RHODES' JOURNAL OF BANKING.

Vol. XIV.

JANUARY, 1887.

No. 1.

UNITED STATES Treasurer Jordan, in his annual report, makes an explanation as to the character of the fund in the Treasury to retire bank circulation, which was clearly needed. There has been an apparent discrepancy between the monthly statements of the Comptroller of the Currency and the Treasurer for some time, the one reporting a certain amount of "legal-tender notes on deposit to retire circulation," while the Treasurer's statement showed a much smaller amount of such notes in the Treasury. The explanation is exactly as we anticipated it would be—in the event of any being made. The Treasurer states that no attempt is made to hold a legal-tender reserve for the notes. When the notes are presented they are paid either by check on New York or in such form of currency as may be demanded. On November 30th the Government was indebted to the banks on account of deposits to retire circulation and the 5 per cent. reserve fund in the sum of \$94,752,389, all of which (theoretically) is payable in legal-tenders, yet the Treasurer says that on that date there were only \$29,548,188 legal-tenders in the Treasury. "The entire sum of \$94,752,389," he says, "may be said to be composed of \$29,548,188 legal-tenders, \$32,602,100 standard silver dollars and \$32,602,100 in gold." Of course these specific amounts are not set apart for the retirement of bank notes, the redemptions being made out of the general balance. The fact is brought out, however, that there is no legal-tender reserve specially held to retire bank notes, and this being the case the methods of reporting deposits to retire notes ought to be changed. The Treasurer's criticism of the methods of including in the Treasury balance funds which are held by the Government only as a depository is obviously proper.

NO MORE SATISFACTORY EVIDENCE of the local character of the National banks could be required than that furnished by the Comptroller of the Currency in his annual report. A statement is there presented which shows that, of a total of 7,116,894 shares of National bank capital, 6,426,320 (or over 90 per cent.) are held by residents of

the State in which the respective banks are located. This average is pretty generally maintained in the Eastern, Northern and Southern States. In some of the far Western States and Territories the average is smaller, owing to their great dependence upon outside capital. But the exceptions are few where less than 70 per cent. of the total number of shares are owned by residents. We question if the State banks can show a larger percentage of resident owners, and it is very certain that few corporations, financial or commercial, having large capital, are less in the control of outside capital. Another fact which the Comptroller brings out very clearly is that the National banks are not controlled by large capitalists. Over 50 per cent of the shareholders of these institutions own only ten shares or less, the actual number being 117,974 out of a total of 223,583. There are 78,781 others who own more than ten shares, but not over fifty shares each, so that 196,755 (or 88 per cent.) of all the National bank stockholders of the country own from one share to fifty shares each, or from \$100 to \$5,000. The average number of shares owned by stockholders is thirty-two, or about \$3,200 in value. This is a complete denial of the proposition that the National banks are in the nature of a monopoly, or are controlled by a privileged class.

A SILVER ADVOCATE who believes in maintaining the old ratio of silver to gold, and charges the decline in the value of silver to "a dastardly attempt to double the value of bonds, to depreciate the price of labor and to destroy the peace and prosperity of the nation," publishes the following statement showing the average ratio between gold and silver for different periods:

From 1492 to 1600.	11.50
From 1600 to 1700 ..	14.00
From 1700 to 1800.	15.00
From 1800 to 1850. ..	15.07
From 1850 to 1875.	15.85
From 1875 to 1885.	18.20

This table, it is claimed, proves that "never until 1874 was the price of silver reduced to a point where an 412½ grain silver dollar was not of equal value in the open market to a dollar in gold." Well, so it does, but it proves more than that, for it shows very conclusively that silver has been declining in value ever since 1600, which antedates by more than 200 years the power of any living "conspiracy" to depreciate it. If there is any force of logic in "what has been," the champion of silver should not stop at the ratio of 16 or 15½, but should demand that the ratio of 11½, which existed when America was discovered, should be established by law.

THE PASSAGE BY THE SENATE of a bill to retire the trade dollar gives reasonable hope that this badly treated coin might soon be disposed of for good but for the fact that a bill with similar provisions was defeated in the House at the previous session. The bill is well

drawn to guard against bringing in the coin from foreign countries for redemption. The time for redeeming is limited to July 1, 1887, which would allow less than six months for the holders to present them. The clause in the bill to which the House may object, however, is the one providing that the trade dollars which are to be recoined into standard dollars shall be deducted from the amount of bullion required to be purchased and coined by the law of 1878. The silver men in the House will undoubtedly fight this provision, and, as they succeeded in defeating it at the last session, they may again. The trade dollar should be retired. The Government practically made itself sponsor for it, and, since it has discredited it, Congress should call it in and put an end to its existence.

ESTIMATES OF THE LOSS ON GOLD COIN by wear and abrasion in Great Britain were published in the December 1886 number of the *JOURNAL*, from which it appeared that the sovereigns in circulation were .64 of one per cent. below the full standard value, while the half sovereigns were 1.63 per cent. below. The Director of the Mint has since issued a report, in which he states that in this country both the legitimate and fraudulent abrasion of coin is probably below that of any other country, on account of the economy of circulation of gold coin. The Director says that, in the case of gold coin of the United States tested upon a large as well as upon a small scale, all old coin have hitherto been found strictly within the limit of tolerance of fineness and about the same as new coin. Upon the recoinage in 1873 of \$16,000,000 of light gold coin the fineness was found in no single melt to be below .899. No systematic investigations on an adequate scale have been made in this country to determine the loss by actual wear on gold coin, but such experiments as have been made indicate that the abrasion under passed conditions of circulation has been from $1\frac{1}{2}$ to 2 per cent. a century.

THE IMPORTANT BANK TAX CASE, involving the legality of over \$2,000,000 of taxes on National banks in the City of New York, has been advanced on the United States Supreme Court calendar, and is set down for argument on the first day after the February recess. The decision of Judge Wallace, of the Circuit Court, holding that there was no unjust discrimination against National banks under the tax laws of New York, and that the taxes were legal, was published in full in the November, 1886, number of the *JOURNAL*. The decision of the Supreme Court of the United States will be awaited with interest.

THE ISSUE OF ANOTHER CALL for bonds by the Secretary of the Treasury on December 28th was in the nature of a surprise, it being generally expected that the Secretary would hold back his calls until some expression came from Congress as to its policy with reference to the public debt and revenues.

FUTURE OF THE NATIONAL BANKING SYSTEM.

An article by ex-Comptroller Knox, upon "The Future of the National Banking System," appears in the *North American Review* for the present month of January. The article is evidently an elaboration of an interview which appeared in a city paper on the 7th of December. In this article it is proposed :

First—That a bill shall be passed authorizing a reduction of the bonds required to be kept on deposit as security for circulation as proposed by the bill of Senator McPherson, to which reference is made elsewhere.

Secondly—Provide for the refunding of the 4 per cent. bonds, amounting to \$738,000,000, now outstanding into $2\frac{1}{2}$ or 3 per cent. bonds, offering the inducement to the holders of these bonds to exchange them for the new ones to be issued, the Government paying to the holders the difference between $2\frac{1}{2}$ per cent. or 3 per cent. and 4 per cent.—the difference in value to be ascertained by an exact calculation by the Actuary of the Treasury Department.

Thirdly—Provide a safety fund from the tax upon circulation, which should be reduced to $\frac{1}{2}$ per cent. per annum, and from the estimated loss arising from the failure to present lost or worn-out National bank notes for redemption during the last twenty years, amounting to about \$4,500,000. When this safety fund amounts to \$5,000,000 authorize the issue of circulating notes at the rate of \$100,000 of circulation upon \$80,000 of bonds ; the loss, if any, from the inability of insolvent banks to redeem their circulating notes to be charged and paid from this safety fund. The statistics in reference to the failure of National banks during the last twenty years show that if circulation had been issued at the rate of \$100,000 upon \$80,000 of United States bonds deposited there would have been no loss whatever to the holders of the circulating notes of insolvent banks. But with a safety fund in hand of \$5,000,000, steadily increasing by a tax of one-half per cent. upon the circulation outstanding, there would be no possibility of loss to the holders of the notes of an insolvent National bank if such notes were issued at the rate of \$100 for every \$80 of United States bonds deposited.

If, however, the 4 per cent. bonds could be funded into $2\frac{1}{2}$'s by the payment of interest in advance, and circulation issued at par upon the bonds, and the present tax upon circulation repealed, the issues of the National banks could be maintained without the necessity of a safety fund until the maturity of the bonds.

The banks might also be authorized, at their option, to deposit in part gold or silver coin or bullion instead of United States bonds, and such a circulation is greatly to be preferred to the silver certificates now in circulation.

Either one of these propositions would give relief to the banks, and all combined would have the effect of continuing the National bank circulation for twenty years, or until the date of the payment of the 4 per cent. bonds now outstanding. Under such an arrangement the circulation of the National banks would not be likely to diminish, but would increase during the next

twenty years. These propositions provide for an absolutely secure National bank circulation. They are eminently practicable and easy to execute if the proper legislation can be obtained.

In any event, there is no reason why a law should not be passed authorizing National banks, if they desire, to reduce their circulation and the bonds required to be held as security therefor, and authorizing that circulation shall be issued at par upon the bonds, as previously provided in the McPherson bill. Surely all parties can agree to allow National banks to retire a portion of their circulation and their bonds if they desire to do so.

The report of the Comptroller of the Currency for 1886 shows a decrease in the circulation of the National banks for the year ending November 1, 1884, of \$24,170,676; in 1885, of \$15,545,461, and in 1886, of \$56,593,533, making a total of \$96,309,670. The banks held \$57,000,000 of threes, all of which will be called in the course of a few months—reducing the circulation from \$210,000,000, the present amount, to about \$170,000,000 during the coming mid-summer months, and increasing the funds on deposit in the Treasury for the retirement of National bank notes from \$88,000,000 on December 1st to nearly \$120,000,000.

It is evident that, unless legislation is obtained during the present session of Congress, the National bank notes now outstanding are to be largely reduced, and that silver certificates are to be issued in their stead; but it does not follow that on this account the National banking system will cease to exist, for the system will continue as long as the banks continue to hold the minimum amount of bonds required by law. The banks which have been organized during the last few years have not been organized on account of the profit upon circulation, but rather because it is found by experience that a bank can more certainly build up a deposit account under the National system than any other. This is very evident from the numerous conversions of State banks and private bankers into the system and the numerous organizations in the new States and Territories, where the rates of interest are so high that there is a loss, instead of a profit, on circulation; and also from the fact that many associations which have left the system on account of the restrictions of the Act have found it to their interest again to return.

So long as the National banks continue to retain their reputation as the safest places of deposit the system will attract to itself new organizations and continue to retain the old.

It is probable that, not long hence, the constitutional question will be raised whether Congress has not the power to authorize the organization of National banks without requiring them to deposit any United States bonds whatever, and, in view of a recent decision of the Supreme Court, there would not seem to be much doubt as to the construction of such a law by that tribunal.

If a law should be passed authorizing the National banks to reduce the bonds now on deposit to one-half the amount now required, as given in the first proposition, the National banking system could continue during the next twenty years upon an aggregate deposit of about \$50,000,000 of bonds by the different banks now organized, or which are likely to be organized, until the year 1907.

In the course of the next twenty years many strange things may happen, and among them, possibly, an increase of the National debt.

PROPOSED BANK LEGISLATION IN CONGRESS.

Bills were introduced in Congress during the month of December by Senator McPherson, of New Jersey, and the Hon. James P. Miller, Chairman of the Committee on Banking and Currency in the House, authorizing a reduction of the bonds held as security for National bank notes.

The bill of Senator McPherson proposes that banks having a capital in excess of \$150,000 shall keep on deposit \$25,000 of United States bonds as security for their circulation, and that National banks having a capital of less than \$150,000 shall keep on deposit an amount equal to one-eighth of their capital.

The bill of Mr. Miller proposes that banks having a capital of from \$50,000 to \$75,000 shall keep on deposit \$5,000, and banks with a capital of \$75,000 and less than \$150,000 may organize or continue business upon a deposit of \$10,000 of United States bonds; while banks having a capital in excess of that amount shall be required to keep on deposit a sum not exceeding \$25,000.

The bill of Senator McPherson, like his previous bill, which was first presented in the year 1883, and which passed the Senate during the last Congress, contains a clause providing for the issue of circulating notes at the par value of the bonds, while the House bill provides for the issue of 90 per cent. only, in accordance with the present law.

Senator Aldrich, of Rhode Island, on December 18th of last year, renewed his proposition, which was under consideration in 1883, providing for the refunding of the long Government bonds into 2½'s and for the payment of maturing bonds having a higher rate of interest previous to those bearing a lesser rate.

On December 13th, Hon. Abram S. Hewitt, of New York city, introduced a bill in the House authorizing the Government to anticipate the payment of interest on the bonded debt in excess of the rate of 3 per cent., for stamping the bonds which are presented so as to show the reduced rate of interest, and also authorizing such stamped bonds to be received as security for the issue of circulating notes to the National banks at the par value thereof. The first section of this bill is as follows:

SECTION 1. That out of any money in the Treasury not otherwise appropriated the Secretary of the Treasury is hereby authorized and empowered to anticipate the payment of so much of the interest on the interest-bearing bonds of the United States as shall be in excess of the rate of 3 per cent. per annum by the payment in gross of such sum in each case as shall be equal to the aggregate present worth of such excess of interest thereon. And for the purpose of ascertaining such present worth the interest upon the amount paid by the United States in and in anticipation of such excess of interest shall be computed at the rate of 3 per cent. per annum, reinvested quarterly, so as to secure to the United States the benefit of compound interest thereon.

The third section of Mr. Hewitt's bill authorizes the deposit of \$100,000,000 of the Treasury surplus with the National banks upon the security of a like amount of United States bonds, to be deposited with the Treasurer of the United States.

WILLIAM LEE TRENHOLM.

The Hon. William Lee Trenholm, an excellent portrait of whom appears in this issue of the JOURNAL, was appointed Comptroller of the Currency by President Cleveland in March, 1886. Mr. Trenholm was born in Charleston, S. C., on February 8, 1836, and is the son of Mr. Geo. A. Trenholm, who was Secretary of the Treasury of the Southern Confederacy. He graduated from the South Carolina College in December, 1855, and was married in January following. He at once engaged in mercantile pursuits, becoming a partner in the commercial house of John Fraser & Co., of Charleston. Subsequently he entered the firm of Trenholm Bros. & Co., of New York, and Fraser, Trenholm & Co., of Liverpool, England. Mr. Trenholm lived in England two years while connected with the last-named firm.

At the breaking out of the civil war he entered the service of the Southern Confederacy, volunteering in the South Carolina State troops in December, 1860, and serving throughout the war.

In 1865, Mr. Trenholm resumed active business in Charleston. He became identified with the progressive business interests of that city; and, while never a candidate for public office, was twice nominated and elected Alderman of Charleston on tickets especially made up for an unusual occasion and supported distinctively by the business elements of the community.

While Mr. Trenholm has long been well known in the section in which he lived for his excellent business qualifications and broad and comprehensive views on commercial and financial questions it is only recently that his name has become familiar throughout the country.

Public attention was first attracted to him by his discussion of the silver question before banking and commercial conventions. Being a native of the South, his opposition to the further coinage of silver and his championship of the National banking system naturally brought him into prominence, and the more so because of the clearness of his views and the ability with which he presented them.

His introduction into the public service may be traced to the masterly way in which he presented an argument in behalf of the South Carolina rice growers before the Secretary of the Treasury in 1885. The clearness and brevity of his argument so favorably impressed Assistant Secretary Fairchild that, when the appointment of two Civil Service Commissioners came up, Mr. Fairchild strongly urged that Mr. Trenholm be named as one.

In November, 1885, the President appointed Mr. Trenholm a Civil Service Commissioner, and he filled that position to the extreme satisfaction of the administration until March, 1886, when he was appointed Comptroller of the Currency. The soundness of his views on all questions which were likely to be influenced by his official position made his selection almost universally popular.

The most delicate compliment paid to Mr. Trenholm at the time he was made Comptroller, we think, was uttered by the *New York Times*, which said: "The only possible cause of regret for the nomination of Mr. William L.

Trenholm as Comptroller of the Currency is his withdrawal from the Civil Service Commission. He is equally qualified—and very highly—for either position, but we fear it will be harder to replace him on the Commission than it would be to find as good a man for Comptroller."

It is unnecessary to refer to Mr. Trenholm's record thus far as Comptroller. It is enough to say that he has satisfied every one who believes in maintaining the credit and currency of the country upon the highest basis. He has disappointed nobody except those who feared he might not make a good Comptroller.

The very complete summary of his last annual report which we print elsewhere in this number shows that his views on financial questions have undergone no change since he entered his present office.

A COMPUTATION BY ACTUARY ELLIOTT.

REFUNDING OF THE UNITED STATES FOURS INTO TWO-AND-A-HALFS.

The following letter from the Hon. E. B. Elliott, Actuary of the Treasury Department, exhibits the maximum amount of the Treasury surplus which would be payable to the holders of the four per cent. bonds of the United States if the bill proposed by Senator Aldrich, of Rhode Island, should become law :

UNITED STATES TREASURY DEPARTMENT, {
WASHINGTON, D. C., December 24, 1898. }

John Jay Knox, Esq., President National Bank of the Republic, New York.

MY DEAR SIR:—In response to your request of the 11th inst. as to "the difference in interest between 738 millions of 4 per cents maturing in 1907 and a bond exactly the same, maturing at the same date, bearing interest at 2½ per cent.," I would say that, throwing out of consideration the superior advantages offered by the 2½ per cent. bond for the purposes of bank-note circulation, the present value to the holders of one dollar and a half a year for 20 years, re-invested quarterly, is, if computed at a 4 per cent. rate of investment, \$20.5831; if invested at 3 per cent., \$22.4979; and, if invested at 5 per cent., \$18.895 on each \$100 bond.

Very truly yours, E. B. ELLIOTT, Government Actuary.

MEMORANDUM.

Present value of one dollar and a half a year for 20 years, re-invested quarterly, at the following rates of interest per annum.

2½ per cent.....	\$23.552
3 per cent.....	22.498
4 per cent.....	20.583
5 per cent.....	18.895

Corresponding difference in interest on \$738,000,000 reduced from 4 per cent to 2½ per cent. per annum.

\$178,810,000
168,034,000
151,903,000
139,445,000

A CRITICISM.—Mr. A. H. Magill, a member of the banking firm of John Warner & Co., of Clinton, Illinois, writes under date of December 20th, when sending remittance to renew his subscription for 1897 :

"I have but one criticism to make on the JOURNAL, and that is that you furnish so much valuable and interesting matter that we can scarcely find time to read it all. Since we began taking the JOURNAL it has been steadily improving until now it is undoubtedly the best bankers' periodical in this country. You give us more than we bargained for."

This is a fair sample of numerous criticisms which reach us now-a-days.

**Notes and Comments on
BANKING PRACTICE.**

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

I.

Bank Clerks' Schedules.—The work of a bank is, as a general rule, so regular and uniform in its character that it admits of an unusual degree of system in its arrangement and also in its disposition among the several members of the working force. Nothing conduces more to the efficiency of the clerical force of a bank than for each man to know precisely what his duties are. Bank clerks are pretty much like other men. Some are active and industrious, others negligent and inattentive. And it is scarcely fair that the former should be virtually required to perform work that properly belongs to the latter. Yet, under the happy-go-lucky system that prevails in many banks, this is too apt to be the case. Some clerks always come early and go late; others pretty generally come late and go early. When any one is absent special arrangements have to be made concerning his work. Things go, so to speak, by tradition rather than by settled rule, and the older clerks are pretty sure to arrange matters to their own liking rather to the disadvantage of those who are new and inexperienced. There are, in consequence, considerable jarring and friction in the bank work and occasionally unpleasant disagreements as to whose duty the performance of such and such a task may be.

To avoid all this, and to secure a proper degree of system in the arrangement of bank work, it is well for the Cashier to make out written schedules for the various desks, defining, as near as may be, the duties appertaining to each. Care should be taken to provide for absences so that there may be no confusion on that account. Written schedules are not to be expected to cover every point. Indeed, they are only intended as general guides, and do not at all preclude the clerks helping each other as much as possible. On the contrary mutual assistance is more practicable when each man knows his duties.

In arranging for absences it is desirable that the work of the absent clerk should be done as far as possible by the one next in the line of promotion.

Attention to Details.—Great results are seldom attained by single efforts, however skillful or well directed, and what appears to the outsider a master stroke of policy is usually but the culmination of a well-digested and patiently-thought-out plan that has already been long in action. This proposition, which will be readily assented to by most people, might be supported by a variety of examples and illustrations from the careers of successful men and the history of successful enterprises. At present, however, it is not intended to do more than briefly note its application to some of the phases of the banking business. Careful readers of the articles on "Practical Banking"

that have been appearing in the JOURNAL no doubt often noticed how much attention the writer has given to what may be termed little things—even going so far as to suggest a way to preserve for a time the waste paper of the bank, so that it may be readily referred to and examined when searching for lost checks, coupons, etc. In respect to this attention to little things the writer of the articles referred to shows the result of his own long actual experience in bank management. All through the pages of the JOURNAL will be found useful suggestions and practical hints as to small matters that are well worth remembering. In an ordinary matter, like the care of a bank vault and safes, very little attention would many times have prevented a troublesome and annoying lock-out. In reading accounts of bank burglaries one is often struck by the seeming ease with which they are effected, the fact being that lack of attention to every little detail on the part of the bank Manager has left some weak and unprotected point which the keen eye of the "professional" rarely fails to notice. And so, also, with forgeries and the various swindling schemes, old and new. In the arrangement of the bank work it is surprising how many ways clerks and even Cashiers will devise to hinder instead of helping themselves. In many banks there can be found account books in active use utterly useless for any practical purpose—mere relics of by-gone ways—yet these old books are clung to with the tenacity of superstition, and daily consume hours of precious time. Some bank officers seem to have a passion for multiplying books, and surround themselves with all sorts of "ticklers," "scratchers," "blotters," etc. Now, a little attention and thoughtfulness would soon gather up all these miscellaneous memoranda into a simple and comprehensive system that would save time and labor and insure a greater degree of accuracy, the main object being to so guard every point that the work when finished must be right. The account of the Teller's cash should be so kept that an error can be, to a certain extent, located. Attention to this matter would prevent many annoying discrepancies. In the matter of carrying money about the street, bank Messengers are sometimes negligent of even ordinary precautions—a negligence, however, that should not be attributed in all cases to the Messenger himself, but rather to the faulty system under which he is working. For instance, the runner should always have his wallet secured by a leather-covered chain passed over the shoulder. This is an obvious precaution and one sometimes neglected. In fact, this principle of attention to little things can be applied with advantage to every department of a bank, and the permanent success of the institution often depends greatly upon its observance.

A Model President and Director.—A fine banker of the old school, who was President and Director of the Suffolk Bank in Boston during the many years Mr. Grubb served as chief of the foreign money department—a gentleman held in most kindly remembrance by all who were ever brought in contact with him—was the late Jeffrey Richardson. Mr. Richardson for more than 40 years was a member of the foreign money committee of the bank—altogether the most important committee in the Board of Directors. While serving on that committee, and also in the more conspicuous position of President of the bank, he showed a skill, a patience and a kindness of heart that won the respect and esteem of the clerks under, and the men of business who were associated with, him. Early in life he had been an active merchant—a large importer and

dealer in iron—but from the date of his entry into the Board of the Suffolk Bank up to the day of his death his time and attention were more given to the banking business than to trade in the old store on Central Wharf, which he nominally occupied for a half a century or so.

When it became evident to most Massachusetts bankers that the days of banking under State charters were numbered and that there was no alternative for the old State banks but to submit to Secretary Chase and be nationalized, Director Richardson, who had all his life been identified with State banking, either in the capacity of President or Director, could not be convinced of the wisdom of reorganizing the Suffolk Bank under the National system. He talked against it, he wrote against it, and, alone in all the Board, he to the last voted solidly against it, because, as he said, he never approved the wisdom of the change.

Following is an accurate likeness of this worthy banker that will vividly recall to many a reader of these papers his kindly face and cheery presence :

Legal and Illegal Holidays and the Mails.—There are two classes of holidays for bankers and merchants who are willing to take them—those which are termed legal holidays and those which are not. In the case of the first named there are no difficult questions arising with banks relative to the way they shall be kept.

|| Banks on such days are not open at all, do not receive their mails or transact business of any description, but treat them, as far as business is concerned, as if they fell on Sunday. This arrangement is, of course, perfectly safe and consistent. But where a bank observes holidays which are not legal—shuts up its place of business when it has no legal authority to do so—it assumes responsibilities which are sometimes troublesome and even risky. Its maturing paper which falls due on the holiday in question is, of course, generally paid the day preceding, for the makers are usually aware of the holiday closing and accommodate themselves to it. If such paper is not paid the day before the holiday it must be kept where the promisor can readily reach it on that day, for it cannot be protested until the close of banking hours on the day of its actual maturity. So banks that nominally close on holidays which are not

legal either leave some clerk at the bank to take charge of the unpaid maturities of that day—to collect or protest them—or post a notice on its doors stating where the paper in question may be found.

But it is in the treatment of the incoming mails on an illegal holiday that the closing banks are sometimes at a loss what to do, and especially is this the case in cities and towns where there are many banks and a Clearing-House. As no settlements at clearing are made on such days, and as the banks have no means of making collections from each other, it evidently becomes a dangerous and embarrassing thing for any bank to take its letters from the post office on such a day; if it takes them from the mail it should open them, and if it opens them the question arises how shall it proceed if the letters contain large checks and sight and demand drafts? Regarding its treatment of the latter the difficulty is increased by the fact that the places of business of the drawees are likely to be shut.

Banks should not take their letters from the post office on illegal holidays.

It is to be hoped that bankers never entertain the idea of going for their mails on Sundays and other legal closing days.

“Take this Off Before Presenting.”—These words are often printed on “no protest” slips. The request, however, is not always complied with. Banks that regard the no pro. slip as sufficient instruction not to protest sometimes object to removing it for fear, if the draft is not paid, it may be overlooked, and thus the draft may incur protest contrary to the wishes of the drawer. But the general custom is to remove it.

Stamped Envelopes.—It is surprising how many banks still use the adhesive stamp instead of the stamped envelopes furnished by the post office authorities. The latter are not only more convenient, but insure the bank against vexatious delays occasioned by letters being put in the post office unstamped—a little piece of forgetfulness to which even the most careful Corresponding Clerks are liable. Envelopes with printed addresses should be used for all regular correspondents.

Signatures.—Whether it is really possible for an expert in handwriting to certainly determine as to the genuineness of a disputed signature is at least open to debate. Sometimes trials in court develop the fact that persons whose opinions are entitled to equal weight are apt to arrive at exactly opposite conclusions. However this may be, it is the duty of bank book-keepers to carefully note the signatures of the checks that come under their supervision. By doing this habitually there is acquired a certain familiarity with the various handwritings that is not easily deceived.

Obsolete Accounts.—What is to be done with old accounts which carry an unclaimed balance of a small amount? Proper attention at the right time would often prevent the accumulation of such accounts. But, when it becomes apparent that such an account will no longer be disturbed, the checks belonging to it should be carefully listed, proved with the ledger and filed for reference. The account should then be balanced in the regular way and closed into the suspense account or into profit and loss. A note should be made on the face of the account of the disposition made of it.

Corporation Accounts.—It is always preferable to have accounts of corporations opened in the name of the corporation and not in the name of

one or more of its officers, thus: "New York Publishing Co.," not "James Robinson, Treasurer New York Publishing Co." To do this prevents constantly changing the name of the account on the ledger as new officers succeed the former ones.

If the corporation keeps two or more accounts, as, for example, one for the Treasurer and a minor one for a Cashier or Agent, the accounts should stand: "Treasurer of the New York Publishing Co.," and "Agent" or "Cashier of the New York Publishing Co." The name of whoever may be the officer for the time being shows on the signature book, and a memorandum of the same may properly show on the ledger; but the accounts should stand as indicated.

Preserving Books and Papers.—Banks differ very much in the matter of preserving old books and papers. Some esteem it of importance to preserve everything, while others go to an opposite extreme. The chief objection to preserving the books for any length of time is the room they occupy. But if a thoroughly systematic method of filing and shelving is observed this objection may be reduced to small proportions. Shelves can be run up to the ceiling, the heavier books being placed on the lower shelves while the lighter books and letter boxes on those higher up, the chief object being to have everything where it can be readily found at a moment's notice. A proper system once introduced can be very easily kept going. The objection to destroying documents is that there is no telling when a book or a paper may be called for, and he who can produce the written evidence usually has the advantage of the situation. A small book-case, handsomely made, in which are kept the original subscription books of the bank, the minute books, etc., form an agreeable addition to the furniture of the Directors' room.

No one Authorized to Act.—It was half-past three o'clock. The President had left his office and gone home to dinner; the Cashier had left the bank for the day. A customer came in with a batch of collaterals (gilt-edge, in fact) and wanted a heavy loan and his check certified against it. The Cashier was in the habit of attending to such matters personally, and, consequently, the Discount Clerk declined to take the responsibility of advancing the loan. The Teller refused to certify until the loan was advanced. The applicant explained why he came late, interjecting the caustic remark, "If half-past three o'clock in the afternoon could be called 'late'?" and argued, reasonably enough, that in busy seasons, with an active market, the bank should provide for these emergencies. Two of the bank's Messengers were dispatched in search of the Cashier, and, fortunately, one of them found him in a short time and secured the necessary authority for making the loan.

A formal rule of the Board now provides for such an occurrence.

Certifications in Lead Pencil.—In some places it is customary for bank Messengers presenting checks for certification to allow the Teller to write his name or initials in pencil on the check instead of a regular and formal certification. This is to save time and trouble. Where the amounts are not large there is no special objection to the custom. It is one of those "faith and honor" transactions in which the banking business so peculiarly abounds.

New Ideas.—Banks should always be on the lookout for new ideas and improved methods of doing business. The ways of the business world are continually changing, and banks that want to keep their business up to the

highest point must change their ways also. Even in the last ten or fifteen years there have been the most remarkable changes in the banking business. Indeed, to a banker of the old school everything seems to be done on an entirely different basis. The competition in the banking business, a thing almost unknown twenty years ago, has increased to such a degree that every point of advantage has to be seized upon. It is to this consideration that we owe the large number of books on banking and financial matters generally that have been issued of late years. The increased circulation of monthly journals and weekly periodicals devoted to financial affairs is due to the same cause.

Wide-awake managers find it impossible to keep pace with their competitors unless they avail themselves of the new ideas that are being put forth in financial publications. For example, the difference between old and new-fashioned methods in book-keeping means the difference of the salary of one or more clerks.

One good practical idea caught from a book on banking, or from a banking journal of recognized authority, is worth several times the price of a year's subscription.

Well-Seasoned Blank Books.—This is a very desirable quality and one which all makers of blank books claim for their work. Were a blank book put in use as soon as it is made it would be very likely to warp or "spring" from the effect of the heat of the banking office. For this reason careful manufacturers keep such book in press for some time before delivering them. This hint should be acted upon by bank officers ordering their books a considerable time before they are needed. When the books are sent to the bank let them be put in a dry place and some heavy books piled on top so as to keep them under pressure until needed for use. In the case of large books, as ledgers, for instance, a number of slips of blotting paper should be placed between the leaves close in against the back before putting the book under pressure. This will make the book open as readily as one that has been long in use.

A Signature.—Bankers come across some queer signatures in the regular course of business. Here is one which will hardly be taken for "John Smith" at the first glance. It is an exact *fac-simile*, photographed from a check recently received at this office in payment of a subscription :

We will give a year's subscription for the JOURNAL OF BANKING to any Teller (outside the State of Kansas), not having previously seen the signature, who will send in the Cashier's name plainly written.

Brief Replies to Subscribers.—It is found that the space heretofore occupied by Brief Replies is required for more valuable matter. For the present, therefore, questions that have been answered under this head will either be attended to by mail or else will find a place under "Replies to Law and Banking Questions."

BANKING LAW.

* Legal Decisions Affecting Bankers.

LIABILITY OF COLLECTING BANK FOR DEFAULT OF CORRESPONDENT—THE MICHIGAN RULE.

Plaintiff brought suit in a Justice's Court to recover a balance claimed to be due him on account of five drafts, of \$100 each, drawn by him upon O. S. Rixford, of East Highgate, Vermont. These drafts were made payable to the order of Waldby & Clay, the defendants, bankers at Adrian, Mich., who undertook the collection of the same. The drafts were dated and paid by Rixford (as appears upon their face) respectively as follows: March 1, 1884, paid March 14, 1884; March 10, 1884, paid March 22, 1884; March 18, 1884, paid March 22, 1884; March 26, 1884, paid April 3, 1884; and March 31, 1884, paid April 3, 1884. These drafts were forwarded by Waldby & Clay to the First National Bank, of St. Albans, and that bank, after collecting of Rixford, sent its own draft on New York for the money to Waldby & Clay. Quite a large number of drafts had been drawn by Simpson, the plaintiff, upon Rixford before this and collected in this manner without any trouble. Waldby & Clay, upon the receipt of the New York draft of the St. Albans bank, would credit the amount of the same to Simpson, who drew against such credit as he wanted money in his business. Waldby & Clay would forward the New York draft to their banking house in New York, which would collect the same and give them credit therefor. The defendants claimed that the amounts of the last three drafts were never received by them, as, on account of the failure of the St. Albans bank, a draft or drafts of that bank upon New York received by them was protested and not paid in New York, the amount being \$300, and they filed a notice of set-off with their plea for moneys overdrawn by Simpson. The trial in the Justice's Court resulted in a verdict and judgment for defendants for \$51.62 damages. On appeal to the Circuit Court, the verdict of the jury was "No cause of action," and judgment was entered for defendants. The case was then appealed to the Supreme Court.

The plaintiff, upon trial in the Circuit Court, testified that he was dealing in axes manufactured by Rixford, and, by arrangement with him, was authorized to draw upon him for money as he needed it in his business; that, when he made the first draft in the commencement with Waldby & Clay, Mr. Clay asked him where East Highgate was. He told him it was a small town in the northern part of Vermont, and that St. Albans was Rixford's banking town; that Clay himself chose the First National as the bank at St. Albans through which defendant would make the collection; that he (Simpson) did not know anything about banks there, and had nothing to do with the selection, nor was there any agreement between him and defendants that the collection should be at his risk. Shortly after Clay informed him that the draft was paid, and he commenced drawing against it. The last four drafts mentioned in plaintiff's bill of particulars were not paid promptly, as Simpson supposed. After the draft of March 10th, he went into Waldby & Clay's for the money. They told him the draft had not been paid. He then drew the one of March 18th. He kept calling for money, receiving the same reply, until he had drawn all the drafts; and still no returns. He had considerable talk with defendants about the matter, and finally said to them that he knew Rixford was all right

* With this issue, Mr. THOMAS B. PATON, who has been connected with the JOURNAL as law writer for the past three years, is introduced to our readers as the Associate Editor of the Law Department.

Attention is directed to several improvements which appear in this number. All the latest Decisions affecting Bankers will be found herein as early as obtainable.

and he should write to him and find out about the matter. He did write to Rixford, and, about the time after so writing that it would take a letter to reach East Highgate and an answer to return to him, Mr. Waldby called him into the bank and said: "Mr. Simpson, the drafts have come. It was just as you stated—they were delayed in sending them on." That day, the 5th of April, he drew from Waldby & Clay \$150 against the drafts, and on April 10th they paid a Wisconsin draft against him, without his knowledge, for \$35.15. He claims that when they paid him the last \$50 of the \$150 in the afternoon they informed him that the St. Albans bank had failed, but paid him the money just as readily as they ever had upon the receipt of drafts before that date. Soon after the defendants refused to pay him any more money, and claimed that he must bear the loss of the three drafts, which they said had been protested in New York.

The defendants testified that, when Simpson commenced doing business with them in this way, they had an agreement with him that the collection of these drafts should be at his risk, and they were not to be responsible for any money collected by the St. Albans bank until it was paid to them, or until drafts that might be sent by that bank had been paid or placed to their credit in the bank where they did business in New York, and that the deposit book which they handed him contained the following, in pursuance of such agreement: "Obligations payable elsewhere than at our bank are received by us subject direct, incidental, and resultant to the party placing the same with us. We do not undertake to be responsible for the laches or acts of agents to whom we send matter for collection. We will simply act in good faith, and endeavor to use diligence and care." That they made the credit upon their books to Simpson when they received the St. Albans bank draft upon New York for convenience, but not for an absolute credit unless such drafts were paid in New York. They admitted that they permitted Simpson to draw at once against such credit, but claimed that it was done because of his impotunity.

The plaintiff swears he never saw the slip pasted in his deposit or pass-book until it was shown him by one of the defendants after they had refused to pay him on account of the drafts claimed by them to have been protested.

The Court, after reviewing the evidence, stated that when the plaintiff proved the payment of his draft by Rixford, and the receipt of a draft from the St. Albans bank for the same by the defendants, it then devolved upon them to show that, through no fault or want of diligence on their part, the draft was not paid; that they completely failed to do this by any competent of legal evidence, and that, therefore, the verdict should have been for the plaintiff. The Court, however, stated that as the main question in the case would of necessity arise again upon another trial it would be now disposed of, and on this question the Court

Held, The question is directly before us: What is the law of the case when a person steps into a bank, in the ordinary course of business dealing, and intrusts to it the collection of a draft drawn upon some person residing at a distance in case the home bank, through the failure or dishonesty of another bank, selected by itself, never receives the money upon such drafts, though the same is paid by the drawee? In the absence of any agreement in regard to the matter, who must bear the loss in case the home bank has not been at fault in the selection of its agent or agents?

There is a conflict of authority upon this proposition, and, as it has never been settled in this State, we must be guided and governed in our action by what seems to us the most correct view in justice and on principle.

It is held in New York, Indiana, Ohio and New Jersey that the home bank must be the loser upon the principle that such bank undertakes the collection of a draft or bill and selects its agent or agents, and must be responsible for their default or neglect as it would be for the default or neglect of its officers or clerks in the collection of a home bill, or as a contractor would be bound to answer for any negligence or default of his sub-contractors or workmen in the performance of his contract. (*Allen vs. Merchants' Bank of New York*, 22 Wend., 215; *Reeves vs. State Bank of Ohio*, 8 Ohio St., 460;

Titus *vs.* Merchants' National Bank, 35 N. J. Law, 588 ; Ayrault *vs.* Pacific Bank, 47 N. Y., 570 ; Abbott *vs.* Smith, 4 Ind., 452 ; Tyson *vs.* State Bank, 6 Blackf., 225.)

In other States it is adjudged that the customer depositing the draft for collection must be presumed to know, and contract upon the knowledge, that in the ordinary course of business the home bank must employ correspondents or agents abroad to make the collection and transmit the money collected. The holder or maker of the draft, having full notice of the usual course of business, must be held to assent thereto. "He therefore authorizes the bank with whom he deals to do the work of collection through another bank." "The bank receiving the paper becomes an agent of the depositor with authority to employ another bank to collect it. The second bank becomes the sub-agent of the customer of the first, for the reason that the customer authorizes the employment of such agent to make the collection." If, therefore, there is no want of ordinary care and prudence in the selection of the sub-agent, and no negligence or fault on the part of the home bank, the customer must be the loser for the default or negligence of such sub-agent who is regarded as his agent. (56 Iowa, 434 ; 1 Cush., 177 ; 12 Conn., 303 ; 17 La., 560 ; 25 Ill., 243 ; 12 Wis., 702 ; 34 Miss., 41 ; 8 Md., 530 ; 1 Pet., 25 ; 56 Mo., 93 ; 6 Har. & J., 146 ; 8 Baxt., 101 ; "Morse on Banking," 347-356.)

Nearly all the cases cited above, in support of both sides of the question, relate to transactions by which the draft or bill failed of collection by neglect of the notary to make demand in time, or proper protest or default of the agent in not moving quick enough to make the money.

In the case at bar the draft was collected of the drawee, and the loss of the money resulted from the failure of the St. Albans bank before the collection of its draft transmitting such money to the defendants. If defendants were negligent or in fault in not immediately forwarding such draft to New York, upon its reception by them, or in its presentation there, they are in my opinion liable to plaintiff for the money ; but, if there was no negligence in either of these respects, the question arises, Who must bear the loss on account of the inability of the St. Albans bank to meet its draft transmitting the money ?

In *Reeves vs. State Bank of Ohio*, *supra*, it is held, that when a bank in Ohio received for collection a draft payable in New York and for that purpose forwarded the same to its correspondent in New York, such Ohio bank was responsible to the owner of the draft for the conduct of such correspondent, and for the proceeds of the draft immediately upon its collection by such correspondent ; that such correspondent was the agent of the Ohio bank, and not the sub-agent of the owner of the draft ; and payment to the agent was payment to the bank, unless there was some agreement or authority between the owner and the bank beyond the mere fact of the draft being received for collection.

In *Mackersy vs. Ramsays* (in the House of Lords), 9 Clark & F., 818, the same doctrine is maintained. Mackersy employed bankers in Edinburgh to obtain for him payment of a bill drawn upon a person in Calcutta. The bankers accepted the employment, and wrote him, promising to credit him with the money when received. They transmitted the bill in the usual course of business to bankers in London, and by them it was forwarded to India, where it was duly paid. The bank in India that collected the money failed, and the Edinburgh bankers did not receive it. They, however, wrote to the drawer of the bill, announcing the fact of its payment, but never actually credited him with the amount thereof on their books. *Held*, That the Edinburgh bankers were the agents of the drawer to obtain payment of the bill ; that, payment having been actually made, they became *ipso facto* liable to him for the amount received, and that he could not be called upon to suffer any loss occasioned by the conduct of their sub-agent, between whom and himself there existed no privity. In 56 Iowa, 434, *supra*, an attempt is made to distinguish this case on the ground that the decision was based upon the fact that the Edinburgh bank expressly undertook to forward the paper, and upon its payment to place the amount thereof to the credit of the depositor, and for the performance of its undertaking it was to receive a commission, and that upon such a contract the bank would be bound to give him credit when it was

paid to its correspondent, and therefore became directly liable to the customer. But the commission charged was only the usual one among bankers, and banks generally have a commission on collections, in the case at bar it being 35 cents on each \$100, which was divided between defendants and the St. Albans bank. Besides, the opinions, both of Lord Campbell and Lord Cottenham, delivered in the House of Lords, were placed upon the broad ground that the Edinburgh bank was liable for the conduct of the bank in India, the same as it would have been for the default or neglect of one of its own officers or clerks in the collection of a home bill, and that its correspondents were its agents and not the agents of the drawer of the bill, who had no privity with such correspondents, and the correspondence between the Edinburgh bankers and such drawer, if it proved any special contract, established only such an agreement as the law would have inferred from the dealings between the parties.

The ruling in that case squarely covers the point in issue here, and to my mind is the better doctrine, and most in accord with principle. The learned jurists holding otherwise all admit that, if a person entrusts a home draft or bill to a bank for collection, such bank is responsible to the customer for any negligence or default of its agents, officers or employees. I cannot see why any different rule should prevail in the collection of a foreign bill. It is in every case that I have examined sought to be maintained upon the theory that the customer knows the bank must act through some other person or persons at a distance, and therefore impliedly, from the very nature of the course of business, assents to the employment of such persons and makes them his agents. This reasoning does not strike me as sound. If I leave an indorsed note against persons in my own town for collection, and consequent demand and protest, I know that some agent or employee of the bank will do the work, or some part of it, and I do not know or inquire who will do it. I contract, however, with the bank that suitable agents will be employed, and hold it responsible for their acts. The law authorizes me to do this. If I intrust the same bank with the collection of a foreign draft I also know that they will employ some agents or correspondents abroad of their selection, not mine, of whom I know nothing, and with whom they are supposed to have business relations. I do not inquire whom they are to select. I presume, and have a right to presume, that they have business knowledge of such agent or agents which I do not and cannot possess by the very course of their dealings as bankers. In each case the bank holds itself out, for a consideration, to collect my paper, and it can make no difference whether the compensation is great or small. In each case it selects its own agents in the premises. In each case I have no part in or control over such selection. In each case there is no privity between the party selected and myself. I fail to perceive why, in the one case more than the other, I adopt the immediate party collecting or protesting the bill as my agent. I cannot find any good reason for making this particular case of the collection of a foreign bill an exception to the general rule of agency. The law in general "is clear that, by the employment of under agents or servants for his own convenience, or to perform part of what he has contracted to do, the employer becomes civilly responsible to those with whom he contracts or deals in his business."

Judge Story, in his work on "Agency," announces the doctrine thus: "It is a general doctrine of law that the principal is held liable to third persons, in a civil suit, for the frauds, deceits, misrepresentations, torts, negligence and other malfeasances, misfeasances or omissions of duty of his agent in the course of his employment, although the principal did not authorize or justify or indeed know of such misconduct."

In no other case that I can recall is a person presumed, by implication of law, without any agreement to do so, to adopt the sub-agent of a person with whom he deals as his own. The carrier is responsible for the negligence of his agents and employees, as is also the ship-owner and the contractor. Why this distinction in the case of a banker or bankers? If in their case, why should it not also be made in the case of collecting agents and attorneys? But collecting agents and attorneys have been held to the general rule. (2 Blackf., 22; 91 U. S., 308; 72 Pa., 124; 10 Ala., 142.)

It has been said by some of the Courts that the holding of banks liable for the default and neglect of their correspondents in a case like the present would render the collection of bills and drafts of this nature extremely difficult, and that it would tend very much to destroy the facilities which at present exist, and subject the holders of bills to inconvenience and expense, and probably in many cases to serious loss. But as long as banks and bankers or other persons hold themselves out to collect such bills or drafts for a compensation, or their advantage, they ought to be governed by the same rules of law that apply to other persons, and, if they wish to avoid such responsibility, it is very easy for them to accept such business only upon a special agreement as to their duties and liabilities. Failing to do this, I think they must, in taking such bills or drafts, be responsible, as other business men are, for the misconduct of their selected agents at home or abroad.

In this case it may be remarked that the crediting of these drafts, from the very beginning of the business, to the plaintiff, when the New York draft of the St. Albans bank was received by them, and the payment, at the last, of the Wisconsin draft against the plaintiff, after it would appear that they knew the St. Albans bank had failed, was strong presumptive evidence, not conclusive, however, and open to explanation, that they understood their liability to the plaintiff to commence when Rixford paid the drafts. Judgment reversed.

Simpson vs. Waldby, Supreme Court of Michigan, November 4, 1886.

PROMISSORY NOTE—JOINT MAKER OR INDORSER—WAIVER OF PROTEST BY AGENT.

This was an action brought by Johnson against L. Zeckendorf & Co. upon a promissory note made by Tully, Ochoa & Co., and purporting to be indorsed by L. Zeckendorf & Co. The note read as follows:

2,800.	TUCSON, A. T., September, 17, 1881.
Three months after date we promise to pay to the order L. Zeckendorf & Co. twenty-eight hundred dollars, at two per cent. interest per month, value received.	
(Signed)	TULLY, OCHOA & CO.

Indorsed: "L. ZECKENDORF & Co."

After the indorsement of L. Zeckendorf & Co., and upon the back of the note, these words were written:

"We hereby waive protest. Tucson, A. T., December 17, 1881. L. Zeckendorf & Co. J. Wittleshoefer."

It appears from the evidence in this case that the defendants Tully, Ochoa & Co. and L. Zeckendorf & Co. were separate mercantile houses doing business at Tucson; that the former were indebted to the latter, who were pressing for a reduction of the balance due. The plaintiff had made known to a broker by the name of Fried that he had \$2,800 to loan. Zeckendorf & Co. went to the broker and told him Tully, Ochoa & Co. were indebted to them and that they were trying to get payment. Fried said he had a customer for whom he would loan \$2,800, with Zeckendorf & Co.'s indorsement. The note was handed to him, and plaintiff handed him the money, and he delivered the note to the plaintiff. Zeckendorf & Co. paid him \$42 for ninety days brokerage for negotiating this loan. The money went to Zeckendorf & Co., and on that day Tully, Ochoa & Co. were credited with \$2,800 on the books of Zeckendorf & Co. The plaintiff left the note in the safe of Mr. Etchells for safe-keeping. When the note was due, viz., December 17th, Etchells took the note to Zeckendorf & Co.'s place of business, and handed it to the person in charge of the main office. The person to whom it was handed directed him to Mr. Wittleshoefer, who was the book-keeper. The latter took the note and wrote the indorsement of December 17th. At that time the members of the firm of Zeckendorf & Co. were absent, as well as their general financial manager, and Wittleshoefer

was left in charge of the business. The Court below found the above facts substantially, and as a matter of law concluded that Zeckendorf & Co. were joint makers of the note and so liable without notice of non-payment by Tully, Ochoa & Co. The Court also found that Wittleshoefer was an agent authorized to waive protest and bind the firm. The appellants L. Zeckendorf & Co. seek to reverse the judgment on the ground that they were indorsers and not joint makers and that Wittleshoefer was not authorized to waive protest.

Held, If Zeckendorf & Co. are joint makers no notice and protest was necessary; but, if they are indorsers, notice, demand and protest was necessary; and it then becomes important to inquire whether notice, demand and protest were waived. Upon its face this is no other than a contract of indorsement. Tully, Ochoa & Co. are the makers. Zeckendorf & Co. are the payees. Zeckendorf & Co. wrote their name on the back of the note, and so are indorsers in blank. This was done on the date of the note. The evidence in this case confirms that. Plaintiff was willing to loan on Zeckendorf & Co.'s indorsement and not otherwise. Zeckendorf & Co. negotiated this loan—that is, discounted the note—and paid the brokerage therefor. The proceeds of the note went to them, and they, on the same day, gave Tully, Ochoa & Co. credit for the same. The transaction was no other than the ordinary discount by the payee of a note by indorsement. Tully, Ochoa & Co. owed Zeckendorf & Co., and gave their note to them, who indorsed it to plaintiff. It was not accommodation paper, nor an accommodation indorsement by a stranger to the note, and hence does not come within *Rey vs. Simpson*, 22 How., 341, or *Good vs. Martin*, 95 U. S., 90, and that class of cases. These cases hold that a stranger to a note, who indorses the same before delivery, is a joint maker of the note. While this is sustained by the weight of authority, and, as we think, by the better reason, it has met strong opposition. (See note to *Burton vs. Hansford*, 27 Amer. Rep., 580—10 W. Va., 470; note to *Jones vs. Goodwin*, 2 Amer. Rep., 475—39 Cal., 498; note to *Fitzhugh vs. Love*, 3 Amer. Dec., 571; and note to *Moies vs. Bird*, 6 Amer. Dec., 182—11 Mass., 436.) The Court below erred in holding that Zeckendorf & Co. were joint makers of the note with Tully, Ochoa & Co., and therefore liable as a principal.

Further *Held*. As first indorsers, Zeckendorf & Co. were entitled to notice of demand upon and non-payment by the makers, Tully, Ochoa & Co., unless the evidence shows that this was waived. On the back of the note in evidence, on the day of the maturity of the note, was indorsed the words, "We hereby waive protest. Signed, Zeckendorf & Co. by J. Wittleshoefer." It could not be contended that this would not be a waiver if signed by one of the firm of Zeckendorf & Co.; but it is insisted that Wittleshoefer, who wrote "L. Zeckendorf & Co." on the note, had no authority to do so. This was one of the issues of fact on the trial, and the Court found that he had authority to waive protest and bind the firm. We cannot say that this finding is erroneous. There is evidence to sustain it. The evidence was better presented before the trial Court than it can be here, and that Court can better determine disputed questions of fact. Etchells, with whom the note was left for safe-keeping, testified that he told plaintiff when the note was due to remind him and he would go and have them waive protest or pay the money; that plaintiff did remind him, and on the day the note was due he took it to Tully, Ochoa & Co. first and demanded payment, and they wrote their name on the back of it. He then took it to Zeckendorf & Co. and presented it to some one at the table in the front or main office, and he, whoever he was, directed him to Wittleshoefer, who was in the inner office. Wittleshoefer took the note and wrote the waiver of protest on the back, and handed it back to him. Nothing was said. He did not say he had no authority to do it. Wittleshoefer testified that he was the book-keeper of Zeckendorf & Co., and had been for five years; that the waiver of protest was in his handwriting; it was done in the office of Zeckendorf & Co.; Steinfeld & Strauss were out of town; in their absence he had drawn checks; that his signature was placed in the bank by Mr. Steinfeld, and in the absence of Steinfeld & Strauss he drew checks for the interest of the business. We think Zeckendorf & Co. were clearly bound by the waiver

of protest by Wittleshoefer. Had he, in the absence of the members of the firm, been found in the general office of Zeckendorf & Co. on the day the note was due, and then and there he had been served with notice of demand upon the makers and non-payment of the note, such service would have been good. (15 La. Ann., 115; 4 Duer, 212; 2 La. Ann., 964; 20 La. Ann., 377; Daniel on Neg. Instr., §1,017.) Notice served upon Wittleshoefer would have been good service; but when the service was made he waived protest and all further steps in the matter. If he were not specially authorized to do this, who should lose—his employer, or the person who found him ostensibly in charge of the business in the absence of the employer, and towards whom he demeans himself as general agent in charge, and assumes to act as such? We think the former. This disposes of all the questions in the case.

Judgment affirmed.

Johnson vs. Zeckendorf, Supreme Court of Arizona, November 5, 1886.

PURCHASE OF NOTE BY BANK—ULTRA VIRES.

The charter of plaintiff, a Wisconsin banking corporation, conferred the following powers: "Such association shall have power to carry on the business of banking by discounting bills, notes, and other evidences of debt; by receiving deposits; by buying and selling gold and silver bullion, foreign coin, and foreign and inland bills of exchange; by loaning money on real and personal securities, and by exercising such incidental powers as may be necessary to carry on such business." Plaintiff brought suit on a promissory note, which the complaint alleged had been "sold and delivered" to it by the indorser, and plaintiff's Cashier also testified that he purchased the note in question. The suit was against the surviving maker, who contended that he was not liable on the grounds: first, that the power of the bank, under its charter, in the acquisition of promissory notes, was limited to "discounts," and did not extend to the buying or purchasing of notes; and, second, that the transaction in question was a purchase as distinguished from a discount. The note in suit was for \$3,000, dated January 1, 1884, payable July 1, 1884, with interest at 8 per cent., and was transferred to the plaintiff on January 31, 1884, who gave \$3,010 for it.

Held, The transaction in question, by whatever name it may have been designated by the parties or witnesses, was a "discount" within the usual and legal acceptance of the term. But, if this were not so, the objection derives what force it possesses from the assumption that, because the bank had no right conferred upon it by its charter to purchase notes, therefore no title could be acquired by it to any notes by purchase. This proposition is not correct. In either aspect of the transaction the title to the note in question passed to the bank, and the defendant could not avail himself of any supposed want of authority to purchase this note as a defense to the action unless the transaction was absolutely void, which it certainly was not.

Judgment for plaintiff.

Neillsville Bank vs Tuthill, Supreme Court of Dakota, October 4, 1886.

LIABILITY OF ATTORNEYS FOR MONEY DEPOSITED IN BANK BELONGING TO THEIR CLIENTS.

The appellants, who were attorneys at law and partners, represented clients holding a large number of claims against the Indiana, Bloomington & Western Railway, and in payment of these claims they received checks from the Clerk of the United States District Court for the District of Indiana for something over \$80,000. These checks they immediately deposited with the Indiana Banking Company, which was then in good standing, the deposit being to the credit of themselves, in their firm name. The money thus received belonged to some hundreds of their clients, and the computation of interest and the dividend to each of his share required several days of continuous work before distribution could be made. The appellants had an account at the bank in question, in which all money collected for and belonging to their various clients

was deposited and checked out in the firm name, but such moneys were not mingled with their own. The money in controversy in the present case was the sum of \$600, which they had collected and deposited, as above, on behalf of one of their clients named Dolan, the respondent herein. Before they had time or opportunity to pay out this money it was garnished at the suit of a creditor of Dolan, and pending the determination of the suit, and while the money still remained on deposit with the Indiana Banking Company, the latter failed and a Receiver was appointed.

The Supreme Court of Indiana states the question for decision thus:

Money belonging to a client, having been received by the attorneys in payment of a claim left with them for collection, the transmission of such money having been arrested by garnishee process before an opportunity for transmitting it occurred, the question is, having acted in the utmost good faith, and without any suggestion of fault or neglect, are the attorneys responsible for the continued solvency of the bank in which such funds were deposited in their own name, but not mingled with their own funds, notwithstanding the bank was in good credit when the deposit was made?

The Court states that the receipt of money by an attorney under the circumstances disclosed in this case does not *pro facto* create the technical relation of debtor and creditor between the attorney and client. It is because it does not that a suit cannot be maintained by the latter against the former without first making a demand. Money so collected belongs to the client. The attorney occupies toward it the relation of a trustee, so long as he chooses to treat and preserve the fund as a trust fund. The circumstances under which he will be liable for its loss are precisely those which govern in the case of any other trustee. While it is preserved in its trust character, if he exercises the same caution in respect to depositing it, if a deposit becomes necessary or proper, as a prudent man would in regard to his own money, and a loss happens, he will be excused (98 Ind., 134). But the authorities agree that a trustee who either invests or deposits trust money in his own name, without in some way designating it as trust property, will be responsible for any loss that may occur to the fund while so invested or deposited (75 Ind., 557; 2 Lead. Cas. Eq., 1805). Having put the owner of the fund to the hazard of losing it, or of maintaining its trust character by such proof *aliunde* as may be available to him, the trustee thereby gives the former the privilege of treating the latter as his debtor, or of supplying the proof or accepting his admission of the facts, at his option. The Court then holds that the appellants assumed the risk that the bank in which the fund was deposited in their name, and from which it could only have been drawn by their check, would be able to respond with the money when their check for it should be presented. The fact that none but money belonging to clients was deposited in the account in which the fund in question was placed does not alter the case. The controlling consideration is that it was deposited to the credit of the firm, without anything to designate or preserve its trust character. They took and retained the legal title to the deposit in themselves. In the event of a controversy the character of the fund would have depended wholly on extraneous proof. This being so, the owner had the right to elect to stand upon the title to the deposit as he found it. Having so elected, there is no rule of law which authorizes any inquiry into the motives for so taking the title short of an express or implied direction from the owner of the fund.

Judgment holding appellants liable. affirmed.

Naltner and others vs. Dolan, Supreme Court of Indiana, September 23, 1886.

DISCOUNT OF NOTE—ASSIGNMENT—FAILURE OF CONSIDERATION.

On March 30, 1885, one S had his note for \$250 discounted by the Lancaster County National Bank. The proceeds, \$248.58, were placed to his credit on the books of the bank, and no check was drawn against that sum. On the following day S made an assignment for the benefit of his creditors, and the bank thereupon immediately credited him with the discount, \$1.42, charged him with \$250, the amount of the note, and tendered the note to S and his assignee. This tender was refused, and the assignee brought this suit against the bank for \$248.58. Judgment was rendered for plaintiff, and

defendant appealed. Plaintiff claimed that at the time of the assignment the bank owed S \$248.58, and the assignment fixed the rights of the parties. That the note was not due when the suit was brought, and there could, therefore, be no set-off.

Held, This case is ruled by *Dougherty vs. Bank*, 93 Pa. State, 227. The facts of that case are upon all fours with this. There is no substantial difference between them. It is true, in the case in hand, there was an assignment for the benefit of creditors after the discount, and before the withdrawal of the credit. But the assignee has no higher standing than his assignor. Had a check been drawn against the fund produced by the discount prior to the withdrawal of the credit such check would have been good in the hands of a *bona fide* holder for value. But there was nothing of the kind here. The rights of third parties have not intervened. We have the case of a man who procured a discount at a bank one day and made an assignment for the benefit of his creditors the next morning. He was insolvent when he procured the discount. The note which he gave the bank was a worthless thing, and he knew it when he offered it to the bank. There was an utter failure of the consideration. The bank received nothing for the credit which it gave him. When it learned next morning of his insolvency the bank withdrew the credit and tendered him back the note. It is conceded that if the rights of third parties had intervened the case would have been different. So it would have been if the bank had paid over the money to S or upon his order. But, as between the parties, the bank had the right to withdraw the credit to S.

Judgment reversed.

Lancaster County National Bank vs. Huver, Assignee, Supreme Court of Pennsylvania, October 4, 1886.

ACCEPTANCE OF DRAFT BY AGENT—WHEN PERSONALLY LIABLE.

A bill of exchange was drawn on "John A. Robinson, Agt.," by the Kanawha & Ohio Coal Co., and was accepted by the drawee as "John A. Robinson, Agent K. & O. C. Co." Suit was brought by the indorsee against Robinson personally to charge him as acceptor of the draft, and he defended on the ground that the acceptance was made by him as agent so as to bind the company and not himself individually, and that the payee knew that he was agent and accepted it for said company, as did also the plaintiff.

Held, That the acceptance was the personal obligation of the defendant, and he is personally liable thereon, and parol evidence is inadmissible, in the absence of fraud, accident or mistake, to show that the defendant accepted the bill intending to bind the drawer as his principal, and that this fact was known to the plaintiff when it became the owner thereof.

Further *Held*, The law as to notes and bills executed by persons acting as agents of other persons is not uniform; but, as a rule, where one acting as agent uses words that import a personal agreement on his part, and signs his own name, it is held to be his individual obligation, although he describe himself as agent, the added words being simply regarded as a description of his person. The rule is in conformity to precision in the use of language and secures that certainty in negotiable paper so necessary to commercial transactions. (2 *Strange*, 955; 3 *Wend.* 94.) The question has been presented and so ruled in a number of the reported decisions of this Court. (10 *Ohio*, 445; 17 *Ohio*, 215.) We fail to see how it can make any difference, in this respect, whether the party signing describes himself as agent simply or adds the name of his principal. In either case the principle upon which his liability is established, and parol testimony excluded, must be the same. The instrument upon its face is his own, and not the promise of his principal. To this rule usage has established an apparent exception, in the instance where a bill is drawn or accepted by the Cashier of a bank. But it is rather apparent than real, since the custom by which a Cashier represents his bank in such matters, by simply signing his own name, is so general that the practice has reduced the custom to the certainty of a law, as it is everywhere understood that in such cases, whether he describes himself as Cashier or not, he is an *alter ego*.

of the bank. His signature is a recognized mode in which a bank may become a party to commercial paper; and the obligation so created is that of the bank and not of the Cashier.

Kanawha Valley Bank *vs.* Robinson, Supreme Court of Ohio, October 19, 1886.

COLLECTING BANK—RECOVERY OF PAPER SENT FOR COLLECTION AFTER FAILURE OF CORRESPONDENT.

Plaintiff, a Chicago bank, received for collection from the drawers a draft drawn on one Brown, payable to the order of the plaintiff, which was accepted payable at the Middletown National Bank, of Middletown, N. Y. The draft was forwarded to the latter-named bank with collaterals attached for collection, but it was not paid. Defendant was appointed Receiver of the Middletown bank, which suspended on the 28th of November, 1884, and thereafter found the collaterals among the securities of such bank. Plaintiff, after demand, brought suit against defendant as Receiver of the Middletown bank, to recover the property entrusted to the care of its agent.

Held, The draft having been sent to the Middletown bank for collection, with the collaterals attached, it was the duty of that bank to hold them until the draft was paid, as it was equally its duty to surrender them when the draft was paid. The latter bank had at no time on this transaction abstractly considered any right, title or property in the collaterals except as the bailee of the plaintiff, and held them subject to its order. Plaintiff, having assumed the collection of the draft, was responsible to the drawers for the faithful discharge of its duties, and the Middletown bank was equally bound to the plaintiff, the latter having received the draft and collaterals charged with duties in regard to them. Nor is there any doubt that the plaintiff, having a special interest in the draft and collaterals arising from its relation to the drawers, can maintain an action against its agent, the Middletown bank, to recover the property entrusted to its care after a proper demand made for it. (Luckey *vs.* Gannon, 6 Abb. U. S., 209; Barrett *vs.* Warren, 3 Hill, 348; Campbell *vs.* Parker, 9 Bos., 322; Frost *vs.* Mott, 34 N. Y., 253; Baker *vs.* Hoag, 7 N. Y., 355; Wheeler *vs.* MacFarland, 10 Wend., 818.) Plaintiff now seeks to obtain this property from its agent, the Middletown bank, and it is quite apparent the latter had no right to detain it, and that the defendant is not justified in refusing to give it up. It did not become a part of the assets of the Middletown bank to be distributed to its creditors, and would not except upon the payment of the lien of the drawers, who could sell it and apply the proceeds to meet the draft. It went into its possession charged with a trust which has not been performed, and never became its property.

Further *Held*, That the suggestion of want of jurisdiction in the State Court in an action of this kind against the Receiver of a National bank, predicated on some of the provisions of the Revised Statutes of the United States in relation to National banks (Sections 5,234 and 5,242), is answered by the case of *Cragie et al. vs. Hadley*, 99 N. Y., 136, if any authority be necessary.

Judgment for plaintiff.

Corn Exchange Bank of Chicago *vs.* Blye, Receiver, N. Y. Supreme Court, General Term, First Department, June 1, 1886.

TAXATION OF BANK CAPITAL—IOWA.

The Board for the equalization of taxes for the city of Centerville, in proper proceedings, increased the assessment of plaintiff from \$5,000 to \$15,000. Upon an appeal to the Circuit Court his assessment was fixed at \$9,750, and a judgment rendered to that effect. Defendant appealed.

Held, The plaintiff is a banker, and the contention in the case involves the assessment of plaintiff's property employed in the banking business. He shows by his own testimony, and there is nothing contradicting his statement, that his capital employed in banking amounts to \$50,000. This sum was made up of \$25,000 in the bonds of the United States, \$10,000 in United States treasury notes, and \$2,000 in real estate, taxed as such. From the \$50,000 these other sums must be deducted, as the bonds and treasury notes are not taxable,

leaving \$18,000 taxable capital. His deposits and bills payable seem to have exceeded his cash and bills receivable in a sum exceeding \$3,000, which should be deducted from the moneys and credit, leaving something less than \$10,000 for which he was taxable in connection with the banking business. The Circuit Court found this sum to be \$9,750. The evidence sufficiently supports the conclusion of the Court. At least, it is not so without the support of the evidence that we are required to interfere, the case not being triable here *de novo*.

Judgment of Circuit Court affirmed.

Campbell *vs.* City of Centerville, Supreme Court of Iowa, October 7, 1886.

PROMISSORY NOTE—CONSTRUCTION—ESTOPPEL.

Action was brought on the following note :

HALLOWELL, January 1, 1881.

On demand after date we promise to pay to the order of John C. McClure three hundred and fifty dollars, at Hallowell, with interest. Value received.

(Sg.) D. P. LIVERMORE, *Treas'r Hallowell Gas Light Co.*

The defendant claimed: first, that the note was that of the corporation; and, second, that if it was the individual note of the defendant, the plaintiff was estopped from maintaining this action because he had previously brought suit against the corporation on the same note, and had obtained a default in the same, though not a judgment.

Held, The note must be construed to be the note of the defendant and not of the corporation. It contains no apt words showing that the parties understood it to be the contract of the corporation and not of the defendant. It nowhere appears that the defendant made the promise for the corporation. The language used expresses his own promise, and what is added after the signature is descriptive of the person. The following cases are directly in point: *Sturdivant vs. Hull*, 59 Me., 172; *Mellen vs. Moore*, 68 Me., 390; *Davis vs. England*, 141 Mass., 590.

Further *Held*, It is claimed that the plaintiff is estopped from maintaining this action by commencing an action against the corporation on the same note, and prosecuting it to a default. That action has not gone to judgment; and, to create an estoppel, it must appear that the acts of the plaintiff, relied on, caused the defendant to change his position, or take some action in regard to the note which will be injurious to him if the plaintiff shall be permitted to charge him as the maker of the note. But the case is entirely barren of any such element. It does not appear that the defendant was in any way misled, or induced to change his position to his injury, by the suit against the corporation. There is no estoppel.

Defendant defaulted.

McClure *vs.* Livermore, Supreme Judicial Court of Maine, October 1, 1886.

PRINCIPAL AND SURETY—DISCHARGE OF SURETY.

In an action against a surety on a promissory note, it was shown that after its maturity the defendant wrote a letter to the plaintiff, using this language: "You had better collect the same from F, the principal. I don't know how he is fixed now to pay, but he has been considered solvent until post-office matters came up, which I presume you have heard all about ere this." And, in response to the question, "You never gave him notice to see F, did you?" he answered: "Only in the letter after he wrote me in 1878, I told him F had some property here; that he should have collected it from him. I told him he had better get it from F if he wanted anything." The question presented for decision was whether such a notice to the holder of a note to proceed against the principal was sufficient, upon the refusal or neglect of the creditor to act, to affect or release the surety?

Held, The most advanced doctrine in this direction to be found in this country has been enunciated by the Courts of New York, Pennsylvania, Alabama, Arkansas, and perhaps Ohio; and it may be conceded that, so far

as these Courts are concerned, the rule seems settled that it is the surety's right and a part of his equity to see that the creditor makes prompt use of the remedies in his hands, and that nothing should be lost by reason of the creditor's supineness or negligence; and those Courts may be said to have established the rule that equity will compel the creditor to sue at the request of the surety, and will hold the surety discharged if the request be not complied with, subject to two very important qualifications. To invoke this rule, even in equity, it must be shown: *first*, that such failure to proceed has resulted in actual injury to the surety, which must be shown by proving that the principal was solvent when the request was made, and became insolvent subsequently; and, *second*, that accompanying the request there be an explicit notice that in case the creditor should fail to sue, the surety will thereupon hold himself discharged. (Bispham's Eq., § 339.) It may be questioned, however, if this, as an equity rule even, is not doubted as unsound by most of the Courts of this country. Giving, then, the utmost weight to the language of the surety, its weakness and insufficiency is apparent, even when tested by rules applicable in a Court of equity. The authorities substantially agree that, in the absence of a statute, the unheeded request by a surety that the creditor proceed against the principal, after the maturity of the note, and while the solvency of the principal is not questioned, will not operate to discharge the surety, although the principal afterwards became insolvent. As has just been stated, the equity rule requires that, accompanying the request to proceed, there be an explicit notice that, in case the creditor should fail to sue, the surety will hold himself discharged. No liability of the surety was released even when considered from an equitable stand-point and weighed in the balances of judicial determination of the most advanced Courts.

Further *Held*, This conclusion has been reached without the aid of a statute. Section 1681 of the Civil Code provides that a surety "may require his creditor to proceed against the principal, or to pursue any other remedy in his power which the surety cannot himself pursue, and which would lighten his burden; and if, in such case, the creditor neglects to do so, the surety is exonerated to the extent to which he is thereby prejudiced." No change is wrought affecting the liability of the surety to the creditor unless the surety "requires the creditor to proceed against the principal." The language used in the case at bar falls far short of such a requirement as is contemplated by the statute.

Kennedy vs. Martin, Supreme Court of Dakota, October 6, 1886.

PRINCIPAL AND SURETY—DISCHARGE OF SURETY—EXTENSION.

Action was brought against the principal and surety on a promissory note, and judgment was rendered for the plaintiffs. The defendant Wagner appealed, and averred that he signed the note as surety for the defendant McCallen, and that the plaintiffs extended the time of payment of the note without his consent, by reason whereof he became released. The facts proven showed that plaintiffs were the proprietors of the Lyon County Bank; that McCallen borrowed money at the bank and gave the note in question, with Wagner as surety; that some time after the note fell due he went into the bank and paid the accrued interest on the note, and also signed another note, which it was expected Wagner would sign, as a renewal note, and at the same time he paid a certain amount as discount on the renewal note; but the old note was not surrendered and was not to be surrendered unless Wagner signed the renewal note, which he never did. One of the plaintiffs testified that there was no agreement or conversation in regard to the extension of the note in suit, and nothing appeared to contradict his testimony on this point.

Held, What was done was inconsistent with the idea of the extension of the note; it was for the purpose of a renewal which would have been entirely unnecessary if there had been an agreement for an extension of the original note. Defendant contends that the payment of discount on the renewal note shows an extension of the original note, but he wholly misconceives the situation. Renewal did not take place, and for the reason that the renewal note was not fully executed. If renewal had taken place, the old note, of course, would have

been discharged, and Wagner would have had no occasion to plead a release of himself by extension. The payment of discount on the renewal note was in anticipation that it would be fully executed and accepted in renewal. But it was not fully executed nor accepted, and the discount, as the evidence shows, was applied upon the note in suit.

Judgment affirmed.

Miller vs. McCallen, Supreme Court of Iowa, October 23, 1886.

ACTION ON PROMISSORY NOTE—AVERMENT OF NON-PAYMENT NECESSARY.

In an action on a promissory note the complainant averred that the defendant "has refused and still refuses to pay" the principal or interest of the note, or any part thereof, and "that there is now due" the sum, etc. The complaint was demurred to on the ground that there was no allegation of non-payment. The demurrer was overruled. On appeal,

Held, We are of opinion the demurrer should have been sustained. The averments of the complaint are not equivalent to an averment of non-payment. The failure to pay constitutes the breach, and must be alleged (21 Cal., 71; 43 Cal., 395).

Judgment reversed.

Scroufe vs. Clay, Supreme Court of California, September 23, 1886.

PAYMENT—PRIMA FACIE EVIDENCE OF.

Possession of a promissory note by the maker is presumptive evidence of its payment. The reason that lies at the bottom of this rule is that it is the common practice of men owning notes not to deliver them to the obligor except on payment. The presumption is not simply that the debt has been released or discharged, as by accord and satisfaction, but that the money due on the note has been paid according to its tenor (13 Ark., 63; 1 Greenl. Ev., § 38).

Hollenburg vs. Lane, Supreme Court of Kansas, October 23, 1886.

PROMISSORY NOTE—PAYMENT BY JOINT MAKER—CONTRIBUTION.

It is a well-established rule, that where one of two joint makers pays a note, he may have his action for the amount which his co-obligor ought in law and equity to have paid.

Judd vs. Small, Supreme Court of Indiana, September 18, 1886.

POWER OF PRESIDENT TO BIND BANK BY ACCEPTANCE OF OVERDRAFT—CANADIAN RULE.

Plaintiff sued for the amount of \$66,011, with interest, being the amount of four checks made by one Gilman, payable at future dates. These checks were accepted by Thomas Craig, the President and Manager of the defendant, the Exchange Bank, and were subsequently discounted by the Banque du Peuple. On maturity they were presented for payment, and, being dishonored, were protested. On suit being brought the defendant met the action by setting up:

First—A general denial. Second—That if the said Craig did sign and accept the said checks he did so unlawfully and not in discharge of his duty as an officer of the bank; and, moreover, the said Craig took advantage of the position of confidence which he occupied and appropriated large sums of money, exceeding \$240,000, the property of the bank, and shortly after its suspension absconded from Canada, and is now an absconder therefrom. Third—That Craig had no authority to sign the checks, and if they were ever signed by him it was without the knowledge and consent of the Directors, and it was not for the purposes of the bank, and was beyond the scope of his powers, and was contrary to the practice and custom of banks in Canada; that the trans-

action was not in fact entered into on behalf of the bank, but was part of a fraudulent conspiracy on the part of Craig and others to obtain funds in order to acquire control over the assets of the Royal Canadian Insurance Co. Fourth—That Craig had no power to accept checks or orders for money payable at any date subsequent to the date of presentation, checks or orders being only marked good and accepted when the drawer has money or credit at the bank. Fifth—That the pretended acceptance was not an acceptance of the bank. Sixth—That the drawer of the checks had no money or credit at the bank against which the same could be drawn. Seventh—That the Banque du Peuple was aware of all the circumstances, and that Craig had no authority to accept the same, etc.

In the course of the trial it was shown that in 1881 Gilman had large transactions with the Exchange Bank. On the 19th of October of that year his account was overdrawn to the extent of \$25,000 to \$30,000. Gilman, to whom the bank had promised to make advances, exceeding that overdrawn, called upon the Manager, Craig, for fresh supplies. The latter informed him that the bank had not sufficient funds at the time to make him the promised advances, and that he must wait awhile. He then proposed to the Manager that the latter accept his check for \$30,000 payable at a further date, sufficiently distant to permit the bank to obtain the necessary funds to honor this check. The Manager acquiesced. The check was then drawn, dated October 19, 1881, and Craig, as Manager of the bank, accepted it, payable at four months—that is, on the 19th of February following. The same day Gilman discounted the check at the Banque du Peuple, and deposited the proceeds (\$29,412.23) to his credit in the Exchange Bank. When the check for \$30,000 became due renewals were made up to the 23d of May, 1883, amounting, with the addition of interest to that date, to \$31,000. This check was presented at the date mentioned to the Exchange Bank, and was paid by order of Craig. On the same day Craig procured from Gilman a new check for the same amount, and, having accepted it, Gilman took it to the Banque du Peuple, which, with the the experience it had had of the payment of the first check, did not hesitate to discount it. Three other checks, for \$20,000, \$5,000 and \$10,000 respectively, were similarly made and discounted. The Superior Court of Montreal gave judgment against the Exchange Bank for the full amount with interest and costs, including costs of protesting. From this judgment the Exchange Bank appealed, and the former judgment was confirmed.

The Chief Justice remarked that Directors were bound to know and be responsible for every act of their executive officers. The Court was unanimously of opinion that the bank was responsible for the amount, the President acting within the scope of his authority, and the bank having previously cashed a check accepted in a similar manner.

La Banque du Peuple vs. The Exchange Bank, Court of Queen's Bench (Appeal side), Canada, November 27, 1886.

OBTAINING ACCEPTANCE OF CHECKS—NOT A FRAUDULENT PREFERENCE.

This action arose out of the following circumstances: The defendant, Hall, at the date of the suspension of the plaintiff bank, on the 15th day of September, 1883, had standing to his credit on the books of the bank \$1,985. Five days afterwards he drew five checks, the aggregate of which covered this amount, and presented them for acceptance. The regular book-keeper of the bank accepted and certified them and closed up the account. These checks were then disposed of at from 93 to 97 cents on the dollar, and were subsequently presented at and deposited with the bank by parties who were its debtors in reduction of the amounts due by them. This suit was instituted to recover from the maker the amounts of the checks on the ground of fraudulent preference, to which the defendant answered that the checks were not presented for payment by him, and that he did not receive any payment for the same from the bank.

The action was dismissed, the Superior Court holding that, in view of the notorious insolvency of the bank from the 15th of September, 1883, all its accepted checks were only negotiable after that date at the risk of the purchasers

and below their nominal value; that there was a reasonable doubt respecting the bank's resumption of payment within the eighty days allowed by law; that this doubt opened the door to speculation as to the value of the checks; and that it was in the way of this speculation that third parties obtained them. The fraudulent preference was not in the accepting of the checks, but in crediting the purchasers with the amounts by which the defendant was not benefited, the purchasers having bought them with all the risks attached.

The Court of Appeal confirms this judgment.

Exchange Bank vs. Hall, Court of Queen's Bench (Appeal side), Canada, Nov. 27, 1886.

EMBEZZLEMENT BY BANK CLERK—EXTRADITION DECISION BY THE UNITED STATES SUPREME COURT.

In 1883, Ker, the plaintiff in error, who was a clerk in the employ of Preston, Kean & Co., of Chicago, embezzled a large sum of money belonging to that firm and fled to Peru, South America. Upon application from the Governor of Illinois, the President of the United States, on the 1st of March, 1883, issued a warrant for the extradition of Ker and sent it to Peru by Henry G. Julian, who was authorized to receive the accused from the Peruvian authorities and bring him to the United States to answer the charge of larceny. Ker alleges that Julian, without presenting the extradition papers to any officer of the Peruvian Government, and without making any demand upon that Government for his surrender, forcibly kidnapped him and placed him on board the United States vessel *Essex*, by which he was brought to Honolulu. There he was transferred, he alleges, to the steamer *City of Sydney* and brought to San Francisco, and then surrendered by the Government of California to the authorities of the State of Illinois as a fugitive from justice. Upon his arrival in Chicago, Ker was put on trial and duly convicted of larceny and embezzlement. He alleged that this whole proceeding was a violation of the provisions of the treaty between the United States and Peru, ratified July 27, 1874, and appealed to the Supreme Court upon the ground that the case calls in question the validity or the proper construction of a treaty. Following is the opinion of the Court:

"This Court is of opinion that if Ker had been brought to this country by proceedings under the treaty of 1874 with Peru, it is probable from the statement of the case in the record that he might have successfully pleaded that he was extradited for larceny and convicted by the verdict of a jury of embezzlement. But it is quite a different case when he comes to this country in the manner in which he was brought here, clothed with no rights which a proceeding under the treaty would have given him, and no duty which the country owes to Peru or to him under the treaty. The Court thinks it very clear that in invoking its jurisdiction upon the ground that he was denied a right conferred upon him by a treaty of the United States the prisoner has failed to establish the existence of any such right. The question of how far his forcible seizure in another country and transfer by violence could be made available to resist trial in the State Court for the offense now charged upon him is one which this Court does not feel called upon to decide, since in that transaction the Court does not see that the Constitution or laws or treaties of the United States guarantee him any protection. The Court holds, however, that this decision does not leave the prisoner or the Government of Peru without remedy for his unauthorized seizure within its territory. Even the existing treaty with that country provides for the extradition of persons charged with kidnaping, and on demand from Peru, Julian, the party guilty of it, could be surrendered and tried in its courts for violation of its law. Ker himself would probably not be without redress, for he could sue Julian in an action of trespass and false imprisonment, and the facts set forth in the plea would, without doubt, sustain the action. Whether he could recover a sum sufficient to justify the action would probably depend upon the moral aspects of the case, which we cannot here consider. The judgment of the Supreme Court of Illinois, sustaining the decision of the Criminal Court of Cook County against the prisoner, is affirmed."

Opinion by Justice Miller.

Frederick M. Ker vs. The People of the State of Illinois, Supreme Court of the United States, December, 1886.

POWERS OF BANK CASHIERS.

Continued from page 978, December, 1886, number of the JOURNAL.

XII. Power to Borrow Money on Behalf of the Bank.—The law is well settled that every banking corporation, unless prohibited by law, can incur obligations, as a borrower of money, to carry on the legitimate business for which it was incorporated, although not specially authorized to borrow by its charter or organic law. (12 S. & R., 256; 16 Mass., 94; 7 Wend., 31; 6 Humph., 515; 1 Sandf. Ch. Rep., 283; 1 Seld., 647; 2 Id., 412; 3 W. & Minot, 105; 1 Smedes & M. Ch. R., 207; 4 Hill, 442; 1 Cow., 518; 3 Wend., 94; 15 N. Y., 9.)

This rule applies as well to National banking associations as to others. This power being undoubted, the question arises as to how far the Cashier has authority to exercise it. Is it a power inherent in his office to be exercised by him without any special delegation of authority from the Board of Directors, or must such authority be conferred either by express authorization or impliedly from acquiescence in previous acts?

Although it has been frequently claimed that the Cashier of a bank, as such, has no power to borrow money for the bank; that this is a power intrusted exclusively to the Board of Directors, and that a Cashier, or any other agent, undertaking to exercise such a power, must produce a special authority from the Board of Directors for that purpose, still there is very good authority which holds that this power may be exercised by a Cashier in behalf of a bank without being specially conferred, and that it is one of those powers which fall within the ordinary duties of his office.

In the case of the City Bank of New Haven *vs.* Perkins, 4 Bosw. (New York Superior Court), 420, it was shown that the Cashier had almost the exclusive management of the business of a bank—so absolutely so that his operations and mode of doing business had not been examined into by the Directors for years. Among other things he had borrowed money for the bank, and a suit having arisen on a loan thus made his authority so to do was then denied. The Court held, however, that under such circumstances the plaintiffs were entitled to have the controversy determined on the principle that, as between them and the bank, the Cashier of the latter was fully authorized to borrow money for it and in its name, and that any loan made by the plaintiffs in good faith on an application of the Cashier of the bank, as such Cashier, to borrow for it, was a loan to the bank, and the bank was primarily liable as the party borrowing.

In the case of Barnes *vs.* The Ontario Bank, decided by the New York Court of Appeals, 19 N. Y., 152, among the questions presented was whether the bank had power to borrow the money in suit, and whether the Cashier was a proper agent to execute that power without any special delegation of power thus to act. The Court stated that it had been previously determined by the Court, upon the fullest examination, in the case of Curtis *vs.* Leavitt, (15 N. Y., 9), that the power to borrow existed, and held that the question as to whether "the Cashier, in virtue of his general employment, can exercise the power does not admit of a reasonable doubt."

In Ballston Spa Bank *vs.* Marine Bank, 16 Wis., 120, where money had been borrowed on a note executed for a bank by its Cashier to use in its business, and the bank, being sued, claimed that the Cashier had no authority to borrow the money and execute the note, the Court held that it was competent for the Cashier, as agent of the Board of Directors, to execute the promissory note in question and bind the bank by such execution. The Court did not determine the question whether the Cashier had absolute or *prima facie* authority by virtue of his office to borrow the money, or whether it was necessary for the plaintiff to give evidence that he was expressly authorized by the Board of Directors, holding that the transaction had been subsequently ratified by the bank, and that this was equivalent to a previous express authority.

In Ringling *vs.* Kohn, 6 Mo. App., 333 (decided in 1878), the Court affirmed the power of a Cashier to borrow money on behalf of the bank, saying: "We find no judicial authority for the proposition that, when a

Cashier borrows for his bank, the lender will be imperilled unless a special power has been given. The case will be different, of course, if it appear that the lender has notice that the Cashier is acting contrary to orders." The Court, in reaching its conclusion that the Cashier has such power, states that cases are numerous in which it is held that the Cashier of a bank may, by virtue of the general nature of his employment, transfer to outside parties any of the notes, bills, or other securities belonging to the bank, and the transferees need look no further for his authority so to do than to the fact of his being Cashier (citing 4 Mich., 606; 4 McLean, 208; 21 Ind., 90; 41 Barb., 586; 3 Mason, 505), and that surely these acts imply a far higher degree of authority than does that of borrowing; for, in the first case, the bank parts with its property, while, in the second, there is a present swelling of the assets.

Also, in the late case of *Donnell vs. Lewis Co. Savings Bank*, 80 Mo., 165, it is held that the power of a Cashier to borrow money on behalf of the bank need not be specially conferred, and that, if done in the ordinary course of his business, it is presumably done within the scope of his duty; and in another late case—*Peters, Receiver, vs. Brown and others*, in the United States Circuit Court for the District of Maryland, decided in July, 1886 (reported in RHODES' JOURNAL OF BANKING for 1886, at page 871)—the rule is laid down, not only that a National bank has the power, under its charter, to borrow money, but that a Cashier of such bank, who has long conducted and managed its affairs, can bind the bank by such a contract, holding that any want of specially delegated authority by the Board of Directors was supplied by the acquiescence on their part, to be presumed from a long continued course of borrowing by the Cashier.

As to the matter of borrowing, therefore, it may be said that not only does this power undoubtedly exist in banking corporations, whether specially conferred or not, but the rule is also fairly well settled that the Cashier has power to borrow money on behalf of the bank, either by virtue of his office or from previous exercise and acquiescence. This power would seem to carry with it, also, the power to pledge the assets of the bank for the payment of the money borrowed.

Ordinarily the power to pledge the assets of the bank for any past indebtedness does not exist among the inherent powers of the Cashier. Thus, it has been held that although a Cashier and President of a bank may, in the ordinary course of business, without the action of the Board of Directors, dispose of the negotiable securities of a bank, yet they have not the power to pledge its assets for the payment of an antecedent debt. This is entirely beyond the scope of the duties of a Cashier, as he might, by this means, dispose of all the assets of the corporation, thus usurping powers which the Board of Directors alone can exercise.

State of Tennessee vs. Davis, 50 How. Pr. (N. Y.), 447.

And in an early case in the equity Courts of New Jersey, where the President and Cashier of a bank executed a mortgage of the banking house and property for an indebtedness of the bank, and it was shown that the whole management of the bank's affairs was committed to the President and Cashier, and the bond and mortgage were executed and the corporate seal affixed by them without the concurrence of the Board of Directors after an attempt had been made to get a meeting of the Directors, which had failed, the Court held that the transaction was one of rare occurrence, that the conveyance of its real estate was one of the most solemn acts which the bank could perform, and that the President and Cashier had no power to execute the bond and mortgage.

Leggett vs. New Jersey Manufacturing and Banking Co., 1 N. J. Eq., 541.

But, in a case where money has been borrowed for the purposes of the bank, the Courts seem to regard the power to pledge the assets as included in the power to borrow. Thus, in *Peters vs. Brown*, *supra*, the Court not only asserts the power to exist in a National bank, under its charter, to borrow money, but also to "pledge its assets as collateral to secure repayment thereof," and the Cashier is declared to have such power in this case by

the acquiescence of the Board of Directors in past transactions of a similar nature.

So, in *City Bank of New Haven vs. Perkins, supra*, the Cashier not only borrowed money for his bank, but pledged certain bills, the property of the bank, as collateral, and the transaction was upheld.

As a general rule it may be, therefore, said that the Cashier of a bank has power, unless specially restricted, to borrow money on behalf of the bank, and to secure its repayment by a pledge of its assets as collateral.

LAW NOTES AND COMMENTS.

We can review with satisfaction the work of the Law Department for the past twelve months. Our object has been to keep the JOURNAL's subscribers fully informed through the medium of this Department of all legal questions arising in the various Courts affecting their interests, as well as in other ways to furnish legal advice and assistance in matters arising in banking law and banking practice.

The law relating to banking and negotiable paper is constantly undergoing changes and modifications, as well as a considerable degree of expansion, at the hands of the various Legislatures and Courts, and it is of great necessity that the banker in active practice should be kept fully posted upon all such matters. In no other department of business is a knowledge of the law so important or a mistake so likely to be followed with disaster and loss.

Questions of when paper falls due, of the proper mode of presentment, protest, and notice of dishonor, of liability for collections, and a hundred others of similar import, are frequently, in new and unexpected cases, puzzlers even to experienced bankers, and it needs no argument to show how important it is for the banker to keep fully advised of everything that the Courts and Legislatures are doing in these and all other matters affecting his business.

During the year 1886 we have published a very large number of current legal decisions on questions affecting bankers. To attempt to enumerate all the different subjects which have been handled and determined by the Courts, or to adequately describe all the different cases which have been reported in our pages, would be impossible in any brief statement, and we would simply state that we believe the importance and value of such a full record of cases has been fully appreciated.

Another branch of the work of the Law Department which we are justified by numerous letters of approval in stating has been valuable and beneficial to our subscribers has been that devoted to the replies to questions of bankers and others. Many of these replies have involved considerable labor and research into the laws of different States, and in all cases we have endeavored to give complete and satisfactory answers to the inquiries of subscribers.

The Law Department will be continued, as heretofore, except that it will be enlarged in scope, and some additional features introduced. We shall publish a full record of current legal decisions affecting bankers, and our pages will be open, as in the past, to the publication of questions and replies on matters of general interest. With reference to these replies, no effort will be spared to make them full and satisfactory; and, to enable their preparation in time to appear in any given number of the JOURNAL, questions should be sent in as early in the preceding month as possible. The series of articles on the important topic of the "Powers of Bank Cashiers" will be continued until the subject is exhausted. Under the head of "Law Notes and Comments" there will appear, at different times throughout the year, in addition to current legal news and comments upon decisions, short articles on important legal questions of interest to bankers wherein the law is unsettled or conflicting.

Space will also be given in the Law Department for the publication of a digest of current mercantile decisions, which we hope will prove valuable to all the JOURNAL's readers.

BANKING AND POLITICS.—A curious and novel method of what might be termed political banking has just been disclosed by the recent decision of Judge Morse, of the Supreme Court of Michigan, in the case of *The People against Wadsworth*, decided by that Court on November 4, 1886. The action was

against the defendant Wadsworth, as the managing member of the banking house of D. F. Wadsworth & Co., private bankers, and charged him with the embezzlement of the money of the city of Ishpeming, by reason of city taxes having been deposited in the bank, which were partly lost when the bank made a general assignment for the benefit of its creditors. These moneys had not been kept or deposited as a separate fund, but were treated as other cash deposits, and were paid or loaned out the same as other moneys. The Court found the defendant not guilty of any embezzlement, holding that the moneys so deposited were loaned to the bank, that the relation of debtor and creditor was created, that there was no intent to defraud, and that Wadsworth was not obligated to return the identical money deposited, but the bank was simply liable for that amount of money to the city.

The political part of the case, however, to which we call attention, not because it is in any way criminal, but by reason of its novelty, may be best stated in the language of Judge Morse. He says:

"The undisputed facts will be found to disprove any embezzlement under the law. John Dillon was elected City Treasurer of Ishpeming for the year 1883. He had held the office two terms immediately previous thereto. It seems that a peculiar method of electing this officer prevails in Ishpeming. The candidate is nominated and elected upon his running qualities—his capacity to get votes—but the money to secure such nomination and election is put up by some bank, which also furnishes the bonds. After the election the candidate elected qualifies, and there his duties begin and end. The taxes are paid into the bank, and collected and disbursed by it. The Treasurer has no further concern about the matter, and is, of course, entirely ignorant of the duties of his office. The bank pays to him the fees allowed by law, and the profits made by the use of the money thus necessarily deposited in the bank seems to be a sufficient remuneration to the bank for its trouble and expense in the matter. Nobody can suffer any material loss under this arrangement except the public. While it may seem a novel method, it certainly relieves the Treasurer of a great responsibility, and renders his administration of the office an easy one, with the same pay as if he performed the duties himself; and the bank fortunate enough to elect its candidate presumably has the means thereby at hand to repay its election expenses and make a handsome profit besides."

In this case, Dillon testified that he knew absolutely nothing of the duties of his office, although he had been Treasurer for nearly three years. The first two terms of his office he was elected and served the people in the manner above indicated, and all seemed to go well. Wadsworth collected the money and kept the books. He stated:

"I suppose Wadsworth was to account to other people who were entitled to the tax money. I was not to do anything myself. I did not know anything about the duties of the City Treasurer. I was elected. Mr. Wadsworth got my bond. I did not do anything there about assuming the office. I did not receive any books or any money. I suppose Mr. Wadsworth received them."

This is the most novel enterprise in banking of which we have heard. The bank in this case was the *de facto* Treasurer of the city of Ishpeming. It gave bonds, it received payment of the taxes, it kept the books pertaining to the office, and paid out the money. The nominal Treasurer elected by the people was a mere dummy, knew nothing of the duties of the office, and did nothing as Treasurer except to receive the fees allowed by law. There is only one improvement which we might suggest, and that is the enactment of a law permitting banking corporations to hold public office and making them capable of election to such positions. If this were done the fees which would otherwise be payable to the dummy would be saved.

LIABILITY OF COLLECTING BANK.—Another case has been added to the list of those which hold that a collecting bank is liable for the acts or defaults of the correspondent to whom it transmits paper for collection which it has itself received for that purpose. This decision is by the Supreme Court of Michigan, and sets at rest the law in that State. We publish a full abstract of it in this number, as the question is of great importance, and is one upon

which the Courts of different States hold directly opposite views. In some of the States a bank that receives paper for collection is bound only to use proper care in the selection of a suitable agent, and, when it has done this, its liability ends for the acts or defaults of the correspondent to whom it forwards the paper, while in others the rule is upheld, as in the present case, that a bank which takes paper for collection payable at a distant place is directly liable to the owner for any neglect or default of any of the subsequent banks through whom the paper is transmitted. The theory of this latter rule is that the bank taking the bill or note for collection contracts to collect it, or to take the necessary steps to preserve the liability of all parties should it be dishonored, and that the instrumentalities through which it carries out its contract are a matter of no concern to its customer, but the parties it employs are its own agents, selected by and amenable to it for any negligence or omission.

In the present case a Michigan bank had received paper for collection payable in Vermont, and had transmitted it to a bank in that State for that purpose. The paper had been paid to the Vermont bank, and the latter remitted its draft on New York for the proceeds. Shortly thereafter it failed and its draft was not paid, and the question to be decided was whether the bank, or the customer, in such case, should bear the loss.

The opinion of the Court discusses and determines the law of the State as to the liability of the bank in such a case; but, as the facts were not fully brought out in the suit, it was sent back for a second trial.

One of the questions presented by the facts of the case, which the Court did not discuss, probably reserving it for a second trial, was as to how far the defendants were released from liability by a notice which was printed in plaintiff's pass-book, stating that they would not be liable for the laches or acts of agents to whom they sent drafts for collection, and as to which the plaintiff testified he had not seen until the transaction was ended. Conceding that, if no such agreement existed, defendants would be absolutely liable to their customer for the amount collected by their agent, did not this notice, existing in his pass-book, bind him to its terms? This is a very important question for bankers to have definitely settled. In view of the law of many States, holding banks actually liable for the acts of their correspondents, the practice has become frequent for banks to insert on their letter-heads, or in their customers' pass-books, notices that they will not hold themselves liable for anything more than due care in the selection of suitable sub-agents. Such a notice appeared to have existed in the plaintiff's pass-book in the present case; but it will be observed that the Court, in discussing the main question as to defendants' liability, simply holds that a bank taking a draft for collection is responsible for the acts of its correspondents, and does not consider whether a notice, such as was testified to, is sufficient to relieve the bank from such liability. This seems to us to be a very important element in the case, and will probably be considered when the case again comes before the Court.

REPLIES TO LAW AND BANKING QUESTIONS.

The Editor of the Law Department of RHODES' JOURNAL OF BANKING will answer Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest as to warrant publication in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail—and which are not to be published.

Editor Rhodes' Journal of Banking:

DENVER, Colo., December 13, 1888.

SIR:—Is a note or other negotiable paper payable, say, ninety days after date, bearing interest, due and payable at the end of such time without grace if the payer prefers it, or does he have to wait until the end of the three days grace if the holder of the paper insists? The paper, for instance, matures December 1-4. Can he legally pay the same December 1st, without paying interest for the extra three days?

A DENVER SUBSCRIBER.

Answer.—All paper which, under the law, has three days of grace, does not become due and payable until the last day of grace. If it bears interest, the holder is entitled to the interest for the full period, including grace, and

the payer cannot relieve himself from this obligation by offering to pay principal and interest, at the end of the ninety days, for that period. The obligation is to pay interest till maturity, and the paper does not mature until the third day of grace.

Editor Rhodes' Journal of Banking:

HUDSON, Wis., December 6, 1886.

SIR:—Should we protest the note of a customer of our bank (he having funds sufficient to pay the same in the bank) without special instructions from him to pay; or, in other words, would we be justified in paying the note without notifying him that we had done so, and charged the amount to his account? A. E. J.

Answer.—The weight of authority is to the effect that a bank is justified in applying the funds of a depositor to the payment of his note made payable at such bank without any special instruction from him, although we are not aware of any decision in Wisconsin on the point.

Editor Rhodes' Journal of Banking:

SPARTA, Tenn., December 9, 1886.

SIR:—Is it binding upon the indorsers for us to protest a note (the indorsers and maker each residing in the city where this office is located) by placing notices in the post-office? Would it be if the maker had previously (to maturity) made an assignment? BANKER.

Answer.—In the absence of any statute in Tennessee permitting notice of dishonor to be deposited in the post-office where the parties reside in the same town, the general rule of the law merchant would apply that the indorsers are entitled to personal notice, verbal or written, or written notice delivered at their residences or places of business. We do not think the indorsers would be held in the present case were the notices deposited in the post-office, unless it could be proved that they were delivered within the time required. The fact that the maker had made an assignment would not dispense with the necessity of giving notice (5 Leigh, 522), nor make any difference in the manner of giving notice to the indorsers.

Editor Rhodes' Journal of Banking:

LOUISIANA, MO., December 11, 1886.

SIR:—A, who is a regular customer of this bank, but not financially responsible, comes in after banking hours, presents the check of a well-known, responsible and honorable business man on a local bank, endorses the same, asks for the cash, and is paid. The following day, when the check is presented at the bank on which it is drawn, payment is refused, the drawer having stopped payment. The check was given for the purchase price of a stock of merchandise—which was attached the evening following the giving of the check—in the hands of the drawer, who chose to stop payment of his check rather than fight an attaching creditor. The check was of such a character that it would be taken in the course of business by any one acquainted with the responsibility of the drawer. Had not the check all the attributes of negotiable paper, and cannot the bank recover from the drawer of the check? If not (as held by good lawyers) what protection have banks? Why are not all checks drawn "For value received," and made negotiable? CASHIER.

Answer.—Generally, we believe the rule to be that (as well in the case of a check as an inland bill of exchange) a *bona fide* indorser for value, before maturity, without notice of any want of consideration, takes the same free from the equities existing between the drawer and payee, or other prior parties, and can enforce its payment from the drawer or prior indorsers. (Keene *vs.* Beard, 8 C. B. U. S., 372; Fuller *vs.* Hutchins, 10 Cal., 523.) And ordinarily, in a case like the present, we think the holder could recover the amount from the drawer. But the difficulty in the present case is that, under the decisions and statutes in Missouri, no instrument, except a bill of exchange, is negotiable unless it contains the words "For value received." Thus, in the case of Lowenstein *vs.* Knopf, 2 Mo. Appeal Reports, 159 (decided in 1876), it is stated that the Missouri statute defines negotiable paper and ascertains its qualities, and the provisions of this statute (and not the provisions of the Statute of Anne), must be looked to to determine whether

paper is negotiable or not; and it is held that no other instrument except a bill of exchange wanting the words "value received" can be negotiable in Missouri, and this for the sufficient reason that no other instrument is, by the statutes of that State, declared to be negotiable without this express feature.

Also, in *International Bank vs. German Bank*, 3 Mo. App., 362, where a certificate of deposit did not contain the words "for value received," it was held that these words were essential to impart the quality of negotiability to mercantile paper in this State (citing 61 Mo., 219); that title to the certificate might be passed by indorsement and delivery, or by delivery alone in case of an indorsement in blank, but the transferee would take subject to all equities.

Under these decisions, therefore, the check could not be considered as negotiable so as to hold the drawer liable to a *bona fide* indorsee for value, as it did not contain the words "for value received," unless the claim could be successfully made that the check was in effect an inland bill of exchange and as such did not require these words to be negotiable.

Editor of Rhodes' Journal of Banking:

WILLOUGHBY, O., December 21, 1886.

SIR:—In the December, 1886, JOURNAL, at page 981, in your reply to a subscriber signing himself "Discount Clerk," you state in answer to his first question that, "It has been held that the indorsement of a note to A. B., Cashier, is sufficient to vest the title thereto in the bank of which he is Cashier." Will you kindly refer me to the decisions wherein it has been so held?

S. H. SMART, Cashier.

Answer.—The decisions holding that the indorsement to a party as Cashier is sufficient to vest the title to the paper in the bank of which such party is Cashier are collected in the article on "Powers of Bank Cashiers," (XI. *Manner of Indorsing the Negotiable Paper of the Bank.*) in the October number of RHODES' JOURNAL OF BANKING, at page 802. Among the decisions there given are *Baldwin vs. Bank of Newbury*, 1 Wall., 234; *Pratt vs. Topeka Bank*, 12 Kan., 570; *Robb vs. Ross Co. Bank*, 41 Barb., 591.

Editor Rhodes' Journal of Banking:

SHELDON, Iowa, December 6, 1886.

SIR:—Will you be kind enough to enlighten us upon the following, and oblige one of your Iowa subscribers:

\$100.00.	SEATON, Iowa, November 10, 1886.
BANK OF SEATON.	
Pay	John Smith or order
One hundred	Dollars
in Chicago exchange.	
GEORGE L. SMITH.	

The above is an exact copy of the check I wish to know about. The check came to the Eagle Bank, of Seaton, from a National bank in Chicago, and was properly endorsed. The Eagle Bank took the above check to the Seaton Bank (within same town), and the Cashier of the Seaton Bank refused to pay the exchange to us, but offered one of their Chicago drafts for the amount, viz., \$100. Now, I particularly wish to know whether I could not compel the Seaton Bank to pay the exchange, together with the \$100; or, if I am forced to take his paper and thus pay him the exchange. Can't I take the cash and deal at another bank if I so desire?

The Cashier of the Seaton Bank said it rested with the word "in" Chicago exchange. Had it been "with" Chicago exchange he would have paid us. By ventilating this in your next issue you will greatly oblige

SUBSCRIBER B.

Answer.—It is held by writers of accepted authority that where a draft is made payable "in exchange" on a given place it is payable in a bill of exchange on that place, and not in money. The drawee can tender the bill of any banker of good credit, or may settle for cash on terms satisfactory to the holder. He cannot, however, tender his own draft, as that would not be a payment but a mere substitution of his own obligation for the draft presented. If the draft had been payable "with exchange on Chicago," cash could have been demanded by the holder, but, being payable "in exchange,"

we are of opinion that the drawee would sufficiently comply with its terms by tendering any reputable banker's bill on Chicago, other than his own, for the amount of the draft.

Editor Rhodes' Journal of Banking: GRAND RAPIDS, Mich., December 20, 1886.

SIR:—On December 9th we received for collection from our correspondent in Chicago a check dated December 2d, payable to order, drawn by Jno. Brown on a local bank, given to Wm. Smith, who had it cashed at a New York bank. This bank turned it over to our correspondent. We passed the check, regularly endorsed by us, through the Clearing-House. The check was returned to us by a messenger, who stated that the reason of refusal was the non-indorsement of payee. Our correspondent's instructions are to protest all paper unless otherwise ordered. We protested the check for non-payment. The bank here claims we should not have protested, as it was not customary, and asked us to refund fees. I claim, inasmuch as we were the last holders of the check, with above instructions from our correspondent, that it was our only recourse for safety, for, in case the payee's indorsement could not have been procured, we would have been held.

Will you please inform us through the JOURNAL what the proper proceeding will be in such cases. KENT COUNTY.

Answer.—A check payable to order, but undorsed by the payee, passes through the hands of subsequent parties, who transfer it by their indorsements, and is received by our correspondent for collection. When presenting it to the bank upon which it is drawn that bank properly refuses payment on the ground that the payee has not indorsed it, and the question arises whether any necessity exists for protesting the check and giving notice to the indorsers? Of course, if the subsequent indorsers would be released if protest was not made, and notice given, the protest would be properly made; but, in this case, was protest and notice necessary to hold them?

An indorser of a bill or note engages by his indorsement, among other things, that it is genuine and valid, that the ostensible parties are competent, and that he has lawful title to it and the right to indorse it, and it is well settled by the authorities that, if it turns out that any of these engagements are not fulfilled, the indorser may be sued for the recovery of the original consideration which has failed, or be held liable as a party without proof of demand and notice. (Daniel on Neg. Instr. § 664a and cases cited; Cochran vs. Atchison, 27 Kansas, 728 [1882]).

In the present case, as the payee did not indorse the check, none of the subsequent parties through whose hands it passed acquired or gave any title to it; and it would seem, therefore, that a failure to protest and give them notice of the non-payment of an instrument to which they never had or gave any valid title would not release them from liability for any consideration which they may have received in exchange therefor, and protest would not be necessary.

Editor Rhodes' Journal of Banking:

PORTSMOUTH, O., December 14, 1886.

SIR:—Will you please give us through your valued magazine your opinion as to the proper time for protesting the following note:

\$279.86.

WINFIELD, Ky., October 1, 1886.

Ninety days after date I promise to pay R. B. Lloyd or order two hundred and seventy-nine dollars and eighty-six cents for value received. To be run sixty days after due at 8 per cent. Negotiable and payable at the Deposit Bank of Winslow, Ky.

B. F. VINCENT.

Indorsed:

R. B. LLOYD,

O. O. SCHLEIFER.

By giving this question your attention you will greatly oblige

L. & V.

Answer.—The above note, being made and payable in Kentucky, is governed by the laws of that State. The question is as to when the note matures. Although there is no statute in Kentucky providing for grace on promissory notes, three days are probably allowed by custom. The note is, by its terms, payable ninety days after date, with an extension of sixty days after due. Bills

and notes falling due on a Sunday or holiday are payable on the day preceding. Without the extension, the day of maturity (93 days from October 1, 1886) would fall on Sunday, January 2, 1887. The day preceding, January 1, 1887, is a holiday, and it would be payable on Friday, December 31, 1886. Now, should the extension of sixty days run from this latter date or from January 2, 1887? This is a difficult question to answer authoritatively, and if the liability of any indorser depends upon its proper presentment we would advise our correspondent to consult Kentucky counsel as to any local custom regulating the maturity of this peculiar form of note. It might be argued in support of the claim that the note matured sixty days after December 31, 1886, that that date would be its day of maturity did it contain no extension, and that the words "to be run sixty days after due" implied sixty days from the time it would become actually due and payable were no extension inserted. On the other hand it might be claimed that the note promised to pay 93 days after date, with an extension of 60 days from the expiration of the first period, and as by its terms payment was not contemplated until the period of 60 days had elapsed, the sixty days should be counted from January 2d and not from December 31st. In support of this argument the matter of the payment of any promissory note entitled to grace might be cited in a case like the following: A promissory note is made payable 90 days from date in a State where the law provides that paper maturing on a Sunday shall be payable on the day preceding. The ninetieth day falls on Sunday. Were no grace allowed it would then fall due and become payable on the 89th day. But the law steps in and says that the maker shall have extension of three days to pay the note. Now these three days are reckoned from the 90th day, notwithstanding it falls on Sunday, and not from the 89th day; and likewise, in the present case, the extension of 60 days from the period when it would otherwise become due should be taken from the actual date, though it happens to be Sunday, and not from the date on which it would be payable were there no extension. In other words that, although a note payable 90 and 3 days from date by reason of a holiday and Sunday occurring at the end of that period would be payable on the 91st day, yet, where the note provides that it is to be run 60 days after due, the 60 days should be counted from the 93d and not the 91st day, because in reality it is not due till the expiration of the whole period. On this theory the note would fall due 60 days from January 2d, viz., Thursday, March 3, 1887.

We would like very much to get the views of any of our Kentucky subscribers as to the date when the above note should be presented for payment, and protested if not paid.

DIGEST OF RECENT DECISIONS IN COMMERCIAL LAW.

ASSIGNMENT FOR BENEFIT OF CREDITORS—DUTY OF ASSIGNEE.—An assignee for the benefit of creditors is not authorized to pay out from the trust funds in his hands money for the conduct of a farm belonging to the estate. Cases might arise in which it would be proper for an assignee to expend trust funds in his hands, even in conducting the business of a farm—as where there was a growing crop at the time the assignment was made, which ordinary prudence would dictate to him should be preserved; but no such facts appear in this case. It is the duty of such an assignee to convert the assigned property into money at the earliest practicable period and not to carry on the business in which his assignor may have been engaged; and if he fails to do this, and takes the responsibility of expending money in the conduct of the business, he must be prepared to show that in this he exercised that ordinary prudence and care incumbent on such a trustee; otherwise he must be held responsible for the expenditure improperly made. [*Wynne vs. Simmons Hardware Co., Supreme Court of Texas, October 22, 1886.*]

FRAUDULENT RESERVATION.—Where an assignment for the benefit of the creditors of an insolvent debtor, after providing for the payment of the creditors who should assent thereto, made provision for the payment to the assignor of any surplus, *Held*, The reservation of the surplus to the grantor stamps the deed as constructively fraudulent. The grantor prefers himself to a dissenting creditor.

An insolvent debtor can reserve no use or benefit to himself out of the property assigned. He may stipulate for a release, but he must dedicate all his property not exempt by law to the payment of all his creditors; not necessarily to the payment of all in equal proportions, for he may prefer such as will execute releases, but the deed must provide for the distribution of any surplus that may remain in the hands of the trustee after the payment of the preferred creditors among the other creditors whether they assent or not. If the assignment is valid its provisions, including the return of the surplus to the maker, ought to be enforced in a Court of equity; yet this might prevent the Court from letting in the non-assenting creditors on the surplus. The deed being fraudulent on its face was a sufficient ground for an attachment. [*McReynolds vs. Dedman, Supreme Court of Arkansas, October 9, 1886.*]

PARTNERSHIP—SALE OF REAL ESTATE—RIGHT OF DOWER.—Where partnership real estate was sold to enforce the payment of the vendor's lien for the purchase money and to coerce the payment of the partnership liabilities, and the widow of one of the deceased partners claimed dower in the property, *Held*, That the sale passed the title; that the lien of the vendor existed and was enforced by the sale; and, besides, the other debts being partnership liabilities, no right to dower attached; that on both or either of these grounds the wife is barred of dower. [*Sherley vs. Thomasson's Ex'r, Court of Appeals of Kentucky, September 25, 1886.*]

VERBAL CONTRACT FOR SALE OF LAND—STATUTE OF FRAUDS.—Where a sale of land was by verbal contract, and no written evidence of the sale had ever been executed by the vendors, *Held*, That such sale, being within the Statute of Frauds, bound neither the vendor nor vendee; that the vendor could not be compelled to complete the contract by making a deed, nor could the vendee, although put in possession of the land by the vendor, be compelled to accept a deed to the land and pay the purchase price for it; that the contract of purchase, to be binding on either party, must be mutually binding on both. [*Fite vs. Orr, Court of Appeal, Kentucky, October 15, 1886.*]

TELEGRAPH COMPANY—NEGLIGENT DELIVERY OF MESSAGE—STATUTORY PENALTY.—Action to recover the statutory penalty of \$100 for negligent delivery of telegram. The defense was that the plaintiff had not exhibited his demand within 60 days from the time he sent the message. The message was received for transmission subject to the following condition: "The company will not be liable for damages in any case where the claim is not presented in writing within 60 days after sending the message." *Held*, The notice of which the company stipulated was of a claim for damages. The only claim to notice to which the company was entitled under the clause in question was of a cause of action sounding in damages—not debt for a penalty. The condition that the company should receive notice of a "claim for damages" did not include the statutory penalty. The case of the *Western Union Telegraph Co. vs. Jones*, 95 Ind., 228, where the contrary is held, disapproved. [*Western Union Telegraph Co. vs. Cobbs, Supreme Court of Arkansas, October 9, 1886.*]

CONDITIONAL SALE—PASSING TITLE.—In the absence of fraud, an agreement for a conditional sale is good and valid, as well against third persons as against the parties to the transaction; and a bailee of personal property cannot convey the title, or subject it to execution for his own debt, until the condition on which the agreement to sell was made has been performed. [*Harkners vs. Russell & Co. United States Supreme Court, November 8, 1886.*]

FRAUDULENT CONVEYANCE—PREFERENCE—"BOOMING" AN INSOLVENT CONCERN.—Where a creditor of an insolvent firm, whose insolvency was known to him, but not to the public generally, made frequent loans to the firm to keep them going, and "to boom" their business, under promise of preference in case of ultimate failure, and thus enabled them to extend their business and obtain large quantities of goods on credit, and the condition of the business was such that the creditor must have known to a certainty that failure was inevitable, and that, by continuing, the firm would inflict losses upon others of whom they should obtain credit, and where the firm, having obtained goods on credit, turned them over to

this creditor in payment of his demands, leaving nothing for the other creditors, *Held*, The transfer of the goods will be deemed fraudulent and the preference was unlawful. One may give aid and credit to an embarrassed person, firm or company for the honest purpose of helping over difficulties *reasonably supposed to be not insuperable*, and yet be entitled, in case of disaster, to receive a preference in respect to the credit so extended. But this plainly was not such a case. If it can be believed that the creditor looked for a successful outcome of the firm's business, or had any faith in them, beyond a reliance on their promised fidelity to him, it was an excuseless trust against which his own intelligence ought to have warned him at every step. He cannot, therefore, be permitted to divert the consequences from himself to others whom his conduct contributed so directly to injure whether the part which he played was one of perfidy or folly. [*Kreppendorf vs. Hyde, United States Circuit Court, District of Indiana, October 4, 1886.*]

STATE STATUTE—CONSTRUCTION OF BY STATE COURT—WHEN BINDING ON FEDERAL COURT.—The construction of a State statute by the Supreme Court of the State, where the question is one of local statute and not of general commercial law, is binding upon the Federal Court. [*Raymond vs. Parish of Terrebonne, United States Circuit Court, Eastern District of Louisiana, 1886.*]

INSOLVENT DEBTOR—CARRYING ON BUSINESS IN WIFE'S NAME—FRAUD.—Under statutes which permit a married woman to have a separate property, to make contracts and to do business as a *femme sole*, she may avail herself of the services and agency of her husband in the conduct of her business, or in the management of her property, without necessarily subjecting it, or the profits arising from his management, to the claims of his creditors. But an insolvent debtor cannot use his wife's name as a mere device to cover and keep from his creditors the assets and profits of a mercantile business which is in truth his own. [*Hyde vs. Frey, United States Circuit Court, District of Indiana, October 4, 1886.*]

DEBTOR AND CREDITOR—ASSUMPTION OF DEBT BY PURCHASER.—An agreement between the purchaser and the seller of a stock of goods that the former would assume and pay the latter's debts inures to the benefit of a creditor of the seller and authorizes him to enforce his claim against the party so agreeing. [*Redelsheimer vs. Miller, Supreme Court of Indiana, September 24, 1886.*]

PRINCIPAL AND AGENT—COMMISSION MERCHANT—EXPENSES OF PRINTING GOODS.—In an action by plaintiff, a commission merchant, against defendant, a manufacturer of cloth, who consigned goods to plaintiff, to recover a balance of account, *Held*, The expenses of printing a part of the goods was properly chargeable to the defendant, it being shown that this was done under the usage of commission merchants in like cases, which usage must be presumed to have entered into and been made part of the contract between the parties. [*Talcott vs. Smith, Supreme Court of Massachusetts, Worcester, October 22, 1886.*]

FRAUDULENT CONVEYANCE—ACTION BY CREDITOR TO SET ASIDE AFTER DECEASE OF GRANTOR.—In an action by a creditor of a deceased grantor, to set aside an alleged fraudulent conveyance of real estate by the grantor in his lifetime, *Held*, The action cannot be maintained. If the facts stated in the complaint are true, it is the duty of the executors to pursue the real estate and reclaim it for the benefit of the persons interested in the estate of the testator, and no one creditor can appropriate it for his sole benefit. The fact that the fraudulent grantee is one of the executors furnishes no insurmountable obstacle. If she should refuse to restore the lands to the estate she would be removed from her office of executrix, and then the two remaining executors could, under the Act of 1858, disaffirm the conveyances of the real estate and bring an action to set them aside; or the two executors could commence the action, making the executrix a defendant, and in such action obtain for the estate the relief demanded. If the two executors refused to commence the action upon the application of the creditors, or some of them, they could be compelled to commence it by an order of the Surrogate. [*Lichtenberg vs. Herdtfelder, New York Court of Appeals, October 5, 1886.*]

REPORT OF THE COMPTROLLER OF THE CURRENCY.

TREASURY DEPARTMENT,
OFFICE OF THE COMPTROLLER OF THE CURRENCY,
WASHINGTON, December 4, 1886. }

Sir:—In obedience to law, I have the honor to submit a report for the year ending November 1, 1886, exhibiting:

First—A summary of the state and condition of every association from which reports have been received the preceding year, at the several dates to which such reports refer, with an abstract of the whole amount of banking capital returned by them, of the whole amount of their debts and liabilities, the amount of circulating notes outstanding, and the total amount of means and resources, specifying the amount of lawful money held by them at the time of their several returns.

Second—A statement of the associations whose business has been closed during the year, with the amount of their circulation redeemed and the amount outstanding.

Third—Suggestions as to amendments to the laws relative to banking by which it is thought the system may be improved.

Fourth—A statement exhibiting under appropriate heads the resources and liabilities and condition of the banks, banking companies and savings banks, organized under the laws of the several States and Territories, such information being obtained by the Comptroller from the reports made by such banks, banking companies and savings banks, to the Legislatures or officers of the different States and Territories; and where such reports could not be obtained the deficiency has been supplied from such other authentic sources as were available.

Fifth—The names and compensation of the clerks employed in the office of the Comptroller of the Currency, and the whole amount of the expenses of the banking department during the year.

This is the twenty-fourth annual report of the Comptroller of the Currency.

[The first summary gives the resources and liabilities of all the banks in the United States at the different dates reports were made during the year. The second summary contains a list of 33 banks which were closed during the year. Their aggregate capital was \$2,301,100, and circulation outstanding \$1,052,041. Of the 33 banks, 24 went into voluntary liquidation, 1 ceased to exist by expiration of charter, and 8 failed.—*Editor RHODES' JOURNAL OF BANKING.*]

SUGGESTIONS AS TO AMENDMENTS TO THE LAWS RELATING TO BANKING BY WHICH THE SYSTEM MAY BE IMPROVED AND THE SECURITY OF THE HOLDERS OF ITS NOTES, AND OTHER CREDITORS, MAY BE INCREASED.

The security now afforded to the holders of National bank notes by the deposit of bonds in trust with the Treasurer seems to be complete, and, as long as the bonds of the United States remain (as they now are and have been for some years) readily salable at above ninety cents on the dollar, the National bank currency will continue to enjoy the confidence of the public.

It must not be lost sight of, however, that there are conceivable contingencies in which the salability of these bonds would be impaired and the security of the notes correspondingly affected; but the probability of any such contingency is too remote for present consideration, while the provision of law giving to the United States a first lien upon all the assets of the bank for the amount of any deficiency in the proceeds of the bonds would seem to be a sufficient factor of safety in any case.

The security of other creditors depends upon two conditions: first, the proportion of assets to liabilities; and, second, the solid value of the assets. Both proportion and value, in any given case, will depend upon the management of the business of the bank; hence the supervision of the business and management of every bank by the Comptroller of the Currency has now become the most important feature of the National banking system.

The laws providing for this supervision and those which prescribe and limit the character of the business that may be done by the National banks should be frequently revised in order that the light of experience may be utilized to their constant improvement. To this end I respectfully submit the following suggestions:

First—That Section 5,137 of the Revised Statutes should be so amended as to express more clearly and definitely the limitation put upon National banks with respect to their dealings in real estate and in mortgages, and to provide a penalty for violation of the law.

Second—That Section 5,145 be amended by adding the following clause: Whenever the Vice-President and the Cashier, or either of them, is a Director, the Board of Directors must consist of at least five members besides such officers.

Third—That Section 5,151 be so amended as to exempt from further liability the shareholders of National banks of which the surplus shall exceed by 20 per cent. the amount of the capital stock of the bank, and that they shall be partially relieved from such responsibility in proportion as the surplus shall exceed the 20 per cent. now required by law. Provision, however, should be made that such exemption cannot be obtained through any process by which capital becomes converted into surplus, and also that such exemption is not to be enjoyed until after the Comptroller of the Currency is satisfied that the entire capital and surplus are represented by good assets.

Fourth—That Section 5,160, as modified by the Act of July 12, 1882, be so amended as to require that the bonds which every association must at all times have on deposit with the Treasurer shall be registered United States bonds bearing interest.

Fifth—That Section 5,192, as modified by the Act of June 20, 1874, be so amended as to require all banks to keep on hand, or at some centre near their location, a larger proportion of their reserve than that now specified in the law. The present provision allowing a part of the reserve to be kept in a distant city appears to be a survival from the system of redemption formerly existing which was repealed by the Act of June 20, 1874, and its maintenance seems inconsistent with the general policy of the laws as they exist.

Sixth—That the Act of June 20, 1874, be so amended as to make it evident whether banks need keep a reserve on Government deposits secured by bonds.

Seventh—That Section 5,200 be so amended as to render its application practicable in all cases.

It would appear that when in 1864* a limit was placed upon the accommodation which a National bank might extend to any person, company, corporation or firm, for money borrowed, Congress had in view the then existing limit as to the number of National banks and as to the formation of new banks arising out of the limitation upon the total volume of National bank currency.

At that time the privilege of issuing currency was the most valued of all the privileges conferred by the National Bank Act, and the limit upon this restricted the number of banks in each community; hence it was logical and consistent for the law to provide that this limited bank accommodation should not be monopolized by any small group of persons.

Now, however, all limitations upon the total volume of National bank currency have been removed, and to all intents and purposes the system has become one of free banking, open to citizens of the entire country to any extent to which they may desire to avail themselves of its privileges; hence there does not appear to be any longer the same reason that there was formerly for the law to enforce a general distribution through the community of the amount of accommodation at the disposal of a National bank.

As a matter of fact, with the growth and extension of the system, banks, especially in the large cities, have had their business very much specialized, and such banks cannot continue to exist or remain in the system if they should now be held to a strict conformity with Section 5,200.

The specialization of the business of the banks means, of course, their becoming identified with special lines in trade, manufacturing, farming, etc., and, as in all such industries there has long been a tendency towards concentration in the hands of a comparatively small number of large houses, it follows that banks so situated must lend largely to particular firms or else lose their most important customers. Thus, business necessity on the one hand and the limitations of law on the other have produced, in many cases, habitual disregard of the law, and in other cases evasions of the law, all of which must be ignored or tolerated by the Comptroller of the Currency

* The limitation in the original Act of 1863 was different and complicated.

because the only penalty now provided is forfeiture of the corporate existence of the offending bank.

While these reasons exist for modifying the law, at the same time it is of course important that some limitation should be imposed upon the amount that any bank should hold in the paper of any person, company, corporation or firm, and that the limit should be such as can be effectively enforced by the Comptroller.

To this end I respectfully suggest the following:

(1) That the limit of 10 per cent. of the capital, in loans to one party, be extended so as to be computed upon capital and whatever surplus may be held in excess of the legal requirement of 20 per cent. of capital.

(2) That this limit may be exceeded only in cases where a bank holds security of undoubted value, and which is not in any way dependent for its ready convertibility upon the borrower.

(3) That the penalty for violation of this restriction be such, in the discretion of Congress, as shall appear to be proportionate to the nature of the offence, and such as may be readily enforced by the Comptroller of the Currency.

Eighth—That Section 5,209 be so amended as to extend the penalties therein, specified for making false entries, reports or statements, so as to make them apply to Bank Examiners or other persons in the employment of the Comptroller of the Currency, and also to all such acts done with intent to deceive the Comptroller of the Currency or any person in his employment.

The protection of banks and of those whose interests are in the keeping of the banks against fraud on the part of the bank officers invites the attention of Congress both in the interest of general order and for the improvement of the banking system. In order that legislation deemed advisable may be framed with reference to past experience, I have given in the Appendix to this report extracts from records in this office showing the causes of National bank failures in all cases in respect to which such information is accessible.

Ninth—That Section 5,219 be so amended as to enable the National banks to obtain that practical protection against unequal State taxation which it was manifestly the intention of Congress to secure to them in this Section.

Tenth—That Section 5,240 be so amended as to apportion the compensation for examination of National banks according to the aggregate investments in each case rather than according to the amount of capital, and that provision be made for more frequent examinations than are now possible by adding to the amount paid by the banks a suitable amount to be paid out of the Treasury in order that supervising Examiners may be employed.

Eleventh—That a law be enacted to the effect that any oath required of the officers or Directors of a National banking association may be taken before any Commissioner of a Circuit Court, or before a Notary Public having an official seal, or before any other officer using a seal, where such a notary officer is qualified by the law of any State or Territory to administer oaths.

There is a practical necessity for such an enactment; for, upon an examination of the statutes, in the light of the decision of the Supreme Court in the case of the United States vs. Curtis (107 U. S., 671), it appears that no provision has been made for giving legal effect to the oaths required of bank officers and Directors except in the one case to which the Act of February 26, 1881, specially applies.

This Act evidently aimed to supply an omission in the law; but, inasmuch as it applies to only one case out of several, other omissions seem by implication to have the sanction of Congress, which I am sure they have not, because, as the law now stands, a Director who swears falsely as to his qualifications for such position, or a President or Cashier who makes oath to a false statement of the dividends and earnings of his association, cannot be convicted of perjury.

Twelfth—That, in the absence or disability of the Cashier, all certificates required by law to be made by him may be made, with the authority of the Board of Directors, by the Assistant Cashier, if the bank has such an officer, and, if it has no such officer, then by some one appointed by the Directors to perform the duties of the Cashier; provided, however, that no assistant or acting Cashier shall be authorized to sign circulating notes. The want of such a provision in the banking law is the cause of considerable inconvenience and annoyance to the banks.

Thirteenth—I renew the recommendation of my predecessor for further legislation

to ascertain and protect the rights of shareholders desiring to withdraw from National banks which are extending their corporate existence.

My attention has been called to several cases of apparent violation of Section 5,243 of the Revised Statutes of the United States, but there does not appear to be in the law any direction or authority to the Comptroller of the Currency to take action in such cases. The instances reported are the following: National Savings Bank, of New Haven, Conn.; National Savings Bank, of Albany, N. Y.; National Savings Bank, of Buffalo, N. Y.; National Bank of Honduras, Washington, D. C.

The only bank in the District of Columbia to which Section 332 of the Revised Statutes applies is the National Savings Bank of the District of Columbia. This institution was chartered May 24, 1870, never had any capital stock, and appears, from such examinations as are reported, never to have accumulated a surplus fund. The charter required the bank to file in the office of the Clerk of the Supreme Court of the District of Columbia a bond, with security for \$200,000, to be approved by one of the Judges of the Court, and the Court was given authority to require a new bond and additional security whenever the interests of the depositors might seem to render it proper to do so. Upon examination I find that there is a bond on file in the Clerk's office for \$200,000, binding the bank and sixteen persons "jointly *but not severally*" to pay and satisfy creditors, etc. This bond is under the seal of the bank and the respective seals of the other obligors, but it is not dated. The approval of Mr. Justice Olin is affixed to it, dated October 30, 1870.

By the records of this office it appears that at various times communications have been addressed by my predecessors to the Chief Justice of the Supreme Court of the District of Columbia, calling attention to the impairment of this security by the death of some of the obligors and the departure of others from Washington. By the records of that Court it appears that on February 13, 1884, an order was made reciting certain of these communications and requiring the bank to file a new bond on or before February 25, 1884, or to show cause to the contrary.

The answer of the bank to this rule sets forth substantially:

1. That the Comptroller of the Currency had no authority to inquire into the sufficiency of the bond.
2. That the bond was still sufficient because of the wealth of four of the obligors out of the original sixteen.

No further proceedings are on file, and no new bond has been executed.

The charter of this bank required annual reports to be made to Congress by its officers, but no such reports have been lately made: and, upon inquiry, the Examiner from this office was informed that it was considered by the bank that the reports sent in to the Comptroller of the Currency, under the Act of June 30, 1876, operated to discharge the bank from the duty of reporting to Congress.

According to Section 332, the Comptroller may, in his discretion, report to Congress the results of such examinations as he may see proper to make of the banks in the District of Columbia, and if this bank were now reporting directly to Congress there would be no occasion, in my opinion, for me to make a report on it also; but, since it appears that, between the charter and the Act of 1876, both providing for reports, no report at all reaches Congress, I respectfully submit in the Appendix a copy of the report made by the bank on October 7, 1886, which agrees substantially with the report made to me by a special Examiner November 15, 1886.

* * * * *

STATE TAXATION OF NATIONAL BANKS.

There has been for some years more or less friction arising out of the mode of assessing and collecting taxes on National bank shares in some of the States.

The subject has been frequently and fully treated by my predecessors, and therefore, in renewing it, I need say only that, as Congress obviously intended to protect the National banks from discriminative taxation, it would seem proper that force be given to this purpose by its more definite expression in the law.

In consequence of different constructions placed by taxing officers upon the existing statute, litigation of a costly and more or less irritating character has arisen in States which together contain nearly one-half of all the National bank capital in the Union.

INFORMATION.

Section 333 of the Revised Statutes of the United States, in prescribing the scope of the annual report to be made by the Comptroller of the Currency, imposes upon

that officer the further duty of submitting to Congress such other information in relation to the banks as in his judgment may be useful. The following information is accordingly submitted:

The following table gives the number of National banks organized in each State and Territory during the year ending November 1, 1888, with their aggregate capital, bonds and circulation:

<i>States and Territories.</i>	<i>No. of Banks.</i>	<i>Capital.</i>	<i>Bonds.</i>	<i>Circulation.</i>
Vermont.....	2	\$150,000	\$37,500	\$33,740
Massachusetts.....	3	350,000	87,500	78,740
Division No. 1.....	5	\$500,000	\$125,000	\$112,480

Wyoming.....	2	175,000	43,750	39,370
Division No. 8.....	24	\$1,355,000	\$353,250	\$295,350
Grand total.....	174	\$21,358,000	\$3,713,500	\$2,900,550

Eight National banks with an aggregate capital of \$650,000 failed and were placed in the hands of Receivers during the year, as shown in the following tabulated

statement, to which is appended a brief account of the chief cause of failure in each case, and the amount of their capital, surplus, and liabilities according to last report of condition.

Name and location of bank.	Date of organization.	Date of Failure.	Receiver appointed.	Capital.	As shown at date of last report in each case.		
					Surplus and undiv'd profits.	Other liabilities.*	Date of last report.
1. First Nat. Bank, of Lake City, Minn.	Nov. 20, 1870	1885. Dec. 29	1886. Jan. 4	\$50,000	\$22,082	\$129,635	1885. Oct. 1
2. Lancaster Nat. B'k, of Clinton, Mass.	Nov. 22, 1864	1886. Jan. 1	Jan. 20	100,000	82,156	287,997	Oct. 1
3. First Nat. Bank, of Sioux Falls, Dak.	Mar. 15, 1880	Mar. 1	Mar. 11	50,000	55,288	170,083	Dec. 24
4. First Nat. Bank, of Wahpeton, Dak.	Feb. 2, 1882	Mar. 27	Apr. 8	50,000	7,987	100,306	Dec. 24
5. First Nat. Bank, of Angelica, N. Y.	Nov. 3, 1864	Apr. 16	Apr. 19	100,000	23,285	48,203	Dec. 24
6. City Nat. Bank, of Williamsport, Pa.	Mar. 17, 1874	Apr. 20	May 4	100,000	20,560	162,897	Dec. 24
7. Abington Nat. B'k, of Ab'gton, Mass.	July 1, 1885	July 1	Aug. 2	150,000	30,518	167,572	1886. June 3
8. First Nat. Bank, of Blair, Neb.	June 7, 1882	Aug. 25	Sept. 8	50,000	12,394	279,669	June 3
Total				\$650,000	\$204,195	\$1,296,312	

* Total, as per statement, except capital, surplus, circulation and undivided profits.

1. The First National Bank, of Lake City, Minn., failed in consequence of heavy losses, having its funds locked up in inconvertible paper. The stockholders, believing that the assets would prove valuable, bought nearly all the claims against the bank and then deposited a sum that enabled the Comptroller to pay all debts, principal and interest. After this was done the remaining assets were turned over to an agent of the stockholders in accordance with the provisions of Section 3 of the Act of June 30, 1876.

2. The Lancaster National Bank, of Clinton, Mass., was wrecked by its President, who absconded to Canada. Money and securities of the bank and of others were taken bodily away, but a large amount was subsequently recovered, which had been buried on a mountain in Vermont.

3. The First National Bank, of Sioux Falls, Dak., had its assets seized on writ of attachment in a suit on its Cashier's check for upward of \$16,000, which was claimed to have been fraudulently obtained. This caused the bank to fail; but it had been badly managed for some time previous, and had suffered large losses on overdue paper and mortgages.

4. The First National Bank, of Wahpeton, Dak., appears to have failed through reckless management, which locked up its funds in speculative enterprises.

5. The failure of the First National Bank, of Angelica, N. Y., was due to the embezzlement by its Cashier of an amount nearly equal to half its capital stock. He lost the money in grain and pork speculations, and concealed the defalcation by false entries on the books. The President and Directors of the bank were the victims of over-confidence in this man, and seemed blind to signs of his irregularities up to the hour of his flight.

6. The City National Bank, of Williamsport, Pa., was closed in consequence of a run upon it. Subsequent examination of the books revealed embezzlement by a former Assistant Cashier and by the Cashier at the date of suspension. Suit has been brought to recover on the bond of the late Cashier, and criminal proceedings against him have also been instituted.

7. The failure of the Abington National Bank, of Abington, Mass., was due to over-loans to its President, both directly and as indorser for irresponsible parties. In this case the creditors were paid in full, principal and interest, within sixty days after the Receiver was appointed.

8. The First National Bank, of Blair, Neb., failed through trying to do too much

business for its means. The assets, as at present estimated, should pay the creditors in full.

Lists will be found in the Appendix, showing the amount of capital, nominal assets amounts collected, claims proved and dividends paid in each of these cases.

ORGANIZATION, CIRCULATION, AND DISSOLUTION.

As the law now stands a National banking association may be formed by any number (not less than five) of natural persons. The conditions are simple and reasonable, the only one appearing onerous being that which requires the bank to deposit in the Treasury United States registered bonds bearing interest.

Before 1882 every bank was required to place and keep on deposit with the Treasurer such bonds to the amount of at least one-third of its capital, but the Act of July 12, 1882, reduced this minimum requirement to one-fourth the capital of banks having not more than \$150,000 capital, and to \$50,000 of bonds in all other cases, however large the capital may be.

Every bank, before beginning business, is also required to deposit with the Comptroller a copy of its articles of association, a complete list of shareholders, Directors and principal officers, all duly authenticated, and evidence that at least 50 per cent. of the capital is actually paid in. The Comptroller may, in his discretion, cause a special examination to be made in order to satisfy himself on any of these points, and he may refuse to authorize any bank to begin business if he has reason to believe that the purposes of its promoters are not in accord with those of the National banking laws. When the Comptroller issues his certificate of authority to begin business the bank is established, and is thenceforward bound to conform to all the requirements of the law governing its business, while, on the other hand, it is entitled to exercise the rights, privileges and franchises secured to it by the statutes.

EXTENSION OF THE CORPORATE EXISTENCE OF NATIONAL BANKS.

Under the provisions of the original Currency Act of February 25, 1863, 488 banks were organized, of which 88 had ceased to exist when the Act of July 12, 1882, went into effect, leaving 400 still in operation at that date. Of these 400 banks 72 were succeeded by other associations with the same or different names, 12 went out by voluntary liquidation or expiration of corporate existence, 2 were placed in the hands of Receivers, and 314 were extended under the Act. The Act of June 8, 1864, is designated the "National Bank Act" in the Act approved June 20, 1874. Up to July 12, 1882, there had been organized under this Act 2,286 banks, of which 450 had been closed, leaving 1,816 in operation at that date.

The following table shows how many of these surviving banks will reach the term of their corporate existence during each year from 1886 to 1902, inclusive, with their capital and circulation:

<i>Years.</i>	<i>No. of banks.</i>	<i>Capital.</i>	<i>Circulation.</i>	<i>Years.</i>	<i>No. of banks.</i>	<i>Capital.</i>	<i>Circulation.</i>
1887...	5	\$1,050,000	\$495,000	1896...	23	\$2,218,800	\$1,322,550
1888...	10	1,364,900	421,200	1897...	26	3,324,000	1,391,545
1889...	3	600,000	184,500	1898...	24	2,354,000	1,397,100
1890...	80	9,235,500	4,626,200	1899...	40	5,080,000	2,552,950
1891...	99	13,483,900	4,742,535	1900...	50	7,582,100	3,257,990
1892...	102	13,190,150	5,285,225	1901...	110	15,156,150	4,546,985
1893...	38	4,516,000	2,275,700	1902...	231	37,697,300	10,461,450
1894...	64	7,353,000	3,484,750				
1895...	77	11,159,000	5,391,450	Total.	962	\$135,394,800	\$51,807,080

NATIONAL BANK SHAREHOLDERS.

With a view to ascertaining how the stock of the National banks is distributed, a laborious examination has been made of the official lists of shareholders, deposited in this office in accordance with Section 5210, Revised Statutes of the United States.

The results of this examination, carefully compiled, are exhibited in the following tables, and, for purposes of comparison, similar tables contained in the report of the Comptroller of the Currency for the year 1876 are here reproduced.

Upon an examination it will be seen that the capital stock of the 2,888 National banks now existing is represented by 7,116,994 shares, and that of these 6,426,320, or over

90 per cent., are held by residents of the State in which the bank is located, and 690,574, or less than 10 per cent., by non-residents. In 1876 less than 90 per cent. of the stock was held by residents.

The number of shares held by natural persons is 6,524,143, or over 91 per cent., while the remainder are held as follows: 82,604 shares by religious, charitable and educational institutions; 6,188 by municipal corporations; 490,993 by savings banks, trust companies and insurance companies, and 12,897 by all other corporations.

The number of shareholders in National banks is 223,583, of which number 215,876, or over 96 per cent., are natural persons, while more than 38½ per cent. of all the stockholders are residents of the State in which the bank is located.

Of the 223,583 shareholders, 117,974, being more than half, hold ten shares or less, 78,781, or about a third, hold over ten shares but less than fifty, while those holding over fifty shares number only 26,828, or but little more than one-ninth of the whole.

The details as to State and geographical divisions will doubtless be found interesting and suggestive.

Among other things it will be perceived that, out of 82,000 shares held by religious, charitable and educational institutions, upward of 40,000 are held in New England and 40,000 more in the Middle States. In the same way, out of 490,993 shares held by savings banks, trust companies and insurance companies, nearly 478 000 shares are held north and east of the District of Columbia.

Geographical divisions Nos. 3, 4, 5, 6, 7 and 8 contain 1,600 banks, with \$225,000,000 capital, and in all this great area the National bank stock is held almost exclusively by natural persons.

Out of 7,704 corporations of all kinds appearing as National bank shareholders only 602 hold stock in banks anywhere in these six divisions.

Another observation to be drawn from these tables is that in those States in which the older banks are situated the stock is more largely held by residents, and is more widely distributed, while in the same area in which nearly all the banks are of recent organization the proportion of non-resident shareholders is larger and the amount of stock held in large amounts is greater. This shows the very important and significant fact that the National bank system is serving to bring capital into those new districts from the older States, and in this way it is a constant and valuable factor in the process by which American industry and enterprise are being extended all over the Continent, and by which the ties of a common citizenship are being daily strengthened by the bonds of commercial intercourse and of interdependent interests.

The total number of shares exceeds one for every \$100 capital, which is accounted for by the fact that a large number of the banks converted from State institutions have availed themselves of the privilege of retaining their shares at their original par value. (See Section 5,154, Revised Statutes.)

* * * * *

CIRCULATING NOTES.

Upon the security of its bonds deposited with the Treasurer each bank is entitled to receive, and the Comptroller of the Currency is by law required to issue to it, circulating notes to the amount of 90 per cent. of the market value and not more than 90 per cent. of the par value of the bonds. Any bank may deposit more than the minimum of bonds, and may take out circulating notes for 90 per cent. of its deposit, provided its entire outstanding circulation against bonds does not exceed 90 per cent. of its capital stock actually paid in. The circulating notes when issued by the Comptroller are in sheets, and are not valid until signed by the bank officers designated by the statute.

Under the present law the minimum deposit of bonds required to be made by the 2,852 National banks in operation in the United States on October 7, 1886, in order to continue as National banking associations, would be but \$84,365,312.

Tables in the Appendix show by States and geographical divisions the National banks in operation on October 7, 1886, separated into two classes, namely, banks of which the capital does not exceed, and banks of which the capital exceeds, \$150,000. The first class contains 2,001 banks, with an aggregate capital of \$167,261,245; the second 851, with an aggregate capital of \$380,979,485. The minimum of bonds required to be kept on deposit by the entire body of banks in the first class is \$41,815,312; the minimum for the 851 banks of the second class is \$42,550,000. If all banks held only the minimum of bonds, the total National bank circulation would be \$75,928,781, while the possible

maximum of circulation, being 90 per cent. of the aggregate of the National bank capital, would be \$496,416,657. The actual circulation on October 7, 1886, was \$308,176,776, inclusive of \$71,963,145 still outstanding, but which is no longer represented by bonds, but by that amount of lawful money deposited with the Treasurer of the United States to redeem it. The \$231,223,631 of circulation for which the banks are responsible is composed of \$96,517,585, secured by the bonds deposited by the 2,001 banks having \$150,000 capital and less, and \$144,706,046 secured by the bonds belonging to the 851 banks of which the capital exceeds \$150,000. The first class of banks have, therefore, \$48,883,805 more than their minimum and \$64,017,586 less than their possible maximum circulation, while the larger banks have \$106,411,046 more than their minimum and \$198,175,491 less than their maximum.

The following table shows the number of banks organized from July 1, 1882, to July 1, 1886, their capital stock, amount of bonds deposited, and the circulation issued thereon:

<i>Fiscal Year.</i>	<i>Number of banks.</i>	<i>Capital.</i>	<i>Minimum bonds required.</i>	<i>Bonds actually deposited.</i>	<i>Per cent. of excess.</i>	<i>Circulation issued.</i>
1882-83	251	\$26,552,300	\$5,155,500	\$7,116,400	28	\$6,404,780
1883-84	218	19,944,000	4,016,000	4,676,100	14	4,206,490
1884-85	142	15,206,000	3,061,250	3,332,800	8	2,990,520
1885-86	163	17,553,000	3,404,500	3,715,500	8	3,342,950

From the foregoing table it appears that 774 banks have been organized between the dates given, with a capital of \$79,254,300; that they have deposited \$18,810,800 bonds, upon which circulation to the amount of \$16,966,730 has been issued. The minimum deposit of bonds as required by law for such banks is \$15,697,250, and it will be observed that, while the actual deposit has in the aggregate exceeded the minimum absolutely required, yet this excess steadily decreased during the first three years covered by the table, and during the years ending July 1, 1885, and July 1, 1886, the percentage of excess remained the same, namely, 8 per cent. Of the 163 National banks organized during the past fiscal year, 96 have a capital of \$50,000 each, amounting to \$4,800,000; 44 have a capital of over \$50,000 and not exceeding \$150,000, amounting to \$4,218,000, and 23 have a capital of \$3,535,000. The latter class of banks deposited only \$100,000 of bonds in excess of the minimum required by law.

Tables have been prepared, and will be found in the Appendix, showing for the National banks in each State, Territory and reserve city the minimum amount of bonds required by law, the bonds actually held, and the circulation issued thereon and outstanding October 7, 1886; also all other information deemed useful as to circulation.

Banks are privileged to change their deposited bonds from time to time, to increase and reduce the amount, within limits, and are required to inspect once a year the bonds held for them in trust by the Treasurer. The Comptroller of the Currency is the agent and medium of all such changes; his indorsement on the bonds establishes their ownership and alone validates their transfer. Section 5,168 of the Revised Statutes requires him to record every act of deposit, transfer and withdrawal, and to keep a set of books for the purpose.

TAXES UPON NATIONAL BANKS.

National banks are subject to a semi-annual duty of one-half of 1 per cent. upon the average amount of their notes in circulation during the preceding six months. They are also required, by the Act of June 20, 1874, to pay the cost of the redemption of their notes at the office of the Treasurer of the United States at Washington and the cost of the plates from which their notes are printed. Banks extending their corporate existence have to pay for new plates. Previously to the Act of June 20, 1874, the expense of the plates had been paid out of the tax on the banks, which at that time attached to capital and deposits as well as to circulation.

The banks are further required to pay the fees of the Examiners employed to ascertain their condition, as set forth under Section 5,240, Revised Statutes of the United States.

The total amount of taxes and assessments collected during the past year were as follows:

Semi-annual duty on circulation	\$2,562,021 33
Cost of redemption of notes by United States Treasurer	168,243 35
Assessments for cost of plates, new banks	14,810 00
Assessments for cost of plates, extended banks	24,825 00
Assessments for Examiners' fees, Section 5,240, R. S.	107,272 83

Total \$2,907,172 51

It has not been customary heretofore to include assessments with taxes, but it seems proper to do so.

The following tables are brought forward from previous reports. For uniformity's sake the only addition made is the semi-annual duty on circulation during the past year:

Years.	On circulation.	On deposits.	On capital.	Total.
1864	\$53,193 32	\$85,911 87	\$18,432 07	\$167,537 26
1865	733,247 59	1,087,530 86	133,251 15	1,954,029 60
1866	2,106,785 30	2,633,102 77	406,947 74	5,146,835 81

ISSUES AND REDEMPTIONS.

The following table exhibits the number and amount of National bank notes of each denomination which have been issued and redeemed since the organization of the system, and the number and amount outstanding on November 1, 1886:

<i>Denominations.</i>	<i>Number of Notes.</i>			<i>Amount.</i>		
	<i>Issued.</i>	<i>Redeemed.</i>	<i>Out-standing.</i>	<i>Issued.</i>	<i>Redeemed.</i>	<i>Outstanding.</i>
Ones	27,167,677	22,757,987	4,409,690	\$23,167,677	\$22,757,987	\$409,690.00
Twos	7,747,519	7,639,806	107,713	15,495,038	15,279,612	215,426.00
Fives	97,667,360	81,109,272	16,558,088	488,336,800	405,546,360	82,790,440.00
Tens	41,695,970	31,767,278	9,928,692	416,959,700	317,672,780	99,286,920.00
Twenties	12,945,618	9,397,854	3,547,764	258,912,360	187,957,080	70,955,280.00
Fifties	1,815,174	1,451,301	363,873	90,758,700	72,565,060	18,193,650.00
One hundreds	1,342,001	1,065,330	276,671	134,200,100	106,533,000	27,667,100.00
Five hundreds	23,924	23,138	786	11,962,000	11,569,000	393,000.00
One thousands	7,369	7,290	79	7,369,000	7,290,000	79,000.00
Fractions out-standing	22,715.60
Total	186,412,612	155,209,256	31,203,356	\$1,447,161,375	\$1,146,170,869	\$301,013,221.60

* * * * *
DIAGRAM.

The diagram accompanying this report—reproduced especially for the JOURNAL from the original plates—exhibits in a very striking manner the main features of the National banking system, and how each has varied during the twenty-one years since the peace of the country has been re-established.

On the 1st of January, 1866, there were 1,582 National banks; on the 7th of October, 1886, there were 2,362 banks—a net increase in number alone of 1,270.

