This question is answered by the case of *McCormack vs. Clarkson*, 7 Bush (Ky.), 519. In that case the question arose whether a note for money made "payable to order" at the First National Bank at Covington, and indorsed to and discounted by said bank, had the legal character and effect of a foreign bill of exchange under the statute, which provided that any promissory note made "payable and negotiable" at a National bank, and which was indorsed to and discounted by said bank, should stand on the footing of a foreign bill of exchange. The Court said: "We consider the words 'payable to order' legally synonymous with the statutory words 'payable and negotiable.' 'To order' makes the note 'negotiable' as effectually as if the precise word 'negotiable' had been substituted."

It follows from this decision that while the precise words "payable and negotiable" may be dispensed with, still it is necessary to have some words of synonymous meaning, such as "payable to order" inserted in the note in order to make it negotiable.

2. Can "For value received" be omitted from a promissory note payable at bank in Kentucky?

We can find no decision in Kentucky as to the necessity of these words in a negotiable promissory note. Although the phrase "for value received" is generally expressed in a note, it is now settled law that value received is implied in every negotiable bill and promissory note, and need not be expressed.

2 McLean, 213; 15 Me., 131; 1 Denio, 116; 8 Cal., 288.

It is said in *Edwards on Bills and Notes* at section 202: "As the law now stands it is difficult to assign any legal reason for, or to point out any advantage to be derived from the use of the words value received, in negotiable paper."

STATE TAXATION OF NATIONAL BANKS.

The Bank Tax Case.

FULL TEXT OF THE RECENT DECISION.

The taxation of National bank shares under the laws of New York is not illegal and void under section 5219 of the United States Revised Statutes, as being at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of the State.

The Mercantile National Bank of the City of New York, appellant, vs. the Mayor, Aldermen and Commonalty of the City of New York, and George W. McLean, Receiver of Taxes. (*Supreme Court of the United States. Decided April 4, 1887.*)

Mr. Justice Matthews delivered the opinion of the Court, as follows:

THE OBJECT OF THE BILL.

The bill in this case was filed by the appellant, an association organized as a National bank in the city of New York, the object and prayer of which were to restrain the collection of taxes assessed upon its stockholders in respect to their shares therein, on the ground that the taxes assessed and sought to be collected by the defendants were illegal and void under section 5219 of the Revised Statutes of the United States, as being at a greater rate than those assessed under the laws of New York upon other moneyed capital in the hands of the individual citizens of that State. The assessment in question was made for the year 1885, by the proper officer, acting in pursuance of section 312 of an act of the legislature of the State of New York, passed July 1, 1882, entitled "An act to revise the statutes of this State relating to banks, banking and trust companies," which reads as follows:

THE LAW UNDER WHICH THE TAX WAS IMPOSED.

"SEC. 312. The stockholders in every bank or banking association organized under the authority of this State, or of the United States, shall be assessed and taxed on the value of their shares of stock therein; said shares shall be included in the valuation of the personal property of such stockholders in the assessment of taxes at the place, city, town or ward where such bank or banking association is located, and not elsewhere, whether the said stockholders reside in said place, city, town, or ward or not; but in the assessment of said shares, each stockholder shall be allowed all the deductions and exceptions allowed by law in assessing the value of other taxable personal property owned by individual citizens of this State, and the assessment and taxation shall not be at a greater rate than is made or assessed upon other moneyed capital in the hands of individual citizens of this State. In making such assessment there shall also be deducted from the value of such shares such sum as is in the same proportion to such value as is the assessed value of the real estate of the bank or banking association, and in which any portion of their capital is invested, in which said shares are held, to the whole amount of the capital stock of said bank or banking association. Nothing herein contained shall be held or construed to exempt the real estate of banks or banking associations from either state, county or municipal taxes, but the same shall be subject to state, county, municipal and other taxation to the same extent and rate, and in the same manner according to its value, as other real estate is taxed. The local authorities charged by law with the assessment of the said shares shall, within ten days after they have completed such assessment, give written notice to each bank or banking association of such assessment of the shares of its respective shareholders, and no personal or other notice to such shareholders of such assessment shall be necessary for the purpose of this act."

THE FACTS OF THE CASE.

The hearing of the Circuit Court was had upon an agreed statement of facts, as follows:

"It is hereby stipulated and agreed by and between the parties to the above-entitled suit, that, for the purpose of the trial of this cause, the facts hereinafter stated are true, and that the cause be submitted for trial and decree upon such statement alone, together with the pleadings: [for the sake of space, the facts which follow are condensed, omitting, however, nothing which is material to a correct understanding of the decision.]

"1. Complainant, on the 2nd Monday of January, A.D. 1885, and for several months prior, had a capital stock of the par value of \$1,000,000 and a surplus fund of \$200,000, nearly the whole of which was, during that period, invested in United States bonds of the par value of \$849,000, and of a much larger market value; its stock was divided into 10,000 shares of the par value of \$100 each, and was then held by 142 persons and corporations, 50 of whom, owning 1,877 shares, were non-residents of the State of New York.

"2. On said day the proper tax officers of the city of New York valued and assessed for taxation the shares of said bank against the individual shareholders, at the rate of \$80 per share, after deducting the proportion of the assessed value of the real estate of said bank applicable to each share, making the total gross valuation of said shares in the hands of the shareholders the sum of \$800,000, from which sum the debts of sundry indebted stockholders, amounting to \$80,128, were deducted, as by law allowed, leaving the total valuation upon which taxes were thereafter assessed the sum of \$800,372.

"3. That on said day the aggregate actual value of the shares of incorporated moneyed and stock corporations incorporated by the laws of New York deriving an income or profit from their capital or otherwise (not including life insurance companies, Trust companies, banks or banking associations, organized under the authority of this State or of the United States) amounted to the sum of \$755,018,892.

"4. That, at the period aforesaid, the aggregate actual value of the shares of the life insurance companies incorporated under the laws of this State amounted to the sum of \$3,540,000, and at the same period the aggregate value of the personal property, of said companies, consisting of mortgages, loans with collateral security, State, county and municipal bonds, and railroad bonds and shares of stock of corporations, (but not including the bonds of the United States nor the shares of corporations created by the State of New York,) amounted to \$195,237,306.

"5. That, at the said period, the aggregate actual value of the shares of the capital stock of the Trust companies existing in the State of New York and organized under

its laws amounted to \$32,018,900, of which sum the amount of \$30,215,900 was of Trust companies located in the city of New York.

"6. That, at the same period, the aggregate actual value of the deposits due by the Savings banks of this State to depositors was \$437,107,501, (not including the surplus accumulated by the said corporations, amounting to \$68,869,001.)

"7. That the aggregate actual value of the bonds and stocks issued by the city of New York, subject to the provisions of chapter 552 of the Laws of 1880, at the said period amounted to \$18,467,000.

"8. That the aggregate actual value at the same period of the shares of corporations created by States other than the State of New York, owned by the citizens of the State of New York, amounted to at least the sum of \$250,000,000.

"9. The assessed valuation of all personal property after making the deductions allowed by law, in the city of New York, (at the said period,) as shown by the annual record of the assessed valuation of real and personal estate of the said city for the year 1885, was \$302,073,906. This sum included the capital of corporations, (after making deductions for investments thereof in real estate, shares of New York corporations, taxable upon their capital stock under the laws of this State, and non-taxable securities,) as follows:

Insurance companies.....	\$2,146,370
Trust companies.....	156,508
Miscellaneous companies.....	29,234,409
Railroad companies.....	12,339,871

"It also included;

Shares of National banks.....	45,046,074
Shares of State banks.....	15,700,220

"The sum so deducted for the value of the real estate belonging to said Trust companies located in the city of New York did not exceed \$2,336,572.81.

The assessed value of the real estate in said city for said period is	\$1,168,443,137
And in the said State, including the city of New York, is.....	2,751,973,445
The latter sum including the sum of about.....	840,000,000

being the assessed value of the real estate located in said State belonging to corporations.

"The 'aggregate amount of the taxable personal estate' within the State of New York, exclusive of said city, after deducting debts due by the owners thereof for the year ending December 31, 1884, as assessed by the assessors and returned to the State comptroller, is \$151,632,369.

"This sum included the capital of corporations (after making the deductions for investments thereof in real estate, shares of New York corporations taxable upon their capital stock under the laws of this State, and non-taxable securities), of the amount of \$34,466,612.

The aggregate capital stock, taken at par, of the National banks outside of the city of New York, but within the State of New York, on December 31, 1884, as shown by the report of the Comptroller of the Currency of the United States, was.....	\$36,804,160
And that of State banks, outside of the said city, but within said State, as shown by the report of the Bank Superintendent of New York, is.....	8,128,000

Total (outside of New York city)..... \$44,932,160

The total par value of the shares of National banks in said State, including the city of New York, for the period aforesaid, is.....	\$83,064,160
And of the State banks.....	32,515,700

"10. That it is the intention of the defendants, unless restrained by injunction, to collect the said tax levied by them against the shareholders of the said complainant upon said shares by the use of all needful legal process.

"11. That any statutes of the United States or of the State of New York may be cited and relied upon before the said Court as if herein fully set forth."

From a decree dismissing the bill the present appeal is prosecuted.

THE ACT OF CONGRESS PROHIBITING UNEQUAL TAXATION.

Section 5219 of the Revised Statutes of the United States is as follows:

"Nothing herein shall prevent all the shares in any association from being included in the valuation of the personal property of the owner or holder of such shares in assessing taxes imposed by authority of the State within which the association is located; but the Legislature of each State may determine and direct the manner and place of taxing all the shares of National banking associations located within the State, subject only to the two restrictions that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual

citizens of such State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located and not elsewhere. Nothing herein shall be construed to exempt the real property of associations from either State, county, or municipal taxes to the same extent, according to its value, as other real property is taxed."

In the present case no question is raised by the appellant as to the validity of section 312, chapter 409 of the Laws of New York of 1882, considered by itself, nor in reference to the rule of valuation or assessment which it prescribes. No exception is taken to the form of assessment, nor is the case based in any degree upon the dereliction of the assessing officers in the discharge of their duties, there being no allegation and no proof that they have not performed their whole duty under the statutes of the State.

THE CLAIM OF THE BANK.

The proposition which the appellant seeks to establish is, that the State of New York, in seeking to tax National bank shares, has not complied with the condition contained in section 5219 of the Revised Statutes, that such taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State, "in that, it has by legislation expressly exempted from all taxes in the hands of the individual citizens numerous species of moneyed capital, aggregating in actual value the sum of \$1,686,000,000, whilst it has by its law subjected National bank shares in the hands of individual holders thereof (aggregating a par value of \$83,000,000), and State bank shares (having a like value of \$22,815,700), to taxation upon their full actual value, less only a proportionate amount of the real estate owned by the bank." This exemption, it is claimed, is of a "very material part relatively" of the whole, and renders the taxation of National bank shares void.

THE EXEMPTIONS CLAIMED TO RENDER THE TAX UNEQUAL AND VOID.

The exemptions thus referred to are classified as follows:

1st.—The shares of stock in the hands of the individual shareholders of all incorporated "moneyed or stock corporations deriving an income or profit from their capital or otherwise, incorporated by the laws of New York, not including Trust companies and life insurance companies, and State or National banks." The value of such shares, it is admitted, amounts to \$755,018,892.

2d.—Trust companies and life insurance companies. The actual value of the shares of stock in Trust companies amounts to \$32,018,900, and the actual value of the shares in life insurance companies amounts to \$3,540,000, which life insurance companies, it is admitted, are the owners of personal property consisting of mortgages, loans, stocks and bonds to the value of \$195,257,305.

3d.—Savings banks and the deposits therein. The deposits amount to \$437,107,501, and an accumulated surplus to \$68,669,001.

4th.—Certain municipal bonds issued by the city of New York under an Act passed in 1880, of the value of \$13,467,000.

5th.—Shares of stock in corporations created by States other than New York, in the hands of individual holders, residents of said State, amounting to \$250,000,000.

EXEMPTIONS CLAIMED TO BE WITHIN THE DECISION OF BOYER CASE.

It is argued by the appellant that these exemptions bring the case within the decision of *Boyer vs. Boyer*, 113 U. S. 689. In that case, referring to the legislation of Pennsylvania, it was said: "The burden of county taxation imposed by the latter Act has at all events been removed from all bonds or certificates of loan issued by any railroad company incorporated by the State; from shares of stock in the hands of stockholders of any institution or company of the State which in its corporate capacity is liable to pay tax into the State treasury under the Act of 1859; from mortgages, judgments, and recognizances of every kind; from moneys due or owing upon articles of agreement for the sale of real estate; from all loans, however made, by corporations which are taxable for State purposes when such corporations pay into the State treasury the required tax on such indebtedness."

This enumeration of exempted property, the amounts of which when stated in the bill and admitted by the demurrer, was held to include such a material portion relatively of the moneyed capital in the hands of individual citizens as to make the tax upon the shares of National banks an unfair discrimination against that class of property, but no attempt was made in the opinion of the Court to define the meaning of the words "moneyed capital in the hands of individual citizens" as used in the statute, or to enumerate all the various kinds of property or investments that came

within its description, or to show that shares of stock in the hands of stockholders of every institution, company or corporation of a State, having a capital employed for the purpose of earning dividends or profits for its stockholders, were taxable as moneyed capital in the hands of individual citizens.

THE CONTENTION OF APPELLEES.

It is accordingly contended on behalf of the appellees in the present case, 1st, that the shares of stock in the various companies incorporated by the laws of New York as moneyed or stock corporations, deriving an income or profit from their capital or otherwise, including Trust companies, life insurance companies, and Savings banks, are not moneyed capital in the hands of the individual citizen within the meaning of the Act of Congress; 2d, that if any of them are, then the corporations themselves are taxed under the laws of New York in such a manner and to such an extent that the shares of stock therein are subject to a tax equal to that which is assessed upon shares of National banks; and 3d, that if there are any exceptions, they are immaterial in amount and based upon considerations which exclude them from the operation of the rule of relative taxation intended by the Act of Congress.

In view of the nature of the contention between the parties to this suit, and the extent and value of the interests involved, it becomes necessary to review with care the previous decisions of this Court upon this subject, and to endeavor to state with precision the rule of relative taxation prescribed to the States by Congress on shares of National banks.

A REVIEW OF THE PREVIOUS DECISIONS.

The National Banking Act of 1864 (13 Stat. 111), in addition to the restrictions now imposed upon the State taxation of National bank shares, declared "that the tax so imposed, under the laws of any State, upon the shares of any of the associations authorized by this Act, shall not exceed the rate imposed upon the shares in any of the banks organized under the authority of the State where such association is located." In the re-enactment of this statute in 1868 (15 Stat. 84), this proviso was omitted. The case of *Van Allen vs. Assessors*, 8 Wallace, 573, was decided under the Act of 1864 as originally enacted. In that case, the taxing law of New York, which was in question, was held to be invalid, because it levied no taxes upon shares in State banks at all, the tax being assessed upon the capital of the banks after deducting that portion which was invested in securities of the United States; and it was held that this tax on the capital was not a tax on the shares of the stockholders equivalent to that on the shares in National banks. It was also decided in that case that it was competent for the States, under permission of Congress, to tax the shares of National bank stock held by individuals, notwithstanding the capital of the bank was invested in bonds of the United States which were not subject to taxation.

It appears, therefore, as the result of the decision in that case, that a tax upon the capital of a State bank, levied upon the value thereof, after deducting such part as was invested in non-taxable Government bonds, was less than an equivalent for a tax upon the shares of National banks from which no such deduction was permitted. Accordingly in the case of *People vs. The Commissioners*, 4 Wallace, 244, the complaint was made on behalf of individual owners of National bank stock taxed in New York, that no deduction was permitted to them from the value of their shares on account of the capital of the bank being invested in non-taxable Government bonds, while such deduction was allowed in favor of insurance companies and individuals in the assessment for taxation of the value of their personal property; and it was contended, therefore, that the relators in that case were taxed upon their shares of National bank stock at a greater rate than was assessed upon other moneyed capital in the hands of individual citizens. In reference to this supposed inequality the Court said: "The answer is, that, upon a true construction of this clause of the Act, the meaning and intent of the law-makers were, that the rate of taxation of the shares should be the same or not greater than upon the moneyed capital of the individual citizen, which is subject or liable to taxation. That is, no greater proportion or percentage of tax in the valuation of the shares should be levied than upon other moneyed taxable capital in the hands of the citizens. This rule seems to be as effectual a test to prevent unjust discrimination against the shareholders as could well be devised. It embraces a class which constitutes the body politic of the State, who make its laws and provide for its taxes. They cannot be greater than the citizens impose upon themselves. It is known as sound policy that in every well regulated and enlightened

State or government, certain descriptions of property and also certain institutions, such as churches, hospitals, academies, cemeteries, and the like, are exempt from taxation; but these exemptions have never been regarded as disturbing the rates of taxation, even where the fundamental law had ordained that it should be uniform." The Court then proceeded to show that the exclusion, as the subject of taxation, of Government securities held by individuals, from their moneyed capital, was by authority of the United States, and hence it would be a contradiction to infer that Congress meant to include the same Government securities as a part of that moneyed capital which it required to be taxed by the States at a rate equal to that imposed by the latter upon the shares held by individuals of National bank stock.

The other objection taken to the validity of the tax complained of was, that insurance companies created under the laws of the State were authorized to deduct from the amount of their capital and surplus profits, for purposes of taxation, such part as was invested in United States securities. In reference to this the Court said: "The answer is, that this clause does not refer to the rate of assessments upon insurance companies as a test by which to prevent discrimination against the shares; that is confined to the rate of assessments upon moneyed capital in the hands of individual citizens. These institutions are not within the words or the contemplation of Congress; but even if they were, the answer we have already given to the deduction of these securities in the assessment of the property of individual citizens is equally applicable to them."

In *Lionberger vs. Rouse*, 9 Wall., 468, it was held that the proviso originally contained in the Act of 1864, and omitted from the Act of 1868, expressly referring to State banks, was limited to State banks of issue. The Court said (p. 474): "There was nothing to fear from banks of discount and deposit merely, for in no event could they work any displacement of National bank circulation." Of course, so far as investments in such banks are moneyed capital in the hands of individuals, they are included in the clause as it now stands.

In the case of *Hepburn vs. School Directors*, 23 Wallace, 480, it was decided to be competent for the State to value, for taxation, shares of stock in a National bank at their actual value, even if in excess of their par value, provided thereby they were not taxed at a greater rate than was assessed upon other moneyed capital in the hands of individual citizens of the State. It was a further question in that case whether the exemption from taxation by statute of "all mortgages, judgments, recognizances, and moneys owing upon articles of agreement for the sale of real estate" made the taxation of shares in National banks unequal and invalid. This was decided in the negative on the two grounds, 1st, that the exemption was founded upon the just reason of preventing a double burden by the taxation both of property and of the debts secured upon it; and, 2d, because it was partial only, not operating as a discrimination against investments in National bank shares. The Court said: "It could not have been the intention of Congress to exempt bank shares from taxation because some moneyed capital was exempt."

The subject was further considered in the case of *Adams vs. Nashville*, 95 U. S., 19. One of the questions in that case had reference to an exemption from taxation by State authority of interest-paying bonds issued by the municipal corporation of the city of Nashville, in the hands of individuals. It was held that the exemption did not invalidate the assessment upon the shares of National banks. The Court said (p. 22): "The Act of Congress was not intended to curtail the State power on the subject of taxation. It simply required that capital invested in National banks should not be taxed at a greater rate than like property similarly invested. It was not intended to cut off the power to exempt particular kinds of property, if the Legislature chose to do so. Homesteads to a specified value, a certain amount of household furniture (the six plates, six knives and forks, six teacups and saucers of the old statutes), the property of clergymen to some extent, school-houses, academies and libraries are generally exempt from taxation. The discretionary power of the Legislatures of the States over all these subjects remains as it was before the Act of Congress of June, 1864. The plain intention of that statute was to protect the corporations formed under its authority from unfriendly discrimination by the States in the exercise of their taxing power."

In *People vs. Weaver*, 100 U. S., 539, it was held that the prohibition against the taxation of National bank shares at a greater rate than that imposed upon other

moneyed capital in the hands of individual citizens could not be evaded by the assessment of equal rates of taxation upon unequal valuations, and that consequently where the State statute authorized individuals to deduct the amount of debts owing by them from the assessed value of their personal property and moneyed capital subject to taxation, the owners of shares of National banks were entitled to the same deduction. The cases of *The Supervisors vs. Stanley*, 105 U. S., 305; *Hills vs. Exchange Bank*, *Ibid.*, 319; *Evansville Bank vs. Britton*, *Ibid.*, 322, and *Cummings vs. National Bank*, 101 U. S., 153, are applications of the same principle.

The rule of decision in *Van Allen vs. Assessors*, 3 Wallace, 573, is not inconsistent with that followed in *People vs. The Commissioners*, 4 Wallace, 244. In the former of these cases the comparison was between taxes levied upon the shares of the National banks and taxes levied upon the capital of State banks. In the valuation of the capital of State banks for this taxation, non-taxable securities of the United States were necessarily excluded, while in the valuation of shares of National banks no reduction was permitted on account of the fact that the capital of the National banks was invested in whole or in part in Government bonds. The effect of this was, of course, to discriminate to a very important extent in favor of investments in State banks, the shares in which *eo nomine* were not taxed at all, while their taxable capital was diminished by the subtraction of the Government securities in which it was invested, and against National bank shares taxed without such deduction at a value necessarily and largely based on the value of the Government securities in which by law a large part of the capital of the bank was required to be invested. In the case of *People vs. The Commissioners*, the comparison was not between the taxation of shareholders in National banks and of shareholders in State banking institutions, but between the taxation of the National bank shares and that of personal property held by individuals and insurance companies, from the valuation of which the deduction was permitted of the amount of non-taxable Government securities held by them respectively. The general ground of decision was, that the exemption was not an unfriendly discrimination against investments in National banks in favor of other investments of a similar and competing character. It was held that the exemption under State authority, of United States securities, which it was not lawful for the State to tax, could not be considered an unwarranted exemption in that case. It was also held that the language of the Act of Congress which fixed the rate of taxation upon National bank shares, by reference to that imposed by the State "upon other moneyed capital in the hands of individual citizens," excluded from the comparison moneyed capital in the hands of corporations, unless the corporations were of that character, such as State banks were held to be in the case of *Van Allen vs. The Assessors*, that shares of stock in them fell within the description of "moneyed capital in the hands of individual citizens." In that way a distinction was established between the shares of stock held in banking corporations and those held in insurance companies and other business, trading, manufacturing and miscellaneous corporations, whose business and operations were unlike those of banking institutions.

DEDUCTION FROM PREVIOUS DECISIONS.

It follows, as a deduction from these decisions, that "moneyed capital in the hands of individual citizens" does not necessarily embrace shares of stock held by them in all corporations whose capital is employed, according to their respective corporate powers and privileges, in business carried on for the pecuniary profit of shareholders, although shares in some corporations, according to the nature of their business, may be such moneyed capital. The rule and test of this difference is not to be found in that quality attached to shares of stock in corporate bodies generally whereby the certificates of ownership have a certain appearance of negotiability, so as easily to be transferred by delivery under blank powers of attorney, and to be dealt in by sales at the Stock Exchange, or used as collaterals for loans, as though they were negotiable security for money. This quality, in a greater or less degree, pertains to all stocks in corporate bodies, the facility of their use in this way being in proportion to the estimated wealth and credit, present or prospective, of the corporation itself. Neither is the difference to be determined by the character of the investments in which, either by law or in fact, the bulk of the capital and the accumulated surplus of the corporation is from time to time invested. It does not follow, because these are invested in such a way as properly to constitute moneyed capital, that the shares of stock in the corporations themselves must necessarily be within the same description. Such is the case of

insurance companies, in respect to which it was held, in *People vs. The Commissioners*, that shares of stock in them were not taxable as "moneyed capital in the hands of individual citizens;" and that the language of the Act of Congress does not include moneyed capital in the hands of corporations. The true test of the distinction, therefore, can only be found in the nature of the business in which the corporation is engaged.

THE POLICY AND PURPOSE OF THE ACT OF CONGRESS.

The key to the proper interpretation of the Act of Congress is its policy and purpose. The object of the law was to establish a system of National banking institutions, in order to provide a uniform and secure currency for the people, and to facilitate the operations of the Treasury of the United States. The capital of each of the banks in this system was to be furnished entirely by private individuals; but, for the protection of the Government and the people, it was required that this capital, so far as it was the security for its circulating notes, should be invested in the bonds of the United States. These bonds were not subjects of taxation; and neither the banks themselves nor their capital, however invested, nor the shares of stock therein held by individuals, could be taxed by the State in which they were located without the consent of Congress, being exempted from the powers of the States in this respect, because these banks were means and agencies established by Congress in execution of the powers of the Government of the United States. It was deemed consistent, however, with these National uses, and otherwise expedient, to grant to the States the authority to tax them within the limits of a rule prescribed by the law. In fixing those limits it became necessary to prohibit the States from imposing such a burden as would prevent the capital of individuals from freely seeking investment in institutions which it was the express object of the law to establish and promote. The business of banking, including all the operations which distinguish it, might be carried on under State laws, either by corporations or private persons, and capital in the form of money might be invested and employed by individual citizens in many single and separate operations forming substantial parts of the business of banking. A tax upon the money of individuals, invested in the form of shares of stock in National banks, would diminish their value as an investment and drive the capital so invested from this employment, if at the same time similar investments and similar employments under the authority of State laws were exempted from an equal burden. The main purpose, therefore, of Congress in fixing limits to State taxation on investments in the shares of National banks, was to render it impossible for the State, in levying such a tax, to create and foster an unequal and unfriendly competition, by favoring institutions or individuals carrying on a similar business and operations and investments of a like character. The language of the Act of Congress is to be read in the light of its policy.

MEANING OF "OTHER MONEYED CAPITAL."

Applying this rule of construction, we are led, in the first place, to consider the meaning of the words "other moneyed capital," as used in the statute. Of course it includes shares in National banks; the use of the word "other" requires that. If bank shares were not moneyed capital, the word "other" in this connection would be without significance. But "moneyed capital" does not mean all capital the value of which is measured in terms of money. In this sense, all kinds of real and personal property would be embraced by it, for they all have an estimated value as the subjects of sale. Neither does it necessarily include all the forms of investment in which the interest of the owner is expressed in money. Shares of stock in railroad companies, mining companies, manufacturing companies, and other corporations, are represented by certificates, showing that the owner is entitled to an interest expressed in money value, in the entire capital and property of the corporation, but the property of the corporation which constitutes its invested capital may consist mainly of real and personal property, which, in the hands of individuals, no one would think of calling moneyed capital, and its business may not consist in any kind of dealing in money, or commercial representatives of money.

So far as the policy of the Government in reference to National banks is concerned, it is indifferent how the State may choose to tax such corporations as those just mentioned, or the interest of individuals in them, or whether they should be taxed at all. Whether property interest in railroads, in manufacturing enterprises, in mining investments and others of that description, are taxed or exempt from taxation, in the

contemplation of the law, would have no effect upon the success of National banks. There is no reason, therefore, to suppose that Congress intended, in respect to these matters, to interfere with the power and policy of the States. The business of banking, as defined by law and custom, consists in the issue of notes payable on demand, intended to circulate as money where the banks are banks of issue; in receiving deposits payable on demand; in discounting commercial paper; making loans of money on collateral security; buying and selling bills of exchange; negotiating loans and dealing in negotiable securities issued by the Government, State and National, and municipal and other corporations. These are the operations in which the capital invested in National banks is employed, and it is the nature of that employment which constitutes it in the eye of this statute "moneyed capital." Corporations and individuals carrying on these operations do come into competition with the business of National banks, and capital in the hands of individuals thus employed is what is intended to be described by the act of Congress. That the words of the law must be so limited appears from another consideration; they do not embrace any moneyed capital in the sense just defined, except that in the hands of individual citizens. This excludes moneyed capital in the hands of corporations, although the business of some corporations may be such as to make the shares therein belonging to individuals moneyed capitals in their hands, as in the case of banks. A railroad company, a mining company, an insurance company, or any other corporation of that description, may have a large part of its capital invested in securities payable in money, and so may be the owners of moneyed capital; but, as we have already seen, the shares of stock in such companies held by individuals are not moneyed capital.

The terms of the act of Congress, therefore, include shares of stock or other interests owned by individuals in all enterprises in which the capital employed in carrying on its business is money, where the object of the business is the making of profit by its use as money. The moneyed capital thus employed is invested for that purpose in securities by way of loan, discount or otherwise, which are from time to time, according to the rules of the business, reduced again to money and reinvested. It includes money in the hands of individuals employed in a similar way, invested in loans, or in securities for payment in money, either as an investment of a permanent character, or temporarily with a view to sale or repayment and reinvestment. In this way the moneyed capital in the hands of individuals is distinguished from what is known generally as personal property. Accordingly, it was said in *Evansville Bank v. Britton*, 105 U.S. 322: "The act of Congress does not make the tax on personal property the measure of the tax on the bank shares in the State, but the tax on moneyed capital in the hands of the individual citizens. Credits, money loaned at interest, and demands against persons or corporations are more purely representative of moneyed capital than personal property, so far as they can be said to differ. Undoubtedly there may be said to be much personal property exempt from taxation without giving bank shares a right to similar exemption, because personal property is not necessarily moneyed capital. But the rights, credits, demands, and money at interest mentioned in the Indiana statute, from which *bona fide* debts may be deducted, all mean moneyed capital invested in that way."

This definition of moneyed capital in the hands of individuals seems to us to be the idea of the law, and ample enough to embrace and secure its whole purpose and policy.

TAXATION OF CORPORATIONS OTHER THAN TRUST COMPANIES AND SAVINGS BANKS.

From this view, it follows that the mode of taxation adopted by the State of New York, in reference to its corporations, excluding for the present, Trust companies and Savings banks, does not operate in such a way as to make the tax assessed upon shares of National banks at a greater rate than that imposed upon other moneyed capital in the hands of individual citizens.

This is the conclusion reached on similar grounds by the Court of Appeals of New York. In the case of *McMahon v. Palmer*, 102 N.Y. 176, that Court said: "Our system of laws, with reference to the taxation of incorporated companies and capital invested therein, has been carefully framed with a view of reaching all taxable property and subjecting it to equality of burden, so far as that object is attainable in a matter so complex. In view of the wide variation in the employable value of such investments and the frequent mutations of their conditions, it is by no means certain that this object has not been attained with reasonable accuracy. It is quite clear, from even this cursory review of the statutes, that if any discrimination is made by our laws in

taxing capital invested, it is not to the prejudice of that employed in banking corporations. Even if this were not the result of the statute, we are of opinion that investments in the shares of companies named do not come within the meaning of that clause in the Federal statutes, referring to other moneyed capital in the hands of individuals. That phrase, as generally employed, distinguishes such capital from other personal property, and investments in the various manufacturing and industrial enterprises. And this is the sense in which it is used in our tax laws, as appears by reference to the statutes."

THE CASES OF TRUST COMPANIES AND SAVINGS BANKS CONSIDERED.

The cases of Trust companies and Savings banks require separate consideration. Section 312 of Chapter 409 of the Act of 1882 is a re-enactment of Section 8 of Chapter 596 of the Laws of 1880, except that in the latter Trust companies were included with banks and banking institutions, so as to subject the stockholders therein to the same rule of assessment and taxation on the value of their shares of stock. The present statute omits them from the corresponding section. The consequence is that Trust companies are taxable, as other corporations under the Act of 1887, for local purposes, upon the actual value of their capital stock. By Chapter 361 of the Laws of 1881, as amended, they are subjected to a franchise tax in the nature of an income tax, payable to the State for State purposes. It is argued, from this legislation, in reference to the taxation of Trust companies, that it discloses an evident intent to discriminate in favor of the latter as between them and the banks, including National banks: and it is argued that, considering the nature of the business in which Trust companies are engaged, it is a material and unfriendly discrimination in favor of State institutions engaged to some extent in a competing business with that of National banks. Trust companies, however, in New York, according to the powers conferred upon them by their charters and habitually exercised, are not in any proper sense of the word banking institutions. They have the following powers: To receive moneys in trust and to accumulate the same at an agreed rate of interest; to accept and execute all trusts of every description committed to them by any person or corporation or by any Court of Record; to receive the title to real or personal estate on trusts created in accordance with the laws of the State, and to execute such trusts; to act as agent for corporations in reference to issuing, registering and transferring certificates of stock and bonds, and other evidences of debt; to accept and execute trusts for married women in respect to their separate property, and to act as guardian for the estates of infants. It is required that their capital shall be invested in bonds and mortgages on unincumbered real estate in the State of New York worth double the amount loaned thereon, or in stocks of the United States or of the State of New York, or of the incorporated cities of that State.

It is evident, from this enumeration of powers, that Trust companies are not banks in the commercial sense of that word, and do not perform the functions of banks in carrying on the exchanges of commerce. They receive money on deposit, it is true, and invest it in loans, and so deal, therefore, in money and securities for money in such a way as properly to bring the shares of stock held by individuals therein within the definition of moneyed capital in the hands of individuals, as used in the Act of Congress. But we fail to find in the record any sufficient ground to believe that the rate of taxation, which, in fact, falls upon this form of investment of moneyed capital, is less than that imposed upon shares of stock in National banks.

It appears from the tax laws of New York applicable to the subject, as judicially construed by the Court of Appeals of that State, that the capital stock of such a corporation is to be assessed at its actual value. The actual value of the whole capital stock is ascertained by reference, among other standards, to the market price of its shares, so that the aggregate value of the entire capital may be the market price of one multiplied by the whole number of shares. (*Oswego Starch Factory vs. Dolloway*, 21 N. Y., 449; *The People vs. The Commissioners of Taxes*, 96 N. Y., 554.) From this are to be deducted, of course, the real estate of the corporation otherwise taxed, and the value of such part of the capital stock as is invested in non-taxable property, such as securities of the United States. In addition to this, the corporation, as already stated, pays to the State, as a State tax, a tax upon its franchise based upon its income, the tax on the capital being for local purposes.

It is evident, we think, that taxation in this mode is, at least, equal to that upon the shares of individual stockholders, for if the same property was held for the same uses and taxed by the same rule, in the hands of individuals, as moneyed capital, it

would be subject to precisely the same deductions; in addition to which, the individual would be entitled to make a further deduction of any debts he might owe. Upon these grounds, therefore, we are of opinion that this mode of taxing Trust companies does not create the inequality which the appellant alleges.

THE CASE OF SAVINGS BANKS.

In the case of Savings banks, we assume that neither the bank itself nor the individual depositor is taxed on account of the deposits. The language of the statute (section 4, chapter 456, Laws of 1857) is as follows: "Deposits in any banks for savings, which are due to the depositors, * * * shall not be liable to taxation, other than the real estate and stocks which may be owned by such bank or company, and which are now liable to taxation under the laws of this State."