The following table groups in a compendious form the most important facts shown in the diagram:

	<i>January 1, 1866.</i>	<i>October 7, 1886.</i>	<i>Highest point touched.</i>	<i>Lowest point touched.</i>
Capital.....	\$403,000,000	\$543,000,000	{ \$543,000,000 Oct. 7, 1886.	{ \$403,000,000 Jan. 1, 1866.
Capital, surplus, and undivided profits.....	475,000,000	772,000,000	{ 772,000,000 Oct. 7, 1886.	{ 475,000,000 Jan. 1, 1866.
Circulation.....	213,000,000	228,000,000	{ 841,000,000 Dec. 26, 1873.	{ 213,000,000 Jan. 1, 1866.
Total investments in United States bonds.....	440,000,000	291,000,000	{ 712,000,000 April 4, 1879.	{ 291,000,000 Oct. 7, 1886.
Deposits.....	522,000,000	1,173,000,000	{ 1,173,000,000 Oct. 7, 1886.	{ 501,000,000 Oct. 8, 1870.
Loans and discounts.....	500,000,000	1,443,000,000	{ 1,443,000,000 Oct. 7, 1886.	{ 500,000,000 Jan. 1, 1866.
Cash—National bank notes....	20,000,000	23,000,000	{ 23,000,000 Dec. 31, 1883.	{ 11,000,000 Oct. 7, 1867.
Cash—Legal tender notes.....	187,000,000	63,000,000	{ 205,000,000 Oct. 1, 1886.	{ 50,000,000 Mar. 11, 1862.
Cash—Specie.....	19,000,000	156,000,000	{ 177,000,000 July 5, 1885.	{ 8,000,000 Oct. 1, 1876.

An examination of this table shows that the aggregate capital, surplus, undivided profits, circulation and deposits have increased from \$1,210,000,000 in January, 1866, to \$2,173,000,000 in October, 1886, which is less than double, while the loans and discounts have gone up from \$500,000,000 to \$1,443,000,000, which is nearly treble, showing how much more widely the banks are now identified with the general business of the country than they were twenty-one years ago.

The investments in bonds have taken an opposite course. Amounting to \$440,000,000 in 1866, increasing to \$712,000,000 in April, 1879, they had subsided by October 7th last to

\$291,000,000, but little more than half what they were in 1866, and scarcely over a third of what they momentarily amounted to in 1879.

The specie, which at the beginning of the period was but \$19,000,000, had got down in October, 1875, to \$8,000,000, is now \$156,000,000, and in July, 1885, was \$177,000,000.

It is interesting to see how these changes appear when reduced to percentages.

The capital, surplus, undivided profits, circulation and deposits constitute together the fund upon which a bank does its business.

Loans and discounts, United States bonds, specie, etc., are different forms in which this fund is invested. Taking the fund at \$1,210,000,000 in 1866 and at \$2,173,000,000 in 1886, these investments represent the following proportions of those amounts, viz.:

	1866.	1886.
Loans and discounts.	41.32	66.40
United States bonds.	36.36	13.39
Specie.	1.57	7.18
Total.	79.25	86.97

Another striking fact is that in 1866 the circulation was \$213,000,000 and in 1886 it is only \$228,000,000. At the former period, therefore, the circulation was nearly 45 per cent. of the capital, surplus and undivided profits, while now it is only about 29 per cent.

CONCLUSION.

In selecting the information presented in this report I have endeavored to exhibit the practical working of the present National currency and bank laws, and I have also had in view the importance of supplying material for a full understanding of the relations between the National banks and the general business of the country. In order to explain the widely prevalent desire among business men for some legislation directed to the establishment of these banks upon a more permanent basis.

The National banking system had its origin during the war, and it will always stand splendid in history as an example of financial skill successful under very difficult circumstances.

The problem in 1863 was how to bring the banking capital of the country to the support of the Treasury, and it cannot be doubted that the banks then had it in their power to exact from the Government concessions far more valuable than those granted them. Even these moderate concessions have long since lost all the elements of monopoly, and the Act of June 20, 1874, actually took away \$55,000,000 of circulation, partly from banks organized during the war, in order to give the privilege of issuing that sum to banks in States that were cut off by the war from access to the National banking system—a measure entitled to honorable consideration, because at that time those States were without sufficient political influence to exact a share in this valuable privilege, and the then existing banks were strong enough to have made a successful resistance if they had been selfishly inclined.

The last vestige of monopoly was swept away by the Act of January 14, 1875, which created a free banking system throughout the United States, and, supplemented by the Act of July 12, 1882, brought its benefits within reach of even small communities.

Under the sanction of these laws the National banks have become numerous, widely distributed, and intimately identified with the varied industries by which our entire population literally obtain their daily bread, but during the same time the rapid reduction of the funded debt of the Government has been introducing into the very basis of the system an element of instability which now hampers its extension, impairs its usefulness, and even threatens its continued existence, while there are still great areas of our country in which the natural resources are awaiting development by just such means as these banks might be made to supply.

The present financial prospects of the country induce the expectation that the funded debt will be paid off as fast as the bonds mature, and, in consequence, a question has arisen as to what changes should be made in the National bank system in order that it shall not suffer deterioration or destruction upon the withdrawal of the support upon which it is based by the present laws, which require every bank before beginning business to deposit a certain amount in United States bonds.

The payment of the 3 per cent. bonds, the maturity in 1891 of the $4\frac{1}{2}$ per cent. bonds, amounting to \$250,000,000, and in 1897 of the 4 per cent. bonds, amounting to nearly \$738,000,000, have combined to produce a prospective scarcity in the securities available to the banks as a basis for their corporate existence, and this is reflected in the advance of these bonds to a premium so high that every day their enforced purchase becomes more and more onerous.

Banks now holding only 3 per cent. bonds, and newly organized National banking associations, are forced into the market as purchasers of the 4 per cent. or the $4\frac{1}{2}$ per cent. bonds, and this constant demand, in connection with the prospective scarcity already referred to, sustains and tends still further to elevate the premium on these bonds.

As the time approaches for the payment of the $4\frac{1}{2}$ per cent. bonds, it is reasonable to expect a still greater demand for the 4 per cents, and it is a question of serious importance whether the banks can afford to hold or buy 4 per cent. bonds after 1891.

In the present age all business men try to anticipate future conditions and to provide well in advance against foreseen contingencies; hence it is to be expected that the banks will not wait until the approach of 1891 to shape their policy with reference to the continued holding of high-priced bonds. For this reason it is not too early now to consider what legislation may be proper to remove this element of future uncertainty from the National banking system; and, looking to the possible consideration of this subject by Congress, I respectfully submit the following statement of the question as it appears from the point of view officially occupied by the Comptroller of the Currency:

The fundamental postulates underlying every banking system established by law, whatever may be its form, must necessarily be:

First—That banks promote the general welfare of the community; and,

Secondly—That the particular system established by law is the best obtainable under the conditions prevailing at the time and place.

These postulates, therefore, underlie our National banking laws.

The first postulate will not be questioned, since no people in modern times have ever risen to civilization, or maintained their civilization, without banks; and least of all can it be questioned in this country where, besides 2,868 National banks now in operation, we have over 5,000 State banks, savings banks, and private banks and bankers, whose operations extend into the minutest ramifications of the employments and resources of our 60,000,000 of population.

The second postulate involves the question whether the present National bank system should be preserved, and, if so, whether it is good enough as it is or whether it can be improved.

The National Currency Act of February 12, 1863, was controlled as to its purposes by the paramount necessity of inducing the banks and other capitalists to become purchasers of Government bonds under conditions that would give a basis of solid value to the currency then being paid out in immense volume under the pressure of military exigencies, hence the consolidation of these banks into a national banking system adapted to commercial and industrial needs appears only as a subordinate incident in the general scheme. As early, however, as the year 1864, it was perceived that the general welfare of the people would be promoted by giving greater cohesiveness and method to the system, regarded more especially in its banking than in its currency features, and from that time to this the effort of legislation has been to subordinate the issuing of currency to the more important functions performed by the banks as institutions of discount and deposit. The effect of this legislation and its wisdom are exemplified in the present high credit and the consequent wide commercial usefulness of National banks.

If the system could be preserved purely as one of deposit and discount there would probably arise an almost universal sentiment in favor of bestowing upon its preservation immediate and careful attention, but it is doubtful whether the banks would find sufficient inducement to remain in the system without enjoying some privileges as to the issue of currency, and it has been questioned whether there is power under the Constitution for the charter of National banks except as instrumentalities for a money circulation.

It follows, therefore, that any legislation directed to the improvement and permanent establishment of the National banking system must include some

provision for the maintenance of a National bank circulation, while on the other hand it appears that whatever opposition exists to the National banks attaches to them mainly as banks of issue; and under our system of government nothing can be regarded as permanently established until it has obtained the support of a well-settled public opinion; hence it is evident that the problem now to be solved is how to remodel the currency features of the National bank system so as to obtain popular approval of them.

Objections to the present National bank currency appear to be comprised within three classes, namely:

1. A general objection to paper money in any form.
2. An objection to National bank notes, based upon the assumption that they take the place of an equal amount of paper money that might be issued directly upon the credit of the Government.
3. The objection that a currency determined in volume by a definite percentage upon deposited securities of high value can never possess the flexibility and elasticity of volume which are the chief commercial advantages of a bank currency in any form.

Against these objections it has been answered:

1. That the question as to having paper money at all is not at present a practical one, because it is evident that our people will have paper money in one form or another, and that, of all forms of paper money of which we have had any experience, the present National bank currency is the least objectionable, even to those who think that all such money should be avoided.

2. That while a bank currency based on Government bonds and redeemable in greenbacks may be considered as a kind of Government money on which the banks are getting the profit, yet without this privilege, or some other equivalent to it, the National bank system could never have been established, nor can it now be maintained, and that this is the cheapest price at which the people or the Government could have got any banking system so good in all respects and so valuable as this has proved to be.

Another argument is that the Government must pay interest upon its bonds whether these are held by the banks or not; hence the profit to the banks on these bonds has been obtained without charge on the Treasury; while, on the other hand, if the banks had not been offered sufficient inducement to invest in these bonds, many more of them would have gone abroad at low prices, and the country as a whole would now be so much the worse off.

3. That the want of flexibility in the currency and of elasticity of volume are consequences arising from the scarcity of bonds and the high prices to which they have risen, and that this could not have been foreseen nor provided against in the original Acts, but may now be remedied by proper legislation.

These objections and the answers to them are stated without comment. They are gathered from current discussion in the press, and seem worthy of consideration.

Some suggestions have been made to me as to new legislation on this subject, which, together with such conclusions as I have been able to reach, are subject to whatever disposition Congress may be pleased to order.

HON. JOHN G. CARLISLE,

Speaker of the House of Representatives.

W. L. TRENHOLM,

Comptroller of the Currency.

REPORT OF THE SECRETARY OF THE TREASURY.

In the annual report of the Secretary of the Treasury the silver question is exhaustively discussed. The Secretary recommends the suspension of the coinage of the silver dollar and also the reduction of the tariff. The salient points in the report are as follows:

SHALL THE UNITED STATES GIVE FREE COINAGE TO SILVER NOW?

I. The free-silver coinage prescription for the monetary dislocation satisfies but one of the several indispensable conditions which I have set forth above in full detail. While it is an indispensable condition of permanent restoration that the free monetization of silver shall be equally complete as of gold, yet were it now given to silver in this actual moment of dislocation the practical result would be to withdraw the same

from gold. That would be a change without advantage in any respect and in every respect with disadvantage. In the first place it would bring us to the Asiatic silver basis. This has been commended in some quarters. There is, however, no such public desire. The preponderance of public opinion seems overwhelming in favor of the joint use of both metals. No party and no administration could survive or would deserve to survive the deliberate or the unforeseen and unprevented change to a silver basis. But the proof is simple that the free coinage of silver now would at once entail a silver basis. Offered by the open Mint to both metals, free coinage of silver for silver owners into legal-tender dollars would stop the use of the Mint for free coinage of gold by gold owners. It would stop the simultaneous circulation of gold and silver dollars. The gold dollar would be at a premium and be exported. Throughout the United States it would make the use of silver in legal-tender payments exclusive, apart from the greenbacks, which would first be used, if possible, to empty the Treasury of gold, and then would cease to signify by "dollar" anything else than the debt of a silver coin—not at all the monetary unit once embodied in equivalent coins of the two metals.

Thus the free coinage of silver now, or, what is the same thing, the Asiatic silver basis, would but shift our lameness to the other foot. It would neither restore nor tend to restore the world-wide use of the two metals in a rated equivalence, which is the cure for the monetary dislocation, as their disjoined use has been its cause. But the change to the other foot would be disadvantageous, not a matter of indifference. Now we make a limping use of both metals, as is possible since the difficulty is with respect to the less precious metal, which we manage, by the legal-tender power and the receipt for taxes, to hold in some general use along with the other. Then, however, we could keep in use but one, not the two—not even by legal-tender laws or penal laws. Thus the free-silver coinage prescription and the silver-basis prescription are alike—amputation of an uninjured leg to cure temporary lameness in the other.

SHALL THE UNITED STATES PROPOSE MORE CONFERENCES?

II. More conferences and further diplomatic correspondence are proposed. I venture to think, with all due deference to those who are responsible for a decision, that the time for another conference has not arrived, and that the moment for diplomatic interference is not perfectly felicitous. Our information is recent and authentic, and is contained (Senate Ex. Doc. No. 29) in the letters of our Ministers accredited to Great Britain, France, and Germany, there published, and in the correspondence and action of the English Government which are summarized above.

The Continental powers await the action of Great Britain, whose reluctance defeated the object of both conferences called at the instance of the United States, and to whom again, almost within a twelvemonth, she has turned a deaf ear. If it suited the dignity of the United States again to besiege the attention of European States, or again to make advances where they have been so lately repulsed, it would not suit our interests so to do when it is certain that the inquiry upon which Great Britain has suddenly entered at the instance and insistence of her great dependency, India, and of her own accord, is entered upon with an exclusive regard to her own interest. And of Great Britain's interests the United States have no call to become advisers or guardians. * * * In short, it is now for Great Britain to make propositions to other powers. And, as not at the instance of united powers, so not at the instance of any one of them, will she abandon her cherished isolation. It will be abandoned, if ever, solely because it is generally perceived in Great Britain to concern the vital interests of Great Britain so to do. Under no circumstances will Great Britain alone open her Mint to the free coinage of silver. When, if ever, she perceives her interest to lie in retracing the error of 1816, she has the means of apprising other powers of a change in her opinions.

SHALL THE UNITED STATES BUY MORE THAN \$250,000,000 OF SILVER.

III. To go on as we are is the least creditable of all the courses open to our choice. The Treasury silver purchase is defended by nobody, approved by nobody; even every vote for the free coinage of silver is a vote that the Treasury silver purchase shall cease—an assertion that it ought to cease.

It has thrown away the opportunity to let loose abroad the silver we have kept, stamped and stored, and it has discarded the power to reduce by as much the foreign stocks of gold—two arguments that would have had an intelligible cogency.

It is a policy which, if now prolonged by our hopes, may easily be so protracted

thereafter by astute delays and dilatory proceedings, and by the time taken for negotiation itself, as to force an Asiatic silver basis for America.

It is thus, at least, the remission of all control of the silver question to adverse, if not to hostile, interests.

It deprives the United States of perfect equality of position (non-coinage) in negotiation with foreign powers.

It is an expense and a taxation demonstrated by experience to be of no avail for any useful end. Needless as a tax, our silver purchase is also a disturbance in the Treasury, which threatens the currency without relieving the tax-payer. It is heaping up a heavy load of silver coin needing to be kept, but increasingly difficult to keep, in domestic commercial equivalence with our monetary unit. Of that unit the silver coins can never be a true embodiment as the gold coins are by any other means than those which preserve to the gold coin its function as such an embodiment, viz., open Mints to the silver of the world and a full legal-tender quality in the payment of debt, imparted by law to any possible output of silver coin, thus ensuring to the unminted metal an equal value with the monetized coin. It is, therefore, glutting our currency with depreciated metal while also impeding the only means of reversing that depreciation and restoring its value.

SHALL THE UNITED STATES PROMOTE CURE OF MONETARY DISLOCATION ?

IV. To stop the purchase of silver is our only choice, our duty and our interest.

It will stop a wasteful and injurious expense, and the taxation which defrays it.

It will commence and promote reform in the sum and the methods of federal taxation.

It will recover to the United States an equality of position (non-coinage) with foreign powers, which will give us due influence in negotiation.

It will induce negotiation, and negotiation to the end of relief, not for the purpose of delay.

Stopping the purchase and coinage of silver is the first step and the best which the United States can take in doing their great part to repair the monetary dislocation of the world. Its origin was foreign; its remedy is international. The time is ripe for this powerful Commonwealth to enter decisively upon that international transaction. The ripe moment must not be let slip. After becoming entangled in negotiation we should not be free, as now, to act, first for our own advantage, and then for the promoting of our own deliverance and the world's deliverance from this world-wide trouble.

SURPLUS TAXATION \$125,000,000 A YEAR.

Employment for the proceeds of our surplus taxation, reasons for delay in reducing our surplus taxation, can no longer be found in a rapid payment of the funded debt. Setting aside the vanishing three per cents and the unfunded debt of \$346,000,000, the residue of the public debt has been in such wise funded by our predecessors that \$250,000,000 cannot be paid except by purchase at a high premium to the bondholder before September 1, 1891, and that \$737,776,400 cannot be paid except by purchase at a high premium to the bondholder before July 1, 1907. On and after those dates, respectively, but not until then, those loans are payable, at the option of the United States, at their face and without premium. The present premium on the four-and-a-half per cents of 1891 is about 11 per cent. The present premium on the four per cents of 1907 is about 28 per cent. To continue our present surplus taxation, and to employ its proceeds now or for some years to come in giving to the bondholder any such, or still higher, premiums by anticipatory purchase of those bonds before they are due and payable at par, is a fiscal policy so unnecessary, extravagant and merciless to the industrious toilers of our land, from whose earnings, profits or capital are deducted and taken all the revenues of the Treasury, that I cannot presume their representatives in Congress would let stand any law devolving upon the head of this Department such a thriftless task.

SINKING FUND WILL CANCEL FUNDED DEBT WHEN DUE.

The computations of Treasurer Jordan, in his subjoined report, show that the provisions of the Revised Statutes (Sections 3,694 and 3,695) as to the sinking fund and the public debt, and compliance therewith, by their continued operation hereafter, will effect the payment of the whole public debt, greenbacks and bonds, by the year 1908—within a twelvemonth after our last great funded loan becomes due and payable.

In other words, I am advised by that able officer that the whole public debt can be thus duly paid without a continuance of our present surplus taxation, but merely by

conformity to the sinking fund law and the regular annual appropriation therefor from now until 1908—to wit, by “the purchase or payment of *one per cent.* of the entire debt of the United States to be made *within each fiscal year*, which is to be set apart as a sinking fund, and the interest on which shall in like manner be applied to the purchase or payment of the public debt as the Secretary of the Treasury shall from time to time direct.”

REDUCE TAXES—PAY GREENBACK DEBT WITH SURPLUS.

I therefore respectfully recommend:

1. Repeal of the clause in the Act of February 23, 1878, making compulsory Treasury purchases of silver, for the reasons heretofore given and in order to reduce surplus and unnecessary taxation \$24,000,000 a year.

2. Further reduction of surplus taxation, beginning in a manner which will be suggested below, close down to the necessities of the Government economically administered.

3. Repeal of the Act of May 31, 1878, making compulsory post-redemption issues and resales of United States legal-tender notes, thus facilitating—

4. Gradual purchase and payment of \$346,681,016 outstanding promissory notes of the United States with the present and accruing Treasury surplus, issuing silver certificates in their room, and gold certificates if need be, without contraction of the present circulating volume of the currency, these notes (called greenbacks) being now the only debt due and payable before 1891 except the three per cent. bonds, which are probably all to be called and paid early in the ensuing fiscal year.

To reduce taxation the Secretary recommends the repeal of the duties on raw wool, and then says:

But this reduction of unnecessary and injurious taxation is not enough, and will operate slowly in diminishing revenue. Last year's import tax on raw wool is little more than the mere growth last year of our taxes from whiskey, tobacco and beer. To make wool free of tax may finally work a larger loss of revenue by enabling our wool manufacturers to undersell at a profit the foreign importers who brought in last year \$40,596,509 worth of manufactures of wool from which we got a tax of \$27,278,528.

To say nothing of other taxes upon raw materials, there are several hundred articles among the 4,122 articles that we tax which ought at once to be swept off the tax list into the free list—petty, vexatious, needless taxes much enlarging the cost of collecting the revenue from imports.

I shall at an early day prepare and submit to Congress a supplementary report on the collection of duties.

REPORT OF THE UNITED STATES TREASURER.

The annual report of United States Treasurer Jordan gives a complete review of the fiscal operations of the Government for the year. The following extracts are of most interest to our readers:

THE SINKING FUND AND PUBLIC DEBT.

Referring to tables Nos. 46 and 47 in the Appendix to this report, it is suggested that a revision of the method heretofore adopted in making up the sinking fund be made and that the annual payments on account of this fund conform therewith. It will be seen that by the present method the “entire debt” of the United States will be retired by the year 1908. If the method suggested in the report, page 105, be adopted, this debt will be extinguished by the year 1913. Any reduction of the public debt in excess of the annual requirements of the sinking fund will, of course, hasten the period of its total extinction.

Following is a statement showing the former and the proposed manner of estimating the sinking-fund charge for the fiscal year 1887.

According to former method the estimate is made as follows:

<i>First.</i> —1 per cent. of the principal of the debt, including coin and currency certificates outstanding and in the cash of the Treasury on June 30, 1886, and excluding bonds issued to Pacific Railroad Companies		\$17,750,630
<i>Second.</i> —Interest accruing for one year on previous year's retirement of debt, as follows:		
6 per cent. bonds	\$264,805,130	
Matured certificates of indebtedness (4 per cent.)	678,000	

Compound-interest notes and small items (6 per cent.)...	5,660	
United States legal-tender notes, non-interest bearing...	29,060,564	
Fractional currency, non-interest bearing	26,178,715	
Old demand notes, non-interest bearing	505	
	\$320,758,544	
Upon which interest is estimated to be accruing at 6 per cent.		19,245,512
Seven-thirty notes	1,950	142
10-40's of 1864, 5 per cent.	600,300	
Funded loan of 1881, 5 per cent.	68,666,700	
One-year notes, 5 per cent.	1,490	
	\$69,358,490	
Upon which interest is estimated at 5 per cent.		3,467,924
Consols of 1907, interest at 4 per cent.	1,500,000	60,000
Bonds continued at $3\frac{1}{2}$ per cent.	137,466,600	4,811,331
Loan of 1882, interest at 3 per cent.	101,880,950	3,056,428
	\$630,966,534	
Total principal of debt in sinking fund.		
Aggregate of 1 per cent. of debt and one year's interest on securities retired prior to July 1, 1886		48,391,909
<i>Third.</i> —One year's interest at 3 per cent. on this amount..		1,451,759
Total sinking-fund charge.....		\$49,843,728

The proposed manner is as follows:

<i>First.</i> —1 per cent. of the principal of the debt, excluding coin and currency certificates outstanding and in cash of the Treasury, and amount reserved for the redemption of legal-tender notes		\$14,740,346
<i>Second.</i> —Interest for one year on the debt in the sinking fund, at the rates which the bonds would now bear if they had been refunded; and at the present rate (3 per cent.) on debt bearing no interest, as follows: 4 per cent. upon the items above marked. 3 per cent. upon all other items.	\$267,673,400 963,263,134	10,706,936 10,898,794
Making a total of	\$630,966,534	\$36,346,076
<i>Third.</i> —One year's interest at 3 per cent. on \$36,346,076.....		1,000,382
Total sinking fund requirement.....		\$37,436,458
A reduction of		\$12,407,369

UNITED STATES NOTES.

The following table shows the amount of each denomination of United States notes outstanding at the close of the last four fiscal years and on November 30, 1886:

Denomination.	1884.	1885.	1886.	Nov. 30, '86.
Ones	\$26,660,185	\$24,952,061	\$17,603,922	\$14,319,238
Twos	24,897,886	25,295,069	18,204,369	14,938,315
Fives	75,552,915	75,997,805	85,629,219	97,590,310
Tens	69,527,016	64,539,386	66,658,691	71,257,324
Twenties	58,054,629	55,126,569	55,078,379	56,745,463
Fifties	25,208,865	23,459,895	23,291,285	21,688,945
One hundreds	33,640,960	32,896,790	31,359,700	29,232,820
Five hundreds	10,914,000	16,557,000	12,424,000	8,495,500
One thousands	19,634,500	28,716,500	37,361,500	32,942,500
Five thousands	130,000	100,000	60,000	50,000
Ten thousands	60,000	40,000	10,000	10,000
Total	\$347,681,016	\$347,681,016	\$347,681,016	\$347,681,016
Less unknown denominations destroyed in sub-treasury in Chicago fire	1,000,000	1,000,000	1,000,000	1,000,000
Outstanding	\$346,681,016	\$346,681,016	\$346,681,016	\$346,681,016

The present business season, which began much earlier than usual, has absorbed a large amount of currency, and this increased movement has not yet ceased. There

has been shipped from the Treasury at Washington and other points since July 1, 1886, the following amounts and kinds of small currency:

Legal-tender notes, \$5	\$14,055,135	
Legal-tender notes, \$10	6,979,330	
Legal-tender notes, \$20	1,989,940	
Legal-tender notes, \$50	147,500	
Legal-tender notes, \$100	194,300	—\$23,340,205
Various denominations and kinds		152,090
Silver certificates, \$1	4,744,608	
Silver certificates, \$10	6,555,850	
Silver certificates, \$20	2,239,640	—13,540,096
Standard silver dollars:		
Payments during same period, \$24,328,558. Increase of out-		
standing		9,291,728
Fractional silver coin:		
Payments during same period, \$4,177,329. Increase of out-		
standing		3,096,614
Totals of all kinds		\$49,426,733

GOLD CERTIFICATES.

The gold certificates of the old issue, under the Act of March 3, 1863, outstanding at the close of the fiscal year amounted to \$2,427,420, the redemptions during the year having been \$134,200.

Of the new issue under the Act of July 12, 1882, there were nominally outstanding at the close of the fiscal year \$128,746,825; the Treasury offices held \$55,129,870 (compared with \$13,593,410 at the close of 1885), leaving actually in circulation \$73,616,955, a decrease of \$50,550,495 in the year.

On November 30, 1886, the amount of the certificates of the new issue outstanding had decreased to \$122,581,607, but of this amount only \$88,111,913 were actually in circulation, the certificates held in the Treasury offices having decreased to \$34,469,694.

The issues and redemptions during the fiscal year, and the amounts outstanding at its beginning and close, are shown below:

Denominations.	Outstanding June 30, 1885.	Issued during fiscal year.	Redeemed during fiscal year.	Outstanding June 30, 1886.
Twenties.	\$12,343,760	\$640,000	\$1,007,290	\$11,976,470
Fifties.	10,443,800	100,000	828,845	9,717,955
One hundreds.	9,527,800	100,000	693,900	8,943,900
Five hundreds.	14,120,500	200,000	950,000	13,370,500
One thousands.	22,120,000	3,842,000	18,278,000
Five thousands.	14,985,000	655,000	13,430,000
Ten thousands.	55,120,000	2,000,000	53,630,000
Total	\$137,760,860	\$1,040,000	\$10,054,035	\$128,746,825

SILVER CERTIFICATES.

The amount of silver certificates nominally outstanding at the close of the fiscal year was \$115,977,675, of which amount the Treasury held \$27,861,450, leaving \$88,116,225 in actual circulation—a decrease of \$13,414,721 during the year. The table below gives the amount of those redeemed and issued during the year:

Denominations.	Outstanding June 30, 1885.	Issued during fiscal year.	Redeemed dur- ing fiscal year.	Outstanding June 30, 1886.
Ten dollars.	\$51,747,127	\$3,800,000	\$5,277,740	\$50,269,387
Twenty dollars.	52,010,964	800,000	7,853,336	44,957,628
Fifty dollars.	7,654,035	269,195	7,384,840
One hundred dollars.	9,878,520	267,700	9,610,820
Five hundred dollars.	8,910,000	7,075,000	1,835,000
One thousand dollars.	9,701,000	7,781,000	1,920,000
Total	\$139,901,646	\$4,600,000	\$28,523,971	\$115,977,675

The amount nominally outstanding on June 30, 1886, has since been added to by the demands of reviving business to the extent of \$3,679,427, the amount held by the

Treasury decreased to \$84,137,285, and the amount now in circulation, November 30, is \$105,519,817.

STANDARD SILVER DOLLARS.

The table below shows amount of silver dollars coined, on hand, distributed and outstanding at close of each year since the enactment of the law authorizing their coinage.

<i>Fiscal year ending June 30.</i>	<i>Annual coinage.</i>	<i>Total coinage.</i>	<i>On hand at close of year.</i>	<i>Net distribution during year.</i>	<i>Outstanding at close of year.</i>
1878	\$8,573,500	\$8,573,500	\$7,718,357	\$855,143	\$855,143
1879	27,227,500	35,801,000	28,358,589	6,587,238	7,442,411
1880	27,933,750	63,734,750	45,108,236	11,184,043	18,623,454
1881	27,637,955	91,372,705	63,249,300	9,490,951	28,123,405
1882	27,772,075	119,144,780	87,524,182	8,497,186	31,620,586
1883	28,111,119	147,255,899	112,362,510	3,272,791	34,893,389
1884	28,089,930	175,355,829	135,810,868	4,652,072	39,545,461
1885	28,528,552	203,884,381	165,535,854	1,190,804	38,048,557
1886	29,838,905	233,723,286	181,253,506	14,121,193	52,469,720

RETIREMENT OF NATIONAL BANK CIRCULATION.

As there seems to be on the part of the public an idea that the Treasury is locking up money in its vaults on account of this fund, the whole operation of the retirement of the notes of a National bank will be stated here in order to relieve any apprehension which may be felt on this subject. The 3 per cent. bonds of the Washington National Bank, of Westervly, R. I., amounting to \$100,000, were called on the 15th day of September, 1886. On the 12th day of October, 1886, the bank sent its duplicate receipt to this office, the original being held by the Comptroller of the Currency, with the request that a deposit of 90 per cent. of the above amount should be made to retire its circulation with the Treasurer of the United States, as agent for the redemption of the notes of the National banks, and requesting a check for the 10 per cent. difference. Accordingly a credit was placed upon the books of the Treasurer, as agent for the National banks, for \$90,000 and a check for \$10,000, and the amount standing to the credit of the bank in the 5 per cent. redemption fund—in this case \$4,500—returned to the bank. The amount of redeemed notes charged to this account since it was opened is \$1,832. The annual percentage of such redemptions is 25.22, and it will therefore take at least four years before the greater part of the notes of this bank will be redeemed. The amount credited to the general fund thus created stands on the books of the Treasurer, as agent, as a credit for the redemption of the notes of the banks, and as the notes come in for redemption they are charged to this account, and the National bank circulation outstanding is decreased by a corresponding amount. At present, owing to the active business season, none but mutilated notes are sent in for redemption. Persons presenting these notes for redemption are paid either by check on New York or in such form of currency as may be desired by them. The indebtedness on the part of the Treasury, created as above described, is no doubt due in legal-tenders, but is liquidated in the manner stated, and no attempt is made to reserve any specific sum of legal-tenders, or any other form of currency, out of the general Treasury balance in which to pay these constantly-accruing liabilities. There was on November 30th of this kind of liability, adding the 5 per cent. fund (which, theoretically, is also composed of legal-tenders), the sum of \$94,752,389. The total amount of legal-tenders in the Treasury on the same date, exclusive of that held to redeem the legal-tender certificates which are used in the banks as reserve in their stead, was \$29,548,188, thus showing that there must be held in the Treasury in some other forms of money the balance of \$65,204,201. The entire sum of \$94,752,389 may be said to be composed of \$29,548,188 legal-tenders, \$32,602,100 standard silver dollars and \$32,602,100 gold. If the books of the Treasury stated accurately the balances due by it as a depository the amount now reported as a credit balance would be materially decreased. That these balances should not be so reported is, in the opinion of the Treasurer, one of the greatest defects of the present Treasury system.

The Prize Essay on "Domestic Exchanges: How Bankers can handle them to ensure Prompt Returns and Fair Profits" will be published as soon as the Judges are able to render their decision. We expect to make the JOURNAL for 1887 the best in its history; many good things of practical value to bankers will appear in its pages.

BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

The Conviction of an Embezzler.—The Supreme Court of the United States have rendered a decision in the important extradition case of Frederick M. Ker, affirming the decision of the Supreme Court of Illinois, a report of which is published in the Law Department of the JOURNAL. The facts of the case are briefly as follows:

In January, 1883, Ker, who was Cashier and confidential man in the banking-house of Preston, Kean & Co., of Chicago, was granted a vacation. At the expiration of ten days the bank received a letter from Ker, stating that he was a defaulter to the extent of \$21,000 in cash and \$35,000 in United States bonds. He intimated that he would take a European tour, and would repay the money if he ever could do so conveniently, but that if the bank troubled him about the matter he would cause a run on it and burst it up. The bank dispatched a Pinkerton man after him. At Aspinwall he found a Chicago overcoat with Ker's name on the lapel. At Lima he found the fugitive himself. War at that time existed between Peru and Chili, and it required much skill to effect his extradition. Through the assistance of Senator Logan a telegraphic order was sent from the Navy Department, and General Lynch, of Peru, assisted in getting the defaulter embarked on board the man-of-war *Eseex*. At Honolulu, after a halt of thirty days, he was sent to the United States via San Francisco. When he had arrived in Chicago a *habeas corpus* was asked of Judge McAllister on the ground that Ker had been kidnapped from Peru, but it was refused. He then appealed to Judge Drummond, but without avail. A special plea was made to Judge Gary, but without success. His trial came off in December, 1883, and he got a sentence of ten years. It was then taken to the Supreme Court of the State on a writ of error, but without relief to Mr. Ker. An appeal was then taken to the Supreme Court of the United States, on the ground that the extradition was defective in not complying with the treaty of Peru and the United States. The regular extradition papers had not been served because the Government of Peru was practically in the hands of the enemy, and there was only a nominal Government at Arizulpa. But the Supreme Court holds that the fugitive could not avail himself of such a plea, that the Government of Peru was the only proper party to complain of any irregularity, and the conviction of the Supreme Court of Illinois is affirmed. The arguments in the case were made at Washington in May last.

The cost of prosecuting this case has amounted to fully \$15,000, which has been borne by the firm's successors—Messrs. S. A. Kean & Co.—and the persistency with which they have pressed this case in the face of such a heavy expense, not to mention the time and trouble given to the matter, is highly commendable. The banks and bankers of the country are to be congratulated that the Supreme Court has decided that this embezzler shall serve out his sentence.

National Banks Without Circulation.—The question whether National banks shall be established or allowed to continue in existence without circulation is now being considered. Yet it is not an entirely new question, having been brought up thirteen years ago, as the following historical statement will show: In the Senate, on December 11, 1873, a bill to authorize the organization of National banks without circulation was taken up on Mr. Sherman's motion. The bill was drawn by Comptroller of the Currency Knox, and required banks to deposit \$10,000 in the Treasury. Mr. Bayard opposed haste in passing it. He declared that "there is a proposition, indefinite, to create a large number of small banks without circulation—banks entirely of deposit. Where comes the power in the Congress of the United States to

charter in this wholesale manner institutions for banking, totally disconnected with your currency?" He was opposed to the extension of the National banking system, and in favor of free banking. Mr. Sherman admitted that a National bank chartered under the bill would have no right conferred upon it except to be called a National bank. Mr. Frelinghuysen objected to the bill because it gave a National bank to every one who could raise \$10,000, so that they "could have one at every corner grocery, and bring the whole name of National bank into disrepute." Mr. Thurman agreed with Mr. Bayard in questioning the power of Congress under the Constitution to charter banks that have no connection with the currency. "If you are to charter all the men who deal in money in the United States," said he, "by a National charter, all the men who secure deposits, buy and sell exchange, discount notes, and do all that bankers do except issue currency, why not upon the same principle pass a National manufacturing incorporation act, supersede the various acts of the States in regard to manufacturing corporations, and provide that they shall be chartered under National authority?" He saw no reason for stopping at one branch of industry. The bill went over, and on January 27, 1874, was up again, when Mr. Bayard, Mr. Thurman, Mr. Boutwell and Mr. Frelinghuysen all opposed it. Mr. Boutwell declared that he could find authority for such banks as those proposed.

New York State Banks.—Following is an abstract of the reports of the banks of discount and deposit operated under the laws of the State of New York, showing their conditions on December 11, 1886, with comparisons with the statement of December 13, 1885:

<i>Resources.</i>	<i>Dec. 11, 1886.</i>	<i>Dec. 13, 1885.</i>	<i>Changes.</i>
Loans and discounts, less due from the Directors.....	\$114,276,709	\$90,765,384	Inc., \$23,511,325
Due from Directors.....	2,788,708	2,909,487	Dec., 20,784

Due individuals and corporations other than banks and depositors.....	1,907,462	1,467,468	Inc., 439,994
Due Treasurer of the State of New York.....	212,563	16,868	Inc., 195,695
Amount due not included in either of the above heads.....	1,249,710	699,205	Inc., 550,505
Add for cents.....	153	145	Inc., 8
Total liabilities.....	\$201,681,168	\$177,445,045	Inc., \$24,236,123

There are 96 banks in operation against 87 a year ago. The increase in capital is \$270,000 and in resources \$24,236,123. The principal changes are an increase in deposits of \$21,826,486 and in loans of \$23,511,325.

Lawful Use of Savings Bank Funds.—The Attorney-General of the State of New York has given an opinion on the question whether a savings bank can pay an assessment for an improvement to benefit the place in which it is located, although not directly benefiting the bank itself. The proposed assessment was for the purchase of

a piece of property to be given to a railroad upon which to build a station. The Attorney-General holds that the Trustees have no right to use the bank funds for any such purpose.

"The purpose of a savings bank," he says, "is to receive funds on deposit and to invest and keep them safely for the benefit of depositors. All other powers exercised by the Trustees are merely incidental to this main feature, and only possessed when actually and absolutely, or in the judgment of the Legislature, necessary to the proper execution of this purpose. The Legislature has specified in what manner savings bank funds may be invested, and ordered that, until they can be safely invested in the manner prescribed, they shall be safely kept.

"I find nothing in the list of authorized investments," the Attorney-General says, "which can, in my opinion, be construed into a direct or implied power to the Trustees to invest the funds of the institution in a scheme having for its purpose the mere convenience of the inhabitants of a particular district, with no expectation of, or stipulation for, the repaying of either the principal or interest, but the same being invested solely upon the idea that some future substantial, although unknown, benefit may possibly arise therefrom, and attach itself to the bank building. I am of the opinion, therefore, that the Trustees have no authority to pay the assessment out of the bank funds; that such a payment would be in excess of their power, and not within the general policy or authority of the banking laws."

Summary of Financial Measures in Congress.—If any significance is to be attached to the introduction of bills and resolutions, in Congress, the prospect is excellent for a very broad discussion of all the financial questions which are of the most pressing interest. Although Congress was in session only about three weeks a score or more of financial measures have been formed into bills or resolutions. These measures relate to the National banks, the application or reduction of surplus revenues, the coinage of silver and the issue of silver certificates, the redemption of the trade dollar, the bonded debt and interest, and the regulation of the railroads.

The only measure thus far acted upon by either House is a bill to retire the trade dollar, which has been passed by the Senate. It provides for the redemption of the coin, if not defaced, mutilated or stamped, in standard silver dollars any time before July 1, 1887, and their recoinage into standard dollars, their bullion value to be deducted from the amount of bullion legally required to be purchased and coined, but not more than \$500,000 to be deducted in any one month.

Other bills introduced pertaining to silver were:

A bill in the House by Mr. White, of Pennsylvania, providing for the free coinage of silver on the same terms as applied to the coinage of gold, the Secretary of the Treasury, instead of coining all the silver bullion presented, to exchange therefor silver dollars or certificates, coining only so much of the bullion as the needs of the country may require.

A bill by Mr. Findlay, of Maryland, to coin silver half-dollars of 208 $\frac{1}{4}$ grains, quarter-dollars of 108 $\frac{1}{4}$ grains and dimes of 41 $\frac{1}{4}$ grains, the half-dollars to be full legal-tender and the quarters and dimes to the amount of \$10. The bill authorizes the issue of silver certificates upon deposits of the half-dollar in sums of \$10 or multiples thereof. Existing coins are to be recoined. The coinage of silver dollars is limited to not less than 20 or more than 70 per cent. of the total silver coinage during the month. The monthly purchases of silver bullion are to be made only until the total silver coin is equivalent to \$7 per capita; but the total investment in silver bullion under the Act of February, 1878, and this Act is limited to \$350,000,000, and the price to be paid for bullion shall not be more than \$1.29 per ounce.

A large number of bills relating to National banks and United States currency have been introduced.

Senator Beck has presented a bill limiting the issue of United States notes to denominations of not less than \$10 nor more than \$500, not more than one-fourth of the total amount of notes outstanding to be of denominations higher than \$50 and not more than one-fourth of the National bank notes to be under \$10. Coin certificates are to be issued instead of gold and silver certificates, those now outstanding to be retired as fast as received and coin certificates issued in their place. It requires the Secretary of the Treasury to issue \$1, \$2 and \$5 coin certificates on all surplus coin and gold bullion held in the Treasury as the property of the United States in excess of \$100,000,000, and pay out the same for all obligations not expressly payable in

gold and silver coin. The coin certificates are also to be issued in denominations of from \$1 to \$500 upon the deposit of gold coin or standard silver dollars in the sum of \$10 or multiples thereof. The coin certificates will be redeemable in gold or silver at the option of the United States, and two-thirds in value of the certificates outstanding at any time shall be in denominations not exceeding \$50.

Senator McPherson introduced a bill reducing the amount of Government bonds required to be kept on deposit by National banks to one-eighth of the capital stock of banks having \$150,000 capital or less and to \$25,000 for banks having over \$150,000 capital, the circulation not to exceed the par value of the bonds deposited.

Senator Bowen, of Colorado, introduced a bill providing for the issue of United States notes in place of bank notes. It authorizes the issue of such notes to National banks upon a deposit of 70 per cent. in gold, silver and Government bonds. The issue of notes is to be made to equal \$30 per capita and to be increased $8\frac{1}{2}$ per cent. per annum. The bill also provides for free coinage upon the same basis as gold.

Senator Aldrich has introduced a bill to exchange the 4 and $4\frac{1}{2}$ per cent. bonds for $2\frac{1}{2}$ per cent. bonds payable in 1901, but not to be subject to call until all higher interest-bearing bonds are retired. The $2\frac{1}{2}$ per cent. bonds are to be available as deposits for circulation to their full par value.

In the House, Mr. Adams, of Illinois, has presented a bill to reduce the deposit of bonds by banks having a capital of \$500,000 or less to one-tenth of their capital.

Mr. Matson, to guard against contraction of the currency, has proposed a bill authorizing the issue of United States notes of like denominations for all National bank notes that are retired.

Mr. Miller, of Texas, proposes a law regulating the deposit of Government bonds by banks as follows: Banks with \$75,000 capital or less, \$6,000 of bonds; banks with \$75,000 to \$150,000 capital, \$10,000 each; and all over \$150,000 capital, \$25,000.

A bill introduced by Mr. Peters, of Kansas, authorizes the banks to deposit coin and bullion in place of Government bonds as the basis of bank circulation.

Mr. Hewitt, of New York, has introduced a bill which authorizes the anticipation of interest on the bonds in excess of the rate of 3 per cent. per annum by paying in a gross sum an amount equal to the aggregate present worth of such excess of interest. In ascertaining the present worth the interest upon the amount paid by the United States in anticipation of the excess of interest is to be computed at the rate of 3 per cent. per annum reinvested quarterly so as to secure the United States the benefit of compound interest thereon. The bill authorizes the bonds, after interest has been reduced, to be deposited as security for bank circulation to their full par value.

Mr. Wilkins, of Ohio, has presented a bill to reduce the compulsory deposit of Government bonds by any National bank to \$1,000, but the voluntary withdrawal of bonds to retire circulation is limited to \$3,000,000 in any one month. It also provides that, instead of the fund of lawful money set apart to retire surrendered bank notes, a reserve fund of not less than 5 nor more than 20 per cent. of the entire sum of surrendered notes shall be held.

Mr. Warner, of Ohio, touches the same point in a bill which he has proposed. It requires the investment in Government bonds of 90 per cent. of the fund to retire bank notes. It also limits the compulsory deposit of Government bonds to one-twentieth of the capital stock of any bank, and in no case to exceed \$20,000.

Mr. Lawler, of Illinois, has introduced resolutions to the effect that the surplus money in the Treasury should be used for equipping the coast defences and construction of ships.

Mr. Weaver introduced a resolution inquiring how many \$1 and \$2 legal-tender notes have been destroyed, and by what authority, also whether notes of large denominations have been substituted for small denominations. The House Committee on Banking and Currency has reported the resolution favorably.

Mr. Taulbee, of Kentucky, wants a resolution passed inquiring by what authority the Secretary of the Treasury offered to anticipate the January interest on the bonded debt.

Mr. Warner introduced a bill, adding Atlanta, Galveston, St. Paul, Minneapolis, Indianapolis, Kansas City and Omaha to the list of bank reserve cities. This bill has passed in the House.

One of the most important measures now under consideration is the Inter-State Commerce bill, which has been agreed upon by a conference committee of both

Houses and has already been partly discussed in the House at the present session. It prohibits pooling by the railroads, the charging a greater aggregate rate for a short than a long haul, prohibits rebates, compels sixty days' notice of an advance of rates to be given, and compels public posting of all rates. A Railroad Commission is called for, which will have supervision of the railroads.

Mr. Townshend, of Illinois, has presented a resolution to investigate the reports that some of the banks of New York city aided speculators to lock up money.

From a survey of the measures now before Congress it is evident that plenty of work has been cut out for it to do between now and March 4, 1887, when the present session will expire by force of law. Some legislation is needed, but the time is too short to allow of much delay in reaching conclusions.

Amendments to the National Banking Law.—Comptroller Trenholm, on the 15th of December, 1886, appeared before the House Committee on Banking and Currency, and presented a draft of a bill amendatory of the laws relating to National Banking Associations. The features of the proposed bill are as follows:

That oaths of bank officers may be administered by United States Commissioners, Notaries Public, and other officers using an official seal.

Authorizing the Assistant Cashier, in the absence of the Cashier, to make certifications and verifications.

Making an Examiner who makes a false entry in any statement to the Comptroller guilty of a misdemeanor.

Compelling banks to replace called bonds with interest-bearing bonds.

Requiring that there shall be not less than five Directors, exclusive of the Vice-President and Cashier.

Preventing the loan of money on mortgages on real estate.

Limiting the total liability of any individual to a bank to 10 per cent. of the capital and surplus, less 20 per cent. of capital required by law to be retained.

All penalties to be withheld by the Treasurer from interest on bonds deposited.

When the surplus exceeds by 20 per cent. the capital, shareholders to be relieved of individual responsibility if the surplus is subsequently reduced, and assessment to be levied on the stockholders to make up the deficit.

Public depositories which have deposited bonds to secure public moneys not to be required to keep any reserve above the amount of the deposits.

Empowering the Deputy Comptroller to perform such duties as the Comptroller may direct.

If the assets of a failed bank are sufficient to pay all creditors in full, holders of two-thirds of the stock may agree to resume.

Real Estate Titles.—The question was presented recently to Bank Superintendent Willis S. Paine, of New York, and by him referred to State Attorney-General O'Brien, whether the savings banks could accept abstracts of title guarantee companies to real estate in lieu of official searches. Both officials have decided that the Trustees of the banks can decide for themselves as to what abstracts they will receive. The Bank Superintendent says:

"The banks under the supervision of this Department are bound to seek the safest methods of investment available, and it is the duty of their Trustees to be alert and watchful. It would, therefore, be inconsistent with the obligations of my office to limit the banks to one particular method of searching when another affords equal security. I believe it wise and expedient to grant the application of the title companies and to allow the banks to accept corporate searches when found to be reliable and secure. It will be the duty of the officers of the banks accepting these searches to investigate the organization and financial responsibility of the corporation they employ, and upon them will rest the responsibility for accepting searches made by a company of doubtful financial ability and integrity."

The Comptroller at Philadelphia.—The Comptroller of the Currency met a number of the Presidents of the Philadelphia banks in Philadelphia on December 23d, and at their invitation gave his views in regard to the National banking system. He said: "The banks of the great cities have functions of their own quite different from those in the country, the former being left to care for the surplus funds and to supply deficiencies when they may arise. Members of Congress entertain the idea that the same law that governs corn in its periodical changes of supply and demand controls money. It is difficult to get them to understand that, whatever the volume of currency, it becomes distributed in such a way as to serve the uses of the country

and that no more will be retained than will suffice for that purpose. However much the volume is increased, it will be distributed in just the same way. For a long time there has been little or no legislation on the National banking system, and I think we should benefit by our twenty years of experience. I maintain that the value of the National banking system is greatest in those parts of the country where its development is the least. In advancing the view that the only way to attract capital is by the improvement of the system, I was met by the view that what is needed is more money; that the cure for all those things that need cure is to be found simply in increasing the volume of circulation in the coinage of silver dollars, in the issue of silver certificates, and in the taking off of the tax on the State bank issue. What is most needed," added the Comptroller, "and what I most desire, is that you gentlemen will educate your representatives in Congress in the elementary principles of finance that govern the National banking system of the country."

New York City Banks.—Following are abstracts from the quarterly report of 28 State banks of discount and deposit in the city of New York, as made to the Bank Superintendent, showing their condition on Saturday, December 11, 1886, with comparisons with those of December 13, 1885:

<i>Resources.</i>	<i>Dec. 11, 1886.</i>	<i>Dec. 13, 1885.</i>	<i>Changes.</i>
Loans and discounts, less due from the Directors.....	\$72,019,135	\$59,023,559	Inc., \$12,995,576

Add for cents.....	36	53	Dec., 17
Total liabilities.....	\$145,044,066	\$132,245,336	Inc., \$12,798,730

There was no change in the number of banks during the year, but a decrease in the aggregate capital of \$325,000.

A Peculiar Case.—The Milford (Mass.) *Gazette* relates the particulars of a peculiar pension case, in which D. B. Washburn, of that town, is interested. It seems that, some time since, William McFarland, of Milford, was granted a pension amounting to \$1,193.24. The necessary papers were sent from Washington, and payment made by draft on the Sub-Treasury at Boston. McFarland died before the draft reached Milford, and it was indorsed by D. B. Washburn, administrator of the estate. The draft was cashed through the Manufacturers' National Bank, of Boston, and the Home National Bank, of Milford. Mr. Washburn, as administrator, paid the funeral and other expenses of McFarland, amounting to \$1,055.50. Six or seven months passed, when the banks and Mr. Washburn were notified that the payment could not

be allowed, and the Government called upon Mr. Washburn to refund the money paid him, holding that, unless McFarland left a widow or minor children under sixteen, payment could not be made. The Government did not consider the issuing of the pension draft as payment, as McFarland was dead when it reached Milford. Mr. Washburn was obliged to refund the \$1,055 which he had paid out from his own pocket, which circumstance seems particularly hard. A bill has been introduced in Congress by Congressman Ely to have the \$1,055 paid back to Mr. Washburn.

Insuring Savings Bank Employees.—Bank Superintendent Willis S. Paine, of New York, raised the question whether savings banks could use any portion of their funds for the purpose of paying premiums on policies issued by guarantee companies as surety for the fidelity of the bank's officers or clerks. The Attorney-General has submitted an opinion that they can not. The opinion says:

"Section 251 of the Banking Act (page 263, 'Paine's Banking Laws,') authorizes the Trustees of savings banks to require from the officers security for the faithful performance of their duties, but nowhere do I find in the Act any provision authorizing the Trustees to pay out bank funds for the purpose of getting guarantee corporations to guarantee the fidelity of the officers and employees."

Women as Bank Shareholders.—A published list of the shareholders of eight out of nine of the National banks in Cleveland shows that the total number is 751, of which 221 (or nearly 30 per cent.) are women. The total number of shares is 72,000. The holdings of the women shareholders are smaller in proportion than those of the men, the total being 11,546 shares (or about 16 per cent. of the entire amount). The estimated market value of the shares held by women is \$1,544,870 (or an average of nearly \$7,000 to each woman).

Subsidiary Coinage Laws.—The Secretary of the Treasury has submitted to Congress a communication from the Director of the Mint calling attention to the statutory limit of the subsidiary silver coin in circulation. The Director says that the practice of the Department seems to have been based upon the theory that it is its duty to supply subsidiary coin up to the full requirement of the public demand. Yet this practice does not seem to accord with the joint resolution of 1876, limiting the amount of subsidiary coin outstanding to \$50,000,000. To sustain the Department in its theory and action in this matter the Director submits a draft of a joint resolution providing that so much of the Act of 1876, above referred to, as limits to \$50,000,000 the amount of subsidiary silver coin outstanding, be repealed. It also authorizes the Director to purchase the bullion required for this coinage with the bullion fund.

Decrease in Municipal Debts.—A large number of cities in the United States have reduced their debts in the past few years. There are 120 cities—excluding southern municipalities, but including most of the great commercial centers of the West and Northwest—which owe in the aggregate \$42,000,000 less than they did in 1880. Ninety-six per cent. of the municipal securities held by the Massachusetts savings banks is composed of the bonds of 104 cities and towns which show a net decrease of debt of over 5 per cent. in the past six years. By an Act of Congress passed June 30, 1886, debts of Territories are limited to 1 per cent. of the assessed valuation of property, and debts of counties, cities and towns in Territories are restricted to 4 per cent. of taxable values. From 1870 to 1880 Territorial counties increased their debts over 400 per cent., and this led to the restrictive law passed by Congress.

Bank Examiner Mygatt.—Mr. A. B. Mygatt, of New Haven, who has been a Bank Examiner for nearly twenty-two years, has resigned his position. He received his first commission from Comptroller Freeman Clark and Secretary Hugh McCulloch on June 12, 1865. Ever since that time he has looked after the National banks of Rhode Island and Connecticut. Mr. Mygatt's resignation caused general surprise, although it was known that some time ago he had expressed a purpose to retire whenever such a course would be acceptable to the administration. He was very popular with the banks, and is highly esteemed by every one who knows him. His resignation has caused general expressions of regret on the part of bankers and the public generally.

Maine Savings Banks.—Hon. F. E. Richards, the efficient Bank Examiner in Maine, has made his annual report. There has been an increase during the year of over 5,000 in the number of depositors and over \$2,000,000 in the amount of deposits. Some of the

banks have had their surplus seriously affected by the depreciation of the stock of the First National Bank, of Portland, consequent upon the defalcation of Mr. Gould, and will probably find it prudent to reduce their dividends until the reduction of their surplus is made up. The report places the liabilities of the savings banks of the State at \$39,475,138.43, consisting of deposits, \$37,215,071.40; reserved fund, \$1,558,744.60; special reserve fund, \$70,619.06; undivided profits, \$770,499; other liabilities, \$60,204.37. The Examiner inclines to the opinion that the tax on savings banks can be still further reduced with good results.

The Trade Dollar.—A bill to redeem the trade dollar has passed the Senate, but is yet to be acted upon in the House. The bill as passed reads:

SEC. 1. That until July 1st, 1887, United States trade dollars, if not defaced, mutilated, or stamped, shall be received at the office of the Treasurer or any Assistant Treasurer of the United States, in exchange for a like amount, dollar for dollar, of standard silver dollars of the United States.

SEC. 2. That the trade dollars received by the Treasurer or any Assistant Treasurer of the United States shall not be paid out or in any other manner issued, but at the expense of the United States shall be transmitted to the coinage Mints, and shall be regarded and treated as silver bullion, and, at their bullion value, shall be deducted from the amount of bullion required to be purchased and coined by the Act of February 23, 1878, and shall be recoined into standard silver dollars, according to the provisions of said Act; provided that the amount to be so deducted as provided in this section shall not exceed \$500,000 in any month.

SEC. 3. That all laws and parts of laws authorizing the coinage and issuance of United States trade dollars are hereby repealed.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- The deficit in the Bolivian Treasury this year will amount to \$800,000.
- The People's Savings Bank, with a capital of \$50,000, will shortly be opened at Saginaw, Mich.
- It is the bull in the stock market who is now most in favor of early rising.—*Philadelphia North American*.
- The capital stock of the Berney National Bank, of Birmingham, Ala., is to be increased from \$100,000 to \$500,000.
- Three more new banks are projected in Chicago, for one of which it is proposed to secure a charter under the National Banking Act.
- Mr. J. W. Kilbreth, President of the State National Bank, of New Orleans, has resigned. It is understood he will organize a new National bank in New York city.
- The Comptroller of the Currency has recommended that an appropriation be made by Congress to pay the \$1,250,000 deficit of the Freedman's Savings Bank to its depositors.
- Mr. Nicholas F. Palmer, after a service of fifty years in the Leather Manufacturers' National Bank, of New York city, fourteen years of which were as President, has resigned his position owing to ill health.
- Application to establish a new bank at Atlantic City, N. J., has been granted. It will be called the Second National Bank and have a capital of \$100,000. It is understood that Mr. George F. Currie will be the President.
- The President has pardoned Obey E. Owens, the Receiving-Teller of the Third National Bank, of St. Louis, who has been serving a sentence in the Chester (Ill.) Penitentiary for embezzling \$200,000 of the bank's funds in 1882.
- The failure of D. M. Tomblin and Burke Colvin, bankers, of Akron, Col., is reported. They were also proprietors of the Benkleman Bank and of the Republican Valley Bank, at Cambridge, Nebraska. Both have been arrested.
- The Comptroller of the Currency has declared a fifth dividend (10 per cent.) in favor of the creditors of the Pacific National Bank, of Boston, Mass. This makes in all 30 per cent. paid on all claims proved, amounting to \$2,299,140.
- The United States Supreme Court granted, on December 20th, a motion to advance the bank-tax case of the Mercantile National Bank against the city of New York, involving the legality of taxes assessed upon the shares of National banks in that city to the amount of \$2,000,000. The case is set for argument on the first day after the February recess. A similar motion has been granted in the case of the

National Newark Banking Company against the city of Newark, N. J., presenting the same questions.

— The private banking house of V. G. Hush, of Minneapolis, Minn., suspended on December 21st. Mr. Hush says that the bank is solvent and will pay depositors in full. The trouble is alleged to be due to indorsements made by Mr. Hush for other people, but for which he holds collateral.

— Mr. William A. Heard, of Sandwich, N. H., has been appointed National Bank Examiner for the States of Maine and New Hampshire. The former Examiners in these States, which are now consolidated into one district, were C. V. Dearborn, deceased, and A. P. Wiswell, resigned.

— The Secretary of the Treasury has advised Congress that the capacity of the vaults for the storage of silver dollars is exhausted. The cost of a double steel-lined vault which will hold \$100,000,000 is estimated at \$106,673, and of a simple vault without steel lining, of like capacity, at \$27,804.

— There is exceeding meanness in counterfeiting the Bland dollars and putting less silver in them than does the Government. The opportunity to dignify and popularize the business of making spurious coin appears to be thrown away on the rascals who are in it.—*Philadelphia Record*.

— Germans are strongly urged to avoid the new Russian loan. The Russian debt is 5,600,000,000 roubles. The interest thereon has risen in a decade from 104,000,000 to 261,000,000 roubles. The paper circulation is 716,000,000 roubles, of which only 171,000,000 roubles are covered by bills convertible into currency.

— President Cleveland has commuted the sentence of William Roath, late Cashier of the Shetucket National Bank, of Norwich, Conn., to two years' imprisonment from the date of conviction. He was convicted on February 25, 1884, of perjury in falsifying his report to the Comptroller of the Currency regarding the assets of the bank.

— Eight of the nine National banks in Cleveland have commenced suit in the United States Circuit Court to restrain the collection of taxes assessed against them, on the ground that the banks are not taxed on the same system as other corporations and individuals. The banks are assessed for \$112,124 and have offered to pay \$43,792.

— The cause of the last rise in silver is now understood to have been the buying of this metal by the French Government for coining into piastres for use in Tonquin and the East. It is ten years since the French Government decided on issuing this coin for Cochinchina, and until recently there has been no demand for the coin. The increased relations of France, however, and the small supply of Mexican coin, have increased the circulation of French piastres.

— The failure of Messrs. Upright & Emy, of Charlevoix, Mich., led to some questions as to the standing of the Charlevoix Savings Bank, which, as results show, was entirely unnecessary. Mr. Upright, who was supposed to be the principal owner of the bank, in fact held only one hundred shares of its stock, and his failure in no way affected the bank, whose stockholders are all responsible and substantial men. The bank itself is in good condition. Since August 1, 1884, its net profits have been \$8,583. Only 60 per cent. of its \$25,000 capital has been assessed, and no dividends are being declared until the entire amount is paid up, which the profits will shortly do.

R. R. AND INVESTMENT NEWS.

New Issues.

NEW YORK STOCK EXCHANGE LIST.—The following securities have been added to the regular list:

Mexican Central Railway Company—Income bonds to the amount of \$8,128,000 and capital stock to the amount of \$33,170,900.

Missouri Pacific Railway Company—An additional \$4,000,000 of capital stock, making the total amount listed up to \$40,000,000.

Chicago, Burlington & Northern Railroad Company—Debenture 6 per cent. bonds, due December 1, 1896, to the amount of \$2,250,000.

Atlantic & Pacific Railroad Company—Guaranteed trust 4 per cent. gold bonds, due January 1, 1897, to the amount of \$17,610,000, issued in exchange for 6 per cent.

bonds upon its Western and Central Division, now outstanding, and Central Division income bonds to the amount of \$2,100,000.

Union Pacific Railway Company—An additional \$900,000 of collateral trust 5 per cent. bonds, making the total now on list \$4,567,000.

St. Paul & Northern Pacific Railway Company—General mortgage 6 per cent. gold bonds, due February 1, 1923, to the amount of \$6,000,000.

St. Paul & Duluth Railroad Company—Duluth Short Line Railway's first mortgage 5 per cent. bonds, due September 1, 1916, to the amount of \$500,000.

East Tennessee, Virginia & Georgia Railway Company—An additional \$22,000 of 5 per cent. divisional bonds, making the total amount listed \$3,106,000.

Missouri, Kansas & Texas Railway Company—An additional \$1,725,000 of general mortgage 6 per cent. bonds, making the total amount listed up to \$33,725,000.

Columbus, Hocking Valley & Toledo Railway Company—An additional \$1,000,000 general mortgage 6 per cent. bonds, making the total amount listed \$2,000,000.

Chicago, Rock Island & Pacific Railway Company—An additional \$900,000 first mortgage extension and collateral bonds, making the total amount listed \$4,860,000.

Gulf, Colorado & Santa Fé Railway Company—An additional \$600,000 of first mortgage bonds, making the total amount listed \$9,600,000 on 800 miles of completed road.

Richmond & West Point Terminal Railway & Warehouse Company—Application was made for the listing of an additional \$9,000,000 common stock and \$5,000,000 preferred stock. The Committee admits \$1,328,200 common stock and \$885,500 preferred stock.

Chicago, Milwaukee & St. Paul Railway Company—An additional \$585,000 of Hastings & Dakota first extension mortgage 5 per cent. bonds and first mortgage 5 per cent. bonds of the Chicago & Missouri River division, the first mortgage 5 per cent. bonds maturing July 1, 1923, to the amount of \$2,049,000.

New York & Perry Coal & Iron Company (the reorganization of the New York & Straitsville Coal & Iron Company)—Capital stock, 15,000 shares of the par value of \$100 per share, \$1,500,000. The company is free from bonded or other indebtedness, and its earnings for the six months ended October 31, 1888, with pig iron at \$16 per ton, were equal to the rate of 6 per cent. per annum on the stock.

PANAMA LOAN.—The Legislative Council of Panama has passed a law sanctioning a loan of \$15,000,000.

WINONA LOAN.—The Winona (Minn.) City Council, at a recent meeting, authorized the finance committee to negotiate a loan of \$10,000.

NEWPORT BONDS.—The City of Newport, R. I., has issued \$51,000 in 4 per cent. bonds for a sewer and new school house. They were awarded to the Savings Bank of Newport at a premium of \$4,500.

BEECH CREEK RAILROAD.—The stockholders have voted to issue \$400,000 car trust bonds to provide for new equipment. Most of the stockholders have agreed to accept car trust securities in lieu of a 5 per cent. cash dividend.

ST. LOUIS & SAN FRANCISCO.—An issue of \$5,000,000 St. Louis & San Francisco general mortgage 5 per cent. gold bonds, due 1931, was offered for subscription in New York, Berlin, Hamburg and Bremen on December 1st. The bonds were all sold at 99½ and accrued interest. They are secured by a first mortgage on 185 miles of road, and are a lien upon all the property of the company.

Railroad Reports.

NEW YORK, LAKE ERIE & WESTERN.—The annual report for the fiscal year ended September 30, 1888, shows earnings as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$18,934,572	\$22,500,046
Operating expenses.....	14,347,516	16,388,638
Net earnings	\$4,587,056	\$6,111,408
Summary of income account:		
Total net income.....	\$5,589,748	\$7,057,689
Total disbursements.....	6,968,691	7,043,258

Balance.....Def., \$1,378,943 Sur., \$14,611

The report states that the holders of \$32,952,500 of the outstanding \$33,857,400 of the second consols accepted the proposition to fund the June and December 1884,

June 1885 and June 1886 coupons into 5 per cent. funded coupon bonds, and \$3,957,900 of the latter were issued.

LONG ISLAND.—The annual report for the year ended September 30, 1886, shows that the earnings and expenditures were as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$2,826,478	\$2,994,772
Operating expenses.....	1,856,351	1,872,325
Net earnings	\$970,127	\$1,122,447
Summary of income account:		
Total net income.....	\$970,127	\$1,122,477
Total disbursements.....	906,482	937,242
Balance, surplus.....	\$64,645	\$185,205

OREGON RAILWAY & NAVIGATION.—The annual report of this company for the year ended June 30, 1886, makes the following showing:

	1884-5.	1885-6.
Total gross earnings.....	\$4,082,118	\$5,546,542
Operating expenses.....	2,569,358	3,066,496
Net earnings.....	\$1,482,760	\$2,460,046
Summary of income account:		
Total net income.....	\$1,621,663	\$2,465,272
Total disbursements.....	1,852,943	2,423,208
Balance	Deficit, \$230,680	Surp., \$42,069

There was \$52,106 spent for betterments, etc., during the year, leaving a deficit of \$10,132. Dividends were increased from 4¼ per cent. in 1884-5 to 6¼ per cent. in 1885-6.

RICHMOND & DANVILLE.—For the fiscal year ended September 30, 1886, the earnings, expenses and income were as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$3,999,147	\$4,012,028
Operating expenses.....	2,231,486	2,121,558
Net earnings.....	\$1,767,661	\$1,890,475
Summary of income account:		
Total net income.....	\$1,767,661	\$1,890,475
Total disbursements.....	1,483,097	1,467,658
Balance, surplus.....	\$284,564	\$422,817
Expended for construction.....	221,047	323,958
Net surplus.....	\$63,517	\$98,859

NEW YORK CENTRAL.—The annual report for the year ended September 30, 1886, shows the following:

	1884-5.	1885-6.
Total gross earnings.....	\$24,429,441	\$30,506,361
Operating expenses.....	16,819,372	18,610,377
Net earnings.....	\$8,110,069	\$11,895,984
Summary of income account:		
Total net income.....	\$8,110,069	\$11,895,984
Total disbursements.....	9,063,717	10,823,017
Balance.....	Def., \$963,648	Surp., \$1,072,967

The company paid 3¼ per cent. in dividends in 1884-5 and 4 per cent. in 1885-6.

OHIO & MISSISSIPPI.—The annual report for the year ended June 30, 1886, shows earnings and expenditures as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$3,645,467	\$3,671,920
Operating expenses.....	2,670,798	2,597,708
Net earnings.....	\$974,731	\$1,074,212
Following is a summary of income account:		
Total net income.....	\$974,731	\$1,074,212
Total disbursements.....	1,073,900	1,079,415
Balance, deficit	\$99,169	\$5,208

The report states the first half of the year was the worst. In the latter half there has been considerable improvement.

NEW YORK & NEW ENGLAND.—The annual report of this company for the year ended September 30, 1886, filed with the Railroad Commissioner of Massachusetts, shows the following:

	1884-5.	1885-6.
Total gross earnings.....	\$3,303,674	\$3,899,405
Operating expenses.....	2,356,450	2,620,605
Net earnings.....	\$947,215	\$1,278,800
Rentals.....	130,132	66,236
Balance.....	\$817,083	\$1,212,565
Interest.....	992,536	1,067,067
Balance.....	Deficit, \$175,453	Surp., \$145,478
Dividend on preferred stock, 7 per cent.....		123,000

Balance..... Deficit, \$175,453 Surp., \$12,478

MANHATTAN ELEVATED.—The report of this company for the year ended September 30, 1886, makes the following showing:

	1884-5.	1885-6.
Total gross earnings.....	\$7,000,567	\$7,426,216
Operating expenses.....	3,967,983	3,980,181
Net earnings.....	\$3,032,584	\$3,466,024
Summary of income account:		
Total net income.....	\$3,032,584	\$3,466,024
Disbursements.....	1,459,043	1,806,308
Balance.....	\$1,573,541	\$1,659,631
Dividends.....	1,560,000	1,560,000

Surplus..... \$13,541 \$99,631

The number of passengers carried during the year was 115,109,591 against 103,354,729 in the previous year.

FOREIGN BANKING AND FINANCIAL NEWS.

[Specially translated for RHODES' JOURNAL.]

Bank of France Notes.—The *Memorial Industriel* gives the following interesting account of how true bills may be recognized. Although it is very hard to counterfeit them at present, still it is done from time to time. The notes have two numbers, which are reproduced twice in diagonal, and one of them is preceded by a letter of the alphabet. Suppose that one of these numbers is 181 and the other G 270; the third number (the notes have three), which is placed between the signature of the principal Cashier and that of the Secretary-General should be 6,731; 181. These figures are obtained by the following calculations: Take the number preceding the letter and multiply it by 100, which will be 27,000. Now divide by 4, which gives 6,750. Then see what rank G holds in the alphabet, beginning with Z, which is considered as two letters, while J is not counted, as doing duty with I. The letter G will be found the 19th. Now deduct 19 from the quotient, 6,750, and we have 6,731, which is followed by the letterless number 181.

No More Counterfeits.—The Paris printing house of Paul Dupont has secured the monopoly of an important discovery. M. Schlumberger, of Paris, has invented a process which he calls the *Cryptographie de Sureté*, which makes the counterfeiting of notes, shares, checks, etc., an impossibility, and which allows a banker to ascertain *instantaneously* whether a security, etc., is genuine or not. It is claimed that the process is infallible, rapid and cheap. This is the description given of it: Hidden on the ground of the note are signs, words or figures that are *invisible*, but these will surely appear when the counterfeiter tries to wash the note. These will also appear by simply rubbing with a brush. The counterfeiters do not know the hidden word or sign, and their products cannot show it. In checks the invisible word will appear under the manuscript words in ordinary ink when an attempt is made to wash them. The secret consists in printing invisible words or signs which become visible by using a brush dipped in a reagent indicated by the inventor.

NEW COUNTERFEITS, SPURIOUS COINS, ETC.

TWO MEN AND TWO WOMEN counterfeiters have been arrested at Wharton, Kansas. A complete outfit for making bogus dollars was captured.

A LARGE QUANTITY OF COUNTERFEIT Mexican silver dollars is reported by the Cienfuegos exchanges to have been put into circulation in that locality.

THERE WAS A SCARE IN BALTIMORE recently over alleged counterfeit \$10 silver notes. Treasury officials say they are not counterfeit, but that the paper is bad.

TWO MEN, NAMED JOHNSON AND BURTON, have been arrested in Camden, N. J., for passing counterfeit \$10 bills. Some of the counterfeits were found in their possession.

GABRIEL VAN ANTWERP AND ELIAS OBERDORF are held in Wilkes-Barre, Penn., on the charge of counterfeiting. They are believed to have a private mint in the wilds of Susquehanna County.

BILLS ARE REPORTED TO HAVE BEEN circulated in Cincinnati which were raised from \$2 to \$10, the figure 10 being cut from an imitation \$10 advertisement and pasted over the figure 2 on the note.

JOSEPH H. WHITE, WHO WAS INDICTED in St. Louis for uttering forged Brazilian Treasury notes, pleaded guilty. His brother, Lucius White, is under indictment in St. Charles, Mo., for the same offence.

OFFICERS OF BALLARD COUNTY, KENTUCKY, accompanied by a posse of citizens, broke into a nest of counterfeiters on December 8th, and arrested four men and two women. On December 4th one of the men went to Wickliffe and bought some solder for which he paid partly with counterfeit nickel five-cent pieces. This led to the movement against them.

A LARGE NUMBER OF COUNTERFEIT \$20 silver certificates are reported in circulation in Western cities. This counterfeit made its appearance first in 1883, and in December, 1884, the counterfeiter was arrested and the plates destroyed. It is believed that a good many counterfeit notes which had been printed from the plates were buried and have recently been unearthed. Some of them have been passed lately. The paper on which the counterfeit is printed is heavy and stiff, and the note is one-eighth of an inch shorter than the genuine bill. In the panel to the left on the counterfeit is the word "certificate." The letters "r," "t" and "f" are engraved wrong side up, and on the back of the note the word "taxes" is printed "tares," and "engraved" is "engroved."

AN IMPORTANT CAPTURE OF A PLANT for manufacturing counterfeit silver dollars was made last month near Pullman, Ill. A large amount of the bogus coin was also secured. The counterfeits are declared to be the most deceptive that have ever been known, and deceive expert numismatists, notwithstanding there is a singular defect upon them, without which they could not be distinguished from genuine dollars. It consists of a peculiar curve to the letter "d" in the motto "In God we trust," the consonant sloping backward almost like an italic letter. The counterfeits correspond in weight exactly with the United States dollar, and have a genuine ring when tested. The metal of which they are made is an entirely new and dangerous composition, whose constituent parts metallurgists cannot determine without a careful analysis.

J. R. T. Brown opened an office at 234 Broadway, New York, about one year ago, and advertised as "J. R. T. Brown & Co., Bankers," soliciting accounts, correspondence, etc. Over six months ago a reputable agent brought an advertisement of the concern to this office with an order to publish it one year in the *JOURNAL*, but it appeared in only one issue, as we soon learned something about the so-called "bankers" and the card was promptly dropped. As a result of their advertisement a number of banks and bankers, mainly in the West, began to report the concern as their New York correspondents to appear in our *BANKERS' DIRECTORY*, etc., but, instead of so doing, we at once notified all of them to have nothing to do with the said J. R. T. Brown. It now appears from a half-column account, published in the New York *Times* of January 6th, that Brown has fled after victimizing a number of people in this city and Brooklyn. Look out for him!

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

BONDS AND NOTES ISSUED IN 1861.

Editor Rhodes' Journal of Banking:

SIR:—Will you kindly favor me with answers to the following questions, as stated below? I don't wish to trouble you much, and the answer in round numbers will be quite satisfactory.

How many dollars in notes did the United States Government issue in 1860 or 1861?
How many dollars in United States bonds?

EDWIN A. RASCH.

DETROIT, Mich., December 6, 1886.

During the fiscal year ended June 30, 1861, there were \$36,194,135 of six per cent. bonds (including six per cent. Treasury notes) issued. Between July 1st and December 1st, 1861, there were issued \$14,019,034 six per cent. two-year notes, \$12,877,750 six per cent. sixty-day notes and \$21,165,220 demand notes (a total of \$48,062,004); also \$100,000,000 three-year 7-30 bonds and \$45,795,478 twenty-year six per cent. bonds—a total of \$145,795,478 bonds and of \$193,857,482 notes and bonds. With the exception of the demand notes all these securities carried interest. We have not the data at hand to show the issues in December, 1861, but for the fiscal year ended June 30, 1862, there were issued \$57,926,116 four per cent. bonds, \$96,354,552 six per cent. bonds and Treasury notes and \$122,582,485 7-30 bonds (a total of \$277,463,153) and \$53,040,000 of old demand notes; making a total issue of \$330,503,153. In this amount is included the issue between July 1st and December 1st mentioned above.

STATE BONDS AS SECURITY FOR NATIONAL BANK CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—It occurs to me that bonds of the various States might, under proper regulations as to the absolute certainty of their payment, be deposited with the National Treasurer for the security of National bank circulation.

I am decidedly in favor of the National Government paying all its obligations at the earliest date practicable, which will, of course, displace the present security for the National bank issue; but I believe State bonds might safely be substituted to a considerable extent at least. Certain rules and regulations might be prescribed by Act of Congress under which State bonds would be received for such purpose, and such States as complied with the regulations would reap the benefit of floating their bonds at low rates of interest.

Respectfully,

G. W. THOMPSON,

CHATTANOOGA, Tenn., December 20, 1886.

President City Savings Bank.

THE LONDON PASS-BOOK.

Editor Rhodes' Journal of Banking:

SIR:—In reading the December number of the JOURNAL, it happened that I gave particular attention to the *fac-simile* of an English pass-book given on pages 964 and 965. Never having practiced addition in £ s. d., I began, as a kind of arithmetical experiment, to add the columns, and soon made the startling discovery that on the face of this pass-book "Thos. Cooper, Esq.," is ahead of the "London and Westminster Bank" to the neat little amount of £200 30s. 11d. if not the further amount of £2 10s. In carrying down the balance of March 31, 1882, the error was made of carrying down the total footing, £639 9s. 1d. instead of the balance £439 5s. 2d., so that fortunate "Thomas Cooper" was able to use again the sum of £200 3s. 11d., which he had already checked out once. Also, at the bottom of the credit column, on page 964, there appears the sum of £2 10s. which is not included in the footing, though one cannot know whether it was intended to be so included.

I am aware, of course, that this *fac-simile* is intended to simply illustrate the general form of an English pass-book, and not necessarily to serve as an example of English mathematics or book-keeping, and probably it was reduced from a copy of some kind into which such an error might creep undiscovered. But it seems a kind of grim joke that the admirable series of articles on "Practical Banking," which has contained so much valuable and hitherto almost unattainable information for bank officers of

all grades, should here furnish unconsciously an example of one of the most serious and practical evils and dangers of banking, viz., the errors sometimes made by even the best book-keepers and accountants, and which in the rush and hurry of business go undiscovered, sometimes forever, and sometimes until power to correct them has ceased.

Very truly yours,

A. H. MAGILL.

CLINTON, Ill., December 20, 1886.

[Mr. Magill is correct. The pass-book model was furnished to Mr. Patten while in London, as stated in his text. It was reproduced for the JOURNAL in *fac-simile*, by photo-engraving process, thus giving an exact copy of the original. It was simply intended to illustrate the general form of an English pass-book, but, at the same time, as suggested by Mr. Magill, its inaccuracy teaches a valuable lesson.—Editor JOURNAL.]

A BANKER'S OPINION.

[A western banker, who is spending the winter in Washington, writes as follows about financial legislation before Congress.]

Editor Rhodes' Journal of Banking:

SIR:—Of the six bills introduced thus far to found a National bank system and currency, all are utterly trivial and ineffective. I think that we are in a position, as no other Nation is, to use the very best, cheapest, most easily understood by the people and easiest identifiable currency of all—a metallic one—and when it becomes necessary to extend credit by means of bills (and it can be done profitably) it will be done, but it will be by evolution from the necessities of the situation and not by hap-hazard legislation.

The National bank note and greenback ought to go, as they are similar parts of a grand inconvertible currency scheme and the creatures of an exigency long gone by, and were not the best. The National bank note is in direct violation of common sense as well as of the principles of economic science, in that, like John Lewis' land bank, it provides that the holder of a claim against the United States, *i. e.*, a bond, can sell it back to the United States, and still own it and enjoy its interest.

WESTERN BANKER.

WASHINGTON, D. C., January 1, 1886.

LOSS ON BANK CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—I notice in the December JOURNAL, on page 1003, an article stating that the loss by retaining circulation on four per cent. bonds at 128 is 1.88 per cent. per annum. I have figured on this matter considerably and cannot see it that way. I inclose my figures, and would like you to point out an error in them:

\$100,000 in United States bonds at 4 per cent. earn.....	\$4,000
\$90,000 in circulation at 6 per cent. earns.....	5,400
Less:		\$9,400
Tax (1 per cent.).....	\$900	
Redemption expenses.....	90	
Sinking fund to liquidate premium in 20 years.....	720	1,710
Net earnings.....	\$7,690
\$128,000 at 6 per cent.....	7,680
Gain by circulation.....	\$10

At 5 per cent.—which is, I think, the correct basis for New England banks, taking into consideration losses, etc.—the gain by circulation is \$300.

H. L. SHERMAN,

LAWRENCE, Mass., December 17, 1886.

Assistant Cashier.

The statement to which our correspondent invites attention was in no sense an expression of opinion by the JOURNAL. It appears in an extract published in "The World of Finance" Department, which was established expressly to give our readers a birdseye view of the current thought of the country, without any intention to indorse the opinions quoted unless such intention is expressly declared in connection with the quotation. We do, however, invite criticism of the opinions which appear in that Department, and are pleased that our correspondent has availed himself of the privilege.

The statement to which he refers appeared in the *New York Times*, which we properly credited, and by that paper is credited to the *Financial Record*. The calculation, we believe, is erroneous, and we are at a loss to understand by what method the deduction was reached. Our correspondent comes nearer the correct

result, but we think he is also in error when he charges off the loss of premium through the operation of a sinking fund, although we have frequently seen it done. The payment of the premium for the bonds is an actual disbursement, involving a loss of interest to the bank and not a saving of interest, which would go to reduce the principal amount paid. Taking this view of it, we make the following calculation :

\$100,000 in United States bonds at 4 per cent. earn.....	\$4,000
\$90,000 in circulation at 6 per cent. earn.....	5,400
Total.....	\$9,400
Less:		
Tax on \$90,000 circulation at 1 per cent.....	\$900	
Redemption expenses (estimated)	90	
Annual loss of premium (1-20th of \$28,000).....	1,400—	2,390
Net income from bonds and circulation	\$7,010
Interest on original investment, \$128,000 at 6 per cent.....	7,680
Loss on circulation	\$670

At 5 per cent., which certainly comes nearer the rate banks actually get, there would be a loss of \$290. This estimate does not take into account the bonds which the banks are required by law to hold whether they take out circulation or not, which would reduce the estimated loss. We think, also, that the estimate of .1 of 1 per cent. on circulation as the annual cost of redemption is larger than the actual figure, which, we believe, is about .05 of 1 per cent.

NATIONAL BANK EXAMINERS.

Editor Rhodes' Journal of Banking:

SIR:—The request of Comptroller Trenholm for the resignation of Bank Examiner Scriba, and the appeal by a number of bank officials for his retention, naturally suggests an enquiry into the character of the relation between a Bank Examiner and the banks which it is his duty to examine. I think that the following, from the *New York Sun*, puts the matter in its true light:

"In the controversy over the appointment of a National Bank Examiner for this city the Comptroller of the Currency seems to us to be in the right. He wants an Examiner of whose fitness he has personal knowledge and with whose qualifications he is satisfied. The banks want him, on the other hand, to retain a man who pleases them because he pleases them. This is very natural, but it is not a good reason for complying with their wishes. We should say that an Examiner who did not please the banks would probably be the more faithful and strict in the discharge of his duty. Any way, Mr. Trenholm has the power to suit himself, and is responsible only to the country."

It seems to me it is not a question of the Examiner pleasing the banks but of pleasing the Comptroller. And I see no more reason why the Comptroller should explain his reasons for changing an Examiner than that he should explain the changing of his private secretary. Both hold confidential positions, and hence absolute liberty in the choice of those who are to fill them must be allowed the one who must extend the confidence. Mr. Scriba is a good man and a faithful official, and it is no reflection upon him that the Comptroller does not feel like entertaining the same confidential relations with him that he might with some one else. AN OLD-FASHIONED BANKER.

NEW YORK, December 13, 1886.

A CRITICISM.

Editor of Rhodes' Journal of Banking:

SIR:—I presume that your subscribers generally are well satisfied with the excellent manner in which the JOURNAL is conducted and with its devotion to the banking interests, but there may be some who, like myself, have fault to find, and I ask space in your Correspondence Department to make our complaint.

We think that the general tendency of the JOURNAL'S articles is to excite a spirit of dissatisfaction with the good old-fashioned ways, and to create in the minds of your readers a foolish desire for new things—seeking to lead them into untrodden paths and untried ways. For example, up to the time that your series of articles on "Practical Banking" began to appear, we had been getting along at our bank in a very comfortable manner. True, the cash did not always balance exactly; sometimes it was over and sometimes short; but we didn't mind it. Occasionally a note, or perhaps a few coupons, were lost; but we managed to get through these little matters some way or other. None of us took vacations; in fact, with the exception of the

younger clerks, we did not want any. But, in an evil hour, I loaned a copy of the JOURNAL to one of our Directors—a leading spirit in the Board—and from that day the whole institution has seemed to be possessed with the spirit of reform. This thing must be done this way and that thing that way. Books deemed indispensable have been pronounced useless and obsolete. Everything has been turned topsy-turvy, until, as our venerable Teller remarked, "There's no longer any pleasure in being in a bank."

One evening we were detained until 7 o'clock looking for \$5 in the cash. Of course we found it; but what was the use of all the trouble about a little thing like that?

Even the waste paper is all gathered up at the end of the day and put in a big paper bag, which is actually dated.

Next year every man, from the Cashier down, will have to take a holiday whether he wants to or not.

Altogether, the influence of the JOURNAL has completely remodeled the bank, and I must say, in all justice, that we do more work and do it better than we used to do in

THE GOOD OLD WAY.

—, December 29, 1886.

[Note.—The above is from an active officer in one of the largest banks in a thriving Southern city.—Editor JOURNAL.]

SENATOR BOWEN'S PONDEROUS POLICY.

Editor Rhodes' Journal of Banking:

SIR:—Senator Bowen, of Colorado, has rushed to the relief of the National banks with a bill which, it seems, should defy any attempt of the Senate to treat it with dignity. Were it not for the fact that Senator Bowen prides himself upon his original discovery that "there is nothing in political economy," a reading of his bill would naturally lead to the conclusion that some waggish individual had made unwarranted use of his name by attaching it surreptitiously to a burlesque measure. Such a practical joke, however, would not be nearly so funny as the real fact that Senator Bowen has really framed the bill, and cherishes the idea that he has acquitted himself most creditably.

The bill provides that silver dollars, gold coin and interest-bearing bonds of the United States, in three equal parts, shall be deposited to an amount equal to 70 per cent. of the circulation desired. That "United States notes," at the rate of \$100 for each \$70 of gold, silver and bonds deposited shall be issued to the banks, but the amount issued to any bank not to exceed its paid-up capital.

The bill further provides "that on and after July 1, 1888, the active circulation of the United States shall be thirty dollars per capita." The population on that date is to be assumed to be 60,000,000, and the currency is to be increased $8\frac{1}{4}$ per cent. per annum; "provided, that the per capita of active circulation shall not be held to include the bank reserves, as fixed by law, or gold and silver which may from time to time be in the Treasury of the United States, or any reserve fund required by law to be kept in the Treasury."

The Secretary of the Treasury is authorized to execute an amount of United States notes of a denomination not less than \$5 sufficient to maintain the per capita of circulation, the notes to be a legal-tender for all payments except for customs and principal and interest on the Government bonds.

The bill creates a first lien upon the entire assets of each bank to secure the notes issued to it, and makes every stockholder liable for twice the par value of his stock.

One year's notice must be given of the intention of a bank to return all or any portion of its notes. When only a portion of the notes are returned all the bonds deposited must first be withdrawn, or so much as will equal 70 per cent. of the notes returned.

The silver and gold coin deposited shall be held as "a general reserve fund applicable to the redemption of all United States notes issued under the provisions of this Act, as well as those heretofore issued.

The tax of one-half per cent. on bank circulation is to be retained and the proceeds are to be held as a reserve fund to provide for loss on account of banks which fail and are unable to return to the United States the full amount of their circulation.

All banks now in existence are required to surrender their notes, or deposit legal-tender notes in lieu thereof, and within one year to deposit gold and silver in the

proportion already mentioned, and withdraw such proportion of their bonds as are in excess of the amount required by the bill.

The bill provides that any one may deposit at any Mint silver bullion in quantities of not less than 100 ounces, and have the same coined into dollars of 412½ grains troy upon the same terms as gold is received and coined.

It calls for the coinage of \$52,000,000 of subsidiary coin in addition to the \$48,000,000 now in circulation.

Lastly, it provides, "That the Secretary of the Treasury be, and with the approval of the President of the United States he is, hereby authorized to suspend and resume specie payment by the Government from time to time, whenever in his opinion the same will be conducive to the safety and to the business interests of the country."

The bill covers pretty nearly everything; but Mr. Bowen overlooked one or two points which, when his attention is called to the omission, he may include in his financial cornucopia.

A provision fixing the rate of foreign exchange, which shall not be changed except upon one year's notice, and a solemn declaration that the Gresham law of currency is hereby repealed, would about fill the Bowen bill.

To discuss the features of the bill seriously would be almost as ludicrous a joke as that which Senator Bowen has perpetrated upon himself. Why he should fix the deposit of gold, silver and bonds at 70 per cent. of the notes to be issued to the banks it is difficult to understand except upon the theory that he had in mind that his beloved silver dollar is based upon 70 per cent. bullion and 30 per cent. nothing.

That the United States should issue its own notes and call upon the banks to secure them by a deposit, and to pay a tax of one-half per cent. on them, is a novelty in finance which could not possibly occur to any one but an anti-political economist.

But the per capita circulation is of the "daisy" order except as regards modesty. What a time the Secretary of the Treasury will have trying to keep the circulation up to the boiling point and to save himself from impeachment.

The first dose is to be \$1,800,000,000, and after that the medicine is to be given annually, but in potions increasing over \$2,000,000 each year—that is, the first year the country is to take \$63,000,000, the next year \$65,000,000, and the tenth year about \$66,000,000, providing the patient lives that long under such treatment.

But bank reserves and money in the Treasury are not to be counted in the circulation, so the Secretary of the Treasury will be kept busy throwing out legal-tender notes as fast as they are poured into the Treasury by the banks because they are not needed.

Mr. Bowen should have provided some means of keeping the notes from getting into the banks, if on no other ground than that of humanity. No Secretary could stand the strain of running such an inflation machine very long.

An amendment should be added to the bill that all notes shall become null and void when deposited in a bank.

To keep the circulation at the regulation heat, also, the bill should provide "that whenever any one secretes any of said notes in stockings, clocks, chests or other hidden place or receptacle, with intent to prevent the same from circulating the said notes shall thereupon become void and cease to be legal-tender." This provision would help to keep the currency in circulation.

Another happy idea of Mr. Bowen's is to make the depositor protect the note-holder. The latter, it being understood, is the holder of a United States note pure and simple. The notes are to be a first lien on all the assets of the bank, and a depositor to-day may have the pleasure to-morrow of seeing somebody else use his money for the redemption of United States notes. This provision should be enacted alone under the title of "An Act to encourage the establishment of State banks."

The banks are allowed a whole year to think about it before they can retire their circulation after expressing a desire to do so. This is generous of Mr. Bowen. Now, if he only would compel the country to give one year's notice of how much currency it would require for the conducting of its business, Mr. Bowen's financial system would be more perfect than a Keeley motor.

There is reason to fear that Mr. Bowen entertains the idea that the law of trusts is a branch of political economy and ought to be abolished with the rest of the system. Else, why should he appropriate the deposits for the notes issued to the banks to the redemption of "all United States notes issued under the provisions of this Act, a

well as those heretofore issued?" That kind of business gets individuals into prison sometimes.

The business end of Mr. Bowen's bill is pretty near the latter end. There he strikes for free coinage of silver and full legal-tender. He demands the coinage of silver on the same terms as gold; but that is not what he wants. He is tired of seeing the Government report a nominal profit of about 30 cents on each silver dollar it coins, and he wants that 30 cents to drop into the pocket of Mr. Bowen and the rest of his silver constituents. He does not want the same privilege as that of the owner of gold—to take 100 cents' worth of bullion and get it coined into a dollar. There would be no profit in that at all. What he really wants is to take 70 cents or, possibly, 10 cents—the less the bigger profit—worth of silver and have it stamped into a dollar which he can force other people to take as and for a dollar.

One section in the bill indicates that Mr. Bowen anticipates lively times to follow the enactment of his proposed law. Hence he bequeaths to the Secretary of the Treasury the power "to suspend and resume specie payment from time to time." The Secretary will probably be allowed to issue hourly bulletins, or oftener as it may seem to him "conducive to the safety and to the business interests of the country," announcing whether specie payments are suspended or resumed.

There is no question that, under the Bowen bill, the Secretary will be able to suspend specie payments; but, notwithstanding the unlimited authority given him to resume them, his ability to do it is another matter. The bill will lead only to the resumption of suspension of specie payments and the permanent suspension of resumption.

A. B.

NEW YORK, December 21, 1886.

CREDIT ASSOCIATIONS.

Editor Rhodes' Journal of Banking:

SIR:—In the last five or ten years the banks have lost so much money on single-name paper and on paper indorsed for accommodation only that the thought is suggested whether some systematic method could not be devised by which such losses might be, not perhaps entirely prevented, for that would seem to be impossible, but at least materially diminished. It was formerly the custom to require satisfactory indorsement on all paper offered for discount. This rule, like many another, works admirably in theory, but the practical application of it soon gave rise to the class of indorsements known as accommodation indorsements. Notes so endorsed are usually made simply for the purpose of raising money, and do not, as a rule, rest upon any actual transfer of merchandise. But of late years, since money has become, if not more plentiful, certainly more obtainable, the situation has changed somewhat, and the borrower is no longer servant to the lender, at least not as much as formerly. The banks are not only willing, but desirous, to lend their money at fair rates wherever there is reasonable certainty of repayment. This state of affairs has caused a gradual relaxation of the rule requiring indorsements, and, consequently, there has grown up a custom for merchants to issue notes drawn to blank and without indorsement; these are offered to the banks for discount either directly, by the maker himself, or indirectly, through a regular note broker. The volume of such paper seems to be increasing.

It is not proposed to discuss the merits and demerits of single-name paper and accommodation indorsements here. It is our object to inquire whether the losses arising therefrom cannot be sensibly reduced.

It may be readily conceded at the outset that by far the larger portion of this class of paper is perfectly good and made for legitimate purposes. The selling of goods on thirty and sixty days and the prevalent practice of discounting time bills has made the old-fashioned four and six months' notes comparatively scarce, and this reason alone would go far to account for, and, indeed, to justify, the existence of the kind of paper to which this article has reference.

But there is one grave evil in single-name paper which shows itself conspicuously on almost every occasion where the maker of it becomes unable to meet his obligations. This evil is the impossibility of knowing how much of it the maker is floating. A borrower in good standing determined to raise all the money he can possibly get can, by skill and systematic method, issue an almost unlimited amount of his own notes, and when at last these come to grief the general feeling is one of surprise that

so much of it could be out and nobody know anything about it. It might be invidious and have a tendency to awaken unpleasant reminiscences to give specific examples of this statement. There are few banks that cannot recall instances within their own experience. If a means could be devised by which an accurate account of this kind of paper could be kept, so that a bank could form some clear idea of the maker's existing liabilities, it would certainly be a great safeguard and protection.

It is to the interest not only of the banks, but of solvent borrowers as well, that bad notes should be kept out of the market, for every successive failure, involving a large amount of such notes, tends to make lenders more unwilling to handle them, and when there is a choice, inclines the scale, even at less rates, to regular paper and collateral loans.

Under existing methods the only feasible plan seems to be for the banks to come together into a credit association, the principal object of which would be to keep each other informed as to the amount of single-name and accommodation paper on the market. The principal objection to such an association would be that it would require the banks to reveal to a certain extent their transactions. This objection would seem, on consideration, to be insufficient to defeat the plan proposed.

In a city where the plan was adopted the system was somewhat as follows: A bank having a note under consideration desires to know how much paper the maker has out. A request to that effect is sent to the Manager of the association, who ascertains by inquiries, from each member of the association, how much of that paper is in the hands of the members. The sum total is reported to the inquiring bank, but the distribution of the paper remains confidential with the Manager.

After all, what harm would it really do if the banks did know this much of each others' business? There might be a slight shading of rates in consequence, but the loss of interest thus brought about would be more than made up by the protection afforded against over-issue.

Apply what has been said to the last half dozen prominent failures. How much would the banks, as a whole body, have saved had each one known what the others were about?

The mutual ignorance of the banks in this respect is the stronghold of those who are borrowing beyond their ability to repay. Yours truly, JOHN H. LOCKE.
CHICAGO, January 3, 1887.

RETURNING CUSTOMER'S CHECKS.

Editor Rhodes' Journal of Banking:

SIR:—It is the custom in some of the banks here to return cancelled checks to customers when they have their pass-books balanced at the end of each month, without getting any receipt for them whatever. Now, if a dishonest customer, after getting his checks returned to him, were to destroy one and then return to the bank, saying that his account had been charged with an amount he never issued a check for, and that such a check had not been given him amongst those returned to him, would the bank be held liable for the amount?

On the other hand, if the bank held the customer's receipt for all checks charged against his account and returned to him when he had his pass-book balanced, would not that be sufficient protection for the bank against any such claim? INQUIRER.

MILWAUKEE, January 4, 1887.

OVER-DRAFTS THROUGH THE CLEARING-HOUSE.

Editor of Rhodes' Journal of Banking:

SIR:—There is an important matter in reference to the Clearing-House which does not appear to have received much attention from the Courts, and, as usage seems to vary in regard to it, I take advantage, with your permission, of your new department for "Open Letters" to bring it to the attention of the banking community. It sometimes happens that several checks of a depositor will come through the Clearing-House exceeding in total the depositor's balance, there being enough to his credit, however, to pay one or perhaps more than one. Should the bank return all the checks as not good or should it pay what it can and send the rest back? If the latter, what checks are to be preferred? Those who prefer the former may contend that the bank has no right to discriminate, and must, therefore, pay the checks—all or none. And so says Morse in his work on "Banks and Banking." The advocates

of the latter plan rest their case on the principle that the bank must honor the drawer's checks so long as he has any funds to his credit. And this seems to me to be the better view. For, if all the checks are returned, the drawer *might* have a right of action against the bank; but, if his balance is exhausted, the drawer can bring no action, and the holder of a check has no action against the bank in any case, but only against the drawer.

In determining which checks to pay and which to return, it would seem to be more equitable to pay in order of dates, so far as that can be done, though I do not understand that a bank is really restricted in its choice. In Baltimore the usage is divided. It would be interesting to know what is done at the other Clearing-Houses as to this question.

Yours respectfully,

Z.

BALTIMORE, January 1, 1887.

THE PROBLEM OF SILVER.

Editor Rhodes' Journal of Banking:

SIR:—In this communication I propose to give the official and most reliable statistics regarding the precious metals as the true basis for the argument that both gold and silver as money are absolutely necessary to restore and maintain the general level of prices and to prevent the impoverishment of whole classes of the people in the commercial world—the most important feature of the whole problem of silver.

I will say first that the only legitimate objection to silver as money is the heaviness and bulkiness of the metal; this objection also appertains in a measure to gold. It can be effectually met by receiving the metals for deposit and issuing therefor notes or certificates for circulating purposes.

The banking, mercantile and industrial classes, or business men proper, want neither gold nor silver coin for use in daily transactions except for subsidiary purposes and for the discharge of adverse balances of international trade. What they do want is good paper money, principally on account of its light weight and great convenience in handling and counting. The people at large, however, have good use for, readily receive, and never object to silver in big and little pieces. For small hoardings and minor transactions they rather like the bright and shining pieces of metal and experience no inconvenience from carrying five dollars, more or less, in their pockets. The owners of and investors in industrial and commercial values, fixtures and commodities, lands, lots and improvements, buildings, mines, manufacturing establishments, transportation lines, railways and shipping, representing about three-fourths of the wealth of modern nations, induced or forced to sell, and the debtor classes, everywhere and always eagerly accept silver so long as it is a legal-tender to discharge debts largely contracted on a silver or gold and silver basis.

A full volume and circulation of money (gold, silver and paper) has a tendency to increase consumption and demand, to raise prices of industrial and commercial values and to make articles salable at profitable rates. Good business again insures employment to workmen and laborers at reasonable wages.

Capitalist and creditor, bond and mortgage-holding and loan-making classes deriving fixed incomes from realized wealth will not suffer by excessive reduction of rates of interest, by depreciation of securities and by losses through failures. This will ultimately outweigh their unearned and undeserved gain from the demonetization of silver and destruction of almost one-half of the money of the world, the doubling of the purchasing power of the remaining money, gold, and proportionate fall of the prices of industrial and commercial values, fixtures and commodities under otherwise normal conditions. Hence the capitalist and creditor-classes, if wise and just, will likewise receive silver, and not knowingly pursue a policy adapted to impoverish investors and bankrupt debtors, lest they might get no money at all.

Thus the broad and sweeping assertion that people do not want silver is ill-founded and untrue in fact, and will certainly prove so when Governments cease to war against that metal, attempt and threaten to destroy its value and use as money instead of devising and carrying out proper measures for the settlement of the silver question without injury to any one and for the benefit of all, as they ought to do.

Before proceeding in my argument for the adoption or re-adoption and maintenance of the bi-metallic monetary system, I propose to give briefly the statistical facts and figures of the production of gold and silver in the United States and in the world; the supplies of gold and silver in past periods; the circulation of the principal

countries of the world; the coinage of the United States and of the various countries of the world; the consumption of gold and silver in the arts and manufactures in the United States and in the world; the loss of precious metals by abrasion of coin in circulation, and loss by casualties, as fire and shipwreck; also loss by wear and tear on precious metals used in the arts and manufactures; and the shipments of silver and gold to India and other Oriental nations. The respective full statistical tables, based on official and reliable reports up to 1882, are published in the pamphlet, "The Silver Question," Louisville, Ky., 1883.

The annual product of the silver and gold mines and placers of the United States of America since 1876, according to the reports of the Directors of the Mint, is in round numbers as follows.

	Gold.	Silver.		Gold.	Silver.
1876.....	\$39,900,000	\$38,800,000	1881.....	\$36,500,000	\$42,100,000
1877.....	46,900,000	39,800,000	1882.....	32,500,000	46,800,000
1878.....	51,200,000	45,300,000	1883.....	30,000,000	46,200,000
1879.....	38,900,000	40,800,000	1884.....	30,800,000	48,800,000
1880.....	36,000,000	39,200,000	1885.....

The product in the world in several years since 1849 is estimated by various authorities as follows:

	Gold.	Silver.	Total bullion product.
1849 to 1877 (29 years).....	\$3,190,125,000	\$1,362,200,000
1853.....	\$235,000,000
1863.....	271,000,000
1867.....	116,000,000	54,000,000
1875.....	97,500,000	62,000,000
1876.....	103,236,588	99,305,538
The above figures are taken from the report of the Director of the Mint of the United States for 1881.			
1877.....	113,947,173	81,040,665
1878.....	119,092,798	94,882,177
1879.....	107,385,421	89,080,680
1880.....	106,989,846	87,543,072

These estimates were submitted to the International Monetary Conference held in Paris in 1881. They differ somewhat from the estimates made by Mr. Del Mar and are to be looked upon as careful estimates made from the best obtainable data rather than exact statements of facts.

Some writers state the products for the different years given in the table below to be as follows:

	Gold.	Silver.
1879.....	\$103,023,807	\$96,172,628
1880.....	106,436,786	96,704,978
1881.....	103,023,078	102,168,354
1882.....	98,699,588	109,952,251
1883.....	94,027,901	114,217,733
1884.....	95,000,000	115,000,000

While other authorities claim an increased production as follows:

	Gold.	Silver.
1881.....	\$107,773,000	\$97,659,000
1882.....	118,000,000	94,000,000

Hence the present annual product of precious metals in the world amounted to \$159,500,000 (lowest) in the year 1875 to \$312,000,000 (highest) in the year 1882.

The world's supplies of gold and silver during the periods prior and subsequent to the California discovery, estimated on the basis of a relative value of 15.50 silver to 1 gold, are as follows:

	Gold.	Silver.
1492-1848.....	\$2,626,000,000	\$5,702,000,000
1849-1876.....	3,215,000,000	1,867,000,000
Total	\$5,841,000,000	\$7,069,000,000

As the total yield of the silver mines of the world since 1492 appears about \$1,200,000,000 larger than the output of the gold mines and placers, while, as we shall presently see, the circulation of gold in the principal countries of the world is estimated about \$750,000,000 larger than that of silver, we suppose that this discrepancy chiefly originates in the large excess of shipments of silver over gold to India and other Oriental nations.

The estimates in the Western world (Europe and the north of Africa and America later), are as follows:

	Population.	Gold and Silver used as money.	Approximate amount per capita.
1492.....	40,000,000	\$170,000,000	\$4.00
1700.....	90,000,000	1,485,000,000	16.50
1877.....	390,000,000	3,700,000,000	9.50

According to the annual report of the Director of the Mint of the United States for the fiscal year ending June 30, 1882, the circulation of the thirty-four (34) principal countries of the world in the years referred to (1874 to 1882) is estimated to be as follows:

Paper, Government issues	\$1,183,064,771	
Paper, bank issues.....	2,642,165,807	\$3,825,220,078
* Gold.....	3,353,073,748	
* Silver, full legal-tender.....	2,182,768,866	
* Including Treasury and bank reserves, and in most cases probably bullion as well as coin of the countries.		
Silver, limited legal-tender.....	438,000,969	5,974,443,563
Total specie and paper		\$9,799,683,661
Not including the circulation of China, which cannot be estimated.		
Specie in banks.....	\$1,312,765,505	
In National Treasuries	886,221,268	1,698,986,763
In active circulation.....		\$8,100,676,896

COINAGE.

The "American Cyclopaedia," Vol. V., page 32, states the coinage of the United States from 1793 till June 30, 1873, at:

Gold.....	\$1,097,683,511
Silver	172,892,780
Minor coinage.....	11,919,839
Total.....	\$1,281,596,130

RHODES' JOURNAL OF BANKING, in its issue for July, 1886, publishes from the annual report of the Deputy-Master of the British Mint accounts of the coinage

of the various countries of the world for the year 1885, collated in tabular form by the London *Economist*, whose figures have been changed into dollars by the JOURNAL. The statistics do not include the Mints of Russia, Mexico and some other minor States.

GOLD.

	New coinage.	Recoinage.	Net coinage.
Total British and Australian	\$37,060,790	\$8,551,855	\$30,498,935
United States	24,861,105	24,861,105
Other countries, from \$2,513,065 in Spain downward	9,984,110	9,984,110
Total	\$71,896,005	\$8,551,855	\$63,344,150

The gold coinage of Russia for 1884 was \$19,840,548, but the annual coinage of the country has been irregular.

SILVER.

	New coinage.	Recoinage.	Net coinage.
Total British and Australian	\$4,059,825	\$1,094,680	\$2,965,145
India	28,950,000	28,950,000
United States	28,848,960	28,848,960
Italy	658,935	892,000	233,065
Other countries, from \$5,899,545 in Japan downward	15,272,965	15,272,965
Total	\$77,790,685	\$1,986,680	\$75,804,005

The silver coinage of Mexico for 1884 was \$25,377,378.

The totals of the world's coinage for the four years, 1882-1885, as compiled by the Director of the United States Mint, are as follows:

	Gold.	Silver.
1882	\$99,697,170	\$110,785,334
1883	104,845,114	109,306,705
1884	99,459,240	90,089,443
1885	92,000,000	108,000,000

From which it appears that the highest annual coinage in the world in the year 1883 was \$214,151,819.

The annual consumption of gold and silver in the arts and manufactures in the United States, according to reports of the Director of United States Mint, is as follows:

	Gold.	Silver.	Total.
Calendar year 1881	\$11,000,000	\$6,000,000	\$17,000,000
Fiscal year 1881	12,000,000	7,000,000	19,000,000

While the annual consumption of gold and silver in the principal commercial countries of the world in the calendar year 1880 was: Gold, \$75,000,000; silver, \$36,000,000; total, \$110,000,000.

According to the late (1883) estimates of Professor Adolph Soetbeer, now of Hamburg, Germany, a high authority among gold mono-metallists, the consumption in the principal commercial countries of the world was: Gold, \$58,000,000; silver, \$17,000,000; total, \$75,000,000. And according to estimates by other writers: Gold, \$68,000,000; silver, \$28,000,000; total, \$94,000,000.

Adding together the foregoing amounts, \$110,000,000, \$75,000,000 and \$94,000,000, making the total of \$279,000,000, and dividing by 3, we obtain the average of \$93,000,000

as the present annual consumption of precious metals in the arts and manufactures of the world.

The loss of precious metals by abrasion of coin in circulation, fire and shipwreck is estimated by competent writers at one four hundred and twentieth of the whole stock of the world, or about one-quarter per cent. yearly on gold and silver in use. Thus, in 25 principal countries of the commercial world having \$2,918,000,000 in gold and \$2,130,000,000 in silver (total, \$5,048,000,000), there would be an annual loss of \$12,620,000.

Soetbeer estimates the amount of money in civilized countries, including India and the extreme East, at \$3,320,000,000 gold and \$2,100,000,000 silver (total, \$5,420,000,000), on which there would be a yearly loss of \$13,550,000.

The Director of the Mint of the United States in 1882, in his estimate of the circulation of the thirty-four principal countries of the world, states gold at \$3,353,673,748, silver—including subsidiary coins—at \$2,620,769,835 (total specie coins \$5,974,443,583), on which the annual loss would be nearly \$15,000,000.

The late Ernest Seyd, in London, estimated in April, 1878, the specie of the world at \$3,750,000,000 gold and \$3,000,000 silver (total, \$6,750,000,000) in use as money on which the annual loss would amount to nearly \$17,000,000.

The average annual loss on specie may be estimated then at present at \$15,000,000.

This is the view also taken of the matter by the *Deutsches Handelsblatt*, a German newspaper at Bremen, estimating the loss of metals by abrasion, shipwreck, etc., in the average at \$15,000,000 per annum.

There is probably a similar loss by wear and tear on precious metals used in the arts and manufactures of \$15,000,000 annually.

A further great loss is due to the steady drain of metals to the Oriental nations which are devoid of banking facilities and from which hardly any ever return.

According to the reports of the Director of the Mint of the United States for 1874 and 1881, the excess of imports of silver in India and the East over exports from those countries, *i. e.*, the net imports during forty-four years from 1836 to 1879, amounted, as added up by me, to \$1,124,275,265, averaging per year \$25,500,000 in round figures.

In the report of the Monetary Commission (1877), Alex. Del Mar says * in regard to the proportion of the world's product of silver and gold shipped to and absorbed by India:

"During the forty-one years, 1835 to 1875 inclusive, the total product of silver throughout the world is estimated in round numbers at \$1,800,000,000. During the same period about \$1,200,000,000 were shipped to India, and of the \$1,200,000,000 about \$1,000,000 were retained in that country."

"During the same period of forty-one years the total product of gold throughout the world is estimated in round numbers at \$3,460,000,000. Of this sum about \$530,000,000 were shipped to India, and of the \$530,000,000 fully \$515,000,000 appear to have been retained in that country."

"According to an English official statement, the net imports of silver in India since that period appear as follows during the fiscal years:

" 1874-75, calculating £1 = \$5.....	\$23,200,000
" 1875-76.....	7,750,000
" 1876-77.....	80,000,000
" 1877-78.....	73,400,000
" 1878-79.....	19,850,000
" 1879-80.....	39,350,000

" Total \$198,550,000

" Here we have a net import of silver in India during the

" Forty-one years (1835 to 1875) of..... \$1,000,000,000

" Average per year..... 24,400,000

" Six years, 1874-75 to 1879-80..... 198,550,000

" Average per year..... 32,258,000

" Showing an increase of shipments of silver to India."

Also a net import of gold in India during said period of forty-one years of \$515,000,000. Average per year, \$12,561,000.

The metals sent to India, estimated at present at \$35,000,000 silver and \$15,000,000 gold (average per year), are largely used for ornaments and trinkets, or are hidden and buried in effect almost the same as if they had never been produced from the mines and placers.

There are also considerable shipments of the metals to China, Japan, etc.

Now, on the basis of the foregoing official and reliable statistical facts and figures and estimates respectively, deduct from the highest annual product of precious metals

* As previously shown in the JOURNAL, Mr. Del Mar cannot safely be quoted as an authority on financial matters.—ED. JOURNAL.

in the world in 1888 \$212,000,000 (the highest coinage in 1888—\$214,151,819), the amount of gold and silver annually consumed in the arts and manufactures of the world (averaging \$98,000,000), the annual loss of metals by abrasion of coin in circulation and loss by fire and shipwreck (\$15,000,000), a similar annual loss by wear and tear on gold and silver used in the arts and manufactures (amounting to \$15,000,000), the amount of gold and silver annually shipped to India and other Oriental nations (\$50,000,000)—total, \$173,000,000—and there will be left but \$39,000,000, or an annual addition of about two-thirds of 1 per cent. to the stock of gold and silver in existence, estimated at the various amounts of \$5,048,000,000, \$5,430,000,000, \$5,974,000,000 and \$6,750,000,000, averaging \$5,798,000,000. This against an annual increment of population of two to two and one-half per cent. in the United States and about four-fifths per cent. in Europe, and a still larger increase of objects of National wealth, production, manufacturing and trade, all requiring a corresponding increase of mediums of circulation and exchange, and measures and representatives of industrial and commercial values, fixtures and commodities, if the general level of prices of these values under otherwise normal conditions shall be maintained, as imperatively demanded by a sense of right and justice and abhorrence of wrong and inequity.

The annual addition to the stock of both metals, gold and silver, being proportionately smaller than the annual increase of population, wealth and exchanges, there can be no overstocking of the gold and silver markets of the world, and the proposition to use gold alone as universal money, when even both metals are insufficient for the rapidly-growing wants of trade and exchange throughout the world, involve the greatest blunder and blackest crime of our age.

CHARLES L. FRANKS.

LOUISVILLE, Ky., December 24, 1886.

INTEREST AT 12 PER CENT.

Editor Rhodes' Journal of Banking:

SIR:—Referring to your very practical serial papers on "Practical Banking," let me supplement "Interest" in your November number with the suggestion that 12 % is a very easy rate to compute as a basis for all other rates by taking aliquot parts. In most cases I consider the 12 % rule preferable to the usual 6 % rule, to which the author refers, in that it is a little more simple and direct in its application.

A general rule for simple interest is to first compute at 12 per cent. by pointing off, in the principal, two figures for *thirty days* (one month) and *three* figures for *three* days. Having found the interest on the given account for the given time at 12 %, find the interest at the required rate by taking aliquot parts of the interest at 12 %, thus:

For 10 per cent., subtract.... 1-6	For 3 per cent., take..... ¼
For 9 per cent., subtract..... ¼	For 7 per cent., add 1-6 and divide by..... 2
For 8 per cent., subtract..... ⅙	For 5 per cent., subtract 1-6 and divide by... 2
For 6 per cent., take..... ⅙	For 4½ per cent., subtract ¼ and divide by. 2
For 4 per cent., take..... ⅓	

EXAMPLE.

Required the interest on \$360 for 7 months and 27 days at 8 per cent.

Interest for 1 month at 12 per cent. on \$360 = $3.60 \times 7 \text{ months} = \25.20

Interest for 3 days at 12 per cent. on \$360 = $.360 \times 9 \left(\frac{27}{3}\right) = 8.24$

Interest for 7 months and 27 days on \$360 @ 12 per cent. = \$28.44

Subtract one-third..... 9.48

Interest for 7 months and 27 days on \$360 @ 8 per cent. \$18.96

SOUTH BEND, Ind., January 1, 1887.

Yours truly,

MYRON CAMPBELL.

The Teller who advertises in this issue is highly recommended, and having experience in all the lower positions is well qualified to take charge of any department in a bank. See his card under "Wanted."

Advertisers will notice that the JOURNAL's advertising rates are slightly changed, owing to a large increase in circulation the past year. Bankers who wish to push their business can do so effectively and at a reasonable cost by using the JOURNAL.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

WHAT THE SOUTH HAS ACCOMPLISHED.

[From a speech of H. W. Grady, of Atlanta, at the New England Dinner, in New York, on December 22, 1886.]

But what is the sum of our work? We have found out that in the general summing up the free negro counts more than he did as a slave. We have planted the school house on the hill-top and made it free to white and black. We have sowed towns and cities in the place of theories and put business above politics. We have challenged your spinners in Massachusetts and your iron makers in Pennsylvania. We have learned that the \$400,000,000 annually received from our cotton crop will make us rich when the supplies that make it are home-raised. We have reduced the commercial rate of interest from 24 to 6 per cent. and are floating 4 per cent. bonds. We have learned that one northern immigrant is worth fifty foreigners, and have smoothed the path to the southward, wiped out the place where Mason and Dixon's line used to be, and hung our latch string out to you and yours. We have reached the point that marks perfect harmony in every household, when the husband confesses that the pies which his own wife cooks are as good as those his mother used to bake; and we admit that the sun shines as brightly and the moon as softly as it did "before the war." We have established thrift in city and country. We have fallen in love with work. We have restored comfort to homes from which culture and elegance never departed. We have let economy take root and spread among us as rank as the crab-grass which sprung from Sherman's cavalry camps, until we are ready to lay odds on the Georgia Yankee, as he squeezes pure olive oil out of his cotton seed, against any down-easter that ever swapped wooden nutmegs for flannel sausages in the valleys of Vermont. Above all, we know that we have achieved in these "piping times of peace" a fuller independence for the South than that which our fathers sought to win in the forum by their eloquence or compel on the field by their swords.

ONE WAY TO REDUCE THE SURPLUS.

[From the *Philadelphia Chronicle-Herald*.]

Instead of wrangling over the surplus in the Treasury, Congress should at once give the country one-cent postage.

HOW MONEY MAY BE LOCKED UP.

[From the *Circular Letter* of Collis & Levy.]

An expenditure of seven thousand dollars will lock up ten millions for five days. The process is simply to arrange with five financial institutions to each loan you two millions for five days at 5 per cent. on Government bonds as collateral, then to pay the interest in advance and fail to send in the collateral. The whole amount is thus tied up for five days and remains in the vault of the bank subject to your order and can be used for no other purpose. We do not charge that this was done early this week, because we have not the evidence of the facts in such shape as to make it available, otherwise we would not hesitate to perform a simple duty to the public; but, if it was done, it behooves the bank Presidents and others who were imposed upon to refuse hereafter to consider a loan consummated until the money and collaterals have changed hands.

NON-INTEREST BEARING BONDS FOR BANK CIRCULATION.

[From the *Louisville Courier-Journal*.]

A prominent business man of this city proposes an expedient for maintaining the National bank system without cost to the people in the way of interest on the bonds used as a basis of circulation. His plan, which is said to meet with favor among well-informed men, contemplates the issue of non-interest bearing bonds, with the privilege conferred upon banks of obtaining note issue thereon to amounts equal to the par value of such bonds deposited in the Treasury. The proposal, to call things by names

in common use, is simply that the Government shall issue non-interest bearing certificates against deposits for stated terms for the banks to use as a basis for the issue of notes. The plan may be regarded from two stand-points. From the bank stand-point it would offer no inducement to banks to act upon it, as it would be equivalent to a plan for the depositing of, say \$100,000 in gold for \$100,000 in notes. It would, therefore, involve a merely neutral operation attended with some little expense and trouble, while utterly barren of results. From the Government stand-point it would be equally so, as people who can deposit gold or silver can now obtain 100 per cent. thereof in certificates which circulate quite as well as the proposed bank notes. The abolition of the bank tax and the removal of certain annoyances incident to the present system would have no bearing whatever on its success.

SCARCITY OF SMALL BILLS AND COIN.

[From Cincinnati *Commercial Gazette*.]

There is much complaint concerning the scarcity of small bills, and to this inconvenience is added the recently developed difficulty of obtaining subsidiary coin at the local Sub-Treasury. An inquiry being made at the Cincinnati Sub-Treasury the other day for "dimes," the messenger was informed that there were a few dollars in "pennies," which might be obtained, but nothing else. The banks claim that this is the first Administration in years under which so little accommodation is extended the local public through the Sub-Treasury. The banks making complaint do not pretend that the local Sub-Treasurer as in any way responsible for the lack of accommodation through his office, as he is given no discretion in the premises, but has simply to obey instructions. Some few months since, when application was made by local banks for currency of small denominations—\$5's, \$10's, and \$20's—information was given that the currency was held in the local Sub-Treasury vaults, but was not to be paid out without instructions from Washington; but, upon payment of the amount desired, together with charge at the rate of 75 cents per \$1,000, in New York the local Sub-Treasury would be instructed to pay the currency to the local applicant: this was done to a considerable extent, but now it is impossible to obtain the currency so. The banks do not claim that the Government officials are responsible for the scarcity of small denominations of currency, but they contend that it would be more equitable to maintain a large balance here for the accommodation of this community, especially of subsidiary coin. Under the present Treasury management and system in operation additional expense and a vexatious loss of time are entailed upon banks here when in need of small coin or currency. Local parties contend that it costs the Government but 25 cents per \$1,000 to transport currency from New York to Cincinnati, while the charge is made by the Government of 75 cents per \$1,000, a profit to the Government of 50 cents per \$1,000. The money paid into the local Sub-Treasury on account of customs, etc., would doubtless facilitate business here if it were allowed to remain long enough to be exchanged instead of being shipped to New York almost immediately, as is now claimed is the case. There may be some extenuating circumstances governing the Treasury action, but the fact remains that there is much inconvenience, which, it is charged, might be avoided.

CIRCULATION WAS THE INDUCEMENT.

[From the Buffalo *Courier*.]

The correctness of the statement made in the report of the Comptroller of the Currency, Mr. Trenholm, that the National bank system could never have been established without the privilege of issuing circulation, has been disputed by a metropolitan paper, but it is strictly in accord with the facts of history. By reference to Mr. Spaulding's valuable history of the greenback currency it may be seen that the National bank circulation was authorized for the purpose of inflating the paper currency at a time when a further issue of legal-tender notes was not regarded as expedient and safe. In a decision of the Supreme Court in *Tiffany vs. National Bank of the State of Missouri*, 18 Wallace, 413, Justice Strong, delivering the opinion of the Court, said: "The purpose of the currency act was in part to provide a currency for the whole country and in part to create a market for the Government loans." When the National Currency Act was adopted the privilege of issuing

circulation was very valuable, inasmuch as the current rate of interest was high and the Government paid interest on its bonds nominally at the rate of six per cent., but in point of fact much more, as both the principal and the interest were to be paid in gold. Without these inducements the transformation of so many State banks into National banking associations could never have been effected.

SCARCITY OF GOOD INVESTMENTS.

[From the *London Statist.*]

Only the other day comparatively good investments were offered to the public in vain; no one cared to subscribe, no one being ready to enter into new risks; but now there is an eager desire to find good investments and a readiness to support anything that is offered on the authority of good names. Trade has improved all over the world, and is still further improving. This improvement, which is world-wide, has restored courage to investors, and in the meanwhile the scarcity of good investments, to which we have so often directed attention, is daily becoming more and more apparent. The world every year is adding to its savings, and yet the number of good investments is not materially increasing. On the contrary, the great industrial enterprises which absorbed so much capital in the middle of the century, and for a long time afterwards, have been almost completed. While depression in trade lasted, while confidence was destroyed—no one knowing in whose solvency to trust—the pressure of this vast unemployed capital was not felt. People preferred to place their money at unremunerative rates rather than to run any risk; but now that suspicion has passed away, that credit is once more good, and that trade is improving, the accumulation of capital awaiting investment forces up prices in every direction, and hurries people into demands for allotments in every enterprise that looks sound.

LIKE THE AVERAGE CHURCH PEW.

[From an Address of Vice-Chancellor MacCracken, of the University of the City of New York.]

Our paper currency is like the average church pew. Half its surface which it presents to the American citizen is elastic, the other half is as hard as a board. The greenback circulation is the back of the pew—it has no elasticity. The law prices it to a dollar, so that for the last eight years the Comptroller of the Currency has reported exactly \$346,681,016. The National bank currency, like the pew cushion, has considerable elasticity. Possibly this is the reason our worthy Congress seems so persistently disposed to sit down upon it.

SOUTHERN SECURITIES TO THE FORE.

[From the *New York Hour.*]

The Southern securities have for the time being come to the fore, and there is no doubt but that the South will be hundreds of millions of dollars richer at the close of the year than she was at the beginning—that is, if we measure the price of Southern securities during the two periods. Of course, whether the South is much richer (even on paper) through this speculation is questionable, as the major part of bonds and shares are held in the North and East still. The South is much richer in financial reputation, and that alone will certainly lead to good results.

WHERE THERE ARE NO STRIKES.

[From the *Philadelphia Times.*]

Pittsburgh is just now enjoying a novel experience. For the first time in several years there are no workmen who are suffering from a grievance worth striking about. Every furnace and factory is in full blast, the new tax on oleomargarine not having proved effective even in shutting down the imitation butter factories. There are various reasons given for this unprecedented and altogether satisfactory condition of affairs, but the probability is that the chief reason is the general adoption of the sliding or yearly scale of wages. By this very sensible method of wage adjustment the workmen are made to feel that they have a mutual interest with their employers, sharing in their prosperity when business is prosperous, as at present, as well as in their losses when it is stagnant. If the Pittsburgh method of sliding scale-wage adjustment was generally adopted there might be more cities and great labor centres rejoicing in the absence of strikes and lock-outs.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3593—Canton National Bank, Canton, Illinois. Capital, \$50,000.
 3594—Citizens' National Bank, Medicine Lodge, Kansas. Capital, \$50,000.
 3595—First National Bank, Shreveport, Louisiana. Capital, \$200,000.
 3596—First National Bank, Dodge City, Kansas. Capital, \$50,000.
 3597—Madison National Bank, Madison, Dakota. Capital, \$50,000.
 3598—First National Bank of West Newton, Newton, Massachusetts. Capital, \$100,000.

Attention is directed to the large Diagram which appears as a Supplement to this issue of the JOURNAL. It was prepared from official data under the supervision of the Comptroller of the Currency.

A number of special features of much interest to bankers will appear in the JOURNAL exclusively in 1887. New subscribers will do well to begin with this (January) number which opens Volume XIV. Until the edition is exhausted we will furnish a copy of the January BANKERS' DIRECTORY AND COLLECTION GUIDE, without extra cost, to all JOURNAL subscribers who remit the subscription price (\$5) with the order.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, January 2, 1887.

THE CLOSE OF THE YEAR shows a substantial improvement in the business situation as compared with twelve months ago. Production in all industrial lines has increased, and the increase in consumptive demand is shown in the decreased stock reported in many commodities. The dry goods trade has experienced a good year, and the product of the mills has increased while prices have advanced.

In the iron trade the output has been very large, particularly during the latter half of the year. Careful estimate for the year shows a production of 5,600,000 gross tons of pig iron (an increase over 1885 of over 1,500,000 tons), of 2,000,000 tons of bessemer steel ingots (an increase of nearly 1,500,000 tons), of 1,500,000 tons of bessemer steel rails (an increase of 550,000 tons), and 1,200,000 tons of open hearth steel (an increase of over 1,000,000 tons). The production of iron ore was about 10,000,000 tons, and about 1,000,000 tons additional was imported.

Railroad construction has been actively prosecuted during the year, a total of over 8,000 miles of track having been laid. This is the largest mileage for any year since 1882, and larger than for any other year except 1881 and 1882, when it amounted to 9,796 and 11,568 miles respectively. In 1885 only 3,131 miles were constructed, 3,825 miles in 1884, and 6,741 miles in 1883.

The coal trade has not improved as rapidly as the iron trade, but is in a favorable condition. Prices are generally higher than they were a year ago, and the total output for the year is about 32,000,000 tons against 31,623,530 tons in 1885 and 30,718,293 tons in 1884. The stock of coal on hand at the end of the year was very small, indicating that the demand is keeping well up to the supply.

The record of commercial failures makes a very satisfactory showing. There were 10,568 failures in 1886 against 11,116 in 1885, 11,620 in 1884, 10,229 in 1883, 7,635 in 1882 and 5,929 in 1881. The liabilities in 1886 aggregated \$113,600,000 against \$118,100,000 in 1885, and the assets \$55,800,000 against \$55,200,000. The average indebtedness per failure was \$10,823 in 1886, \$10,731 in 1885, \$21,443 in 1884, \$17,251 in 1883, \$12,268 in 1882 and \$12,897 in 1881.

The statistics of the foreign trade of the United States show an increase in exports, which for some time have been small as compared with imports. The merchandise movement since July 1, 1886, is shown in the following, with comparisons with the previous year:

	1885.	1886.
Exports:		
November.....	\$67,452,290	\$72,619,343
Five months ended November 30th....	277,640,240	300,305,961
Imports:		
November.....	50,602,184	54,048,515
Five months ended November 30th....	254,635,004	278,517,506
Excess of exports:		
November.....	16,850,106	18,570,828
Five months ended November 30th....	23,005,236	21,788,446

The balance of trade in favor of the United States for the five months is

smaller than that of the previous year, but this is due to the large increase in imports, which was greater than the increase in exports.

Money has shown a hardening tendency during the month just ended, and about the middle of the month the banks were forced to reduce their loans in order to protect their reserve. The stiffening of rates was mainly for call loans, and as high as 200 per cent. was quoted for money at the Stock Exchange on the 16th ultimo. This was artificial, however, and 6 @ 7 per cent. represented the rate for the bulk of transactions. The stock market was seriously depressed, and some heavy declines occurred in specials. Money became easier late in the month, and about \$15,000,000 of gold was imported in December.

On December 28th the Secretary of the Treasury issued the 145th call for the redemption of bonds. The call is for \$10,000,000 of the three per cent. loan of 1882. Notice is given that the principal and accrued interest of the bonds will be paid at the Treasury of the United States, in Washington, on February 1, 1887, and that the interest on said bonds will cease on that day, namely:

Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50, original No. 47 to original No. 48, both inclusive; \$100, original No. 583 to original No. 609, both inclusive, and original No. 9,940 to original No. 9,969, both inclusive; \$500, original No. 246 to original No. 266, both inclusive, and original No. 4,230 to original No. 4,234, both inclusive; \$1,000, original No. 2,017 to original No. 2,175, both inclusive, and original No. 23,749 to original No. 23,777, both inclusive; \$10,000, original No. 5,316 to original No. 6,327, both inclusive; total, \$10,000,000.

The bonds described above are either bonds of the "original" issue, which have but one serial number at each end, or "substitute" bonds, which may be distinguished by the double set of numbers, which are marked plainly "original numbers" and "substitute numbers." All the bonds of this loan will be called by the original numbers only. The three months' interest due February 1, 1887, on the above described bonds will not be paid by checks forwarded to the holders of the bonds, but will be paid with the principal to the holders at the time of presentation. Persons holding bonds called by this circular can obtain immediate payment, with interest to date of presentation by requesting the same in the letter forwarding the bonds for redemption. Many of the bonds originally included in the above numbers have been transferred or exchanged into other denominations on "waiver," the original numbers being cancelled, or have been redeemed under circular of September 15, 1886, and leaving outstanding the apparent amount above stated.

FOREIGN EXCHANGE.—The rates for foreign exchange declined until the last week of the month, when they became firmer, but at no time were they high enough to prevent gold imports. Following are the posted and the actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.81 @ \$4.81½; sight, nominal \$4.85 @ \$4.85½; 60 days, actual, \$4.80½ @ \$4.80¾; sight, actual, \$4.84¼ @ \$4.84¾; Cable transfers, \$4.85¼ @ \$4.85¾; Prime commercial sterling, long, \$4.79¼ @ \$4.79¾; Documentary sterling, 60 days, \$4.78¾ @ \$4.79¼; Paris, bankers', 60 days, 5.26¼ @ 5.25½; sight, 5.23¼ @ 5.23½; Paris, commercial, 60 days, 5.27½ @ 5.26¾; sight, 5.25 @ 5.24½; Antwerp, commercial, 60 days, 5.28½ @ 5.27½; Swiss, bankers', 60 days, 5.26½ @ 5.26¼; sight, 5.24¾ @ 5.23¾; Reichsmarks (4), bankers', 60 days, 94¼ @ 94¾; sight, 95 @ 95½; Reichsmarks (4), commercial, 60 days, 94 @ 94½; commercial, sight, 94½ @ 94¾; Guilders, bankers', 60 days, 39¾ @ 39 13-16; sight, 39 15-16 @ 40; Guilders, commercial, 60 days, 39 9-16 @ 39½; sight, 39¾ @ 39 13-16; Copenhagen, Stockholm and Christiana, krona, 60 days, 26½; sight, 26¾. Paris dispatches quote exchange on London 25f. 36½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on December 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of November and December, 1886:

Nov.	BANKERS—		Cable		PARIS

† Ex-interest.

MONEY AND DOMESTIC EXCHANGE.—Money has been in more active demand, and rates ruled strong during the greater part of the month. From

the 15th to the 22d call loans frequently touched as high as 20 per cent., and 200 per cent was quoted at one time. Later money was easier, and 6 @ 7 per cent. were the nominal rates. Commercial paper is in demand at rates varying from 5 to 7½ per cent. according to grade. The following rates of domestic exchange on New York indicate a less demand for money through the country: Savannah, par; selling, ½ @ ¼ premium. Charleston, buying, ½ @ 3-16 discount; selling, par. New Orleans, commercial, \$1.50 per \$1,000 discount; bank, par. St. Louis, 75c. per \$1,000 discount. Chicago, 50c. @ 60c. per \$1,000 discount.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of January, 1887, and, for comparison, on the 1st of November and December, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury:

	Jan. 1, 1887.	Dec. 1, 1886.	Nov. 1, 1886.
Gold coin and bullion.....	\$283,128,018	\$254,450,853	\$246,852,148
Gold certificates outstanding.....	97,215,405	90,520,633	88,294,969
Gold owned by Treasury.....	\$170,912,413	\$163,930,220	\$158,537,179
Silver dollars and bullion.....	\$193,245,614	\$189,003,321	\$186,739,180
Silver certificates outstanding.....	117,248,670	105,519,817	100,306,800
Silver owned by Treasury.....	\$75,998,944	\$83,483,504	\$86,432,380

THE NATIONAL BANK CIRCULATION was reduced \$2,529,994 during the month, and is now \$20,586,283 less than it was a year ago. The amount of legal-tender notes deposited during the month was \$2,679,501, making a total of \$91,170,712, an increase since January 1, 1886, of \$48,564,860.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Jan. 1, 1887.	Dec. 1, 1886.	Nov. 1, 1886.	Oct. 1, 1886.
Currency 6 per cents.....	\$3,680,000	\$3,645,000	\$3,586,000	\$3,576,000
4½ per cents.....	59,636,200	59,019,050	57,306,850	56,276,100
4 per cents.....	113,903,200	115,252,700	115,313,150	113,740,850
8 per cents.....	52,218,950	58,994,450	69,538,050	86,515,450
Total.....	\$229,438,350	\$236,911,200	\$245,744,050	\$260,108,400

ASSOCIATED BANKS OF NEW YORK.—The surplus reserve was reduced on December 18th to the lowest point touched since June, 1884, but by the close of the month it was increased to over \$12,000,000.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1886 and 1885:

	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
1886.						
Dec. 31.....	\$343,687,500	\$82,718,100	\$19,370,400	\$359,268,800	\$7,911,500	\$12,271,350

Jan. 3.....	297,887,700	87,867,800	37,356,900	340,816,300	11,398,800	40,023,625

RAILROAD AND MISCELLANEOUS STOCKS were very strong early in December, a number touching the highest prices of the year. About the middle of the month a stringency in money caused a temporary panic and there was a rapid decline, particularly in stocks like Nashville, Chattanooga & St. Louis, New York & New England, Reading, and Richmond & West Point Terminal, which had advanced considerably in the previous month. Late in the month prices began to recover, and the stock market closed strong.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of December, the highest and lowest since January 1, 1886, and also during the year 1885:

	DECEMBER, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. In cases where there was no quotation during the past month the latest previous quotation is given. The highest and lowest prices for the year 1885—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Baldwin.—Mr. A. H. Baldwin, a member of the New York Stock Exchange, died on December 26th. He was connected with the Exchange since September, 1878.

Benford.—C. Benford, President of the Third National Bank, Circleville, O., is dead.

Bingham.—Samuel Bingham, aged 67 years, late Cashier of the Windham National Bank, Willimantic, Conn., died suddenly from an epileptic attack at Windham Centre, Conn., January 5, 1887.

Carter.—Mr. Buel C. Carter, Bank Commissioner for New Hampshire, died at Hollisford, N. H., on December 11th, aged 47 years. He was appointed Commissioner in 1882 and again in 1885.

Croswell.—Chas. M. Croswell, President of the Lenawee County Savings Bank, Adrian, Mich., is dead.

Eyster.—Ex-Assistant United States Treasurer George Eyster, who has been suffering for over three years from a complication of diseases, died on December 29, 1886, at Philadelphia, Pa., in his 54th year. In 1869 General Grant appointed him Assistant Treasurer of the United States at Philadelphia, and he remained in that capacity until last June.

Groves.—Mr. George M. Groves died of Bright's disease at his home in New York city, on December 29th, at the age of 65 years. He was one of the founders of the Bank of the Metropolis, of New York city, and was its Vice-President for one year.

Hamilton.—Mr. Edmund S. Hamilton died on December 28th in this city, of neuralgia of the heart, aged 68 years. He was connected with the Central National Bank for over twenty years, or since that institution was established.

Hargous.—Mr. Louis Stanislas Hargous, who was for many years a banker in the City of Mexico and New Orleans, died in this city, on December 24th, aged 77 years.

Hays.—Mr. William H. Hays, of New York, died on December 8th of apoplexy, aged 72 years. He was a member of the old Open Board of Brokers. Later he became one of the founders of the New York Stock Exchange. He was President of the Dry Dock Bank, in Wall Street, from 1858 to 1865, when that bank went out of business. In 1876 he became President of the National Bank of the State of New York, which position he retained for four years.

Hoyle.—The Hon. Timothy Hoyle, President of the First National Bank, of Champlain, N. Y., is dead.

Hurter.—Henry Hurter, Cashier of the Western Bank, Louisville, Ky., is dead.

Kauffman.—Mr. Abraham Kauffman, ex-President of the Manheim National Bank, of Manheim, Penn., died at his home near Lancaster, Penn., on December 17th, aged 88 years. He was a member of the Pennsylvania House of Representatives from 1835 to 1838 and in 1843 and 1844.

Loomis.—Henry Loomis, aged 69 years, formerly President of the Burlington (Vt.) Savings Bank for a period of thirty years, is dead.

McConomy.—Mr. Ambrose McConomy, a well-known banker of Lancaster, Penn., died on December 5th, aged 53 years. He was first connected with the Lancaster Savings Institution and afterward became a member of the firms of Reed, McGrann, Kelly & Co. and Reed, McGrann & Co.

Odell.—Mr. Isaac Odell, a leading banker of this city, died on December 28th, aged 66 years. He was at one time President of the Irving National Bank, and for several years President of the Mercantile National Bank. Subsequently he became a Trustee and Vice-President of the Irving Savings Institution.

Price.—Mr. Richard Price, formerly of Salem, Mass., died at his home at Topsfield, on December 19th, aged 45 years. He was a banker and broker in Boston for years.

Simons.—Mr. Oscar A. Simons, President of the First National Bank, of Fort Wayne, Indiana, while in a demented condition, the result of nervous prostration from overwork, committed suicide on December 10th by shooting himself. He was 53 years old, and the wealthiest man in Fort Wayne.

Sather.—Mr. Pedar Sather, sole owner of the banking house of Sather & Co., of San Francisco, Cal., died at Oakland on December 28th.

Sabin.—Mr. Sydney S. Sabin, President of the First National Bank, of La Porte, Ind., died on December 26th, from cancer, aged 72 years. He was one of the oldest and wealthiest citizens of La Porte.

Tash.—Mr. George W. Tash, President of the Cochecho Savings Bank, of Dover, N. H., died suddenly on November 29th. Mr. Tash was a prominent shoe manufacturer and had held many positions of trust.

Thurston.—Mr. Josiah Thurston, President of the Ossipee Valley Savings Bank, of Freedom, N. H., is dead.

Voigt.—Mr. Adolph Voigt, Cashier of the Wilkesbarre (Penn.) Savings & Deposit Bank, died suddenly on December 28th.

Warren.—Mr. James D. Warren, editor of the *Buffalo Commercial Advertiser*, died at his home in Buffalo, N. Y., on December 17th, aged 64 years. For many years Mr. Warren was President of White's Bank, one of the most substantial financial institutions of Buffalo.

New York State Banks.—The annual report of Bank Superintendent Willis S. Paine, submitted to the Legislature January 4, 1887, shows that four new banks with an aggregate capital of \$250,000 were organized during the last fiscal year, making the present number of State banks in New York ninety-five. The increase during the fiscal year in the aggregate resources of these banks was \$11,579,775; increase in loans and discounts, \$12,611,582; in deposits, \$13,642,643. There was a net decrease of \$255,000 in the amount of capital required and a reduction of \$755,915 in the amount of specie on hand. No bank operating under State laws failed during the year.

The resources of the twenty trust, loan and mortgage companies of the State aggregate \$189,166,059, an excess over liabilities of \$2,442,147.52. The amount of deposits on which interest is allowed by these companies is \$135,503,674.82, an increase over the preceding year of \$21,783,287.76.

Superintendent Paine recommends that the banking laws be so amended as to authorize individual bankers to conduct a banking business in places of 3,000 population or less, with a minimum capital of \$10,000. Referring to the Treasury surplus, Mr. Paine says:

"The public welfare demands that the enormous surplus which will accumulate after the three per cents are paid should not be allowed to remain unemployed. It cannot be seriously maintained that a National debt should be permitted to exist for the sole purpose of perpetuating a National banking system."

Upon the subject of uniform currency, the Superintendent says:

"If Congress were to enact a statute permitting the issue of circulating notes by the Government to State banks upon certain conditions, a uniform currency would be provided of inestimable value to the country, having all the advantages now claimed for that of the National banks. Such currency should be a first lien upon the assets of each bank, and securities satisfactory to the Comptroller of the Currency should be held by him to be sold for the purpose of redeeming the circulating notes in cases where banks failed to redeem them. The Directors of any bank of deposit and discount desiring to exercise the privilege of circulating its notes should be required to deposit with that officer, subject to substantially the same conditions that now exist in connection with the deposit of Government bonds, the best obtainable stocks."

The subject of unequal taxation is dwelt upon at length, and, to illustrate this point, Mr. Paine says the trust companies of New York city, with a par capital of \$11,190,000, are assessed only upon \$64,681.

Referring further to the trust companies, which are rapidly multiplying, and are in many instances by virtue of their special charters doing the same business as that of the State banks of deposit and discount, he makes the following good points:

"Undoubtedly, if the practice of creating trust companies by special charters is to meet with no check, the evil results which afflicted thousands of the thrifty but poor depositors of savings banks during the year 1873 and subsequent years will on a larger scale be again experienced. The evils caused by the multiplication of savings banks were only remedied by an amendment to the Constitution, November 3, 1874. If the rapid increase of trust companies is permitted there is reason to believe that in time not a State bank of deposit and discount will exist in the metropolis."

The organization of trust companies, he thinks, like that of banks, should be provided for under a general law, and he has prepared such an Act for submission to the Legislature.

The recommendation regarding trust companies is in harmony with the JOURNAL's views, which have frequently been emphasized herein. A fuller reproduction of Mr. Paine's report, with comments on its main features, will appear in the next issue of the JOURNAL.

The New Bank Examiner.—Mr. Valentine P. Snyder, late Deputy Comptroller of the Currency, has entered upon his duties as National Bank Examiner at New York city, and has taken an office at No. 16 Exchange Place. His district includes Brooklyn, New York city and Jersey City, N. J. Mr. Snyder was Deputy Comptroller during the last months of Mr. Cannon's service as Comptroller of the Currency, and has since been associated with Comptroller Trenholm in the same capacity. It is believed he is well qualified to fill the important position satisfactorily to all concerned. Ex-Comptroller Cannon, President of the Chase National Bank, introduced Mr. Snyder to Manager Camp, of the Clearing-House, before he began operations. The late Examiner, Mr. A. M. Scriba, made a good record. It may not be generally known that the National Bank Examiners are appointed by the Comptroller, with the approval of the Secretary of the Treasury, and are removable by those officials. By a word the Comptroller can transfer an Examiner, if need be, from New York to San Francisco.

RHODES' JOURNAL OF BANKING.

Vol. XIV. FEBRUARY, 1887. No. 2.

IT is difficult to conceive that any person who has had practical experience of the evils of State bank circulation could be found to advocate the substitution of such a system for National bank circulation. The *Atlanta Constitution*, however, is making urgent appeals for what it calls free banking, which evidently is not to include National banks. It says:

“If Congress wants to present a valuable New Year's gift to the country let it give us free banking. There is a great deal of talk about legislation for the benefit of the National banks, but none about legislation for the benefit of the people. It is time this beautiful tune was changed. Congress has piped it right straight along for a number of years, and the dear people have danced to it with an agility that is astonishing. But now they are getting tired in the calves of the legs. The 10 per cent. tax which protects the circulation of the National banks is no longer necessary. They are able to work out their own salvation, now if ever, and they no longer need the protection of a prohibitory law. Moreover, the people can no longer appreciate the benefit of a banking system that ignores the basis of all capital, real estate. A change is necessary. Fortunate is the Congressman who, perceiving this, shall be able to bring it about.”

It is not easy to consider seriously the proposition that it would be “for the benefit of the people” to allow a revival of the old system of wild-cat bank circulation. To substitute for the National bank note (which, issued in California, is good in New York) the State bank note which was good nowhere outside of the State in which it was issued, and frequently not there, would be so unwise that it does not seem possible that any Congressman will attempt “to bring it about.” The last report of the Comptroller shows pretty clearly that the *Constitution* misinterprets the opinion of the people regarding the National banks. That report shows that there are 215,879 individual holders of National bank stock. In the State of Georgia alone there are 820 individual bank shareholders, and there are 655 resident shareholders and only 186 non-resident. Of the total 841 holders, there are 470 owning 10 shares or less, 250 owning over 10 and not more than 50 shares, 111 owning over 50 and not more than 300 shares, and only 10 owning over 300 shares. The average holdings of each shareholder are less than 32 shares, or about \$3,200. Surely there can be no banking

system proposed which would give the people of Georgia a better opportunity to invest their money in that line of business. No State system ever existed which was less exclusive as to bank ownership or which was more truly local in character. There can be no freer banking except that which would substitute license for liberty.

ONE PROVISION OF A BILL introduced in the Senate by Senator Plumb, which ought to be adopted, limits the deposit of Government bonds by a National bank to \$5,000. The object of the measure is to preserve the National banking system, and not to affect bank circulation in any way, for it leaves the basis of bank circulation exactly as it is at present. Under the Act of July 12, 1882, every bank with a capital of \$150,000 or less is required to deposit Government bonds with the Treasurer of the United States to an amount equal to 25 per cent. of its capital, and those with over \$150,000 capital are required to deposit \$50,000 of bonds. This deposit must be made whether circulation is taken out or not. The calling in of bonds has forced some banks to choose between surrendering their charter or depositing other bonds. The lowest amount of bonds that can be deposited is \$12,500 and the maximum \$50,000. At the present price of 4 per cent. bonds the cost of such a deposit in these bonds ranges from \$16,050 to \$64,000, while the cost of 4½ per cents. is from \$13,750 to \$55,000. Senator Plumb's bill reduces the deposit to a uniform amount of \$5,000, which is large enough, as additional security is required for any circulation taken out in excess of 90 per cent. of the original deposit. According to the last annual report of the Comptroller, there are 2,001 banks with a capital of \$150,000 or less which are required to deposit \$41,815,312 of bonds without reference to their circulation and 851 banks with over \$150,000 capital which are required to deposit \$42,550,000. The aggregate deposit, therefore, which these banks must make is \$84,365,312. If Senator Plumb's bill is enacted the 2,852 banks would be required to deposit only \$14,260,000, or \$70,000,000 less than under the law of 1882. It is not probable that the deposit would be reduced to anything like this extent, as a number of the banks have a circulation outstanding based upon their bond deposit, but there are banks with little or no circulation which would avail themselves of this opportunity to remain in the National system that now find it onerous to maintain a large deposit of bonds returning only a very small income upon the investment.