According to the stipulation in this case, the deposits in such banks amount to \$437,107,501, with an accumulated surplus of \$68,669,001. It cannot be denied that these deposits constitute moneyed capital in the hands of individuals within the terms of any definition which can be given to that phrase; but we are equally clear that they are not within the meaning of the Act of Congress in such a sense as to require that, if they are exempted from taxation, shares of stock in National banks must thereby also be exempted from taxation. No one can suppose for a moment that Savings banks come into any possible competition with National banks of the United States. They are what their name indicates, banks of deposit for the accumulation of small savings belonging to the industrious and thrifty. To promote their growth and progress is the obvious interest and manifest policy of the State. Their multiplication cannot in any sense injuriously affect any legitimate enterprise in the community. We have already seen that, by previous decisions of this Court it has been declared that "it could not have been the intention of Congress to exempt bank shares from taxation because some moneyed capital was exempt;" *Hepburn vs. School Directors*, 23 Wallace, 480; and that "the Act of Congress was not intended to curtail the State power on the subject of taxation. It simply required that capital invested in National banks should not be taxed at a greater rate than like property similarly invested. It was not intended to cut off the power to exempt particular kinds of property, if the Legislature chose to do so." *Adams vs. Nashville*, 95 U. S., 19. The only limitation, upon deliberate reflection, we now think it necessary to add, is that these exemptions should be founded upon just reason, and not operate as an unfriendly discrimination against investments in National bank shares. However large, therefore, may be the amount of moneyed capital in the hands of individuals, in the shape of deposits in Savings banks as now organized, which the policy of the State exempts from taxation for its own purposes, that exemption cannot affect the rule for the taxation of shares in National banks, provided they are taxed at a rate not greater than other moneyed capital in the hands of individual citizens otherwise subject to taxation.

THE EXEMPTION OF MUNICIPAL BONDS.

It is further objected, on similar grounds, to the validity of the assessment complained of in this case, that municipal bonds of the city of New York, to the amount of \$13,467,000, are also exempted from taxation. The amount of the exemption in this case is comparatively small, looking at the whole amount of personal property and credit which are the subjects of taxation; not large enough, we think, to make a material difference in the rate assessed upon National bank shares; but, independently of that consideration, we think the exemption is immaterial. Bonds issued by the State of New York, or under its authority by its public municipal bodies, are means for carrying on the work of the Government, and are not taxable even by the United States, and it is not a part of the policy of the Government which issues them to subject them to taxation for its own purposes. Such securities undoubtedly represent moneyed capital, but as from their nature they are not ordinarily the subjects of taxation, they are not within the reason of the rule established by Congress for the taxation of National bank shares.

THE EXEMPTION OF SHARES OF FOREIGN CORPORATIONS IN THE HANDS OF CITIZENS OF NEW YORK.

The same considerations apply to what is called an exemption from taxation of shares of stock corporations created by other States and owned by citizens of New York, which it is agreed amount to at least the sum of \$250,000,000. It is not pretended, however, that this exemption is based upon the mere will of the legislature of the State. The courts of New York hold that they are not the proper subjects of taxation

in the State of New York, because they have no situs within its territory for that purpose. *Hoyt vs. The Commissioners of Taxes*, 23 N. Y. 224; *People, ex rel. etc. vs. The Commissioners*, 4 Hun, 595. The objection would be equally good if made to the non-taxation of real estate owned by citizens of New York, but not within its limits. Clearly the property to be taxed under the rule prescribed for the taxation of national bank shares must be property which, according to the law of the State, is the subject of taxation within its jurisdiction.

Upon these grounds, substantially the same as those on which the Circuit Judge proceeded, 28 Fed. Rep. 776, we are of opinion that the appellant is not entitled to the relief prayed for.

The decree of the Circuit Court is, therefore, affirmed.

Mr. Justice Blatchford took no part in the decision of this case.

Improved Banking Forms (REMITTANCE AND COLLECTION REGISTERS).—

In all banks—whether large or small—the business of collecting and remitting is the most tedious and laborious. Anything valuable offered in the way of improvements on the old methods should, and doubtless will, receive encouragement by bankers generally. On the following pages are shown the forms of new Remittance and Collection Registers which certainly possess merit and seem to be very easily understood and adapted to use in banks of all classes handling collections. The books are devised and copyrighted by E. M. Longcope and F. R. Malone, of the First National Bank, Lampasas, Tex., and these gentlemen write that they have tested the books thoroughly by use in their own bank for a number of months before introducing the system to the banking public.

One of its great merits is simplicity as well as economy of time. Each book contains two hundred and fifty pages, having four forms on each page and registering one thousand items. The Remittance Register has one thousand charge tickets, one thousand remittance sheets or letters, and registers the same number of items. The Collection Register contains one thousand acknowledgment blanks, the same number of remittance blanks, and also registers one thousand items.

The Remittance Registers can also be made, if desired, with the correspondents' names printed in, the same as in draft books, thus saving much time in filling out and using the forms.

Messrs. Longcope and Malone state that they have succeeded in getting the price of the books fixed at such a reasonable figure as to render them in fact both "labor and money savers."

A number of banks—large and small—have already introduced the books, and after using them for several months are practically unanimous in their opinion that the following advantages are secured, viz.: saves time, stationery and largely in salaries—no need of letter-copying, no mistakes in numbers and no possible oversight in checking up and reporting collections.

It has been noticed that there is a disposition among a few book-keepers to keep in the old grooves and to look with suspicion upon anything that claims to be an improvement on the old-time methods. Innovations, as they are termed, are avoided by some bank clerks no matter how valuable, but experience shows that as a rule the good things, which are devised by practical bankers, will command attention when they are brought before the men who do the work in banks. There have been marked improvements in book-keeping in recent years—though as a whole the system is far from perfect—and it must be admitted that the machinery of practical banking ought to run more smoothly, with less wear and tear, than it now does in many departments.

In this progressive age, safety appliances and devices to save time and money are coming to the front, and bank workers, whether they be Cashiers, Tellers, book-keepers or general clerks, will certainly not be slow in accepting new ideas of real merit. They, of all others, should be first and foremost in adopting improvements which will save worry and much valuable time.

It is confidently hoped that readers of the JOURNAL—especially bankers who wish to improve their methods of handling collections—will give these Registers a careful examination, and, if they possess the advantages claimed, not hesitate to put them into practical use.

NEW YORK FINANCIAL LEGISLATION.

[From the JOURNAL'S correspondent at Albany.]

A large number of bills affecting taxation, banking and other financial interests have been introduced in both Houses of the Legislature.

Mr. Silas B. Dutcher, who a year ago resigned an influential position at the Capital to accept the Presidency of the Union Dime Savings Bank, visited Albany to look after Senator Cullen's bill to compel Savings banks to report annually to the Superintendent of the Banking Department the names of all depositors whose deposits have remained untouched for twenty years, together with the whole amount credited to each of such depositors, and the amount and date of the last deposit. These names, amounts and dates, so reported, are also to be published annually by the State Superintendent in his report. President Dutcher says it would make the report of the Banking Department exceed in size an unabridged dictionary, and that the publication of these matters would subserve no useful purpose. It is claimed by the promoters of the bill that its passage will result in the restoration to the actual owners of millions of dollars now controlled by Savings bank trustees and employed by them for private vantage, which are now withheld as "unclaimed deposits." This bill passed the Senate on the 21st of April, after previously failing through absenteeism. A third reading in the Senate was objected to on the 22d by Mr. Erwin, of the Committee on Banks, who is said to be a close friend of Mr. Dutcher, and likely to render him valuable assistance in his efforts to defeat the bill.

The principal other measures affecting financial interests are the Brokers' Tax bill, the various corporation tax bills, and the Telephone bill. The Brokers' bill has passed the Senate and has been reported favorably by the Assembly Committee on Ways and Means by a vote of 6 to 5. It is now in Committee of the Whole. Any prediction as to the ultimate action by the House would be entirely futile.

The corporation tax bills are too numerous for mention. Almost every legislator has some proposition of this kind. Among the bills which are likely to pass is that of Mr. Cole, of Schuyler, repealing the percentage tax of 1880 on the premiums of life insurance companies. This Act was contested in the Courts, and has been but recently held to be constitutional. Little if any revenue has as yet accrued from it, and several millions of back taxes remain unpaid.

The Telephone bill restricts the charges of telephone companies. It was introduced by Senator Cullen, and passed the Senate without much opposition. When it reached the House the companies became alarmed, and began active work to defeat the measure. These efforts are likely to prove successful, and it is said that the Committee of Ways and Means has decided to kill the bill, although final action has not as yet been taken.

The Subway Commission bill is in general orders in the House.

Comptroller Chapin's bill to tax the indebtedness of corporations has passed the House and is now in the hands of the Senate. It will probably pass.

The bill repealing the act regarding warehouse receipts, which allows more than six per cent. interest, is fathered by Senator Cullen and Assemblyman Finn. It is now in the Committee of the Whole in the House.

Questions Proposed.—A correspondent of the JOURNAL writes: "I notice in the last number of the *Century Magazine* quite an interesting collection of letters from various musical people in regard to international copy-right for musical compositions. Do you not think it would be interesting to get up something of the sort for the JOURNAL?" The following questions were suggested:

Is the National bank system worth preserving?

Is there any probability of a premium on gold?

When overdrafts come through the Clearing-House, should all the checks be sent back, or should the bank pay what it can and send the rest back?

What is the best method of preventing defalcations?

We will be glad to publish concise letters on any of these subjects.

BOSTON BANKERS' ASSOCIATION.**COMPTROLLER TRENHOLM AND OTHERS AT THEIR SECOND ANNUAL DINNER.**

The second annual dinner of the Bank Officers' Association, of Boston, took place on April 18th at the Parker House. A large number of representative banking men were present, and the whole company numbered over two hundred. President A. F. Luke sat at the head of the table. On his right were seated Hon. W. L. Trenholm, Comptroller of the Currency; Governor Ames, Hon. S. N. Aldrich, Assistant Treasurer of the United States, and J. M. Magruder, National Bank Examiner.

At the close of the dinner President Luke called the company to order, and after alluding to the prosperity of the Association, said: "I think that you will all agree with me when I state that it is my firm conviction that the banking fraternity of this city is stronger and better to-day than ever it was before, and that to-morrow it will be stronger and better than it is to-day. When we bear in mind the enormous increase and accumulation of wealth in the last five years, the importunities for accommodation that bankers are subject to, the opportunities for personal profit that are constantly being placed before them, and the tremendous increase in speculation, I say that, as a class, it is an extraordinarily honest class, and I, for one, am proud of my profession. In the first place, the National part of our business is rapidly nearing its minimum, and the time is very near at hand when the Government must either change its relations to the banks, or the banks must change their relations to the Government. When the present system was adopted the National was the biggest part of it, whereas now it is almost merely an expensive ornament, and upon the man who shall solve this problem successfully will abundant fame descend. In this age there is no need to mention examples to teach us that there is nothing so fickle as fortune, nothing so real as true friendship. Whether our Association has a well filled treasury or not, it does not, in my opinion, matter so much as whether its members become more unselfishly interested in one another or not. We want to add to the magnetism of personal association, and the good old fashion of loving and helping. When we have made an advance in this direction we may well be proud of our institution, and may rest assured it will not lack encouragement and support."

Governor Ames extended a warm greeting to the bankers and their guests.

The President then introduced the Hon. W. L. Trenholm as a son of the sister State of Massachusetts, the State of South Carolina. Col. Trenholm said: "I was anxious to come to Boston to meet face to face the men who actually do the hard work at the banks. There are, perhaps, over 100,000 persons who hold the junior positions in the different banks throughout the country. We are very apt to hear of the hard-working class, the so-called horny-fisted sons of toil, but no one ever thinks of these thousands of clerks who work day and night in their different vocations that these very sons of toil may receive the wages due them. Have we no right to be considered in the division of the results and the profits of this country just because we do not work with our hands? These laborers are making a big mistake when they cry down the people who are willing and ready to be classed with them, and in all the work they do it is practically for the benefit of the working class. Banking is practically a modern institution. We expect so much that perhaps we are impatient as to the results of our profession. The growth of the banking system has been rapid, and we should be satisfied with the results so far attained. The problem of poverty is another problem which we have to solve, and in my opinion we stand now upon the threshold of the door which is opening to the solution of this great problem. I bring this simile in to show that we all belong to the great army of workers, and must each do his work for the better advancement of humanity. Your President has made the remark of your nearness to Canada. I asked him how many, if any, Boston men had taken advantage of this. He informed me of one. I was much surprised, as I had not expected any. You perhaps remember the great wall which is built upon the northern border of China. Now, the Chinese are the oldest of banking nations. I have been recently informed that this wall was built to prevent the escape north. Since it was built there have been

few absconding bank officials from China. I am glad to see the harmonious feeling between the banks of Boston, that they appreciate the Examiner, and am also glad to see they are making money. It is said that the Yankees are all outside of Boston, and that they never show their appreciation for anything that does not pay. I cannot see the truth of this statement when I look upon this assembly before me and see the satisfied looks of the members of this Association."

Rev. Phillips Brooks, who was the next speaker, said that one bank officer might feel embarrassed in the presence of two hundred clergymen, and one clergyman might feel out of place in an assembly of two hundred bankers. It is with awe and reverence, he said, that I look round upon you to whom the great king Money is so familiar. You have seen him when he is easy, you have seen him when he is tight. Money is an object of desire to many, an object of envy to most of us. Every occupation has its special object and attendant skill. It must be a science, it must come down to things that are essentially true. The arts of bankers and ministers are wholly dissimilar. But when we meet on the same level we recognize the true basis of our respective occupations. Your art and science are helping the progress of mankind; your art is the business that is fundamental to all business.

The Hon. S. N. Aldrich was next introduced, and responded in a very happy vein. He referred to a bank appointment which the Governor was about to make, and hoped that he would choose some one from the many competent banking men of Boston—one who had had experience and one not bound by any political ties. Mr. Aldrich spoke of his new work as the Sub-Treasurer, and hoped he should so conduct the affairs of his office that he should satisfy all.

Professor William Everett, of Quincy, made some facetious remarks upon banks and their officials, and said these officers never made mistakes, but that it was always "the poor depositors."

Mr. Charles W. Stone, the Secretary, presented his report. He said that one year ago the membership numbered 320. At present it is 367, representing 56 National banks and 11 Savings banks, the Bank Examiner and the Clearing-House. The list includes seven Presidents and forty-one Cashiers. Three National and two Savings banks are not as yet represented. Three deaths have occurred in the Association during the past year.

In the course of the evening there was singing by a glee club composed of members of the Association, a duet by Messrs. Monahan and Bell, and a solo by Mr. Samuel King; Mr. A. D. Davenport gave imitations of Henry Irving, and the exercises closed with the singing of "Auld Lang Syne."

The arrangements for the dinner were made by the following-named committee: A. F. Luke, S. L. Treadwell, T. Frank Pratt, Alfred Ewer, E. A. Church and J. D. Ferguson.

The Western National Bank, of New York city, opened for business at its rooms in the Equitable building on Tuesday, May 10th. Its Board of Directors on April 14th called for the payment of the balance due on capital stock on May 2d.

The Kansas Investors' Guide, issued by Hodges & Knox, Mortgage and Loan Brokers, of Topeka, Kan., gives information interesting to those who have invested or may wish to invest in Kansas securities. The pamphlet furnishes an abstract of the laws of Kansas relating to real estate, mortgages, taxation, etc. The character of the loans made by the firm and their method of doing business are fully set forth, together with such detailed information as will direct those who may wish to make investments through them. The method of conducting the business by Messrs. Hodges & Knox appears to be exceedingly careful and conservative. Loans are made on real estate to the amount of one-third of its reasonable valuation. The annual rate of interest is 8 per cent., payable semi-annually. The lender has no expenses to pay, all charges connected with the loan being liquidated by the borrower. The utmost precautions are taken as to the title of the property upon which money is advanced. The loans made vary from \$200 to \$10,000. Interest is paid upon money from the time it is received until permanent investment is secured. For those not having a sum large enough to make a real estate loan, a savings department has been established by the firm, where deposits in amounts of not less than \$25 nor more than \$200 are received, for which time certificates of deposit are issued, on which 7 or 8 per cent. interest is paid, according to the time the money is left. For further details, attention is directed to the advertisement in this issue of the JOURNAL.

COMMERCIAL PAPER.**A PLAN TO VERIFY THE SIGNATURES OF MAKERS AND INDORSERS.**

The action of the Board of Presidents of the Philadelphia banks, taken on April 4th, by which notices of all notes and acceptances received by them will be sent to the makers forthwith, is a step in the right direction. The crime of forgery has within recent years become a serious menace in banking. Bankers and money-lenders take the most elaborate precautions to ascertain the standing, capital and worth of business firms or individuals on whose paper they lend money, but heretofore the extremely confidential character of transactions of this kind has, to some extent, precluded the complete protection against forgeries and over-issues which should be provided. The banks of Philadelphia in the Clearing-House have nearly ninety millions of loans.

The private banks and bankers, Trust companies and money-lenders have many millions more. It is quite probable that these loans are represented by at least one hundred thousand separate promissory notes or acceptances of drafts, some with collaterals, but a large portion of them without. In making each transaction the banker has carefully scrutinized the paper with reference to the financial standing of the borrower, maker or indorser, but in many cases without the absolute knowledge of the genuineness of signatures. The confidential relations of borrower and lender have heretofore largely prevented this, and it has been the knowledge of this shortcoming that has enabled the skilful business men who have successfully conducted the recent forgeries to carry on their systems of crime. In banking the lender deals only with his customer, who may be either a depositor at bank or a broker who brings him the note or acceptance. The piece of paper is made or accepted usually by a stranger, and often indorsed by a stranger, in the sense of having no direct dealings with the lender in the particular transaction. In many cases the maker and indorser, when the note passes from them to the broker, never know until maturity where the money has been borrowed. The banker who has loaned the money may be personally acquainted with the borrower or maker of the note, but so confidential is the matter that it is rarely spoken of. The broker, of course, guarantees the signatures as to their genuineness, but recent developments show that even the most experienced brokers have not had the accurate knowledge necessary to fortify their guarantee.

The shortcomings of the system are shown by the method pursued in conducting recent successful forgeries. In Hilgert's case forgeries were made of the signatures of some of the most prominent sugar dealers in the country, and not only their signatures but also their peculiar styles of paper, printing and inks were imitated; and one of the most careful and prominent firms of note brokers was duped by Hilgert's artistic villainy. In Hunter's case the forger successfully dovetailed a line of forged paper into a line of genuine paper, even imitating private marks upon which the maker of the genuine notes relied as a test, and he thus for years hoodwinked another firm of note brokers of high standing who usually placed this paper at the head of their list. In Holl's case the forged notes and acceptances were not directly discounted at bank, but were used as collaterals for his own discounts. In each case the forger depended for the success of his crime upon the knowledge that the confidential character of banking would prevent the money-lender from communicating with the maker or acceptor until maturity, and if at maturity the note or draft was taken up or renewed he would be safe. The long careers of both Hilgert and Hunter showed the shrewdness of their calculation. In Holl's case detection came through the banker opening communication with an alleged borrower, and thus discovering the forgery. The new rule, by notifying makers and acceptors immediately upon receipt of their paper, will thus be a protection all around, and it is a commendable addition to the safeguards of banking.

The following is the resolution adopted by the unanimous vote of the banks of the Philadelphia Clearing-House Association:

Resolved, By the Associated Banks of the city of Philadelphia, that, as soon as practicable after discounting paper for customers and others, notice of the maturity of such paper shall be sent to the maker or makers thereof, whether payable at bank or elsewhere.

STATE BANKS OF MINNESOTA.

The following is an abstract of the reports made to the Hon. Henry M. Knox, Superintendent of Banks, by the State banks of Minnesota of their condition on Saturday, March 12, 1887. The abstract of the condition of the same banks on July 31, 1886, is added for the purpose of comparison:

RESOURCES.	March 12, 1887. 50 banks.	July 31, 1886. 41 banks.	Changes.
Loans and discounts.....	\$13,769,101 98	\$12,375,050 78	Inc., \$1,394,051 20

Total liabilities.....	\$19,429,112 87	\$16,581,225 31	Net inc., \$2,847,887 56

A. B. Mygatt, Esq., until recently National Bank Examiner for the State of Connecticut, in which position he was both efficient and popular, and now President of the First National Bank, of New Milford, Conn., is pleased to speak highly of the JOURNAL. He says: "I regard the JOURNAL as a work of great value, and it is so regarded by all bankers who are familiar with it."

A Valuable Book.—"THE BANKERS' DIRECTORY AND COLLECTION GUIDE, published by Bradford Rhodes & Co., is a valuable book for bankers. It contains a list of all banking institutions throughout the United States and Canada. It also publishes in the same volume the law on many points as it exists in each State, which is of great benefit to all business men throughout the country."—*Chautauqua* (N. Y.) News.

Mr. Claudius B. Patten, referred to in the following notices from Boston papers, was well known to our readers as the author of the valuable series of articles on "Practical Banking," which appeared from month to month in the JOURNAL, and will shortly be issued in book form:

Americans who write books about visits to England are fond of telling of their enjoyment of the hospitalities of the nobility. By-and-by we hope some American will return from that country able and not ashamed to tell us something about the homes of the bluff, hospitable common people.—*Traveller*.

This was done in a series of sketches by the late Claudius B. Patten, which was recently published in book form. Mr. Patten travelled on foot through many interesting portions of England, mixed and talked with laborers, farmers, workmen, and the common people generally, and gave the results of his investigations.—*Commercial Bulletin*.

UNIQUE CHECKS AND DRAFTS.—Signatures, although oftentimes difficult to decipher, do not monopolize all that is curious in banking. Dealing with bankers in every section of the country, we have an opportunity of inspecting a great variety of checks and drafts which reflect, in many cases, individual traits and peculiarities, but are frequently remarkable for the beauty and good taste displayed. We have received checks that, in the gorgeousness of their make-up, fairly eclipsed "Solomon in all his glory." The greatest ingenuity is often shown, in indicating in the design of the check the character of the business in which the banker drawing it is chiefly engaged.

The illustration shown herewith is a *fac-simile* of the draft used by Mr. G. A. Singer, Banker, Monroe, La. As he lives in the cotton-growing section his business is largely with those who handle that commodity. The background of the check, therefore, is intended to represent a pile of cotton bales. The artist, perhaps, was not quite equal to the occasion, for we understand that the representation is not as good as Mr. Singer expected it would be. On the whole the check is striking in its appearance, and combines the useful with the beautiful in an admirable manner.

BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Appointment of Second Comptroller.—Sigourney Butler, a young Massachusetts lawyer, and son of the Receiver of the Pacific National Bank, of Boston, has been appointed Second Comptroller of the Treasury, in place of Judge Maynard, made Assistant Secretary.

Deposits of U. S. 4½ % Bonds.—The deposits of four and four and a half per cent. bonds to secure National Bank circulation continues to exceed in amount the estimates and expectation of the Treasury officials. The New York, Philadelphia and New England Banks especially are manifesting a disposition to increase their circulation.

New Bankruptcy Law.—A bill is in preparation in the Massachusetts Legislature, amending the Bankrupt Law of the State. The chief defect sought to be removed is the inability of Trustees of a bankrupt to make a sale of his property, which will give a good title as against an assignee appointed by the Court in subsequent proceedings against the bankrupt.

The Bank of Tennessee.—This is an old institution, chartered in 1837, the capital of which was owned by the State. It made an assignment in 1866, and the State seized its funds, leaving the depositors unpaid. The Senate of the State has passed a bill for the relief of the depositors by the issue of bonds to the amount of \$800,000. This sum, in bonds, is to be divided pro rata among the depositors.

Inter-State Commerce Commissioners appointed by the President are: Thomas M. Cooley, of Michigan, for the term of six years. William R. Morrison, of Illinois, for the term of five years. Augustus Schoonmaker, of New York, for the term of four years. Aldace F. Walker, of Vermont, for the term of three years. Walter L. Bragg, of Alabama, for the term of two years. Mr. Chas. P. Young, of New York city, has been appointed Secretary and Stenographer.

Suits Against the United States.—The Act of March 3, 1887, permits suits to be brought against the Government, in the Court of Claims or United States District Courts, where the claim does not exceed \$1,000, and in the Circuit Courts where it exceeds \$1,000 and does not exceed \$10,000. The suits are to be tried without a jury, and appeals may be taken. Four per cent. interest is allowed on judgments until Congress makes appropriation to pay them.

Election of officers of Boston Clearing-House.—The annual election of officers of the Boston Clearing-House recently resulted as follows: Chairman, James H. Beal; Secretary, N. G. Snelling. Clearing-House Committee: R. E. Demmon, Charles O. Billings, George Ripley, George S. Bullens, and Walter S. Blanchard. The annual report shows the aggregate exchanges for the year ended March 31st to have been \$4,128,333,964; this is \$406,667,012 larger than the exchanges for the preceding year. The balances were \$486,470,140, an increase of \$8,838,220 over those of the year before.

Dead Savings Bank Depositors.—There is a popular belief in New York that a large part of the \$300,000,000 deposited in the Savings Banks of the State is the property of dead people who have left behind no evidence of their deposits. The officers of the Banks, however, say that the unclaimed deposits are small. The fact is that deposits are sometimes made secretly, and are left undisturbed for years, by persons who hope to make some provision for old age, and do not care to have their friends know how much they have saved. The secret is with the bank and it ought to be kept. There are cases, doubtless, of deposits belonging to deceased persons, and Savings Banks should endeavor to find out and notify the heirs in such cases, if they do not appear of their own accord.—*Springfield Mass. Union.*

Over-payments on Checks.—An interesting question has just been decided by the Supreme Court. It appears that in 1879 the bookkeeper of a prominent business house went to a bank and received cash on a check. The paying teller by mistake handed him \$200 over the sum called for. In time the bank accounts showed a deficit. The loss was finally located. Suit was brought against the firm, to whom the bookkeeper had faithfully handed over the money. The statute of limitations was pleaded by the firm ineffectually. That \$200 mistake of the bank teller must be paid for with interest. —*Boston Commercial Bulletin*.

Stock Exchange Nominations.—The nominating Committee of the New York Stock Exchange have named the following regular ticket to be voted on at the election in May: President, J. D. Smith; Treasurer, D. C. Hays; Secretary, Geo. C. Ely; Chairman, James Mitchell; Vice-Chairman, Alex. Henriques; members of the Governing Committee for four years, Donald Mackay, W. B. Lawrence, James Weeks, A. B. Hill, W. H. Johnson, J. B. Williams, Charles Minzesheimer, H. T. Cary, A. J. Ormsbee, W. H. Donald; for three years, W. H. Granberry; for one year, R. B. Whittemore, and trustee of the gratuity fund, W. E. Strong.

Curious Redemptions of Mutilated Notes.—About \$100 in National Bank notes had been placed in a small tin can for security, and afterwards caught fire and were burned to a crisp. When recovered they were a black, charred mass. The package was submitted to experts, and notes to the amount of \$50 were taken from it in small sections and easily identified. A check for that amount was mailed to the owner. In another case the experts were called upon to examine small pieces of pulp, which, it was explained, were all that remained of a pocketbook containing about \$200, which a Western farmer had dropped in a field while at work, and which had been torn to pieces by a pig, which had chewed it until it began to taste badly, and then spit it out in pieces as he trudged along the pasture. All that could be found were sent to the Treasury, where enough remnants were discovered to entitle the farmer to \$40 in good money. —*Boston Transcript*.

Bank Legislation in Dakota.—The JOURNAL's Western Correspondent, writing from Bismarck, says: "The Dakota Legislature adjourned without the passage of a law adverse to the interests of the banks and bankers; but, much to the surprise of those not acquainted with the situation, they repealed the misdemeanor clause of the statute on usury, which was a step in the right direction. The friends of the banks thought it almost a hopeless case at the beginning, with thirty-two farmers in the lower House of forty-eight members; but the Dakota Bankers' Association had appointed a Committee on Legislation at their last convention, and this committee took steps to have a bill for the repeal of the obnoxious section of the statute on usury introduced early in the session, and pushed it through. Later on in the session, when the members who were inimical to the banking interest realized what they had done, there were two or three bills introduced, the passage of any one of which would have re-enacted the provision they had repealed, with other objectionable features. The Committee from the Bankers' Association then directed their efforts to defeat unfriendly legislation, and were successful. The bankers of Dakota now realize more than ever before the value of their Association.

"A bill authorizing the incorporating of banks was passed, which contains some very good provisions and no objectionable features."

Never Saw a Gold Coin.—The San Francisco *Examiner* thus closes an account of an interview with ex-Senator James G. Fair: "I had occasion to go down to Georgia on some business. I got off at a little station, and after stopping a day went up to the ticket agent to buy a ticket back to Washington. I had nothing but gold in my pocket, and threw down a twenty-dollar gold piece. The agent, a young fellow, picked it up, turned it over deliberately, and then looked me squarely in the face and said: 'That may be all right, mister, but I never saw one of those things before, and as I'm only getting a small salary, I can't take the risk of accepting it. If the company would not accept it, I would have to plank down the full amount.' Here was an amusing dilemma. As I did not have any other kind of money with me, I started out to find some one who knew a gold piece when he saw one. Luckily I ran across an old man, and brought him back with me to see the agent. The old fellow said he had not seen any gold since the war, but he knew the twenty-dollar gold piece was all right. Both of us finally persuaded the agent to take the gold in payment for a ticket. But, don't you know, that agent

was still in doubt, for he carefully took down my name and address, and made me promise to send \$20 'in good money' if the company refused to take the gold."

Artistic Coinage.—The following circular has been sent out by the Director of the Mint for the purpose of securing designs for the coins of the United States. This is an appeal to the artists of the country in accordance with provisions of the Coinage law of 1873, which have never been acted on. The designs in use are behind the times:

TREASURY DEPARTMENT, BUREAU OF THE MINT, {
WASHINGTON, D. C., April 9, 1887.

SIR:—Under the provisions of Section 3,510 of the Revised Statutes, and with the approval of the Secretary of the Treasury, you are respectfully invited to submit designs for the obverse and reverse of such of the coins of the United States as it may in future be decided to apply them to, in case of their acceptance. The following is announced as the conditions under which designs will be entertained:

(1.) Six sets of designs are now sought for the silver and minor coins, except the three-cent piece. Acceptance of designs will be limited to that number, except on further notice.

(2.) They will be presented in the form of medallions in plaster, of the diameter of two and one-half inches, an obverse and reverse medallion being submitted in the case of each coin, free from lettering for denomination, such lettering to be decided only subsequent to the acceptance of the designs.

(3.) The relief should be in what is known as "low relief," in conformity with the universal requirement in the coinage of the present day, on account of the excessive abrasion found to follow from the employment of "high relief."

(4.) The designs will be submitted in sealed parcels to the undersigned, on or before July 6, 1887. Judges invited to open and pass upon the same will also be desired to recommend to the Director of the Mint to what coins of the United States accepted designs or existing patterns be applied.

(5.) The "date" of the coin will be omitted.

(6.) An award not to exceed \$500 will be made for each accepted set of designs—that is, for obverse and reverse patterns. For an obverse design accepted to the exclusion of a reverse design rejected, a sum not to exceed \$400 will be paid. For a reverse design accepted to the exclusion of an obverse design rejected will be paid a sum not to exceed \$100.

To artists who may desire to study the coins belonging to the cabinet of the Mint at Philadelphia an opportunity will be given. This collection includes several pattern pieces, the designs of which are believed to be superior to those of several of the current coins. I shall be happy to give you any further information on the subject of this circular, or to confer with you in person at Washington, or on such occasions as I may be present at the Assay Office in New York or at the United States Mint at Philadelphia.

Very respectfully yours,

JAMES P. KIMBALL, *Director of the Mint.*

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Palestine, Tex., is to have a new bank.
- Two new banks are to be started at Polo, Mo.
- A safe depository is to be built at St. Joseph, Mo.
- A bank building will be erected at Carson City, Mich.
- A new bank is soon to be established at Uloia, Ia.
- Some talk of establishing a bank at West Atchison, Kana.
- Local capitalists are about to start a bank at Augusta, Illa.
- Eastern parties contemplate organizing a bank at West Bend, Wis.
- The Union Bank at Greenly, Col., intends to erect a new building.
- Mr. Reville and others will establish a bank soon at Greenville, Ga.
- The business men of Somerset, O., are to organize and start a bank.
- A bank will, it is understood, be established this spring at Sargent, Dak.
- The Seville Bank has been organized at Seville, Volusia County, Florida.
- The Elk National Bank is in process of organization at Fayetteville, Tenn.
- The First National Bank of Marquette is preparing to build at a cost of \$17,000.
- A new bank, it is expected, will be opened at Mentone, Ind., with a capital of \$80,000.
- The Dime Savings Bank of Peoria, Ill., has contracted for a new fire-proof building.
- St. Joseph, Mo., has been designated as a National bank reserve city, under the new law.

- A revised estimate of the public debt reduction for March makes it about \$11,500,000.
- The stock has all been taken for a new National bank, with \$50,000 capital, at Atlanta, Ills.
- Mr. John Howard Latham became a partner in the firm of Winalow, Lanier & Co., April 1st.
- A building to be put up in Knoxville, Tenn., will be occupied by the Third National Bank.
- The Duluth National Bank building about to be constructed will be fire-proof six stories high.
- It is said that capitalists from Kansas City, Mo., purpose opening a national bank at Decatur, Ala.
- They are putting up a bank building at Horton, Kan., and the organization of a bank will follow.
- Steps have been taken to establish a National bank at Knoxville, Tenn., with a capital of \$150,000.
- The State Bank of Florida, at Jacksonville, has opened a safe deposit vault, the only one in that city.
- A bill is before the New York Legislature for abolishing days of grace upon notes and bills of exchange.
- Bray & Choate and W. A. Scott, of Merrill, Wis., are endeavoring to organize a National or State bank.
- The Woodson National Bank, of Yates Centre, Kans., contemplates the erection of a new bank building.
- C. S. Dyer, Examiner of National banks in the State of Michigan, has resigned to go into private business.
- At Des Moines, Ia., a banking house will, it is understood, be put up by the Citizens' National Bank.
- The National Revere Bank, of Boston, Mass., has been appointed a United States depository for public money.
- The National Security Bank of Philadelphia will soon commence operations on a new building to cost \$40,000.
- The United States National Bank of Atchison, Kan., propose to build. It will be a building of four or five stories.
- Bridgeton, N. J., is to have a new hotel and bank building, the latter to be occupied by the Cumberland National Bank.
- The Hon. J. J. Sullivan, of Millersburg, O., has been appointed a Bank Examiner in place of Mr. R. C. Parsons, who resigned.
- The Commercial Bank of St. Joseph, Mo., has just elected directors for its first year. A new building is to be constructed for it.
- The Commercial National Bank of Dubuque, Ia., are contemplating the erection of a new building for the occupation of the bank.
- New safe deposit vaults have been fitted up in the building of the North River Bank, corner Dey and Greenwich streets, New York.
- The Comptroller of the Currency has authorized the Merchants' National Bank of Rome, Ga., to begin business with a capital of \$100,000.
- A new National institution at Cincinnati will be called the Brighton National Bank. It will be located at Colerain and Harrison avenues.
- The Secretary of the Treasury has decided that National bank depositaries are not required to redeem trade dollars under the recent Act.
- A movement has been started by Jacksonville (Fla.) bankers to establish a State Association, and a convention is likely to be called for that purpose.
- On March 28, the Massachusetts House of Representatives passed the bill to incorporate the Commonwealth Safe Deposit and Trust Company of Boston, after

amending it in some particulars. The chief amendment was that raising maximum limit of capital from \$500,000 to \$1,000,000.

— The Chattanooga National Bank is about ready to commence business. The Fourth National is the name of a new bank projected at Chattanooga.

— The ground left vacant by the Insolvent Maritime bank of St. John, New Brunswick, is being occupied by agencies established by the Halifax banks.

— Exchange on New York has been introduced in Berlin, the price of one dollar being 4.18 $\frac{1}{4}$ in marks. This is a new feature of international exchange.

— Proposals for \$400,000 stock of the City of New York, bearing interest at 3 per cent. per annum, were received at the Comptroller's office on April 8th.

— All the capital amounting to \$50,000 of the new Sussex National Bank of Seaford, Del., has been subscribed and the bank will open for business about May 15th.

— The new Market Street National Bank, Philadelphia, Pa., has purchased the property 1,107 Market street, and intends erecting a handsome building there.

— Bank of Commerce of Grand Island, Neb., has filed articles with the County Clerk to commence business with a capital of \$50,000. It may increase to \$500,000.

— From the Montreal *Stockholder* it appears that some opposition to the Government Savings banks in St. John, New Brunswick, is developing among bankers in that place.

— The Committee on Banks and Banking of Massachusetts House reported favorably on petition for incorporation of the Manufacturers' Loan and Trust Co. of Holyoke.

— Trade dollars come in so slowly for redemption at the Sub-Treasury that the clerks no longer require that a customer shall wait indefinitely to get new money or exchange.

— The stockholders of the Rahway (N. J.) National Bank have decided to put the bank into liquidation. A new bank will be organized under the State law by Rahway capitalists.

— Virginia is still hunting around for means that will enable her to pay her debts at forty cents on the dollar and at the same time keep her conscience at par.—*Philadelphia Press*.

— Mr. H. L. Sturdee, Mayor of Portland, New Brunswick, has been appointed professional liquidator of the Maritime bank of St. Johns, New Brunswick, under the laws of Canada.

— It is stated that John C. Eno's father has made restitution to the Second National bank of New York city of the full amount of his son's defalcation, amounting to upwards of \$5,000,000.

— Mr. Northcote, son of Lord Iddesleigh, and son-in-law of Hamilton Fish, is fitting up the Cunard mansion on Staten Island for residence. He is a member of the banking firm of J. Kennedy Tod & Co.

— The Boise City National Bank, of Boise City, Idaho, has been designated for the reception, safe-keeping and disbursement of public funds advanced to disbursing officers of the War Department.

— The Banking Committee of the Massachusetts House of Representatives on Savings Banks reported it as inexpedient to pay deposits to foreign executors, administrators or guardians of depositors.

— Senator Vedder's bill provides that stockholders in every Trust company in the State of New York shall be taxed on their shares as personal property at the place where the company's chief office is situated.

— President Cleveland has commuted to five years the sentence of imprisonment of Douglass W. Vanderhoof, of Minnesota, who was sentenced to ten years for embezzling the funds of a bank in which he was a clerk.

— The new banking room of the Emigrant Industrial Savings Bank, at 49 and 51 Chambers street, New York, occupies the first story of the building, and is beautifully finished in marble and bronze. The building itself is entirely fire-proof, with two elevators and all the most modern appliances. It was built by the Trustees of the bank because greater facilities were needed in the transaction of business.

— Another indication that the demand for small silver certificates in some portions of the South has been supplied was afforded by the return of some \$1,000 packages of these notes from Texas for redemption.

— The Comptroller of the Currency has declared a fourth dividend, 20 per cent., in favor of the creditors of the Lancaster National Bank, of Clinton, Mass. This makes in all 70 per cent. on claims proved, amounting to \$170,384.

— Blair & Co., private bankers, of St. John, N. B., have made an assignment. The firm suspended at the time of the Maritime Bank's failure. It is feared that the assignment will bring disaster on other business people of that city.

— The Bank of Horton, Kans., with \$50,000 capital, has been organized. The following Directors have been mentioned: H. A. Parker, C. F. Jilsen, J. W. Parker, M. A. Low and W. W. Guthrie, of Atchison, and E. W. Sandison, of Horton.

— Parties in Boston have petitioned the Legislature of Massachusetts for the formation of an investment company. The plan is to borrow money on bonds and debentures to be issued by the company to invest in bonds, mortgages, etc.

— There is now in the United States Treasury \$180,000 in cash belonging to the Pacific railroads which will be invested in the first mortgage bonds of the companies. The amount already invested in United States bonds aggregates \$8,000,000.

— The National banks of Jersey City, which have been contesting the legality of the State tax on their shares, since the decision of the United States Supreme Court in the case of the Mercantile National bank will pay up the amount in arrears.

— An unknown quantity of forged bonds of Virginia of the class known as Riddleburger threes, have, it has recently been discovered, been offered for sale in Northern cities. Since attention has been called to them, they are not calculated to deceive.

— The promissory notes, mining stocks and other securities of John M. Masterton, late owner of the defunct Mount Vernon (N. Y.) Bank, valued in the schedule of assets at \$30,000, have been sold, and realized only \$12,000. The deficiency will have to be borne by the depositors.

— Shipments of \$20, \$10 and \$5 silver certificates and United States notes have been made from Washington to the Assistant Treasurers at New York and Chicago to meet the demand at those points. One and two-dollar silver certificates are being issued at the rate of \$150,000 a day.

— A statement prepared at the Treasury Department in regard to the production of distinctive paper used in printing notes, bonds, etc., shows that during the fiscal year more sheets were produced than during the previous fiscal year at a cost of 13.10 cents less per pound and a cost of \$1,077 less for superintendence.

— The Third National Bank, of Jersey City, has been organized with a paid-in capital of \$200,000. John D. Carscallen was elected President and Henry Betz Vice-President. The old Fifth Ward Savings Bank building, on Pavonia avenue, was purchased for \$30,000, and will be repaired for the new bank.

— Secretary Fairchild has informed a firm of importers at New York that silver trade dollars cannot be received in payment of duties due the United States, inasmuch as section 2 of the joint resolution approved July 22, 1876, which is now in force, provides that the trade dollar shall hereafter not be a legal tender.

— Instructions have been given by the Treasury Department for the discontinuance as a United States depository of the First National Bank, of Galveston, Tex., at its own request, and the transfer therefrom to the Assistant Treasurer of the United States at New Orleans, La., of balances standing to the official credit of officers of the army.

— Mr. Wm. Sistare of New York, has been straightening out the tangled affairs of his branch office in Detroit. The exact loss through the late manager, Mr. Alexander M. Stanton, is stated to have been \$28,000, which has been reduced by the return of \$7,500 by Mr. Stanton's brother. The branch will be continued under a gentleman of Detroit who is widely acquainted, reliable and energetic.

— A letter was received at the Treasury Department recently from a farmer of Western New York, who said he had seen in the newspapers that the Government had more silver than it could care for, and as he had great need of some ready money, he was willing to relieve it of a little from its overflowing vaults—say about \$1,000. He

said he did not want more than that at present, but in case he found use for more he would let the Department know!

— The Chinese had a way of "chipping" or marking with their outlandish characters every trade dollar that came into their possession. All thus defaced are only redeemable as bullion. Another kind of mutilation was the disfiguring of the Goddess of Liberty on the face of the dollar. On some of the coins sent to the Treasury the poor goddess has been almost denuded of her flowing robes, and placed in awkward positions.

— The Treasury Department has been notified through the Department of State that in order to give additional effect to its measures relative to the circulation of foreign silver coins in the Empire, the Government of Turkey will absolutely prohibit on and after April 13, 1887, all foreign silver coins from entering any of its custom-houses or post offices. All such coins will be returned to the place whence they came, unless fraudulently entering, when they will be confiscated.

— Secretary Fairchild has determined to protect claimants before the Treasury Department from the extortionate demands of attorneys. He recently ordered the cancellation of a check issued in payment of the back pay and bounty of a soldier which was held by an attorney in order to secure what the Secretary considered an exorbitant and illegal fee. The Secretary then directed that a duplicate check be issued and sent direct to the claimant. This course will be adopted in all cases where the attorney asks more than fair compensation for his legal services.

— According to the *New York Times*, the idea of safe deposit companies, so common and successful, originated with the proprietor of a drinking saloon near Washington Market. The butchers used to bring their tin boxes to him for storage over night in his safe, until finally he could not accommodate them all. Attending an auction sale one day, he purchased a large safe, had it fitted into compartments, and assessed the cost among his patrons. Shortly after the first safe deposit company was opened on lower Broadway, one of the promoters having watched the working of the system described. Several attempts have been made to introduce the system in London, but have been unsuccessful excepting as concerns the "city."

— The Receiver of the Pacific Bank, which suspended five years ago, has declared the sixth dividend. It is to the amount of 10 cents on \$1. This brings the total amount declared to the depositors to 40 cents on \$1, which amount has been paid from money collected from the stockholders after much litigation. About \$500,000 has already been collected, and from this 40 per cent. of dividends have been paid. There remains, as yet to be collected, about \$100,000 or \$170,000, and from this sum, as it is paid in, a dividend of 10 per cent. and possibly one more of 5 per cent. will be declared, making a total of from 50 to 55 per cent. for the benefit of the depositors. Of the amount now uncollected about 50 per cent. is good to the fullest amount. Nearly all the remainder, however, is good for a large part of the amount due, and so far there have only been eight cases that are practically worthless.

NEW COUNTERFEITS, SPURIOUS COINS, ETC.

[Readers of the JOURNAL have frequently been informed that much of the news published in newspapers and in so-called "Counterfeit Detectors" regarding bogus bills and coin is either wholly or in a large part unreliable. The Secret Service Bureau of the Treasury Department is so well organized that it is now almost impossible for rogues to either make or put in circulation any considerable amount of bogus money. If bankers exercise proper care and read the information furnished by the Department they will have no trouble in promptly rejecting counterfeits.—EDITOR.]

GREEN GOODS SWINDLERS.—The Cashier of a bank in Alabama sends to the JOURNAL the following letter, recently received by him from swindlers belonging to the class known as "Boodlers" or "Green goods dealers." The last number contained a letter on the same subject from Chief Brooks, of the United States Secret Service:

DEAR SIR:

Do you want to make money fast and safely? The goods are really *bona fide*, printed from genuine plates, and upon genuine paper, and the most skillful expert cannot detect the least particle of a flaw. Any bank or store will accept of them, without the least hesitation. Sizes are 1s, 2s, 5s, 10s and 20s. Also a large supply of Canadian bank bills, and the new series of U. S. silver certificates. If you conclude to write for terms and full particulars, sign No. 68 S. instead of your name, for *safety* sake.

If you desire samples, you must send \$1 for a 1, \$2 for a 2, \$5 for a 5, \$10 for a 10, and \$20 for a 20. This proves to me your sincerity and honest intentions to purchase

the goods if they suit, and at same time puts a stop to parties asking for samples to merely satisfy a morbid curiosity, when they have neither capital, or any intentions to engage in the business. All correspondence must be returned, otherwise I won't deal with you. Address as per slip that is enclosed.

The following is the address given:

A. S. SHAW, 33 Bowery,
Care of Pacific House.

On April 18th a gang engaged in this business was arrested in this city. The police found the largest assortment of stock in the "green goods" business that it has been their luck to capture in twenty years. The invading officers found 80,000 stamped envelopes addressed to people in Western States, a Dun's mercantile reference list from which addresses were obtained, letters printed by the cyclostyle process, inviting the receiver to buy at low rates splendidly engraved bank bills, printed from genuine plates on genuine paper. There were thick piles of genuine one, two, five and ten-dollar bills, in all amounting to \$1,420 of United States money and \$640 in Canadian currency, which, packed in a black gripsack, were shown to the avaricious purchaser, and for which he would plank down his own honest money on a basis of \$100 of the "queer" for \$10 dollars of the good, only to have the black gripbag which he saw filled with the genuine green goods adroitly exchanged for an exactly similar black gripbag loaded with a brick and old papers. And there were thick piles of green slips of paper, the size and color of bank bills, fastened with a narrow ribbon of paper like Cashiers put up their money, on the top and bottom of which were placed a real bank note, so that each pile looked as if it were a pile of the honest stuff. There were memoranda of the progress of transactions like these:

Jesse M. Nolan, Fine's Creek, N.C.—Offered State right for \$25: afraid to come; coaxed; son: father will not deal; Rosemore.

H. S. Montgomery, Long Island, Kan.—State right, \$500; has friends who want to do biz; will take them in after first deal.

W. A. Black, Kennedy, Ala.—Wants to do biz in room; will let him name hotel; leave money with clerk and pay at hotel; wrote him not in public place.

ANOTHER SWINDLE.—Akin to the preceding are the operations carried on by some of the "Bucket Shops." Bankers and others receive documents issued by — & Co., of New York, who it appears are stock operators on 1 per cent. margins, opening up a highly attractive scheme of converting their business into a stock corporation, limited, and taking in their country customers as shareholders. The amount of capital is placed at \$250,000, in shares of \$50 each. Those stockholders who wish to receive a fixed income from their investment can have stamped upon their certificates of stock a guaranty of interest at the rate of 7 per cent. per annum, while on the shares not guaranteed, the holders will be entitled to receive dividends up to 25 per cent. per annum, payable quarterly, and a handsome profit beyond 25 per cent. is confidently predicted. It is the first instance, says the rosy-hued memorandum accompanying a scarcely less rosy prospectus, "where customers have been admitted into any degree of copartnership with their brokers." It is also stated that "there exist several limited liability corporations doing a similar business to Messrs. — & Co., but the capital is closely held in a few hands. The most important one is a company in New York with a nominal share capital of only \$100,000 held by three or four persons, who have divided as much as \$1,300,000 in profits in one year recently." Of course, the fact that these operators offer to speculate in small lots on 1 per cent. margin is sufficient notice to warn off men at all acquainted with business, but it is quite possible that the enterprising speculators will find some very unsophisticated "lambs" who will send in their orders and subscriptions. They will wait in vain, however, for a remittance from a Kentucky correspondent of the JOURNAL who asks indignantly, "Can nothing be done with them?" Our answer must be similar to the one always sent in like cases—*Let them severely alone.*

Cattle Ranches.—The attention of those desiring to invest in cattle and cattle ranches is directed to the advertisement of THE BANK AT HAIGLER, Nebraska, in this issue. The opinions of those who understand the situation agree that now is a favorable time to purchase, affording a good opportunity for the employment of some of the idle capital of the East. Young men looking for business which is profitable, highly respectable, and at the same time conducive to health, would do well to correspond with above-named bank.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

NATIONAL BANKING AGAIN.

Editor Rhodes' Journal of Banking:

SIR:—I have just read with some interest, and more surprise, in your April number, under the signature of "Subscriber," a reply (?) to my brief paper in your February number. That article was intended to be merely tentative and suggestive, not exhaustive; therefore, I did not expect any criticism of it. However, "as iron sharpeneth iron, so doth the countenance of a man his friend."

"Subscriber" says: "While it is quite true that the necessities of the Government acted as a potent influence in the passage of the National Bank Act," etc., I reply that the necessities of the Government were of paramount consideration, *the potent factor* in passing the Act establishing National banks; the providing a uniform currency for the whole was altogether a secondary consideration. The currency was the *quid pro quo* to induce the formation of National Banking Associations; and, further, to facilitate that object a law prohibitory in its nature was passed against circulation of State banks.

"Subscriber" does not give the National Bank Act much, if any, credit for originality—referring to the well-known fact of its being based upon the State-banking system of New York. So, after all, the salient and wholesome features of the National Currency Act are borrowed, more or less, from the banking laws of a State—notwithstanding it is so common to sneer at bank corporations under State charters. As progress was the characteristic of the social organism, so banking, an important factor in working out this progress, was likewise developing and improving under State charter. Therefore I do not agree with "Subscriber" as to the probability, "without the pressure of war times," of establishing banks under National charter.

"Subscriber" takes issue with me as to the etymology of bank from the Italian of *banco*—a bench—and prefers to derive the word, as in ordinary use, from massing things together—"as a bank of sand, stones, or money." I would say here, *par parenthesis*, that the article written by me last July, and published in your February number, was written on scraps of paper, during the intervals of business at my desk in bank, in midsummer dullness. Certain dates, etc., given were verified by me at home from books in my library. But I do not remember specially looking into the dictionary for bank; but, of course, I had come across, years ago, somewhere, the derivation as I gave it. Since reading "Subscriber's" derivation, as above given, I have had recourse "to the law and the prophets." What say the lexicographers? First, we will take our great American lights.

Webster. "Bank derived from Italian *banco*; derived from German. See Bench."

Worcester. "Bank from Italian *banco*, a bench or table on which the Venetian money-changers displayed their money."

Now we will take dictionaries recently issued by English authors or editors.

Stormonth's.—"A Dictionary of the English Language," by Rev. James Stormonth, author of "Etymological, etc., Dictionary."

He says: "Bank—French *ban*; German *bank*, a bench or bank; Italian *banco*, a bench, a merchant's place of business."

Skeat's "Etymological Dictionary of the English Language," by the Rev. Walter W. Skeat, Professor of Anglo-Saxon in the University of Cambridge.

Skeat says: "Bank—the word is, in fact, a doublet of bench—a place for depositing money, a money-changer's table or bench."

Finally I quote from a dictionary just publishing—a dictionary, as far as the English language is concerned, that will be in the line of lexicography the master-work of the nineteenth century—in every respect a work as monumental as the great dictionary of Littré for the French. I refer to "A New English Dictionary on Historical Principles," founded mainly on materials collected by the Philological Society; edited

by James A. H. Murray, LL.D., sometime President of the Philological Society; printed at Oxford, Clarendon Press.

In treating of the word bank, this dictionary has at least four times as much as all the four preceding dictionaries quibbled combined—enough to fill a few pages of your JOURNAL. There are three extensive divisions of bank used as a substantive. Under the third division I briefly quote: "Bank—early modern English *banke*, from French *banque*, from Italian *banca*, feminine; *banco*, masculine." General definition under this heading: "The original meaning shelf, bench was extended in Italian to that of tradesman's stall, counter, money-changer's table (*mensa argentaria*), whence money-shop, bank, a use of the word which passed, with the trade of banking, from Italy into other countries." Not to pun, I will say that the italics are mine. Under this third division there are eight sub-divisions. Sub-division seven defines the word, "in the ordinary modern sense, as an establishment for the custody of money, etc.—a bank of deposit, a bank of issue of circulation"—giving, also, Bank of England as an example. Among other derivations of bank we have bankrupt, from the Italian *banco rotta*—that is, bank-broken or bench-broken. Also I would cite, as an *obiter dictum*, the law term *in banc*, or *in banco*, denoting a full Court, before all the Judges on the Bench, for the hearing of arguments, as distinguished from a *nisi prius*, or Circuit Court, before one Judge and a jury. But enough of the *lucus a non lucendo* of "Subscriber."

Yes, I say that the two-fold objects have been subserved, to carry out which the National Bank Act was enacted. People do not engage in banking, actuated primarily by philanthropic or patriotic motives. Self-interest (the more enlightened the better) is here, as elsewhere, the *primum mobile*. Therefore, if there is but one advantage, *per se*, in the National system, that of circulation, and it has well nigh, if not altogether, ceased to be a source of profit, then people engaged in the business of banking will endeavor to get into a more profitable system, or go out of it. Ergo, circulation ceasing to be profitable, "the beginning of the end" of the National Banking system is at hand.

"Subscriber" thinks that the Government ought "to pay a bounty to banks as an inducement to remain in the system." A confession of weakness this that yields the whole point at issue. If there are any words in the relation of Government to people that are odious to right thinking persons they are bounty, monopoly, and protective tariff—means devised by Government, intermeddling to enrich the few at the expense of the many. All legislation making statutory laws of this character is legalized iniquity. Pray, how does "Subscriber" expect this bounty to be paid by the Government to be raised? The Government has no talismanic touch, no peculiar power of getting money other than by way of taxes from the citizens at large. Shall they be taxed that National banks may fatten and batten on the bounty at somebody else's expense? Thus it is evident, like all people who want bounties out of others' pockets, that "Subscriber" is in favor of paternal Government—of holding on to the apron strings and enjoying all the pap possible. I not only do not "want the earth," but I also don't want this. In this respect I differ with him not only as to the earth, but *in toto cælo*.

War is a barbarism, and none the less so if carried on by ways and means devised through National banks; unworthy of people living in the latter part of the nineteenth century. We are passing out of the militant stage, and wars are destined, ere long, to cease. The fulfilment of the prophecy, made more than twenty-five centuries ago, is drawing near at hand, when "they shall beat their swords into ploughshares and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more." The lugubrious view of the probability of another war, and the continuance of National banks to meet such a contingency, reminds one of an illustration of the improbable, if not impossible, where Hume, in one of his essays, refers to a worthy rector in rural England, who, while perambulating his parish, comes across two of his very estimable parishioners, two pious old maids, *well stricken in years*, standing on the bank of a stream, looking mournfully into, and mingling their own tears with, its flow. The old rector was much concerned and wanted to know the source of their troubles. One of the "unwedded maidens old" said that she and Sarah Jane were thinking that if either of them had a little baby and it should fall into the stream and be drowned what a dreadful thing it would be, and how sad would be their bereavement—booh-hooh! So much for conjuring up the improbable or impossible, and wasting one's fears and tears over a pessimistic future.

"Subscriber" says: "Surely your correspondent does not need to be told that the law does not require the reserve agents of National banks to be themselves National

banks; that they are uniformly so is simply a usage of the Comptroller," etc. Yes, your correspondent does require to be told so, and then does not accept it as a fact. In the National Bank laws, Sections 5,191-5,192 (R. 8.), make provision by naming certain cities as redeeming and reserve cities no less than sixteen in number, in alphabetical order, beginning with Albany and ending with Washington. The banks referred to in those cities are National Banking Associations—stating that the legal-tender reserve to be kept (25 per cent.) on both deposits and circulation. National banks located elsewhere are required to have a reserve of 15 per cent.—three-fifths of which may consist of balances due from an association (in the cities named) to an association elsewhere. Now, what does the word association here mean? Manifestly every National banking association in the cities named. Any and all other banking associations are therefore excluded. The only modification or amendment made to these two sections was by the Act of June 20, 1874, rescinding the requirement of a reserve on circulation other than a deposit of 5 per cent. with the Treasurer of the United States.

Yes, I repeat, "Subscriber" to the contrary, that in the reserve cities, especially in New York, the National banks have, taken as a class, only a minimum deposit of United States bonds as security for circulation, as by law allowed.

In the city of New York there are forty-five National banks, with a capital of more than \$45,000,000, a surplus of—say \$26,000,000, and undivided profits of more than \$10,000,000, aggregating more than \$81,000,000, depositing bonds with the Treasurer of the United States to secure circulation of \$10,000,000 with a circulation of \$8,000,000. Five of the forty-five National banks in New York have no circulation whatever, among them one bank with a capital of \$5,000,000.

The less "Subscriber" says about the panic in New York in May, 1884, the better. It was decidedly odorous of foul fish, especially so at the *Marine National Bank*. The Metropolitan *National* collapsed after having weathered many a storm as a *State* bank. The Second *National*, if it had not been for certain rich Directors putting their hands into their pockets and pulling out millions (for the defalcation of an absconding Eno), would have gone irredeemably to smash, despite its being a National bank under Government surveillance. I forbear to give many other no less humiliating examples (among them the National Exchange Bank, of Norfolk) going to show that the "National Bank Act" cannot put brains into empty skulls or honesty into dishonest hearts.

No, it is not "a curious error to speak of the Government as an indorser"—especially so in the ordinary conventional use of that word—on the notes of National banks. The Treasurer of the United States holds in trust United States bonds deposited as security for circulation, and to that extent is a Trustee. But the National currency bears the imprint of the seal of the United States Treasury and the signatures of two officers of the Treasury, viz: of the Register and of the Treasurer of the United States. So in business parlance, referring to the notes as negotiable instruments, it is not amiss to speak of the Government as an *indorser* even to the most pedantic purists.

It would be better, perhaps, for "Subscriber" to read, learn and inwardly digest (rather than take hearsay or second and third dilutions of) Huxley and Spencer (especially the latter in his essay on "State-tamperings with Money and Banks"), and perhaps he would be more chary in vaunting himself in his proud "humility" in neither reading nor learning from them.

In conclusion, as I do not know whom the *nom de plume* of "Subscriber" represents, I am at a loss as to construing his closing lines—whether complimentary or whether after the style of what Pope calls *damning with faint praise*—otherwise I might give "Subscriber" "a Roland for an Oliver."

CLAYTON CANNON.

BALTIMORE, April 13, 1887.

COUNTRY COLLECTIONS.

Editor Rhodes' Journal of Banking:

SIR:—The practice of remitting for collections on day of payment is so generally followed by banks that were it not for an exception now and then this splendid rule would be universally observed. Occasionally, however, we run across a country bank that fails to remit promptly, indeed not until several tracers are sent out by the forwarding bank can an answer be obtained. This is a bad practice and if followed to any extent will eventually prove ruinous. When a banker holds the money received as

payment of a collection for thirty or fifty days without reporting to his correspondent, it proves him guilty of nothing more or less than a breach of trust not to speak of the impure banking indulged in, and though country bankers as a class are not charged here with such unbusiness-like proceedings, instances of this kind are too often found in the records of modern banking.

If a country banker uses the funds so received for his own purposes (as he evidently does) he is virtually charging himself a more exorbitant rate of interest than was ever exacted from an unfortunate borrower, though he may not be aware of it at the time.

When we find a banker guilty of such an act the first best thing to do is to strike his name off the list of correspondents. Our little red book contains other than printer's ink. And now the question arises how can we make our collections at certain points? Forward them by express charging the customer with the extra expense. Most business men are reluctant to pay exchange or collection charges at all, but as soon as they are informed that by this means the proceeds will be certainly and promptly remitted, they are willing to pay the expense. O yes! you can easily satisfy the greatest economist by tendering him on one hand, promptness at a premium, on the other, uncertainty at par, and by the way the best method to break a country banker's high rate of exchange is through the unstinted use of an express company. One correspondent charged us for remitting as high as 1 per cent. until we surprised him one day by sending our checks and other collections through an express company. His rate is now $\frac{1}{4}$ of 1 per cent., and sometimes as low as 1-10 of 1 per cent. A good article on this subject can be found in the October, 1886, number of the JOURNAL at page 795.

Another bad practice is that of holding collections after maturity unless otherwise instructed by the forwarding bank. This is, however, such thoroughly rotten banking that an intelligent banker cannot fail to see the folly of it at a glance. The drawer of a draft often regulates a customer's commercial credit and good standing by the promptness exercised in meeting his collections on day of maturity, and here the banker by not reporting promptly assumes a dangerously responsible position. Returning unpaid collections on day of maturity is as necessary to correct banking as remitting for paper on day of payment; it gives the drawer of the collection or holder of a note chance for prompt action against a delinquent customer, saves the forwarding bank many tracers and no end of trouble.

WORICH.

DETROIT, April 22, 1887.

CANCELLED CHECKS.

Editor Rhodes' Journal of Banking:

SIR:—In a recent issue of your JOURNAL one of your correspondents seems to detect a source of danger in the common practice of banks returning to their customers, when pass books are balanced, the cancelled checks without receiving a receipt for same. His idea seems to be that a dishonest man might destroy a check and then claim that he never issued it, and so compel the bank to refund him the money paid out. I do not see any force in this criticism, because the check in question could be readily traced from the bank back to the depositor, and through him could be followed from hand to hand until it reached the drawer himself.

Yours truly,

C. D.

ST. LOUIS, APRIL 18, 1887.

PAPER IN MARKET.

Editor Rhodes' Journal of Banking:

SIR:—In the January number of the JOURNAL I suggested the propriety of the banks in the Clearing-House cities forming an association for the purpose of keeping themselves informed as to the amount and character of the single name and accommodation paper on the market.

I would suggest in this number, if your space will permit, a definite plan for such an association. There should be a manager, with one or more clerks, located in a central office convenient to the greater part of the members. At the close of each day, the discount clerk at each bank should forward a detailed statement of his discounts for that day, showing the maker, the endorser, time, date and amount and whether with or without collateral. The rate need not be named. For the sake of convenience, notes under \$1000 might be omitted. The manager received these reports on the following morning proceeds to enter them in detail in a day book ruled for that purpose, and from that posts to two ledgers, one for makers and one for endorsers. The original

memorandum may be preserved for reference, returned or destroyed. The day book is not to show in any way the distribution of the paper entered, so that as far as the record goes, the business of the banks remains confidential with the manager himself. By such an arrangement, each member of the association will be able to ascertain at any time the amount and character of the paper which any applicant for a loan may have at that time upon the local market. Of course this system does not provide for loans floated outside of that particular city. The importance and value of such information can scarcely be over-estimated, but the arguments in favor of some such arrangement were presented in such length in my previous letter that it would be abusing your time and space to repeat them here.

I trust that the attention which everything in your JOURNAL receives from the banking community will be attracted to this scheme, and that something practicable will grow out of it.

Yours respectfully,

BANK OFFICER.

PROVIDENCE, April 23, 1887.

SIGNATURES.

Editor Rhodes' Journal of Banking:

SIR:—I find articles on "Queer Signatures" very interesting. Although one of the winners on the "Hazen" signature I was surprised at the large number entitled to the prize.

Your offer in that case as well as others to send the JOURNAL for 1887 free to bank Tellers, Cashiers, etc., was very liberal on your part. At the same time I think you could not advertise the real value of the publication in a more profitable way, for any wide-awake and progressive bank officer who has had it for a year will see that he cannot get along without it after that.

The way I found out W. P. Hazen's name was thus: The fact that Kansas officers were debarred from competing led me to believe it belonged to that State. I used a glass on it, turning it in all directions, then taking the "z" for a cue looked over the list of Kansas Cashiers and decided that W. P. Hazen was the one. Some might not call that a fair way of doing, but you placed no restrictions on manner of obtaining it.

I claim it is impossible for any one to read some of the signatures you have published if they have never seen them before and have no means of verifying a guess. Take the signature of Carmon Parse, for instance, shown in the March JOURNAL; one might make out the Parse, but they would certainly have to pass the Carmon. The name of Wm. D. Mussenden, Cashier, in same number, I don't believe anybody can read it without knowing it. These names have long been noted in our bank as being the most illegible signatures known to us.

The "mark" of a business firm shown with the above names I cannot read. The Cashier's name in the April JOURNAL might be "E. Holm, Cashier." The business man's name might be a number of different names. If I was to guess at the last name of the gentleman, should say it was "Early." If he should say it was "Late" I shouldn't contradict him.

The "Treasurer's" signature I wouldn't venture even a guess on, but I have seen a picket fence look a good deal like that when riding by on a railroad train.

Shall look forward with interest for the May article on the same subject and hope to have better luck in deciphering the signatures.

HERBERT B. BAILEY.

BOSTON, Mass., April 22, 1887.

Southern Investment Securities.—We have received from John L. Williams & Son, Richmond, Va., a copy of their "Manual of Southern Investment Securities." It presents in a carefully classified form a list of very desirable State, municipal and railroad securities dealt in by this firm, and at the same time giving sufficient variety to please the most particular. It shows the rapid development and almost unlimited resources of that section of the country in connection with the inducements offered to investors. A valuable feature of the "Manual" is a map, prepared under the personal supervision of the firm, showing in distinct colors the route of five great Southern railroads with their properties easily identified and traced, together with a stock and bond investment table. The book also contains other useful information. Messrs. Williams & Son have placed a few copies of the "Manual" on sale with the Arcade News Company, Richmond, at \$1.00 each.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

REDEEM THE GREENBACKS.

[Edward Atkinson's Letter, published in N. Y. *Evening Post*.]

SIR:—With the near approach to the time when, the 3 per cent. bonds having been called in, there may be some difficulty in getting out from the Treasury of the United States such money as may be received for taxes and duties, an interesting problem is presented.

In all the current discussion of the National banking system, it is popularly assumed that a bank cannot exist unless it issues notes which serve the purpose of money, or of instruments of exchange, passing from hand to hand in the settlement of small transactions.

Of course all persons who are conversant with banking know that the functions of a bank of issue are wholly distinct and separate from the functions of a bank of deposit and discount, and are not essential thereto.

Our trust companies are really more like banks according to the technical limitation of the term "banking" in England than the National banks themselves, the issue of notes being simply a supplementary function of a bank, entered into for the purpose of making additional profit, and also serving the convenience of the public, especially in this country, where the public prefers paper notes to coined money.

We now have four kinds of instruments of exchange, each of which passes for money; or, rather, I may say, six kinds of such instruments of exchange:

- (1.) Gold coin.
- (2.) Silver coin.
- (3.) Government certificates of the deposit of gold.
- (4.) Government certificates based on silver dollars.
- (5.) Legal-tender notes of the United States.
- (6.) National-bank notes.

These various forms of what passes for money are practically interchangeable, because they have not yet been issued in excess of any demand, and are all substantially receivable by the Government in liquidation of duties and taxes. They are all practically redeemable in gold coin, at the present time, and are therefore used without discrimination, although they are in part only representatives of actual capital saved and now in existence.

Each gold certificate is intrinsically worth its face in gold.

Each silver certificate is intrinsically worth what the number of dollars which it represents would bring if the dollars were melted and sold as silver bullion.

Each bank note is secured by Government bonds, but is also issued by the bank upon the discount of securities which are based on property of one kind or another, valued at a gold standard.

The legal-tender notes are simply evidences of debt due from the Government of the United States to the people thereof.

Entirely aside from this mass of instruments of exchange is the actual capital of the United States, excessive in its abundance, consisting of products of every name and nature; never greater in proportion to the demand for its use than it is at the present time.