THE RESPONSIBILITY for the failure to establish a satisfactory Extradition Treaty between the United States and Canada, it must be admitted, rests primarily upon our own Government. That the necessity for such a Treaty exists cannot be denied, and public sentiment in both countries is strongly opposed to the present system of interchange of criminals. It is a difficult question to solve whether a country suffers most from the immigration or the emigration of knaves, but

no country can view with pleasure a steady influx of foreign rogues. It has, therefore, been in the nature of a surprise that Canada, notwithstanding the good reason it has for complaint, because of the obstinacy of the United States, has not, on its own account, refused an asylum to the undesirable immigrants which have left their native country for the country's good. That public sentiment in Canada favors such a policy we are well aware. This sentiment is reflected by the *Montreal Shareholder* in a recent issue, which suggests a plan for making it very uncomfortable for those who seek refuge in Canada to avoid punishment for their crimes. The *Shareholder* says:

"If the United States want our thieves, our defaulters, our forgers, and our blackguards, generally, let them have them by all means and welcome; but we don't want theirs in exchange. We would do away with the law making it necessary that a man shall be tried for a crime in the city, county, district, or State where the crime is committed. If such a one steals, or embezzles, or forges, or commits any other (what we regard as) crime, say, in Chicago, and flies to Canada, let his pursuers follow him, and when they come up with him let them lay their information and have him arrested. Then let them produce their evidence, and let the accused be tried by *our* Courts, according to *our* law, and, if found guilty, let him be punished precisely the same as if his crime had been committed here. Situated as we are with regard to the United States, with several hundred miles of invisible frontier between us, we are peculiarly liable to a continual interchange of criminals under existing laws, and the spectacle which is constantly presented to our rising generation of criminals committing crime with impunity is by no means an edifying one, nor one that is likely to elevate the moral tone of the community."

WHEN A SOVEREIGN STATE can, and will not, pay its debts the problem how to make it pay is one which has not as yet been solved. The unpaid creditors of some of the Southern States have attacked this problem in a new way, and the outcome, no doubt, will be awaited with considerable interest. The United States Government holds a large amount of bonds of Southern States which were bought as a trust fund for the benefit of Indian tribes. The bonds have been defaulted, and some of the individual creditors have appealed to Secretary Lamar to bring suits against the States which are in default. While the Government might succeed in such a suit, and enforce the collection of any judgment obtained, it is a question how individual creditors will profit by it. The constitutional right of a State to ignore an individual claimant can hardly be set aside on account of a judgment obtained by the United States Government in its own behalf.

A BILL WHICH FAILED TO PASS the New York Legislature last year has been reintroduced by Senator John J. Cullen. It provides that, whenever a depositor in a savings bank in New York city has failed to withdraw any part of his deposit or interest within ten years, he shall be presumed dead unless affirmative proof that he is alive is produced. It also requires bank Presidents to furnish the Public Administrator with a list of all depositors who have failed to withdraw any money

within ten years. The measure should not be allowed to become a law. It is of frequent occurrence that depositors turn up who have not been heard from in ten or twenty years, or even longer. The scheme of publishing a list of uncalled-for deposits, which the bill virtually provides for, would simply invite all manner of frauds to be committed. Ganted that some money is deposited in savings banks which is never withdrawn, the amount is only a very small percentage of the total deposits. The savings banks are purely fiduciary institutions, run for the sole benefit of the depositors. If any profit is derived from uncalled-for deposits it goes to the depositors and not to the Managers. It is an important element in maintaining confidence in such banks that a depositor is assured that he can have his money any time he wants it, whether one day or fifty years elapses after he has deposited it.

THE USE OF A PARTICULAR COIN not infrequently plays an important part in determining the commercial relations between one country and another. An illustration of this fact is to be found in the introduction of the new French piastre into Asia. The London correspondent of the *Mexican Financier* calls attention to this matter, which is of no little significance to Mexico. The Mexican peso for many years has been circulated in China, and for a long time the French have tried to displace it with coin of their own. By making the piastre a trifle heavier than the Mexican eagle dollar, and introducing it into Tonquin (their new colony), the French seem to be in the way of succeeding at last. The Chinese already express a preference for the French coin, and the French Government has been making large purchases of silver bullion, not only in London but also in the United States, for coinage into Tonquin piastres. This country to a certain extent, therefore, is a gainer by this movement, but Mexico is doubly injured in the loss of its market for silver and a diversion of its foreign trade.

THE RESIGNATIONS OF SECRETARY MANNING AND TREASURER JORDAN may be viewed in the light of a public misfortune. Both these gentlemen have had much to do with strengthening confidence in the Administration, which naturally was somewhat affected by the political changes that occurred nearly two years ago. Through defects in the laws the financial system of the Government is not what it should be, and only the courage, ability and integrity of the heads of the Treasury Department have prevented unpleasant complications. For some weeks after it was intimated in the Washington press dispatches that Mr. Manning would resign, there yet remained some doubt about it as the Secretary had made no statement as to his intention. In another part of the JOURNAL, however—see News Department—appears a correct statement of facts regarding the organization of the new Western National Bank in this city, and Mr. Manning's name appears as President and Mr. Jordan's as Vice-President. It will be difficult to fill their places with men possessing so fully, as they do, the confidence of the public.

CONSTITUTIONALITY OF THE NATIONAL BANK ACT.*

If the constitutionality of the first and second Banks of the United States be admitted there can be no difficulty in admitting that of the National Bank Act. If the power to create one banking corporation be granted so must the power to enact a general banking law.

When, in order to facilitate the funding of the revolutionary debt and to aid the Government in the fiscal operations, Alexander Hamilton proposed a National bank, the constitutionality of the measure received much consideration—both in Congress before the bill passed and by the President after its passage. Washington, before signing the bill, called first for the opinions of Attorney-General Randolph and Secretary of State Thomas Jefferson. Both of these gentlemen returned opinions adverse to the power of Congress to create a National bank. Both, but especially Jefferson, insisted with great stress of argument that the word *necessary* in the clause of the Constitution giving power “to make all laws *necessary* and proper for carrying into execution the enumerated powers” did not give power to create a bank. They both took the narrow view that nothing could be looked upon as necessary that could be done without. On receiving these opinions, Washington asked for Hamilton’s opinion in order that he might “be fully possessed of the arguments for and against the measure” before expressing any opinion of his own.

The essential point in Hamilton’s opinion was that the Government of the United States, in the exercise of its powers sovereign and from the very nature of sovereignty, had the right to employ all the means requisite and fairly applicable to the attainment of the ends of such powers. In proof of this inherent sovereignty he cited the clause of the Constitution which declares that the Constitution and the laws of the United States made in pursuance thereof, and all treaties made or which shall be made under their authority, shall be the *supreme law of the land*.

Hamilton claimed that, to carry into effect *any* of the express powers, Congress had the right to erect a corporation. “The only question,” he says, “in this or any other case must be whether the means to be employed—in this instance the corporation—has a National relation to any of the acknowledged objects or lawful ends of the Government. Thus a corporation may not be erected by Congress for superintending the police of the City of Philadelphia because they are not authorized to regulate the police of that city. But one may be erected in relation to the collection of taxes, as to the trade with foreign countries, or to the trade within the States, or with the Indian tribes.”

He further remarks that to insist on the narrow construction of the necessity clause adhered to by Randolph and Jefferson “would be to make the criterion of the exercise of any implied power a case of *extreme necessity*, which is rather a rule to justify the overleaping of the bounds of constitutional authority than to govern the ordinary exercise of it.”

Washington was convinced that the bill was constitutional, and on February 25, 1791, it became a law.

[* This article is a reply to the communication of E. D. S. on the same subject which is printed in this issue under “Open Letters from Bankers.”—Editor JOURNAL.]

When the charter of this bank expired, in 1811, Congress refused to extend it, and in the debates the question was again raised.

Albert Gallatin, then Secretary of the Treasury, in a letter to Hon. William H. Crawford, Chairman in the Senate, wrote as follows, after citing many reasons in favor of extending the charter :

"Permit me simply to state that the bank charters, having for a number of years been acted upon, or acquiesced in, as if constitutional by all the constituted authorities of the nation, and thinking, myself, the use of banks to be at present necessary for the exercise of the legitimate powers of the general Government, the continuation of a bank of the United States has not, in the view I have been able to take of the subject, appeared to me to be unconstitutional."

President Madison regarded the question as settled, inasmuch as in his veto of a bill chartering the second Bank of the United States, which passed Congress in 1815, none of his objections rested on constitutional grounds. In that veto he waives "the question of the constitutional authority of the Legislature to establish an incorporated bank as being precluded, in my judgment, by repeated recognitions, under varied circumstances, of the validity of such an institution in Acts of the Legislative, executive and judicial branches of the Government, accompanied by indications in different modes of a concurrence of the general will of the nation."

Even Jefferson, though the greatest opponent, on constitutional grounds, of the first bank of the United States, afterwards, when President, signed a bill creating, at New Orleans, a branch of the very bank the charter of which he had so ably opposed.

Daniel Webster, then in the House, was opposed to the charter-bill on grounds similar to those taken by Madison, but he had no doubt then, or afterwards, as to the constitutionality of the power to create a National bank.

In 1816 Madison signed the bill for the charter of the second Bank of the United States, and in his message to Congress said that the bank was "essential for the interests of the community at large as well as for the purposes of the Treasury."

In 1819 the Supreme Court of the United States decided, in *McCulloch vs. State of Maryland* (4 Wheat., 316), squarely on the constitutional point that Congress has powers to incorporate a bank—the reasons being substantially those in Hamilton's opinion already quoted which had so much weight with Washington—and further decided, generally, that "If a certain means to carry into any of the powers expressly given by the Constitution to the Government of the Union be an appropriate measure not prohibited by the Constitution the degree of its necessity is a question of legislative discretion not of judicial cognizance."

This is precisely the ground taken by the Supreme Court in the latest legal-tender decision.

Other decisions fixing the constitutional and legal status of the second Bank of the United States were rendered by the Supreme Court in *Osborn vs. Bank of United States* (9 Wheat., 738) ; *Flecknor vs. Bank of United States* (8 Wheat., 838) ; *Bank of United States vs. Planters' Bank of Georgia* (9 Wheat., 104) ; *Bank of United States vs. Dundridge and others* (12 Wheat., 64).

When the charter of this bank was about to expire, Jackson vetoed the bill for its renewal.

Lodge, in his life of Webster, says of Jackson : "He had the audacity to rest his veto upon the ground that the bill was unconstitutional, and that it

was the duty of the President to decide upon the constitutionality of any measure without feeling in the least bound by the opinion of Congress or the Supreme Court. His ignorance was so crass that he failed to perceive the difference between a new bill and one for continuing an existing law, while his vanity and self assumption were so colossal that he did not hesitate to assert that he had the right and the power to declare an existing law, passed by Congress, approved by Madison, and held to be constitutional by an express decision of the Supreme Court, to be invalid because he thought to say so."

This description of Jackson will not illy apply to those at the present day who, without his power and individuality, still dispute the constitutionality of the National Banking Act.

If the constitutionality of the law chartering the first Bank of the United States (though at the outset hotly disputed) was finally granted by such men as Madison and Gallatin (both belonging to the Jeffersonian school) and even by Jefferson himself, if that of the second Bank of the United States was granted by Madison at the very outset without dispute and sustained by the Supreme Court, it is much too late to call in question the constitutionality of the National Bank Act, in creating which the Congress of the United States, the Executive of the United States and the Judiciary of the United States, for the third time in less than a century, took action in favor of the views of the Constitution held by Hamilton and approved by Washington.

Webster, in his speech at the merchants' meeting in Wall street on September 28, 1840, declared that even Jackson was willing to waive the constitutional question if the bill for a re-charter could be altered in some points in accordance with his suggestions.

Thurlow Weed, in his "Memoirs," Vol. I., page 373, refers to an offer of compromise offered by Jackson's administration, which indicates that the constitutional point was not thought vital.

On the whole, if any view of the Constitution can be considered as settled by action of the Government, by weight of authority, by general consent, and by lapse of time, it is that the Congress of the United States has power to create a National bank by special or general law.

BANKERS' PORTRAITS.—The following letter is published, not so much for its commendation of the JOURNAL—we receive hundreds every week filled with appreciative words, and every one is highly prized—but more especially to direct attention to the JOURNAL's portraits of Bank officers and prominent financiers similar to the one (Mr. Babcock's) which appears in this issue. Read what our correspondent thinks of the illustrations :

FARMERS' STATE BANK,
CONCORD, Mich., January 27, 1887.
Bradford Rhodes & Co., New York:
GENTLEMEN:—In renewing our subscription (a draft for which is inclosed), permit us to say that we think the JOURNAL is keeping fully abreast of the times in its progress, and especially do we commend its new departure in the way of illustrations, as it gives us of the interior, who are not favored by a personal acquaintance with our leading financiers, an opportunity to "see how they look," and thus form a more satisfactory idea of these men. Nothing would more enlighten us regarding a man with whom we have (or wish to have) business relations than to see a faithful likeness of him. The portraits you are furnishing in the JOURNAL are the best I have ever seen; wish you would give us more of them in every issue. Respectfully,

PERCY E. CHAPPLE, Cashier.

SPECIE PAYMENTS FOR EIGHT YEARS.

Eight years have elapsed since the Government, on January 1, 1879, resumed specie payments. It will be remembered with how much fear and trembling this important step was taken, and how many were the predictions that the effort to resume would end in failure. "Resumption that did not resume" was what many chose to call the attempt of the Government to get its currency upon a substantial specie basis. The Government itself was cautious in taking the important step, for the Resumption Act was passed on January 14, 1875, or nearly four years prior to the time when it was to become operative. The interim was to be devoted to preparations for the great operation.

The Resumption Act provided for the coinage of fractional silver pieces to be used to retire fractional currency, of which there was about \$44,000,000 outstanding at the time the Act was passed, and which was reduced to about \$16,000,000 by January 1, 1879. To encourage the coinage of gold, the Act abolished the charge of one-fifth of 1 per cent. for converting standard gold bullion into coin.

The limitation of National Bank note circulation to \$354,000,000 was removed, and the Secretary of the Treasury was directed to redeem the legal-tender notes until only \$300,000,000 should be outstanding.

At the time of the passage of the Act it was the intention of Congress to retire all the legal-tender notes, but later a different policy was adopted.

On May 31, 1878, an Act was passed prohibiting the retirement of any more legal-tender notes, and requiring the reissue of all such notes as should thereafter reach the Treasury.

The only other Act passed, during the interval between the enactment of the Resumption law and its enforcement, was the one passed February 28, 1878, authorizing the issue of the standard silver dollar.

For some time prior to the date of resumption, the Secretary of the Treasury, under the authority given him by the Act, sold 4 and $4\frac{1}{2}$ per cent. bonds in order to accumulate a gold reserve for the redemption of legal-tender notes. This reserve, he estimated, should be equal to 40 per cent. of the legal-tender notes outstanding, of which there were \$346,681,016. The Secretary aimed, therefore, to have a coin reserve of \$138,000,000 on January 1, 1879, and he did have on that date \$133,500,000.

The fear that the attempt by the Government to resume would be defeated by note-holders rushing to secure gold, was soon dissipated. On January 2, 1879, the redemption of notes in coin began at the Sub-Treasury in New York, and the United States Treasurer, in his annual report for 1879, says: "More gold was received on that day and several days thereafter than was paid out."

From January 1, 1879, to November 1, 1879, only \$11,256,678 of notes were presented for redemption, and the net balance of gold and silver coin and bullion in the Treasury available for resumption increased from \$133,508,804 to \$152,737,155.

This in brief is the history of one of the most important financial feats ever accomplished by any country. Its success in no way reflects upon the caution

of the Government in attempting it, nor does it militate against the intelligence of those who expressed grave doubts of the practicability of the attempt.

Now that resumption has been accomplished, and the Government for so many years has been paying coin to every applicant, it is of interest to study the changes that have taken place in our circulating medium. To do this it is not necessary to take into account anything but the gold coin, silver dollars, legal-tender notes and National bank notes, ignoring the fractional silver, gold and silver bullion and minor coin.

Only an approximate estimate of the gold coin in the country on January 1, 1879, can be made. This may be given as \$240,000,000, the highest possible figure, the Mint estimate for July 1, 1879, being \$241,166,203. The amount of gold coin in the country on January 1, 1887, is estimated at \$559,000,000. This estimate is based upon the Mint estimate of \$534,235,453 on January 1, 1886, by adding to it the year's coinage of \$28,945,542, less about \$3,000,000 for American gold coin, exports, re-coinage and amount used in the arts. The silver dollar and note issues are stated accurately as officially reported.

The total amount of each class of money in the country on January 1, 1879, and January 1, 1887, was as follows :

	Jan. 1, 1879.	Jan. 1, 1887..
Gold coin.....	\$240,000,000	\$559,000,000
Silver dollars	22,435,560	249,655,847
Legal-tender notes.....	346,681,016	346,681,016
National bank notes.....	323,791,674	296,771,981
Total.....	\$933,908,240	\$1,452,108,844

In eight years the coin and currency of the country has increased from \$933,908,340 to \$1,452,108,844, or over \$519,000,000. Our money supply has increased, therefore, nearly 56 per cent., while the population of the country has increased from 48,200,000 to 59,200,000, or less than 23 per cent. The average supply *per capita* has increased from \$1.94 to \$2.45. The coin supply, which in 1879 was only 28½ per cent. of the total, is now 55½ per cent. The percentage of gold coin is 38½ per cent. against 26 per cent. in 1879; silver coin, 17 per cent. against 2½ per cent. in 1879; legal-tender notes, 24 per cent. against 37 per cent. in 1879; bank notes, 20½ per cent. against 34½ per cent. in 1879.

The amount of each class of money held in the Treasury of the United States, at the respective dates, was as follows:

	Jan. 1, 1879.	Jan. 1, 1887.
Gold coin.....	\$128,575,960	\$187,196,596
Silver dollar	16,697,398	188,506,228
Legal-tender notes	69,682,506	29,679,826
National bank notes.....	8,469,162	3,012,336
Total.....	\$223,324,955	\$408,394,494

The gross amount of gold and silver coin and notes held in the Treasury has increased over \$185,000,000 during the eight years, or nearly 83 per cent. About 28 per cent. of the total supply is in the Treasury against 24 per cent. in 1879. About 34 per cent. of all the gold coin is in the Treasury, over 75 per cent. of the silver dollars, over 8 per cent. of the legal-tender notes, and 1 per

cent. of the bank notes. A portion of the money in the Treasury, however, is represented in circulation by certificates. The following statement shows the amount of certificates outstanding at the dates mentioned:

	Jan. 1, 1879.	Jan. 1, 1887.
Gold certificates	\$21,189,280	\$97,215,805
Silver certificates.....	413,360	117,246,870
Currency certificates.....	33,193,000	6,510,000
Total	\$54,795,640	\$220,972,275

The increase in this class of currency has been very large, aggregating over \$166,000,000. The increase in gold certificates is over \$76,000,000, and in silver certificates nearly \$117,000,000, while currency certificates have decreased nearly \$27,000,000.

Deducting the amounts, above-mentioned, from the gross amounts in the Treasury, the net amounts in the Treasury, representing the actual ownership of the Government, are as follows:

	Jan. 1, 1879.	Jan. 1, 1887.
Gold coin.....	\$107,386,670	\$99,980,991
Silver coin.....	16,283,973	71,259,568
Legal-tender notes.....	36,392,506	23,169,325
National bank notes.....	8,469,162	3,012,335
Total	\$168,532,311	\$187,422,219

The net cash in the Treasury shows only a small increase, less than \$19,000,000, or about 12 per cent. But no account is taken of the bullion held in the Treasury in the foregoing figures. On January 1, 1887, there was \$80,931,421 gold bullion owned by the Government against only \$6,806,688 in 1879, an increase of over \$74,000,000. Silver bullion, however, shows a decrease of about \$4,700,000, there being only \$4,739,376 held against \$9,439,461 in 1879. The amount of fractional silver coin held is \$25,660,935 against \$6,039,295 in 1879, an increase of \$19,600,000. These three items, therefore, show a net increase of about \$89,000,000. Adding them to the net coin and currency holdings, it appears that the net cash in the Treasury has increased from \$190,817,000 to \$298,783,951, or nearly \$108,000,000 since resumption.

The amount of coin currency and certificates in circulation in 1879 and 1886 is shown in the following table:

	Jan. 1, 1879.	Jan. 1, 1887.
Gold coin.....	\$111,424,060	\$371,803,404
Gold certificates.....	21,189,280	97,215,805
Total gold	\$132,613,340	\$469,019,009
Silver dollars	\$5,798,212	\$61,149,409
Silver certificates	413,360	117,246,870
Total silver.....	\$6,211,572	\$178,396,079
Legal-tender notes	\$277,098,511	\$317,001,691
Currency certificates	33,190,000	6,510,000
Total legal-tenders.....	\$310,288,511	\$323,511,691
National bank notes.....	\$315,322,512	\$223,759,6
Total coin, currency and certificates.....	\$764,436,925	\$1,264,686,425

The increase in actual circulation of coin, legal-tender notes and certificates, exclusive of fractional coin, is over \$500,000,000, or 65 per cent. The larger portion of the increase is in gold coin circulation, which is now over \$336,000,000 greater than it was when specie payments were resumed. Of this increase \$260,000,000 is in gold coin and \$76,000,000 in silver certificates.

The circulation of silver dollars has increased \$172,000,000, of which \$55,000,000 is in the coin itself and about \$117,000,000 in silver certificates. There is an increase of \$13,000,000 in legal-tender circulation, the notes in actual circulation having increased \$40,000,000 and the currency certificates decreased \$27,000,000. The decrease in bank notes is over \$21,000,000.

Some very important changes have occurred in the ratios of the different classes of currency to the total circulation. The gold circulation has increased from 18 per cent. of the total in 1879 to about 37½ per cent., the coin increasing from 15 to 29½ per cent. and the gold certificates from 3 to 8 per cent. Silver circulation has increased from less than 1 per cent. to 14 per cent. of the total, the circulation of silver dollars now being 5 per cent. and of silver certificates 14 per cent. The circulation of legal-tender notes has decreased from 40 to 25½ per cent. of the total, the notes themselves falling from 36 to 25 per cent. and the certificates from 4 to about ½ per cent. The circulation of bank notes has decreased in a similar proportion, being now only 23 per cent. of the total against 41 per cent. in 1879.

It is interesting to note that the increase in circulation has been at a greater rate than the increase in population. In 1879 the total actual circulation was equal to \$15.86 *per capita*, while it is now over \$25.70 *per capita*, an increase of over \$9.84 for each individual in the country. In the following table is given the *per capita* circulation of each class of currency for the two periods :

	January 1, 1879.	January 1, 1887.
Gold coin.....	\$2.31	\$7.56
Gold certificates.....	.44	1.98
Total gold.....	\$2.75	\$9.54
Silver dollars12	1.24
Silver certificates.....	.01	2.38
Total silver	\$0.13	\$3.62
Legal-tender notes	5.75	6.44
Currency certificates.....	.89	.13
Total legal-tenders.....	\$6.44	\$6.57
National bank notes	6.54	5.97
Total for all.....	\$15.86	\$25.70

In 1879 the *per capita* of bank note circulation was the largest, with legal-tenders almost as large. The circulation of gold was considerably less than that of either bank notes or legal-tenders, while the silver circulation was almost *nil*. Now the gold circulation is much larger than that of any other class, being \$9.54 *per capita*, with legal-tenders next at \$6.57 *per capita*, bank notes coming third at \$5.97 *per capita*, and silver fourth at \$3.62 *per capita*.

Considering the methods which have been adopted in recent years for the more economical use of money, as, for instance, the establishing of Clearing-Houses in numerous cities, the conclusion seems irresistible that the increase

in the volume of the currency has been fully equal to the commercial requirements of the country.

One fact is brought out very plainly in the figures above given, and that is that the use of paper money is considered preferable to the handling of coin. It is true that the circulation of coin has increased, but the circulation of paper, including certificates of all kinds, comprises nearly two-thirds of the circulating medium. The circulation may be classified as follows:

	Jan. 1, 1887.	Jan. 1, 1879.
Legal-tenders (including certificates) and bank notes...	\$825,611,023	\$617,271,337
Coin certificates	21,602,640	214,462,275
Total paper	\$847,213,663	\$831,733,612
Coin.....	117,222,262	432,952,813
Total paper and coin.....	764,435,925	\$1,264,686,425

There has been a decrease in legal-tender and bank note circulation of over \$8,000,000, but this may be accounted for by the operation of the law keeping the one at a stationary point and forcing a reduction in the other. The increase in coin certificates, however, has been nearly \$193,000,000, and it is quite probable that it would have been still greater were not the issue of gold certificates limited to denominations of not less than \$20, and of silver certificates, until very recently, to not less than \$10. Notwithstanding these hindrances to the increase of paper circulation there are still outstanding nearly \$2 of paper for every dollar of coin.

Since resumption we have been getting our currency upon a specie basis, and now over 50 per cent. of the total circulation is in coin or its representative against less than 20 per cent. when the Government undertook the very doubtful task of establishing and maintaining specie payments.

BANK CASHIERS, ETC.—The time was when bank Directors sought out men with much of the bull-dog temperament for the Cashiership of the bank under their charge, but the day has passed for the desirability of this special qualification. The successful Cashier of to-day may, properly enough, be possessed of this old-time spirit, but it is never allowed to manifest itself. In these times of competition banks want business, and plenty of it, and a large part of the equipment necessary to win customers is the affability and straightforwardness of the bank's officers. The model bank President or Cashier is the one who can say no with such an agreeable manner that the customer feels at once that the man is prompted to say it by the best motives and that he will be glad to see him again. "Sugar catches more flies than vinegar" is pertinently true in this pushing, driving age.

Another school in which bank officers have been apt pupils for several years past is that of advertising. Even those whom the fledglings are apt to call "old fogies" have learned that IT PAYS to place their advertisements in high-toned banking publications of wide circulation and consequent influence. The best testimony on this point can be had by consulting the JOURNAL's advertising pages.

THE PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY, of which Mr. Sheppard Homans, the well-known life insurance actuary, is President, makes an annual statement for the year 1886, the main features of which will be found itemized on another page. As far as we can see, Mr. Homans' company fulfils all its promises and has excellent prospects for its future success.

BANKING IN MINNESOTA.

RECOMMENDATIONS OF THE PUBLIC EXAMINER.

Public Examiner Henry M. Knox, of the State of Minnesota, is an official thoroughly alive to the importance of carefully guarding the moneys of the people. On January 5th he received (what rarely falls to the lot of any public official) an indorsement in one day from two Governors of that State. Governor Hubbard, in his last message to the Minnesota Legislature, called special attention to the recommendations in the report of the Public Examiner regarding the necessity of greater protection for the moneys collected by County Treasurers, and also to the need of more assistance in the Bank Examiner's department. On these points Governor Hubbard said :

"I especially commend to your attention the report of the Public Examiner. His lucid exposition of the defects in our system of administering the public revenues should command thoughtful study, with a view of a thorough revision of the methods now in use. His suggestions and recommendations are too voluminous for recapitulation here. I desire, however, to call your attention especially, as I have that of your predecessors, to the loose, inconsistent and insecure methods which prevail respecting the receipt and disbursement of the public funds by county officials. The receipts for the County Treasuries of the State for the year ending February, 1886, were in excess of \$9,000,000. The present system provides no checks whatever upon County Treasurers for a verification of their transactions covering this vast sum. All vouchers and entries pertaining to the receipt of these millions of the people's money are practically within the control of the Treasurer alone. One would suppose that a statement of this character would startle the taxpayers of the State, but it has been repeated in this form and by the Public Examiner from year to year, and received no heed. This state of things is accountable for the occasional defalcations of County Treasurers reported from time to time, and is a standing temptation to their frequent recurrence. The evident remedy is suggested by the Examiner, that 'all receipts for money should originate in the Auditor's office,' thus providing an accurate and effective check upon all transactions of the Treasurer. I venture to express the hope that this session will not close without legislation necessary to effect this reform.

"The recent rapid development of the State and the corresponding increase in the number of moneyed corporations over which the Examiner exercises supervision under the law has greatly added to the duties of his office. The work he must now perform in connection with the accounts of county offices has increased threefold since the office was established in 1873. Our continued growth must constantly add to the labor imposed upon him. He already finds it a physical impossibility to comply with the requirements of the law regulating his duties, and asks for an increase in his clerical assistance. It would be difficult to exaggerate the importance of this service to the public interests, and it would be a most mistaken economy to limit the expenses of its maintenance in a manner to impair its efficiency.

"Regarding the protection of public funds in the hands of County Treasurers there can be no question that the recommendation of the Examiner should be adopted as speedily as possible. It is difficult to conceive that such loose methods of business should have been allowed to continue for any length of time.

"The Legislature should make no delay in granting the Public Examiner the power to increase his force to such an extent as will insure the efficiency of his department. The very nature of the service performed by that official requires that the work should never be so pressing as to interfere with its being well done. By attempting economy in that direction, extravagance in some other direction is bound to result, no matter how careful and zealous may be the official who tries to do what

the requirements of his office demands. Mr. Knox is a most efficient officer, and for that reason his request for assistance should be promptly responded to."

Governor McGill (who succeeded Governor Hubbard), in his inaugural address, commends another recommendation of Mr. Knox, as follows:

"The banking business of the State, as appears by the Public Examiner's report, is transacted by 237 banks, but 107 of which are incorporated either under our State or the United States laws. The balance, 130, are owned and operated by private individuals and firms, and all but eleven of them have assumed corporate names. In this the corporations placing themselves under legal restrictions and surveillance have just cause of complaint. There can be no hardship in insisting that banks which make no application to the State for corporate privileges, which conform in no particular to the statutes, and make no disclosures of their affairs either by report or examination, are not entitled to corporate titles and should be compelled to do business under their personal names, as in other business. It would be well to thoroughly consider, further, whether such corrective legislation should not be applied as will bring all associations seeking to do a banking business under either National or State supervision.

"The proposition of the Examiner, which would entitle the heads of the several departments to certain privileges upon the floor of the Legislature for the purpose of making brief explanatory remarks, or of answering questions pertaining to their work, seems to me in the line of utilizing the experience of those officers, and commends itself to my judgment."

The legislation which the Public Examiner advises with reference to private banks is such as the State of New York, and in fact all the older States, have found it necessary to have. No banking institution not incorporated should be permitted to use a corporate title. It not only opens the door to fraud, but it really works to the disadvantage of those banks which have put themselves under the operation of laws looking to the greater security of the public.

That 130 out of a total of 237 banks in the State of Minnesota should be private institutions, and 119 of them should be using corporate titles, shows very conclusively that an advantage is secured over banks duly incorporated. This should not be allowed, for it is detrimental not only to the varied banking interests but to the people who use the banks as well.

ATTENTION IS DIRECTED to a letter on page 127; it gives expression to the views of very many of the JOURNAL's readers. In this extensive country it is only possible for bankers to meet a very few of their brethren face to face in the course of a lifetime; and surely the next best thing to taking a man by the hand and looking into his face in your presence is to have a faithful likeness of him before you and let the touch of his hand and the sound of his voice be pictured in your imagination. True, the Bankers' Association does a little—a very little, however—in the way of personal contact of men who have known (?) each other—by their signatures—for many years; but out of the *eighteen thousand* bank offices in this broad country the best attended Convention of the Association has never yet been able to muster over two or three hundred representatives. The working officers of the banks cannot leave their desks and travel several hundred miles simply to be present at a two days' Convention and hear a few papers read—*sometimes* very "dry" and uninteresting at that—which they would rather read in the printed Proceedings, when they can, without seeming at all rude, omit the less interesting, and inwardly digest the *meaty* papers and instructive discussions.

The JOURNAL does not expect to introduce *all* bank managers in the United States to each other, but it hopes to have the pleasure of presenting the long list who have friends and correspondents in nearly every State and prominent city.

ESTIMATES OF GOLD AND SILVER PRODUCTION.

In a recent issue of the London *Bullionist* are presented estimates of the amount of gold and silver produced in the United States that are remarkable for their inaccuracy. Not only are the figures wrong, but the statement concerning their source and method of computation are inconsistent with well-known facts.

The *Bullionist* starts out with the statement that "the American bullion year terminated on the 1st of October," to which is added that it is announced that the Director of the United States Mint has issued his report for the past fiscal year, showing a total production of gold and silver in the United States equal to \$83,000,000, or nearly £17,000,000.

The inference is natural that the *Bullionist* assumes the Mint report to be for the fiscal year ended October 1, 1886. This is wide of the mark, for the report, which was issued only a few weeks ago, is for the calendar year 1885. That report estimates the production of gold and silver for the year at \$74,800,000, or nearly \$9,000,000 less than the amount mentioned by the *Bullionist*.

It is then stated that the official document has been forestalled on the other side of the water by the annual estimate of Mr. Delmar. "The latter," the *Bullionist* says, with more pertinence than it evidently suspects, "as usual does not agree with the official data."

The feature of most of Mr. Delmar's statistical documents is that they do disagree with all trustworthy authorities, and even with irrefutable facts.

"According to Mr. Delmar," the *Bullionist* says, "the production of the past year (1885-6) was fully £5,000,000 worth of gold and less than £6,500,000 of silver (total £11,380,000) against the Mint estimate of nearly £17,000,000."

Such a mixing up of facts, or rather fiction, is worthy of no one but Mr. Delmar himself, who is entitled to the *soubrequet* of the Statistical Buttercup. If Mr. Delmar did not pen the statement himself, he must have so impressed his individuality upon the one who did that he can justly claim the production as his own.

It is absurd enough to claim on behalf of Mr. Delmar any estimate for the fiscal year (1885-6) as having any authority more than would pertain to a mere guess, but it is nothing less than ridiculous to set up the report of the Director of the Mint for the calendar year 1885 to compare it with a conjectural estimate by Mr. Delmar (or anyone else) of the production of the fiscal year 1885-6.

Mr. Delmar's estimate, stated in American currency, is given at \$25,100,000 for gold and \$31,800,000 silver (a total of \$56,900) as against the estimate of \$83,000,000 credited to the Mint report.

"Mr. Delmar," says the *Bullionist*, "kindly furnishes a key to part of the discrepancy." This is the key:

"He explains that the United States Mint gives to silver an arbitrary value of 1.29 dols., or 58.377d. (say 59d.) per ounce. For official reasons, it has never lowered its standard below that point, and the more the silver has fallen under it the greater has been the gap between official and market value. At the present time the London market value of silver is about one-fourth less than the American Mint value. The Mint valuation of the past year is consequently subject to this large deduction, and the same qualification applies to all the annual returns from the same source since the market price fell below the Mint price of 5 per cent. per ounce. To a large extent, therefore, the glut of silver has been a matter of statistics—a mere figment of an official brain. It is at least a dozen years since the American Mint rate corresponded with the

London market, and in each of these twelve years the silver production of the States has been over-valued from 5 to 25 per cent. Were the aggregates corrected throughout their totals would be many million dollars less than it now appears, and the alarming glut of silver would shrink proportionately."

If Mr. Delmar saw the report of the Director of the Mint which he attempts to criticise he must have been aware that it not only contained an estimate of the silver production based upon the arbitrary rate of \$1.2929 per ounce fine, the coining rate, but it also estimated the commercial value upon the basis of the average price of silver for the year. We quote from the report as follows:

"The rate used at the Mints for statistical purposes and in the reports of this Bureau is the coining value of silver in silver dollars, \$1.16 4-11 per standard ounce, or \$1.2929 per ounce fine, while the commercial value of silver at the present writing is about \$1.01 per ounce fine. Here is a difference of 28 cents per ounce, equal to more than one-fourth of the commercial value of an ounce, for which allowance must be made in dealing with the exportation and importation of silver bullion reported by the custom houses, and with the production as reported from the mines, reduction works, refineries, and by shipping agents."

The Director estimates the production of silver in 1885, reckoned at its coining value, at \$51,264,574. "The commercial value," he says, "of the silver product of the country was \$42,504,447, reckoning the commercial price of silver for the calendar year at \$1.065 per ounce fine, which was the average price at current exchange." The Director estimates the gold production at \$31,800,000, making the total commercial value of gold and silver produced in 1885 about \$74,300,000.

A comparison of the Mint estimate and the one credited to Mr. Delmar will show how widely apart the two estimates are :

	Mint Estimate.	Delmar's Estimate.
Gold	\$31,800,000	\$25,100,000
Silver	42,504,000	31,800,000
Total	\$74,304,000	\$56,900,000

The similarity of the Mint estimate for gold with Mr. Delmar's estimate for silver may be only a coincidence, but it looks as if the latter had mixed those figures up. This conclusion becomes irresistible after reading the following extract from the London *Bullionist* which follows immediately after the extract quoted above :

"The commercial world is probably on the eve of a discovery, that the glut of silver—always much exaggerated—has spent its force. The tide has turned, and for several years past production has been either declining or standing still. Mr. Delmar gives a comparative statement of totals from the year 1869 onward, according to which this high-water mark of the American silver mines was touched in 1882. Their production in that year was valued at £9,200,000, and since then it has hovered round £8,500,000 a year—sometimes £100,000 over and sometimes as much under. The Mint returns differ all through from Mr. Delmar's, and, according to them, the yield of the American silver mines has grown steadily till last year, when it exceeded £10,000,000.

If Mr. Delmar is an authority for the statement that the silver production of America since 1882 "has hovered round £8,500,000 (\$42,500,000) a year," what becomes of his estimate of \$1,800,000 for the year 1885-6 ? The Mint estimate for 1885 is almost exactly \$42,500,000, and we do not see how it could well hover much closer to what Mr. Delmar gives as the true figures. His own estimate does not come within \$10,500,000 of them, and, although he charges the Director of the Mint with stating the silver production at over \$50,000,000, even that amount hovers nearer the \$42,500,000 figure than Mr. Delmar's \$31,800,000 estimate.

FRANCIS G. BABCOCK.

In this issue of the JOURNAL we present a finely executed portrait of Mr. Francis Granger Babcock, one of the representative bankers of the country. Mr. Babcock was born in Chenango County, State of New York, in 1831, and is a descendant of an old New England family, his grandfather, Luke Babcock, having been a resident of Connecticut, but leaving it to become one of the first settlers of Chenango County.

The subject of this sketch was educated at Bacon Academy, at Colchester, Conn., where he enjoyed educational advantages of a high order. Mr. Babcock to this day remembers with grateful appreciation the training which he received in that place of learning, and speaks in the highest terms of praise about his old tutor in mathematics, James S. Eaton, a graduate of Andover Seminary, Mass., who was acknowledged to be one of the best mathematicians in the country.

After leaving school, Mr. Babcock began his business career in a country store in Connecticut, and no better school in which to lay a firm foundation for a commercial education could have been selected for him. He very soon gave evidence of his natural aptitude for business pursuits, and his shrewd insight into human nature may be traced to the information picked up by him in that country store in Connecticut.

Subsequently his business talents and enterprise attracted the attention of his uncles, the Messrs. Ushers, who at that time carried on the most extensive trade with the West Indies of any house in the State of Rhode Island. They made Mr. Babcock their chief clerk, and in this wider field he further demonstrated the possession of abilities which have since placed him in the foremost rank of banking men.

When the Erie Railroad was completed in 1852, and began running from Piermont to Dunkirk, Mr. Babcock at once recognized the important influence which the railroad would exert upon business enterprises along its line. He located in Allegany County, New York, first taking a position as a clerk in a country store.

About six years later he associated himself with his father-in-law, Mr. Charles S. Clark, in the business of manufacturing and dealing in pine lumber and the sale of general merchandise. This business was conducted for nearly twenty-five years, until the death of Mr. Clark in the latter part of 1880. During this time Mr. Babcock prospered in everything he undertook. Quick to perceive the character of any investment brought to his attention, he rarely failed to profit by any legitimate opportunity which offered itself. He early saw that the development of the country would exceed anything that people in his younger days dreamed of.

He became extensively interested in the ownership of pine lands in the States of Michigan and Pennsylvania. All his investments were made after personal examination and location of the property purchased, and with a clear perception of its future value. Some of these investments turned out far more profitable than anticipated. Large tracts of land purchased in Pennsylvania with refer-

ence to their value as timber land proved to be petroleum-producing, and Mr. Babcock came to be widely known as one of the largest oil land owners and sellers in McKean County, Pennsylvania.

In the year 1871, Mr. Babcock, who had then become one of the best known business men in Western New York, removed his residence from Allegany County to Hornellsville, in the adjoining County of Steuben. At that time, as now, Hornellsville was one of the most important points on the line of the present New York, Lake Erie & Western Railroad, of which road Mr. Babcock was always a firm and enthusiastic friend. In Hornellsville no man is better known and more highly esteemed. He is public spirited, and always ready to aid in the advancement of the interests of the town where he has made his home.

In 1874 he built the Babcock building, one of the principal structures in Hornellsville. In 1875 he established the Bank of Hornellsville, which is now a very prosperous institution. It was organized under the State law, and two-thirds of its stock is owned by Mr. Babcock, who has been President since its organization. The remainder of the stock is owned by his brother, Mr. D. D. Babcock, who is Vice-President of the bank, and by members of the respective families of both, so that the institution may aptly be termed a family bank.

Enormous as are the enterprises in which Mr. Babcock is interested, he gives them all his personal attention, and all show the ability and genius of the man who controls and guides them. He is recognized as one of the ablest business men in the State, and his opinion on any business question is always received with confidence and as authority.

In addition to the enterprises already mentioned, Mr. Babcock is interested in the importation and breeding of Holland and Scotch cattle, to which he has given considerable attention for several years. He is the owner of the celebrated Babcock Stock Farms, located at Hornellsville, which are unrivalled in this State. Here some of the best horses in the country are being bred. In connection with his brother, Mr. D. D. Babcock, he also owns a fine farm in Kansas, comprising some 12,000 acres, upon which are kept from 2,500 to 3,000 head of cattle and horses.

Notwithstanding the extent and diversity of Mr. Babcock's business enterprises, he has found time to take an active part in politics. He was a delegate to the National Convention in 1880, and a member of the Executive Committee of the Democratic State Committee in 1882 and 1883, representing the Congressional District then composed of Chemung, Steuben and Allegany Counties.

Mr. Babcock is, in the truest sense of the term, a self-made man. He was not born in poverty, but, from the time he was ten years of age, he has had to make his way and to depend upon his own resources for a living. With the exception of fifty dollars, his only inheritance has been the industry, enterprise and business ability which have won for him wealth and prominence.

A GOOD APPOINTMENT.—The JOURNAL's readers will note with pleasure that Mr. A. M. Scriba, the late faithful and popular National Bank Examiner for the city of New York, has been appointed Cashier of the National Shoe & Leather Bank, of New York city, which, we believe, with its capital and surplus of \$750,000, has made choice of a most excellent officer, and one whose affability of manner, sterling integrity and ripe experience must prove of great advantage to this well-known and solid institution.

**Notes and Comments on
BANKING PRACTICE.**

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by occasional contributions from others who are interested in the subject.

Work and Wages.—How many clerks ought a bank to carry? What salaries should be paid the various officers? These are questions about which there are usually two opinions, and these opinions are very different. A few general remarks, however, may not be out of place. It is cheaper, in the end, for a bank to employ too many clerks than not enough, and to pay wages somewhat above rather than below what their services are really worth. First, as to the work. When men are hard pressed and worked beyond their strength they inevitably curtail their tasks and scant their work as much as possible. Sometimes this is done through design, sometimes unintentionally and unconsciously, and sometimes because it cannot be helped. The work of the bank falls behind; pass-books are not promptly balanced; accounts-current are badly made out, and those received from correspondents are not promptly reconciled; little errors, and sometimes big ones, are left unattended to; questions that require care and attention are hastily decided; customers receive brusque answers, and go away displeased and dissatisfied; and, in short, the whole business of the institution suffers, and that in a manner which is not readily perceived by the managers until the evil has gone too far to be easily corrected. With a sufficient force, on the contrary, matters run smoothly and pleasantly. Every one who has dealings with the institution goes away satisfied, and thus the bank acquires a reputation which in the long run is more profitable than a parsimonious policy in maintaining the working force at the lowest possible number. As to wages. Persons employed in a bank are quite as keen in looking after their own interests as other men, and, as a general observation, a bank is apt to get what it pays for. Low salaries bring cheap men and high salaries bring the pick of the market. In the term salaries are included permanency of position, prospective promotion, and all those conditions that a man looks at when accepting a place or considering a change. For example, youths, when entering a bank, are commonly guided by the advice of their friends, and the older heads are apt to take a very impartial survey of the field. Hence banks that have an unfavorable reputation do not get the bright and promising boys, but are constrained to put up with those worthies who cannot get any one else to employ them. Nothing so hampers a manager as to have a lot of incompetents under him. Few things contribute more to the welfare of a bank than an efficient, well-paid force of officers.

An Offering Book.—Every bank has its own way of dealing with paper offered for discount. Some keep a record of such paper while others do not. Here is a form of an offering book which seems to answer every purpose :

The transactions shown illustrate, also, the way in which the various kinds of paper are tendered to the bank. For example, the first two sets of notes, those of Brown and Ashton, are regular commercial paper, and were probably dropped in the discount box without any special comment or explanation. This is the usual course with regular depositors. Clark Bros., on the contrary, are note brokers. Brokers commonly hand their paper directly to the Discount Clerk or to the Cashier. Very often the notes themselves are not sent in at all, but simply a memorandum of name, time and amount. This is possibly what was done in this case. The book shows the action of the Board. The next note, that of Merchant for \$10,000, might be called "gilt-edged and copper-fastened." It commands the very lowest rate that the bank's funds and the general condition of the money market will warrant. It sometimes happens that a capitalist will require a temporary supply of ready money. Rather than disturb existing investments that have been made with care and judgment he prefers to borrow in the open market, pledging bonds or stocks as collateral. Sometimes very large loans are placed in this way, especially in New York. The last note, that of H. Peirsone, is one of those curiosities that turn up every now and then at Board meetings and usually meet the same fate. No one knows Mr. Peirsone or has ever heard of him. He came in, dropped his note in the discount box, and went away without attracting any one's attention. Under such circumstances, of course, it has to be refused. But the Cashier will look out for Mr. Peirsone when he comes after his note, and may possibly grant the discount on his own authority, for Peirsone may be one of those close saving men who, in spite of every disadvantage, somehow manage to accumulate considerable money. In such a case a valuable account may be secured for the bank. The column, giving the names of the Directors present, is very desirable as showing upon whose responsibility any special note was accepted.

Furnishing a Bank.—Much more attention is paid at the present time than formerly to the furniture and general equipment of a bank. True, we have somewhat outgrown the "barbaric opulence" that displayed itself so profusely about ten years ago, and which was partly an outcome of rapid fortunes and vigorous reaction from the severe, not to say dingy, simplicity of *ante-bellum* days. The best furnished of the new banks aim rather to secure comfort and convenience than to make any special impression upon the casual visitor; indeed, it is astonishing how many little conveniences can be placed in a bank without taking up room or costing much money. Among these conveniences may be enumerated small, separate closets, where the clerks may hang their coats and hats, wire "cages" for the accommodation of customers, suitable shelving for the storage of stationery and blank books and such filled-up account books as are of too recent date to be consigned to the attic, and so on through quite a little list. The portion of the bank used by customers should be nicely and comfortably furnished with chairs, desks, and one or two small tables, to be used by those who prefer to sit while writing a check or filling up a deposit ticket. Resting against the partition that separates the clerks from the customers, and at the height of a man's waist, there should be (immediately in front of the Teller's window) a wide ledge, which, for convenience, might be rounded off to a width of two or three inches, affording customers a convenient place to count their money after receiving it from the

Paying-Teller or to indorse a check without having to go half-way across the room to find a desk. As to the arrangement of the clerks' desks, every bank has its own peculiar plan, governed usually by the way the bank happens to be built. It is a point, however, to have every clerk who is brought by his duties into contact with the public so placed that he can readily talk to a customer without leaving his desk. It is also a convenience to have every desk furnished with a shelf underneath to hold account books that have to be referred to occasionally but are not in daily use. There is one point, however, to which attention should be specially called because it is so generally neglected—keeping the desks provided for customers in proper order. The inkstands should be nicely cleaned and filled and fresh blotters and *new pens* placed on these desks every day. Nothing is more annoying to a business man, accustomed to having things neat and clean around him, than to pick up one of those cheap, common holders that seem to stick to one's fingers, and to have to *mark* his name with an old steel pen thick with ink and dirt. A vault or closet used for storing books should be fitted up with metal shelving as being more fire-proof than wooden shelves, which become dry as tinder and are ready to burn from the least spark.

Letters of Administration.—Many banks have a custom of requiring administrators to leave a copy of their letters of administration with the bank before transferring the account of a deceased person to the administrator. This is an excellent rule for the bank, but it is doubtful if it could be enforced if strenuously objected to. The relation of a bank to its depositors is simply that of debtor and creditor, and surely there is no rule of law requiring an administrator to leave a copy of his letters with every debtor from whom he endeavors to collect what may be due the estate. An administrator may be required to exhibit his letters, but, if the bank wishes to retain a copy of them, should not the bank pay the fee charged by the Court clerk for the same?

Assistant-Tellers.—A line of customers at the Teller's desk, each patiently waiting his turn, is no uncommon sight in a city bank toward the hour of closing. In some banks it seems to be regarded as a regular occurrence, and no one stops to consider whether it is objectionable or not. But it is an objectionable practice in various ways. In the first place, it is unbusiness-like and unreasonable to keep customers waiting any longer than necessary. In the second place, business men, appreciating the value of time, fall more and more into the habit of sending junior clerks and boys to the bank—an undesirable habit, because it is always better for a bank to deal with its patrons direct and not through subordinates. A Cashier, seeing heads of firms, business managers, etc., every day, can pick up considerable information that may be very useful at critical moments. Again, a Teller who is pressed by a long line of customers cannot stop to give personal and courteous attention to inquiries, messages and complaints, nor has he the time to enter into explanations with new and inexperienced persons. It may be said that these and similar objections are too trivial to require serious attention. But, in the eyes of a careful and conscientious manager, nothing that affects the interests of the bank is too trivial to be considered. The remedy is to be found in assigning one or more clerks to assist at the Teller's counter whenever a press of business occurs. This should not be put on extra, but as a part of their regular duties in the

general distribution of work. It is a good plan to take the assisting clerks from those next in the line of promotion, so that they may become gradually familiar with the Teller's duties.

About Discounting.—It is no small task to control and keep well in hand the discount line of a large and active bank. This duty properly falls to the lot of the Cashier. He is expected to keep all the details in his head and to be able to inform the Board exactly how the bank's funds stand. There is a point about discounting worthy of consideration. Small notes in the long run pay better than large ones and regular paper better than single-name notes. By regular paper is meant paper that a wholesale dealer gets from jobbers and retailers and brings to the bank for discount. As a matter of general policy, every effort should be made to get the more desirable paper in the bank by giving it preference when money is scarce and shading rates when money is plenty. Some banks seem to have a special fancy for big notes, and appear more willing to discount a single-name note for ten thousand dollars than to go to the trouble of examining into a batch of little notes, though year in and year out the latter are more likely to be paid than the former, and so small notes offered by regular customers, and undoubtedly good, are done at the regular rate, while big notes get the benefit of any special rates that the condition of the market will warrant.

A rough classification of loans in the order of their preference is: loans secured by regular collateral, paper given for goods actually sold and delivered and offered by the seller for discount, loans secured by speculative collateral, and, lastly, single-name paper. Rates should be graded, accordingly, so far as it can be done.

Executive Ability.—A man may be a very good bank clerk and yet make a very poor Cashier. For the latter office, to be properly filled, there is needed, not only knowledge and experience, but also a large degree of that rare mental quality known as executive ability. It is sometimes for lack of this qualification that clerks, who might otherwise have succeeded to a Cashier's vacancy, are passed over and an outsider of less experience called in. The ability to manage, coupled with force of character, are the chief requisites of an efficient Cashier. It is for this reason that the training a bank clerk gets is not in every respect calculated to fit him to be the responsible head of the institution. Men who are not called upon until near middle life to assume heavy responsibilities are not always equal to the occasion. Hence clerks should systematically seek to counteract the narrowing influence of routine work, and to avoid getting into a "rut," as it were. Careful reading of standard works on subjects connected with banking and finance will not only be found instructive but tend to keep the mind fresh and vigorous. Indeed, it takes a pretty vigorous brain to follow the reasoning of writers like Mill and Montgredien. Not only must books be read, but men must be studied also. At the Cashier's desk half the battle is to know how to deal with the different class of people that come to transact business.

The bank often loses or gains according to the intelligence displayed by the Cashier in his treatment of customers. To be sure, this special kind of ability is rather a natural gift than an acquired qualification, yet in this, as in every case, much may be done by perseverance, practice and, above all, self-control.

BANKING LAW.

* Legal Decisions Affecting Bankers.

DEPOSIT OF NOTE FOR COLLECTION WITHOUT RESTRICTING THE INDORSEMENT—FAILURE OF BANK—CAN CORRESPONDENT TO WHOM IT HAS BEEN TRANSMITTED HOLD PROCEEDS AS AGAINST TRUE OWNER FOR A BALANCE DUE BY FAILED BANK?

On January 3, 1884, F, of Oil City, made and delivered to the plaintiff, H, of Pittsburgh, his promissory note for \$424.12, payable five months after date to the order of H at the Oil City Savings Bank, of Oil City. In February, 1884, plaintiff placed the note in the Penn Bank, of Pittsburgh, for collection, indorsing his name thereon in blank. About May 20th the Penn Bank forwarded the note to the defendants, R. L. & Co., bankers at Oil City, and indorsed the note: "Pay S. H. Lamberton, Cashier, or order, for account of the Penn Bank, Pittsburgh. G. L. Reiber, Cashier." The defendants were the regular correspondents of the Penn Bank, and had been for several years. They kept mutual accounts. They collected for the Penn Bank and placed the proceeds of collections to its credit, and the Penn Bank did the same for them. On May 26th, at noon, the Penn Bank failed, and defendants heard of it at once by telegraph. Mr. Lamberton, about half-past 3 o'clock of the same day, called on F for payment. He could not pay, but gave two notes at thirty and sixty days, which were paid when due. About May 31st, the old and new notes being in the defendants' possession, plaintiff called on them and notified them that the note belonged to him and demanded it. He was informed that it was paid and credited to the Penn Bank. When defendants received the note there was a balance of about \$7,000 due them from the Penn Bank. It did not appear that there was any money advanced by the defendants to the Penn Bank on the credit of this note or that the balance was in any way increased after plaintiff's note came into their hands. Plaintiff sued defendants, who claimed that, in the absence of notice of plaintiff's title, the defendants had a right to treat its correspondent as owner of the note.

Judgment was rendered for defendants, and plaintiff appealed. •

Held, Although the indorsement by the plaintiff was in blank, it is undisputed that he was the real owner of the note; that the Penn Bank received it for collection only, but remitted it to defendants as if it were the paper of the bank. It is also established that defendants had no notice whatever that the apparent relation of the Penn Bank to the paper was not its real relation to it. They had an undoubted right to treat the Penn Bank as the actual owner of the note. If, therefore, they had purchased it for a valuable consideration, or made advances upon it, or given new credit upon the faith of it, they would have been protected as *bona fide* holders or owners of the note. But it is not alleged that defendants bought the note or advanced or gave credit upon it. It is contended that there had been mutual dealings between the Penn Bank and R. L. & Co.; that they had an account current between them in which they credited each other with the proceeds of all paper remitted for collection; that their accounts were from time to time settled on these principles; that upon the credit of these remittances, in their usual course of dealing, balances were suffered to remain in the Penn Bank to be met by the proceeds of these remit-

*All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

tances, and that the proceeds of the H note were in good faith credited to the Penn Bank under this course of dealings. The Court below instructed the jury that, if this was so, their verdict should be for the defendants. Upon an examination of the whole case, we fail to find any evidence showing or tending to show that any balances were, in point of fact, suffered to remain to be met by these remittances, and which, but for this course of dealings, would have been drawn. It does not appear for what particular purpose these balances were suffered to remain. We might as readily suppose they were kept for convenience or to facilitate exchanges, or for both or all these purposes, as for the purpose stated. There is not the slightest evidence that the balance in the Penn Bank to the credit of the defendants had been suffered to remain upon the faith of and to be met by remittances for collection from the Penn Bank. We are of opinion, moreover, that, if there had been evidence to this effect, in order to avail the defendants in this case, it must be shown that the balances were suffered to remain upon the faith of remittances received, or, under some circumstances, perhaps, in the process of transmission, and that R. L. & Co., relying upon such remittances, actually did something or forbore to do something by which their condition was worse than it would otherwise have been. To this extent we are willing to follow the rule laid down in *Bank of Metropolis vs. Bank of England*, 1 How., 284; S. C., 6 How., 232. A purchaser or holder of a legally-executed negotiable instrument can hold it against all claims and defenses where he has acquired it not only in good faith but upon a valuable consideration. This, in Pennsylvania, is a rule of general application, equally binding upon banking companies in their dealings with each other as upon individuals. We cannot consent to the doctrine that a mere usage and course of dealings between banks, in transmitting bills and notes for collection, by which they mutually credit the avails in account to over-balances due, can, without more, deprive a third person, the real owner of the notes or bills, of his rights. The case is distinctly ruled by *First National Bank of Clarion vs. Gregg*, 79 Pa. St., 334. The language there employed by Mr. Justice Williams, when applied to the case under consideration, *mutatis mutandis*, expresses with the greatest clearness and accuracy, the proper determination of this case. The Penn Bank did not become the owner of the note by the plaintiff's indorsement and delivery of it to it for collection, and had no right to pledge it or direct its proceeds to be placed to its credit in payment of its indebtedness to R. L. & Co. It is true that the Penn Bank was the apparent owner of the note, and, in the absence of notice of the plaintiff's title, R. L. & Co. had the right to treat that bank as the real owner. If R. L. & Co. had made advances or given credits to the Penn Bank on the faith of the note they would undoubtedly be entitled to retain the amount or the proceeds; but just at this point the defense wholly failed. The testimony of the Cashier does not show that R. L. & Co. made advances or gave any new credits on the faith of the note, nor does it show that they incurred any liability or did anything by which their condition is worse than it would have been if they had not received the note for collection and credit, or that they will suffer any loss or damage if the credit is not allowed. If so, they clearly have no equity which entitles them to withhold the proceeds from the owner of the note.

Judgment reversed.

Hackett vs. Reynolds, Supreme Court of Pennsylvania, November 1, 1886.

USURY BY PRIVATE BANKERS—DOES TAKING OF A PERCENTAGE IN ADDITION TO INTEREST AS COMPENSATION FOR LETTER-WRITING AND COLLECTING CONSTITUTE?—THE NEW YORK STATUTE.

Plaintiffs, the surviving members of the firm of E. J. & Co., who were engaged as partners in the banking business, but not organized or doing business under any statute of the State, brought suit to foreclose a mortgage given as security for certain notes drawn by one of the defendants, payable in New York city, and which were discounted by the plaintiffs at their banking house in Rochester. The defense was usury. The facts found were that, at the time of making the discounts, respectively, the plaintiffs intended to take, in addition to interest at the rate of 6 per cent. per annum, one-fourth of 1 per cent. upon

the face of said notes, respectively, calling the same exchange. Also, that said notes were made payable in New York at the desire and request of the plaintiffs; that there was then no rate of exchange between Rochester and New York in the sense of a premium for the greater value of funds in the one place over the value of funds in the other; that the maker had no bank account in New York, and the plaintiffs knew that fact; and that, by the one-fourth of 1 per cent., exchange was intended and meant a charge for letter-writing and collecting the notes in the city of New York, and the profits which would arise to the plaintiffs for making such collections by reason of the facilities which the plaintiffs, as bankers, had for making such collections; and that said charge was a reasonable one.

Held, Upon these facts the question of usury is to be determined. We will first consider the question, independently of the statutes, which provide that a reasonable charge made by any of the banking associations or bankers therein specified for collecting a note discounted by such an association or banker payable at another place than the place of such discount, in addition to the interest, shall not be considered as taking a usurious rate of interest. (Laws 1870, Ch. 163; amended, Laws 1880, Ch. 567; repealed, Laws 1882, Ch. 402, par's. 29, 37; Laws 1882, Ch. 409, Sec. 68.) The amount of the credits in the bank book show that the plaintiffs, on the discount of each note, retained the stipulated rate of exchange, in addition to interest at 6 per cent. for the time each note had to run. It has long been held in this State that it is not usurious or unlawful to take the interest out in advance without regard to the rules of rebate or discount. (2 Kern., 223.) The question of usury in this case depends, therefore, on the effect of taking out the so-called exchange in addition to the lawful interest in advance. It has also been held in this State that there is no usury in the discount of a note by a banker in the interior made payable in the city of New York, not for the accommodation of the maker nor upon the expectation that he will have any funds there at the time of its maturity otherwise than by the purchase of them at a premium, but with the purpose in both parties to enable the lender to realize a profit from a difference of exchange existing in fact and expected to continue. (19 N. Y., 184.) That decision proceeded upon the ground that there was no contract to pay more than the legal rate of interest and no more than the legal rate taken, and that the hope or expectation of realizing a profit in the difference of exchange was uncertain and speculative. That there was nothing in the law of the contract which secured the contemplated result, because the rule of damages, in an action upon the note, allowed no indemnity for the loss of exchange; and that the law recognizes no difference of value in money at different localities within this State. If, therefore, the plaintiffs in this case had done nothing more than to stipulate for and receive the interest in advance, and to receive the defendant's note made payable in New York, at their request, the transaction within the decisions would have been free from usury. But they went further by stipulating for and taking the so-called exchange in addition to the lawful interest at the time of the discount. The like feature existed in the case of *Price vs Lyons Bank* (33 N. Y., 55), and it was held to distinguish that case from that in 19 N. Y., *supra*, and to constitute usury. To the same effect is the case of the *Seneca County Bank vs. Schermerhorn* (1 Den., 132), where the bank, on the renewal of a debt, took, in addition to lawful interest, drafts on New York and Albany to the amount of the debt, which were at the time at three-fourths of 1 per cent. premium, under an arrangement by which the bank secured to itself the premium. The transaction was held usurious. We are not able to distinguish this case in principle from the two last cited. The finding that the charge was a reasonable one is immaterial; it was reasonable in amount, undoubtedly, if the debtor had needed the service, but he did not. He had no occasion to make his note payable in New York. It was made payable there at the request of the lenders, and for the sole purpose, so far as the case discloses, of enabling them to realize a profit in addition to the lawful interest. The finding is that the charge was not simply a reasonable remuneration for letter-writing and collecting, but it also included a profit which would arise to the plaintiffs from making the collection by reason of the facilities which they, as bankers, had for making such collections.

We are of opinion that, but for the statutes already referred to, the transaction would be usurious for the reasons above stated.

Further *Held*, The only question in respect to those statutes is whether the plaintiffs, being private bankers, are within their provisions? After an exhaustive review of the provisions of the statutes, the Court states: On the whole, we are of opinion that the plaintiffs are within the statute referred to, and should have judgment in their favor.

Perkins vs. Smith, N.Y. Supreme Court, General Term, Fifth Department, June, 1886.

ACTION AGAINST NATIONAL BANK—JURISDICTION OF CIRCUIT COURT.

Action was brought in a State Court against a National bank, and defendant sought to remove the suit to the Circuit Court.

Held, Section 4 of the Act of Congress of July 12, 1882, declares that the jurisdiction for suits thereafter brought by or against any National banking association, except suits between them and the United States or its officers and agents, "shall be the same as and not other than the jurisdiction for suits by or against banks not organized under any law of the United States which do or might do a banking business where such National banking associations may be doing business when such suits may be begun," and repeals all laws and parts of laws of the United States inconsistent with that enactment. This language is so explicit as to seem to leave no room for reasonable doubt that Congress intended to prohibit National banks from invoking any jurisdiction in suits in which they are either plaintiff or defendant not open to banks not organized under the laws of the United States. The defendant has sought to remove this suit from the State Court upon the sole ground that it is a corporation organized under the laws of the United States, and that, therefore, the suit is one arising under the laws of the United States. If its position is correct, the section referred to is practically nugatory legislation by Congress, because, in all cases, a National bank can resort to the jurisdiction of the Circuit Court by removal, where it is plaintiff, by bringing its action in the State Court and then removing it to the Circuit Court, and, where it is defendant, by removal merely.

Motion to remand granted.

Cooper vs. Leather Manufacturer's National Bank, United States Circuit Court, Southern District of New York, November, 1886.

PROMISSORY NOTES—NEGOTIABILITY.

A note in form negotiable is not rendered non-negotiable by the addition, at its close, of this stipulation: "We do hereby relinquish and waive the benefit of all laws exempting real and personal property from levy and sale." In the absence of any statute of the State, prescribing the effect of such a stipulation, it is merely a question of general commercial law in which Federal Courts follow their own opinions rather than necessarily the decisions of the State Courts. That stipulation is one which does not affect the time or amount of payment, or place of payment, or the party by whom or to whom payment is to be made. In short, it in no manner affects any of the essential elements of a negotiable promissory note.

A note otherwise negotiable is rendered non-negotiable by the stipulation in it to pay "with interest and exchange." This is a stipulation which affects the amount to be paid at the maturity of the paper, and in that respect it differs from those stipulations for the payment of attorneys' fees in case of collection. That is a distinction which should be borne in mind; for, if the amount to be paid at the maturity of the note is certain, then (although the Supreme Court of this State has held otherwise) the incorporation of a stipulation for the payment of a greater, though uncertain and contingent, amount in the future does not affect the negotiability of the paper. But this stipulation renders uncertain the amount to be paid at the maturity of the paper. It is interest and exchange, and what that exchange will be no one can tell. There is no law determining the amount of exchange. It all rests upon the modesty of the banks. Even if the note was made in the place it was made payable that

would not affect the question, because, wherever the party may be at the time the note becomes due, he is bound to add to the amount of the note and interest, the exchange to the place where the note is payable. Supposing he had removed to Texas, and an action was brought on this note there, the amount to be recovered would not be simply the principal and interest, but also the exchange from that place to Montgomery City, the place where the note was payable. So that, in any aspect of the question, here is a stipulation incorporated into the body of the note making uncertain the amount to be paid at the time of maturity, and that conflicts with a well-understood and essential element of negotiable promissory paper, viz., that the amount to be paid at maturity shall be a sum certain.

Hughitt vs. Johnson, United States Circuit Court, Eastern District of Missouri, September 30, 1886.

CHECK—FORM OF—MAKING IN SETS SIMILAR TO FOREIGN BILLS OF EXCHANGE.

The question for determination was whether an instrument in the following form was a check :

<p>\$2,000.</p> <p>Pay this, our first check (second unpaid), to the order of William Haerle, two thousand dollars.</p> <p>To Merchants National Bank, Chicago, Illinois.</p> <p>No. 190,283.</p>	<p>Original.</p> <p>STATE OF INDIANA. INDIANAPOLIS, July 15, 1884.</p> <p>BANKING HOUSE OF A. & J. C. S. HARRISON.</p> <p>A. & J. C. S. HARRISON.</p>
---	---

Indorsed across the face was : "\$2,000. WILLIAM HAERLE."

Held, It is not contended, and it could not be on authority, that the fact that the above instrument is drawn by parties in Indiana on a bank in this State can be held to determine that it is not a check. Parsons, in his work on "Notes and Bills" (Vol 2, pages 58, 59), says : "They (*i. e.*, checks) are much used here in drawing from one State upon houses of deposit in another ;" and *Union National Bank vs. Oceana County Bank*, 80 Ill., 212, and *National Bank of America vs. Indiana Banking Co.* 114 Ill., 483, disregard the fact that the drawer resides in one State and the drawee in another upon the validity or character of instruments as checks. The only reason urged why this instrument is not a check is the fact that it contains the words "Original" and "(second unpaid)". These, it is contended, make its payment conditional. We cannot concur in this view. The practice of making more than one copy of an instrument ordering or requesting the payment of money, we concede, is generally confined to foreign bills of exchange : but there is nothing, in our opinion, in the purpose or effect of that practice which should render it inapplicable under all circumstances to checks. The purpose is to guard against loss or question in case of miscarriage, the chances of the bill reaching in due season the party to whom it is transmitted being increased by the number of copies. (1 Pars. N. & B., 58, 59.) But this does not render the instrument a conditional one in any sense. The whole of the set constitutes, in the law, but one bill, and, therefore, payment or canceling of either of the sets is a discharge. (1 Pars. N. & B., 59.) The essential characteristic of a check is that it shall be instantly payable on demand (2 Daniel on Neg. Instr., 8d Edition, Sec. 1572 ; 2 Pars. N. & B., 59, 60), and that demand is effected, unconditionally, the moment either copy is presented.

Merchants National Bank of Chicago vs. Ritzinger, Supreme Court of Illinois, November 13, 1886.

PURCHASE OF BONDS BY CASHIER AS AGENT FOR DEPOSITOR—SPECIAL DEPOSIT—CONVERSION—AGENCY.

On the 17th of March, 1882, B employed H, defendant's Cashier, to purchase for him four Roseville Township Railroad Aid bonds of \$1,000 each. H purchased the bonds and paid for them from the proceeds of a check drawn by B on the defendant. On the same day B made a special deposit of these bonds with the defendant. H, having embezzled funds from the defendant while

acting as Cashier, subsequently, and while still acting as defendant's Cashier, without the knowledge or consent of B, in order to conceal in part the fact or extent of his embezzlement, took these bonds from their place of special deposit in the bank and put them with the assets, including other like bonds of the defendant, and thereafter reported them to the defendant as so much of its assets. The defendant afterwards became insolvent, and its assets and also these bonds were taken charge of by a Bank Examiner on the 8th of April, 1884. Since that time defendant has been demanded by B to deliver the bonds to him, and has refused. This action is brought by the administrator of B against defendant for negligence and for the conversion of the bonds. Judgment was rendered against defendant, who (as plaintiff in error) appeals.

Held, Although, in the mere act of purchasing the bonds, H was the agent of B, when the purchase was completed that agency ended. As Cashier in receiving the bonds on special deposit he was the agent of the bank, and it was as Cashier and agent of the bank that to hide, in part, his embezzlement from the bank, he took the bonds from the special deposit and placed them among, and reported them as, assets of the bank. His knowledge was its knowledge, and it could not in this way acquire a legal title to the bonds without the knowledge or consent of B.

Judgment affirmed.

First National Bank of Monmouth vs. Dunbar, Adm'r, Supreme Court of Illinois November 12, 1886.

INDORSEMENT OF NOTE AFTER THAT OF PAYEE—INDORSER OR GUARANTOR
—LIABILITY OF GUARANTOR.

C indorsed the note in suit below the name of the payee before maturity in order to give it credit, and the payee then transferred it for value to R. The note was dishonored, but C never had notice of any demand of payment on the maker and of its dishonor. In a suit by R against C,

Held, The question arises whether C is to be regarded as an indorser of negotiable paper, with the liabilities and rights incident to such an engagement; or a guarantor whose guaranty was of such a nature as to render it unnecessary to prove either demand or notice in order to make out a *prima facie* case for recovery. We are of opinion that C was such a guarantor. It was held in 13 Ohio, 228, and afterwards approved in 17 Ohio, 36, that the mere indorsement upon a note of a stranger's name in blank is *prima facie* evidence of guaranty, there being no proof that his indorsement was made at the time of the making of the note. This presumption, it is true, may be overcome by parol evidence that a different agreement was intended. (28 Ohio St., 52; 18 Ohio, 441; 9 Ohio, 139; and cases *supra*.) But the evidence as disclosed by the record shows that C's name was not upon the note at the time of its execution or before it was drawn, and so he could not be charged as an original promisor. Not then being in the chain of title—having no ownership in the note—he could not, in the capacity of indorser, vest title thereto in an indorsee. M, the payee, was at the time in possession of, and the sole owner of, the note, and was the only person competent as an indorser to enter into the contract implied in the act of indorsement, namely, that he had a good title to the instrument. As an indorser he did not transfer the paper to C, who might in turn indorse it to pass title; but M, by indorsement, vested title directly in R, with no indorsee intervening. R, however, demanded other security than a recourse to those who were parties to the paper, and therefore required that C, a stranger to the paper, should place his name upon its back and thus add strength and credit to it and render it more easy of circulation. C, in signing his name under that of the payee and indorser, assumed the obligation of a guarantor, and did not contract to pay the note, if dishonored, only upon condition that it would be duly presented for payment at maturity and due notice would be given to him of the dishonor. The rule as laid down by Judge Story is that, if subsequent to the time when the note is made a party indorses it, not being a regular indorsee from or under any of the antecedent parties, he will be deemed a guarantor if there be a sufficient consideration. (Story on Prom. Notes, Sec. 183.) The guaranty of C was not dependent upon

any condition or contingency expressed in or implied from the terms of his contract. In legal effect it was as absolute and unconditional as if he had written on the back of the note "I guarantee the payment of the within note," words held in 19 Ohio St., 549, to be an absolute and unconditional guaranty, and which rendered it unnecessary to aver or prove either demand or notice in order to make out a *prima facie* case for recovery. As said in 31 Ohio St., 15, "a breach of the agreement of the guarantor results from the non-payment of the debt." There being no condition as regards presentment or notice implied in the terms of such a guaranty, the guarantor must enquire of his principal, or take notice of his default, at his peril. By such guaranty, the guarantor is made a party to the note, and his contract, unlike that of an indorser, is governed by the rules of common law and not by those peculiar to the law merchant. "It is an undertaking to do a thing in a certain specified event. The event is a default in the payment of the bill or note by the parties. When this happens the liability of the guarantor, by the terms of his guaranty, is complete." (Story on Prom. Notes, 7th Edition, 623; note by Thorndyke.)

Castle vs. Rickly, Supreme Court of Ohio, December 7, 1886.

PROMISSORY NOTE—INDORSEMENT BY PAYEE—PAROL EVIDENCE.

In an action on a note against the payee, who had indorsed the same, and who sought to show by parol evidence that when he put his name on the back of the note it had already been paid, and that his name had been so put on the note at the request of the plaintiff as evidence of such payment, it was claimed that the indorsement of a promissory note constituted a certain and well-defined contract with as much force and meaning as if all the conditions and stipulations had been written out at full length, and that parol evidence was inadmissible to either modify or contradict such a contract of indorsement; and the case of *Stack vs. Beach*, 74 Ind., 571, was relied on as supporting that doctrine.

Held, The doctrine, as thus stated, was in that case only made to apply to indorsements upon a note or bill which regularly follow that of the payee, and, as to that class of indorsements, many exceptions to the general rule announced were recognized. So far as we are advised, so strict a rule has never been applied to indorsements upon a note or bill by the payee. It is true that, where the law attaches a definite meaning to an indorsement upon a note or bill, parol evidence will not be admitted to qualify or contradict the contract of indorsement; but this rule for the exclusion of parol evidence does not extend to evidence offered to attack the validity of the contract itself for want of consideration, or on account of fraud, or because the consideration has failed. So the fact that it would be inequitable or fraudulent to enforce the contract of indorsement, as that the indorser was an agent, or that the note was indorsed for a special purpose, such as the creation of a trust, or for collection, or for the accommodation of the indorsee, may be proved by parol. (Edw. on Bills, Sections 393, 399, 440, 442; 3 Kent Comm., 80.)

In the case of *Smythe vs. Scott*, 106 Ind., 215, it was said that, "where an indorsement is made by a payee without consideration or upon some trust arising out of an antecedent transaction, or to accomplish some special purpose, the facts which go to show the transaction may be shown. This for the purpose of showing the equities between the parties and to determine the consideration upon which the indorsement was made." From what has been said the inference would seem to be plain that the defendant is entitled to show by parol evidence the circumstances connected with his indorsement of the note.

Spencer vs. Sloan, Supreme Court of Indiana, November 6, 1886.

PLEDGE OF COLLATERALS FOR A PRE-EXISTING DEBT—SUFFICIENCY OF CONSIDERATION.

Whether a previous debt is sufficient to constitute a holding for value of collateral paper is a question upon which there has been a very sharp conflict of authority in this country ever since the case of *Coddington vs. Bay*, 20 Johns., 636, was decided by Chancellor Kent. That case in effect declared

that a previously existing debt did not constitute a sufficient consideration for such a holding of collateral paper, and the doctrine of that case has obtained full recognition in a large number of the States. But the Supreme Court of the United States has uniformly held a contrary doctrine. In the case of *Swift vs. Tyson*, 16 Pet., 1, this latter Court declined to follow the case of *Coddington vs. Bay*, and has ever since continued to dissent from the rule recognized in that case. (See *Jones*, "Pledges," Section 107 *et seq.*; 1 How., 234; 20 How., 343; 21 How., 432; 100 U. S., 239; 102 U. S., 14.) It may therefore be now regarded as an established legal proposition in the Supreme Court of the United States that an existing debt affords a sufficient consideration for the pledge of collaterals as security for its payment, and that seems to be in accord with the English decisions on the same subject. (See *Jones*, "Pledges," Section 111, and authorities cited.) This Court, in the case of *Straughan vs. Fairchild*, 80 Ind., 598, accepted the rule of construction thus established by the Supreme Court of the United States as the correct rule under the laws of this State, and still adheres to that rule as being more in the interest of commerce than the contrary doctrine.

Spencer vs. Sloan, Supreme Court of Indiana, November 6, 1886.

DEPOSIT OF TRUST FUNDS—INSOLVENCY OF BANK—RECOVERY.

Fletcher & Sharpe, bankers, doing business in the city of Indianapolis, became insolvent on the 15th day of July, 1884, and, on their application to the Court, a Receiver was appointed, who took possession of the assets, and, through its Receiver, the Court continued in the administration of the insolvent concern. On the 29th of September, 1884, F & V, administrators of the estate of V, in an intervening petition to the Court, alleged that, soon after their appointment as such administrators, they had deposited in the Fletcher & Sharpe Bank about \$40,000 of the funds of the estate for safe keeping. That, at the time of receiving such funds, Fletcher & Sharpe had full notice that they belonged to the estate, and that the same were placed in their custody by the petitioners in their trust capacity, and the petitioners aver that the fund was so received by Fletcher & Sharpe. The petition alleges the insolvency of the bank, the appointment of the Receiver, and his possession of the assets, and it is shown that about \$22,000 of the money so deposited remained in the bank at the time of its suspension. The petitioners aver that the Receiver has in his possession a large amount of assets, consisting of bills receivable and choses in action, in which Fletcher & Sharpe had wrongfully invested the moneys so deposited by the petitioners, and they ask that the Court shall order the Receiver to pay over to them the full sum of money so deposited and yet remaining unpaid by the bank at the date of its suspension. Denial was made on behalf of the Receiver, and, upon a hearing, the prayer of the petition was denied and judgment rendered that the petitioners take nothing. On appeal,

Held, The question arises upon the evidence. There was no disagreement as to the material facts in the case. The funds were deposited in the bank from time to time to the credit of the petitioners. It may be assumed that the account was opened and continued on the books of the bank in the name of the petitioners as the administrators of the estate of V, although this does not very distinctly appear. It does appear, however, that Fletcher & Sharpe were notified, when the first deposit was made, that the funds thus deposited, and such as should be thereafter deposited by the petitioners, were and would be the funds of the estate, and a trust fund, and that no checks would be drawn upon it except for the purposes of the estate, and that all checks would be signed by the petitioners as administrators. An ordinary bank account of debit and credit was kept, the petitioners having the customary pass book evidencing the amount of their deposits from time to time. When the bank suspended the amount due the petitioners on their account was \$22,042.52. A sufficient sum of money went into the hands of the Receiver when he took possession of Fletcher & Sharpe's affairs to have paid the amount due the petitioners. The total amount of the assets was about \$500,000; the liabilities aggregated \$1,500,000. Upon this state of facts it is now argued that the petitioners are entitled to an

order giving them a preference over other general depositors. Whether the loss to the fund occasioned by the suspension or insolvency of the bank will ultimately fall upon the petitioners is a question in no way directly involved in the decision of this case. The principles which determine the liability of trustees who become depositors of trust funds were considered to some extent in the case of *Naltner vs. Dolan* (an abstract of which appears in the January, 1887, number of the JOURNAL, page 21,) and cases cited. Nor does the case involve any question as to the right of the bank to appropriate the fund for an indebtedness due from the depositors as in 84 Ind., 114. There are many cases in which the question has arisen as to the equitable right of a *cestuis que trust* to pursue a trust fund which has been misapplied or diverted by the trustee or which the creditors of the latter are seeking to subject or appropriate to the payment of debts due them. The general doctrine is well established that equity will follow a fund through any number of transmutations and preserve and protect it for the real beneficiary so long as such fund can be identified and followed. (104 U. S., 54; 4 DeGex M. & G., 372; 2 Hem. & M., 417; 18 Ch. Div., 696; 3 Maule & S., 562; 57 Pa. St., 202; 52 N. Y., 1.) The class of cases above cited are relied on by the appellants for a reversal of the ruling below. The distinction between the cases relied on and the case being considered is obvious. Those are cases in which the aid of a Court of equity was invoked by the rightful owners to preserve a trust fund from misappropriation by a trustee or his creditors. This is a case in which trustees with others have become general depositors in a bank which has become insolvent and whose assets are in the hands of a Receiver for distribution among all its creditors according to law. The question is: Do persons who become general depositors of trust funds in such manner as to create the relation of debtor and creditor between themselves and the bank in which the funds are deposited stand upon a different level from other general depositors? There is no question but what the fund was properly deposited. The propriety of the conduct of the trustees in making the deposit or of the bank in receiving it is not in dispute, nor does the evidence suggest any wrongful misappropriation or diversion of the fund either by the bank or the trustees. When deposits are received, unless they are special deposits, they belong to the bank as a part of its general funds, and the relation of debtor and creditor arises between the bank and the depositor. This is equally so whether the deposit is of trust money, or funds which are impressed with no trust, provided the act of depositing is no misappropriation of the fund. If, in receiving a trust fund, a bank acted with knowledge that it was taking the fund in violation of the duty of a trustee the rights of the *cestuis que trust* might be different. In respect to such a case we decide nothing here. In this case, where no impropriety is imputed to the bank in receiving the money, it becomes the debtor of the petitioners, and its debt to them was of the same character as its debt to any other depositor, and must be paid in the same proportion. The rights of other creditors stand on a level with those of the petitioners and are to be guarded and protected by the Court with the same vigilance. (103 Ind., 563; 31 Kan., 173; 46 N. Y., 82; 71 N. Y., 325; 10 Wall., 152.)

Judgment affirmed.

Fletcher vs. Sharpe, Supreme Court of Indiana, November 20, 1886.

POWERS OF BANK CASHIERS.

Continued from page 32, January number of the JOURNAL.

XIII. Power to Bind a Bank as Accommodation Indorser or Acceptor.—The Cashier of a bank has no authority by virtue of his office to bind the bank by an accommodation indorsement or acceptance of the paper of third parties. Although he may lawfully indorse the negotiable paper of the bank, with a view to raise money on it by way of discount, or for any other lawful purpose, still he has no right to indorse, in behalf of the bank, the paper of other persons in which the bank has no interest, or to make the bank a party to paper for the accommodation of any one. Such an indorsement would be

void in the hands of every person having notice of the fact. (13 N. Y., 316; 16 N. Y., 128; 1 Dougl., Mich., 457; 26 Wis., 663.) But, though such an indorsement is entirely beyond the scope of the Cashier's powers, if the paper is negotiable and is upon its face in all respects such as the bank, by its Cashier, would have authority to indorse, and its only defect consists in the extrinsic fact that the indorsement is in reality for accommodation, and without authority, a *bona fide* holder before maturity, without notice of the purpose for which it was indorsed, can hold the bank on such indorsement. (16 N. Y., 128; 29 N. Y., 619; 35 N. Y., 505; 26 Wis., 663.)

Where, however, the Cashier of a bank made his individual note to the order of the plaintiff, and indorsed it as Cashier, it was held, not only that he had no authority as Cashier to bind the bank by the indorsement of his individual note, but that the very form of the paper itself was notice of a presumptive want of authority to make the indorsement, and was sufficient to put a purchaser on his guard; and that, if such purchaser failed to avail himself of the notice and make inquiry as to the authority of the Cashier to bind the bank by such an indorsement, it was his own fault, and, as against the bank, he must bear the loss. (*West St. Louis Savings Bank vs. Shawnee County Bank*, 3 Dill., 403; same case, 95 U. S., 559.)

Not only is there an entire absence of authority in the Cashier of a bank to bind the institution as an accommodation indorser or acceptor, but it would seem to be still an open question whether a banking institution, acting through its regularly-constituted Board of Directors, has itself the power to incur such a liability. In the case last above cited (*West St. Louis Bank vs. Shawnee County Bank*), in the United States Circuit Court for the District of Kansas, and in the Supreme Court of the United States, it is assumed that such a power exists. The opinion of Judge Dillon, in the Circuit Court, after stating that the plaintiff had notice of a presumptive want of authority by the form of the instrument (it being made by the Cashier, individually, who indorsed as Cashier), states that "to hold the defendant bank on such indorsement the onus to show *authority, express or implied, from the Directors of the defendant bank* is upon the plaintiff." The case being carried to the Supreme Court of the United States, that Court, in affirming the decision of the Circuit Court, in its opinion states that "one who accepts an indorsement of that character, if a contest arises, *must prove actual authority* before he can recover." It will thus be seen from these extracts that the power to bind the bank as accommodation indorser or acceptor is considered, so far as the Federal Courts are concerned, to reside in the Board of Directors, and that the holder of paper, having notice that it has been indorsed for accommodation by the Cashier, must prove *actual authority from the Directors* before he can recover, and, if such authority is shown, it is sufficient.

Turning to the decisions of the Court of Appeals of New York, however, we find a denial of any such power, and the contrary doctrine asserted, as follows: "It is quite clear that the officers of a banking association have no power to engage the institution as the surety for another in a business in which it has no interest. Such a transaction is without the scope of the business of the company. * * * The officers of a bank have no right to indorse in its behalf the paper of other persons in which it has no interest. Such contracts are void upon the same principle that an indorsement by a partner of the firm name without the consent of the co-partners for the accommodation of a third person would be inoperative against the firm. But, if a co-partner of a mercantile firm affixes the partnership name to paper in which the firm has no interest, and such paper is negotiated to an innocent holder for a valuable consideration, the firm is bound. The same principle applies to the acts of the officers of a corporation." (18 N. Y., 309.)

And again: "It is a sound proposition that a banking corporation exceeds its powers when it becomes the mere surety for another upon a contract in which it has no interest or lends its credit in any form for the exclusive benefit of third parties. Such a contract is *ultra vires* and cannot be enforced against the bank by any person cognizant of the facts."

It would thus seem to be unsettled whether an indorsement or acceptance of the paper of third parties, for accommodation, is *ultra vires* a banking

institution, and not enforceable by any party having knowledge of the facts, or whether the Board of Directors, as the managing body, are vested with such power. However this may be, there is no question but that such a contract is entirely beyond the powers of the Cashier.

LAW NOTES AND COMMENTS.

THE MASSACHUSETTS SAVINGS FUND AND LOAN ASSOCIATIONS.—Section 5 of Chapter 117 of the Public Statutes of Massachusetts relative to these associations provides that "the capital to be accumulated shall not exceed one million dollars, and shall be divided into shares of the ultimate value of two hundred dollars each." A few of these associations have issued more than five thousand shares, which, at \$200 each, constitute the limit of capital; but it is claimed by the officers of these associations that the shares are not now, and are never likely to be, worth par, as they are constantly losing in value. The Savings Bank Commissioners have taken the ground that the limit of \$1,000,000 should not be increased, and they have obtained the opinion of the Attorney General that the banks have no power, under the law, to issue above five thousand shares. In view of the fact that these shares are deteriorating in value, it is considered as a great hardship upon these associations that they should be forbidden to issue more than five thousand shares, and they claim that this discrimination as to the amount of shares to be issued by them interferes greatly with their workings. The Legislature will probably be petitioned to increase their powers.

NEGOTIABILITY OF PAPER PAYABLE "WITH EXCHANGE."—In the case of *Hughitt vs. Johnson*, in the United States Circuit Court for the Eastern District of Missouri, reported in this number, it is held that a note is rendered non-negotiable by the addition of the stipulation in it to pay "with exchange." As there has not been an entire uniformity of decision on this question, we submit in connection with that case a brief abstract of the decisions of other Courts on the question.

In *Lowe vs. Bliss*, 24 Ill., 168, the action was on a promissory note dated at New York, payable at a bank in Illinois "with current rate of exchange on New York." The Court held that the instrument was not negotiable, as the words quoted made the sum payable uncertain.

In *Hill vs. Todd*, 29 Ill., 102, the note was dated at Chicago, payable to B., H. & G., at their office in that place, "with current rate of exchange." The Court held that there could be no such thing as exchange on this note. That exchange is the difference in value of the same sum of money at two different and distant places or countries. If the coins of the two places are of equal fineness and weight there can be no difference in their value except the expense of transporting from one place to the other, which would constitute the rate of exchange between the two places. It is said that the relative abundance or scarcity of money is what forms the exchange between those countries. This, doubtless, enters largely into, and probably is, a material circumstance determining the rate of exchange; yet the necessity of transmitting from one place to another without reference to its abundance or scarcity has no doubt a more controlling influence on the rate than any other circumstance. As this note was payable in current coin, and payable at the office of the payee, there could be no exchange on that place, as there was no cost of transfer of the funds. The language "with current rate of exchange" in this note is, therefore, without meaning, and should be rejected as surplusage; and the note is negotiable.

In *Clauser vs. Stone*, 29 Ill., 114, the note sued on was dated at Boston, payable at a bank in Illinois, and promised to pay the sum of \$405 "with exchange." *Held*, The simple words "with exchange" are unmeaning; they can be rejected as surplusage, and do not affect the negotiability of the note.

In *Philadelphia Bank vs. Newkirk*, 2 Miles (Pa.), 442, the note contained the words "current rate of exchange to be added." *Held*, The instrument

sued on is not a promissory note. To constitute a promissory note, the instrument on its face must be for the payment of a sum certain, not susceptible of contingent or indefinite additions, nor subject to indefinite or contingent deductions. In this instance the "current rate of exchange to be added" is clearly indefinite.

In *Smith vs. Kendall*, 9 Mich., 241, the action was on a promissory note payable "with current exchange on New York." *Held*, The fluctuation to which exchange is subject is not such a contingency or uncertainty as the rule requiring a note to be for a sum certain was intended to guard against, and the note was held negotiable.

In *Bullock vs. Taylor*, 39 Mich., 137, a note was dated at Mount Pleasant, payable at a banking house in East Saginaw, and promised to pay the sum of \$70 "with exchange or express charges." The Court held that the provision for the payment of the exchange or express charges was merely nugatory. By the terms of the note it was payable at East Saginaw, and it therefore became the duty of the promisors to be at any expense necessary for the transmission of the money to that place. Whether they sent by draft or by express the expense would equally fall on them, and an express promise to pay it could add nothing to their liability.

In *Johnson vs. Frisbie*, 15 Mich., 286, a promissory note made in Michigan and payable "with current rate of exchange on New York" was held to be a negotiable instrument.

In *Leggett vs. Jones*, 10 Wis., 34, the note in suit promised to pay \$224 at a bank in Wisconsin "with exchange on New York." *Held*, Although these words might seem to be a slight modification of the general rule that a promissory note must be for a sum fixed and certain, we have no doubt such instruments have everywhere been treated as commercial paper both by the business world and by the Courts.

DEPOSITING PAPER FOR COLLECTION WITHOUT RESTRICTING THE INDORSEMENT.—The case of *Hackett vs. Reynolds*, in the Supreme Court of Pennsylvania, reported in this number of the JOURNAL, affords an example of how unsafe it is to deposit paper for collection in a bank without indorsing it specially "for collection," or in some other manner restricting the indorsement for that purpose. An ordinary, unrestricted indorsement vests the apparent title to the paper in the bank, and a correspondent to whom it has been transmitted who, on the faith of such apparent title and believing it to be the property of the bank, purchases it for a valuable consideration, or makes advances upon it, is protected as a *bona fide* holder against the real owner.

The Supreme Court of the United States have laid down the rule that where bank A and bank B have had mutual and extensive dealings, and have kept mutual accounts, in which each credited the other with the proceeds of paper received for collection, and bank B has treated bank A as the owner of negotiable paper which it has transmitted for collection, and had no notice to the contrary, and where bank B has, upon the credit of such remittances, made or anticipated in the usual course of dealing between them, suffered balances from time to time to remain in the hands of bank A to be met by the proceeds of such negotiable paper, bank B is entitled, where bank A has failed, to retain against the true owner the proceeds of such paper for the balance of account due from such bank A. (1 How., 234; 6 How., 212.)

The Supreme Court of Pennsylvania, however, do not carry the rule to this extent.

In the present case plaintiff had indorsed a note in blank and deposited it in the Penn Bank for collection, and the latter transmitted it to a bank in Oil City. These two banks kept mutual accounts, and each credited the other with the proceeds of collections. The Penn bank failed, and at the time of its failure owed a balance of account to the Oil City bank of some \$7,000. The latter, who had no notice of plaintiff's title to the note, had treated it as the property of the Penn Bank and applied the proceeds on such indebtedness. In a suit by plaintiff against the Oil City bank to recover the proceeds, the Court held that, although, if defendants had made advances upon the note or

given new credit for it, they would have been entitled to retain the proceeds against the plaintiff, yet it was not alleged that defendants bought the note, or advanced or gave credit upon it; that there was no evidence that any balances were, in point of fact, suffered to remain to be met by remittances from the Penn Bank, and which, but for this course of dealing, would have been drawn; that, even if there had been evidence to this effect, in order to avail the defendants it would have to be shown that the balances were suffered to remain upon the faith of remittances received or, under some circumstances, perhaps, in process of transmission; and that defendants, relying upon such remittances, actually did something or forebore to do something by which their condition was worse than it would otherwise have been. The Court say that to this extent they are willing to follow the rule laid down by the Supreme Court of the United States, but they cannot consent to the doctrine that a mere usage and course of dealing between banks in transmitting bills and notes for collection, by which they mutually credit the avails in account to over-balances due, can, without more, deprive a third person, the real owner of the notes or bills, of his rights; and they hold that plaintiff is entitled to recover, as defendants did not show that they made advances or gave any new credits on the faith of the note, or incurred any liability or did anything by which their condition was worse than it would have been if they had not received the note for collection and credit.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail—and which are not to be published. See advertisement on another page.

Editor of Rhodes' Journal of Banking: ST. PAUL, Minnesota, January 21, 1887.

Please state the right tender in payment of draft as per copy below:

\$1,000.	NEW YORK, September 28, 1886.
Sixty days after date pay to the order of ourselves one thousand dollars in	
Exchange on New York and charge on account.	JNO. DOE.
To Richard Roe, Duluth, Minn.	

Across the face of the note is written: "Accepted. Payable at Union National Bank, Duluth. RICHARD ROE." Yours truly, AN INQUIRER.

A National bank draft on New York was offered to one of our banks at this place in payment of such a draft, and was refused on the ground that they had the right to make an exchange charge the same as if the draft had been drawn with exchange.

Answer.—The draft by its terms is payable *in exchange*, not in money; and we are of opinion that the tender of a bill of exchange of a banker in good credit, on New York, would be sufficient to answer its terms. Of course, if satisfactory to both parties, the amount in cash, with exchange, might be tendered in satisfaction; but we do not think the drawee is obliged to tender cash.

Editor Rhodes' Journal of Banking: VICTORIA, Tex., December 29th, 1886.

SIR:—To settle a dispute, we write for your opinion on the following questions, the parties having agreed to abide by your decision in the matter:

What is the proper date of maturity (in Texas, where three days grace are allowed by Statute on all negotiable paper,) on a bank check post-dated January 1, 1887? If the check should prove not to be good at maturity, on what day should the collecting bank protest it? We would state, however, that no grace is claimed or taken on bank checks in Texas. Yours truly, TEXAS.

Answer.—The check in question is post-dated January 1, 1887, which fell on Saturday, and was a legal holiday. The following day, January 2d, was

Sunday. What is the proper date of maturity of this check, and when should it be protested?

Treating the question as one of general commercial law, and irrespective of any Statute in Texas, it has been held that when a bill or note without grace falls due on a Sunday or holiday it is not payable until the following business day; and this for the reason that the payer is not compelled by law to pay on the exact day named when that day falls on a Sunday or holiday; and the next business day is the first day that the creditor can demand payment.

Avery vs. Stewart, 2 Conn., 69; *Salter vs. Burt*, 20 Wend., 205; *Barrett vs. Allen*, 10 Ohio, 426; *Kuntz vs. Tempel*, 48 Mo., 75; *Colms vs. Bank*, 4 Baxter, 422.

Also, with reference to a post-dated check, it has been held that, if it falls due on a Sunday or on a legal holiday, presentment for payment cannot be made until the day following; that presentment on the day preceding is irregular, and the bank is not bound to pay on that day.

Salter vs. Burt, 20 Wend., 205.

Under the general commercial law, therefore, the check in question being post-dated, as well as being payable without grace, should not be presented for payment until the next business day after its date, viz., January 3, 1887, unless some statutory provision exists in Texas changing this rule.

The only statutory provisions in Texas on the subject of holidays, and relating to the presentment and protest of paper falling due thereon, are the following, contained in the Revised Statutes:

"ARTICLE 2,835. The first day of January, the 22d day of February, the 2d day of March, the 21st day of April, the 4th day of July and the 25th day of December of each year, and all days appointed by the President of the United States or by the Governor of this State as days of fasting or thanksgiving, and every day on which an election is held throughout the State, are declared holidays, on which all the public offices of the State may be closed, and shall be treated and considered as Sunday or the Christian Sabbath for all purposes regarding the presenting for payment or the acceptance and of presenting for and giving notice of the dishonor of bills of exchange, bank checks and promissory notes placed by the law upon the footing of bills of exchange.

"ARTICLE 2,836. All the exemptions and requirements usual on legal holidays may be observed on the days above-named.

"ARTICLE 2,837. If any of the days named shall occur on Sunday the next day thereafter shall be observed as a holiday; but bills of exchange or other paper may be presented for payment or acceptance on the Saturday preceding such holiday, and proceeded on accordingly."

These provisions, in effect, say that the enumerated holidays shall be treated and considered as Sunday for all purposes relating to the presentment, protest and notice of dishonor of bills, bank checks and promissory notes; and, further, that, when any holiday falls on Sunday, the following Monday is a holiday; but bills or other paper may be presented on the Saturday previous, and proceeded on accordingly. So far as the last provision is concerned, it does not fit this case, as the holiday on which this check would be otherwise payable does not fall on Sunday; so that the only provision which might have any bearing on this case is the first, which says that "the first day of January * * * shall be treated as Sunday * * * for all purposes regarding the presentment, etc. * * * of bills of exchange, bank checks, etc. * * *"

If, then, a bill of exchange or a bank check falls due on a holiday, it is treated as if it fell due on Sunday for the purpose of presentment, etc. What, then, is the rule when it falls due on Sunday.

When the paper is entitled to grace, and the third day of grace expires on a Sunday, it falls due on the day preceding, for the reason that, as grace is a matter of indulgence, the debtor cannot require the creditor to extend his indulgence more than three days.

Bussard vs. Levering, 6 Wheat., 192; *Kuntz vs. Tempel*, 48 Mo., 75; *Barrett vs. Allen*, 10 Ohio, 426; *Tassell vs. Lewis*, 1 *Ld. Raym.*, 743; *Reed vs. Wilson*, 18 *Vroom*, 29; *Morris vs. Richards*, 45 *L. T. R. (N. S.)*, 210.

But we have already stated the rule, and cited authorities, that where a bill or note is payable without grace, and falls due on a Sunday or holiday, it is

not payable until the next succeeding business day. The bank check in question was not entitled to grace. According to the Statute, it was to be treated as if it fell due on Sunday, and paper without grace falling due on a Sunday would not be payable until the next business day.

We are, therefore, of opinion that the check became payable on Monday, January 8, 1887.

Editor Rhodes' Journal of Banking:

CHARLEVOIX, Mich., January 20, 1887.

SIR:—Should space and time permit I would like you to answer the following through the next JOURNAL, not having seen anything on the point in any previous number:

The firm of A. & B. made a note for \$1,500, and, as security for the same, attached several notes due at different times. Among them was one for \$125, which was taken before it was due, in fact a few days after it was made. The firm of A. & B. failed, and the maker of the note refused to pay all of the note, saying he had been paying at different times on the note in goods, and has a book account with A. (of the firm of A. & B.) which he proposes to offset the note with. The note, however, is now one year and four months past due. It seems to me his book account is good as against the note in the hands of A. or A. & B., but not against the note in the hands of the bank, as collateral security.

Your reply will be thankfully received through the interesting columns of the JOURNAL.

F. A. SMITH, Cashier.

Answer.—Our correspondent, as we understand, made a loan on a note for \$1,500, and received from the makers, as collateral security, certain notes, among which was one for \$125, which was indorsed to our correspondent before due. This latter note the maker refuses to pay, claiming certain payments and offsets against the pledgers. The rule is well settled that the pledgee of negotiable instruments (such as bills of exchange and promissory notes) before maturity by indorsement and delivery, so that he becomes a party thereto for a present advance, and, as a part of the transaction of a loan, and without notice of antecedent equities, is a holder for value in the due course of business. (Colebrook on Collateral Securities, Sec. 16, and cases cited.)

Our correspondent, therefore, having taken the note before maturity, and being a holder for value, is entitled to recover the amount from the maker, if he had no notice, at the time it was received, of any antecedent equities between the original parties.

Editor Rhodes' Journal of Banking:

SINCLAIRVILLE, N. Y., January 21, 1887.

SIR:—What are the conditions of a note given "on or before 60 days?" Can the payee ask for payment before due, or is the form for the benefit of the maker only?

E. B. CRISKEY & Co.

Answer.—The option to pay before due is for the benefit of the maker only. A note so drawn is due on the day named and not before, but it gives the maker the option to pay it before if he chooses.

DIGEST OF RECENT DECISIONS IN COMMERCIAL LAW.

ASSIGNMENT FOR BENEFIT OF CREDITORS—LAW OF PLACE.—The validity of an assignment of real property situated in Iowa for the benefit of the creditors of the assignor, made in another State, must be determined by the laws of Iowa; and, if such an assignment gives preference to creditors, it is void as to the real property within this State conveyed by the assignment. This decision is based upon the familiar rule of law that the validity of a conveyance of real estate must be determined by the *lex loci rei sitae*. The fact that the plaintiffs and defendants were all residents of New York does not modify the rule and require the application of the law of that State to the transaction. It has been held that it would not have this effect in a case wherein the right to personal property was involved. The same, or stronger reasons, require the application of the rule to cases involving the title to real estate. [*Moore vs. Church, Supreme Court of Iowa, December 8, 1886.*]

ATTACHMENTS—NEBRASKA.—To authorize an attachment, at least one of the causes mentioned in the Statute must exist. Mere insolvency is not a ground of attach-

ment. A man may be unable to pay his debts in full and still be doing all in his power to pay them, and so long as he furnishes no statutory cause of attachment against him no attachment will lie against his property. Neither will denials of the validity of the claim sued upon, and a determination to fight it, furnish cause to attach the defendant's property. The rule might be different, however, if such expressions were accompanied with acts constituting a cause of attachment. [*Walker vs. Haggerty, Supreme Court of Nebraska, December 1, 1886.*]

BANKRUPTCY—DISCHARGE—EXTINGUISHMENT OF DEBT.—In a suit brought to recover a claim which has been barred by a discharge in bankruptcy the following distinct principles may certainly be considered as settled by the decisions of this Court: 1. The effect of the certificate in bankruptcy is to extinguish the debt, not merely to bar the remedy for its recovery. 2. The prior legal obligation is a sufficient consideration for a new promise to pay it. 3. The promise, to be effective, must be clear, distinct and unequivocal, without qualification or condition. 4. In an action upon such a claim, the declaration must be upon the new promise and not upon the original obligation. [*Murphy vs. Crawford, Supreme Court of Pennsylvania, November 8, 1886.*]

CHattel Mortgage—Evidence—MINNESOTA.—When a chattel mortgage is acknowledged the certificate of acknowledgment entitles it to be read in evidence "in all Courts of justice." (General Statutes of 1878, Chapter 73, Section 67.) A copy of such mortgage, when certified by the proper Town Clerk to be a true copy of the original on file in his office, is receivable in evidence in like manner and with like effect as the original mortgage; that is to say, it is, under the Statute, entitled to be read in evidence "in all Courts of justice." [*Ellingbor vs. Brakken, Supreme Court of Minnesota, December 9, 1886.*]

CLAIM AND DELIVERY—ACTION OF—MINNESOTA.—An action of claim and delivery is one for the recovery of specific property, and hence, to maintain it, a right to specific property must be alleged and shown. But when the property sought to be recovered is a certain undivided fractional part of a certain specified quantity of property, uniform in quantity and value, and susceptible of a fair and equal division by count, measurement or weight (as, for instance, grain in bulk,) the description and proof of the property sought to be recovered, as such undivided fractional part, is sufficiently specific. Under such a description in his writ, an officer may properly seize such part of the whole quantity as is equal to the undivided fractional part claimed. [*Ellingbor vs. Brakken, Supreme Court of Minnesota, December 9, 1886.*]

COMMON CARRIER—LIMITATION OF LIABILITY—NEGLIGENCE.—In 55 Pa. St., 53, this Court decided that a common carrier might, by a special contract, and perhaps by notice, limit his liability for loss or injury to goods carried by him as to every cause of injury except that arising from negligence. In 55 Pa. St., 140, the doctrine was repeated that common carriers may limit their liability by a special contract or special acceptance of the goods, and thus become subject to the laws of bailment only, but that there could be no limitation of liability where the loss or injury resulted from the negligence of the company or its servants. In the present case the lower Court further charged the jury that a common carrier could limit its liability even as against its own negligence. This was done in obedience to a decision of the Supreme Court of the United States, in the case of *Hart vs. Pennsylvania R. R.*, 112 U. S., 331. An examination of that case shows that such is the law as declared by that Court; and, if the decision were of binding authority upon us, we would be obliged to follow it. But our own decisions for a long time have established the opposite doctrine, until it has become firmly fixed in our system of jurisprudence. We could not depart from them now without overruling them all, and we are not willing to do so. The authorities upon the general subject are very numerous and conflicting, but with us the rule has been uniform, and we prefer to adhere to it. [*Grogan vs. Adams Express Co., Supreme Court of Pennsylvania, November 17, 1886.*]

CONSTITUTIONAL LAW—CITY TAX ON FOREIGN MERCHANT.—The General Council of the city of Louisville passed an ordinance in February, 1879, entitled "An ordinance to license sample dealers," which provided that "any person whose principal place of business is not in this city, or who conducts his principal place of business

without this city, who shall sell or offer to sell any goods, wares or merchandise by sample or representation in this city to any person other than persons living in or doing a license business in this city, must first obtain an annual license therefor, and shall pay for such license \$200;" and that "every person violating this ordinance shall be fined not less than twenty nor more than fifty dollars for each offense." *Held*, Invalid under Section 2, Article 4, of the Constitution of the United States, which provides that "the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." [*Fechetner vs. City of Louisville, Court of Appeals, Kentucky, October, 1886.*]

FRAUD—RIGHT TO RETAKE PROPERTY—LIEN.—Plaintiff entered into an agreement with B to manufacture a large quantity of paper for him to be used for printing a book, and received from B the promissory note of M, which was, in fact, a forgery. Under the directions of B, plaintiff delivered to the defendant, L, a printer, 150 reams of such paper, on which L commenced the work of composition, electrotyping and printing. Plaintiff, on discovering the fraud, and finding that 146 out of the 150 reams delivered to L had not been printed upon nor used, made a demand and brought suit against L for its recovery, the latter claiming a lien thereon for the work done for B. *Held*, The defendant cannot stand upon his lien on the paper in question. Independent of the fact that he performed no service and bestowed no labor upon that paper, the fraud perpetrated by B upon the plaintiff vitiated his transactions with the latter; and, as plaintiff's sale to him was induced by such fraud, plaintiff had the right, after its discovery, to retake and reclaim his property from any person except a transferee in good faith for a valuable consideration. The defendant was not such a transferee. In fact, the property was never transferred to him at all, as the title of B was vitiated by his fraud. He had nothing to transfer to the defendant, and never did, and never could, vest the latter with any right or title to the property. The lien which defendant claims is against B, and must attach, if at all, to his title or to his property in the goods; as, therefore, he had no property in the goods, and as the title to the property never passed from the plaintiff, the defendant could acquire no lien upon it by virtue of any arrangement with B. [*Conrow vs. Little, New York Supreme Court, General Term, Second Department, 1886.*]

JUDGMENT LIEN—DEATH OF DEBTOR—ENFORCING JUDGMENT.—Under Section 3,082 of the Code of Iowa a judgment lien can be enforced against the land of a judgment debtor after his death without filing the judgment as a claim against the estate; and there is nothing in the amendment of the Statute that would require one who obtains his judgment before his debtor's death to file the judgment as a claim against the estate. [*Boyd vs. Collins, Supreme Court of Iowa, December 13, 1886.*]

RECOVERY OF MONEY PAID—WHEN JUDGMENT IS NO BAR TO SUBSEQUENT ACTION.—Where a party sued to recover money as being obtained by fraud, and, failing to establish the fraud alleged, judgment was rendered against him, *Held*, Such a judgment presents no obstacle to an action for the recovery of the money as having been paid under mistake of fact. [*Belden vs. State of New York, New York Court of Appeals, October, 1886.*]

MUNICIPAL CORPORATION—USE OF STREETS FOR PRIVATE RAILROAD—GRAIN ELEVATOR.—A city has no authority to permit a private railroad, or a railroad for merely private purposes, to be constructed or operated upon the public streets of such city. It does not follow from the fact that a grain elevator is public to the extent that its charges may be regulated by law that a private railroad, operated only for the purpose of carrying grain to and from the elevator, is a public or common carrier. A railroad which carries only grain for only the proprietors of a grain elevator, and only to and from the elevator, lacks many of the essential elements of a public or common carrier. Indeed, it is no more a public or common carrier than the farmer who transports his own grain by his own wagon from his own farm to the elevator. It is only such railroads as are operated by public or common carriers, and such only as are required by law to carry all kinds of carriable goods, and for all persons or corporations who may desire to have goods carried, that can be permitted by a city, under the Statutes, to be operated upon the public streets of the city. [*Mikecell vs. Durkee, Supreme Court of Kansas, December 2, 1886.*]

NEW YORK STATE BANKS.**ANNUAL REPORT OF BANK SUPERINTENDENT PAINE.**

The annual report of Hon. Willis S. Paine, Superintendent of the Banking Department of the State of New York, shows that four new banks, with an aggregate capital of \$250,000, were organized during the year, and one additional with a capital of \$100,000, since the close of the fiscal year. There were 96 State banks on October 1, 1886, against 92 at the beginning of the preceding year. The following statement shows the resources and liabilities on September 12, 1885, and September 18, 1886:

RESOURCES.	Condition Sept. 12, 1885.	Condition Sept. 18, 1886.
Loans and discounts, less due from Directors.....	\$97,928,129	\$110,589,711
Due from Directors.....	2,948,779	2,775,838
Overdrafts.....	92,277	51,432
Due from Trust Companies, State, National and private bankers and brokers.....	13,588,077	11,581,784
Real estate.....	2,929,414	3,024,445
Bonds and mortgages.....	521,665	426,673
Stocks and bonds.....	4,482,565	4,484,850
Specie.....	18,627,201	12,871,266
United States legal-tender notes and circulating notes of National banks.....	7,973,743	6,112,368
Cash items.....	22,453,047	26,745,231
Loss and expense account.....	898,083	853,499
Assets not included in either of above heads.....	723,236	279,816
Add for cents.....	283	299
Total resources.....	\$167,667,499	\$179,247,274
LIABILITIES.		
Capital.....	\$22,350,700	\$22,095,700
Surplus fund.....	6,894,223	6,845,592
Undivided profits.....	4,711,552	6,043,675
Circulation.....	8,075	8,075
Due depositors on demand.....	118,774,018	130,416,652
Due to Trust Companies, State, National and private bankers and brokers.....	14,408,263	11,140,305
Due individuals and corporations other than banks and depositors.....	1,441,698	1,794,975
Due Treasurer of the State of New York.....	250,081	250,148
Amount due not included in either of the above heads.....	823,793	851,996
Add for cents.....	151	166
Total liabilities.....	\$167,667,499	\$179,247,274

One bank increased its capital from \$100,000 to \$200,000, making, with the increase of capital of new banks, a total of \$350,000. Four banks reduced their aggregate capital \$106,000, and one bank with a capital of \$500,000 went into the National banking system, making a net decrease in capital of \$255,000 since October 1, 1885.

A table is published, showing the principal items and resources at the close of each fiscal year since 1886, from which the following comparative statement is taken:

	Sept. 29, 1886.	Sept. 26, 1885.	Sept. 18, 1886.
Capital.....	\$15,448,477	\$11,578,200	\$22,095,700
Due depositors on demand ..	40,573,591	40,980,922	130,416,652
Loans and discounts.....	37,420,710	39,455,487	110,589,711
Profits and surplus.....	4,579,440	5,758,181	12,889,267
Total resources.....	72,632,008	67,869,319	179,247,274
No. of banks.....	85	44	95

While the number of banks has not increased much since 1886, there has been a large increase in the capital and other items, deposits being over three times as large and loans and profits surplus nearly three times greater.

In reference to the old State bank circulation, the Superintendent reports that

the final redemption of all secured circulation has been advertised save only that issued by the Mechanics' Bank, of Brooklyn. The report says:

The amount of circulation of that bank now outstanding is \$5,500, the redemption of which is secured by \$7,000 of public stocks held by the Superintendent. Under the existing law this bank will be compelled to deposit for six years \$5,500 in cash with a bank located in the city of Albany, and, as the banks located there refuse to allow interest on such deposit, the Mechanics' Bank has declined to advertise the final redemption of its outstanding circulating notes. To enable this bank to advertise the redemption of its notes on a stock deposit, the re-enactment of Sections 1 and 2 of Chapter 191 of the Laws of 1887, which were repealed by Chapter 402 of the Laws of 1882, is recommended. It is desirable that all of the old State bank circulation be retired at the earliest possible date in view of the existing doubt as to the future of paper circulation. If the exigencies of the financial situation become such as to render it expedient or necessary for the State banks to again issue circulating notes, the old issues should be wholly retired. During the past fiscal year none of the outstanding circulating notes which are redeemable at this Department has been returned to it for redemption and burning.

There are 20 Trust, Loan, Mortgage, Security, Guarantee or Indemnity Companies in existence in the State, and their resources on July 1, 1886, aggregated \$189,168,059 against \$165,023,132 on July 1, 1885.

On October 1, 1886, the Superintendent held \$1,459,829 of securities for banks, bankers and Trust Companies, of which \$1,320,188 were deposited by Trust Companies which receive deposits of money in this State.

The Superintendent calls attention to the need of legislation relative to private banks and individual banking, as follows:

"A list of private bankers doing business under corporate names will be found in the Appendix. Experience has shown that the change in the law in this connection was most advisable, but no reason has been given to modify the previously expressed opinion that it is the imperative duty of the Legislature to enact by statute that the present concerns shall be known to their customers as private banks. It is noticeable that none of these institutions using corporate names are located in the large cities; it is only in the smaller communities, and especially in the rural districts, that such concerns flourish. In assuming the name of 'The Patchogue and Suffolk County Bank,' its owner possibly used the name without the desire to deceive, but there is abundant evidence to show that its depositors were misled and believed it to be precisely what a bank is generally supposed to be, viz., an establishment for the custody and loaning of money, with stockholders and their representative Directors acting in their corporate capacity, and subject to Governmental inspection and control.

"The banking laws are incomplete in several material respects concerning individual bankers. While the statutes recognize their existence and place them under the same restrictions as banking associations, the law makes no provision for their organization, nor does it specify the minimum amount of capital on which they may operate. At this date but two individual bankers are engaged in the business of banking under the provisions of the State laws—one with a paid-up capital of \$30,000 and the other with a capital of \$5,000. The first organized in 1863 and the last in 1879, at a time when each bank, banking association and individual banker was required to deposit \$5,000 (since reduced to \$1,000) with the Superintendent of this Department as a guarantee of good faith. The Attorney-General, to whom the question was at that time submitted, held that individual bankers were not restricted as to the minimum capital to be employed by them. The statutes should be made plain in respect to these important particulars. They now authorize the organization of banking associations with a capital stock of not less than \$100,000,000; provided, however, that banks with a capital of not less than \$50,000 may be organized in any city, village or place the population of which does not exceed thirty thousand inhabitants; and, with the approval of the Superintendent of the Banking Department, banks with a capital of not less than \$25,000 may be organized in any village or place the population of which does not exceed six thousand inhabitants. The law is silent on both the mode of organizing and the minimum capital required for individual bankers. Throughout the State are numerous small villages without the necessary banking facilities for the convenient transaction of local business which is not of a sufficient volume to justify the organization of a banking association of even \$25,000 of paid-in capital. It is

therefore recommended that the banking laws be so amended as to authorize individual bankers to conduct a banking business in places of three thousand population or less with a minimum capital of \$10,000."

There are sixteen Safe Deposit Companies in the State, eleven of which are located in New York city. The Superintendent recommends that the law of 1875 be amended so as to place restrictions on their future organization so that the ill-advised multiplication of this class of corporations may be avoided.

The report contains suggestions as to State bank circulation which are open to criticism and are not likely to be adopted. It says:

"If Congress were to enact a statute, permitting the issue of circulating notes by the Government to State banks upon certain conditions, a uniform currency would be provided of inestimable value to the country having all the advantages now claimed for that of the National banks. Such currency should be a first lien upon the assets of each bank, and securities satisfactory to the Comptroller of the Currency should be held by him to be sold for the purpose of redeeming the circulating notes in cases where banks failed to redeem them. The Directors of any bank of deposit and discount desiring to exercise the privilege of circulating its notes should be required to deposit with that officer, subject to substantially the same conditions that now exist in connection with the deposit of Government bonds, the best obtainable stocks, for example:

"1. The stocks or bonds of any State in the Union that has not within ten years defaulted in the payment of any part of either principal or interest of any debt authorized by any Legislature of such State to be contracted.

"2. In the stocks or bonds of any city, county, town or village in such States, issued pursuant to the authority of a law of that State. Stocks or bonds of a body politic to be unavailable when the indebtedness exceeds a certain percentage of the assessed valuation of its real estate.

"With an efficient force in the office of the Comptroller of the Currency this plan would not prove cumbersome, nor does it invest that officer with unlimited power, provided an appeal may be taken from his decision to that of the Secretary of the Treasury. It is no objection to the plan to say that it will strengthen the credit of one State and impair that of another. The Legislature of this State has made a like discrimination concerning the securities in which its savings institutions are authorized to invest, and distinction is practically made everywhere in connection with all classes of securities. But, even if it were not, certainly when State Legislatures countenance theft (for successful repudiation has in many cases been nothing less), they must suffer the natural and necessary result, while those that have displayed a decent regard for the rights of others should meet with encouragement.

"In convenience of use this proposed bank currency would be preferable to coins. It would be taken as freely at one end of the Union as at the other because of its undoubted security. The saving to business men in the sums paid out under the old system of inter-State exchange would be great. It would thus prove an important factor in accelerating business transactions and developing the resources of the country."

The suit of 19 State banks in conjunction with certain National banks, to test the legality of taxing bank shares, is reviewed. The case has been very fully reported in the *JOURNAL* and it is unnecessary to mention its features here. The Superintendent says that the banks are clearly justified, and that the laws of this State governing the taxation of banking capital are inequitable.

That portion of the report devoted to the Trust Companies of the State merits general approval. These institutions have come to do a general banking business while they are relieved of many of the duties and obligations of banks of deposit. We quote Mr. Paine fully on this subject, as it is one that calls for legislative action. He says:

"An inspection of the first charters granted to Trust and Loan Companies of the State will show that they were originally designed to insure property of all kinds against loss or damage by fire; to make insurance on lives; to grant and buy annuities; to make other contingent contracts involving the use of money and the duration of life; and not for the reception and execution of trusts of every character. They have been variously styled Trust, Loan, Indemnity, Improvement, Security, or Guaranty Companies. Some have been authorized to do a safe deposit business: and one was created in the year 1868 which had, among other powers, not only an express authorization to carry on the business of a Safe Deposit Company, but also of a Savings bank. In creating the first company in the State, the Legislature made use of the fol-

lowing careful language: 'And also provided, that nothing in this Act shall be so construed as to authorize the said corporation to receive any deposit or deposits, nor to discount any promissory note, bond, due-bill, draft, or bill of exchange, nor shall it be so construed as to allow any banking privileges or business whatever.' If the same care had always been exercised there would be no grounds for the present complaints. A vague belief exists that these corporations act only as care-takers of funds belonging to estates, or such as are in the custody of the Courts, or generally in a fiduciary capacity—*i. e.*, as the trustee of mortgages. At the present time some of them are conducted in such a manner that there is no practical difference between the business transacted by them and that of the State banks of deposit and discount. They make loans on collaterals, purchase commercial paper, and receive deposits subject to checks. At every recent session of the Legislature, bills to incorporate Trust Companies have been introduced, and when, perchance, charters are obtained they have in some instances been hawked about the streets of New York to be sold to whoever might desire to buy. The Governor sent to the last Legislature a veto of a measure of the character mentioned which commanded universal approval; and it is in accordance with the views expressed by him that a proposed general law has been framed, a draft of which will be found in the appendix. Undoubtedly, if the practice of creating Trust Companies by special charters is to meet with no check the evil results which afflicted thousands of the thrifty but poor depositors of savings banks during the year 1873 and subsequent years will on a larger scale be again experienced. The evils caused by the multiplication of savings banks were only remedied by an amendment to the Constitution, November 3, 1874. If the rapid increase of Trust Companies is permitted there is reason to believe that in time not a State bank of deposit and discount will exist in the metropolis.

"One difference of a vital character between banks and Trust Companies is in connection with the taxation imposed upon them by law. The former are the only corporations in the State the shares of which are taxed; the latter are placed in the same category with railroad, insurance and manufacturing corporations, and their capital may be invested in Government bonds, which are not taxable. The report of the Comptroller of the State, transmitted to the Legislature in January last, shows that the 15 Trust Companies transacting business in the city of New York during 1886, with an aggregate paid-up capital of \$12,775,900, paid to that officer in taxes the sum of \$37,091. The Commissioners of Taxes and Assessments of the city of New York have recently stated that the assessed value of the banks of deposit and discount in that city for the year 1886, after allowing all legal deductions, is given at \$59,012,843, while the actual par value of the same is \$59,337,700. On the other hand, the Trust Companies of that city, with the capital at par of \$11,190,000, are assessed only upon \$64,681 of the same.

"General statutes exist providing for the organization of Banks, Safe Deposit, Manufacturing and Insurance Companies, Building, Mutual Loan and Accumulating Fund Associations, and, by parity of principle, Trust Companies should form no exception.

"There would be no demand for the creation of Trust Companies, especially in the city of New York, were it not that the equivocal and unsettled (legally-speaking) terms of their charters give them powers beyond those which it has been thought wise either by the National or State Legislatures to grant to banking associations. The last-named are organized either under the National Bank Act or under the general Act of 1838, as required by the State Constitution (Art. VIII.), the theory being that all who wish to engage in a banking business should be enabled to do so upon an equality, with like privileges and liabilities, and under uniform restraints. And, while the Legislature has the discretion of creating corporations, other than banks, by special charter, yet equality between corporations themselves, as well as equality between corporations and individual citizens, so far as the latter was practicable, was in the minds of the Convention in framing this part of the Constitution. (49 N. Y., 458.)

"In preparing the proposed general law for the organization of Trust Companies, the charters heretofore granted by the Legislature since 1821 have been carefully examined; and, in submitting the same to the Attorney-General, copies of the main portions of such charters have been handed to him. Printed copies of the proposed law have been sent, for suggestions, to each of the now existing Trust Companies, savings institutions and banks of deposit and discount in this State."

THE FINANCIAL SITUATION IN ENGLAND.

[The following letter from a member of the staff of RHODES' JOURNAL OF BANKING, who is spending a few months in England to recuperate his health, will be found to contain an interesting survey of the financial situation abroad.—Editor JOURNAL.]

LONDON, January 3, 1887.

To any one accustomed to view the dealings at the New York Stock Exchange from the lofty height of the "visitors gallery," or to drop into a New York stock brokers office to take a look at the tape and find out how stocks are going, the methods of the Stock Exchange here are very certain to occasion surprise. The Exchange is kept rigidly closed to the public, while a visit to a stock broker's office is sure to be met by a respectful inquiry "What can we do for you?" in about the same way that a stranger, wandering aimlessly in one of New York's great retail stores, would be addressed by a floor-walker anxious to put him in the right track.

There are none of the off-hand, free and easy ways of doing business in and about the London Stock Exchange which is a feature of Wall street. It is easy enough to speculate here if one wants to and has the means or credit to back his desires. From a casual view, I should say that stock speculation is not the plaything of that class of people who are in ordinary circumstances to anything like the extent that it is in New York and other American cities.

As to the general financial situation here, the view most generally entertained is that the outlook for the New Year is quite favorable. Home and foreign politics and labor difficulties have been the chief obstacles to improvement in the year just closed. Yet 1886 is looked back upon as having been altogether a very favorable year both for business and speculation.

The "rumors of wars" in Europe have a depressing effect upon large enterprises for the time being. The prevailing opinion regarding American securities is very favorable. A number of the best-informed men in London on these matters with whom I had the privilege to converse are unanimous on this point.

There has been considerable appreciation in the value of securities during the past year, although the rise appears to have been largest in foreign securities. While the advance in English funds has been from $\frac{1}{4}$ to 1 per cent., Spanish 4 per cents. advanced 12%, Egyptian unified 10%, and other international securities from 1 to 11 per cent. While there were declines in some English railway stocks, a number shows gains ranging from 2 to 23 per cent., the latter for London and Brighton shares. Nearly all American railway securities dealt in have advanced, the gains ranging from 3 to 21 $\frac{1}{4}$ per cent.

There has been a large increase in new issues of securities, the total application for new capital during the year amounting to nearly £94,000,000 (irrespective of about £8,000,000 partly subscribed abroad) against £78,000,000 in 1885.

The Bank of England made seven changes in the rate of discount during the year, the same as in 1885, ranging from 2 to 5 per cent., and the rate for money in the open market fluctuated between 1 and 5 per cent.

The *Morning Post* of yesterday makes a very exhaustive review of the financial situation, and remarks that "the opening of the year 1887 shows a distinct improvement in the financial position of the country as compared with that of twelve months ago." As to the outlook, it says: "It is, of course, impossible to say what the coming months have in store for us, but we certainly meet this year under better auspices than the last, and, with a firm Government at home and peace abroad, there is every reason to hope that the opening of 1888 will see a still larger improvement than that which we chronicle at the commencement of 1887."

Although the year 1886 opened under favorable auspices, political complications connected with the advent of Mr. Gladstone into power caused disquiet among investors. The possibility of trouble between Germany and Russia also cast a cloud upon the financial horizon. The Bulgarian question was another important factor for some time in unsettling confidence. But, in spite of this, there was a general

improvement, and the prospects of business are now better than they were a year ago.

As there are even now rumors of wars on the Continent, I cannot do better than quote the following from the *Post*, which bears upon the question of future complications: "The enormous armaments maintained by the great Continental powers are at all times not only a burden on the people but a menace to peace. Yet everywhere during the last year these armaments have shown a tendency to increase rather than diminish. The rulers of Germany desire to make a large addition to their military strength. The French Government and, there is little doubt, for some time past been working steadily in a similar direction, for there can be no other explanation of the accumulated deficits which last year made a large fresh loan a fiscal necessity. The recent reluctance of the Bank of France to part with gold has not been unnoticed as an omen of possible war."

How sensitive public confidence here is to labor outbreaks, even in remote countries, is shown in a single remark of the paper from which I have just quoted. It says that the outbreaks of Socialism in various forms both in Europe and America have had their effect in retarding commercial enterprise. The labor riots in Belgium and the scarcely less determined and savage strikes in America have not unnaturally tended to frighten the holders of capital.

I am indebted to the manager, Mr. Darbyshire, for an early copy of the report of Sir John Lubbock, containing the London Clearing-House statistics for 1886. It shows that there has been a substantial improvement during the year. The total clearings for the year amounted to £5,901,925,000, an increase of £300,854,000 over 1885. The payments on Stock Exchange Account Days increased £238,478,000 and on Consols Account Days £14,170,000, while the amounts passing through on the 4ths of the months decreased £3,354,000. The following statement, prepared by the Inspector of the Clearing-House, gives the figures for the past nineteen years:

Year.	Totals for the Years.	On Fourths of the Month.	On Stock Exchange Account Days.	On Consols Account Days.
1868.....	£3,425,185,000	£155,068,000	£523,349,000	£134,552,000
1869.....	3,626,396,000	169,729,000	564,935,000	149,932,000
1870.....	3,914,220,000	176,137,000	634,914,000	163,230,000
1871.....	4,826,034,000	211,095,000	806,356,000	210,647,000
1872.....	5,016,452,000	256,899,000	1,015,959,000	246,922,000
1873.....	6,070,948,000	272,156,000	1,038,287,000	249,755,000
1874.....	5,936,772,000	265,427,000	1,010,456,000	260,244,000
1875.....	5,685,793,000	245,810,000	1,043,464,000	251,572,000
1876.....	4,963,480,000	225,936,000	761,091,000	225,948,000
1877.....	5,042,383,000	232,630,000	744,085,000	228,254,000
1878.....	4,992,398,000	217,753,000	795,443,000	227,241,000
1879.....	4,885,937,000	213,348,000	842,937,000	225,381,000
1880.....	5,794,238,000	236,809,000	1,151,867,000	255,224,000
1881.....	6,357,059,000	253,133,000	1,383,430,000	278,864,000
1882.....	6,221,206,000	238,150,000	1,228,916,000	278,387,000
1883.....	5,929,404,000	239,080,000	1,058,703,000	254,620,000
1884.....	5,798,555,000	242,659,000	960,623,000	268,352,000
1885.....	5,511,071,000	221,873,000	935,084,000	249,327,000
1886.....	5,901,925,000	215,519,000	1,198,557,000	263,497,000

Mocatta & Goldsmid's annual circular, just issued (which is universally recognized as a first-class authority), gives an interesting review of the silver market. The price of silver was 47d. in January, 1886, and fluctuated between 46½ and 47 until April, when a rapid decline began, and, on August 3d, it touched 42d. The price then began to advance, and, on November 20th, it reached 47d. again. On November 27th it was 46½d., and no buyers for the silver offered could be found after that until December 2d, when only 45d. was paid. A rally followed, and in a fortnight it was up to 46½d., and at the close of the year it was 46½d.

The cause of the depression, which began in April, the circular says, was the continual succession of lower rates of Exchange in India, produced by the anxiety of Manchester houses to obtain cover for future shipments to India. The subsequent improvement was due to the purchase by the French Government for the coinage of dollars for Tonquin.

The shipments of silver to India during the year amounted to £4,500,000 against £3,300,000 in 1885.

Mexican dollars were in moderate demand for China early in the year, and afterwards for the French Government. The price was about 45¼d. per ounce in the first four months of the year, but fell to 41¼d. in August, subsequently advancing to 46d., the highest point for the year, on November 19th. At the close of the year the price was 45¼d., the average for the year being 44¾d. against 47 15-16d. in 1885.

The total import of silver in bars and coin for the last seven years is as follows:

	Imports.	Exports.
1880	£8,500,000	£7,250,000
1881	6,700,000	7,000,000
1882	9,100,000	8,950,000
1883	9,800,000	8,700,000
1884	9,585,000	9,720,000
1885	9,300,000	9,600,000
1886	7,015,000	7,195,000

The gold exports and imports for the past seven years were as follows:

	Imports.	Exports.
1880	£9,000,000	£11,500,000
1881	10,000,000	15,500,000
1882	14,350,000	12,100,000
1883	7,700,000	6,525,000
1884	10,870,000	11,735,000
1885	13,450,000	11,500,000
1886	13,090,000	13,500,000

C. D.

THE BANKERS' DIRECTORY AND COLLECTION GUIDE.

The new *Bankers' Directory and Collection Guide* will be mailed to nearly all subscribers a day or two in advance of this issue of the JOURNAL. Copies for remote points being sent first, near-by subscribers will please not become impatient should their copies not be received until a day or so after the JOURNAL. It requires a large number of books to supply every subscriber—more than some people have any idea of—and, besides, we have a long list of orders from those who are not JOURNAL subscribers. The latter, as a rule, are outside of the banking line—mainly merchants and others who have considerable business with the banks.

As may be seen by an examination of its pages, the new *Directory* is corrected up to January 21st—this fact is sufficient apology for its non-appearance in January.

We submit two important points wherein this work excels all others:

1st. Best arranged for ready reference.—Bankers are busy men, and they can turn to just what they want in this book without loss of time. Being arranged in the natural way, and not padded with out-of-date maps and other cumbersome insets, the desired information can be referred to and used in considerably less time than is required in making a tedious examination of any other Directory or list-book by whatever name known.

2d. Correctness, and all Changes brought down to past the middle of January.—It is a fact that all the other January Directories (so-called) close their corrections and PRINT the larger part of their edition—with the exception of their advertisements and the list of banks in a few of the large cities—in December (and some even in November) of the old year. Their edition is, therefore, comparatively useless (because lacking so many changes made in January) the very first day it comes to the banker's desk.

This fact can be verified by comparing the new *Directory* with any other January book published.

ESPECIAL attention is asked to the ADVERTISERS' REGISTER supplementing the new *Bankers' Directory*—see page 319. It contains the advertisements of very many of the Leading Banks and prominent Banking-houses of the United States and Canada. They are arranged by States in alphabetical order for easy reference. All the advertisements therein have been prepared especially for this book, giving facts and figures of much interest not only to the banking community but to the Merchants, Investors, Capitalists and others who so generally refer to this Directory for reliable information.

The New York City Cards appear on the pages immediately after the States.

BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

E. D. S. on National Banks.—Some of the JOURNAL's readers may be interested to know the spirit which prompts our correspondent to write against the "Constitutionality of the National Bank Act." In a personal note to the Editor, enclosed with his letter, which appears in this issue, he says:

"My article will no doubt be criticised and attacked—I hope it will be—at this end we will be prepared to defend the stand taken therein. I am directly and indirectly largely interested in the National banks, but, all the same, they (the National banks) are eternally throwing clubs at the banks organized under State laws, and I am tired of it, and am prompted to stand in their defence."

New York's New Bank.—Secretary of the Treasury Daniel Manning, on February 9th, was elected President of The Western National Bank, of the city of New York, and United States Treasurer C. N. Jordan was elected Vice-President. Although the capital stock of the new bank is to be \$3,000,000, subscriptions amounting to nearly \$5,000,000 have been received, and we understand that the allotment of shares has already been completed.

Mr. Ferdinand Blankenhorn—for about twenty-two years past Assistant Cashier of the Third National Bank of this city—has been elected to the position of Cashier. He is a young man of marked ability and varied experience in banking.

Among the subscribers, in addition to Messrs. Manning, Jordan and Blankenhorn, are Assistant Treasurer Charles J. Canda, Congressman W. L. Scott, of Erie, Pa.; John R. McLean, of Cincinnati; Henry B. Hyde and John A. McCall, officers of the Equitable Life Assurance Society, of New York; F. O. Matthieson, Marcellus Hartley, Eduardo Gogorza, Joseph Tilney, Ferdinand E. Canda, Sidney Dillon, of New York; Evans R. Dick, of Philadelphia, and W. C. Hall, of Louisville, Ky. The Board of Directors will shortly be elected.

The bank will occupy commodious banking rooms in New York city in the new Equitable building, on the north-east corner, fronting on Broadway and Cedar street. It is expected that the institution will be ready for business on May 1st.

Mr. Valentine P. Snyder, the newly-appointed National Bank Examiner, it is understood, will make no changes in his office, but will retain the services of the assistants of his predecessor, Mr. Scriba. These assistants, Mr. H. C. Knox and Mr. Wm. H. Mellins, are both experienced Bank Examiners, and have earned a reputation for efficiency and faithfulness in the service of the late head of the office. Mr. Knox received his training in the Public Examiner's office of Minnesota, which position he relinquished to accept one in the Pacific National Bank, of Boston. Mr. Mellins received his appointment under Mr. Scriba after the failure of the Metropolitan National Bank in 1884. He was previously connected with the National Bank of the Commonwealth until its failure, subsequently being employed in the office of the Receiver of that bank.

Comptroller Trenholm on the National Banks.—Comptroller Trenholm, on January 10th, appeared before the House Committee on Banking and Currency, at the request of the Committee, for a preliminary talk with reference to the formulation of a report upon the present condition of the National banks. He stated that he had prepared a digest of all the suggestions that had been made, and that he was preparing a commentary upon those suggestions. Mr. Trenholm declared the existing banking system to be of great merit and value, but recognized the impossibility of continuing its existence without supplemental legislation in view of the rapid redemption of the bonds. He stated that he had received a number of letters from officers of National banks indicative of their intention to abandon the system if they were compelled to replace their

called bonds with other bonds at the present high market prices. At the conclusion of Mr. Trenholm's remarks the Committee requested him to complete the work he had undertaken of preparing a commentary upon the various schemes for the continuation of the National banking system.

A Growing Life Assurance Society.—Below will be found a summary of the annual statement of the Provident Savings Life Assurance Society, of New York city, for the year ending December 31, 1886, as published by Mr. Sheppard Homans, President and Actuary of that Society. The facts and figures given bear evidence of material growth both in finances and membership.

The net assets on January 1, 1886, were \$217,404.45. The premiums received in 1886 amounted to \$648,823.50; interest, \$3,730.99. Total income, \$874,961.94, an increase during the year of \$337,567.30. The net assets increased 40 per cent. during the year.

The disbursements were: Claims by death, \$203,218.00; dividends to policy-holders, \$300,284.73; paid surrendered policies, \$7,356.53. Total amount paid to policy-holders, \$410,859.26, an increase during the year of 91 per cent. The total disbursements amounted to \$569,028.16.

The net assets on December 31, 1886, amounted to \$304,490.28. These are invested as follows: In bonds and mortgages, \$80,500.00; railroad bonds, \$28,496.25; loans on policies, \$738.55; cash on hand and in banks, \$39,809.82; agents' ledger-balances (secured), \$28,041.34; not deferred and unpaid premiums, \$14,703.34; accrued interest, \$1,707.43.

The gross assets on January 1, 1887, amounted to \$319,552.30. The liabilities (New York State standard) amounted to \$126,234.00. The Actuaries 4 per cent. amounted to \$134,241.00. The surplus (New York State standard) over all liabilities amounted to \$193,318.30. The Actuaries 4 per cent. over all liabilities amounted to \$185,311.30.

The policies in force on January 1, 1886, were 6,266. The policies in force on December 31, 1886, numbered 8,779. There were 3,630 policies issued in 1886, amounting to \$15,196.100. There were 1,117 policies terminated from all causes amounting to \$4,346.700. The total number of policies in force on December 31, 1886, numbered 8,779 and amounted to \$36,000,666.

Something of interest to business men appears in the Society's advertisement on the back cover of this issue of the JOURNAL.

A Distinguished Director.—President Dwight, of Yale College, has been elected a Director of the National New Haven Bank to fill a vacancy caused by the death of Treasurer Henry C. Kingsley.

New York City Savings Banks.—The Bank Department of New York has just completed its semi-annual statement of the savings banks of New York city, and the exhibit is important as illustrating the thrift and industry of the people of the metropolis. There are twenty-four banks in this city, and their total resources reached the large sum of \$320,475,726, while their net surplus is \$49,905,313. As indicating the improvement in the trade and industries of the country in 1886, it can be stated that the deposits increased \$14,623,318 against \$11,520,810 in 1885. It is estimated that the gain in deposits by the savings banks of the whole State for 1886 will approximate \$25,000,000, and it is gratifying to know that the institutions now in existence are generally in a prosperous and sound condition.

Of the city savings banks, the Bowery comes first with total resources of \$55,011,889 and a surplus of \$11,271,543. This is certainly a remarkable exhibit for one institution, and shows how rapidly savings will accumulate. The German has resources of \$22,873,424 and a surplus of \$1,963,083, and the Dry Dock shows resources of \$14,571,897 and a surplus of \$1,826,248.

Defaulted Southern Bonds.—Mr. Edward L. Andrews, of New York, representing a number of holders of bonds of Southern States which have been defaulted, has addressed a letter to Secretary Lamar, asking that the Interior Department bring a suit to collect the principal and interest of the bonds. The letter states that the United States Treasurer holds as custodian, in trust for certain Indian tribes, about \$1,710,000 of bonds, issued by the States of Arkansas, Florida, Louisiana, North Carolina, South Carolina, Tennessee and Virginia, the principal or interest of which, or both, have been in default for many years. Since March, 1865, Congress has appropriated for the Indian beneficiaries sums equal to the interest due and unpaid. In view of the continued disbursements from the Federal Treasury to make good the unfulfilled liabilities of these defaulted States the holders of similar repudiated bonds, who are also taxpayers, deem that they

are subjected to a peculiar hardship in being compelled to contribute to repair these deficiencies of debtors from whose acts they are also individual sufferers. The taxpayers of the country, including holders of similar bonds, have been mulcted to the extent of nearly \$100,000 per year (making an aggregate sum of more than \$2,000,000) to discharge the debts of these defaulting States, the aggregate of which is nearly \$4,000,000, and they think that the time is come, considering the financial ability of the debtor States, when further indulgence is not only unjust toward the taxpayers of the whole country, but conveys demoralizing encouragement to the States in question.

Growth of the National Banks.—The number of new National banks organized in 1886 was larger than for any previous year, although the official figures fail to show this, owing to the fact that in some recent years banks whose charters expired and were reorganized were included in the number of new banks. The following table shows the number and capital of banks organized in each month of the past two calendar years:

	NUMBER OF BANKS.		CAPITAL.	
	1885.	1886.	1885.	1886.
January	17	16	\$2,625,000	\$ 975,000
February	15	15	1,406,000	2,100,000
March	13	16	1,225,000	1,355,000
April	10	16	885,000	1,350,000
May	9	16	460,000	3,005,000
June	13	10	1,450,000	960,000
July	9	20	1,110,000	2,973,000
August	17	7	1,418,000	535,000
September	8	10	685,000	3,050,000
October	10	16	721,000	850,000
November	8	14	535,000	1,860,000
December	12	18	1,100,000	2,375,000
Total	141	174	\$13,623,000	\$20,988,000

Freedman's Savings Bank.—There is a fair prospect that Congress will at last reimburse the depositors of the defunct Freedman's Savings Bank for the deposits which they lost through the failure of that institution. A bill introduced by Mr. Dibble, appropriating \$1,000,000 for that purpose is now pending in the House. On January 11th, Senator Sherman introduced a similar bill in the Senate. It provides that the successors in office of the Commissioners of the Freedman's Savings & Trust Company be directed to pay to all depositors of the defunct company whose accounts have been properly verified and balanced a sum of money equal to the verified balance due the depositors at the time of the company's failure, less the amount of dividends which may have been declared from the assets of the company. The sum of \$1,200,000 is appropriated for this purpose.

Kansas City.—Mr. W. P. Rice, Vice-President, and E. E. Parker, Director, of the new AMERICAN NATIONAL BANK, of Kansas City, Mo., visited New York recently in the interest of their bank, and while here called at this office to express their appreciation of the good results the bank is receiving from their advertisement in the JOURNAL. As many of our readers already know, the AMERICAN NATIONAL is conducted by experienced men who are fully acquainted with the various interests as well as the requirements of the entire West and South-West, and they are rapidly building up a large business and making strong connections throughout that section. The bank has organized an exclusive Collection Department, with exceptional facilities for handling collections satisfactorily and securing prompt returns. The AMERICAN NATIONAL was organized on August 9, 1886, and the bank's many friends will be glad to hear of its progress. It has the largest paid-up capital of any bank in the South-West, amounting to \$1,250,000. On December 31, 1886, or less than five months from its organization, its deposits aggregated \$1,331,412, and its undivided profits \$41,657.

Mr. M. C. Curtis has been promoted to the position of Assistant-Cashier of the bank. He was connected with different banks in New York and Boston for several years, and was Paying-Teller and Cashier of the House of Representatives, at Washington, D. C., for four years. He resigned the latter position on January 1, 1886, and was with the

Safe Deposit & Savings Bank of Kansas City until the AMERICAN NATIONAL was started. He went with the latter bank as Paying-Teller, after two months was made Second Assistant-Cashier, and now has been made Assistant-Cashier. Mr. Curtis has obtained wide experience in the various positions he has filled which will be of great service to him in his new field.

New York and Brooklyn Trust Companies.—The annual examination in December of the Trust, Loan and Mortgage Companies of New York and Brooklyn, under the direction of Bank Superintendent Willis S. Paine, shows resources, liabilities and surplus for each company as follows:

	Resources.	Liabilities.	Surplus.
United States Trust Co.	\$41,058,204	\$34,793,912	\$6,264,092
Farmers' Loan & Trust Co.	23,320,041	20,697,471	2,622,570
American Loan & Trust Co.	5,781,189	5,698,282	81,907
Manhattan Trust Co.	201,727	180,882	20,844
United States Mortgage Co.	2,786,569	2,628,175	158,394
Union Trust Co.	26,524,967	24,130,623	2,394,344
Brooklyn Trust Co.	9,476,398	8,815,994	660,403
Knickerbocker Trust Co.	1,297,710	1,200,941	96,769
New York Life Insurance Trust Co.	18,968,204	16,296,042	2,671,962
Mutual Trust Co.	543	50,680	*50,136
Central Trust Co.	22,204,643	19,665,102	2,539,540
Title Guarantee & Trust Co.	779,093	762,000	17,093
Equitable Trust Co.	4,458,303	4,824,538	*366,144

The Hoke Extradition Case.—Chief Justice Dorlon, at Montreal, on January 7th rendered a decision on the application for a writ of *habeas corpus* in the J. F. Hoke extradition case, sustaining the decision of the Judge who committed Hoke for extradition. The Chief Justice holds that the filling-in of regular-signed drafts without authority is forgery under the law of England. He also holds that, if there was sufficient evidence upon which a petit jury could bring in a verdict of guilty, and which verdict could not be set aside as being a verdict without evidence, it was the duty of the committing magistrate to commit the accused. He therefore committed Hoke to await the final order for extradition.

Cleveland Banks.—The final statements of the banks of Cleveland for the year 1886 make the best showing in a number of years. Compared with the statements of the previous year, there is a large increase in both deposits and loans. The nine banks of the city report an aggregate capital of \$6,700,000 and surplus of \$991,854. Following are the loans and deposits of each bank on December 28, 1886, compared with December 24, 1885:

	LOANS.		DEPOSITS.	
	Dec. 24, 1885.	Dec. 28, 1886.	Dec. 24, 1885.	Dec. 28, 1886.
National Bank of Commerce....	\$2,387,162	\$3,254,101	\$2,630,162	\$3,296,982
Commercial National Bank....	2,644,248	3,281,576	2,605,876	2,839,489
Mercantile National Bank....	1,965,182	2,194,950	2,584,822	2,531,851
Union National Bank....	1,445,049	2,140,445	1,378,710	1,604,133
First National Bank....	1,202,089	1,178,105	781,185	989,905
Cleveland National Bank....	873,406	1,209,565	643,648	774,838
Euclid Avenue National Bank..		850,015		495,796
Ohio National Bank....	822,591	1,067,385	652,085	1,150,297
National City Bank....	514,194	716,036	640,109	791,833
	\$11,704,021	\$15,662,678	\$12,172,097	\$14,461,624

Baltimore.—The National Mechanics' Bank, of Baltimore, on January 11th, elected Mr. John B. Ramsay its President. Mr. Ramsay is a young man who has had wide experience in the banking business, and in every way is well qualified for the position to which he has been called. He came to Baltimore from Port Deposit, Md..

where he was Cashier of the Cecil National Bank. He was elected Cashier of the People's Bank, of Baltimore, which he made a flourishing institution. He resigned that position to become the head of the banking firm of Ramsay, Clabaugh & Co., which also became a very successful house. When Mr. Orson Adams resigned as Bank Examiner for that district Mr. Ramsay was appointed his successor, and performed the duties of the office up to the present time in a most able and satisfactory manner. He has won the respect and esteem of all with whom he has been in any way connected, and the National Mechanics' Bank is expected to prosper under his care as it never did before. The Directors are Messrs. William F. Lucas, Robert Lehr, S. Hamilton Caughy, Thomas Deford, Robert Garrett, Alexander Brown, George C. Jenkins, Jesse Hill and John B. Ramsay.

Values of Foreign Coins.—The following estimation of the value of foreign coins, made by the Director of the Mint, I hereby proclaim to be the values of such coins expressed in the money of account of the United States, and to be taken in estimating the values of all foreign merchandise, made out in any of said metallic currencies, imported on or after January 1, 1887.

DANIEL MANNING, *Secretary of the Treasury.*

TREASURY DEPARTMENT, BUREAU OF THE MINT, {
WASHINGTON, D. C., January 1, 1887. }

Hon. Daniel Manning, Secretary of the Treasury:

SIR:—In pursuance of the provisions of Section 3,564 of the Revised Statutes of the United States, I have estimated the values of the standard coins of the various nations of the world, and submit the same in the following table:

Country.	Standard.	Monetary Unit.	Par of exchange or equivalent value in terms of U. S. gold dollar.	Coins.
Argentine Rep'lie.	Double.....	Peso	\$0.965	Gold: argentine (\$4.82,4) and $\frac{1}{2}$ argentine. Silver: Peso and divisions.
Austria	Single silver	Florin36,9	Gold: 4 florins (\$1 92,9), 8 florins (\$3.85,8), ducat (\$2 28,7) and 4 ducats (\$9.15,8). Silver: 1 and 2 florins.
Belgium.....	Double.....	Franc.....	.19,3	Gold: 10 and 20 francs. Silver: 5 francs.
Bolivia.....	Single silver	Boliviano....	.72,7	Silver: Boliviano and divisions.
Brazil	Single gold.	Milreis of 1,000 reis.....	.54,6	Gold: 5, 10, and 20 milreis.
Brit'h Poss's, N.A.	Single gold.	Dollar.....	1.00	Silver: $\frac{1}{2}$, 1, and 2 milreis.
Chili.....	Double.....	Peso91,2	Gold: escudo (\$1 82,4), doubloon (\$4.56,1) and condor (\$9.12,3). Silver: Peso and divisions.
Cuba.....	Double.....	Peso98,2	Gold: doubloon (\$5.01,7). Silver: peso.
Denmark	Single gold.	Crown26,8	Gold: 10 and 20 crowns
Ecuador.....	Single silver	Sucre.....	.72,7	Gold: doubloon (\$3.85,8), condor (\$9.84,7) and double-condor. Silver: sucre and divisions.
Egypt.....	Single gold.	Pound (100 piastres)...	4.94,8	Gold: pound (100 piastres), 50 piastres, 20 piastres, 10 piastres and 5 piastres. Silver: 1, 2, 5, 10, and 20 piastres.
France.....	Double..	Franc.....	.19,3	Gold: 5, 10, 20, 50 and 100 francs. Silver: 5 francs.
German Empire..	Single gold.	Mark.....	.23,8	Gold: 5, 10 and 20 marks.
Great Britain.....	Single gold.	Pound sterling.....	4.86,64	Gold: sovereign (pound sterling) and $\frac{1}{2}$ sovereign.