It is this capital, this actual substance, these products of labor, the title to which passes from one man to another by the use of instruments of exchange almost wholly consisting of checks and drafts; it is in very small part transferred by the actual use of what passes for money.

A disturbing element in the consideration of the case is to be found in the fact that banks have been permitted to make use of the legal-tender notes of the United States as a part of their reserves, in place of coined money or certificates of deposit of gold bullion. In all the popular discussions, and in most of the discussions in Congress, it

has been assumed that if these legal-tender notes were paid into the Treasury of the United States and were not reissued, being thereby withdrawn from the bank reserves, the effect would be like a great withdrawal of actual capital from its customary use, or like a great withdrawal of so much coin from the banks to be piled away idle in the Sub-Treasury of the United States.

Can this view of the matter be sustained?

What is a legal-tender note when it has come back into the Treasury of the United States in liquidation of a tax? Is it anything more than a bond, note, or promise of the Government which the Government has redeemed and paid, and which it does not need to reissue because it is no longer borrowing or in need of borrowing? This note is not even representative money. There is no actual capital behind it; nothing but the power of taxation in order to pay it. It is not capital itself. It is nothing but a note or evidence that under the assumed necessity of war the Government of the United States was obliged to make a forced loan and issued these notes as evidences of the debt incurred; when the Government has become possessed of such a note by the liquidation of a tax due to it, it has simply paid the debt, and that is the end of it. It has not heretofore been the end of it, because members of Congress have been under the delusion that in time of peace and plenty the Government was still under the necessity of reissuing this note in order to make *another* forced loan even while it is struggling to find out a way to get rid of a surplus revenue.

Is not this country rich enough in its excess of capital to furnish itself with all the coin it needs for its bank reserves or for any other purpose? May it not, therefore, happen that all fears of a stringency in the money market or of a general financial disturbance, in case no Act is passed by Congress for the reduction of the revenue, will prove to have no foundation when the time comes? May it not prove perfectly feasible for the Government to apply the \$100,000,000 of gold coin which it now holds for the redemption of the legal-tender notes, and so much more of its excess of revenue as it will receive in gold coin after the greenbacks become scarce by not being reissued, as will suffice to pay the remainder of this demand, *without* bringing about any hardships, scarcity of capital, or other disturbance?

In other words, cannot the Treasury of the United States avail itself of its abundant resources to pay a debt which is due on demand, and mark it off as paid on the books of the Treasury without injuring any one, but benefiting all?

Are the bankers of this country, who are in possession of such an excess of capital, either their own or that, the title to which has been deposited with them, incapable of providing the instruments of exchange which are required (if I am correct in my memory of the statistics) only in about 3 per cent. of the transactions which are carried on over their counters? Is it not as absurd to assume that this country, with its enormous wealth, cannot furnish itself with true money as to assume that a railroad corporation might come to grief in constructing a railroad for want of wheelbarrows upon which to move the gravel from its grade?

Can a country which possesses so much capital that the chief complaint has been of "over-production" and such an excess of revenue that its most difficult problem is how *not* to tax, come to grief because it pays its debts due on demand?

If such a course is followed—*i. e.*, payment of all legal-tender notes—the excess of revenue may suffice to pay off the whole demand debt in the interval between the date when all the 3 per cents. have been called and the date when the next interest-bearing bonds fall due.

ENGLISH FINANCIAL VIEWS.

[London *Statist.*]

It is not easy to understand why the Directors of the Bank of England lowered their rate of discount to $2\frac{1}{4}$ per cent. Practically, they might as well have kept it at 3 per cent. for all the business they are likely to do, and as they will probably put it down to 2 per cent. in a week or two, they might as well have done so at once. Perhaps the answer to us will be that they would obtain just as little business at 2 per cent. as at $2\frac{1}{4}$, and that it really matters very little. Possibly this may be so; but it is clear that if the danger of war has passed, and if no great drain of gold is likely, the Directors would have been fully justified in lowering the rate to 2 per cent. The reserve is considerably over 15 $\frac{1}{4}$ millions, and its proportion to liabilities is over 50 per cent. At the same time gold continues to be received, while the stock of the metal

exceeds twenty-four millions. Further, the outside market has repaid its whole debt to the Bank. At the beginning of March, and again this week and last week, the repayments have amounted to very nearly five millions, while from the early part of February the advances have but slightly exceeded $4\frac{1}{4}$ millions. It seems clear, therefore, that the whole of the debt due by the outside market to the Bank has been paid off, and yet the 'other deposits' exceed 24 millions. The probability appears to be, then, that if peace is maintained, and if no accident happens, the value of money will continue very low throughout the summer. On this anticipation there has been a rise in prices on the Stock Exchange going on for weeks past, and speculation in every department is springing up, likewise on the same calculation. The danger, of course, is that the stock of gold held by the Bank is still very small, notwithstanding the increase to it of recent months.

A few weeks ago we called the attention of our readers to the immense stocks of bullion now held in France and in the United States, and also to the comparatively large stocks held in Germany and in Russia. We pointed out what a complete change in the money markets of the world was thus being effected, and we added that it was clear the position of the country, both as a banking centre and as a commercial country, must be effected thereby. Now, bearing all this in mind, it is obvious that 24 millions is a very small stock of the metal with which to begin a summer that may be fraught with difficulties and dangers of an unusual kind. Peace seems now likely to be preserved, but yet no one can foresee what a moment may produce. Bulgaria is like a powder-barrel in the midst of Europe. At any moment there may be an explosion. And there are other quarters likewise in which there is danger. Further, the economic condition of Russia, as we have frequently insisted, is very critical; and, lastly, there is an extraordinary situation in the United States, brought about by the monetary and banking legislation of the country. In spite, therefore, of the general expectation that money will continue both cheap and abundant, it is by no means certain that we may not see the money market disturbed, and it is to be borne in mind that the supply of loanable capital in the outside market is really small. Even after the repayment to the Bank, it is true that the 'other deposits' exceed 24 millions; but on the settling day this week the demand for the Stock Exchange, though not very great, and the falling due of a few instalments of loans and company issues sufficed to raise the rate for short loans for the day to $2\frac{1}{4}$ per cent. The rate, of course, is a moderate one, and no applications had to be made to the Bank; but yet the fact is evidence that the excessive supply in the outside market which is forcing rates down so rapidly is not very great, and that a comparatively moderate demand would so reduce the excess as to change the whole current of the market. It is further to be recollected that the stock of gold held by the Bank has been maintained at its present level to a very large extent by withdrawing coin from the internal circulation, and the internal circulation must be increased as trade improves. It is true that the improvement is still slow; but yet those who are interested should bear in mind all the perils of the situation, and not count too confidently that no accident will occur.

A WAY TO REDUCE THE SURPLUS.

[From the *New York Sun*.]

The simplest and most sensible step is for the Secretary of the Treasury to purchase in the open market as many as he can of the \$250,000,000 $4\frac{1}{4}$ per cent. bonds due in 1891. These bonds are now selling at a premium of about 10 per cent., while the interest yet to accrue on them is 18 per cent. Purchasing them now would save 8 per cent. during the next four years in interest; and, besides, since but a small part of them are held by National banks, most of the money paid for them would go at once into the hands of people who would invest it again, and thus set it in motion.

GIVE THEM A HOLIDAY.

[From the *London Bullionist*.]

This week a charge of embezzlement was made against the secretary of four building societies in Lancashire, and an official of gas works in that shire is also in trouble about money. Whenever the embezzlement may be, or through whatever means it may be accomplished, there is one general feature which is hardly if ever absent. The person

who commits the fraud never takes a holiday, or allows any other person to have the care of his books or accounts. There are no doubt hundreds, it may be thousands, of honorable men who never leave their work and would not be happy away from it. It is the action of these men the rogues copy. If there never was a good sovereign there never would be a counterfeit. This part of a rogue's conduct being always the same, it behoves all Trustees, directors, managers and others with officials in places of trust under them, to see that each has a holiday, covering such an amount of time from work as will be fairly sufficient to prove the integrity of the cash, books or accounts in his charge. If they do not ask for holidays they ought to be made to take them.

An Embezzler Captured.—On May 15, 1886, E. H. Abbott, Supreme Secretary of the Order of the Royal Templars of Temperance, Buffalo, New York, made application to the American Surety Company, of New York, for a bond of \$10,000 to secure the Order for any dishonest act of his as such secretary. The company made the necessary investigation and issued the bond to Abbott on his payment of the premium thereon. Abbott had previously filed a bond with personal sureties, and it has been ascertained that at the time of taking out the bond of the American Surety Company he had concealed an embezzlement of at least \$1,000 so artfully as to escape detection by his superiors. It is presumed that his motive in applying to the Surety Company was to transfer, if possible, the liability from his personal friends, the bondsmen, to said company. After taking out the bond of the American Surety Company he ascertained that the company had a summary way of dealing with defaulters, and that he could more safely repose under the personal surety, than under the corporate bond. He accordingly did not file the American Surety Company's bond with the Order, but allowed the bond of his friends to remain in its place. The Order rested under the belief that Abbott had furnished the American Surety Company's bond, but neglected even to see that it had been filed.

Just sixteen days prior to the expiration of the Surety Company's bond, namely, on Sunday, Feb. 27, 1887, Abbott absconded to Canada with \$16,000 of the funds of the Order, and took with him, also, the bond of the Surety Company, which he had purchased but never put in force. He thought he could save himself from prosecution, and accordingly mailed the following letter, without date, but which was posted on the train of the Hamilton & Toronto Railway Post Office:

Richard A. Elmer, President, 160 Broadway, N. Y.:

DEAR SIR: The amount of my shortage was \$15,800. I do not think your company should pay, for the reason that my bond (10,708) was never accepted or filed. It was never out of my possession. If the bond was in your possession would it relieve the company from paying the loss? A letter will reach me at Montreal, Quebec.

[Signed,]

E. H. ABBOTT.

It would seem to have been the height of injustice on the part of the Surety Company to pursue Abbott for the benefit of the Order after he had taken pains to save the company from liability, but such was the fact. The American Surety Company assumed that there was a moral obligation resting upon it to prosecute Abbott, if possible, in Canada, and compel him to return such portion of the funds embezzled as had not been squandered. Abbott had taken with him a certain portion of the funds in draughts drawn to his own order on New York for \$9,000, and these the Surety Company captured before the proceeds got into his possession. After a three weeks' chase, in which Quebec, Montreal and Toronto were thoroughly searched, the Surety company's operator located Abbott at a point near the northern shore of Lake Erie, and at once arrested him under the laws of Canada (32-38 Victoria) for carrying stolen property into the Dominion. It was not clear, however, that a conviction under that statute was certain, and Abbott was allowed to restore, for the benefit of the Order, \$3,500 in cash and property valued at \$1,500. In the meantime four indictments have been found by the Grand Jury of Erie County, New York, and Abbott, in consequence, remains an exile in Canada.

By the prompt and voluntary action of the American Surety Company the Order loses only a little more than \$2,000, instead of \$16,000, as originally taken. This is the third absconder that the Surety Company has captured in Canada within the past year, and during the same period it has secured the conviction of many defaulters in the United States, who have received sentences of from one to five years in the penitentiary, while others yet await trial.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 2658—First National Bank, Caldwell, Kansas. Capital, \$50,000.
 2659—First National Bank, Red Lake Falls, Minnesota. Capital, \$50,000.
 2660—First National Bank, South Pittsburgh, Kansas. Capital, \$50,000.
 2661—First National Bank, Glenwood Springs, Colorado. Capital, \$100,000.
 2662—First National Bank, Helena, Arkansas. Capital, \$50,000.
 2663—First National Bank, Gadsden, Alabama. Capital, \$50,000.
 2664—Fourth National Bank, Dallas, Texas. Capital, \$200,000.
 2665—Pendleton National Bank, Pendleton, Oregon. Capital, \$50,000.
 2666—Charter National Bank, Media, Pennsylvania. Capital, \$100,000.
 2667—First National Bank, Greensburg, Kansas. Capital, \$50,000.
 2668—Mechanics' National Bank, New Britain, Connecticut. Capital, \$100,000.
 2669—First National Bank, Lisbon, Dakota. Capital, \$50,000.
 2670—Merchants' National Bank, Rome, Georgia. Capital, \$100,000.
 2671—New Iberia National Bank, New Iberia, Louisiana. Capital, \$50,000.
 2672—Carthage National Bank, Carthage, New York. Capital, \$50,000.
 2673—First National Bank, Mayville, Dakota. Capital, \$50,000.
 2674—First National Bank, Rulo, Nebraska. Capital, \$50,000.
 2675—First National Bank, Parker, Dakota. Capital, \$50,000.
 2676—First National Bank, Arlington, Oregon. Capital, \$50,000.
 2677—United States National Bank, Chicago, Illinois. Capital, \$200,000.
 2678—Merchants' National Bank, Tuscaloosa, Alabama. Capital, \$100,000.
 2679—Birmingham National Bank, Birmingham, Alabama. Capital, \$250,000.
 2680—Third National Bank, Jersey City, New Jersey. Capital, \$200,000.
 2681—First National Bank, Edmeston, New York. Capital, \$50,000.
 2682—First National Bank, Statesville, North Carolina. Capital, \$50,000.
 2683—Fourth National Bank, Wichita, Kansas. Capital, \$200,000.
 2684—Market Street National Bank, Philadelphia, Pennsylvania. Capital, \$600,000.
 2685—Fond du Lac National Bank, Fond du Lac, Wisconsin. Capital, \$100,000.
 2686—First National Bank, Chillicothe, Missouri. Capital, \$50,000.
 2687—First National Bank, Norton, Kansas. Capital, \$50,000.
 2688—First National Bank, Starkville, Mississippi. Capital, \$50,000.
 2689—Commercial National Bank, St. Paul, Minnesota. Capital, \$500,000.
 2690—Kineo National Bank, Dover, Maine. Capital, \$50,000.
 2691—Chattanooga National Bank, Chattanooga, Tennessee. Capital, \$300,000.
 2692—Ouachita National Bank, Monroe, Louisiana. Capital, \$50,000.

ALABAMA.

- ANNISTON.**—First Nat'l Bank; A. D. Smith, Assistant Cashier, in place of O. H. Parker.
BIRMINGHAM.—Birmingham National Bank has been authorized to commence business. Capital, \$250,000. President, John W. Read; Cashier, H. C. Ansley. —
 First National Bank; 2d Assistant Cashier, Thomas M. Bradley.
DADEVILLE.—Tallapoosa County Bank; Z. Jones Wright, Jr., has been elected Cashier.
DECATUR.—Decatur National Bank has been organized. Capital, \$100,000. President, H. G. Bond; Cashier, W. K. P. Wilson.
GADSDEN.—Bank of Gadsden (Glenn & Brockway); succeeded by First National Bank. Capital, \$50,000. President, A. L. Glenn; Vice-President, R. O. Randall; Cashier, W. G. Brockway.
TUSCALOOSA.—Merchants' National Bank has been authorized to commence business. Capital, \$100,000. President, George A. Scarcey; Cashier, E. N. C. Snow.

ARIZONA.

- FLAGSTAFF.**—Arizona Central Bank; name of Cashier is J. H. Hoskins, Jr.

ARKANSAS.

- BENTONVILLE.**—Benton County Bank; W. A. Terry, President, in place of J. Mack.
HELENA.—Phillips County Bank; succeeded by First National Bank. Capital, \$50,000.
 President, F. B. Slinger; Cashier, Lycurgus Lucy.
JONESBORO.—Bank of Jonesboro is reported here. Capital, \$25,000. President, Wm. H. Cate; Vice-President, Geo. W. Culberhouse; Cashier, Oscar M. Nilson.

CALIFORNIA.

- GRASS VALLEY.**—First National Bank; Vice-President, C. E. Clinch.
LOS ANGELES.—First National Bank; Vice-President, J. F. Crank.

COLORADO.

- COLORADO SPRINGS.**—First National Bank; no Asst. Cashier in place of A. A. Welch.
GLENWOOD SPRINGS.—First National Bank has been authorized to commence business. Capital, \$100,000. President, J. J. Hagerman; Cashier, J. H. Fesler.
IDAHO SPRINGS.—First Nat. Bank; F. F. Osbaston, Vice-Pres., in place of Dennis Faltre.
ROCKY FORD.—State Bank has been incorporated. Capital, \$20,000. President, John F. Godding; Cashier, Frank Clendenin.
YAMPA.—Breeze & Breeze; discontinued banking and collection business.

CONNECTICUT.

HARTFORD.—Aetna National Bank; A. R. Hillyer, President, in place of W. R. Cone; A. C. Loomis, Cashier, in place of A. R. Hillyer.
 LITCHFIELD.—First National Bank; H. W. Buel, President, in place of Henry R. Colt; Charles B. Andrews, Vice-President, in place of H. W. Buel; no Assistant Cashier in place of Chas. H. Colt.
 MIDDLETOWN.—Central Nat'l Bank; A. C. Markham, Pres., in place of J. G. Baldwin.
 NEW BRITAIN.—Mechanics' National Bank has been authorized to commence business. Capital, \$100,000. President, Valentine B. Chamberlain; Cashier, William E. Atwood.

DAKOTA.

CLARK.—First National Bank; Vice-President, Frank Clendenin.
 DEADWOOD.—Merchants' National Bank; Wm. Selbie, Cashier, in place of Alvin Fox. No change in President or Assistant Cashier.
 DE SMET.—First National Bank; P. Lawrence, Cashier, in place of Walter N. Carroll.
 FARGO.—Dakota Guaranty Savings Bank has been incorporated. Capital, \$25,000. President, P. B. Smith; Secretary & Treasurer, B. F. Spalding; Assistant Secretary & Treasurer, W. C. Laizure.
 LAKOTA.—Nelson County Bank; T. G. Turner, Assistant Cashier, resigned.
 LISBON.—Ransom County Bank; succeeded by First National Bank. Capital, \$50,000. President, Rush S. Adams; Vice-President, B. M. Frees; Cashier, H. Kirke Adams.
 MAYVILLE.—First National Bank has been authorized to commence business. Capital, \$50,000. President, G. S. Albee; Cashier, J. Rosholt.
 PARKER.—Geo. W. Stone & Co.; succeeded by First National Bank. Capital, \$50,000. President, L. K. Lord; Cashier, Geo. W. Stone.
 PARKSTON (P. O.: Kirk).—Bank of Parkston; Bowdle, Newcomer & Co. have sold out. New officers are, President, Jacob Schaezel, Sr.; Cashier, Wm. Schaezel.
 VERMILION.—Clay County Bank (Downing & Lumley); now incorporated. Capital, \$25,000. President, L. T. Swezey; Cashier, C. H. Barrett.

DISTRICT OF COLUMBIA.

WASHINGTON.—National Metropolitan Bank; Vice-President, Wm. Thompson.

GEORGIA.

ROME.—Merchants' National Bank has been authorized to commence business. Capital, \$100,000. President, R. G. Clark; Vice-Pres., J. A. Glover; Cashier, J. King.

IDAHO.

KETCHUM.—First Nat'l Bank; Geo. J. Lewis, Asst. Cashier, in place of Thomas Lavelle.

ILLINOIS.

CHICAGO.—Home National Bank; J. C. McMullin, Vice-President, in place of C. N. Holden. — Lincoln National Bank; Vice-President, Edw. Hammett. — United States Bank (Jackson, Dwiggs & Co.); succeeded by United States National Bank. Capital, \$200,000. President, Zimri Dwiggs; Cashier, James M. Starbuck.
 FARMER CITY.—John Weedman National Bank; A. T. Kincaid, Vice-President, in place of V. S. Lindsay.

GARDNER.—Bank of Gardner; F. L. Root, Cashier, in place of W. V. D. Bishop.

LEXINGTON.—First National Bank; Assistant Cashier, W. H. Claggett.

MATTOON.—First National Bank; C. E. Wilson, Cashier, resigned.

OLNEY.—Olney National Bank; in liquidation.

PEKIN.—German-American National Bank has been organized here. Capital, \$100,000.

President, Henry Feltman; Vice-President, C. W. Wilson; Cashier, A. H. Purdie.

PEORIA.—Commercial National Bank; G. T. Barker, President, in place of Eliot

Callender; Eliot Callender, Vice-President, in place of G. T. Barker.

ROCHELLE.—Wm. Stocking & Co.; A. J. Bird, Cashier, in place of J. T. Miller.

VIRGEN.—Walworth & Heaton (Bank of Virgen); succeeded by Caldwell, Henderson & Co.

INDIANA.

FRANKLIN.—Franklin Nat'l Bank; John W. Ragsdale, Vice-Pres., in place of T. B. Wood.

IOWA.

AMES.—Union National Bank; D. A. Bigelow, Vice-President, in place of Geo. F. Tilden.

CEDAR RAPIDS.—Cedar Rapids National Bank; Vice-President, G. F. Van Vechten;

CHARLES CITY.—Charles City National Bank; no Vice-President in place of E. Austin;

Assistant Cashier, F. V. Taylor.

CLARINDA.—Clarinda National Bank; W. D. Merriam, Vice-President, in place of N. L. Van Sandt.

DES MOINES.—Des Moines National Bank; no Asst. Cashier in place of V. F. Newell.

FAYETTE.—Lakin, Baker & Co.; Cashier, Chas. R. Carpenter.

GREENE.—First National Bank; J. Perrin, President, in place of A. Slimmer; Andrew Glodery, Vice-President, in place of J. Perrin.

NEOLA.—Farmers' & Merchants' Bank has just been opened. Capital, \$50,000.

President, Chas. R. Hannan; Cashier, T. G. Turner.

PETERSON.—Farmers Bank; Assistant Cashiers, Lewis Voight and N. R. Lyon.

SIOUX RAPIDS.—Bank of Sioux Rapids; Assistant Cashier, C. B. Mills.

TIPTON.—First National Bank; C. W. Hawley, Cashier, in place of Clarence Jewett.

KANSAS.

ANTHONY.—Harper County National Bank; L. C. Bidwell, President, in place of P. Anderson; no Assistant Cashier in place of F. M. Anderson.

BURLINGAME.—Burlingame Savings Bank; Levi Emple, President, deceased.

CALDWELL.—Caldwell Savings Bank; succeeded by First National Bank. Capital,

\$50,000. President, S. P. J. Lewis; Cashier, T. E. Neal; Asst. Cashier, S. S. Richmond.

DWIGHT.—Bank of Dwight will shortly open for business. Capital, \$50,000. Cashier, S. F. Boyd.

ERIE.—Farmers & Merchants' Bank; W. P. Hazen succeeds Sophie F. Grubb as one of the proprietors and Arthur Grubb as Cashier. Capital, \$10,000.

FRANKFORT.—First National Bank: F. F. Rhodes, President, in place of J. P. Pomeroy J. S. Warden, Cashier, in place of J. T. Phinney.
GIRARD.—First National Bank: D. Corning, Vice-President, in place of H. P. Grund.
GREENSBURG.—First National Bank has been authorized to commence business. Capital, \$50,000. President, Thomas J. Ross; Cashier, George S. Murphy.
HABER.—First National Bank; no Assistant Cashier in place of F. R. Zacharias.
HOWARD.—First National Bank: W. H. Gibson, Vice-Prs., in place of D. L. Campbell.
LUKA.—Pratt County Bank: President, C. E. Merriam; Cashier, J. L. Metcalf.
JEWELL CITY.—First National Bank; Vice-President, Fred Beeler.
KINGMAN.—First National Bank: D. B. Cook, President, in place of R. W. Hodgson; W. E. Maynard, Cashier, in place of D. B. Cook; Assistant Cashier, M. W. Chamness.
LIBERTY.—Bank of Liberty; discontinued.
NORTON.—State Bank of Norton; succeeded by First National Bank. Capital, \$50,000. President, Aaron S. Raymond; Cashier, Elhanan V. Peterson.
OSWEGO.—First National Bank; F. W. Keller, Cashier, in place of H. C. Cook; no Assistant Cashier in place of F. C. Wheeler.
PLEASANTON.—Bank of Pleasanton; President, W. P. Rice; Cashier, G. R. Saunders.
PRATT.—First National Bank; Vice-President, C. S. Calhoun.
ST. JOHN.—First National Bank; no Vice-President in place of Henry Rohr.
WAMEGO.—First National Bank: L. C. Prunty remains Vice-President. Change reported in April JOURNAL was an error.
WETMORE.—Wetmore State Bank: H. C. De Forest, President, in place of Willis Brown; John Thornburrow, Vice-President, in place of H. C. De Forest.
WICHITA.—Fourth National Bank has been authorized to commence business. Capital, \$200,000. President, W. K. Carlisle; Cashier, J. H. Slater. — Sedgwick County National Bank has been organized. Capital, \$200,000.

KENTUCKY.

CARROLLTON.—Carrollton National Bank; O. W. Grier, Vice-President, in place of John Howe.
CYNTHIANA.—Farmers' National Bank; Jno. G. Montgomery, Cashier, in place of Paul King, deceased.
ELIZABETHTOWN.—First National Bank; J. S. Grimes, Cashier, in place of S. R. Robertson.
HUSTONVILLE.—National Bank of Hustonville; J. P. Riffe, Vice-President, in place of T. J. Robinson.
LOUISVILLE.—Bank of Commerce; John B. Smith, President, deceased.
OWENSBORO.—Citizens' Savings Bank; C. H. Todd, President, in place of J. F. Kimbley; J. Q. Haynes, Vice-President, in place of M. V. Monarch.
OWENTON.—Farmers' National Bank; no Assistant Cashier in place of R. C. Davis.
RUSSELLVILLE.—N. Long & Co.; Nimrod Long deceased.

LOUISIANA.

MONROE.—Breard & Millsaps; succeeded by Ouachita National Bank. Capital, \$50,000. President, D. A. Breard, Jr.; Cashier, T. F. Millsaps.
NEW IBERIA.—Breaux & Renoudet; succeeded by New Iberia National Bank. Capital, \$50,000. President, Joseph A. Breaux; Vice-President, Felix Patout; Cashier, P. L. Renoudet.

MAINE.

AUGUSTA.—Granite National Bank; no Vice-President in place of James W. Bradbury.
BANGOR.—Merchants' National Bank; Samuel H. Blake, President, deceased.
DOVER.—Kineo National Bank has been authorized to commence business. Capital, \$50,000. President, Elbridge A. Thompson; Cashier, C. B. Kittredge.

MARYLAND.

BALTIMORE.—Hopkins Place Savings Bank has just been opened. President, Benjamin F. Smith; Vice-President, Henry King; Treasurer, Robt. M. Rother.

MASSACHUSETTS.

ABINGTON.—Abington National Bank; Vice-President, M. N. Arnold.
BOSTON.—Central National Bank; President, Chas. H. Allen. — Massachusetts National Bank; Wm. A. French, President, in place of Abraham O. Bigelow, resigned on account of ill health. — Old Boston National Bank; T. F. Pratt, Assistant Cashier, until September 1, 1887. — Bay State Trust Co.; President, F. W. Hunnewell. — D. H. Darling & Co.; partnership expires by limitation.
CONWAY.—Conway Savings Bank; President, J. B. Packard; Treasurer, W. G. Avery.
HOLYOKE.—Manufacturers' Loan & Trust Co.; application for incorporation of this company has been favorably reported by the Legislative committee. — People's Savings Bank; President, William Skinner; Treasurer, F. H. Chamberlin.
NEWBURYPORT.—Ocean National Bank; President, Philip H. Lunt; Cashier, Moses H. Fowler.
SHELburne FALLS.—Shelburne Falls National Bank; C. W. Hawks, Cashier, in place of O. R. Maynard.
WALTHAM.—Waltham Savings Bank; Charles F. Stone, Treasurer, in place of F. M. Stone, resigned.
WELLFLEET.—Wellfleet Savings Bank; President, Simeon Atwood.
WESTMINSTER.—First National Bank; F. W. Fenn, Cashier, in place of Wm. Mayo.

MICHIGAN.

CARSON CITY.—State Bank of Carson City has been organized. Capital, \$50,000. President & Cashier, E. C. Cummins.
DOWAGIAC.—D. Lyle & Co. (Dowagiac City Bank); now incorporated. Style, City Bank. Capital, \$50,000. President, John Lyle; Cashier, F. W. Lyle.

DETROIT.—Detroit National Bank; Wm. C. Colburn, Vice-President, in place of C. H. Buhl. — Merchants & Manufacturers' National Bank; Wm. E. Reilly, Assistant Cashier, in place of J. Henry Cleveland. — American Banking & Savings Association has filed articles of incorporation. Paid-up capital, \$200,000. President, W. H. Stevens; Vice-President, J. B. Moran; Secretary, John M. Nicol. — American Trust Co. has also filed articles of incorporation. — Exchange Bank; closed. — Preston Bank; David Preston, President, deceased.

EAST TAWAS.—Benj. Richards & Co.; succeeded by J. H. Schmeck & Co.

ISHPEMING.—Ishpeming National Bank; Assistant Cashier, E. R. Hall.

KALKASKA.—Bleazby's Exchange Bank (A. A. Bleazby); James Harriot, Cashier, in place of J. C. Gray.

ST. JOHN'S.—State Bank; Edward Brown, Cashier, in place of Alvin Shaver.

MINNESOTA.

ANOKA.—First National Bank; A. C. Franman, Vice-President, in place of R. M. Taylor.

CHASKA.—Carver County Bank; O. W. Lunsten, Cashier, in place of G. M. Houghton.

SAULT STE. MARIE.—Central Bank of Canada has opened a branch here.

NEW BRUNSWICK.

ST. JOHN.—Blair & Co.; assigned.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, May 2, 1887.

The action of the Commissioners appointed under the Inter-State Commerce Bill has had a tendency to quiet apprehension as to the effect the attempt to regulate the business of the railways of the country might have upon prices. It is plain the Commissioners intend to apply the law very conservatively, and make such changes as may be required by it as gradually as possible. The effect, so far, has been a rise in freight charges. The general tendency of prices has been toward greater firmness, but there has been no marked advance. The earnings of the railroads for the month of March were larger than during any corresponding month since 1882.

A list of twenty-three cities, where there has been a marked advance in the price of real estate, is given in *Bradstreet's*, for April 23. Apart from local causes, this is ascribed to a revival in general trade and the investment of funds heretofore locked up awaiting investment. The rates for money abroad are low—the Bank of England rate was reduced first to $2\frac{1}{2}$ per cent. and since to 2 per cent. The currency of the country has increased about \$60,000,000 within the last eight months, and there seems to be no reason to expect any serious contraction. The rates for money in New York appear to have been higher than would be expected under all the circumstances. The surplus reserves of the banks showed an increase during the last two weeks. The revival of business, of which there are so many indications, appears to be beginning in the interior, and money seems to be tending in that direction. The influence of the Treasury has not been a prominent feature, although there seems to be a belief that the Secretary will be compelled to purchase the fours and four and a halves at their market price, which has evidently kept Governments advancing. Perhaps, too, the fear that after the threes are redeemed the surplus revenues may be locked in the Treasury at such a rate as to cause a contraction of the currency, has had a tendency to deter speculation. It has been anticipated that money would soon return to the East, but there has been no great change in this respect. The changes in prices are insignificant; the advances are followed by very prompt falling off. A large amount of the increase in circulation consists of small silver certificates, which have been issued to the amount of about \$20,000,000, in denominations of one, two and five dollars.

FOREIGN EXCHANGE for the first two weeks of the month was extremely dull. The scarcity of commercial bills and the low rates of money in London had a strengthening effect on the market, and the rate slightly advanced. There was, however, very little increase in the demand, until the last of the month, when it became moderately active. The supply of commercial bills has continued small. The Bank of England lost specie during the month to the amount of £255,000, but the proportion of reserve to liabilities has increased from 45.51 to 50.90. The discount rate at the beginning of the month was 3 per cent. It was reduced on the 14th to $2\frac{1}{2}$, and finally on the 28th to 2 per cent. The Bank of France during the month lost 8,125,000 francs in gold and gained 4,975,000 francs in silver, a net loss of specie of 3,150,000 francs. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.87@ \$4.87½; sight, nominal, \$4.89; 60 days, actual, \$4.86½@ \$4.86½; sight, actual, \$4.87½@ \$4.88; Cable transfers, \$4.88@ \$4.88½; Prime commercial sterling, long, \$4.85¼@ \$4.85¾; Documentary sterling, 60 days, \$4.85@ \$4.85¼; Paris, bankers', 60 days, 5.20@ 5.19¾; sight, 5.17½@ 5.16¾; Paris, commercial, 60 days, 5.22½@ 5.21¼; sight, 5.19¾@ 5.18¾; Antwerp, commercial, 60 days,

5.22½@5.21½; Swiss, bankers', 60 days, 5.20@5.19½; sight, 5.17½@5.16½; Reichsmarks (4), bankers', 60 days, 95¼@95¾; sight 95¾@95¾; Reichsmarks (4), commercial, 60 days, 95@95½; sight, 95¾@95½; Guilders, bankers', 60 days, 40@40 5-16; sight, 40½@40 9-16; Guilders, commercial, 60 days, 40½@40 8-16; sight, 40 5-16@40¾; Copenhagen, Stockholm and Christiania, krona, 60 days, 26¾@26 13-16; sight, 27@27 1-16. Paris dispatches quote exchange on London 25f. 25c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on April 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of March and April:

March.	BANKERS		Cable		PARIS	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.
Highest...	4.86	4.88½	4.88½	4.84	5.21½	5.19½
Lowest...	4.84½	4.87	4.86½	4.83½	5.23½	5.21½
April 1.....	4.85	4.88	—	4.83½	5.22½	5.19½
" 6.....	4.86	4.88	—	4.84	5.21½	5.19½
" 11.....	4.86½	4.88½	—	4.84½	5.21½	5.19½

American dimes	99¾ @ 1 00	Mexican doubloons.....	15 55 @ 15 70
Mexican dollars	75 @ 76	Ten guilders	3 96 @ 4 00
Peru soles & Chilean pesos	73 @ 74½	Com'l silver bars, per oz.	94¾ @ ..
English silver.....	4 80 @ 4 84	U. S. Assay silver bars. .	95¾ @ 97
Five francs	93 @ 95	Fine gold bars par @ ¼ % premium on the	
Victoria sovereigns... ..	\$4 85 @ \$4 88	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The rates for call money were for the first week from 3½ to 7 per cent.; for the second, from 3 to 9 per cent.; for the third, from 3 to 6 per cent.; and for the last week from 2½ to 6 per cent. The usual rates were early in the month from 5 to 7, and later ruled 4 to 5 per cent. Prince commercial paper has been from 5 to 5½ per cent. Other grades ruled from 7 to 9 per cent. The total reserve of the New York city banks on April 30 was \$100,061,400, showing an increase of about \$3,000,000 during the month. The excess of reserve above the legal requirements was \$7,139,925, as against an excess of \$12,025,850 at the corresponding date in 1886. The following are the rates of domestic exchange on New York: Savannah, par, selling ½@¼ premium. Charleston, buying ½; selling 3-16 premium. New Orleans commercial, 50c. per \$1,000 premium; bank, \$1.50 per \$1,000 premium. St. Louis, 25c. per \$1,000 premium. Chicago, 60c. per \$1,000 discount. Commercial paper is in better demand.

NEW YORK BANKS.—Loans have decreased during the month \$5,047,800 and deposits \$728,800. The surplus reserve has, however, increased, showing a tendency of money to return to the banks, not as yet sufficiently marked to decide whether a change in the current since last month has really taken place. During the month of April the gross exchanges at the leading Clearing-Houses of the United States amounted to \$4,584,833,694, of which \$1,471,961,305 were outside of New York city. For the corresponding month in 1886 the exchanges at the same Clearing-Houses were \$3,611,068,502 of which

\$1,190,096 were outside of New York city. The increase in total exchanges was 25.6 per cent., and in exchanges outside of New York 23.7 per cent. In New York city the increase was 26.5 per cent. Outside of New York city the most noticeable increases were in Boston, 28 per cent., San Francisco, 44.2 per cent., Pittsburg, 30.6 per cent., Kansas City, 35.4 per cent., St. Paul, 55.7 per cent., Minneapolis, 29.8 per cent., Omaha, 106.1 per cent., Denver, 78 per cent., Cleveland, 34 per cent., Columbus, 27.3 per cent., Indianapolis, 47.9 per cent., St. Joseph, Mo., 75.9 per cent., Peoria, Ills., 42.4 per cent., Springfield, Ills., 46.6 per cent. The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about the same dates in 1885 and 1886:

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Apr. 30....	\$360,611,900	\$77,627,600	\$22,433,800	\$371,685,900	\$8,365,500	\$7,139,925

THE PUBLIC DEBT STATEMENT of May 2d shows that during the month of April there has been a decrease of the debt of \$13,053,098. The outstanding interest-bearing debt amounted, on May 2d, to \$1,094,678,712, on which \$8,780,656 of interest was due. The debt on which interest has ceased was \$6,504,015. The total debt, less cash in the Treasury, was \$1,305,170,459. The total demand liabilities of the Government, as given by the Treasurer's statement of April 30th, were \$509,440,887. This does not, however, include all of the legal-tender notes, but only \$100,000,000 of them, an amount equal to the gold reserve required by the Act of July 12, 1882. There are outstanding, in addition to this \$100,000,000, \$246,681,016 in legal-tender notes, which belong as properly to the demand liabilities of the Government as any item given in the Treasurer's statement. Adding this amount, therefore, the total demand liabilities of the Treasury on April 30th were \$756,121,903. This includes \$109,044,565 liability for the redemption of National bank notes. Against these demand liabilities the Treasury held reserves of gold, silver, United States notes, National bank notes, and deposits in National banks, etc., amounting to \$544,326,925, and, in addition, \$27,028,658 of fractional silver and minor coin. The total reserve of the Treasury may therefore be said to

be about 75 % of its demand liabilities. On April 14th the gold and silver held by the Bank of France amounted to about 70 % of the demand liabilities of the bank, including its circulation. The cash reserve of the Bank of England on the 13th amounted to about 44 % of its demand liabilities and increased to about 50 % by the end of the month. The following table shows the net gold and silver held by the United States Treasury on the 2d of May and on the 1st of March and April :

	May 2, 1887.	April 1, 1887.	March 1, 1887.
Gold coin and bullion.....	\$275,336,915	\$275,965,962	\$275,068,626
Gold certificates outstanding.....	94,434,485	94,046,015	99,958,365
Gold owned by Treasury.....	\$180,902,430	\$181,939,947	\$175,130,261
Silver dollars and bullion.....	\$209,960,748	\$206,452,230	\$202,812,943
Silver certificates outstanding.....	187,740,430	181,930,459	121,130,755
Silver owned by Treasury.....	\$72,220,818	\$74,521,741	\$81,682,188

On April 18th the Bank of England held £22,697,765 in gold coin and bullion, and £1,487,800 of gold and silver coin—equal to about \$115,000,000.

The Bank of France, on April 14th, held £47,494,100 in gold and £45,974,000 of silver, equal to about \$235,000,000 of each. The amount both of net gold and silver in the United States Treasury has slightly decreased since April 1st.

THE NATIONAL BANK CIRCULATION outstanding has decreased during last month by \$2,118,175, the decrease during the past year having been \$28,801,263. The statement made by the Office of the Comptroller of the Currency, on April 30th, shows that the amount of lawful money deposited with the United States Treasurer to redeem notes of insolvent and liquidating banks, and banks retiring circulation under Acts of June 20, 1874, and July 12, 1882, was \$108,715,305, while the statement of the United States Treasurer, on the same date, gives this item at \$100,433,496 only. The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	May 1, 1887.	Apr. 1, 1887.	Mar. 1, 1887.	Feb. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents	\$3,245,000	\$3,241,000	\$3,241,000	\$3,201,000	\$3,680,000
4½ per cents	64,621,250	62,973,300	60,667,400	60,206,400	59,636,200
4 per cents	114,351,750	113,637,800	112,836,950	113,387,000	113,903,200
3 per cents	20,228,550	27,085,900	36,894,800	47,132,250	52,218,950
Total.	\$202,446,550	\$206,938,000	\$213,639,150	\$223,926,650	\$229,438,350

In addition to the above the National bank depositories have with the United States Treasurer \$24,435,500 (including \$2,081,000 threes) United States bonds to secure deposits, making a total deposited by the National banks for all purposes on May 1 of \$226,882,050.

The rate of interest realized to investors in 4 per cent. bonds of 1907, at a market price of 129.75, is computed by E. B. Elliott, Esq., Government Actuary, at 2.29 per cent., and the rate realized on 4½ per cent. bonds of 1891, at 110 is 2.03 per cent. At these rates for bonds, and assuming 6 per cent. as the rate for bank loans, there is virtually a loss in depositing either class of bonds for the purpose of taking out circulation.

THE EXPORTS OF SPECIE since January 1, 1887, have amounted to \$3,463,664, and the imports during the same period to \$4,715,452. For the corresponding period in 1886, the exports were \$25,865,830, and the imports \$5,412,680.

RAILROAD AND MISCELLANEOUS STOCKS.—The reports of the earnings of railroads continue encouraging, but there has been no pronounced advance either in railroad or other stocks. If anything, there has been a slight tendency to better prices.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of April, the highest and lowest since January 1, 1887, and also during the year 1886:

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Baldwin.—Jesse G. Baldwin, a prominent citizen of Middletown, Conn., died of consumption on April 5th, at the age of 83. For thirty years he was President of the Central National Bank of Middletown.

Banfield.—A. W. Banfield, President of the Wolfboro Savings Bank, Wolfboro, N. H., died on March 9th, aged 57 years.

Barker.—Hon. Hiram Barker, of Farmington, N. H., died March 26th. He was 72 years old, and for fifteen years was President of the Old State Bank, of Farmington. He had been member of the Legislature and of the Constitutional Convention.

Blake.—Samuel H. Blake, President of the First National Bank, of Bangor, Me., and one of the wealthiest men in the State, died in Boston, on April 25th. He had been spending the winter in Florida, and had reached Boston on his return home when he was struck down by pneumonia. He was an active Democratic politician, and one of the oldest living graduates of Bowdoin College.

Clarke.—William A. Clarke, President of the National Bank, of Rhode Island, of Newport, one of the oldest banking institutions in the State, is dead.

Coit.—Henry R. Coit, President First National Bank, Litchfield, Conn., died April 2d.

Crane.—John J. Crane, President of the New York Warehouse & Security Company, died on the 17th of April. He was one of the founders of the National bank of the Republic, had at various times filled the offices of President and Vice-President of that institution and was a Director at the time of his death.

Empie.—Levi Empie, President of the Burlingame Savings Bank, of Burlingame, Kans., died suddenly on April 10th, of paralysis, at the age of 71.

Fleming.—Charles L. Fleming, a member of the New York Stock Exchange, died suddenly on the 20th of April. He was 35 years of age.

Kenyon.—S. N. Kenyon, President of the Fulton Savings Bank, Fulton, N. Y., is dead.

Lockwood.—Legrand Lockwood, son of the late Legrand Lockwood, and member of the firm of Lockwood & Co., died April 2nd, of pneumonia.

Long.—Nimrod Long, of the firm of N. Long & Co., bankers, of Russellville, Ky., died on the 24th of April. He had just returned from Florida, where he had been to recuperate his health. He was 70 years of age.

May.—Simon C. May, Cashier of Columbia National Bank, Columbia, Pa., died on March 3d, aged 47 years.

Mershon.—Henry Mershon, President of the Bank of Hickory, N. C., died suddenly on April 6th of apoplexy. He was 55 years old.

Miller.—A. B. Miller, of the firm of Miller & Conger, of New York city, is dead. He was the originator and organizer of the Mercantile Trust Company, of New York, and was active in the organization of the Park National Bank.

Mitchell.—Alexander Mitchell, President of the Wisconsin Fire & Marine Insurance Co. Bank, of Milwaukee, of which he owned 90 out of 100 shares, died at the Hoffman House in this city on April 19th. He is reputed to have been worth nearly \$25,000,000. His banking career in the North-west is one of the longest and most honorable in that part of the country. He was also widely known as a railway man, and at the time of his death was President of the Chicago, Milwaukee & St. Paul Railroad Company.

Noyes.—Albert L. Noyes, Cashier of the Lamoille County National Bank, of Hyde Park, Vt., is dead.

Preston.—David Preston, founder of the Preston Bank, of Detroit, and largely interested in the Metropolitan National Bank, of Chicago, died in Detroit on April 24th, of heart disease. He was in his 61st year.

Smith.—John B. Smith, President of the Bank of Commerce, of Louisville, Ky., died on April 20th.

COLLECTION OF BANK TAXES.—A bill has been recently introduced in the Massachusetts Legislature, providing for the collection of State and municipal taxes on National and State bank shares. It provides that the tax until paid shall be a lien on the shares which may be seized and sold; that parties may pay under protest, and afterwards recover taxes shown to have been excessive, by suit, and that the Governor may employ counsel to conduct suits brought by the city or town Treasurers for the recovery of taxes.

AMERICAN NATIONAL BANK, KANSAS CITY, MO.—This bank was organized last year by bankers and financiers well known in that section of the country. During the first seven months it has enjoyed remarkable prosperity. Individual deposits, aggregated by its last report, \$1,322,981; bank deposits, \$689,152; loans, \$2,075,875; capital paid in, \$1,250,000; cash on hand, \$1,219,023. Its undivided profits for the period were \$62,033.91. A new building for the accommodation of the bank is in process of construction, which, it is believed, will be the finest office building in Kansas City.

NOTICES OF NEW BOOKS.

The First Nine Years of the Bank of England, an Enquiry into the Weekly Price of Bank Stock from August 17, 1694 to September 17, 1703, by JAMES E. THOROLD ROGERS. (Morses profundo; pulchrior evenit.) Oxford: at the Clarendon Press; New York: McMillan & Co. 1887.

The history of the Bank of England is particularly interesting to Americans as well as to the English, in that it is the first bank started by the Anglo-Saxon race. There were banks previously in operation in Venice, in Genoa and in Amsterdam, as these cities in turn controlled the commerce of the world, and the establishment of the Bank of England was the signal that the commerce of Great Britain had arrived at a stage that made such an instrument necessary. Macaulay in his history of England has portrayed in vivid colors the condition of affairs when the bank obtained its charter. There was much wealth, but there were not the same facilities for investment that now exist. There was a passion for speculation, for forming companies and for stock jobbing. Well-to-do people often kept their savings in strong boxes at home, but more deposited them for safe keeping with the goldsmiths, whose notes or certificates of deposit passed current as money in larger transactions. The bank obtained its privilege through the necessities of the government, engaged in carrying on war on the continent. Its great rivals were the goldsmiths who recognized its power to absorb their business and made many attempts to injure its credit. It had its most important rival in the land bank started by Chamberlain. The danger was due as much to the serious want of money resulting from the recoinage of light-weight silver as to any real probability of the success of Chamberlain's scheme. Mr. Rogers' work gives in much detail the history of the early struggles of the bank. He has drawn somewhat from the same sources as Macaulay but has also discovered new and interesting material never before used. Many of the characters familiar to us in Macaulay's history are shown in a new and interesting light. We can thank Mr. Rogers for having discovered the first English publisher of what may be called a banking and financial journal. This was John Houghton, an apothecary, who first lived near the Royal Exchange and published a weekly statistical paper containing articles on art, science and trade, and a price list of corn and other commodities, as well as the price of bank stock. He was a friend of many eminent persons, and a Fellow of the Royal Society. He is supposed to be the person mentioned by Bishop Sprat, as the tradesman whom the society elected and for whose presence they thought fit to apologize to the king. Charles, "who never said a foolish thing and never did a wise one," answered that he wished them to elect many such persons, if they were equally competent.

Banks and Banking in Michigan; with Historical Sketches, General Statutes of Banking under State and National Laws, and Personal Notices of late Prominent Bank Officers. By T. H. HINCHMAN. Detroit.

This little volume has been sent to us by the author, who is well known as the President of the Merchants' & Manufacturers' National Bank, of Detroit. The State of Michigan was admitted to the Union in 1836, and both during its territorial existence and as a State it went through many interesting vicissitudes in banking experience. A bank was started in Detroit as early as 1806, but it had but a short and troubled existence, during which it came near involving the territorial Governor and Judiciary in an internecine war. After this, up to and including the year 1836, a large number of special charters were granted to banks both by the Territorial Council and the State Legislature. In 1837 a general banking law was enacted which contained many prudent and conservative features, including a rigid system of bank examinations. But at that time there was little real capital in the State, and people generally were impressed with the erroneous idea that it could be manufactured by a banking law. The system commenced, too, in a year of financial crisis, and breathed out its short and spasmodic existence in the disastrous business years from 1837 to 1842. Banks were started under all imaginable circumstances of fraud and pretension, and the whole system became a by-word both within and without the State. In this experience Michigan was not exceptional. The history of the time shows that nearly every one of the newer States, West and South, was afflicted with similar attempts to build financial success upon legislative enactment. Mr. Hinchman's book gives an excellent

view of these operations, and is the only full publication on this and other matters relating to banking in Michigan. Judge Cooley refers to these early attempts at banking in his history of Michigan, and the Hon. Alpheus Felch, who was one of the Bank Commissioners under the law of 1838, has written a paper on the subject.

Mr. Hinchman's book continues the history of banking in Michigan down to the present time, and gives the State banking laws, sketches of the National banks and of prominent bankers of the past and present.

Public Debts, an Essay in the Science of Finance, by HENRY C. ADAMS, Ph. D., of the University of Michigan and Cornell University. New York: D. Appleton & Co., 1887.

As its title indicates the purpose of this work is to attempt to portray the principles which underlie the administration of public credit. It considers the circumstances which cause the growth of public debts, and the conditions and effects on expenditure which their creation implies,—the political circumstances under which it is considered that public debts are opposed to popular Government, and how foreign debts endanger the self-Government of weak States. In this connection the work calls attention to the anomalous character of State bonds in this country. The States having retained the degree of sovereignty necessary to contract a debt have surrendered to the United States the power of making war. When, therefore, a State repudiates a foreign debt, if the foreign nation should undertake coercion, the power of the United States would be called in to defend the State from foreign interference. Foreign creditors have not, therefore, been able to treat the separate States of the Union in instances where debts have been repudiated, in the same summary manner that foreign creditors have treated Mexico or Egypt. In their social effects public debts are considered to perpetuate class distinctions. Good financiering implies a careful regard for the effects of public borrowing upon the industries of a country. The first part of the work concludes with a study of the circumstances under which States may legitimately borrow. The principle recognized in ancient times of storing up a surplus in time of peace, which in modern days has been followed by Prussia, in her policy of a war chest, is not suited to the circumstances of modern life and trade. Loans for public works are regarded as proper.

The next part considers the financiering necessary in case of a National deficit, the management of war necessities, the liquidation of war accounts, the management of the debt when peace returns and its final payment. In illustration of these various matters the financial history of this Government is largely drawn on, as well as that of England and France. The various methods of incurring, funding, and paying are minutely considered.

The last part contrasts the contraction of State and municipal debts with those of the nation. The legal distinctions are carefully pointed out, the duties of local Governments considered and the various principles of debt payment are applied to this form of indebtedness. The purposes for which local credit has been employed at various periods is set forth. In the same way the subject of State indebtedness is considered in its complicated relation to the Federal Government, and its relation to internal improvements. The question of assumption of State and other local debts by the Federal Government is also treated of. The various influences which tend to foster municipal indebtedness are enumerated, and their relation to city population, to speculation, to inland commerce and to local administration remarked upon. The sources of municipal corruption are suggested as well as the means of municipal reform. The policy of restricting governmental duties, and the effect public debt is having on State rights, and suggestions for conserving the latter close the book. It is an original and comprehensive study of an interesting and extensive subject. Financial discussion is avoided, but the views taken seem generally to be sound and philosophical.

In Mr. Adams' criticisms upon Alexander Hamilton's use of a sinking fund, he does not seem to lay stress enough upon the political necessity that a public officer in the United States is compelled to recognize and yield to. This political necessity often includes the recognition of popular errors. When Hamilton promised that the reduction of the public debt should be sacredly provided for, he stated a principle which, since his day, has been paramount in American finance, and is admitted by all to be correct. It was a popular error of the day to look upon a sinking fund as the

proper means to carry out such a reduction. Because Hamilton yielded to this view and suggested a sinking fund, is no proof that he was possessed of the same vagaries as Dr. Price, or that he believed a sinking fund meant more than a promise to apply to the payment of the debt all surplus revenues. Nor is it just to blame Hamilton, as Mr. Adams appears to do, because having no surplus revenue his sinking fund effected no reduction of the debt during his administration.

Statesman's Year Book, Statistical and Historical Annual of the States of the Civilized World, for the Year 1887, edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Twenty-fourth annual publication, revised after official returns. London: McMillan & Co. and New York. 1888.

This publication gives important political information derived from official sources in regard to all the States of the civilized world, the form of government and the chief officials, the names of the reigning emperor or king or chief ruler, the church and education, revenue and expenditure, army, navy, area and population, trade and industry, railways, post-offices and telegraphs, diplomatic service, money, weights and measures, and the names of all important books of reference in which further information may be found. It is the only publication covering so much ground and is invaluable as a reference to those requiring general political information. The experience of twenty-four years publication has enabled the publishers and editor to give this work an amplitude and accuracy which leaves little to be desired. We notice however that in some countries no statement of the national debt is given, and that no reference seems to be made to the systems of banking in operation in the various States. Tables are given showing the density of population of the principal States of Europe, the export and import markets of the United Kingdom in 1885-86, the mileage of railway lines open in the principal States of the world (1885-86), and likewise the mileage of telegraph lines in operation in the same States.

In another part of the JOURNAL will be found the announcement to the public of changes in the officers of the Wisconsin Marine & Fire Insurance Co. Bank, of Milwaukee, resulting from the death of its late President, the Hon. Alexander Mitchell. Mr. John L. Mitchell succeeds his father in the Presidency; Mr. David Ferguson, for forty-six years Cashier, becomes Vice-President, and Mr. John Johnston, for twenty-three years Assistant Cashier, succeeds as Cashier. The stock of the bank has been increased to \$500,000. A fine steel engraving of the Hon. Alexander Mitchell and a sketch of his life will appear in the June number of the JOURNAL.

WANTED—OFFICERS AND CLERKS, POSITIONS, BANKS FOR SALE, LOCATIONS WANTING BANKS, ETC.

[Notices under this head—space not over four lines—cost \$2 an insertion. If replies are to be sent to this office the advertiser must send us two stamped envelopes addressed to himself, in which the replies will be forwarded.]

A GENTLEMAN well posted in all details of banking business who has not less than \$30,000 to invest in a proposed banking enterprise in Texas, can secure the position of Cashier or Assistant Cashier in the bank when organized. Address: TEXAS, care RHODES' JOURNAL, 78 William Street, New York.

TOPEKA, KAN., offers profitable openings for business. Population nearly 40,000. Great natural advantages and excellent railroad communication with all points East, West, North and South.

We most want just now:—Capital to improve a splendid water power; a paper mill; a planing mill; a wagon factory; a carriage factory; a woollen mill; a plow factory; a rolling mill. Address: J. R. MULVANE, President Bank of Topeka.

A YOUNG MAN now occupying the position of Teller in a large National bank wishes to make a change. Has capital to invest in a new bank, either National or State. Fully competent to take charge of any department. Address: TELLER, care of Bradford Rhodes & Co., New York.

WANTED.—Position in a bank by the advertiser, who has had over twelve years' experience as assistant in National and Savings banks. Best of references. Address: R. L., care of RHODES' JOURNAL OF BANKING, New York.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

JUNE, 1887.

No. 6.

QUITE a sensation has been caused by the announcement that the Western National Bank, better known as Mr. Manning's or Mr. Jordan's bank, is about to undertake the business of issuing certificates upon deposits of silver bullion. The idea is that as America, and particularly the United States produce the largest part of the silver of the world, that New York should be the controller of the silver market instead of London. The certificates issued against silver bullion are, in accordance with the plan to be dealt in on the Stock Exchange, and it is claimed that the price might possibly be advanced. The country would thus get more for its silver product, the standard dollars be appreciated in value, and many of the evils of a continued silver coinage averted. This expectation is based on the general proposition that organized speculation in any article has a tendency to steady and advance its price. It substitutes knowledge of the conditions that control production, and of the quantities to be had at any time, for the vague general rumors, which either raise or depress prices unduly, and adds a speculative demand. It is also claimed that an advance in the price of silver will enable wheat from the United States to compete to more advantage with the wheat of India which the low price of silver now enables dealers to land in England profitably. The bullion is to be deposited with the Western National Bank, and certificates issued therefor, in a manner similar to that in which the Clearing-house banks now deposit gold and take certificates from the Bank of America. The difference is that the silver bullion certificates will be issued to the general public and not confined to any class.

The chief reason why the proposition excites so much attention is because the people of this country have arrived at a point where they almost believe that nothing can be done without an Act of Congress. As that legislative body has grown more and more unwieldy the faith in the necessity of its permission to engage in ordinary business has increased. A little independence of spirit would prove that many things which are not absolutely prohibited by law may be done without affirmative legislation. The plan of issuing silver certificates based on

bullion by the Government, was suggested by the Hon. Henry W. Cannon, Comptroller of the Currency, in his report for the year 1884. The certificates were to call for an amount of silver bullion equal at its market gold value to the face of the certificate. The market value at stated periods say on the first of every month was to determine the price at which the certificates were to be redeemed during that month. What it might be unwise or impossible for Congress to agree upon is proposed to be done by a private National banking corporation. That it can be made successful seems to admit of little doubt. Years ago in Massachusetts they had the Suffolk system of requiring the country banks of New England to redeem their notes in Boston. This was inaugurated and carried on by a State bank, and through the operation of the natural demands of business had the force of legislative enactment. A similar system in New York was approved by the Legislature, and the law to-day compels National banks to redeem their notes in Washington. Yet the example of the Suffolk system shows that private enterprise might, if intelligently directed, accomplish the same results without permissive law as with it.

There are, however, some other questions which may arise as to the ultimate scope of a scheme of this kind. During the period of gold speculation subsequent to the war, the Gold Exchange Bank was organized to meet the wants of gold speculators. The tendency of the silver market taken in connection with the silver coinage law of the United States, indicates very strongly that the country may at some future day be upon a silver basis. A bank organized and prepared to take advantage of the new condition of affairs would be ready to reap large profits from the change. With its silver certificates on the market and quoted at the stock board, it would, when the purchasing power of the silver dollar began to coincide with its intrinsic value control the price to a greater or less extent. The speculation although apparently in silver would be as really in gold as it was in 1869. The quotations might show a discount on silver dollars but this would also mean a premium on gold. When the silver standard becomes paramount the silver certificates of the Western National Bank calling for a given weight of fine silver, will be precisely the same value as the certificates of the United States which call for dollars containing the same amount of fine silver.

A further question arises as to the denominations and forms in which these silver bullion certificates may be issued. If in the form of bank bills and of similar denominations there would be a tendency to circulate them as money, and this would bring them into contact with the United States law forbidding National banks to issue post notes or any notes to circulate as money except the authorized circulation based on bonds. If this were not so every National bank in the country could become a depository of silver and issue certificates which according to the credit of the bank might or might not be as

good as those issued by the United States. Laws may however be changed, and it is plain that the plan alleged to be contemplated by the Western National Bank is full of possibilities in many directions. The movement of the crops and the wheat competition theory were favorite arguments of Jim Fisk and Jay Gould for keeping up the price of gold in 1869. The advisability of coming to a silver basis can be defended on the same line. The farmers might not get as much for their wheat but more of it could be sold abroad. How the latter proposition compensates the individual farmer for the former is a problem which depends upon a variety of considerations too numerous to go into.

APPOINTMENT OF UNITED STATES TREASURER.—Under Mr. Jordan the office of Treasurer attained an importance in its bearing on the financial policy of the country never before ascribed to it. This was due partly to circumstances, viz., the rapidly accumulating surplus, the difficulty of the silver question, and the reduction of the debt payable at the option of the Government. But it was most largely due to the character and ability of Mr. Jordan himself who is a man of positive views on finance which he was not afraid to express and generally succeeded in putting in operation. It is said that he was an intimate and trusted friend of Mr. Tilden, and that he went into the Treasury Department not only as Treasurer but also as the main adviser of Mr. Manning in the conduct of the financial policy of the Government. His changes in the form of the debt statement, included two rather arbitrary assumptions which a less positive man might have hesitated to make, first, that the bonds of the Pacific Railroads were Government debt, and second, that the Act of July 12, 1882, required \$100,000,000 in gold to be kept as a reserve for the redemption of legal-tender notes. His attitude toward the National banks was liberal as might naturally have been expected of a banker, and he deserves great credit for postponing bond calls during the first year of Cleveland's administration. The pressure of the continued silver coinage and the constantly growing difficulty of keeping Government payments on a gold basis, compelled him to depart somewhat from his earlier policy and to favor bond calls as a means of retiring National bank circulation. As these notes when presented for redemption could be paid in silver, this continued retirement has afforded the Treasury great aid in getting out its silver and preserving the gold basis. Mr. Jordan should also have the credit for the scheme of issuing silver certificates of small denominations, authorized by Congress at the last session, which, by the vicarious circulation of silver dollars, has been the means of counteracting the contraction of circulation which would otherwise have occurred from the locking up of surplus revenues. To avoid this, if it had not been for the silver certificates, the Government would have been forced to more frequent calls, of the threes, and perhaps ere this

to purchases of long bonds at a premium. In his interview with the Finance Committee of the Senate in January, Mr. Jordan did not appear to exert all the influence he might in favor of some practical measure for funding the fours into bonds at a lower rate of interest. His judgment seems to have been obscured by a natural prejudice in favor of a bill proposed by himself which was clearly impracticable. Perhaps his influence with Congress may have been overrated, but he probably, more than any one, had it in his power to secure some legislation which would have put a stop to the retirement of National bank circulation. But as has been said he was between two evils, on the one hand the accumulation of silver in the Treasury and consequent danger to the gold basis, and on the other, the retirement of National bank circulation. Of these he probably regarded the latter as the least.

The appointment in Mr. Jordan's place of a comparatively new and untried man like Mr. James W. Hyatt, of Connecticut, indicates that the financial policy of the administration will not hereafter be dictated by the United States Treasurer. In fact, as a Washington correspondent very mildly puts it, "Secretary Fairchild has not desired in the Treasurer's office a friend and assistant who would share the responsibility for the management of the finances and take an active part in shaping the financial policy." In other words the Secretary is going to do all that himself, and relegate the Treasurer to the sphere to which he belongs, where he will attend exclusively to the duties of his office that, however responsible and onerous, are properly matters of routine. Mr. Hyatt at the time of his appointment was a National bank examiner for the State of Connecticut, to which office he had been appointed at the incoming of the present administration as the successor of the efficient and popular Mr. Mygatt. Previously he had for a number of years been Bank Commissioner for the State of Connecticut, so it is to be presumed that he has some knowledge of financial matters. Some time will be required to count the cash as a preliminary to transferring it from Mr. Jordan's custody to that of his successor. It will be remembered that the last count was made when Mr. Jordan succeeded Mr. Wiman, and that it came out within two cents, and even this discrepancy was afterwards found.

THE WASHINGTON CORRESPONDENT of the *Commercial Bulletin* announces that the Treasury Department has decided to make persistent and determined efforts to substitute a paper currency circulation for the present coin circulation of the Pacific slope, and to secure the return of the gold coin to the Treasury as a means of strengthening its reserves, etc. He goes on to say that to effect this it has been proposed to amend the legal-tender law, probably meaning the law for the resumption of specie payments, so as to make the legal-tender notes redeemable at the Sub-Treasury in San Francisco as well as in New York city. He says no such legislation was obtained, and is thus

oblivious of the fact that on March 3, 1887, a law was enacted Section 3 of which is that Section 3 of the Act of January 14, 1875, entitled, "An Act to provide for the resumption of specie payments" be and the same is hereby amended by adding after the words "New York" the words "and the city of San Francisco, California," the effect being to make legal-tender notes redeemable in San Francisco as well as in New York.

The object seems to have been to encourage a circulation of paper on the Pacific coast with a view to having some of the silver certificates circulate in that part of the country. The States and territories which produce the most silver have always been the most averse to its reception as a circulating medium. They are very willing that it should be forced upon the East but hitherto have always rejected it for their own use with a wry face. The legal-tender notes now being redeemable in gold in San Francisco, the fact that they have not replaced the coin circulation indicates that the people of the Pacific coast are not so sure but that ultimately silver will be all that can be obtained for them, and hence it will be necessary, if the Department thinks it of importance to substitute paper for the gold in circulation in California, to issue gold certificates payable in San Francisco. If legal-tender notes have not proved acceptable even when redeemable at the San Francisco Sub-Treasury, much more will silver certificates be rejected.

After all it is a question whether instead of trying to force the Pacific coast people to accept a circulation of paper based on silver and give up their predilections in favor of a single standard of gold coin, it would not be better to propagate their mono-metallic practice throughout the rest of the country.

CONGRESS CAN DETERMINE what the unit of value in the United States shall be, and it has determined such unit of value to be a dollar, and that a dollar is a certain coin stamped at the United States Mint, containing 25.8 grains of gold nine-tenth's fine, and another certain coin stamped at the United States Mint, containing 412.5 grains of silver, nine-tenths fine, each subject to certain laws and regulations as to legal-tender, as to device and as to limitation of errors in weight, etc. It is frequently said that 23.22 grains of pure or fine gold make a dollar and also 371.25 grains of fine silver. This is an erroneous statement. The respective dollars contain the amounts of pure gold and silver mentioned, but they comprise other things, viz., the alloy, the Mint stamp, the legislative authority which makes them a legal-tender. All these features are required to make a legal gold or a legal silver dollar. It is much the fashion to affect to disregard in scientific inquiry the effect of legislative enactment and to put much stress on such phrases as the laws of nature, the laws of trade, the laws of finance, the higher law, the reign of law, etc. It is true that there are very many things that cannot be accomplished by Parliaments or Congresses or Assemblies, but in all ages men have also found that legislators can accomplish very many things. They cannot change

the laws of nature, they cannot for instance make water run up hill as a general proposition, but they can pass laws for pumping works which for some time make some water disobey the law of gravity. The history of civilization is but a history of the modification of natural laws by the united efforts of mankind bound together and directed by some form of law of their own enactment. The let alone policy, advocated at the present day by many thinkers derives the apparent feasibility of its application from the fact that men have been educated by the pressure of government for so many generations that by hereditary inclination they pursue the lines previously prepared for them. If in the earlier history of the human race, when all merchants were pirates and the term stranger was synonymous with enemy, governments had retired and let natural laws of trade, finance, and what not, then existing have their way, the earth as far as improvement is concerned might as well have been inhabited by Kilkenny cats.

While therefore Congress cannot make 23.22 grains of pure gold equal to 371.25 grains of pure silver in value in the bullion market any more than it can make water as a rule run up hill, yet as it can by authorizing pumping machinery compel some water for some time to act contrary to natural law, so it can and does make silver dollars of 412.5 grains, nine-tenths fine, under some circumstances, equal to gold dollars containing 25.8 grains of gold, nine-tenths fine. What is seen every day cannot be denied. We know that in the United States silver dollars as yet pass on a par with gold dollars, and also that this is due to legislative action. The pumping machinery of the Treasury Department authorized by law raises the silver dollar up to, and keeps it at the level of the gold dollar for business purposes within the United States. How long this can be done depends on the strength of the machinery and the quantity of silver dollars to be raised. The Dutch have succeeded with much labor in keeping Holland dry and in a condition for cultivation practically on a level with the rest of the dry land of Europe. It was a work which necessity compelled them to, and one which they have made to pay. We should regard them as very foolish if they had set their pumps to work in the ocean. and feel that the utmost strength and perseverance would never enable cabbages to be raised on the right of way of the Atlantic cables. In endeavoring to keep a silver dollar at a level with a gold dollar in the United States, Congress has undertaken a task which is both expensive and worse than useless. Any break or clog in the machinery may at any time forcibly illustrate what a heavy weight the Government is carrying.