Greece	Double.....	Drachma19.3	Gold: 5, 10, 20, 50 and 100 drachmas. Silver: 5 drachmas.
Hayti	Double.....	Gourde96.5	Gold: 1, 2, 5 and 10 gourdes. Silver: gourde.
India	Single silver	Rupee of 16 annas34.6	Gold: mohur (\$7.10.5). Silver: rupee and divisions.
Italy	Double..	Lira19.3	Gold: 5, 10, 20, 50 and 100 liras. Silver: 5 liras.
Japan	*Double.....	Yen (Gold99.7	Gold: 1, 2, 5, 10 and 20 yen. Silver: yen.
Liberia	Single gold.	Dollar	1.00	
Mexico	Single silver	Dollar78.4	
			.79	Gold: dollar (0.96.3), 2½, 5, 10 and 20 dollars. Silver: dollar (or peso) and divisions.
Netherlands	Double.....	Florin40.2	Gold: 10 florins. Silver: ¼, 1 and 2½ florins.
Norway	Single gold	Crown26.8	Gold: 10 and 20 crowns. Silver: sol and divisions.
Peru	Single silver	Sol72.7	
Portugal	Single gold.	Milreis of 1,000 reis	1.08	Gold: 1, 2, 5 and 10 milreis.
Russia	Single silver	Rouble of 100 copecks.....	.58.2	Gold: imperial (\$7.71.8) and ½ imperial + (\$3.65.9). Silver: ¼, ½ and 1 rouble.
Spain	Double.....	Peseta of 100 centimes.....	.19.3	Gold: 5, 10 and 25 pesetas. Silver: 5 pesetas.
Sweden	Single gold.	Crown26.8	Gold: 10 and 20 crowns.
Switzerland	Double..	Franc19.3	Gold: 5, 10, 20, 50 and 100 francs. Silver: 5 francs.
Tripoli	Single silver	Mahbub of 20 piastres65.6	Gold: 25, 50, 100, 250 and 500 piastres.
Turkey.....	Single gold.	Plastre04.4	Gold: condor (\$9.64.7) and double-condor. Silver: peso.
U. S. of Colombia.	Single silver	Peso72.7	Gold: 5, 10, 20, 50 and 100 bolivars. Silver: 5 bolivars.
Venezuela	Double.....	Bolivar19.3	

* Gold the nominal standard. Silver practically the standard.

† Coined since January 1, 1886. Old half-imperial = \$3.94.6.

NOTE.—The "Standard" of a given country is indicated as follows, namely: *Double*, where its standard silver coins are unlimited legal-tender, the same as its gold coins; *Single gold* or *Single silver*, as its standard coins of one or the other metal are unlimited legal-tender. The par of exchange, of the monetary unit of a country, with a single gold, or a double, standard is fixed at the value of the gold unit as compared with the United States gold unit. In the case of a country with a single silver standard, the par of exchange is computed at the mean price of silver in the London market for a period commencing October 1st and ending December 26, 1886, as per daily cable despatches to the Bureau of the Mint.

JAMES P. KIMBALL, *Director of the Mint.*

Pennsylvania Banks.—The annual message of the Governor of Pennsylvania states that there are eighty-one banks incorporated by the State, of which more than sixty have special charters. Nearly one-fifth of them pay no dividends. There are 266 private bankers and banks in the State. Of these the number reporting an annual income exceeding \$10,000 is forty-one; exceeding \$5,000 and under \$10,000, twenty-seven; exceeding \$4,000 and under \$5,000, eleven; exceeding \$3,000 and under \$4,000, nineteen; exceeding \$2,000 and under \$3,000, thirty-two; exceeding \$1,000 and under \$2,000, thirty-eight; exceeding \$500 and under \$1,000, twenty-five; less than \$500, forty-four; and reporting no net earnings or income, twenty-nine. Some of these private banks have large lines of deposit for which the depositors have no security but the property of the individual bankers, which, in case of disaster, is generally found to be mortgaged for all that it is worth, or to have changed hands clandestinely. The Auditor-General cites one instance in which a private bank with \$300,000 on deposit returned an income of \$68 for 1883, for 1884 reported no income at all, and then closed its doors with a promise to pay the depositors twenty cents on the dollar. During the last three years four incorporated banks went into liquidation, and eleven private banks failed, causing a loss to depositors of between \$1,500,000 and \$2,000,000.

Texas—Fort Worth.—A new bank, to be known as the Merchant's National, has been organized at Fort Worth, Texas, through the efforts of Mr. A. B. Smith, formerly Cashier of the State National Bank of that city. Mr. Smith resigned his position, to take effect on January 13th, for the purpose of organizing the new bank. Mr. Smith

is highly thought of in Fort Worth, and, when the fact that he was about to resign became known, some fifty of the leading business men of the city signed a letter addressed to him in which some very complimentary things are said.

Production of Precious Metals.—Mr. John J. Valentine, of Wells, Fargo & Co., who for years has published trustworthy statistics on the production of gold and silver in the United States, has issued his annual statement for the year 1886. The amount produced in the States and Territories west of the Missouri River (including British Columbia, and receipts by express from the West Coast States of Mexico) he states as follows: Gold, \$30,773,759; silver, \$53,776,055; copper, \$9,276,755; lead, \$9,185,192; total, \$108,011,761. The net product of gold and silver in the States and Territories west of the Missouri (exclusive of British Columbia and the West Coast of Mexico) for the last seven years is reported as follows:

	Gold.	Silver.
1880.....	\$32,559,067	\$38,033,055
1881.....	30,653,959	42,987,613
1882.....	29,011,318	48,133,639
1883.....	27,819,840	42,975,101
1884.....	25,183,567	43,529,925
1885.....	26,393,756	44,516,569
1886.....	29,561,424	52,136,851

The product of gold and silver in Mexico from 1877 to 1886 is reported as follows:

	Gold.	Silver.	Total.
1887-78.....	\$661,385	\$21,451,785	\$22,113,170
1878-79.....	662,524	21,405,380	22,067,854
1879-80.....	474,632	23,383,448	23,858,082
1880-81.....	380,301	28,583,135	23,963,436
1881-82.....	382,752	24,009,525	24,392,277
1882-83.....	380,419	22,921,921	23,302,340
1883-84.....	420,000	24,240,000	24,660,000
1884-85.....	385,000	25,087,356	25,472,356
1885-86.....	450,000	26,000,000	26,450,000
Total.....	\$4,197,013	\$212,082,500	\$216,229,513

Michigan.—The Second National Bank, of Hillsdale, Mich., went into voluntary liquidation on December 18, 1886, and a new bank, to be known as "The Waldron Bank," was organized as its successor by Messrs. C. W. Waldron and E. L. Koon, former President and Vice-President of the old bank. Messrs. Waldron and Koon are the principal owners, and they retain Mr. J. R. Wyllie as Cashier. The new bank is even stronger than the old bank, as the owners are individually liable for the deposits of the bank. Both the owners are well-known as careful and able bankers, and under their guidance the new institution will secure public confidence and patronage.

Duluth, Minn.—Two very important movements have been inaugurated in Duluth which will give that point largely increased banking facilities. One bank, called the Union National Bank, of Duluth, has been organized with an authorized capital of \$2,000,000, and opens with a paid-up capital of \$500,000. It is owned principally by a syndicate of Chicago capitalists, interested in the Union National Bank, of Chicago. Mr. J. J. P. Odell is President, Mr. C. P. Cummings, Vice-President, and H. A. Ware, Cashier. Mr. N. B. Ream, the wheat operator of Chicago, and President Fisher, of the St. Paul & Duluth road, are interested in the enterprise. Another bank is to be organized under State charter with a capital of \$200,000. George V. Foreman and Mr. Barch, of Olean, N. Y., are interested, and Mr. E. H. Bond, of Buffalo, N. Y., is to be made Manager. These two banks will more than double the banking capital of Duluth, making the total amount \$1,300,000, divided among six banks.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

—Shannon's Bank, of Terre Haute, Ind., closed its doors on January 19th. The liabilities are \$39,000 and assets \$10,000. The bank was established in 1839. Mr. Shannon

died last spring, and since then the bank's affairs have been conducted by an administrator.

— The surplus silver brick in Uncle Sam's hat is getting heavier and heavier.—*Philadelphia Record*.

— Mr. W. G. Deshler, a banker of Columbus, Ohio, has given \$100,000 to the Columbus Female Benevolent Society.

— A bill has been introduced in the New York Legislature authorizing savings banks to invest in city scrip.

— The new \$5 silver certificates are almost ready to be issued. They have on them a vignette of General Grant.

— Jesse B. Abrahams, of Virginia, has been appointed Deputy-Comptroller of the Currency *vice* Snyder, resigned.

— Ex-Bank Examiner A. M. Scriba, has accepted the position of Cashier of the Shoe & Leather Bank, of New York.

— The Court of Appeals of Canada has decided against J. F. Hoke, the Peoria, Ill., defaulter, in the extradition proceedings.

— It is reported that Mr. John H. Rogers will retire from the Presidency of the Freeman's National Bank, of Boston, Mass.

— The Albany National Bank, of Laramie City, Wyo., has been authorized to commence business with a capital of \$100,000.

— The calls for the redemption of Government bonds in 1886 aggregated \$127,000,000 against \$10,000,000 in 1885 and \$70,000,000 in 1884.

— The Riverside Bank, located at the corner of Eighth Avenue and Fifty-seventh street, this city, began business on January 13th.

— London's *per capita* tax is \$7.40, while New York's is \$36.65. The difference is not due to the relative sizes of the heads, either.

— William A. Duer has been appointed Receiver of the Guardian Savings Institution, of New York City, in place of John T. McGowan.

— A bank has been established at Hammononton, N. J., the requisite number of shares of stock being subscribed for by leading citizens.

— Silver dollars are finding their way back into the Treasury almost as rapidly as they were put into circulation in November and December.

— Charles E. Cooper, of Keene, N. H., has been appointed Bank Commissioner for New Hampshire, in place of B. C. Carter, of Dover, deceased.

— The Comptroller of the Currency has declared a 10 per cent. dividend in favor of the Richmond (Indiana) National Bank, making 46 per cent. in all.

— "What becomes of all the counterfeit coins?" excitedly asks an exchange. Most of them eventually find their way into the contribution boxes.—*Chicago Tribune*.

— William A. Heard, of Sandwich, N. H., has been appointed National Bank Examiner for Maine and New Hampshire, which are now consolidated into one district.

— Bank Superintendent Willis S. Paine has authorized the organization of a savings bank at Amsterdam, N.Y. There is no other savings institution in Montgomery County.

— The depositors of the Hush Bank, of Minneapolis, Minn., have agreed to a settlement of 85 cents on the dollar, with a promise of payment of the remainder.

— Calvin Platt, who forged \$14,000 of checks on the Pacific Bank, of San Francisco, and was extradited from Japan for the crime, has been sentenced to 14 years in State Prison.

— The Northern Savings Fund, Safe Deposit & Trust Company, of Philadelphia Pa., has called in the balance of its unpaid capital (\$250,000), which will make the total \$500,000.

— The Comptroller of the Currency has declared a first dividend of 50 per cent. in favor of the creditors of the First National Bank, of Blair, Neb., on claims amounting to \$54,278.

— Mr. Wm. F. Whiting has been elected a Director of the Holyoke (Mass.) National Bank by a full vote to fill a vacancy caused by the resignation of his father, Congressman

Wm. Whiting. The directors unanimously re-elected President George W. Prentiss and Vice-President R. B. Johnson thus conferring a high compliment on those gentlemen.

— Mr. Percy M. Lewis, Cashier of the Third National Bank, of Philadelphia, Pa., has been elected President of that bank in place of Mr. David B. Paul, who declined a re-election.

— The new Ninth Avenue Bank, in New York city, will be opened for business on March 1st at Ninth avenue near 59th street. The capital is \$100,000. Mr. William H. Bellamy is the President.

— George M. Bain, Jr., Cashier of the insolvent Exchange Bank, of Norfolk, Va., has been sentenced to five years in the Albany Penitentiary for making false entries in the books of the bank.

— The Comptroller of the Currency has appointed Mr. James W. Hyatt, of Norwalk, Conn., to be National Bank Examiner in Connecticut and Rhode Island in place of Mr. A. B. Mygatt, who resigned.

— The new \$2 silver certificates have been issued. They are—but, hold on, if the United States Treasurer wants us to notice his publications he had better send along some sample copies.—*Independent*.

— The International Trust Company, of Boston, has made an application for offices covering over 10,000 feet of floor room in the new banking building to be erected on State street by the Porter syndicate.

— Of the \$10,000,000 3 per cent. bonds called for redemption on December 28th, \$8,636,000 were held by the Treasury to secure bank note circulation. This is the largest proportion so held under any call yet issued.

— The South Cleveland Banking Company has re-elected its old board of officers, with Mr. Joseph Turney as President. The deposits of the bank aggregate nearly \$400,000, an increase of \$40,000 in the past six months.

— Mr. S. A. Carlton, President of the Security National Bank, of Boston, sailed on January 19th for a six months trip in Europe. Before his departure he was presented with an elegant silver service by the Directors of the bank.

— The safe of the Belmont Savings Bank, of Belmont, Mass., was blown open by burglars about midnight on January 18th. A large amount of securities was stolen and a small sum of cash. Only two bonds valued at \$1,500 were negotiable.

— The City of New Bedford, Mass., has begun suit in the State Courts against the National banks which have refused to pay their taxes this year and are seeking in the United States Courts to recover the taxes which they paid under protest last year.

— The Fidelity National Bank, of Cincinnati, O., which has been in operation only since March 1, 1886, has paid a dividend of 1½ per cent. on its \$1,000,000 capital stock and carried \$50,000 to its surplus account, besides having \$10,548 of undivided profit.

— The Comptroller of the Currency has ordered an assessment of 50 per cent. on the stock of the Rahway National Bank. The assessment is understood to have been made on the recommendation of President Price, who desired to have the bank put on a sound financial basis.

— Receiver John T. McGowan, of the Guardian Savings Bank, after a judgment for \$77,000 had been rendered against him by the Referee, applied to Judge Barrett to reopen the case. The Court denied the motion. The Receiver claims that only \$152 is owing by him to the bank.

— C. N. Wheeler, a member of a banking firm in Chicago, which did business in Western farm loans, has been arrested on the charge of larceny. The firm used the money received in investments which proved disastrous, and Wheeler left Chicago, but was arrested in Connecticut.

— The East End Savings Bank Company is the title of a new bank organized in Cleveland. It has been started as a savings institution, but also does a general commercial banking business. Mr. J. H. McBride is President; V. C. Taylor, Vice-President, and Charles A. Post, Secretary and Treasurer.

— The Germania Savings Bank, of Jersey City, N. J., closed its doors on January 29th. Claus M. E. Schroeder, the Secretary and Treasurer, disappeared, and is believed

to have taken \$30,000 of the bank's funds. He left at the bank a six months' note for that amount, payable to the order of President Leinan, dated January 31st.

— A bill has been introduced in the House by Mr. Findlay of Maryland (by request) to make gold and silver coin jointly legal-tender; to authorize the issue of legal-tender certificates for half gold and half silver coin, and to provide that the fund for redeeming Treasury notes and the coin reserves of National banks shall be held one-half in gold coin and one-half in silver coin.

— Howard T. Blackstone, the defaulting Cashier of the Canal National Bank, of Portland, Me., was arrested at Winnipeg, Man., on January 12th. He was traced to Winnipeg by detectives who followed his wife. Blackstone defrauded the Canal Bank of \$78,500 by forging drafts, and has been in Winnipeg for two months, where he has been employed as collector by several firms.

— The Canadian Bank of Commerce has appointed Mr. A. M. Crombie as Manager of the Montreal branch in place of Mr. Robert Gill, who takes another important position in the same bank. Mr. Crombie for seven years past has been Local Manager of the Merchant's Bank, of Montreal, and has been Manager of the Merchant's Bank at Hamilton, and of the Commercial Bank at St. Thomas, Ont.

— Mr. I. R. Holmes, of Garden City, Kansas, has sold his bank at Lamar to Messrs. J. H. Borders and A. V. Scott, who will continue the business under the firm name of Borders & Scott until a charter for a National bank can be obtained. Mr. Borders was Cashier of the Bank of Coolidge, and Mr. Scott is a well-known capitalist of Creston, Iowa. Mr. Holmes has started a new bank at La Junta, Col., called the Bank of Commerce. He is the President and Lester Hays is the Cashier.

— Messrs. Ellis & Saunders have transferred the ownership of the Linn County Bank, of La Cygne, Kansas, to a stock company, organized under the laws of the State of Kansas. The Trustees for the first year are W. P. Rice, George J. Miller, George C. Wynkoop, G. R. Saunders, A. Freidman, W. O. Fuller, Jr., and B. Ellis. The capital stock has been fixed at \$50,000. The bank has been very successful, and the names of the gentlemen who have gone into the company assure a continuance of its prosperous course.

— The Marble Savings Bank, of Rutland, Vt., during the year ending February 1, 1887, issued 421 deposit books to pupils of the graded schools, aggregating \$1,037. It is believed that the Rutland schools were the first to adopt this system of savings in this country, though the practice has obtained in several other cities. The method adopted is for the pupils each day to bring whatever pennies they have to their teachers till the end of the month, and then all individual amounts of fifty cents or over are deposited in the savings bank.

— On the application of the depositors of the insolvent Bowling Green Savings Bank, of New York City, Judge Lawrence, on January 13th, appointed Charles H. Hall as Receiver of the bank in place of the late Shepherd F. Knapp. Mr. Hall was a depositor in the bank and had become familiar with its affairs. At the time of Receiver Knapp's death he had \$7,000 of cash assets in his custody, and was prosecuting several suits to recover money he claimed to be due the bank, which failed in 1871 at the time the Tweed ring concern known as the Guardian Savings Institution went to pieces.

— The Secretary of the Treasury has recommended to Congress the amendment of the laws governing the issue and redemption of minor coin. He points out that the coins frequently accumulate in the Treasury and Sub-Treasuries of the United States, which are the only agencies for the redemption of minor coin, while there may be a pressing demand for the coin in parts of the United States remote from the Treasury and its branches. The Secretary suggests that authority be conferred upon him to transfer coin from the Treasury to the Mint, and allowing him to retain from the balance of the minor coinage profit fund, which is now covered into the Treasury, a sum not exceeding \$35,000 in any one year to defray the expenses of the distribution.

— In the suit of the Shackamaxon Bank, of Philadelphia, Pa., against William Bumm & Sons, Thomas L. Huggard, the Cashier, Samuel P. Milligan, the Teller, and Joseph Conklin, a contractor, the Master, Edward Barry has filed a report holding the President, Cashier and Teller responsible for the defrauding of the bank by Conklin. He finds that neither George W. Bumm nor William H. Bumm, the sons of the dead President, had any knowledge of the fraud. Mr. Barry finds that the bank

lost \$130,210.29, and he annexes a decree for this amount against Huggard and Milligan; \$149,538.23 against Conklin; \$235,823.42 against the estate of William Bumm; \$138,233.19 against George W. Bumm and William H. Bumm, surviving partners of their father, and \$4,720.39 against George W. and William Bumm as partners of the new firm after their father's decease.

— The St. Paul *Pioneer Press* of January 16th mentions the annual meeting of the stockholders of the First National Bank, of Anoka, Minn., which took place on the 15th ult., the old officers being re-elected, as follows: *President*, H. L. Ticknor; *Vice-President*, R. M. Taylor; *Cashier*, P. F. Pratt; *Directors*, H. L. Ticknor, A. C. Franman, E. L. Keed, C. T. Woodbury, D. C. Dundam, R. M. Taylor, P. F. Pratt. The *Pioneer Press* adds that the condition of the bank is first-class. Since the great fire at Anoka the bank has made good the heavy loss sustained by the conflagration and is now paying a handsome dividend.

— Some remarkable communications are sometimes addressed to United States Treasury officials. The Assistant Treasurer at New York recently received a letter written on paper with the heading of a country bank asking how many of the standard silver dollars must be purchased in order to secure the discount, and what the discount is. An answer was returned that the United States is not in the habit of depreciating its own currency. Another letter, from a merchant, contained an order for \$50 worth of 5 cent pieces to be sent by express C. O. D. The coin was not delivered, as the United States collects in advance.

— The National banks of Chicago, Minneapolis and St. Paul have sent a petition to Congress to have the bill making certain cities reserve cities amended so that banks in reserve cities may deposit one-half their reserve with bank in cities outside of New York. The Chicago banks ask that Chicago be placed on an equality with New York, the St. Paul banks that Chicago, St. Louis, Milwaukee and Boston be granted equal privileges with New York and the Minneapolis banks that Chicago and St. Louis be raised to equal dignity with New York.

R. R. AND INVESTMENT NEWS.

New Issues.

STOCK EXCHANGE LIST.—The following securities have been listed at the New York Stock Exchange:

Illinois Central Railroad Company.—An additional \$1,000,000 capital stock, making the total amount now listed \$30,000,000.

Denver & Rio Grande Western Railway Company.—Capital stock, 75,000 shares of the par value of \$100 per share, amounting to \$7,500,000.

Union Pacific Railway Company.—An additional \$1,016,000 collateral trust 5 per cent. bonds, making the total amount now listed \$5,583,000.

Fort Worth & Denver City Railway Company.—An additional \$820,000 first mortgage 6 per cent. bonds, making the total amount now listed \$3,820,000.

James River Valley Railroad Company.—An additional \$228,000 first mortgage sinking fund 6 per cent. gold bonds, making the total amount now listed \$963,000.

Northern Pacific Railroad Company.—An additional \$1,000,000 first mortgage and land grant 6 per cent. bonds, making the total amount now listed \$52,500,000.

East Tennessee, Virginia & Georgia Railway Company.—An additional \$1,995,000 consolidated first mortgage gold bonds, making the total amount now listed \$12,770,000.

St. Paul & Northern Pacific Railway Company.—Registered bond certificates as issued in exchange for general mortgage 6 per cent. forty-year gold coupon bonds.

The Wheeling & Lake Erie Railway Company.—First mortgage 5 per cent. gold bonds, due October 1, 1926, \$3,000,000 and \$3,800,000 capital stock of the par value of \$100 per share.

Milwaukee, Lake Shore & Western Railway Company.—An additional \$160,000 of first mortgage Michigan Division 4 per cent. bonds, making the total amount now listed \$1,281,000.

Chicago, Rock Island & Pacific Railway Company.—An additional \$2,000,000 first mortgage extension and collateral 5 per cent. bonds, making the total amount of issue now listed \$6,860,000.

Norfolk & Western Railroad Company.—An additional \$400,000 of improvement and extension 6 per cent. bonds, making the total amount now listed \$3,300,000, and

an additional \$208,000 general mortgage 6 per cent. bonds, making the total amount listed \$6,902,000.

Chicago, Milwaukee & St. Paul Railway Company—An additional \$420,000 first 5 per cent. bonds of the Chicago & Pacific, Western Division, making the total amount now listed \$21,100,000.

Tennessee Coal, Iron & Railroad Company—An additional 70,000 shares of the capital stock issued for the acquisition of and consolidation with other properties, making the total amount now listed \$10,000,000.

Cincinnati, Washington & Baltimore Railroad Company—An additional 1,000 shares of preferred and 750 shares of common stock, making the total amounts now listed \$12,993,200 of preferred and \$5,886,100 of common stock.

St. Louis, Arkansas & Texas Railway Company—Central Trust Company certificates for \$9,529,000 first mortgage bonds, Mercantile Trust Company certificates for \$9,529,000 second mortgage bonds, and \$9,550,000 capital stock.

The Cameron Iron & Coal Company—Is a reorganization of the old Cameron Coal Company with a capital stock of \$3,000,000, and free from debt. Of the capital stock \$290,000 remains in the company's treasury and \$2,720,000 issued is listed. On February 1st the stock of the Cameron Coal Company will be stricken from the list.

Chesapeake & Ohio Railway Company—Extended 4's of 1886, coupon and registered, which are the assents of series B 6's, to an extension of the maturity of the bond from 1906 to 1966, and to a reduction of the annual interest to 4 per cent., which assent is stamped upon such bonds as have been presented. The assents up to January 12th amounted to \$2,693,900 out of an issue of \$15,000,000.

FORT WORTH & WESTERN.—The stockholders will meet on March 19th to vote on the proposed issue of first mortgage forty-year 6 per cent. bonds at the rate of \$15,000 per mile.

BALTIMORE & OHIO.—This company has arranged to issue \$2,000,000 4½ per cent. mortgage bonds secured by a mortgage on rolling stock. They are payable (\$200,000 each year) in ten years.

CHICAGO, BURLINGTON & QUINCY.—An issue of \$11,000,000 4 per cent. bonds were sold by this company to a syndicate headed by Lee, Higginson & Co. and Kidder, Peabody & Co. last month at 95½.

DISTRICT OF COLUMBIA DEBT.—The United States Treasurer reports that the total funded debt of the District of Columbia is now \$21,041,000, being \$1,903,350 less than it was at its highest point on July 1, 1878.

CINCINNATI, HAMILTON & DAYTON.—The stockholders on January 5th voted to issue \$50,000 new stock and the issue of \$50,000 in bonds to run fifty years with interest at 4½ per cent. The proceeds will be used in betterment of the track and in giving better terminal facilities.

ILLINOIS CENTRAL.—On January 18th the stockholders voted to increase the capital stock from \$29,000,000 to \$30,000,000, the new stock to be issued at \$136 per share. The proceeds are to be used in payment of elevator property at Chicago, for double tracking the line to Kankakee and buying car equipment.

BOSTON & LOWELL.—At the annual meeting the stockholders voted to authorize the issue of \$500,000 of bonds for the purchase of real estate and the improvement of the property of the company. On January 5th the company sold 2,000 shares at auction in Boston at 138¼ to Lee, Higginson & Co.

NEW YORK, CHICAGO & ST. LOUIS.—An agreement between the first mortgage bondholders of this company and the Lake Shore Company is reported to have been made under which new \$20,000,000 4 per cent. mortgage bonds will be issued by the New York, Chicago & St. Louis, which will be guaranteed by the Lake Shore. The stocks of the former will be reduced one-half to \$11,000,000 of preferred and \$14,000,000 of common stock.

RICHMOND & WEST POINT TERMINAL.—The Directors have authorized the issue of \$14,000,000 new common stock and a new 6 per cent. 10-year collateral trust bond for \$6,500,000. Of the new stock \$10,000,000 will be given for the Richmond and Danville outstanding stock, four shares of Richmond Terminal for one of Richmond and Danville stock. The remaining \$4,000,000 will be given to the East Tennessee syndicate as part payment for 60,000 shares of East Tennessee first preferred stock. The terms

of purchase of East Tennessee first preferred stock are \$4,400,000 in cash and 40,000 shares of Richmond Terminal stock. The collateral trust bond is given to the syndicate as security for the loan of \$8,500,000. Of this amount \$4,400,000 will be used to pay for the East Tennessee stock and the balance will be used for retiring the floating debt.

Railroad Reports.

NEW YORK CENTRAL & HUDSON RIVER.—The annual report of this company covers the year ended September 30, 1886. It shows the following:

	1884-5.	1885-6.
Total gross earnings.....	\$21,640,175	\$28,048,804
Operating expenses.....	16,819,372	18,610,377
Net earnings.....	\$5,320,803	\$9,438,427
Summary of income account:		
Total net income.....	\$8,110,066	\$11,895,985
Total disbursements.....	9,063,717	10,823,017
Balance.....	Deficit, \$953,651	Sur., \$1,072,968

The total surplus at the end of the fiscal year is reported at \$11,473,468 against \$10,508,332 for the previous year.

NEW COUNTERFEITS, SPURIOUS COINS, ETC.

COUNTERFEIT TEN-DOLLAR Canadian Bank of Commerce notes are reported in circulation in Ottawa.

BOGUS TEN-CENT PIECES, which are described as being among the best counterfeits yet seen, are being circulated in Kingston City and elsewhere along the Hudson river.

DURING THE YEAR 1886 thirty-three arrests were made by the United States authorities in New York city of persons passing counterfeit money. In these cases twenty-four prisoners were convicted and sentenced and nine were acquitted.

JOSEPH H. WHITE, of Waco, Texas, who was arrested in St. Louis in August, 1886, on the charge of counterfeiting Brazilian Treasury notes, has been sentenced to three years in the Penitentiary. His brother, Lucius White, who turned State's evidence, will be released.

A LARGE NUMBER of counterfeit silver dollars bearing the date 1881, 1882 and 1885 have been circulated in Chicago. Almost daily some of them appeared at the Sub-Treasury in that city having been received from various careless bank Tellers that in turn received them from retail stores. The 1885 counterfeit is reported to be quite deceptive.

A COMPARATIVELY NEW COUNTERFEIT silver dollar of the date 1882 is in circulation in the West. The weight is nearly correct and the milling good. The ring is the same as that of the genuine coin, but the color is not good. The counterfeit is reported to be deceptive and not easily detected except by expert bankers.

THE ANNUAL REPORT for 1886 of Chief Brooks of the United States Secret Service shows that 433 persons were arrested for various crimes connected with counterfeiting. There were 97 persons convicted and 49 pleaded guilty. The aggregate terms of imprisonment imposed were 465 years, 3 months and 6 days, and the aggregate fines \$13,739. Mr. Brooks says that the past year was prolific in counterfeits. In the South a \$20 counterfeit silver certificate of the series of 1880 appeared, but the work was so poor that little damage was done, and the criminals were quietly arrested. Next was a photographic counterfeit \$5 note on the West National Bank, of New Bedford, Mass. Then came the counterfeit \$2 and \$5 notes of 1880. These notes were in the hands of Italians. A neat \$5 note on the Central National Bank, of Norwalk, Conn., was discovered, and the counterfeiters were soon apprehended in Canada. An attempt was made to circulate a \$20 note of the Mohawk Valley Bank, of Mohawk, N. Y., but the counterfeiters were arrested before any were put in circulation, and are now awaiting trial. Chief Brooks states further that it is a remarkable fact that there are more Italians engaged in the manufacture of counterfeits than people of any other nationality.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

CONSTITUTIONALITY OF THE NATIONAL BANK ACT.*

Editor Rhodes' Journal of Banking:

SIR:—Your courteous answer in the December, 1886, number to my inquiry as to the constitutionality of the present system of National banks refers me to the decisions of the Supreme Court of the United States upon the subject and quotes from the text of some of them. As I cannot consider this an entirely satisfactory reply to my question I beg leave to recur to the subject.

I am not "a lawyer nor the son of a lawyer," but a banker who, like other business men, has made some study of the Constitution of the United States, and who has not been able to overcome his doubts of the authority of Congress, under the Constitution, to establish the existing system of National banks. The decisions to which you refer are, undoubtedly, those upon which the constitutionality of the Banking Acts of 1863-4 is sustained. But in those cases the direct question of constitutionality was not fully argued or considered. The truth is (and lawyers will sustain me in the statement, and these very decisions show), that the power of Congress to establish such banks was taken for granted and held to have been finally decided by the old cases of *McCulloch vs. Maryland*, 4 *Wheat.*, 316, and *Osborn vs. The Bank of the United States*, 9 *Wheat.*, 738, which decided that the Bank of the United States was constitutional as a means for carrying into effect the powers vested in the Federal Government. The States have long acquiesced in these decisions, and perhaps it may be regarded as finally settled. And this being so, the establishment of the National banking system in 1863-4 elicited but little discussion in denial of the power of Congress. (See Judge Cooley's note, in his edition of "Story on the Constitution," Vol. II, page 160.)

Admitting all this, my doubts are not resolved nor my inquiry answered. As a plain business man I look to the language of the Constitution as the source of the power of Congress upon the subject. I cannot find any words which justify the Supreme Court in deciding that Congress has constitutional power "to provide a currency for the country." The language of the Constitution is not ambiguous, and I find nothing in it relating to money, or anything representing money, except the power given to Congress "to coin money, regulate the value thereof," etc. (Art. I, Sec. 8). But the constitutionality of National banks has never, by the Supreme Court, been placed upon this provision of the Constitution.

The reasoning upon which the Court, in the cases above-mentioned held that a United States bank was constitutional, was that Congress, by virtue of its incidental powers, viz., those implied as necessary and proper to carry into effect the express powers granted, may establish United States banks. (See the cases cited, and "Story on the Constitution," Vol. 2, Book III., Chap. 25.) Judge Story expressly says, speaking of the Constitution: "It is true that, among the enumerated powers, we do not find that of establishing a bank or creating a corporation." So that I am right in thinking that the *letter* of the Constitution does not authorize Congress to establish National banks.

Now my difficulty is this: Even if it was long ago decided by the Supreme Court that the establishment of a United States bank was constitutional, it was upon the ground that it is a necessary and appropriate instrumentality for carrying into effect the powers expressly granted by the Constitution to the Federal Government. If National banks are held to be constitutional upon this reasoning, the door is opened wide, it seems to me, for serious departures from the Constitution. If National banks, with power to issue currency, and with other valuable franchises, can be organized by five or more individuals, in any State, under the authority of the Federal Government, and authorized to carry on the business of banking, why may not Federal charters be granted to five or more individuals, with similar franchises, authorizing them to carry on the business of mining or manufacturing in any State? It being

*An answer to this communication will be found in an article printed on page 125.—Editor JOURNAL.]

conceded that no power is *expressly* granted by the Constitution to Congress to confer franchises for the organization of private corporations in the States, it seems to me that to hold that Congress, under its implied powers, has authority to establish National banks, with power to issue currency, and with other special privileges as business corporations, justifies the establishment by Congress of business corporations of all kinds. This, in my judgment, is a violation of the whole spirit of the Federal Constitution, and tends in the wrong direction. And no one pretends that the letter of the Constitution upholds it.

The course of the Supreme Court on the legal-tender question is in the same direction. At first they decided that the Legal-Tender Act was unconstitutional as to debts contracted and due before its passage. The Secretary of the Treasury (Chase) had become Chief Justice, and as Judge he held that to be unconstitutional which as Secretary of the Treasury he had thought constitutional. It is to his honor that he followed his convictions as a Judge, for it required moral courage to declare that his policy as Secretary had not been constitutional. Then the composition of the Court was changed; two judges were appointed who were in favor of legal-tenders, and the former decision was overruled. And the latest decision of the Supreme Court on the subject is that Congress has complete power to authorize the issue of legal-tenders by the Government in time of peace as well as of war, and that Congress is the sole judge of the expediency and extent of the issues of currency by the Government.

All this, it seems to me, is a departure from the letter and spirit of the Constitution. like the decisions on the National bank question, and tends to subject the business of the country to the unlimited power and discretion of a majority in Congress.

Although National banks have been acceptable to the public, in providing a uniform currency, that does not prove their constitutionality.

We may, perhaps, hereafter see Congress establishing all kinds of business corporations in the States, but I think the people will have something to say in the matter, and they may overrule the Supreme Court. Very respectfully, E. D. S.

DETROIT, January 20, 1887.

NATIONAL BANKS WITHOUT CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—I respectfully submit for the consideration of the JOURNAL's readers—as well as our law-makers—the following draft of an Act to amend the National Banking Law: "*Be it enacted, etc.*"

"That Section 5,150 of the Revised Statutes be and the same is hereby amended to read as follows:

"Every association, after having complied with the provisions of this Title, preliminary to the commencement of the banking business, and before it shall be authorized to commence the banking business under this Title, shall transfer and deliver to the Treasurer of the United States any United States registered bonds bearing interest to an amount not less than one quarter of their capital stock paid in. Such bonds shall be received by the Treasurer upon deposit, and they shall be by him safely kept in his office until they shall be otherwise disposed of in pursuance of the provisions of this Title:

"*Provided*, that the Board of Directors of such associations may, by a two-thirds vote, elect to issue no circulation, in which event the depositing of bonds will not be required:

"*Further provided*, that any National Banking Association, desiring to withdraw its circulation, may deposit with the Treasurer of the United States lawful money in an amount equal to its outstanding notes, and take up the bonds which such association has deposited for the security of circulating notes.

"All acts and parts of acts inconsistent with this act are hereby repealed."

The original purpose of compelling banks to buy bonds and issue circulation was to create a market for United States bonds. As that is unnecessary now, I can see no objection to giving banks the privilege of becoming members of the National Association without issuing circulation or depositing bonds, but subject to all the other provisions.

J. W. SPONABLE.

PAOLA, Kansas, January 20, 1887.

CIRCULATION OF NATIONAL BANKS.

Editor Rhodes' Journal of Banking:

SIR:—In the January number of the JOURNAL you have published two statements showing the loss to National banks by reason of taking out circulation. You have pointed out the error in Cashier Sherman's arithmetic, where he figures on the annual amounts to extinguish the premium account. It seems to me, however, there is one

item of some importance which should enter into the calculation, but which, so far as I have observed, has not been taken into the consideration of this question, namely, the *earnings or profits accruing to the bank from the semi-annual credits* to the sinking fund created for the purpose of liquidating the premium on the bonds, and which, with your permission, I will illustrate.

Suppose a bank commences business January 1, 1887, with a paid-up capital of \$128,000, and invests the whole in United States 4 per cent. bonds at 128, and deposits the bonds as security for circulation. Now, to retire this premium account of \$28,000 in the 20½ years by regular semi-annual payments, the bank should charge off 2-41 of this sum, say \$1,366 each time, to the profit and loss account before declaring dividends, and have this sum to the credit of the sinking fund, or left among the "undivided profits" as you please. In any event the money is *reserved* in the bank and becomes a part of its earning power. It is money uncapitalized the same as the surplus proper. The first credit so made will be July 1, 1887, and so continuously each six months until the last, or 41st credit, is made, at which time the amount will be \$28,000. The bonds have matured, and the sinking fund and premium account are both cancelled.

It is readily seen that the average amount of the sinking fund created as above will be \$14,000 for 20 years, upon which, with money at 5 per cent., the aggregate interest will be \$14,000, and this distributed over 20½ years will give \$683 as the average annual interest due to this account.

For the purpose of exhibiting the profit or loss on circulation, I would submit the following statement:

\$100,000 United States 4 per cent bonds earn.....		\$4,000
\$80,000 circulation, less 2 per cent. not in use, or, say \$88,000 at 5 per cent., earn.....		4,400
Average interest on the sinking fund as shown above.....		083
Total income.....		\$9,083
Less tax on circulation (1 per cent.).....	\$880	
Less redemption, etc., expenses.....	50	
Less 2-41 of the premium account.....	1,366	2,296
Net income from bonds and circulation.....		\$6,787
Interest on capital (\$128,000) invested at 5 per cent.....		6,400
Profit on circulation.....		\$387

With money at 6 per cent., and other things as above, the profits on circulation would be only \$124. In neither case, with the best possible showing, is circulation, under the present restrictions of 90 per cent. circulation and 1 per cent. taxes, worth anything to a National bank.

JAMES STOTT, Cashier.

CARBONDALE, Pa., January, 1887.

"THE ASSOCIATED TREASURERS' SAFE DEPOSIT & TRUST COMPANY."

The enormous amount of money abstracted by defalcations committed by men heretofore considered examples of honesty and integrity proves conclusively that the temptations now besetting the paths of men in custody of high trusts are such as to often lead to ruin and disgrace even the very best. Neither ample means, social standing nor happy homes seem sufficient safeguards against the unhealthy longing for more wealth without adequate labor and self-denial. It is, therefore, advisable to devise new means to protect the frequently immense interests of large organizations by curtailing the until now almost unlimited power vested in the head officers. The following is an entirely new plan to deal with this difficult subject. It is not claimed that the proposition will be adopted in its present shape, nor, in fact, that it ever will be adopted. It is claimed to be an effort in the right direction, and, if good for nothing else, will probably draw forth more practical suggestions from other quarters.

It is proposed that mills and other institutions having more or less common interests at stake, and doing their financial business in the same banking city, should agree between themselves to centralize the offices of their Treasurers around, and clear through, a concern to be especially brought into existence for this purpose. This concern, which we will call the "Associated Treasurers' Safe Deposit & Trust Company," may be organized either by the thus associated mills or, what is more preferable, entirely

independent by men of means and responsibility. Its capital should be nominal only or not more than needed for the acquisition of the proper premises and fixtures. The offices of the several Treasurers must needs be in the same building, and the duties of the Trust Company should be the following:

1. To receive on deposit, subject to order, all the funds held or to be received by the Treasurers thus associated.
2. To countersign and negotiate all paper either owned or held by these mills, and to receive for these services the customary brokerage.
3. To examine the books and accounts of the several Treasurers five times a year (without previous notice), or oftener if deemed proper.
4. To keep on hand 60 per cent. of the aggregate deposits, 10 per cent. of which shall be in cash and 50 per cent. on deposit with a number of city banks to be especially described.
5. The remaining 40 per cent. the Trust Company may invest in stocks and bonds for its own profit and benefit—the class of securities to be described and to be such as to be easily convertible or available as collaterals.
6. The Trust Company shall make no discounts out of its available funds, and shall transact no other business than that stipulated in the foregoing.
7. The Trust Company shall furnish ample bond for the proper administration of its affairs.

[NOTE.—Article 3 may be amended as follows: The respective Treasurers shall render to the Trust Company five times a year, true exhibits of their finances, when called upon, and the Trust Company shall examine each Treasurer's books at least once a year or oftener, if deemed proper. This will do away with the necessity of keeping the Treasurer's offices in the Trust Company's building, and permit the latter to expand its business over larger fields, embracing different classes of organizations.]

The writer has endeavored to put the plan in the most concise form, and hopes he is successful.

Considering the large amount of ready cash always held by the mills, and the brokerage on the immense amount of mill paper which would necessarily be handled through the agency of this Trust Company, it is evident that the same would prove a profitable undertaking. Besides, who can fail to see the great advantages of such an institution to the associated mills themselves.

The chance of fraud and defalcation being reduced to a minimum, mill paper would be benefited first of all; it would appreciate; there would be a perceptible saving on interest and less trouble in floating it during a tight money market. The compulsory and frequent examinations would force the Treasurers to faithfully administer their trusts; dishonesty, incapacity and neglect would be discovered forthwith, to the protection of the stockholders. Extravagant salaries of Treasurers would not be needed to keep them from defrauding their trusting employers.

The counter-signature of the Safe Deposit & Trust Company would be a palpable guarantee of the genuineness and legitimacy of all paper bearing it. The proceeds thereof floating back to the Trust Company for the credit of the respective Treasurers, an attempt at misappropriation would very likely soon be noticed by the officers of the same, and must come to light at the first examination of accounts.

The strict rules governing the disposition to be made of all funds held by the Trust Company forestalls effectively all attempts at speculation, preventing possible losses, and even providing against momentary tightness, whilst the provision of keeping 50 per cent. on deposit with the city banks will insure the good will and co-operation of the banking fraternity.

Without going into details, it may be mentioned that the system of the London Cheque Bank, known as the Hertz system, could be advantageously combined with such a trust company, and could prove a great convenience to the mills in more ways than one.

As to the privacy of each mill's financial transactions, it may be confidently asserted that it will not be interfered with by such an arrangement—only inasmuch that instead, as at present, the bankers, it will then be the business of the Manager of the Trust Company to become the convenient financial confessor. Owing to this delicate point, it would be more advisable to have outside parties organize the institution, and not parties intimately connected with the mills.

A. HANSEL.

SAN ANTONIO, Texas, January 29, 1887.

CASHING CHECKS OF UNKNOWN PARTIES.

Editor Rhodes' Journal of Banking:

SIR:—For the mutual protection of banks generally, I would be glad to see the JOURNAL advocate some measure whereby banks would be protected in the cashing

of private checks upon parties unknown. For instance, A presents a check, for \$100 on some Eastern bank, but is a stranger. The bank telegraphs to the Eastern bank and receives a favorable reply, and, upon such information, cashes the check. Now then, after all, the bank cashing the check has no assurance that A will have the money in his bank when the check reaches them. What I desire is that banks may adopt some plan upon matters of this kind. I would suggest that in case a telegram like the above is received, with the word "Hold!" that a bank should hold the amount until a draft or check arrives. I would be glad to hear from other parties on this subject.

COOLIDGE, Kan., January 22, 1887.

Respectfully, JOE H. BORDERS, Cashier.

LOSS ON CIRCULATION.

Editor Rhodes' Journal of Banking:

SRB:—Referring to the article, "Loss on Bank Circulation," in your January number, I do not think that either Mr. H. L. Sherman or the Editor arrive at correct results. Let me submit figures. Supposing money is worth 6 per cent. annual interest:

\$100,000 United States bonds at 4 per cent		\$4,000
\$90,000 in circulation, less 5 per cent. for redemption fund, amounting to \$4,500, leaving \$85,500, at 6 per cent., earns.....		5,130
Gross earnings		\$9,130
Less tax on \$90,000 circulation at 1 per cent.	\$900	
Less cost of redemption and Bank Examiner.....	100	
Less sinking fund to liquidate premium in 20 years.....	761—	1,761
Net earnings.....		\$7,869
\$128,000 for 1 year at 6 per cent.....		7,680
Loss on circulation each year.....		\$811

The loss in circulation in 20 years on money worth 6 per cent. is \$11,447.

Or, let me state it thus: I want to invest for 20 years (allowing the earnings to accumulate) in good mortgages:

\$128,000 for 20 years at 6 per cent. annual interest amounts to		\$410,513
I invest in bonds and get circulation:		
\$100,000 in 4 per cent. bonds earns.....	\$4,000	
\$85,500 net circulation at 6 per cent. earns.....	5,130	
Total.....	\$9,130	
I pay:		
Tax on \$90,000 circulation.....	\$900	
Cost of redemption and Bank Examiner.....	100—	1,000
My net annuity is.....	\$8,130	
Which in 20 years will amount to.....	299,066	
To which I add the value of my bonds.....	100,000	
And retire from National banking with.....		399,066
Mourning the loss on circulation of.....		\$11,447

With money worth 7 per cent. the loss on circulation would be nearly \$27,000 in 20 years.

SOUTH BEND, January 17, 1887.

Yours very truly, MYRON CAMPBELL.

Reply.—Our correspondent's calculations are accurate enough, but they do not put the estimate of the JOURNAL so far in the wrong as the first method of estimating the loss on circulation made by him, on its face, would seem to indicate. That the average annual loss is more than \$811 is evident when the aggregate for the 20 years is examined. That is, our correspondent shows that the total loss for the whole period is \$11,447, or an average of \$572.35 per year, which is \$287.65 less than the estimate we made. There is no question that \$311 per annum placed in a sinking fund and compounded at 6 per cent. per annum would produce \$11,447 at the end of 20 years; but in only one year (the first) would the loss be as small as \$811, and each subsequent year there would be a constantly increasing loss. Our first correspondent fell into the error of applying the sinking fund principle to the loss of premium, while failing to com-

pound the interest on the original principal sum. Mr. Campbell has figured the question down to a point of exactness which was not contemplated in our estimate, for compounding interest at 6 per cent. per annum is rather too good a thing, even for National banks.—Ed. JOURNAL.

A NATIONAL CODE OF COMMERCE.

Editor Rhodes' Journal of Banking:

SIR:—Why so much bankruptcy? Why so many assignments? Is there no practical scheme for diminishing these commercial misfortunes?

Business reverses are inevitable. There are people who, if engaged in speculative enterprise, though backed by the National Treasury, would not succeed. There are others who, with half a chance, will accumulate fortunes. Then there are others who succeed by failure—whose chief means of success lies in the benefits of bankruptcy.

We may now divide failures into two classes—the one kind caused by ignorance, the other by weakness. Failures of the first kind will continue until those in business become unerring in judgment, rich in prudence and exuberant in zeal. Each must decide for himself when that time will come. Much may be done, with proper effort, toward ameliorating that class of business failures which result from weakness.

The business man whose failure is purely the result of misfortune is entitled to every reasonable consideration. If, after having made every honorable effort to succeed, he fails, and then makes full and absolute surrender of his estate for the benefit of creditors, he is fully entitled to the charity of our most lenient bankruptcy proceedings. When bankruptcy, however, results from rash speculation, unwarrantable extravagance, or a morbid desire for gain, the bankrupt should be taught the importance of greater honesty and less prodigality. This seems to be the belief of good business men almost without exception. But here we meet a difficulty. In dealing with bankrupts how are we to determine which of the circumstances we have in hand? The scanty lawful measures we now have relating to insolvency and assignments are insufficient, poorly constructed, and often badly abused. Designing and unscrupulous tradesmen find in them ample opportunity for deceiving their creditors, hoodwinking Courts, and abusing the confidence so universal with American merchants. The law, as we see it, is as often invoked for the protection of artful traders in their mischievous practice as for benefiting creditors or aiding honorable bankrupts in their misfortunes.

At an early period there existed one generally recognized principle which shaped the ideas on questions of insolvency. With business failure was connected an odium which amounted almost to social ostracism and perpetual ridicule. This was extreme severity, especially when falling upon the truly unfortunate, but it wielded a powerful influence for good in checking unscrupulous merchants. Examining the first statute, so far as history tells us, which was promulgated during the reign of Henry III., we find this general thought strongly enforced in the definition of insolvent debtors as "those who obtain other men's goods on credit, and then suddenly flee to parts unknown, or keep house, and there consume their substance without paying their debts." And this only shows the trend of opinion as it prevailed in early times. The law was founded upon the supposition that there were no honest bankrupts. Failure to meet one's financial obligations was looked upon as thoroughly disreputable, and the bankrupt, in the eyes of the law, was deemed a criminal. All the early laws throughout Europe were based much upon the English idea that fraud of some kind had been committed, and the laws therefore were never intended as a relief for the bankrupt, but as a protection to creditors against the crime of failure. Gradually the old theories were modified and new statutes enacted. In each step was manifested a deeper sense of justice to all parties, so that the bankrupt was no longer looked upon as a criminal from the mere circumstance of his misfortune. At length a public feeling was aroused, tempered with charity and justice for the honorable unfortunate, and soon came laws looking, in some measure, to the good of the debtor.

One old English statute provided that during legal proceedings the bankrupt should have an allowance for his support; and, should it be found he had made a full and complete surrender of all his property; and, providing there was given the consent of three-fifths of his creditors in number and value, or nine-tenths in number alone, he was granted a certificate of conformity, or, as it was sometimes called, a testimonial, showing he had complied with all requirements. The purpose of this was to grant

relief, discharging the bankrupt's person and future estate from the debts then proved against him. When his estate amounted to ten shillings in the pound of his indebtedness he was given a reasonable allowance by the Court.

Prior to the liberal advance in France, the bankrupt law of that nation was severe in the extreme. It provided that all proceeds of the bankrupt's estate should be distributed among his creditors, and the bankrupt himself either imprisoned or condemned to forced labor according to the measure of his fault. In Holland the laws on this subject were never so harsh as in either France or England, though they were patterned much upon the common theory.

Tracing the law through the early history of the United States, we observe that but little sympathy was shown the unsuccessful in business. Under the Constitution, Congress is given power to establish "uniform laws on the subject of bankruptcies." On April 4, 1800, a general bankrupt law was enacted. It was limited in existence to five years, but before the time had expired (December 19, 1803) it was repealed. On August 19, 1841, another law was passed, and that, eighteen months later, was also repealed. The last of these differed widely from the first. The one of the year 1800 was founded largely on the old English notion of bankruptcy; but in the later law the bankrupt was shown some consideration. From that fact it was called by many an insolvency law rather than bankruptcy, and opinions were freely expressed that Congress had exceeded its authority in granting extraordinary relief to insolvent debtors.

From the repealing of the law of 1841 up to 1867 nothing in this direction was accomplished by Congress. An opinion seemed prevalent that the National Legislature was unable to form an acceptable permanent bankrupt law. But in March, 1867, the last (and by far the most satisfactory) National bankrupt law was enacted. The existence of this law was limited to ten years, but up to the year when it expired there was a strong general belief that it would be continued in force for another period if not made permanent. Contrary to this opinion, however, the law came to an end. Since then insolvency proceedings have been governed by State legislation and the common law.

Thus far, in State as well as in National legislation, serious difficulties seem to have been encountered in creating an equally just and charitable bankruptcy proceeding. Loop-holes have invariably been left through which unprincipled debtors might escape with pockets well lined from their peculations. In attempting to treat the honorable insolvent with fairness and reasonable charity the door has been left open for fraud and corruption.

The bill now awaiting the action of Congress, with its many modifications, is conceded in the main as an advance upon all previous measures, either State or National. This one, however, is by no means free from gross imperfections. It may be vastly improved by striking deeper at the root of prevailing evils. I shall not pretend that any law on the subject may be perfect, but I hope to show a possibility of creating something better than the proposed measure, and superior to existing State legislation.

Many other nations are more successful in dealing with bankrupts than the United States. And why? Because they possess systematic regulations for the guidance of those engaged in trade as a foundation upon which the superstructure for stringent, guarded and equitable bankruptcy proceedings may rest. The United States is destitute of such legislation. By way of definition, but keeping as far from details as possible, I will refer here to the laws and regulations of some foreign countries.

In France every person on engaging in business must obtain from the Council of Trade* a "journal," as it is called, which he finds ready stamped and paged. In this book, commencing with a statement of his assets and liabilities, the trader must enter the particulars of all his business transactions. In the event of his failure this book is open to the inspection of the proper authorities. His accounts are then systematically audited under authority of the Council, and the insolvent must be able to show that no fraudulent act has been committed. He must account for the loss of his capital. His accounts must explain the cause or causes of his failure. In the keeping of his accounts the merchant is not restricted to any book or books, and the "journal" furnished him by the Council is expected to serve only as one in the set which his business, according to its nature, may require.

The laws of Germany furnish a similar illustration, and are even more explicit. From the German *Handelsgesetzbuch* we learn specifically what the merchant in that

*An executive department of the general Government.

country in his business practice is and is not permitted to do. I will give the substance of a few Articles found in the guide book to which I refer so far as they bear, particularly, upon counting-room methods and commercial failures.

ARTICLE 28.—Every trader must keep authentic books of record in which his business transactions and his financial position are fully disclosed. He must also keep the business letters he receives and true copies of those he sends out.

ARTICLE 29.—On commencing business the trader must make an inventory, giving a correct description of his property, and all liabilities, showing the value of such property as is in hand. He must have made up a balance-sheet of his assets and liabilities. Each year thereafter a balance-sheet must be made.

ARTICLE 30.—The inventory and balance-sheets must be signed by the trader, or by each partner of the firm, if a partnership.

ARTICLE 31.—The property and debts must be entered according to their existing value. Doubtful debts must be estimated and bad debts must be written off.

ARTICLE 32.—Account-books must be bound and each page numbered. Spaces must not be left between the entries. Entries must not be erased nor left in any way illegible. Alterations of consequence are not permitted.

ARTICLE 33.—All books, inventories and balance-sheets must be kept at least ten years from the time they are made up or used.

These regulations, it will be observed, cover many of the most pertinent questions arising in bankruptcy matters. A strict adherence to them by the Government has done much towards diminishing failures in number and severity, for it has rendered bankruptcy, as a money-making scheme, a difficult undertaking.

In many other countries are laws and regulations similar to those of France and Germany.

In a number of South American States admirable precautionary measures have been adopted for warding off bankruptcy, as a business, while protection is given the unfortunate. Reference to the Chilian *Código de Comercio* (Commercial Code) will serve as an illustration. Under this law all merchants are required to keep a *diario*, (day-book or explanatory journal as it would be termed in this country), a *mayor* (ledger), a *libro de balances* (book of balances), and a *libro copiator de cartas* (copy-book of letters). In brief, the Code provides that the merchant must enter in his *diario* in chronological order, all his business operations, expressing in detail the nature and circumstance of each. It specifies how the books are to be opened and how financial statements must be made, prohibits alterations, erasures, interlineations and blank spaces in the body of the entries. Leaves of account-books must not be torn out. The binding and paging must not be changed or mutilated. Ample instructions are given in the Code for the correction of errors and omissions. If a merchant fails he must produce all his books, and they, being taken possession of by the Court, a strict examination follows. If the law has been faithfully kept the Court is able from the records to ascertain the condition of the bankrupt's estate, and may determine whether he be entitled to amelioration or subject to punishment. If the law has been broken punishment is certain.

But we need not ask what has been the experiences of other nations, nor turn, for example, to their legislation on this subject, before we determine what is needed in this country. Let past experiences teach us. What formulas have been engrafted in our laws relating to the practice of persons engaged in business, their records and accounts? None! What do we find on this subject in the proposed National Bankrupt Law? Nothing! What in the common law have we touching such duties and practice? Nothing! How can an equitable and adequate law on bankruptcy, or insolvency, be created without some consideration of the records and proofs of what the insolvent has been doing? Any business man will say a law so founded must be defective.

Now, what do we need? Not a National Bankrupt Law, but a National Code of Commerce. We want, as the foundation of bankruptcy proceedings, a general Code regulating the practice of merchants, and making book-keeping in some degree compulsory. The proposed law covers only a part of the needed legislation. A National Code of Commerce will serve every purpose in the settlement of insolvent estates and prove a powerful agency in preventing many failures. The bill now awaiting the action of Congress may serve as the superstructure for a complete bankruptcy law, but a Code of Commerce will provide a foundation upon which it may stand and prove of lasting service to the commercial interests of the nation.

I do not offer the rules of any foreign land as a suitable pattern for a commercial Code in the United States. An improvement upon those of foreign countries may be

readily suggested. With the true end in view, our law makers will experience no great difficulty in formulating a bill that will cover every needed requirement. As a basis, let us suggest an outline for such a Code:

First—Relating to the duties and practice of merchants and others engaged in business, who, in the event of failure, may be entitled to the benefits of the proposed Act.

Second—Relating to proceedings under the proposed Act—voluntary and involuntary bankruptcies, etc.

Third—Relating to arbitrations and awards for the adjustment of purely commercial controversies, and the enforcement throughout all the States and Territories of contracts arising in the purchase and sale of merchantable commodities.

Any provision under the first part of the Act, as above divided, need not specify particularly what book or books, account or accounts shall be kept; but it is important that every person, whose estate is to be settled in a Court of bankruptcy, should present to that Court his books of account, his inventories and balance sheets, and including all such which for ten years next preceding his failure he shall have made, used, or caused to be used or made in his business operations. The Code may properly describe the nature of the information these books, inventories and balance-sheets must furnish. The making of or offering for inspection any fraudulent or fictitious book, inventory or statement should be made a criminal offense.

Both under the old law and the present *regime* the keeping of business records is entirely a matter of choice. Persons who desire, for their own convenience, to keep books, do so; others keep none.

Under the present law of assignments, or the proposed National Act, no questions arise concerning the insolvent's business records. If he has kept books of account, and is willing his creditors should inspect them, he turns them over; but, if he fears they will disclose unpleasant facts, he secretes or destroys them.

With such a Code as I have outlined disgraceful practices of this kind will be abated. Creditors will be given a means of knowing what the debtor has been doing, and what disposition he has made of his property.

With more stringent measures for the prevention of fraud, greater charity may be dealt out to those justly entitled to receive it.

SELDEN R. HOPKINS.

NEW YORK, January 20, 1887.

NATIONAL BANKING—"A THRICE TOLD TALE."

Editor Rhodes' Journal of Banking:

SIR:—In treating the subject of this brief monograph* it is possible that I shall touch upon points that are, to many of your readers, more trite than a thrice-told tale. However, it is "precept upon precept, line upon line, or here a little and there a little," by which we slowly gather knowledge. Fortunate, too, will it be for us if, in receiving this knowledge by the rigorous teacher Experience, a practical application of it on our part will be transmuted into wisdom.

Our present system of National banking had its inception a little more than a score of years ago. Like many systems that preceded it, it was born of the necessities of the State, to be ancillary to it, and, as a fiscal agent in its straightened finances, to help the State out of debt already incurred, or to help it into debt by procuring money for its empty Treasury to carry on undertakings whether of peace or war.

The word "bank" etymologically carries us back to the country of its origin in modern Europe, being derived from the Italian word *Banco*, a bench—a very modest beginning for so potential a future.

Of these banks, State or National in their connection, the most ancient seems to have been that of Venice, established in the latter half of the twelfth century to help the Republic out of debt. In the first decade of the fifteenth century the Bank of Genoa was founded, and, like that of Venice, owed its origin to the debts of the State. The Bank of Amsterdam, founded in 1609, belonged to the city of Amsterdam, and was under the direction of four burgomasters. It was started with the paramount object of improving and regulating the coinage, which had become very much worn and clipped. The bank, however, became so involved in lending money to the Government of Holland that before long it was ruined. But the most noticeable of these banks

* This paper was originally written last July, to be read at the Bankers' Convention held at Boston in the following month; but the writer, not attending the meeting, the paper was not presented.

started with a Government connection—as a handmaid to help the Government in its financial troubles—is the Bank of England, established in the time of William and Mary. And the “Old Lady of Threadneedle Street” will, within eight years, commemorate her two hundredth anniversary, still ruling in a green and vigorous old age (or rather as *semper virens*—a perennial youth) the financial world. In 1808, though previously established, the Bank of France became the financial agent of the Government. In 1781, Congress chartered the Bank of North America (still existing as a bank under the present National system). It was started as an adjunct to assist the Government in its finances. Ten years afterward, under the auspices of Alexander Hamilton, the Bank of the United States was chartered with a capital of \$10,000,000, in which the National Government was a large shareholder. This bank expired by charter limitation in 1811. In 1816, the second Bank of the United States was chartered by Congress with a capital of \$35,000,000, of which \$7,000,000 was allotted to the United States.

Thus briefly referring to the establishment of preceding National banks—as primarily for financial aids to the Government—I now approach what is known as our present system of National banking. It, like its predecessors, was established as a financial auxiliary to the Government at a momentous and perilous time. In an adjudicated case by a Justice of the Supreme Court of the United States it has been announced that the purpose of the Currency Act was in part to provide a currency for the whole country and in part to *create a market for Government loans*. Now, as this two-fold purpose has been thoroughly subverted, it may be said of the National banks that, if not “played out,” their occupation is well nigh gone. The Government no longer stands in need of them as financial aids; and, coupled with the heavy tax of 1 per cent. from the Government a low rate of interest on United States bonds costing a high premium, there is no longer realized a *quid pro quo* to the banks in the National system. So far from there being a direct, absolute profit in the system *per se* there is, rather, a relative loss.

There is, however, an indirect benefit to be derived from the National system for banks in New York and other large cities growing out of a feature in the National currency law authorizing National banks to be named in certain cities as reserve agents. In these cities (especially New York), to render the National banks of the country more or less tributary to them, the banks nominally remain National by the minimum deposit of \$50,000 in United States bonds so as to continue as the reserve agents of the other National banks and thus secure their general business. In these cities, if all but a few banks went out of the National system, those remaining would have, and exercise, a tremendous power. It is this which causes so many banks to remain National that otherwise would go out of the system. If, therefore, the banks in the large cities would go out, it would be the beginning of the end.

It is true, then, that an indirect benefit is derived to National banks as a prestige—a prestige arising from the fact that depositors generally suppose that in some way or other they have greater security in a National bank than in a private bank or a State incorporated one—a faith certainly justified when comparing the National system with the so-called wild-cat banking too often prevalent a quarter of a century ago. But I doubt whether the same cause for preference exists now. Indeed, certain signal failures which have taken place among National banks within the past three years were of so aggravated a nature as to call in question whether the people as depositors have any more protection in the one than in the other.

There never has been any direct profit from the National system, to those engaged in the business of banking, other than that arising from circulation, and that was more apparent than real, and has long since been approximating to a vanishing point. To attain this profit on circulation those engaged in banking have had to surrender every manly sense of independence which all men ought to have in conducting a business to which they give their time, talent and means, and losing which they lose all. But the average National bank man has been so long accustomed to Government intermeddling and espionage that he feels so tied to an old woman's apron strings that his manly independence is well-nigh sapped.

That which officers and Directors should do in the way of bank examinations, etc., is almost completely ignored as a duty of their own, but to be devolved upon Bank Examiners.

In its relation to National banks the Government starts out upon the theory that—however honest and capable men may be to conduct other business, whether manu-

facturing, merchandising, etc., yet when they become bankers they become fools or knaves and require to be looked after—fools that they don't understand their own business and interest, or knaves that they are trying to cheat everybody else—a humiliating dilemma, let them take either horn they please.

Now this great boon, so-called, from the Government, of circulation—is no necessary adjunct to banking. People in the past in this country have got so accustomed to bank bills, bank money or currency, as they variously call it, that a person would hardly suppose that banking could be carried on without it. This *quasi* money is no money, for the bills recite a promise to pay dollars, and on their face thus confess that they are not money, but promises or promissory notes, and in the past, alas! too often made to the eye to be broken to the hope.

In the National currency, so well secured as it has been by Government indorsement, not a dollar has ever been lost to the note holder, even though the banks here and there have failed, and, in some notable cases, have made some very bad failures. The ample protection thus evinced for the note holder—the relatively very small creditor—is a marked anomalous feature in the present system as compared with the relatively small protection for the heavy creditor—the depositor. The notes are fortified, so to speak, by a deposit in the hands of the Government of a collateral security of its own naming—having a margin from 15 to 35 per cent. in excess of the note issues. So much for looking after the interest of the small creditor. On the other hand the depositor is protected to the extent of an assessment upon the shareholders of 100 per cent. more than their stock-holding. Thus, a National bank may owe note holders \$45,000—hardly any one of whom would hold \$100—to secure which there may be \$50,000 or \$60,000 worth of United States bonds as well as a 5 per cent. deposit in legal-tenders with the United States Treasurer. The bank may owe depositors millions of dollars with the relatively inadequate assessment of 100 per cent. on its shareholders. Towards this last and much the largest class of creditors the Government assumes no responsibility in the event of the failure of a National bank.

So far, however, am I, in pointing out this inconsistency, from advocating a closer relation or a more stringent oversight on the part of the Government toward National banks, that I disclaim the relation as at present existing as in its nature an intermeddling one, which should entirely cease.

The Government endorses certain promissory notes for banks that are not money nor legal-tenders, and it would be wrong for the Government to attempt to make them either one or the other. In the event of the promissors not fulfilling their promises the Government, as indorser, becomes responsible for their fulfillment just as in ordinary business any indorser becomes responsible. For this responsibility the Government demands its own security and its own price, paid by way of tax, for the responsibility thus assumed. This should be the beginning and end of the Government's relations to National banks.

The whole system of examination, reports, statements, etc., and all other statutory enactments by which the banks are "cabinéd, cribbed and confined," should not have had a beginning, much less a prolonged existence of more than twenty years, with an increasing tendency to become more and more intermeddling.

Why should the Government, because it indorses (with ample security) the notes of the banks, assume to meddle with and control the banking business any more than it does with the baking or bacon business, or any other business that men engage in? Far more ground could be shown for such an interference with other business than with banking.

I am opposed to all Government protection or intermeddling in business affairs, believing that if there ever was a form and genius of Government fitted for the *laissez-faire* theory it is the Government of the United States as laid down in its Constitution of 1787.

In some polemical passes between Huxley and Spencer, concerning the sphere and duty of government, the former throws out jeeringly, if not sneeringly, the paradoxical phrase of "administrative nihilism"—a logical illogical issue of the *reductio ad absurdum*—against his opponent, the stout maintainer of the *laissez-faire* theory in political economy. In this respect I am an humble disciple of Herbert Spencer.

The fewer and simpler the duties of the State, the more probable will be the efficient discharge of those duties. The more multifarious and mixed the duties

assumed, not only will the functional performance be lethargic, but sooner or later a political atrophy will set in, and the simple, essential duties of the State—the protection of person and property, and the general administration of justice—will be neglected.

If, therefore, banks or bankers fail in the performance of their contracts or the fulfillment of their promises, then let the State step in and perform its duty in the rigorous enforcement of contracts. Thus, with regard to banks—while the National system seems destined, as it now exists, ere long to disappear, and with it its currency, let there be a very large liability, if not unlimited liability (as in general copartnership in business), so that, in the event of the failure of a bank, its shareholders should be assessable for, at least, thrice the amount of their respective shares. They will then give close attention to the moral and mental fitness of those whom they select to conduct their business.

It may almost be said that the whole business of the country—agricultural, mining, manufacturing, mercantile, etc.—passes through the banks. And yet, compared to all this grand aggregate, how small is the loss! Far, far smaller than is sustained from any other source. Is a deposit in bank of \$5,000 or \$50,000 (conventionally called cash) of checks, drafts and notes (and relatively of but little money) put in to-day, drawn upon the same day, or next day—subject to be called for on demand—of any more sacred value than so many thousand dollars worth of merchandise sold on 30 days, 60 days or 4 months. In the case of the bank, the depositor has an opportunity, as a business man, of knowing its standing in the community, and he can very soon materially reduce or withdraw all his balance with little or no loss. Not altogether so with customers to whom he may sell his goods. Within 24 hours after the buyer has come into possession of the merchandise the seller may become perfectly aware that within 30 days the buyer will suspend, and is now in an insolvent condition, but he can do nothing at present to protect himself from the loss staring him in the face. The fact is, when we talk about money we forget that it is of a representative value, and are disposed to make a fetish of it, exalting it to a position beyond what it does represent. That I may not be misunderstood, however, I take the precaution to state that true money—say, coined of gold, that universal solvent—has an intrinsic value as the product of labor, as well as a representative, or exchange, value for all other commodities. In this intrinsic worth lies its true representative value in contradistinction to factitious money, made by legislative fiat, whether of some other less valuable metal or of paper promises to pay.

This latter kind of money, so-called, instead of being, like money coined of gold, a representative value, may be more properly called a re-representative, because, not being truly money, it is a promise or representative of money—of that which does represent the value of all wealth—that is to say, of lands, houses, merchandise, etc., the use and enjoyment of which make for our common welfare, and therefore, in the subsistence of life, in our daily wants and pleasures, as ministering to our use and comfort, is superior to that money, its exchange value, which represents it—that is to say, wealth as a general term.

In days gone by there was a class of men who seemed to love money in the abstract for itself, who doted on the glittering coins of gold, and who, for the sake of saving one little coin, would almost starve. These men were pre-eminently called misers. But this miserable class of money-getters and idolators, to whom coined gold was indeed a fetish, has well-nigh become extinct.

Money is now no sooner made than it is sought to be invested in merchandise, stocks, bonds, etc.; and, during the interim of making and investing, it seeks a temporary resting-place, generally of short duration, in a bank, to be immediately drawn out when the depositor can find his desired form or object of investment. Therefore, to make laws so especially binding and rigorous upon the temporary custodians, the bankers, of this money, is in marked contradistinction to what is required by those to whom is trusted merchandise; and hence, to repeat, money is still treated by public opinion and statutory laws as something peculiarly more sacred than values existing in other commodities; and thus it is, indeed, to treat money as a precious fetish.

It is, of course, evident from the foregoing that the writer is not wedded to the National banking system as at present prevailing. But, to satisfy those whose predilection is so strongly in favor of that system, I would suggest a means for its continuance—

and the only means that seems to me to be legitimate. Let the Government fund its Treasury notes (vulgarly known as greenbacks) into two per cent. bonds, to run for 20 years. Let the National banks deposit the bonds as security for circulating notes, dollar for dollar.

These greenbacks are, in one sense (as legal-tenders), a forced loan upon the people, which may have been condoned for, when issued as a war measure, under the pressure of necessity—"the tyrant's plea." But, now that twenty years and more have elapsed since the close of the Rebellion it is high time that they were retired, and that the Government, to this extent, should get out of the banking business—a pursuit for which it was never intended by its organizers. To continue as legal-tenders these notes is in flagrant violation of the Constitution of the United States. This I emphatically assert with all due deference to that august body—the Supreme Court of the United States—notwithstanding their decision to the contrary, so laid down and rendered in March, 1884, in the case of *Julliard vs. Greenman*. CLAYTON CANNON.

BALTIMORE, January 27, 1887.

NATIONAL BANK CIRCULATION—A QUESTION ANSWERED.

Editor Rhodes' Journal of Banking:

SIR:—On pages 75 and 76 of the January number of the *JOURNAL*—by far the best bankers' publication in the country—you show that a National bank starting in business with the full amount of circulation on a basis of 4 per cent. bonds at present prices will do so at a loss so far as circulation is concerned. Although that fact is proven by your figures, yet I would like to have you show me the fallacy of the following:

A bank holding \$100,000 in 3 per cent. bonds as a basis for circulation will soon be obliged to give them up at the call of the Secretary of the Treasury, and decides to take out the minimum of circulation on a basis of 4 per cent. bonds.

This proposition is made to the bank by its New York brokers:

"We will take your \$100,000 of 3 per cent. bonds and give you for them \$25,000 in 4 per cent. bonds and \$875 in cash, and will make a substitution of \$27,500 of legal-tenders in Washington to retire outstanding notes to that amount."

Now, please note the difference in income to the bank:

Present income:			
\$100,000 in 3 per cent. bonds earns.....			\$3,000.00
\$90,000 in circulation earns.....			5,400.00
			\$8,400.00
Less 1 per cent. tax.....		\$900.00	
Less estimated redemption charges.....		90.00	990.00
			\$7,410.00
Income under proposed change:			
\$25,000 in 4 per cent. bonds earns.....		\$1,000.00	
\$22,500 in circulation earns.....		1,350.00	
\$875 in cash earns.....		61.50	
		\$2,401.50	
Less 1 per cent. tax.....	225.00		
Less redemption charges.....	22.50	247.50	\$2,154.00
Showing a loss in income to the bank of.			\$5,256.00

These figures show a loss of over \$5,000 to a bank of \$100,000 capital that reduces its circulation to the lowest amount, and yet it is said that circulation does not pay.

I am quite confident that there is something I have failed to take into consideration, but what is it?

Remember, in the exchange the bank gets but \$875 in cash, and pays to the Government through its brokers \$27,500 to retire its notes. Please point out to me wherein I am wrong.

B. K., *Cashier*.

NEWARK, N. J., February 10, 1887.

Answer.—The bank has now \$100,000 in 3 per cent. bonds, which are deposited at Washington, and on which it has \$90,000 of circulation outstanding. In return for this

circulation, when issued, the bank received, presumably, an equal amount in resources. We assume it was invested in bills receivable at 6 per cent.

The present income is:	
\$100,000 in 8 per cent. bonds earns.....	\$3,000.00
\$90,000 invested in bills receivable at 6 per cent. earns.....	5,400.00
Gross income.....	\$8,400.00
Deduct tax and expense.....	990.00
The net income is.....	\$7,410.00

In the transaction with its brokers the bank appears to pay a premium of \$6,625 (see following table) upon the \$25,000 in 4 per cent. bonds to be received by it.

It receives in cash.....	\$875.00
In 4 per cent. bonds.....	25,000.00
For retiring circulation.....	67,500.00
Total.....	\$93,375.00
In return it gives 8 per cent. bonds.....	100,000.00
Making the apparent premium paid.....	\$6,625.00

Assuming this to be the correct premium paid, the bank, after the change, will have:

\$25,000 in 4 per cent. bonds (income).....		\$1,000.00
\$90,000 in bills receivable at 6 per cent.....		5,400.00
\$875 in cash at 6 per cent.....		52.50
Gross income.....		\$6,452.50
Tax and expense.....	\$247.50	
1-30 of premium paid.....	331.25	578.75
Net income.....		\$5,873.75
As against previous income of.....		7,410.00
A reduction of income of.....		\$1,536.25

This reduction is made up as follows:

A loss of 8 per cent. on \$75,000	\$2,250.00	
A loss in annual charges to premium account.....	331.25	\$2,581.25
A gain of 6 per cent. on \$875.....	\$52.50	
A gain on tax, etc.....	742.50	
A gain of 1 per cent. on \$25,000.....	250.00	1,045.00
Total.....		\$1,536.25

There is no change made in invested circulation, as the bonds only were disturbed to take up the outstanding circulation, and no new circulation has been issued. The \$22,500 protected by the \$25,000 in 4 per cents is included in the \$90,000 already invested.

If the law did not compel the bank to keep at least \$25,000 in United States bonds on deposit, it would be more profitable for it to wait until its 8 per cent. bonds are called, and then retire all its circulation. Under such circumstances its income would be:

\$90,000 in bills receivable at 6 per cent. earns.....	\$5,400.00
\$10,000 margin on bonds earns.....	600.00
Total.....	\$6,000.00
As against.....	7,410.00
A loss of.....	\$1,410.00

This loss is the amount of the annual profit of circulation based on 8 per cents, as long as they are not called, when held at par. The difference between the loss

(\$1,536.25) shown in the calculation based on the bank holding \$25,000 in 4 per cents at the assumed premium and the loss (\$1,410) shown by the last calculation (\$126.25) is just the annual loss on circulation taken by depositing \$25,000 in 4 per cent. bonds bought at a premium of \$6.625, thus:

\$25,000 in 4 per cent. bonds earns	\$1,000.00
\$25,000 in circulation at 6 per cent. earns.....	1,350.00
Gross income.....	\$2,350.00
Tax and expense.....	\$247.50	
1-20 premium.....	881.25	578.75
Net income.....	\$1,771.25
If the \$31,625 invested in 4 per cent. bonds had been loaned at 6 per cent. it would realize.....	1,897.50
Loss by circulation in this case.....	\$126.25

The bank will thus lose \$1,410 annual income which it now gains by circulation based on 3 per cent. bonds and \$126.25 more by the circulation it takes on the 4 per cent. bonds it is forced to deposit, making in all a loss of \$1,536.25.

BETTER POSITIONS WANTED.

Editor Rhodes' Journal of Banking:

SIR:—The subject about which I wish to inquire, namely, the promotion of bank clerks or officers, I do not remember having noticed at any time in your valuable JOURNAL. What is the best way in which a clerk, who sees no chance for bettering himself in the town where he lives, may bring himself into notice in a larger city? I am speaking of experienced men who have filled the positions of Discount Clerk, Book-keeper, Teller, and possibly Cashier, and have fitted themselves by general study for positions of larger trust than the place affords. Is there any demand in New York for young men like these? Would you advise them to seek positions there? If you could get the opinion of some of the prominent bank officials on this subject I think it would be of interest to a large number of your readers.

TELLER.

WATERTOWN, N. Y., January 19, 1887.

J. T. Dean, Cashier of the Bank of Lewisburg, Tenn., writes on January 31st:

"I have been a regular reader of the JOURNAL for several years and am bound to say that I could not well get along without it. It is an educator as well as a reliable helper in the every-day business of this bank."

Mr. Dean's note is similar in tone to very many recently received at this office. It is a real pleasure to everyone connected with the JOURNAL—editors, correspondents, clerks, printers, &c.—to know that their work is fully appreciated. Our constant aim is to make it the BEST BANKING PUBLICATION in the United States, and its assured success from a business point of view shows that it has attained the high standard of excellence set up for it. *We intend to keep it there.*

Western Pennsylvania's Greeting.—"Bradford Rhodes, a native of Beaver County is (and has been for some years) chief editor of the JOURNAL OF BANKING, published in New York city, which is justly regarded as the most valuable publication of its kind in the United States. Mr. Rhodes is yet a young man, but he is endowed with a level head, to which is added that degree of energy which wins success. The January number of the JOURNAL, which we have read with much interest, is one of rare value to bankers as well as to all others interested in the monetary affairs of the country."—*Beaver (Penn.) Times, January 13, 1887.*

The reproduction of this item is not intended to flatter the editor—he has by nature as much pride as is good for him—but to inform the bankers and others of Western Pennsylvania and Eastern Ohio who are interested in financial affairs—as well as all friends from whatever section they come—that they will be made welcome at the JOURNAL office, No 78 William Street, New York city, at any time when in New York. We are never so busy but that we can find time enough to see our friends, nor too deeply absorbed in every-day duties to fail to render them any service in our power.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

CONSTITUTIONALITY OF THE NATIONAL BANK ACT.

[From the *New York Evening Post*.]

Bearing upon the question of the constitutionality of the National Banking Act considered apart from the note-issuing function—a question touched upon by Comptroller Trenholm in his annual report—the last number of RHODES' JOURNAL OF BANKING publishes a brief resumé of all the decisions of the Supreme Court relating to that particular subject, which we reprint in another place. The conclusion of the writer is the same as that reached by the *Evening Post* in a recent article, that these decisions go to the length of conceding to Congress full and unquestioned power to grant charters to National banks, quite irrespective of the note-issuing function, since the decisions virtually leave Congress the sole judge of its reasons for granting such charters. In other words, although the original purpose of the National Banking Act was to aid the Government to borrow money, yet the power is not exhausted when the original purpose has ceased to operate. This is the only construction that is free from legal absurdities and paradoxes and also from very great business embarrassments, for, if a bank charter should expire by the calling in of the bonds held by the bank, complications would arise which the law never contemplated or made any provision for, and which the shareholders and depositors could never have foreseen. A corollary results from this, that, if the Government calls in a particular lot of bonds held by a National bank as the basis of its charter, it cannot compel the bank to go into the market and buy other bonds at any premium that the holders may ask. It might happen that the holders would not sell at all. That is what will happen eventually; and certainly the law does not require impossibilities. It follows that Congress ought at once to repeal that clause of the law which requires National banks to invest a certain portion of their capital in United States bonds, whether they issue circulating notes or not. Philosophers of the Beck school, who take it in dudgeon that the bonds should stand at such a high premium in the market, should be active in securing the repeal of this clause, since the compulsory purchase of bonds by the banks to replace their called bonds is one of the contributing causes of the high premium.

NATIONAL BANKS THE BEST.

[From the *Albany Argus*.]

If National aid is a necessity to establish credit, why are not National banks, which are directly accountable to the National Government and under a uniform law, better than banks indirectly accountable, and why should the National Government, therefore, encourage State banking by cancelling the only difference which now exists between the two systems, except the more severe National law.

STATE BANK NOTES.

[From the *New York Commercial Advertiser*.]

Bank Superintendent Paine, of New York State, in his annual report to the Legislature, has come out flat-footed in recommendation of a bank currency based upon State securities. He prefers a National system, in charge of a United States Comptroller, but the only restriction he makes upon the security for the notes is that they shall be obligations of a State which has not defaulted within ten years, or of a municipality, and that the notes shall be a first lien upon the bank's assets. It is difficult to see how this system would be much better than that of the old State banks, when interstate exchange and discount complicated the relations of commerce, and when everybody, the moment he heard of the failure of a bank, rushed home to count over his bank notes and get rid of those issued by the broken bank. A proper paper currency should be equally acceptable in all parts of the country. Now, it is inconceivable that a currency based upon State and town bonds could be such, even with

the wisest provisions for its redemption on demand at Washington. The State bank currency of New York before the war was the best obtainable, and the restrictions as to security were most careful, yet we have instances of banks in this State which, after failure, never paid more than 40 per cent. on their notes. Again, Virginia and Carolina people will necessarily judge State securities by their own, and these latter are in a much worse plight than before the war. This could not encourage confidence in a bank currency thus secured. The ten-year provision might be stretched so as to apply before long to States which eleven years ago did default on their bonds, and which, to judge by indications, would do so again if they found an inducement. Does anybody suppose that Virginians and Carolinians would care to accumulate much of such a currency?

THE COST OF LEGAL-TENDER NOTES.

[From the *Chicago Times* of January 1st.]

As regards economy, it is not always the cheapest thing that is most economical. That is not less true in regard to the material of money than it is in regard to the affairs of every-day life. If you want a good thing you must pay for it. That is as true of good money as it is of a good sealskin cloak. Our greenback money has cost us many times more than it has saved us. When it was depreciated far below par, bonds payable in coin were sold for it at par, and in that way the bonded debt was made fully one-third greater than it need have been. What we lost on this one account would have covered the entire cost of a sufficient metallic currency for the country.

But the increase in the bonded debt is only a part of the mischief wrought by the exercise of the power to make Government paper a legal-tender. The impairment of the obligation of contracts, the enrichment of some at the expense of others, the unsettlement and confusion of all values, the stimulus that sent speculation to the wildest excesses, and last, but not least, the poisoning of men's minds with the most dangerous economic delusions—these have cost the country vastly more already than any possible saving in interest, in addition to the first cost of the best of currency.

BANKING ON THE PACIFIC COAST.

[From the *San Francisco Chronicle*.]

The year 1886 has been one of the most remarkable in the history of banking institutions on this coast, as at no time during the year has there been any scarcity of coin in any of the bank vaults. In fact, it has been difficult to loan all that was desirable, and, as is a natural consequence, some of the loans made were not the best secured. But instances of this kind have been few. The past year, until within the last few weeks, has been entirely devoted to legitimate merchantile business, without any tendency to stock gambling. The more conservative banking institutions decline to make loans on stock securities.

PROSPERITY IN CLEVELAND.

[From the *Cleveland Leader*.]

The Clearing-House banks of this city have started the new year with a truly gratifying record. The very first week has broken all records for clearances, and that in spite of the fact that January is usually one of the lightest months of the year. The gain over the corresponding week of last year is 87.1 per cent., and there is every indication that the excellent business enjoyed by the banks of this city in 1886 will be totally eclipsed in 1887. The Clearing-House reports are generally considered the best single test of the industrial state of a city obtainable, and there is very good evidence that Cleveland is prosperous and enjoying a rapid, solid growth.

A DEPOSIT CLAIMED AFTER TWENTY-FIVE YEARS.

[From the *San Francisco Bulletin*.]

Some time ago the Attorney-General brought suit against one of the San Francisco banks to declare escheated to the State money on deposit which had not been called for during a given number of years, and the claimant of which had apparently disappeared. What might happen if such long-neglected deposits were paid over to the State is illustrated in the following case: "In the Clay Street Bank there was an account which represented \$12.48 deposited between March 18 and September 2, 1861.

The depositor and his book disappeared, it was believed, at about this time, since nothing was heard from them for twenty-five years. But to-day the holder of the book appeared, had his interest entered up, and withdrew his money, receiving the handsome sum of \$149.07.

THE REAL VALUE OF SILVER COINS.

[From the *New York Times*.]

While the United States maintain with rigid obstinacy that 75 cents' worth, more or less, of silver is equal to one dollar when stamped with the image of the scared hen eagle, and inscribed with the pertinent remark, "In God we trust," the Government does not forbear to take note of the real value of foreign silver coins. It will duly proclaim to-morrow that the "rupee" of India is worth but 84.6 cents instead of 35.7 cents; that the "sol" of Peru has fallen from 75.1 cents to 72.7 cents; that the Japanese "yen" must be reckoned at 78.4 cents instead of 81 cents, and that the "mahbub" of Tripoli has depreciated from 67.7 cents to 65.5 cents.

THE INTERSTATE COMMERCE BILL.

[From an interview with Mr. Chauncey M. Depew.]

"In Massachusetts, which gives us the most conspicuous example of State control that we have in this country, and where the problem has passed beyond the realm of experiment and is an established success, the powers of the Commissioners are limited to investigation, recommendation, and report to the Legislature, except as to certain obvious powers. No scandal of any kind has ever attached to their action, no road has ever defied their recommendation, however extensive or burdensome it may have been. The people are entirely satisfied, the roads are doing reasonably well, and the railway problem in that State has entirely disappeared from politics."

"Now, as to the plan of a Commission," Mr. Depew continued, "it is based on the ideas of the best informed railroad men in this country and in Europe. On to that, by way of compromise, has been tacked Mr. Reagan's bill—not because the conferees approved of its provisions, but because many politicians think the name 'Reagan's bill' is like the trade-mark of old Dr. Thompson's sarsaparilla—a panacea to satisfy his constituents, no matter what the trouble. Reagan's views on the railway question, as embodied in his bill, are that he wants Reagan's bill, and doesn't want anybody else's bill or any number of bills, and there has grown up a sort of feeling from the iteration and reiteration of years that it has been before Congress that there must be some elements of good in this particular measure which no other measure can possibly have, which simply illustrates what an energetic and determined man, with some ability, who persists in one idea, can accomplish with people who are giving their attention to a great many other things besides the one which he is devoting his life to. A friend of mine once saw a man in a lunatic asylum straddling a wooden chair, cracking his whip, and yelling for it to go on. Thinking to please the driver he remarked to him that that was a fine horse. The lunatic responded: 'This is not a horse, it's a hobby.' Then he suddenly propounded the question, 'Do you know the difference between a horse and a hobby?' My friend said that he did not. 'Well,' said the lunatic, 'the difference is that you can get off a horse.'"

THE "BLOATED BONDHOLDER" CLASS.

[From the *Boston Traveller*.]

More than half the National bank shareholders' holdings represent a par value of about \$1,000 each, and about seven-eighths represent \$5,000 or less. This is conclusive evidence that the National bank shareowner certainly does not belong to the alleged "bloated bondholder" class, and indicates that in the large majority of cases the dividend from bank shares goes to make-up the modest income of the possessors. There is good ground for belief that the same holds good as to the vast majority of United States bondholders and the owners of securities in the oldest and best-established railroads. Now and then some wealthy capitalist holds large blocks of these securities, but the amount thus held is small in comparison to the aggregate divided in small sums among the people. The people of the United States are fortunately inclined to economy, and small savings and investments prevail as perhaps nowhere else except in France. No talk could be more absurd than much of that which has been, and is, current concerning "the bloated bondholder" class.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3613—German-American National Bank, Lincoln, Illinois. Capital, \$50,000.
3614—First National Bank, Sparta, Tennessee. Capital, \$50,000.
3615—Albany County National Bank, Laramie, Wyoming. Capital, \$100,000.
3616—First National Bank, Rock Hill, South Carolina. Capital, \$50,000.
3617—First National Bank, Sheffield, Alabama. Capital, \$100,000.
3618—First National Bank, Sutherland, Iowa. Capital, \$50,000.
3619—First National Bank, Beaver City, Nebraska. Capital, \$50,000.
3620—First National Bank, Wenona, Illinois. Capital, \$50,000.
3621—Second National Bank, Atlantic City, New Jersey. Capital, \$100,000.
3622—East Alabama National Bank, Eutaw, Alabama. Capital, \$59,000.
3623—National Exchange Bank, Dallas, Texas. Capital, \$300,000.
3624—First National Bank, Farmersville, Texas. Capital, \$50,000.
3625—Columbia National Bank, Washington, District of Columbia. Capital, \$250,000.
3626—Union National Bank, Duluth, Minnesota. Capital, \$500,000.
3627—First National Bank, Ponca, Nebraska. Capital, \$50,000.
3628—Carson National Bank, South Auburn, Nebraska. Capital, \$80,000.

ALABAMA.

- BIRMINGHAM.**—Hudson & Perryman have recently opened here.
EUFULA.—East Alabama National Bank has been authorized to commence business. Capital, \$59,000. President, Allen H. Merrill; Cashier, John P. Foy.
HUNTSVILLE.—W. B. Rison & Co.; W. B. Leedy retires and A. L. Rison admitted.
SHEFFIELD.—First National Bank has been authorized to commence business. Capital, \$100,000. President, Charles D. Woodson; Cashier, T. L. Benham.

ARKANSAS.

- HOT SPRINGS.**—Arkansas National Bank; Ed. Hogaboom, President, in place of John B. Roe.

CALIFORNIA.

- COLTON.**—James Lee & Co.; merged in First National Bank.
LOS ANGELES.—East Side Bank is new bank here.
NATIONAL CITY.—San Diego County Bank (A. H. Raynolds); Cashier, C. E. Early.
OCEANSIDE.—D. H. Horne & Co. are reported here.
ORANGE.—Bank of Orange; authorized capital, \$100,000; paid capital, \$10,000. President, Noah Palmer; Secretary, W. T. Bartlett.
PASADENA.—E. C. Webster & Co.; Treasurer, Bayard T. Smith.
SAN DIEGO.—San Diego Savings Bank; discontinued.
SOUTH SAN DIEGO.—A. H. Raynolds has opened an office here.
WINTERS.—Bank of Winters; J. B. McArthur, Cashier, in place of Emile B. Kahn.

COLORADO.

- LA JUNTA.**—Bank of Commerce has just been opened. President, I. R. Holmes; Cashier, Lester Hays.
MONTE VISTA.—Bank of Monte Vista is reported here. Capital, \$25,000. Cashier, R. B. Wallace.

CONNECTICUT.

- ANSONIA.**—Ansonia National Bank; no Vice-President in place of G. P. Cowles.
NEW HAVEN.—Mercantile Safe Deposit Co. will shortly commence business.
NORWICH.—Merchants' National Bank; J. Hunt Smith, President, in place of John Brewster.
WALLINGFORD.—Dime Savings Bank; J. Leonard B. Bishop, Treasurer, in place of John Atwater.

DAKOTA.

- BANGOR.**—W. R. Greene is in business here. Style, Walworth County Bank. Assistant Cashier, J. Rhodes.
CANTON.—First National Bank; Geo. Olson, Assistant Cashier, in place of Hans Anderson.
CASSELTON.—First National Bank; Vice-President, W. F. Holmes; J. L. Gunkel, Cashier, in place of W. F. Holmes; no Assistant Cashier in place of J. L. Gunkel.
FRANKFORT.—James River Bank; Frank Drew, President, in place of John R. Palmer; S. Drew, Cashier, in place of Wm. H. Hathway.
GALENA.—Bank of Galena; Assistant Cashier, E. A. Younglove.
KEYSTONE.—Name changed to Monango.
MOUND CITY.—Campbell County Bank has been recently opened.
OKES.—Bank of Okes has been recently opened. Authorized capital, \$35,000. President, H. C. Sessions; Vice-President, W. H. Yerkes; Cashier, C. A. Baker.
PIERRE.—Robinson Bros. (Bank of Pierre); partners now are H. T. and W. R. Robinson; President, H. T. Robinson.
WEBSTER.—Bank of Webster; President, A. J. Leetoh; Cashier, W. W. Severy.

DISTRICT OF COLUMBIA.

WASHINGTON.—Columbia National Bank has been authorized to commence business. Capital, \$250,000. President, Brainerd H. Warner.

GEORGIA.

AMERICUS.—Bank of Americus; John Windsor, Cashier, in place of H. C. Bagley.

ATLANTA.—Jones & Pratt are in business here.

NEWNAN.—Newnan National Bank; R. W. Anderson, Cashier, in place of Jos. T. Kirby.

ILLINOIS.

ABINGDON.—First National Bank; M. C. Kimball, President, in place of J. B. Mackay; J. B. Scheidtlin, Vice-President, in place of M. C. Kimball; Assistant Cashier, H. B. Scheidtlin.

BLOOMINGTON.—First National Bank; E. Thorp, Vice-President, in place of Geo. W. Funk; C. W. Robinson, Cashier, in place of Edward Thorp; C. B. Ferrigo, Assistant Cashier, in place of C. W. Robinson.

CHAMPAIGN.—Champaign National Bank; Assistant Cashier, W. A. Heath.

CHICAGO.—Chicago National Bank; stockholders vote to increase capital to \$500,000.

—Metropolitan National Bank; Assistant Cashier, H. H. Hitchcock. —North-Western National Bank; Vice-President, H. F. Dummer. —Van Zandt & Haskins are in business here.

LINCOLN.—German-American National Bank has been authorized to commence business. Capital, \$50,000. President, Adolph Rimerman; Vice-President, Fr. C. W. Koehnle; Cashier, Louis C. Schwerdtfeger.

MACOMB.—Union National Bank; B. F. McLean, Assistant Cashier, in place of J. D. Hixon.

OTTAWA.—First National Bank; Wm. Cullen, Vice-President, in place of M. H. Smith.

ROCKFORD.—Second National Bank; C. O. Upton, Vice-President, in place of R. P. Lane.

WARSAW.—First National Bank; in voluntary liquidation.

WENONA.—First National Bank has been authorized to commence business.

INDIANA.

DECATUR.—Decatur National Bank; P. W. Smith, Vice-President, in place of Henry Derker.

DELPHI.—Citizens' Bank; President, M. Shirk; Vice-President, E. W. Shirk; Cashier, J. G. Blythe.

ELKHART.—First National Bank; C. H. Winchester, President, in place of J. R. Beardsley; John Cook, Vice-President, in place of Silas Baldwin; Assistant Cashier, J. A. Cook.

SOUTH BEND.—First National Bank; E. S. Reynolds, Vice-President, in place of A. G. Cushing.

TERRE HAUTE.—Shannon's Bank (Elizabeth Shannon); failed.

IOWA.

ALLERTON.—First National Bank; in voluntary liquidation.

ATLANTIC.—Atlantic National Bank; H. M. Boorman, Cashier, in place of C. McDaniels; J. W. Winslow, Assistant Cashier, in place of H. M. Boorman.

AUDUBON.—Leet & Negley have just opened the Commercial Bank. Capital, \$50,000. President, Wm. Leet; Cashier, W. H. Negley.

BROOKLYN.—First National Bank; W. F. Holmes, Vice-President, in place of C. L. Foster.

DEFIANCE.—Citizens' Bank; reported sold to Bank of Defiance.

DUBUQUE.—Dubuque National Bank; D. D. Myers, Vice-President, in place of J. W. Knight; Assistant Cashier, T. P. Guernsey.

GARNER.—City Bank (C. C. Doolittle & Co.); Cashier, W. C. Moak.

GRUNDY CENTRE.—Grundy County National Bank; Vice-President, J. L. King.

HARTLEY.—Hartley State Bank has been recently incorporated, succeeding People's Bank. Capital, \$25,000. President, Frank Patch; Vice-President, James W. Cravens; Cashier, Jno. W. Cravens.

IOWA FALLS.—First National Bank; Assistant Cashier, F. D. Peet.

OTTUMWA.—First National Bank; Vice-President, George Haw.

SUTHERLAND.—Bank of Sutherland; succeeded by First National Bank. Capital, \$50,000. President, Benjamin Thompson; Cashier, Charles H. Brintnall.

WATERLOO.—Commercial National Bank; Assistant Cashier, Wm. Thompson.

WHEATLAND.—John Guenther & Sons are in business here.

KANSAS.

ANTHONY.—Harper County National Bank; Chas. D. Organ, Cashier, in place of J. H. Anderson. —Anthony Bank; Secretary, T. B. Smith.

APPLETON.—Appleton Bank; capital, \$5,000. President, Perry A. Sorogin; Cashier, Chas. M. Cross.

ARLINGTON.—Arlington State Bank is being organized.

ATCHISON.—First National Bank; D. C. Newcombe, Vice-President, in place of C. G. Foster. —United States National Bank; Vice-President, S. B. Glazier.

ATTICA.—Citizens' Bank succeeds People's Bank. Cashier, E. F. Berry.

BELLE PLAINE.—Belle Plaine Bank; succeeded by Fultz, Millard & Co.

BELOIT.—First National Bank; H. A. Phelps, Cashier, in place of W. S. Search.

BURTON.—Merchants & Farmers' Bank; Jno. Welch, President, in place of J. H. Gresham.

CHERRYVALE.—International Bank; removed to Edna. Style, International Bank of Edna. Same officers.

COLBY.—Thomas County Bank is reported here.

DONGE CITY.—First National Bank; Vice-President, R. J. Hardesty; Assistant Cashier, E. F. Kellogg.

EDNA.—International Bank (formerly at Cherryvale) has recently commenced business here.

EL DORADO.—Bank of El Dorado (Ellet, Gardner & Frazier); sold to Clancy & Son. Cashier, T. T. Parsons.

ELLIS.—Merchants' Bank; F. R. Green, Assistant Cashier, in place of W. E. Moore.

HALSTAD.—Reliance Investment Co. has been recently incorporated. Capital, \$25,000.

HARPER.—Harper National Bank; Vice-President, Geo. P. Yeakam; L. W. Wilson, Cashier, in place of H. C. Munger.

HOWARD.—Lambert's Bank; succeeded by Howard State Bank, President, W. S. Lambert; Vice-President, Harlan P. Tracy; Cashier, Thos. B. Campbell.

INDEPENDENCE.—Bank of Independence; President, J. D. Wood; Vice-President, J. D. Gossett; Cashier, W. S. Wells.

LA CYGNE.—Linn County Bank (Ellis & Saunders); reorganized. Capital paid in, \$50,000. President, W. P. Rice; V.-President, G. K. Saunders; Cashier & Sec., W. O. Fuller, Jr.

LAMAR.—Joe H. Borders and A. V. Scott are in business here. Style, Borders & Scott.

LEAVENWORTH.—Citizens' Savings Bank; capital, \$100,000. President, R. P. Clement; Vice-President, Geo. W. Mickle; Cashier, N. C. Stone.

LEOTI (P. O.: Bonasa).—State Bank of Leoti is being organized.

ASHLAND.—Northern National Bank; Vice-President, Geo. W. Harrison.
BLOOMER.—Henry Marshall (Bank of Bloomer); succeeded by Tillinghast & Marshall. Cashier, Henry Marshall.
JANESVILLE.—First National Bank; Assistant Cashier, John G. Rexford.
KILBOURN CITY.—Bank of Kilbourn; A. D. Rowman, Cashier, in place of John W. Brown.
MILWAUKEE.—National Exchange Bank; Grant Fitch, Assistant Cashier, in place of Abbott Lawrence.
NEW LISBON.—Farmers & Merchants' Bank (Hughes & Marsh); Assistant Cashier, John Singleton.

WYOMING.

FORT FRED STEELE.—Hugus & Chatterton; Manager, F. Chatterton; A. R. Couzens, Cashier, in place of F. Chatterton.
LARAMIE CITY.—Albany County National Bank has been authorized to commence business. Capital, \$100,000. President, Ora Haley; Cashier, Eli Crumrine.

ONTARIO.

ALEXANDRIA.—Union Bank of Canada; Manager, Geo. Brown.
CAYUGA.—Bank of Hamilton have opened a branch here. Manager, J. H. Stuart.
CLIFFORD.—J. W. Scott; E. K. Scott, Manager, in place of F. Walton.
DUNNVILLE.—W. F. Haskins & Co.; Geo. Wilson, Manager, in place of W. F. Haskins, Jr.
THORNBURY.—Telfer Brothers have commenced business here.
TORONTO.—Quebec Bank; Acting Manager, W. P. Sloane.
TOTTENHAM.—Bank of Hamilton; W. C. Aitken, Agent, in place of W. P. Roberts.

QUEBEC.

MONTREAL.—Canadian Bank of Commerce; A. M. Crombie, Manager, in place of Robert Gill.

NORTH-WEST TERRITORY.

QU' APPELLE.—S. H. Caswell; Manager, Harold Jagger.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, February 5, 1887.

THE MOST PROMINENT features of the present financial situation, it is to be acknowledged, are of a dubious or disturbing character. The passage of the Interstate Commerce bill in Congress and its probable approval by the President, present a subject for anxiety as to the effects of the measure upon the railroads of the country, and has been made the most of by stock operators who desire to see prices low in order to purchase cheaply. It appears to us that the most dispassionate judges of the matter, while they find objections to some provisions of the bill, do not expect any great harm to result from it. It was in the nature of things that a Government Railroad Commission should be appointed sooner or later; and, while it might have been better for Congress not to enact any general law for the government of the railroads until the Commission had, after investigation, drafted the provisions which might be found necessary and just, it is wrong to exaggerate the defects of the measure.

The fresh outbreak of strikes, most of which are quite unjustifiable, while it is very embarrassing to many business men, is not so serious as that of last year. It is bound to run its course, but it is easy to see that the end is not far off. The pestiferous idea so prevalent among the manual workers of the times, that by united effort they can force the payment of high wages, whether the business of the employer will warrant such payment or not, is certain to be stamped out by hard facts before long. The strikers have met so many defeats that the faith of the body of workers in the efficiency of strikes and boycotts is plainly on the wane.

A third factor, affecting especially the stock market, is the fear across the water of war on the Continent. The political situation there is certainly critical, but the very fact that war is so generally looked for is, to some extent, an argument against its commencement. Late advices from very responsible European sources make it appear doubtful if there will be any war. But, in any case, the effect upon American securities should be only temporarily unfavorable.

In spite of the depressing features mentioned, the condition of general trade is encouraging. The business failures in the United States reported to Bradstreet's since January 1st compare favorably with the number for the corresponding time in previous years. The number so far this year is 1,255 against 1,364 in 1886, 1,645 in 1885, 1,258 in 1884 and 1,108 in 1883.

The bank clearings during January, as compiled weekly from the transactions of the various Clearing-Houses throughout the country, show a marked increase over the totals of January, 1886. The price of pig iron is advancing, the stocks on hand at the furnaces being only one-half what they were a year ago. It is reported that the coal companies will advance the price of their product \$1 per ton during the year, but it is wisely intimated that this will be done with less flourish of trumpets than was made last fall over a very moderate advance.

As the condition of the iron industry is considered so correct an indication of general trade, we quote as follows from the "Bulletin" of the American Iron and Steel Association: "The general business outlook for 1887 is at this time very favorable, and for our iron and steel industries it is especially so. Railroad building promises to be even more active in 1887 than in 1886. But none of us know what a day or a month may bring forth in the stock market, or in the financial or tariff legislation of Congress, or in the condition of the country's crops. Of one thing we feel certain, speaking generally, prices must stop where they are, or we will have such an influx of foreign iron and steel in 1887 as we have rarely, if ever, experienced."

FOREIGN EXCHANGE.—The rates for foreign exchange have been forced upward of late by the difficulty in shipping goods from New York, but dealers are looking for high rates in the near future. Following are the posted and the actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.85½@4.86; sight, nominal \$4.89; 60 days, actual, \$4.84½@4.85½; sight, actual, \$4.88@4.88½; Cable transfers, \$4.89½@4.89; Prime commercial sterling, long, \$4.88½@4.84½; Documentary sterling, 60 days, \$4.83½@4.83½; Paris, bankers', 60 days, 5.22½@5.21½; sight, 5.20@5.19½; Paris, commercial, 60 days, 5.23½@5.23½; sight, 5.21½@5.25½; Antwerp, commercial, 60 days, 5.24½@5.28½; Swiss, bankers', 60 days, 5.23½@5.22½; sight, 5.20½@5.20; Reichsmarks (4), bankers', 60 days, 95@95½; sight, 95½@95½; Reichsmarks (4), commercial, 60 days, 94½@94½; sight, 95½@95½; Guilders, bankers', 60 days, 40@40 1-16; sight, 40 3-16@40½; Guilders, commercial, 60 days, 39½@39 15-16; sight, 40 1-16@40½; Copenhagen, Stockholm and Christiana, krona, 60 days, 26½; sight, 26½; Paris dispatches quote exchange on London 25f. 37c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on January 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of December, 1886 and January, 1887:

Dec.	BANKERS		Cable Transfers.	Commercial.	PARIS

Five francs.....	92	@ 96	Mint value.		

The following statement of the foreign trade of the United States, compiled from the returns of the Bureau of Statistics, may be found of interest :

MERCHANDISE.	December, 1886.	July 1st to Dec. 31, 1886.
Exports	\$85,804,419	\$385,078,792
Imports	56,206,129	384,827,568
Excess of exports	\$29,098,290	\$50,851,194
	December, 1885.	July 1st to Dec. 31, 1885.
Exports	\$74,278,716	\$351,913,956
Imports	52,211,520	306,846,524
Excess of imports	\$22,067,196	\$45,067,432

During the month of December the excess of imports over exports of gold and silver bullion was \$9,908,197 against \$2,157,613 in December, 1885. For the six months ending December 31, 1886, the same excess was \$30,065,022 against \$5,988,525 in the corresponding period of 1885.

MONEY AND DOMESTIC EXCHANGE.—The rates for money have been gradually slackening, the present rate for call loans ranging from $8\frac{1}{2}$ to 5 per cent. Commercial paper is offered freely, and is taken more readily by the country than by the city banks. Following are the rates of domestic exchange upon New York: Savannah, par, selling $\frac{1}{8}$ @ $\frac{1}{4}$ premium; Charleston, buying $\frac{1}{8}$ discount @ par, selling $\frac{1}{8}$ @ $\frac{1}{4}$ premium; New Orleans commercial, 25c. per \$1,000 discount; bank, \$1 per \$1,000 premium; St. Louis par @ 25c. per \$1,000 discount; Chicago, 40c. per \$1,000 discount.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of February, 1887, and, for comparison, on the 1st of January, 1887 and December, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Feb. 1, 1887.	Jan. 1, 1887.	Dec. 1, 1886.
Gold coin and bullion	\$274,140,469	\$268,128,018	\$254,450,853
Gold certificates outstanding	105,665,107	97,215,605	90,520,638
Gold owned by Treasury	\$168,475,362	\$170,812,413	\$163,930,220
Silver dollars and bullion	\$198,810,822	\$193,245,614	\$189,003,321
Silver certificates outstanding	118,315,714	117,246,070	105,519,817
Silver owned by Treasury	\$80,525,108	\$75,998,944	\$83,483,504

On January 22d the Secretary of the Treasury issued a call for the redemption of \$13,887,000 of the 3 per cent. loan of 1882 on March 1, 1887. Following is a description of the bonds called, the numbers being original and inclusive in each case: \$50—No. 26 to 46; \$100—No. 375 to 582; \$500—No. 168 to 245; \$1,000—No. 1,321 to 2,014; \$10,000—No. 3,959 to 5,315. There are now exactly \$40,000,000 uncalled 3 per cent. bonds outstanding.

The receipts of the Government from all sources in January were \$28,895,921 against \$24,787,857 in January of 1886, an increase of \$3,658,064. From July 1, 1886, to February 1, 1887, the receipts were \$209,078,928 against \$191,512,808 for the corresponding period of last year, an increase of \$17,566,120. The expenses in January were \$23,384,901 against \$22,753,131 in 1886, an increase of \$631,770; and from July 1, 1886, the expenses were \$167,786,451 against \$151,401,022 last year, an increase of \$16,385,429. Thus far in the fiscal year the receipts have exceeded the expenditures by \$41,292,477.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of

Government bonds on each day of the month of January and the highest and lowest during the month. Actual sales marked * :

JAN.	4½s. '91, coup.	4s. 1907, coup.	3 per cents.	C'y 6s. 1895.	C'y 6s. 1899.	JAN.	4½s. '91, coup.	4s. 1907, coup.	3 per cents.	C'y 6s. 1895.	C'y 6s. 1899.

+ Ex-interest.

THE NATIONAL BANK CIRCULATION was decreased \$3,693,425 during the past month, leaving the total now outstanding \$292,793,452. The decrease since February 1, 1886, is \$24,861,571. The amount of legal-tender money on deposit with the Treasurer to redeem National bank notes is now \$92,535,106, an increase of \$1,354,334 during the last month and of \$45,935,676 during the past twelve months.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Feb. 1, 1887.	Jan. 1, 1887.	Dec. 1, 1886.	Nov. 1, 1886.
Currency 6 per cents.....	\$3,201,000	\$3,680,000	\$3,645,000	\$3,586,000
4½ per cents.....	60,054,400	59,636,200	59,019,050	57,306,850
4 per cents.....	113,300,000	113,903,200	115,252,700	115,813,150
3 per cents.....	48,483,100	52,218,950	58,994,450	69,538,050
Total.....	\$225,038,500	\$229,438,350	\$236,911,200	\$245,744,050

ASSOCIATED BANKS OF NEW YORK.—The money reserved has lately been increased to a very safe amount. The amount of loans is near the maximum.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1886 and 1885:

	1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Jan. 29.....		\$353,051,000	\$92,851,600	\$25,187,200	\$382,961,800	\$7,825,000	\$22,296,450

RAILROAD AND MISCELLANEOUS STOCKS.—The market is considerably depressed, a fear of the effect of the Inter-state Commerce bill, the labor strikes and European war news giving the bears a good opportunity to break down prices. The railroad earnings are good, however, and the prospects are fair for the remainder of the year.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of January, the highest and lowest since January 1, 1887, and also during the year 1886:

	JANUARY, 1887.			SINCE JANUARY 1, 1887.		YEAR 1886.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the latest previous quotation is designated by a *. The highest and lowest prices for the year 1896—actual sales—are given for comparison.

W. L. TRENHOLM,

Comptroller of the Currency.

BANKERS' OBITUARY RECORD.

Allen.—Judge William C. Allen, a leading banker of Racine, Wis., died January 13th, aged 72 years. He was a Judge in Walworth County, Wisconsin, for a number of years, and occupied several important political positions.

Armstrong.—Matthew Armstrong, for many years President of the Hudson County National Bank, died at his home in Jersey City, N. J., on January 3d, aged 63 years. He was a member of the Jersey City Board of Finance for one term.

Carney.—Captain James Carney, for thirteen years Cashier of the First National Bank, of Richmond, Me., died on January 1st, aged 82 years. He retired from active business in 1878.

Gillette.—C. S. Gillette, President of the First National Bank, Hartford, Conn., is dead.

Greenleaf.—John H. Greenleaf, President of the Laclede County Bank, Lebanon, Mo., died on December 9th, 1886, aged 52 years.

Gurley.—William Gurley, President of the Union National Bank, of Troy, N. Y., died on January 11th, aged 66 years. He was Mayor of Troy for several years, and a member of the State Legislature in 1867.

Hobbs.—A. Hobbs, President of the Edwards County Bank, Kinsley, Kan., is dead.

Hogarth.—Hon. John P. Hogarth, National Bank Examiner for the Detroit District, died at his home, Monroe, Mich., Saturday, September 18, 1886, in his sixty-sixth year. A more extended notice, giving some of the facts regarding Mr. Hogarth's life and public services appeared in the JOURNAL for November, 1886.

Knapp.—Shepherd F. Knapp, at one time Receiver of the Bowling Green Savings Bank, of New York, died on December 25th, 1886, aged 54 years.

Landell.—Washington I. Landell, for a number of years President of the Kensington National Bank, of Philadelphia, Pa., died on January 15th, of ossification of the heart, aged 69 years. He was connected with the bank nearly 15 years.

Lindsay.—Jesse H. Lindsay, President of the National Bank of Greensboro, Greensboro, N. C., is dead.

Loomis.—Henry Loomis, President of the Burlington (Vt.) Savings Bank, died on December 18, 1886, aged 68 years. He was President of the bank 50 years and the last survivor of the corporators of that bank. The Trustees, on December 23d, passed resolutions of respect to his memory. He was for 31 years a Trustee of the University located at Burlington, and gave much of his time and money to its support.

Marsh.—John Marsh, Cashier of the Citizens' National Bank, Muncie, Ind., is dead.

Near.—Andrew Near, for many years Vice-President of the State of New York National Bank, died on January 11th, at Kingston, N. Y., aged 78 years. He was one of the oldest leading citizens of Kingston.

Newman.—William H. Newman, one of the charter members of the New York Produce Exchange, and its Vice-President from 1863 to 1870, died on January 11th, aged 64 years. He was at one time officially connected with several New York banks.

Owens.—Rufus S. Owens, Auditor of the Chelsea (Mass.) Savings Bank, died on December 30, 1886, aged 60 years. He was a member of the State Legislature in 1867.

Pinneo.—James B. Pinneo, President of the National Newark Banking Company, Newark, N. J., died on January 9th, aged 80 years. He was President of that bank (the oldest financial institution in Newark) since 1854, and was also a Director in the Howard Savings Institution.

Pollock.—Thomas C. Pollock, formerly President of the St. Nicholas Bank, of New York city, died January 28th, aged 57 years. He resigned his position last October owing to ill health.

Pope.—Samuel M. Pope, Chairman of the Board of Trustees of the Burlington Savings Bank, of Burlington, Vt., died on January 2d, aged 72 years. For many years he was Vice-President of the Merchant's National Bank, of Burlington, and was highly esteemed.

Printup.—D. S. Printup, of Printup Brothers & Co., Rome, Ga., is dead.

Sprigg.—Joseph A. Sprigg, President of the First National Bank, Baltimore, Md., died December 23, 1886, aged 65 years.

Todesco.—Herr Todesco, a well-known banker, of Vienna, Austria, died on January 16th.

Warner.—Charles Warner, President of the National State Bank, of Troy, N. Y., died suddenly of apoplexy on January 16th, aged 58 years. He was County Treasurer for three years.

White.—Frank Worth White, a member of the New York Stock Exchange and of the stock commission firm of Loomis L. White & Co., died of pneumonia on January 18th, aged 30 years. He was admitted to membership in the Stock Exchange in April, 1881.

Williams.—John Williams, President of the Fulton Bank, of Brooklyn, N. Y., died on January 9th, aged 68 years. He became connected with the bank 15 years ago, and was its President for ten years. He was a prominent resident of Brooklyn for half a century and filled a number of important political offices.

F. G. Babcock.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

MARCH, 1887.

No. 3.

THE REPLY OF SECRETARY MANNING to the House resolution touching the retirement by the Treasury Department of the \$1 and \$2-notes constitutes a stronger arraignment of the stupid and dishonest currency system of the United States than any that has come under notice. He says plainly that the \$125,000,000 per annum of surplus taxation is the measure of the clear distance which separates the Government from a present need or excuse to reissue the greenbacks. That temporary notes which are a debt of principal only, like notes which are a debt of principal and interest, should at once be cashed and canceled from abundant and superfluous coin in hand not now capable of being applied to any other use he holds "to be so obvious a principle of sound finance, such as a prudent citizen would apply to his private affairs, that any Secretary of the Treasury would be subject to just reproach for departure therefrom by reissues, were it not that the Act of May 31, 1878, seems to require of him this fatal misstep." But, besides, the faith of the Government is solemnly pledged to pay the greenbacks in coin or its equivalent. The payment of the bonded debt from the surplus is attended with the difficulty that, after the 3 per cents are redeemed, there are no other bonds falling due for four years, and they can only be purchased at a high premium, and, besides, it causes contraction of the currency through the withdrawal of bank circulation. The remedy is very clear: first, the coinage of the silver dollar should be stopped; then the greenbacks should be paid with the funds in the Treasury, coin certificates being largely used in the operation, and excessive taxation abolished. These reforms are supported by language and arguments adapted to convince any person but a modern politician of their practical utility.

IN HIS LAST ANNUAL REPORT the Director of the Mint called attention to the fact that there had been a demand for some time past for dime pieces. In order to supply the want the Mints have been called upon to recoin other silver coins into dimes. There is an abundance of such other coins, as the Director says: "The fact that there is a large

accumulation in the Treasury of fifty and twenty-five cent silver pieces tends to indicate that the coinage of those denominations has been in excess of the requirements of the public." This is stated very gently, indeed, for it is a well-known fact that the Treasury has been carrying from \$25,000,000 to \$30,000,000 worth of subsidiary coins which are so practically useless that Treasurer Jordan has reported them separately from the other money in the Treasury as "Assets not available." Under these conditions, with such an excessive amount of silver halves and quarters in the Treasury, and a demand for dimes, what was more natural than that Director Kimball should suggest that, "instead of buying silver for the coinage of dimes, for which there is a pressing demand," it would be preferable "to recoin the worn twenty-five and fifty-cent pieces in the Treasury, and uncurrent three, five and twenty-cent pieces which may be presented to the Treasury for redemption." But it appears that this did not meet the views of the silver men, for the joint resolution introduced in Congress to deal with the subject provides that bullion shall be purchased for the new coins. This is a matter that has escaped attention by the newspapers, but it well illustrates the selfishness of the silver men—their total disregard of any interest but their own.

THE VIEWS OF COMPTROLLER TRENHOLM on the matter of the reduction of National bank circulation, as explained to the Senate Committee on Finance, and published in this number, are worthy of close attention. He is undoubtedly right in opposing the issue of the circulation on the premium of bonds deposited, but it is questionable if allowing the banks to issue up to the face value of their bonds would not tend to prevent the present rapid decrease in the circulation. He does not favor even this proposal, however, and it must be confessed that any change calculated to increase the market value of bonds which the Government may be compelled to purchase before maturity is hardly feasible. Notice should be taken of the point that, after the 3 per cent. bonds are all called, of which the banks now hold less than 50 millions, the limit of \$3,000,000 per month to the deposit of lawful money to reduce circulation will begin to apply, so that this will be the maximum amount of the reduction when the 3 per cents have all been disposed of. The only positive recommendation made by the Comptroller is the repeal of the tax upon the minimum amount of circulation, and perhaps a reduction of the minimum amount now required for each bank. These two proposals are hardly in harmony, but there are strong reasons in favor of both, and they would tend to insure a continuance of the National bank system.

MANY WELL-MEANING PEOPLE are advocating an adoption by the Government of a Postal Savings Bank system for the very laudable purpose of encouraging the accumulation of small savings. While, of

course, this purpose is to be commended, the proposed means of accomplishing it is very questionable. Unless some plan is devised for investing deposits, the evil from which we are already suffering (hoarding money in the Treasury which should be in active circulation) will be intensified. The Government cannot invest deposits in its own bonds without buying them at a large premium, and it is already in receipt of more revenues than it can advantageously use for that purpose. The policy of investing deposits in any other class of securities is one which involves a number of serious objections, and should not be entered upon without some means of avoiding them is first devised. The savings banks as now conducted in New York and New Jersey, as well as all the New England States, are under strict supervision by the State, and are doing a grand work. Other States are gradually perfecting their laws so as to build up similar institutions. There is not a whit of evidence to show that the United States Government is capable of taking care of the people's savings.

IT IS TO BE HOPED THAT the attempt to pass a law providing for the establishment of a system of savings banks in the State of Illinois on the plan of the New York system will prove successful. The State has no system whatever deserving the name, the savings banks being all joint-stock concerns, having deposits aggregating only about \$4,000,000, or about \$1.33 per head of the population. The advantage of a system devised wholly in the interest of the depositors will be recognized when we say that the savings banks of the State of New York, which has about one-half more inhabitants than Illinois, have total deposits of \$559,000,000, or about \$112 per capita. Massachusetts, with a population of less than 2,000,000, has saving deposits of \$304,000,000, or \$152 per head, and Connecticut has \$102,000,000, being an average of over \$174 for every man, woman and child in the State. A place where persons of small means may safely deposit their money and earn a little interest is an aid to the advancement of the people which neither Illinois nor any other State can afford to neglect.

THE REPORT OF THE SENATE FINANCE COMMITTEE on the bill to establish a Sub-Treasury at Louisville, Ky., is worthy of notice, not because the Committee opposed it as a useless expense, but on account of the argument contained in it against the Sub-Treasury system. There are now no less than 160 places where public revenues are collected and disbursements made, outside the Sub-Treasury cities, with absolute security to the Government, through means of National bank depositories. As the report says: "The cause which led to the adoption of the Sub-Treasury system no longer exists." It is extravagant and injurious to the business of the country, causing money to be locked up from time to time when it is needed outside, and thus inducing monetary panics. Besides, it leads to an improper connection between

the Government and the money market. When our finances are arranged on a more scientific basis—if that time ever comes—one of the principal changes to be made will be the abolishment of the Sub-Treasury system.

ALTHOUGH THE FACT has been fully demonstrated that legislation cannot fix the market value of a commodity, the attempt to make an exception to the rule with reference to money is of frequent occurrence. A bill is now pending in the Massachusetts Legislature to prevent the making of a contract to pay a greater rate of interest than 10 per cent. per annum. The author of the bill has stated that in 32 States and Territories there is a penalty for usury, the rate of interest varying from 5 per cent. in Louisiana to 18 per cent. in Montana. The efficacy of legislation in regulating the value of money, if there is any, ought to be demonstrated by the experience of some one of these 32 States, but the evidence is not forthcoming. In many States severe penalties are attached to usury, yet they have not saved a single borrower from paying the full market rate for money. On the contrary, severe usury laws usually operate to increase the rate which the borrower has to pay. The weak point in all such laws is their lack of power to compel owners of money to lend it whether they want to or not.

THE RETIREMENT OF SECRETARY MANNING and the language used in his letter of resignation give rise not only to regret but anxiety regarding the future of the country's finances. The Secretary has done his duty sturdily and well in a very difficult position. With the best chances for placing our monetary system on a perfect footing and reforming the tax and tariff laws into a logical system that probably any nation ever enjoyed, Congress has insisted on continuing in the old stupid and dishonest course against which the Secretary has always protested. It is evident that Mr. Manning had no hope of a return to rational methods during his term of office, and no doubt this had much to do with his retirement. His successor will have to encounter a condition of affairs and an outlook that no prudent man will face without shrinking.

THERE IS NO ACCOUNTING for the vagaries of State legislators when dealing with financial matters. A case in point which came up in Tennessee during the past month was the introduction of a bill to prevent the payment of interest on deposits except by savings banks. This proposal was advocated on the ground that the banks are paying 4 to 6 per cent. on deposits, and are thereby becoming moneyed monopolies, as no one can borrow from them at less than 12 to 15 per cent. The bill was introduced in the interest of the young men of the State. When it is remembered that there is no regular system of savings banks in the State, the bill and the arguments in favor of it appear all the more farcical.

REDUCTION OF THE SURPLUS.

BY JOHN JAY KNOX.

In an article upon "The Future of the National Banking System," published in the *North American Review* for January, the subject of the reduction of the surplus was briefly referred to. The proposition was to provide for the refunding of the four per cent. bonds, amounting to about 738 millions, into two-and-a-half per cents in all respects precisely like the fours except in the rate of interest, the Government offering to the holders of the fours the inducement to exchange the old bonds for the new by paying in advance the difference in interest between two-and-a-half per cent. and four per cent. as calculated by the Actuary of the Treasury Department. Since the publication of that article I have received from the Actuary of the Treasury of the United States the following letter, giving an exact calculation of the difference to be paid to the holders of the four per cents in money. It is as follows:

UNITED STATES TREASURY DEPARTMENT, }
WASHINGTON, D. C., December 24, 1886. }

John Jay Knox, Esq., President National Bank of the Republic, New York.

MY DEAR SIR:—In response to your request of the 11th inst. as to "the difference in interest between 738 millions of 4 per cents maturing in 1907 and a bond exactly the same, maturing at the same date, bearing interest at $2\frac{1}{2}$ per cent." I would say that, throwing out of consideration the superior advantages offered by the $2\frac{1}{2}$ per cent. bond for the purposes of bank-note circulation, the present value to the holders of one dollar and a half a year for 20 years, re-invested quarterly, is, if computed at a 4 per cent. rate of investment, \$20,583; if invested at 3 per cent., \$22,479; and, if invested at 5 per cent., \$18,896 on each \$100 bond.

Very truly yours, E. B. ELLIOTT, Government Actuary.

MEMORANDUM.

Present value of one dollar and a half a year for 20 years, re-invested quarterly, at the following rates of interest per annum.

$2\frac{1}{2}$ per cent.	\$23,552
3 per cent.	22,498
4 per cent.	20,583
5 per cent.	18,896

Corresponding difference in interest on \$738,000,000 reduced from 4 per cent. to $2\frac{1}{2}$ per cent. per annum.

\$173,810,000
166,084,000
151,908,000
139,445,000

According to this calculation, the holder of \$100,000 of four per cent. bonds would receive new two-and-a-halves, maturing at the same date as the fours, and in addition \$23,552 cash, if the rate of interest upon the interest advanced by the Government is cast at two-and-a-half per cent., or at a little above the borrowing power of the Government.

If the rate of interest is cast at four per cent. the holder of \$100,000 of bonds would receive new two-and-a-half per cents and \$20,583 cash.

I have conversed with many large holders of the four per cents, including officers of banks and trust companies and other corporations, and all of them, without exception, have expressed the opinion that if such an offer was made the four per cents would be readily returned to the Government, either for conversion or for reduction in the rate of interest by stamping on the four per cents as proposed in the bill introduced in the House by Hon. Abram S. Hewitt, of New York.

Private individuals who are satisfied with a small income hold Government bonds for the purpose of avoiding taxation; National banks hold them

as security for circulating notes and for Government deposits; savings banks and trust companies hold them as a reserve and because they are not subject to taxation; and insurance companies and other corporations are required by law to deposit them with State authorities. It is evident that a bond having a low rate of interest, payable at the same time as the fours, could be used equally as well for any or all of these purposes.

The bill of Senator Aldrich, now pending in the Senate, provides: "That the two-and-one-half per centum bonds herein authorized, issued in exchange for four per centum bonds, shall not be called in and paid so long as any bonds of the United States heretofore issued, bearing a higher rate of interest, shall be outstanding and uncalled, and the last of such bonds originally issued under this Act, or the substitutes issued therefor, shall be first called in; and this order of payment shall be followed until all of such bonds shall have been called in or paid." The bill also authorizes the issue of circulation of National banks up to the par value of the two-and-a-halves. Such legislation would immediately enhance the value of the two-and-a-halves, and the holders of the fours, and particularly the National banks (who hold about 125 millions), would hasten to make the exchange in order to obtain the earliest numbers of the new bonds, for the same reason that similar exchanges were promptly made for the three-and-a-halves, and subsequently for the threes at the time those bonds were issued.

The new two-and-a-halves can also be made more valuable, and the proposed exchange rendered certain, by extending the date of the maturity of a portion of the new bonds to a date subsequent to 1907, when the present bonds are payable.

Under the present law the whole 738 millions of fours mature on July 1, 1907. The Government cannot, of course, at that time pay the whole amount, and will undoubtedly, at the maturity of these bonds, extend the time of payment by reducing the rate, as it did at the date of the maturity of the five and six per cents on July 1, 1881, when 579 millions of these bonds were extended or continued at the rate of three and a half per cent.; or, as it did two years subsequently, on July 1, 1883, when more than 800 millions of three-and-a-halves were continued at the rate of three per cent.

The bill of Senator Aldrich can be so amended that the date of the payment of the new two-and-a-halves to be issued may be postponed, at the same rate of interest, beyond the maturity of the fours, and made payable in instalments of 100 millions, or less, annually during each year succeeding July 1, 1907, until the whole amount is paid, as follows:*

<i>Rate of Interest.</i>	<i>Maturity of Bonds.</i>	<i>Amount.</i>
2½ per cent.....	July 1, 1907.	\$100,000,000.
2½ per cent.....	July 1, 1908.	100,000,000.
2½ per cent.....	July 1, 1909.	100,000,000.
2½ per cent.....	July 1, 1910.	100,000,000.
2½ per cent.....	July 1, 1911.	100,000,000.
2½ per cent.....	July 1, 1912.	100,000,000.
2½ per cent.....	July 1, 1913.	100,000,000.
2½ per cent.....	July 1, 1914.	100,000,000.
2½ per cent.....	July 1, 1915.	87,000,000.
		\$887,000,000.

* There is a precedent for making bonds under the same law payable at different dates in the bonds issued by the Government to Pacific Railways, which mature at seven different dates, commencing January 16, 1896, and ending January 1, 1899.

Or, if the annual payments were fixed at 80 millions, then the final payment of 87 millions would be in the year 1917, ten years after the maturity of the present bonds. This would make the new two-and-a-half per cents exceedingly desirable to all holders of United States bonds, and particularly to that large class who desire the *longest* bonds. The holders of the four per cents first presenting their bonds for exchange would receive the new two-and-a-halfs having the longest time to run, and there is no doubt there would be a brisk competition among holders to obtain the longest bonds, which under the bill proposed would be the first bonds issued.

It has been proposed by Senator Beck, and by Representative Scott and others, to loan the surplus reserve, which is estimated by the Secretary of the Treasury to be 100 millions annually, temporarily at two per cent. to holders of Governments who would deposit such bonds as security. Even at this low rate of interest, upon the condition named, it is not believed that the Government would succeed in loaning any considerable amount of the surplus; but, if the Government will offer to the holders of the fours the inducements which are here outlined, it may not only refund all of these bonds into the two-and-a-halfs—the lowest rate of interest of any Government—but may at the same time receive *four per cent. interest* upon the interest which it pays in advance to these bondholders. In other words, it may successfully reduce its surplus and complete the whole transaction by offering for every \$100,000 of the fours the same amount of two-and-one-halves and \$20,588 cash.

According to the calculation of the Government Actuary, as given above in his letter, the just and equitable amount to be paid to the holders in advance as interest upon the 738 millions of fours for an exchange of such bonds for two-and-a-half per cents is \$178,810,000 in cash.

With the additional inducement of an extension of the date of maturity of the new two-and-a-half per cents, there is no doubt that the whole transaction could be consummated by offering to the holders of the fours in the aggregate \$151,908,000, thus effecting a gain to the Government in the whole transaction of \$21,907,000, and at the same time reducing the surplus during the next two or three years \$151,908,000, according to the exact calculation of the Actuary of the Treasury Department.

This plan for refunding the last loan of the Government, if the proper legislation can be obtained, is perfectly feasible, and can be readily carried out, and would be unsurpassed even by the brilliant transactions of Secretary Sherman, when these very bonds, the four per cents, were issued in the year of the resumption of specie payments—1879.

The proposed plan will be of advantage to the bond-holder, and, owing to the existing circumstances, still more advantageous to the Government. It provides for the reduction of the surplus as rapidly as the state of the Treasury will warrant, and will give ample time for both parties to mature a bill for a just and permanent reduction of the customs duties,

THE PRIZE ESSAY on "Country Collections" will probably be ready for publication in the April issue. The Judges have the various contributions in hand, and the JOURNAL's readers may confidently expect something of practical interest—and real value—on this important branch of banking practice in place of the wild-geese-chase system (or rather *no system*) now in vogue.

POWER OF A NATIONAL BANK TO BORROW MONEY.*Editor Rhodes' Journal of Banking:*

HUTCHINSON, KANS., February 26, 1887.

SIR:—I see in your valuable JOURNAL for January, under the head of "Banking Law," that the power of a National bank to borrow money has been sustained by the Courts in numerous decisions. If the Courts have adjudicated the question, why is it that the Comptroller of the Currency insists that the borrowing of money is *not* one of the acts permitted under the National Banking Law? In other words, are we to follow the decisions of the Courts or the Comptroller?

VERITAS.

According to a communication received from the office of the Comptroller of the Currency upon the subject mentioned in our correspondent's letter, it appears that Comptroller Trenholm does not hold it to be illegal for a National bank to borrow money. He takes the view that "the whole business of a bank consists in borrowing money to lend again. It borrows its capital from its stockholders; it borrows deposits from the community. Every note that it issues represents value borrowed from the person into whose hand that note first goes, and to be paid to whatever holder of the note presents it for redemption. Therefore, it is a fundamentally untenable proposition to say that it is not a part of the business of a bank to borrow money to lend again."

At the same time, he holds that "It is seldom safe for a bank, by offering inducements of interest or other advantages to those from whom it borrows, to increase its indebtedness beyond what may be regarded as its natural limits, by which I mean the limits that arise out of the industrial circumstances of the community. Now, what I think is that, when a bank habitually adds to its own capital and ordinary deposits resources artificially obtained—as by borrowing money in some other place or attracting to it by the payment of interest deposits which it would not otherwise obtain—and employs such increased resources in extending its business, there arises an unnatural and artificial relation between the real resources of the community and the capital upon which it is trading, a relation which may be at any time disturbed by the failure of these external resources. Such a disturbance is certain to cause embarrassment not only to the bank but to those of its customers who have in this way been induced to depend upon a rate of accommodation which it is not in the power of the bank to keep up.

"For these reasons I have advised banks not to seek to extend their business by increasing their resources beyond their natural limits through the rediscounting of paper or the creation of bills payable. This advice is accompanied with a reminder that, since the obtaining of resources in this way is not one of the enumerated powers of National banks, in order to be unquestionably legal the creation of such obligations should always be supported by the formal and recorded resolution of the Board of Directors.

"The Courts have decided that, where the Board of Directors authorize the use of the credit or of the assets of a bank in effecting a loan, such loan is valid; and, while I do not know of any decision to the effect that in the absence of this condition an otherwise similar loan would not be valid, yet I think the inference is, that if the question were raised, it would be decided in that way."

ENGLAND'S FINANCIAL AFFAIRS AND INSTITUTIONS.

AS SEEN BY THE ASSOCIATE EDITOR OF THE JOURNAL.

LONDON, February 22, 1887.

The writer had an opportunity to converse with a number of gentlemen who are well informed regarding the condition of financial affairs in England, and they are unanimous in saying that the feeling prevailing as to the prospects of American properties are very good. They themselves recognize fully the evidences of renewed prosperity which have appeared so abundantly in the United States during the past year, and, besides, they speak as if business men generally here were convinced of their validity. A noticeable fact is that financial men speak as if they were very well disposed toward American properties, and less criticism is bestowed upon the management of our railroads, etc., than might, perhaps, be expected. Intelligent Englishmen, however, are puzzled to account for the vagaries of Congress on currency matters. They are not able to understand how the country can prosper, as it does, under the control of men who are foolish enough to continue the silver dollar coinage. Among the commercial class there appears to be a widespread feeling of rivalry, arising almost to bitterness, respecting America. Of course, the testimony of but one person to this fact is far from conclusive, but the feeling is evidenced when conversing with persons in various parts of England and Scotland, and it must commonly prevail. The merchants believe that they are unfairly handicapped with the United States in the contest for trade, and that England's tariff laws are too generous, while ours are just the opposite. Whether this feeling is or is not justified by the facts, it appears that they would rather not trade in American products if it were merely a matter of choice.

THE ROYAL MINT.

Permits to visit the Royal Mint are only to be obtained from Mr. Freemantle, Deputy-Master, upon application to the Chancellor of the Exchequer, and they always state the exact hour at which admission is to be obtained.

The Mint is a spacious marble building situated in the "city" and near the Tower of London. There is a large gate-way in front opening on a court-yard which the building surrounds on three sides.

After entering his name on the book in the reception room, the visitor is conducted to the smelting department on the left of the court-yard. The furnaces are not unlike the grills in an oyster saloon, and smelting precious metals is no more curious than the same operation when applied to baser products. We were shown a crucible about twelve inches high intended to hold 1,200 ounces of gold, but no gold is coined at present. The next operation after smelting consists in rolling out the bars of metal into strips the thickness of the coins that are to be struck. The silver strips which were being worked bore slight resemblance to that metal, being of a dingy bright color, something like blackened zinc, a result of oxidation. The bars are rolled and re-rolled many times under immense pressure in order to reduce them to the right thickness. When this is done they are tested and annealed in order to free them from

the excessive hardness caused by the pressure. The silver is now in thin strips about six or seven feet long. The strips are introduced into a stamping machine which at each blow strikes out two discs the size of the coins required, the strips of metal being just wide enough for two coins. This stamping, in the case of small coins (such as sixpences, which were being worked on this occasion) is done very fast. The discs or blanks are next fed into a machine which presses the edges outward on both sides in preparation for the final stamping. This is also done very rapidly, so that the pieces flow from the bottom of the machine like a stream of water. The blanks being yet of a very dull color are next washed in acid and rolled in a drum containing sawdust until they come out looking like discs of white pasteboard. They are also annealed, the metal having again been unduly hardened by the manipulation mentioned. The blanks are now ready to be fed into the machine which makes the "coin of the realm," stamping at one blow the inscription on both sides as well as the milling around the edge. By a system of levers and springs a very heavy pressure is obtained from one of these machines, but this pressure can be graduated to the greatest nicety. For sixpences three tons' pressure is sufficient, but for the largest pieces twenty tons is required. One machine will turn out about 100 pieces per minute. The machines are manufactured in Birmingham.

The pieces, to all intents and purposes, are now coined, and, in the case of copper, they would be ready for distribution and circulation, but with gold and silver coins the law requires a perfection never attained at this stage by all the pieces. Coins of these metals are, therefore, taken into a new department to be tested as to weight. This operation is carried on by means of a delicate and interesting machine invented by Mr. Cotton, formerly a Director of the Bank of England. Thirty-five of these instruments stand upon tables in one room. The pieces are fed into a small cylinder at the top, a quantity at a time, so that one man can attend to a number of the machines. The pieces are pushed out one by one from the bottom of the heap upon a little platform where they rest an instant and then drop over either forward toward the right or the left. Most of them go into a receptacle in front, and one occasionally to the right or left. The first are true in weight or within the tolerance prescribed by law; those dropped to the right are over the weight and are sent back to be reduced, and those that fall to the left are light in weight and have to be smelted again. Even now there will be some pieces showing imperfections. Therefore, before being packed up, the coins are run through a simple machine in which a large number at a time are passed over a cloth belt so as to show first one side and then the other. An attendant, by watching carefully, is able to pick out those that are disfigured.

Gold has not been coined at the Royal Mint in London for some time, the Empire's coinage of this metal being carried on at the Melbourne and Sydney Mints. The pieces coined at those places have a distinctive inscription, and are lettered "M" or "S" as the case may be. The pieces coined in London bear no signature. The coins from the Royal Mint were formerly all distributed through the Bank of England, but silver and copper pieces are now sent to Scotland, Ireland and the Colonies direct, free of expense, as they may be required.

The mechanical operations mentioned have to be carried on under strict rules to prevent loss by carelessness or speculation. Every distinct manipulation

is accomplished in a separate room having its regular staff of workmen under a responsible head. Each department is charged with the weight of metal intrusted to it, and this weight has to be accounted for before the day's business is done. In the meantime, from the time work is begun until the afternoon's balance is struck, no one occupied in the room is allowed to leave it. By using these precautions the work of supplying the coin of Great Britain is carried on without friction.

THE BANK OF ENGLAND.

The Bank of England occupies a whole square in the centre of the banking district which lies, of course, in the "city." Its various buildings and courts, covering an area of about eight acres, are inclosed in a wall showing no windows toward the street. The various offices are open to the public during business hours, but some of the most interesting portions of the institution may be visited only by special permission. Among these is the Directors' Room, a spacious apartment of noble proportions.

The Issue Department of the bank is in a separate building (in which in earlier times the whole business was centred), where gold may at any time be exchanged for notes at the fixed price of £3 17s. 9d. per ounce. Here everything is open and business-like, the scales and trays on the various counters giving it the appearance of a store or "shop," as the English would say. At one side there are desks where notes may be redeemed. The writer, being the happy possessor of a £5 note (the lowest denomination issued), presented it for payment for the purpose of noting the usual forms gone through. The clerk, after examining the note, requires the payee to indorse on it his name and address. A description of the note is then put down in a book, and the corner of the note which bears the signature of the Cashier is torn off by the clerk. The coin is then paid over and the body of the note put away to be filed later on.

In one of the more private offices the visitor, under official guidance, is allowed to watch a staff of clerks sorting and entering the redeemed notes preparatory to filing them. These are distributed to various clerks according to the description of the notes, one handling the £5 and another the £10 denomination, etc. The notes are carefully arranged in order according to the numbers they bear, and are then entered in books. All the notes redeemed upon any day are packed together in boxes containing about 6,000 notes each. The record books and boxes are kept in such a manner that any note can be found, in case reference is required, in about five minutes. Such reference is frequently called for in cases of lawsuits, etc. The notes, after being paid, are kept for five years and then burned. The official conductor said there were about 55,000 notes paid daily, representing £1,000,000. The figures given by him, as well as the process gone through in filing the redeemed notes, differ from other printed accounts of the matter, and for this reason particular inquiry was made on these points.

Upon entering the Bullion Department the attendant turns the visitor over to the official in charge, not being allowed to enter the vaults himself. The spacious vault visited contained about £1,750,000 in gold bars and foreign coins, but this money was only for everyday use, the bulk of the reserve being locked up in other vaults. At this place there is a large weighing machine for weighing gold in bulk. The bars are distributed in regular form on trucks around the walls. Each bar is valued at about £800, and 100 are arranged on

each truck. The coin is arranged in bags containing about £2,000 each, about £100,000 being arranged on a truck for moving around easily. The coins, American and foreign, are bought by the bank by weight at their bullion value, and are not generally melted down or recoinced into British money. They are, for the most part, held with a view to being sold again in their existing shape. This, American bankers know, is different from the common procedure in the United States. A noticeable thing in this department was the absence of silver in any shape.

All the printing of the bank is done on its own premises, and is apparently under as strict a supervision as any other department. Here are printed not only the bank notes, but postal orders used by the Post Office, Indian Government notes, and all the various blanks in use in the bank. For the latter purpose a number of compositors are employed, and, as eight or more presses are run, the whole forms a compact but complete printing office. It is well known that the bank notes are printed on paper specially made in Hampshire for the purpose. Only two notes are printed on a sheet, and, as there is but one impression in black, there is nothing unusual in the process, excepting the numbering of the notes. The presses register the number of impressions, and the printers are bound to account for every sheet received, either in the shape of good notes or spoiled sheets. The signature of Cashier May is printed and not written. The postal orders are printed to the number of 18,000 a day, on bank paper, or, at least, paper of the same quality, but with a different watermark, and the bank has been entrusted with this work probably because it is the safest place in the kingdom for the purpose. The Indian notes were of the denomination of 50 rupees, and are each printed in four languages, being the tongues of the four principalities of India. The printing is in colors, and is more elaborate than that of the English notes. They are not signed until ready for issue in India.

In connection with the Issue Department is a room containing sixteen of the same delicate weighing machines used in the Mint. Those in the bank, however, are made to tip the pieces only to the right or left. The full-weight pieces are thrown to the left and the light ones to the right, no separation being made of over-weight pieces. Should there be such they would go in with those of full weight. All the gold sovereigns received in the bank are tested for weight in this room, about 100,000 a day passing through the machines.

A large department of the bank is devoted to the payment of dividends on various Government and other shares and to transfers of stocks. The ordinary banking business is mainly done in the Private Drawing office and the Bill office. In the former deposits are made and checks cashed, and in the latter discounting of notes is carried on, but there is little in the methods to attract the attention of a stranger.

It may be of interest to American bankers to see the kind of deposit ticket used in the Bank of England. It is printed on blue writing paper 8 inches deep and $4\frac{1}{2}$ inches wide. The back is ruled for a list of "Cheques payable in London." The rule that "Cheques on Clearing Bankers should be paid in before half-past three, and on Saturdays before half-past two" is made so that such checks may go through the Clearing-House the same day, there being a number of clearings every day in London. Following is the style of the ordinary ticket :

BANKING LEGISLATION IN MINNESOTA.

The Legislature of Minnesota appears to have taken up in serious earnest the work of regulating the methods of private banks in that State. As mentioned in the February number of the *JOURNAL*, Public Examiner Henry M. Knox called attention to the fact that 180 out of a total of 237 banks in the State were private institutions, and all but 11 of them are using corporate titles; that is, there are 107 banks regularly incorporated doing business in the State and 119 more using titles that induce people to believe they are incorporated when they are not.

Such a condition of affairs is not desirable for any community. Let the private bankers of the State of Minnesota be deserving of the highest degree of confidence, yet the fact that they can use deceptive titles is bound to attract dishonest people to sail under the same false colors. The experience of other States has been such that it was found necessary to prevent individual bankers from using corporate titles.

A bill now pending in the Minnesota Legislature is aimed at this evil. The bill has been reported favorably by the Senate Judiciary Committee, and its friends hope to see it pass both branches of the Legislature, when it will certainly become a law, as the Governor has already publicly expressed his desire to have such a measure enacted. The bill provides that no person or persons engaged in the business of banking in the State, not subject to the supervision of, and not required to report to, any officer elected or appointed by the State, shall make use of any office sign at the place where such business is transacted having thereon any artificial or corporate name; nor shall such person or persons make use of or circulate any letter-heads, bill-heads, blank notes, blank receipts, certificates, circulars, or any written or printed or partly written or printed paper whatever having thereon any artificial or corporate name. Any one violating this provision of the law is declared to be guilty of a misdemeanor, and, upon conviction, is made liable to a fine of not less than \$50 nor more than \$500 for each offense.

The private banks of the State have made a strong fight to prevent the passage of the bill, a fact which of itself ought to demonstrate the necessity of such a law.

The restrictions which the State puts upon incorporated banks should assure such banks that the confidence which these restrictions create may be enjoyed exclusively by the banks that submit to them. It is unfair to such banks to permit banks which are unrestricted to masquerade in the livery of incorporated banks, enjoying all the advantages of a charter without assuming any of its obligations or duties.

It seems unwise for bankers who are using their own individual credit and capital—if either is of a character to command confidence—to sink their identity in a corporate title. For instance, Smith and Jones, who are known to be men of great wealth and unquestioned integrity, might find it to their interest to do business where they are known as "Smith & Jones" rather than as "The Merchants' Bank." People would be much more likely to have

confidence in "Smith & Jones," whom they know, than in the "Merchants' Bank," whose identity they cannot disclose.

Another important measure before the Minnesota Legislature, and one which will undoubtedly pass, transfers from the State Auditor to the Public Examiner all the duties relative to the regulation of banking. The Auditor now issues charters to banks, authorizes them to commence business, and calls for four reports each year. These duties more properly belong to the Public Examiner, who, under the bill mentioned, is given the title of Superintendent of Banks.

A third bill makes certain changes in the law regulating loans by banks. The law now limits loans to 15 per cent. of the capital and surplus, and is essentially the same as Section 5,200 of the National Bank Act. The bill provides that the limitations of the old law shall not apply to loans based upon collateral security of warehouse receipts covering produce stored in elevators and warehouses provided that the actual market value of the produce shall at all times exceed by at least 5 per cent. the amount loaned on it; that the produce shall be deposited in a warehouse or elevator in which the borrowers of the money have not a controlling interest; and that the full amount of the loans shall at all times be covered by policies of insurance.

LATER.—Advices from our St. Paul Correspondent, under date of March 1st, state that the bill transferring all supervision from the State Auditor to the Public Examiner has passed both Houses of the Minnesota Legislature, and will, of course, have the Governor's signature. This gives the Examiner—Hon. Henry M. Knox—the granting of all charters as well as a proper supervision of the banks, including calling for reports of condition under the provisions of the law. His *ex-officio* title will be "Superintendent of Banks."

*BORROWING MONEY.

SOME POINTS OF INTEREST TO NATIONAL BANKS.

Editor of Rhodes' Journal of Banking:

SIR:—The general rule in interpreting charters is that a corporation has no more power than is specifically granted, and that what is not so granted is forbidden.

Assuming that the bank is a thing distinct from its stockholders, and that it borrows the money contributed by them, then this kind of borrowing is specifically authorized by the law. Section 5,140 provides, not only that capital stock may be paid in, but that it shall be, and the manner of payment; and Section 5,141 provides penalties for not making such payment. Other sections of the law make provisions for increase or reductions, and in case of impairment of capital stock. So, if National banks borrow their capital stock, it is a form of borrowing freely granted by law.

The power of borrowing money by receiving deposits is another granted power. (See Sections 5,135 and 5,202.)

To cite the sections which grant to National banks the power to borrow by the issue of circulating notes would be tedious. Every one knows that, if

* By a correspondent of the JOURNAL—who is a bank officer as well as student of banking law.

issuing circulating notes upon a deposit of United States bonds be borrowing money, that the National Currency Act was drawn for the special purpose of permitting National banks to exercise such a power.

The form of borrowing about which there is doubt is none of the foregoing, but the right of a National bank to borrow upon bills payable, upon its notes (other than circulating notes), or by rediscounting its own bills receivable. Borrowing in these ways often leads to danger. All good bankers know this.

The men who framed the Currency Act were experienced bankers. They prescribed in what manner a bank should get its funds: first, by its capital and circulation, which in the National system are in part the same thing (all capital may not be in the form of circulation, but all National bank circulation, being secured by bonds, is a part of capital), and, second, from deposits. They did not prohibit soliciting deposits by offering interest, but they did not grant the power to do so. They did not grant the power to borrow on bills payable, and they did prohibit borrowing by the issue of post-notes to circulate as money.

Another point remains to be considered. The Courts have decided that an obligation for borrowed money is binding upon a National bank, particularly when the loan is made with the authority of the Directors of the borrowing bank, but it does not appear that the Courts have decided that the power to borrow money (in a sense apart from borrowing circulation, capital and deposits) is granted by the law. It must not be forgotten that an act may be *ultra vires* beyond the chartered powers of an institution and yet binding upon it. Not only this, but it has been decided that a National bank can enforce a contract which it had no power to make. This is the decision of the United States Supreme Court in regard to loans made direct on real estate security.

It is well to note that, while the Supreme Court held that a National bank might recover on a contract which was clearly *ultra vires*, it did not say that such infringement of charter was without penalty. The penalty is forfeiture of charter, which can, in the case of any act of a bank which is beyond its chartered rights, be enforced in a suit brought under Section 5,289 of the United States Revised Statutes.

The fact that the Courts may decide that a contract made *ultra vires* by a National bank is binding upon such bank in a pecuniary sense does not protect the bank from a suit for forfeiture of charter brought by the Comptroller, nor does it absolve the Comptroller from bringing such suit.

It is the duty of the Comptroller to warn the Managers of banks to cease illegal practices which are generally more dangerous than profitable, and, if they do not obey, to enforce the penalties. This is the only way in which innocent stockholders can be protected. X. Q.

THE RIGHT OF CONTRACT.—A resolution introduced in the Senate by Mr. Van Wyck last month seemed to question the right of a National bank to loan money on a discount note requiring payment in gold coin only. The law permits individuals to make contracts providing for the payment of anything, whether money or goods. Any one can contract for payment in gold or silver or copper or wheat or potatoes, and the law says that such a contract can be enforced. Why, then, should a National bank, which is permitted to discount negotiable paper, be subject to strictures because it exercises that right in a strictly legal manner?

"WHAT'S IN A NAME?"

I.

In the January JOURNAL we published a *fac-simile* of a signature to a check received at this office in payment for a year's subscription. It was a very curious specimen of chirography, and, in order to make it interesting, we facetiously called it "John Smith's" autograph, and offered as a premium to the successful guesser a year's subscription to the JOURNAL—limiting the competition, however, to *Tellers only* connected with banks which were paid-up subscribers or were on our books as old subscribers but not yet paid for this year. We also, inadvertently, excepted the State of Kansas, which fact was evidently taken by many as a clue which led up to the right solution.

We had no idea the difficult signature would create such general interest, and were astonished at the number and great variety of guesses received. Up to this writing nearly five hundred different Tellers have been heard from, of which number over one-half deciphered the signature correctly—a fact, by the way, which shows the good training and quick perception of the young men who are being educated to officiate as Cashiers, Vice-Presidents, and possibly Presidents, of financial institutions at some time, we trust, in the near future. The Tellers who deciphered the name correctly—under the conditions named—have been placed on the JOURNAL's subscription lists for this year.

The puzzling signature (not an easy one to read, even with the clue possibly given) was that of Mr. W. P. Hazen, Cashier of Chatham T. Ewing & Co.'s Bank, Thayer, Kans.

Those who have returned correct solutions of the name deserve great credit, and we take pleasure in showing our appreciation of their efforts by publishing the names of a number of the successful competitors, as follows:

W. P. Shackelford, Bank of Decatur, Ala.; Edw. M. Joyes, First National Bank, Opelika, Ala.; Geo. W. Lorenz, People's Savings Bank, Sacramento, Cal.; A. L. House, Pacific Bank, San Francisco, Cal.; Jno. T. Griffith, Bridgeport National Bank, Conn.; Robert Foote, National Tradesmen's Bank, New Haven, Conn.; F. L. Trowbridge, First National Bank, New Haven, Conn.; W. R. Hubbell, National Iron Bank, Falls Village, Conn.; Geo. O. Norton, Grafton National Bank, Dak.; M. P. McArthur, Security Bank, Tyndall, Dak.; M. C. Skinner, First National Bank, Devil's Lake, Dak.; W. H. Burr, Citizens' National Bank, Grand Forks, Dak.; C. E. Corry (Loomis & Corry, bankers), Columbia, Dak.; Geo. M. Snow, First National Bank, Ketchum, Idaho; A. W. Howard, First National Bank, Aurora, Ill.; Cherrill, Sholl & Co., Carthage, Ill.; J. W. Cary, Continental National Bank, Chicago, Ill.; F. G. Sanburn, Farmers' National Bank, Knoxville, Ill.; L. C. Schwardtfeger, German-American National Bank, Lincoln, Ill.; B. F. McLean, Union National Bank, Macomb, Ill.; A. L. Wilson (Ohlwiene, Schreiber & Co., bankers), Red Bud, Ill.; H. S. Bower, Bank of Tolono, Ill.; C. C. Paddleford, First National Bank, Tuscola, Ill.; Frank L. Bunn, Third National Bank, Bloomington, Ill.; C. A. Webster, Galesburg National Bank, Ill.; O. H. Ferris, Hancock County National Bank, Carthage, Ill.; Ross Matthews, First National Bank, Pittsfield, Ill.; John S. Feimley, Griggsville National Bank, Griggsville, Ill.; H. L. Emley, First National Bank, Huntington, Ind.; E. W. D. Holway, Winneshiek County Bank, Decorah, Iowa; Jno. H. Owens, Des Moines National Bank, Des Moines, Iowa; John X. Aleck, Cadwell's Bank, Logan, Iowa; W. T. Fenton, First National Bank, Ottumwa, Iowa; Geo. R. Slocum, Primghar Exchange Bank, Primghar, Iowa; Frank L. Williams, City Bank, Marshalltown, Iowa; F. H. Gunison, First National Bank, Mason City, Iowa;

Browne, People's National Bank, Burlington, Kans.; Sylvester Rapter (with Silvester Johnson, banker), New Haven, Ky.; James O. Otis (office of Commissioners of Savings Banks), Boston, Mass.; H. B. Bailey, Boylston National Bank, Boston, Mass.; J. R. Monroe, Kalamazoo Savings Bank, Kalamazoo, Mich.; H. H. Terwilliger, Muskegon County Bank, Montague, Mich.; Burt Parkhill, First National Bank, Mount Pleasant, Mich.; Richard Barrett, Lumberman's National Bank, Muskegon, Mich.; O. S. Miller, Anoka National Bank, Anoka, Minn.; G. D. La Bar, First National Bank, Brainerd, Minn.; Chas. R. Oliver, Wilkin County Bank, Breckenridge, Minn.; R. G. Tweston, Bank of Pelican Rapids, Pelican Rapids, Minn.; A. J. Lehmick, Lumbermen's National Bank, Stillwater, Minn.; B. B. Somerville, Chillicothe Savings Association, Chillicothe, Mo.; A. L. Stringer, Safe Deposit & Savings Bank, Kansas City, Mo.; John R. White, First National Bank, Springfield, Mo.; C. B. Littlefield, Bank of Knob Knoster, Knob Knoster, Mo.; H. B. Hill, First National Bank, Fort Benton, Mont. Ter.; W. W. McCrackin, First National Bank, Butte, Mont. Ter.; H. H. Wall, First National Bank, Auburn, Neb.; E. G. Baker, First National Bank, Beatrice, Neb.; A. Anderson, First National Bank, Columbus, Neb.; Henry G. Koehler, First National Bank, Blue Hill, Neb.; L. E. Fuller, First National Bank, Crete, Neb.; E. D. Higgins, First National Bank, Ponca, Neb.; F. R. Allen, Paterson Savings Institution, Paterson, N. J.; A. M. Brown, First National Bank, Key Port, N. J.; W. T. Cooper, National State Bank, Newark, N. J.; H. H. Johnson, Mechanics' National Bank, Trenton, N. J.; C. Frank Allen, First National Bank, Las Vegas, N. M.; Jas. D. Proudft, Second National Bank, Sante Fé, N. M.; M. W. Browne (Browne, Manzanaras & Co.), Socorro, N. M.; John W. Parry, Glens Falls National Bank, Glens Falls, N. Y.; W. C. Donnan, National Bank of Le Roy, N. Y.; Harry F. Wilton, Union Bank, Medina, N. Y.; F. E. Brockway, First National Bank, Owego, N. Y.; E. W. Stone, Tioga National Bank, Owego, N. Y.; W. S. McCartney, Central National Bank, Cambridge, Ohio; Harry Heinking, First National Bank, Cincinnati, Ohio; J. H. Page, First National Bank, Cleveland, Ohio; O. L. Hardman, Winters National Bank, Dayton, Ohio; W. E. Agler, First National Bank, Garrettsville, Ohio; D. Rockhold, Merchants' National Bank, Hillsborough, Ohio; M. E. Griswold, Montpelier Banking Company, Montpelier, Ohio; H. H. Ratcliff, First National Bank, Mount Pleasant, Ohio; C. C. Enlase, Lebanon National Bank, Lebanon, Ohio; Thos. H. Wilson (Wick Brothers & Company, bankers), Youngstown, Ohio; Geo. D. Couch, First National Bank, Carbondale, Pa.; M. H. Sellers, National Bank of Chambersburg, Chambersburg, Pa.; T. E. Clyde, Chester National Bank, Chester, Pa.; J. L. Sternberg, First National Bank, Erie, Pa.; F. A. Simpson, Butler County Bank, Millerstown (Barnhart's Mills P. O.), Pa.; W. Steele, Merchants' National Bank, Philadelphia, Pa.; G. W. Ritchie, Commonwealth National Bank, Philadelphia, Pa.; F. H. Lea, Iron City National Bank, Pittsburgh, Pa.; H. F. Wyers, National Bank of Chester County, West Chester, Pa.; A. B. Pickard, National Bank of Fayette County, Uniontown, Pa.; J. H. Stoner, First National Bank, Waynesboro, Pa.; Frank Colville, People's National Bank, McMinnville, Tenn.; G. B. Burke, State National Bank, Austin, Tex.; "Teller," Bowie Bank, Bowie, Tex.; J. S. McDuffie, Ennis National Bank, Ennis, Tex.; Jno. E. Arnold, Fort Worth National Bank, Fort Worth, Tex.; W. H. Campbell, Utah National Bank, Ogden, Utah; H. D. Fuller, Shenandoah Valley National Bank, Winchester, Va.; R. L. Campbell, Shenandoah County Bank, Woodstock, Va.; C. W. Lockwood, Bank of Eau Claire, Eau Claire, Wis.; W. S. Brown, Tobacco Exchange Bank, Edgerton, Wis.; James H. Cole, Sawyer County Bank, Hayward, Wis.; C. W. Twining, First National Bank, Monroe, Wis.; E. M. Proctor, Manufacturers' National Bank, Neenah, Wis.; E. B. Kilborn, Manufacturers' National Bank, Racine, Wis.; W. B. Geery, First National Bank, Ripon, Wis.; Stedman Thomas, Dairymens Bank, Sheboygan Falls, Wis.; A. F. Falls, Merchants' Bank of Canada, Chatham, Ont.; Geo. Burn, The Bank of Ottawa, Ottawa, Ont.; Geo. W. F. Carter, Merchants' Bank of Canada, Montreal, P. Q.

Besides the foregoing, there were quite a number who guessed anything but the right name. Some of the guesses were "away off"—so much so that we cannot well see any resemblance between them and the genuine signature. Others are not only ingenious but quite curious, and show a considerable study and patience in arriving at the incorrect solution. In the April JOURNAL we

shall publish some of them in connection with an article further illustrating the subject of queer signatures.

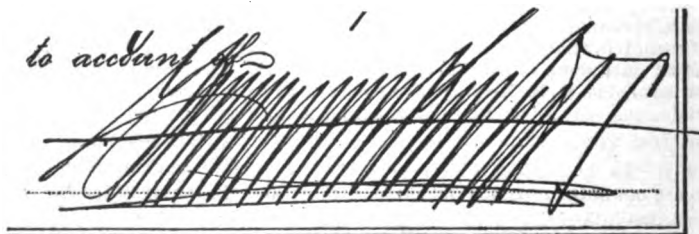

The following *fac-simile* extract from a letter and signature was recently sent to this office in reply to a request for the same for publication; it is that of a very successful and well-known bank official, whose autograph on bank notes has, no doubt, been in many of our readers' hands. The name is not Brown, Jones or Smith. But we leave our readers to guess it:

Yours of the
11th with signature
below please find
By J. H. Jones

The signature given below is one well-known in the West. It is the "mark" of a firm doing an extensive business in a western city whose name is frequently inspected by bankers. It is sent to us by a friend who considers it more of a puzzle than Hazen's; and we are not sure but he is right:

to account of

Here is the *fac-simile* autograph of a bank Cashier who, no doubt, can read his own name after the ink is dry, although it is uncertain if any other person can. We don't think he lies awake nights for fear it will be counterfeited :

In order to give all our friends a chance, we offer the following liberal proposition : Any bank official or employee, other than President, Vice-President or Cashier, who sends a correct reading of the *three* photographed signatures before the first day of May next will be entitled to a copy of the JOURNAL free from date to January 1, 1888.

In case a successful competitor is already a subscriber, and does not wish an extra copy, we will, if desired, publish his name as one of the lucky guessers in a subsequent issue of the JOURNAL.

The continuation of this article in the April number of the JOURNAL will give some additional specimens of names frequently seen by bankers which are difficult to decipher.

Practical Banking and Banking Law.—In response to many inquiries whether we have issued or intend to issue in a single publication the articles on "Practical Banking" which appeared in the JOURNAL during the past two years, and the department of "Banking Law and Replies to Questions," we would state: The series of articles entitled "Methods and Machinery of Practical Banking"—the Patten Series, ended with the 1886 Volume of the JOURNAL—is undergoing revision, and will probably be published in book form toward the end of the present year. It will be a volume of rare value. The price has not yet been determined, but will probably not exceed \$3, and a discount will be given to banks ordering several copies. A number of institutions have already signified their intention of purchasing a copy for every clerk in their employ.

The department of "Banking Law and Replies to Questions" we have no immediate intention of publishing in a separate volume. This matter could not all be comprised in a single book, and, as it is published from year to year in the bound volumes of the JOURNAL, fully indexed, it is accessible to our readers in that shape. Furthermore, subscribers who are desirous of being informed on doubtful or disputed points in banking law and practice of general interest can always receive answers to their inquiries through that section of the Law Department devoted to "Brief Replies to Subscribers."

THE PORTRAITS of prominent bankers and financiers appearing in the JOURNAL are not inserted as a source of profit to the publishers—we only charge the actual cost to those whose portraits are accepted—but solely as a practical method of presenting our readers with faithful likenesses of gentlemen who are prominent in the financial world.

**Notes and Comments on
BANKING PRACTICE.**

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Small Accounts.—Is it the better policy for a bank to take all business that is offered, or should a discrimination be made against accounts that carry very small balances? Opinions differ on this point. Large city banks, with a well-established business, sometimes fix a minimum limit to balances, refusing all accounts that do not keep, on an average, at least that amount to their credit. New banks, catering for business, are apt to be less strict in their requirements. The proper course would seem to be to take all accounts offered, no matter how small, provided they are *bona fide* business accounts. A man of limited means, without much experience in banking matters, who is starting a business on a small capital, is often at a loss where to open an account. To such a man a bank that will take his account and grant him small discounts is the friend in need. Such accounts often turn out to be among the best on the bank ledgers. But accounts that are opened merely for convenience, on which money is put in one day only to be drawn out the next, should be refused unless there is some special reason to the contrary. It merely increases the clerical work, and ultimately the clerical force, without any sufficient compensation to the bank. Men who are in the habit of over-checking should be mercilessly weeded out. A bank derives no profit from such accounts, and they are a source of danger.

Directors' Examinations.—Too much cannot be said in favor of regular examinations of a bank's affairs by the Board of Directors; and for several reasons. In the first place, it is the plain duty of the Directors of a bank to keep themselves informed as to matters under their charge of which they have voluntarily assumed the care and direction. This is a duty which they owe both to their fellow stockholders and the public who deal with the bank. In the second place, it is a good thing for discipline and the general conduct of a bank's business for the managers to look around and see for themselves how affairs are, so as to tighten the loose screws and brush out the cobwebs, so to speak. Men take more pride in their work when their efforts are seen and appreciated by their superiors. Again, the officers of a bank are all heavily bonded for the proper performance of their duties, and it is but just and right that the money, securities and accounts should be properly audited at least once in three months either by the Directors themselves or by competent accountants acting under their authority. To properly examine a bank a certain degree of familiarity with the system of book-keeping is requisite, and, where examinations are made only at long intervals, Directors do not acquire this necessary knowledge of the bank's books, and consequently their examinations are apt to be superficial. Bank Directors as a rule are keen,

shrewd, observant men, and it cannot be doubted but that frequent examinations would be followed by practical suggestions which would be of benefit to the institution. And last, but not least, it would be a good idea to bring Directors and clerks into personal contact. A free and unrestrained intercourse between these two sets of officers would tend to make many a dark thing plain and crooked path straight. "A word to the wise is sufficient" is a saying of ancient date, and a word to a wise Director spoken in season by a clerk who had his eyes open might often avert a serious loss from defalcation or mismanagement.

Balancing Pass-Books.—Some banks make it a rule to balance all pass-books once in three months. It is better to balance active accounts every month or every two months. Other accounts may be allowed to run from three to six months. Frequent balancing of pass-books is one of the surest ways to discover and correct errors. Pass-books should be called in during the month at the convenience of the Book-keepers or of the clerk whose duty it is to balance them. This spreads the work over the month and prevents crowding at special times. Postal cards, with the printed request, "Please send in your pass-book for balance, and oblige," etc., will be found convenient and time-saving. Adjust the deposit side first, because it is easier to find differences on that side, and cross-entries made to correct errors are more readily noticed. When a pass-book is returned to a customer there should be enclosed a postal card, addressed to the bank, and bearing a form similar to the following: "Pass-book and vouchers, showing a balance of \$—, has been received and found correct." This is to be signed by the customer and returned to the bank. It is thought by some to be a check against fraud to have the pass-books balanced by a special clerk, independent of the Book-keepers. There is considerable force in this argument. At the same time the system is open to the disadvantages which always attend the use of the same ledger by two men. They are likely to be in each other's way, and so hinder rather than help each other. Some Book-keepers arrange the checks in numerical order before balancing, but when, as is usually the case, bank clerks list the checks, this plan is rather a disadvantage, because, if a check has been entered wrong in the cash-book or posted wrong to the ledger, and the work has to be checked off item by item, the checks, being in numerical order, are widely scattered from the order in which they have been posted to the ledger. Books sent in for balance should be attended to promptly, and not allowed to lay over three or four days.

Unpaid Collections.—It has become quite a general practice for city merchants to send their drafts direct to some bank or banker in the town where their customer is located instead of depositing them with their home bank. This plan, properly conducted, is a source of convenience to the drawer of the drafts and also one of some little profit to the country banks. The city merchant is usually willing to pay a small sum for collecting, but sometimes objects to paying anything when the draft is returned dishonored. It is but just that the drawer should pay in either case, for the bank is at an outlay of its time and labor whether the draft is paid or not. Even postage and stationery make up no inconsiderable item of a bank's expense in the course of a year.

NOTE.—Several pages of "Banking Practice" matter, including two Forms of much value to bank book-keepers, are crowded out of this issue. The April instalment will, therefore, be of more than usual interest.

*** NOTED SAVINGS BANK OFFICERS.**

Thomas Jeremiah, William Purves and Cyrus P. Lee.

THE RECORD OF THEIR WELL-SPENT LIVES.**I.**

Thomas Jeremiah.—No doubt very many of the JOURNAL's readers will remember the broad-minded man—a philanthropist in the highest meaning of the term—who is the subject of this sketch. His face for many years was familiar to the patrons of the Bowery Savings Bank, in New York city; and his admirable management has left, as a perpetual monument, the greatest institution of the kind in this country. The bank to-day has aggregate resources (of which over \$10,000,000 is surplus) amounting to the enormous sum of over fifty-five million dollars (\$55,000,000), belonging to 104,130 depositors.

Mr. Jeremiah was born in the city of New York on March 3, 1793. He was engaged in the pork and provision business in the early years of his life, during which time he laid the foundation of an ample fortune.

He was one of the original incorporators, on May 1, 1834, of the Bowery Savings Bank, and acted as a Trustee of that institution until January, 1841, when he resigned on account of removing to Staten Island. He did not remain away long, however. Upon his return to the city he was elected to fill the first vacancy in the Board of Trustees, which occurred on May 10, 1843. He served on the Funding Committee during the years 1845-46-47-50-51-52-53-54-55-56-57-58, and was Vice-President from January 11, 1837, to January 13, 1841, and also from October 14, 1857, to March 10, 1858. In 1858 he was elected President of the bank, which position he held until his death on December 2, 1872.

As an evidence of what his efforts accomplished in building up the bank it may be stated that when he was elected President the deposits were only \$7,256,563 (a large sum, however, considering the city's population and the growth of savings banks in those days) and at the time of his death they had increased to the enormous aggregate of \$29,310,834—in itself a grand tribute to the fidelity and helpfulness of a busy life.

But there was another and more humane side to Mr. Jeremiah's life, one which, possibly, is not so well-known to the world at large; but it found a lodgment in the hearts of a multitude of men and women—young men just starting in life, many who were buffeted by storms and temptations, besides hosts of poor widows and orphans who live to-day and whose remembrance of the good man is so helpful that they can indeed rise up and call him blessed.

Mr. Jeremiah's great love for the bank entrusted to his charge was proverbial. He saw in it, by reason of its great scope and widespread means of usefulness, a sure means of benefit and profit, morally as well as financially,

BRADFORD RHODES & CO.,
F. RUTLAND PHOTOGRAPHS

to all who could be induced to seek its protection—not only by the certain return but sure increase of the money deposited. It was to impress the great lessons of Industry and Economy upon the people—more especially the army who depend upon their daily toil for a living—that he devoted his life-work, and right royally did he succeed. Much might be written and said about his efforts in this direction did the space of this brief sketch permit, and it would only tend to increase respect and admiration for the man.

He was always easy of access and approach. If any favors were shown, the poor and needy received possibly a little more attention than the rich. The severity of a business transaction was tempered with a grace that always carried good feeling with it, and no one was ever humiliated by extending a favor or granting a concession. A church dignitary or high official of the State would be treated with all the courtesy demanded by his position, but he would never thrust aside the poor washerwoman or humble laborer to make room for a more pretentious person.

Very frequently his time was devoted to carrying a portion of a deposit to one who was too sick to come to the bank for it. The writer remembers that in his private desk he had pigeon-holes containing several hundred books of depositors whose interests he looked after personally. Some were the property of poor widows with children who could not conveniently come to the bank, others belonged to cripples, while many were on the sick list. In many cases where legal documents were required from a poor depositor he would draw the papers himself to save the expense where it could not be afforded.

As to his integrity—he was incorruptibility personified. It is related by an employé of the bank who was present that on one occasion a borrower offered him a bonus for obtaining a loan. The honest indignation and withering sarcasm with which he rebuked the would-be briber could teach a good lesson (as well as prove a strong safeguard) if its moral force could be felt by some of the present generation.

When the Trustees of the bank were desirous of showing their appreciation of his services by increasing his salary, he invariably said: “No! give it to those who are dependent for support on their own exertions and need it more than I do.”

On one occasion a very valuable lot came into his possession at a remarkably low price. It was at once re-sold to an anxious expectant without profit to himself.

Many are the instances which might be cited of his self-sacrificing generosity. Several times he was persuaded, against his better judgment, to engage in business enterprises that promised well at the outset, but turned out badly in the end; and, when deserted by those to whom he had yielded and trusted, he would manfully shoulder the entire burden and carry it forward, many times to success.

He was always very kindly disposed towards other similar institutions, and no savings bank in the city or country ever asked his advice in vain. A malicious attempt to trespass or infringe upon the rights of a neighboring bank received as much attention and provoked as much indignation as if he was personally attacked.

In framing a law to be submitted to the Legislature he exercised as much care and thought in its effect upon other banks as his own institution.

Unselfishness in all business transactions was the predominant characteristic of his life.

In January, 1859, he wrote a letter to the Legislature of New York, in which the sentiments expressed seem to have been the keynote of all his previous and subsequent convictions regarding the proper sphere of Savings banks. He wrote :

"Institutions for savings being creatures of the Legislature, originated for wise and beneficent purposes, no objection should ever be made by them to any legislative action with a view to salutary supervision and, if necessary, appropriate restraints. Institutions such as are Savings banks, benevolent in their character and benignant in their operation, *cannot be too well guarded*, nor can their managers be men of too high integrity."

The writer cannot permit this account to be closed without relating an incident where the kindly advice of Thomas Jeremiah was the means of shaping the course of a life work—and the memory of his wise counsels a continuous blessing :

In January, 1872, a young man of 25 came to New York a perfect stranger, with less than ten dollars in his pocket—in fact no resources whatever outside of a good education and a firm resolution to succeed. He was born and spent his boyhood on a farm in Western Pennsylvania not far from the Ohio line. His intercourse with the world had been only such as was received by him while working his way through country schools and a high-class academy, making both ends meet by teaching part of the time, coupled with such aid as a devoted father could give. In two days after his arrival in the city he secured employment as a reporter on a daily newspaper. The closing of a Savings bank about that time caused considerable uneasiness and general distrust among depositors in every savings institution in the city, and the young stranger was detailed to visit some of the principal institutions, secure statements of their actual condition, and write articles which, if possible, would tend to allay the general distrust. While engaged in this work he met Thomas Jeremiah, and the bank President's manner was so courteous, his frankness and undoubted honesty so evident in every detail regarding the condition of the bank under his charge, that the personality of the man made a lasting and favorable impression at once. It was mainly due to his wise suggestions and keen perception—pointing out a line of work he believed his interviewer was fitted to undertake—that shortly thereafter the publication of a small and unpretentious paper devoted in the main to Savings bank affairs was begun, and on the foundation thus laid RHODES' JOURNAL OF BANKING was reared and has steadily grown year by year under the care of its founder—the editor and proprietor—to its present remarkable success.

The portrait of Mr. Jeremiah as shown herein is from a photograph he gave the writer in the spring of 1872. The portrait is not very sharp, on account of dimness in the photograph, though it is a faithful likeness of the man as he appeared in the eightieth year of his age.

Such, in brief, is the record of a man who, take him for what he was, lived and died one of Nature's Noblemen.

II.

William Purves.—There died, in the city of Philadelphia, on the 28th of last October, a man who well deserves the record of a busy and well-spent life. William Purves, the subject of this sketch, was born in Philadelphia, December 28, 1809, and consequently was nearly seventy-seven years old at the time of

his death. Alexander Purves, the famous cloth merchant, was his father. He gave his son a good education at the classical school of Mr. Ross, the author of the Latin grammar bearing his name. It was the intention of young Purves to enter upon a collegiate course, and his early education and training were with that view; but, on account of the unexpected death of his father, he was obliged to change all his plans and diverge from the business life laid out for him. Accordingly he obtained a situation as clerk in the carpet store of Lapeley Bros., which position he held for two years. He next secured a place in the old United States Bank, where he remained until that institution failed, at which time he held the position of Second Teller. From his experience and aptitude for the business he was one of those selected to assist in closing the books and business of the bank, and this occupied his time for nearly two years longer.

It is perfectly safe to assume that the knowledge and training gained by Mr. Purves while in the United States Bank laid the foundation for his subsequent career of usefulness in connection with the management of the largest savings institution in Philadelphia—in fact the largest in the United States outside of New York. For four years longer, however, he was engaged in the book business with Mr. Henry Perkins under the style of Perkins & Purves, after which he finally concluded to accept a position in the old Philadelphia Bank. While he was with this bank he made many valuable suggestions and changes in regard to the methods of bank book-keeping that were not only adopted by the management but have been quite generally used by Philadelphia banking institutions and others throughout the country.

In December, 1849, he was elected Treasurer of the Philadelphia Saving Fund Society, with which institution he was connected until the day of his death. He acted as Treasurer until November, 1884, when he was elected Vice-President. As showing the earnestness and success of his efforts in building up the institution, it may be stated that when he first assumed office the assets of the Society were only about \$2,000,000, with 10,000 depositors, while at the time of his death the total resources aggregated nearly \$30,000,000, belonging to over 100,000 depositors.

He was prominent in church matters, having been an elder in the First Presbyterian Church for many years, and during the latter part of his life in the Calvary Church. He was also actively connected with many charitable organizations.

As an evidence of the public esteem in which Mr. Purves was held, the following, from one of the leading Philadelphia newspapers, published at the time of his death, is appropriate:

"The death of Mr. William Purves, for thirty-seven years Treasurer of the old Philadelphia Saving Fund Society, at Seventh and Walnut streets, is a public loss to Philadelphia. He was honored and respected by all who knew him, and really beloved by the thousands of depositors in the institution for his kind and courteous treatment of all who came in contact with him."

The Society with which he was so long connected passed a series of Resolutions showing its appreciation of his character and qualifications, from which the following is extracted:

"Mr. Purves was peculiarly fitted by nature and education for the position he occupied. He was calm in turmoil and excitement, never losing his balance, and ready at all times to meet with composure every case that presented itself for consideration. His amiable temper and gentle disposition led him to give a ready ear to every person

however humble, who appealed to him for a hearing. He was always courteous to the high and the lowly, especially listening with patience to those who are habitually suspicious about the safety of their money when it is out of their sight and placed temporarily beyond their immediate control. When, however, a person approached him inspired by aims of negotiation, he was ever on the watch, and no man gained an advantage over him. Mr. Purves became very popular in the discharge of his duties, and much of the reputation enjoyed by the Society is due to the confidence reposed in him as a fiducial officer."

III.

Cyrus P. Lee.—In the death of Mr. Cyrus Peck Lee, the city of Buffalo, N. Y., lost one of its most highly respected citizens, and the Erie County Savings Bank a life-long and faithful official. Mr. Lee was born in Sandy Hill, N. Y., September 12, 1809, and removed to Buffalo when a young man. He early became identified with the business interests of the city, and for over half a century was prominent in business and financial circles. For several years he served as clerk in the post-office, and afterward as deputy postmaster, which position he held during four different administrations.

In 1854 the Erie County Savings Bank was organized by a number of prominent citizens, and Mr. Lee was elected Secretary and Treasurer, which position he held with honor, discharging its duties with marked ability up to the time of his death.

During the fifty years of his life spent in Buffalo he saw the city expand from a comparatively small beginning to its present rank as one of the leading commercial and financial centres of the country. His history, as has been truly said, was the history of the city, his name being associated with nearly every worthy business enterprise, but more especially its charities. In them his position was in the front rank, standing ever ready to lend a helping hand to relieve suffering and distress.

But it was in the banking business that he stood, probably, in advance of any local financier whose name can now be recalled. He was not a mere figure-head, but was ready at all times to assume, if necessary, the duties of any subordinate in the bank. That was one of his peculiarities, and it doubtless had more to do with the success of the institution than anything else. No matter how small the detail or trivial the duty, *he* always had time to attend to it if no one else had. He was thoroughly bound up in the welfare of the institution with which he was connected.

Although all savings banks are closely hedged by statutory provisions designed to protect depositors, yet there was a feeling that money was safer in the bank controlled by Mr. Lee than in other similar institutions, simply because of his well-known ability and sterling integrity. It was a proud boast of his, and one on which he loved to dwell, that "the Erie County Savings Bank could *never fail*. It might, in case of a prolonged run, be obliged to close its doors temporarily, but when its real estate and other assets were put on the market and disposed of there would be enough to give every man one hundred cents for every dollar he had on deposit, and have a considerable surplus left." The total resources of the bank at the present time exceed \$18,000,000.

It was that supreme confidence in the man which gave the bank its strong hold on the community. He was proud of the prosperity of the institution, and deeply interested in everything that could be done for the benefit of its

depositors, fully realizing the dignity and responsibility of his position as one worthy the entire consecration of all his powers.

His memory of names and faces is said to have been so remarkable that when he was in the post-office he formed a personal and permanent acquaintance with every person who ever asked him for a letter or newspaper. He probably knew more people than any man in Erie County, and out of the more than thirty thousand depositors in the bank at the time of his death it is safe to assume that the large majority felt they had lost a personal friend. It is stated as a fact that he knew most of them by name and considerable of their personal history besides.

He was a remarkably fine penman, and felt a just and pardonable pride in the neatness and accuracy of his work. He was also a thorough accountant. When the bank was first organized he devised a system of book-keeping which, without material change, has been ever since used by the bank. The peculiar feature of it is that at the close of every day's business a balance is struck, and a written statement made, showing the exact financial condition of the institution. This system has always worked well, and is believed to afford all possible checks against errors, and at the same time is a safeguard against loss. Another remarkable characteristic of the man was his supervision of the payment of his employees—a duty which he had discharged personally every month for the past thirty-two years.

On Saturday, October 30, 1886, he rose from a sick bed and went to the bank to attend to the accustomed payment of the employees. It was his last official duty. On the following Tuesday he died.

He was a devoted adherent of the Episcopal Church, being a member of the Church of the Ascension and a Warden since 1873.

About three years since he was ordained as a lay minister for mission work. Only a few weeks before his death he performed the marriage ceremony for a young couple at Lancaster.

He was a gentleman whose principles were so well grounded that he could easily forgive and forget an injury, but always remembered a kindness.

A very touching memorial and resolutions, expressive of their appreciation of his worth and services, were unanimously adopted by the Board of Trustees of the Erie County Savings Bank, from which the following extract is taken :

"Of our personal affection for Mr. Lee, the product, with most of us, of the almost daily intercourse and counsels for many years, we cannot adequately speak. We see his face, so expressive of his intelligence and character, no more. We bid farewell to our faithful friend and officer, assured that his fidelity to every trust in the world will make him master over many things in larger spheres of duty. And now be it

Resolved, That the Trustees of the Erie County Savings Bank do hereby adopt the foregoing memorial as an expression of their regard for their departed friend.

Resolved, That said memorial and these resolutions be recorded in the minutes of this Board; that a copy of the same be transmitted to the family of the deceased, to whom we tender our sincere sympathy in their bereavement; and that a copy be also published in the newspapers of Buffalo.

Resolved, That we will attend the funeral of Mr. Lee in a body as a testimony of our affection and respect.

M. C. CURTIS, Assistant Cashier of the American National Bank, of Kansas City, Mo., writes under date of March 2d: "I beg leave to inform you that we consider it [their page in our new *Bankers' Directory & Collection Guide*] the best advertisement we have yet had in any publication in which we advertised. It is the best BECAUSE IT BRINGS US BUSINESS."

***FRANCIS G. BABCOCK.**

In this issue of the JOURNAL we present a finely executed portrait of Mr. Francis Granger Babcock, one of the representative bankers of the country. Mr. Babcock was born in Chenango County, State of New York, in 1831, and is a descendant of an old New England family, his grandfather, Luke Babcock, having been a resident of Connecticut, but leaving it to become one of the first settlers of Chenango County.

The subject of this sketch was educated at Bacon Academy, in Colchester, Conn., where he enjoyed educational advantages of a high order. Mr. Babcock to this day remembers with grateful appreciation the training which he received in that place of learning, and speaks in the highest terms of praise about his old tutor in mathematics, James S. Eaton, a graduate of Andover Seminary, Mass., who was acknowledged as one of the best mathematicians in the country.

After leaving school, Mr. Babcock began his business career in a country store in Connecticut, and no better school in which to lay a firm foundation for a commercial education could have been selected for him. He very soon gave evidence of his natural aptitude for business pursuits, and his shrewd insight into human nature may be traced to the information picked up by him in that country store in Connecticut.

Subsequently his business talents and enterprise attracted the attention of his uncles, the Messrs. Ushers, who at that time carried on the most extensive trade with the West Indies of any house in the State of Rhode Island. They made Mr. Babcock their chief clerk, and in this wider field he further demonstrated the possession of abilities which have since placed him in the foremost rank of banking men.

When the Erie Railroad was completed, in 1852, and began running from Piermont to Dunkirk, Mr. Babcock at once recognized the important influence which the railroad would exert upon business enterprises along its line. He located in Allegany County, New York, first taking a position as a clerk in a country store.

About six years later he associated himself with his father-in-law, Mr. Charles S. Clark, in the business of manufacturing and dealing in pine lumber and the sale of general merchandise. This business was conducted for nearly twenty-five years, until the death of Mr. Clark in the latter part of 1880. During this time Mr. Babcock prospered in everything he undertook. Quick to perceive the character of any investment brought to his attention, he rarely failed to profit by any legitimate opportunity which offered itself. He early saw that the development of the country would exceed anything that people in his younger days dreamed of.

He became extensively interested in the ownership of pine lands in the States of Michigan and Pennsylvania. All his investments were made after personal examination and location of the property purchased, and with a clear perception

*The sketch of Mr. Babcock appeared in the February JOURNAL, but is repeated herein, as the portrait was inserted in but a small part of the edition—on account of a fire in the artist's place destroying the plates—and we deem it more satisfactory to our readers to have the sketch and the portrait presented together in one number.

of its future value. Some of these investments turned out far more profitable than anticipated. Large tracts of land purchased in Pennsylvania with reference to their value as timber land proved to be petroleum-producing, and Mr. Babcock came to be widely known as one of the largest oil land owners and sellers in McKean County, Pennsylvania.

In the year 1871, Mr. Babcock, who had then become one of the best known business men in Western New York, removed his residence from Allegany County to Hornellsville, in the adjoining County of Steuben. At that time, as now, Hornellsville was one of the most important points on the line of the present New York, Lake Erie & Western Railroad, of which road Mr. Babcock was always a firm and enthusiastic friend. In Hornellsville no man is better known and more highly esteemed. He is public-spirited, and always ready to aid in advancing the interests of the town where he has made his home.

In 1874 he built the Babcock building, one of the principal structures in Hornellsville. In 1875 he established the Bank of Hornellsville, which is now a very prosperous institution. It was organized under the State law, and two-thirds of its stock is owned by Mr. Babcock, who has been President since its organization. The remainder of the stock is owned by his brother, Mr. D. D. Babcock, who is Vice-President of the bank, and by members of the respective families of both, so that the institution may aptly be termed a family bank.

Enormous as are the enterprises in which Mr. Babcock is interested, he gives them all his personal attention, and they show the ability and genius of the man who controls and guides them. He is recognized as one of the ablest men in the State, and his opinion on any business question is always received with confidence and as authority.

In addition to the enterprises already mentioned, Mr. Babcock is interested in the importation and breeding of Holland and Scotch cattle, to which he has given considerable attention for several years. He is the owner of the celebrated Babcock Stock Farms, located at Hornellsville, which are unrivalled in this State. Here some of the best horses in the country are being bred. In connection with his brother, Mr. D. D. Babcock, he also owns a fine farm in Kansas, comprising some 12,000 acres, upon which are kept from 2,500 to 3,000 head of cattle and horses.

Notwithstanding the extent and diversity of Mr. Babcock's business enterprises, he has found time to take an active part in politics. He was a delegate to the National Convention in 1880, and a member of the Executive Committee of the Democratic State Committee in 1882 and 1883, representing the Congressional District then composed of Chemung, Steuben and Allegany Counties.

Mr. Babcock is, in the truest sense of the term, a self-made man. He was not born in poverty, but, from the time he was ten years of age, he has had to make his way and to depend upon his own resources for a living. With the exception of fifty dollars, his only inheritance has been the industry, enterprise and business ability which have won for him wealth and prominence.

"INFORMATION OF GREAT VALUE."—"We have at hand Messrs. Bradford Rhodes & Co.'s *Bankers' Directory & Collection Guide*, corrected to latest dates and full of information of great value to every banker, merchant and collection agent. It may be obtained at 78 William street."—*N. Y. Journal of Commerce*, March 4, 1887.

BANKING LAW.

* Legal Decisions Affecting Bankers.

RECEIPT OF DRAFT BY CREDITOR TO APPLY IF COLLECTED—DUTY AS TO TAKING STEPS TO COLLECT AND AS TO RETURN IF NOT PAID.

Plaintiffs sued defendants for a balance of account with a special count upon the indorsement of a protested draft which had been taken in conditional payment and dishonored. The material facts show that, on December 14, 1888, defendants, dealing at Ishpeming, in Marquette County, Michigan, bought a draft of D. F. Wadsworth & Co., bankers at that place, on a Chicago bank for \$475, payable to defendants' order, which they indorsed and mailed to plaintiffs, who were New York merchants, to apply, if collected, as a payment of \$500, being with \$25 rebate. Plaintiffs received it to apply when paid, and sent it to Chicago, where, on the 20th of December, it was presented and protested. On December 24th, which was Monday, the draft and notices of protest reached plaintiffs in New York city, who mailed notice to defendants, and also telegraphed to know why the draft was dishonored. Defendants telegraphed back to return it and they would send a new one; also that they had made a further remittance of \$500. On the 29th of December plaintiffs returned the draft, which, in the course of mail, reached Ishpeming on January 2, 1889, when Wadsworth & Co. had failed. Defendants claimed that the plaintiffs were bound to return them the draft at once so that they could have got Wadsworth & Co. to redeem it before their failure, and that the omission to do so made them liable for the consequences. The plaintiffs' letter of December 29th was as follows: "Inclosed please find protested draft, for which please give us credit for \$477.91 and remit us new draft." The Court below held that this letter showed conclusively that plaintiffs only held the draft as agents, and had no right to retain it, but should at once have returned it, and ordered a verdict for defendants. On appeal,

Held, The testimony showed very clearly that the draft had been properly dealt with by the plaintiffs, and that the protest and notices had been sent in due time. Upon this we do not think there is any conflict of testimony, and it seems to have been so considered in the Court below. The decision went upon the ground that the plaintiffs were mere collecting agents until payment, and had not been diligent. That they had the duties of collecting agents is true, but they were something more. There is no rule of law which requires a person who has received a security conditionally to give it up again at one time more than another. If defendants had a right to recall the draft when protested, they had a right, on the same principle of agency, to recall it before dishonor or to change its application. We do not so understand the authorities. It is not reasonable to deprive a holder of what he has taken collaterally any more than of what he has taken absolutely. If a debtor wishes to get back his paper he has a right to do so by paying the debt, but not otherwise. If plaintiffs had taken this paper in absolute payment of their account it is not very clear why they could not have had the right to hold defendants as indorsers on its dishonor, although the original amount was cancelled, and they would not have been compellable to return it unpaid. They had the right to so credit it if they had seen fit, and the same difficulty would have arisen which has now arisen, namely, that defendants as indorsers would have had to pay paper which

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL's Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

the failure of the drawers prevented them from getting refunded. It is unfortunate that it was not returned; but there is nothing in the law of negotiable paper which would have required more than plaintiffs did. The defendants had not warned plaintiffs that they had any fears of the solvency of the drawers of the draft, and there was nothing in the telegram to indicate uneasiness or require haste. Plaintiffs could not be at fault for not having the draft sent back to Ishpeming for presentation to the drawers unless they had reason to believe that delay would be dangerous. There was no such evidence in the case, and nothing was shown which should have led them to think so. Defendants themselves do not appear to have been alarmed any more than plaintiffs. Had they been warned of the danger or urged to immediate action in such a way as to apprise them that they ought to be quick in enforcing their collateral security they might have been bound to look after it. They were in no case bound to return it to defendants unless received on that condition. Defendants could always have redeemed it if they had seen fit.

There was evidence aimed at showing that New York wholesale houses had a custom of returning dishonored drafts to their debtors from whom they received them. If this testimony was admissible the case should have been left for the jury. But there were two objections to it. The law of negotiable paper has never been allowed to be changed by local customs even more general than this, unless, possibly, when the paper itself is purely local. This was a foreign bill, drawn and indorsed in Michigan and payable in Chicago. It is difficult to see how New York business usages could apply to such an instrument. And, further, no such custom was even colorably shown. The witness who swore to it did so as to a usage of two houses only; he had no further knowledge. Beyond this the only proof offered was of single cases which had no tendency to prove custom. (*Lamb vs. Henderson*, 29 N. W. Rep., 733.)

We can see no reason why plaintiffs could not recover either on the account or on the indorsement.

Judgment reversed.

Stringfield and others vs. Vivian and others, Supreme Court of Michigan, November 17, 1886.

BILL OF EXCHANGE—BANKRUPTCY OF ACCEPTORS IN ENGLAND—HOLDER LOSES RECOURSE AGAINST DRAWER BY PROVING CLAIM AND ACCEPTING COMPROMISE WHEREBY ACCEPTORS ARE DISCHARGED.

Defendant, a citizen of this country, drew a bill of exchange to his own order at 60 days' sight upon Johnston & Co., who were English merchants residing in Liverpool. Defendant sold it to the plaintiffs, who were American bankers residing in New York. The bill was duly accepted by Johnston & Co., payable in London, who thereby, as to the plaintiffs, became the principal debtors, the drawer being contingently liable upon their default and holding the position of a surety for the payment of their debt. The bill was protested for non-payment at its maturity, Johnston & Co. having failed and being unable to meet their liabilities, and the holders now sue the drawer to recover its amount. The latter defends upon the ground that, as surety, he was entitled upon the payment of the bill to be subrogated to the rights of the holders, and that the latter had so destroyed or materially impaired those rights as to have lost all remedy against the drawer. The fact relied on as the cause and basis of this result is that the acceptors were discharged in bankruptcy, upon a compromise, by the English Courts, and that the plaintiffs, who were originally not parties to the proceeding, became so afterwards voluntarily, and proved their claim and accepted the composition decreed, whereby the judgment became binding upon them in this country as well as in England; and so the acceptors were wholly discharged, and right of subrogation as surety rendered valueless. The answer made to this contention is that the foreign discharge in bankruptcy was operative against the holders in this country even although they had never become parties to the proceeding; and so the release of the acceptors flowed from no act of theirs; and, consequently, they had not invaded or affected the drawer's rights.

Held, The foreign discharge would have been in and of itself no defense to the American holder of the bill. If property of the bankrupt should be

found in our jurisdiction the plaintiffs were at liberty to proceed against it by attachment and collect their debt out of such property, and the foreign bankruptcy proceedings would neither prevent nor stand in the way, for the sufficient reason that their only force in our jurisdiction comes from our consent, and we have chosen thus to limit that consent. This right remaining to the plaintiffs was a valuable right. It charged with the payment of the protested bill any present or future acquisitions of the acceptors which might come under our jurisdiction and might result in the collection of the whole debt, or a compromise settlement, induced by the desire or interest of the debtors to have access to our markets and freedom to resume their business among us. To that right, thus valuable and material, it was the privilege of the surety to succeed by way of subrogation whenever he should pay the debt, and the plaintiffs could not deprive him of it, or impair or destroy it, except at the peril of releasing him from his liability. Just that was what the plaintiffs did. Tempted by the compromise offered, they sought to obtain the defendant's consent to its acceptance by him. That consent he withheld; but they, acting upon their own conceptions as to what was most for their interest, voluntarily submitted themselves, and their rights as creditors, to the foreign jurisdiction, proved their debt, and accepted the compromise decreed. The condition of the dividend was a release of the debtor. They could not take the compromise and avoid the condition, and so by their act they discharged the acceptors entirely and everywhere. That such is the effect of their voluntary submission to the foreign jurisdiction is inevitable on principle and has been often decided. (11 Barb., 558; 3 Pet., 411.) The unavoidable consequence follows. The creditor, having by his own voluntary act released the debtor from all remaining liability, his surety is discharged.

Phelps vs. Boland, New York Court of Appeals, November 23, 1886.

RECEIPT OF CASHIER'S CHECK IN PAYMENT OF PROMISSORY NOTE—FAILURE OF BANK—RECOVERY ON NOTE.

Defendant was indebted to the plaintiff bank on a promissory note for \$2,287.67. On May 24, 1884, the day of the maturity of the note, defendant, who had on deposit with the Penn Bank, of Pittsburgh, more than this amount, drew its check on such bank for the amount of the note and presented it to the said Penn Bank. The latter received the check and charged it to defendant's account, and issued and delivered to the defendant therefor its Cashier's check for the amount payable to the order of the plaintiff's Cashier. Defendant on the same day presented this instrument, without indorsement, to the plaintiff, who received it and delivered up to defendant the promissory note. On May 26, 1884, the 25th being Sunday, plaintiff caused the instrument issued by the said Penn Bank to be duly presented, duly indorsed, to the Penn Bank for payment, which was refused—the Penn Bank being insolvent and having suspended—whereupon the instrument was duly protested for non-payment, and the plaintiff notified the defendant of the presentment, demand and refusal, demanded payment of the said sum of \$2,287.67, and offered to the defendant, indorsed, but without recourse, the instrument so protested. Defendant refused, claiming that the note was paid. Plaintiff then sued defendant to recover the amount of the note, and judgment was rendered against defendant. On appeal,

Held, The receipt by the defendant in error (the plaintiff) of the Cashier's check of the Penn Bank, and the contemporaneous delivery of the note to the maker thereof, was a conditional payment only of the note. The check was taken for a pre-existing debt. The case stated does not aver any agreement that it was to be accepted as absolute payment. The burden of proof was on the maker of the note to overthrow the presumption that the check was taken as a conditional payment. It was of no higher character than the note, and it certainly was not money. (51 Pa. St., 357; 85 Pa. St., 244; 15 Pittsb. Leg. J., 139.)

Due diligence was used in presenting the check on the next business day after it was received and payment thereof was demanded and refused. There-

upon, on the same day, the check was duly protested for non-payment, and the plaintiff in error (the defendant) was duly notified of the presentment, demand and refusal. Payment of the note was demanded accompanied with an offer on its payment to return the check. The check not having been taken as payment, and nothing having been realized thereon, the plaintiff in error has no just cause to complain of this judgment.

Judgment affirmed.

Canonsburgh Iron Co. vs. Union National Bank, of Pittsburgh, Supreme Court of Pennsylvania, October 4, 1886.

BANK AND DEPOSITOR—PASS-BOOK NOT A CONTRACT BUT A RECEIPT—DEPOSIT TO CREDIT OF THIRD PARTY DOES NOT PASS TITLE WHERE NO KNOWLEDGE OR ACQUIESCENCE BEFORE REVOCATION.

The pass-book issued by the defendants contained the following entry :

"Dawson & Co. in account with Mrs. William Branch, Dr. 1889, July 12. To dep't, \$5,000."

Held, This entry did not constitute a written contract. It was merely evidence in the nature of a receipt of the fact that plaintiff, or some one for her, had deposited that sum with defendants, as bankers, and, like any other receipt, might be contradicted or explained by oral testimony.

In this case the husband of the plaintiff deposited \$5,000 of his own funds to the credit of the plaintiff; but he never communicated the fact to her, never said anything to her about giving her the money, never gave her the possession of the pass-book, and the whole matter of the deposit rested entirely between himself and the defendants. This money he afterwards drew out. Subsequently, he having died, plaintiff sought to recover the amount from the bank as her property, claiming that, by the mere act of placing this money to her credit on the books of the bank, her husband's title to and control over it entirely ceased, and it became the absolute property of the plaintiff, between whom and the defendants the relation of debtor and creditor arose immediately.

Further *Held*, An incomplete voluntary gift creates no right which can be enforced. A gift requires the assent of both minds as much as a contract. To say that a conveyance or transfer of property by way of gift imports an agreement is only to say that ownership cannot be thrust upon a person against his will. Knowledge of the gift on the part of the donee at the time it is made may not be essential in order that it may take effect. If the act of transfer be complete on the part of the donor, subsequent acceptance by the donee *before revocation* will be sufficient. But a mere deposit of property by the depositor, in the name of another, with a third person will not of itself be sufficient to pass the title. This act is one entirely between the depositor and the bailee, to which the person in whose name the deposit is made is in no way a party. It would of itself no more pass title than the execution of a deed by a person and the placing it on record by him without the knowledge or consent, express or implied, of the person named as grantee. (104 Mass., 228; 138 Mass., 581; 72 Me., 140.)

Branch vs. Dawson, Supreme Court of Minnesota, December 13, 1886.

INSOLVENT BANK—ACTION AGAINST DIRECTORS TO RECOVER BILLS RECEIVABLE HELD BY THEM AS INDEMNITY.

In a suit by the Assignee of the Penn Bank, of Pittsburgh, against the Directors to recover certain bills receivable of the bank alleged to have been wrongfully appropriated by the defendants (the Directors of the bank) when the same was insolvent, and should by them have been known to be insolvent, the Master found that the defendants had possession of about \$450,000 of the bills receivable of the bank which they held as indemnity for \$289,000 of paper issued by them for the accommodation of the bank, which paper was discounted by other banks and brokers and the proceeds paid into the vaults of the Penn Bank.

Held, This transaction appears to have been done in entire good faith and with the hope and for the purpose of enabling the bank to resume payment

successfully. There is nothing in the case to connect the Directors with the great fraud by which this institution has been wrecked. They may have reposed too much confidence in the officers of the bank, but they did not steal its money. The case itself does not raise any question of their negligence. It is conceded that, when these securities were selected, set apart, and handed over to the defendants, they took a good title thereto; but it is alleged that, on the following Monday, the said securities were so mingled with other securities of the bank that they could not be identified, and the doctrine of confusion of goods has worked to destroy the defendants' title to the notes. It is at least doubtful whether the doctrine referred to is applicable to such a case; and, even if it were, the Master has found no funds to which it could be applied. He has found that there was no mingling whatever, and we think he is sustained by the evidence. The securities passed over by the bank to the defendants to indemnify them for raising this loan of \$289,000 incurred in law to the benefit of the other banks advancing the money. This is settled law. (37 Pa. St., 31; 79 Pa. St., 168.) They are entitled to the full benefit of the securities. They have done no act which would justify a Court of equity in forfeiting their rights.

Appeal of Warner, Assignee, Supreme Court of Pennsylvania, January 4, 1887.

PROPERTY OBTAINED BY FRAUD IMPRESSED WITH TRUST—HOW FAR SUCH PROPERTY CAN BE FOLLOWED.

It is elementary that a person obtaining property by fraud acquires no title to it, but it is held by him and by all persons claiming under him with notice in trust for the original owner. So long as the property can be identified in its original or in a substituted form it belongs to the original owner if he elects to claim it; and if it passes into the hands of an innocent purchaser for value the title of the defrauded owner, at his option, at once attaches to the avails so long as the identity is preserved no matter how many transmutations of form the property has passed through. So long as the trust property can be traced and followed into other property into which it has been converted, that remains subject to the trust. The product or substitute has the nature of the original imparted to it. The depositing of trust money in a bank, although it creates the relation of debtor and creditor between the bank and depositor, does not change its character or relieve the deposit from the trust. It is not the identity of form but the substantial identity of the fund itself which is the important thing. In support of these propositions, and as illustrating the extent to which Courts of equity have carried this principle, see 3 Maule & S., 562; 4 DeGex M. & G., 372-387; 2 Hem. & M., 417; 13 Ch. Div., 696; 2 Grat., 544; 52 N. Y., 1; 96 N. Y., 32; 99 N. Y., 131; 6 Jones Eq., 34; 57 Pa. St., 202; 30 Kan., 156; 104 U. S., 54.

And some cases go so far as to hold that the trust character still adheres to money even though it cannot be traced into any specific property.

Third National Bank of St. Paul vs. Stillwater Gas Co., Supreme Court of Minnesota, November 22, 1886.

LIABILITY OF DIRECTOR OF BANK FOR OVERDRAFTS AND MISMANAGEMENT OF CASHIER.

This was an action instituted by the liquidators of the defunct Exchange Bank to recover from Matthew H. Gault, M. P., the sum of \$109,621.42, the amount of over-drafts by Thomas Craig, the bank's late Manager and Cashier, now an absentee from Canada. These drafts were made between February 24, 1879, and March 27, 1883. The defendant was one of the Directors of the bank during that period, and resigned on the latter date. It was alleged that the appointment of Craig, who was Gault's brother-in-law, was due to the endeavors and influence of Mr. Gault, and that he was aware during all that time that Craig was engaged in stock gambling and was speculating with funds belonging to the bank, but neglected to disclose this knowledge to the shareholders, and thereby violated his trust and duties as a Director. That, as such Director, he neglected to obtain sufficient security from Craig to cover

his indebtedness. That ignorance of the over-drafts referred to was impossible, as the deposit ledger containing Craig's account was open to inspection. It was further alleged that, on March 22, 1883, the bank was in an insolvent condition, and that the defendant, knowing this fact, as well as that of Craig's inability to pay his indebtedness, sold ninety-five shares to another Director, who thereupon transferred them to Craig in trust for the sum of \$15,825, with which Craig was debited in the books of the bank. This sum was paid to the defendant, who withdrew from the Directorate. There were further allegations to the effect that the defendant and his co-Directors submitted false statements to the shareholders, all of which led to the suspension and insolvency of the bank. There was also an allegation that Mr. Gault withdrew \$4,640.83 charged to The Montreal Conservative Association in 1878, the cheques for which were drawn to meet defendant's election expenses in that year. The conclusions of the declaration were that the defendant be condemned to pay the amount sued for to the liquidators. The defendant denied all knowledge of Craig's defalcations, and pleaded that, owing to ill-health, he was physically incapable to attend to his duties as a Director of the bank from August 22, 1882, and continued so until after his resignation, and could not, consequently, be held responsible for any over-drafts issued from December 22, 1882, up to the time that he ceased to be a Director. He further contended that Craig subsequently paid into the bank a much larger sum than that alleged to have been overdrawn, and that such sum should be set off against the amount claimed. There was also a plea of prescription to the item of \$4,640.83. Craig was examined under a commission sent to New York, and admitted his indebtedness. Other witnesses were also examined in support of the allegations of the parties. The case was heard on its merits, and judgment was rendered dismissing the action. The Court held that Gault could not be held responsible for credits given to Craig during the time of his (defendant's) illness. It also maintained the defendant's contention that whatever the bank received from Craig must be imputed to the payment of Craig's indebtedness at the time, and the defendant, not being responsible for the acts of Craig subsequent to December, 1882, must have the benefit of all the payments made after the 22d of that month, which, according to the evidence, amounted to \$111,000. The plea of five years' prescription covering the sum of \$4,640.83 was maintained. In the course of its judgment, the Court held that Directors are responsible for flagrant negligence or fraud; that if they are deceived by the connivance of the employees and the Managing Director they are not liable; that a Director is responsible for his personal fraud and for the fraud of his co-Directors when authorized or ratified by him; that he is not responsible for the acts of his co-Directors during his illness if he is unable to attend to them, and that no action lies against him for damages caused by non-fulfillment of his duties during such illness.

Exchange Bank vs. Gault, Superior Court of Montreal, January 10, 1887.

RECEIPT AND CREDIT BY BRANCH BANK OF DRAFT DRAWN ON ANOTHER BRANCH BANK—RIGHT TO CHARGE BACK AMOUNT ON DISHONOR BY DRAWEE.

On the 15th of February, 1883, Mr. T. G. Davey, of London, Ont., purchased at the Mahon Bank, in London, a draft drawn by the Mahon Bank on the Bank of Montreal, London, in favor of the plaintiffs. Across the face of the draft appeared the words, "Payable at par at the Toronto branch of the Bank of Montreal." The draft was sent to plaintiffs in payment of an account due to them by the Railroad News Company, and was received by them on the 16th, and deposited in the Imperial Bank, Toronto, on the 17th (Saturday). On Monday, the 19th, the draft was sent in the usual way by the Imperial Bank to the Toronto branch of the Bank of Montreal, and credited by the latter institution to the Imperial Bank. The draft was then sent the same day to London, reaching the Bank of Montreal there on the morning of the 20th, and on that day the Mahon Bank closed its doors. The draft was dishonored and charged back by the defendants to the Imperial Bank, and by the Imperial Bank to the plaintiffs, who brought this action, contending (1) that the note on

the face of the draft habitually used by the Mahon Bank without objection by the defendants was an acceptance or guaranty by the defendants of the payment of the draft, and (2) that the draft was, in effect, paid on presentation at the Bank of Montreal in Toronto, and the payment could not afterwards be revoked by charging back the draft. The judgment is against the plaintiffs, and reads as follows: "But for the words partly written and partly printed across the face of the check, 'payable at the Bank of Montreal, Toronto, at par,' it is clear under the authorities that the Bank of Montreal had the right to charge back the check to the Imperial Bank upon its dishonor at the London branch. I do not think that this legal right is altered by these words. The check is drawn on the London branch and is payable at that branch. These words do not change the place of payment. The check must be read to give effect to every part of it, and, so reading it, it is clear the whole effect of these words is a statement by the drawer that the Toronto branch will make no charge for cashing the check; and I find that this was by agreement between the drawer of the check and the Bank of Montreal; but I do not think that, upon the Bank of Montreal cashing the check, they thereby assumed the risk of there being no funds to meet it, and lost the right to charge it back upon its being ascertained that there were none. I think the plaintiffs must fail; but, as the words were well calculated to mislead, and have caused this difficulty, and caused this litigation by permitting, as I think they did, the drawer of the check to use this form of check, I will not give them costs."

Action dismissed with costs as against the Imperial Bank, and without costs as against the Bank of Montreal.

Mr. Falconbridge, Q. C., for the plaintiffs, and Mr. Worrell for defendants.

Rose & Belford vs. Bank of Montreal, Queen's Bench Division of the High Court of Justice, Toronto, Ont., January, 1887.

FORGERY OF NOTE WITH CONDITION—DEFENSE ON GROUND THAT CONDITION WAS NOT FULFILLED.

Defendant was a soliciting agent of the Continental Insurance Company, and sent an application and two promissory notes to the Chicago department of that company. The application and notes purported to be signed by J. C. Moore. The notes were for the premium for an insurance. A policy was not issued on the application because, upon inspection, the notes and application were suspected to be forgeries. The evidence showed conclusively that the defendant forged the name of J. C. Moore to the notes and application with the intent of procuring the commission due him as agent for procuring the insurance. Under his contract with the company he was entitled to payment of his commission on but one of the notes at the time of the issuance of the policy, and that note provided that it should not be valid unless the company issued a policy. Counsel for the defendant claimed that, as the application was not accepted and no policy issued, there was no crime, because the notes never became obligations to pay money.

Held, We cannot concur in this view. The defendant forged the instruments with a criminal intent, and attempted to defraud the insurance company by forwarding them and demanding his commissions. He cannot escape conviction because his crime was detected before any one was injured or defrauded by reason of it.

State vs. McMackin, Supreme Court of Iowa, December 11, 1886.

NATIONAL BANK—THEFT OF SECURITIES—NEGLIGENCE—POWER TO RECOVER PROPERTY.

Where a large amount of money and securities in the hands of a National bank, including a special deposit of bonds belonging to the plaintiff, were stolen,

Held, The mere fact of the loss of the plaintiff's property by that means was not sufficient to sustain an allegation of negligence.

Further *Held*, That a National bank would certainly have power to take measures for the recovery of its own property lost in the way described; and,

if the loss included the property of others, and it was deemed best, having reference to the bank's own interest, that these measures should be taken by the bank alone for itself and all concerned, it might lawfully undertake to act for others thus jointly concerned with itself as well as for itself alone; and want of proper diligence, skill and care in the performance of such an undertaking would be ground of liability to respond in damages for such failure. Much more would the bank be liable in such a case if, in the performance of such a contract, it used the property of the plaintiff for the recovery of its own.

Wylie vs. Northampton National Bank, Supreme Court of the United States, December 12, 1886.

SAVINGS BANK—PAYMENT OF WIFE'S MONEY UNDER TRUSTEE PROCESS AGAINST HUSBAND.

Plaintiff sued a savings bank for money deposited by her husband in her name, part of which had been paid out under trustee process against her husband, but to which suit the plaintiff was not a party. Plaintiff's husband appeared and disclaimed the funds, but the Court below directed a verdict for the defendant. On appeal,

Held, The answer admits a deposit in the name of the plaintiff. The plaintiff testified that the money was her own, and her husband, who seems to have been supposed by the bank to have been her principal and the then depositor, disclaimed the funds. This evidence fully warranted a finding that the plaintiff was a creditor of the bank. It follows that the Court erred in directing a verdict for the defendant.

Townsend vs. Webster Five-Cent Savings Bank, Supreme Judicial Court of Massachusetts, Worcester, January 4, 1897.

POWERS OF BANK CASHIERS.

Continued from page 154, February number of the JOURNAL.

XIV. Power to Extend the Time of Payment of Bills and Notes.—There is a dearth of authority on the question of what power the Cashier of a bank possesses in respect to extending the time for the payment of a bill or note held by the bank, and the only two decisions which have come to our notice on the subject seem to arrive at directly opposite conclusions. In the case of *The Bank of East Tennessee vs. Hooke*, 1 Coldw. (Tenn.), 156, decided in 1860, the action was against the indorser on a bill of exchange, who claimed that he was discharged because a new bill had been taken by the Cashier in renewal or discharge of the former bill. The Court, after stating that the evidence implied that the indorser knew of the new arrangement and assented to it, said: "But this consideration aside, the arrangement obviously was an unauthorized one on the part of the Cashier and of no binding obligation on the bank unless it were made to appear that the bank either previously sanctioned or subsequently ratified it, which does not appear in the record."

On the other hand, in the case of *Wakefield Bank vs. Truesdell*, 55 Barb., 602 (New York Supreme Court, decided in 1864), the Cashier is held to have authority to bind the bank by such an agreement. In that case a note held by the plaintiff bank falling due, the maker paid to plaintiff's Cashier interest on the note for six months thereafter, and the Cashier indorsed thereon "Interest paid to February 26, 1856." In an action against the surety the Court held that receiving the interest amounted to an agreement by the Cashier to extend the time of payment (although he did not so state), and that the surety was discharged. The Court further say: "But it is claimed that the Cashier had no authority to receive the interest and to contract to extend the time of payment. I do not consider the question entitled to a discussion. The Cashier is the financial officer of the bank, and his agreements in behalf of his principal in all matters relating to its business of discounting and banking are binding upon it to the same extent as if made by a resolution of the Board of Directors."

Reasoning on general principles, the decision in this latter case would not seem to be sound, as the Cashier would seem to have no inherent power to extend the time for the payment of a note or bill. Being a strictly executive

officer, the power to grant an extension to a debtor for the payment of his obligation would be such an act of discretion as to fall beyond the range of the ordinary powers which the law proclaims are inherent to the office. Furthermore, such indulgence granted in pursuance of a binding legal contract is sufficient to discharge an indorser or surety from his obligation if given without his consent, and it has been shown in a previous article ("Powers of Bank Cashiers," Article V., RHODES' JOURNAL OF BANKING, June, 1886) that the Cashier has no power to release an indorser or security from liability on a bill or note.

The power to extend the time for the payment of a bill or note not being inherent in the office of Cashier, we apprehend that to bind the bank it would be necessary to show either express authority or subsequent ratification by the Board of Directors, or a long-continued acquiescence in a practice of this kind from which authority might be presumed.

LAW NOTES AND COMMENTS.

The Inter-State Commerce Bill.

We give below a summary of the provisions of the "Act to Regulate Commerce" recently passed by Congress and signed by the President. The Act contains twenty-four sections. The 11th and 18th sections took effect on its passage. The remainder of the Act goes into force on March 12th.

Section 1 provides that the Act shall apply to common carriers engaged in the transportation of passengers or property wholly by railroad or partly by railroad and partly by water when both are used under a common control, management or arrangement for a continuous carriage or shipment from one State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States; and also the transportation in like manner of property shipped from any place in the United States to a foreign country and carried from such place to a port of transshipment, or shipped from a foreign country to any place in the United States and carried to such place from a port of entry in the United States, or an adjacent foreign country; but the provisions of the Act shall not apply to the transportation of passengers or property or to the receiving, delivering, storage or handling of property wholly within one State and not shipped to or from a foreign country from or to any State or Territory as aforesaid. The term "railroad" includes all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any corporation operating a railroad, whether owned or operated under a contract, agreement or lease; and the term "transportation" includes all instrumentalities of shipment or carriage. The section further provides that all charges made for any service rendered or to be rendered in the transportation of passengers or property or for the receiving, delivering, storage or handling of such property shall be reasonable and just; and every unjust and unreasonable charge is prohibited and declared to be unlawful.

Section 2 provides that, if any common carrier subject to the provisions of the Act shall directly or indirectly charge or receive from any person a greater or less compensation for any services rendered or to be rendered in the transportation of passengers or property than it charges or receives from any other person for doing for him a like service in the transportation of a like kind of traffic under substantially similar circumstances and conditions, such common carrier shall be deemed guilty of unjust discrimination, which is prohibited and declared to be unlawful.

Section 3 makes it unlawful for any common carrier subject to this Act to give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation or locality, or any particular description of traffic, in any respect whatsoever, or to in any respect subject any such person, company, firm, corporation or locality, or particular description of

traffic to any undue or unreasonable prejudice or disadvantage. It also provides that every such common carrier shall, according to their respective powers, afford all reasonable, proper and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding and delivering of passengers and property to and from their several lines and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines; but this is not to be construed as requiring any such common carrier to give the use of its tracks or terminal facilities to another carrier engaged in like business.

Section 4 makes it unlawful for any common carrier, subject to the provisions of this Act, to charge and receive any greater compensation in the aggregate for the transportation of passengers, or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line in the same direction, the shorter being included within the longer distance; but this is not to be construed as authorizing any common carrier subject to this Act to charge and receive as great compensation for a shorter as for a longer distance. The Act provides, however, that, upon application to the Commission appointed under this Act, such common carrier may, in special cases, after investigation by the Commission, be authorized to charge less for longer than for shorter distances for the transportation of passengers or property; and the Commission may from time to time prescribe the extent to which such designated common carrier may be relieved from the operation of this section.

Section 5 declares it unlawful for any common carrier under this Act to enter into any contract, agreement or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads or any portion thereof; and, in any case of an agreement for any such pooling of freights, each day of its continuance is deemed a separate offense.

Section 6 requires every common carrier, subject to this Act, to print and keep for public inspection schedules showing the rates and fares and charges for the transportation of passengers and property which it has established, and which are in force at the time upon its railroad, as defined by the first section. Such schedules must plainly state the places upon its railroad between which property and passengers will be carried, and contain the classification of freight in force upon such railroad. They must also state separately the terminal charges, and any rules or regulations which in any wise change, affect or determine any part of the aggregate of such rates and fares and charges. The schedules must be plainly printed in large type, of at least the size of ordinary pica, and copies for the use of the public must be kept in every station upon any such railroad in such places and in such form that they can be conveniently inspected. It is further provided that any common carrier within the terms of this Act who receives freight in the United States to be carried through a foreign country to any place in the United States shall also in like manner print and keep for public inspection at every depot where such freight is received for shipment schedules showing the through rates established and charged by it to all points in the United States beyond the foreign country to which it accepts freight for shipment; and any freight shipped from the United States through a foreign country into the United States, and through rates on which shall not have been made public as so required, shall, before it is admitted into the United States from said foreign country, be subjected to customs duties as if it were of foreign production; and any law in conflict with this section is repealed. The section further provides that no advance shall be made by any common carrier in the rates, fares and charges so established and published except after ten days' public notice, which shall plainly state the changes proposed to be made in the schedule then in force, and the time when the increased rates, fares or charges will go into effect; and the proposed changes shall be shown by printing new schedules or be plainly indicated upon the schedules in force at the time and kept for public inspection. Reductions in such published rates, fares or charges may be made without previous public notice; but notice of any such

reduction must be immediately publicly posted, and the changes made shall be immediately made public by printing new schedules, or immediately be plainly indicated upon the schedules in force at the time and kept for public inspection. When any such common carrier shall have established and published its rates, fares and charges, it is unlawful for such common carrier to charge, demand, collect or receive a greater or less compensation for the transportation of passengers or property, or for any service in connection therewith, than is specified in such public schedule which may at the time be in force. Every such common carrier must also file with the Commission hereinafter provided for copies of its schedules of rates, fares and charges which have been established and published as provided for, and promptly notify the Commission of all changes made in the same. Every such common carrier must also file with said Commission copies of all contracts, agreements or arrangements with other common carriers in relation to any traffic affected by the provisions of this Act to which it may be a party. And in cases where passengers and freight pass over continuous lines or routes operated by more than one common carrier, and the several common carriers operating such lines or routes establish joint tariffs or rates or fares or charges for such continuous lines or routes, copies of such joint tariffs shall also, in like manner, be filed with said Commission. Such joint rates, fares and charges on such continuous lines, so filed as aforesaid, shall be made public by such common carriers when directed by said Commission, in so far as may, in the judgment of the Commission, be deemed practicable; and the Commission, from time to time, shall prescribe the measure of publicity which shall be given to such rates, etc., or to such part of them as it may deem it practicable for such common carriers to publish, and the places in which they shall be published; but no common carrier party to any such joint tariff shall be liable for the failure of any other common carrier party thereto to observe and adhere to the rates, fares or charges thus made and published. It is further provided that if any such common carrier neglects or refuses to so file or publish its schedules or tariffs of rates, fares and charges, or any part of the same, it shall, in addition to other penalties prescribed in the Act, be subject to a writ of *mandamus* to be issued by any Circuit Court of the United States in the judicial district wherein the principal office of such common carrier is situated or wherein the offence may be committed (and, if the common carrier be a foreign corporation, in the judicial circuit wherein it accepts traffic and has an agent to perform such service) to compel compliance with the aforesaid provisions of this section, the writ to issue in the name of the people of the United States at the relation of the Commissioners appointed under this Act; and failure to comply with its requirements is punishable as a contempt. The Commissioners, as complainants, may also apply in any such Circuit Court for a writ of injunction against such common carrier to restrain it from receiving or transporting property among the several States and Territories, or between the United States and adjacent foreign countries, or between ports of transshipment and of entry and the several States and Territories, as mentioned in the first section, until such common carrier shall have complied with the foregoing provisions of this section.

Section 7 makes it unlawful for any common carrier subject to the provisions of this Act to enter into any combination, contract or agreement, express or implied, to prevent, by change of time schedule, carriage in different cars, or by other means or devices, the carriage of freights from being continuous from the place of shipment to the place of destination; and provides that no break of bulk, stoppage or interruption made by such common carrier shall prevent the carriage of freights from being treated as one continuous carriage from the place of shipment to that of destination unless such break, stoppage or interruption was made in good faith for some necessary purpose and without any intent to avoid or unnecessarily interrupt such continuous carriage or to evade any of the provisions of this Act.

Section 8 provides that in case any common carrier subject to the provisions of this Act shall do, cause to be done or permit to be done any act, matter or thing in this Act prohibited or declared to be unlawful, or shall omit to do any act, matter or thing in this Act required to be done, it shall be liable to

the persons injured thereby for the full amount of damages sustained in consequence of any such violation, together with a reasonable counsel or attorney's fee, to be fixed by the Court in every case of recovery, to be taxed and collected as part of the costs.

Section 9 provides that any person or persons claiming to be damaged by any common carrier within the terms of this Act may either make complaint to the Commission as provided for hereafter, or may bring suit in his or their own behalf for the recovery of the damages for which such common carrier may be liable under the provisions of this Act in any District or Circuit Court of the United States of competent jurisdiction. Both remedies, however, cannot be pursued, and the party must in each case elect which of the two methods of procedure he will adopt. In any such action brought for the recovery of damages the Court before which it is pending may compel any Director, receiver, trustee, or agent of the corporation or company defendant to attend, appear and testify in such case, and may compel the production of the books and papers of such corporation or company party to such suit. The claim that any such testimony or evidence may tend to criminate the person giving it will not excuse the witness from testifying, but such evidence or testimony shall not be used against such person on the trial of any criminal proceeding.

Section 10 provides that any common carrier subject to the provisions of this Act (or, when it is a corporation, any Director or officer thereof, or any Receiver, trustee, lessee, agent or person acting for or employed by such corporation), who alone, or with any other corporation, company, person or party, shall willfully do or cause to be done, or shall willingly suffer or permit to be done, any act, matter or thing prohibited or declared by this Act to be unlawful, or who shall aid or abet therein, or shall willingly omit or fail to do any act, matter or thing in this Act required to be done, or shall cause or willingly suffer or permit any act, matter or thing so directed or required by this Act to be done not to be so done, or shall aid or abet any such omission or failure, or shall be guilty of any infraction of this Act, or shall aid or abet therein, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof in any District Court of the United States within the jurisdiction of which such offense was committed, be subject to a fine not to exceed \$5,000 for each offense.

Section 11 provides for the creation of a Commission, to be known as the Inter-State Commerce Commission, to be composed of five Commissioners who shall be appointed by the President by and with the advice and consent of the Senate. The Commissioners first appointed under the Act are to continue in office for the term of two, three, four, five and six years respectively from January 1, 1887, the term of each to be designated by the President. Their successors are to be appointed for the term of six years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the Commissioner whom he shall succeed. Any Commissioner may be removed by the President for inefficiency, neglect of duty or malfeasance in office. No more than three of the Commissioners shall be appointed from the same political party. No person in the employ of or holding any official relation to any common carrier subject to the provisions of this Act, or owning stock or bonds thereof, or who is in any manner pecuniarily interested therein, shall enter upon the duties of or hold such office. Said Commissioners shall not engage in any other business, vocation or employment. No vacancy in the Commission shall impair the right of the remaining Commissioners to exercise all the powers of the Commission.

Section 12 vests the Commission with authority to inquire into the management of the business of all common carriers subject to the provisions of this Act, to keep itself informed as to the manner and method in which the same is conducted, and the right to obtain from such common carriers full and complete information necessary to enable it to perform the duties and carry out the objects for which it was created; and for this purpose the Commission has power to require the attendance and testimony of witnesses, and the production of all books, papers, tariffs, contracts, agreements and documents relating to any matter under investigation, and to

that end may invoke the aid of any Circuit Court of the United States in requiring the attendance and testimony of witnesses, and the production of books, papers and documents under the provisions of this section. Any Circuit Court within the jurisdiction of which such inquiry is carried on may, in case of contumacy or refusal to obey a subpoena issued to any common carrier subject to the provisions of this Act, or other persons, issue an order requiring the party so refusing to appear before said Commission and produce books and papers, if so ordered, and give evidence touching the matter in question; and any failure to obey such order is punishable as a contempt. The claim that any such testimony or evidence may tend to criminate the person giving it will not excuse the witness from testifying, but such evidence or testimony shall not be used against such person on the trial of any criminal proceeding.

Section 18 provides that any person, firm, corporation, association, or any mercantile, agricultural or manufacturing society, or any body politic or municipal organization, complaining of anything done or omitted by any common carrier subject to this Act in contravention of the provisions thereof, may apply to the Commission by petition, which shall briefly state the facts, whereupon a statement of the charges thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission. If such common carrier makes reparation within the time specified for the alleged injury it shall be relieved of liability to the complainant only for the particular violation of law complained of. If such carrier does not satisfy the complaint within the time specified, or there appears to be any reasonable ground for investigating said complaint, it is the duty of the Commission to investigate the matter complained of in such manner and by such means as it shall deem proper. It is the duty of the Commission in like manner to investigate any complaint forwarded by the Railroad Commissioner or Commission of any State or Territory at the request of such Commissioner or Commission, and it may institute any inquiry on its own motion in the same manner and to the same effect as though complaint had been made. No complaint shall at any time be dismissed because of the absence of direct damage to the complainant.

Section 14 provides that it is the duty of the Commission, whenever an investigation has been made by it, to make a report in writing in respect thereto which shall include the findings of the fact upon which the conclusions of the Commission are based, together with its recommendations as to what reparation, if any, should be made by the common carrier to any party or parties injured; and the findings so made shall thereafter in all judicial proceedings be deemed *prima facie* evidence as to each and every fact found. All such reports shall be entered of record and a copy thereof furnished to the party who may have complained and to any common carrier that may have been complained of.

Section 15 provides that if, in any case where an investigation has been made by the Commission, it is made to appear to its satisfaction, either by the testimony of witnesses or other evidence, that anything has been done or omitted to be done in violation of the provisions of this Act or of any law cognizable by said Commission by any common carrier, or that any injury or damage has been sustained by the complaining party or by other parties aggrieved in consequence of any such violation, the Commission must forthwith cause a copy of its report in respect thereto to be delivered to such common carrier, together with a notice to said carrier to cease and desist from such violation, or to make reparation for the injury so found to have been done, or both, within a reasonable time to be specified by the Commission; and, if within the time specified it is made to appear to the Commission that such carrier has ceased from such violation of law, and has made reparation for the injury found to have been done in compliance with the report and notice, or to the satisfaction of the party complaining, a statement to that effect shall be entered of record by the Commission, and the said common carrier shall thereupon be relieved from further liability or penalty for such particular violation of law.

Section 16 provides that, whenever any common carrier subject to the provisions of this Act shall violate or refuse or neglect to obey any lawful order or requirement of the Commission, it shall be the duty of the Commission, and lawful for any company or person interested in such order or requirement, to apply, in a summary way, by petition to the Circuit Court of the United States sitting in equity in the judicial district in which such common carrier has its principal office, or in which the violation or disobedience of such order or requirement shall happen, alleging such violation or disobedience, as the case may be, and said Court is given power to hear and determine the matter on such short notice to the common carrier as the Court shall deem reasonable; and such notice may be served on such common carrier, its officers, agents or servants in such manner as the Court shall direct. Said Court shall proceed to hear and determine the matter speedily as a Court of equity, and without the formal pleadings and proceedings applicable to ordinary suits in equity, but in such manner as to do justice in the premises; and to this end such Court is given power if it think fit, to direct and prosecute in such mode and by such person as it may appoint all such inquiries deemed needful to enable it to form a just judgment in the matter of such petition, and on such hearing the report of said Commission shall be *prima facie* evidence of the matters therein stated. And, if it be made to appear to the Court on such hearing or on report of any such person or persons that the lawful order or requirement of said Commission drawn in question has been violated or disobeyed, it is lawful for such Court to issue a writ of injunction or other proper process, mandatory or otherwise, to restrain such common carrier from further continuing such violation or disobedience of such order or requirement of said Commission, and enjoining obedience to the same. And, in case of any disobedience of any such writ of injunction or other proper process, mandatory or otherwise, the Court may issue writs of attachment, or any other process incident or applicable to writs of injunction or other proper process, mandatory or otherwise, against such common carrier; and, if a corporation, against any one or more of the Directors, officers, or agents of the same, or against any owner, lessee, trustee, Receiver or other person failing to obey such writ of injunction or other proper process, mandatory or otherwise. And the Court may, if it think fit, make an order directing the common carrier or other person so disobeying such writ of injunction or other proper process, mandatory or otherwise, to pay a sum of money not exceeding for each carrier or person in default the sum of \$500 for every day after a day to be named in the order that such carrier or other person shall fail to obey such injunction or other proper process, mandatory or otherwise, such moneys to be payable as the Court shall direct, either to the party complaining or into Court to abide its ultimate decision, or into the Treasury; and payment thereof may, without prejudice to any other mode of recovering the same, be enforced by attachment or order in the nature of a writ of execution in like manner as if the same had been recovered by a final decree *in personam* in such Court. When the subject in dispute is of the value of \$2,000, or more, either party to the proceeding before said Court may appeal to the Supreme Court of the United States under the same regulations now provided by law as to security on appeal, but such appeal shall not operate to stay or supersede the order of the Court or the execution of any writ or process thereon. And such Court may in every such matter order the payment of such costs and counsel fees as shall be deemed reasonable. Whenever any such petition is filed or presented by the Commission, it is the duty of the District-Attorney, under the direction of the Attorney-General of the United States, to prosecute the same; and the cost and expenses of such prosecution shall be paid out of the appropriation for the expenses of the Courts of the United States. For the purposes of this Act, excepting its penal provisions, the Circuit Courts of the United States shall be deemed to be always in session.

Section 17 provides that the Commission may conduct its proceedings in such manner as will best conduce to the proper dispatch of business and the ends of justice. A majority of the Commission constitutes a quorum for the transaction of business; but no Commissioner can participate in any hearing or proceeding in which he has any pecuniary interest. The Commission may,

from time to time, make or amend such general rules or orders as may be requisite for the order and regulation of proceedings before it, including forms of notices and the service thereof, which shall conform, as nearly as may be, to those in use in the Courts of the United States. Any party may appear before the Commission and be heard in person or by attorney. Every vote and official act of the Commission must be entered of record, and its proceedings shall be public upon the request of either party interested. The Commission shall have an official seal which shall be judicially noticed. Either of the members of the Commission may administer oaths and affirmations.

Section 18 provides that each Commissioner shall receive an annual salary of \$7,500, payable in the same manner as the salaries of Judges of the Courts of the United States. The Commission shall appoint a Secretary at an annual salary of \$3,500, payable in like manner. The Commission may employ and fix the compensation of such other employees as it may find necessary to the proper performance of its duties, subject to the approval of the Secretary of the Interior. The Secretary of the Interior must furnish the Commission with suitable offices and all necessary office supplies. Witnesses summoned before the Commission are to receive the same fees and mileage that are paid witnesses in the Courts of the United States. All of the expenses of the Commission, including all necessary expenses for transportation incurred by the Commissioners or by their employees under their orders in making any investigation in places other than the city of Washington, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Chairman of the Commission and the Secretary of the Interior.

Section 19 provides for the principal office of the Commission, which is to be in the city of Washington, where its general sessions are to be held; but, whenever the convenience of the public or of the parties may be promoted, or delay or expense prevented thereby, it may hold sessions in any part of the United States. It may, by one or more of the Commissioners, prosecute any inquiry necessary to its duties in any part of the United States into any matter or question of fact pertaining to the business of any common carrier subject to the provisions of this Act.

Section 20 authorizes the Commission to require annual reports from all common carriers subject to the provisions of this Act, to fix the time and prescribe the manner in which such reports shall be made, and to require from such carriers specific answers to all questions upon which the Commission may need information. Such annual reports shall show in detail the amount of capital stock issued, the amounts paid therefor, and the manner of payment for the same, the dividends paid, the surplus fund, if any, and the number of stockholders; the funded and floating debts, and the interest paid thereon; the cost and value of the carriers' property, franchises and equipment; the number of employees and the salaries paid each class; the amounts expended for improvements each year, how expended, and the character of such improvements; the earnings and receipts from each branch of business and from all sources; the operating and other expenses; the balances of profit and loss; and a complete exhibit of the financial operations of the carrier each year, including an annual balance sheet. Such reports shall also contain such information in relation to rates or regulations concerning fares or freights, or agreements, arrangements or contracts with other common carriers as the Commission may require, and the Commission may, within its discretion, for the purpose of enabling it better to carry out the purposes of this Act, prescribe (if in the opinion of the Commission it is practicable to prescribe such uniformity and methods of keeping accounts) a period of time within which all common carriers subject to the provisions of this Act shall have, as near as may be, a uniform system of accounts and the manner in which such accounts shall be kept.

Section 21 provides that the Commission shall, on or before the 1st day of December in each year, make a report to the Secretary of the Interior, which shall be by him submitted to Congress, and copies of which shall be distributed as are the other reports issued from the Interior Department. This report shall contain such information and data collected by the Commission as may be considered of value in the determination of questions connected with the regulation of commerce, together with such

recommendations as to additional legislation relating thereto as the Commission may deem necessary.

Section 22 provides that nothing in this Act shall apply to the carriage, storage or handling of property free or at reduced rates for the United States, State or municipal Governments, or for charitable purposes, or to or from fairs and expositions for exhibition thereat, or the issuance of mileage, excursion or commutation passenger tickets; nothing in this Act shall be construed to prohibit any common carrier from giving reduced rates to ministers of religion; nothing in this Act shall be construed to prevent railroads from giving free carriage to their own officers and employees, or to prevent the principal officers of any railroad company or companies from exchanging passes or tickets with other railroad companies for their officers and employees; and nothing in this Act contained shall in any way abridge or alter the remedies now existing at common law or by statute; but the provisions of this Act are in addition to such remedies; provided that no pending litigation shall in any way be affected by this Act.

Section 23 appropriates the sum of \$100,000 for the uses and purposes of the Act for the fiscal year ending June 30, 1888, and the intervening time anterior thereto.

Section 24 provides that the provisions of Sections 11 and 18, relating to the appointment and organization of the Commission, shall take effect immediately, and the remaining provisions within sixty days after their passage.

LIABILITY OF COLLECTING BANK FOR LACHES, NEGLIGENCE OR DEFAULT OF ITS CORRESPONDENT.—In our January number we published at considerable length the opinion of the Supreme Court of Michigan in the case of *Simpson vs. Waldby* (decided November 4, 1886) on this question, holding that a bank receiving paper for collection in the ordinary course of business is responsible for the negligence or default of any correspondent bank to whom the paper is retransmitted for collection. The Supreme Court of Montana, in a still more recent case (*Power vs. First National Bank, of Fort Benton*, decided January 5, 1887), have upheld the same doctrine in a very elaborate and well written opinion, wherein a large number of cases on all sides of the question are examined and discussed. This opinion is of great length, and we are able to give but a brief mention of it in our notes.

The Court states that the question of how far a bank is liable for the default of a correspondent or collecting agent in regard to a collection is one which has been solved in at least three different ways by many Courts of last resort in the United States which have at different times had the matter under consideration, and that, inasmuch as there is such a variety of opinion to be found among the highest Courts on this important question, it is purposed to examine at some length such of them as are accessible. The Court then goes into an exhaustive review of some twenty-five cases in which all the different phases of the question are considered, taking them in their chronological order, and, after mature consideration of the authorities, comes to the conclusion that, in the absence of a special contract, a bank is absolutely liable for any laches, negligence or default of its correspondent whereby the holder of negotiable paper suffers loss, following the decision of the Supreme Court of the United States in the case of the *Exchange National Bank vs. Third National Bank* (112 U. S., 284, decided in 1884), which the Court states is not only binding as an authority upon it, but that, "beyond a doubt, it is the correct doctrine sustained by the weight of reason and the general current of authority." The Court states that by such a rule alone can a depositor who entrusts his business to a bank be secure against carelessness or dishonesty on the part of collecting agencies employed by banks to carry out their contracts. That banks can easily avoid the effects of this stringent rule by making special contracts in special cases or declining to undertake collections at points where they have any fears as to the reliability or solvency of the agents whom they will be obliged to employ; but, when they undertake collections either at their own location or at distant points without a special contract limiting their liability, they must be held to do so for a sufficient consideration and to be responsible

absolutely to the owner of negotiable paper for the payment of all money collected thereon, and for all losses occurring through the negligence of the agent resulting in the failure to make such collection.

In connection with this general subject, we beg also to notice the able article of Mr. Francis B. Patten as to the responsibility of banks and bankers for their correspondents and their notaries, published in the *American Law Review* for November-December, 1886, in which he draws a distinction between those cases which bear upon the liability of a bank for the acts of their correspondents and those which relate to their liability for the negligence of their notaries, and shows that, while some of the leading text-books have proceeded on the assumption that the two cases were identical in principle, they in fact rest upon different principles of law and should be considered separately. The writer shows that, while there is great conflict on the first branch of the question, the decisions are almost uniform that a bank is not liable for the default of the notary whom it employs. On the question of the liability of a bank for the acts of its correspondents, he maintains the doctrine that the bank is absolutely bound for their negligences and defaults as being supported by the greatest weight of authority, and combats the view taken by Mr. Morse in his work on banking that the better rule is that a bank is only bound to the exercise of due care in the selection of a suitable sub-agent. In justice to Mr. Morse, however, it should be said that, since the publication of his work in 1879, a number of cases have been decided, holding the contrary doctrine—*i. e.*, that a bank is absolutely liable for the defaults of its correspondents—which have gone far to change the weight of authority to the latter rule.

PLEDGE OF PERSONAL PROPERTY—HOLDING AS SECURITY FOR SUBSEQUENT ADVANCES—APPLICATION OF PAYMENTS.—The Supreme Court of Pennsylvania in a recent case (Appeal of Pennsylvania Co. for Insurances of Lives), speaking of the lien of a party on property which has been pledged for a specific loan, say: "It is a principle too well settled to require the citation of authorities that personal property pledged specifically as security for a certain loan cannot be held as security for subsequent advances without an agreement to that effect."

The same Court, in the case above-mentioned, lay down the rule as to the application of payments between debtor and creditor as follows: "The general rule is that one who owes money on several distinct securities or accounts has a right to apply his payment to either as he pleases; but, if he makes a payment generally, and without specifically appropriating it, the creditor may apply it as he pleases. If neither debtor nor creditor makes any specific application of the money so paid the law will appropriate it according to the equity and justice of the case. This principle applies only, however, in cases of voluntary payments. It has no place in payments *in invitum* or where the money to be applied is the proceeds of the judicial sale of real estate. In such cases the law applies the proceeds in order of their priority to such liens as are divested by the sale."

DRAFT OR NOTE DRAWN PAYABLE IN EXCHANGE.—In the January number of the JOURNAL we held that, when a draft was presented to a bank payable in exchange on a given place, the holder could not demand cash, because it was not payable in money, but *in exchange*; and, further, that the drawee bank could not tender its own draft in payment, for the reason that that would be simply substituting its own obligation for that of the draft, but must tender the draft of some banker of good repute other than his own. This latter proposition has been maintained by a recent writer of authority, but there is a conflict of opinion on the subject. After mature consideration we have come to the conclusion that there is no good reason why, when a bill is drawn upon a bank payable in exchange, the drawee bank cannot sufficiently answer its terms by tendering its own draft. And the statement in the January JOURNAL is modified accordingly.

REPLIES TO LAW AND BANKING QUESTIONS.†

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail—and which are not to be published. See advertisement on another page.

Editor Rhodes' Journal of Banking:

TELLURIDE, Colo., February 15, 1887.

SIR:—Will you kindly answer the following question through the JOURNAL. At what date does the note mature, and at what date is the interest due:

\$100.

DELTA, Colo., January 6, 1887.

Six months after date, for value received, I promise to pay A. Jones or order one hundred dollars (\$100) with interest thereon at the rate of two per cent. (2 %) per month, payable monthly.

JOHN DOE.

Respectfully yours,

C. R.

Answer.—The note in question, by the law of Colorado, is entitled to three days' grace in the time of payment, and it therefore matures on Saturday, July 9, 1887.

As to the dates when the monthly instalments of interest are payable, it has been held that, on mere instalments of interest on a note, the debtor is not entitled to days of grace.

Macloon vs. Smith, 49 Wis., 200.

See National Bank of North America vs. Kirby, 102 Mass., 497.

Catlin vs. Lyman, 16 Vt., 44.

Oridge vs. Sherborne, 11 M. and W., 374.

Coffin vs. Loring, 5 Allen, 153.

These instalments are payable, therefore, monthly without grace, or on the 6th days of February, March, April, May, June, and probably the last instalment on the maturity of the note, viz., July 9th. In February and March, however, the 6th day of these months falls on Sunday, and the question arises whether the payments of interest in these months are due on the 5th or on the 7th. The statute of Colorado allows grace on promissory notes, and provides that, when a promissory note falls due on a Sunday or holiday, it becomes payable on the preceding day. We think, however, that this provision would only apply to the due date of a promissory note which was reached by including days of grace, and that, in the case of a monthly instalment of interest, where no grace was allowed, the rule of the common law would govern, that in the case of instruments payable without grace, which mature on a Sunday, they do not become payable until the following day. We think, therefore, that the interest due in February and March was and is payable on the 7th day of those two months.

Editor Rhodes' Journal of Banking.

BURLINGTON, Vt., February 23, 1887.

SIR:—I think you are in error in the answer to your St. Paul correspondent published in the February number concerning drafts or other paper made payable "in exchange." Who is to be the judge of what constitutes a sufficient bill of exchange in the case mentioned? Certainly not the *payer* of the draft. I contend that the *holder* of the paper has the right to say what is a satisfactory bill of exchange to be taken in payment, and therefore he can refuse to take any "exchange" save a bill drawn by his *own bank*. It is not enough to say that any bill of exchange drawn by a banker in good credit is sufficient, for the banker might be in "good credit" to-day and fail to-morrow.

Yours truly,

VERMONT.

Answer.—We do not agree with our correspondent that the holder of the draft can select the exchange to be tendered, where the draft is payable "in exchange." We are of opinion that, in the case of such a draft, the drawee can tender any bill of exchange of a reputable banker which he may select. In the January number of the JOURNAL we stated that, although he could do

† NOTE.—Inquiries from Wessington Springs, Dakota; Concordia, Kansas; Sacramento, Cal.; Astoria, Oregon; and Fort Worth, Texas, have been received too late for the proper preparation of replies for this number. They will be published in the April JOURNAL.

this, he could not tender his own draft; but as to this latter, we now deem it erroneous (see remarks in "Law Notes and Comments" of this number), and we see no reason why the drawee cannot answer the terms of such a draft by tendering his own draft on the place specified.

In answer specifically to the claim that the holder has the right to select the exchange, we do not see how it can be maintained. A draft is drawn payable "in exchange" on New York. In other words, it directs the drawee bank to pay to the payee or his order an amount of money in a bill of exchange on New York. The drawee tenders its own bill, or it tenders the bill of another bank which it claims to be in good credit, but the collecting bank refuses to receive it, and claims the right to select the bill of exchange which shall be tendered. This the drawee refuses to do, and the draft is protested. Unless the collecting bank could prove that the draft tendered by the drawee was not good, would it not be held for the costs of the protest and for any other damages which might result from a failure to collect the draft? It presents a draft calling for a bill of exchange on New York. The terms of the draft are silent as to whose bill of exchange. Are not the terms of the draft fully answered by the tender of any good bill of exchange which the drawee may select, either its own or that of another banker? If so, and we think so, under the terms of such a draft we do not see how the collecting bank can claim the right to select its own bill, and to refuse any not of its own selection. If by this construction the collecting bank loses the exchange which it might otherwise obtain were its own draft bought for the purpose, this is not the fault of the construction of the instrument but of the terms of the draft itself, for, if the draft were made payable "with exchange," such bank could then demand the amount in cash.

Editor Rhodes' Journal of Banking:

CHATTANOOGA, Tenn., February 28, 1887.

SIR:—I want information as to the probable amount of State, County, Municipal and School bonds in the United States. If you can favor me with any statistics at your command, or inform me of the most available way to obtain the information, I will be under an obligation to you.

G. W. THOMPSON, *President City Savings Bank.*

Answer.—Mr. Robert P. Porter was appointed Special Agent to prepare debt statistics for the Census of 1880, and made several compilations on this subject. In the compendium of that Census, pages 1570, etc., can be found all the figures for 1880. The summary shows that at that time the total State and Territorial bonded debt amounted to \$246,974,476; County debt, \$106,767,946; Township debt, \$30,120,048; School District debt, \$9,849,242; City and Town debt, \$723,858,834; making the total State, County, School and City bonds, \$1,117,583,546. There is a book called "Lalor's Cyclopaedia of Political Science, Political Economy and United States History," which contains a valuable chapter on "Debts," prepared by Mr. Porter, comprising those of the United States, and the various States, as well as all the classes mentioned by our correspondent. The last volume of the work was issued in 1884. We furnish the set at publisher's prices; three large octavo volumes, full sheep, at \$6.00 per volume.

Editor Rhodes' Journal of Banking:

MILWAUKEE, Wis., February 11, 1887.

SIR:—In your opinion, is the answer to the enclosed clipping correct?

"Does the following note bear interest from its date or from maturity?"

"\$1,000.

"XVILLE, Tex., July 1, 1886.

"Ninety days after date I promise to pay to the order of John Brown one thousand dollars, at Bank of Xville, Xville, Tex. Value received. Interest at 10 per cent. per annum.

"I. O. You."

Answer.—We think it bears interest from its maturity. The interest clause refers to the rate of interest, in our opinion, because of the absence of words clearly showing that the note was intended to be charged with interest from date."

The above note and answer are taken from a well-known New York newspaper.

H. E. F.

Answer.—We think it is doubtful, from the wording of the above instrument, whether interest was intended to be paid from date or from maturity, and that

it is a case where parol evidence would be admitted to show the real intention of the parties. We have been unable to find any case wherein a note containing similar terms has been construed. In *Griffiths vs. Furry*, 80 Ill., 251, the note read as follows :

\$456.75.

One day after date we promise to pay Daniel Furry, or order, four hundred and fifty-six and 75-100 dollars for value received, ten per cent.

The Court held that the addition of the words "ten per cent." at the end of the note were in their connection without any meaning, and they were rejected as surplusage.

In *Gramer vs. Joder*, 65 Ill., 314, the note was as follows :

\$400.

ARISHE, October 8, 1864.

One year after date I promise to pay to the order of B. Joder, the sum of four hundred dollars at ten per cent. value received.

Held, This was a note bearing ten per cent. interest from date.

And it is settled law that a promise to pay "with legal interest" imports interest from date. (79 N. C., 162.)

In the absence of evidence as to the real intention of the parties, we think the probabilities are that the note in question would be construed as promising to pay ten per cent. interest from date.

Editor Rhodes' Journal of Banking:

LEBANON, Pa., February 15, 1887.

SIR:—Will you please inform me who is entitled to the exchange on the following collection when received through a corresponding bank :

\$1,000.

BEAVER, Pa., February 10, 1887.

One day after sight pay to the order of the First National Bank, of Beaver, one thousand dollars, with exchange, value received, and charge to account of To David Williams, Lebanon, Pa.

WILLIAM L. BROWN.

For some time past the First National Bank, of Beaver, has sent these drafts to us direct, with the request that we remit the amount to their New York correspondent, and we have done so, charging the exchange, which is our profit. They now send the above draft to the Exchange Bank, of Millersburg, which is one of our corresponding banks, and with which we have a reciprocal account. This bank claims the exchange, but I contend that we are entitled to it, as we make the collection from Williams the same as before, and that we, in our settlement with the Millersburg bank, are obliged to give par funds. I contend that the bank that collects from the drawee is entitled to the exchange in all cases in which the drafts are written "with exchange."

GEO. D. RISE, Cashier.

Answer.—We do not know that there is any general rule which can be laid down on the subject. The compensation for the collection of drafts is a matter of private contract or agreement. Some banks undertake collections without any specific compensation, looking to the probable remaining of the proceeds in their hands for a longer or shorter period, or to the increased business or patronage which it may bring, as a sufficient remuneration, while others charge a small percentage or sum for their services. As stated by our correspondent, it had been in the habit of collecting drafts similar to the above and remitting the proceeds for the exchange paid by the drawee. Now, instead of receiving the draft direct from the owner, as heretofore, it receives it from the Millersburg bank, to whom it has been first transmitted, and, after collecting it, remits the proceeds to that bank. For this service it asks the same compensation, but the Millersburg bank claims that it is entitled to the exchange. As a matter of fact, both the Millersburg bank and our correspondent are entitled to compensation, both having performed services in the matter of the collection of the draft; but, in the absence of any special agreement between the two banks as to compensation for collection, or as to any division of the exchange in proportion to their respective services, we think our correspondent is entitled to the same compensation which it has always received, and that the fact that

the Millersburg bank has also performed services in connection with the draft would not entitle it to claim any part of the money which our correspondent is entitled to for its services in the matter.

Editor Rhodes' Journal of Banking:

CORRY, Pa., February 15, 1887.

SIR:—Having been a constant reader of the JOURNAL for the past three years, I trust you will pardon the liberty I take in asking for your opinion on the following: When is a note given February 1, 1886, (10) ten days after date, due?

I claim that, allowing the three days, the note becomes due on February 14th, while my opponent claims it would fall due on February 13th, saying that the date of the paper should be figured in as one of the days which the note has run.

By answering in your JOURNAL as soon as convenient you will greatly oblige

A CONSTANT READER.

Answer.—In computing the number of days the note has to run the day of its date is excluded. (1 Barn., 303; 8 Mass., 453; 31 Me., 580; 2 Pa. St., 495; 3 McLean, 583.) The note, consequently, fell due on February 14th.

Editor Rhodes' Journal of Banking:

WATERLOO, Iowa, February 24, 1887.

SIR:—Can the holder of my note, due in ninety days from date with interest, compel me to pay interest for ninety-three days if tendered the amount due on the ninetieth day?

Respectfully,

T. A. JENNEY, Cashier.

Answer.—Our correspondent is liable to pay interest for the full period of ninety-three days unless the holder of the note agrees to waive the interest for the three added days and accept payment of the principal and interest on the ninetieth day.

Editor Rhodes' Journal of Banking:

STURGIS, Mich., February 22, 1887.

SIR:—John Jones has signed the inclosed note as security. Is he released from all liability if the note runs until it is past due?

\$50.00.

DETROIT, Mich., Dec. 23, 1886.

Thirty days after date I promise to pay to the order of Clapp Bros. & Co. fifty dollars, at their office in Detroit, with interest at 10 per cent. after due.

Value received.

SAMUEL SMITH.

No. 3478. Due January 25, 1887.

JOHN JONES.

Has the Michigan Supreme Court ever made a decision that the signor of a note is released if the note is not paid when due?

If you will answer in the next number of the JOURNAL you will greatly oblige

H. A. C.

Answer.—The mere allowing a note to run until past due is not sufficient to discharge a surety thereon, and we are quite certain that the Supreme Court of Michigan has never rendered a decision that the surety on a note (which we suppose our correspondent to mean when he uses the word "signor") is released if the note is not paid when due. In connection with this inquiry, however, it may be of interest to our correspondent to submit a few of the cases in which the Supreme Court of Michigan have discussed the liability of a surety and the acts by which he will be released.

The case of Inkster vs. First National Bank of Marshall, 80 Mich., 143 (Supreme Court of Michigan, 1874), was an action by the bank, the holder of a note, against Inkster, who had signed the note under the signature of the maker, adding to his name the word "surety." Inkster defended on the ground that he had made a request in writing of the plaintiff to proceed and collect the note against White (the maker) after the same had become due, but the plaintiff had neglected to do so. That when this request was made White was solvent, but at the time of the suit he was utterly insolvent, and consequently Inkster claimed that he was not liable on the note. The Court held: "Without expressing any opinion upon the case of a mere guaranty, and without undertaking to decide whether the plaintiff in error (Inkster) might or might not in a Court of equity, by giving proper indemnity, have called upon the bank to proceed against White for the collection of the note, and treating

the question now before us as one of common law only (which it is), the facts relied on by the defendant below (Inkster) constituted no defense to the action. As between him and the bank, so far as the right of action was concerned, he was a maker of the note and a principal. As between him and White he was but a surety; and, though the bank was apprised of this by his signature upon the face of the note as surety, this did not, in reference to the question here involved, change the nature of his liability to the payee or holder, or make it any more the duty of the latter to proceed against White at his request than if he had signed as principal maker without adding to his signature the word 'surety.' His liability to the holder was absolute and not conditional, and his duty was to pay the note; and, though as between himself and White he was but a surety, he cannot complain of any hardship because the holder would not at his request proceed to bring suit against the principal, as it was in his power at any moment after default to pay the note, take it up, and proceed himself against the principal for the amount. This was the duty which his contract imposed upon him by the common law, and such was the remedy which the common law gave him upon the performance of that duty. Such we understand to be the well-settled and general rule as to the obligation and rights of sureties, and we see nothing in this case to take it out of the general rule."

The Supreme Court of Michigan, in *Hayes vs. Knox*, 41 Mich., 529, decided in 1879, say: "Delay alone, where there is no agreement for delay which would be binding, has never been held to discharge a surety."

In *Michigan State Ins. Co. vs. Soule*, 51 Mich., 312 (1883), the Court say: "It is not claimed that in this State the failure of the creditor to enforce his demand against the principal at the request of the surety would have the effect to release the surety, for *Pain vs. Packard*, 13 Johns. (N. Y.), 174, which originated that doctrine, is repudiated in this State as it is in most others. * * * Mere delay by the creditor to collect the debt after a request to that effect by the surety will not operate as a discharge. * * * If time has been given the creditor is not bound by it unless it appears that the extension was for a consideration, for it is not the forbearance to collect or the promise to forbear but the contract which operates the discharge."

Our correspondent will see from the above extracts that a surety remains liable on a note after it falls due, and that mere delay or forbearance on the part of the creditor to enforce his demand against the principal debtor will not operate to discharge the surety, even though the latter has requested the creditor to proceed against such principal debtor, unless the creditor has made a binding contract extending the time of the principal to pay the note.

DIGEST OF RECENT DECISIONS IN COMMERCIAL LAW.

ARBITRATION.—In a common law arbitration and award it is settled law that where the submission is to three citizens, and there is no agreement that two may act and render an award, all three of the arbitrators must meet, hear the proofs, and sign the award to render it valid. [*Bayard vs. Harkrider*, *Supreme Court of Indiana*, December 7, 1886.]

ASSIGNMENT FOR BENEFIT OF CREDITORS—CLERICAL ERROR.—An assignment for the benefit of creditors conveyed all the property of the parties of the first part to the party of the second part in trust, etc., and then proceeded as follows: First—The party of the first part shall forthwith take possession of all and singular, etc., and shall sell and dispose of, etc. Second—With and out of the proceeds of such sales, etc., the party of the second part is directed to pay and retain all reasonable costs, etc. Action was brought to set aside this assignment as fraudulent, and the Court took the case from the jury and held that on its face the assignment was fraudulent and void. On appeal, *Held*, The alleged fraudulent part of the contract is that in the first item "party of the first part." No one can read the assignment and hesitate to say that it was a clerical error. Many of the following items show this in each of which the words "party of the second part" are used in a way inconsistent with any other view than that there was a clerical error in item first. This is not a case where it is necessary to reform the instrument. That remedy is

needed when the real and true interest of the parties cannot be discovered from the instrument itself. Here no extraneous evidence is needed. The true meaning and intent cannot be doubted, and such meaning and intent must not fall on account of a mere clerical error manifest to any reader. Judgment reversed. [*Smith vs. Bellows, New York Supreme Court, General Term, Third Department, December 1, 1886.*]

ASSIGNMENT FOR BENEFIT OF CREDITORS—PREFERENCE BEFORE ASSIGNMENT.—It is the settled law of this State that a debtor may prefer a creditor, provided he does not do so in a deed of assignment. The Act of 1843 strikes down such preferences in assignments. But, while a man retains dominion of his property, he may pay whom he pleases or secure whom he pleases. He may encumber or convey his property. He may prefer creditors as he chooses by payment or transfer. So long as he violates no law and commits no fraud the law will not interfere with him. It is only when a man loses dominion over his property and transfers that dominion to another that the right of a creditor to a *pro rata* dividend attaches. When it is in *gremio legis* his control over it ceases. [*Gallagher's Appeal, Supreme Court of Pennsylvania, November 15, 1886.*]

ASSIGNMENT FOR BENEFIT OF CREDITORS—PREFERRING CREDITORS—INDIANA.—Can a debtor in falling circumstances make a general assignment of all his property for the benefit of all his creditors, and effectually provide in the deed of assignment that certain enumerated creditors shall be first paid in full, and after they are so paid that all other creditors shall be paid ratably? The decision of the Court in 103 Ind., 166, must be regarded as foreclosing further discussion on this subject. The conclusion there reached makes it certain that whatever other methods a debtor may employ for the purpose of giving a preference to one or more of his creditors, he cannot give such preference while proceeding under the statute which provides for voluntary assignments, and prescribes the method of proceeding thereunder. Under the law of this State, a debtor, though he be insolvent, may prefer one or more of his creditors by securing them, or by a sale of property to them, if such security or sale be given or made in good faith. Where, however, resort is had to the statute, its provisions *ex proprio vigore* draw all the assignor's property, whether such property is specifically mentioned in the schedule or not, into the custody of the Court, to be administered by it through the instrumentality of the Assignee for the equal benefit of all the assignor's creditors. (105 Ind., 534.) Any attempt to prefer creditors by a stipulation to that effect in the instrument or deed of assignment, or by omitting property therefrom for that purpose, will prove futile. This result follows from a consideration of the general purpose and spirit of the statute, and especially from Section 2,662, which provides in substance that the assignment which a falling debtor may make shall be a general assignment of all his property in trust for all his *bona fide* creditors, and that all assignments for such purpose, except as provided for in that Act, shall be deemed fraudulent and void. Further *Held*, While the Act regulating voluntary assignments in this State renders the preference of creditors voidable, yet the fact that the deed makes provision for preferences does not overthrow the whole assignment and make the deed fraudulent *per se* unless it is apparent therefrom that such preferences were actually fraudulent and that the deed was not intended to have effect and be operative under and in accordance with the provisions of the statute. [*Henderson vs. Pierce, Supreme Court of Indiana, December 16, 1886.*]

CONTRACT—CONSTRUCTION OF—AGREEMENT TO PROCURE "GOOD AND APPROVED FREEHOLD SURETY" TO SIGN NOTE.—In an action on a contract, where the plaintiff agreed to procure "a good and approved freehold surety" to sign a note with him, it was claimed on the part of the defendant that this agreement conferred upon him the right, as he might see fit, to approve or disprove of any person who may have been offered as surety under that provision, and that the defendant had the right to reject any note tendered by the plaintiff on which the surety was for any cause unacceptable to him. *Held*, We are unable to agree to any such construction. The word "approved" has several shades of meaning. One of the definitions which Webster gives of it is "to make or show to be worthy of approbation or acceptance—to commend;" and it is in that sense we construe the word as it was used in connection with the surety which was to be furnished by the plaintiff. The

phraseology used in the provision in question was equivalent to saying that the plaintiff should execute a note with "good freehold surety worthy of approval." [*Andis vs. Personett, Supreme Court of Indiana, November 16, 1886.*]

FRAUDULENT CONVEYANCE—SETTING ASIDE.—It is settled law that a voluntary conveyance is valid between the parties, and it is equally well settled that one who participates in a fraud cannot avoid the transaction. A person subsequently becoming a creditor who seeks to set aside a fraudulent conveyance must prove that there was an intent on the part of the debtor to defraud subsequent as well as existing creditors. [*Barrows vs. Barrows, Supreme Court of Indiana, November 23, 1886.*]

MERCANTILE AGENCY—RESTRAINING PUBLICATION OF NAME AND BUSINESS STANDING.—Plaintiff brought a bill in equity to restrain the defendants from publishing or printing the plaintiff's name in the books, circulars, etc., of the defendant's mercantile agency. *Held*, It is not within the jurisdiction of a Court of equity to restrain by injunction representations as to the character and standing of the plaintiff or as to his property, although such representations may be false, if there is no breach of trust or of contract involved. (114 Mass., 69, and cases cited; 119 Mass., 484; L. R., 10 ch., 142.) The bill before us alleges that the defendants have published and intend to publish in the future the name and business standing of the plaintiff in the records and books of a mercantile agency. It does not even allege that the representations are false and malicious. If he has any remedy, which we do not mean to intimate, it is by an action at law. The bill does not state a case within the equity jurisdiction of the Court. Bill dismissed. [*Raymond vs. Russell and others, Supreme Judicial Court of Massachusetts, Suffolk, January 7, 1887.*]

PARTNERSHIP—ADVANCES PRELIMINARY TO BECOMING PARTNER—RECOVERY.—Plaintiff sued defendant in an action on contract to recover on certain promissory notes given by the defendant to plaintiff. The defendant claimed that the sums of money for which the notes were given were contributions to the capital stock of a partnership which he alleged to exist between the plaintiff and the defendant, and that, inasmuch as said partnership had never been liquidated, the plaintiff could not recover in this form of action. Plaintiff denied the existence of any partnership. *Held*, There being no written articles of co-partnership between the plaintiff and the defendant, the question whether the parties by an oral agreement formed a co-partnership was purely a question of fact. Upon this question we cannot revise the finding of the Justice of the Superior Court who tried the case without a jury except so far as to inquire whether there is any evidence to justify his finding. The facts and evidence reported to us tend very strongly to show that no partnership was ever formed. The plaintiff advanced money to the defendant, taking his note therefor, upon the agreement "that if, after further examination, the plaintiff should conclude to become a partner in the business, he should have the right to do so, and should be admitted as an equal partner with the defendant," and that in such case the sums for which the notes were given should be considered as contributions to the capital of the firm. No partnership was ever formed by this agreement. It was in its nature an executory agreement that a partnership should be formed and that the plaintiff should be admitted as a partner in the future when he signified that he desired to become a partner. It appeared in evidence that, when plaintiff signified to the defendant his choice to become a partner, the defendant refused to admit him or recognize him as a partner and has always since so refused. The Court was clearly justified in finding that no partnership was ever formed, and, therefore, that the plaintiff was entitled to recover on the note. [*Morrill vs. Spurr, Supreme Judicial Court of Massachusetts, Suffolk, January 6, 1887.*]

PARTNERSHIP—ASSIGNMENT BY PARTNER—LIABILITY OF INDIVIDUAL ESTATE FOR CO-PARTNERSHIP DEBTS.—G and B were co-partners; and, on January 1, 1883, G bought out B and assumed all the co-partnership debts. At that time the co-partnership was owing a large amount of money to different creditors. On May 15, 1884, G made an assignment to defendant for the equal benefit of his creditors. Plaintiffs, who were creditors of the co-partnership, sued defendant to participate in the estate of G. It was shown that B was insolvent. *Held*, We think they are entitled to participate. There is some conflict of decision upon the question

whether such creditors are entitled to come upon the individual property where there are co-partnership funds; but it is generally conceded that, where there are no co-partnership funds, and no solvent partner, the joint creditors may come upon the separate estate *pro rata* with the separate creditors. [*Alexander vs. Gorman*, *Supreme Court of Rhode Island*, December 8, 1886.]

SALE—OFFER OF—MUTUAL ASSENT.—As no contract is complete without the mutual consent of the parties, an offer to sell imposes no obligation until it is accepted according to its terms. So long as the offer has been neither accepted nor rejected the negotiation remains open and imposes no obligation upon either party—the one may decline to accept or the other may withdraw his offer, and either rejection or withdrawal leaves the matter as if no offer had ever been made. A proposal to accept or an acceptance upon terms varying from those offered is a rejection of the offer, and puts an end to the negotiation unless the party who made the original offer renews it or assents to the modification suggested. The other party having once rejected the offer cannot afterwards revive it by tendering an acceptance of it. [*Minneapolis & St. Louis R. R. Co. vs. Columbus Rolling Mill Co.*, *Supreme Court of the United States*, November 22, 1886.]

SALE—PURCHASE BY INSOLVENT—RESCISSION.—The mere fact that a purchaser is insolvent does not make his purchases invalid. Even the fact that he is deeply insolvent does not have that effect unless he purchases with no intention or expectation of paying; for, if there be no dishonest mind or purpose, there is no fraud. [*Dalton vs. Thurston*, *Supreme Court of Rhode Island*, December 2, 1886.]

STOCK—CONVERSION OF BY BROKER—MEASURE OF DAMAGES.—When a broker, without authority from his customer, disposes of stock which he holds for him, it is a conversion, and the measure of damages is the cost to the customer of replacing the stock within a reasonable time after the conversion, and not merely the amount advanced by the customer at the time the stock was purchased (45 Ill., 441; 53 N. Y., 211; 90 N. Y., 368; 81 N. Y., 226; 57 Ill., 452; 19 N. Y., 170). [*Brewster vs. Van Liew*, *Supreme Court of Illinois*, November 13, 1886.]

TRANSFER COMPANY—POWER TO BECOME SURETY—ULTRA VIRES.—The officers of a transfer company empowered by its articles of incorporation "to engage in the general freight and transfer business and such other business as may not be inconsistent therewith" have no power to sign a contract of suretyship on behalf of the company for the purpose of guaranteeing the credit of a third party. Such a contract is beyond the power of the corporation. [*Lucas vs. White Line Transfer Co.*, *Supreme Court of Iowa*, December 23, 1886.]

A Slight Error.—The following item deserves to be corrected. It has been going the rounds of the press, and was sent to the JOURNAL by a correspondent:

"The Superior Court has granted a stay of execution until April 1st next to H. M. Brooks, *alias* Maxwell, the St. Louis bank robber, which will indeed be a highly appropriate day for him to perform on the tight rope in the St. Louis jail."—*Exchange*.

The person who perpetrated the foregoing was evidently aching for an opportunity to work off a few stale puns or wilfully distorted the facts. In the first place, Brooks-Maxwell was not a "bank robber." He murdered his friend Preller, was convicted, and has been under sentence of death for several months past. What connection his crime could possibly have with robbing a bank we fail to see, as the latter offence is not a capital crime.

But we do see in the above paragraph a disposition on the part of certain scribblers for irresponsible newspapers to magnify and distort anything done by a bank official. Sensation is the order of the day, and the greater the lie about bank officials the more eager certain publishers are to print it. While it is true that bank officers, as a rule, rank higher in the scale of morality than any other class of business men—as they certainly do in ability—no person of sense believes them to be wholly immaculate. They are subjected to extraordinary temptations, under stress of which they sometimes commit crime; but there is no reason, because a bank officer or clerk occasionally yields to temptation, why all employees of banks should be "jumped on" promiscuously by the press and held up before the public as having committed crimes worthy of death. There is no "April Fool" about that!

BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Payment of Lost Coupons.—The Secretary of the Treasury has made an important ruling in a case involving the payment of lost coupons. Recently the Central National Bank, of Cincinnati, O., filed a claim at the Treasury Department for the payment of coupons attached to \$44,200 of 7.30 per cent. notes, which were lost, destroyed or stolen in 1866. The coupons, which represented about thirty months' interest, have not been recovered. In 1868 the Treasury Department issued 5 per cent. bonds in lieu of the notes. Nothing was said at that time about the coupons and no claim was made for their payment until 1886. The claim was referred to the First Comptroller, and he has given an opinion against its allowance on the ground that there is no proof that the coupons were attached to the notes when destroyed, and also because over twenty years elapsed after the coupons were missing before claim was made for payment of the interest thereon. The Secretary of the Treasury has approved the ruling of the First Comptroller.

A Massachusetts Usury Law.—A bill has been introduced in the Massachusetts State Senate by Senator Shea making the rate of interest 6 per cent. per annum when not otherwise specified, and forbidding any contract for more than 10 per cent. per annum. Mr. Shea, in arguing in favor of his bill, said that in thirty-two States and Territories there is a penalty for usury. In them the rate of interest allowed varies from 5 per cent. in Louisiana to 18 per cent. in Montana. In fifteen States, of which number Massachusetts is one, there is either no statute or a statute without penalty. Ex-Senator Pillsbury appeared in opposition to the bill in behalf of the Collateral Banking Association and several National banks and trust companies. He said that the proposition had been presented to and rejected by every Legislature since 1867, when the usury laws were repealed. It is impossible legislation, to begin with, as is proved by all human experience. If it ever works anywhere it is in a rural community, and is generally only heard of once in a great while when set up by some rascal in defense of a suit. The matter of money lending is regulated by a law as natural and inexorable as that which regulates the flow of water. If put forward as a philanthropic measure it is a mistake, and will be so pronounced most quickly by the people whom it is intended to benefit.

Amending State Banking Laws.—A bill has been introduced in the New York State Senate by Senator Walker, which proposes to revise the Statutes of the State so that any number of persons may associate to establish offices of discount and deposit upon the terms and conditions and subject to the liabilities prescribed in the bill; but the aggregate amount of the capital stock of any such association or bank is not to be less than \$100,000; providing, however, that banking associations with a capital of not less than \$50,000 may be organized in any city, village or place the population of which does not exceed 30,000 inhabitants. And it is further provided that banking associations with a capital of not less than \$25,000 may be organized in any village or place the population of which does not exceed 6,000 inhabitants. With the approval of the Superintendent of the Banking Department, individual bankers with a capital of not less than \$10,000 may be authorized to transact a banking business in any village or place the population of which does not exceed 3,000 inhabitants.

The Sub-Treasury System.—The report of the Senate Finance Committee, which is adverse to the bill establishing a Sub-Treasury at Louisville, Ky., is a strong argument against the Sub-Treasury system. The report is understood to have been drafted by Senator Aldrich, and is a very able paper. It shows that the Sub-Treasuries are far from being desirable, and that the National bank depositories are meeting the

public requirements far better than the Sub-Treasuries. The following extract from the report gives the views of the Committee on this matter:

"The Committee believe that no public interest will be advanced by the establishment of a Sub-Treasury at Louisville. Ample facilities are now afforded for the collection, disbursement and transmission of the public moneys by the designated depositories without expense or risk of loss to the Government, and the currency used is retained in the regular channels of trade. If economy and safety in the custody of the Treasury reserves and surplus funds is desired, the number of Sub-Treasuries should be reduced rather than increased. The cause which led to the adoption of the Sub-Treasury system no longer exists, and cannot be urged in favor of this bill. In 1844, when the present system was adopted, there was a general feeling that the Government deposits were insecure, and that the character of the State banks was such that they could not be properly selected to act as fiscal agents of the United States. The Committee are not aware of any advantage which would result to the banks or people of Louisville by the establishment of a Sub-Treasury in that city other than that they would not then be obliged to pay the expense of transmitting gold and silver coin to the nearest Sub-Treasury for purposes of redemption and exchange. If it is the intention of the promoters of this bill to oblige the Government to pay the expense of returning the silver coin to the Treasury, it would be much cheaper to pay express charges on all shipments rather than to establish Sub-Treasuries at all points where private institutions desire to avoid the expense necessarily incident to a portion of their business. In the distribution of certificates and other paper currency Sub-Treasury cities have now no advantage over other points, as it is the custom of the Treasury Department to charge in all cases a sum equal to the cost of transportation to parties requiring currency. The public revenues are now collected and disbursements made outside the Sub-Treasury cities with absolute security to the Government through more than 160 National bank depositories. The arguments used in favor of the establishment of a Sub-Treasury at Louisville might be urged with equal or greater force in behalf of a large portion of the 160 cities where these depositories are located."

New York City Savings Banks.—The annual reports of the 24 savings banks in New York city, showing their condition on January 1, 1887, make the aggregate resources \$320,475,726 against \$301,147,881 on January 1, 1886, an increase of \$19,327,895. The deposits amount to \$270,569,399 against \$255,946,181 a year ago, an increase of \$14,623,218. The number of depositors is 669,433 against 640,524, an increase of 28,909. The following shows the resources, deposits and number of depositors of each bank on January 1, 1887:

	Resources.	Deposits.	No. of Depositors.
Bowery	\$55,041,889	\$43,770,346	104,180
German	22,878,424	21,210,341	53,789
American	582,946	569,979	2,362
Franklin	8,857,165	8,306,056	15,047
Dry Dock	14,571,897	13,245,648	32,453
New York	7,769,200	6,191,657	15,729

Important Legal Technicality.—Oscar L. Baldwin, the Cashier of the Mechanics' Nat'l Bank, of Newark, N.J., who was sentenced four years ago to 15 years' imprisonment for wrecking that institution, has been released by an order filed by Justice Bradley of the United States Supreme Court. Baldwin pleaded guilty on three indictments, and was sentenced to five years' imprisonment on each indictment, the sentences not to run concurrently. The decision of the Court says: "It is manifest that the sentence in this case is uncertain, because it does not specify upon which indictment either of the terms of imprisonment is to be undergone. If the prisoner is to be detained in

prison for three successive terms neither he nor the keeper of the prison, nor any other person, knows under which indictment he has passed his first term or under which he will have to pass the second or third. Without the last words of the sentence, declaring that the terms of the imprisonment should not run concurrently, it would be sufficiently clear and certain. It would then, by force of law, be a sentence of five years' imprisonment on each indictment, and each sentence would begin to run at once, and they would all run concurrently. Such a sentence is lawful and proper. But the addition that they were not to run concurrently, without specifying the order in which they were to run, is uncertain and incapable of application. The additional words must be regarded as void."

New Bank Reserve Cities.—Senator Morrill, from the Committee on Finance, has reported favorably a bill to amend Sections 5,191 and 5,192 of the Revised Statutes by adding Atlanta, Charleston, Galveston, St. Paul, Minneapolis, Indianapolis, Denver, Kansas City, Omaha, Richmond and St. Joseph to the list of lawful money reserve cities. Section 5,195, allowing one-half of the lawful reserve to be kept with banks in New York city, is also amended so as to read as follows:

"Section 5,195. Each association organized in any of the cities named in Section 5,191 of the Revised Statutes may keep one-half of its lawful money reserve, in cash deposits, with any association approved by the Comptroller of the Currency, organized and operating under the provisions of the National banking laws in either or any of the said cities mentioned in said section."

New York Trust and Loan Companies.—The semi-annual reports of the 16 Trust, Loan and Mortgage Companies to the Bank Superintendent of New York State shows an increase in deposits during the year of \$6,915,658. The following is a summary of their reports: Farmers' Loan & Trust Company—resources, \$24,017,070.66; excess of assets over liabilities, \$806,455.84; deposits in trust, \$20,265,198.76. United States Trust Company—resources, \$40,130,887.64; deposits in trust, \$31,206,770.22. Title Guarantee Trust Company—resources, \$823,324.05; surplus fund, \$20,324.05. Central Trust Company—resources, \$20,812,136.68; deposits in trust, \$7,031,887.83. Union Trust Company—resources, \$26,902,791.02; deposits in trust, \$1,372,340.69. American Loan & Trust Co.—resources, \$6,466,478.12; deposits in trust, \$9,997.75. United States Mortgage Company—resources, \$3,059,047.99; surplus fund, \$479,188.60. Equitable Trust Company—resources, \$4,788,531.14; liabilities, \$4,788,531.14. Mercantile Trust Co.—resources, \$21,989,716.27; surplus fund, \$800,000. Manhattan Trust Company—resources, \$195,715.99; deposits in trust, \$4,784.15. New York Guarantee & Indemnity Co.—resources, \$100,956.46; surplus fund, \$646.35. New York Life Insurance Trust Company—resources, \$18,631,865.60; excess of assets over liabilities, \$1,099,101.96. Metropolitan Trust Co.—resources, \$5,540,341.92; surplus fund, \$322,621.05. Brooklyn Trust Co.—resources, \$9,808,245.20; deposits in trust, \$390,006.62. Knickerbocker Trust Company—resources, \$1,101,928.98; deposits in trust, \$165,777.05. Long Island Loan & Trust Company—resources, \$2,873,585.23; deposits in trust, \$122,876.61.

How He Robbed the Bank.—After Howard E. Blackstone, the defaulting Note-Teller of the Canal National Bank, of Portland, Me., absconded last November, he wrote to the bank officials stating that his accounts were short \$76,000. For some time no trace of the shortage could be discovered, and Blackstone then wrote a letter to Mr. Elias Thomas, President of the bank, explaining how the money had been stolen. The letter is a remarkable production, and reads as follow:

MR. ELIAS THOMAS:—I have just received a letter from my wife, and she says you ask if I have ever used any notes of your father's. No, I have not, neither have I ever hypothecated any notes in my hands that were the property of banks. This would have led to my sure detection. The fact is, you have all had such implicit confidence in me that I have been able to get all the funds I needed without resort to forgery, as you will see when I explain how a man who handles no money can steal money. I did not ever need to have any notes. In order to get discount I would enter the names and amounts on the discount book, then check the note on the discount book as being a short-time note, as many are kept out for some informality. If the "tickler" had been referred to no such note would have been found entered. The proceeds I passed to the credit of different parties. Then I went to them and said they had been credited in error and asked for their check as the easiest way to fix it up on our books. When I was acting for the Teller the notes paid or charged up were not always credited to bills discounted. If I knew Mr. Robinson was to be away next week I could pass any amount to anybody's credit. The papers say I paid for these things. This is not true. If it were it would certainly implicate whoever took pay, of course. I did not operate often enough with any one firm to create suspicion. The loan is \$76,509.61 short. My other accounts are all right, except a Boston check for \$814, which should

be \$198.14. When the Bank Examiner came around I would put in enough collection notes to make good the deficit. When the Directors took a loan I raised the amounts of the notes sent away to Boston and New York. My speculations commenced in Maine mining stocks. Before that I was an honest man; and even then I had no more idea of robbing a bank than you have. I used my own money at first. I was elated with success and lost my head, risking all I had in cash besides buying options. When, options became due I had to have money from somewhere. This was when I first "borrowed" from the bank. I reasoned that I would soon be able to pay it all back, but that day never came. In January, 1884, the Diamond Wrench Manufacturing Company was formed. My friends were going in and urged me to do the same. I thought it very profitable. I put in \$5,000 and lost all, but, as I thought, through mismanagement. July 9, 1885, it was sold at auction. C. R. Milken was my only competitor. He offered me \$1,000 to go home. Now, I wish I had accepted his offer. He and George Burnham own one-quarter of the patent, for which they pay \$1,700. There has been some \$40,000 put into the company since July, 1886, and I think most of it can be got out. Mr. Libby will, I have no doubt, give you every assistance in his power. He is an honest, shrewd fellow, and has no knowledge of my wrong-doing. The papers say that I, like Mr. Gould, "took a prominent part in religious circles." That's a lie, but I expect to have much said about me that is not true. I am a member of the State Street Church, but have not been inside church for two years. Not at Woodford's either. I have taken my little boy to Sunday school occasionally, and that is all. No, I had too great a weight of sin upon me to enjoy anything religious. I haven't been happy a moment since I have been in this miserable business; and if a man don't believe that "the wages of sin is death" just let him try it. I feel like calling on the rocks to fall on me. I have been going around the past few days trying to get work, offering to work for my board, offering to wash dishes in a hotel. I might have been a bank Cashier. These things are so pleasant to contemplate. How I could ever be such a fool is more than I can understand. I have carried nothing away with me. You have all that is left of the wreck. I regret the shock to your father as well as all the rest of you, and believe me when I say that I am sorry and ashamed that I have so abused the confidence placed in me. If you want to communicate with me write my father.

H. T. BLACKSTONE.

Nebraska.—The First National Bank, of Ponca, Neb., was opened for business on February 3d in the building formerly occupied by the Farmers & Merchants' Bank. In 1883 Dorsey Bros. established the Farmers & Merchants' Bank, the business of which increased so rapidly that the present National institution, with \$50,000 capital, is the outgrowth of it. The stockholders of the new bank number some of Ponca's most successful business men, besides several leading capitalists of Omaha, Sioux City, and other cities. Hon. Geo. W. E. Dorsey will continue to act as President and F. M. Dorsey as Cashier. The past record of this bank is a sufficient guarantee that, with increased facilities, its future will be even more prosperous.

The Trade Dollar.—The bill passed by the Senate to redeem the trade dollar was amended by the House, and the amendment was rejected by the Senate. It was then referred to a Conference Committee, who agreed upon a new bill, which, on February 20th, was passed by both houses. The bill is as follows:

"Be it enacted, etc., that for a period of six months after the passage of this Act, United States trade dollars, if not defaced, mutilated or stamped, shall be received at the office of the Treasurer or any Assistant-Treasurer of the United States in exchange for a like amount, dollar for dollar, of standard silver dollars or subsidiary coins of the United States.

"SECTION 2. That the trade dollars received by, paid to or deposited with the Treasurer or any Assistant-Treasurer or National depository of the United States shall not be paid out, or in any other manner issued, but, at the expense of the United States, shall be transmitted to the coinage Mints and recoined into standard silver dollars or subsidiary coin, at the discretion of the Secretary of the Treasury, provided that the trade dollars recoined under this Act shall not be counted as part of the silver bullion required to be purchased and coined into standard dollars as required by the Act of February 28, 1878.

"SECTION 3. That all laws and parts of laws authorizing the coinage and issuance of United States trade dollars are hereby repealed."

A Record of Fifty Years.—In a very neat pamphlet, the Honesdale Bank, of Honesdale, Penn., records its history of half a century. The bank was organized in December, 1836, and became a National bank in December, 1864. As the latter had its charter extended in December, 1884, it bids fair to round the present century and celebrate its centennial. The bank started with a capital of \$100,000, divided among 195 stockholders, the largest single holding being 180 shares and the smallest 2 shares. In 1855 the capital was increased to \$150,000. In 1857, when the banks in Pennsylvania generally suspended specie payments, this bank resolved not to suspend, and did not. When the war broke out the bank, on April 12, 1861, subscribed \$1,000 to the war fund. On June 20, 1861, it subscribed \$5,000 to the State war loan. On August 7, 1862, it contributed \$5,000 more towards paying bounties to Wayne County volunteers, and, on August 13, 1861, it sent \$1,500 to the committee of Philadelphia banks for the purpose

of paying the State militia called out to repel invasion. Throughout the war it was a liberal contributor to the Government, and subscribed for a large amount of bonds. In 1884, when the charter was renewed, the bank reported that it had, while a National bank, paid \$800,000 in dividends, \$102,864 for taxes, and had a surplus of \$185,650. It has been very successfully managed.

The United States Bank Redivivus.—The New York *Star* has evolved out of its midnight oil and inner consciousness an enormous banking scheme. It is no less than the resurrection of the old United States Bank, which has been dead these many years, with rejuvenated flesh added to its antiquated bones. We quote from the *Star* its great scheme, premising, however, that "the founder of the First National Bank" never contemplated the laying of a foundation broad enough to support such a mammoth structure as that paper proposes erecting upon it. To the *Star* must be given, therefore, the entire credit for the greatest invention of the age. It is as follows:

"The furore about a bank to be started in this city has brought to light a scheme worthy of the great American nation and the greater American people. The founder of the First National Bank, of this city, foreseeing just the present financial and commercial condition of this country twenty-three years ago, provided in its articles of association power to increase its capital to fifty millions, thus laying the foundation for carrying into effect the present contemplated bank. The capital of that bank (after the word "first" is stricken out and it becomes the "National Bank") will be taken by capitalists in every part of the United States and also every part of civilized Europe, and its surplus of five millions will be carried to extra capital, making an aggregate of fifty-five millions. The principal Israelite houses of Europe will be represented in its direction, and Hon. John Sherman is to be "captured" for its President. Its business will not be confined to this Continent, but it will undertake the negotiation of war loans for European nations, and will carry out the refunding of their National indebtedness at a much reduced rate of interest. The Bank of the Republic will be consolidated with the National Bank for the necessity of having the whole of the main floor of the United Bank building for its immense business. The Government is to discontinue its Sub-Treasuries, and this bank is to be permitted to establish branches all over the United States, as well as in the principal financial centers of Europe, in order to successfully carry forward the immense enterprises of National and International financiering.

Detroit, Michigan.—The fifty-ninth quarterly report of the Wayne County Savings Bank, of Detroit, Mich., shows a very prosperous condition of affairs. The aggregate deposits are increased to \$3,788,000 and the interest earnings to over \$250,000. Nearly one-third of the whole amount of deposits is secured by National and State bonds, and the balance by loans on unincumbered real estate. Interest at the rate of 3 per cent. is paid on all deposits. There is no sounder or better managed institution in Michigan. Mr. S. Dow Elwood, well-known to many readers of the JOURNAL, is the Treasurer of the bank and General Manager of its affairs.

Massachusetts National Banks.—There are 54 National banks in the city of Boston, with an aggregate capital of \$50,950,000, or an average of nearly \$1,000,000 apiece. They have a surplus of \$11,648,242 and undivided profits of \$3,214,396. The deposits aggregate \$74,087,299 and total liabilities \$192,043,458. The circulation was reduced nearly \$6,000,000 in the year and now stands at \$15,568,700. The loans amount to \$122,567,788. The Massachusetts banks outside of Boston number 196, and they have: capital, \$45,190,500; surplus, \$13,804,009; undivided profits, \$3,648,853; deposits, \$54,429,904; liabilities, \$151,247,462; loans, \$88,478,396. The dividends paid by the Boston banks last year amounted to 5.22 per cent. on the total capital stock and by the banks outside of Boston to 6.79 per cent. Since the origination of the National banking system 265 banks have been organized in the State, of which number 15 have ceased to do business, leaving still in operation 250. The corporate existence of only one Massachusetts institution will expire during the current year. It is the National Security Bank, of Boston, whose present charter ends November 22d next. The corporate existence of 199 Massachusetts National banks, representing a capital of \$85,712,500, has already been extended under the banking laws. The whole number of shares of National bank stock in Massachusetts is 986,480. Of this number 925,381 shares are held by residents of the State and 61,099 are owned by people outside of the State. The number of shares held by natural persons is 704,022; by religious, charitable or educational institutions, 16,225; by savings banks, trust companies and insurance companies, 284,192; by municipal corporations, 535; all other corporations, 1,456. The number of shareholders resident in the State is 47,960; non-residents, 4,491; total, 52,471. The number of shareholders owning specified amounts of stock is as follows: Owning

10 shares and less, 33,377; over 10 and not more than 50, 15,612; over 50 and not more than 300, 3,298; over 300 shares, 184.

Duplicating Lost Bonds.—A request was presented to the Treasury Department by a resident of Chicago for the issue of a duplicate \$1,000 bond. The claimant alleged that, while examining the bond in his room at a late hour one night, he heard a noise which he supposed was made by thieves, and in his fright he chewed the bond into a pulp and swallowed it. It was afterwards discovered that there were no grounds for alarm. First-Comptroller Durham decided that there was no law under which a duplicate bond can be issued in such a case. He says that the law provides for the issue of duplicates only where the original has been lost or destroyed "without bad faith on the part of the owner." This he construes to mean that the bond must have been accidentally defaced or destroyed without any fault or direct agency of the owner. In this case the destruction of the bond was intentional, being designedly chewed up and swallowed through fright. It does not, therefore, he says, come within the law providing for the duplication of bonds lost in good faith. Another claim for the issue of a duplicate bond in place of one destroyed has been submitted to the Comptroller. In this case the claimant represents that, while he was operating with vitriol, some of the acid accidentally fell upon a \$500 bond and practically destroyed it. A duplicate bond will probably be issued for this one.

Savings Bank Trustees.—Questions being raised as to the power of a savings bank to have business relations with deposit banks, insurance companies and title companies, a stockholder in which happens to be a trustee in the savings bank, the New York Bank Superintendent recently requested an opinion from the Attorney-General. The latter has submitted his opinion, as follows:

"Section 255 of the law in reference to savings banks ('Paine's Banking Laws,' page 232) provides as follows: 'No Trustee of any such corporation shall have any interest whatever, direct or indirect, in the gains or profits thereof, nor as such, direct or indirectly, receive any pay or emoluments for his services, except as hereinafter provided; and no Trustee or officer of any such corporation shall directly or indirectly, for himself or as the agent or partner of others, borrow any of its funds or deposits, or in any manner use the same, except to make such current and necessary payments as are authorized by the Board of Trustees; nor shall any Trustee or officer of such corporation hereafter become an indorser or surety, or become in any manner an obligor for moneys loaned by or borrowed of such corporation.'

"It is the duty of the Trustees to satisfy themselves as to the validity of titles to real estate upon which the money of the institution is loaned. The manner in which they shall proceed to ascertain the validity of such titles rests in the discretion of such Trustees; and if in the sound use of such discretion they deem it advisable to have a title investigated and guaranteed by a corporation engaged in such business, I do not think there is anything in section 255 (*supra*) which can be construed into a prohibition from such services being performed by a corporation in which one of the Trustees of the bank owns stock. A Trustee of the savings bank who may be a stockholder in the company in which property is insured upon which the bank has a mortgage receives no benefit, direct or indirect, from the bank. The contract is not with the bank, and is not necessarily made with a corporation designated by the bank.

"A person owning real estate is at liberty to insure it against fire in a fire insurance company irrespective of who or what the Directors in such company are.

"There is a well recognized distinction between a loan or 'borrowing' and a deposit, and the rights and responsibilities of parties under these different species of contract are quite different. I think the word borrowing as used in the section was intended to be employed in its ordinary legal signification, and does not include deposits of money with banks of discount; and that, when a savings bank deposits its funds with said discount bank, the latter cannot be said to be a borrower; and the fact of one of the Directors being a Trustee does not, therefore, bring it within the prohibition of section 255."

Comptroller Trenholm was one of the invited guests on the occasion of the fifth annual dinner of the New York Board of Trade and Transportation, given at the Hotel Brunswick on Washington's Birthday. The New York *Tribune* refers to the Comptroller as "a young-looking man." If the *Tribune* writer had consulted a copy of the *JOURNAL* for January he would have found therein a sketch of the Comptroller, accompanied with a fine portrait, which shows him to be not only "young-looking" but a handsome man as well. The portraits of prominent financiers and representative bankers which are published in the *JOURNAL* from time to time are alone worth more than the subscription price for a year.

Chicago.—At a meeting of shareholders of the Chicago National Bank, Chicago, Ill., held on the 13th of last December, it was voted to increase the capital stock to \$300,000 by the sale of \$200,000 of new stock at 50 per cent. premium, to be paid for as

follows: fifty dollars per share on January 3, 1887, fifty dollars per share on March 2, 1887, and the balance of fifty dollars on May 2, 1887. The last two payments will draw interest from January 1, 1887, at 6 per cent. The present capital of the bank is \$300,000, with a net surplus of \$150,000. Mr. J. R. Walsh is the President, Mr. H. H. Nash, Cashier, and Mr. William Cox, Assistant Cashier.

Kansas.—The Winton & Deming State Bank, Ashland, has called in the balance of its stock remaining unpaid, which is to be paid in by March 5th. This will make their capital \$60,000. This institution, which commenced business October 1, 1886, with a paid in capital of \$30,000, is organized under the State banking law. For its first quarter, ending December 31, 1886, it paid a dividend of 4 per cent., or 16 per cent. per annum.

Kansas Bankers' Association.—About sixty representatives of banking institutions from all sections of the State met at Topeka, Kans., in the Board of Trade rooms, on February 22d, for the purpose of effecting a permanent organization. The meeting was called to order by the Hon. J. R. Mulvane, President of the Bank of Topeka, who was subsequently elected President of the Association for the ensuing year. A committee on Constitution and By-laws was appointed, and their report was a document which is substantially the same as that under which the American Bankers' Association has worked for some years. The report was adopted.

Seven Vice-Presidents—one from each Congressional district—were elected, who, together with the President of the Association, compose the Executive Council.

The following-named gentlemen were chosen to represent the seven districts of the State: District No. 1—H. H. Crosby, Valley Falls; District No. 2—Hon. John W. Sponable, Paola; District No. 3—S. H. Lanyon, Pittsburg; District No. 4—Hon. H. C. Cross, Emporia; District No. 5—S. A. Fulton, Marysville; District No. 6—G. S. Bishop, Mankato; District No. 7—W. J. Bell, McPherson.

Mr. C. N. Beal, President of the Kansas Mortgage Co., of Topeka, was elected Secretary, and D. A. Moulton, Cashier of the First National Bank, of Topeka, Treasurer.

Letters of regret were received from one hundred and thirty-five bankers throughout the State who were unable to be present, but expressed their sympathy with the movement.

The President read quite a lengthy address, stating the objects and benefits to be derived by organization.

Mr. D. A. Moulton also read a paper on "Banks and Taxation," which called forth a general discussion.

The meeting was a very pleasant one throughout, and the bankers of Kansas may congratulate themselves on the success of their first annual convention.

Bank-opening Reception.—The Third National Bank, of Baltimore, Md., removed on February 15th from its temporary quarters on Exchange Place to its new building, No. 33 South street. From 10 A. M. to 4 P. M. a grand opening reception was given, and hundreds of visitors, including bankers, financial men and many ladies, embraced the opportunity to view the fine structure. The visitors were treated to a luncheon, which was highly appreciated.

The building is 25 by 103 feet and the interior 35 feet in height. The banking department is 25 by 60 feet, with tiled flooring outside the counters, which are of colored marble, the framework for the heavy wire screens being made of mahogany. Back of this apartment, overlooking the interior, is the room of the Cashier, which is furnished with a line of electric bells that summon each or all the clerks. The room of the President adjoins the Cashier's. At the rear is the Directors' room, 25 feet square. The massive Miller vault is a feature. It is built free from either walls of the building at the rear of the banking-room, and could not be tampered with except from the inside of the bank. It is furnished with a large Corlies safe and a couple of other heavy safes.

The Third National Bank was organized in the old building on May 23, 1865, and for two years has been working under its second charter. Mr. Wm. H. Crawford is President, Mr. A. M. Carter has been its Cashier from the start, and Mr. N. B. Medairy, Assistant Cashier, was a clerk at the beginning.