THE TREASURY AND THE SURPLUS.—The accumulation of surplus revenues in the Treasury will, it is estimated, go on after the threes are paid on July 1st, at the rate of from eight to ten millions of dollars per month, and the accumulation up to the date of the regular session of Congress will therefore be between 50 and 70 millions of dollars. If

there is to be no way of getting this out of the Treasury it will cause a contraction of the circulating medium of the country to that extent. This accumulation may be prevented either by reducing the revenues or by paying out the surplus. The latter may be accomplished by the purchase of bonds at a premium, by paying interest on the debt in advance with a rebate say of 2 per cent., or by paying the present value of the difference in interest between a four per cent, and a two and a half per cent. bond. To reduce the revenues will require an extra session of Congress, and it is exceedingly doubtful whether if an extra session were called any measure could be agreed on in time to be effective. The plan which has been spoken of as most feasible is to repeal the internal revenue taxes on whisky and tobacco, but although these taxes afford as much protection to the whiskey ring and tobacco dealers, and restrict free trade in these articles as much as the tariff duties prevent free trade in foreign products, yet the free traders, the whiskey distillers and the manufacturers of tobacco will all join to prevent the repeal of these laws. There are others, too, who believe that whiskey and tobacco are the most appropriate articles for taxation. The opposition to this mode of reducing revenues will be as determined as to reductions of customs duties. In fact any attempt to change the present laws for raising the revenues will result in a long and weary session of Congress. Admitting, however, that Congress would immediately repeal the internal revenue laws—what would be the effect? The receipts from internal revenue for the fiscal year ending July 1, 1886, were \$116,805,936 out of total ordinary receipts amounting to \$336,439,727. The receipts outside of internal revenue were therefore \$219,633,791; while the ordinary expenditures, including interest on the public debt, were \$242,483,137. The repeal of the whiskey and tobacco tax would therefore cause the receipts to fall below the necessary expenditures of the Government, and the result might be a shock to public credit which would be far more disastrous than any trouble likely to result from the accumulation of surplus. At the extra session Congress might, it is true, pass a law for the funding of the fours and four-and-a-halves into 2½'s, according to principles heretofore elucidated. It is, however, entirely in the discretion of the Secretary of the Treasury, if we are to judge by precedents, to change the 4½'s and 4's into lower rate bonds without a further Act of Congress. In the May number of the JOURNAL it was contended that the plan of paying interest in advance on the debt, with a rebate which would net the Government say 2 per cent., was precisely the same in principle as buying the difference in interest between a four and a two-and-a-half per cent. bond at its present value. In the one case the whole interest for one year on the whole debt is purchased at its present value at 2 per cent. In the other ¼ of the whole interest for twenty years is purchased at its present value computed at three per cent. The Secretary has a precedent for the purchase of advance interest in the

action of Secretary Richardson in 1873, when he paid a quarter's interest in advance as a rebate. But it may be said that a change in the character of the bond is made by reducing the interest. For this there is the precedent established by Secretary Windom in 1881, when he called in the six per cents. and stamped them as continued at $3\frac{1}{2}$. Under the two foregoing precedents the Secretary of the Treasury has it in his power to say to the holders of the fours or four-and-a-halves: "If you will bring in your bonds and permit me, on behalf of the Government, to cancel the present rate of interest and stamp $2\frac{1}{2}$ per cent. on the bonds in place of four per cent., I will, with the surplus revenues, purchase of you the present value of the difference in interest for twenty or four-and-a-half years, as the case may be, computed at three per cent." There is no compulsion, no violation of contract, and the Government earns three per cent. on its surplus. It has been urged against this plan that the holders of Government bonds will not permit the Treasury to make this gain, that the bonds are held for investment, and that this investment includes the purpose of holding them to maturity in their present condition, for if it did not, the present premium in the market would induce a sale. Moreover, the idea of the investment includes that of certain amounts coming in at regular intervals, and the acceptance of advance interest or the sale of a portion of the future interest at its computed present value in cash would defeat this purpose. Many of the holders of fours bought them at par or thereabouts, and will receive about four per cent. on their original investment until maturity. The premium itself is as much an indicator of the tenacity with which these bonds are held as of the demand for them.

This view, however, does not take into account the whole effect of such a measure. The moment it is known that the Treasury will pay the present value of a portion of the interest on fours, say of one-and-a-half per cent. for twenty years, the effect would be to enable the National banks, who who are in a situation to afford to do it, to bid high for the bonds to induce their sale. Thus, if a National bank purchased a \$100 four per cent. bond at \$134, it would receive a $2\frac{1}{2}$ per cent. bond and \$24 in cash. The $2\frac{1}{2}$ per cent. bond would cost the bank 110, and if a $4\frac{1}{2}$ per cent. bond at 110, having $4\frac{1}{2}$ years to run, nets an investor about 2 per cent. per year for that time, a $2\frac{1}{2}$ per cent. bond at 110, having 20 years to run, would net as much per annum for twenty years. So if National banks can, as they do, afford to buy $4\frac{1}{2}$'s as a basis for circulation, much more can they afford to buy fours even at 134, and exchange them for two-and-a-halves. But in addition the banks can use the realized interest to better advantage than can other investors. This action by the Treasury independent of Congress, would not prevent the latter, when it meets, from passing a law allowing the issue of circulation to the par value of the bonds. The Treasury need not issue new bonds, but merely stamp the fours

presented with a new contract for a lower rate of interest, for which it has precedent in the action of Secretary Windom with the three-and-a-halves, and to induce holders to present the bonds for this purpose it can offer the present value of the interest surrendered, computed say at two or three per cent., for which it has a precedent in the payment of advance interest in 1873 by Secretary Richardson. In fact the Treasury has both law and precedent for all the action necessary to get rid of the surplus at a profit to the Government.

MR. ALEXANDER DEL MAR has been astonishing the Geographical Society of the Pacific, in San Francisco, by reading a paper on the interdiction of gold mining. This is an effort similar to collating the arguments which have been urged in all times and by all sorts of men against charging interest for the use of money. To deliver a lecture in California against gold mining is about as audacious as to address an audience of bankers in opposition to the taking of discounts. The instances cited in this most remarkable paper are about as mythical as the evidences in favor of the early settlement of Rhode Island by the Norsemen. They consist of a traveler's tale, of the speculation of an ancient philosopher, of the imaginings of a popular modern novelist, and of a quaint tradition handed down by one of the aborigines. Herodotus, who is good authority for what was told him, mentions that in Lydia the kingdom of the celebrated millionaire Croesus, mining of the precious metal was prohibited by law. Plato, in his code of laws for an imaginary republic proscribed the use of gold. J. Rider Haggard, in that matter-of-fact romance, "She," described the ruins of ancient gold-mining works in Africa; and an old Indian travelling on the Pacific coast in 1760 is alleged to have seen Japanese ships at the mouth of the Columbia River the crews of which were engaged in mining gold.

Of more weight perhaps are the statements, that the Japanese forbade the Portuguese to mine gold in Japan; that the Roman Senate would not let the Tiber be worked for gold because it would interfere with the navigation of the stream, that the Chinese refused to sanction mining because it interfered with the circulating medium of the country, and that the negroes of Congo, like the apes that would not betray their knowledge of human speech lest they should be set to work, will not reveal the location of gold mines in their country because they fear they will be made to labor in them.

Mr. Del Mar, who is a pronounced bi-metallist, perhaps cited these convincing instances to show that the output of gold is declining on account of a growing aversion on the part of the several members of the human family to the further utilizing of the gold mines of the world. This startling argument should cause those who are in favor of retaining a gold standard to pause and consider when they see the antipathy of the bulk of their fellow beings to the use of gold so ably

proved in the paper read before the Geographical Society of the Pacific, by that eminently sound and scientific person Mr. Alexander Del Mar!

AN ANALYSIS of the New York Holiday Act so far as it applies to banks and bankers, sent out by the New York Clearing-House Association, will be found in the News Department of the JOURNAL. The law went into effect on May 16th, and May 21st was consequently the first Saturday coming under its provisions. For a beginning the half-holiday was very generally observed. The Stock, Petroleum, Produce, Cotton and Maritime Exchanges closed promptly at twelve o'clock noon, as did also the leading private banking houses and many business houses. The banks kept their doors open but the amount of business transacted was small. The indications are that the half-holiday will be more and more observed, as the routine of business of the exchanges, and of the banks and their customers gradually conforms itself to the new law. Outside of New York there was great diversity of action among the banks some closing and others remaining open. The main difficulty found with the working of the bill was in regard to notes falling due on a Sunday not a holiday, some holding as did the Clearing-House Association of New York that notes, etc., carrying grace, falling due on Sunday were payable as before on the preceding Saturday, others that the law made such notes payable on the next secular day. This defect has been remedied by the passage of a supplemental bill which was introduced by Mr. Shehan providing that paper falling due on Sunday or on Saturday or Monday, when the two latter are whole holidays, shall be due on the next succeeding secular day.

CHANGE OF DESIGNS OF UNITED STATES COIN.—The circular of the Director of the Mint issued on April 9th of the present year, which was published in the May number of the JOURNAL, calling upon artists to submit designs for coins of the United States, seems to have excited some adverse criticism. In another part of the JOURNAL a letter from a prominent Boston banker is printed which calls the attention to one of the disadvantages of change in the coinage. Section 3510 of the United States Revised Statutes under which the circular of the Director of the Mint was issued, authorizes the designs to be obtained, but it does not, except by inference, authorize them to be applied to the coinage. The question having been submitted to the Attorney-General, this officer decided that as the use of the coin was intended to be world-wide it was commercially important that the appearance of the coins of the United States should be familiar to the whole world, and that frequent changes in their devices or designs would impair their usefulness in this respect. Therefore he held that a special Act of Congress was necessary to empower the Director of the Mint to make any alteration.

RESERVE CITIES UNDER ACT OF MARCH 3, 1887.

In his address at the meeting of the American Bankers' Association on August 11, 1886, Comptroller Trenholm presented tables relative to the reserve held by National banks, and while remarking that the banks as a whole held more than the required amount, suggested that the excess was least in the banks in New York city, and less in the banks of the other reserve cities than in those located outside such cities. This appeared to indicate that the Comptroller was of the opinion that there was some disadvantage to the country in the accumulation of deposits in New York and other reserve cities, in which the tables presented seemed to show that the reserves were proportionately the weakest. The tables as well as the address were printed in the September number of the JOURNAL, and in commenting on them at that time it was pointed out that it was a misapprehension to assume the weak point of the reserves to be in New York city, and that this misapprehension arose from making the comparison on the basis of total reserves instead of upon that of cash reserves. The law permitted banks outside of the reserve cities to keep three-fifths of their total required reserves with their reserve agents in those cities, and banks in reserve cities other than New York to keep one-half of their total required reserves with reserve agents in New York, while the banks in New York city alone were required to keep their total reserves in cash in their own vaults. On a cash reserve basis, the New York city banks, with deposits on June 8, 1886, amounting to \$296,751,907, held \$89,855,515 in their vaults, or \$15,667,538 in excess of the legal requirement, which, reduced to percentages, shows a holding of 30.28 per cent. instead of 25 per cent. of liabilities, or an excess of over 5 per cent.

The banks in reserve cities outside of New York had on the same date deposits amounting to \$387,240,951, and, if like New York city, they had been required to keep their reserves in cash at home, they should have had in their vaults \$96,810,237, whereas they actually had only \$83,216,734, or about 21 per cent., a deficiency of \$13,593,503, or about 4 per cent., if measured by the rule of requirement for New York city. Judged by the same rule of requiring the total reserve to be kept in cash in bank, the country banks, viz.: those outside the reserve cities, with \$611,733,799 of deposits, should have had \$91,760,069, or 15 per cent., on hand, but they held \$88,092,935, or 14.2 per cent., showing a deficiency of \$3,667,134, or a little more than $\frac{1}{2}$ of 1 per cent.

A critical examination thus indicated that the weakness in reserve apparently imputed to New York did not exist at that point at all, but if there was any weakness it lay in the country banks, and especially in those in the other reserve cities. The Comptroller's attention appears to have been directed to this point, and in his annual report, which appeared in December, 1886, he recommended the law be so amended as to require all banks to keep on hand, or at some centre near their location, a larger proportion of reserve than the law now required. He adds: "The present provision, allowing a part of the reserve to be kept in a distant city, appears to be a survival from the system of redemption formerly existing, which was repealed by the Act of June 20, 1874,

and its maintenance seems inconsistent with the general policy of the laws as they now exist." This indicates that Mr. Trenholm was of the opinion that when Congress originally provided for the keeping a large portion of the bank reserves in central redemption cities, it had in view simply the redemption of the circulating notes at those points, and the reserves on circulation having been abolished and redemption at the reserve centres having been superseded by redemption at the United States Treasury, the law for keeping reserves at these cities had no longer a *raison d'être*. It also indicates that the Comptroller thought the home reserves of the country banks and of the banks in reserve cities outside of New York should be strengthened. An inspection of the original law shows, however, that Congress contemplated both reserve agents and redemption agents. The banks were permitted to select reserve agents, but they were obliged to select redemption agents. The Act of June 20, 1874, relieved them of the necessity of selecting redemption agents, but still continued the permission to select reserve agents.

A bill was introduced for the purpose of carrying out the Comptroller's suggestion and was passed by the House of Representatives in December, 1886. This bill added eleven cities to the list of those named in Section 5191, National banks in which were required to keep a reserve of 25 per cent, and added nine cities to those named in Section 5192, National banks in which might be selected as reserve agents. Richmond and Charleston were already named in Section 5192, but were not included in Section 5191, and this explains the difference in the number of cities added by the new law to the respective sections. Section 5195 was also amended to enable these reserve cities to keep one-half of their reserves in National banks in any of the other reserve cities, instead of compelling them, as heretofore, to keep such reserve as they did not retain at home in New York. The imperfection of this measure was apparent. It did not in any degree carry out Comptroller Trenholm's recommendations, which proposed greater reserves at home, and that reserves not kept at home should be held at near points. This bill did not in the least increase home reserves, and there was nothing in it to prevent the selection of reserve agents at points very distant from the banks. In its general operation it tended to weaken the reserves of the country in that it enabled banks to count as reserve balances which they, in any event, would have kept to meet the necessities of their business, but which had before been additional to the regular reserve they were required to keep. For instance, a bank—say in Cleveland—with a million deposits under the law, must keep \$125,000 at home and \$125,000 more either at home or in New York. The necessities of its business obliged it to keep balances at Chicago, Milwaukee, St. Paul and St. Louis—say \$10,000 at each place—or \$40,000 more. This amendment enabled the Cleveland bank to count this \$40,000 as legal reserve, and in times of pressure permitted it to reduce its reserve in New York by this amount, so that instead of having a real reserve of \$290,000, this law reduced its real reserve to \$250,000.

This bill was happily amended by the Finance Committee of the Senate, and became a law in its present form, allowing three-fourths in number of National banks in any city with 200,000 inhabitants, by application to the Comptroller of the Currency, to constitute that city a central reserve city like New York, and three-fourths of the National banks in any city having 50,000

population to constitute it a reserve city. From the Comptroller's office it is learned that St. Louis and Chicago have become central reserve cities under this law, and Kansas City, St. Joseph, Mo., and Omaha, Neb., have become ordinary reserve cities.

In all but Chicago the banks were unanimously in favor of the change. St. Louis made application on March 16th, and was approved by the Comptroller on March 18th. Kansas City applied on March 18th, and was approved March 21st. St. Joseph applied on March 24th, and received the Comptroller's approval on April 7th. Thirteen out of sixteen of the Chicago National banks applied on April 15th, and the Comptroller approved it as a central reserve city on May 2d. And, finally, Omaha became a reserve city on May 16th, the application having been received on the 12th.

It is too soon to tell with any certainty what changes in the deposit of National bank reserves will follow the action of the banks in the cities named. It is not probable that the effect of the change to reserve depositories of the banks in Kansas City, St. Joseph or Omaha will be very noticeable. Country banks that have hitherto found it profitable to keep balances in those cities will select reserve agents there, so as to have such balances count as reserve, but they will not necessarily increase their deposits. Wherever there is the more profitable use for money, there it will go, despite reserve laws. Chicago and St. Louis banks will probably not keep any less in New York than they have heretofore done. For some time these banks have found that their business required large home reserves. In time of pressure they may have cause to regret that they cannot use their New York balances to keep their reserves up to the legal requirement, as it may oblige them to cease discounting much sooner than they otherwise would. The banks in Boston and Philadelphia can now count their Chicago and St. Louis balances as reserve. The abstracts of the statements of the banks in the several cities on May 13th will be studied with much interest to see whether there has been any marked change in the status of bank deposits. This is the first statement called for since the law was put into execution. Omaha, however, did not become a reserve city until the 16th of May, and Chicago had only been working eleven days under the change. Probably the midsummer reports will be the first to give any sure data as to the effect of the law.

BANKS AND TRUST COMPANIES.

In an article in the October number of the JOURNAL, it was shown that the Trust Companies of the State of New York held as reserve against \$147,000,000 of deposits only \$7,000,000 in cash, and that for their real strength in this respect they depended upon their power to draw upon the reserves of the banks, and that thus the latter were sustaining a much greater load of credit than at first sight appeared. In other words, to understand the real reserve strength of the associated banks it was necessary to take into account the business of the Trust Companies. The writer well styled the latter a huge parasite banking system which, unacknowledged as such, drew its strength and sustenance from the acknowledged banks. All of this acquires new force since the decision of the United States Supreme Court given in the last number of the JOURNAL, in which by mere dictum the Court settles

that Trust Companies are not engaged in the same business as banks, and consequently do not come in competition with them. The Court says: "Trust companies however in New York, according to the powers conferred upon them by their charters and *habitually exercised*, are not in any proper sense of the word banking institutions." If the words italicized had been omitted, it might have been imagined that the Court confined itself to what might appear, from the charters of the companies, to be their sole business. From the use of these words, and from the quoting of the usual terms of the charters in full, it appears that the Court must have intended to make an examination not only of what powers the charters do actually confer, but of the powers which Trust companies do actually exercise. In coming to the conclusion that Trust companies are not actually "in any proper sense of the word banking institutions," the Court must either have labored under some misapprehension, or they were so misled by the desire to avoid interference with the taxing power of State authorities, even when unjustly exercised, that they strained a point in favor of the Trust Companies, to make them appear what they are not.

The charters of these companies grant among other things the power "to receive moneys in trust and to accumulate interest thereon." There is no restriction upon the methods they may employ to do this. And in fact if the Court had examined their workings under this clause it would have found that they receive deposits, subject to check and issue certificates of deposit, and certify checks in a manner precisely similar to the National and State banks, and moreover that the bulk of their business is of this character. Mr. Paine, Superintendent of the New York Banking Department, whose duty it is to supervise the operations of the Trust companies and make examinations of their affairs, says in his Banking laws (page 71) that "the distinction between Trust companies and banks of deposit is not as broad practically as it is in theory." That this is very true may be shown by an examination of their reports published in the report of the Superintendent of the Banking Department, transmitted to the Legislature in January, 1887. These reports bear date the latter part of 1886. From them it is found that the Central Trust Company of New York city, with a capital of one million dollars, had deposits subject to check amounting to \$18,430,291, and that it had loans on collateral amounting to \$13,328,892 and had purchased bills to the extent of \$2,885,796. The Farmers' Loan and Trust Company, with one million dollars capital, had \$19,504,861 deposits, and loans to the extent of \$15,746,255. The Mercantile Trust Company had a capital of \$2,000,000 and deposits and loans of \$16,760,380 and \$13,863,112 respectively, the certified checks reported were \$1,027,787 in addition to the deposits mentioned. The Metropolitan with \$1,000,000 capital had deposits amounting to \$4,453,384 and had loaned \$3,382,900. The New York Life Insurance and Trust Company, with a capital of \$1,000,000, had deposits amounting to \$14,382,553 and had loaned \$4,295,950. The Union Trust Company, with the same capital, had deposits to the extent of \$22,821,582 and loans to the amount of \$19,987,831, and the United States Trust Company, with a capital of \$2,000,000, had deposits to the enormous amount of \$32,182,954 and had loaned \$22,788,360. These loans were not made on real estate nor were they investments in bonds of the United States, States or cities or municipal corporations. They were loans on

collateral security just the same as those made by the banks. In almost every case the amount of this description of loan was more than twice as large as every other species of investment made. The daily quotations for money indicate that the comparative freedom from taxation enables the Trust Companies to offer loans on the best collateral at from one to one and a half per cent. less than the banks. This gives them the cream of the market. If cheap money is a good thing for the public, and the Trust Companies can offer it because of their exceptional situation as to taxation it would appear to be profitable to the public if the Trust Companies cannot be put on the same footing as the banks, to put the banks on the same footing as the Trust Companies by making their shares free of State taxation.

How it is possible to say that Trust Companies are not in any sense banking institutions when the great bulk of their business is precisely the same as that done by the banks? As a matter of fact the companies exercise all the functions of banks and in addition have other powers which the banks do not possess. The Court decides they are not banking institutions, not because they do not do the same business as the banks, but because the banks cannot do the same business as the Trust Companies. In other words, because the less does not include the greater, the greater necessarily cannot include the less.

CHANGE OF STANDARD IN ENGLAND.

Mr. Moreton Frewen, before the Chamber of Commerce, Bristol, England, made the following statements in regard to the currency question. He referred to the adverse theories accounting for the fall of prices, one ascribing it improved methods of production and transportation and the other to the diminution of gold, which, by unwise legislation, had become the exclusive currency of the greater portion of the commercial world. He premised by asserting the general theory that, as legal tender money diminished, prices would fall. In the 16th century, just before the discovery of the silver mines of Potosi, the whole monetary stock of Europe was but £35,000,000. The opening of those mines brought it up to £140,000,000, and prices rose nearly 300 per cent., or in proportion to the increase in currency. But from 1809 to 1880, the stock of currency diminishing 17½ per cent., prices fell 48 per cent., or much more than proportionally to the diminution of the currency. Between 1858 and 1878 the stock of sovereigns was reduced by 20 per cent., but, owing to improvements in banking and instruments of credit, prices had only fallen about 40 per cent. Mr. Frewen contended that an immense amount of gold is used in the arts, and stated that in Birmingham 10,000 sovereigns were melted down for this purpose every week. Although the vicious legislation making gold the standard of England was initiated in 1809, yet practically silver was not deprived of its place as currency until 1873, because up to that time France continued to hold open her Mints to the coinage of both metals at a ratio of 1 to 15½, and this enabled any holder of silver to at once turn it into gold. The action of France in 1873, closing her Mints, stopped the fly wheel of the world's monetary system, and the financial troubles of England date from that time. Of the £18,000,000 of annual output of gold from the mines, £12,000,000 is used in the arts, £5,000,000 is hoarded in India, and £1,000,000 goes to Egypt. In eleven years, says Mr. Frewen, only £75,000,000 of new gold has

been added to the world's currency, while during that period the United States and Germany have absorbed for their own use £180,000,000. Europe is losing gold at the rate of £12,000,000 per annum, and therefore prices are everywhere falling and industry is everywhere dismayed. As long as the French Mint maintained silver at a ratio of $15\frac{1}{2}$ to 1, the exporter of produce in India, where silver is the legal tender standard, sold his produce for gold, and changed that gold for silver at the Mint rate. When Indian wheat sold in London for £2 per quarter,—the two pounds sterling would buy 22 rupees. Now, when Indian wheat sells in London for a pound and a-half per quarter, because of the fall in the price of silver, the £1½ will purchase 23 rupees, and Mr. Frewen remarks that at a less gold price for wheat in London the Indian farmer, since the fall of silver, gets more for his wheat than he did before when the gold price was greater. While, therefore, the English farmer gets nominally less money, the Indian farmer gets more. Moreover, the rupee in India, so Mr. Frewen says, will buy more land or labor or commodities than it would when the gold price of silver was higher. Again, Mr. Frewen says that the Lancashire cotton trade can not continue to compete with mills in India if the gold price of silver continues to fall. Mr. Frewen states that the fact that a Royal Commission is considering the entire question is due to the agitation of the subject in Lancashire and to the Manchester Press. He believes that it is not necessary for England to wait for a monetary conference, but can single-handed settle the question by simply saying to its citizens, you may pay your debts in gold or in the silver equivalent of that gold—in other words, making silver a legal tender hereafter at its present gold value, viz., twenty ounces of silver for one of gold.

All this seems very plausible, and it is no doubt true that the cotton trade of England is beginning to suffer from the competition of the East Indian mills, established, as these are, within the cotton-growing district and contiguous to an immense home market. It is not, however, clear that the currency has anything to do with it, and Mr. Frewen's figures, such as he gives, are very inconclusive on this point. In fact, if the success of the competition were due to difference in currency alone, then the general reduction of prices, which he says exists in England, would seem to enable the cotton business to continue at a less range of profits. If the fall of silver enables wheat to be cheaply placed in the London market, it should also reduce the price of raw cotton.

Neither is it so clear that the Indian farmer benefits because of the fall in silver. Just after the late war in the United States, it was said that the greater the depreciation of greenbacks the easier to export wheat. This was so, because of the greater margin of profit for the exporter. If wheat were a dollar a bushel, net gold price in London, and gold at 120, the exporter could buy 6 bushels in this country for every five sold in London. The farmer never got the London gold price in reality, but he got the nominal London price paid in greenbacks. It was the exporter who profited and, as a rule, failed to divide this profit with the farmer.

The Germans are said to be highly elated at the success of their recent loan to the Chinese. They feel they have beaten England in a transaction which is the forerunner of extensive dealings with China.

*** ALEXANDER MITCHELL.**

The death on April 19th of the Hon. Alexander Mitchell, President of the Chicago, Milwaukee & St. Paul Railroad Company, and of the Wisconsin Marine & Fire Insurance Co. Bank, of Milwaukee, removes one of the most prominent bankers and financiers, not only of the North-west, but of the country. As has been remarked, his death in this city, where he frequently came to look after his interests, suggests how intimately the ties of business connect all sections of the country. The men who are financially prominent seem to belong to no State or section, but to the nation at large.

The effect of the announcement of his death was a temporary depression of the stock market, which has become the appropriate sign of the death of a great financier, as the flag at half-mast is that of the death of a great general or statesman. Mr. Mitchell was born in the parish of Ellon, Aberdeenshire, Scotland, on October 18, 1817. His father was a farmer. While yet in his teens he essayed the study of law in Aberdeen. This did not suit his taste, and he soon abandoned it to enter a banking house in Peterhead. His banking history is one of the most interesting in the banking annals of the United States, and is intimately connected with the growth of the great North-west.

In 1834 George Smith, a Scotchman from Aberdeen, came to Chicago, at that time a mere village, seeking opportunities for profitable investment. He was so well pleased with the prospect that he returned to Scotland, and there organized the Scottish Land & Investment Company, of Illinois, and associated with himself Messrs. Strachan and Scott. There was great scarcity of money in the West and of banking facilities, and great ignorance of the true principles of banking. Owing to this there was a fine field in which dishonest and ignorant adventurers had exercised their talent much to the detriment of the general public. The people generally were opposed to banks, but obliged to use the bills they issued. Mr. Smith was well acquainted with Mr. Mitchell, who was then employed in the banking house at Peterhead, and well knowing his abilities and innate fitness for financial affairs, associated him with himself in the new enterprise, undertaken in 1839, of starting the Wisconsin Marine & Fire Insurance Company at Milwaukee, the charter of which was obtained from the Territorial Legislature of Wisconsin. It was not supposed to have banking powers, which, in the public mind, were synonymous with issuing promissory notes to circulate as money; but its charter granted the power to receive deposits and to make loans, and of course to issue certificates of deposit. The exercise of the latter privilege in reality gave the power of issuing circulation, as the certificates were engraved like bank bills and in similar denominations.

It has been stated that Mr. Smith did a banking business previous to his association with Mr. Mitchell, but the fact is that no real banking was done by him until after Mr. Mitchell's arrival in this country, and the experience and ability of the latter was one of the principal inducements to take this new departure. The charter was like others granted in the West, but the

* An excellent portrait of Mr. Mitchell appears in this issue of the JOURNAL.

success of this institution was due not to the law of its creation, but to the firm characters and sterling honesty of Messrs. Smith & Mitchell, and what was of equal importance the training of the latter in the details and principles of Scotch banking. Other similar institutions in the West, started under more favorable Legislative privileges and with more capital, broke down with disaster or disappeared in disgrace, while the Wisconsin Marine and Fire Insurance Co., known popularly as "Smith's Bank" or "Mitchell's Bank," went through financial panics, successfully resisted the intrigues of conspirators against its credit, and stood firm amidst runs made upon it until it stood higher than any bank in the North-West, and its bills were at that period as well and universally known as a gold certificate is to-day. A detail of all the reasons of the want of success of many other similar banking enterprises would occupy too much space. The principle that insured the success of "Mitchell's Bank" was that no certificate was ever put in circulation unless full value in coin or security came into the bank. The circulation at one time reached the enormous sum of \$1,800,000, and every certificate was promptly redeemed on presentation.

In the degree that the development of a country is due to a good currency, the development of the North-West owes much more than has been generally understood to the currency furnished by Mitchell's Bank, in a day when wild cat, red-dog and stump-tail currency was the disgrace of the banking business. The certificates were redeemed not only at Milwaukee, but at agencies in Chicago, Galena, St. Louis, Buffalo, New York and other important points. To indicate the wide extent of this currency at that early day it is said that over 34,000 of the bills were never returned for redemption although the bank stands ready to redeem them if any of the missing notes should ever be presented. Such a record of the special business of a man under the peculiar temptations of the times and without any Legislative restriction bears witness to his firmness, his honesty, his purpose, as well as to his financial ability and far seeing shrewdness. In 1853 the Wisconsin Marine & Fire Insurance Co. was reorganized under the free banking law of the State of Wisconsin, and thenceforth was known as the Wisconsin Marine & Fire Insurance Co. Bank, of which institution Mr. Mitchell continued to be the President and chief owner until the day of his death.

It is not only as a banker that Mr. Mitchell is known in the United States. In later days his reputation rested more on his success as a railroad man. In 1863, the railroads of Wisconsin, which had been organized by small and weak companies, were generally bankrupt, and were in process of foreclosure. The purchasers at the sale in 1863 organized the Milwaukee & St. Paul Railway Company, and in June, 1865, Mr. Mitchell was elected its President, which office he held continuously until his death. In 1871-72 this company extended its line from Milwaukee to Chicago, and in 1874 the name was changed to Chicago, Milwaukee & St. Paul Railway Company. At the time of the reorganization the shares stood at \$10 each and have been recently quoted at \$92. The same qualities that rendered him successful as a banker have been manifested in his railroad management. Naturally conservative, he at the time quickly recognized all that tended to true progress. As a bank man he belonged to the whig party, and seeing the disintegrating influence of slavery he became a republican. He supported Andrew Johnson's policy in the rehabilitation of the States, and perhaps from a bias in favor of free trade he has since continued

a member of the conservative wing of the democratic party. He was twice elected to Congress, in 1870 and 1872, and declined a renomination in 1874. He was a friend and admirer of Mr. Tilden, and actively supported him in the campaign of 1876. In 1879 he declined the Democratic nomination as Governor of Wisconsin. When in Congress Mr. Mitchell was a firm supporter of measures for a return to specie payments and the protection of public credit.

He was married in 1841 and has one son, who succeeds him in the Presidency of the bank.

HOW TO GET BUSINESS.

To illustrate the effect of advertising in the JOURNAL, an advertisement was inserted for the first time in the May number for a Kansas investment firm, accompanied by the usual reading notice. The number was issued May 9th, and the following letter dated four days later was received from the firm :

Messrs. Bradford Rhodes & Co., New York :

TOPEKA, Kan., May 13, 1887.

GENTLEMEN : We are well pleased with the style of our advertisement in the May JOURNAL OF BANKING, and the reading notice referring to it is exactly to the point.

We have already received several applications for our guaranteed loans, and also for the Investors' Guide, in every case the applicants writing they saw the advertisement in your JOURNAL.

Yours truly,

HODGES & KNOX.

Other letters of similar purport are from time to time received upon which is based our claim that banks, bankers, investors and those engaged in moneyed transactions can get more new business while retaining the old than by advertising in any other way. The JOURNAL is exclusively a banker's magazine, and the banks and others who advertise with it are well known to be of high standing, and this inspires confidence in the minds of those classes who furnish or are seeking investments and who necessarily deal more or less with the banks and follow their lead. It must be said however that bankers, with some notable exceptions, seem to appreciate the advantages of advertising less than any other class of business men. This is due to the conservative traditions of a business that originally was a monopoly both in the sense of possessing exclusive chartered rights, and in that of possessing masses of capital at a time when capital was comparatively scarce. But now banking is free as far as legislative enactment can make it, and the increase of capital in the country leaves very little chance of gathering so much in one institution that in this respect, it can be fearless of competition. That many conservative institutions take this view may be seen from their advertisements in the JOURNAL.

Some old established banks are inclined to think that their business is already built up and finished, and that they need no new introduction to the public. Others of equally long standing are more progressive and find that advertising so as to reach the banking public does not fail to increase business to the same extent as if they were newly organized and competing for public favor for the first time. Some say their business is local and that publishing it abroad is useless, but business in the United States has long outgrown county and State and section lines, and what is done in one part is felt in all others. Banks must conform to custom. It is custom, recognized by the Courts that has given them their powers. The custom of advertising is a growing one among banks, and as a rule all will have to comply with in one way or another. Every business has its own publications and to these the

public look for information about that business. A banker's periodical is the place where the public look for information about banks. There was a time when banking was a mystery having numerous points in common with the recondite practices of charlatans astrologists and alchemists. A mysterious reticence is no longer looked upon as necessary to the reputation of either doctors or bankers, publicity is no longer feared and judicious advertising is the real philosopher's stone, working golden transmutations.

TREASURE TROVE.

From *Chambers' Journal* we gather the following facts relative to recovering treasure concealed and forgotten in other days. In 1880 a copper flagon was turned up at Fortrose, Scotland, with more than a thousand silver coins in it, all of the reign of Robert III., between 1390 and 1406. The same year a shepherd at Langhope found in a sheep drain a brown pot which was full of silver coins and jewelry.

In 1881 a crockfull of pennies of the Teutonic Knights bearing dates of the 14th and 15th centuries, and stamped with the arms of the grand masters of the order were ploughed up by a peasant at Rosenburg, in West Prussia. The same year in Kent, England, a laborer broke up for fuel an old chest of drawers he had twenty years previously purchased for a few shillings. Out of a secret drawer rolled some score of gold coin of the reigns of William III. and the earlier Georges. In January, 1882, while some repairs were being made in a house at Leicestershire a leathern bag with crowns and shillings of Charles II., James II. and Queen Anne came to light. In February in Sweden was found a hoard of silver bowls of the twelfth and thirteenth centuries with runic inscriptions, and also a number of gold armlets, necklace, rings and spoons. In July a big pot-full of late Roman coins was discovered near Yeovil, England. Another old pot containing two hundred and fifty coins of Queen Anne's reign was found by two laborers near Watford. And finally, in an old house in Paris, once owned by the Marquis d'Effiat, of no enviable fame, were found in a copper jar seven thousand eight hundred and eighty-two gold pieces, worth twenty thousand dollars as bullion, and some of them of great extrinsic value as instances of the coinage of some of the rarest reigns of all French history.