St. Paul, Minn.—Necessary steps have been taken for the opening of a new bank at St. Paul, Minnesota, to be styled the Commercial National Bank, with a paid-up capital of \$500,000, and officers as follows: President, Albert Scheffer; Vice-Presidents,

Patrick H. Kelly, Chas. Kittelson; Cashier, Hermann Scheffer. The Messrs. Scheffer are now Cashier and Assistant Cashier respectively of the Bank of Minnesota, from which they withdrew in order to aid in forming the new bank. Hon. Chas. Kittelson, one of the Vice-Presidents, was formerly State Treasurer.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- The last of the 3 per cent. bonds will probably be retired by July 1st.
- Two new National banks are expected to be shortly started in Chicago.
- The People's National Bank has been organized in New Brunswick, N. J., with a capital of \$100,000.
- The banks in Flint, Mich., have adopted the one session plan, and will be open from 9 A. M. to 3 P. M.
- Out of all the bills presented in Congress to establish a new basis for bank circulation not one passed.
- Judge Van Brunt has decided that Mr. William J. Hutchinson must be reinstated as a member of the New York Stock Exchange.
- The funds of the Indiana State Treasury have become exhausted, and payment of claims against the State has been suspended.
- A savings bank is being organized in Fort Wayne, Ark., by Wm. T. Abbott. There is no other institution of the kind in that city.
- Of the \$10,000,000 in 3 per cent. bonds called for redemption on February 21st, \$5,125,000 were held to secure National bank circulation.
- William E. Gould, the defaulting Cashier of the First National Bank, of Portland, Me., who is now in State Prison, is reported as becoming insane.
- The stock of the Birmingham National Bank, Birmingham, Ala., amounting to \$250,000, has been subscribed for, and the location of the bank secured.
- A 60 per cent. dividend has been paid the depositors of the suspended Germania Savings Bank, of Jersey City, N. J., and it is expected the claims will all be paid in full.
- The Fifth Ward Savings Bank, of Jersey City, N. J., which failed a few years ago, has declared a dividend of 5 per cent. to the creditors, making 70 per cent. in all.
- The Comptroller of the Currency has declared a dividend of 10 per cent. in favor of the creditors of the Pacific National Bank, of Boston, Mass., making 40 per cent. in all.
- At a meeting of the Directors of the St. Nicholas Bank, of New York city, on January 31st, resolutions of respect to the memory of the late President, Thomas C. Pollock, were adopted.
- The Massachusetts Legislature has authorized the incorporation of the Conway Savings Bank, the West Newton Savings Bank, and the B. M. C. Durfee Safe Deposit & Trust Company, of Fall River.
- An attempt to rob the Waverly Bank, at Marshall, Mo., was made early in the morning of February 4th. After drilling holes in the vault and exploding charges of powder the robbers hastily decamped.
- The American National Bank, of Fort Smith, Ark., opened for business on February 17th with a capital of \$100,000. Its officers are B. H. Tabor, President, B. F. Atkinson, Vice-President, and S. N. Dwight, Cashier.
- Secretary Manning, prior to his resignation, in reply to the Senate resolution, stated that there was no information in the Department as to whether any National banks were lending money to be repaid in gold only.
- Mr. Edward T. Goodall, who died suddenly at his residence in Brooklyn on February 21st, was not Cashier of the Fourth National Bank, of New York city, as has been stated. The Cashier of that bank is Mr. H. Buckhout.
- The German Bank, of Memphis, Tenn., has issued \$250,000 of old stock and \$350,000 of new stock (a total of \$600,000) to subscribers at 110. There are 152 stockholders, and the average amount of stock held by each is only \$4,000.
- The First National Bank, of Montgomery, Ala., has ceased to be a Government depository on account of the \$100,000 in 3 per cent. bonds it had on deposit being called

in. It refused to deposit 4 per cent. bonds in their place. The Government deposits will be made with the Assistant United States Treasurer at New Orleans.

— A new bank, to be known as the Banco Commercial Fluminense, is in process of organization at Rio. The capital is to be \$2,000,000.

— Canada's debt is assuming huge proportions. It now amounts to \$234 per family, and the annual interest to \$9.36. The net debt equals \$50 for every man, woman and child.

— The Simla Bank, of Calcutta, has suspended payment. Arrangements for a voluntary liquidation have been made. It is expected that the depositors will be paid in full.

— A petition has been prepared for presentation to the Comptroller of the Currency for a charter for another new bank in Philadelphia, to be called the Metropolitan National Bank, with a capital of \$300,000 and authority to increase it to \$500,000.

— Two new banks have been organized in Chattanooga, Tenn., one the Chattanooga National Bank, with \$500,000 capital, and another the Fourth National Bank, of Chattanooga, with a capital of \$250,000. Cincinnati capitalists are interested in the latter.

— J. Finlay Hoke, the embezzling Book-keeper of the Merchants' National Bank, of Peoria, Ill., has been extradited. Twenty indictments for forgery, containing 80 counts, covering forgeries aggregating from \$10,000 to \$12,000, have been found against him.

— Governor Lounsbury, of Connecticut, has nominated ex-Congressman George M. Landers, of New Britain, for the unexpired term of Bank Commissioner John W. Hyatt, of Norwalk, recently appointed United States Bank Examiner for Connecticut and Rhode Island.

— William Roath, Cashier of the Shetucket National Bank, of Norwich, Conn., was released from prison on February 25th. He was sentenced to four years' imprisonment for swearing to a false bank report, but his sentence was commuted to two years by President Cleveland.

— Mr. Charles A. Hibbard, of Cambridge, Mass., a clerk in the Maverick National Bank, of Boston, was among the injured in the Central Vermont Railroad accident. His chin was badly bruised and some teeth were knocked out, but he fortunately sustained no worse injuries.

— A writ of *habeas corpus* has been granted George M. Bain, the Cashier of the Exchange National Bank, of Norfolk, Va., who was sentenced a short time ago to five years' imprisonment in the Albany Penitentiary. The writ will be argued in Washington on the first Monday in March.

— The Senate Finance Committee reported adversely on Senator Beck's bill to retire legal-tenders and bank notes and replace them with silver certificates. The bill also provided for the issue of certificates of small denominations on all surplus coin and gold bullion in excess of \$100,000,000.

— Mr. Samuel N. Aldrich, President of the Massachusetts Central Railroad, has been appointed Assistant United States Treasurer at Boston in place of Mr. Martin P. Kennard. He was a member of the Massachusetts State Senate in 1879 and 1880, and has occupied a number of important positions.

— The Merchants' National Bank, of Deadwood, Dak., failed to open on February 20th. The branches at Central City and Sturgis, Dak., and Sundance, Wyo., were all closed, but the two latter subsequently reopened. The statement published on December 28th showed that the liabilities exceeded \$425,000.

— Mr. Edson Fessenden, a Director of the Charter Oak National Bank, of Hartford, Conn., for 21 years, resigned his position owing to infirmity of health and old age. The Directors, on January 31st, unanimously adopted resolutions expressing the highest regard for Mr. Fessenden and sincere regret at his retirement.

— The proposed assessment of 50 per cent. on the stock of the Rahway National Bank, Rahway, N. J., is meeting with opposition on the part of some of the stockholders. Directors B. A. Vall and Ira Laforge, who opposed the assessment, resigned, and their places have been filled by a son of the President and Mr. Taylor, of Jersey City. The stockholders claim that the assessment is larger than necessary, and favor the

dissolution of the bank and a reorganization under State laws with the capital reduced to \$50,000.

— It is stated that unless Congress pays back to Ohio the \$1,500,000 expended by that State during the early part of the war the State will be bankrupt by July 1st. It is estimated that the appropriations made by the present Legislature will amount to \$3,000,000, or \$1,000,000 more than the total revenue of the State.

— Treasurer Jordan appeared before a sub-committee of the House Committee on Appropriations, on February 23d, and urged the necessity of a deficiency appropriation of \$50,000 for printing small notes during the remainder of the fiscal year. He also called attention to the need of additional vault room for silver storage in the Treasury.

— The Merchants' Exchange, of St. Louis, Mo., is trying to suppress the "bucket shops." For this purpose it has had a bill prepared, which it will try to have enacted by the Legislature, and which declares the setting up of a bucket shop or conducting a bucket-shop business a misdemeanor, punishable by a fine not less than \$500 nor more than \$1,500.

— A new State bank, called the People's Bank, has been organized in Haverstraw, N. Y., with a capital of \$50,000. Some of the old Directors of the Haverstraw National Bank, who recently resigned, are among the incorporators of the new institution. The officers are: President, U. F. Washburn; Secretary, Charles R. Christie; Cashier, H. C. Vervalen.

— The extradition proceedings against H. T. Blackstone, the defaulting clerk of the Canal National Bank, of Portland, Me., have been dismissed by Chief Justice Wallbridge, and the prisoner discharged. It was attempted to extradite him on the charge of forgery, but the Chief Justice held that, under the English common law, his offense was not forgery.

— The Union National Bank, of Cincinnati, O., whose New York correspondent is the Fourth National Bank, is closing up its affairs, having consolidated with the Ohio Valley National Bank, of Cincinnati, which succeeds Espy, Heidelbach & Co., bankers, and the Union National Bank. The capital of the Ohio Valley National Bank is \$1,000,000, and James Espy is its President.

— John D. Lisle, the Discount Clerk of the First National Bank, of Baltimore, Md., has been discovered to be a defaulter to the amount of about \$100,000. He obtained the money by forged notes and the substitution of bogus paper for notes paid at the bank for which he received the cash. Lisle was in the employ of the bank for twenty-one years, and has been always considered a most exemplary person.

— The last published statement of the First National Bank, of Kalamazoo, Mich., shows that its surplus and profits have been increased to \$142,500. With a capital of \$100,000 paid up, \$50,000 in 4 per cent. bonds, no premium account, no real estate, furniture or fixture account, we think the stockholders of this bank should be a very contented class of individuals. It certainly makes a remarkably clean statement.

— Since the decision of the United States Supreme Court, holding the stockholders of the Pacific National Bank, Boston, Mass., liable for the assessment levied upon them, the stockholders have been settling the cases brought against them as fast as possible. Judgments have been entered in 127 cases, the cost aggregating \$10,000. The amount paid in to Receiver Butler on account of these cases reaches \$500,000.

— The four savings banks of Buffalo, N. Y., report aggregate deposits on January 1, 1887, of \$24,293,558 against \$23,659,481 in 1886. The number of open accounts fell from 65,783 to 65,066. The new accounts opened during the year numbered 13,740. The surplus in the banks increased from \$4,018,236 to \$4,367,536 and the amount of United States bonds held from \$8,250,000 to \$9,931,541. The bonds and mortgages held aggregated \$9,744,563 against \$8,444,676 in 1886.

— The National Bank of the Republic, of New York city, has brought a suit against the city of St. Joseph, Mo., on 150 interest coupons of bonds issued by that city in 1871. The bonds bore 10 per cent. interest, and on July 29, 1886, the city called them in, although not then due. The city claims that, under an old section of its charter, it has a right to call in any of its bonds whether due or not. Nearly all the bondholders surrendered their bonds, but the Bank of the Republic has decided to test the question by a suit to collect the interest falling due on January 4, 1887.

— A bill has been introduced in the New York State Senate by Senator Traphagen, which provides for a graduated income tax as follows: 1 per cent. on incomes from \$2,000 to \$3,000; 3 per cent. on incomes from \$3,000 to \$10,000; 7 per cent. on incomes from \$10,000 to \$50,000; 20 per cent. on incomes from \$50,000 to \$100,000; 50 per cent. on incomes over \$100,000. The bill defines in long detail methods for ascertaining incomes, of what they shall consist, how taxes be collected, etc.

— The indictments against John M. Masterton and Philip Lucas, Jr., who owned the Masterton Bank, of Mount Vernon, N. Y., which failed in November, 1884, have been quashed. The District Attorney of Westchester County stated that the banking laws did not cover the case, as Masterton and Lucas were acting only as individuals. What they did was only a breach of trust, and the remedy is in civil actions. The depositors have received 30 per cent. of their claims, and an additional 20 per cent. has been promised them.

— The Comptroller of the Currency has made the following changes in the National bank reserve agents in New England: Maine—Portland, Casco National Bank; Phoenix Nat'l Bank, New York city, approved as reserve agent. Vermont—North Bennington, First National Bank; Maverick National Bank, Boston, Mass., approved as reserve agent. Approval of National Bank of Redemption, Boston, Mass., as reserve agent is revoked. Massachusetts—Boston, National Bank of the Republic; American Exchange National Bank, New York city, approved as reserve agent.

— Oscar L. Baldwin, who was convicted of misappropriating funds and making false entries while Cashier of the Mechanics' National Bank, of Newark, N. J., having been released from imprisonment by a writ of *habeas corpus* returnable before Judge Bradley, of the United States Supreme Court, has been restored to his rights as a citizen by President Cleveland. The President's indorsement reads: "This I am entirely willing to do, in view of his standing and respectability prior to his conviction, and in the belief that society will not be injured by such restoration."

— The total collections of internal revenue during the first seven months of the fiscal year ending January 30, 1887, were \$66,048,807, being \$837,544 less than the collections during the corresponding period of the last fiscal year. There was a decrease of \$3,377,570 in the collection from spirits, an increase of \$878,590 from tobacco, an increase of \$1,233,502 from fermented liquors, and an increase of \$69,335 from miscellaneous objects. The total receipts from oleomargarine up to February 1st last were \$365,599. The aggregate receipts for January, 1887, were \$216,796 greater than those for January, 1886.

— According to a new law passed by the New Jersey Legislature all notes and bills of exchange or drafts which become due and payable upon legal holidays, which are declared to be January 1st, February 22d, July 4th, Thanksgiving Day, Christmas Day, any day upon which a general election shall be held for members of the Assembly in each year, and also upon any day set apart by proclamation of the Governor of the State for the purpose of public observance, shall be due and payable upon the first legal business day next succeeding said holiday instead of on the preceding day as heretofore.

— There was considerable excitement in Wall street on February 28th caused by the fact that one-dollar silver certificates were being sold by the leading bankers for 45 and 55 cents each. People eagerly took the certificates, and it became known later in the day that the National banks were also disposing of their one-dollar silver certificates at the same rate.—*Evening News*. There was nothing remarkable about this. People who pay 45 and 55 cents each for one-dollar silver certificates pay precisely what they are worth, for 45 and 55 added make precisely 100. Then why all this excitement?—*New York World*.

— A farmer, hearing that money was cheap in the city, came to see about it. He entered a bank, called for the Cashier, and said: "Mr. Cashier, is it true that money is abundant and cheap?" The Cashier answered in the affirmative. "Can I get some?" queried the countryman. "Certainly," replied the moneyed man. "Well, just lend me a hundred dollars for six months." The Cashier said: "Yqu can have the money—we have plenty of it—but it is necessary for us to have collateral." The farmer winced and responded: "Collateral! What the deuce is that?" The matter was explained. Then the planter of the soil, illuminated on the subject of political economy, with a

broad grin, rejoined: "Ah, I see how it is, Mr. Cashier. Money is plentiful and not high, but it is this blanked *collateral* that is scarce and hard to get!"—*Augusta (Ga.) Chronicle*.

— A woman brought to the Gardiner (Maine) Savings Bank recently a basket containing \$220 in silver coins. They were bright, sharp-edged quarters, halves and dollars, which evidently had seen but little use. The Treasurer was surprised on looking at the dates, which the odd appearance of some of the coins prompted him to do. They dated back to 1798, and included samples of almost every coinage from that date up to 1837. The woman said that her grandfather had hoarded the money since the beginning of the century. He never would invest any of his cash, fearing to trust banks or bonds.

— Mr. Albert A. Munger, a rich young man of Chicago, has made one bank clerk wealthy. A short time ago he stopped in at the National Bank of Illinois to see his cousin, Mr. George A. McKay, the Assistant Cashier of that bank, and found the latter looking very ill. Mr. Munger invited him to take a trip to Europe with him, agreeing to pay all the expenses. The bank could not very well spare Mr. McKay and the latter could not afford to throw up his position. Mr. Munger thereupon executed a deed to his cousin of the building known as the Hastings Block in Chicago, worth \$120,000, and told him to resign his position and be ready to sail in a fortnight.

— Three New Orleans banks are seeking for relief from Congress. The Citizens' Bank wants to enforce a claim against the Government for \$143,800 for moneys paid by it to the Government in 1862 and subsequent thereto. The State National Bank (formerly the Louisiana State Bank) has a claim for cotton belonging to the bank taken by the agents of the Treasury Department in Louisiana and Arkansas after June 30-1865. The Union Bank has a claim for \$36,000. During the war General Banks seized moneys, etc., valued at \$28,000 which the Union Bank held for the Planters' Bank, of Nashville. The latter thereupon sued the Union Bank in the United States Supreme Court and recovered the sum of \$28,000 and interest, making a total of \$36,000. The Union Bank now seeks to have this money refunded by the Government.

— The Assignees of the defunct People's Bank, of St. Louis, Mo., have applied to the Court for permission to sell the charter of the bank. This bank failed in April, 1878, with liabilities estimated at \$200,000, and no dividends have been paid the creditors. The People's Bank was organized in 1861, under a special charter, but the act providing for such charters was repealed by the Legislature in 1870, and it was the only bank with such a charter in Belleville, Ill. (a suburb of St. Louis). It is considered to be very valuable, because, under the Act of 1870, banks cannot be organized as corporations, but only as private concerns. The old charters, however, issued previous to 1870, hold good, and a new bank can be incorporated on that of the defunct People's.

— The Director of the Mint has submitted to Congress his report on the production of precious metals in the United States in the calendar year 1886. It shows that the production of gold during 1886 exceeded that of any previous year since 1880, and almost equalled the production of that year. This amounted to \$35,000,000 in 1886 against \$31,800,000 in 1885, an increase of over \$3,000,000. The production of silver, as nearly as can be ascertained, was \$40,895,980. The amount of gold bullion imported into the United States was \$17,947,518 and the exports \$27,862,637. The importations were made almost exclusively since August last. There was also imported gold coin of the value of \$23,361,663, and gold coin was exported to the value of \$13,363,688. The total exports of gold bullion and coin were \$41,221,376, which corresponds almost exactly with the amount imported, so that there was a slight gain by the movement of gold to and from the United States during the calendar year.

R. R. AND INVESTMENT NEWS.

New Issues.

STOCK EXCHANGE LIST.—The following securities have been listed at the New York Stock Exchange:

Oregon Railway & Navigation Company—an additional \$665,000 in consolidated mortgage 5 per cent. bonds.

St. Paul, Minneapolis & Manitoba Railway Company—an additional \$5,346,000 consolidated mortgage bonds, but bearing interest at 4½ per cent. instead of 6 per

per cent., issued upon 356½ miles of additional road. The total issue of consolidated bonds—6 and 4½ per cent.—now is \$18,890,000.

Minnesota & Northwestern Railroad Company—an additional \$5,094,000 of first gold 5 per cent. bonds, due in 1934.

Virginia Midland Railway Company—general mortgage 5 per cent. bonds, due May 1, 1936, amounting to \$432,000.

Equitable Gas Light Company, of New York—capital stock of \$3,000,000 in 30,000 shares of the par value of \$100.

Minneapolis & Pacific Railway Company—first mortgage 5 per cent. bonds, due January 1, 1936, amounting to \$3,035,000.

Chesapeake, Ohio & Southwestern Railroad Company—second mortgage 6 per cent. bonds, due August 1, 1911, amounting to \$2,767,000.

Southern Pacific Railroad Company, of California—an additional \$4,447,000 first mortgage 6 per cent. bonds, making the total amount now listed \$38,440,000.

Gulf, Colorado & Santa Fe Railway—an additional \$600,000 of first mortgage bonds, making the total amount now listed \$10,200,000 on 850 miles of completed road.

Missouri, Kansas & Texas Railway Company—an additional \$1,000,000 general consolidated mortgage bonds, making the total amount now listed \$34,725,000.

Tennessee Coal & Iron Railroad Company—consolidated first mortgage 6 per cent. gold bonds, due 1917, of the Birmingham, Alabama, division, amounting to \$400,000.

Columbus & Hocking Coal & Iron Company—capital stock \$4,318,500 in shares of \$100 each and mortgage 6 per cent. gold bonds due July 1, 1917, amounting to \$700,000.

Philadelphia & Reading Railroad Company—assented stock stamped by Brown Bros. & Co., and also certificates with Philadelphia stamps when indorsed by Brown Bros. & Co.

New York, Chicago & St. Louis Railway Company—Central Trust Company certificates for deposits of first and second mortgage bonds under the new trust for reorganization.

Oregon Railway & Navigation Company—an additional \$500,000 consolidated mortgage bonds, issued to retire a like amount of debenture bonds, making the total amount now listed up to \$4,655,000.

St. Louis & San Francisco Railway Company—first mortgage 6 per cent. bonds, due September 1, 1916, of the St. Louis, Kansas & Southwestern Railroad Company, interest secured by lease to the St. Louis & San Francisco Company, amounting to \$735,000.

New Jersey Junction Railroad Company—first mortgage 4 per cent. bonds, due in 1936, guaranteed principal and interest by the New York Central & Hudson River Railroad Company, amounting to \$2,000,000. The authorized issue is \$4,000,000, \$1,000,000 of which can only be issued with the consent of the New York Central & Hudson River Railroad Company.

Richmond & West Point Terminal Railway & Warehouse Company—an additional \$16,000,000 of common stock on February 21, 1887. The issue is for the purchase of 65,000 shares of East Tennessee, Virginia & Georgia first preferred, 15,000 shares and \$625,000 income bonds of the Washington, Ohio & Western Railroad Company and 25,000 shares of Richmond & Danville Railroad stock, and "5,000 shares sold for the purpose of raising funds for the uses of the company." This will make the total amount of common stock listed \$40,000,000.

SAFETY ELECTRIC LIGHT AND POWER COMPANY.—This company has been incorporated in New York city with a capital stock of \$250,000.

CINCINNATI, HAMILTON & DAYTON.—The stockholders have voted to increase the capital stock \$2,000,000, and issue \$1,000,000 for betterments, etc.

LEHIGH & WILKES-BARRE COAL COMPANY.—The stockholders have authorized the issue of \$2,500,000 of bonds to retire outstanding bonds and mortgages.

MILWAUKEE & NORTHERN.—The Milwaukee & Northern Railroad has filed amended articles of incorporation, increasing the capital stock from \$2,500,000 to \$8,000,000.

CHICAGO & NORTHWESTERN.—This company is reported to have placed \$6,500,000 of extension 4 per cent. bonds with a syndicate headed by the firm of Messrs. Kuhn, Loeb & Co.

NEW YORK, SUSQUEHANNA & WESTERN.—A mortgage for \$1,000,000 covering all the rights and property of this company has been filed to secure an issue of 4½ per cent.

bonds, due February 1, 1937, to retire outstanding debenture bonds and improve the property.

POUGHKEEPSIE BRIDGE COMPANY.—An issue of \$5,000,000 first mortgage 6 per cent. gold bonds of this company, due in 1936, has been offered for subscription in New York.

STATEN ISLAND BONDS.—The Board of Supervisors of Richmond County (Staten Island) have decided to issue \$40,000 of fifteen-year bonds, to be used in retiring those which expire in April next.

MINNEAPOLIS, SAULT STE. MARIE & ATLANTIC.—Projectors of this road are reported to have sold to London bankers \$9,000,000 of 5 per cent. bonds to build and equip a line to the Sault.

PEORIA, DECATUR & EVANSVILLE.—A mortgage for \$2,065,000 has been executed to the Central Trust Company, of New York city, to secure an issue of 5 per cent. bonds payable in New York in 1936.

CHICAGO, MILWAUKEE & ST. PAUL.—An issue of \$2,000,000 in 5 per cent. first mortgage bonds on the Chicago & Missouri division has been offered for subscription at 104½ per cent. and accrued interest.

NEW YORK CITY WATER BONDS.—The Controller of the city of New York has sold \$3,000,000 of 3 per cent. registered water bonds, payable October 1, 1905. The prices ranged from 103 to 103.875 per cent.

BOSTON BOND PURCHASES.—It is stated that about \$28,000,000 of new 4 and 5 per cent. bonds have been issued and taken by Boston bankers within the past two months, and are being absorbed by investors.

CONNECTICUT BONDS.—The State Senate of Connecticut has passed a bill to refund \$1,000,000 of State 5 per cent. bonds with the same number of 3 per cents. They fall due on May 1st. The new issue will be payable May 1, 1917.

ILLINOIS CENTRAL.—This company has filed a mortgage for \$4,000,000 in the various counties in Illinois through which the road runs. The mortgage is to secure an equal amount of bonds payable in London on July 1, 1930.

A MAINE LOAN.—The Maine Legislature has authorized the State Treasurer to receive a loan of \$100,000 from the State College of Agriculture, and issue for the amount an unnegotiable registered interest-bearing bond to run 30 years.

ATCHISON, TOPEKA & SANTA FE.—This company has issued a circular to the stockholders, giving rights to subscribe to \$13,000,000 new stock on extensions in Southern California, Kansas and Colorado. For each \$2,000 the subscriber will get a \$1,000 5 per cent. fifty-year collateral trust gold bond, \$1,000 Chicago, Kansas & Western 5 per cent. bond, the same as issued under circular No. 57, and a \$500 income bond bearing 6 per cent. interest. The \$2,000 blocks are open to subscription to holders of 100 shares and multiples thereof, and are quoted from \$3 to \$3.40 each.

CINCINNATI, INDIANAPOLIS, ST. LOUIS & CHICAGO.—The Directors have adopted a resolution providing for the sale to stockholders of record on March 18th the \$3,000,000 of stock, the issue of which was authorized at the last annual meeting. The stock is to be sold at par, less credits of dividends earned but not declared to the amount of 35 per cent., making the net price to stockholders 65 cents. One million dollars of the proceeds will be used in carrying out the scheme for refunding the present bonded indebtedness of the road in new gold 4 per cents, running 50 years.

NEW YORK, CHICAGO & ST. LOUIS.—The reorganization committee has announced its plan for reorganizing the company. It provides for the issue of \$20,000,000 4 per cent. gold bonds, \$5,000,000 first preferred stock, \$11,000,000 second preferred and \$14,000,000 common stock. The old first mortgage bonds will receive 112 per cent. and the old second mortgage bonds 110½ per cent. in 4 per cent. bonds. The old preferred stock is assessed \$10 per share and will receive new first preferred stock at par for the assessment and 50 per cent. of the stock in new second preferred stock. The old common stock is assessed \$10 per share, and will receive new first preferred stock at par for the assessment and 50 per cent. of the old stock in new common stock.

Railroad Reports.

NEW YORK, NEW HAVEN & HARTFORD.—The annual report for the year ended September 30, 1886, shows earnings and expenses:

	1884-5.	1885-6.
Total gross earnings.....	\$6,895,824	\$7,801,946
Operating expenses.....	4,449,288	4,775,820
Net earnings.....	\$2,446,536	\$2,826,126
Summary of income account:		
Total net income.....	\$2,446,536	\$2,826,126
Total disbursements.....	2,225,608	2,242,876
Balance, surplus.....	\$220,868	\$583,250

Included in the disbursements out of net income is \$1,550,000 dividends in each year.

BUFFALO, NEW YORK & PHILADELPHIA.—The annual report of this company for the year ended September 30, 1886, shows earnings and expenses as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$2,331,514	\$2,568,217
Operating expenses.....	1,880,667	2,195,210
Net earnings.....	\$454,847	\$373,207
Summary of income account:		
Total net income.....	\$512,771	\$428,860
Total disbursements.....	1,756,288	1,616,614
Balance, deficit.....	\$1,243,512	\$1,187,754

Full interest—both paid and unpaid—is included in the disbursements out of net income.

NEW COUNTERFEITS, SPURIOUS COINS, ETC.

A COUNTERFEIT \$5 gold piece, bearing the date 1880, is reported to have been discovered in Indiana. It is said to be light in weight, a little thicker than the genuine, and will not stand the acid test. Its appearance before applying the test is very good, but the ring is poor.

AN EFFORT is being made to secure the pardon of John B. Doyle, the counterfeiter who was implicated in the bond forgeries of William E. Brockway, the noted plate maker. Doyle was sentenced to 16 years' imprisonment and has served 5 years. Brockway's work was so good in this case that he and Doyle attempted the bold defence that the plates were made by the Bureau of Engraving and Printing and stolen by Government employees. In the little museum of the Secret Service Bureau of the Treasury Department, Brockway's bonds and plates are exhibited as the best specimens of counterfeiting ever made. Senator Farwell has known Doyle for a great many years, and thinks that he was used as a tool in this crime. Several unavailing attempts have been made by the Chicago friends of Doyle to secure his pardon.

THE UNITED STATES MINT, at Philadelphia, has secured a counterfeit \$2.50 gold piece of 1852. It was presented to Superintendent Fox by L. H. Taylor & Co., the Philadelphia bankers, who received it in a lot of \$10,000 from the Sub-Treasury. The gold was forwarded to New York, and this one piece was returned as a counterfeit. At the Philadelphia bank it was pronounced genuine, and the acid test at the Sub-Treasury failed to show it anything but good. At the Mint, however, the assayer declared it a counterfeit—one of the most dangerous spurious gold coins ever made. "It contains only twenty-seven cents worth of gold," he said, "yet its weight is that of the real article to a hair. Its size is exactly the same, save that the genuine coin is slightly thinner at the middle than the counterfeit, and it has the true ring of the pure metal. We have been looking for a sample of this counterfeit for ten or fifteen years to place in our cabinet here. I readily recognized it by the head. That style head of Liberty was not printed upon the \$2.50 pieces of 1852."

WITH REFERENCE to the report that counterfeit one dollar United States notes, numbered B18,361,361, were in circulation in Canada, officials at the New York Sub-Treasury express the opinion that the notes are genuine. No counterfeits have come under their supervision, and it is thought that genuine notes which have been hoarded for some time are now being put in circulation in consequence of the issue of silver certificates of small denominations.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

A PLAN FOR ISSUING BOND BILLS.

Editor Rhodes' Journal of Banking:

SIR:—In my communication of December 20, 1886, published in your January issue, I suggested the use of State bonds as security for National bank circulation, since which time I have given considerable thought to the question of National currency. I want to recommend, through the medium of the JOURNAL, the following plan, viz.:

Let Congress, by appropriate legislation, provide that any State, county, municipality or school district may deposit its bonds with the Treasurer of the United States and receive therefor a like amount, or a certain amount, of bond bills, which shall be clothed with all the qualities now pertaining to National bank bills. These bond bills need not be localized, as in the case of National bank bills, but may be all alike in their wording. On the redemption or payment of the bonds for which they are issued a like amount of these bills shall be retired and destroyed. Whether the issuance of such bills shall be absolutely free or partially restricted is a matter for consideration and statutory enactment. I can see no reason why such a currency may not be made as absolutely safe as the combined National Government, State, county, municipality or school district can make it. The bonds so issued should draw a low rate of interest, part of which would, of course, be needed to defray the necessary expenses connected with the business, the balance to be covered into the United States Treasury for such uses as Congress may direct.

I present this thought in the rough, without elaborating upon it, simply to bring it to the notice of the banking fraternity, and would suggest that it should receive careful consideration.

Respectfully,

G. W. THOMPSON, *President.*

CHATTANOOGA, Tenn., February 18, 1887.

CHICAGO AS A RESERVE CITY.

Editor Rhodes' Journal of Banking:

SIR:—The National banks of Chicago have joined in a movement to secure two important changes in the National bank law: (1.) To require the institutions of that city to always keep in their own vaults 25 per cent. of their deposits in cash; and (2), to allow the National banks of other reserve cities to keep half of their reserve either in New York or in Chicago. The occasion for this movement among the Chicagoans is the bill now before Congress making reserve cities of St. Paul, Minneapolis, Indianapolis, Kansas City and Omaha. There is no opposition to this bill in the West. On the contrary, not only the towns directly concerned, but Chicago itself is heartily in favor of it. But it is thought that, unless the measure is modified according to the suggestions of the Chicago bankers, the natural course of business will be hampered, and the greatest evils that come with a panic will be promoted.

The law as it stands now allows the banks of reserve cities to keep half of their reserves with approved agents in New York. The banks of other cities can keep three-fifths of their reserves in any of the reserve cities. It is natural that the banks of the smaller cities of the North-West should keep their reserves in Chicago (and, as a matter of fact, they do keep the bulk of them there). Under the law now pending before Congress nothing that the banks in these cities might deposit in Chicago would count as reserve. The temptation to them, therefore, would be to keep more funds in New York than their current business with that city would require. In order to comply with the law they would deprive the West of a considerable quantity of funds that would remain in that part of the country if there were no legal constraint. Nobody understands better than bankers that it is very unwise to place trammels on the natural course of monetary affairs, and hence the desire to amend the pending bill.

Moving money is much like moving anything else. It is easy to see that St. Paul, for instance, would find it much more convenient to order funds from Chicago than from New York. Suppose currency were needed. Under the most favorable circum-

stances funds can be sent from Chicago a day quicker than from New York. In a time of financial distress a day may make a good deal of difference. And then the expense of transporting currency is an important item. It is not an occasional but a constant expense and counts up in the course of a year. These facts become increasingly important year by year as the relations of the Western towns to Chicago grow more intimate.

The capital of the Western metropolis is carrying immense quantities of the grain stored in Duluth, Milwaukee, St. Paul, Minneapolis and Toledo. New York capital is very little represented in that interest. It would therefore be an anomalous thing for these towns to have half of their reserve in New York and none of it in Chicago. And this is but one feature of the financial relations of these towns to Chicago. In all matters of trade the connection is much more intimate and direct than with New York.

It is time for us to realize, too, that the enormous extent of the country forbids us to take the practice of other countries as a proper precedent. London is the one reserve city of England; but England territorially is very small as compared with the United States.

When there is a sudden demand for current money we appreciate the fact that there is something cumbersome about our system.

New York bankers do not need to have their memory refreshed as to the enormous demands made on them for currency by the Western towns during the panics of 1873 and 1884. They would be relieved of the greater part of the strain of such occasions if the National banks of Chicago were to be required to keep 25 per cent. of their reserves in their own vaults and were also made the custodians of half the reserves of the minor reserve cities of the West.

Bankers generally do not realize the immense quantities of currency the Western banks handle even in quiet times. One bank in the city of Chicago sent to the country towns over \$16,000,000 of currency between August 1, 1886, and January 1, 1887.

The movement is one of National importance and not merely the effort of one section of the country to get ahead. The National banks of Chicago are unanimous in their approval of the scheme, and have written a letter to Senator Allison calling his attention to it. The bankers of the towns that it is proposed to make reserve cities appear to be equally in its favor. Thus far no opposition has developed in any quarter, and it is to be hoped that the measure will become a law.

E. B. CLINTON.

CHICAGO, February 10, 1887.

A SUGGESTION.

Editor Rhodes' Journal of Banking.

SIR:—The excellent portrait of Comptroller Trenholm which embellished the January number of the JOURNAL pleased me so much that I thought it would be a good idea to have it framed, which I did, and find that it attracts considerable attention. As you intend to publish a series of portraits of prominent bankers and leading financiers, I think it would be a good plan for subscribers to have them neatly framed for the benefit of customers and others who do not have a chance to visit the large cities to see the great financiers and yet are glad to form some idea of what manner of men they are.

A SUBSCRIBER.

SCRANTON, Pa., March 1, 1887.

A DEFALCATION—"THE OLD, OLD STORY."

Editor Rhodes' Journal of Banking:

SIR:—On Tuesday morning, February 1st, the Baltimore newspapers announced the defalcation of Mr. J. Lisle, Discount Clerk and Note-Teller of the First National Bank, of Baltimore, Md. Eighty thousand dollars was the amount stated to be stolen at that time, and investigation has not materially changed those figures. The cold facts, so far as the bank is concerned, appear to be the same old story—highly appreciated, thoroughly competent, wholly unsuspected, but the eighty thousand and the Clerk "clean gone"—probably to the land of the Toboggan and the Ice Palace.

The bank is much better off than if Lisle had remained at his post a few months longer, for his work was cleverly concealed. Some months ago Lisle was tendered a more responsible position, but preferred to stay in his old place!

In Lisle's case there seems to have been a break in the usual ante-characteristics of absconders. He did not gamble or speculate, and was particularly temperate. His reputation for anything "fast" was confined to a fair record upon a bicycle. The

circumstances of the case, coupled with the intelligence of the man, all point to a cool, deliberate steal for the preconceived purpose of enriching himself.

"It is an ill wind that blows nobody good:" therefore is not the above occurrence a good text upon which to base a general brushing up by the banks? There are banks that have good methods—some the very best that experience dictates—but many know of better methods than they now employ (if they don't it is no fault of the JOURNAL), yet they hesitate to stir things up. "He who runs may read." The raveled thread should be gathered up and the whole fabric sewed together with a "lock-stitch." It is not assumed for a moment that a revival would develop fraud, but it might prevent dishonesty in the future and correct carelessness born of neglect and over-confidence.

It was a faulty system that allowed Lisle to take thirty-five hundred dollars in cash from his drawer during the last hour he spent in the bank. At that time the money belonged where he could not get it.

Casting out faults and obsolete ideas helps every one in the banking business. The press of this city often takes occasion to felicitate the shareholders of our banks on their escape from loss by defaulters, but retrospect shows that Baltimore "gets there" just the same.

Now, the great majority of bank clerks are honest to the core, and court investigation because it increases the faith and respect of their superiors, which of itself is a great instigation to a correct and faithful performance of duty. "An honest man is the noblest work of God" is significant in this connection. An honest man is born honest, grows up honest, and will die honest. Manufactured honor and politic honor may be good in its way and may take a man through unscathed to the end, but, if possible to avoid it, it should never be exposed to the temptations of a bank!

Very many people wonder how a clerk can get away with any of the funds of a bank when the Cashier is there to watch him. In a bank where it is possible for a clerk by dishonest methods to get a very big slice of the money deposited with it the Cashier is too busy a man without attempting any special detective work.

In proportion to the years of faithful service and great responsibility upon him a bank clerk should pat himself on the back (generally no one else does it) and thank his stars, not that he knows better than to rob any one, but that he don't know any better than to be honest.

Lisle did not leave behind him a broken bank—the amount was large, yet the bank is solid and rich, and will not feel the loss—but he left behind him a wife and five children and an aged mother whose faith in him alone should have been a guide to his footsteps. A broken bond, broken faith and broken friendships!

He has double-discounted all the reputation he ever had; he has overdrawn his account in the Bank of Happiness, and he has gone forth a broken man, only to wish, every day of his future life, that he could once more rest his body and mind with hard work behind the counter of the First National Bank, of Baltimore.

It is not necessary to occupy your valuable space by giving all the details of Lisle's crime. Aside from the \$3,500 cash pocketed by him the night he left, it was his habit to put the funds received (cash) for notes in his pocket and substitute a dummy note in the work. His conscience must have pricked him quite severely when he took counsel of his fears and fled sooner than was necessary, as he had really lulled any suspicion he feared had been aroused.

O'C.

BALTIMORE, February 5, 1887.

The *London Statist* of February 19th reproduces with favorable comments nearly all of the article upon the "Future of the National Banking System," by the Hon. Jno. Jay Knox, first published in the January number of the *North American Review*. In this issue of the JOURNAL appears a valuable article by Mr. Knox on the Reduction of the growing Treasury Surplus.

The Western National Bank.—Some newspapers have published notices in relation to the new bank—the Western National—which will shortly open for business in this city: but they were incorrect in important particulars, notably in giving the names of the Directors, who are Daniel Manning, Conrad N. Jordan, Chas. J. Canda, Ferdinand E. Canda, John A. McCall, Marcellus Hartley, Eduardo Gogorza, F. O. Matthiessen, W. C. Hall, John S. Tilney, Evans R. Dick. The capital has been fixed at \$3,600,000. As stated in the February JOURNAL, Mr. F. Blankenhorn is the Cashier.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

BANKS WITHOUT CIRCULATION.

[From the *Boston Globe*.]

The question of maintaining the basis of the bank note circulation is being steadily pushed aside by suggestions which favor dispensing with bank note circulation altogether, still continuing, however, the National banking system. The original purpose of compelling the banks to buy bonds and issue circulation was to create a market for United States bonds. No such necessity exists any longer. There is no reason, therefore, why banks cannot become members of the existing National association without their issuing circulation or depositing bonds with the Treasury. The chief business of banks of discount and deposit is fully described in those two terms. The circulation of a bank is the least of its profits under present circumstances, while its loan business constitutes about the whole of it. It is upon this same circulation, too, emitted solely for the public convenience, that the people using it are compelled to pay a tax, when of right the currency furnished by the Government, whether directly or through banks, should be theirs without any charge whatever.

THREATENED WITH ASPHYXIATION.

[From the *New York Commercial Advertiser*.]

So long as one series of bonds was retired and another series substituted for it the banks could manage their securities without much trouble, but now the situation is a serious one for them and the public. There are hardly two opinions as to the excellence of the National bank system and the desirability of its permanent continuance. But so long as the law compels the banks to hold a certain amount of United States bonds as security for their circulation, when at the same time the Government steps in and takes away these bonds without issuing others in their stead, it needs no special ability in finance to enable one to see that the system is doomed. The banks, as issuers of circulating notes, in a word, are threatened with asphyxiation.

ANGER OF OVERDOING IT.

[From the *Baltimore Manufacturers' Record*.]

There is, we fear, danger in the land speculative fever that is developing throughout the South, because the success of the honest, legitimate enterprises in that line may possibly result in the organization of swindling schemes that will not only cause losses to the outsiders who invest, but will also do the whole South harm. The desire to grow rich suddenly through some fortunate speculation, as many have done, is liable to draw into speculative enterprises those who know nothing about what they are doing, except that they are blindly trusting their money to some one else. It behooves the leaders in this progressive movement of the South, as well as the press, to do all in their power to be on the lookout for wildcat land schemes. It would be a serious blow to the South if this rush to form land companies should result in the floating of any extensive swindles, and we trust that this may be guarded against.

THE "LABOR HOLIDAY" HUMBUG.

[From the *New York Commercial Bulletin*.]

The banks, we observe, are taking vigorous action against the demagogic Saturday Half-holiday bill with which Albany statesmen hope to capture the labor vote; and in so doing we do not hesitate to say they are in line with a correct public opinion, not less than in harmony with the more considerate and intelligent of the laboring classes themselves. A similar measure, it will be remembered, was introduced last year, but towards the close of the session it was defeated in the Assembly. Now, however, no

fewer than three such bills have been introduced, one to make the third Monday in September a "Labor Day" holiday, another to make every entire Saturday a legal holiday, and the third to apportion half of Saturday for the purpose indicated. We suppose the banks would care little what disposition is made of these measures providing some guarantee was given that their business should remain undisturbed; but that is not to be expected. A whole day would be far less embarrassing to them than a portion thereof. The "Labor Day" bill has already passed the Senate under the inspiration of the Knights of Labor, adding another legal holiday to the eight we now enjoy. The House may, of course, pass the Saturday Half-holiday bill, but it is difficult to believe that the more conservative branch of the Legislature, which contains a number of bankers and men of business, will thus lend itself to the support of such a measure, even though it has the approval and endorsement of the Governor, whose solicitude of late for the political support of the "walking delegate" would seem to have outrun his discretion.

GROWTH OF THE NATIONAL BANKS.

[From the *Cleveland Leader and Herald*.]

Both in numbers and in capital the showing is better than ever before. Moreover, the growth of the system is now mainly in the smaller cities and towns where it is most needed and most beneficial, and the average capital of the National banks was never so small as now. In some parts of the West and vast districts in the South there is still a wide field for the further growth of the best banking system ever established in any country, and it is evident that only very harsh treatment at the hands of Congress can prevent all this territory from being occupied in the course of time. Five years of such growth as in 1886 would mean the addition of more than 700 banks, or one for every county in a dozen States, and of more than \$100,000,000 in capital, or a sum greater than the assessed valuation of Cleveland.

SILVER MEN FROM INTEREST.

[From the *New York Times*.]

Nothing could be plainer at the present moment than that no class of people in the United States have a direct pecuniary interest in the continued coinage of silver except the mine owners. They are the only ones who can make any money from the operation of the law. It secures to them a market for \$24,000,000 of their product, or something more than half of the average output. Of course, the Government pays only the regular market price, but that price would necessarily be depressed if this demand, which is large and certain and continuous, were withdrawn. Even with this demand the price of silver has fallen more than one-sixth since the passage of the law, and has been considerably lower than it is just now. It is very easy to see why the mine owners should wish to keep the law in force, and, as a matter of fact, they are straining every nerve and spending a good deal of money to do so.

LENDING THE SURPLUS.

[From the *Philadelphia North American*.]

When Congressmen haven't much to do they may be excused sometimes for getting into mischief, but, when they have as much business on hand as the present Congress, they should busy themselves with something serious. The offering of a bill to loan the surplus to trade unions to start co-operative enterprises is the latest bit of nonsense. It is very bad for some boys and men to have a little money in their pockets, and some Congressmen seem bent on proving it true of the nation. The fact that a Congressman would dare to offer a bill to devote public money to private enterprises shows what utterly incompetent men can be elected.

TWO SIDES TO FOREIGN TRADE.

[From the *Boston Globe*.]

It ought to be plain to the average comprehension that the amount of a country's exports forms the measure of its ability to buy from other countries. No exports, no foreign trade. Hence, to obstruct its imports is the surest way to diminish a country's exports. The practical moral ought to be obvious. Yet we have men in and out of

the National Legislature who persistently maintain that our import trade is in effect so much a diminution of domestic industry. It is not possible to see how it should be so, with our export trade thereby increased, and therefore with industry more and more widely employed. The two forms of trade simply complement one another. They obey the plain law of action and reaction. Cut off the one and the other inevitably languishes. It would be as rational to try to get expected service out of one-half a pair of shears as to try to increase our export trade while doing our utmost to diminish our import trade. Or we might as reasonably look for regular tidal movements if the ocean carried away the flood of waters without bringing them back again. Commerce must be two-sided or it ceases to be commerce. And that is the simple truth which many have yet to learn.

THE REISSUE OF LEGAL-TENDER NOTES.

[From the *Philadelphia Record*.]

The report that President Cleveland has energetically intervened in person in favor of the emission of the \$1 and \$10 greenbacks is denied. There is no doubt, however, that Secretary Manning has not strictly enforced the laws in this respect. In fact, he has admitted as much in his response to the inquiries of the House. The law of 1878 authorized the reissue of the \$344,000,000 greenbacks then unredeemed, and it is not easy to see how the Secretary can evade the reissue of the notes of small denominations when paid into the Treasury. As if in anticipation that the Treasury officials might do this, the law of last year expressly forbids the substitution for small greenbacks of notes of larger denomination. The greenback debt ought to be redeemed, and the currency placed wholly on a specie basis. But so long as the issue of greenbacks shall be authorized the law should be strictly observed in letter and spirit.

AN OPINION ON MONEY.

[From the *Louisville Courier-Journal*.]

The shallow Frenchman and his Chicago disciple both commit the error of limiting the function of money to that of a standard measure. Money is a great deal more—it is a measure of value, but it is also a repository of the value it represents. Money is hard money, and paper currency is a representative of money which is good only by promising to pay money on demand. As to hard money, it is the only honest and legitimate conception of this that it comes from a free mint, and that it is a legal-tender—conditions which anywhere in the world would render it impossible that there should be any variation or difference between the metallic value of the coin and the market value of the metal in it. A dollar can measure wheat, corn and cotton only by a physical exchange of one for the other, as of two things between which it is determined that the relation of equality exists.

THE COST OF COINAGE.

[From the *London Bullionist*.]

In this country the cost of coinage is borne by the Government, and in this particular this country differs from any other. In other States a seigniorage is charged to cover the expense entailed in coinage. In France the Mint charge is 6.70 francs, the price being deducted from the gold brought in. The British Mint gains from the coinage of silver and loses from the coinage of gold. The seigniorage from silver has recently been greatly increased, in consequence of the fall in the price of silver. In 1870 the seigniorage was 9 per cent.; in 1881 it was 27½ per cent., but in 1885 it had increased to 36 per cent. The total profit of the silver coinage in 1885 was £124,786. The excess of receipts over expenditure in the cost of manufacture amounted to £37,959.

VIRGINIA'S BAD PREDICAMENT.

[From the *Boston Evening Transcript*.]

The Virginia State Courts and the United States Courts are again at loggerheads over the question as to the value and use of the State's coupons in payment of fees and charges. Nearly two years ago the United States Supreme Court decided that a fee for a trader's license was a tax, and that the State's coupons were therefore tenders for it. To get around this law the Virginia Legislature passed an act providing that

before coupons should be received for license fees they must be verified by a jury. The effect of this was to embarrass business men, and its purpose was to drive them to tender hard cash alone. A case has arisen under this Act on which both the Virginia Court of Appeals and the United States District Court have passed. The Virginia Court affirms that the Act is constitutional; the United States Court takes the opposite view, and holds that it is of no binding force or effect. Meanwhile the value of the coupons is steadily depreciating in the market, and as the State is compelled, even under its own law, to take them at their face, it has to stand the difference between their nominal and their actual worth. Thus does the State's invention return to torment the inventor. The short road for Virginia is the honorable way. She should pay her debts, principal and interest, as with her great present and prospective wealth she is well able to do.

THE SILVER DOLLAR TEXT.

[From the New York *Commercial Advertiser*.]

A counterfeit two-dollar-and-a-half gold piece was discovered yesterday which is worth twenty-seven cents, and has been in circulation for more than thirty years. The advantage that the possessor of this counterfeit holds over the owner of a silver dollar is that the former knows what his coin is worth and that it will always have a recognized value of at least twenty-seven cents, while the proprietor of the silver dollar cannot tell one day what his coin will be worth the next.

[From the Philadelphia *Record*.]

As between a promise to pay a dollar that is backed by eighty cents' worth of silver and a promise to pay a dollar that has no backing except the credit of the promiser, both being a legal-tender, the silver promise is to be preferred. In choosing between the evil of all fiat and one-fifth fiat currency Congress seems disposed to take as little fiat as possible. This is encouraging.

WANTS NO FREE BANKING.

[From the Memphis (Tenn.) *Appeal*.]

The Comptroller of New York advocates a system of free banking upon the bonds of any State which has not repudiated within ten years, the bonds to be guaranteed by the General Government, municipal and county bonds also to be accepted when guaranteed by the States. The National Government guarantees the State, and the State guarantees the municipalities. This is too much like the theory that says the earth is supported on the shoulders of a giant, while the giant stands upon a tortoise. What the tortoise stands upon the theory does not define. The securities for bank circulation must be something that can at once be turned into cash when required. This quality of rapid transformation State, county and municipal bonds do not possess, and no giant guaranteeing, or tortoise guaranteeing, can impart that quality. Besides, nobody who is old enough to remember what curses to the country's commerce State banks were, nor any one informed by them, will consent that the country shall harbor that brood again, whatever shape it may assume.

Bankers as Office-Holders.—A Kansas newspaper says that Mr. C. N. Beal, President of the Kansas Mortgage Company, was asked by a large number of the leading citizens of Topeka to accept the nomination for Mayor of that city at the ensuing charter election. Mr. Beal made a characteristic reply, in which he says: "That if the Republican convention chooses to endorse your sentiments by making me the nominee of the party, I shall cheerfully acquiesce therein, and, when elected, earnestly put forth every effort to prove myself worthy of the confidence reposed in me."

We assume, of course, that the voters of Topeka are not closely bound by party ties in local matters, and that they will vote for the man who in the largest sense will promote the welfare of their live city. Party affiliations are desirable in the main in controlling National affairs, but when it comes to city and local government the *best man* should win. Observation goes to show that a progressive and successful banker (the terms cannot be separated) will almost invariably make a good public servant. His training and association with various classes of men, combined with a comprehensive knowledge of business, eminently fit him for such a position.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3629—First National Bank, Piedmont, West Virginia. Capital, \$50,000.
3630—Smith County National Bank, Smith Centre, Kansas. Capital, \$50,000.
3631—Merchants' National Bank, Fort Worth, Texas. Capital, \$300,000.
3632—Stroudsburg National Bank, Stroudsburg, Pennsylvania. Capital, \$100,000.
3633—Memphis National Bank, Memphis, Tennessee. Capital, \$500,000.
3634—American National Bank, Fort Smith, Arkansas. Capital, \$100,000.
3635—Keystone National Bank, Manheim, Pennsylvania. Capital, \$80,000.
3636—National Bank of Dakota, Huron, Dakota. Capital, \$50,000.
3637—Union National Bank, Kansas City, Missouri. Capital, \$800,000.
3638—First National Bank, Paris, Texas. Capital, \$50,000.
3639—Atlas National Bank, Cincinnati, Ohio. Capital, \$200,000.
3640—First National Bank, Beardstown, Illinois. Capital, \$50,000.
3641—First National Bank, Kaukauna, Wisconsin. Capital, \$50,000.

ARIZONA.

FLAGSTAFF.—Arizona Central Bank has been recently opened here. Cashier, J. H. Norkens, Jr.

ARKANSAS.

FORT SMITH.—American National Bank has been authorized to commence business. Capital, \$100,000. President, B. H. Tabor; Vice-President, B. F. Atkinson; Cashier, S. N. Dwight; Assistant Cashier, Russell Myrick. — National Bank of Western Arkansas, George T. Sparks, President, in place of Bernard Baer.

CALIFORNIA.

DOWNEY.—Los Nietos Valley Bank; President, C. Maholm; Cashier, H. A. Scott.
LOS ANGELES.—Southern California National Bank; John I. Redick, President, in place of H. H. Boyce.
PASADENA.—First National Bank; J. E. Farnum, Cashier, in place of D. Galbraith.
POMONA.—First National Bank; Thos. Coates, Vice-President, in place of J. E. McComas.
SAN JACINTO.—State Bank of San Jacinto has been recently organized. Capital paid in, \$12,500. President, A. P. Anderson; Cashier, J. A. Green; Assistant Cashier, C. T. Daggett.
SANTA BARBARA.—First National Bank; Jas. W. Calkins, President, in place of W. W. Hollister; Assistant Cashier, H. P. Lincoln.
ST. HELENA.—Bank of St. Helena; H. J. Llewelling, President, in place of Seneca Ewer; Vice-President, G. K. Gluyas.

COLORADO.

AKRON.—H. Chamberlin is reported here. Style, Bank of Akron.
CRESTED BUTTE.—Carlisle, Thompson & Co. (Bank of Crested Butte); succeeded by Metzler Brothers.
DURANGO.—Colorado State Bank is new bank here.
LAMAR.—Bank of Lamar; Joe H. Borders, President, in place of I. R. Holmes; A. V. Scott, Cashier, in place of Chas. M. Morrison. — Lamar State Bank has been recently opened.
TRINIDAD.—First National Bank; Frank G. Bloom, Vice-President, in place of G. R. Swallow; E. P. Jordan, Assistant Cashier, in place of A. M. Hawley.
WRAY.—Newell & Sisson are in business here. Style, Bank of Wray.

CONNECTICUT.

HARTFORD.—First National Bank; C. S. Gillette, President, deceased. — Mercantile National Bank; Cashier, Chas. H. Field.
LITCHFIELD.—First National Bank; Assistant Cashier, Chas. H. Coit.
NORWALK.—National Bank of Norwalk; E. J. Hill, Vice-President, in place of James W. Hyatt.

DAKOTA.

CENTRAL CITY.—Stebbins, Mund & Fox; closed.
COOPERSTOWN.—Clark & Smart are in business here. Style, Griggs County Loan & Trust Company.
DEADWOOD.—Merchants' National Bank; closed.
FLANDREAU.—Farmers & Merchants' Bank is reported here. Proprietor, A. J. Smith; Assistant Cashier, C. H. Wellman.
GRATTON.—First National Bank; Chas. A. Harris, Assistant Cashier, in place of J. W. Whitman.

GRAND FORKS.—Citizens' National Bank; Wm. Budge, President, in place of J. S. Eschelman; Assistant Cashier, W. H. Burr.
 GRAND RAPIDS.—Farmers' Bank is reported here.
 HURON.—Traders' Banking Co.; succeeded by National Bank of Dakota. Capital, \$50,000. President, David L. Stick; Cashier, John A. Kemp.
 JAMESTOWN.—James River National Bank; Vice-President, A. Dickey; Cashier, Geo. L. Webster; A. Parkinson, Assistant Cashier, in place of Geo. L. Webster.
 MONANGO.—Bank of Keystone; title now, Bank of Monango.
 REDFIELD.—First National Bank; Vice-President, Roscoe Stinson.
 YANKTON.—Edmunds, Hudson & Co. (Yankton Bank); succeeded by Edmunds & Sons.

DELAWARE.

SEAFORD.—First National Bank; Vice-President, Phillip L. Cannon; H. W. Baker, Cashier, in place of Mitchell J. Morgan.

DISTRICT OF COLUMBIA.

WASHINGTON.—Columbia National Bank; Vice-President, A. T. Britton; Cashier, E. Southard Parker.

GEORGIA.

AMERICUS.—People's National Bank; John Windsor, President, in place of Samuel H. Hawkins; Cashier, J. B. Felder. — Bank of Americus; S. H. Hawkins, President, in place of M. Speer.
 AUGUSTA.—Augusta Savings Bank; Wm. B. Young, Cashier, instead of Cashier *pro tem*.
 FORSYTH.—W. T. Maynard & Co. are reported here. President, W. T. Maynard; Cashier, P. B. Maynard.
 ROME.—Printup Bros. & Co.; D. S. Printup, President, deceased.
 SAVANNAH.—Oglethorpe Savings & Trust Co. has been recently organized. Capital, \$37,500. President, J. J. Dale; Cashier, John M. Bryan.

IDAHO.

BOISE CITY.—Boise City National Bank; Assistant Cashier, Jos. Perrault.

ILLINOIS.

BEARDSTOWN.—People's Bank; succeeded by First National Bank. Capital, \$50,000. President, John H. Harris, Cashier, Thomas K. Condit.
 CAMP POINT.—Richard A. Wallace; succeeded by Richard A. Wallace & Bro.
 CANTHAGE.—Hancock County National Bank; Assistant Cashier, J. C. Ferris.
 CHICAGO.—Continental National Bank; Vice-President, John C. Black; Douglass Hoyt, Cashier, in place of John C. Black; Ira P. Brown, Assistant Cashier, in place of Douglass Hoyt. — Union National Bank; no 2d Assistant Cashier in place of J. M. Thirde.
 FARMER CITY.—First National Bank; R. V. Crawford, President, in place of J. B. Lewis; T. H. Slick, Vice-President, in place of A. M. Cumming; James H. Harrison, Cashier, in place of Frank J. Miller; Assistant Cashier, Isaac T. Houseman.
 HOPEDALE.—Hopedale Bank (Hobart & Orendorf); sold to W. H. Schultze.
 MATTOON.—Mattoon National Bank; no Vice-President in place of Mark Kohn.
 PEKIN.—Farmers' National Bank; F. E. Rupert, President, in place of Jonathan Merriam; Vice-President, F. Shurtleff; A. H. Purdie, Cashier, resigns; Assistant Cashier, C. H. Turner.
 PEORIA.—Dime Savings Bank is new bank here. President, Elliot Callender; Treasurer, Henry P. Ayres.
 SYCAMORE.—Sycamore National Bank; no Vice-President in place of J. N. Perry.
 WARSAW.—Hill, Dodge & Co. have recently commenced business here. Capital, \$50,000. President, Wm. Hill; Cashier, J. B. Dodge.
 WAUKEGAN.—First National Bank; Vice-President, Nelson A. Steele.
 WYOMING.—Scott & Wrigley; Assistant Cashier, G. S. Rakestraw.

INDIANA.

CONNERSVILLE.—First National Bank; Assistant Cashier, J. C. Mount.
 CRAWFORDSVILLE.—First National Bank; Samuel W. Austin, Cashier, in place of C. H. Davidge.
 FORT WAYNE.—First National Bank; John H. Bass, President, in place of Oscar A. Simons, deceased; W. Fleming, Vice-President, in place of John H. Bass.
 GREENCASTLE.—Central National Bank; Alfred Hirt, President, in place of R. L. O'Hair; M. L. McHaffie, Vice-President, in place of Alfred Hirt; R. L. O'Hair, Cashier, in place of Daniel W. Lovett.
 GREENSBURG.—Third National Bank; Walter W. Bonner, Cashier, in place of Cortez Ewing; Putnam Ewing, Assistant Cashier, in place of W. W. Bonner.
 INDIANAPOLIS.—Merchants' National Bank; no Vice-President in place of H. C. G. Bals.
 KOKOMO.—Howard National Bank; John A. Jay, Cashier, in place of Wm. P. Valle.
 LA PORTE.—First National Bank; Wm. Niles, President, in place of S. S. Sabin, deceased; Vice-President, H. D. Morrison.
 LEBANON.—First National Bank; G. W. Baird, President, in place of W. J. Devol; Levi Lane, Vice-President, in place of G. W. Baird.
 MARTINSVILLE.—First National Bank; C. A. McCracken, Cashier, in place of A. E. Graham; no Assistant Cashier in place of C. A. McCracken.
 MUNCIE.—Citizens' National Bank; W. M. Marsh, Cashier, in place of John Marsh, deceased; no Assistant Cashier in place of W. M. Marsh.
 PIERCETOWN.—Froehly Brothers are reported here.

SEYMOUR.—First National Bank; J. H. Andrews, Vice-President, in place of James H. Blah.

SHELBYVILLE.—First National Bank; John Messick, President, in place of John Elliott.

IOWA.

CRESTON.—Creston National Bank; Assistant Cashier, W. J. Donlin.

DES MOINES.—Des Moines Savings Bank; Geo. B. Hippee, Cashier, in place of J. W. Geneser; Assistant Cashier, J. W. Geneser.

FORT DODGE.—First National Bank; R. P. Furlong, Vice-President, in place of H. Norton. — Merchants' National Bank; Webb Vincent, President, in place of A. McBane; J. M. Mulroney, Vice-President, in place of Webb Vincent.

GRINNELL.—First National Bank; Chas. F. Craver, President, in place of J. P. Lyman; H. K. Edson, Vice-President, in place of Chas. F. Craver.

HAMBURG.—First National Bank; succeeded by Bank of Hamburg. Same officers. Capital, \$100,000.

INDEPENDENCE.—People's National Bank; Thomas Edwards, Vice-President, in place of A. H. Trask.

LEWIS.—Bank of Lewis; being wound up on account of decease of L. O. Reinig, proprietor.

LITTLE SIOUX.—B. F. Freeman is in business here. Style, Little Sioux Bank.

MONTEZUMA.—First National Bank; C. A. C. Harris, Vice-President, in place of Thomas Harris.

MT. PLEASANT.—National State Bank; J. H. Whiting, President, in place of Timothy Whiting; Geo. H. Spahr, Vice-President, in place of J. H. Whiting.

ORANGE CITY.—Bank of Northwestern Iowa; Assistant Cashier, W. S. Short.

SIOUX CITY.—Commercial State Bank; Louis H. Brown, Cashier, in place of Charles F. Luce. — Iowa Savings Bank and Sioux City Savings Bank; by a transposition these banks are wrongly reported in the "Bankers' Directory." The capital and surplus of the former are \$100,000 and \$10,000 respectively. Of the latter, \$50,000 and \$5,000. Since January, the surplus of former has been increased to \$12,000.

SUTHERLAND.—First National Bank; Vice-President, James Porter.

WATERLOO.—First National Bank; Vice-President, Allen T. Lane.

WHAT CHEE.—First National Bank; John G. Schott, Vice-President, in place of J. A. Vincent.

KANSAS.

ADMIRE.—Farmers' Bank; President, W. Wayman; Cashier, Fremont Miller.

ANTHONY.—Anthony National Bank; H. M. Denlinger, Vice-President, in place of D. M. Kirkbride; F. D. Denlinger, Cashier, in place of H. M. Denlinger; no Assistant Cashier in place of F. D. Denlinger.

ATCHISON.—United States National Bank; Assistant Cashier, L. A. Wheeler. — German Savings Bank; merged in United States National Bank.

COFFEYVILLE.—H. H. Isham; discontinued.

COLBY.—Farmers & Merchants' Bank is new bank here. President, Chas. Buschow; Vice-President, A. Lauterbach; Cashier, David Zerwekh.

ELLSWORTH.—First National Bank; A. N. McLennan, President, in place of I. W. Phelps; J. H. Clark, Vice-President, in place of A. N. McLennan; Assistant Cashier, T. W. Hall.

FORT SCOTT.—Citizens' National Bank; C. W. Goodlander, Vice-President, in place of James H. Brown; Assistant Cashier, G. W. Katzung.

GOVE.—Gove County Bank is new bank here. Capital, \$12,000. Proprietors, Dudley, Lloyd & Heath; Cashier, Boyd Dudley; Assistant Cashier, W. J. Lloyd.

HARPER.—Harper National Bank; H. C. Munger, President, in place of Joseph Munger; N. H. Grove, Vice-President, in place of Geo. Yoakman.

HOLLYROOD.—Bank of Hollyrood is reported here. President, M. P. Westfall; Cashier, A. W. Baker.

HUTCHINSON.—W. H. Bohart (Bank of Hutchinson); succeeded by W. F. & J. M. Mulkey. **JOHNSON CITY (P.O.).**—Stanton County Bank has been recently opened. Capital, \$50,000. President, I. W. Pack.

KINGMAN.—Kingman National Bank; Vice-President, H. W. Lewis; Assistant Cashier, J. H. White.

KINSLEY.—Edwards County Bank; A. Hobbs, President, deceased.

LATHAM.—Citizens' Bank; sold to Bank of Latham.

LONG ISLAND.—Duquesne State Bank is reported here. Capital, \$50,000. President, A. C. Hays; Vice-President, M. D. Hays; Cashier, Jas. S. Bartholomew.

NORTONVILLE.—Nortonville Savings Bank is new bank here. Proprietors, A. J. Perry & Co.

OVERLIN.—First National Bank; Assistant Cashier, C. M. Francoe.

SMITH CENTER.—Smith County Bank; succeeded by Smith County National Bank. Capital, \$50,000. President, Orson W. Sheldon; Vice-President, John Hall; Cashier, Albert W. Sheldon; Assistant Cashier, E. E. Brown.

STERLING.—First National Bank; Assistant Cashier, C. Hawkins.

WICHITA.—Savings Bank of Wichita has recently commenced business.

WINFIELD.—Winfield National Bank; Vice-President, Wm. S. Kenny.

KENTUCKY.

CAMPBELLVILLE.—Bank of Campbellville has been recently opened for business. Capital, \$50,000. President, John H. Chandler; Cashier, John N. Turner.

CYNTHIANA.—Farmers' National Bank; Paul King, Cashier, deceased.

DANVILLE.—Citizens' National Bank; John J. Craig, President, in place of M. J. Farris; J. L. Bruce, Vice-President, in place of J. J. Craig.

LOUISVILLE.—Third National Bank; C. H. Wulkop, Cashier, in place of E. C. Bohné; no Assistant Cashier in place of C. H. Wulkop. — Western Bank; Cashier, E. F. Freese.
 SOMERSET.—National Bank of Somerset; J. M. Richardson, President, in place of A. Gibson; no Vice-President in place of J. M. Richardson.
 WINCHESTER.—Clark County National Bank; James Hodgkin, Vice-President, in place of R. H. Prewitt.

MAINE.

AUGUSTA.—First National Bank; W. B. Nickels, Cashier, in place of John W. Logler.
 BANGOR.—Kenduskeag National Bank; J. S. Wheelwright, President, in place of W. B. Hayford, deceased.
 LEWISTON.—Manufacturers' National Bank; C. S. Barker, Vice-President, in place of James Dempsey.
 OAKLAND.—Mescalonsakee National Bank; L. D. Emerson, Vice-President, in place of S. Blaisdell.
 PORTLAND.—Cumberland National Bank; Vice-President, Wm. H. Moulton.

MARYLAND.

BALTIMORE.—Second National Bank; Vice-President, Chas. C. Horner. — College Dime Savings Bank; closed.

MASSACHUSETTS.

Extracts from Recent Letters.—The following communications, in connection with those appearing on pages 835 and 836, are fair samples of very many letters received at this office. As may be seen, they are all of recent date. There are one or two so-called Bankers' publications in this city that print very stale commendations of their mis-named sheets—without date or place—and very often bearing on their face the evidence of made-to-order puffs. The few printed in this issue are given simply to show the drift of the tide—a flood tide that has no indications of ebbing:

Editor Rhodes' Journal of Banking:
BANK OF GOLDEN,
 GOLDEN, Colo., March 1, 1887.
 SIR:—Your new *Bankers' Directory* at hand. It is in good shape, correct, handy, and your firm, which publishes the best Bankers' JOURNAL in America, deserves great credit for the excellence of everything it undertakes. A. M. HAWLEY, Cashier.

Editor Rhodes' Journal of Banking:
DIAMOND NATIONAL BANK,
 PITTSBURGH, Pa., March 1, 1887.
 SIR:—We have received a copy of your *Bankers' Directory & Collection Guide*. Like your monthly JOURNAL OF BANKING, it is a part of the necessary equipment of a well-regulated bank. Yours truly, JOHN A. SCULLY, Cashier.

Editor Rhodes' Journal of Banking:
THE NATIONAL BANK & LOAN COMPANY,
 WATERTOWN, N. Y., March 4, 1887.
 SIR:—Your *Bankers' Directory* is the most correct, neatest, and handiest volume I have ever seen. Respectfully yours, C. L. PARMELEE, Cashier.

Editor Rhodes' Journal of Banking:
DREXEL & CO.,
 PHILADELPHIA, March 4, 1887.
 SIR:—We acknowledge with thanks the receipt of your *Bankers' Directory & Collection Guide*. It is a convenient and useful book. DREXEL & Co.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, March 2, 1887.

THE FEATURES of general trade are considerably improved, chiefly on account of the ending of the labor strikes. The iron and steel trades remain comparatively quiet. Stocks on hand are small and prices firm. A fact which prevents an advance in price is the knowledge that it would only increase imports from abroad. There is said to be less disposition than formerly to carry out railway extensions since the passage of the Inter-State Commerce bill. However this may be, news of such projects comes from all quarters. The cotton trade is active, but the woolen trade is not so brisk.

The Inter-State Commerce law was for some weeks a prominent factor in financial affairs, the railroad men generally and the investing public fearing that it might have a ruinous effect upon the transportation interests of the country. The more the Act is examined, however,—and it has been criticized and scanned pretty thoroughly—the more it appears that the railroads will be far better off under it than before. It is certain that the companies are everywhere preparing to act in concert by accepting its provisions in good faith, and not try to evade them, as they doubtless would were the law to be as disastrous as at first predicted. A summary of the different sections of the bill appears in this number of the JOURNAL on page 268.

Since nothing of utility to the business of the country was to be expected from the expiring Congress, its adjournment has been received with a sigh of relief. Bills were enacted by it that should not have passed, and many measures of practical benefit to the country failed to receive its support. In the latter category may be classed the failure to stop the further coinage of silver dollars and remove a source of anxiety to every prudent business man in the country, or to reduce the present excessive taxation and prevent the accumulation of a surplus which is a source of corruption, embarrassment and danger to the money market.

The repeated rumors of the probability of a great war in Europe have for some time had an unfavorable effect upon the market for securities here as well as abroad. Should a war break out it would cause an increased demand for American stocks and bonds because they would offer a more stable investment to foreigners than many European issues. It is feared, however, that the immediate effect of war would be a call for gold from this country, inducing a restricted money market. The serious break in the stock-market last December was caused by tight money, and people are afraid of a repetition of that experience. The bank loans in this city have lately been expanded to the largest amount ever before known, although this is by no means the usual time of the year for loans to be very large. At the same time there have been some exports of gold, but not important in the aggregate. Considerable money has been going into the Treasury on balance, so that the reserve of the New York banks has been largely reduced; but, notwithstanding these facts, there has been no pressure for money. The Treasury payments this month will be large, and tend to ease matters. Among the rest the trade dollars which many people have been holding for years will be offered promptly and redeemed, bringing their amount into use in other money. The bank clearings, as compiled from week to week, generally indicate an increase of genuine business throughout the country. The record of business failures is encouraging. "Bradstreet's" reckons the total number in the United States since January 1st at 2,141 against 2,301 in 1886, 2,851 in 1885, and 2,841 in 1884.

FOREIGN EXCHANGE.—The rates a week or two ago were up to the gold exportation point, but are now considerably lower. Following are the posted

and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.85½@4.86; sight, nominal, \$4.88½@4.89; 60 days, actual, \$4.84½@4.85; sight, actual, \$4.87½@4.87¾; Cable transfers, \$4.87¾@4.88¾; Prime commercial sterling, long, \$4.83½@4.83¾; Documentary sterling, 60 days, \$4.83@4.83¼; Paris, bankers', 60 days, 5.22½@5.21½; sight, 5.20½@5.20; Paris, commercial, 60 days, 5.25@5.24½; sight, 5.22½@5.20½; Antwerp, commercial, 60 days, 5.25½@5.25; Swiss, bankers', 60 days, 5.22½@5.21½; sight, 5.20½@5.20; Reichsmarks (4), bankers', 60 days, 95½@95¼; sight, 95½@95¼; Reichsmarks (4), commercial, 60 days, 94¾@94½; sight, 95½@95¼; Guilders, bankers', 60 days, 40 1-16@40½; sight, 40¼@40 5-16; Guilders, commercial, 60 days, 39 13-16@39½; sight, 40@40 1-16; Copenhagen, Stockholm and Christiania, krona, 60 days, 26½; sight, 26½; Paris dispatches quote exchange on London 25f. 88½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on February 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of January and February:

Jan.	BANKERS—		Cable	Commercial.	PARIS	
	60 days.	Sight.	Transfers.		60 days.	Sight.
Highest...	4.85½	4.89	4.88¾	4.84	5.26	5.23½
Lowest...	4.81	4.85	4.85	4.79½	5.22½	5.19½
Feb. 1.....	4.85½	4.89	4.88¾	4.84	5.21½	5.19½

English silver.....	4 75 @	4 80	Fine gold bars par @ ¼ % premium on the		
Five francs.....	92 @	95	Mint value.		

MONEY AND DOMESTIC EXCHANGE.—The supply of ready money has been lessened of late, but there is no stringency. Loans on collateral have ranged from 2 to 5 per cent., 3 to 4 per cent. being most common. Prime commercial paper is quoted at 4½ to 5 per cent., other grades ranging up to 6½ per cent. Following are the rates of domestic exchange on New York: Savannah, ½ discount; selling 1-16 premium. Charleston, buying par 1-16; selling ¼@¼ premium. New Orleans commercial, 50c. per \$1,000 discount;

bank, \$1 per \$1,000 premium. St. Louis, 75c. per \$1,000 discount. Chicago, 75c. per \$1,000 discount.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of March, 1887, and, for comparison, on the 1st of February and January, 1887, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Mar. 1, 1887.	Feb. 1, 1887.	Jan. 1, 1887.
Gold coin and bullion.....	\$275,068,626	\$274,140,469	\$268,128,018
Gold certificates outstanding.....	99,958,365	105,665,107	97,215,605
Gold owned by Treasury.....	\$175,130,261	\$168,475,362	\$170,912,413
Silver dollars and bullion.....	\$202,812,943	\$198,840,822	\$198,245,614
Silver certificates outstanding.....	121,130,755	118,315,714	117,246,670
Silver owned by Treasury.....	\$81,682,188	\$80,525,108	\$75,998,944

The gold balance is larger than for some time past, but a bond call is just due, and there are other payments to be made soon. The amount of silver in the Treasury is nearly \$14,000,000 larger than it was on December 1st last. This difference is more than balanced, however, by the increase in certificates outstanding.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of February and the highest and lowest during the month. Actual sales marked * :

Ex. Int.	4½%, '91, coup.	4s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.	Ex. Int.	4½%, '91, coup.	4s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.

+ Ex-interest.

The Treasury Department recently issued the 147th call, being for \$10,000,000 in 3 per cent. bonds. The call will mature April 1st. The following is a description of the bonds: Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50, original No. 24 to 25, both inclusive. \$200, original No. 352 to 374, both inclusive. \$500, original No. 149 to 162, both inclusive, and original No. 4,235 to 4,236, both inclusive. \$1,000, original No. 1,222 to 1,320, both inclusive. \$10,000, original No. 2,886 to 3,958, both inclusive. Total, \$10,007,730. Parties holding bonds called can obtain immediate payment, with interest to date of presentation, by requesting the same in the letter forwarding the bonds for redemption.

THE NATIONAL BANK CIRCULATION was decreased \$4,024,770 during the past month, leaving the total now outstanding \$288,768,682. The decrease since February 1, 1886, is \$28,977,689. The amount of legal-tender money on

deposit with the Treasurer to redeem National bank notes is now \$97,763,956, an increase of \$5,238,850 during the last month and of \$46,065,073 during the past twelve months.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Mar. 1, 1887.	Feb. 1, 1887.	Jan. 1, 1887.	Dec. 1, 1886.
Currency 6 per cents.....	\$3,241,000	\$3,201,000	\$3,680,000	\$3,645,000
4½ per cents.....	60,468,400	60,064,400	59,636,200	59,019,050
4 per cents.....	112,755,450	113,300,000	113,903,200	115,252,700
3 per cents.....	39,299,300	48,483,100	52,218,950	58,994,450
Total.....	\$215,764,150	\$225,038,500	\$229,438,350	\$236,911,200

ASSOCIATED BANKS OF NEW YORK.—There has been a remarkable expansion of loans for this season of the year, the amount being larger than ever before. The money reserve is drawn down to moderate proportions, and there has been some calling in of loans on securities, but not to any great extent.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1886 and 1885:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Feb. 26....	\$368,413,500	\$87,068,800	\$21,189,900	\$887,462,800	\$7,606,700	\$11,393,000
Feb. 19....	367,350,000	91,647,200	21,776,700	891,778,800	7,646,600	15,479,200

RAILROAD AND MISCELLANEOUS STOCKS.—The market for the more stable securities has been a waiting one, with small fluctuations. The tendency is upward, however, as the rumors of war in Europe grow less frequent. The most remarkable dealings have been in Cotton Oil Trust certificates and Richmond Terminal, Reading and Union Pacific stocks, which have moved according to causes peculiar to each. The railroad earnings generally compare favorably with those of last year, and the present prices of stocks are moderate compared with the highest of last autumn.

While a very considerable increase has been noticed in railroad bond transactions during the past month, the general investment market still remains dull and comparatively quiet, the inquiry being for limited amounts and for the very choicest securities only. An impression has gained considerable currency in the "Street" that more than one of the recent high-sounding syndicate transactions in low-rate bond issues was not as successful as the public have been led to believe. It is openly alleged that the syndicates are still the happy owners of the greater portion of their original holdings, the "dear public" not having been induced to invest very liberally.

There are the usual conflicting rumors regarding Jersey Central's future. An announcement is made one day that a plan of reorganization has been perfected and all the details ready to be made public, only to be upset the next by a contrary statement. All that can be positively stated is, that there must be a settlement with Reading first, after which a financial statement will be prepared, and the Committee on Reorganization will then have a definite basis on which to proceed to reorganize.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of February, the highest and lowest since January 1, 1887, and also during the year 1886:

	FEBRUARY, 1887.			SINCE JANUARY 1, 1887.		YEAR 1886.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

FIRST NATIONAL BANK.

Editor Rhodes' Journal of Banking:

LANDER, Wyo. Ter., February 10, 1887.

SIR:—Herein find draft to pay for our subscription to your valuable JOURNAL, together with your Directory for 1887. We should dislike very much to be without your publications.

Yours truly,

SAM'L. C. PARKS, JR., Cashier.

O'CONNOR & SULLIVAN, BANKERS.

Editor Rhodes' Journal of Banking:

SAN ANTONIO, Tex., February 11, 1887.

SIR:—Enclosed I beg to hand you draft for subscription. I consider your JOURNAL OF BANKING a most valuable publication for the use and advancement of our modern American bankers.

Yours truly,

A. HANSEL, Cashier.

FIRST NATIONAL BANK.

Editor Rhodes' Journal of Banking:

BRUNSWICK, Ga., March 1, 1887.

SIR:—A copy of your Bankers' Directory & Collection Guide was received to-day. Am very much pleased with its appearance and adaptability for ready reference.

Yours truly,

J. L. N. HENMAN, Teller.

BANKERS' OBITUARY RECORD.

Cutting.—Mr. Robert L. Cutting, a prominent banker of New York, died on February 25th, aged 75 years. He was a member of the New York Stock Exchange nearly thirty-seven years, but retired in 1881.

Farwell.—Mr. George N. Farwell, a prominent banker of Claremont, N. H., died on February 24th, aged 83 years. In 1848 he organized the Sullivan Savings Institution and in 1849 the Claremont Bank, which subsequently became the Claremont National Bank, of which he was President at the time of his death. He served several terms in the Legislature, and filled positions of trust for over fifty years. He leaves two sons, one of whom, John L. Farwell, is Treasurer of the Savings Institution.

Goodall.—Mr. Albert G. Goodall, President of the American Bank Note Company, died on February 19th, aged 61 years.

Hayford.—The Hon. William B. Hayford, President of the Kenduskeag National Bank, of Bangor, Me., died on February 8th, aged 59 years. Mr. Hayford was elected Mayor of Bangor in 1876. He was a Trustee of the Bangor Savings Bank at the time of his death.

Head.—Mr. George S. Head, formerly President of the Second National Bank, of Pittsburgh, Pa., died on February 4th, aged 68 years.

Hickling.—Mr. George M. Hickling, of the banking firm of G. M. Hickling & Co., of Philadelphia, Penn., died on January 31st, aged about 82 years. He was a senior member of the Philadelphia Stock Exchange, having been a member of the Board for almost sixty years.

Laighton.—Mr. Albert Laighton, for twenty years Teller of the Rockingham National Bank, died at his home in Portsmouth, N. H., on February 6th, aged 58 years. He acquired considerable celebrity as a poet.

Masten.—Mr. Peter Masten, one of the organizers of the State of New York National Bank, died at Kingston, N. Y., on February 18th, from paralysis of the heart, aged 70 years.

Palmer.—Mr. Nicholas Fletcher Palmer, formerly President of the Leather Manufacturers' National Bank, of New York city, died on February 27th, aged 74 years. He was connected with the bank for fifty years, passing through the several grades of employment leading up to the Presidency. He was presented with a magnificent silver service in April, 1886, in commemoration of the completion of half a century of labor for the bank. He resigned from the bank last December owing to ill-health.

Reinig.—L. O. Reinig, proprietor of the Bank of Lewis, Lewis, Iowa, died on January 30th.

Stokes.—Mr. Henry Stokes, a well-known New York banker, died on February 11th, aged 81 years. He was Vice-President of the Manhattan Savings Institution, of New York city, for a number of years, and also an active Director in the Union Trust Company, the Citizens' National Bank and other financial institutions.

Thacher.—The Hon. George H. Thacher, Vice-President of the City Bank, of Albany, N. Y., died in that city on February 15th, aged 69 years. He was elected Mayor of Albany in 1860, and served four terms. At the time of his death he was worth about \$1,000,000.

Wells.—The Hon. Chandler J. Wells, one of the founders of the Erie County Savings Bank, of Buffalo, N. Y., died on February 4th, aged 72 years. He was Mayor of Buffalo in 1860, and for many years was very active in advancing the interests of that city.

BANK OF RADCLIFFE.

Editor Rhodes' Journal of Banking:

RADCLIFFE, Iowa, February 15, 1887.

SIR:—The December number, Volume XII., of RHODES' JOURNAL OF BANKING is before me. I like it very much. Enclosed find draft for subscription.

Yours,

H. D. BALLARD, *Cashier.*

CONCHO NATIONAL BANK.

Editor Rhodes' Journal of Banking:

SAN ANGELO, Texas, February 25, 1887.

SIR:—Enclosed find draft, for which please send JOURNAL as before. We can't do without it.

Yours,

R. B. TALBERT, *Cashier.*

[In January this subscriber ordered the JOURNAL discontinued, and, in accordance with an invariable rule of this office, his request was promptly complied with. The above letter, therefore, is especially significant. Our publications are only sent to those who want them. No forcing process is permitted here.—B. R. & Co.]

WINTON & DEMING STATE BANK.

Editor Rhodes' Journal of Banking:

ASHLAND, Kansas, February 25, 1887.

SIR:—Your Bankers' Directory (the red book) received, and the least we can say is that we are greatly pleased with the same. It is the best publication we know of—and we have used them all.

Yours truly,

H. E. TAYLOR, *Cashier.*

RHODES' JOURNAL OF BANKING.

Vol. XIV.

APRIL, 1887.

No. 4.

MENTION was recently made in the JOURNAL of efforts to establish savings banks in Illinois on the system prevailing in New York and Massachusetts. It is gratifying to note that similar plans are progressing in Missouri, a number of prominent residents of St. Louis having obtained the introduction of a bill in the Legislature to incorporate a genuine savings bank system. That is to say, the banks are to be managed by Trustees serving without compensation; they are to pay not over 4 per cent. on deposits; the method in which the deposits shall be invested is strictly prescribed; the banks are prohibited from discounting or carrying on a commercial banking business; and they are to report to and be examined by the State authorities. As the *St. Louis Republican* says: "There are many banks in St. Louis—enough to accommodate the business interests; but they do not want the small sums that make up the monthly, weekly or daily savings of working people, teachers, clerks, messengers, servants and other wage-earners, and this large class of our citizens are forced to keep their money as they best can. Many do not save because of the want of a safe place to deposit their savings." It is to be hoped that this state of affairs will no longer exist. It is much better, besides, for the people to establish banks themselves than to ask the Government to do it for them, especially as the Government has no way of using the deposits to advantage. Every State in the Union should have a savings bank system similar to the one shortly to be introduced in Illinois and Missouri, which, in the main, is founded on the principles underlying the provident savings banks in New York and the New England States. Some idea of the success of savings banks in the State of New York may be formed by reading the report of Bank Superintendent Paine in this number of the JOURNAL.

THE QUESTION WHETHER OR NOT a monetary panic is likely to occur this year on account of the failure of Congress to dispose of the Treasury surplus has aroused considerable interest. While the late Congress fully deserves all the criticism so far received for its short-

comings, yet the reasons given for expecting trouble to the money market from the cause mentioned are insufficient. If the three per cents. are all redeemed before the next session of Congress, and money is accumulating in the Treasury, most assuredly the Secretary of the Treasury will buy $4\frac{1}{2}$ or 4 per cent. bonds. The belief that, if he does this, the bonds will go up to an extravagant figure is not well founded. If money is scarce some of the holders would rather sell at the present high premium in order to use their capital to better advantage. There would be free competition among the bondholders, and the price of the bonds in the open market would be governed by the price of other good securities. The money paid by the Department would go more directly into the channels of trade than the money paid now for the three per cents., which is left in the Treasury, to a great extent, in order to redeem the bank circulation now issued against the bonds. The period during which there is a chance of money accumulating in the Treasury covers only a few months preceding the next session of Congress. At that time a policy of some kind in relation to disposing of the surplus will perhaps be decided upon.

MR. EDWARD ATKINSON, of Boston, has recently written a strong argument in favor of redeeming Greenbacks. [The letter is printed in full in this issue of the JOURNAL—see "World of Finance."] He shows that the various other kinds of money in the country (gold coin, silver coin, gold certificates, silver certificates and National bank notes) have some tangible value or capital upon which they are based, but the legal-tender notes are simply evidences of debt due from the Government. Strangely enough, however, the National banks are permitted to use these notes as part of their reserve instead of coin or coin certificates. It seems to be assumed, he says, that if the Greenbacks were redeemed the effect would be either like "a great withdrawal of actual capital from its customary use or a large quantity of coin from the banks to be piled away idle in the Sub-Treasury of the United States." This common view of the matter is certainly erroneous, as the notes are mere promises of the Government to pay money; and, being once redeemed, there is no necessity for their reissue. This simple, natural and honest method of disposing of the Treasury surplus is one less often thought of than it should be.

F. E. SPINNER, formerly Treasurer of the United States, who has been living in retirement for a number of years past in Florida, recently wrote his views on the silver coinage to a banker friend in the North. He considers the existing silver legislation dangerous and mischievous, and warns his friend to prepare for the "storm that is sure to come when we shall pass from the gold standard of the commercial world to our alternate depreciated silver standard." There is nothing new in this warning, but it should not be forgotten that the country's finances

are moving directly toward the danger mentioned, and that it has been so far avoided is mainly due to the superior administration of the laws as compared with financial legislation. Very likely timely warning will be given by the state of the Treasury before gold will go to a premium. This may suffice for ordinary business transactions, but in making their engagements a long time ahead wary business men will not leave it out of consideration. Of course, no important change will occur very soon.

A STRONG EFFORT HAS BEEN MADE during the present session of the Pennsylvania Legislature to pass a measure favoring a State supervision of banks. It met considerable opposition, however, many of the members thinking it was a scheme to persecute the banks, and on March 15th it was defeated in the Assembly on its final passage. The vote was reconsidered, however, and the bill may come up again. Laws similar to those embodied in this bill have been enacted for many years in a number of States, and neither the banks doing business under their provisions nor the public have found them open to the objections brought forward at Harrisburg. It is perfectly competent for the Legislature to require that banks incorporated under State laws shall make regular reports of their condition, which should be published. In order that the reports may be properly compiled and published it is necessary that the matter be put in charge of an officer appointed for the purpose, as in New York, Minnesota and many other States, or else the work will be done in a merely perfunctory manner. The examination of State banks should also be provided for. Under a system devised to carry out these ends well-managed banks will flourish and weak or badly-managed ones be weeded out. The history of Pennsylvania banking for a few years past shows the necessity of this reform.

A NUMBER OF BILLS have been offered in the Massachusetts Legislature to widen the scope for investing savings bank funds, which has lately become somewhat restricted. One of these measures proposes to extend the limit applied to loans on personal security or three-named bills receivable from $33\frac{1}{4}$ to 40 per cent. of the deposits; but this might be rejected, as discounting bills should be left to purely commercial banks. Another proposal, to allow investments in the first mortgage bonds of any railroad that has earned and paid dividends for ten consecutive years, has been criticised on the ground that it is based on the "theory that increase of revenue is of first importance, whereas the cardinal principle in dealing with savings deposits certainly should be security first, last and always, and revenue an after consideration." Security should certainly be the cardinal principle, but, after this has been provided for, it is foolish to ignore the importance of profit to the depositor. It is a part of the inducement to save that a fair profit can be earned on the money. It is surely true that the losses to savings bank depositors in past years—small as they are—can be traced to laxity in the laws governing investments; but now that State supervi-

sion of these institutions is much more closely applied than formerly it does seem necessary for the good of the system that a little wider latitude in the way of investments could safely be accorded.

THE SCARCITY OF SMALL BILLS gives rise from time to time to a great many misunderstandings. Treasury officials, the banks and even bear speculators have been blamed for a lack of sufficient one and two-dollar notes. It is argued that the present state of affairs could not arise from an increase in business transactions, because this was gradual, while the scarcity of notes has been suddenly felt. This idea is far from being correct. It is comparatively a long time since the Treasury Department ceased printing one and two-dollar greenbacks, which caused an inquiry during the past session of Congress, but it seems that this did not change the rule not to put any more small bills in circulation. The object of Secretary Manning was to produce an outlet for the circulation of silver dollars. This policy did not suit the silver men, and Congress provided for issuing small silver certificates, which were only begun a few months ago; but the supply does not meet the present demands of business. During the clamor the bright idea of circulating the "stove-lid" dollars does not seem to have occurred to any person. However, the Treasury presses are once more at work on small certificates, and the policy of tiding over a temporary difficulty at the cost of future disaster is being continued.

BY PASSING AN ACT to redeem trade dollars, Congress did but simple justice to holders of the coins. Their rights have been persistently delayed by arguments to the effect that the coins were not issued for general circulation, but merely for foreign use, as if this could relieve the Government from all responsibility for money issued from its Mint, stamped with its insignia, and created by law as coin of the United States and a legal-tender in sums of not over five dollars. Many newspapers considered it a strong argument against recognizing the trade dollars because they had fallen into the hands of speculators. It is certain that speculators have gained little or nothing by the transaction, because they lost the interest for a number of years on the money they had invested in trade dollars. Besides, is not any repudiated Government obligation sure to go into the hands of speculators? That is a favorite argument with repudiators generally. Honest people should not use reasons in one case that they ignore and contest when brought forward in similar transactions.

THE UNITED STATES has an advantage over most other countries in being a large producer of precious metals. Its mines yielded \$35,000,000 of gold last year (not an extraordinary output), and, if it had exported most of this, it would be no poorer in the metal than the previous year. A large amount of gold could be exported this year without affecting the finances of the country in the slightest degree.

NATIONAL BANK RESERVE CITIES.

One of the final acts of Congress at its last session was to provide for an increase in the number of National bank reserve cities. The Act amends Sections 5,191 and 5,192 of the Revised Statutes, which specify in what cities National banks may keep a portion of their reserve to secure deposits.

The cities named as reserve cities in the Revised Statutes are New York, Boston, Chicago, Cincinnati, Cleveland, Philadelphia, Pittsburgh, Baltimore, Washington, Albany, Louisville, New Orleans, Detroit, Milwaukee, San Francisco and St. Louis.

The National banks in these cities are required to maintain a cash reserve equal to 25 per cent. of their deposits, but are allowed to keep one-half of this reserve in New York city banks.

The banks outside of the sixteen cities named are required to keep a reserve of 15 per cent., of which they are allowed to keep three-fifths on deposit with reserve city banks.

The law passed by Congress now provides that whenever three-fourths of the National banks located in any city having a population of 50,000 shall make application to the Comptroller of the Currency in writing, asking that the name of the city in which such banks are located shall be added to the list of cities named in Sections 5,191 and 5,192 of the Revised Statutes, the Comptroller shall have authority to grant such request, upon the condition that every bank located in such city shall at all times thereafter have on hand an amount equal to at least 25 per cent. of the deposits as provided in said sections of the Revised Statutes.

The law also provides that, whenever three-fourths in number of the National banks located in any city having a population of 200,000 shall make application that such city may be a central reserve city like the city of New York, in which one-half of the lawful money reserve of the National banks located in other reserve cities may be deposited, as provided in Section 5,195 of the Revised Statutes, the Comptroller shall have authority, with the approval of the Secretary of the Treasury, to grant such request upon the condition that every bank located in such city shall at all times thereafter have on hand 25 per cent. of its deposits.

The Comptroller of the Currency has decided that the application of any bank to have the city in which it is located made either a reserve or a central reserve city must be authorized by a majority of the Directors, so that there can be no question raised as to the authenticity of the application.

The object of the law has been stated to be to distribute more evenly the reserve fund throughout the country, and particularly to keep the reserve from increasing in New York, there to be used for speculative purposes.

Whether the law will accomplish any such result is a very doubtful question. In the first place, legislation is not likely to prevent money going to the commercial centre which is the most convenient point and the only place where large amounts can be employed. New York banks pay interest for money deposited with them by outside banks, and thus attract the reserves

of other cities. The banks of other reserve cities have for years paid larger rates of interest for deposits without affecting the amounts held in New York.

The provisions of the law relative to reserve cities do not hold out the advantages which at a first glance they seem to do. All banks in reserve cities must hold a 25 per cent. reserve, while in other places only 15 per cent. is required. Nor do the latter have to hold in cash in their vaults more than two-fifths of their 15 per cent. reserve, while the reserve city banks are compelled to hold one-half of their 25 per cent. reserve in cash.

The difference may be shown by assuming that the deposits of a bank in each class are \$1,000,000 each. The reserve city bank will have to hold \$250,000 of reserve, of which \$125,000 must be in actual cash and \$125,000 on deposit, if the bank so chooses, in a central reserve bank. The bank which is not in a reserve city is required to hold a reserve of only \$150,000, of which \$60,000 must be in cash and \$90,000 may be deposited in a reserve city bank. In the first case the bank can use \$875,000 of its deposits, in the second case \$940,000.

The effect of this provision of the law is seen in the amount of cash reserve and reserve held with agents by banks in reserve cities and other banks at different periods. To show this below are given the amounts reported at the close of each of the past ten fiscal years, as follows :

October 1st.	RESERVE CITIES OUTSIDE OF NEW YORK.		OTHER BANKS.	
	Cash reserve.	Deposited with reserve agents.	Cash reserve.	Deposited with reserve agents.
1877.....	\$39,900,000	\$24,400,000	\$35,800,000	\$48,900,000
1878.....	38,800,000	29,100,000	39,100,000	58,000,000
1879.....	44,300,000	35,700,000	41,800,000	71,300,000
1880.....	53,300,000	48,200,000	49,500,000	86,400,000
1881.....	56,500,000	40,600,000	54,600,000	82,400,000
1882.....	52,400,000	33,200,000	60,000,000	80,100,000
1883.....	56,400,000	40,800,000	62,000,000	84,100,000
1884.....	63,600,000	32,300,000	66,100,000	79,700,000
1885.....	76,900,000	42,400,000	71,400,000	95,900,000
1886.....	70,500,000	41,300,000	77,900,000	90,500,000

It will appear from the above that the total cash reserve carried by the banks outside of reserve cities in October, 1886, was only \$7,400,000 more than that held by the reserve banks outside of New York, while they had \$58,200,000 more deposited with reserve agents. Yet the net deposits of the reserve cities amounted to only \$381,500,000, while in the remaining banks they aggregated \$637,600,000. That is, with about 75 per cent. more deposits, the outside banks carried only about 10 per cent. more cash in their reserve. In 1885 the cash reserve of outside cities was smaller than that of the reserve cities, although the deposits were \$206,000,000 larger.

The figures indicate that the banks find it advantageous to keep their reserve where they can get interest on it rather than to keep it as idle cash in their vaults. By examining the returns of the reserve banks it also appears that they in turn find it profitable to keep as much of their reserves as they can in New York because it is the commercial centre.

From the statements of the banks to the Comptroller of the Currency on October 7, 1886, the following figures are obtained, showing the amount due from reserve agents and from other National banks to the banks in

each reserve city and the amount due from reserve banks to the National banks:

	<i>Due from approved reserve agents.</i>	<i>Due from other National banks.</i>	<i>Due to National banks.</i>
Boston	\$11,704,020	\$10,126,350	\$26,905,918
New York		18,850,754	103,127,344
Albany	1,441,196	1,131,761	2,270,631
Philadelphia	7,656,746	4,926,405	14,143,900
Pittsburg	1,922,938	959,801	3,060,964
Baltimore	1,652,528	1,308,172	2,929,853
Washington	920,393	244,177	228,988
New Orleans	692,471	190,203	853,913
Louisville	784,158	252,266	459,943
Cincinnati	2,769,457	1,688,126	6,830,330
Cleveland	1,197,410	1,246,735	988,850
Chicago	6,748,977	3,900,321	17,302,315
Detroit	1,312,098	931,765	1,225,748
Milwaukee	1,069,619	464,701	835,881
St. Louis	1,367,928	542,436	2,215,162
San Francisco	31,563	68,307	409,086
Total for reserve cities	\$41,271,502	\$46,835,280	\$183,788,826
All other National banks	99,493,077	33,691,335	34,607,124
Total for United States	\$140,764,579	\$80,526,615	\$218,395,950

The last column shows only the amount due from the reserve banks to other banks, the amount held by the former as reserve agents not being separately stated. The first column, however, shows that the reserve cities have \$41,271,502 deposited with reserve agents, of which \$11,704,020 belongs to Boston banks, \$7,756,746 to Philadelphia banks, \$6,748,977 to Chicago banks, and \$2,769,457 to Cincinnati banks.

Where the money is lodged may be inferred from the fact that, out of \$183,788,826 due from reserve banks to other banks, the New York banks hold \$103,127,344, or nearly 60 per cent. Boston, Chicago and Philadelphia hold about \$58,000,000 more, or a little more than one-half of what is held in New York. All of this money, of course, is not held by the banks in the cities named, as reserve agents, but the greater proportion of it is.

The facts which these figures show are that New York naturally attracts the surplus funds of banks in other cities. Because a city may be denominated a reserve city it does not follow that the banks in that city will find it to their interest to keep their funds in their own vaults or in neighboring reserve cities.

No objection is here raised against the proposition to increase the number of reserve or central reserve cities. Whatever objection there may be is likely to come from the banks in the cities which are likely to become reserve cities, for the law provides that *every* bank in a reserve city shall come under the rule relative to the manner of holding its reserve, whether or not it desires to become a reserve agent.

The text of the law will be found on another page.

The New York Legislature is considering several measures of interest to bankers. The Trust Company Bill passed the Senate, but has been amended in the Assembly, and consequently must be returned to the Senate for concurrence. The Savings Bank Tax Bill is an unrighteous measure (its success would be a serious blow to the progress of these institutions) and should be defeated.

BANK OF AMERICA CLEARING-HOUSE CERTIFICATES.

Under Section 5,192 of the Revised Statutes of the United States, "Clearing-House certificates, representing specie or lawful money specially deposited for the purpose, of any Clearing-House Association shall also be deemed lawful money in the possession of any association belonging to such Clearing-House holding and owning such certificates." National banks in New York city belonging to the Clearing-House Association can, therefore, hold the full amount of their lawful money reserve in these certificates. When formerly what were known as three per cent. certificates issued by the Government were permitted to form a part of the lawful money reserve in bank, there was a requirement that two-fifths of such home reserve should be held in specie or legal-tender notes.

From the report of the Comptroller of the Currency for 1880 it appears that, after the discontinuance of the issue of gold certificates by the Government in 1878, and the increase of gold coin consequent on the resumption of specie payments on January 1, 1879, the banks in New York city found it necessary to select the Bank of America as a depository of gold coin for the convenience of the Clearing-House. Certificates of deposit at this depository were first issued on October 14, 1879.

The Clearing-House balances during the years from 1881 to 1886 were paid in the following medium, as shown by information furnished to the Comptroller of the Currency by Wm. A. Camp, Manager of the New York Clearing-House :

	<i>Certificates of Bank of America.</i>	<i>U. S. Gold Certificates.</i>	<i>U. S. Legal- tender Certificates.</i>	<i>Gold Coin.</i>	<i>Legal- Tenders.</i>
1881.	\$1,394,966,000	\$392,419,000	\$8,633,161
1882.	1,325,990,000	259,550,000	10,220,245
1883.	1,020,039,000	\$530,718,000	6,864,000	10,017,196
1884*	751,382,000	640,370,000	\$20,320,000	42,198,994
1885.	120,436,000	556,376,000	406,900,000	212,643,251
1886† ...	177,673,000	645,643,000	286,796,000	410,814,385

* In this year there were also \$70,510,000 Clearing-House loan certificates.

† In this year there were also \$140,000 Clearing-House loan certificates.

The issue of gold certificates by the United States was resumed under the Act of July 12, 1882, and the use of these certificates has in the last four years largely superseded that of the Bank of America certificates and gold coin entirely. The use of legal-tender notes and United States legal-tender certificates has, however, increased, which would indicate a tendency to hold gold.

A question has arisen whether the Bank of America certificates are issued in a form that conforms to the requirements of Clearing-House certificates, which, under Section 5,192, may be counted as lawful money reserve ; and this necessarily includes another question, whether the Clearing-House Association is bound for the payment of these certificates.

It will be seen by Section 5,192 that the certificates which may be counted as a reserve must be those of the Clearing-House Association. It nowhere appears on their face that the Bank of America certificates are those of the Clearing-House ; there is nothing to show that the deposit is made under the

authority or order of the Clearing-House, or that the certificates are anything more than certificates of special deposits of gold coin with the Bank of America, for the issue and payment of which that bank is alone responsible.

It would seem that, under the terms of the law, a Clearing-House certificate to be counted as reserve should either be issued by the Clearing-House directly, specifying that the specie deposited is a special deposit made with the specified depository for the purpose of facilitating the payment of balances; or, if the certificate is issued by a depository bank specially selected by the Clearing-House, it should state the fact of such selection, etc.; and the certificate not be regarded as complete until countersigned by the Clearing-House Association.

As far as the simple counting of these certificates in the form at present issued as reserve, this is a matter for the Comptroller of the Currency to decide.

The more important phase of the question is whether, in the event of loss through any cause, the Clearing-House Association would be responsible.

The deposit is made "specially for the purpose," and would, perhaps, come under the law of ordinary special deposits, the liability of the Bank of America depending on the degree of care exercised, which might make the recovery from that bank a matter of tedious litigation.

The Clearing-House Association has certainly the right to issue the certificates, inasmuch as it has (in 1873 and in 1884) issued Clearing-House loan certificates which were used in payment of balances.

The subject is not, however, of so much importance since the passage of the Act of July 12, 1883, authorizing the issue of United States gold certificates, inasmuch as the banks can, if the Comptroller decides that the Bank of America certificates are not in legal form, avoid all difficulty by transferring their gold to the Treasury, and taking out United States gold certificates.

Big Checks.—It is a satisfaction to read about checks that have drawn large sums from banks even if every person is not fortunate enough to have a bank account that will stand such drafts. The largest check ever made in the United States—according to the JOURNAL's records—was drawn by Mr. John D. Taylor, recently deceased, who was for many years Treasurer of the Pennsylvania Railroad Co. It was given to purchase a controlling interest in the Philadelphia, Wilmington & Baltimore Railroad, the stock being held in Boston. The check was drawn on the National Bank of Commerce, New York city, to the order of Lee, Higginson & Co., Boston, and was for the very comfortable sum of \$14,256,440. Great as was this amount—being nearly equal to the total award in the Alabama claims—it was transferred from Philadelphia through the New York banks to Boston without causing even a ripple in the financial sea. Jay Gould is also famous for the easy manner in which he can sign big checks; and they are good, too! It is a matter of record how he testified to drawing \$5,000,000 and \$10,000,000 checks for subscription to the American Cable Company. Another of his big checks was the one in payment of President Scott's interest in the Texas Pacific Railroad. It was written on a plain sheet of note paper, drawn upon the Fourth National Bank, of New York city, and amounted to \$8,400,000. Other checks for enormous sums have been drawn at different times by members of the Vanderbilt family, but the foregoing are believed to be the largest ever used in any legitimate business transactions.

THE SUB-TREASURY SYSTEM.

The failure of Congress to provide for the distribution of the surplus revenues of the Government must necessarily cause the forced locking up of large amounts of money in the Treasury for some time to come. On the 1st of April there were less than \$30,000,000 of bonds subject to call which had not been redeemed, and by the 1st of July these, in all probability, will have been retired.

No other bonds can be retired, except at the option of the holders, until September 1, 1891, so that four years must elapse before debt-paying can be resumed, unless the Government goes into the market as a purchaser at the current premium rates. During that time what the Government is to do with its surplus revenues Congress has not decided, yet that surplus is not likely to fall much below \$100,000,000 a year unless the annual expenditures are increased or the revenue laws changed.

Until December, at least, there can be no provision made for the use of the surplus. It is assumed, of course, that the President will not call Congress in special session to act upon this matter. For nearly six months, therefore, after all the redeemable bonds have been paid off, the surplus will be accumulating in the Treasury, and how much longer will depend entirely upon the promptness with which Congress disposes of the question.

While it may be useless at this time to discuss any proposition as to the best way in which to dispose of the surplus, the question how to prevent a locking up in the Treasury of money required in circulation is timely enough to admit of discussion.

It would not be of such vital importance that the Government is collecting \$100,000,000 more per annum than its immediate wants require were it not that this large sum is retired from the channels of trade and forced into unproductive idleness when it might be kept in profitable employment. The contraction of the circulating medium promises to be more disastrous than the over-taxation which produces the unused surplus.

Under the Sub-Treasury system, money which the Government takes, but for which it has no immediate use, is in effect demonetized so far as its public use is concerned. The vaults in which this money is deposited are, as their name implies, burial places, and, were they accessible to the public, numerous would be the mourners who would be tempted to visit them when money is scarce everywhere except in the one place where it should be scarce.

It is not within the scope of this article to discuss the history of the Sub-Treasury. Suffice it to say that its adoption was a departure from the policy of other great nations. The experience of the Government with United States banks was not pleasant or satisfactory. When the revenues and cash balances of the Government were small the practicability of holding in its own possession its surplus was not doubted, and only in recent years has the policy of locking up Government funds come to be burdensome.

From 1840 until 1861 the net ordinary receipts of the Government never reached \$75,000,000 in any one year. The annual receipts ranged from about

\$16,000,000 to \$74,000,000, while the average for the twenty-two years was less than \$44,000,000 per annum. The balance in the Treasury at the end of each year during that period ranged from \$28,000,000 to \$50,000,000, and averaged only \$38,000,000.

It appears, therefore, that prior to the late war neither the receipts of the Government nor the balances which it carried were large enough to cause very much apprehension of the dangers involved in the forcible withdrawal from circulation of the money held by the Government.

But the financial affairs of the Government have grown to mammoth proportions. We paid for pensions alone last year nearly \$20,000,000 more than the average yearly revenues of the Government were between 1840 and 1861.

Skipping over the period of the war, when the receipts and disbursements of the Government were exceptionally large, and starting with 1870, the record down to date shows that the moneys constantly going into the Treasury amount to enormous sums. The net ordinary receipts during that period have ranged from \$257,000,000 to \$395,000,000, and averaged \$332,000,000 per annum, or at the rate of over \$1,000,000 for each business day.

This, it is to be understood, comprises only the net ordinary receipts which find their way into the Treasury or Sub-Treasuries. It does not include the receipts from loans, from notes redeemed, nor the gross receipts of certain branches of the Government such as the Postal Department, which turn into the Treasury only its net receipts after paying all disbursements.

The balance in the Treasury, which prior to 1860 rarely reached as much as \$50,000,000, on June 30, 1886, amounted to more than ten times that sum. How the balance has grown is shown in the following statement of the amounts reported at different periods:

<i>Year.</i>	<i>Date.</i>	<i>Balance in the Treasury.</i>
1830	December 31st.	\$6,014,539
1840	December 31st	29,963,163
1850	June 30th.	35,871,753
1860	June 30th.	32,979,530
1870	June 30th.	177,604,116
1880	June 30th.	231,940,064
1886	June 30th.	526,848,755

It is not surprising that frequent appropriations have been required to supply storage room for the funds which have accumulated, nor that the Sub-Treasuries have been increased in number and their capacity for storing money enlarged.

It should be observed, however, that not all of this \$526,000,000 of money reported in the Treasury represents cash actually withdrawn or kept out of circulation. Considerable of it is in circulation by virtue of paper representatives in the shape of gold, silver and legal-tender certificates, while a small part of the balance is represented by moneys belonging to the Government in the hands of disbursing agents, depository banks, etc.

The amount which is in fact withheld from circulation is very large, however, as is indicated by the following table, which gives the net gold coin and bullion, the net silver coin and bullion (including subsidiary silver coin), and the net legal-tender notes, after deducting the certificates outstanding, held

in the Treasury at the end of each of the past 17 fiscal years and on February 23, 1887:

	<i>Net gold.</i>	<i>Net silver.</i>	<i>Net legal-tenders.</i>	<i>Total.</i>
1870	\$76,231,846	\$1,022,007	\$31,037,862	\$108,291,215
1871	73,319,160	977,599	12,931,030	87,227,779
1872	45,013,736	1,336,013	11,331,320	58,281,069
1873	33,932,313	3,320,849	7,535,555	44,819,017
1874	50,416,008	4,559,745	10,573,548	65,554,301
1875	39,139,848	5,858,623	28,085,245	71,083,516
1876	81,042,624	6,270,433	38,324,806	125,637,863
1877	57,082,431	5,224,945	21,864,967	84,182,363
1878	103,562,522	21,913,252	25,775,120	151,250,894
1879	119,956,854	41,728,837	45,036,903	206,722,594
1880	118,181,527	68,110,768	18,785,559	205,077,854
1881	157,412,141	53,991,638	18,554,032	229,957,811
1882	143,477,369	63,827,294	21,425,589	228,830,252
1883	138,271,197	72,261,550	23,438,899	234,071,596
1884	133,729,364	72,790,123	27,993,801	234,513,288
1885	120,238,895	99,154,950	15,462,378	234,856,223
1886	156,793,743	125,134,220	22,868,816	304,796,779
1887 *	175,180,261	108,164,659	25,689,201	308,934,121

* February 28th.

The table shows how money has been accumulating in the Treasury in recent years, and it now amounts to four times what it did in 1875 and seven times the amount held in 1873.

But this money is not all held in the Treasury at Washington; in fact, only a small portion of it is there. The bulk of it is in the Sub-Treasuries located in nine different cities.

The figures are not attainable which would show the exact proportion of the amounts mentioned in the foregoing table as in the Treasury which is actually in the Sub-Treasuries, but an idea may be had of the amounts in the Sub-Treasuries by examining a statement published in the last annual report of the United States Treasurer which shows where the funds constituting the Treasury balance were held on September 30, 1886. The statement shows that the balance was \$584,124,982, of which only \$90,690,639 was in the Treasury at Washington while \$353,452,734 was in the Sub-Treasuries, the remainder being in the Mints and Assay Offices, excepting \$16,897,047, which was in National bank depositories. There was \$197,443,056 in the New York Sub-Treasury alone, over \$58,000,000 in San Francisco, \$22,500,000 at Philadelphia, \$21,000,000 at St. Louis, and \$19,600,000 at Boston, besides smaller amounts at Baltimore, Cincinnati, Chicago and New Orleans.

The locking up of money, therefore, may be traced to the maintenance of the Sub-Treasury system. The collecting of more money than the Government needs for immediate use would not in itself be so harmful were it not that it is retired from circulation. For nearly nine years the Government has kept a cash balance on hand averaging over \$240,000,000. The interest on that sum at only 3 per cent. would amount to \$64,800,000.

How to prevent, first, the locking up of money, and, second, the loss of interest upon so large a sum of money, is a question which seems capable of practical solution. The evil of the Sub-Treasury system has been very plainly set forth by Treasurer Jordan in his last annual report, in which he says:

"That alterations should be made in the present system, so that it may conform to the financial changes which have taken place since this system was adopted, does not admit of doubt. The annual and daily transactions of the Treasury have become so large, its financial operations and movements touch the interests of the people at so

many points, that great care should be taken to avoid any unnecessary friction. As the country increases in wealth and population, with the consequent increase of its revenues and disbursements, it will be impossible to continue it in its present form."

Fortunately, the Treasurer suggests a plan which would tend to bring material relief—that is, the more extended use of the banks as depositories—which he says would result in a large saving to the Government and very much lessen the chances of loss from speculation and frauds. Since 1864 over \$4,458,000,000 of Government funds have gone through National bank depositories; and the Treasurer says:

"No loss has resulted in this class of deposits for the past 18 years, although a number of failures have taken place among the depository banks."

Here may be found a complete remedy for evils of the Sub-Treasury system.

At present the rules adopted by the Treasury Department governing public deposits in National banks are not liberal enough to encourage the banks to seek that class of deposits. These could be modified so as to make the inducement to receive such deposits greater without in any way impairing the security for their safe-keeping. In this way the surplus moneys collected by the Government could be kept in the channels of circulation and be made to earn some interest, no matter how little, for the Government.

It is certainly as poor economy for a Government to lock up its money as it would be for a private individual to keep all his capital in cash locked up in his own safe or in a safe deposit vault.

Circuitous Collection Routes.—The following from a subscriber illustrates the 'round-Robin-Hood's-barn-methods of making country collections:

Editor Rhodes' Journal of Banking:

MALDEN, Mass., March 17, 1887.

SIR:—The point of a recent article in the JOURNAL on circuitous methods of making collections was forcibly illustrated recently by a draft received for collection. The draft was dated Versailles, N. Y., and was eleven days in reaching its destination at Malden, Mass., passing from bank to bank in the following order:

Bank of Gowanda, N. Y.
First National Bank, Springville, N. Y.
Ohio National Bank, Cleveland, Ohio.
Merchants' National Bank, Philadelphia, Pa.
National Bank of the Republic, New York City, N. Y.
Manufacturers & Traders' Bank, Buffalo, N. Y.
First National Bank, New York City, N. Y.
First National Bank, Boston, Mass.
First National Bank, Malden, Mass.

Respectfully, K.

Bankers' Signatures.—A correspondent, referring to the JOURNAL's articles on Signatures, writes:

"By the way, is there any good reason why a banker's signature should be illegible? It would seem that the plainly-written signature would be much more difficult to counterfeit; and certainly the paying bank would rather have a readable signature than an illegible scrawl."

There is much force in the above suggestion. We have thought that some bank officials studied how to write their names illegibly for the simple reason that they could not be easily counterfeited. If this is not a plausible theory, then it must be from want of care. Certainly it cannot be from lack of time, for Cashiers in large banks have but little writing to do except sign their names. Our opinion is that plain signatures are the best. But we would like to hear from other correspondents on the subject.

PRIVATE BANKING IN PENNSYLVANIA.

A bill is now pending in the Pennsylvania Legislature, known as House Bill No. 27, that has for its object the bringing of private banks under State supervision, and which has caused no little acrimonious discussion. The bill was introduced at the suggestion of Auditor-General Jerome B. Niles, and provides for the appointment of a Bank Examiner, who shall have supervision over all incorporated and private banks, the same as is provided by the National Bank Act for the National banks. It requires every bank to make a quarterly report, giving a detailed statement of assets and liabilities, which is to be published three times in two newspapers in the locality of the bank. The Bank Examiner is required to make a personal examination of the bank once or more in each year and may call for additional reports from any bank whenever he thinks it advisable. The bill also provides, by certain prescribed legal procedure, for the dissolution and appointment of a Receiver for an insolvent or fraudulently conducted bank. Under this bill every bank would be required to register in the office of the Auditor-General, giving a list of the officers, amount of capital invested, etc. The Auditor-General, in his annual report, recommends the passage of the bill, stating his reasons at considerable length.

Bankers and brokers are required under the laws now in force to report annually, under oath, to the Auditor-General, their net earnings or income, upon which they are required to pay a tax to the State of 3 per cent. The banks are allowed to deduct from their gross earnings clerk hire, rent, fuel, taxes, insurance and loss in exchange, and the tax is levied upon the balance remaining.

The Auditor-General states that 266 bankers reported their income for the year 1886. Of these only 41 report an annual income exceeding \$10,000 and 27 others more than \$5,000, while 44 reported an income of less than \$500 and 29 no net earnings whatever. In referring to these banks the Auditor-General says:

"Of the above number it is estimated that some 200 are engaged in the banking business. Many of them are situated in small towns remote from National and State banks, and are the sole depositories for the savings of the communities in which they are located. Many of them have high-sounding titles, which are "taking" with the people. There is something seductive to the average citizen in the word "bank." Generally "a bank" is supposed to be a safe depository for the citizens' money. These banks sometimes consist of a single individual; more often of two or more persons, who constitute a firm or private partnership. They have no capital stock, and the public, which trusts them implicitly, has no knowledge or means of knowing the extent of their assets and liabilities. It may be said that the property of the persons composing the firm is liable to its full amount for the payment of the amount due depositors; but past experience has sadly shown that, in case of the failure of a private bank, the property and assets of the persons composing the same, in too many instances, had found its way into the hands and control of the owners' friends and relations. Convenient judgments, mortgages and transfers given before the shutters went up had been resorted to, and, when the innocent and too-confiding depositors came to look after their money, the assets were, as a rule, found to be composed of protested notes, rusty nickels and unpaid bills. In 1886, as before stated, twenty-nine reported a net loss, forty-four an income of less than \$500 and

twenty-five an income of less than \$1,000, making ninety-eight which are doing a public business, and which, on an average, earn less per annum than a good mechanic. The logic is clear that they are in an unsafe condition, or else they are not paying the State her just dues. In either event their management is wrong."

The Auditor-General states that a careful examination of the reports on file in his office will show, in many cases, that the institutions are either not in a solvent condition or else the State is not receiving a proper revenue from this source.

During the past three years four incorporated banks suspended or went into liquidation and eleven private banks failed, the losses resulting to depositors therefrom being from \$1,500,000 to \$2,000,000.

A number of statements of private banks are mentioned in detail in the Auditor-General's report, and they make a curious showing. One of these banks, located in Allegheny county, reports that it paid nearly \$22,000 in interest last year, but that the net profits on its business were but \$105.87, making its tax to the State \$3.15. A Tioga county bank reports that its gross earnings and its expenses tally to a cent, each being \$2,220.15. A York county bank makes the announcement that, while its gross income was only \$26,000, it lost \$11,500 during the year by exchange and discounting notes—nearly as much as it paid out in interest. By the sworn statement of a Columbia county bank the interest paid on deposits during the year only lacks a few dollars of the amount reported as the gross earnings. Another private bank reports exceptionally good fortune with its exchange business, as it met with no loss at all in that branch; but, although it earned only \$5,998.65, it paid \$5,835 in salaries to clerks to do its year's work. A Crawford county bank reports gross earnings of \$1,702, and clerk hire of \$1,720, which, with other incidental expenses, inflicts a loss of over \$1,000 on the bank for the year. The loss on exchange reported by a Clarion county bank exceeds by \$9 the total yearly income. A Butler county bank gives its gross income as \$2,315.36. It reports ordinary expenses at \$942 and credits itself with the sum of \$3,579.35—lost in oil. One of these private banks, with deposits of \$300,000, returned, in its report for 1883, an income of \$68. The next year, with an increased amount of deposits, it reported no income, and before it was time to make another report closed its doors and promised to pay its depositors 20 cents on the dollar. Another of these institutions, in Butler county, reports gross earnings at \$16,000 and profit and loss account at \$10,000.

Estimating from the amounts reported to the Auditor-General as paid in interest on deposits in these banks, an experienced accountant says that there cannot be less than \$10,000,000 on deposit in these 200 private banks, without taking into account the business done by about 70 brokers, who operate on the same plan and with the same freedom from surveillance and restraint. "It is as easy to start a private bank in Pennsylvania," says Auditor-General Niles, "as it is to start a grocery or a shoe store." There is absolutely no legislation governing the management of these institutions in the State.

The Auditor-General urges the passage of the bill before the Legislature so as to bring all banks under State supervision. He argues, and with sound reason, that the publication of the report of a bank, showing it, after an examination, to be upon a sound financial basis, will aid and not injure it. He further says :

"Beyond all question, the revenues of the State will be largely increased by the examination proposed by the Packer bill, and reason for such belief must be manifest to all. As bearing upon the propriety of examining State banks and private banks, I quote from RHODES' JOURNAL OF BANKING, a work of known and accepted authority, of February, 1885. After speaking of the English joint stock companies, it says: 'For many years there has been a marked tendency throughout the country to start National banks; the reason is, not the profit on circulation, for that is very trifling, but that the people have more faith in the National than in other banks generally, knowing that the statements of the former must be published regularly, and that they are under competent supervision. In this view of the case it would appear that the State banks should welcome any legislation calling for publicity of accounts within reasonable limits, and for proper oversight by a State official.' The same journal, in March, 1885, spoke editorially upon the subject as follows: 'Bills have been introduced in the State Legislatures of both Pennsylvania and Indiana, which are designed to bring all the private banks under State supervision. Leaving out of consideration the details of the bills in question, to some of which valid objection may be made, a word ought to be said here in favor of the general principle involved. Banking, in the sense of receiving deposits from the public generally, discounting, etc., is altogether too important a matter to the people to be allowed to be carried on under a cover as a purely private business. In that case the public is at a disadvantage. It is expected to trust the banker implicitly at every turn of business, and take it for granted that he is solvent and is carrying on his affairs in a legitimate way. But there is no good reason why this ought to be entirely taken for granted, and it is extremely likely that the change proposed would work as much good for the banks as for their customers. The principal advantage which the National banks now enjoy is that of efficient supervision, and this is enough to make them popular. We had occasion to quote from an English contemporary, a month ago, some remarks strongly confirming this view.' The italics are mine. The logic of these articles, to my mind, is unanswerable."

The position of the JOURNAL with reference to the supervision of the business of banking is clearly defined in the above extract. It has always favored every safeguard that would protect honest banking from falling a prey to designing people.

It is only fair to say, however, that the bill introduced in the Pennsylvania Legislature has been opposed by bankers in that State who command our confidence and esteem. Some of them have expressed to us their perfect willingness to have "any fair bill" passed, but they make objection to some of the provisions of the proposed law.

It is objected that the measure imposes obligations and restrictions upon persons doing a private business without conferring any benefit or advantage upon them. It is argued that the National Bank Act limits the liability of stockholders, allows them note circulation, and in other ways compensates them for the restrictions, duties and penalties imposed upon them.

The bill defines a banking business to be "the receipt of money on deposit, subject to check or draft, or the issuing of a certificate of deposit with or without interest." This, it is claimed, is too broad a definition, and reaches every person who receives money from another to be repaid upon order, and every person who, upon the receipt of such money, acknowledges the same and agrees that it is to be repaid upon demand; for checks, drafts, and certificates of deposit are nothing but such orders and acknowledgements.

The provision requiring private bankers to register their capital with the Auditor-General, it is argued, would compel them to list everything they own, whether used in their banking business or not, as all the property of a private banker is liable for his debts. Virtually all his assets may be classed as capital, and to compel him to file an inventory and appraisal of his entire

estate would be an injustice, and all the greater because the proposed law requires him to publish quarterly statements of his resources three times in two newspapers at his own expense.

The authority given the Auditor-General to call upon a private banker to make a report whenever the former may desire is considered by the opponents of the bill as giving one person too broad a discretion. It is also objected that the bill leaves it open for irresponsible persons—appointed temporary examiners in the absence of the Bank Examiner—to pry into the affairs and accounts of any bank and publish the information to the world.

It is further claimed that, whenever the Auditor-General shall have reason to believe that the business is being fraudulently conducted, or for any other reason that it is inexpedient that the bank shall continue, he can, without a sworn complaint, or any evidence whatever outside of his own official suspicion, cause the Attorney-General to commence a suit against the banker, and if he vindicates his integrity and solvency, it is done at his own expense, with his financial standing smirched and his business probably ruined. Such a proceeding cannot be instituted without leaving its injurious effects. All this may be done through ignorance, or upon suspicion, or from motives of malice or caprice.

It is claimed on behalf of the private bankers that they transact their affairs in the same way as all private persons in any other business, and are subject to the same penalties. They receive no favors from the State, and should, therefore, not be held to greater responsibility than other private individuals. They simply take money that is offered them and keep it for depositors, permitting them to withdraw it upon checks, orders or drafts; loan such money as they can spare; and sell exchange. These are transactions that any person may enter into without question, and which are done every day by individuals who do not claim to be bankers.

The person who deals with a private banker, it is argued, deals with him exactly as he would with a farmer or a shopkeeper. In small towns and villages the private banker usually is a man who has grown up in the community, acquired property, and by his experience and ability won the confidence of the people among whom he lives. Residing away from a large town, he establishes small banking facilities for the accommodation of his neighbors, and they rely upon their knowledge of the man and his personal responsibility without regard to State supervision or legal enactments. The banker has his reputation at stake and his property to protect, and these make him cautious. That a banker so placed should have but small profits to report is neither a reflection upon him nor upon his business standing.

Some private bankers have no idea of making large profits out of banking. They have private sources of income of their own, and their bank is either a pet hobby or is conducted as an accommodation for the neighborhood. The village banker is very often the presiding genius of the place he lives in and the financial mentor of all his fellow citizens. That this picture is not overdrawn many of the JOURNAL's readers will no doubt admit, for in many interior towns will be found some contented, well-to-do citizen who takes pride in running a small private bank without regard to large profits.

A correspondent in Pennsylvania writes the JOURNAL concerning the private banks in his county. He says that in the town in which he lives there is

one National bank with a capital of \$100,000 and deposits amounting to about \$400,000. There are five private banking concerns in the same county, but in different towns, and not one of them nearer than seventeen miles to the National bank. The deposits of the five private banks will not aggregate \$250,000, while the individuals owning these banks are worth very nearly, if not quite, a million dollars. He says:

"This bill is ostensibly to 'secure depositors.' Which class of depositors is the better secured: the depositors in the National bank with a limited liability or the depositors with the private bankers with an unrestricted liability—liable for all that they are now worth or ever may be worth? This is the situation all over our State. In this county there is a National bank at the county seat and five private banking concerns scattered in the smaller towns around the county, reaching the people directly, who are not asking any change."

It is claimed that such a bill as the one proposed would, if made a law, cause the closing up of many of the small private banks in the State and cripple the business of numerous small towns, for it would leave them without banking facilities except those which might be afforded by larger towns distant twenty, thirty or forty miles. These small towns now, through their private banks, are ancillary and auxiliary to the larger towns, and the banks of the former are feeders of the banks of the latter. Wipe out the small private banks and it is argued that the large banks will be the sufferers.

These are the arguments of the opponents of the bill in the Pennsylvania Legislature. Whatever force they may have against that particular measure they are not intended to be urged against the general principle of *proper supervision of banking*. Those who advance these arguments declare that they favor any law which will restrain dishonest banking, but they are opposed to any measure that places unjust and unnecessary restrictions and imposes burdensome obligations upon men who are carrying on a legitimate business in a lawful and honest manner.

Mexican Gold and Silver.—A curious financial proposition has recently originated in Texas in the shape of a bill before the Legislature to make Mexican gold and silver coin a legal-tender in that State. The idea is advocated by the supposition that it would make money more plentiful in the State and every man would have a better chance to get some of it. The difficulty in passing a bill of this character is that such a law would be in violation of the United States Statutes, and therefore clearly unconstitutional. The Mexican *Financier* properly calls the proposal absurd, but says: "A monetary union of the United States and Mexico may be desirable, and, certainly, if the two Governments would agree to strike a silver dollar interchangeable in both countries for merchandise, a great impetus would be given to international commerce." Desirable as such an agreement might be, it is totally impracticable under present conditions. Our silver dollars, while intrinsically worth no more than the Mexican, are now interchangeable with gold dollars, while the Mexican dollar is worth in trade only about eighty cents. Silver has driven gold out of circulation in Mexico. If the same thing should occur in this country, the United States might be in a condition to enter into a monetary union on even terms, but not as affairs are at present. If the Mexican dollars were made a legal-tender in this country they would soon circulate in such quantity as to drive out gold.

"WHAT'S IN A NAME?"

II.

In the March JOURNAL was published a partial list of names of bank officers who correctly deciphered the difficult signature (W. P. Hazen's) which appeared in the January issue. Of the entire number the West furnished exactly twice as many correct readings as the East, and that proportion seems to have been maintained among those who *did not* decipher the name correctly. It should not be inferred from this that Western bank Tellers are any brighter than their Eastern brethren, but probably they manifested a greater interest. The "new South," too, shows that it is rapidly developing a multitude of keen-eyed bank clerks in due proportion to its increase in banking facilities and material resources.

The Hazen signature gave rise to a great variety of interpretations—which proves how easy it is for a person to be mistaken and not know it. For instance :

A Book-keeper in a National bank in Iowa deciphered Mr. Hazen's name as W. W. Morgan or possibly W. W. Horam, while the Cashier of a National bank in Indiana "read it very plainly" Wm. H. Betts. One of the proprietors of a Minnesota bank called it W. M. Marshall. Two Tellers (one in Dakota and the other in Illinois) gave their opinion that it was W. J. Tobey. Four Tellers in Iowa, Minnesota, Dakota and Michigan respectively, and one Assistant Cashier of an Ohio National bank, make it W. H. Haskell. A curious rendering came from the Cashier of a Nebraska bank, who read it W. W. Horm—nearly equalled by an Assistant Cashier in Dakota whose "guess was W. M. Horm." Two Tellers, one in California, the other in Pennsylvania—showing how extremes meet—think it is W. or "Wm." H. Bell, while a Massachusetts clerk, "never having seen it before," calls it Walter H. Bell. Not to be outdone, three Tellers (one from Maryland, one from Indiana, and another from Michigan) come to the front with W. H. Betts. W. C. Rankin seems to be quite a favorite, a National bank Teller in Ohio having come to that conclusion "after scrutinizing it with a glass," in which decision he is joined by a brother Teller in Ohio, a Minnesota banker, an Assistant Cashier in Kentucky and a Teller in Pennsylvania—the last-named "making a break at it." The Assistant Cashier of a Rhode Island National bank thinks it "looks more like a scratch than anything else," but reads it, all the same, J. W. Brown. An Illinois Cashier wants to know "if Wm. H. Brown is right?" The Teller of one of the leading banks in Canada reads it as "W. P. Brown, Cash'r," while an Oregon Cashier of a National bank "guesses" W. P. Brown. The Teller for a private banking firm in Georgia asks if "W. P. Horm is correct?" A Pennsylvania National bank Teller calls it W. V. Horne or W. V. Thorne, and would like to know which is correct. One of the strangest renderings is that of the Cashier of an Iowa National bank, who thinks it is W. N. Worm, while a Wisconsin Cashier and a Tennessee Teller offer W. P. Worm as the right name. The Teller of a National bank in Ohio is not absolutely certain that the name, after all, is *not* "John Smith," but finally translates it also W. P. Worm, "or possibly

"Warm," and an Illinois private banker "enters" W. W. Worm as correct. Another National bank Teller in Ohio was "so near and yet so far" when he suggested W. E. Hazen as the right reading. How a genuine Yankee could make W. F. Tompkins out of it almost passes comprehension, but such is the guess of a Maine Cashier—and a National bank one at that; but he is fully offset by the Colorado National bank Teller who saw in it only Wm. S. Park. The Teller of a Connecticut National bank sends, "as near as he can make it," the name of W. H. Herbst, while a Massachusetts National bank clerk gets still further "off" on W. M. Hiant. A Wisconsin bank Teller sends W. P. North, "or words to that effect," as the plain reading of the signature, and the opinion of another Massachusetts bank Teller favors W. W. Allen. We feel sorry for the Missouri Teller who tried so hard and failed. He sends two versions—W. W. Kern and W. W. Sizm—and writes that "he is satisfied he is right on one of them." Another Ohio Teller goes wrong on W. H. Bell. A New York Savings bank Secretary and a Maryland Teller of a National bank agree that W. P. Worth is the man. From New Mexico come two guesses—both from a National bank—one of H. P. Morgan, the other W. P. Morgan, and a New York National bank Cashier asks "if it is not W. M. Morgan?" A New Hampshire Teller came to the conclusion that it was A. H. Magill.

And so the list might be extended over several pages. But enough instances have been cited to show that there is a good deal in a name.

In the March number of the JOURNAL it was stated that the names appearing in the published list were *not all* entitled to the premium. Neither did all those deciphering the name correctly care for the extra subscription, as the following letter will show:

FARMERS' NATIONAL BANK,

KNOXVILLE, ILL., March 7, 1887.

Editor Rhodes' Journal of Banking:

SIR:—Your favor of the 2d inst. received. In reply would say I waive any claim for a premium that I may have for interpreting the signature of W. P. Hazen, Cashier. In fact, if I rightly remember, the offer was *only* to bank Tellers. My whole interest in the matter was to read the signature—not to get a premium. You call it good guessing, and perhaps it was so partially; but I claim to have read the name "Hazen" before referring to the *Directory*, and when I found the "W. P." I could read it easily. My starting point of the name was the letter "Z."

F. G. SANBURN, President.

In the published list of successful competitors should have appeared the name of W. M. Conover, Teller in the Mechanics' National Bank, Trenton, N. J.

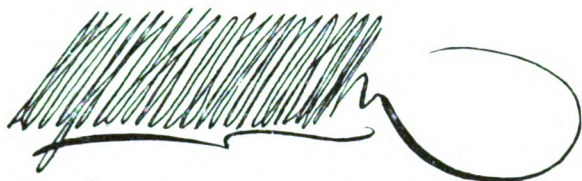

Continuing the series of curious signatures, that of a well-known bank Cashier whose autograph is frequently seen in banking circles is given below. It is very plain—to those who can read it. Those who cannot will be able to learn what it is by consulting the continuation of these "signature" articles in subsequent numbers of the JOURNAL:

Following is the signature of a prominent business man, whose name is "as good as his bond" in his section when he has occasion to affix it to a piece

of paper. It is possible that any one of the JOURNAL's readers would be willing to take his "promise to pay" even if they cannot decipher his signature:

A good many bank Cashiers have probably seen the following, but we think it will prove a conundrum to a large number who are not familiar with it. It is a *fac-simile* of the signature of the Treasurer of a large manufacturing company, and is composed of a double-back-action combination of letters known only to the signer:

Any bank official or employee, other than President, Vice-President or Cashier, who sends a correct reading of the *three* photographed signatures before the first day of June next will be entitled (1) to the publication of his name in the JOURNAL as having deciphered the signatures correctly, and (2) to a copy of the *Bankers' Directory & Collection Guide*—July edition—free of charge.

[To be Continued.]

Private Banks in New York.—A correspondent wishes to know if he can "open a private bank in a town in this State [New York] and do a general banking business under the title of, say, 'John Smith & Co., Bankers,' receiving deposits subject to check, etc.; or, if I prefer to use the name, 'Bank of Earlville, John Smith & Co., Bankers,' could I do so under the law?"

Under the present laws of New York the Superintendent of the Banking Department has no supervision over a firm doing business as "John Smith & Co., Bankers," but the title "Bank of Earlville" could not be used either alone or in connection with the firm name. Here is the law on the subject, Chapter 329, Section 311, passed May 23, 1885:

"No person or persons engaged in the business of banking in this State, not subject to the supervision of the Superintendent of the Banking Department, and not required to report to him by the provisions of this Act, shall make use of any office sign at the place where such business is transacted having thereon any artificial or corporate name or other words indicating that such place or office is the place or office of a bank; nor shall such person or persons make use of or circulate any letter-heads, bill-heads, blank notes, blank receipts, certificates, circulars, or any written or printed or partly written and partly printed paper whatever, having thereon any artificial or corporate name, or other word or words, indicating that such business is the business of a bank. Whoever shall offend against any of the foregoing provisions of this section shall be deemed guilty of a misdemeanor, and shall also forfeit the sum of one thousand dollars. The penalties prescribed in this chapter, where no other provision is made, shall be recovered by suits in the name of the people of this State, to be prosecuted by the District-Attorneys of the counties, respectively, where the offenses may be committed; provided, however, that the provisions of this section shall not apply to any person or persons engaged in the business of banking in this State prior to the passage of this Act."

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject. •

The Correspondence Desk.—In a large bank the correspondence desk is properly ranked as one of the senior desks. The duties of the clerk in charge of this desk are very important, because it is through him that the bank maintains relations with out-of-town customers and agents. When the work of this desk is done neatly, accurately, and with promptness, it gives the bank a better standing with its correspondents. In glancing over the daily mail of a bank with a large correspondence one cannot but be struck by the different appearance of the various letters. Here is a great blanket sheet with spider lines scrawled all over it, and the figures placed in a happy disregard of the rule to place units under units and tens under tens, for there are no down lines. Here is another sheet not as large, but bearing so extensive a heading that one is uncertain whether the object is to write a letter or advertise the bank that sends it. As to the various styles and kinds of handwriting, most of them bear marks of haste, not from carelessness, but from the clerk having more to do than he can properly attend to. All these little things bespeak the character of the bank from which the letter comes. The general manner of conducting its correspondence shows under what kind of management a bank is carried on. By daily familiarity with the bank mails, a Corresponding Clerk, if he has his eyes open and his wits about him, gradually forms a pretty fair idea of the way his correspondents conduct their business, and governs his opinions concerning them accordingly, and he thus becomes, to use an old-fashioned phrase, "the eye of the Cashier." Particularly is this the case if the desk of the Corresponding Clerk be next that of the General Book-keeper. These two clerks should be able between them to keep the Cashier fully informed in regard to all the bank's correspondents. The following is suggested as a convenient "form" of paper to use when writing a letter: Let the size be five by eight inches, or, for large letters, eight by ten inches. This is a regular printer's size, and paper comes from the mills cut in what is called flat letter (10 by 16 inches) of all kinds and qualities. Do not put anything on the letter, either printed or written, except what is absolutely necessary. The printer should use plain type, and the handwriting and figures should be entirely free from flourishes. The letter should be distinctly ruled with both horizontal and down lines, and it has been suggested, as a good point, that the horizontal lines be numbered. Use single sheets, and write only on one side of the paper. A general attention to the above suggestions will not only tend to increase the general convenience but bring about a degree of uniformity which, in itself, is highly advantageous. In looking over the morning mail it is evident at a glance that some of the letters have not been copied in the ordinary copying

press. The old style of copying by hand has not, perhaps, gone entirely out of fashion (so conservative are some institutions), but some banks go to the opposite extreme and do not copy their letters at all, contenting themselves with "proving" them with the general cash-book. The general rule should be laid down that every letter and telegram that goes out of a bank should be copied in a copying-press, and the copy-books filed, so that the letters can be readily referred to.

Special Deposits.—Following is a form, "Release for Special Deposits," furnished by Mr. E. F. Torrey, Cashier of the Honesdale National Bank, of Honesdale, Pa., which appears to include all the points likely to arise in receiving such deposits:

To the Board of Directors of the Honesdale National Bank:

GENTLEMEN:—I desire the privilege of placing from time to time Bonds or other Valuable Securities or Property in the Vault of your Bank.

If you will permit me to do so, until such time as you shall otherwise direct, I agree that such Bonds, Securities and Property shall be and remain at my entire and exclusive risk, and that in case of loss or damage to any of the same, or if same cannot be found when hereafter called for, I will under no circumstances whatever hold the Bank liable or make any claim or demand upon the Bank or any of its officers or employees for any such loss or damage on the ground of negligence or want of proper care on their part.

I do not desire the Bank, or its officers or employees, to become custodians of said property, nor to be responsible for the exercise of any care with regard to the same, but simply that you will not refuse me the privilege, for my own personal accommodation and at my own risk, of occupying so much space in your vault as will contain said property.

I assume all risk and responsibility for the security of said vault, and agree that the Bank may leave the same altogether unprotected and unlocked, so far as said property is concerned.

As this favor is to be granted entirely for my accommodation, with no benefit to accrue to your Bank, I desire this paper to be construed as exonerating your Bank, its officers and employees from risk and liability as completely and absolutely as if I had placed or should place said property in your vault without your knowledge or consent and its existence there remained unknown to you, and that such be construed the condition upon which the privilege asked is granted by you; and I agree to remove said property whenever you may desire.

Witness my hand and seal this — day of ——— A. D. 188 .

The foregoing having been first carefully read by me.

SEAL.

In the JOURNAL's series—"Methods and Machinery of Practical Banking," March, 1886, page 194—may be found an article on the "Power of Bank Cashiers to Receive Special Deposits."

Shorts and Overs.—It is next to impossible for a Teller to settle his cash day after day and always come out right. With the exercise of the greatest care and attention there will occasionally be differences one way or another that cannot be found. What is to be done about them? If the Teller's cash constantly shows a short amount or a sum in excess of the right figures, should he change the total with every additional error? No; the better way is to carry the difference a reasonable time and then charge it off, making on the settlement book or slip a memorandum of the fact for possible future reference. Errors in the cash cannot be wholly obviated, but they can be reduced to a minimum by a plain and simple system of keeping the cash-books. The business of each bank is peculiar to itself, and therefore it is impossible to lay out a system that will be applicable to all. The fewer books

in use the better. Enter the checks on two separate books and prove the totals; that will be sufficient. The Teller should be able to prove the money independently of the checks and other cash items—that is to say, if the cash is short or over, he should be able to tell definitely whether or not the money itself is all right. Often, with a little ingenuity, the books may be arranged so that an error may be approximately located. For instance, where the items are listed in two or more books, one column may be proved against another or one "batch" of checks against another. Another point in guarding against errors is to have enough clerks to do the work in a proper manner. The man who stands at the window should have plenty of time to attend to his duties, and not be kept on a strain for two or three hours at a time; and so also with his assistants. After a long day's work with an insufficient force the men are too much fatigued to look for errors carefully, and consequently an approximate settlement is too often regarded as satisfactory.

"Work and Wages"—A QUESTIONER ANSWERED.—An article in the February number of the JOURNAL on "Work and Wages" seems to have excited considerable interest among our readers. In the department of "Open Letters" in this issue of the JOURNAL appears a communication from a correspondent which doubtless expresses the views of many Cashiers as well as other officers. In the banks in large cities, where work is done under the constant supervision of men trained in the requirements of a counting-house, there is not apt to be any deficiency in the number of clerks requisite to conduct the business of the bank properly, but in country banks, where the owners are mainly men of little business experience and no practical knowledge of the amount of work required from the clerical force in a bank, a disposition is too often displayed to keep it at the least possible number. Two or three men are expected to do work which could not be performed properly by less than twice that number. Indeed, as our correspondent's letter would indicate, the staff is sometimes cut down until there is only one man left. In the smallest country banks not less than two men should ever be employed, not only on account of the work that is performed, but also that one may serve as a protection to the other, and that, in case of sickness or necessary absence, an experienced man is at hand to take general charge of affairs. In regard to vacations, the principle that every bank official should be required to absent himself from his post for at least ten days during the year holds good as well in regard to the smallest country banks as to the largest city institutions. This affords an opportunity to the managers to gain a correct insight into the manner in which the work of the absent official has been done. In regard to the point whether a Cashier should be allowed to attend to duties not connected with his official business it is difficult to give a definite statement. In this, as in many other matters, the conclusion depends to a great extent upon the man himself. A Cashier who is a large stockholder may well claim considerable discretion as to the manner in which he performs his duties, but when he has no interest in the concern except to draw his salary he may reasonably be expected to give the greater portion of his time to the bank that employs him. At the same time, if his outside interests are of such a nature as to require nearly all his attention, would it not be practicable to make an arrangement with the bank by which he could be afforded additional clerical assistance, and his own salary, in view of this fact, be scaled accordingly? The

experience of bank managers goes to show that a parsimonious policy in reference to salaries and general privileges accorded to their employees is apt to react unfavorably to the interests of the institution.

Errors in Balance Sheets.—It is provokingly true that if work is done properly it will come out right, but too often it is not, and the trouble consists in finding out where the wrong is. When the ledger is kept on the "Boston" or "Daily Balance" system errors are readily found, but on the old cash-book and ledger system, still used by a number of banks outside of large cities, an error in the balance sheet is not so easily located. The most systematic way is to go over the additions of the balance sheet first, then review the taking off of the balances, then the additions, transfers, etc., on the ledger, then the postings, and last the additions of the cash book. But all this takes a long time. Therefore it is worth while to consider whether some expedients cannot be adopted to shorten so laborious a task. In the first place the work should be done carefully, and every entry reviewed. When posting insert markers (narrow slips of blotting paper are most convenient), and check the posting back. When accounts are transferred or balanced slip in a marker and examine it next day. Prove the additions of the ledger carefully when they are made. In the morning run over the work of the previous day to make sure that every item has been posted, and especially items added at the close of the day. A favorite place for errors is the making of corrections in the cash-book and neglecting to alter the posting in the ledger. To avoid this make it a rule not to alter the *footings* of the cash-book until the ledger-posting is corrected. The reason of this rule is that the footing is obliged to be altered to agree with the other books of the bank. If the error is 1 or 2 in any column it is probably in the addition. If it is divisible by 9 it is most likely a transposition, and therefore in the posting or in carrying forward some amount. If it is divisible by 2 it may be an item posted to the wrong side of the ledger. Look over the cash-book for such an item. If the difference consists of two or more figures glance over the proper side of the cash-book for an omission to post such an amount. If the error still eludes a search it is well to call in some of the more active pass-books and balance them up. This is easier than ticking off the postings of a long account. Sometimes the error is in a balanced account, but this is very rare. In short, be careful not to make errors. If any are made try to find them in the quickest and easiest manner possible. The most convenient time to take off balance sheets is during the next to the last week in the month. This week is about the duller in the month, and, if there is an error, one has time to look it up before the first of the next month. A good many pass-books come in about the first, and balancing these will detect errors in postings.

Gas Explosions.—Every now and then some unlucky person is injured in a bank vault by an explosion of gas. The gas had been extinguished the preceding night, but not turned completely off, and whoever is unfortunate enough to "light up" the following morning meets a severe accident. It is the duty of Cashiers to see that proper care is exercised about such matters, but, in spite of the utmost precaution, accidents will sometimes occur. Both on this account, and in view of the possible danger from fire, it is a great deal better, where it can be done, to use the electric light for illuminating bank vaults.

BANKING LAW.

* Legal Decisions Affecting Bankers.

EXECUTION OF PROMISSORY NOTE WITH CONDITION ON STUB—ALTERATION BY REMOVING CONDITION—ACTION AGAINST MAKER BY BONA-FIDE HOLDER.

On December 24, 1881, S, a farmer in Williamson County, was approached by C and constituted an agent for the sale of "Pulliam Patent Bolster Springs," and fifteen sets of said springs, estimated at \$15 a set, were delivered to S to be sold. Four days later one T, claiming to represent the same company represented by C, called upon S and demanded payment for the springs, insisting that S had bought them. S denied that he had bought them, and very properly refused to pay for the springs. Finally, T prepared a note for \$225, the price of the springs, due in three months, and presented it to S for his signature. S, still being willing to sell the springs as agent, agreed to sign the note if T would insert therein the condition that he (S) should have credit on the note at maturity for such of the springs as might then remain unsold. T agreed to the condition, but declined to put it on the face of the note upon the ground that there was not sufficient space on the note. He did write the condition, however, upon the stub of the note (the note and stub attached being in a book of blank notes) and sign the same, whereupon S signed the note and delivered it to T with the stub attached. According to the manifest purpose of T the stub or condition was cut from the note, and the note was by the payee, the Pulliam Patent Bolster Spring Co., indorsed in blank and delivered to the Semple & Birge Manufacturing Co. in payment of a debt and to secure future credit. Without its indorsement, the Semple & Birge Manufacturing Co. delivered the note to D, the plaintiff, before maturity at 25 per cent. discount. When the note was presented for payment, S declined to pay any part of it, because the springs were worthless, and none of them had been sold by him. In a suit to recover the amount by D against S, the latter admitted that he signed the note, but averred that it had been altered and changed by separating it from the conditions. Plaintiff replied that the note was a perfect and complete negotiable instrument upon its face, and that he was an innocent holder. The trial Judge charged the jury that if the conditions "were upon the stub, easily removed without defacing the note, the defendant would not be entitled to relief on account of his own negligence," and that D could recover, notwithstanding such condition, if he became the holder of the note before maturity for a valuable consideration and without notice of any fact to arouse the suspicion of a prudent man that all was not right with the note. Judgment was rendered against S, who appealed.

Held, This instruction was erroneous. The condition was written contemporaneously with the note. By agreement of the parties before the signing of the note it was a substantive part of the note and restricted its negotiability the same as if the condition had been indorsed upon the face of the note. The severance of the condition without the consent or knowledge of the maker was a material alteration of the original contract to his prejudice, and, therefore, the act was forgery. The instrument sued on is but a part of the contract between the parties and could not be acquired and held as a negotiable note by any one. That the stub could be easily separated from the note can make no difference, as no rule of law required the maker to anticipate

that the payee would commit a felony by the alteration. He could not be required to protect himself in advance against such an act on the part of the person with whom he contracted. Similar, and we may say identical, questions have arisen in other States and been decided in accordance with the views we here express. (Citing *Benedict vs. Cowen*, 49 N. Judgment reversed.

Stevens vs. Davis, Supreme Court of Tennessee, December 9, 1886.

PAYMENT OF DRAFT ON FORGED INDORSEMENT—ACTION BY OWNER AGAINST DRAWER—NEGLIGENCE IN FORWARDING.

Plaintiff procured a draft of defendants, bankers, upon the First National Bank, of Chicago, for \$100, dated January 9, 1882, and payable to her own order. On the same day it was indorsed by her through her husband, who acted for her and used her name as follows: "Pay Charles Raymond, Boston." He testified positively that the draft was, after it was so indorsed, carefully inclosed in an envelope with an accompanying letter and addressed "Charles A. Raymond, 175 Congress Street, Boston, Mass.," that being his address and place of business. The letter and draft were not, however, received by the latter in due course or at all until it was sent a second time, as below mentioned. On the 21st day of January following the same draft was presented at a hotel in Boston for his bill by a person who had the day before registered there as "Charles Raymond," and was by him indorsed. It was received and deposited in bank and thereafter forwarded and collected of the drawee, The First National Bank, of Chicago. This indorsement is admitted to have been fraudulent and a forgery; but nothing further appears in the evidence as to the identity or name of the person so indorsing it. The draft was intended for "Charles A. Raymond," to whom the plaintiff was indebted, but was by mistake indorsed payable to "Charles Raymond." It was forwarded to and formally indorsed by "Charles A. Raymond" to plaintiff in August, 1882, her account with him having been otherwise adjusted; and thereafter, payment having been duly demanded of the drawee and refused, she brought this action to enforce the collection thereof against the defendants. Upon the trial the Court directed a verdict for the plaintiff. On appeal,

Held, The principal question here is whether the Court erred in such disposition of the case upon the evidence. The defendants contend that there is evidence in the case tending to prove negligence on the part of the plaintiff in forwarding the draft which caused or contributed to the fraudulent misappropriation and negotiation thereof, and that this question should have been submitted to the jury. The draft was, according to the plaintiff's evidence, inclosed in a letter directed to "Charles A. Raymond" to apply the amount upon plaintiff's indebtedness to him. If the evidence in her behalf was true, then the letter was wrongfully delivered or anticipated by some one other than the person addressed, and the fraudulent and unauthorized indorsement of "Charles Raymond" is as much a forgery as if the draft had been correctly indorsed by the plaintiff and the letter had been intercepted or the draft stolen and negotiated through the forgery of the name "Charles A. Raymond." There is no proof that it in fact came into the possession of any one identified as "Charles Raymond." It was not shown that any one of that name lived in or received his mail in Boston at that date. It does not even appear that the party who negotiated the draft at the hotel was registered as a resident of Boston, or that he was identified at all by the hotel clerk who received it from him. Hence the evidence that one claiming to be "Charles Raymond," and responding to a letter addressed to that name in the Charlestown district of the city in the year 1884, would not raise or strengthen the presumption that he received the letter in question here in due course of mail, and of course would not be material upon the alleged mistake of plaintiff's husband in sending the draft. And for the same reason it was not material to prove that the indorsement was in the same handwriting as the signature of the letter introduced in evidence

purporting to come from "Charles Raymond" in 1884. The testimony is clear and explicit on the part of the plaintiff that the letter enclosing the draft was addressed "Charles A. Raymond" at his place of business in Boston, and that the address was taken from one of his bill-heads placed before the writer at that time. There was no conflict in the evidence, and there is no presumption, therefore, that the draft miscarried and fell into the hands of some one whose address was "Charles Raymond, Boston," through the mistake or carelessness of the plaintiff. Since the indorsement of "Charles Raymond" appears to be a forgery, the payment was unauthorized, and the plaintiff upon the record as it exists was entitled to recover, and the verdict was properly directed.

Judgment affirmed.

Lennon vs. Brainard, Supreme Court of Minnesota, January 2, 1887.

**SET-OFF BY BANK OF INDIVIDUAL DEPOSIT AGAINST PARTNERSHIP DEBT—
ACTION BY CHECK HOLDER AGAINST BANK.**

O and T were partners under the firm name of O. & Co., and doing business as commission merchants in the city of Chicago. The partnership was dissolved on the last day of August, 1879. It had made deposits with the International Bank and drawn drafts payable in the course of its business, and at the time of the dissolution the firm was indebted some \$1,100 to the bank on overdrafts. After the dissolution of the partnership, O continued to do business under the old firm name of O. & Co., and, on the first day of September, 1879, he drew a check in the name of O. & Co. upon the International Bank, payable to J. & Sons, for \$1,960.75, and delivered it to the payees in payment for 250 barrels of pork then bought by him of them. Payment of the check was refused by the International Bank, and this suit was brought by J. & Sons, as payees in the check, against the bank for the money which the check directed to be paid. It was clearly proved that on the day the check was drawn, and before presentment of the check, O deposited with the International Bank to the credit of O. & Co. more than enough money to pay this check and enough to pay all checks drawn by him on that day, and this was not contested. But the International Bank claimed the right to apply the deposits made by him on that day in payment of the overdrafts of the old firm of O. & Co. (composed of O and T), and, having done it, there were not funds left to meet this draft. Upon the trial the plaintiffs gave evidence to the jury tending to prove that the Cashier and President of the International Bank were notified of the dissolution of the firm of O. & Co., and that O would thereafter do business as a new firm under the old firm name; that on September 1, 1879, they were expressly notified before this check was drawn that O, as the new firm, would draw checks upon the International Bank on that day, and that to meet those checks he would deposit the checks which he should receive in payment on sales made by him on that day; that after the check was drawn and before it was presented for payment it was expressly notified by O that it had been drawn, and that he had made a deposit with the bank to meet its payment, to all of which it assented. On behalf of the International Bank evidence was given tending to contradict this evidence and to show that the officers of the bank had no knowledge that the firm of O. & Co. had been dissolved, and that the deposits on September 1, 1879, were made by O alone as O. & Co.; and also evidence tending to show that the officers of the bank had reason to believe that the transactions between O and the bank on the 1st day of September, 1879, were but a continuation of the business of the old firm of O. & Co.

Held, The general rule is that a bank has a right of set-off, as against a deposit, only when the individual who is both depositor and debtor stands in both these characters alike in precisely the same relation and on precisely the same footing towards the bank, and hence an individual deposit cannot be set off against a partnership debt. (105 Ill., 470; "Morse on Banking," 48.)

And the jury, having found the facts to be as testified by plaintiff's witnesses,

Further *Held*, Notwithstanding O owed the duty to pay the firm debt, still, inasmuch as the bank could not set-off the firm debt against his deposit, he

could lawfully appropriate his deposit to a *bona-fide* creditor by drawing a check in his favor on the bank for the amount and thereby vest him with full power and authority to sue for and collect the same.

International Bank of Chicago vs. Jones and others, Supreme Court of Illinois, January 25, 1887.

ACTION BY DEPOSITOR AGAINST BANK FOR BALANCE OF ACCOUNT—SET-OFF OF OVERDRAFT BY HIM ON ANOTHER ACCOUNT.

Plaintiff sued defendant, his banker, to recover on a book account for services rendered to the latter, and also a balance of a bank account at defendant's bank. In addition to plaintiff's personal account with defendant he had opened an account as treasurer of a mining company, and in his capacity as treasurer plaintiff had checked out the money of the company and had overdrawn this latter account to the amount of \$180.53. Defendant sought to set-off the amount of this overdraft against the balance due plaintiff on his personal account, claiming the right to hold plaintiff personally liable therefor.

Held. The checks drawn by plaintiff against the mining company account were without exception signed by him in his official capacity as treasurer of the company. In addition to this he distinctly notified the defendant at the time the account was opened and thereafter that he was acting as treasurer of the company and would in no wise be individually responsible on any of the company's transactions nor for any of its debts. The defendant thereafter could not pay out money on account of the company and hold plaintiff responsible therefor. Unless he intended to credit the company he should have rejected their drafts when there were no funds in his hands to meet them. The overdraft on the account of the mining company should not be allowed as an offset against the individual claim of the plaintiff.

Miller vs. Mickel, Supreme Court of Colorado, November 12, 1886.

DISCOUNTING DRAFTS IN GOOD FAITH HAVING FORGED BILLS OF LADING ATTACHED—INDORSEMENT BY BANK OF SUCH BILLS OF LADING "FOR COLLECTION" IMPLIES NO GUARANTY THAT THEY ARE GENUINE—RECOVERY ON DRAFTS FROM ACCEPTORS.

In October, 1881, the plaintiffs in error, Goetz & Luening, were partners in the business of buying and selling hides on commission at Milwaukee, Wis. At that time one Du Bois was a dealer in hides at Kansas City, Mo. On the 10th of that month Du Bois telegraphed to them from Kansas City inquiring what they could sell 400 green salt hides for, and what they would advance on a bill of lading of the shipment. The firm answered by telegram, stating the market price of light hides on that day, and that they would pay a draft "for two-thirds value, bill of lading attached." On the same day the firm sent a letter to Du Bois, repeating the message, and adding that, if the hides were in good condition and No. 1, they could sell them readily; that their commission was 2½ per cent.; and that they would sell all hides that he might ship to the market at Milwaukee. Upon this understanding and during the same month Du Bois drew upon the firm five drafts, amounting in the aggregate to \$9,395, which were accepted, and, with the exception of the fifth one, were paid. The fifth one, which was for \$2,000, was protested for non-payment. To each of the drafts were attached a bill of lading and an invoice of the shipment. The bill of lading purported to have been issued by the Chicago & Alton Railroad Company, stating that it had received hides, giving the number and estimated weight, to be transported on the road from Kansas City to Milwaukee, and marked and consigned as follows: "To shipper's order. Notify Goetz & Luening, Milwaukee, Wisconsin." The invoice purported to give the net weight in pounds of the hides shipped and the market price at Milwaukee and their estimated aggregate value, referring to the sight draft for two-thirds of the amount.

The drafts were made payable to Thornton, the Cashier of the Bank of Kansas City, and were cashed as drawn, the bank paying their full face less the usual rate of exchange on Milwaukee. The amount, as each was cashed,

was passed to the credit of Du Bois, and was checked out by him in the usual course of business in a few days. The drafts were sent by the bank to its correspondent at Chicago, indorsed "for collection" on its account, and by him were forwarded to Milwaukee. The invoices of some of the shipments were indorsed in the same way. The bills of lading were indorsed by Du Bois *per* J. MacLellan, his clerk. The signatures to the bills of lading proved to be forgeries, on which account Goetz & Luening refused to pay the fifth draft. The bank thereupon brought an action against them for the amount in the Circuit Court of the United States. They defended, and set up as a counterclaim the sums they had paid on the four drafts. At the same time they commenced an action in the State Court against the bank to recover the money paid on those four drafts. The latter action was removed, on application of the bank, to the Circuit Court of the United States, where the two actions were consolidated and tried as one, the same questions being involved in both. The trial resulted, by the direction of the Court, in a verdict for the bank, by which it recovered against the firm the amount claimed on the unpaid draft and defeated the claim of the firm for the return of the money paid on the other four drafts. The case being taken to the Supreme Court of the United States, Field, J.,

Held, The contention of Goetz & Luening was substantially this: That they accepted the drafts in the belief that the bills of lading were genuine; that their genuineness was asserted by the indorsement of the bank on the invoices accompanying them; that the bills of lading were forgeries; that no shipments as stated therein had been made; and that Du Bois bore in the community such a reputation for dishonesty—having been charged at other times with forging bills of lading attached to drafts drawn by him—that the bank was guilty of culpable negligence, amounting to bad faith, in discounting these drafts on the faith of the bills of lading presented by him without inquiring as to their genuineness. The testimony offered by the firm respecting the character of Du Bois was of great length, but it would serve no useful purpose to discuss it. It is sufficient to say that it consisted of a mass of loose statements, general charges of criminality, with vague references in some instances to reported particulars, sensational articles in newspapers, surmises, insinuations, rumors, beliefs and suspicions which might make men cautious in their dealings with him, but they were altogether of too indefinite and uncertain a character to interdict all transaction with him in the ordinary course of business. Besides, testimony was produced by the bank highly favorable to the standing and character of Du Bois. He is shown to have been a man of great enterprise and capacity, and, just before opening business with the bank, to have been a member of the Government of Kansas City, representing his ward in the Common Council, and spoken of as a prominent candidate for its Mayoralty. He was a member and Director of the Board of Trade in the city and one of its Committee on Arbitration, to which business disputes of its members were referred for settlement. He had been a Captain in the Union army and bore the reputation of a brave and gallant officer. He was received in the best society in the city and was generally popular. He commenced business with the bank in March, 1881, and drafts by him, cashed by the bank, amounted from \$20,000 to \$100,000 a month. Those drafts were always accompanied by bills of lading, and not until after the discovery of the forgery of the bills of lading in this case was it known that in any of these transactions had he been guilty of dishonest conduct. Under these circumstances, it is not surprising that, when drafts on the merchants in Milwaukee were presented for discount, the bank made no inquiry as to the genuineness of the bills of lading attached to them. A bank in discounting commercial paper does not guarantee the genuineness of a document attached to it as collateral security. Bills of lading attached to drafts drawn as in the present case are merely security for the payment of the drafts. The indorsement by the bank on the invoices accompanying some of the bills "for collection" created no responsibility on the part of the bank. It implied no guaranty that the bills of lading were genuine. It imported nothing more than that the goods which the bills of lading stated had been shipped were to

be held for the payment of the draft if the drafts were not paid by the drawees, and that the bank transferred them only for that purpose. If the drafts should be paid the drawees were to take the goods. To hold such indorsement to be a warranty would create great embarrassment in the use of bills of lading as collateral to commercial paper against which they are drawn.

The bank, after discounting the drafts, stood towards the acceptors in the position of an original lender, and could not be affected in its claim by the want of a consideration from the drawer for the acceptance or by the failure of such consideration. This has been held in numerous cases and was directly adjudged by this Court in *Hoffman vs. Bank of Milwaukee*, 12 Wall., 181, which in the essential particulars is similar to the one at bar. There the bank had discounted drafts drawn by parties at Milwaukee on Hoffman & Co., commission merchants, of Philadelphia, to which were attached bills of lading purporting to represent shipments of flour. Hoffman & Co. accepted and paid the drafts. The bills of lading proved to be forgeries, and Hoffman & Co. sued the bank to recover the money paid. It was contended that they had accepted and paid the drafts in the belief that the accompanying bills of lading were genuine, and that, had they known the real facts, they would not have accepted and paid the drafts and could not have been compelled to do so, in which case the loss would have fallen on the bank; that is, that they paid the drafts under a mistake of facts. But the Court answered "that money paid as in this case by the acceptor of a bill of exchange to the payee of the same, or to a subsequent indorser, in discharge of his legal obligation as such, is not a payment by mistake nor without consideration, unless it be shown that the instrument was fraudulent in its inception, or that the consideration was illegal, or that the facts and circumstances which impeach the transaction as between the acceptor and drawer were known to the payee or subsequent indorsee at the time he became the holder of the instrument;" that, supposing the plaintiffs accepted the bills of exchange on the faith and security of the bills of lading attached, that fact would not benefit them, as the bills of exchange were in the usual form and contained no reference whatever to the bills of lading; and it was not pretended that the defendants had any knowledge or information that the bills of lading were not genuine, or that they had made any representation upon the subject to induce the plaintiffs to contract any such liability; that undoubtedly the bills of lading gave some credit to the bills of exchange beyond what was created by the pecuniary standing of the parties to them, but that they were not a part of those instruments, and could not be regarded in any more favorable light than as collateral security accompanying the bills of exchange, and that proof that the bills of lading were forgeries could not operate to discharge the liability of the plaintiffs as acceptors to pay the amounts to the payees or their indorsees, as the payees were innocent holders, having paid value for the same in the usual course of business. (Other cases cited by the Court as to the same effect are *Robinson vs. Reynolds*, 2 Q. B., 196; *Craig vs. Sibbett*, 15 Pa., 240; *Munroe vs. Bordier*, 8 C. B., 862; *Thiedemann vs. Goldschmidt*, 1 De Gex F. & J., 4; *Hunter vs. Wilson*, 19 Law J. Exch., 8; *Leather vs. Simpson L. R.*, 11 Eq., 898.)

Further *Held*, The bad faith in the taker of negotiable paper which will defeat a recovery by him must be something more than a failure to inquire into the consideration upon which it is made or accepted because of rumors or general reputation as to the bad character of the maker or drawer. The main position of the plaintiffs in error is, therefore, untenable. It only remains to say a few words respecting the exceptions to the rejection and admission of testimony.

The Court, after then considering the exceptions to the admission or rejection of testimony, affirmed the judgment for the bank.

Goetz, Jr., and ano. vs. Bank of Kansas City, Supreme Court of the United States, January 10, 1887.

BANK AND DEPOSITOR—AUTHORITY TO DISPOSE OF FUNDS WITHOUT ORDER FROM DEPOSITOR.

On the 15th of November, 1882, the plaintiff's testator, J. Marion Sims, delivered to one Crowell his check on the People's Bank, of the city of New

York, payable to the order of the defendant, for \$5,000, with verbal directions to deposit the same to his credit with the defendant. Instead of doing as directed, Crowell delivered the check to the defendant, but requested and received from it a certificate of deposit payable to himself as trustee for Doctor Sims, and shortly thereafter drew the money thereon and converted it to his own use. The defendant collected the money from the People's Bank upon Doctor Sims' check. In an action by the plaintiff, as executor of Doctor Sims, against the defendant to recover the amount of such deposit,

Held, The main question in the case is whether the defendant had authority to make the payment it did to Crowell. It claims to have acted in so doing upon the strength of an alleged custom among banks authorizing such a payment. Upon the trial, however, the proof in relation to such a custom was conflicting, and the question as to its existence was submitted to the jury and found against the defendant's claim. Upon the transaction, with this feature eliminated, there would seem to be no doubt of the defendant's liability. The check upon its face imported the ownership of the moneys represented in it by Doctor Sims and his desire that its custody should be transferred from the People's Bank to the defendant. This certainly did not warrant the defendant in supposing that Doctor Sims thereby intended to pay \$5,000 to Crowell or place him for any purpose in possession of the fund. If he had so intended the check would have been made payable to Crowell's order and there would have been no need of the agency of the defendant in the transaction. The use of the defendant's name as payee of the check indicated the drawer's intention to lodge the moneys in its custody and place them under its control, and nothing further than this was inferable from the language of the check. The check by its terms authorized the defendant to withdraw from the People's Bank a certain sum for a purpose not disclosed but fairly inferable from the nature of the defendant's business. The defendant could have refused to receive the deposit or act as Doctor Sims' agent in transferring the funds from one custodian to another, but having accepted the office of so doing it was bound to keep Doctor Sims' money until it received his directions to pay them out. The language of the check making the funds payable only upon the order of the defendant imposed upon it the duty of seeing that they were not, through its agency, improperly disbursed after it had received them. It could not safely pay out such funds except under the direction of their lawful owner. This it had never received, unless the proof hereafter referred to shows such authority. (And after considering the evidence in the case, the Court holds:) The circumstance that it was the custom of the trust company to require the signature of a customer to accompany a deposit was one adopted for the safety and protection of the bank which it was at liberty to enforce or omit as it deemed best under the circumstances. It could not affect its liability to the real owner of the moneys actually received by it or the legal effect of a transaction by which it came into the possession of another's property. We think the evidence of ratification by Doctor Sims of the act of Crowell in making the deposit in question as he did was not sufficient to authorize the submission of that question to the jury.

Judgment for the plaintiff affirmed.

Sims' Executor vs. The United States Trust Company, of New York, New York
Court of Appeals, November 23, 1886.

**BANK OFFICER RECEIVING DEPOSIT WITH KNOWLEDGE OF INSOLVENCY—
MISSOURI STATUTE—DOES IT INCLUDE PRIVATE BANKERS?**

Section 1.350 of the Revised Statutes of Missouri declares that "if any President, Director, Manager, Cashier or other officer of any banking institution doing business in this State shall receive, or assent to the reception of, any deposit of money or other valuable thing in such bank or banking institution, or if any such officer shall create, or assent to the creation of, any debts or indebtedness by such bank or banking institution after he shall have had knowledge of the fact that it is insolvent or in failing circumstances, he shall be deemed guilty of larceny, and upon conviction thereof shall be

punished in the manner and to the same extent as is provided by law for stealing the same amount of money deposited or valuable thing; provided that the failure of any such bank or banking institution shall be *prima facie* evidence of knowledge on the part of any such officer or person that the same was insolvent or in failing circumstances when the money or property was received on deposit."

Held, It was the intention of the General Assembly in the above enactment to include only the President, Directors, Manager, Cashier or other officers of incorporated banks, and not persons forming a voluntary association or partnership to engage in the business of private banking; and, where a private banker was convicted by the Circuit Court under this Act, the judgment was reversed and the prisoner discharged.

State vs. Kelsey, Supreme Court of Missouri, November 15, 1886.

— BONA-FIDE HOLDER—NOTICE TO CASHIER. —

The Second National Bank, of Pittsburgh, Pa., discounted a note before maturity given by the defendants to the Gillespie Tool Co. for certain work which the latter had agreed to do. The Cashier of the bank was also the treasurer of the tool company. At maturity, the note having been protested, the bank sued defendants, who claimed that there had been a failure of consideration, and that of this failure of consideration the bank, by its Cashier, had notice.

Held, Admitting that, as between the original parties, the consideration of the note in controversy had failed because of the breach by the tool company of its contract with the defendants, yet, as the bank is a *bona-fide* holder for a valuable consideration and without notice of the status of affairs between these parties at the time of the discount of the paper, clearly it cannot be affected thereby. The knowledge of Willuck, the treasurer of the tool company, cannot be imputed to the bank of which he was Cashier unless he revealed that knowledge to some one or more of its officers; but of this there is no evidence.

Judgment for the bank.

Second National Bank, of Pittsburgh vs. Wilson, Supreme Court of Pennsylvania, November 15, 1886.

— ISSUE OF CERTIFICATE OF DEPOSIT BY CASHIER—AUTHORITY TO BIND BANK. —

Action against a bank on a certificate of deposit as follows:

\$780.	FIRST NATIONAL BANK OF LIVINGSTON, LIVINGSTON, M. T., May 21, 1884.
<p>This is to certify that the Crystal Plate Glass Company have deposited in this bank seven hundred and eighty dollars payable in current funds to the order of themselves three months after date with interest at the rate of six per cent. per annum on the return of this certificate properly indorsed. No interest after three months.</p> <p style="text-align: right;">D. E. FOGARTY.</p> <p>No. 508.</p>	

Fogarty was Cashier of the bank at the time this certificate was issued, and sent the same to the plaintiff in a letter as follows:

"GENTLEMEN:—Your favor of the 16th is received. Owing to the stringency in the money market here the parties we ordered the glass for are unable to pay for the same at present. They are perfectly good. Consequently we will take their paper for three months and inclose our C. D. to secure you, which we trust will be satisfactory.

"Respectfully,
D. E. FOGARTY, Cashier."

The bank having refused payment of the certificate when due, plaintiff brought suit against it, in which the following questions arose:

1st. Was the certificate of deposit issued by Fogarty as Cashier of the bank?

2d. If so, did he, under the above state of facts, have authority to issue it?

Held, As to the first question. It is true that the certificate was not signed by Fogarty as Cashier, but the evidence shows that he was Cashier of the bank at the time of its issuance, and the letter of the same date relating to it as above

set forth is signed by him as Cashier. We have no doubt, therefore, from the above state of facts, and from the inherent nature of the transaction, that it was issued by him in his official capacity of Cashier of the bank.

Further *Held*, Did he have authority to issue the certificate? From the foregoing evidence it appears that it was not issued upon the strength of funds of the plaintiff deposited in the bank, but upon the promissory notes of third persons made payable to the bank for whom the bank had previously ordered goods. The letter was admitted without objection, and it appears from it that the bank itself had ordered the goods for the price of which the certificate of deposit was issued. It is fair to presume that credit was given to the bank and that it was responsible therefor. It was therefore a demand against the bank, and the certificate of deposit payable three months after date was in substance the promise of the bank to pay at the expiration of that period. We think this to have been within the authority of the Cashier. But even proceeding upon the theory that it was not the debt of the bank, but of the third parties who gave the notes, the bank, by taking these notes, payable to itself, assumed their indebtedness and became liable therefor. In this case the Cashier would have the authority mentioned before. But, aside from this, it is the regular course of business in banks that persons make their promissory notes thereto and have the amount thereof placed as so much cash to their credit, and a certificate may be issued therefor to themselves or to any one whom they may direct. Therefore, putting out of view the liability of the bank, when the bank took the promissory notes of the parties for whom the goods were ordered they may be considered funds in its hands upon which the Cashier might issue a certificate of deposit to their creditor, the plaintiff. We think that the proceeding was according to the ordinary course of business in banks and that the Cashier did not exceed his authority.

Judgment against bank.

Crystal Plate Glass Co. vs. First National Bank of Livingston, Supreme Court of Montana, January 12, 1887.

POWERS OF BANK CASHIERS.

Continued from page 267, March number of the JOURNAL.

XV. Miscellaneous Matters Falling Within the Ordinary Duties of a Cashier.—The drawing of checks upon the funds of the bank deposited elsewhere is an act which falls within the ordinary duties of the Cashier, and he is the proper officer to attend to this part of the business. The drawing and accepting of bills of exchange and the issuing of certificates of deposit, when done in connection with the regular business of the bank, falls within the scope of his employment. The Cashier, however, has not the power to bind the bank by an acceptance for accommodation, and such an acceptance would be invalid in the hands of every person having notice of the fact. In a case reported in this number (Crystal Plate Glass Co. vs. First National Bank), where a Cashier issued a certificate of deposit to a creditor for the debt of a third party, taking the notes of such third party made payable to the bank, it was held that the Cashier had authority to issue the certificate and that the bank was bound.

It is also a part of the duty of the Cashier to attend to the opening of accounts with depositors and to decide upon their acceptance or rejection, subject, of course, to the supervision of the Board of Directors. The correspondence of the bank is also a branch of the business which is conducted by the Cashier with more or less assistance from his subordinates. The Cashier has general charge and supervision of the personality of the bank, and is responsible for the safe-keeping of its money and securities. He attends to the payment of debts and taxes. It is also his duty to superintend the collection of debts owing the bank and to make up the accounts of the sums due. His power with regard to compromising the debts of the bank is treated elsewhere in this series.

LAW NOTES AND COMMENTS.

TAXATION OF NATIONAL BANK STOCK IN THE TERRITORIES.—Section 5,219 of the National Bank Act provides: "Nothing herein shall prevent all

the shares in any association from being included in the valuation of the personal property of the owner or holder of such shares in assessing taxes imposed by authority of the State within which the association is located ; but the Legislature of each State may determine and direct the manner and place of taxing all the shares of the National banking associations located within the State, subject only to the two restrictions that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located and not elsewhere. Nothing herein shall be construed to exempt the real property of the associations from either State, county or municipal taxes to the same extent according to its value as any other real property is taxed." Under this section a resident of Montana and holder of certain shares in a National bank located in that Territory resisted a levy of taxes upon his shares on the ground that by virtue of this section the right to tax National bank shares is limited to National banks located and doing business in a *State*, and that such shares are not subject to taxation in a Territory. The Supreme Court of Montana has just rendered a decision in the matter (*County of Silver Bow vs. Davis*, January, 1887), denying this claim and holding that shares in a National bank are equally liable to taxation in a Territory as in a State. The Court says that, in construing the section above referred to, reference must be had to all the sections and to the general scope and meaning of the Act of Congress authorizing and establishing our National bank system. That the sections or different parts of every statute must be construed together and as they are modified by one another. If the object and intent of the statute is definitely defined and clearly expressed ordinary words will be given such a meaning, if they have such a meaning, as to make them harmonize with such object and intent even though they might be so interpreted as to conflict therewith. The word "*State*" has various meanings. It may mean a place ; it may mean an organized political community. If used in the latter sense the word might mean the same as Territory, if that is also an organized political community. The Court holds that the general purpose and scope of this Act of Congress was to give the people of the United States, whether they lived in a State or in a Territory, a uniform system of banking whereby they should be authorized to form associations for carrying on that business ; that it requires such associations in their certificates to name the place where its operations of discount and deposit are to be carried on, designating the "*State, Territory or district*" and the particular county, city or village. (Section 5,184.) Here the words "*State, Territory or district*" mean simply the place—the locality—in which the business is to be carried on. The right to form such associations is made a privilege—a franchise—which is distributed equally among the people of the *States and Territories* according to the population of either (see Sections 5,178–5,180), and every association is allowed to charge and to receive interest at the rate allowed by the laws of any *State, Territory or district* where the bank is located. (Section 5,197.) Penalties for the violation of any of the provisions of the Act by the officers of any banking association are the same whether such violation occurs in a State or Territory. (Section 5,239.) The Court holds that the banking system created and established by the Act extends alike to the States and Territories. The Constitution and laws of the United States which are not locally applicable have the same force and effect in the Territories as elsewhere within the United States. (Rev. Stat. U. S., Sec. 1891.) The Territories are as much a part of the United States as are the States. There is but one banking system for all. No provisions of the Banking Act are locally inapplicable to the Territories. The legislative powers of the Territories extend to all rightful subjects of legislation. It is just as competent for a Territorial Legislature to determine and direct the manner and the place of taxing personal property as it is for a State Legislature to do the same thing. In this respect their powers are alike. Either may levy and assess taxes upon property subject to taxation within its jurisdiction. Each must raise a revenue by taxation for carrying on the local Government. The National banking system extending over each

alike, it would seem that the words in Section 5,219, "in assessing taxes imposed by authority of the State within which the association is located," ought to be interpreted to mean the legislative authority or the authority within the locality in which the banking association is situated that may rightfully and legally levy and assess taxes upon personal property. Otherwise burdens are imposed upon banking associations in States and exemptions are allowed to those in Territories which would be inconsistent with the whole spirit of the Act which was designed to give a uniform system to every locality. If this interpretation of the word "State" be correct, the Court holds that then there are no restrictive words in Section 5,219, which is a part of Chapter 3 of the Act, and is controlled by Section 5,157, which provides that Chapters 2, 3 and 4, which are expressed without restrictive words as applying to "National banking associations" or to "associations," apply to all associations organized to carry on the business of banking under any Act of Congress. If this interpretation is not correct, then, by virtue of the same section, the real estate of any banking association in a Territory is exempt from taxation, and, by virtue of Section 5,242, attachments and injunctions may issue against banking associations before final judgment if located in a Territory. And so, if the word "State" means one of the United States, and not a place in which the banking association is located, then, while the Comptroller of the Currency, by virtue of Section 5,181, is given authority to equalize the currency in a State according to the population, he has no such power in the Territories. The Court shows that these incongruities are avoided and the Act made consistent and harmonious by giving to it a uniform operation in the States and Territories, which can be done without violating any of its words or phrases, and which was the evident purpose of Congress when it provided a banking system for the people of the United States. The claim of the shareholder to exemption on this ground was therefore denied. The Court further held that by the laws of Montana and by the showing of the facts in the case there was not, as claimed also by the shareholder, an unjust discrimination against him in the taxation of his shares of National bank stock.

LIABILITY OF A PARTY WHO SIGNS A NOTE WITHOUT READING IT.—In the case of *Carpenter vs. First National Bank*, in the Supreme Court of Illinois (decided January 25, 1887), a party signed a note in a hurry without reading it and without really understanding its contents. The Court held that he could not be relieved from liability, as maker, if no artifice was used to induce him to sign it, and he, being a man of mature years, sound mind, and able to read and write, had an opportunity to read and examine the note before signing it and to inform himself of its contents.

DRAFTS PAYABLE "IN EXCHANGE."—The following terse article, by Dr. Andrew Simonds, President of the First National Bank, of Charleston, S. C., issued in circular form and circulated among bankers, presents very clearly the objections to making paper payable "in exchange." The writer says:

"Our business with the Northwest is large and increasing. Occasionally drafts come payable 'in New York exchange.' This doubtful form is open to many objections, one of the least of which is to deprive the collecting agent of all compensation for his risk, labor and expense (no charge being made for collecting other than the small profit on the exchange, averaging from one-sixteenth to one-eighth of one per cent.). It is claimed by the drawee that he can discharge the paper by offering a draft on New York. If so, must the payee accept any draft offered? If not, who is to decide what he may refuse? Surely not the drawee, whose interest it is to pay in the cheapest bill to be had. If the holder can refuse one tender it is clear he can refuse any.

"It is said that the draft of a drawer in good repute must be offered. But who is to decide on this good repute? If the payee has doubts about the offer, may he refuse it? If, then, for reasons satisfactory to himself, he declines the tender, must he protest the collection? If he accept payment 'in exchange' which should prove worthless, on whom shall the loss fall? To avoid such

troublesome questions, banks and bankers are respectfully urged to refuse drafts out of the legitimate form 'with current rate of exchange on New York.'

"In financial dealings certainty is essential to security. I can find no decision as to the effect of the words 'in New York exchange,' and am therefore forced to conclude that, if they are to be regarded at all, they destroy the negotiability of the paper.

"If this is correct then the drawers and endorsers have no legal right to protest and notice of non-payment as in the case of negotiable paper. Commercial paper to be negotiable must be payable in money. Drafts are not money.

"Daniel on Negotiable Instruments,' Vol. I., Sections 55 and 56, says:

"It is indispensably requisite, in order to constitute a bill of exchange or negotiable promissory note, that the direction or promise be to pay *in money*. And if the instrument be expressed to be payable 'in cash or specific articles' in the alternative, or in merchandise, as, for instance, 'in good merchantable whiskey at trade price,' it becomes a special contract, and by the law merchant loses its character as commercial paper. Nor can it be for payment in 'good East India bonds' or in 'foreign bills' or by bill or note. A bond payable 'in notes of the United States Bank or of either of the Virginia banks' has been held not payable in money; but where the bond was for a certain sum, and it was added, 'which sum may be discharged in notes or bonds due on good solvent men in R——,' it was held payable in money. But the Courts would not go so far, we think, as to hold an instrument couched in such terms negotiable; for, in order to possess that quality, it should afford on its face every element necessary to fix its value, and such a paper would be a special contract rather than a negotiable bill or note."

In this connection it will be interesting to learn what Mr. Patten, the author of the JOURNAL's series on "Practical Banking," at page 794 of the October (1886) number of the JOURNAL, said on the same subject:

"There is a class of business men who have the inveterate habit of making drafts payable 'in New York exchange' rather than 'with exchange.' This is a risky and objectionable way of framing paper, and banks should set their faces very strongly against the use of such a form. The bank which attempts to collect the paper drawn in this manner is liable to find itself in an unpleasant predicament. The drawee of paper of this type may take the stand that he can pay the paper by offering in settlement any draft on New York which he may select. If the collecting bank attempts to discriminate regarding the character of the exchange on New York that is offered, and raises the question whether or not the tendered exchange is of good repute, it may find itself in an unwelcome controversy with the payer, and it may, in the end, be difficult to say who has the right to decide upon the repute of the exchange tendered. This form of draft-drawing should be entirely done away with, and, in order to hasten the abolition of its use, the banks should take the position that they will not assume any responsibility in the matter of collecting such paper."

REPLIES TO LAW AND BANKING QUESTIONS.†

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail—and which are not to be published. See advertisement on another page.

Editor Rhodes' Journal of Banking:

CORNING, Iowa, March 9, 1887.

SIR:—Will you please give us some idea in the JOURNAL in regard to collaterals? If we lend money to a party, and take notes as collateral security, should we give the party a receipt for the collateral notes? Is it not the custom among bankers to withhold receipts in such cases?

Truly yours,

WESTERN BANKER.

Answer.—We think a receipt should be given. In one or two of the States statutes have been enacted in the matter. Thus, in Alabama, by the Laws of 1879, as amended by Laws of 1883, No. 33, it is provided that "all banking, insurance and other corporations, private bankers, brokers, and other persons

† NOTE.—Inquiries from Pittsburgh, Pa., and Louisville, Ky., received too late for insertion in this number.

engaged in the business of making discounts or loaning money, are hereby required, on the receipt by them of any collateral for a loan or discount, if demanded by the borrower, his agent or attorney, to give a receipt or acknowledgement in writing, which said receipt or acknowledgement shall designate or describe the collateral so held, the amount and character of the debt and the time when due; and if the same be negotiable bonds, the series number thereof shall also be given in said receipt; and if any corporation or person so making discounts or loaning money wilfully fail or refuse to give such acknowledgement, as above provided, such corporations or persons shall have no title to said collaterals until such receipt or acknowledgement is so given."

Editor Rhodes' Journal of Banking:

LEWISBURG, Tenn., March 14, 1887.

SIR:—Please give your opinion in regard to the following note—whether negotiable or collectable in cash—all the provisions in the note being legally complied with by the payee:

\$100.	OFFICE OF THE DUCK RIVER VALLEY RAILROAD CO., COLUMBIA, Tenn., August 31, 1880.
Twelve months after the completion of the Duck River Valley Railroad to the town of Fayetteville, Tenn., the Duck River Valley Railroad Co. will pay to B, or order, the sum of one hundred dollars, in six equal installments, at the office of the company, in the town of Columbia, Tenn., the same being one-half of his subscription under date of —.	
This note is payable in shares of the capital stock of the company, or in freight and passage only at the option of the holder.	
Signed, DUCK RIVER VALLEY RAILROAD CO., By GEORGE CHILDESS, Secretary & Tr.	

This road was completed to Fayetteville on June 1, 1882. Can this note be collected, provided the company is solvent? J. T. DEAN, Cashier.

Answer.—The instrument above set forth is not negotiable or collectable in cash for the reason that it is not payable in money, but "in shares of the capital stock of the company, or in freight and passage only at the option of the holder." It is not, therefore, a promissory note, but a contract for the payment of \$100 in the capital stock of the company or in freight and passage twelve months after the completion of its road. This time having elapsed, it can be enforced by the holder should no defense exist on the part of the company. Not being negotiable, it is open to all defenses against any assignee which might be made to it in the hands of the payee. The words "in six equal installments," we think, would be rejected as without meaning in any suit on the instrument.

Editor Rhodes' Journal of Banking:

SAN FRANCISCO, Cal., February 22, 1887.

SIR:—The receipts of the express companies usually contain certain conditions, one being that they shall "not be liable for an amount exceeding fifty dollars unless the true value of the shipment is herein stated."

1. Cannot the shipper legally place the value of \$50 on a package which really contains much more than that?

2. If he does so undervalue his shipment, and the package is lost by fire or through train-robbery, can he collect more than \$50?

3. If he does so undervalue a package, and it is stolen by a servant of the express company, cannot the true value of the package be claimed?

4. In the last case, if the express company should not make known to the shipper the particulars of the robbery, could not the shipper apply for and obtain a search-warrant so as to ascertain whether the company was holding his package as a punishment for undervaluation?

P. A. T.

Answer.—The shipper could not recover from the express company in case of loss or injury for which it was liable any greater amount than the value which he had placed on the package.

In *Tyle vs. Morrice, Carth.*, 485, a carrier received two bags of money sealed up, and was told that they contained £200, and a receipt was given charging 10s. per cent. for carriage and risk. The bags in reality contained

£400, and the carrier having lost them by robbery it was held that the plaintiff could not recover more than £200.

In *Orange Co. Bank vs. Brown*, 9 Wend., 116, Nelson, J., says: "In the absence of notice, if any means are used to conceal the nature of the article, and thereby the owner avoids paying a reasonable compensation for the risk, this unfairness, and its consequence to the carrier, upon the principles of common justice, will exempt him from responsibility; for such a result is alike due to the carrier, who has received no reward for the risk, and to the party who has been the cause of it by means of disingenuousness and unfair dealing."

In *Gibbon vs. Paynton*, 4 Burr., 2,298, an attempt was made to hold a carrier liable for money delivered to him concealed in a bag filled with hay, although he had given notice that he would not be liable for money or valuables unless notice was given that they were contained in the package delivered to him to be carried and with the payment of a higher price for the carriage accordingly, the object of the owner being to cheat the carrier and have the money carried without paying the price which the latter was entitled to. Lord Mansfield held that the plaintiff could not recover because of fraud.

See "Hutchinson on Carriers, Section 212."

And in "*Angell on Carriers*," at Section 259, it is said, speaking of the case above cited (*Tyle vs. Morrice*), where a package containing £400 was valued at £200, and £200 was all the plaintiff was allowed to recover, that "it may be doubted whether the defendant would now be considered as liable even to that extent, and whether the whole contract would not be considered as avoided and rendered a nullity, by the fraudulent representation."

See "*Angell on Carriers*," Sections 258, 259, and cases cited.

Editor Rhodes' Journal of Banking: FORT WORTH, TEX., February 23, 1887.

SIR:—The following check was presented at this bank:

\$10,000.	FORT WORTH, TEX., February 21, 1887.
THE MERCHANTS' NATIONAL BANK.	
Pay to G. B. M. & Co. ten thousand dollars.	
No. 896.	PETER JONES & Co.

The drawer erased the words "or order." Should the holder of the check—that is, the party receiving it from the drawer—lose it on the way to the bank and some person finds it could the finder claim that the check was payable to bearer and demand the money? The drawer makes it read, "Pay to G. B. M. & Co.," knowing at the time that there is no such firm, and holds that it is payable to bearer. I take the position that the party presenting the check must be identified as a member of the firm of G. B. M. & Co., and, on his failing to be identified, we are right in refusing to pay. The person that questions this matter claims that the check is payable to bearer. Is there any responsibility assumed by the bank in refusing to pay the amount of the check without its being properly indorsed? Please give me your opinion as to the bank's responsibility in paying the check in its present shape.

A. B. SMITH.

Answer.—A check made payable to the order of a fictitious name is regarded as equivalent to being made payable to bearer.

Coggill vs. American Exchange Bank, 1 N. Y., 118.

Foster vs. Shattuck, 2 N. H., 446.

Vere vs. Lewis, 3 Term., 182.

And a bank can pay a check which is payable to bearer without the indorsement of the holder. In a case like the present, however, we think the bank would be justified in deferring payment of the check until it had satisfied itself that the name of the payee was fictitious, and that the party presenting was the rightful holder of the check.

Editor Rhodes' Journal of Banking:

BOSTON, MASS., March 19, 1887.

SIR:—A man named A keeps a bank account in a town near this city. A perfect stranger calls on him and requests a favor. The stranger desired to send \$15.25 to New York, and wished A to give him his check for this amount. The check is filled out by A's clerk, payable to bearer—A's customary method of drawing checks—and properly

signed. By using chemicals the stranger cleverly raises the check to \$150.25, and has it immediately cashed at A's bank. Should the bank or A stand the loss?

Respectfully,

WILLIAM A. BLACK.

Answer.—The rule in such cases is that the bank paying the check must stand the loss unless it was drawn in such a careless or incomplete manner that it might be raised without giving it a suspicious appearance or leaving a perceptible mark. In that event A would be chargeable with the amount paid.

Editor Rhodes' Journal of Banking: NORTH LA CROSSE, Wis., March 17, 1887.

SIR:—We would like your opinion, through the JOURNAL, as to the correctness of the following reply, which I clip from a (so-called) banker's publication in your city. The inquiry is dated at Ellis, Kansas, and reads as follows:

"We mailed a remittance of Union Pacific Railway pay checks to our Kansas City correspondent over two months ago, which has never reached its destination. As soon as we discovered the loss we notified the local Treasurer, and requested him to stop payment and send us duplicate checks. Not hearing from him in a reasonable time, I wrote the Paymaster of the U. P. R. a statement of the case, and he referred my letter to the Auditor, who has paid no attention to it. The Paymaster informed me that the Auditor would insist on an indemnity bond before issuing duplicates. Can we secure payment or duplicate checks without giving an indemnity bond, and, if so, what is the proper way? As address was printed plainly on envelope, and the post-office department can find no trace of letter, it was probably stolen, and checks may be presented to the railway company for payment."

Here is the answer given in the paper:

"The course pursued by the railroad company is regular and proper. They paid the obligation due their employee by them by making and delivering such check to him. The check was lost by the agent of the payee, for which the company is not liable, and it cannot, in our judgment, be caused to pay again. It is discretionary with the company whether it will pay again or not. The check may be in the hands of an innocent third party."

It seems to us that the railroad cannot maintain any such position as this. If the check used by the railroad company is drawn on a bank it cannot be considered paid until charged by the bank to the account of the drawer, and in the meantime is a promise of the company to pay to the order of the drawer; and it seems to us the company could be made to issue duplicates upon proper proof and security against the probability of the originals turning up.

Will you please give your views and any legal decisions affecting such cases.

MAGILL BROTHERS.

Answer.—The reasoning in the above reply is certainly unsound. The writer states that the railroad company paid the obligation due their employee by delivering their check to him, and, if the check is lost, they cannot be called upon to pay again. Conceding that they discharged the *obligation* to their employee by delivering the check, their liability on the *check*, as drawers, is not discharged until it is paid.

In the case stated the railway company could probably be required to issue new checks, but not until indemnified against the originals turning up in the hands of some party entitled to enforce them. The authority for this proposition may be found as follows:

By the Statute 9 and 10, William III., ch. 17 (enacted in the year 1698), it is provided by Section 3 that, "in case any *such* inland bill shall happen to be lost or miscarried within the time before limited for the payment of the same, then the drawer of the said bill is and shall be obliged to give another bill of the same tenor with that first given, the person to whom it is delivered giving security, if demanded, to the drawer to indemnify him against all persons whatsoever in case the said bill, so alleged to be lost or miscarried, shall be found again."

It is stated in "Byles on Bills" (seventh edition, Sharswood), at page 384, that this provision is not peculiar to the law of England, but agreeable to the mercantile law of other countries (citing Code de Commerce, Liv. 1, tit. 9, art. 151, 152). And, further, that the "relief administered by courts of equity was not confined within the letter of the statute. It would be afforded not only on *such* bills as are mentioned in the statute, but on others."

And it is stated that this provision is extended to promissory notes by the Statute of III. and IV. Anne, Chapter 9, Section 1 (1775), which is "an Act

for giving like remedy upon promissory notes as is now given upon bills of exchange," etc.

It is probable, therefore, under the provisions of this statute of William III., that a Court of equity has power to compel a drawer to issue a duplicate check upon receiving sufficient security to indemnify him against liability on the original.

Another remedy which the holder of a lost check would have would be to demand payment upon a copy, and, on refusal, bring suit against the drawer. In such a suit he could recover upon giving proper indemnity.

Editor of Rhodes' Journal of Banking: WESSINGTON SPRINGS, Dak., Feb. 19, 1887.

SIR:—In making returns for assessment for local taxes would it be proper for a private bank doing business in Dakota to deduct from its cash on hand the United States notes (greenbacks) which it holds. Respectfully, C. E. THAYER.

Answer.—Treasury notes or greenbacks are exempted from taxation by Section 3,701 of the Revised Statutes of the United States, and can therefore be deducted from the amount returned for assessment.

Editor Rhodes' Journal of Banking: HYANNIS, Mass., March 11, 1887.

SIR:—It was decided in the case of Seeley vs. New York National Exchange Bank (8 Daly, 400,) that, when a National banking association reduces its capital stock, the amount of capital thus released belongs to the shareholders *pro rata*, and must be returned to them; and it cannot be retained by the association for a surplus. *Question:* How would it be as to its *surplus*, providing the bank had a *surplus* equal to 20 per cent. of its capital? Would that have to be divided *pro rata* the same as its capital stock?

JOSEPH T. HALL, Assistant Cashier.

Answer.—In Seeley vs. New York National Exchange Bank (8 Daly, 400) —affirmed in the Court of Appeals—the defendant, by a resolution of its stockholders, under the provisions of Section 5143 of the Revised Statutes, reduced its capital stock from \$500,000 to \$300,000—*i. e.*, two-fifths—and provided that \$100,000 should be returned to the stockholders, who should relinquish two-fifths of their stocks *pro rata* according to their amounts. This, in effect, gave the stockholders but \$100,000 in cash for \$200,000 of stock surrendered, and the remaining \$100,000 was sought to be retained by the association as a surplus. Seeley, the owner of twenty-five shares of \$100 each, brought suit to compel the bank, upon the surrender of the shares, to issue him a new certificate for three-fifths of the amount, and to pay him cash for his remaining two-fifths, claiming that the association had no right to retain any portion of the capital so reduced as a surplus. This claim the court upheld. In this case the shares of Seeley were proved to be of the value of \$100 each, and no question arose as to the *pro rata* division of any surplus. But, supposing in a similar case there was a surplus of 20 per cent., would two-fifths of this surplus be adjudged to be *pro rata* divided in like manner as the two-fifths capital? This is the question we are asked to determine.

Let us examine the opinion in the Seeley case and see if the same reason which influenced the decision in that case would also apply to a case like the present.

Judge Van Hoesen, in his opinion in the Seeley case, says:

"The principal question in this case is whether a National bank may, after reducing the amount of its capital stock, retain, as a surplus or for other purposes, the whole or any portion of the money which it received for the stock that is retired. The defendant reduced its capital stock from five hundred thousand to three hundred thousand dollars. What is to become of the two hundred thousand dollars which was subscribed and paid for the stock that has been called in? Must it be paid to the stockholders who surrendered the retiring stock or may it be retained by the bank? A certificate of stock is merely the evidence of an interest in dividends, as they are declared, and of a right to a *pro rata* distribution of the effects of the corporation on hand at the expiration of the charter. If the defendant had determined to discontinue business and wind up its affairs there is no doubt that the shareholders would be entitled to a distribution of whatever assets of the corporation might remain after its

debts had been paid. If, instead of surrendering all its corporate powers, a corporation, by reducing its capital stock, relinquishes a portion of them, it seems to me that the shareholders may properly claim a distribution of the money which the corporate body has no longer the right to use as capital. *The abandonment by a corporation of all its corporate rights gives the stockholders a right to the distribution of all the net assets. Why should not an abandonment of a portion of these rights give the stockholders a right of distribution pro tanto? Of course, if the capital stock has been impaired, the amount to be returned to the stockholders must be diminished.* * * * * The bank has gone out of existence as a corporation with a capital of \$500,000. Under a modified charter it commences a new life with a capital of \$300,000. *So far as the \$200,000 of reduced stock is concerned, the corporation must be considered as having surrendered its charter and wound up its business.* This being so, there is no doubt as to the duty it owes to the stockholders who own the retired stock."

In the case in which this opinion was rendered there was no surplus. The shares were of the actual as well as the par value of \$100. If there had been a surplus of 20 per cent., so that the actual value of each share had been \$120, is there any doubt that, under this reasoning, each share retired would take with it, in addition to its par value, its *pro rata* of the surplus? "*The abandonment by a corporation of all its corporate rights gives the stockholders a right to the distribution of all the net assets*"—that is, not only the capital, but any surplus. "*Why should not an abandonment of a portion of those rights give the stockholders a right of distribution pro tanto? Of course, if the capital stock had been impaired, the amount to be returned to the stockholders must be diminished.*" With equal reason, therefore, if it has been enhanced, the amount to be returned will be increased.

The rule established by the decision is, that when a corporation with a capital of \$500,000 reduces it to \$300,000, it must be considered as having surrendered its charter and gone out of business to the extent of \$200,000. That this discontinuance entitles the stockholders to a distribution of its *net assets pro tanto*. That, if the capital has been impaired, the amount to be returned must be diminished; but, if the capital is unimpaired, and a surplus exists, this surplus, to the extent of two-fifths, is to be divided *pro rata* with the capital. This is a deduction clearly drawn from the opinion. In the case in which it was applied there appeared to be no surplus, nor was there any diminution of the capital. The shares were each worth par. The Court accordingly held that two-fifths of the capital must be returned *pro rata* to the shareholders. Had there been a surplus, it is clear, under the reasons advanced in the opinion, that two-fifths of this, also, would have been decreed to have been divided in the same way.

Editor Rhodes' Journal of Banking:

HUMMELSTOWN, Pa., March 10, 1887.

SIR:—I would like to get your opinion on the following questions:

1. A makes his note payable to B, or order. B indorses it and hands it back to A, who brings it to the bank and takes credit on his account. Is this note sufficiently indorsed? Transactions of this kind are very common in country banks.

2. Does the waiver of an exemption clause destroy the negotiability of a note?

JOHN J. NISSELEY, Cashier.

Answer.—1. If the note was indorsed in blank by B, and handed back to A, who delivered it to the bank, the indorsement is sufficient to vest the title in the bank, and A is liable thereon as maker and B as indorser.

2. The waiver of exemption laws does not destroy the negotiability of a note in Pennsylvania. *Zimmerman vs. Anderson*, 67 Pa. St., 421, is an authority for this rule. In that case the indorser sued the maker on a note, which read: "Six months after date I promise to pay E. W. Lowe or order one hundred and twenty-five dollars, for value received, with interest, *waiving the right of appeal, and of all valuation, appraisement, stay and exemption laws.*" The maker claimed that the note was not negotiable, and sought to interpose the defense of a want of consideration. The Court held the note negotiable, saying that the words above italicized "do not contain any condition or contingency, but, after the note falls due and is unpaid, and the maker is sued, facilitates the collection by waiving certain rights which he might

exercise to delay or impede it." That "instead of clogging its negotiability, it adds to it, and gives additional value to the note."

We have omitted from the above inquiry a third question as to taking "proceed checks," as it does not seem clear to us. If our correspondent will re-state the inquiry we will gladly answer it.

DIGEST OF RECENT DECISIONS IN COMMERCIAL LAW.

ADMINISTRATOR—EXTINGUISHING DEBT OF.—The granting of administration of an estate to one indebted to the intestate is an extinguishment of the debt. The chose in action becomes converted into a chose in possession, and is transmitted by mere operation of law, which is equivalent to judgment and execution. The debt is thus satisfied and extinguished. The instant administration is granted, the administrator, being the person to receive and to pay, is considered to have paid the debt and as holding the amount in his hands as assets, and the debt having once become assets no act of the parties can return it back to an obligation. [*Jacobs vs. Morrow, Supreme Court of Nebraska, February 16, 1887.*]

ATTACHMENT—FOREIGN ASSIGNMENT—RIGHT TO PROPERTY.—A resident of New York made an assignment for the benefit of his creditors, giving preferences, to a New York assignee. The assignment embraced certain lands in Cook County, Ill., and was duly recorded in that county. A Massachusetts corporation, creditor of the assignor, in a suit against the debtor subsequent to and with notice of the assignment, attached the same property in Illinois and obtained judgment by default. The New York assignee intervened and claimed the property by virtue of the deed. *Held*, A statute of this State makes void every provision in an assignment that provides for the payment of one debt or liability in preference to another. The policy of the law of the State would hardly warrant the Courts in lending their aid to a foreign assignee to withdraw effects, either real or personal, from the just claims of the creditors of the insolvent debtor and remove the same to another State where, under the laws of that State, such creditors might get no part of their claims on account of the preferences given by the deed of assignment. It is, therefore, quite plain that if the attaching creditor was a citizen of this State, or a corporation existing under the laws of this State, it would be entitled to the property attached as against a foreign assignee; and no good reason exists for denying a citizen of another State, owing no duty to observe the laws of the State under which the assignment was made, to become a suitor in the Courts of this State on terms of equality with our own citizens. [*May vs. First National Bank of Attleboro, Supreme Court of Illinois, January 25, 1887.*]

CONTRACT—OFFER AND ACCEPTANCE.—An offer of a bargain by one person to another imposes no obligation upon the former unless it is accepted by the latter according to the terms upon which the offer was made. Any qualification of or departure from those terms invalidates the offer unless the same is agreed to by the party who made it. Where the negotiations are by letters they will constitute no agreement unless the answer to the offer is a simple acceptance without the introduction of any new term. [*Langelier vs. Schaefer, Supreme Court of Minnesota, January 31, 1887.*]

FORGERY—STATUTE OF LIMITATIONS—ABSENCE FROM STATE.—Indictment for uttering a forged note. Defense, the Statute of Limitations. *Held*, It appears that the respondent had always lived in this State, but that several years ago he was absent for several months; his absences in all, if deducted from the period between the commission of the crime and the filing of the information, reducing the period of his actual presence in the State to less than six years. The Statute of Limitations applying to crimes deducts from the six years' limitation such time "during which the party charged was not usually and publicly a resident within the State." It is not mere absence from the State which this statute refers to, but such absence as destroys residence. Otherwise persons would be unable to leave home for any purpose without incurring the risk of consequences which were never contemplated. Criminal cases really do not stand on the same necessity as civil cases, for absence does not prevent an indictment, while it does prevent the beginning of a

civil action. It is a hardship to postpone criminal proceedings so long that testimony may be lost and the truth difficult to get at. Long delay in complaining does not usually further justice. We think there was nothing in this case to take it out of the statute. Prisoner discharged. [*People vs. McCausey, Supreme Court of Michigan, February 10, 1887.*]

PARTNERSHIP—DISSOLUTION—AUTHORITY OF PARTNER.—After the dissolution of a partnership one partner has no power to assign or transfer a chose in action belonging to the firm without some authority, either express or implied, from the other partner or partners. After the dissolution the former members of the firm are no longer partners, but are only tenants in common; and where there is no agreement to the contrary, each partner, after dissolution, possesses the same authority to adjust the affairs of the firm by collecting its debts and disposing of its property as before the dissolution; but such former partners can no longer bind each other even by varying the form of existing obligation. After dissolution one partner cannot indorse a partnership note even to pay a prior debt of the firm. [*Stair vs. Richardson, Supreme Court of Indiana, December 10, 1886.*]

PRINCIPAL AND AGENT—LIABILITY OF PRINCIPAL FOR FRAUD OF AGENT.—When an agent, in the course of a principal's business and within the scope of his agency, has been guilty of negligence, trespass, or the like, the principal is liable in an action for damages; and the amount of recovery in such cases is co-extensive with the injury sustained by the plaintiff in the action and is not limited to the amount of benefit received by the principal from the tort of his agent. There is no sensible distinction, in this respect, between a case of fraud and that of any other tort; and the authorities, generally, hold that an action for damages for the deceit of the agent will lie against the principal. This proceeds, not upon the ground of any imputation of vicarious fraud to the principal, but upon the familiar doctrine of the law of agency—*respondet superior*. [*Davies vs. Lyon, Supreme Court of Minnesota, February 16, 1887.*]

TELEGRAPH COMPANY—OBLIGATION TO FURNISH MESSAGES FOR AN ILLEGAL PURPOSE—BUCKET-SHOP.—A telegraph company who had been engaged in furnishing to a bucket-shop, by means of wires and ticker, market reports of the prices of grain, provisions, etc., sought to remove the ticker and discontinue the furnishing of such reports. The owner of the bucket-shop petitioned the Court for an injunction restraining the telegraph company from stopping the supply of said reports and removing the ticker. *Held*, These reports were the very essence—the very sinew—of appellant's gambling business, and without the prompt supply of which his business was a failure. Can the appellee be compelled to continue the supply? We think not—not upon the ground that the appellee is the innocent victim of an illegal enterprise, nor that it has been entrapped into aiding a gambling business, for it says that it was willing to furnish the reports as long as the terms of the contract suited it—but upon the ground that the appellant was engaged in a gambling enterprise, which is contrary to law, good morals and public policy. It is for the sake of the law and the best interest of society that we relieve the appellee from continuing to furnish the appellant the reports. It is contended that, although the appellant may be engaged in a gambling business, the appellee has no right to withhold the reports from him because, in its position as a public servant, it is bound to serve the public indiscriminately and without questioning the motives or the purposes of the persons who employ it. Mr. Gray, in his work on "Communication by Telegraph" (Section 15), says: "The general rule is that a telegraph company is under no obligation to contract to communicate an illegal or an immoral message." This rule is not only correct as to telegraph companies, but it applies to all persons who undertake to carry for the public. A contrary rule would convert a telegraph company into a public vehicle for the purpose of communicating unlawful, treasonable or felonious schemes of all kinds, or the consummation of any and all kinds of illegal transactions and enterprises. Of course, a telegraph company, in assuming to refuse to send a message because it is illegal or moral, acts upon its peril. If it is mistaken or has misjudged the tenor or purpose of the message it would be held responsible to the injured party for any damage by reason of the refusal. Petition dismissed. [*Smith vs. Western Union Telegraph Co., Court of Appeals, Kentucky, January 26, 1887.*]

SAVINGS BANKS AND TRUST COMPANIES.

ANNUAL REPORT OF THE BANK SUPERINTENDENT OF NEW YORK STATE.

The report of Hon. Willis S. Paine, Superintendent of the New York Banking Department, relative to Savings banks and Trust companies, was transmitted to the Legislature on the 1st ultimo. As required by the Laws of 1882, it shows the condition of these institutions on January 1, 1887.

Under the existing law the savings banks of the State are not required to forward their semi-annual reports to the Department until August 1st and February 1st, showing their condition on the 1st of July and January respectively. This year the last report was not received until February 10th, and, as the Superintendent is required to submit his annual report on or before March 1st, he complains that the time is insufficient to prepare an exhaustive report. He recommends the amendment of the law so that hereafter savings banks shall be required to file their reports on or before January and July 20th in each year.

RESOURCES OF STATE FINANCIAL INSTITUTIONS.

Savings banks, State banks of deposit and discount, Trust companies and Safe Deposit companies are, by law, required to report to the Superintendent at stated periods, and are subject to annual or biennial examinations by him. The aggregate resources of the financial institutions named, which were organized and are now operated under the State laws and subject to the supervision of the Superintendent on January 1, 1887, amounted to \$963,759,753; on January 1, 1882, the total resources of such institutions were \$680,580,082, an increase of \$283,179,671 during the last five years.

RESOURCES.

	Jan. 1, 1884.	Jan. 1, 1885.	Jan. 1, 1886.	Jan. 1, 1887.
Savings banks.....	\$499,242,641.00	\$505,327,498.00	\$534,536,633.00	\$568,276,807.00
Discount & deposit banks	171,591,164.00	177,445,045.00	180,576,668.00	201,681,168.00
Trust companies.....	164,314,887.17	158,698,081.31	176,216,940.82	189,503,545.20
Safe deposit companies..	8,858,186.61	8,670,477.36	4,078,976.07	4,296,122.90
	\$839,001,878.78	\$845,786,079.67	\$905,409,212.89	\$963,759,753.10

Besides the foregoing there are more than one hundred other concerns, variously styled savings and building, aid, or mutual accumulating fund associations, all in active operation, only seven of which have reported to the Department, although required by law to do so. The Superintendent recommends that, as "their business is of a purely local character, and the publicity that should be given their transactions would be more effectively accomplished by requiring them to report to the Clerk of the county in which their business offices are located," that the portion of the existing law requiring them to report to the State Department should be repealed.

NEW BANKS.

Three new banks were organized during the year — the City Savings Bank, Brooklyn; Richmond County Savings Bank, Castleton (Staten Island), and Amsterdam Savings Bank, Amsterdam. The City Savings Bank, of Brooklyn, has already opened its doors and is doing an active business, and the remaining two expect to open in the near future.

In thirty-one counties of the State there are no savings banks in operation, to wit: Allegany, Cattaraugus, Chautauqua, Chenango, Clinton, Delaware, Essex, Franklin, Fulton, Genesee, Hamilton, Herkimer, Lewis, Livingston, Montgomery, Ontario, Orleans, Otsego, Rockland, St. Lawrence, Saratoga, Schoharie, Schuyler, Steuben, Sullivan, Tioga, Warren, Washington, Wayne, Wyoming, Yates. While the creation of new corporations in the localities named would meet with prompt encouragement, the Superintendent thinks "the increase of savings banks in larger cities should not, as a rule, be favored." He thinks that "applications from neighborhoods having one

or more savings banks are oftentimes made to subserve personal purposes rather than from philanthropic motives."

CLOSED BANKS.

The Chautauqua County Savings Bank, at Fredonia, having paid all but two depositors to whom \$2.24 is due, has made application for an order declaring its franchise surrendered.

FAILED BANKS.

The Whitestone Savings Bank, having reported that \$478.66 was due its depositors, and the assets of the bank were not sufficient to pay this sum, application was made, and James W. Covert appointed Receiver, August 21, 1886.

NUMBER OF BANKS.

On January 1, 1887, there were one hundred and fifteen active savings banks, besides seven dormant and two new banks not yet ready for business, making a total of one hundred and twenty-four. The combined assets of the seven dormant banks are less than \$2,000, and one of them (the Hope, of Albany) has a bill before the Legislature to repeal its charter.

RESOURCES OF SAVINGS BANKS.

On January 1, 1887, the total resources of the savings banks of the State amounted to \$568,276,867, being a net increase for the year of \$33,740,234. The surplus now amounts to \$85,623,329, and the number of open accounts are 1,264,536.

In 1870 there were in existence in this State one hundred and forty-seven savings banks, with aggregate resources of \$245,091,177, showing the enormous increase during the last sixteen years of more than 131 per cent., or \$323,185,690.

The total resources of the banks of discount and deposit on January 1, 1887, amounted to \$201,681,168; the Trust companies, \$189,503,596; and Safe Deposit companies, \$4,298,122—all making a gratifying increase over the previous year.

BONDS AND MORTGAGES.

On January 1st the Savings banks of the State held bonds and mortgages on which deposits had been loaned amounting to \$169,972,875. The increase since 1871 amounts to \$91,788,233, or more than 117 per cent.

The following table gives the location of the Savings banks and the amount of mortgages held by them on January 1st:

COUNTIES.	Amount.	COUNTIES.	Amount.
Albany.....	\$3,234,442 00	Onondaga.....	\$6,145,379 00
Broome.....	636,806 00	Orange.....	1,758,508 00
Cayuga.....	661,558 00	Oswego.....	485,613 00
Columbia.....	251,440 00	Putnam.....	111,226 00
Cortland.....	253,017 00	Queens.....	958,177 00
Dutchess.....	2,127,638 00	Rensselaer.....	472,678 00
Erie.....	9,544,563 00	Richmond.....	239,350 00
Greene.....	172,063 00	Schenectady.....	160,262 00
Jefferson.....	555,948 00	Seneca.....	59,355 00
Kings.....	19,707,734 00	Suffolk.....	1,500,413 00
Madison.....	238,800 00	Tompkins.....	177,685 00
Monroe.....	10,646,617 00	Ulster.....	2,415,868 00
New York.....	102,955,376 00	Westchester.....	2,062,663 00
Niagara.....	317,958 00		
Oneida.....	1,769,542 00	Total.....	\$169,972,875 00

Of this amount nearly the whole is loaned in twelve counties of the State, as follows: New York, \$102,955,376; Kings, \$19,707,734; Monroe, \$10,646,617; Erie, \$9,544,563; Onondaga, \$6,145,379; Albany, \$3,234,442; Ulster, \$2,415,868; Dutchess, \$2,127,638; Westchester, \$2,062,663; Oneida, \$1,769,542; Orange, \$1,758,508; Suffolk, \$1,500,413—a grand aggregate of \$168,908,798.

The par value of stocks and bonds of various kinds held by the banks at the beginning of the present year amounted to \$375,029,114, costing \$293,817,908, their market value being \$333,966,458, or an excess of \$40,149,552 over cost. Of this amount over one-half is invested in United States and District of Columbia bonds, the balance being principally in the bonds of cities, counties, towns and villages in the State.

The amount of "collateral loans" on January 1st was \$14,425,589, an increase of nearly \$9,000,000 during the year. This is the direct result of an amendment to the Savings Bank Law, passed by the last Legislature on the recommendation of the

Superintendent, authorizing Savings banks to loan as high as 90 per cent. of the par value of securities in which they may invest their deposits, except mortgages on real estate, thus enabling them to compete with other financial corporations for these desirable loans and also to utilize the daily excess of receipts over payments.

REAL ESTATE.

Savings banks are allowed by law to purchase, hold and convey real estate only for the purpose of erecting a building requisite for the transaction of a banking business, from portions of which revenue may be derived, and also such real estate as shall have been acquired under foreclosure of mortgages owned by the corporation, or upon judgments obtained for debts due to it, or in settlements to secure such debts; but such real estate must be sold within five years after the same is vested in the bank unless the time is extended by the Superintendent—the intent of the law being that such banks shall not hold real estate other than their banking houses when the same can be sold without loss. The present estimated market value of the real estate so held by the savings banks of the State is \$8,034,653, of which \$4,530,271 represents bank buildings, the remainder having been acquired through foreclosure.

CASH ON HAND AND WITH BANKS AND TRUST COMPANIES.

On January 1, 1887, the savings banks held the sum of \$5,836,906 in cash, and had \$30,796,122 deposited with State and National banks or Trust companies incorporated under the laws of this State, making a total of cash uninvested amounting to \$36,633,120, or \$1,125,241 more than the preceding year.

The Superintendent considers that, as "deposits have increased \$25,436,480 during the past year, it is a remarkably favorable showing for the banks that the increase in cash uninvested has not been greater."

DEPOSITS.

The total amount of deposits in the Savings bank of the State on January 1st was \$432,436,730, an increase during the year of \$25,436,480; but, as \$15,777,022 resulted from accretions of interest credited or paid to depositors, it leaves a net increase of deposits of \$9,659,458. Much of the marked increase in actual deposits during the past two years is attributed by the Superintendent to the calling of United States 3 per cent. bonds, the money received having, to a considerable extent, probably been deposited in the Savings banks.

During the year 1886 the sum of \$170,198,206 was received from and \$160,538,141 paid to depositors.

DEPOSITORS.

On January 1st the number of depositors in all the Savings banks of the State was 1,264,535, an increase over last year of 56,463. This of course, includes only those who have open accounts. The average of each account is \$381.55, an increase of \$3.22.

SURPLUS.

Estimating the stock investments and real estate held by Savings banks on January 1, 1887, at market values, the surplus of the banks on that date was \$35,623,329, an increase during the year of \$8,340,440.

INTEREST OR DIVIDENDS.

The sum of \$15,777,022 was paid depositors during the past year for interest, a net increase over the preceding year of \$625,043.

Sixty-one Savings banks with aggregate deposits of \$332,709,750 paid rates of interest varying from three-and-one-half to four-and-one-half per cent.

The total amount paid during the past year for expenses in managing the Savings banks was \$1,590,967. Of this amount \$1,133,268 was paid for salaries and the balance for miscellaneous expenses. The average cost of caring for each account was \$1.26.

RIGHTS OF TRUSTEES.

Trustees cannot have any interest, direct or indirect, in the profits of their banks, and are not allowed to receive pay for services rendered, except those who act as officers of such corporations and whose duties require and receive their regular and faithful attendance at the bank. The question, what is an "indirect interest" of a trustee, was recently ruled on by the Department in the light of an opinion by the Attorney-General, who holds that the cases specified do not come within the prohibition of the Savings Bank Law.

INVESTMENTS.

On the subject of increasing the scope of investments for Savings banks, the Superintendent argues sensibly and soundly, as follows:

"It is urged in favor of increasing the scope of investments that there is a steady diminution in the amount of securities allowed by law to be taken by these institutions, that the rate of interest realized upon the same is decreasing, while the necessary incidental expenses are not less. Admitting this to be so, it is nevertheless true that the banks were not created for the purpose of accumulating large sums on deposit, but to afford the laboring population and others of limited means a place where their small deposits would be safely kept and immediately available upon demand. Safety and availability should be the tests in investing these trust funds. A high rate of interest is of slight importance compared to absolute security and convertibility of the principal. Better that a few depositors should withdraw their money and place it in investments where they can gain greater profits from its use than that one should witness again, in this State, the insolvency of more than twenty savings institutions in one locality, several of which were most lamentable failures."

RECEIVERSHIPS.

Fifteen failed savings banks, which paid dividends to depositors ranging from 15 to 88 per cent., have been closed up, and the Receivers, having deposited with the Superintendent all moneys not claimed by depositors or creditors, have been discharged by the Court. There still remains deposited with this Department the sum of \$74,079.03 in unclaimed dividends and deposits of these failed banks.

The Superintendent is not able to give much information concerning the affairs of most of the fifteen failed savings banks still in the hands of their respective Receivers, owing to the fact that many of these officers fail to comply with the provisions of law directing them to semi-annually report to the Superintendent of the Banking Department. In the case of the German Savings Bank, of the town of Morrisania, and the Bond Street Savings Bank, a final accounting is now in progress, on the termination of which these two Receiverships will be closed.

TRUST, LOAN AND MORTGAGE COMPANIES.

Nineteen Trust, Loan and Mortgage Companies reported to the Department at the beginning of the year, with aggregate resources and liabilities of \$189,167,452.31.

Printed copies of the proposed general law for the organization of Trust companies have been sent for suggestions to each of the now existing Trust companies, Savings institutions and the banks of discount and deposit. So far there has not been the slightest opposition manifested to the enactment of the measure as a whole. It is now before the Legislature. The total amount on deposit with these various Trust companies on January 1st was \$145,845,688.37, on \$135,337,361.27 of which interest is paid.

CHANGE OF NAME.

By the general act under which the names of corporations in this State are changed, Trust companies, banks and banking associations are expressly excepted.

The Superintendent recommends that, instead of the Legislature passing a special act in each case, a general law be adopted, whereby, after "the approval of this Department, application may be made to the Supreme Court in the county where the institution is situated for an order to authorize it to assume another corporate name."

CORPORATE AND OFFICIAL SEARCHES.

This question is treated at great length by the Superintendent, who reviews the two methods of searching—the old one by the County Clerks and Registers of Deeds and the new one by corporations organized for that express purpose. Banking institutions are among the heaviest loaners on bonds and mortgages, and their patronage is eagerly sought for by these new corporations. Formal application was made by two of these corporations, in which it was claimed that, if it was shown they have the ability to make more reliable searches than those made by official custodians of the records, and possess sufficient pecuniary accountability, where Trustees of savings banks prefer to use searches made by such corporations, they should be permitted to do so, and that such searches should be accepted by the Department.

Referring to the method of searching now in vogue, the Superintendent says: "Indexing against the names of the parties to a deed or mortgage is the method now used in this State, and is easily liable to error. The mistakes of clerks, who hold positions in the public offices during the brief reign of political favor, multiply the imperfections of a system easily liable to inaccuracy." To show the enormity of the task it is stated that, in 1855, there were only twelve hundred volumes of conveyances in the New York County Register's office, while at present there are nearly four thousand.

"Should a bank decide to loan on a certain mortgage, and investigate the title to the land offered as security, official searches up to the date of the last transfer would

generally be found with the deed and title abstract of the owner. Such searches are usually accepted by the bank, and official searches from the date of last transfer to the date of the mortgage are then procured. If loss should follow, owing to errors in the searches of the previous period, the mortgagee would be without remedy against the searcher.

"Were the banks to adhere to the strict rule of requiring new official searches covering the same period that existing certificates represent, borrowers would negotiate with private capitalists, the banks would be unable to effect good loans, and their deposits would be proportionately unproductive. It is a necessary evil, therefore, and essential to the financial prosperity of these institutions so long as the present method of searching is practiced.

"The scheme of corporate searching has been found, it is alleged, to be practicable and safe elsewhere, and the comparatively brief existence of similar companies within this State, it is further alleged, exhibits evidence of a greater degree of accuracy and a larger financial responsibility for loss than has before been claimed by either the most expert private searcher or the most careful and responsible official. They contract to pay any loss when the party guaranteed has been evicted by adverse title, when any lien guaranteed against has passed into final judgment and execution defeats the title, or when the property is rejected by a future purchaser owning to newly-discovered errors or defects. This is more than Registers or County Clerks pretend to do."

The Superintendent sums up the matter as follows:

"Taking into consideration the claims that the paid-up cash capital of these corporations exceeds the private fortune of the average official or the penalty of his bond, that the stockholders are personally liable, and that the liability of the companies continues permanent, the conclusion is warranted that their ability to answer for loss is as great as that of the custodian of the records. The banks under the supervision of this Department are bound to seek the safest methods of investment available, and it is the duty of their trustees to be alert and watchful. The manner in which the examination shall be made is not limited or specified by law. It is true, however, beyond all contention, that the special method to be pursued rests in the sound discretion of the trustees of the bank; and it is their solemn responsibility to use the safest and best method. It, therefore, comes within the province of this Department to watch and supervise the use of this discretion."

REGISTRATION OF TITLE TO LAND.

This question is also discussed very fully, including the proposed reform in the method of transferring title. In 1884 Commissioners were appointed by the Governor, who, after carefully investigating the subject, reported two systems, one known as the "lot" the other the "block" system. Both plans are elaborately reviewed by the Superintendent, who claims that many defects of the "lot" are avoided in the "block" system, as, "under it, the responsibility of proper indexing would be slight."

The proposed bill to adopt the block system provides that:

"No instrument shall be deemed or held to be recorded or filed for the purpose of giving notice thereof unless it shall be entered in the local index of the block in which the land affected by such instrument is located subsequent to the entry thereof in the Register's Journal.

"It is not claimed for the block system that searching will be avoided by it, but it certainly would reduce the expense of a search to a merely nominal amount, while delay would be prevented and errors and loss avoided. The block system unites the virtues of simplicity and definiteness. The block area is known to all, and, as a rule, is unalterable. It is the smallest practicable area that remains fixed and permanent. The block index is easily understood and convenient for use by laymen. It restricts searching; and, with a name index for each block, a search would be the labor of a few minutes. An official search once made inures to the benefit of all and reduces the expense of searching to a nominal fee. It requires no elaborate study of maps, no surveys, and no additional legal writings to properly index a deed; the mere knowledge of a block number is sufficient, and there is no opportunity for fraud. In the block index the risk of proper indexing may be assumed with safety by the party recording his deed. The adoption of this system would be a most desirable reform in the method of transferring title to land."

"A Publication of Great Value."—"The new *Bankers' Directory & Collection Guide*, published by Messrs. Bradford Rhodes & Co., 78 William street, New York city, is a very useful and reliable publication. It contains a full list of bankers in this country as well as Canada admirably arranged for prompt reference, is well revised—the corrections being made down to January 21st—and may be fully relied upon. It has a compendium of the collection laws of the different States and of Canada, and shows briefly the laws as to assignments, mortgages, attachments, arrests, etc. A list of places without banks, with directions where to send collections to the nearest point to them, is given. It is a publication of great value to every banker, merchant and collection agent—in fact, to any business man—and deserves a large patronage. The price of the book is \$2."—*U. S. Economist & Dry Goods Reporter*.

CHICAGO BANKS AND MONETARY AFFAIRS.

[From the JOURNAL's Chicago correspondent.]

There is quite a mania for the formation of new banks in this city, which is due to the great success of the old institutions. Three National banks were organized last year, and it seems that there was room for them, as they report a very good business, and the stock of one of them (the American Exchange) has sold at 12½, while that of a second is quoted at about 11½, and a third in the vicinity of par.

This year a National bank (the Lincoln) has been formed on the North side, ex-Governor Beveridge being its President. That is a part of the city where there have been no banks heretofore, and it is expected that this bank will secure a good many small accounts.

Mr. Spencer Hibbard has for some time been organizing a National institution, which is to have a capital of \$500,000, and will open shortly after the 1st of May.

It is reported that Marshall Field, the great dry-goods man, is interested in another enterprise of the same description, and will have associated with him his partner Mr. Higginbottom and Henry J. Willing.

Efforts have been made from time to time to start banks outside the National system, but the laws of the State are so unfriendly to such enterprises that they have made no headway. Very few people care to be in a bank organized on the partnership plan, and there is no other method except to secure one of the old State charters. Most of those charters have become valueless through failure to "keep them alive," and so it is practically National bank or no bank at all.

There is a strong movement among public-spirited men toward the formation of savings banks, but we have no law that allows them to begin business on the mutual plan, which has been so successful in the East, and there are no charters available for the organization of such institutions as stock companies. There are some bills before the Legislature authorizing savings banks; but, in spite of all that has been written on the subject, there is a general apathy, and it is doubtful if anything will be done.

The great profits of the banks here have been the chief stimulus to the new enterprises. Aside from wise management, the two leading causes of these handsome profits are the large proportion of deposits to capital and the rapid and constant increase in the business of the city. A comparison of the deposits of Chicago banks with those of other cities as related to the amount of capital will show that it is very far above the average of the country. A banker who has a large amount of other people's money to lend, and only a moderate amount of his own to declare dividends on, will make heavy per centages if he is a person of fair abilities.

The First National made a net profit of 20 per cent. last year, and others did almost as well. But there is a feeling among the best financiers that the institutions now in existence and planned are quite enough for the present. A man who is probably interested in more banks than any other person in the city said not long ago that he did not care to go into any new enterprises of that description.

But, while the Chicago banking interest is growing rapidly, the expansion of financial affairs to the west of the city is forcing itself on observing men as one of the important phenomena of the time. The question is often asked why it is that there are such enormous shipments of currency to the country towns every fall and no return flow at all commensurate with them. The answer is found in the establishment of financial centres all over the West. Every year Chicago is called upon for large amounts of currency "to move the crops," and every year an increasing proportion of what is sent out remains in the towns that have ordered it. They have grown and they want the funds themselves, not merely while the grain is being bought of the farmers, but right through the year. This fact has impressed itself on the minds of Chicago bankers, who see that it means a certain amount of competition for the business they have heretofore had almost a monopoly of. The effects of the same phenomena are also seen in the buying and selling of Eastern bills. Of course Chicago is the natural centre of the West for dealings in such bills, and the smaller towns rely

on it to a very considerable extent for their New York paper. But for months past New York bills have been almost uniformly at a discount, and the dealings in them have been materially restricted.

Outside bankers are regulating their own supply and demand to an unusual degree. One of the influences at work is the large amount of railroad building in the West. The capital for the new roads comes mainly from the East, and the payments for supplies and labor are made in New York funds. Persons making remittances to New York can therefore get their bills without sending to Chicago for them. These influences will, of course, go on after the roads are completed. They are a part of the natural growth of the new country.

The banks of this city are still drifting southward toward the Board of Trade. When that institution was moved south over two years ago several of the banks saw that to follow was a necessity of their business. Lending to Board of Trade men is by no means the best branch of banking in Chicago, but it is a very important branch. Some of the bankers refused to go with the tide at first, but have since yielded, and others will do the same this year or the next. The best banking rooms in the world are being prepared in that quarter, and they will not be long vacant.

An important step has been taken toward the prevention of fraud in borrowing money on warehouse receipts. It will be remembered that the Neeld defalcation a few months ago consisted in borrowing on bogus warehouse receipts. Money was advanced on certificates purporting to represent merchandise stored in certain warehouses. After the disappearance of the defaulter it was found that no such property existed. The usual precaution against frauds of that character has been to insist on the registry of certificates. This is not considered a positive preventive, but a wise safeguard.

A number of leading bankers have organized a company, which will take charge of any personal property on which a loan is desired anywhere in the Northwest, place it under lock and key, and certify that the property is as represented. There is a wide field for the operations of such a concern.

Warehouse receipts, when genuine, are among the best securities offered for loans in this market.

E. B. C.

THOMAS COOPER'S ACCOUNT.

The following letter was received on the 16th of last December, and, being such a remarkable production, we hesitated to publish it. As may be seen, it refers to Mr. Cooper's account with the "London & Westminster Bank," of London, England, shown in the *fac-simile* of a London Pass-Book which appeared in the December issue of the JOURNAL in the department devoted to "Practical Banking:"

"*Editor Rhodes' Journal of Banking:*

"THE OAKS,' TIVOLI, December 15, 1886.

"SIR:—I'm no sooner landed in this country than I'm confronted with what purports to be a copy of my account with the L. & W. Bank at home, as displayed on page 964 of your JOURNAL for December current. You preface this publication with the statement that it contains features 'curious and instructive.' I should say it did! And let me tell you I shall apply to the Manager directly I reach home for a satisfactory explanation and apology for the defamatory character of this exhibit. By your showing, it's clear I've defrauded the L. & W. of £200, more or less, or some of their servants have done it at my expense of character and good name. I'm not good at accounts, and am free to say I don't keep any tablets, but when a fellow asks me plump what I've done with that £200 I did the old bank out of, and shows me your print—I'm free to say I want to go home. My friend says there are numerous 'curiosities' about this account, but I'm too sick to point them out.

"THOMAS COOPER, of London."

[In the JOURNAL for January, page 75, Mr. Thomas Cooper, of London, will find something of interest regarding his account—a satisfactory reply, we trust, to his letter.—EDITOR.]

Here is another letter on the same subject from Mr. C. M. Merrick, Cashier of the National Bank of New Brighton, Pa.:

"To a country banker some matters in the 'London Pass-Book' *fac-simile* shown recently in the JOURNAL are not at all clear. The first balance brought down, viz., £639 9s. 1d., should be £439 5s. 2d. Then the next debit footing I make £912 3s. 7d. You have it £902 3s. 7d. And these gross errors are not discovered but carried through to a final settlement. Such errors might occur, but that they should pass inspection by the editor of the JOURNAL, always so correct, is unaccountable to me."

CALIFORNIA BANKING INSTITUTIONS.

STATEMENTS OF THE SAVINGS AND COMMERCIAL BANKS.

From an advance copy of the report of the California Savings and Commercial banks for the six months ending January 1, 1887, the following instructive figures are gathered. A comparison is also made with the condition of the banks on January 1, 1886. The Savings banks show an improvement, deposits having increased \$6,700,000 and the reserve and profit account \$140,000, while the amount of real estate gained by foreclosure has decreased nearly \$300,000 and loans on real estate increased \$2,600,000. The total assets and liabilities show an increase of over \$6,000,000.

Following is a statement showing the financial condition of the live Savings banks of California on January 1, 1887, compared with the report of January 1, 1886:

RESOURCES.	1886.	1887.	Increase or Decrease.
Bank premises	\$496,716.63	\$894,519.48	Dec., \$2,197.15
Real estate by foreclosure	2,815,621.18	2,531,126.44	Dec., 287,494.74
Invested in stocks, bonds and warrants	14,275,024.96	16,447,419.23	Inc., 2,172,394.26
Loans on real estate	39,166,119.72	41,785,313.29	Inc., 2,619,193.57
Loans on stocks, bonds and warrants	5,749,127.08	6,570,294.28	Inc., 821,167.26
Loans on other securities	97,701.82	189,080.45	Inc., 91,378.63
Loans on personal security	1,234,849.07	1,088,465.38	Dec., 176,383.69
Money on hand	1,760,022.77	2,195,681.21	Inc., 445,658.44
Money in other banks	692,539.88	1,431,467.40	Inc., 538,927.57
Other assets	474,994.87	398,420.76	Dec., 81,577.11
LIABILITIES.			
Capital paid up	\$3,378,299.60	\$3,961,272.10	Inc., \$582,972.50
Reserve and profit and loss	2,713,015.82	2,856,816.72	Inc., 143,801.10
Due depositors	60,435,918.99	66,196,189.54	Inc., 5,760,270.55
Due to banks and bankers	27,812.83	22,810.80	Dec., 5,001.88
Other liabilities	330,670.98	459,648.96	Inc., 158,977.88
Total resources and liabilities	\$97,383,717.87	\$73,526,788.08	Inc., \$23,856,929.79

Following is a statement showing the financial condition of the Commercial banks of California on January 1, 1887, compared with the report of January 1, 1886:

RESOURCES.	1886.	1887.	Increase or Decrease.
Bank premises	\$1,848,498.81	\$1,873,424.97	Inc., \$24,926.16
Real estate taken for debt	1,355,540.06	1,451,135.14	Inc., 95,595.06
Invested in stocks, bonds and warrants	2,089,047.11	2,767,000.03	Inc., 677,952.92
Loans on real estate	12,085,393.65	13,191,196.99	Inc., 1,105,793.04
Loans on stocks, bonds and warrants	7,871,329.60	5,782,232.43	Dec., 2,079,231.17
Loans on other securities	10,210,320.99	9,667,453.08	Dec., 542,867.91
Loans on personal security	26,513,369.36	30,051,604.47	Inc., 3,538,235.11
Money on hand	10,146,304.59	11,300,064.23	Inc., 1,153,759.64
Due from banks and bankers	7,457,534.03	10,637,845.51	Inc., 3,180,311.23
Other assets	3,671,115.48	3,221,614.64	Dec., 449,500.84
LIABILITIES.			
Capital paid up	\$30,255,538.29	\$27,252,742.45	Dec., \$3,002,795.84
Reserve and profit and loss	9,983,653.51	10,906,634.22	Inc., 922,980.71
Due depositors	87,537,158.20	44,594,158.95	Inc., 8,756,996.75
Due to banks and bankers	3,636,974.06	6,329,134.73	Inc., 2,692,210.67
Other liabilities	1,636,868.64	1,078,865.84	Dec., 558,002.80
Total resources and liabilities	\$83,349,182.70	\$90,163,631.19	Inc., \$6,814,448.49

The paid-up capital of the Commercial banks amounts, in round numbers, to \$27,000,000. The capital of the San Francisco banks, including the five branches of foreign banks, aggregates \$18,500,000. This, deducted from the total, leaves only \$8,500,000 capital invested in the State at large outside of San Francisco. There are

at present twenty-seven National banks in this State having a paid-up capital of nearly \$4,000,000 and surplus of about \$1,000,000 more, or nearly equal to the combined capital of the sixty-four Commercial banks, exclusive of San Francisco. Taking the decrease in capital into account and the rapid increase of National banks, it would seem that the drift of financial sentiment was settling in favor of the latter institutions.

In the Commercial banks there has been a decrease in capital of over \$3,000,000, an increase in deposits of nearly \$7,000,000, and an increase of profit and reserve of about \$1,000,000. Loans on personal security have increased \$3,400,000, while real estate taken for debt has increased \$75,000.

THE NEW RESERVE LAW.

The following was the text of the reserve law as it passed the House of Representatives on December 15, 1886:

AN ACT to amend sections five thousand one hundred and ninety-one and five thousand one hundred and ninety-two of the Revised Statutes of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section fifty-one hundred and ninety-one of the Revised Statutes be amended by adding to the list of cities named therein the following, namely: Atlanta, Charleston, Galveston, Saint Paul, Minneapolis, Indianapolis, Denver, Kansas City, Omaha, Richmond, and Saint Joseph.

SEC. 2. That section fifty-one hundred and ninety-two of the Revised Statutes be amended by adding to the list of cities therein named the following, namely: Atlanta, Galveston, Saint Paul, Minneapolis, Indianapolis, Denver, Kansas City, Omaha, and Saint Joseph.

On the same date the bill was referred to the Finance Committee of the Senate; and, on February 15th, it was reported to the Senate with the following amendment:

SEC. 3. That section fifty-one hundred and ninety-five of the Revised Statutes of the United States be amended to read as follows:

"SECTION 5195. Each association organized in any of the cities named in section fifty-one hundred and ninety-one of the Revised Statutes of the United States, or amendments thereto, may keep one-half of its lawful money reserve in cash deposits with any association or associations approved by the Comptroller of the Currency, organized and operating under the provisions of the National banking laws, in either or any of the other cities mentioned in said section."

The bill was subsequently referred back to the Finance Committee, from which it was again reported, and passed as follows:

AN ACT to amend sections five thousand one hundred and ninety-one and five thousand one hundred and ninety-two of the Revised Statutes of the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever three-fourths in number of the National banks located in any city of the United States having a population of fifty thousand people shall make application to the Comptroller of the Currency, in writing, asking that the name of the city in which such banks are located shall be added to the cities named in sections fifty-one hundred and ninety-one and fifty-one hundred and ninety-two of the Revised Statutes, the Comptroller shall have authority to grant such request, and every bank located in such city shall at all times thereafter have on hand, in lawful money of the United States, an amount equal to at least twenty-five per centum of its deposits, as provided in sections fifty-one hundred and ninety-one and fifty-one hundred and ninety-five of the Revised Statutes.

SEC. 2. That whenever three-fourths in number of the National banks located in any city of the United States having a population of two hundred thousand people shall make application to the Comptroller of the Currency, in writing, asking that such city may be a central reserve city, like the city of New York, in which one-half of the lawful money reserve of the National banks located in other reserve cities may be deposited, as provided in section fifty-one hundred and ninety-five of the Revised Statutes, the Comptroller shall have authority, with the approval of the Secretary of the Treasury, to grant such request, and every bank located in such city shall at all times thereafter have on hand, in lawful money of the United States, twenty-five per centum of its deposits, as provided in section fifty-one hundred and ninety-one of the Revised Statutes.

SEC. 3. That section three of the act of January fourteenth, eighteen hundred and seventy-five, entitled "An act to provide for the resumption of specie payments," be, and the same is, hereby amended by adding after the words "New York" the words "and the city of San Francisco, California."

Approved, March 3, 1887.

BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Loss on Non-Interest Bearing Bonds.—The failure of some banks to replace the called 3 per cent. bonds on deposit to secure circulation with other bonds has caused the Comptroller of the Currency to call especial attention to the loss resulting from this course of action. The National banks now hold over \$3,000,000 of 3 per cent. bonds on which interest has ceased. The Comptroller expresses the view that it is negligence rather than inability to make new investments which prevents the surrendering of the bonds and taking the money for them or replacing the bonds with others that bear interest. He mentions the case of a Western bank which had \$150,000 of 3 per cent. bonds that ceased to bear interest three years ago. Frequent notice was given the bank that the bonds were yielding no interest, but the bonds were not redeemed until last summer. The Cashier explained that the Directors did not meet very often, and, when they did, he forgot to call their attention to the matter. The bank lost \$11,800 of interest, not counting the interest it might have gained by some other form of investment. The Comptroller has just issued to more than one hundred banks having called bonds on deposit the following notice, showing the loss resulting from failure to have the bonds redeemed:

Banks holding on deposit against circulation United States bonds that have ceased to bear interest are not only persisting in an act declared by the Attorney-General to be unlawful but they are also sustaining a loss. Take the following instances:

1—A bank holds matured bonds.....	\$100,000
Deduct circulation on the same.....	90,000
Non-interest-yielding outlay.....	\$10,000
2—A bank holds 4½ per cent. bonds maturing in 4½ years at a cost of 109 per cent.....	\$108,000
Deduct circulation on the same.....	90,000
Outlay.....	\$18,000
1—Interest at 7 per cent. on \$10,000 locked up in matured bonds, \$700 for 4½ years.....	\$3,150
Add 1 per cent. on circulation on \$90,000 for 4½ years at \$900.....	\$4,050
Loss on investment in 4½ years.....	\$7,200
2—Interest on \$100,000 at 4½ per cent. for 4½ years.....	\$20,250
Deduct 1 per cent. on circulation on \$90,000 for 4½ years.....	4,050
Less premium paid on bonds.....	9,000
Gain in 4½ years on \$18,000.....	\$7,200
Difference.....	\$14,400

Savings Bank Tax Bill.—A bill introduced in the New York State Legislature to tax Savings bank deposits is meeting with much opposition on the part of those who wish to see the Savings bank system preserved. The bill reads as follows:

SECTION 1. It shall be the duty of the Assessors of any town, city or village in this State to assess and levy a tax upon the amount of money held on deposit or as a surplus fund by any Savings bank or Trust company located in any town, city or village in this State in the same manner and at the same rate and at no higher rate than is levied upon other personal property held by individuals or the stocks of incorporated banks or companies in said town, city or village.

SEC. 2. The amount upon which such assessment shall be made and tax levied shall be upon the total amount of deposits and the surplus funds as held by the Savings bank or Trust company upon the day preceding the last as advertised for the review of the assessment roll by the Assessors of any such town, city, or village.

SEC. 3. The Treasurer of any Savings bank or Trust company located in any town, city or village in this State shall present a statement under oath of the amount in gross of deposits and the surplus fund of said Savings bank or Trust company on the last day of the review of the tax roll as advertised by the Assessors of the town, city or village where the Savings bank or Trust company is located, and the amount a

rendered by the Treasurer shall be the amount of the deposits and surplus funds at the closing of business of the Savings bank or Trust company, on the evening of the preceding day as so advertised.

SEC. 4. The assessment shall be made and the tax levied in gross directly to the Savings bank or Trust company, and shall be paid by the Savings bank or Trust company to the Receiver of Taxes for the town, city or village where the bank or Trust company, is located, and not elsewhere.

SEC. 5. The Treasurer of the Savings bank or Trust company may, if so directed by the Trustees or Directors of the institution, charge the amount of the tax so levied and collected to the account of the depositors as shown by the books of the bank or Trust company on the day of making up his accounts, rendered for the assessment at a *pro rata* amount, and the same shall be a legal charge against the amount of such deposit or any accumulated interest on the same.

SEC. 6. All Acts or parts of Acts which may conflict with the provisions of this Act are hereby repealed.

SEC. 7. This Act shall take effect immediately.

The Topeka Savings Bank.—A new banking institution was organized in Topeka, Kansas, during the latter part of March, styled "The Topeka Savings Bank," with a capital stock of \$75,000. President, A. W. Knowles; Vice-President, A. Washburn; Treasurer, L. G. Beal. The list of Directors comprises A. W. Knowles, City Treasurer; A. Washburn, capitalist; Hon. J. B. Mulvane, President of the Bank of Topeka; D. A. Moulton, Cashier of the First National Bank; Willis Norton, President of the Citizens' Bank; B. M. Davies, Vice-President of the Bank of Topeka; T. P. Rodgers, Secretary of the Board of Trade; H. K. Rowley, capitalist; and C. N. Beal, President of the Kansas Mortgage Company, all representative and influential citizens. The bank is incorporated under the laws of Kansas, and, with such able managers, its prosperity is assured.

Small Notes and Coin Outstanding.—A statement has been prepared by the Treasury Department showing the amounts of small notes, standard dollars and fractional silver outstanding on March 1, 1887, as compared with the amount outstanding on July 1, 1886. The statement is as follows:

	July, 1886.	March, 1887.
United States, \$1's, \$2's, \$5's.....	\$121,400,000	\$119,500,000
National bank notes, \$1's, \$2's, \$5's	88,900,000	79,800,000
Silver certificates, \$1's, \$2's, \$5's.	19,000,000	19,000,000
Standard dollars	52,400,000	57,000,000
Fractional silver	46,000,000	48,000,000
Total	\$308,700,000	\$328,800,000
Increase.....		\$19,000,000

The issue of silver certificates began as follows: \$1's, September, 1886; \$2's, November, 1886; \$5's, February, 1887.

Nicholas E. Paine, father of Willis S. Paine, Bank Superintendent of the State of New York, died at his residence in Yorktown, Westchester County, March 23d, at the age of seventy-nine years. He celebrated his golden wedding June 23, 1883. Mr. Paine was born in New Hampshire and graduated from Phillips Exeter Academy. He studied law and was admitted to the Maine bar, after which he became a Colonel on Gov. Fairchild's staff. Nearly half a century ago he removed to Rochester, N. Y., and was successively District Attorney of Monroe County, Mayor, President of the Board of Education and Postmaster. He came to New York in 1869. At the time of his death he was President of the Dakota Railroad Company. The late John Treat Paine, of Boston, was his brother.

Co-operative Banking in Massachusetts.—The system of co-operative banking, which is now in a flourishing condition in Massachusetts, is similar to that which originated in Philadelphia and has proven successful there. Some changes in the law relative to these banks in Massachusetts have been found to be desirable, however. The attention of the Attorney-General was recently called to the provisions of the law under which these co-operative banks were incorporated, and, in accordance with a strict legal interpretation of the statute, he decided that no bank could issue more than 5,000 shares, with an ultimate value of \$200 each, in theory making the total capital \$1,000,000; and he requested those companies which had exceeded this issue to reduce some of the shares. The co-operative banks have now asked the Legislature to

make some changes in the statute, by which the actual capital may approach the limit originally fixed for the working capital, something now impossible by reason of legal technicalities. The Legislative Committee will, it is thought, report favorably on the petition and thus give these organizations an opportunity to extend their wide scope of usefulness.

Canadian Banks.—Following is a summary of the assets and liabilities of the chartered banks of Canada, made from the reports furnished by them to the Department of Finance on December 31, 1886 (cents omitted):

ASSETS.		LIABILITIES.	
Specie	\$4,019,685	Capital authorized	\$79,579,686
Dominion notes	9,181,842	Capital subscribed	64,276,899
Notes of and checks on other banks	6,271,290	Capital paid up	61,257,735
Balances due from other banks in Canada	3,230,684	Reserve fund	17,985,141
Balances due from agencies of the bank or from other banks or agencies in the United Kingdom	15,194,049	Notes in circulation	32,110,620
Balances due from agencies of the bank or from other banks or agencies in the United Kingdom	2,512,069	Dominion Government deposits payable on demand	4,304,611
Dominion Government debentures or stock	4,399,606	Dominion Government deposits payable after notice or on fixed day	100,000
Provincial, British or Foreign or Colonial public securities other than Canadian	3,064,026	Deposits held as security for execution of Dominion Government contracts and for insurance companies	568,430
Loans to the Government of the Dominion	1,224,337	Provincial Government deposits, payable on demand	707,967
Loans to Provincial Governments	864,999	Provincial Government deposits, payable after notice or on a fixed day	1,249,246
Loans, discounts or advances on stocks, bonds, etc., other than Canadian as collateral	12,395,567	Other deposits, payable on demand	50,088,787
Loans, discounts or advances on current accounts to municipal corporations	2,193,553	Other deposits, payable after notice or on a fixed day	55,368,256
Loans, discounts, etc., on current accounts to other corporations	14,071,978	Loans from or deposits made by other banks in Canada, secured	
Loans to or deposits made in other banks, secured	146,502	Loans from or deposits made by other banks in Canada, unsecured	1,638,999
Loans to or deposits made in other banks, unsecured	518,879	Due to other banks in Canada	751,918
Other current loans, discounts and advances to the public	135,628,918	Due to agencies of bank or to other banks or agencies in foreign countries	102,823
Notes and bills discounted, overdue and not specially secured	1,190,391	Due to agencies of bank or to other banks or agencies in the United Kingdom	717,822
Other overdue debts not specially secured	71,337	Other liabilities	302,511
Notes and bills discounted, overdue and other overdue debts secured by real estate or securities	1,457,507		
Real estate the property of the bank (other than the bank premises)	1,347,770		
Mortgages on real estate sold by the bank	814,164		
Bank premises	3,572,216		
Other assets	3,159,018		
Total assets	\$228,632,078	Total liabilities	\$148,028,975

Loans to Directors or firms in which they are interested, \$7,716,441. Average amount of specie held during the month, \$5,912,438. Average amount of Dominion notes held during the month, \$9,258,909.

Minnesota Legislation.—The Public Examiner of Minnesota—Hon. H. M. Knox—with the additional title of "Superintendent of Banks," gets his much-needed deputy, and all duties pertaining to banks is transferred to his office, including organization and reports. All his curative bills were passed and have become law. These provide for the filing of county attorneys' bonds in conformity with the uniform system; the renewal of bonds of depository banks without readvertising on change of organization; providing for notice to the State on the dissolution of State banks by the district courts; and providing for corporate as well as personal suretyship for official bonds. On bills drawn by him of general and far-reaching import the one known as the "Keller bill" has been signed by the Governor as well as the bill providing for a graded minimum capital for State banks. These two Acts do not go into effect until January 1, 1888. This is the first successful attempt to deprive private unincorporate banks of corporate or artificial names. New York tried it and failed, and yet it has but about fifty private banks, while Minnesota has 180. That the first attempt to reduce Minnesota's moneyed institutions to something like consistency should be successful, notwithstanding a most powerful opposition, is little less than marvellous, and is owing almost entirely to the indomitable energy and persistence of Senator Keller. The discussion awakened by the revelation in the Examiner's report of the true condition of affairs as relating to State banks, Savings associations and Trust companies has had also this further beneficial effect, that Trust and Savings companies organized under the general corporation act are now voluntarily amending their charters and dropping out the objectionable titles by law allowed only to institutions chartered under the Savings and Trust company acts. It is now pretty certain that in the near future the title of a moneyed corporation in Minnesota will indicate that it is of State or United States creation, and that it has a known capital behind it.

Following are the laws as passed:

(No. 39.) Relative to the dissolution of corporations:

SECTION 1. That section four hundred and fifteen (415) of chapter thirty-four (34) of the General Statutes of one thousand eight hundred and seventy-eight (1878) be amended by adding to the same the following words:

"*Provided*, That in case of the dissolution, under this section, of any bank incorporated under the laws of this State, a duly certified copy of the order of the Court adjudging such dissolution shall be at once transmitted by said Court to the State Auditor or other officer having power to authorize the existence of banks, and such copy of such order shall be duly filed in the office of such State officer."

SEC. 2. This Act shall take effect and be in force from and after its passage.

Approved March 7, 1887.

(No. 43.) Relating to banks and banking:

SECTION 1. That section forty-three (43) of chapter thirty-three (33) of the General Statutes of eighteen hundred and seventy-eight (1878) is hereby amended so as to read as follows, viz:

"SECTION 43. No person or persons who are now or shall hereafter become engaged in the business of banking in this State, not subject to the supervision of and not required to report to any officer elected or appointed by the State, shall make use of any office sign at the place where such business is transacted having thereon any artificial or corporate name; nor shall such person or persons make use of or circulate any letterheads, billheads, blank notes, blank receipts, certificates, circulars, or any written or printed or partly written or partly printed paper whatever having thereon any artificial or corporate name. No bank hereafter incorporated shall adopt or use the name of any private or incorporated bank now existing without first obtaining consent in writing from the person or persons who have done business by or under such name."

"Any person or persons violating any of the provisions of this chapter not hereinbefore specially provided for shall be guilty of a misdemeanor, and on conviction thereof pay a fine of not less than fifty (\$50) dollars or more than five hundred (\$500) dollars for each and every offense, to be recovered before any Court having competent jurisdiction; and all fines and penalties so recovered shall be paid into the State treasury."

SEC. 2. This Act shall take effect and be in force from and after January first, 1888.

Approved March 7, 1887.

(No 44.) To amend the act relating to banks and banking:

SECTION 1. That section ten (10) of chapter thirty-three (33) of the General Statutes of eighteen hundred and seventy-eight (1878) be amended by striking out the words in the fourth and fifth lines of said section, "but the aggregate of the capital stock of such association shall not be less than twenty-five thousand dollars," and inserting in their stead the words, "but the aggregate amount of the capital stock of such association shall not be less than ten thousand (\$10,000) dollars in any town containing a population of not exceeding one thousand (1,000) persons, and not less than fifteen thousand (\$15,000) dollars in towns of not exceeding fifteen hundred (1,500) population, and not less than twenty thousand (\$20,000) dollars in towns of not exceeding two thousand (2,000) population, and not less than twenty-five thousand (\$25,000) dollars in

towns of more than two thousand (2,000) inhabitants, the population in all cases to be determined by the last official census."

SEC. 2. This act shall take effect and be in force from and after January first (1) eighteen hundred and eighty-eight (1888).

Approved March 7th, 1887.

(No. 137.) Transferring certain duties now performed by the State Auditor to the Public Examiner:

SECTION 1. That all duties now required to be performed by, and all responsibilities now imposed upon, the Auditor of this State under the laws regulating the business of banking shall hereafter be performed by the Public Examiner, under the title *ex-officio* of Superintendent of Banks, and all reports and documents now on file in the State Auditor's office pertaining to banks now in existence are hereby transferred to the custody of the Public Examiner.

SEC. 2. This Act shall take effect and be in force from and after its passage.

Approved March 2, 1887.

Kansas City, Mo.—The Union Investment Company has recently been organized in Kansas City, Mo., with \$300,000 capital, fully paid up. The President is Mr. W. P. Rice, formerly Vice-President of the American National Bank, Kansas City. The new company starts out under favorable auspices, and with so able a financier as Mr. Rice at the helm, added to his ability and experience, the Union Investment Company will rank as one of the leading institutions in the Southwest.

Mr. E. E. Parker succeeds Mr. W. P. Rice as Vice-President of the American National Bank. He was one of the founders and formerly Cashier of the First National Bank of Cawker City, Kan. He has been an active Director of the American National Bank since its organization, and is to be congratulated on his deserved promotion.

Gold Production.—From figures published in a late number of *Herpath's Journal* it appears that the production of gold in the United States, Australia and Russia (the principal gold-producing countries of the world) since 1850 was nearly \$3,900,000,000. The production in periods of five years each since 1850, and the estimated production in 1886, are stated as follows:

Five years including.	United States.	Australia.	Russia.	Total.
1855	\$297,438,011	\$240,782,649	\$82,874,686	\$621,095,346
1860	258,115,698	283,430,800	89,238,980	630,785,478
1865	223,255,785	360,008,835	80,679,840	664,044,460
1870	244,725,905	239,137,631	101,115,820	584,979,356
1875	196,430,082	201,136,872	118,089,213	515,656,167
1880	194,985,241	144,753,922	136,081,094	475,820,257
1885	153,861,154	142,323,199	119,842,767	416,027,120
Year.				
1886	83,272,723	27,373,443	25,547,625	86,193,791
Total	\$1,602,184,594	\$1,538,947,371	\$758,466,980	\$3,899,598,945

The estimated production of gold from 1492, (the year of the discovery of America) to 1850 was \$3,121,000,000, and from 1850 to 1886 it amounted to \$4,184,000.

New Jersey Savings Bank Taxation.—The Committee on Banks and Insurance of the New Jersey Assembly has introduced a bill relative to the taxation of savings banks which cannot fail to have the effect of withdrawing from the tax lists of the cities much valuable property. The Act provides that, in lieu of local taxes now paid upon the property owned by them to the municipalities in which they exist, Savings banks shall pay to the State a tax of "one-half of one per cent. on the amount of deposits exclusive of surplus, deducting, however, from said deposits the sum of \$50,000 and also the amount invested in any securities issued by this State or by any town or city in this State, or which, by the statutes of this State or of the United States, are exempt from taxation, and also the amount of their real estate." This tax is declared to be "in lieu of all other taxes upon said savings banks, their deposits and surplus, except upon the real estate owned by them, which shall be subject to local tax." The bill will be opposed on the ground that there is no reason for its passage, unless it is that some stock institution desires to reduce to a half per cent. the taxes which it now pays to some city. The opponents of the measure will argue that there is no propriety in levying a State tax on savings banks and exempting them from municipal taxation, for they are inherently and almost exclusively local institutions. The franchise of a savings bank is of no value, they say, save that it permits people

who want to save their money to do it in an organized way and under the protection of the law. The money that goes into the banks and takes the form, first of deposits and afterward of investments, is money drawn from the personal custody of those who otherwise would pay tax on it as on their personal property. It will be contended that it is fairly taxable within the city or town where it is held and protected, and is not justly taxable by the State.

Canadian Finances.—The public debt of Canada is stated by Sir Charles Tupper, the present Minister, to be more than \$290,000,000, an increase of over \$5,000,000 during the past fiscal year. Of outstanding bonds it is estimated that Canada holds \$30,000,000; United States, \$55,000,000; England, \$100,000,000; Germany, \$1,000,000, and France, \$5,000,000. The average rate of interest these bonds bear is $5\frac{1}{4}$ per cent., and more than one-half of the bonds were sold at from 5 to 12 per cent. discount. It will be proposed that, in order to take up a loan of \$30,000,000 and to prepare for extraordinary expenses, a new loan of \$50,000,000 be made at 4 per cent., and, if possible, float it at par. If the different railroads now projected (which the Government is pledged to support with the usual subsidy of \$3,500 per mile) are completed the debt will be increased \$1,000,000.

St. Louis' New Sub-Treasurer.—Mr. Chauncey F. Shultz has been appointed as Assistant United States Treasurer at St. Louis to succeed Gen. Albert J. Edwards. Mr. Shultz has been a prominent business man in St. Louis for many years. He was born in Somerville County, Pennsylvania, in 1824, removed to Hampshire County, Virginia, in 1856, and three years after removed to St. Louis. From 1874 to 1876 he was presiding Justice of the County Court. Since that time he has been actively interested in the leather business.

Kansas (Cawker City).—The following changes have been made in the officers of the First National Bank: E. E. Parker, President, in place of H. P. Churchill; H. P. Churchill, Vice-President, in place of H. P. Stimson; O. F. Page, Cashier, in place of E. E. Parker. Mr. Page, the newly elected Cashier, has been for the past six years Treasurer of the Biddeford Savings Bank, of Biddeford, Maine, where he was highly esteemed. In accepting his resignation the Trustees adopted a series of resolutions, from which the following are extracted:

Resolved, That we have always found Mr. Page to be a careful and conscientious man, alike careful to the interests of the bank and of individual depositors.

Resolved, That as evidence of his care in making investments of the funds of this bank and his ability as a financier, we point to the fact that in 1879, when he took charge of the bank, it had a surplus of \$8,000, but that surplus has steadily increased until now it amounts to \$140,000, making it one of the strongest and safest banks in the State.

Resolved, That while we regret the loss of a valuable officer from this bank and so prominent a citizen from our city, we cordially congratulate other institutions and another locality upon their gain, and we earnestly wish him success in his new field of labor.

Trade Dollar Redemption.—On account of inadequate facilities at the Treasury Department the redemption of trade dollars is proceeding very slowly. To accommodate holders of these coins the Treasurer has given notice that applications for the redemption of unmutated trade dollars may be sent to the Treasury or any Sub-Treasury in the United States, and that such applications will be filled as rapidly as possible in the order of presentation. Up to the present time applications to redeem \$5,000,000 in trade dollars have been made at the New York Sub-Treasury and \$2,000,000 at Philadelphia. The first of the coins were redeemed on March 7th, and up to date over \$1,500,000 have been disposed of at New York. All the coins are examined carefully, and mutilated and marked ones thrown out. Very few counterfeits have been found among those presented.

Nathan P. Pratt's Forgery.—The United States Circuit Court has decided that the fraudulent assignments made by N. P. Pratt, Treasurer of the defunct Reading (Mass.) Savings Bank, must stand. The Receivers of the Bank brought a suit against Harvey A. Whiting to compel him to reconvey a number of mortgages assigned to him by Pratt. It was claimed that Pratt had altered the record of a vote of the Trustees of the bank passed in 1876, authorizing the Treasurer to discharge and release all mortgages belonging to the bank, so as to make it read "discharge, assign and release." The defendant derived title to the mortgages in controversy through John F. Kimball, President of the Appleton National Bank, and those for whom the latter acted. The

Court decided that there was not sufficient proof to sustain the allegations in the bill, that Kimball had notice that these securities were taken contrary to the law and that he was guilty of fraud, but that full value was paid for them, and that the certificate, which is in substance a copy of the record of the bank, was received by Kimball from Pratt in the course of negotiating the sale of the first mortgages purchased, and that it follows that, whether forged or not, it binds the bank as against an innocent party acting in good faith and without notice.

California (San Diego).—"The published statement on March 4th of the Consolidated National Bank is one which San Diego as a city may well be proud of, as few banks in the United States can make so good a showing. This bank has had a singularly fortunate career. It has never been in 'trouble,' never had a law-suit to collect a debt, never crowded a customer to the wall to pay his note, never missed a dividend to its stockholders, always carries a cash reserve double the amount required by the National banking law, and attends strictly to legitimate banking business, having the implicit confidence of the community."—*San Diego Union*.

Savings Bank Investments in Massachusetts.—A bill has been introduced in the Massachusetts Legislature to allow Savings banks to invest their deposits in the bonds of railroad companies. The bill is as follows:

SECTION 1. The deposits of Savings banks and the income derived therefrom may, in addition to the investments now allowed by law, be invested as follows, to wit: 30 per centum of the total deposit of any such corporation or any less sum may be invested: *First*—In the first mortgage bonds of any railroad company incorporated by the laws of any State or States of the United States other than this Commonwealth, which is in possession of and operating its own road, and which has earned and paid annual dividends in each of the ten years next preceding such investment. *Second*—In the first mortgage bonds of any other railroad company incorporated as aforesaid, owning a railroad fully built and in operation, the principal and interest of which are guaranteed by a railroad company incorporated, operating its road, and having paid annual dividends for ten years as aforesaid. *Third*—In the notes or bonds of any railroad company incorporated, operating its road, and having paid annual dividends for ten years as aforesaid; provided such notes are secured by the deposit, in a trust company incorporated under the laws of this Commonwealth, of an equivalent amount, dollar for dollar, of the first mortgage bonds of any other railroad company incorporated as aforesaid, the railroad of which is built and in operation.

SECTION 2. This act shall take effect on its passage.

Saturday Half Holiday Bill.—A bill is now pending in the New York Legislature having for its object the making every Saturday afternoon a half-holiday. The importance of this measure lies in its bearing upon commercial paper. The bill as originally drafted provided that drafts and notes falling due on Saturday should be payable on the Friday preceding. It was introduced in the Senate and referred to the Judiciary Committee, which took the view that any advantage should be in favor of business men rather than the banks. The committee therefore amended the bill so as to make such drafts and notes payable on the next succeeding day. The amendment was agreed to by the Senate, but an effort will be made to defeat it on the final passage of the bill.

President Bostwick.—A correspondent wishes to know something about the new President of the New York & New England Railroad. He is a large-hearted man, who has won his way in the world through merit. The following sketch, which appeared in the *Boston Traveller* recently, is substantially correct:

Mr. J. A. Bostwick is one of the largest individual stockholders. He is a man of about 50 years of age, thick-set, but well built, with gray whiskers, streaks of gray in his hair, a smooth upper lip, and features which clearly indicate a remarkable force of character, determination and energy. He is a good illustration of the hard-headed, keen, resolute, self-made men who, beginning with nothing, have amassed great fortunes. He was born in Sullivan County, New York State, where Jay Gould was also born. When he was still a boy his parents moved to Ohio, which may explain his present resemblance to the average Western man of business. For a good many years, however, Mr. Bostwick has lived at No. 800 Fifth avenue, New York city. His fortune is variously estimated by those intimate with him at from \$40,000,000 to \$50,000,000. Mr. Bostwick is a member of Dr. Armitage's (Baptist) Church. One of his friends, speaking of his benevolence, said: "Besides being a conservative and thoroughly reliable business man, Mr. Bostwick is well known for his charitable gifts. I know it to be a fact that he gives away more than a tenth of his income. It was only recently that he gave \$50,000 to one institution." As regards his policy in the management of the New York & New England Railroad, if, as it is probable, he assumes the same, one of his closest friends said to-day: "Mr. Bostwick is not a speculator. He is going to take charge of the New England Railroad for the benefit of New England people. He believes that they have been bottled up long enough."

A Fictitious Bank.—A bank swindle (so-called) has been exposed in Detroit, Mich. It appears that some persons have had engraved drafts and checks of the "Marlette Exchange Bank, of Marlette, Mich.," filled them out for various sums ranging from \$50 to \$75 each, and negotiated them throughout the country. For several days these fraudulent papers had been coming into the First National Bank, of Detroit, Mich., from all parts of the country for collection. One which came in is a fair sample. It was drawn for \$55.50, and was signed by "John B. Martin, Cashier." There is no such institution as the "Marlette Exchange Bank, of Marlette." That village has but two banks—the "Bank of Marlette" and the "First National Bank of Marlette." The extent of the fraud is not known, but it appears to have been of considerable magnitude.

Minneapolis' New Bank.—On May 5th a new financial institution, the Franklin State Bank, will be opened at Minneapolis, Minnesota, with a capital of \$50,000, paid up. Its officers will be: William James, President, and J. C. Fairweather (formerly with the Falls Bank, Sheboygan Falls, Wisconsin), Cashier. It will transact a general banking business.

Bank Reserve Cities.—The Comptroller of the Currency, on March 21st, authorized Kansas City to become a reserve city under the provisions of the Act passed at the last session of Congress. The Comptroller has also received notice that an application will be made by the National banks of Chicago for the designation of that city as a central reserve city. There has been delay in making the application, as several new banks in Chicago are not members of the Clearing-House, and an arrangement will probably be made with them before the formal application is presented.

Issuing Scrip for Money.—The attention of Bank Superintendent Willis S. Paine was called to the practice of some of the ice companies along the Hudson river during the ice harvesting season in issuing pasteboard tickets for fractional parts of a dollar, which circulate as money in the river towns. These tickets were paid to the men in the employ of the companies. It is said that the tickets of fifteen companies are in circulation, and that they have become a nuisance, as proper provision was not made for their redemption. The Superintendent submitted the question of the legal right to issue such tickets to Attorney-General O'Brien. The latter, in a written opinion that such issue is in violation of the laws of the United States, says:

Section 3,583, United States Revised Statutes, provides that "No person shall make, issue, circulate or pay out any note, check, memorandum, token or other obligation for a less sum than \$1, intended to circulate as money or to be received or used in lieu of lawful money of the United States; and every person so offending shall be fined not more than \$500 or imprisonment for not more than six months, or both, at the discretion of the Court.

Illinois (Beardstown).—On the 7th ultimo, the People's Bank, of Beardstown, Ill., was succeeded by the First National Bank with a paid-up capital of \$50,000 and deposits amounting to \$127,000. The People's Bank, by its conservative management, had won a high place in the confidence, not only of its patrons but the public at large, and it will be a source of gratification to know that the new bank is to be under the same management as the old institution. The change was made principally with a view to greater permanency of organization, and also to increase the banking facilities. The capital having been increased to meet the requirements of its business, it is confidently expected that the new institution will enter upon a greater era of prosperity than was ever enjoyed by its predecessor. Its officers are J. H. Harris, President, and T. K. Condit, Cashier.

The Western National Bank.—The absence in Europe of ex-Secretary Manning and ex-United States Treasurer Jordan, who are respectively President and Vice-President of the Western National Bank, appears to have caused sensational rumors to be circulated that the owners of stock in the new bank were selling out. These reports were without any foundation, and have been denied by the principal stockholders. Secretary Manning went abroad on account of ill-health, but is reported to be improving, and it is expected that he will assume the duties of his position when the bank opens on May 1st. By a strange blunder in reporting transactions at the Consolidated Stock Exchange one day last month a sale of Fort Worth & Denver City first mortgage bonds at 92 was printed as "Western National Bank" shares, the price being much below that paid by subscribers for the stock. This mistake caused the circulation of the above report. The bank, however, is on a substantial basis and will be opened

on May 1st in the Equitable building. The main room is forty-five feet square and eighteen feet high. The main entrance will be by a short flight of steps ascending directly from the arcade extending through the centre of the building from Broadway to Nassau street, and just at its intersection with the passage-way running from Cedar to Pine streets. Opening from the south side of the main bank room is an apartment, 15x25 feet, which probably will be used as the President's and Directors' room.

The Savings Bank of St. Paul.—One of the attractive bank buildings of St. Paul, Minn., is that recently completed and occupied as the future home of the Savings Bank, of St. Paul. It is centrally located on the southwest corner of Fifth and Jackson streets, the first floor being devoted to the business of the bank. It was organized in 1867 with a paid-up capital of \$50,000. The last published report shows surplus and undivided profits of \$15,000 and a deposit line of \$415,000. The officers are John S. Prince, President, and Edward J. Meier, Cashier.

Cleveland National Banks.—The statements of the nine National banks of Cleveland, O., on March 4, 1887, show that the aggregate capital on that date was \$4,700,000; surplus and undivided profits, \$1,184,154. The loans and discounts were \$16,066,625 against \$15,622,978 on December 28, 1886, an increase of \$373,947, and \$11,790,866 on March 1, 1886, an increase of \$4,275,759. The deposits were \$14,666,366 against \$14,461,624 on December 28th, an increase of \$204,771, and \$12,666,556 a year ago, an increase of \$1,999,840. The reserve was \$3,488,047 against \$3,357,906 in December, an increase of \$130,144.

Interest Checks to Trustees.—The Treasury Department has issued a circular to National and State banks in regard to indorsement and payment of interest checks, which provides that, in all cases in which societies and lodges hold United States bonds in the name of trustees, proper evidence of their election must be filed in the office of the First Auditor, and that the certificates of authority for the indorsement and collection of interest checks must be from all the trustees, and not from the society or lodge. The circular says that the proper indorsement of interest checks is important and should, before payment, be known to conform to the Treasury rules.

Bank of Commerce, Memphis, Tenn.—The last statement of this bank, made at the close of business on March 2, 1887, has just been issued. It is simple justice to say it is the best ever sent out by this growing institution. The figures show that the capital stock has recently been increased to \$600,000, which gives it the largest capital of any bank in the city. The statement further shows a surplus fund of \$40,000, undivided profits of \$25,700, and deposits of \$1,101,458, which ought to be satisfactory to the stockholders. The building occupied by the bank is one of the finest in Memphis. The officers are: S. H. Dunscomb, President; Jno. Overton, Jr., Vice-President; and J. A. Omburg, Cashier.

A New Yorker's Impression.—The Boston Stock Exchange ordinarily is not a very excitable body, as compared with the New York Stock Exchange. On rare occasions, however, the "bulls" and "bears" become somewhat bolsterous. How it appeared at such a time to a New Yorker is faithfully depicted by a writer for a Boston newspaper:

"The member was occupied in a little speculation of his own as to whether Boston brokers could ever make so serious a business of stock dealing as the speculators of New York and produce brokers of Chicago when he was addressed cheerily by a spruce, tailor-made-looking man at his side, who wore his silk hat tilted in the slightest perceptible degree towards his left eye and had a general jaunty air of New Yorkiness.

"Beg your pardon," said he, "but can you tell me which is Rev. Dr. Tompkins?"

"What do you mean, sir?"

"Mean? Why, isn't this a little Sunday-school convention?"

"Sunday-school convention? No, sir: this is the Boston Stock Exchange."

"St-st-stock Exchange!" The New York man looked stupefied. "You don't mean to say that this quiet little assemblage is a stock exchange!" he went on.

He would have elaborated his joke, no doubt, but there was nothing to do but to cut him dead. The New York man's idea of wit, as it finds expression when he comes to Boston and wants to ridicule something, is excruciating."—*Boston Transcript*.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— Letters of credit—I O U A V.—*Danville Breeze*.

— There are now nearly \$40,000,000 of silver in the vaults of the Sub-Treasury in New York, and there is room for only \$3,000,000 or \$4,000,000 more.

- The banks of Birmingham, Ala., propose to establish a Clearing House in that city.
- Over \$30,000 has been subscribed for the proposed new National bank at Woodbury, N. J.
- The Bank of the State of New York has increased its capital stock from \$800,000 to \$1,200,000.
- A bill making 12 per cent. the highest rate of interest has been passed by the Dakota Legislature.
- It takes the first thirty years of a man's life to find out that it isn't the man with the shiniest hat who draws the biggest check.—*Philadelphia Call*.
- Bank Superintendent Paine has decided in favor of the application of the Title Guarantee & Trust Company for his approval of the acceptance by Savings banks of its searches.
- Governor Lounsbury, of Connecticut, has appointed Mr. T. W. Wooster, of Saybrook, as Bank Commissioner to succeed Mr. T. W. Williams, of New London. His term will run four years from July 1st.
- The Keystone National Bank, of Philadelphia, Pa., is preparing to erect a new building on the present site of the bank. It will be 32½ feet front and 111 feet deep, and seven stories high. It will cost about \$100,000.
- At the annual election of the Philadelphia Stock Exchange, Mr. Bushrod W. Adams was elected President; T. C. Knight, Chairman; William J. Morris, Vice-Chairman, and John C. Johnson, Secretary and Treasurer.
- Blackstone, the defaulting clerk of the Canal National Bank, of Portland, Me., who escaped extradition, remains in Winnipeg, and is reported to have been "restored to his old position in that city by the firm that formerly employed him."
- W. O. Fuller, Jr., and C. J. Simmons, of Rockland, Me., started on March 28th for their new home in Kansas. Mr. Fuller was formerly engaged in banking in Rockland, but is now one of the Directors and Cashier of the Linn County Bank, La Cygne, Kansas. Mr. Simmons will be located at Pleasanton, Kansas, as Assistant Cashier of the Bank of Pleasanton, recently organized in that place. He was for a number of years connected with the Rockland National Bank.
- We imagine that very few people think that a quarter of a dollar can be changed 215 different ways. The pieces used in making the changes are the twenty-cent piece, ten-cent piece, five-cent piece, three-cent piece, two-cent piece, and one-cent piece. To be able to make all the changes would require one twenty-cent piece, two ten-cent pieces, five five-cent pieces, eight three-cent pieces, twelve two-cent pieces, and twenty-five one-cent pieces, making in all 53 pieces of money representing \$1.25.—*Philadelphia Agents' Herald*.

NEW COUNTERFEITS, SPURIOUS COINS, ETC.

[Readers of the JOURNAL have frequently been informed that much of the news published in newspapers and in so-called "Counterfeit Detectors" regarding bogus bills and coin is either wholly or in a large part unreliable. The Secret Service Bureau of the Treasury Department is so well organized that it is now almost impossible for rogues to either make or put in circulation any considerable amount of bogus money. If bankers exercise proper care and read the information furnished by the Department they will have no trouble in promptly rejecting counterfeits.—EDITOR.]

MR. MARLOR, the New York Sub-Treasury expert, expresses the opinion that the \$5 silver certificate cannot be successfully counterfeited.

COUNTERFEIT silver dollars are reported as circulating in Abbeville County, S. C. It is also thought that counterfeit gold coin is being manufactured in the county, but none has been passed up to the present time.

A COUNTERFEIT \$5 bill on the Traders' Bank, of Chicago, was received at the money-order office in that city from the postmaster at Wenona, Ill., recently, and promptly returned. It is said to be a new counterfeit.

A DISPATCH from Ottawa, Canada, states that a gang of notorious counterfeiters infesting Canada for years has been broken up. Cobourg and Owen Sound, Ontario,

as well as Sweetsburg, Quebec, have been the rendezvous of the gang, and from these headquarters they have issued within the last two years over \$500,000 in counterfeit \$2 notes, as well as \$1,000,000 in \$10 and \$5 notes of the Bank of Commerce and Bank of Toronto. The recent arrests include James Carroll, the noted bank sneak; William Rogers *alias* "California Jack," an ex-convict of the Auburn Penitentiary; Hal Grover, one of the best known of Canadian crooks, and Denis Perullo, who has been in Canada since 1882, where he skipped from Cuba after forging drafts on New York and Savannah brokers for \$110,000, and securing the cash through the Bank of Havana.

RATHER STRANGE.—The correspondent of a Chicago paper writes: "In Bolivia counterfeit money is as current as good money, and passes just as well. At the hotel in La Paz I could hear the workings of a counterfeit press in the room next my own. A former American Consul in one of the Bolivian cities sold his press to my English companion. Another of our diplomatic corps in Bolivia had one hundred kegs of nails sent him from New York. There were a few nails laid in the tops and bottoms of the kegs, but the main contents were counterfeit silver pieces. The Consul was not at home when the kegs arrived at his warehouse. A brother-in-law of President Dosa, of the Bolivian Republic, wanted some nails about this time, and the Consul's secretary sold him a dozen kegs. An exposure was prevented by the Consul going halves with the brother-in-law on the counterfeit money."

THE CHIEF of the Secret Service reports no new counterfeits this month. He referred to the recent Chicago discovery of counterfeit \$100 compound-interest notes and the Hamilton-head \$50 notes, which the party passing them confessed to have stolen from a safe, but refuses to give the name of the owner. A few of the number claimed to have been stolen are still in circulation, but it is not necessary to give the points of difference between them and the genuine, as they are well known.

Following is a circular letter of the Secret Service Division, which the Department found necessary to issue on account of the gullibility of mankind generally. The Chief believes that probably half a million dollars is annually passed into the coffers of this class of swindlers in New York and other large cities by the would-be purchasers of counterfeit money:

SIR:—Your letter of — is received. From its tenor I infer the party offering to sell counterfeit money is of the numerous class of swindlers known by the title of "Boodlers." Such persons never deal in it, but make a pretense of doing so to inveigle dishonest persons into parting with their good money in the hope of getting counterfeit.

They send circulars in imitation of letters by thousands all over the country, inviting their correspondents to visit them, naming the hotel at which they should stop, and offering them great inducements to purchase. Those who go after such bargains never obtain counterfeit money, and seldom return home without leaving all of their good money in the hands of these plausible but dangerous men. In August, 1885, James T. Holland, of Abilene, Tex., allured to the city of New York by a circular similar to that forwarded by you, met Tom Davis and Theodore, his brother. These men, while pretending to sell Holland ten thousand dollars of so-called counterfeit money, but which were genuine notes, cheated him of his good money. Holland, at once discovering the cheat, shot Tom Davis, killing him instantly. A jury subsequently acquitted Holland. Another practice is to toll on their victims by sending a GENUINE one or two-dollar note, or parts of the same, and representing them to be specimens of the counterfeit notes they have for sale. Under the various names of "Green Articles," "Green Cigars," "Green Leaves," etc., they offer for sale counterfeit money which they aver is printed on plates stolen from the Government Bureau of Engraving and Printing. Not a plate of any kind has ever been stolen from that establishment. Those who have counterfeit money for sale do not write letters requesting strangers to buy it. Even after the introduction of a new man by one counterfeiter to another it takes a long time to establish such friendly relations as would induce a counterfeiter to trust a new-comer. Yet thousands of criminally-foolish people believe that they can purchase counterfeit money as they would butter or cheese, and, in their attempts to obtain it, are robbed, and an honest public sentiment says, "Serves them right." The crime of which the "Boodler" is guilty is that of obtaining money under false pretenses—an offense of which State statutes only take cognizance, and over which United States Courts have no jurisdiction. It is next to impossible to obtain legal evidence against these swindlers. Were one of them arrested and brought to trial the testimony of the main witness (he who lost the money) would be weakened by the fact that he WOULD HAVE BEEN a criminal if he COULD. This office is in daily receipt of "Boodle" circulars, sent in from all parts of the country; hence the necessity of putting this explanatory statement in its present form.

JAMES J. BROOKS, Chief.

[Circulars such as Chief Brooks refers to are frequently sent to the JOURNAL office by out-of-town subscribers who request us to ferret out the parties who issue them! We had an experience with one New York swindle, but don't care to start a Detective Bureau just yet.]

7, as shown by their Official Statements.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

EMBEZZLEMENTS—A COMMON DEFENSE.

Editor Rhodes' Journal of Banking:

SIR:—The recent defalcation of a Discount Clerk in Baltimore calls renewed attention to the necessity for organized action on the part of banks to protect themselves from such losses. As a mere matter of business (setting aside any moral considerations) it would seem to be more profitable for the banks to formulate some arrangement which, if it would not put a stop to, would greatly diminish defalcations and breaches of trust. You have often urged the necessity, in cases of this description, to leave no stone unturned to bring the defaulter to justice; but, as a matter of fact, a bank that has already lost a considerable sum of money feels but little inclined "to throw good money after bad," and is more likely to pocket its loss and let the criminal go free than to still further diminish its profit and loss account by expending money to catch him. A better way would be for the banks to all stand together, and to form in each city a pool for the express purpose of making embezzlers and swindlers feel the strong arm of the law. Banks should pay into this pool according to their respective capitals or lines of deposit, and place the management of the money in the hands of one or two competent men, who would see that it was not spent in vain.

BANK PRESIDENT.

ST. LOUIS, Mo., March 21, 1887.

STRANGERS' DRAFTS.

Editor Rhodes' Journal of Banking:

SIR:—In reply to Joe H. Borders in the February number of the JOURNAL, I would say that, when a stranger desires us to pay his own draft on a distant bank, we ask by telegram: "Will you honor," etc. I expect the bank will then at once charge the account of our "stranger" with the amount, assuming that it will be paid to him by us; and I would, of course, hold them (the bank) responsible for the prompt payment of the draft.

GEO. O. MOORE, *Cashier*.

WORTHINGTON, Minn., March 26, 1887.

A BASIS FOR CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—By examining the compilation made by Mr. Robert Porter in a compendium to the United States Census of 1880, page 1,571, we find that at that time the State and Territorial debt was \$246,974,476; county debt, \$106,767,946; township debt, \$30,120,048; school district debt, \$9,886,242; city and town debt, \$723,853,534; making the total debt of \$1,117,585,546. This debt is secured by the tax bonds of the various States, Territories, etc., and is an obligation of the people, to be liquidated in the payment of taxes from year to year, and can be made the very best security for a National circulation. My plan would be to make all these bonds payable in equal annual amounts, covering a period from one to twenty years, drawing no interest. Let the General Government purchase the bonds, by issuing seventy-five per cent. (75 %) of their face value in a circulating medium having all the qualities of the present National bank currency, thus making a discount of twenty-five per cent. (25 %) from the face value of these non-interest bearing bonds, having an average period of about ten years to run, which would amount to very nearly a discount of two-and-one-half per cent. (2½ %) per annum, or about three and one-third per cent. (3⅓ %) simple interest. In this way the State, for example, would pay an equal amount each year for twenty years in liquidating its debt. The payment of the face value of these bonds to be made in bond bills, and when so paid, the seventy-five per cent (75 %) originally issued in the purchase of such bonds to be retired and destroyed, or reissued in the purchase of additional bonds. In this way it is plainly to be seen that the general Government would have

and receive an income of one-quarter of the amount of all the bonds so issued by the States, Territories, counties, towns, cities and school districts; and the various States, etc., would only be out for interest the low rate of about three and one-third per cent. ($3\frac{1}{3}\%$) simply for the average time of ten years. I would also provide for a penalty to be imposed in case such bonds were not paid promptly at maturity. The profit accruing to the general Government, after paying all the expenses pertaining to the business, would be considerable; but, as this is a "Government of the people, for the people and by the people," it would be much like taking the money out of one pocket and putting it into another, the locality issuing the bonds getting the benefit of the low rate of interest and the general public having the benefit of such interest. Of course I only suggest the rate of discount to illustrate my plan.

CITY SAVINGS BANK,
CHATTANOOGA, Tenn., March 10, 1887.

G. W. THOMPSON, *President*.

BANK CIRCULATION—PROFIT AND LOSS ACCOUNT—A BALANCE SHEET EXHIBIT ON THE BASIS OF 3's, 4's AND $4\frac{1}{2}$'s.

Editor Rhodes' Journal of Banking:

SIR:—In the articles on "Bank Circulation," published in the January and February numbers of the JOURNAL, in the department "Open Letters from Bankers," the figures have been given in so many different ways that no doubt some of your readers have been mystified. If you will allow me to present the case, by means of the balance sheet and profit and loss account, it may perhaps make the matter a little clearer.

The figures of a bank issuing circulation on \$100,000 3 per cent. bonds would be as follows:

BALANCE SHEET.	Dr.	Cr.
Capital stock		\$100,000 00
Circulation		90,000 00
United States bonds in Washington	\$100,000 00	
Five per cent. fund	4,500 00	
Cash	85,500 00	
	\$190,000 00	\$190,000 00

PROFIT AND LOSS ACCOUNT.	Dr.	Cr.
\$85,500 cash loaned at 6 per cent. earns		\$5,130 00
Interest on bonds		3,000 00
Semi-annual duty	\$900 00	
Redemption expenses	50 00	
Balance	7,180 00	
	\$8,130 00	\$8,130 00
Net income		7,180 00
\$100,000 capital loaned at 6 per cent. earns		6,000 00
Net profit on circulation		\$1,180 00

After surrendering the \$100,000 in 3 per cent. bonds and buying \$25,000 4 per cent. bonds at 120, the figures would be as follows:

BALANCE SHEET.	Dr.	Cr.
Capital stock		\$100,000 00
Circulation		22,500 00
United States bonds at par	\$25,000 00	
Redemption fund	1,125 00	
Premium account	7,250 00	
Cash	89,125 00	
	\$122,500 00	\$122,500 00

PROFIT AND LOSS ACCOUNT.	Dr.	Cr.
\$20,125 loaned at 6 per cent. earns.....		\$6,347 50
The interest on \$25,000 invested in United States bonds at 4 per cent. amounts to		1,000 00
Annual charge to retire premium account in 20 years.....	\$362 50	
Semi-annual duty	225 00	
Redemption expenses.....	25 00	
Balance	5,785 00	
	<u>\$6,347 50</u>	<u>\$6,347 50</u>
Net income		5,785 00
\$100,000 capital loaned at 6 per cent. earns		6,000 00
Loss on circulation.....		<u>\$285 00</u>

A bank making the change as above loses the profit on \$100,000 circulation with 8 per cent. bonds amounting to.....	\$1,180 00
And loses by issuing circulation on \$25,000 in 4 per cent. bonds.....	285 00
Total decrease of income.....	<u>\$1,445 00</u>

The figures of circulation based on \$25,000 of 4½ per cent. bonds at 100¼ are slightly more encouraging to banks:

BALANCE SHEET.	Dr.	Cr.
Capital stock.....		\$100,000 00
Circulation		22,500 00
United States 4½ per cent. bonds at par.....	\$25,000 00	
Five per cent. fund.....	1,125 00	
Premium account.....	2,812 50	
Cash	94,062 50

The figures for redemption expenses are from the books of this bank, and are, of course, lower than those of the city banks, whose bills find their way more readily to Washington.

Yours truly,

H. D. BATES, *Cashier*.

MERCHANTS' NATIONAL BANK,
WATERVILLE, Me., March 21, 1887. }

INSURANCE A SECURITY FOR CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—What shall be the future basis for the circulation of National banks is a vexed question which is being answered in a great many different ways. Let me suggest that the redemption of National bank notes be insured by *insurance* instead of by the deposit of United States bonds or other securities. We insure our houses and

barns and shops and stores and contents, our horses and cattle and our lives. Why not our circulation? Why not let the present tax on circulation be a fund set apart for the redemption of the notes of insolvent banks, this fund to pay the notes of suspended banks as fast as presented, and to become a creditor of the suspended bank to the amount of its outstanding circulation on the same footing as are its other creditors, but not a preferred creditor to the prejudice of depositors and others?

That this would be entirely practicable is apparent when we consider that the tax paid is not needed in other channels, considering the redundant and unnecessary revenues of the Government, and that under strict Civil Service rules for examination, which would put competent bankers rather than incompetent politicians in the field as Bank Examiners—men who would not only look for leaks, but stop them when found—it would require but a small per cent. of the fund so created under the present levy to pay such losses.

In evidence of this it will be noticed that "the proved claims against National banks from 1865 to 1884, inclusive, aggregate \$38,479,810; that the claims remaining unpaid in 1884 aggregate \$14,776,659. Assuming that the banks which have been in the hands of a Receiver as long as five years will pay nothing more, and those which have not been for this period in the hands of a Receiver will average as large a percentage of dividend to creditors as the failed banks for the fifteen years previous, we have approximately that the loss to creditors from the failure of National banks from 1865 to 1884 inclusive will be \$9,524,568." In the absence of preferred security for circulation it would be hardly fair to assume that one-half of this loss would fall on circulation. It certainly would not be more than one-half, and probably not more than one-third—say one-half—and we have a total loss to circulation from 1865 to 1884 inclusive of \$4,762,276, if unsecured; but, to off-set this, we have tax paid on circulation during this time of \$58,366,981, or more than eleven times the probable loss.

Why not so modify the National Banking Act that:

First—Circulating notes may be issued to a National bank to the amount of — per cent. of its paid-up capital without a deposit of United States bonds or other securities.

Second—That the amount collected from National banks on account of the semi-annual tax or duty on circulation shall be held and kept by the Treasurer of the United States as a separate and distinct fund to be used to redeem the circulation of suspended banks, the tax or semi-annual duty on circulation to be inoperative when this fund shall reach — dollars, and to remain so until it shall be reduced to — dollars; the United States Treasurer to have power to invest portions of this fund from time to time, as the condition of the fund may warrant, in United States interest-bearing bonds, the interest to be added to the fund.

Third—When the affairs of a National bank shall have been placed in the hands of a Receiver, a portion of this fund, sufficient to redeem its outstanding circulation, shall be at once set apart for this purpose, and the Comptroller of the Currency for the fund shall become a creditor of such suspended bank to the amount so set apart *pro rata* with its other creditors, etc.

I do not care to elaborate the plan at present, but only to offer it as a suggestion. If it is not a good one, in what is it weak?

You are aware that there is now a bill pending which proposes to make the tax on circulation a fund for the protection of depositors in National banks; but it seems to me much better that circulation should care for circulation; and, if depositors are to be protected by a special fund, the propriety of which seems somewhat doubtful, that the fund should be created from a duty or tax on deposits.

MYRON CAMPBELL.

SOUTH BEND, Ind., March 19, 1887.

"WORK AND WAGES."

Editor Rhodes' Journal of Banking:

SIR:—I would like to ask you, or the author of your "Notes and Comments on Banking Practice," a few questions which I believe to be of general interest in connection with the subject of "Work and Wages," commented on in your last issue.

Suppose a bank of twenty-five thousand dollars capital and sixty thousand dollars in deposits, earning 24 per cent. gross profits annually (the only bank in a manufacturing town of twenty-five hundred inhabitants) has its affairs supervised by a manager having another business who attends to none of the details of the bank. Aside from the person mentioned, how many officers or employees would such a bank be supposed to

have, and at about what salaries? In your opinion, would one man of average ability and experience be able to do justice to the work of such a bank and carry the usual responsibilities of a Cashier? If so, what yearly salary would you consider him fairly entitled to receive?

Is a bank Cashier generally supposed to be at his desk every business day in the year and never able to leave town, or is he given a vacation each year, without abatement of pay, besides being accorded considerable personal liberty to attend to public or private duties or privileges calling him away from his desk occasionally.

Are acting Cashiers and clerks usually prohibited from having any business interests or employments outside of the bank?

I hope to see a full and frank expression in answer to these questions in an early number of the JOURNAL.

A WESTERN SUBSCRIBER.

DEAD-HEAD COLLECTIONS.

Editor Rhodes' Journal of Banking:

SIR:—I note what you say in the March number of the JOURNAL in regard to country collections. I understand there is a movement on foot among country bankers looking to concerted action to do away with at least some of the abuses which the author of "Notes and Comments on Banking Practice" points out. While I do not see exactly what practical shape such a movement would take, still I desire to add my voice to aid its success. When a merchant sends me a draft to be collected for him, and I present that draft to his customer, it certainly is not my affair whether the draft is honored or not, and it does not diminish my trouble in the matter because the drawee refuses to pay. It is very little more labor to collect the money and remit a check than to return the dishonored draft; and while, perhaps, a less charge might be made for returning an unpaid draft, it is only fair that I should be remunerated to some extent for my trouble. I, for one, have adopted the plan of refusing to do business for people who are unwilling to pay for it. I hope you will be successful in your efforts to reform this long-standing abuse.

CASHIER.

—, NEW YORK, March 26, 1887.

COLLECTION ABUSES.

Editor Rhodes' Journal of Banking:

SIR:—I have been looking for an article in the JOURNAL to aid the movement begun by country bankers against the present abuse of the collection system by city firms, who expect us to return unpaid items without charge whether the reason for non-payment or non-acceptance be "will write," "have paid," "refused," "not correct," or any other reasons that reflect in no way against the activity of the collecting bank, which, in returning these unpaid items, consumes time, stationery, return postage, book room, etc. Of course, we do not refer to collections from regular correspondents. Won't you stir up the matter?

NORTH LA CROSSE, WIS., March 3, 1887.

NATIONAL BANKING—A REPLY.

Editor Rhodes' Journal of Banking:

SIR:—Not being able to agree in all points with the Open Letter published in the February JOURNAL under the head, "National Banking—A Thrice Told Tale," I venture to ask your indulgence for a brief examination of its main features. While it is quite true that the necessities of the Government acted as a potent influence in the passage of the National Bank Act, at the same time it must not be forgotten that the National system itself was, to a great extent, but a growth and a development of the banking system of the State of New York. It is not altogether impossible that, even without the pressure of war times, some National measure would have been enacted, for the people were becoming heartily weary of the State bank system which a few banks at the present time seem desirous of returning to.

The word "bank" itself is scarcely to be derived from the Italian *banco*. More probably it is, as has been suggested, the ordinary use of the word bank, meaning anything brought together into a mass—as a bank of sand, stones or money.

Passing over previous systems, let us come to the question under discussion—namely, the National banking system, as we know it to-day. Mr. Justice Strong

correctly defined the National Bank Act when he stated that its purpose was in part to provide a currency for the whole country and in part to create a market for the Government loans. So far from both these objects having been thoroughly subverted, the first ceases to be so the moment the National banks go out of existence, and, as to the second, he would be a bold prophet who would predict that the United States Government will not again be in the market as a borrower of money. I hope the day is far distant when this country shall again know the horrors of war. In January, 1861, there were few men who saw the gathering clouds, and fewer still who realized the awful magnitude of the storm that was even then about to burst. At present nothing seems more unlikely than a foreign war, and yet a year hence and the nation may be straining every nerve to preserve its existence.