In 1883 a workman on the Earl of Darnley's estate at Cobham, Rochester, unearthed an old clay pot containing coins of the later Roman Emperors. In 1884, in the island of Skye, some silver coins of the reigns of Elizabeth and Henry of Navarre were found in the bed of a stream. At Laon, France, a peasant ploughed up some twenty-five antique silver vessels, and in Rome eight hundred and twenty-nine Anglo-Saxon coins were discovered, three of King Alfred and two hundred of Athelstane, all hitherto considered of much numismatical value. In Wales three hundred silver coins of Queen Elizabeth and James I. were found in a mountain wall. In 1885, two men cutting a drain in Cumberland came across two hatfuls of coins of Edward I. and King David of Scotland, the latter of whom, according to the ancient chronicler, had nine sons, all fond of war. Beneath the wall of an old stable at Long Emsdon, England, was found a vessel containing eight hundred coins of the reign of Queen Elizabeth, and a few of the reigns of James I. and Charles I.,

probably left by some Cavalier or Roundhead of the revolutionary period. A ploughman at Watton turned up one hundred and eighty ancient guineas in a pot covered with a stone. In demolishing an old house at Svendborg, in Denmark, the workmen found ten bars of fine silver and three thousand seven hundred and seventy-four gold and silver coins. As there had in the case of this house always been a tradition of hidden treasure connected with it, the previous owner in selling had reserved the right to any treasure that might be found. In 1886 over three thousand silver coins, together with small rods of fine silver which in early days were cut up and used in lieu of coin, came to light in the island of Gothland.

At Faversham, in the King's field, England, a large number of old coins and gold and silver jewelry set with garnets were dug up. A workman engaged in splitting some old beams taken from a demolished farm-house at a little village in Bedfordshire, opened a cavity in one, from which rolled out more than a hundred bright gold coins—nobles, angels and half-angels of the reigns between Henry VI. and Henry VIII.

All the preceding instances occurred abroad. In the daily papers, from time to time, we read of similar finds in the United States. Not to speak of such ancient and well-known traditions as Captain Kid's buried treasures, and the golden guineas known to have been sunk in the British frigate *Hussar*, quite recently we hear from Texas how an iron pot containing more than \$1,000 in gold coin was dug up at a spot indicated by an Indian woman on her death-bed. Another more wonderful story from the same region is that a farmer, while ploughing, saw a twenty dollar gold piece sticking up in the furrow. As he ploughed on he found more, and finally calling on his hired man, the two finally by nightfall unearthed and picked up twenty dollar gold pieces amounting to \$5,640. This treasure is supposed to be part of the gold paid to Indians for their reservations by the Texas Government. In Milwaukee some workmen digging in a cellar came across a box which was found to contain gold coin, U. S. and foreign, amounting to \$20,000. This was the hidden treasure of a Milwaukee miser. The greatest news of this kind comes from India, which is par excellence the country of buried treasures, and indicates the discovery of over \$25,000,000 buried under the palace of Gwalior by the late Mahrajah. It was sunk in pits beneath the Zenana, and covered with flag-stones. When the flag-stones were removed the pots were found filled to the brim with silver, mostly freshly coined rupees. The Indian Government promptly gave the young Mahrajah an opportunity to invest the treasure in its own securities. This is characterized by some as a forced loan.

All this goes to show that there must yet be numbers of treasure hoards within reach if one only knew where to look for them, and probably as human instincts are much the same to-day as they ever were, the number of new hoards hidden away equals, if it does not exceed, those discovered. In ancient days, in cases of war and tumult, when plunderers were abroad, the only way to keep money safe was to hide it. A violent or sudden death, either by war or plague, sent silent to the grave the possessors of the secret. In modern times we are accustomed to think that people have given up keeping their own money, and intrust it to banks and in paying investments. It is probable, however, that large amounts are still hoarded. In fact it is hard to account for large sums of gold coin which are known to come into the country except

on some such supposition. Centuries hence, when New York may have become as Venice, the dead monument of a departed commerce, the hearts of antiquaries may be delighted by the discovery of eagles of the reign of Cleveland, or of Garfield or Lincoln, chopped out of old beams or dug up in iron pots. Even the despised silver dollar may become so hallowed by the traditions of the past, that it may then hold a place of dignity in the collections of enthusiastic numismatists. That day now appears to be very far off.

THE PRIZE ESSAY ON "COUNTRY COLLECTIONS."

Some months ago we offered a prize of \$100 for the best descriptive article on this important subject, a condition of the competition being that not less than four Forms illustrative of the plan proposed—such as the design of Record Books, printed blanks, etc., to be used—should be included and form a part of the article.

We were somewhat surprised that so many would undertake the task—over thirty papers of all classes being submitted. Five gentlemen consented to act as Judges—one in Boston, one in Chicago, and three in New York; but owing to the vast amount of MSS. sent in, and the distance between the judges, it would be too much of a tax on the time of these gentlemen to pass on the merits of the various contributions. To obviate this difficulty, and at the same time ensure fairness to the contestants, we have decided on the following plan:

The Editor and the Associate Editor of the JOURNAL have examined all the papers carefully and selected seven of the best which have complied with the conditions named in the offer.

These will all be published in the JOURNAL in successive numbers, as follows: Two in this issue, two in July, two in August, and one in September. When the series is completed we will ask the JOURNAL's readers to indicate on a postal card the one entitled to the prize—each subscriber being entitled to one vote. The voting will be limited to four weeks after publication of the September number, when the cards will be counted and the name of the successful contestant duly announced in the JOURNAL.

United States Bonds Found.—A farmer near Boston found \$500 in United States bonds in a hole in a stone wall on his farm. He took them to a Boston bank, and, as there was some doubt as to their genuineness, they were sent to the Treasury Department, where they were pronounced genuine. It is announced that the Government will neither redeem them nor return them to the sender, but will hold them until the loser shall be discovered, and that the finder can never recover them, even if the original owner never appears. If this is true, it certainly is very mean and absurd for the Treasury officials to run directly in the face of the settled law in regard to such finds, which is that the finder has a good title against all except the loser. If the loser does not turn up within a reasonable time after due publicity, the Treasury simply exercises arbitrary power in refusing to redeem them for the finder. There is no possible way that they can belong to the Government, except by seizure. The finder can probably recover them by suit in the Court of Claims, but who wants to be subjected to the trouble and expense of long and tedious litigation for \$500. In this respect the Government acts like the alleged grasping corporation, intrenched in power and defying just claimants with the machinery of the Courts. No wonder claim agents flourish.

***DOMESTIC EXCHANGES AND THEIR TREATMENT.**

BY NEMO.

"Practical Banking," the name under which this subject is to be treated or published, is to my mind not quite the correct name for it—practical banking being really the every-day practice of banking business, and the handling of the various classes of financial transactions which come under the actual supervision of a banker in the active pursuit of his business. It is, moreover, a practical application of an experience gained after years of constant work, care and observation in a common-sense and judicious manner. Writing on such a subject as this partakes more of the nature of theoretical, or, more properly, educational banking, as it is, to a great extent, beneath the usual scope of an experienced banker's observation and every-day care; in fact, more in the sphere of the clerical force of his office. It is, notwithstanding this, a subject with which every banker should be conversant, as I believe the head of any establishment is much more efficient when he is thoroughly acquainted with the details of his business, although it does not necessarily follow that he need perform them, but that he is able to instruct others as to the best means of performing them.

If a banker can suggest any means of saving labor, or lessening the number of entries coming under the hands of his fellows daily, he is entitled to their gratitude; for, as the commerce of the country increases, so does the amount of banking transacted, and with it the number and extent of entries passing through the various financial institutions. Every day we see hailed with delight the various intricate mechanical contrivances invented for the saving of manual labor, and therefore any scheme devised for lessening the clerical work of a banker's office should receive the same welcome.

I cannot, I feel confident, commence this article better than by giving a quotation from a work on banking, recently published, with which it would profit, I am certain, even experienced bankers to become familiar. I refer to Rae's "Country Banker." Under the head of "Routine Duties" the following passage occurs: "The routine of a bank, to a large extent, is automatic, and is usually framed on the simplest and most direct methods of doing those things which have to be done swiftly and effectually. In office work you prefer to reach an object by the line of its diameters, rather than by that of its circumference. Here and there, no doubt, a bank may still be found with leanings to old ways—to methods of reckoning and account which would seem to add needlessly to human labor. If a man is a benefactor to his species, who causes a blade of grass to grow where one never grew before, the man who renders one book entry out of three to be forever needless deserves the lasting gratitude of the clerkhood of banking. Superfluity of record and excess of books and book-entry only puzzle the brain, lengthen the hours of office work and multiply the chances of error."

If, therefore, the publishers of RHODES' JOURNAL OF BANKING can, by their enterprise, elucidate any scheme which will fulfil the object of the essay for which they have asked, they will have accomplished a most beneficial work for the banking community in general.

Under the heading of Domestic Exchanges must be classed the enormous number of items covering the vast amount of money passed through banks daily in the shape of out-of-town checks and drafts of a short date—say sight, three days' date, and three days' sight. These are varying in amount from a check of a few cents to a newspaper publisher for a subscription or sales of

*One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed—particulars are given on another page.

papers in a country town, to the many thousands in payment for large purchases of goods, or stocks in Wall street.

In fact, being the most convenient of the several ways of remitting money, it is most frequently used by merchants and others having occasion to do so. There is more or less trouble connected with the remittance of money by express, money orders, postal notes, or bank drafts, and risk as well by registered letter, and more still by ordinary letter. In these days of extended banking facilities there are few people who have occasion to remit money who have not a bank account; and, what is more convenient than to sit at one's desk and draw a check on our banker for the amount to be remitted, and by adding the small amount of bank charge for collection—in many cases smaller than by any other mode of remittance—obtain payment to a correspondent, and in due course a receipt for the amount, as well as an assurance of the money having reached the party for whom it was intended by receiving all the checks paid by the bank against one's account at the end of each month, as is the custom now in all well-regulated banks?

Perhaps it would be as well, under this head, to mention a custom which should not exist. I mean that of remitting checks without making the addition of the bank collection charge, which is frequently done. This is, of course, incorrect, and to some extent mean, as it is well known banks make some charges, and annoyance as well as loss is caused to the receivers when the charge is exacted by the bank and not allowed by senders. Of course this does not apply when the agreement is that payment shall be made at the residence of the party remitting. I would ask those whose eye this reaches to bear this fact in mind.

Many customers of banks use the Domestic Exchanges account as a very convenient method of collecting small amounts due by parties who do not remit as promptly as they should, or where by agreement the money is to be so paid, in which case the bills come under the head of sight, or drafts of a few days' date.

The scope of this paper is:

First—How bankers can handle Domestic Exchanges to insure prompt returns.

Second—A fair profit.

Third—The greatest degree of safety.

As a banker's rule is, or should be, to place safety beyond all other considerations in his business, I shall discuss the last of these sub-divisions or headings first—*i. e.*, how to handle exchanges with the greatest degree of safety. There are two kinds of safety, *viz.*: safety in remittances reaching the collecting bank, their safe collection, and return to their owners in good money, and safety in lending your customers money on these items. As to the last mentioned, a banker must exercise the same caution with a check or draft as he does with any other description of security. As many of the items in the Domestic Exchanges are casual only—*i. e.*, not with regular customers, a most stringent rule should be made that no dealings should be had with strangers, however respectable they may appear or plausible they may be, unless they are properly introduced by a responsible customer of the bank in person, and the transaction is indorsed by him in the presence of a bank officer. Banks occasionally lose money by these transactions, but if the rule I mention is followed no loss can possibly happen. With regular customers a bank is quite safe in any of these transactions, provided they are legitimate, and for amounts for which the names would be taken in other dealings.

As to safety in the other sense, it is a comparatively simple thing, and is insured by sending items for collection to the bank's own correspondents, where possible, or to a chartered bank or respectable and responsible private bank, in the place where they are payable, properly indorsed, to the collector. Some banks remit bills for collection indorsed in blank. This is a very unbusiness-like, as well as unsafe, custom. Care being exercised as to directing and mailing of letters—with the admirable Post Office system of the country—no danger of loss should be feared in transmission. As a rule, coupons, bonds and other securities which pass by possession and not by indorsement, should be sent by registered letter, or, if of great value, by express. Correspondents

should also be warned to obey implicitly any instructions given with the bills for collection—*i. e.*, as to disposal of bills of lading, etc.

How to obtain a fair profit on all transactions is a point which should be carefully considered, and a profit to the bank insisted upon, for it was for just such transactions banks were first organized, and it may be regarded as certain the business was not done then for nothing.

I fear this is a point not considered at all by many bankers, or, if considered, not persisted in by exacting a profit in every case. This, I think, is particularly the case in New York city banks, where some make a practice of charging only on items of over \$500. When it is considered that the vast majority of these items are under \$250—and it is just as much trouble to collect an item of \$5 as one of \$500—the risk, of course, is not so great, the force of my statement is quite apparent. The whole machinery, if I may call it so, of a bank, the experience of its senior and the time of its junior officers, its stationery, postage, etc., and the same of its correspondents, are all employed in the service of a party depositing one of these items. Why, then, should there be no charge, or one in which there is no profit? True, the charge, if any, is small, but then the majority of bank charges are the same; and although it may seem a very small thing to omit one of these charges, the aggregate of them would swell or diminish the yearly profits materially if exacted or omitted. Another point is that a very considerable amount of a bank's funds is constantly in the shape of these items, and therefore actually so much paper discounted on which no discount has been received. A Cashier of a large National bank in New York city once told me that he had \$4,000,000 outstanding in just such transactions. A thoroughly experienced head officer of a large bank, whom I know well, holds the view that the charges made for exchange of various kinds should pay the expenses of the bank, leaving the discount and interest clear for dividends and other purposes. I don't think, however, this is often the case; but at the same time the opinion of such a man as I mention is a good guide of what should be aimed at by banks in general in this way. As I said before, I fear bank Cashiers do not consider these points sufficiently.

To make a fair profit, therefore, a charge should be made on each item sufficient to cover interest on the money whilst in transitu—*i. e.*, from the time of receipt until it is returned paid, the charges of the collecting bank, and a reasonable charge to cover all other incidentals, such as postage and stationery. As a rule, no check or draft, however small, should be taken for a lower charge than 25 cents, no matter on what point. Banks know what their correspondents charge for collecting, and the charge they make should be considerably over that, so that there would always be a good balance at the credit of exchange or commission account. The rate of charge on large amounts might be fixed, to a great extent, by the cost of transmitting the same amount by express or special messenger; and if the state of the bank's account with its correspondent would admit, or it was expedient for any other reason to make a low charge, a bank could easily charge less than either, and send the amount more safely and promptly as well.

Generally, as to profit on these transactions, a bank should know what it costs to collect, and then charge the customer an additional amount, so as to leave a clear profit of at least $\frac{1}{2}$ of 1 per cent. over everything, making, as I said before, no charge to a customer of less than 25 cents. What I have said is broad enough to apply both to city and country banks, but in the latter, which are constantly drawing on a centre like New York, and therefore always require funds, it may suit their convenience to make no charges; or, indeed, pay a premium for New York exchanges, taking their profit on the sale of their own drafts to other customers or banks. As a rule, however, a charge should be made in every case, and if this was persisted in by banks generally, it would soon educate those who remit by check to allow or add a small sum for bank commission.

The third part of this subject, or how to handle the numerous items designated Domestic Exchange so as to save time and cause the least trouble, is a comparatively easy matter when it is acknowledged, as it must be, that a certain amount of trouble must be experienced and a certain amount of time

devoted to the work. For the purpose of brevity I shall designate all these checks and sight drafts of which I am writing as "Cash Items." In dealing with these items, which are particularly numerous in large centres like New York and Chicago, it would, to my mind, be an exceedingly convenient way of disposing of them for other banks, and a very profitable thing for the originators, if a bank was incorporated solely for the purpose of collecting out of town items. If there was such a bank, then each day at the Clearing-House these items could be cleared like checks payable in the city, by being deposited with the collecting bank. The collecting bank would naturally have a large amount received each day in payment of collections to deposit, and thus reimburse the other banks at once. The commission charged on the items would pay the collecting bank for its trouble, and should pay a handsome dividend on a moderate capital. This is of course only a suggestion, but I have no doubt it could be worked into shape by many of the clever financiers of the large cities of the country.

For present purposes, however, I would say that each cash item received should be indorsed by the person from whom it is received, at the time of receipt, for the obvious reason that if it is returned unpaid, or refused acceptance for any reason, recourse could at once be had to the indorser. For book-keeping purposes a register should be kept—see form "A"—called "Register of Cash Items," divided into three parts, viz.: for agents, other banks, and for other items than checks not payable on demand, or rather presentation. Each item should be entered in the register under one of these heads. The register should be ruled as in form "A," and give the following particulars: Date of receipt; number, which is placed at every item, for convenience of reference in case of return for any reason, or telegraphing about it; name of drawer or maker; name of drawee; number of it, if it is a bank check or draft; place of payment and date of item; term, i. e., demand, sight, three days' sight, etc., etc.; amount; commission received, and lastly, when paid. The use of each column is quite plain, and all these particulars are necessary for tracing the item or procuring a duplicate in case of loss during transmission or otherwise. The last column is necessary to show what items are outstanding or unpaid, and as the items paid each day are so marked, a glance would show the Accountant or chief Book-keeper if it was necessary to work about any of them, inquiring as to cause of delay in payment. The register should be carefully and accurately kept, as it is a very important book. An account should be opened in the general ledger of the bank, called "Cash Item Account," and to it charged through the cash book, at the end of each day's work, in one sum, all the items received during the day and not charged to agents, as hereinafter mentioned. The entry would simply be: "Cash Items as per register."

Register of Cash Items. (FORM A.)

COLLECTIONS RETURNED. PLEASE MARK REASON FOR RETURN BELOW.

Acceptance refused; no reason given.	Cannot pay at present.
Payment refused; no reason given.	+ Out of town.
Amount not correct.	Does not owe amount.
Goods not received.	Has remitted check.
Wants extension of time.	Drawee will write.
Failed.	Drawee cannot be found.
Not due.	Notified Drawee; no response.
Closed up.	

The account would be credited each day with the paid items, in one sum, after having been entered on a slip, "form B," in the same words as the debit entry above. The account would naturally always be a debit, except no items were outstanding, and the balance could be proved at any time by comparing

it with the outstanding items in the "Cash Item Register." The commission received and paid for collection could be credited and charged to commission account in one sum in the same way, daily.

If properly worked this would be found very little trouble, and would keep the account of these cash items perfectly accurate always, and permit the tracing of each one easily.

Now as to reason for dividing the register into three parts, with three distinct series of numbers.

Mostly all banks, both city and country, have accounts with other banks who act as their agents. It could be easily arranged, and no doubt is, that all items received daily and payable at the town where the agency is, should be charged at once to the agency, and transmitted to it by first mail, with a list as in form "C," the receiving bank crediting the amount in full at once, and re-charging any item not paid. This would dispose of a great number of the items without further entry or trouble than the record I have mentioned, the monthly account current showing that all were credited correctly. It is, I believe, the custom in some New York banks to send the items to their agents for collection, and have them remit periodically, say fortnightly. This course is cumbersome, and allows the agency the use of the money longer than is necessary. The first division of the register would contain all these agency items; the second would contain all those sent to other banks, and the third all items payable at either agencies or other banks other than checks, and which would entail an advice of payment from the agencies or a draft in payment from the other banks.

In the case of items sent direct to agents and credited immediately by them, the last column of the register, "when paid," need not be used, and in case of items sent to other banks, form "C" could be slightly varied to suit the circumstances.

In using form "C" with agents no letter would be necessary, or indeed with other banks, a press copy of the list being sufficient, but care should be taken to see the receipt of the "Cash Item List" was promptly acknowledged.

A carbon sheet might be used if considered more convenient than copying the list in a letter book.

The preceding remarks refer more particularly to checks which are payable on presentation, and in the collection of which no delay occurs; with sight and short dated transactions it is different. They should be entered in the third division, particulars given, and numbered precisely as in other cases; but as collecting banks cannot credit or remit for them immediately or in one sum, and it is frequently necessary to give instructions as to disposal of bills of lading or other documents attached to them, it is better to write a letter with them, giving each item separately.

I know of no particular form of letter to be used, the usual heading and simply "Please receive herewith for collection" being sufficient. If any special instructions are to be given they should be attached to the draft so as to be easily detached, and a reference made to them in the letter. This is important in case it should be necessary to hold the collecting bank liable for any negligence. Collecting banks should be cautioned not to retain drafts for acceptance or payment at request of the drawee without permission from the owners or the senders.

Many banks have schemes of their own for ascertaining particulars of the dishonor of drafts remitted for collection. A memorandum such as form "D" is often attached, which is very convenient for the collecting bank, but as it has the appearance of the remitting bank expecting a great many of its collections returned for some reason or other, I do not consider its adoption except universally would be an improvement. Banks should, I think, discourage by all means—in fact, refuse altogether—any drafts having the appearance of "kiting" amongst their customers: *i. e.*, making accommodation drafts, no actual transaction forming the base of them, or of manufacturers or dealers drawing upon their customers unless they are reasonably certain the drafts will be accepted and paid. I have known firms to "finance" for a time by making such drafts, well knowing they would be refused, or the

drawee would re-draw, but in the meantime they would have the use of the money for a few days.

It is a great discredit to a bank, to my mind, to have its collections returned unaccepted or unpaid frequently. Even the practice of attaching slips of "no protest for non-acceptance," which has become so general of late years, should be discountenanced, savoring as it does of no right to draw; and the draft sent forward as a legitimate business transaction, being what it purports to be, an order to pay money which is due and owing in the tenor of the draft.

Where collections are sent a long distance it is a good plan to have the collecting bank, especially if the amount is large, remit to New York agents, or other place when the cash is wanted direct, advising the remitting bank of having done so and the amount, as it saves the time of remitting to the owner and that bank having to forward to New York or elsewhere. For example, a bank in Minneapolis sends a draft against a shipment of flour to Halifax, with instructions to remit proceeds to its agents in New York, instead of to itself, thereby having the money reach New York ten days earlier.

As I said at the commencement of this essay, Practical Banking is the application of one's knowledge of the profession in a practical, *i. e.*, common sense way, and in doing this an evidence of knowledge is the placing of the ideas in as few words as possible. I have striven to do this, and so successfully, I trust, that what I intend to convey may be readily understood by those who, although they may have little experience, have aptitude for their business, and who are aware that in banking more probably than any other business, "nothing succeeds like success," and that constant vigilance is necessary to achieve success.

DOMESTIC EXCHANGES.*

BY SUTTER.

The majority of banks are small compared with the great city banks, and one clerk "plays many parts"; in fact, each part is played by more than one clerk, according to the needs of the day and the business. It therefore follows that the small banker is more acquainted with all the routine of the service than the great banker. At least we small bankers so think, and as one of that class I now humbly offer my contribution towards systematizing and shortening our duties.

The checks on ourselves which we receive or cash, of course go to the ledgers, and thereafter are useful only as vouchers to prove the accounts. Their care and custody do not come within the scope of our text.

All other documents, however, seem to come under the text.

It is our custom to keep a supply of envelopes, somewhat longer than a check, with a simple printed form on its face, leaving space for the owner's name and the payer's name, and the number of the package (the latter in the left-hand upper corner), and also a space for "due-date" in the upper right-hand corner. Into one of these envelopes we pop every time-paper, or collection, or will, or insurance-policy which comes into our hands for action or custody.

We fill the blanks on the face, enter it on the collection-register of the usual form, note the date, etc., of maturity in our diary, and file it away in the vault or in a bill-file.

When the document is paid or sent out we not only mark it off the register, but we also save the empty envelope, often taking a receipt for its former contents on its face.

We find this plan simple and applicable to everything. Have often attached such numbered envelopes to the outside of boxes left for safe keeping.

At proper periods we compare these packages with the register.

We thus have in bank cancelled checks, numbered packages, notes which appear in our own bill-file and register, and our stock of money; nothing

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed—particulars are given on another page.

else. If anything is wanted, it must be found under the above classifications.

It greatly assists us when we receive a paper for collection to find that the sender has sent also two tags, one to be kept by us and the other to be returned to him. Better yet, sometimes the sender will have both tags printed on one sheet, so that when we have detached our own half to file it, we feel that the other half has been duly returned to the sender; because a clerk is not likely to detach one tag from the other until he has completed the transaction.

In the same line of thought we offer a plan for domestic exchanges which we have used for years with success. We send away many papers, and at certain seasons many of them are of similar amounts, and go to certain banks at frequent intervals, with orders to remit proceeds to New York. It will be evident to book-keepers that here lies possible confusion in comparing accounts, but our success in keeping clear of confusion has been greatly owing to this scheme.

We have books printed in two colors: the book of blanks printed in green ink is for papers which have not been carried into our ledgers; the other color is for checks which are charged into the ledgers at the time of sending.

The form is bound so that the back hinge of the book is at the head of the form, and the head is eight inches wide and the depth of the form is about eleven inches.

The first inch in depth is a stub, and shows only "Rec'd from —. Sent to —. \$—. Stub No. —."

The next half-inch of depth (and extending eight inches across the page) is an index-flap, and remains attached to the stub after all the lower part of the form is detached.

It is the most valuable part of the whole scheme, for it projects beyond its neighbors when they have been retired, and proclaims loudly, "Here is a case which is still out in the cold."

When the report is received, then this little narrow index-slip is removed.

So we are able in a very few minutes, by means of this little projecting strip, to refer to all our outstanding collections.

The next division below this is about four inches deep by eight wide, and ruled so that a description of five or a dozen checks can be noted one under the other, and in columns, headed, "Drawer—Payer—Indorser—Amount." At the bottom is the owner's name and the title "Voucher No. —."

Underneath this are two equal tags, each about five inches deep and four wide.

One is like unto a deposit-tag, and in fact the receiving-bank probably does use it as such, for it contains the items described in the "Voucher," and is perhaps a letter of transmittal, although entitled "List No. —."

Its twin-fellow is dated and signed, etc., and returned to us, and bears the title of "Advice No. —."

Please bear in mind that all these forms are printed on the same sheet, and then listen to our manner of using. Our teller has taken checks on the San Juan Bank as cash, and must dispose of them. He has a book of these forms (and other clerks have books, also.)

He enters on the stub, "From Rec., Teller. Sent to San Juan Bank, \$1,234.56."

On the "voucher" he notes the total only, and detaches the voucher with its accompanying "list" and "advice" tags and passes the sheet with the checks to our Corresponding Clerk, who copies the description on the voucher, proves the total, indorses the checks, fills the "list" with the same figures, and then detaches the "list" and its twin "advice," mailing them with the checks to the San Juan Bank.

The Corresponding Clerk is then in possession of the "voucher" only, and he proceeds to write on its back thus: "1,234.56 dollars, charge San Juan Bank." Of course this is a printed form also.

The Bookkeeper enters to the debit of the San Juan Bank thus: "Voucher No. —. \$1,234.56."

[illegible]

Use this entire sheet for one item—or for only such items as can be reported together by the same person at the same time and place. For time collections use a book or pad of different color from that used for cash items and allow the voucher to remain in the book until it is paid, when the voucher will be used as a charge tag.

Not yet advised owner.	

The San Juan Bank returns our "advice" tag, and it is then taken to the stub of the same number and the index-slip removed.

It is compared also with the ledger. The preservation of the voucher is thereafter a matter of indifference to either bank.

If the paper to go to the San Juan Bank is a time-collection the same Teller will fill out a green blank and especially the voucher, which he does not remove. He does remove the twin "list" and "advice" tags, and passes them, with the collection, to the Corresponding Clerk, who attends to the mailing. On return of the advice-tag it is found that its back is now available for a deposit-tag, whereon to make the necessary credit, while the voucher is detached and used as a charge-tag.

There are several minor points which will occur to those who study this scheme, but the greatest value of it lies in the fact, that the blanks are all originally parts of the same sheet of paper, and that their filling, detaching and mailing proceed mechanically, so that there is little chance of mistake—especially if one clerk makes the stub and another does the rest. The stub, voucher, list and advice are all numbered by machine, with the same number for each group, so that reference is easy and accurate at all times.

Of course upon one page there should be put only such items as will usually proceed to the same fate together: each number should be cleared by one entry and not by partial payments.

Frequently drafts, etc., are sent to banks with request for returns by draft on a third party. As no letter is required under this system—the advice-tag furnishing a good substitute—these remitting banks are saved much labor.

It occurs to the writer that still more labor can be saved, and greater accuracy secured.

Let us suppose that it is conceded that any draft can be altered or raised, and that the indorsers are responsible therefor to the paying-bank.

Then it seems as if we could use detached checks or drafts with the amount punched or perforated only and not written. Better yet: suppose we tear from the draft-book the stub, with the draft, and fold the stub over the face of the draft, and then punch the amount through both. The Bookkeeper would get the stub (signed by the Teller,) and by pasting it in a large scrap-book he would have an accurate proof, when the paid check returned home, by pasting it to its stub.

If the Bank of England can afford to preserve its cancelled notes in books for eight years, then other bankers can afford to take similar trouble.

To return to the form of blank (accompanying): it will be seen that it is composed of four or more forms on one sheet, and that its use does away with the keeping of a register.

Many bankers feel that a large book should be kept containing a description of all checks sent out. The value of such a record is quite temporary.

When a remittance has been acknowledged by the receiving bank, then the value of the record ceases almost entirely. Under our system, the record is kept on the back of the charge-tag, and the latter we often put among other vouchers in a statement of account, so that the record may follow the remittance at a very short interval of time.

It is not probable, however, that the remittance and the record will be in the same mail-bag and lost by the same accident. If the vouchers are retained in bank, no danger follows: they could be so retained appropriately, and the entry on the statement would then read, "List No. —, \$—."

We make a daily remittance of fifty to one hundred and fifty checks to one correspondent, and find our scheme quite easy to operate. Several clerks can work on the different sheets, and the lists can therefore be kept up closer to mailing time than by the use of one large register.

The subject of "Domestic Exchanges" might include a discussion of Clearing-Houses and country-clearings, and also a reference to a system by which the Clearing-House for one State or section of country could remit to the Clearing-House of any other section at a rate for exchange.

The immediate necessity in this country, however, is for "country-clearing" as known at the London Clearing-House.

"WHAT'S IN A NAME?"

IV.

And still they come—signatures queer, quaint and curious. There seems to be no end to the number of those who delight in using mysterious marks when signing their name. It is very doubtful if one-half the world ever dreamed of the chirographical wealth which lay hidden from the gaze of the curiosity hunter until first brought to light by the JOURNAL's explorations.

The *fac-similes* published in the April JOURNAL were those of E. Keator, Cashier, First National Bank, Cortland, N. Y., L. M. Mielly, business man, Santa Fé, New Mexico, and Hugh Harbison, Secretary and Treasurer of Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn. Very few solutions have been attempted, and none of them correct—for the reason, probably, as a correspondent tersely puts it: "You rather 'got' the boys this time." An enthusiastic Indiana clerk deciphers them as E. Krank, M. A. McOlly, and either Wash Warunnoxeam or Myh Warunnalalh, while a Kentuckian reads them E. T. Grant, M. H. Heally and M. Yoissarl Morihan—both which interpretations will doubtless be a genuine surprise to the writers. A Connecticut Teller naturally enough reads Hugh Harbison's signature, but the others are to him E. Knight and W. H. Eddy respectively.

The following from the Cashier of a National bank in Minnesota, is in continuation of criticisms received and heretofore presented to our readers.

Editor Rhodes' Journal of Banking:

SIR:—I have noticed several *fac-simile* signatures in late numbers of the JOURNAL, and the thought has occurred to me, What is the use or excuse of a man writing his name in such an illegible manner? It seems to me that in nearly all of those cases it is a voluntary matter, and that the writer of such a signature takes a kind of pride in writing so no one can read it. It certainly is nothing to be proud of; for if a man is unable to write a letter which can be read, it is cause for regret on his part at the neglect of his early education. I see no distinction between writing one's name plainly and writing anything else. So far as counterfeiting is concerned, it is fully as easy, if not easier, to copy an unreadable scrawl as it is plain writing. I fully agree with the writer referred to in the April JOURNAL, who cannot see why a banker's signature should be illegible.

C. E. S.

This and other similar criticisms may at first sight appear to some extent warranted, but on the other hand it may be said that the writers are busy men, and for years have had to write their signatures under great pressure. Very often the constant use of the pen brings about a local nervous weakness known as pen paralysis. Men originally writing plainly and legibly, in other professions and business than that of banking, are apt, under the hurry of their daily occupation, to permit their hand writing to degenerate. They gain in speed and, their chirography being familiar to their correspondents, lose little or nothing in intelligibility. All honor to those who, like the great John Hancock, permit neither the fear of hanging nor the pressure of business to interfere with the bold legibility of their sign manual, but much of the censure these curiosities of hand-writing very naturally call forth may be off-set by other considerations. Egyptian Hieroglyphics are not very intelligible to us, but the ancient Pharaohs had no difficulty in reading the daily news dished up in them. So with these signatures: they are probably unobjectionable to the signers and their correspondents, and to them are perfectly intelligible and satisfactory, and perhaps even beautiful. Moreover, we have heard nothing from the writers in their own defense. At a meeting for the benefit of an Orphan Asylum much was said in favor of the charitable people who were endowing it, but the people who furnished the orphans, though equally important to the success of the institution, had no one to speak for them.

Many great men have written illegibly. It has even been claimed that this was a sign of greatness. While we do not indorse this, nevertheless the fact is

to be ascribed to the pressure of business which greatness generally entails. Napoleon the First, when at the height of his glory, wrote so poorly that even his secretaries could hardly decipher his notes, but when at St. Helena, with more leisure, his hand-writing became again plain and readable.

Horace Greely is an instance how, in another sphere, the force of ideas may out-run the power of manual execution, and may result in a chirography as difficult, to those unacquainted with it, to decipher as any of the signatures given in the JOURNAL. The type-writer has relieved many busy men, but the bank officer must still sign his name.

The following is submitted not so much for illegibility, although the signature may fairly rank among the puzzling ones, but as indicating another form of peculiarity. It fills the entire page of a letter-head, and was the form usually adopted by the writer in remitting for collections. A note accompanying the same says: "If no use please return and we will replace upon the wall of our office, where it has hung nearly a year, a natural curiosity to us and the wonder and terror of all beholders."

I have received of your favor of
May 7th and will enclose as
stated I enclose you my \$99.24
15 8.99 39

When a certain National bank Cashier "out West" signs a bill or indorses a draft, it looks like this:

The Cashier of a Kansas bank signs in the following style :

A National bank Cashier patronizes ink manufacturers after this manner :

This is the way a National bank Cashier, well-known throughout a large portion of the South, signs his name :

As so much has been said on the subject of illegible signatures, it might be pleasant to change the subject somewhat. Although we have quite a number of additional ones not yet printed, which have been sent in by the writers and others, it would seem only fair to both sides of the subject to have our correspondents send us specimens of what they consider to be signatures which answer every requirement, of legibility, beauty and ease and rapidity of execution, as well as showing sufficient character to protect from successful imitation. The writers of alleged peculiar signatures will then have an opportunity of judging in what respects, if any, their hand-writing varies from the standard. It is possible that by photographing a number of these upon the same plate, by the process indicated in a recent article in *Scribners' Magazine*, the ideal signature might be obtained, which would combine all good qualities and be above criticism.