"In time of peace prepare for war" is a maxim tried and true, and what better preparation for war could the nation have than a system of National banks scattered all over the country, each one doing its part to place at the disposal of the Government all the loanable funds of the people. For this reason alone the Government could well afford to pay a bounty to banks as an inducement to remain in the National system.

Surely your correspondent does not need to be told that the law does not require the reserve agents of National banks to be themselves National banks. That they are uniformly so is simply a usage of the Comptroller's office—a very proper and correct usage, designed, as it is, to strengthen the National system. Should every bank in the city of New York go out of the system, the reserve requirements of the law as to other banks would not be affected in the slightest degree, as the Comptroller would simply approve State banks as reserve agents.

In all the reserve cities, including New York, the National banks take out a large circulation. To say that the banks in these cities "nominally remain National by a minimum deposit of \$50,000 in United States bonds" is to make a statement which is applicable only to a comparatively few of the banks in question.

As to the tax on circulation, the advocates of the National system have for years been working for its repeal. The opponents of the system are the very persons who insist upon retaining this onerous burden of which your correspondent complains so bitterly.

That the admitted prestige of National banks is deserved is aptly shown by the fact that in the great panic in New York in May, 1884, "while many banks and private banking firms of excellent repute failed, but one association organized under the National-bank Act failed, and but one suspended." This branch of the question is fully and ably discussed in the report of the Comptroller of the Currency for 1884.

It may also be added that failed National banks pay their depositors on an average 70 per cent. of the proved claims, the note-holders receiving dollar for dollar.

To use an ordinary phrase: "Does your correspondent want the earth?"

The restrictions in the National-bank Act are only such as prudence and experience suggested. Has not the wisdom of them been amply justified by their fruits? The provisions as to examinations, reports, etc., follow as a necessary adjunct to the restrictions and requirements of the law. There is no other way of securing the enforcement of the law. If the Directors neglect their duty that is no fault of the law, and the remedy is to be found, not in amending the law, but in choosing Directors who will attend to their business.

It is a curious error to speak of the Government as an *indorser* of the National bank notes. The position of the Government is simply that of a *Trustee* holding certain securities pledged for the redemption of the notes.

Space would fail to discuss properly the doctrine of the relation of the Government to the corporations of various kinds which it has created; but to have a system of banks entirely free from Government supervision would be an experiment few would care to try.

When your correspondent talks about Huxley and Spencer and "administrative nihilism," I can only say, in all humility: "I do not follow the gentleman."

I have endeavored thus briefly to answer the points against the National system made by your correspondent, not only because his objections may seem to some persons reasonable in themselves, but because they acquire additional weight from the high standing of your correspondent in the banking community.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

MR. KNOX ON THE SURPLUS.

(From the *Utica (N. Y.) Herald* of March 8th.)

Of the many schemes for reducing the surplus in the Treasury, that of Hon. John Jay Knox, ex-Comptroller of the Currency, is not only sensible and feasible, but could easily be put into execution if Congress would pass a statute to authorize it. Mr. Knox proceeds on the assumption that what the country needs is something to reduce the surplus temporarily, say for about three years, while Congress is deliberating upon a plan for permanent reduction and perfecting the details of such a plan. This of itself would be a great relief to the country. All through the past winter, and, in fact, for several years past, Congress has felt that there was a necessity for some legislation to reduce the revenue of the government; but, although the pressure was strong, it seemed impossible for the members to agree upon any plan. A plan like that of Mr. Knox would give the country a breathing space, and perhaps enable some one to bring forward a scheme of permanent reduction that would receive the approval of a majority in Congress. Mr. Knox's proposition, to which we have already referred, is elaborated in the *Epoch* for the current week. It is exceedingly simple, and apparently need not create any strong animosity against it. It treads on the toes of no man who cherishes a particular theory of the tariff. It interferes with neither free trader nor protectionist. It appeals rather to the common sense of both of these parties, and can be adopted without partisanship by Republicans and Democrats alike. Its principal feature can be stated in a single sentence. He would exchange the 4 per cent. Government bonds now outstanding for $2\frac{1}{4}$ per cent. bonds of the same denomination, and pay the present holders the present cash value for the difference in interest. As these bonds have 20 years yet to run, and the amount of 4 per cents now is about \$738,000,000, it is estimated by the Government Actuary that the amount of interest thus forestalled would be \$173,810,000. Mr. Knox believes that this would be as great a sum as the Government could spare for three years at least. In order to give the new bonds greater desirability he would have the law that authorized their issue state, also, that none of them should be called for payment so long as any bonds bearing a higher rate of interest are outstanding. Those, also, which are issued first should be called last, and this provision, it is believed, would cause an immediate demand for them. The banks of the country hold about \$125,000,000 of the 4 per cents, and the one feature which the banks desire more than another is a long duration of time or permanency in the securities which they deposit with the Government. In order to make this still more pronounced it is suggested that the new $2\frac{1}{4}$'s, instead of being made to mature in 1907, should be made payable in amounts of eighty or one hundred millions per year, which would extend them over a period of 8 or 10 years further. Those who made the first exchanges would be entitled to the longest bonds, and there would be a strife to get them. Banks should also be allowed to issue their notes up to the par value of the $2\frac{1}{4}$ per cent. bonds which they would deposit. A bill containing these provisions was introduced in the Senate during the last session, but no action was taken upon it. It should be passed at the short session of the next Congress.

BI-METALLISM IN GERMANY.

(From the *London Economist*, March 5th.)

Among the papers issued by the Foreign Office this week is a report by Mr. G. Strachey about the discussions in Germany on the currency question, in which the arguments of German economists for and against the double standard are very clearly and impartially set forth. It can hardly be said, however, that much new light is thrown by it upon the bi-metallic controversy, and it is mainly valuable as showing the general drift of German opinion on the subject. On that point Mr. Strachey states that "the wish of the financial world of Germany is that the actual monetary system

may be retained intact. The assertion may sound sweeping, but I believe there are very few heads of important financial institutions or leading private bankers in Leipzig, Breslau, Cologne, Hamburg, Frankfurt, Augsburg, Munich, or any other large city, who are not decided adherents of gold. My own experience is that gentlemen so situated have a profound contempt for bi-metallism, and that they habitually speak of it in the tone which our own men of science would use in reference to astral presences or spooks. Of the Chambers of Commerce of the Empire it is sufficient to say that at the last Handelstag, held in March of the present year, seventy-one of those bodies declared for the adherence to the gold standard and four only for bi-metallism; these last were the Chambers of Dresden, Chemnitz, Munster and Bochum. German industry is specially represented by the great association known as the 'Industrieller Verein.' The Central Committee recently circulated a request to the branch unions, representing the various departments of industry, to report their views on the currency question. A solitary branch announced itself as bi-metallist, *sans phrase*; two branches were bi-metallist with limitations, all the remainder supporting the existing currency, except three, which were in favor of an absolute gold standard. Considering the affinities of bi-metallism and protection, this is a significant fact." The bi-metallists, however, he points out, have gained some strength through alliances with political parties, and, summing up the position, he writes: "On the whole, if the balance is struck between the various influences thus coming into play on each side of the controversy, intelligent German conviction must be described as militating in favor of the maintenance of the present currency system. But looking to the peculiarities of the local political constellations, and to the fact that any resistance to the double standard which might arise in the Federal Council would probably be of a passive character, the surmise seems justifiable that, if the Imperial Government were to ask for power to enable them to make the Empire a party to an international bi-metallist league, the Reichstag would grant the necessary authorization." There is, however, no probability of the Government changing in its attitude of firm opposition to the bi-metallist proposals.

THE TREASURY BANK AND THE NATIONAL BANKS.

[Wm. B. Greene in *A. S. Pratt & Sons' Bankers' Eclectic* for March.]

Under the present law the Government of the United States invests a certain part of its revenues in making a monthly addition to the silver circulating medium of the country. It has been apprehended that the result of this ceaseless increase of the standard silver dollar will be to change the standard of value from gold to silver: that the dollar which now means 25.8 grains of gold will shortly mean 412.5 grains of silver. The silver dollar is the satellite of the gold dollar, and shines as yet with reflected light within the influence of the gold standard.

The gold coin in the country on January 1, 1887, was estimated to be about \$559,000,000, and the silver dollars coined to the same date amounted to \$249,555,647. The gold coin was by this more than double the legal value of the silver. But it is not the proportionate amounts of the respective metals held in the country which control; it is the proportionate amounts of each metal in actual circulation. There is some indication of the proportion of circulating gold to circulating silver in the country in the proportions in which the two metals are held in the United States Treasury; and on February 1, 1887, it appears that the Treasury, including amounts held for certificates, had \$187,196,596 in gold and \$188,506,238 of silver. The gold reserve of the Treasury sustains a circulation of paper redeemable in gold of \$443,896,621, of which \$346,681,016 were legal-tender notes and \$97,215,605 were gold certificates. In addition, there were \$392,793,452 National bank notes, which, redeemable in lawful money, consisting of gold coin, silver dollars and legal-tender notes, were sustained at the gold standard by the fact that the preponderating amount of lawful money represented gold. Assuming that the gold coin in circulation in the country equals the amount of silver dollars coined, namely, \$250,000,000, and adding to it the legal-tender notes, there is, without including National bank notes, a possible gold circulation of \$596,681,216 as compared with a possible silver circulation of \$250,000,000. This would seem to assure the permanency of the gold standard, even in the face of the increase in silver dollars, which must now occur before another session of Congress.

The Treasury has, however, become a great Government bank, such as Jackson recommended in 1829, "founded upon the credit of the Government and its revenues."

It has three kinds of paper circulation—the legal-tender notes, sustained by a gold reserve of about 30 per cent.; gold certificates, with a gold reserve of 100 per cent.; and silver certificates, with a reserve of 100 per cent. The currency certificates may be considered a larger denomination of the legal-tender note. It receives deposits in gold coin, silver coin and legal-tender notes, for which it issues certificates of deposit. It acts as the redemption agent of the National banks, and gives them credit on its books for the amounts deposited by them for the redemption of their notes. In fact, it performs almost all of the functions of a bank, and through the Assistant Treasury at New York is a member of the Clearing-house. It employs the Assistant Treasuries and many of the National banks as its branches. This attitude of the Treasury of the United States invests it with greater control of the currency of the country, and with greater power to make or mar, than any institution ever known in the history of the United States. The only function of a bank which it does not possess is that of making loans and discounts. Its powers of gathering in currency are unlimited, but its power of redistributing and paying out the same is bounded by the expenditures of the Government. Like all banks which issue circulation, the Treasury seems to be impatient of rivals, and bound to sustain itself at whatever cost to its competitors.

For some time it has been struggling with the problem how to get into the hands of the public the silver dollars the law forces it to take without giving the impression that it pays silver in preference to gold, inasmuch as such an impression would tend to discredit the silver and cause a demand for the gold, which might make it exceedingly embarrassing to maintain a gold standard of payments. The National banks held a very large proportion of the redeemable public debt of the Government, and the high price of the unredeemable debt of the United States makes it more profitable for the banks to retire such portion of their circulation as is based on the called bonds. If the bonds were held by individuals the Treasury would have to pay them in gold; but, as it is, one-tenth only is paid in gold funds, and the proceeds of the remaining nine-tenths are placed on the Treasury books as a credit to the banks for redemption of circulation. The notes when presented are redeemed in silver, and the Treasury thus puts in circulation an equal amount of silver certificates in place of the National bank notes retired.

It is thus at first sight an advantage to the Treasury bank to have the retirement of National bank notes continue, as it affords an outlet for its most undesirable currency. This may explain why Mr. Jordan, the United States Treasurer, and Mr. Trenholm, the Comptroller of the Currency, in their interview with the Finance Committee of the Senate on January 26th, did not urge measures for stopping the retirement of National bank circulation. In taking this stand they were evidently carrying out the policy of the Administration.

Mr. Jordan was opposed to the removal or even diminution of any of the restrictions in regard to the deposit of bonds by National banks—that is, he wanted them to hold the largest amount possible under the present law, inasmuch as when called they could be paid chiefly in silver certificates. Moreover, the restrictions tend to cause the gradual withdrawal of banks from the system and a gradual retirement of circulation which will perhaps equal the current coinage of silver.

Mr. Jordan was also in favor of State banks without circulation, which he pronounced no better nor worse than National banks. He said: "The National bank circulation, which is now being retired, comes in at the rate of about \$180,000 a day, and is paid for principally in small silver notes. I expect to see silver certificates take the place of all the National bank circulation, provided you do nothing to stop its reduction here."

One would suppose that the Comptroller of the Currency would have given more substantial evidence of his interest in the preservation of the system. Not that he should be the mere spokesman or advocate of the banks, but that he should feel that the advantages which the country has already derived from the National system are sufficient reason for an effort to retain it. But he presented no measure that would serve to stop the retirement of circulation. He opposed the plan of issuing to within 10 per cent. of market value of the bonds, and even the proposition to issue to the par value of the bonds, as affording no relief to the banks in the latter case and dangerous in the former. He recommended, it is true, a reduction of the minimum of bonds required to be held and a reduction of the tax on circulation held on

minimum bonds, but both of these measures would cause a reduction of circulation, and so be in line with the Administration policy.

When asked as to the Aldrich bill, which the Treasurer very frankly said would serve the banks, Mr. Trenholm declared: "That is not in my province as Comptroller of the Currency; I am looking only to the interests of the public in the banks, and regard these matters only in connection with bank circulation." It would seem that the Comptroller need not have been so diffident, as it is fair to assume that the preservation of a system which has kept deposits safely and has raised the standard of banking in the country would be of public interest. To preserve the system it is, in Mr. Trenholm's view, necessary to preserve the power to issue circulation, inasmuch as in this interview he intimates that a National bank without circulation is unconstitutional; and evidently the reason the Committee asked him about the Aldrich bill was to get his opinion as to its effect upon National bank circulation. Yet the Comptroller declined to discuss the matter. In view of these facts, it would seem plain that the chief reliance of the Administration in maintaining the gold standard is the retirement of National bank notes.

It only remains to consider whether this policy is a sound one. If the gold standard can only be maintained by the sacrifice of National bank circulation, it would perhaps be wise to pay this price. But, if the sacrifice is to be made without permanent benefit either to the Treasury or the country, that result had better be known.

Nothing can entirely stop the approach of the silver standard but the repeal of the Act forcing the coinage of the silver dollar. But a free issue of National bank notes would much retard it, tending, as it would, to keep the amount of funds payable in gold in excess of funds payable in silver. The policy of the Treasury in favoring the retirement of bank notes to substitute silver notes is only a concealment. It effects no good, but does immense harm, not only to the National system but to the Treasury itself. The silver certificates are receivable for customs, from which source only can the Government derive its gold revenues. The more silver certificates in circulation the less gold will the Government receive. That this effect is already experienced is indicated by the fact that, although the Treasury has ostensibly relieved itself of silver to the extent of National bank notes retired, yet the proportion of its silver funds to its gold funds constantly increases. If it can be proved that the increase in the proportion of silver funds is greater during the period in which the Treasury has pursued the policy of forcing out silver than it should be from a computation founded upon an increase in silver funds equal to the silver dollars coined during the same period, then it is plain that the excess of increase is something that might have been avoided by proper management. The present policy may maintain the gold standard during the present Administration—perhaps it does not care to look beyond. While it might have been impossible to procure a repeal of the law forcing the coinage of silver, there is not much doubt but that proper representations to Congress might have secured the passage of a measure increasing National bank circulation.

WHERE LAND OWNERSHIP IS POPULAR.

[From the Toledo, O., *Commercial*.]

There is no place in this country where the laborers are so narrowly removed from pauperism as in New York city. The thousands of operatives in factories, shops and stores, and day laborers in the streets, go to their rest at night in the great tenement houses, where they are huddled together in order to co-operate in the payment of rent. Hence the political strength of Henry George in New York. The great would-be apostle of the down-trodden laboring classes took an active interest in the recent Mayoralty contest in Philadelphia, where there was a labor candidate for Mayor in the field. George went to Philadelphia and canvassed the city and made speeches and set forth his doctrine that the increased value of land in cities is an increment unearned by the owners, and that land should therefore be taxed according to its value in order that every one might get the benefit of the increased value. Now, it happens that the workmen of Philadelphia do not live huddled up in tenement houses, but many of them own their own homes, and building associations are offering facilities for more to do so all the time. Consequently, after thinking over Mr. George's doctrine, they cast just 1,664 votes for the labor candidate out of a total vote of 164,365!

NOTE.—The letter of Edward Atkinson, referred to on page 328, is crowded out. It will appear in the May number.—EDITOR.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3642—Market National Bank, Cincinnati, Ohio. Capital, \$250,000.
3643—Cedar Rapids National Bank, Cedar Rapids, Iowa. Capital, \$100,000.
3644—First National Bank, Alvarado, Texas. Capital, \$50,000.
3645—Corsicana National Bank, Corsicana, Texas. Capital, \$100,000.
3646—Greenville National Bank, Greenville, Texas. Capital, \$100,000.
3647—Lincoln National Bank, Chicago, Illinois. Capital, \$200,000.
3648—First National Bank, Grass Valley, California. Capital, \$50,000.
3649—First National Bank, Pratt, Kansas. Capital, \$50,000.
3650—People's National Bank, Lancaster, Pennsylvania. Capital, \$200,000.
3651—First National Bank, Tyler, Texas. Capital, \$100,000.
3652—First National Bank, Ogallala, Nebraska. Capital, \$50,000.
3653—Sutton National Bank, Sutton, Nebraska. Capital, \$50,000.
3654—Farmers' National Bank, Canfield, Ohio. Capital, \$50,000.
3655—La Grande National Bank, La Grande, Oregon. Capital, \$60,000.
3656—First National Bank, Aberdeen, Mississippi. Capital, \$50,000.
3657—First National Bank, Russell, Kansas. Capital, \$50,000.

ALABAMA.

BIRMINGHAM.—Alabama National Bank; Geo. H. Waddell, Cashier, in place of John W. Read; Assistant Cashier, H. B. Urquhart. — Berney National Bank; H. F. De Bardeleben, Vice-President, in place of Robert Jenison; Assistant Cashier, W. P. G. Harding.

DADEVILLE.—Tallapoosa County Bank has been opened for business. Capital, \$50,000. President, Wm. Gray; Secretary, W. C. McIntosh.

 BADDECK.—Merchants' Bank of Halifax; no agency here now.

VANCOUVER'S ISLAND.

VICTORIA.—Bewicke & Wulfsohn are reported here.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, April 2, 1887.

THE LATEST REPORTS relating to the condition of general trade throughout the country show large movements of merchandise by rail in anticipation of increased freight rates, beginning on the 5th instant, when the Inter-State Commerce law takes effect. Considerable doubt has been expressed whether the Inter-State law would defer many projects for railroad extensions. There has been great activity in this direction so far this year. The track reported laid on new lines from January 1st to April 1st is 664 miles against 316 miles at the corresponding date in 1886; 169 miles in 1885; 386 miles in 1884, and 705 miles in 1883. The law has had more effect upon business and speculation than anything of a similar character, and this before a practical application of its provisions has been made. Public opinion regarding it has undergone extraordinary changes since it was first opposed as a bill, but it is reasonable to expect that it will be a benefit to the railroads and not injurious to other interests. People who formerly rode free will now have to pay their fare, and many concerns that have had special rates will be placed on an equality with their neighbors; but these evils are not to be dreaded. The long and short haul clause, which will be decided first by the Railroad Commission, is important. Southern railroads have already called for a ruling on the question whether they may not, in order to retain their traffic, allow through competitive rates to remain regardless of local rates; and it is intimated that certain Western roads will make a similar claim. It is an open question whether the railroads have not a right, under the law, to do this without permission from the Commission so long as their rates are just and reasonable; but it is certain that the Commission is allowed to give the permission if it sees fit. The Commission is composed of men of high character and large experience, and no doubt justice will be done to all parties.

Business in real estate is flourishing in the cities of the west. The iron trade is fairly active on a very large output, and, while prices are not advancing, they are firm. The cotton goods trade is in almost the same condition.

A fair idea of the condition of business may be gained as well from the state of the coal trade as from any other indication. The total output of the anthracite coal companies for January and February was 4,794,316 tons against 4,723,299 in the corresponding months of 1886 and 3,409,510 tons in 1885. The consumption for the two months was as follows: 1887, 4,695,939 tons; 1886, 4,480,898 tons; 1885, 3,618,626 tons. This shows a marked increase over that of two years ago.

FOREIGN EXCHANGE has fluctuated considerably of late, rates being affected to some extent by loan bills. For some time they have not approached the point calling for either an importation or an export of gold. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.85½@4.86; sight, nominal, \$4.87½@4.88; 60 days, actual, \$4.84½@4.84¾; sight, actual, \$4.86¼@4.86¾; Cable transfers, \$4.86½@4.87; Prime commercial sterling, long, \$4.83½@4.83¾; Documentary sterling, 60 days, \$4.83@4.83¾; Paris, bankers', 60 days, 5.22½@5.21½; sight, 5.20@5.19½; Paris, commercial, 60 days, 5.24½@5.23½; sight, 5.21½@5.20½; Antwerp, commercial, 60 days, 5.25@5.24½; Swiss, bankers', 60 days, 5.22½@5.21½; sight, 5.20@5.19½; Reichsmarks (4), bankers', 60 days, 95½@95¼; sight, 95½@95¼; Reichsmarks (4), commercial, 60 days, 94½@94¼; sight, 95¼@95½; Guilders, bankers', 60 days, 40@40 1-16; sight, 40 3-16@40¼; Guilders, commercial, 60 days, 39½@39 15-16; sight, 40 1-16@40¼; Copenhagen, Stockholm and Christiania, krona, 60 days,

26 $\frac{3}{4}$ @26 13-16; sight, 27@27 1-16; Paris dispatches quote exchange on London 25f. 3: $\frac{1}{2}$ c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on March 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of February and March:

Feb.	BANKERS		Cable Transfers.	Commercial.	PARIS

COINS AND BULLION.—Bar silver is quoted in London at 44d. per ounce. At this quotation for silver the bullion value of the standard dollar is 74.60 cents. The following are New York quotations in gold for other coins and bullion:

Trade dollars... ..	\$ 99 @ \$ 1 00	Twenty marks	4 74 @ 4 60
New (412 $\frac{1}{2}$ grains) dollars	99 $\frac{1}{4}$ @ 1 00	Spanish doubloons.....	15 60 @ 15 75
American silver $\frac{1}{16}$ s & $\frac{1}{8}$ s.	99 $\frac{1}{4}$ @ 1 00	Spanish 25 pesetas.....	4 78 @ 4 83
American dimes	99 $\frac{1}{4}$ @ 1 00	Mexican doubloons.....	15 55 @ 15 65
Mexican dollars	75 @ ..	Mexican 20-pesos.....	19 50 @ 19 60
Peru soles & Chilean pesos	73 @ ..	Ten guilders	3 96 @ 4 00
English silver.....	4 75 @ 4 80	Com'l silver bars, per oz.	95 @ ..
Five francs.....	92 @ 95	U. S. Assay silver bars. .	96 @ 97 $\frac{3}{4}$
Victoria sovereigns.....	\$4 85 @ \$4 89	Fine gold bars par @ $\frac{1}{4}$ % premium on the	
Twenty francs	3 85 @ 3 90	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The rates for call money have ranged between 3 and 9 per cent. within a week or two past, the usual rate being 5 or 6 per cent. The rate of discount on prime commercial paper is 5 or 6 per cent., other grades reaching as high as 8 per cent. per annum. The reserve of the banks has been reduced from \$118,000,000 at the end of January to \$97,000,000 at the present time. Only a small portion of the difference was shipped abroad or drawn into the Treasury, the rest having gone to interior points. The amount is unusually large for this season of the year, and indicates a greater demand for money throughout the country than has existed in a number of years past. Following are the rates of domestic exchange on New York: Savannah, $\frac{1}{8}$ % discount; selling $\frac{1}{4}$ % premium. Charleston, buying par@1-16; selling $\frac{1}{8}$ @ $\frac{1}{4}$ % premium. New Orleans commercial, 25@50c. per \$1,000 discount; bank, \$1 per \$1,000 premium. St. Louis, 50@75c. per \$1,000 discount. Chicago, 50c. per \$1,000 discount.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of March and the highest and lowest during the month. Actual sales marked * :

MAR.	4½% '91, coup.	4s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.	MAR.	4½% '91, coup.	4s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.

+ Ex-interest.

NATIONAL DEBT REDUCTION.—The public debt statement issued April 1st shows a decrease in the debt for March of \$12,808,467, and total cash in the Treasury amounting to \$453,117,086. The debt now consists of \$1,114,284,253 interest-bearing debt, \$7,124,992 debt on which interest has ceased since maturity, and \$586,798,257 of debt bearing no interest. The total debt is \$1,708,207,513; or, deducting \$368,123,971 cash items in the Treasury and \$21,859,988 net cash in the Treasury, it amounts to \$1,331,032,026.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of April, 1887, and, for comparison, on the 1st of March and February, 1887, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Apr. 1, 1887.	Mar. 1, 1887.	Feb. 1, 1887.
Gold coin and bullion.....	\$275,985,862	\$275,068,626	\$274,140,469
Gold certificates outstanding.....	94,046,015	99,968,365	106,665,107
Gold owned by Treasury.....	\$181,939,847	\$175,130,261	\$168,475,362
Silver dollars and bullion.....	\$206,452,230	\$202,812,943	\$198,840,822
Silver certificates outstanding.....	181,930,489	121,130,755	118,315,714
Silver owned by Treasury.....	\$74,521,741	\$81,682,188	\$80,525,108

The gold reserve is well sustained, while accumulating silver has been paid out in the form of certificates in answer to the demand for small bills. On March 23d the Acting Secretary of the Treasury issued the one hundred and forty-eighth call for the redemption of bonds. The call is for \$10,000,000 of the 3 per cent. loan of 1882, and the principal and accrued interest of the bonds designated will be paid at the Treasury on May 1st, interest on said bonds to cease on that day, viz.: Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50, original number 17 to original number 23; \$100, original number 157 to original number 351; \$500, original number 66 to original number 148; \$1,000, original number 787 to original number 1,221, and original number 23,778 to original number 23,797; \$10,000, original number 1,912 to original number 2,485, all inclusive; total, \$10,000,000. The three months' interest due May 1st on the above described bonds will not be paid by checks forwarded to the

holders of the bonds, but will be paid with the principal to the holders at the time of presentation. Parties holding bonds called as above can obtain immediate payment, with interest to date of presentation, by requesting the same in the letter forwarding the bonds for redemption.

FAILURES FOR THE FIRST QUARTER OF 1887.—The report of mercantile failures, compiled by Bradstreet's agency, occurring throughout the United States and Canada during the first quarter of 1887 and 1886 is as follows :

STATES.	Number of failures.		Actual assets.		Liabilities.	
	1887.	1886.	1887.	1886.	1887.	1886.

NEW YORK BANKS.—Loans have decreased to a comparatively small extent since last month, and deposits are considerably less. Money has been leaving this centre, so that the surplus over 25 per cent. of the net deposits is only \$4,379,825 against \$11,991,400 a year ago and \$47,125,850 at this time in 1885.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1886 and 1885 :

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Apr. 2	\$365,659,700	\$77,996,100	\$19,487,400	\$372,414,700	\$7,960,500	\$4,379,825
Mar. 26....	365,403,000	79,602,700	20,259,700	374,702,200	7,647,800	6,186,650
Mar. 19....	368,811,500	82,852,600	20,018,900	382,144,600	7,658,900	7,535,260
Mar. 12....	369,501,000	84,100,700	19,942,900	384,181,000	7,667,800	7,998,350
Mar. 5....	369,487,600	85,278,200	20,141,300	385,325,900	7,617,700	9,068,060
1886.						
Apr. 3.....	349,806,600	78,459,800	26,241,100	370,838,000	7,974,100	11,991,400
1885.						
Apr. 4.....	302,757,100	104,484,400	30,812,500	352,684,200	10,953,800	47,125,850

THE NATIONAL BANK CIRCULATION was decreased \$1,914,186 during the past month, leaving the total now outstanding \$286,854,496. The decrease since April 1, 1886, is \$29,036,982. The amount of legal-tender money on deposit with the Treasurer to redeem National bank notes is \$101,844,945, an increase of \$4,080,989 during the last month and \$45,358,767 during the past 12 months.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Apr. 1, 1887.	Mar. 1, 1887.	Feb. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.....	\$3,241,000	\$3,241,000	\$3,201,000	\$3,680,000
4½ per cents.....	62,045,800	60,468,400	60,054,400	59,636,200
4 per cents.....	113,651,300	112,755,450	113,300,000	113,903,200
3 per cents.....	27,659,900	29,299,300	48,483,100	52,218,950
Total.....	\$206,598,000	\$215,764,150	\$225,038,500	\$229,438,350

RAILROAD AND MISCELLANEOUS STOCKS.—The dealings at the Stock Exchange appear to be working out of the rut in which they have been dragging for a long time past. The railroad earnings are satisfactory, the aggregate earnings of 63 railroads for the third week of March showing an increase of 16½ per cent. over the corresponding week of last year. No special event has occurred to excite the market, the Baltimore & Ohio deal being pretty nearly forgotten ; but, while fears of tight money have tended to check any decided advance thus far, the prevailing feeling is very confident.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of March, the highest and lowest since January 1, 1887, and also during the year 1886:

	MARCH, 1887.			SINCE JANUARY 1, 1887.		YEAR 1886.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

Silver Cliff Mining Co.50	10,000,000					

Interest Tables.—Mr. O. M. Beach has issued a new book of Interest Tables at 6, 7, 8, 9 and 10 per cent., designed to meet the wants of all parts of the country where those rates prevail. It also contains a full set of tables of compound interest, compound discount (or present values), annuities, sinking funds, etc., by which many useful and necessary calculations can be made. Bank Clerks will find the calculations very simple and easily understood, and the book should find a place in every monied institution. Mr. Beach is an accountant of wide experience, and his work can be relied on. Price, \$4 a copy, sent postpaid to any address in the United States or Canada. Bradford Rhodes & Co., 78 William street, New York, have the exclusive sale of the book. For further particulars, see the advertisement in this issue of the JOURNAL.

BANKERS' OBITUARY RECORD.

- Adams.**—J. Adams, of J. & G. Adams, bankers, of Millersburgh, O., is dead.
- Bowen.**—Edward E. Bowen, formerly a banker in Wall Street, died in Brooklyn on March 15th, aged 71 years.
- Clarke.**—William Audley Clarke, the oldest bank President in New England, died at Newport, R. I., on March 26th, aged 84 years. He was a clerk in the National Bank of Rhode Island from 1818 until 1839, was then made Cashier, and in 1862 became President, which position he held until his death.
- Fitch.**—George P. Fitch, formerly Secretary of the Farmers' Loan & Trust Company, of New York city, died on March 21st, aged 79 years. He was connected with that company over 50 years, resigning his position in 1881.
- Fleet.**—Jonathan Gardner Fleet, at one time officially connected with the Bowery Bank, of New York city, and a Director for many years, died on March 15th, aged 85 years.
- Green.**—Joshua Green, President of J. Green's Bank, of Jackson, Miss., is dead.
- Gortner.**—John S. Gortner, of Helmer & Gortner, bankers, of Mechanicsville, Iowa, is dead.
- Harriman.**—Edward Harriman, formerly a member of the banking firm of Harriman & Jerome, which did business in Wall Street twenty years ago, died on March 25th.
- Humphrey.**—John D. Humphrey, Note-Teller of the National Exchange Bank, of Boston, died on March 6th.
- Huntzinger.**—Henry H. Huntzinger, President of the Government National Bank, of Pottsville, Penn., died suddenly on March 5th, aged 55 years.
- King.**—Paul King, Cashier of the Farmers' National Bank, of Cynthiana, Ky., died on March 4th.
- Mackin.**—Hon. James Mackin, formerly President of the First National Bank, of Fishkill Landing, N. Y., died at St. Augustine, Fla., on March 13th, aged 68 years. He was a member of the State Assembly for four years, State Treasurer in 1877 and 1878, and State Senator in 1881.
- Mattocks.**—The Hon. Samuel B. Mattocks died on February 28th, at Lyndon, Vt., aged 85 years. He was Cashier of the Caledonian Bank, of Danville, and subsequently of the Bank of Lyndon. He was Probate Judge for nine years, State Senator in 1847 and 1848, and a member of the Assembly three years.
- Myers.**—Alfred Granville Myers, senior member of the stock brokerage firm of Myers, Rutherford & Co. of Wall street, died on March 4th, aged 54 years. He was a member of the Stock Exchange since 1872.
- Pomeroy.**—Edward Pomeroy, of the firm of Pomeroy & Meigs, stock brokers, of New York, died on March 6th, aged 42 years. He was well known and highly esteemed in financial circles.
- Redington.**—Edward C. Redington, a prominent Vermont financier, died at Bradford, Vt., on March 21st, aged 76 years. He was at one time Cashier of the Orange County Bank, of Chelsea, Vt., and from 1850 to 1862 Cashier of the Passumpsic Bank, of St. Johnsbury.
- Richmond.**—Alonzo Richmond, a Trustee of the Erie County Savings Bank, of Buffalo, N. Y., died suddenly on March 2d. He was one of the leading citizens of Buffalo, and active in forwarding the commercial interests of that city.
- Ridgway.**—Thomas Ridgway, formerly President of the Girard Life Assurance, Annuity & Trust Company, of Philadelphia, Pa., died in that city on March 7th, aged 90 years. He was President of the company from 1851 to 1883.
- Seeligson.**—Henry Seeligson, one of the best known business men in Texas, died at Corpus Christi on March 14th, aged 59 years. For several years he was a prominent banker in Galveston, Tex.
- Sherwood.**—John H. Sherwood, a wealthy banker and real estate owner in New York city, died on March 17th, aged 71 years. He was one of the projectors and organizers of the Fifth Avenue Bank, of which he was Vice-President for three years and a Director at the time of his death. He was largely interested in real estate, connected with several insurance companies, and widely known for his great liberality and public spirit.
- Slocomb.**—Samuel Slocomb, of Cambridge, Mass., died on February 23d, aged 82 years. He was Treasurer of the East Cambridge Five-Cents Savings Bank for fourteen years, which position he held up to his death.
- Thompson.**—Augustus P. Thompson, Cashier of the National Bank of Port Jervis, Port Jervis, N. Y., died on March 26th, aged 73 years. He was a member of the New York State Assembly in 1848.
- Travers.**—William R. Travers, the prominent New York financier and banker, died at Bermuda, on March 19th, aged 67 years. He became a member of the New York Stock Exchange in 1844, and was a partner in a number of Wall Street banking firms at different times. He retired from active business in 1875, but was a special partner in the firms of Prince & Whitely and Van Emburgh & Atterbury. Mr. Travers was a very popular man and famous for his wit.
- Treat.**—James A. Treat, Vice-President of the Broadway Savings Bank, of Lawrence, Mass., died at Lawrence, on March 10th, aged 80 years. He was a Director of the Lawrence National Bank at the time of his death.
- Wallace.**—Lyman W. Wallace, formerly in the banking business in Michigan and later in Chicago, died at his home in New York on March 14th, aged 53 years.
- Wescott.**—George B. Wescott, President of the Chestertown National Bank, Md., died on March 22d, aged 87 years. He was President of the bank for thirty years.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

MAY, 1887.

No. 5.

THE silver advocates claim that if the Government would accept all the silver produced by mines in the country and pay for it in certificates, the shipment to England of silver bullion would be stopped and silver would appreciate. In answer to this argument it has been remarked that the Government has for a number of years been purchasing more than one-half of the total product, or about \$28,000,000 out of \$40,000,000, and silver has steadily declined in value. Another objection to such reasoning is the fact that silver is largely produced outside of the United States, and the next demand of the silver men would be to have the Government issue certificates for the total product of the world. Even this would not keep England or any other country from getting what silver they might need by buying the certificates and demanding the silver, and as with such a flood of certificates it would be impossible for the Government to maintain them at the gold standard, the price paid for them would be the market price of silver, which the immense amount of certificates it would be necessary to issue would depress rather than raise. There is another view of the matter which might seem to be worthy of consideration, whether the forced use of silver as money in this country and elsewhere does not really prevent a demand for silver in the arts, which would tend in the long run to steady the market. If the Government should cease to buy silver, it would doubtless at first fall some in price. This would tempt dealers to use it more extensively in the arts, and the surplus would soon be utilized in this way. At the reduced price, only the richest mines could be profitably worked, and the supply instead of being excessive, as it is now under a forced demand, would respond more exactly to the actual requirements of silver for legitimate use in the arts or for subsidiary coin. The present condition of affairs makes the future profits of every silver mine in the country a matter of uncertainty. It seems plain that even with the protection afforded by the Government, the price of silver will not rise, but probably continue to decline. The question for the miners is whether they can reduce the cost of production and transportation commensurate with the decline

in price. At 44 pence per oz. in London, the Government of the United States by compelling the public generally to take 412.5 grains of silver for a dollar, puts the majority of its citizens in the way of eventually losing about 25 cents upon every dollar taken by them. Owing to the financial strength of the Government, no disaster has as yet occurred, but this very immunity from danger tempts the silver advocates, who are using the Government as their pack horse to put a still further load upon the back of that patient beast of burden, to bear which its strength will sooner or later prove inadequate.

THE APPOINTMENT of Charles S. Fairchild as Secretary of the Treasury appears to meet with general approval. He was strongly recommended by Mr. Manning, so it is understood, for the place as one likely to continue the conservative policy heretofore followed. It is said that much that was best in the administration of Mr. Manning was the work of Mr. Fairchild. In advance of positive action, he is credited with being rather more radical than Secretary Manning in advocating revision and reduction of the tariff. As during Mr. Manning's illness Mr. Fairchild has virtually had the direction of the financial policy of the Department, the bond calls and other financial movements may be fairly assumed to have been made on his responsibility. He is said to be strongly in favor of a discontinuance of the silver coinage, and the necessity of sustaining the interchangability of the gold and silver funds of the country. He is generally believed to be in favor of intelligent civil service reform, so far as it brings about the desired result of economical administration. It is also said that he is convinced of the possibility of carrying on the financial operations of the Treasury without any disturbance to necessitate an extra session of Congress. Those most disposed to criticise the appointment admit that Mr. Fairchild is from a State that is in favor of sound financial measures, and that he has had every opportunity to receive good advice, and heretofore shown a disposition to follow it. Mr. Fairchild is the thirty-eighth Secretary since the adoption of the Constitution.

IN AN ARTICLE in the *Commercial and Financial Chronicle*, which appears to have been intelligently and carefully prepared from the best attainable sources, the total currency of the country in the hands of the people and the banks exclusive of that in the Treasury Department on July 1, 1886, amounted to \$1,249,191,406, and on April 1, 1887, to \$1,313,391,996, indicating an increase in nine months of \$64,200,590. In this computation, gold, silver and legal-tender note certificates of deposit are represented under the heads of gold, silver and legal-tender notes, by the coin or notes against which they were issued. By some the increase within the period mentioned has been estimated as high as eighty millions, but those who arrive at this figure have doubtless included to some extent both the certificates and the

coin or notes which they represent, which reduplication has been carefully avoided in the computation made in the *Chronicle*. The effects of this inflation of the currency are manifest in an increase in speculation in different sections of the country and in a general tendency to higher prices. That greater effects have not been manifested is perhaps due to the apprehension that the accumulation of surplus revenues in the Treasury may, as soon as the three per cent. bonds are all redeemed, cause a contraction which would upset all speculation upon a rise in prices. It seems to be assumed that the monthly statements of the Treasurer indicate a strengthening of the gold reserve. This is not caused by any increase in the gold receipts, but is due to the fact that the National banks retiring circulation as their bonds are called do not withdraw gold funds from the Treasury as other bondholders would do. The gold funds which would otherwise be paid out are retained to offset outstanding circulation. The Treasury does not, however, redeem the notes when presented in gold or gold funds, but in silver certificates. The retirement of National bank circulation is thus enabling the Treasury to get out its silver and retain its gold. What the ultimate effect of increasing the circulation of silver certificates indefinitely cannot be altogether foreseen, but as they are receivable for customs duties, it is probable that their use may interfere with and largely reduce the gold receipts of the Government. The certificates have been largely in use in the West and South, but when the current turns to the East, the certificates will accumulate in New York and other Eastern cities, and their use to pay customs duties will increase.

THE COURSE THAT will be pursued by the Treasury Department, after the three per cent. bonds are redeemed, excites much interest. Since the Government has assumed the regulation and the issue of the circulation of the country, its operations have become so interwoven with all the business interests of the nation, that its action or inaction has the most important effect on the money market. The uncalled 3 per cents. aggregate \$19,824,600, and \$16,491,900 of these are held by the banks to secure circulation. \$3,325,700 by individuals and \$7,000 in foreign countries. Two more calls of the usual amount will exhaust this portion of the public debt.

A postponement of the calls of this remnant of the threes was suggested, not as has been stated because of any undue expansion of the currency within the last eight months, but because there was now an ample supply of money, and the payment of the threes might well be reserved until there might be a greater necessity of releasing a portion of the Government surplus. This argument did not appear to have much weight with Secretary Fairchild, as he was represented as being in favor of stopping interest at the earliest moment—in other words, of letting the Government take care of itself and the money market of itself. From later dispatches it appears that the Secretary has been

influenced by another consideration to postpone the bond-call until after the beginning of a new fiscal year. The new argument is that if the \$19,000,000 three per cents. are called before July 1st it will effect no benefit, but if called after that date they can be counted as a part of the purchases or redemptions of bonds to meet the legal requirements of the sinking fund, and thus put off for a month or two the necessity of purchasing 4's and 4½'s in the market for this purpose. The sinking fund requirements for the present fiscal year have already been complied with. This plan will, perhaps, enable the Secretary to tide over the interval until the meeting of Congress, and obviate the necessity of an extra session.

It has also been intimated that the Secretary has the right to pay interest in advance upon the public debt, with a rebate, and that this plan may be pursued. This course has already been followed in the past, notably by Secretary Richardson, in 1873. But it would, doubtless, require severe pressure in the money market to induce bond-holders to accept the advance interest to any great extent, unless the amount of the rebate was computed at a low rate of gain to the Government. If the interest upon the whole debt were advanced for a year, say at a rebate which would net the Government 3 per cent., it would require about forty millions of dollars for the payment. This amount would pay the present value computed at 3 per cent. of the difference in interest between 2½ and 4 per cent. bonds for twenty years, upon nearly one quarter of the outstanding 4 per cent. bonds. That is, the Government by the use of \$40,000,000 could fund \$178,000,000 of 4 per cent. bonds of 1907 into \$178,000,000 of 2½ per cent. bonds having the same time to run. In fact, this funding operation is precisely the same in principle as to advance interest with a rebate, and if the latter plan is within the scope of the discretion of the Secretary of the Treasury, so is the former. In the one case the interest for one year is purchased at its present value, computed at 3 per cent., and in the other, part of the interest for twenty years is purchased at its present value, computed at the same rate. The funding plan will give a permanent basis to National bank circulation for twenty years. The advance interest payment benefits the bond-holders temporarily. Either of the plans is better than buying 4's and 4½'s at a premium in the market.

A WRITER in the *Grocer* quotes a President of a New York city bank as saying that the proposition recently advocated by Mr. John Jay Knox, for refunding 4 per cent. bonds into 2½ per cents., is not original with him, but is merely a rehash of a refunding bill offered in Congress by Mr. O. B. Potter, in 1884. The bank President goes further and accuses Mr. Knox, who was at the time Comptroller of the Currency, of favoring the McPherson bill and opposing the Potter bill, in doing which the said bank President thinks the Comptroller was very unpatriotic. The truth is that the plan for refunding 4 per cent. bonds

was first suggested and recommended in the Comptroller's report for the year 1882. The plan was embodied in a bill introduced in the Senate early in the session of 1883-4 by Mr. Aldrich. Mr. Potter's bill was introduced in the House later in the same session.

It was earnestly advocated by its introducer in the House, and by Mr. St. John, President of the Mercantile National Bank, among the bankers, but was so palpably impracticable that it became the laughing stock of those who took the trouble to understand its provisions.

It is true that the Potter bill contained the same principle suggested and advocated by the Comptroller in 1882, but this principle was so smothered and strangled by lumbering and contradictory provisions that no sane persons, then or since, except the originators, could advocate the measure. The same principle was contained in the Aldrich bill, which was and is a plain and practical plan of refunding the 4 per cent. debt at a lower rate of interest, and in his interview with the Finance Committee of the Senate in January, 1884, so far from opposing the principle which he had in 1882 suggested and advocated in his report, the Comptroller said that the Aldrich bill was his preference, that it was the best, though he was also in favor of the McPherson bill, which would be more readily passed by Congress, and would give immediate relief to the banks without in the least interfering with the subsequent passage of a practical funding measure like the Aldrich bill. The McPherson bill would have become a law in 1885 if it had not been for the parliamentary tactics of the advocates of the Potter bill, and it is due to this alone that National banks do not now receive circulation to the par value of the bonds deposited by them.

THE NATIONAL BANKS IN the city of Chicago appears to be backward in taking advantage of the opportunity offered them by the new reserve law to make Chicago a reserve city of the first class, that is a city the National banks located in which will be permitted to hold one-half of the reserves of National banks located in reserve cities of the second order, and be required to keep all their reserve in their own vaults. When the law was under consideration, it was supposed that the Chicago National banks were the ones to be the most benefitted by its enactment. It seems that they are too shrewd to rush into a situation all the consequences of which cannot be foreseen. It must be well understood, however, that Eastern exchange will be just as necessary as ever in Chicago, and that if it becomes a central reserve city the National banks there can no longer count such balances as their business requires them to keep in New York as reserve. The privilege of keeping all their reserve at home they can exercise at any time without any change under the law. What deposits from other banks they would get by a change which they do not get now is problematical. Probably no more would come if the change was made. The Chicago banks may be waiting to see how the thing works in St.

Louis and are willing to let the latter test the chestnuts. If they are good Chicago can step in later.

FROM THE COMPLAINTS that are received and the wide latitude which the Commission allow themselves in suspending the operation of certain portions of the law, it is plain that the Inter-State Commerce Act is very imperfect. And this was to be expected with a measure so wide-reaching in principle and which has to control so many complicated and conflicting interests. The more so as Congress now for the first time exercises its constitutional right upon grounds which have for a long time been solely occupied by the States. But whether the present law is practicable or not, Congress has taken an important step in making an attempt to exercise its unquestioned right to regulate inter-State commerce. Even if sins both of commission and omission be found in the law, much has been gained by making this effort towards exploring the field. The experience of the Commission this year will show what changes in the law are necessary to render it practical. Some parts of the bill are complained of by the railroads, and the States regard others as interfering with their rights. In some respects there is a striking analogy between the inception of this law and that by which the National banking system was established. The first National banking law was very imperfect, and Congress found it needed amendment within a year from its passage.

The Inter-State Commerce law is founded upon the constitutional right of Congress to regulate inter-State commerce. Since the days of railroads, Congress has never exercised this right, and consequently has never interfered with the powers States have exercised in chartering railroads within their borders. The State of New Jersey and doubtless other States in chartering railroads have reserved the right of demanding certain privileges from them. Since the passage of the Inter-State Commerce bill the Legislature of New Jersey has required her railroads to issue passes to State officials, which is in controversion of the law of Congress.

It might at first sight appear that Congress has no right to interfere with such an exercise of State authority. But just as Congress in the exercise of its power to regulate the currency took from the States the power to authorize State banks to issue circulating notes, so Congress in the exercise of its power to regulate inter-State commerce can render null and void provisions in State charters granted to railroads which conflict with the exercise of its constitutional right. In 1863-65 it was determined that the regulation of the currency necessitated the retirement of State bank circulation, and within a year or two it will probably be settled that the Federal law will control the contradictory powers heretofore exercised by railroads under State authority. The Commission has recently refused to decide hypothetical questions brought before them. The law, they say, is for the railroads to

observe, and its provisions are to be complied with in good faith. If complaints of non-compliance with law are brought before the Commission, they will consider whether the violations complained of are simply errors of judgment, or whether they exist in wilful disregard of the law. Where certain important features of the law are reported as inapplicable, the Commission will, in its judgment, exercise the right of suspending them until a full hearing can be had. The Commission itself, headed by Judge Cooley, of Michigan, appears to be composed of men of ability and of conservative habits of thought, which gives promise of their dealing with the complicated difficulties of this new field in a manner which will insure the eventual success of regulation of the railroads of the United States by the Federal Government.

THE COMPTROLLER OF the Currency was requested by the House Committee on Banking and Currency, to submit to them a plan for continuing the National banking system after the debt of the United States shall be reduced so as to no longer afford a sufficient basis for circulation. It was understood that Mr. Trenholm had at that time already given the subject much study, and had even prepared some notes upon the subject. It now seems that he will reserve the suggestion of any plan until his next annual report. It has been announced in the papers that in his correspondence with the banks he has accumulated a large amount of valuable material which will be of assistance to him. The apparent unpopularity of the system with Congress makes it possible that it might injure the chances of the adoption by that body of any plan proposed by the Comptroller, if it were known that the banks had in any way been instrumental in suggesting any portion of it. Mr. Trenholm takes apparently a firm stand in favor of retaining the National banks even without circulation, and it is understood is in favor of legislation reducing the deposit of United States bonds required from each bank to a merely nominal amount.

THE REMAINING THREE PER CENT. bonds will probably be called for redemption after the end of July. The surplus revenues can then be used in the purchase of four and a halves and fours at their price in the market, that is, if the holders will sell. Many seem to take it for granted that it will be just as easy for the Secretary of the Treasury to buy 4½s or 4s at the market price to any extent that he may have money to pay for as it was for him to call threes. The fact is that the fours and four and a halves are held largely by permanent investors, and the amounts offered for sale from time to time are comparatively small. The present market price is no indication of what the Government might be forced to offer to secure a purchase of say ten millions of four and a half per cent. bonds. If the Treasury can buy secretly it can obtain only the small quantities which normally are thrown on the

market from time to time. If it has to buy openly it must, to be successful in obtaining any quantity, offer much more than the market price. How much more will depend upon the opposition excited by speculators. The very knowledge that the Government is about to become a buyer will raise the price. The limit of rise would perhaps be the present value of the interest to accrue to the date of the maturity of the bonds.

THE OBJECTIONS to Senator Cullens' bill to arrive at the amount of deposits held by Savings banks which belong to deceased or unknown persons seem to consist of assertions of the extra labor it will entail on the banks to prepare the reports of the names of all persons having deposits on which there have been no payments of principal or interest for twenty years and of the alarm it may cause among small depositors. These objections do not seem to be particularly well grounded, as no Savings banks ought to grudge the few weeks extra labor which will enable it to do justice to the representatives of its dead depositors, particularly as this labor will once for all clear up the arrears of at least twenty years. In strict justice a Savings bank, partaking as it does of the nature of a benevolent institution, ought perhaps to bear not only the expense of making the list of deposits uncalled for, but also that of advertising the same. The law proposes to place the latter expense on the State. As for the dreaded alarm among small depositors, the law should rather inspire them with joy to know that the interests of savings depositors generally are the anxious care of the State.

THE NEW ASSISTANT SECRETARY, Mr. Isaac H. Maynard, in the office of Second Comptroller of the Treasury, signalized himself by care and good judgment. He has shown himself to be at once conscientious and circumspect. In his new position he will have greater opportunity for the exercise of the judicial ability with which he is credited. It is said that he has been making a special study of the customs laws which will now come under his administration. The salary of Assistant Secretary, by one of the anomalies not infrequent in the laws of the United States, is less than that of the Second Comptroller. It is, however, a step toward the highest position in the Department, as has been evidenced in Mr. Fairchild's case.

WHY DOES NOT the Treasury authorize the National bank depositories throughout the country to receive deposits for the issue of silver certificates. This would get the certificates out faster in many sections of the country, and would supplement the much strained vault room of the Treasury and Sub-Treasuries by the unused portions of the vaults of the depositories. Besides, it would facilitate the circulation of the silver dollars themselves, as they could be obtained in exchange for silver certificates wherever there is a National bank Depository.

BANK TAX DECISION.

The United States Supreme Court, in the *Mercantile National Bank* tax suit, defines the expression moneyed capital in the hands of individual citizens, used in § 5,219, as consisting "of stock or other interests owned by individuals in all enterprises, in which the capital employed in carrying on its business is money, where the object of the business is the making of profit by its use as money."

In addition to the shares of National banks, the shares of Trust companies and the deposits of Savings banks are admitted to come within the scope of this definition. The deposits of Savings banks do not, under this decision, come into competition with National bank shares, inasmuch as they are such moneyed capital as the State, from obvious interests and public policy may, in accordance with the former decision of the Court in *Hepburn vs. School Directors*, exempt from taxation without entitling National bank shares to a like exemption.

So far it may, perhaps, be admitted that the Court had at least plausible grounds for excepting the forms of capital examined from moneyed capital, the rate of taxation of which by the State is made by the Federal law the criterion of the taxation of National bank shares. But in endeavoring to except the shares of Trust companies, also, the Court has involved itself in a mass of inconsequent reasoning and apparent contradiction. The decision of *Boyer vs. Boyer* induced the banks of New York city, including the *Mercantile National*, to bring their suits for relief from taxation. In that case the Supreme Court held that the only criterion by which the degree of State taxation of National banks was to be measured was the taxation of other moneyed capital in the hands of individual citizens, and "that capital invested in National bank shares was intended to be placed upon the same footing of substantial equality, in respect of taxation by State authority, as the State established for other moneyed capital in the hands of individual citizens, however invested, *whether in State bank shares or otherwise.*"

The Court now decides that the taxation of "moneyed capital" is not the only criterion—discrimination must further be made in what, by its own definition, is declared to be moneyed capital in the hands of individual citizens; and in arriving at the proper rule for State taxation of National banks, it must be considered whether the institutions in which such moneyed capital is invested do the precise business which is done by National banks. In other words, the Supreme Court, with a sapience creditable to the celebrated Jack Bunsby, decides virtually that shares of National banks are to be taxed—not as lightly as moneyed capital invested in Savings banks—not as lightly as moneyed capital invested in Trust companies, but National bank shares must be taxed precisely at the same rate as moneyed capital invested in National banks.

Because Trust companies are not called banks, the State may exempt moneyed capital invested in them from taxation without lessening its right to tax moneyed capital invested in bank shares. The Court defines the business of banking to consist "in issuing circulation, in receiving deposits payable on demand, in discounting commercial paper, making loans on collateral security, buying and selling exchange, negotiating loans and dealing in negotiable

securities issued by the Government, State and National and municipal and moneyed corporations." The Court says it has looked at the charters of Trust companies and finds that they are incorporated to perform certain trusts, and are required to invest their capital in bonds and mortgages and stocks of the United States or of New York State or of incorporated cities of that State. While this may be so as to the capital of Trust companies, there is nothing in their charters to prevent them from receiving deposits payable on demand, and it is a notorious fact that the bulk of the deposits they do receive are so payable. These deposits they loan in precisely the same way as the banks do, and probably the largest proportion of the profits of the Trust companies are earned in the same manner as the banks earn theirs. In fact, there is no more difference between the bulk of the business done by Trust companies and that done by banks than there is between the business of one bank and that of another. One bank may issue circulation, another not; one may deal largely in securities; one may make collections a specialty, etc. The business in which banks make most of their profits, and which, as is the case with Trust companies, is their most important business, is the loaning of their deposits.

The distinction between banks and Trust companies does not appear to fully satisfy the Court, and in order to make its position stronger it asserts that the Trust companies are really taxed by the State laws in a way which renders the rate imposed on them equivalent to the rate imposed on National bank shares. The Trust companies are assessed for taxation upon capital equal to the market value of their shares, from which is allowed to be deducted the amount of non-taxable securities which they hold. The National banks are assessed upon the market value of their shares, from which no deductions are allowed. The record shows that the capital stock of Trust companies in New York city amounts to \$27,879,328, which, on account of the deductions allowed, is assessed at \$156,506 only. The shares of National banks amount to over \$40,000,000, and are without deduction assessed at that value. In *Van Allen vs. Assessors* the Court decided that, in the case of State banks, a rule of assessing the capital from which non-taxable securities were deducted *was not equivalent* to the assessment of National bank shares from which no such deductions were allowed. In the *Mercantile National Bank* suit the Court decides that, in the case of Trust companies, a rule of assessing the capital from which non-taxable securities are deducted *is equivalent* to the assessment of National bank shares without similar deductions.

The only reconciliation of this is to suppose that the Court means to intimate that the stockholders of National banks do not take full advantage of the method pointed out in its decision, in *People vs. Weaver*, of deducting the debts owing by them from the value of their bank shares. In other words, the Courts seem to say to the National banks these tax questions you are persecuting us with are too hard for us. We have involved ourselves in an inextricable tangle, and cannot preserve our consistency. Don't bring us any more. We can't help you unless you follow our advice and help yourselves. There is an easier way out of trouble. Go swear off your taxes. That is what the shareholders of Trust companies would do if the tax was on their shares. That is a practical way of securing justice. Every man can be his own Supreme Court. We are tired of these constant complaints to us when you have the remedy in your own hands.

INFORMATION ON PRACTICAL BANKING.

The *London Bankers' Magazine* for March says: "Once again the Gilbert lectures have been delivered, and once again, as on previous occasions, the question has been debated in the minds of many thoughtful financial men whether these lectures are now carried out on the lines intended by their founder. Are they sufficiently practical? Are they as interesting to bank clerks as they might be? Are they calculated to benefit bank officials in their daily work? Are they of a kind the mastering of which will enable bank clerks to take more important posts in the offices in which they are engaged? Or are they too theoretical? Are they confined to subjects outside the pale of practical banking? Are they delivered by one who is thoroughly versed in all the branches of the banking work of to-day? Or are they, on the other hand, more suitable for financial men well versed in the science of economics, and experts in arguments for and against bi-metallism."

This moderate protest against the usurpation by lectures and addresses upon recondite questions in finance, of the ground which could to more purpose be occupied by practical information of much greater utility to bank clerks and bank officers is in line with the views held by many in this country. A correspondent of the *JOURNAL* writes in a similar vein: "I think a large proportion of the bankers of the country, feel as I do, that a little more attention to the details of the banking business, and less airing of pet theories by the American Bankers' Association would be decidedly to the advantage of the fraternity and lead to a much more generous and cordial support of the Association." In fact there has been much criticism that the American Bankers' Association has permitted itself to be used as a means of introduction to public notoriety by men who were not practical bankers, in fact interlopers who through the complaisance of the association were permitted to read papers and make addresses, characterized by a greater display of egotism than of knowledge. There is no doubt however that the American Bankers' Association has done some good in a practical way, but it has not by any means exhausted the subject of practical banking.

The manner in which the details of the banking business are carried on in different parts of this country, are not by any means uniform, nor are banking customs or charges. An interesting subject would be the sources from which banks derive their profits. In other words what kinds of business they do at a profit, what as a gratuity. It is believed that bankers as a rule do more for their customers without compensation than almost any other business employing as much capital. It is pretty well known that much of the collection business is done at a loss, and there are many other favors which a customer of a bank expects for nothing. A comparison of notes on these subjects by the bankers of the country could not fail to be interesting and might bring about results valuable to all.

There seems to be a similar dearth of published information as to banking methods in England. It is suspected however that the English bankers are accustomed to be paid for many things which customers in the United States

expect for nothing. It would perhaps be interesting to bankers in England and its colonies as well as to those in this country to have some of the Gilbert lectures devoted to the subject of the profits of banking, considered in reference to the sources from which they are derived.

The JOURNAL has always advocated the necessity of keeping those subjects prominently in view which are of use to bankers in their every day business, not, however, to the exclusion of subjects of general financial importance.

TRANSPPOSITIONS IN MAKING ENTRIES.

Errors in making balances resulting from transpositions in setting down figures may be detected more readily if the accountant adopts a regular system. In England this subject is considered of sufficient importance to warrant the publication of a work on the subject called *Haycraft's Detector*, as appears from the January, 1887, number of the *London Journal of the Institute of Bankers*.

Of course there is more scope for such a work under the system of keeping accounts in pounds, shillings and pence, but in our decimal system the necessary rules are very much more simple, and are probably more or less followed by every accountant.

In cases of transpositions the difference in the footing from what it should be to balance is invariably some multiple of nine, whether the reversed figures stand in immediate juxtaposition, as 3-4, or are separated by intervening ones, as 3-2-4. In the first instance the setting down of 4-3 for 3-4 would give a difference of 9. In the next, 4-2-3 for 3-2-4 would give a difference of 0.99. A difference of 9 indicates a difference of 1 in the transposed figures; of 18, a difference of 2; of 27, a difference of 3; or in any transposition the number of times 9 is contained in the difference indicates the difference in the transposed figures. There can be nine possible variations of the transposed figures where the error is 9, and the difference between the figures 1, eight variations where the error is 18 and the difference in the transposed figures is 2, and so on, as is shown by the following table, which is taken from *Haycraft's Detector*, showing transposition of figures in juxtaposition :

1	2	3	4	5	6	7	8	9
2	3	4	5	6	7	8	9	1
3	4	5	6	7	8	9	1	2
4	5	6	7	8	9	1	2	3
5	6	7	8	9	1	2	3	4
6	7	8	9	1	2	3	4	5
7	8	9	1	2	3	4	5	6
8	9	1	2	3	4	5	6	7
9	1	2	3	4	5	6	7	8
Diff.	9	18	27	36	45	54	63	72

If the transposed figures are separated by intervening figures, the differences will follow the same rule. There will, however, be intervening nines between the figures indicating the character of the transposition. Thus, if the transposed figures differ by one, and have one intervening figure, the difference will be 0.99. If the transposed figures differ by 2, and have one intervening figure, the difference will be 1.98, or 18 with an intervening 9, the whole difference being always some multiple of 9. The number of intervening figures between the transposed figures, will be indicated by the number of nines between the

figures indicating the character of the transposition. Thus, if there is a difference of 2-9-9-7, nine is contained in 27, 3 times and the transposed figures differ by three, and, as seen by the table, may be either 0.8, 1.4, 2.5, 3.6, 4.7, 5.8, 6.9, and have two figures intervening between them. In this way any transposition in the decimal system may be traced out.

SILVER AND THE SAVINGS BANKS.

In a recent issue of the *North American Review* there appeared an article on the above subject from the pen of the Hon. Willis S. Paine, Superintendent of the New York Bank Department. The silver question is one that constantly forces itself into public view, and it has been discussed from almost every standpoint. The article of Mr. Paine presents the evil effects of the adoption of the silver standard in a peculiarly striking light by pointing out the depreciation of the value of Savings bank deposits that would necessarily ensue.

He points out that the Savings banks of the State of New York hold in trust for 1,208,000 persons the enormous sum of \$584,000,000, which represents "the slow accumulations from the pay given for services rendered by more than one-fifth of the population of the Empire State."

"The law of 1792 established a proportional value of gold to silver. It was then enacted that such value shall be as 15 to 1, according to quantity, in weight of pure gold or pure silver. This was changed in 1834 as 15 98-100 to 1. In the year 1853, the gold dollar, weighing 25 8-10 grains, was made by statute the unit of value. An ounce of standard gold is worth \$18.60, but, as the statutory relative worth of gold to silver is as 15 98-100 to 1, the coinage value of an ounce of silver is \$1.1689, yet standard silver has been and can be purchased at about ninety cents per ounce; consequently, if the silver dollar of 412½ grains becomes the unit of value there will be a shrinkage from the present gold unit, a percentage that is indicated by the loss of 26 89-100 cents on \$1.1689 or 22 67-100 per cent. The result will be that every Savings bank depositor will, when paid in lawful money, receive in round figures twenty-two per cent. less than he at the present time receives, and the loss to the depositors of these institutions in that State alone will be \$100,551,000, while all articles purchased by him will, however, necessarily be sold at twenty-two per cent. higher in silver than they now bring in gold, because tradesmen will not receive depreciated coin without protecting themselves. In other words, the premium on gold will at once be met by a rise in price. The pay given to labor is always slow to appreciate, and necessarily very gradually adapts itself to a new order of things. This injustice will be suffered by these depositors, the most deserving of encouragement of our citizens, to increase the fortunes of a few persons (comparatively speaking) who it is believed do not lack means nor deserve sympathy. If the silver interest is to be promoted at the expense of the whole people, then consistency demands that the coinage of the old-fashioned copper cent should be begun to aid the large copper interest."

The amount of Government bonds held by the Savings institutions of the State of New York aggregates \$140,066,610. Mr. Paine shows that in 1874 the United States Supreme Court held that our dollar of account is the standard gold dollar of 25 8-10 grains, and that the Revised Statutes of 1874 abolished the coinage of the standard silver dollar. "From 1874 to 1878, and long before

the maturity of some of the bonds, they were constantly being bought and sold in the belief that the Government would respect this law."

"Previous to the passage of the Bland law, \$1,143,493,400 of the bonds of the Government then unpaid had been purchased by the public at a time when silver was not in use, and \$583,440,350 had been refunded since that time when, gold was the only coin for which they were sold (gold being the legal unit subsequent to 1874) and the understanding between the parties was that the bonds were to be paid in the same coin which was given for them. They were bought with gold at the time when silver was depreciated in value. Two hundred and twenty-five millions of dollars in bonds at the reduced rate of four per cent. were offered for sale, which were also purchased by the public with gold coin or its equivalent. While these sales were progressing a doubt was raised by purchasers as to the intention of the Administration to pay the bonds in gold, when a public announcement was authorized that it was not to be anticipated that any future Congressional legislation 'would sanction or tolerate the redemption of the principal of these bonds, or payment of the interest thereon, in coin of less value than the coin authorized by law at the time of the issue of the bonds, being the coin exacted by the Government in exchange for the same.' What guarantee can there be save that of an obligation of honor for the payment of these bonds? Certainly payment cannot be enforced by process of law."

There could be no better refutation of the argument of the silver advocates that the silver dollar is the money of the masses, than the statement of Mr. Paine, showing how the deposits and assets of Savings banks—admitted to be made up of the savings of the poorer classes—would be depreciated by a change from the gold to the silver standard.

THE MONEY PROBLEM.

This is the title of an address delivered before the Chamber of Commerce, New Haven, Conn., on March 7, by Mr. George A. Butler, Vice-President of National Tradesmen's Bank. The length of the address precludes the giving of it in full in the JOURNAL, but with the permission of the author the following extracts are printed:

"Wolowski says: 'Germany, intoxicated with her success in the war and believing that henceforth all things were possible to her, desired to strike a great blow by transforming the metallic circulation in such a way as no longer to admit any thing but gold in payment, and that without the resources, supplied by the war contribution, it would have been impossible for her to have realized this metallic renovation.'"

"Whatever may have been the object Germany had in view, the fact remains, that in December, 1871, she decreed the demonetization of silver, and the adoption of the gold standard, and by December, 1875, had coined 312 millions in gold; and in January, 1876, she proclaimed the gold standard. This action of Germany opened up what is now known as the *Silver Question*. Having seen how this question was forced upon the nations, it will be well to examine the conditions under which silver had circulated as money and as a standard of value, before Germany discarded it, that we may know whether the course pursued by Germany, in regard to silver, has disturbed or destroyed

those conditions under which, and by which alone it was possible for it to be maintained by the side of gold as a medium of exchange and as a measure of values." * * * * *

"At the beginning of the war between France and Germany silver was the current money of the greater part of the world, and the mints of every country, except the few gold nations, were open to silver, and might still have been open to it, but for the course pursued by Germany, which brought about a great revolution in the monetary affairs of the world. On the demonetization of silver by Germany, the nations composing the Latin Union met to take into consideration the restriction of the coinage of silver, for the purpose of checkmating Germany, and preventing her from pouring her discarded silver into the countries of the Latin Union. They decided to closely limit the coinage of silver. This limitation of the coinage was tantamount to the closing of the mints, not only of the Latin Union nations, but the mints of the civilized world to silver. From being the current money, and the standard of value of the great majority of the nations, silver became an outcast at every mint in Europe."

After going through the history of the fluctuations in the relative value of gold and silver from the earliest times to the present Mr. Butler continues: "While I think that there is sufficient data to justify the belief that both gold and silver may be used as money, I cannot see that we are warranted in the conclusion that at times one will not circulate to a greater extent than the other. While both metals may be used as a tender, there will not at all times be a perfect concurrent circulation of the two, but rather they will alternate to a considerable degree, one being dominant at one time, the other commanding the field at other times, and that such alternations will not lead to any serious embarrassments, but on the contrary, the inconvenience be much less than we have good reason to fear from enforced monometallism." * *

"The time at my command will not permit of a full presentation of the argument that the action of France furnishes those who advocate a bi-metallic currency; nor is it at all necessary, for it is quite generally admitted that France saved gold from a great fall in value, and the world from a very grave monetary disturbance which might, and probably would have caused the most serious financial embarrassment and industrial depression throughout the civilized world.

We have seen that the coinage of gold by France; and the general acceptance of it by other nations, prevented a great decline in the value of that metal, and that the divergence in the proportions between gold and silver did not at any time exceed five per cent., and then only for a short time, and under the stress of a great demand for silver by England to be sent to India for the expenses of the army, and to build railroads in that country.

The question now arises, whether a similar course of action in regard to silver would save it from a further fall in value, and restore it to its former position as one of the great money metals of the world. I cannot see that the evidence which we have been considering is conclusive enough to permit of our insisting that there can be no question about it, but it seems to me that the evidence is good enough to admit of our saying that a belief in the practicability of a bi-metallic currency is a reasonable one, and that an effort on the part of the leading nations to establish it, is, all things considered, the

part of wisdom, rather than that of a lack of it. The perils that now hang like a pall over the earth are real, and great, and they are the natural results of the demonetization of silver. To avoid still greater evils, there must be a restoration of silver to its former position. If that cannot be done, then the world has entered upon a struggle, the end of which no man can tell." * * *

"The coinage of silver by one nation, however great that nation may be, cannot restore it to the position it had before the demonetization of silver by Germany. Before that event the mints of the greater part of the world were open to silver, now they are closed to it, and there are no indications that they will again be opened, and if not, the struggle for gold must go on and every nation must fight for its own. None can escape from the effects of the struggle, but that nation that has the smallest quantity of silver will be the one that will suffer the least, and will be in the best condition when the contest is over." * * *

"With all these facts before us is it wise for us to continue in our present course in alone trying to establish a bi-metallic currency when every thing points with irresistible power to the conclusion that it must make the United States a silver mono-metallic country? If we shall arrive at that conclusion the future historian will need no other evidence to sustain him in the assertion that we failed to comprehend the situation, and that we missed our opportunity to protect our own interests, and to insure the prosperity and peace of our own country."

The Holiday Act names the seven legal holidays now observed, viz.: New Year's Day, Washington's Birthday, Decoration Day, Independence Day, Election Day, Thanksgiving Day, and Christmas, and adds Labor Day, viz.: the first Monday in September, and fifty-two half holidays on Saturday after 12 o'clock. For all purposes whatever as regards the presenting for payment or acceptance, and the protesting and giving notice of dishonor of bills of exchange, checks, and promissory notes, these days and half days are to be considered as Sunday. There is also a further proposition for making the first Saturday following the first of May a holiday to be known as Arbor Day. If these bills become laws, the number of working days in the year will be reduced to about 280.

Plain Writing.—The signature articles now appearing in the JOURNAL seem to have stirred up the advocates of legible signatures and plain writing. From present indications, a bankers' writing school will be the next thing in order. The following letter from a correspondent shows the drift of sentiment in his section:

Editor Rhodes' Journal of Banking:

YPSILANTI, Mich., April 18, 1887.

"SIR:—I notice in the April number of the JOURNAL a correspondent writes: 'By the way, is there any good reason why a banker's signature should be illegible? . . . And certainly the paying bank would rather have a readable signature than an illegible scrawl.'

"The foregoing will, I think, receive the hearty indorsement of nine-tenths of the banks and bankers throughout the country. In our office we are very apt to regard with suspicion drafts or checks signed with a (to us) meaningless jumble of badly executed hen-tracks, while a plain, legible signature bears the mark of care and respectability upon its face.

"Just what object is served by the cultivation of signatures resembling ancient hieroglyphics is one of those things 'no fellow ever could find out.' The perpetrators of such offenses against a long-suffering public would confer a great benefit not only upon themselves but the world at large by a season's attendance at a good, old-fashioned writing-school.

P."

"WHAT'S IN A NAME?"

III.

It is gratifying to see the interest created by the series of articles published in the JOURNAL on the subject of signatures. When first introduced in the January number by showing the photographed *fac-simile* of a prominent bank Cashier in Kansas, it was intended more to illustrate what queer methods many persons—including bank officials—adopt in signing their names to prevent counterfeiting; or rather to show what curious autographs are afloat in the banking world which do not come under general observation. It was designed more as a literary curiosity, amusing and entertaining if not absolutely instructive, by showing some of the strange scrawls that are used, in business circles, as signatures.

From the number of guesses or attempts received—a very large proportion of them correct—it is evident that the rising generation of bankers is paying more attention to the subject of signatures than their predecessors. With the correct or otherwise rendering of the puzzle came, in many cases, valuable suggestions and hints with now and then such questions as the following: "What, if *any*, benefit is to be derived by using a signature that no one can read?"—or, "How can it be determined whether an undecipherable signature is counterfeit or not?"—and again, "Is not *plain writing* the *best*, under all circumstances?"

These and many more similar queries show clearly that to correctly count and care for the cash is not considered all that is necessary to complete a banker's education.

Encouraged by the interest so unexpectedly aroused, three more "curiosities" were given in the March JOURNAL—two signatures of bank officials and the third that of a prominent business firm in the West. They were more puzzling if possible than Hazen's. One of them had previously been poorly illustrated in a New York daily newspaper, which is evidently not much read by bankers as very few deciphered on it. The "marks" are those of Carmon Parse, Cashier First National Bank, Plainfield, N. J.; Gordon, Kurtz & Co., Indianapolis, Ind., and W. D. Mussenden, Cashier First National Bank, Bath, Me.

Only one person read all the names correctly, *viz.*: E. S. Scott, Teller, First National Bank, Springfield, Ill. Of the remaining guesses, two Tellers made it C. Parse, one calls it Chas. Adsit, another Adam Parse, and still another thinks it looks like Hamilton B. Dox. The business firm's signature was variously read to be John Plankinton & Co., Goldsmith, Klaw & Co., E. Kanter & Co., or Simeon Keuhn & Co., and a small number hit it right. The Mussenden name was a puzzle, some not attempting to read it, others calling it A. A. Alexander, J. E. Ostrander, W. B. Alexander, or Austin Snyder, while only three were right.

The Cashier of a Western National bank wastes ink in the following style :

The following signature is that of the Vice-President of a prominent State bank in New York :

Not to be behind in curious penmanship, the Pacific slope contributes the signature of a well-known Cashier :

Offer.—To either present subscribers or those connected with banks, firms, etc., now on our subscription books, who send in a correct reading of the *three signatures* before the sixth day of June next, we will publish their names in a subsequent issue of the JOURNAL as successful readers of very difficult signatures. To any not now subscribing—either officers or clerks—who send in a correct reading of the *three signatures* before the sixth day of June next, we will send the JOURNAL free from date to January 1, 1888.

HOW SIGNATURES SHOULD BE WRITTEN.

The publication of the signature articles in the JOURNAL has very naturally opened up the question of How bank signatures *should* be written—whether plainly or illegibly. We have no desire to take sides in a matter which, after all, is largely one of taste; although if an opinion were expressed it would rather favor plain writing, as we believe it is not so easy to counterfeit.

Queen Elizabeth once asked Sir Walter Raleigh's advice about some important matter of State, when he tersely replied : "In the multitude of counsellors there is safety—for the counsellors." So "in the multitude" of flourishes "there is safety"—for the counterfeiter. It is far easier to counterfeit John Hancock's signature and escape detection, if written in the modern style with flourishes and indescribable embellishments for the purpose of covering up the *real* name, than if it were written in the plain, old-fashioned, easy style of the original John Hancock which is so familiar to readers of American history. Any—even the *slightest*—variation from that simple signature would cause instant detection, while in the other case a glaring discrepancy might be deftly concealed beneath an array of flourishes.

A Boston correspondent, who probably was not successful in correctly reading the three puzzling signatures published in the March JOURNAL, ven-

tilates his opinion as follows. It is needless to say that we do not endorse all his conclusions:

"The only appropriate remark to be made about the makers of such signatures is, that they manifest a great want of common sense as well as an overweening vanity in supposing—as they doubtless do—that they are so well known that everybody knows their signature, however illegible. They should either improve their style or be removed from office."

A correspondent, writing from Louisville, Ky., contributes the following:

"The articles in the JOURNAL OF BANKING upon the subject of illegible signatures of bank officials have attracted considerable attention in this section, and no small amount of interest is manifested therein.

"As one of your subscribers and as bankers also, we should very much like to see this matter extended and further publicity given to these nondescript signatures, with the hope that your efforts may, to some extent, remedy the evil and induce plainer writing."

However, the question is an open one and has two sides. We invite a full expression of opinion from all parties interested.

[To be Continued.]

A package of perfectly new silver certificates of small denominations was recently returned to the Treasury from Texas, in a mutilated condition, for redemption. The mutilation consisted of a hole punched through the package, through which a cord had been passed. Acting-Treasurer Whelpley, it is stated, refused to receive them, and directed that they be returned to the bank at its expense, with the statement that such mutilation was a violation of law, and would not be permitted by the Department. If this statement of the action of the Acting Treasurer be true, it is hard to understand what legal warrant there was for it. If mutilating new United States silver certificates is a violation of law, the penalty does not consist in refusing to redeem them, nor, whatever the penalty may be, is it the duty of the Acting Treasurer or Treasurer to enforce it. It would seem that the proper course would have been to redeem the notes, and refer the facts of the mutilation to the Department of Justice to take steps to enforce the penalty.

The reason these notes were sent to Washington is supposed to be the desire to obtain New York exchange. The Texas parties by paying express to Washington hoped to obtain the proceeds of the redemption in a Treasury draft on the Assistant Treasurer in New York, thus saving the difference in express between Washington and New York city. This suggests at once the great difference between the redemption of Government paper money, legal tender notes, gold and silver certificates, and National bank notes. The National banks pay all the expenses of the redemption of their currency. A holder of National bank notes can send them to the redemption agency, at Washington, and the expense of the transportation is paid by the Government and reimbursed to it by the banks. The proceeds of the redemption are sent in the form of a Treasury draft on New York. On the other hand, the holder of legal tender notes or gold or silver certificates has to bear the expense of sending them to the Treasury—when he desires their redemption. The Government ought to render its own currency as good as that of National banks by paying all express charges involved in its presentation for redemption from any part of the country at any of the Sub-Treasuries or National Bank Depositories. If this were done it would give an elasticity to the currency which it does not now possess, and would tend to regulate the exchanges between all parts of the country.

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

A Clearing-House Settling Sheet.—The increasing tendency among the banks in the smaller cities and towns to form Clearing-houses for the speedy settlement of their exchanges renders any article in reference to the subject of timely interest. Every Clearing-House has its own peculiar way of managing its business, and, naturally, each one is disposed to think its own way the best. An examination of the settling sheets of the different Clearing-Houses shows that hardly any two adopt precisely the same form, and yet, by selecting the good parts in all, it seems possible to draw up a model, very simple in itself, and yet answering every purpose. The form shown is made as simple as possible :

Reserve City Clearing-House
IN ACCOUNT WITH
THE COMMERCIAL NATIONAL BANK.

Reserve City,, 1887.

	Dr.	Cr.
1 RESERVE CITY BANK.....	22 675 18	11 873 19
2 FIRST NATIONAL BANK.....	14 574 29	15 967 24
3 COMMERCIAL NATIONAL BANK.....	— — —	— — —
4 STATE BANK.....	8 435 76	10 873 16
5 MERCANTILE NATIONAL BANK.....	15 874 16	12 913 74
6 SECOND NATIONAL BANK.....	24 736 88	25 800 63
7 NATIONAL BANK OF METROPOLIS.....	10 563 77	4 625 76
8 MANUFACTURERS' NATIONAL BANK.....	12 789 64	9 834 63
9 MERCHANTS' BANK.....	5 615 19	5 215 02
	115 264 87	97 106 42
	18 158 45	— — —

The theory is as follows : For the sake of convenience, the banks are numbered in order, 1, 2, 3, etc. The desks at the Clearing-House, the names of the banks on the settling sheet, and the names on the Manager's sheet are all arranged in this same order. In regard to the arrangement of the furniture at the Clearing-House, it is equally convenient to have the desks formed by folding shelves attached to the wall. These can be let down when the Messengers return to their banks, thus leaving the room clear for other uses during the day. The Messengers, before coming to the Clearing-House, must be careful to see that their amounts against other banks are put down correctly, and that the additions are likewise correctly made. Upon arriving at the Clearing-House, each Messenger leaves the proper package on the respective desks. Then going to his own desk, enters upon his sheet the amounts of the packages, placed there for him by the other Messengers, adds up the column, makes one subtraction, and the difference he calls off to the Manager as soon as convenient, taking care to indicate whether it is a debit or a credit amount. The Manager receiving all the debits and credits, adds up the two columns,

and if they agree, the work may be presumed to be correct. As every debit on one sheet has its corresponding credit on some other sheet, the sum of the final debits must be equal to the sum of the final credits. In a Clearing-House of two dozen members this process ought not to take more than ten minutes. As a rule, the Manager's sheet will come out right the first time, for any man ought to be competent, as a general thing, to put down twenty-four amounts, add them and make one subtraction without an error. Occasionally, however, somebody will blunder. How is the error to be found? The Messengers must go over their respective sheets, see that they have put the amounts down correctly, review their additions and subtraction, and again call off to the Manager. This ought to take about five minutes more. If the error is still unfound, it must be in the work that was done on some one of the sheets before it reached the Clearing-House. To ascertain if this is the case, Messenger No. 1 must take his sheet and pass around to each bank successively, calling off the amount which he has charged against that bank. Messenger No. 2 follows him in the same way. The Messengers then go over the additions of the first columns of their sheets. The error by this time must be found, for we have exhausted every possible place in which it could be hid. This last process may consume from ten to fifteen minutes. In the matter of time, then, it would seem that, ordinarily, the settlement will be made and the Messengers out of the Clearing-House inside of ten minutes. About once a month there may be about five minutes extra, and once in a very long while an additional quarter of an hour may have to be added on. Some Clearing-Houses have a system of showing the specific differences of each bank in an extra set of columns, in order, as they claim, to prove the work. Extra columns not only cause a great deal of additional and unnecessary work, but are themselves a prolific source of error and confusion.

Better Positions.—In a large city bank a clerk may reasonably look for gradual, though perhaps slow, promotion. If he only remains there long enough, he may hope to mount step by step to the highest position, and which is more to the point, to receive the emoluments belonging thereto; but it often happens, in the small country towns, that a young man will reach his limit in a comparatively short time. Having attained the position of senior clerk, there is then no room for him to go farther until somebody dies, which they seldom do, or resigns, which they never do. Naturally such a man looks about him with a view of obtaining a place which will afford him more remuneration for his services. He knows that he is perfectly competent to fill more difficult and responsible positions, and yet sees nothing before him but years of weary waiting for "dead men's shoes." It is not likely, under ordinary circumstances, that he can find in his own town a clerical position which will be an improvement upon the one that he already holds, unless he has means and influence to start some enterprise of which he himself will be the head. It would be necessary and the best thing to put himself in communication with the outside world. This can be done by inexpensive advertising in newspapers and other publications which enjoy a large circulation among financial men. Such an advertisement, stating his age, qualifications, experience and so on would scarcely fail to bring some responses. In the large cities there are many places which a comparatively young man who has had the training afforded in a country bank could fill to advantage, and so few really competent men to take them that one who is really fit for such a position should find little difficulty in obtaining employment. In the railroad offices, large manufacturing establishments, large commercial houses, and, in fact, in any concern doing an extensive business, the services of a man who combines the qualifications of a book-keeper with experience in judging signatures, handling money and estimating credits, are always in demand. The salary paid to a really first-class man in such a position as those indicated can scarcely fail to be an improvement upon what falls to the lot of even a senior clerk in a country bank. There are additional advantages in living in a large city, which will be perceived upon very little consideration. Coming in contact with men who have themselves been successful in the financial world is, in itself, an advantage to any man, and there is in city life a certain activity

which prevents that "going to seed," as the expression is, which is apt to overtake a man shut up within the narrow confines of a village.

Filing Letters.—So great has been the demand for convenient methods of filing letters that ready sale is found for patented files of various kinds ranging from a simple pasteboard box to an elaborate cabinet. Below is shown a plan of a case for filing letters, postal cards, etc., so easy of construction that it can be made by any good carpenter. It should be explained that the names of correspondents are lettered on blocks eleven by nine inches (or eleven by seven inches) and one-half inch thick. This is preferable to lettering on the solid woodwork, as the blocks can be more readily shifted or new names substituted for others. The letters are thrown in flat, a great convenience when searching for a special item, as by merely drawing out the block the whole file of letters can be readily examined. When a compartment is filled the letters are put away in pasteboard boxes and neatly labeled. This cabinet should also be furnished with doors to keep out the dust and dirt:

Intercourse Among Bank Clerks.—The staff of a bank forms, as it were, a little world of itself, and, as the members of it spend a good part of their lives in daily intercourse with each other, it is desirable that they should get along with each other with as much harmony and as little friction as possible. Any one, whose occupation has been such as to throw him in contact with the inside workings of the different banks, cannot fail to notice how they differ from each other in this respect. In some institutions the men get along very pleasantly together, while in others there is constant discord, jealousy, and sometimes downright ill-feeling. This harmony, which is so desirable, cannot exist unless each one contributes his part towards it. There must be mutual respect, mutual forbearance, good feeling, a kindly disposition to help one another, and, above all, a most delicate regard for each one's rights and privileges. The older clerks should avoid taking advantage of the superiority to which their lengthy services in the bank might seem to entitle them, while the young clerks must remember that to them falls the duty of performing all those numberless little tasks which cannot properly be assigned to any one in particular. The saying, "Like master, like man," holds in respect to this matter as well as to less important things. If the Cashier, who in his relation to the staff of the bank is simply the head clerk, fails to set a proper example, both in his language and manner, the whole tone of the bank suffers in consequence. It is almost impossible for the officers of the bank to take any other tone with each other than that which is given to the whole establishment by the man at the head of it. Persons who complain of the incivility and brusqueness of bank clerks would probably, upon close observation, find out that they had learned it from the man who should have set them a better example. In a certain dame's school in England, the sign displayed in the window indicated that a full course of instruction in the ordinary branches was given for one shilling per quarter, and "two-pence extra for them as learns manners." It is the observation of the writer that there are many bank officials in this country who stand in need of the old lady's instructions, especially as they are offered at so reasonable a rate.

Balancing Pass-Books—THE BALTIMORE METHOD.—In the March, 1886, number of the JOURNAL, page 174, the following description was given of the Baltimore system of balancing pass-books:

"The banks require customers to write up the checks in their pass-books before sending them in for balance—that is to say, the bank lists the deposits on the left-hand side of the pass-book day by day as they are made. The customer lists the checks on the right-hand side either day by day as he draws them or just before the book is sent in for balance. This system has not been adopted simply to save clerical labor, as might be supposed, but has commended itself to the most experienced bankers. By this method the pass-book serves as a joint account-book between the bank and the depositor. Thus the bank practically gives a receipt in writing for all money put in, and the depositor likewise gives a receipt (by listing his checks himself) for all money paid out. When the book is ready for balancing the depositor sees that it agrees with the balance called for by his cash-book. It is then sent to the bank and the clerk compares it with the bank ledger. The checks are ticked off one by one, those that have not yet been presented for payment being properly noted. This method is an advantage to both parties. The depositor, listing his checks himself, can produce the pass-book as evidence in Court. Should the bank have paid a forged or raised check it is immediately noticed by the Ledger Clerk, and at once reported to the Cashier, who is then in a position to take such steps as may be necessary to protect the bank's interests, bringing the matter to the attention of the Board of Directors or the bank's legal advisers. But where the bank lists the checks the customer will be the first to notice the forged or altered check, and will take good care to fortify himself with facts, evidence and *legal advice* before saying anything to the bank about it. By this method, however, the bank, in case of any irregularity, has first knowledge of the wrong, which gives it a decided advantage in any further proceedings. It is also a safeguard against falsifying the bank's ledgers."

The above method has many good points to recommend it. Following is the check side of a pass-book balanced on this plan, which will give a very

clear idea of its practical utility. The checks not ticked are those outstanding at the time the book is balanced, and are given in detail under the ruling :

Insufficiently Stamped Letters.—It is a great annoyance to receive letters that are insufficiently stamped. It gives a bad impression of the bank that sends them and often causes vexatious delays in their reception. Postmasters put a notification card in the lock-box instead of the letter itself. This delays the Messenger, who has to fumble about in his pocket for a nickel and then take his turn at the window for the letter. A letter scale should be kept on the corresponding desk of every bank both as a convenience and a reminder to the sender to always put sufficient stamps on every letter.

A Ledger Ruling.—Here is a method of ruling a Ledger which may commend itself to some of our readers. The posting and adding columns will be understood at a glance. The middle column is called the balance column, and the figures in it are intended to be altered with every posting. The object of this column is to show the exact balance outstanding at any time on that account. It makes a little more work to strike the balance at every posting, but some book-keepers think it more advantageous to do so. The balance can be proved at any time by adding the posting columns as shown and taking the difference :

BANKING LAW.

* Legal Decisions Affecting Bankers.

GIVING DRAFT IN RENEWAL OF PREVIOUS DRAFT—LIABILITY OF PARTIES ON ORIGINAL NOT DISCHARGED—LIABILITY OF GUARANTOR.

The Belleville Nail Mill Co. gave its draft at four months, drawn upon and accepted by P., its Treasurer, to the Belleville Savings Bank, for an indebtedness to the latter. This draft was indorsed by B, W and A as co-guarantors. At the maturity of this draft, it not being paid, another draft of the same tenor and only differing in date was executed in renewal by the Belleville Nail Mill Co. When this draft was given, B, after it was executed by the Belleville Nail Mill Co., put his name on the back of it and gave it to P, the Treasurer of said Company directing him to tell the Cashier of the Belleville Savings Bank that it was not to be taken by the bank unless A also placed his name on the back of it. P so informed the Cashier, who said the draft was taken on those conditions. A refused to indorse the draft as co-guarantor with B and W, but signed a paper, which was pinned to the draft, to the effect that he guaranteed payment thereof at maturity if the same was not paid by the Belleville Nail Mill Co., or by B. The draft being but partly paid, and B having died, a claim was made by the Belleville Savings Bank against the estate of B upon this draft. The lower Court held that the Savings Bank could not recover, and gave judgment against it. On appeal,

Held, A never placed his name on the back of the draft. He executed a separate paper guaranteeing the payment of the draft if it was not paid by the Belleville Nail Mill Co. or by B. Had this been all there was of the case it is plain that B was not liable. His contract was a conditional one. He guaranteed the draft on condition that A should also become a guarantor like himself by writing his name on the back of the draft, and the bank before accepting the draft had notice of that fact. As the condition upon which B agreed to become bound as a guarantor of the paper was never performed, of which the bank had notice before accepting the draft, he incurred no obligation. The bank had no right to take the draft until A had written his name on the back of it. It was as between the bank and B an incomplete instrument until that condition was complied with; and so far as the conditional contract of B is concerned, no recovery can be had upon it.

But there is another view of the case which places the liability of the parties in a different aspect. This draft was given in renewal of a like one in all respects except date, made on March 14, 1874, on the back of which appears the signatures of B, W and A as co-guarantors. This last draft, when the other one was taken by the bank, was marked "Paid," and surrendered, and was put in evidence on the trial by the defendant. That the draft of March 14th was in all respects valid and a binding obligation and that B was liable thereon as guarantor is not questioned or denied. That it never was in fact paid is also a conceded fact. And, if B shall not be held liable as guarantor on the renewal draft of July 17th, then it is contended that his liability as guarantor of the old draft of March 14th remains undischarged and may be enforced against his estate.

The authorities are not uniform on the subject of the giving of a bill of exchange or a negotiable promissory note for the pre-existing debt being

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL's Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

regarded as a payment, or not, of the indebtedness. But the prevailing rule we regard to be as stated in Edw. Bills & N. § 290, viz.: "In general the American Courts have followed the doctrine of the common law, holding that the negotiable note of a debtor when delivered to his creditor on his own debt without express agreement is not a payment thereof, but that the giving of the note may be shown in evidence on the trial in an action brought on the original demand, and will defeat a recovery on it unless the note is produced and cancelled." In further support of such rule see *Id.*, §§ 277, 278, 286, 290; 1 *Dan'l Neg. Inst.*, § 205; 2 *Dan'l Neg. Inst.*, §§ 1259, 1260, 1266, 1267, and authorities cited in the notes. And see *McConnell vs. Stettinius*, 2 *Gilman*, 713; *Miller vs. Lumsden*, 16 *Ill.*, 161; *Morrison vs. Smith*, 81 *Ill.*, 221.

Generally, where a new bill or note is given in renewal of another bill or note, the new bill or note operates only as a suspension of the debt evidenced by the original, and is not a satisfaction of it until paid. Although in some cases it has been held that an agreement to take a bill or note in absolute payment of a debt must be expressed in order to render it such, the better opinion is said to be that such an agreement may be implied as well as expressed, and that all the circumstances may be looked to to ascertain what was the actual agreement of the parties. 2 *Daniel Neg. Instr.*, § 1268.

There was in the present case nothing of any agreement that the renewal draft should be taken in payment of the old one; and all the circumstances indicative of any intention of the parties in that respect are the surrender of the old draft, the bank stamping it "Paid" on its face, and indorsement on the renewal draft of payments subsequently made. But it is held that the delivery of the old note without an agreement that it shall be extinguished does not of itself operate as a presumption of extinguishment. Neither does the receipting of the renewal note as payment so operate, such receipt being interpreted as meaning conditional payment, to be in full when the renewal note is paid. See authorities above cited. The circumstance of indorsing some payments that were made on the last draft, although dwelt upon by counsel, we regard as of no significance. It is said by *Parsons* (2 *Pars. B. & N.*, 203), that the general custom and understanding of the mercantile world would seem to demand that a new note given in renewal of an old one, which is taken up, as it is termed, should pay and cancel the old note for which it is given. But this appears to be but the author's individual opinion and not having support in the adjudicated cases. See 2 *Dan'l Neg. Inst.*, § 1266. But it is laid down by *Parsons*: "Where a new note is exchanged for one void or worthless from any cause, as usury, the former contract is not thereby avoided. The debtor has not given that to the creditor which the creditor supposed, and therefore the creditor is not bound thereby. Nor would an exchange by renewal notes be held a payment and discharge if such discharge would injure the creditor." 2 *Pars. B. & N.*, 205, 219. *Daniel* lays it down: "Even where a note is considered as paid and discharged by one given for it, as a general rule the case is excepted where the debt would by such a construction be lost, because then the intention to receive the second as a discharge would be *prima facie* rebutted. This view was taken when the first note was secured by mortgage." Citing authorities. 2 *Dan'l Neg. Inst.*, § 1266. A renewal note has the benefit of any security for the payment of the original whether by way of mortgage, deed of trust, or otherwise, and the holder may enforce it. 1 *Dan'l Neg. Inst.*, § 748. This is abundantly established by the authorities where the first note is secured by a mortgage. It is also held where the renewal note is void for usury in it, that the original note is not discharged and may be enforced. *Rice vs. Welling*, 5 *Wend.*, 595; *Leary vs. Miller*, 61 *N. Y.*, 490.

In the case at bar there was a clear liability on the part of B and A as co-guarantors for the payment of the draft of March 14, 1874. That draft has never been paid, and B's liability to pay it has not been discharged. As respects B, all that he has done in the way of discharging this undoubted liability of his is that he has made an abortive attempt towards the continuation and extension of his liability for four months. In place of his guaranty of the draft of March 14th, he was willing to become guarantor with A on a draft in renewal, payable at the end of four months, and went so far for that purpose as to place his name on a renewal draft dated July 17th, payable at four months,

upon the condition that, before it was delivered, A should likewise place his name on the draft as co-guarantor. This A did not do. Consequently B's placing his name on the renewal draft went for naught, and it was as if he had never done so. So B's liability on the draft of March 14, 1874, remains with nothing whatever done on his part in discharging it. To hold B to be quit and clear from all liability by reason of the bank taking the renewal draft would be a manifest injustice and not in accordance with the intention of either party. The bank surely did not intend to release the liability of B as guarantor. B had no intention or expectation of having his liability as guarantor extinguished. He was willing and expected to continue his existing liability as guarantor by having A join with him in the guaranty of the renewal draft. But if A did not become a co-guarantor with him on the renewal draft, then, of course, B intended and expected that his liability together with that of A as guarantor on the old draft should be and remain as it then was. There is no reason why his mere unsuccessful attempt to renew the guaranty should discharge it. His putting his name on the renewal draft without a delivery thereof was no detriment to him or benefit to the bank, and the taking by the latter of the renewal draft with B's name upon it should under the circumstances count as nothing towards the discharge of his liability as guarantor upon the original draft of March 14, 1874. Nor did the separate guaranty given by A affect the rights of any of the parties. He remained as co-guarantor on the old draft with B. For like reason that the taking of the renewal draft would not have been held to affect the security of any mortgage had there been one for the payment of the original draft, we think it should not be held to discharge this security of a guaranty for the payment of the first draft.

Further *Held*, That notwithstanding the claim against the estate of B was made upon the renewal draft and not upon the original draft, plaintiff can recover in this action. The whole theory and policy of the Illinois practice now is to allow a recovery in all cases, regardless of technical rules, where the evidence shows a right of recovery.

Judgment against bank reversed.

Belleville Savings Bank vs. Bornman, Ex'r, Supreme Court of Illinois, January 26, 1887.

CERTIFICATE OF DEPOSIT A NEGOTIABLE PROMISSORY NOTE—STATUTE OF LIMITATIONS RUNS FROM DATE.

Action upon a certificate of deposit in the following form :

\$540.

J. D. WITTER, Banker,

GRAND RAPIDS, Wis., October 6, 1886.

Mr. James Curran has deposited in this bank five hundred and forty dollars, payable to his order on the return of this certificate properly indorsed.

J. D. WITTER, per MOODY.

Held, The certificate of deposit in suit is in the ordinary form of such instruments, and is therefore in substance and legal effect a promissory note.

Further *Held*, The next question is, when did the statute of limitations commence to run against the certificate? The plaintiff maintains that it only commenced to run upon demand of payment, while the defendant claims that it commenced to run as soon as the certificate was issued. There are plenty of adjudications by Courts of great authority sustaining both of these propositions. The question is now presented to this Court for the first time, and we must choose between these conflicting lines of authority and adopt the rule which seems to us to rest on the soundest principles and which best accords with the analogies of the law. What would be the equivalent of this certificate were it put in the usual form of a promissory note? Undoubtedly it would be for the same amount payable on demand to the same payee, or order, perhaps, at the office of the maker, and probably without interest until actual presentation and demand of payment. It would be substantially in this form: "For value received, on demand, I promise to pay James Curran, or order, at my bank in Grand Rapids, Wisconsin, \$540 without interest until after demand." That such a note is due presently, and the statute of limitations commences

to run against it from its date, is well settled. What valid reason can be given why the same results should not follow the giving of a certificate of deposit, which contains the same contract and is the exact equivalent of such a note? If any such reason exists we have failed to comprehend it. In *Brummagin vs. Tallant*, 29 Cal. 503, it was held that the statute of limitations began to run against a banker's certificate of deposit payable on demand from the date of the same, and that no special demand is necessary to put the statute in motion. We entirely agree with the Supreme Court of Michigan, which in *Tripp vs. Curtenius*, 36 Mich., 496, after the rule of the California case, proceeds to say of a certificate of deposit in the usual form: "To hold such instruments to be, in legal effect, promissory notes payable on demand, and yet not apply the principle applicable to demand promissory notes, either because of the peculiar form of the instrument or because issued by a firm engaged in the ordinary business of banking, would be to create a distinction unsound in principle and one not warranted by any necessity that we can discover." See also *Cate vs. Patterson*, 25 Mich., 191; *Poorman vs. Mills*, 35 Cal., 118.

The cases which hold that such a certificate is not due until presented for payment, and hence that the statute of limitations does not commence to run against it until such presentation seem to go upon the ground that the transaction is not a loan of money creating a debt against the drawer of the certificate, but rather that it is in the nature of a bailment upon which no cause of action accrues until demand; in other words, it is said the transaction is in contemplation of law, a deposit and not a loan. This doctrine is held or intimated in *Payne vs. Gardner*, 29 N.Y., 146; *Munger vs. Albany City Nat. Bank*, 85 N.Y., 589; *Nat. Bank of Fort Edwards vs. Washington Co. Nat. Bank*, 5 Hun., 605; *Fells Point Sav. Inst. vs. Weedon*, 18 Md., 320; and *Bellows Falls Bank vs. Rutland Co. Bank*, 40 Vt., 377.

With all due deference to the very able Courts which have adopted this view, we cannot give our approval to the doctrine thus enunciated by them. We think that when a person deposits money in a bank in the usual course of business, he lends it to the bank, and the bank thereby becomes his debtor to the amount of the deposit—not his bailee of the money. By a deposit, the title to the money passes to the bank, and it is thereafter its money, subject to its absolute control and disposition. The depositor cannot reclaim the specific money. He cannot maintain replevin or trover for it (as he might, were the deposit a bailment) but only *assumpsit* for the amount deposited. That was the view of Judge Bronson in *Downe's vs. Phoenix Bank*, 6 Hill, 297, which was an action for the amount of a deposit, the evidence of which was the entry made by the proper officer of the bank in the plaintiff's pass-book. The judge said, speaking of the transaction: "It is not strictly a deposit nor a bailment of any kind, for the same thing is not to be returned, but another of the same kind and of equal value. In the Civil Law it is called a *mutuum* or loan for consumption. Except where the deposit is special, the property in the money deposited passes to the bank, and the relation of debtor and creditor is created between the parties."

We hold with the Michigan and California Courts that the money claimed in this action was due and payable at the date of the certificate in suit—October 6, 1869—and hence that the claim was barred by the statute on and after October 7, 1875.

Judgment for defendant.

Curran vs. Witter, Supreme Court of Wisconsin, January 11, 1887.

DEPOSIT WITH CITY BANK OF FUNDS TO TRANSMIT TO COUNTRY BANK FOR USE OF DEPOSITOR—DUTY AND LIABILITY OF CITY BANK—CUSTOM.

Action against the Drover's National Bank of Union Stock Yards, Chicago, on a certificate of deposit. The facts were as follows: On or about April 10, 1884, the plaintiff and appellee, one M. J. O'Hare, who was a farmer living near Mineral Point, Wis., came to Chicago with a car-load of cattle, which he procured to be sold at the Union Stock Yards by Bensley Bros. & Co., commission merchants. Plaintiff instructed the latter to send what was due him from the proceeds of the sale to Henry's Bank, at Mineral Point. The

amount coming to O'Hare, after deducting commissions, was \$1,053.16; and, on April 11, 1884, Bensley Bros. & Co. deposited this amount with defendant with the following ticket:

Deposit in — —, credit of W. T. Henry's Bank, Mineral Point, Wis., by Bensley Bros. & Co., for use of M. J. O'Hare.
April 11, 1884. Currency, \$1,053.16.

The bank thereupon gave Bensley Bros. & Co. a copy of the following letter of advice as a certificate of deposit:

DROVERS' NATIONAL BANK,
Union Stock Yards, Chicago, Ill., April 11, 1884. }

W. T. Henry's Bank, Mineral Point, Wis.:

Your account has credit ten hundred fifty-three 16-100 dollars deposited by Bensley Bros. & Co. for the use of M. J. O'Hare. Confirmation of the above will be given in our regular advice of this date. \$1,053.16. W. H. BRINTNALL, Cashier, by H.

The original of the above letter, together with the following, was on the same day mailed to the Henry Bank:

DROVERS' NATIONAL BANK,
Union Stock Yards, Chicago, Ill., April 11, 1884. }

W. T. Henry's Bank, Mineral Point, Wis.:

DEAR SIR:—I remit to North-Western National Bank, Chicago, for your credit, as specified below, \$1,053.16. Yours truly, W. H. BRINTNALL, Cashier.
Deposited by Bensley Bros. & Co. for use of M. J. O'Hare.

Some time during the following day this money was deposited with the North-Western Bank. Prior to this, and in January, 1883, the defendant had received the following letter:

EXCHANGE AND COLLECTION OFFICE, W. T. HENRY'S BANK,
Mineral Point, Wis., January 24, 1883. }

To H. G. Brainard, Cashier of Drovers' National Bank of Union Stock Yards, Chicago:

You are hereby instructed to transfer all deposits made with you for the credit of this bank to the North-Western National Bank, Chicago, Ill.

(Signed) THOS. T. PARMELEE, Cashier.

In July, 1883, after the giving of this last-mentioned instruction, W. T. Henry died, and thereafter the business of the bank was carried on by his widow, under the name of Henry's Bank, up to the time of its failure, which occurred on the same day that the deposit was made by Bensley Bros. & Co. with the defendant. Plaintiff sued defendant for the amount of the certificate of deposit, and a defense was interposed on the ground that there was no privity of contract between plaintiff and defendant, and that plaintiff could not maintain an action against the bank when the latter had, before any notice of his alleged equities, paid over the funds to the order of the party who was legally entitled to call on the bank for them. Judgment was rendered in favor of plaintiff, and defendant appealed.

Held. It is contended that, if a right of recovery exists in the plaintiff, the action should have been brought against the North-Western National Bank and not against the appellant. We are of opinion that the suit was properly brought. The North-Western National Bank had no notice whatever that the check of the appellant represented money belonging to the appellee, or that the appellee was in any way interested therein. It never consented to become his debtor, or to become the depository of funds for his use, and received the money without notice that it was charged with such use. The check purported to transfer to the North-Western National Bank funds of the Henry Bank going to its general account, and the same was so received by that bank and carried to the credit of the Henry Bank. There was no privity of contract between the North-Western National Bank and the appellee. The transfer was made to that bank without his knowledge or consent. Nor did the North-Western National Bank consent to act as trustee in respect to this money for its transmission to the Henry Bank for his use. No action would lie by appellee to recover of the North-Western National Bank. (29 Ill., 512; 3 Gilman, 502; 100 U. S., 195; Whart. Cont., 784-787.)

Bensley Brothers had been directed by appellee to forward the proceeds of the sale of his cattle to the Henry Bank at Mineral Point, Wis. For this purpose they were his agents, and whatever they did in pursuance of that

direction was the act of the appellee. In the course of transmitting appellee's money the agents of appellee deposited it in the appellant bank to the credit of the Henry Bank, for the use of O'Hare, appellee. The deposit was accompanied by a ticket, or memoranda, distinctly notifying appellant that the deposit was for the use of appellee. Appellant with such notice accepted the deposit, and issued and delivered to appellee's agents a certificate therefor, in which they certify that the amount has been carried to the credit of the Henry Bank for the use of appellee. Appellant must be held to have received this money with full knowledge that it belonged to appellee, and of the trust character in which it was to be transmitted to the Henry Bank.

The liability assumed by the appellant bank was to pay to the Henry Bank, for the use of appellee, the amount of this deposit with it, and, upon such payment being made and acceptance thereof by the Henry Bank, the liability of appellant would cease and the Henry Bank become liable to account to appellee for the same. It is, however, urged that, as the deposit was to the credit of the Henry Bank, it alone had the right to demand and receive the money, and alone could recover the same. This position is, we think, untenable. The deposit was by appellee for the transmission of his own funds to the credit of his home bank for his use. The Henry Bank was not a party to the deposit, never gave its consent to receive the credit or accepted the trust created for appellee's benefit. On the very day the deposit was made the Henry Bank, without any notice of this deposit to its credit, closed its doors as a bank, and its affairs passed into the hands of an assignee for the benefit of its creditors. It will not be questioned that if, before closing its doors, the Henry Bank had had notice of this deposit to its credit it would have had the right to decline it and refuse to assume the trust with which it would be charged upon receiving the money. Common honesty would have dictated such a course in view of its financial condition. The Henry Bank was a mere intermediary chosen by appellee through which the money should pass in reaching appellee, and it would become liable to appellee only in the event of its coming into possession of the fund or acceptance of the credit. The fact that the deposit was made to its credit without its knowledge or consent created no contract relation between the Henry Bank and appellant unless the Henry Bank can be held in some way to have assented thereto. (Whart. Cont., 787, and authorities cited.) The authorities cited seem fully to support the reasoning of the text. That the Henry Bank did not act indicating its assent to receiving the credit is apparent. As stated, at no time since the deposit was made has it been in condition to consent or to act as trustee of this fund.

Waiving, then, the question whether the transfer to the North-Western National Bank by check of a like amount of money constitutes a defense, if the Henry Bank refused to accept the credit, or for any reason it became impossible that it could receive the money in trust for the use of appellee, it became the duty of appellant to hold the money for the use of the depositor. He by his agents deposited the money with appellant to be transmitted for his use and benefit to another bank, which refuses or is unable to receive it, and cannot be compelled to do so. The purpose for which the deposit was made has failed and is incapable of execution, and appellant would hold the funds to the use of appellee and must account to him for the same. (5 Dill., 241; 26 Law J., Ch. 710.) Nor does it militate against this view that appellee may have been indebted in some amount to the Henry Bank. The evidence wholly fails to show that there was any understanding or agreement that the bank was to be paid out of this fund or had any interest therein.

It is shown, however, that it is the custom of city banks, when a deposit is made to the credit of a country bank in a city bank not its correspondent, to transfer the amount by check to the city correspondent of the country bank, and it is urged that the transfer to the North-Western National Bank by appellant was in accordance with this custom, and that appellant is protected from liability. While it probably is true that parties dealing with the city banks with knowledge of the custom mentioned would be bound thereby, it is not necessary in this case to determine the effect to be given to that general usage among the city banks.

As we have seen, when this money was deposited with appellant bank it was impressed with the trust in favor of appellee, and while the Henry Bank

would be entitled to draw it from appellant bank if it accepted the deposit to its credit for the use designated, yet it was, as already said, a mere intermediary in the transit of the funds from Chicago to appellee at Mineral Point, and the Henry Bank would be compelled to account to him therefor. Appellant might hold the money subject to the order of the Henry Bank, which, by its letter of advice and certificate of deposit, would be advised of the use for which it was to receive the money, or appellant might transmit it in the regular course of business, being responsible only for such care and diligence as the law charges upon persons similarly situated. But if the Henry Bank must from the character given the funds in the hands of appellant account to appellee therefor, it was the duty of appellant to give notice to any intermediary which it might select of the trust character impressed upon the funds, and not permit it to be carried in the general account of the trustee to be applied upon its debts. (Perry on Trusts, 406, 443, 444, and authorities cited.) In the hands of appellant this money was not liable as assets of the Henry Bank, nor could it be applied by appellant in payment of debts due from the Henry Bank, nor would it be subject to garnishment in appellant's hands at the suit of creditors of that bank. In what is claimed as an attempt to transfer the fund to the North-Western National Bank, appellant withheld all indications of the trust character of the funds, or that it was other than money going to the general account of the Henry Bank. To this appellee in no wise consented, and appellant stands in no better position than if it had retained the money in its custody.

It is, however, contended that, under the authority of the letter of W. T. Henry, appellant was justified in transferring this fund to the North-Western National Bank in the manner it did, and therefore the loss must fall upon appellee, if loss occurs. Without pausing to discuss whether the death of W. T. Henry would, under the circumstances here shown, amount to a revocation of that authority, it is apparent that the direction was from W. T. Henry, who, up to his death on July 1, 1883, carried on the banking business in his own name as W. T. Henry. After his death the business was carried on by another, who adopted the style "Henry Bank," and it was to this latter institution that the credit was given in this instance. But, independently of this, that letter, if otherwise binding, would not authorize the deposit in the North-Western National Bank of appellee's money to the credit of the Henry Bank as funds of the Henry Bank generally, and destroy all ear-marks by which the funds could be identified as held for appellee's use. While appellant held the funds the trust character continued. When the Henry Bank received them, if at all, it was for the benefit of appellee; and it cannot be held that any previous direction of the Henry Bank relating to a disposition of its funds would authorize the destruction of the evidence of the trust relation created in respect to this fund.

There is no hardship in the rule requiring the bank to preserve the character of the funds received by it in transmitting the same. All appellant had to do to protect itself was to preserve the trust character impressed upon the fund in transferring it to the North-Western National Bank. If that bank had, with notice of the trust, received this money, it would have held it in the same character as it was held by the appellant and charged with the same use, and, upon failure of the Henry Bank before the transmission of the fund to it, would be bound to account to appellee therefor.

Judgment against the bank affirmed.

Drovers' National Bank vs. O'Hare, Supreme Court of Illinois, January 25, 1887.

NATIONAL BANK — UNLAWFUL LENDING OF MONEY — WHO CAN ENFORCE PENALTY? — JURISDICTION OF CIRCUIT COURT IN SUIT AGAINST NATIONAL BANK.

Defendant, a National bank, loaned to the firm of Jesse Ames' Sons \$5,000 and took their note at four months, which note plaintiff, who was not a member of that firm, signed as joint maker. Plaintiff now sues the bank to have the note so signed by him declared void, and to require the defendant to deliver up such note to him for cancellation, alleging that the firm induced him to

sign the note for the purpose of evading the provisions of the Banking law, Section 5,200, of the Revised Statutes, which provides that "the total liabilities to any association of any person or of any company, corporation or firm for money borrowed, including in the liabilities of a company or firm the liabilities of the several members thereof, shall at no time exceed one-tenth part of the amount of the capital stock of such association actually paid in. But the discount of bills of exchange drawn in good faith against actually existing values and the discount of commercial or business paper actually owned by the person negotiating the same shall not be considered as money borrowed," and that the bank had cognizance of the purpose for which plaintiff was induced to sign said note. Plaintiff also alleged that the bank had obtained a judgment, in which the amount of this note was included, against Jesse Ames' Sons, but the plaintiff was not made a party to the suit and no judgment was obtained against him. Defendant demurred to the complaint.

Held, It is well settled that the Federal Courts no longer have jurisdiction upon the ground that the defendant is a National bank, but it is insisted that the jurisdiction obtains under Section 1 of the Act of March 3, 1875, for the amount involved is over \$500, and the suit arises, as plaintiff claims, under a law of the United States. I think the decisions of the Supreme Court of the United States, heretofore made, warrant the conclusion that objections of the character presented to a breach of the Banking law by a National bank can only be urged by the Government, and the substance of complainant's bill of complaint is virtually an objection to the breach. In this case the other makers of the note who received the consideration could not escape payment, although the money was loaned in violation of the Act. This is conceded. The contract is not void as to them, and I see no equity in releasing the complainant and applying a different rule to him. He knew the obligations assumed when he signed the note to aid the party in making the loan, and he was equally liable with the other makers. The true rule is that, if the bank is to be punished for a violation of law, the Government must enforce the penalty and not an individual. The Banking law, when fully examined, does not make the contract entered into in violation of Section 5,200 of the Revised Statutes void, and the stockholders are not to suffer when such a claim is made under the circumstances suggested in the record. If it is desirable to punish a bank for a violation of law, no doubt the proper officer of the Government would, on sufficient proofs, commence proceedings.

Bill of complaint dismissed.

Wyman vs. Citizens' National Bank of Faribault, United States Circuit Court, District of Minnesota, February, 1887.

FOLLOWING PROCEEDS OF COLLECTIONS IN THE HANDS OF RECEIVER OF INSOLVENT COLLECTING BANK—RECOVERY IN FULL.

The defendant, a Savings institution, closed its doors July 2, 1884. On May 31st, previous, the Independence National Bank of Philadelphia sent a draft on C. D. Bailey for \$16.67, of that date and payable at one day's sight, indorsed "Pay to the order of Pfeiffer, Treasurer, for collection on account of the Independence National Bank, Phila., Willard B. Moore, Cashier," to the defendant institution for collection. On June 10th of the same year it sent a note of C. F. Ransom for \$527.64, due July 2d., and on June 3d. a note for \$100 of Brewer & Co., due July 4th., to the same institution for collection, both of which were indorsed as the first paper above-named. The Savings institution collected the Ransom note on June 16th., although not due until July 2d. It also collected the draft for \$16.67, but sent the Brewer & Co. note for \$100 to the National State Bank of Camden, which collected it. The Independence National Bank now seeks to recover the proceeds of the collections from the receiver.

Held, The Independence National Bank claims that it is entitled to those moneys in full. This is resisted by the counsel for the receiver, who claims that the bank is only entitled to share *pro rata* in the funds collected by the receiver. It is said that when these notes were paid it was impossible for the Savings institution to keep the money separate from the other funds of the

bank, and that when they were mingled with the other funds and the Independence Bank had credit therefor, the simple relation of debtor and creditor arose, and that if the relation of principal and agent ever did exist it did so no longer after such an entry on the books of the bank. I can see nothing in the argument respecting the impossibility of keeping the money separate when collected. The collecting bank could place such money in an envelope or other paper and preserve its identity just as easily and certainly as it could the note or draft collected. Nor can I see any force in the insistent that the entry by the collecting bank upon its books of the sum or sums of money collected changed the rights or relation of the parties. It would hardly be safe to say that an agent could make himself a debtor, simply, as distinguished from agent, by a confusion of the moneys or goods of his principal, and by then giving his principal credit for their value, or for the amount collected. Any such doctrine would be dangerous in the extreme, and would inevitably compel the abandonment of commercial transactions by means of agents. But no difficulty arises from the confusion of these moneys any more than in every other case where the rightful owner is in pursuit of trust funds. In such case the owner need not point out the very goods or bills or coin. He does all that is required if he shows that the goods or bills or coin came to the hands of the defendant impressed with a trust to his knowledge. In every such case the holder must respond either in the article taken or its value. These thoughts are sustained by the Court of Errors and Appeals in *Hoffman vs. First National Bank of Jersey City*, 46 N.J. Law, 604; *Sweeney vs. Easter*, 1 Wall., 166; *Hook vs. Pratt*, 78 N.Y., 371; 2 Pars. Bills, 21-23; *McLeod vs. Evans*, 28 N.W. Rep., 173; *Morse, Bank*, 420.

That banks may collect notes or drafts for each other, and in so doing establish a system of mutual dealing and thereby stand in the relation of debtor and creditor, as a banker does with his ordinary depositor, is not questioned, nor are the foregoing views at all inconsistent therewith. An order should be entered that the receiver pay to the Independence National Bank the full amount collected on said notes and drafts, with interest. If the money collected on the note sent to the National State Bank of Camden be still in its possession, the Independence Bank can look to it for that.

Thompson vs. Gloucester City Savings Institution, Court of Chancery, New Jersey February 17, 1887.

LIABILITY OF OFFICER OF CORPORATION SIGNING PROMISSORY NOTE AS MAKER.

Action against B. I. Brownell individually on the following promissory note:

\$200.

One year after date, value received, we promise to pay Daniel Heffner, or bearer, two hundred dollars, with interest at eight per cent. from date until paid. Payable at Independence, Iowa, with reasonable attorney's fees if sued. If interest is not paid when due it shall draw interest at eight per cent.

INDEPENDENCE MANUFACTURING CO.

B. I. BROWNELL, Pres.

D. B. SANFORD, Sec'y.

Defendant demurred to the petition and the demurrer was sustained. On appeal.

Held: In *Lacy vs. Dubuque Lumber Co.*, 43 Iowa, 516, it was held that the face of the note showed that it had been executed by the corporation. The question in that case was whether the corporation was bound and not whether Moore, who signed the note as President of the corporation and for it, was bound. In the case at bar it may be conceded that the Independence Manufacturing Company is bound, and still the question remains whether the defendant is not also. The note purports on its face to be the note of all the persons, including the corporation, who executed it. There is nothing on the face of the note which indicates that the defendant signed it as President of the Manufacturing Company, and for it. Whether parol evidence can be admitted to show that he did, we are not called on at this time to determine. (56 Iowa, 473; 75 Me., 497; 32 Md., 427.) The Courts have been called on to

determine who is bound on notes similar in some respects, and yet all the cases to which our attention has been called are different from the instrument sued on. Some of these do not disclose the name of any principal except the persons who have signed the note, or claimed to have done so, in a representative capacity. In this case, as the note purports to bind both the corporation and the defendant, and there is nothing to indicate that the defendant was President of the corporation or had signed the note for it, or in its behalf, we think he is bound personally, and that the letters "Pres." must be regarded simply as descriptive of the person to whose signature they are appended. It follows that the Court erred in sustaining the demurrer.

Judgment reversed.

Heffner vs. Brownell, Supreme Court of Iowa, March 2, 1887.

PRESIDENT OF NATIONAL BANK—AUTHORITY TO SELL PROPERTY—TRANSFER OF NOTES.

As between the corporation and himself, a President of a National bank ordinarily has no authority to sell the property of the corporation of which he is such an officer. Before he can legally do so he must have authority by the charter, the direction of the Board of Directors or its Managing Committee, or by usage; and where the property of a bank is sold by a President without authority, and the bank suffers loss thereby, he may be held liable in damages to the extent of such loss.

Where the President of a National bank, without authority, disposes of the property of the bank, and the bank is damaged thereby, and for the purpose of making good the loss, either temporarily or permanently, transfers to the bank promissory notes held by him in an amount equal to the loss sustained, and where afterwards he disposes of his interest in the bank and induces others to purchase a controlling interest in the stock upon the representation that he has no demands against the bank, he cannot afterwards recover of the bank the amount of the notes transferred to it for the purpose of making up the deficiencies caused by the loss resulting from the sale of the bank's property.

First National Bank of Central City vs. Lucas, Supreme Court of Nebraska, February 24, 1887.

ALTERATION OF NOTE — INSERTION OF "OR BEARER" IS NOT A MATERIAL ALTERATION.

Plaintiff sued defendant, the payee and indorser, upon a promissory note, as follows:

\$50.	HESPERIA, Mich., April 28, 1885.
Nine months after date I promise to pay to the order of Henry Bromley, or bearer, fifty dollars, at seven per cent. interest, value received.	
ALPHONSO C. GOWELL.	

This note was indorsed on the back "H. Bromley."

Defendant pleaded the general issue and filed an affidavit alleging that the note had been altered since he had indorsed it, and that he didn't sign it as it then appeared. The alteration claimed in the note was the insertion of the words "or bearer."

Held, Such change was not a material alteration and would not avoid the liability of the defendant upon the note.

Weaver vs. Bromley, Supreme Court of Michigan, February 15, 1887.

POWERS OF BANK CASHIERS.

Continued from page 370, April number of the JOURNAL.

XVI. Power in Regard to Discounts.—The power to make discounts is not one which is inherent in the office of Cashier, and just how far the Cashier has authority in this respect it is difficult under the present state of the authorities to say. In an early case in the Supreme Court of the United States (*Bank of*

U. S. *vs.* Dunn, 6 Pet. 51), the Court in holding that an agreement by the President and Cashier of the Bank of the United States that an indorser should not be held liable on his indorsement was beyond their power to make, use this language:—"It is not the duty of the President and Cashier to make such contracts, nor have they the power to bind the bank except in the discharge of their ordinary duties. All discounts are made under the authority of the Directors and it is for them to fix any conditions which may be proper in loaning money." Mr. Morse, in his work on Banking at page 109, is very decided in his assertion that the Cashier not only has no power inherently to discount paper but that it is one which cannot be delegated to him by the Board of Directors. He says: "The making of discounts is an inalienable function of the Directors. They cannot part with it or invest any officer or officers with it. It rests in them alone and exclusively. It is a power of that degree of vital importance that it cannot be taken out of the policy of the general principle that powers of a public nature given by the Legislature cannot be sub-delegated. The Legislature imposes upon the Board the duty of taking charge of all those matters of business upon the wise and skillful conduct of which the prosperity of the institution and the safety of the persons dealing with it depend. This duty they cannot shift in whole or in part upon others, and it covers no department of banking business more unquestionably than the making of loans and discounts." And again, at page 96, "If a President or Cashier of his own sole motion should effect a discount, he would trench upon an inalienable function of the Directors. His act would be not voidable but absolutely void, in direct contravention of a law which the Directors could by no action of their own abrogate or affect. Since they could not have originally conferred on him power to do the act, they must be equally unable subsequently to render valid his assumption of the power. The money advanced by the bank could of course be recovered in an ordinary action of debt. But the contract of discount, strictly as such, could never be confirmed by the Directors, or sued upon or enforced by either party. It must be absolutely and irremediably void."

Notwithstanding these positive statements of Mr. Morse that the power to discount cannot be delegated to the Cashier or his act in making a discount subsequently ratified, it is the fact that in actual practice discounts are frequently made by the Cashiers of banks in the exercise of their own personal discretion, and that this power is frequently delegated to the Cashier subject to a greater or less degree of supervision on the part of the Directors, or of a special discount committee. In some cases almost the entire management of the business of a bank is left to the Cashier and the Board of Directors only meet at long intervals. The exigencies of the banking business render it necessary that the Cashier should be vested with a certain degree of power to make discounts, as it is certainly impracticable for the Directors to be ever present at the Cashier's elbow on all occasions when discounts, desirable for the bank to make, are requested.

The recent case of Second National Bank of Oswego *vs.* Burt, decided by the New York Court of Appeals in 1883 (93 N. Y. 233), is an authority for the position that the Cashier may exercise this power by virtue of authority received from the Directors and that where a Cashier has been permitted for a long time to make discounts on his own responsibility with the knowledge and acquiescence of the Directors of a bank, he cannot be held liable for a loss on a discount made by him in good faith.

In that case the plaintiff bank sought to hold defendant, its former Cashier, liable for a neglect of duty resulting in loss in discounting certain drafts drawn by Page & Co., of Oswego, on White & Co., of Albany, and accepted by them which were lost to the plaintiff on account of the insolvency of both those firms shortly thereafter. No question was made as to any want of integrity, judgment or skill on the part of the Cashier in the transaction of the business in question, but he was sought to be held liable solely for his alleged neglect to observe a regulation of the bank, viz., certain by-laws appointing committees to supervise the making of discounts and requiring the Cashier to consult these committees. These discounts were all made with the knowledge and at least tacit consent of the President and Directors. The Court says at page 240:

"The undisputed evidence in the case shows that these several by-laws were from the first uniformly disregarded in the practical management of this bank with the knowledge and acquiescence of its officers. Such laws were equally as obligatory upon the President and various committees therein referred to as upon the Cashier and impliedly required them either to attend at the bank at stated periods to perform the duties enjoined upon them or at least to keep themselves accessible to the Cashier and in a position to be conveniently consulted by him according to the requirements of the business. To impose upon the Cashier the duty of carrying on the business of a bank and yet hold him responsible for a neglect of duty in not consulting officers and committees who apparently held no meetings and systematically absented themselves from the performance of their duties is an imposition which the law will not tolerate."

The Court further says that "it would be quite impracticable for the managing officer of a bank, required to keep it open daily, to leave his place of business as each transaction requiring attention occurred to look up persons engaged in other employments and consult them in regard to such transactions."

The recent case of *Martin vs. Webb*, in the Supreme Court of the United States (decided January, 1884), 110 U. S., 7, is an authority for the position that in certain cases a bank will be bound by the acts of its Cashier outside of the scope of his ordinary duties, and in matters wherein inherently he has no power to act. The Court says, at page 14: "It is clear that a banking corporation may be represented by its Cashier—at least where its charter does not otherwise provide—in transactions outside of his ordinary duties, without his authority to do so being in writing, or appearing upon the record of the proceedings of the Directors. His authority may be by parol and collected from circumstances. It may be inferred from the general manner in which, for a period sufficiently long to establish a settled course of business, he has been allowed, without interference, to conduct the affairs of the bank. It may be implied from the conduct or acquiescence of the corporation, as represented by the Board of Directors. When, during a series of years or in numerous business transactions, he has been permitted, without objection and in his official capacity, to pursue a particular course of conduct, it may be presumed, as between the bank and those who in good faith deal with it upon the basis of his authority to represent the corporation, that he has acted in conformity with instructions received from those who have the right to control its operations. Directors cannot, in justice to those who deal with the bank, shut their eyes to what is going on around them. It is their duty to use ordinary diligence in ascertaining the condition of its business, and to exercise reasonable control and supervision of its officers. They have something more to do than, from time to time, to elect the officers of the bank, and to make declarations of dividends. That which they ought, by proper diligence, to have known as to the general course of business in the bank, they may be presumed to have known in any contest between the corporation and those who are justified by the circumstances in dealing with its officers upon the basis of that course of business."

The rule to be deduced from a consideration of these recent decisions is that, although the power to discount is not inherent in the office of Cashier, and is a power requiring the exercise of the highest degree of discretion, still from the very nature of the business, the Board may invest the Cashier with such power, subject to such restrictions as they may see fit to impose; and in cases where the whole management of a bank is left to the Cashier, or where without express authority he has been in the habit of making discounts with the knowledge and without objections by the Directors, his power will be presumed and the bank will be bound.

REPLIES TO LAW AND BANKING QUESTIONS.*

Editor Rhodes' Journal of Banking:

STOCKBRIDGE, Mass., April 22, 1887.

SIR:—Will you kindly give, through the JOURNAL, advice as to how accounts of an unprofitable character can be made to pay some income to the bank?—I mean accounts

* NOTE.—A number of replies prepared for this issue are crowded out and will appear in the next number.

from which there is no hope of a fair daily balance. What commission should be charged, if any? Perhaps, if inquiry is made in this way, suggestions may be received from bankers in the country.

COUNTRY BANKER.

Answer.—It is a well known fact that banks and bankers in this country do a great deal of work for their customers without compensation which bankers in England would invariably make a charge for. Whether this is due to greater banking competition or simply by common custom, is not plain. No bank is obliged to take or retain an account unless it wishes to, and it would seem an account that is not profitable to one bank would be equally unprofitable to another. A bank may, perhaps, fear to incur the reputation of being unaccommodating. It would, however, seem to be the best course for the banks in a community to come to an understanding to make a charge in such cases. What it should be might depend on circumstances, and should be settled by the banks by agreement. The JOURNAL would be obliged for suggestions from correspondents and readers in this matter

Editor Rhodes' Journal of Banking:

BURLINGTON, Vt., April 18, 1887.

SIR:—Will you please write me your opinion as to the right of the State to tax a Savings bank in this State on what U.S. bonds it owns? Act No. 43 of Public Acts of 1884 reads as follows: "**** Every Savings bank, Savings institution and Savings bank and Trust company incorporated by this State and doing business herein, shall pay a tax to the State, which is hereby assessed at the rate of six-tenths of one per cent. annually upon the average amount of its deposits, including money or securities received as Trustee under order of Court or otherwise, and accumulations, deducting therefrom the average amount of its assets invested in real estate owned by such corporation, and also average amount, if any, of individual deposits in excess of fifteen hundred dollars each, listed to depositors in this State, where such depositors reside."

**** Very truly yours,

F. W. WARD, Treas.

Answer.—We are of the opinion that under the above law the Savings bank cannot deduct from the average amount of its deposits the amount thereof invested in United States bonds. This opinion is based on two decisions of the Supreme Court of the United States in similar cases, viz.: *Society for Savings vs. Coite*, 6 Wallace, 594, and *Provident Institution vs. Massachusetts*, in the same volume at page 611; both decided in 1867.

While it is undoubted that the bonds of the United States are exempt from taxation by the States for any purpose, and that when any portion of the capital of a corporation is invested in United States bonds a tax on such portion will be held invalid, still where the tax, as in the present case, is fixed at a certain per cent. and imposed upon the average amount of the deposits of a Savings bank at a given day, the tax will be sustained and held valid as a tax on the franchise of the association, as distinguished from a tax on its property.

In the case of the *Society for Savings vs. Coite*, above referred to, the Legislature of Connecticut in 1863 enacted that the several Savings banks in the State should make annual returns to the Comptroller of Public Accounts "of the total amount of all deposits" in them respectively, on the first day of July in each successive year; and that each should annually pay to the Treasurer of the State "a sum equal to three-fourths of one per cent. on the total amount of deposits" in such Savings bank on the day aforesaid. The statute declared that this tax should be in lieu of all other taxes upon Savings banks or their deposits. The *Society for Savings*, which was empowered by its charter to receive deposits of money, and improve them for the benefit of its depositors, but having no capital stock or stockholders, had on July 1, 1863, \$500,161 of its deposits invested in securities of the United States, which, by Act of Congress authorizing their issue, were declared to be exempt from taxation by State authority, "whether held by individuals, corporations or associations." Upon the amount of their deposits thus invested the *Society* refused to pay the sum equal to the prescribed percentage. *Coite*, the Treasurer of the State, brought suit to recover the tax thus withheld, and the Supreme Court of Connecticut decided that the tax in question was not a tax on property, but on the corporation as such, and accordingly rendered judgment for the plaintiff. (See *Coite vs. Savings Bank*, 32 Conn., 173.) The case being taken

to the Supreme Court of the United States, the judgment of the Supreme Court of Connecticut was affirmed. Mr. Justice Clifford delivering the opinion of the majority of the Court, on the ground that the tax was imposed on the franchise of the corporation and not as a tax on its property. Judge Clifford in his opinion, says : " Viewed as a tax on property, the assessment, so far as respects the amount in controversy, would be illegal, as it is well settled by repeated decisions of this Court that the States cannot tax the securities of the United States, declared by Act of Congress to be exempt from taxation, for any purpose whatever. Congress has power to borrow money on the credit of the United States, and the people, by making the Government supreme, have shielded its action in the exercise of that power from every species of unfriendly State legislation. Undoubtedly the States may tax all subjects over which the sovereign power of the State extends, but they are not authorized to tax the instruments of the Federal Government nor the means employed by Congress to carry into effect the enumerated powers of the Constitution, or any other power vested by the fundamental law in the Government of the United States." The same Justice delivers the opinion in the similar case of *Provident Institution vs. Massachusetts*, below stated, and in that opinion he summarizes the decision in the present case, so that the points decided in this case will be there referred to. Chief Justice Chase and Justices Grier and Miller dissented from the majority opinion in this case on the ground that the tax was a tax on the property and not upon the franchises and privileges of the plaintiff in error, the Society for Savings.

The case of *Provident Institution vs. Massachusetts*, *supra*, involved in a general way the same question as the case just preceding, the difference between the two being that the question in the case of the Society for Savings *vs. Coite* arose under a statute of Connecticut having one form of language, and in the present case it arose under a statute of Massachusetts having another form, more or less different. In the present case a statute of Massachusetts of 1862, entitled, " An Act to levy taxes on certain insurance companies and on depositors in Savings banks," provided by its fourth section that every institution for Savings incorporated under the laws of that Commonwealth should pay to the Commonwealth " a tax on account of its depositors of one-half of one per cent. per annum on the amount of its deposits, to be assessed, one-half of said annual tax on the average amount of its deposits for the six months preceding the 1st day of May, and the other on the average amount of its deposits for the six months preceding the first day of November." By the twelfth Section of this Act " all property taxed " under the above Section was exempted from taxation for the current year in which the tax was paid ; and Savings banks were relieved from making return of deposits in accordance with the provisions of previous statutes. The Provident Institution for Savings, a corporation having no property except its deposits and the property in which they were invested, and authorized by the general statute of Massachusetts to receive money for the use and benefit of depositors, and to invest its deposits in securities of the United States, had as its average amount of the deposits for the six months preceding the first day of May, 1865, \$8,047,652.19, of which \$1,327,000 stood invested in public funds of the United States, exempt by law of the United States from taxation under State authority. It paid all taxes asked of it, except on the portion which stood thus invested, and upon this portion it declined to pay a tax. In a suit to recover the tax, the Supreme Judicial Court of Massachusetts held that the tax was on the franchise and not on the property of the Savings institution, and was therefore lawful. (5 Allen, Mass. 437.) The case being taken in error to the Supreme Court of the United States, the decision of the Supreme Court of Massachusetts was affirmed.

Mr. Justice Clifford, in delivering the opinion of the Court, said : " Most of the questions involved in this record were very carefully considered in the case of the Society for Savings *vs. Coite*, argued at the present term, and received the conclusive determination of the Court. Extended argument in support of that judgment is unnecessary, as we are entirely satisfied with our conclusions and with the reasons assigned therefor at the time the judgment was rendered. The substance of the points determined in that case, so far as they are applicable in this controversy, may be stated as follows : (1) That the securities issued

by the United States, declared by Act of Congress to be exempt from taxation, cannot be taxed by the States for any purpose. (2) That power to borrow money on the credit of the United States is conferred upon Congress, and that inasmuch as the Constitution and the laws of Congress passed in pursuance thereof are made the supreme law of the land, it follows that the action of Congress, in the exercise of that power, is shielded from every species of unfriendly State legislation. (3) That the States cannot tax the instruments of the Federal Government nor the means employed by Congress to carry into effect the powers conferred in the Federal Constitution, although their authority is undeniable to tax all subjects over which the sovereign power of the State extends. (4) *That State laws requiring Savings institutions authorized by law to receive deposits, but without authority to issue bills and having no capital stock, to pay annually into the State Treasury a sum equal to three-fourths of one per cent. on the total amount of their deposits on a given day, in lieu of all other taxes, are properly regarded as imposing a franchise tax and not a tax on property.* (5) That the privileges or franchises of a private corporation, unless exempted in terms, which amount to a contract, are as much the legitimate subject of taxation as any other property of the citizen which enjoys the protection and is within the control of the sovereign power of the State. (6) That corporate franchises are legal estates, and not mere naked powers, but powers coupled with an interest which vest in the corporation by virtue of their charter. (7) That private corporations, and all trades and avocations by which the citizens acquire a livelihood, may be taxed by the State for the support of the State Government. (8) That such authority resides in the States independent of the Federal Government, and that it is wholly unaffected by the fact that the party, whether corporation or individual, has or has not made investments in Federal securities. (9) That the power rests in the discretion of the Legislature to decide whether the sum to be levied shall be a fixed one, and if not to determine in what manner and by what means the amount shall be determined.

"Those several propositions, except perhaps the fourth, are as applicable to the present case as to that in which they were announced, and it is clear that nothing is left in this record for decision, save the question whether the tax imposed in this case is to be regarded as a tax on property, or a tax on the privileges and franchises of the corporation."

And the learned Justice, after an elaborate discussion, reaches the conclusion that the tax in this case is not a property tax, but must be considered as a franchise tax, laid upon the corporation for the privileges conferred by the charter, "which by all the authorities, it is competent for the State to tax, irrespective of what disposition the institution has made of the funds, or in what manner they may have been invested." The Chief Justice, Grier, J., and Miller, J., in this as in the last preceding case, dissented, on the ground that the tax was one on the property and not on the franchise of the Provident Institution.

In the case of the Society for Savings above cited, the bank was required to annually pay "a sum equal to three-fourths of one per cent. on the total amount of deposits" on a given day. In the case of the Provident Institution, the law imposed "a tax on account of its deposits of *one-half of one per cent. per annum on the amount of its deposits*, to be assessed, one-half of the said annual tax on the average amount of its deposits for the six months preceding the first day of May, and the other, on the average amount of its deposits for the six months preceding the first day of November."

"In the present case the law requires that the bank "shall pay a tax to the State, *which is hereby assessed at the rate of six-tenths of one per cent. annually upon the average amount of its deposits,*" etc.

This is sufficiently similar in terms to the statute of Massachusetts to bring it within the rule laid down in the case of the Provident Institution, so that the amount of the deposits invested in United States bonds would not be exempted from the tax so levied.

Editor Rhodes' Journal of Banking:

MILWAUKEE, Wis., April 16, 1887.

SIR:—On page 373 of your April number you say that a receipt should be given by a bank for collaterals taken as security for a note discounted. Please say what the

bank should do when the party to whom the receipt has been given comes and pays his note, asks for his collaterals and says he has lost the receipt? Will the taking of a receipt back from him be sufficient? Should a bank lend to a man who will not trust it with collaterals without a receipt?

Yours truly,

MILWAUKEE.

Answer.—A party pledging collaterals has no doubt a legal right to demand a receipt for them from the bank. If this were the usual course pursued by customers there would be nothing to attract attention in it. But if it was not the custom to demand a receipt in such case, then the making of the demand might seem to indicate an unusual distrust or some ulterior design upon the part of the customer making the demand. This would be a point to be judged of by the banker himself, and he might have sufficient reasons, gathered from his experience, to refuse a loan.

If the receipt were alleged to be lost, it might not always be safe to deliver the collaterals on the simple receipt of the pledgor, because he may have transferred the original receipt for value to some innocent third party who may thereby acquire a *prima facie* right to demand the collaterals of the bank after the equities of the latter are satisfied. All these points might arise, and if a pledgor demands a receipt of the bank he ought to be very careful not to lose it, as the bank ought to be very careful not to give up his collaterals until he presents the receipt. If a receipt is demanded, it might be stipulated that the collaterals will not be surrendered except on the return of the receipt.

Editor Rhodes' Journal of Banking:

BRUNSWICK, Ga., April 15, 1887.

SIR:—We have had quite an argument on the following question, and have agreed to leave it to you to decide: When would three notes mature, dated two months from the 29th, 30th and 31st of December, 1886, respectively?

JOHN L. H. HANNAN.

Answer.—When notes are made to run so many months from date, the rule is to go to the corresponding date in the last calendar month. If that month has no such corresponding date, then the last day of that month must be taken. Thus, a note due two months from December 28th, 29th, 30th or 31st, if it is payable without grace, is due the 28th of February, unless it be a leap year, in which case the first note falls due February 28th, and the others February 29th, and so a similar note due two months from July 31st falls due September 30th. This is the rule laid down by Daniel in his work on "Negotiable Instruments," and it is the one adopted in practice among the banks generally. If the notes mentioned in the inquiry are entitled to the customary three days' grace, then their due date is March 3, 1887. By the Statutes of Georgia, promissory notes made payable or discounted at a bank are allowed three days' grace.

Editor of Rhodes' Journal of Banking:

TRAVERSE CITY, Michigan, April 19, 1887.

SIR:—Can you favor me with the figures of the report made some time ago by the Comptroller of the Currency, showing the percentage on a certain date of currency and coin, and of drafts and checks to the entire transactions of the day.

C. A. HAMMOND, Cashier.

Answer.—Information on this point was obtained by the Hon. Jno. Jay Knox, Comptroller of the Currency, who on June 30 and September 17, 1881, sent out circulars to the National banks of the country, asking for classified returns of their receipts and payments on the respective dates, and the results were published at length in his report for the year 1881.

On June 30th the total receipts of National banks in New York city were \$167,437,759, of which \$460,993 was gold coin, \$15,997 silver coin, and \$1,706,604 paper money. The remainder, \$165,254,164, was in checks and drafts. On the same date the total receipts of the National banks in the reserve cities were \$77,100,705, of which \$581,070 was gold coin, \$114,485 silver, and \$3,631,710 in paper money. The checks and drafts amounted to \$72,774,450.

The total receipts of the country banks were at the corresponding date \$40,175,542, \$822,041 being in gold coin, \$310,516 in silver coin, \$6,216,433 in paper, and \$32,826,552 in checks and drafts.

The returns received in answer to the September circulars were not materially variant from the above. The result for the whole country, taking both dates

into account, showed that checks and drafts form on the average between 94 and 95 per cent. of the total receipts of the banks.

Editor Rhodes' Journal of Banking:

ASTORIA, Oregon, April 15, 1887.

SIR:—A private banker in Astoria furnishes his customers with a stamp with which they stamp on checks drawn upon the private bank the words "payable at the — National Bank, of Portland," which is the banker's correspondent. Has the private banker the right to refuse payment on such checks when demanded at his counter in Astoria?

CASHIER.

Answer.—The drawer of the check having made the same payable at the Portland Bank, it should be presented there for payment. The case would be different if the private banker on whom the check was drawn should, after it had been issued, himself affix the printed clause that it was payable at the Portland Bank. In that event the holder could refuse to accept the qualification as to the place of payment, and protest the check. But where the drawer himself does this, he incorporates this clause as to the place of payment as part of the terms of the check, and the payee and all others thereafter taking the check must be regarded as taking it upon condition of receiving payment at the place designated.

Editor Rhodes' Journal of Banking:

DECORAH, Iowa, April 14, 1887.

SIR:—The assessor of our city thinks called United States bonds subject to taxation, claiming that as the money is in the Treasury to pay the bonds on presentation, they are no longer to be considered bonds, but as a credit. E. D. W. HOLWAY, Cashier.

Editor Rhodes' Journal of Banking:

Answer.—The assessor is probably right, if he means called bonds after the interest has ceased. Thus, the Secretary issued a call for bonds on March 23rd, which become payable on May 1st, and interest ceases after the latter date. After May 1st these bonds become mere certificates of a certain amount due the holder from the United States Treasury. The exemption from taxation was a feature intended to induce investment in them for such time as the Government desired the loan. When the Government, according to contract, has the right to pay the loan, and does pay or provide for its payment, it is absolved from further protecting the bond from the payment of taxes, the same as it is absolved from further payment of interest. In the case of a National bank, the credit in the Treasury arising from called bonds due but not presented would be nearly offset by the debit on account of circulation—even if the credits of National banks could be taxed by State authority.

Editor Rhodes' Journal of Banking:

GRAND RAPIDS, Mich., April 22, 1887.

SIR:—A bank of this city will not accept the endorsement of "The Voight Milling Company" unless the name of an officer is added. Is this necessary.

W. RICHARDSON.

Answer.—The title of the company may be a sufficient endorsement, but the name of an officer is an additional guarantee that the endorsement is valid and approved by the company.

Editor Rhodes' Journal of Banking:

BURLINGTON, Vt., April 8, 1887.

SIR:—Please state when the interest is due and payable on a note of which the following is a copy:

\$1,000.

BURLINGTON, Vt., February 1, 1885.

On or before two years from date, I promise to pay to the order of John Doe one thousand dollars with interest annually after March 31st next.

RICHARD ROE.

Very truly yours,

* * * * *

Answer.—If the wording of the note simply stated that interest is payable after the 31st of March next, its proper construction would be apparent. The question then is, What effect does the word "annually" have in modifying the meaning of the phrase? The amount of interest plainly is not affected,

for interest commences to run on the 1st of April and continues until the note is paid. The word "annually" could only refer to the time at which interest itself is payable before the maturity of the note. It might possibly be construed to mean that the year is to be reckoned from the date of the note, but as the modifying word is fixed in the body of the clause relating to the interest and placed in such close connection with that word, it would seem that it must be construed with the other words in the sentence in which it is found. In other words, that the interest is due and payable annually commencing April 1, 1886.

Editor Rhodes' Journal of Banking:

FAIRBURY, Ills.

SIR:—A note is payable to W. E. Fuller or bearer. A bank purchases the note from another party. Fuller claims to have lost the note and admitting he did lose it can he compel the bank to surrender the note and lose the money advanced on it.

CASHIER.

Answer.—If Fuller did not advertise the note or give notice to the bank of the loss of the note in any other way and if the bank in good faith purchased the note in ordinary course of business there being nothing to indicate any flaw in the title, it cannot be compelled to return the note. It is an innocent holder for value.

Editor Rhodes' Journal of Banking:

ALLENTOWN, N. J., April 23, 1887.

SIR:—A customer of the bank after endorsing a check loses it on the street, he comes to the bank and stops payment. Can the bank refuse to pay it, the check being properly endorsed.

CASHIER.

Answer.—If a check is stolen or lost by the holder after endorsement, it is not issued as against him, in the hands of the thief or finder. But if it gets into the hands of a third party who takes it for value and in due course of business, without knowledge of the fact that it had been stolen or lost, and this third party establishes this fact, the bank would be obliged to pay the check and would be protected in paying it. See Morse on Banking, pp. 255-256.

Editor Rhodes' Journal of Banking:

SHREVEPORT, La., April 21, 1887.

SIR:—What is law and what is custom in regard to endorsing checks in making exchanges with banks. It is claimed that it is neither necessary nor customary for one bank to endorse a check in getting it cashed, so long as it is endorsed by well known parties.

Answer.—If the check is endorsed payable to the order of the bank, then the latter must endorse it. If the check is not payable to the order of the bank but is simply endorsed by last holder, then there is no legal requirement that the bank in order to get the money must endorse it again.

But in making exchanges among banks it is believed to be the general custom that the checks presented by any bank should be endorsed by it whether payable to its order or not.

Editor Rhodes' Journal of Banking:

LOUISVILLE, Ky., March 26, 1887.

SIR:—Which is the most important in drawing up a note? "For value received" or "Negotiable or Payable," are they absolutely necessary, or could either of them be dispensed with? A number of clerks by "ONE OF THEM."

Answer.—Section 21 of Chapter 22 of the General Statutes of Kentucky (1881) provides that "promissory notes, payable to any person or persons, or to a corporation, and payable and negotiable at any bank incorporated under any law of this Commonwealth, or organized in this Commonwealth under any law of the United States, which shall be indorsed to and discounted by the bank at which the same is payable, or by any other of the banks in this Commonwealth, as above specified, shall be, and they are hereby placed on the same footing as foreign bills of exchange."

Promissory notes in Kentucky, ordinarily, are not negotiable so that a *bona fide* holder who has taken such a note for value, before maturity, would hold it subject to any defenses which might be interposed. By the above statute, however, when a promissory note is made payable at a bank as therein stated, and is discounted by a bank, as therein stated, it is made negotiable by

being placed on the footing of a foreign bill of Exchange, and the maker is deprived of all defense by reason of any right against the original payee.

Having prefixed this much explanatory of the peculiar law of Kentucky to enable those in other States who may be unfamiliar therewith, to correctly understand the answers to the above questions, we will now consider:

1. Is the phrase "negotiable and payable" absolutely necessary to be inserted in a Kentucky promissory note made payable at a bank?