Offer.—The names of present subscribers—including clerks connected with banks, firms, etc., now on our subscription books—who send in a correct reading of *all* the signatures shown in this article before the sixth day of July next, will be published in a subsequent issue of the JOURNAL as successful readers of very difficult signatures. To any not now subscribers—either officers or clerks—who will send in a correct reading of the signatures before the date named, we will send the JOURNAL free from date to January 1, 1888.

[To be Continued.]

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Transpositions and the Figure 9.—The difference between two amounts formed by the same figures arranged in a different order is always divisible by nine. This is a familiar rule, but there is a refinement of it which may not be so well known. In posting, for example, if the cents be transposed, the difference will be divisible by nine; but, in addition to this, the quotient will be the difference between the two numerals considered as units. Thus 87 less 78 is 9; 8 less 7 is 1; 68 less 86 is 27; 6 less 8 is 3. If the difference divided by 9 is 1 then the amount transposed must be 98, or 87, or 76, and so on. If the quotient is 6 then the amount transposed is 98, or 82, or 71. In looking for a transposition of cents, therefore, this peculiarity limits the investigation to a comparatively small number of amounts.

Vaults and Safes.—Certainly three-fourths of the annoying lock-outs which occasion so much inconvenience might be partly avoided by a little care and attention to the locks themselves. It is the business of the Cashier of the bank to see that the vaults, safes and locks are kept in proper condition and working order. When a lock or safe is first put in place by the manufacturer, it is always in perfect order. The machinery is bright and new and each bar works without friction, but if months are allowed to run by and no one takes the trouble to wipe off the dust or to put on a little oil where it is necessary, the bolts become dry and harsh and the delicate machinery of the lock filled with fine particles of dust and dirt, and bye and bye the whole machinery stops working. Then follows a lock-out with its consequent annoyance and expense. The constant friction of the machinery occasioned by throwing the bolts backwards and forwards several times in a day and turning the combination wheel an indefinite number of times makes a constant wear and tear on the metal, and while it is true it takes a long time to wear a steel bar in half, it does not take so very long to wear it out enough to keep it from working.

Specimen Checks.—The following check form is quite a favorite with many bankers. It seems to be used principally for checks on Eastern correspondents. The principal feature is the name of the drawee bank, being in the lower left-hand corner; the name of the bank drawing the check being printed conspicuously at the top. The name of the State in which the bank drawing the check is located is printed in the left-hand end. (In this case it is Massachusetts—omitted in the *fac-simile*.) The stars indicate where the check is cut by an ordinary hand-punch. These little cuts are very good features and serve in some degree as a protection against raising the check. The form, however is open to some objections; for example, the name of the drawee bank should be in conspicuous type, that of the other bank should be printed less boldly. There is no good reason why this draft form should be adopted for a check, and though it is very much used, it certainly would be better, for the sake of uniformity, to have all checks printed in the ordinary way. It is better to put the number of the check in the upper left-hand corner; and the amount of the check in the lower left-hand corner. The printing of the name of the State on the end of the check can not be defended on any ground: it is a mere affection of novelty, and has no argument in its favor. In a former

issue of the JOURNAL a model check form was shown, which avoids the objections alluded to in this criticism :

<i>Franklin County National Bank</i> <i>Greenfield, June 15 1886</i>	
<i>\$5.00</i> ★ ★ ★	<i>Pay to the order of Charles Rhodes</i>
<i>Five</i> ★	<i>Dollars</i>
<i>To the Chase National Bank</i> <i>No. 6994</i>	<i>New York</i> <i>Wm. A. F. Rhodes</i>

Here is a form of individual check, very plain and neat, and which would hardly seem open to any objection. The type is clear, with no unnecessary words, and the number, amount, etc., are placed in their proper positions :

No. <u>2004</u>	<u>Oswego, N.Y. July 20, 1886.</u>
Merchants National Bank	
Pay to the order of <u>James Monk</u> ¹⁸³⁸	
<u>One hundred and eighty</u> Dollars	
<u>\$180.</u>	<u>William Smith.</u>

Country Collections.—The following suggestions which recommend themselves by their practical good sense are made in regard to collections by an officer of one of the most prominent Western banks :

"I have never paid very close attention to articles appearing on this subject, as my idea of making collections has been to send them direct to some banker of credit and reputation in business at the point where the item is payable. If not informed as to the responsibility of bank, send by express, or to the bank in which the banker keeps his account, or to the banker nearest that point in whom confidence can be placed. I think no one should object to paying a fair charge to collecting bank. The making of collections is part of the banking business, and should be a source of revenue to a bank. Collections should be sent direct thus saving loss of time in presentment. A bank owes it to its patrons, to get as quick returns as possible on collections entrusted to its care, and in case of loss to a bank from its making use of these roundabout channels, for the purpose of saving a collection charge, as many of them do, I say serves them right. There is too much cutting of rates by banks in order to get business, and too much is done for nothing. If banks did not offer all kinds of inducements to get business there would be no necessity for any bank resorting to these roundabout, unsatisfactory and risky collection methods. A customer who also keeps an account in an Eastern bank, presented a draft to me to be marked, drawn on a town in Illinois. On my marking our customary rate on the draft, he remarked, "My Eastern bank will collect that at par for me," and deducted it from his deposit ticket. That collection will cost the Eastern bank one-eighth of 1 per cent. and the owner of collection will not know that it is paid for at least ten days. Is not this one instance suggestive as being a partial explanation of the present unsatisfactory collection methods?"

New Business.—New banks must needs seek new business, and in these days of close competition and small profits, new business is not apt to come uninvited. Banks that have old-established reputations, and have accumulated large surplus funds, find it necessary and profitable to inform the public of the inducements which they hold out to persons desiring financial accommodations. Much more necessary then is it for those banks who have just commenced their career to exert themselves in every way to secure a profitable line of depositors. Perhaps the way that would occur to most successful business men, placed in charge of a new banking institution, would be to make their wants known through the usual channel of advertisements in high-class financial publications. Experience has shown that such a course is a proper one, and repays the outlay. Many go farther than this, and distribute through the mail circulars setting forth a statement of their condition, the names and occupations of their officers and their directors, their special facilities for doing business, and the inducements which they offer to the public at large. This is also to be commended. Many persons who have not the time nor the opportunity to inquire personally into the standing of a new bank are naturally much influenced

by the names of the men who are chosen to manage its affairs, and consequently great care is always taken to put at the head of the institution men whose names are a guarantee for its proper management. Whether it is a proper thing for a bank to go about soliciting custom, is a question about which there may be two opinions. The older banks, who already have these desirable customers upon their books, frown upon the practice and denounce it as undignified and unbecoming, but new banks which have their living and way in world to make are rather inclined to the opposite view, and suggest that the older institutions do not have exactly a life mortgage upon every customer in the place. Sometimes there is a pretty lively cutting of rates, and what might be called a little war between rival institutions, but as the latter phase of the competition hurts nobody but the banks themselves, a peace is soon patched up. An attractive appearance in the banking room and its furniture goes a great way towards making a favorable impression, and the same thing may be said in regard to the location of the building and other matters of that sort. An easy and pleasant address on the part of the officers is certainly not calculated to drive away anybody seeking banking facilities, while, on the other hand, a disposition to be abrupt and positive in manner is more apt to drive people away than to encourage them to become customers of the bank. Indeed, this whole matter of getting new business might be worked out in considerable detail, but enough has been said to indicate what should be the general drift of bank management in respect to this important matter.

Responsibility For Errors.—It seems to be well settled that Presidents and Directors are not to be held pecuniarily responsible for any errors they may make in discounting paper that proves to be worth less than its face value or that may in the end find its way to the Notary, and this is as it should be. But in regard to errors that are occasionally made in the clerical work of the bank, the practice is not always so uniform. Every now and then somebody in a bank will make an error, and occasionally banks lose money by it, and then the question arises, Who is to stand the loss? The corporation or the man who made the error. In a great many large banks, unless the error be attended by circumstances of unusual negligence or carelessness, it is the custom to simply charge the amount to profit and loss and that is the end of it, but in banks that are running along on a very small margin of profit and are managed by men who have a sharp eye for a penny, the Directory occasionally try to make the matter a personal affair and constrain the clerk in error to reimburse the institution out of his own funds. This seems to be rather an unfair way of doing business. The most careful man will make mistakes and it certainly seems to be uneven justice for Boards of Directors to excuse their own errors and yet adopt an entirely different rule when dealing with those of their subordinates.

Surplus and Dividends.—The National Bank Act requires new banks to set aside from their profits a certain proportion every year until they have accumulated a definite percentage of their capital, which is to be carried as a surplus fund against inevitable losses. The principle upon which this provision is based is not infrequently carried further in organizing a new institution, and formal resolutions of the Board of Directors will provide that no dividend shall be declared until a considerable percentage of the capital shall have been accumulated to serve as a surplus fund for losses. Before the new era of banking, inaugurated by the National Bank Act, depositors and note holders looked chiefly to the private resources of the men controlling the institution to guarantee its solvency, but, under the national system, the individual responsibility of the stock holders is less considered, and customers look more to the ability of the Board of Directors indicated by the showing the bank makes in its published statements. A new bank consequently has first of all by its accumulating surplus to show its ability to meet any reasonable losses without impairing its capital. In addition the settled policy of not declaring any dividend until this surplus has been accumulated, impresses the institution from the beginning with an air of conservatism which goes a long way in procuring it new and desirable business.

BANKING LAW.

* Legal Decisions Affecting Bankers.

COLLECTING BANK—RETAINING PROCEEDS OF DRAFT INDORSED FOR COLLECTION FOR DEBT OF CORRESPONDENT WHO HAS FAILED—RIGHTS OF OWNER.

(A banker who receives from his correspondent a draft indorsed for collection, which is indorsed in like manner to his correspondent, cannot, on the failure of such correspondent, appropriate the proceeds to the latter's debt to him, and refuse to pay the owner.)

On December 17, 1885, appellant, the City Bank of Sherman, remitted to the City Bank of Houston for collection, a draft drawn by one Kent on the Texas Tram & Lumber Co. for \$222.58, having first indorsed it as follows: "For collection and credit for account of the City Bank of Sherman. C. C. Jones, Cashier." On the 18th day of the same month the City Bank of Houston indorsed the draft as follows and sent it to appellee, Weiss: "Pay V. Weiss, or order, for collection, for account of the City Bank of Houston. B. F. Weems, Cashier." On the last named day the City Bank of Sherman, appellant, remitted another draft for \$201.60 drawn by the same drawer upon the same drawee, which also reached Weiss, appellee, through the same channel with like indorsements upon it. The City Bank of Houston failed. Appellee collected the money upon both drafts—upon the first before and upon the second after he was apprised of the failure. The Houston Bank was indebted to both appellant and appellee; and appellee credited the proceeds of collections to the account of the latter bank, and refused to pay appellant. Appellant brought suit and the cause was submitted to a jury, who returned a verdict for appellee. The Court rendered judgment accordingly and overruled appellant's motion for a new trial. On appeal,

Held: The assignments of error relied upon in the brief will relate to the action of the Court in giving and refusing instructions. It is claimed that the general charge was misleading in this: that it made the liability of the appellee depend upon the question whether he was the agent of appellant in collecting the draft, or the agent of the City Bank of Houston, and did not instruct the jury as to the legal effect of the restrictive indorsements upon the drafts. It is also assigned that the Court erred in refusing charges asked by appellant, to the effect that these indorsements were notice to appellee of appellant's ownership of the paper, and that if the former collected them, he was responsible to appellant for the amount so collected.

When one places negotiable paper with a bank for collection, and that bank sends it to another bank for the same purpose, whether the second bank is to be deemed the agent of the owner or merely the agent of the second bank is a vexed question. Important legal consequences flow from its determination and upon it the authorities are conflicting. If the second bank be held the agent of the owner, then it would be responsible to him for any negligence which resulted in a loss of the debt. So also if the collecting bank failed after recovering the money, being in good credit at the time the paper was transmitted for collection, the bank which had sent it would not be liable to the owner for the amount collected. But if, as many authorities hold, the second indorsee is to be considered merely the agent of his immediate indorser, and not of the first indorser, these consequences do not follow; and in case of negligence or

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

default the first indorsee is liable to the owner of the bill, and not the second.

In *Allen vs. The Merchant's Bank of New York*, 22 Wend. 215 the defendant bank had received the draft for collection and had transmitted it to a bank in Philadelphia, through whose negligence it had been lost. Defendant was held liable for the loss. In the case of *Montgomery County Bank vs. Albany City Bank*, 7 N. Y. 459, the decision was to the same effect; and it was also there held that the bank to which the bill had been sent in the second instance was not liable to the owner for its own default. Virtually the same doctrine was held in *Reeves vs. State Bank of Ohio*, 8 Ohio St. 466. In *Kent vs. Dawson Bank*, 13 Blatchf. 237, the draft was sent for collection to the defendant bank upon a party in Washington, N. C. Defendant sent it to bankers in that place, then in good standing, who collected it, and becoming insolvent failed to pay over the money. The defendant was held responsible. In Pennsylvania the same principle was applied to a company of mercantile agents, and they were held liable to the owner of a claim given them for collection, by the failure of an attorney to whom they had sent it, who collected and retained the money. (*Bradstreet vs. Everson*, 72 Pa. St. 124.) All these cases are based upon the principle that the last collector to whom the paper is sent is the agent of the bank or agency who sends it, and not of the owner, and they therefore hold that the first indorsee who receives the bill for collection is the owner's agent, and takes the bill under the implied contract to be responsible, notwithstanding the negligence or default of the agent whom he may employ. The case of *Hoover vs. Wise*, 91 U. S. 308, follows the Pennsylvania case above cited, and holds that the attorney to whom a collection agency has sent for collection a claim belonging to another is not the agent of the owner. The opinion admits a great conflict of authority even upon that proposition.

It will be seen that the case before us presents quite a different question. It is whether a banker, who has received from his correspondent a draft indorsed for collection, which is indorsed in like manner to his correspondent, can collect the paper and appropriate the proceeds of the latter's debt to him and refuse to pay the owner. It is not necessary to decide that he is the owner's agent in order to determine that he cannot do this. He has received the owner's money, knowing, by the indorsement upon the draft, that it is his, and will not be permitted to withhold it from him. The authorities in support of this proposition are overwhelming. The following cases from Courts of high authority are directly in point. *Sweeny vs. Easter*, 1 Wall. 166; *Cecil Bank vs. Farmer's Bank of Maryland*, 22 Md. 148; *Sigourney vs. Lloyd*, 8 Barn. & C. 622; 5 Bing. 525; *Treutel vs. Barandon*, 8 Taunt. 100; *Blaine vs. Bourne*, 11 R. I. 119. See also *White vs. National Bank*, 102 U. S. 658; *Hook vs. Pratt*, 78 N. Y. 371; 1 Dan'l Neg. Ins. Sec. 336, 698, et seq.; *Story Prom. Notes*, Sec. 143.

The only case holding to the contrary is *Hyde vs. First National Bank*, 7 Biss. 156. The Court seemed to consider that it was constrained to its decision by the principle decided in *Hoover vs. Wise*, *supra*, and claimed that that opinion was in conflict with the former decisions of the same Court in *Sweeny vs. Easter*, before cited. An examination of the two cases will show that there is no conflict between them, and the opinion in *Hoover vs. Wise* recognizes none; and although it contains an elaborate discussion of the authorities, it does not name the case of *Sweeny vs. Easter* for the obvious reason, as we think, that the two decisions are dependent upon wholly different principles.

The question before us is not one of agency. A party may be held liable as a trustee for another, or for the conversion of his money, though not an agent. The proposition which determines the rights of the parties here is that appellee collected appellant's money knowing it to be such, and must be held to have received it for appellant's use and benefit.

Judgment reversed.

City Bank of Sherman vs. Weiss, Supreme Court of Texas, February 8. 1887.

SAVINGS BANK—WINDING UP BUSINESS—WHO ENTITLED TO SURPLUS?

The Morristown Institution for Savings was incorporated by special charter from the State of New Jersey in 1867. By the fourth section of its charter it was authorized to receive as deposits all sums of money which might be

offered for that purpose, and to invest them in such amounts, and at such times, and on such terms as its by-laws might prescribe; and it was authorized to execute all trusts of every description relating to the care, safe-keeping and investment of moneys entrusted to it by any person or persons, by will or otherwise, or by the order of any Court. By the fifth section it was provided that it should be the duty of the managers from time to time to regulate the rate of interest to be allowed and paid to depositors so that they might receive as nearly as could be a rateable proportion of the profits, after deducting therefrom all necessary expenses, and retaining a reasonable surplus or contingent fund; and that such rate of interest might be so regulated by the managers that the interest allowed to such depositors as should have \$1,000 or more on deposit should be one per centum per annum less than the interest allowed to other depositors. By the sixth section it was provided that no emolument or compensation should be received either directly or indirectly by the president or other managers for their services.

The bank went into voluntary liquidation, having at the time of the institution of proceedings to wind up its business a surplus of \$20,842.19. Various parties appeared before the Court claiming a portion of the whole of this surplus, among which were the Attorney-General of the State and two classes of persons, viz., those who were depositors when the proceeding was instituted for winding up its business, and those who before that time had been depositors but had withdrawn their deposits and were not such then. On the question of who was entitled to the surplus, the Court

Held. The management have no claim to the surplus. Their trust is a naked trust. The charter expressly declares that they shall receive no emolument or compensation either directly or indirectly. It provides that the depositors shall receive as interest their rateable proportion of the profits after deducting necessary expenses and retaining a reasonable surplus or contingent fund. Neither the bank nor the management could derive any benefit from any deposit or the produce thereof. (Grant, Banks, 614; Huntington *vs.* Savings Bank, 96 U. S. 388.)

The State has no right to the surplus. Nor have those who were depositors, but withdrew their deposits before the institution of the winding up proceedings, any claim to it. The surplus was created and maintained for the protection of the depositors from loss by reason of the depreciation of securities, etc.—to protect them against the casualties and contingencies to which the funds of the institution were liable and which might impair their deposits. It stood as such indemnity for the depositors who were such for the time being. So long as a person continued to be a depositor, so long it stood for his protection and when, by withdrawing his funds, he ceased to be a depositor, his interest in it was at an end. He thus relinquished his interest in it and as he would not be liable to contribute to any loss to which the remaining depositors might be subjected, so on the other hand he would not be entitled to any participation in the surplus.

The 32d section of the Act concerning Savings Banks (P. L. 1876, p. 352), makes it the duty of the managers of every corporation subject to that Act to regulate the rate of interest or dividends, not to exceed 6 per cent. per annum upon the deposits, in such manner that depositors shall receive as nearly as may be all the profits of the corporation after deducting necessary expenses and reserving such amount as the managers may deem expedient as a surplus fund for the security of the depositors, which to the amount of 15 per centum of their deposits the management are thereby authorized to accumulate gradually and to hold to meet any contingency or loss in the business of the corporation from depreciation of its securities, or otherwise. It provides also that it shall be the duty of the managers of any such corporation, the surplus of which amounts to 15 per centum of its deposits to divide equally, at least once in three years, the accumulation beyond the authorized surplus as an extra dividend to depositors in excess of the regular dividends authorized by the Act. This latter provision is a legislative recognition of the principle that the surplus which a savings institution has when wound up belongs to those who are depositors at that time. Those depositors being the only persons

interested in the assets of the corporation at the time of winding up are entitled to a rateable distribution among themselves according to the amounts of their respective deposits of those assets after paying the debts of the corporation to other creditors. In *Hannon vs. Williams*, 34 N. J. Eq., 255, it was said by the Court of Errors and Appeals that in prosperity the depositors of a savings bank are the stockholders among whom profits are divided.

Norristown Institution for Savings vs. Roberts, Court of Chancery, New Jersey, March 5, 1887.

WITHDRAWAL BY SHAREHOLDERS FROM NATIONAL BANK UNDER ACT OF JULY 12, 1882—APPRAISEMENT OF VALUE OF SHARES—POWER TO CORRECT ERROR THEREIN—FUNCTIONS OF APPRAISERS CONSIDERED

Defendants in error, Breneman and others (plaintiffs in the Court below), brought an action of debt against The First National Bank of Clarion, the plaintiff in error, on an award of appraiser's appointed under the Act of July 12, 1882, to ascertain the value of certain shares of stock of the bank owned by said defendants in error. The Act in question is for the purpose of enabling National banking associations to extend their corporate existence and for other purposes, and the fifth section thereof provides: "That when any National banking association has amended its articles of association as provided in this Act, and the Comptroller has granted his certificate of approval, any shareholder not assenting to such amendment may give notice in writing to the Directors, within thirty days from the date of the certificate of approval, of his desire to withdraw from said association; in which case he shall be entitled to receive from said banking association the value of the shares so held by him, to be ascertained by an appraisal to be made by a committee of three persons, one to be selected by such shareholder, one by the Directors, and the third by the first two; and in case the value so fixed shall not be satisfactory to any such shareholder he may appeal to the Comptroller of the Currency, who shall cause a re-appraisal to be made which shall be final and binding; and if said re-appraisal shall exceed the value fixed by said committee the bank shall pay the expenses of said re-appraisal; otherwise the appellant shall pay said expenses, and the value so ascertained and determined shall be deemed to be a debt due, and be forthwith paid to said shareholders from said bank; and the shares so surrendered and appraised shall, after due notice, be sold at public auction within thirty days after the final appraisement provided in this section."

Under this Act appraisers had been appointed who had appraised and fixed the value of the shares of the defendants in error at \$198 per share, which valuation they had declared was satisfactory. Subsequently, however, but before the time to appeal had expired, the appraisers discovered that they had made a clerical error in duplicating an item of assets, and they corrected their valuation and notified the parties of a corrected valuation of \$173.637 per share. This not being satisfactory, action was brought against the bank by the shareholders on the original award, and judgment was directed by the Court in their favor for want of a sufficient affidavit of defence. The bank appealed.

Held, This action is founded upon the fifth section of the Act of Congress of July 12, 1882, which provides for the appraisal by a committee of three persons of the National bank shares of shareholders who do not assent to amendments to the articles of association. No provision is made for constituting the appraisal a proceeding of any Court or for filing it in any office or with any public officer, or even directing that it shall be in writing or that the parties shall be notified of it. The Act does provide that when the value has been ascertained and determined it shall be a debt due from the bank to the shareholders to be forthwith paid, and that is what makes it a cause of action. The committee are simply to appraise the value of the shares. They have no judicial functions. They have no controversy. They render no judgment as upon a litigated cause. Their proceedings are not of record. They are mere appraisers and presumably inform the parties of the fact and amount of their appraisement. For aught that appears in the Act that information may be imparted verbally or in writing. If the shareholder is dissatisfied he may appeal to the Comptroller of the Currency, and that officer is directed to cause a re-appraisal to be made

which shall be final and binding. The Act does not prescribe the time within which the appeal must be taken; but as it does direct that the shares shall be sold within thirty days after final appraisement, the right of appeal could not be exercised after the expiration of that time. In the present case the appraisers on April 1st notified the parties in writing that they had appraised the shares at \$198 per share, and on the 9th the owners notified the bank that they were satisfied with the valuation. On the 21st of April the appraisers again notified the parties that they had made a clerical error in computing the figures upon which their valuation was made, by twice adding the valuation of one of the assets, to wit, the banking house and furniture, appraised at \$23,604, and they corrected the mistake, which resulted in a corrected valuation of \$173.637 per share. No part of the valuation actually made was changed. The real figures which composed the aggregate of the assessment remained the same, and the appraisers did nothing but remove a double valuation of the same item, unintentionally and mistakenly made. It would be strange indeed if this could not be done. Technically, there is not a solitary reason why it could not. The time for appeal had not expired. No judgment, award or decree had been entered or pronounced upon the appraisement they had made. Nothing in the Act of Congress gave, at the time the correction was made, any quality of finality to the appraisement made. The party affected could still appeal if he desired. The mistake was corrected by the parties who made it. The work of correction was made as much a part of the work of the appraisers as the appraisement itself. Nothing in the law under which they were acting took from them either their control of the subject matter or their power to correct their own mistakes, at the time they assumed to correct this mistake, and we know of no reason, legal, equitable or moral, why they should not be permitted to make the correction in question. The power to correct mistakes even in judicial proceedings is fundamental and inherent in all tribunals and is constantly exercised—the daily practice of the Courts. The right of the citizen to have mistakes corrected is so thoroughly established and so well recognized that it is an independent source of equitable jurisdiction and may also be enforced in Courts of law. Thus money paid by mistake of fact can be recovered back in an action at law.

(The Court here cites passages from Story's Equity Jurisprudence, Sec. 1456, 1456a, and from Morse on Arbitration and Award, p. 323, to the effect that the mistakes of arbitrators and referees may be corrected.)

Judgment reversed.

First National Bank of Clarion vs. Breneman and others, Supreme Court of Pennsylvania.

NATIONBL BANK—TAKING USURIOUS INTEREST—RECOVERING BACK TWICE THE AMOUNT PAID UNDER SECTION 5, 198 REVISED STATUTES. RIGHT OF JUDGMENT CREDITOR TO BRING ACTION.

Plaintiff was a judgment creditor of an insolvent firm and instituted proceedings by bill in chancery against defendant, a national bank, to recover double the amount of interest taken by defendant from such firm, as provided by Section 5,198 of the Revised Statutes, on the ground of usury.

Held, The single question in the case is the right of a judgment creditor of an insolvent debtor to subject the forfeiture provided for in Section 5,198 to satisfaction of his judgment and its settlement, and depends upon the construction of said section of the Revised Statutes of the United States. That section is in the following language: "The taking, receiving, reserving or charging of a rate of interest greater than is allowed by the preceding section when knowingly done shall be deemed a forfeiture of the entire interest which the note or bill or other evidence of debt carries with it or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid, or his *legal representatives*, may recover back, in an action in the nature of an action of debt, twice the amount of interest thus paid, from the association taking or receiving the same, provided such action is commenced within two years from the time when the usurious transaction occurred. That suits, actions and proceedings against any association under this title may be had in any circuit, district or territorial court of the United States held within the district where such association may be

established, or in any State, county or municipal court in the county or city in which said association is located, having jurisdiction in similar cases."

By the terms of this section the relief granted is confined to the debtor, or his *legal representatives*, to be obtained by either only in an action in the nature of an action of debt commenced within two years from the time the usurious transaction occurred. It does not therefore extend to the creditor of the debtor as he is in no sense the debtor's legal representative; nor does it give a creditor an action in equity to subject the forfeiture to the satisfaction of his debt. The right not being given, it cannot be supplied by intentment. No latitude of construction is permissible of a statute providing a forfeiture as a penalty for its violation and a remedy for its recovery. He who seeks to recover the amount forfeited must be the person authorized to sue and must bring the action provided for. No other can have the redress nor can it be obtained in any other action. These are familiar principles and need no citation of authority to sustain them.

The direct question as to the right of a creditor to sue involved in this cause has not been before the Supreme Court of the United States so far as we are advised, but the statute in question has been often before that Court in kindred aspects, and in each the plain intimations of the Court have been that it was susceptible only of the construction which we have given it.

Bill dismissed. (Turney J. dissents.)

Barrett vs. Shelbyville National Bank, Supreme Court of Tennessee, February 17, 1887.

NATIONAL BANK—PURCHASE OF BONDS—POWER OF CASHIER TO BIND BANK BY AGREEMENT TO RE-SELL UPON DEMAND AT SAME PRICE OR LESS—*ULTRA VIRES*.

Townsend, Appellee, alleged in his petition that in June, 1879, he sold and delivered to appellant, the Logan County National Bank, bonds of the County of Logan of the face value of \$12,800, for which it paid him at the rate of 68½ cents on the dollar, and as a further consideration agreed to replace the bonds upon demand at the same price or less. Appellee also alleged that he had offered to repay the amount so paid to him therefor and demanded the return of the bonds, which appellant refused to deliver; and hence he sues for a breach of the contract and asks judgment in damages for the amount of the difference between the price of 68½ cents paid by him, and the par value of the bonds, which he avers they were worth when the demand was made. The bank claimed that the transaction was entered into with its Cashier, and not being within the scope of the Cashier's powers was not binding on the bank. On this point the Court

Held, The special finding of the jury reduces the discussion of this question to very narrow limits—in fact precludes appellant from denying the authority of the Cashier to make the contract; for if appellee sold the bonds to appellant, the bank, it necessarily follows they were appropriated and used by it; and having thus derived or elected to avail itself of whatever benefit might flow from the contract, it cannot now in good faith repudiate the contract or any part of it; nor deny the authority of the Cashier to make it.

In further defense the bank claimed that the contract was *ultra vires* the corporate authority of the bank, in direct violation of its charter, and consequently was no such obligation as would charge the bank or make it to any extent either in law or conscience liable in damages, or otherwise, for breach of the conditions. As to this claim the Court further

Held, It seems to us that if the proposition be conceded it would not avail appellant, for if it had no authority under its charter to purchase the bonds, it cannot in justice and conscience refuse to abide by the judgment in this case, which involves nothing more than the return of the bonds and receipt of what it paid for them. To do less cannot be justified without permitting it to profit by its own wrong in violating the law of Congress under which it exists.

Probably according to a fair construction of the National Bank Act the power is not expressly given to appellant to purchase and deal in bonds of the character of those in question, but neither is it expressly prohibited by the Act to do so. And there is a proper and well recognised difference between the

"case of an engagement made by a corporation to do an act expressly prohibited by its charter or some other law, and a case of where legislative power to do the act has not been granted." See *Hitchcock vs. Galveston*, 96 U. S. 841, and numerous authorities there cited. In that case the following from *State Board of Agriculture vs. Citizens State Railway Co.*, 47 Ind., 407, was quoted with approval: "Although there may be a defect of power in a corporation to make a contract, yet if a contract made by it is not in violation of its charter, or of any statute prohibiting it, and the corporation has by its promise induced a party, relying on the promise and in execution of the contract to expend money and perform his part thereof, the corporation is liable on the contract."

If the special findings of the jury in this case be taken as true (viz., that appellee sold the bonds to the defendant bank, and that the contract made at the date of sale was that defendant would replace the bonds to plaintiff at the price paid at the time or less), there needs no argument to show that the rule there laid down applies to the contract we are considering; and to adopt the opposite of that rule would invite a disregard for the provisions of the National Bank Act, as well as fraud and bad faith towards those dealing with a corporation existing under it.

The judgment of the Court below against the bank for \$4,032, the difference between the amount paid to the appellee at the rate of 68½ cents on the dollar and the par value of the bonds, affirmed.

Logan County National Bank vs. Townsend, Court of Appeals, Kentucky
February 10, 1887.

NOTICE OF DISHONOR—REASONABLE TIME—SUFFICIENCY OF SENDING THROUGH POST-OFFICE.

Action was brought against George W. Stocking, Jr., the indorser upon a promissory note executed by Byron Wise and Peter Marsh to said Stocking, and by him indorsed before maturity to Phelps, the plaintiff. Defendant claimed that the notice of dishonor given to him was insufficient to hold him as indorser. On the last day of grace demand was duly made of the makers of said note for payment, and upon their failure to pay the note was duly protested and notice thereof given to the indorser. Wise and Marsh appear to have been residents of Wahoo, while Stocking resided near there and received his mail at that place. The notice was sent through the post-office on the day that demand of payment was made and was received by Stocking in the forenoon of the following day. The case being tried in the District Court, and a jury being waived, that Court rendered judgment for the defendant Stocking. On appeal

Held, Two questions are presented: *First*, was the notice received by the defendant Stocking on the day after the dishonor of the note within a reasonable time? *Second*, was a notice sent through the post-office sufficient to charge the indorser?

The rule seems to be well established that the holder is not obliged to give notice immediately, on the very day of the dishonor. (2 *Dan'l Neg. Inst. Sec.* 1,037; 6 *East*, 8; 1 *Term R.* 168; 3 *Camp.* 193; 2 *Doug.* 515; 2 *H. Bl.* 565; *Chit. Bills* (492) 544; 1 *Pars. Notes and Bills*, 515, and cases cited.) The notice of dishonor therefore was forwarded in time.

In *Forbes vs. Omaha National Bank*, 10 *Neb.* 338, where Forbes resided about one and one quarter miles outside the corporate limits of Omaha where the bank was located, and received his mail at the post-office in that city, it was held that the notice sent through the Omaha post-office was insufficient to charge Forbes as indorser. In that case there was nothing to show that Forbes had received the notice in a reasonable time. In this case, however, the testimony is undisputed that Stocking received the notice the next day after the failure to pay the note. It certainly could make no difference to him in what manner he received notice. One of the objects in requiring personal service of notice of protest is to give the indorser a fair start with others in pursuit of the property of the defaulting principals. If in such case it could be shown that the indorser did not receive the notice until several days after

the same had been placed in the post-office, such notice would not be sufficient as there is an implied agreement that the indorser shall be notified within a reasonable time after the dishonor of the note. When a person indorses commercial paper at a distant place, he by implication agrees to receive notice of its dishonor through the post-office, as that is the usual channel of communication between distant points. This rule, however, does not apply to an indorser of paper payable at a place situated within his own post-office delivery. (*Forbes vs. Omaha Nat. Bank, supra.*) Where however the indorser receives notice through the post-office within a reasonable time, so that he is enabled to take proper steps for his own security, he will be bound thereby even if such notice was mailed in the post-office at which he received it. (15 Wis. 278; 26 Me. 45; 51 Vt. 473; 10 Allen, 524.)

Judgment reversed and ordered to be rendered in favor of plaintiff.

Phelps vs. Stocking, Supreme Court of Nebraska, March 16, 1887.

**ACTION BY DEPOSITOR TO RECOVER DEPOSIT APPEARING ON PASS-BOOK —
DENIAL BY BANK OF THE FACT OF SUCH DEPOSIT — ADMISSIBILITY OF
THEORY OF CASHIER.**

Meade, the plaintiff in the action below, sought to recover the sum of \$550, alleged by him to have been a balance due on account of certain deposits made by him with the defendant bank. In the deposit or pass-book of the plaintiff there were two entries of \$550—one on November 26, 1882, and one on April 26, 1883. Defendant denied the deposit of November 26, 1882, and the contest in the Court below was upon the question of fact whether the entry of November 26th was correct. Among other witnesses, the Cashier, Willie Jones, was examined for the defendant, who, after explaining the manner in which deposits were made and how they were entered on the books of the bank as well as in the pass-book of the customer, and after testifying that the alleged deposit of \$550 did not appear on the books, said that had there been a deposit made on that day, in balance of the cash, which he said was done every day on the close of the business, an "over" would have appeared and the mistake been discovered. He was then asked the question: "If Meade (the plaintiff) really made the deposit as he claims, on what theory, if any, can you account for its not appearing on the books of the bank?" This question was objected to by the plaintiff's attorney. It was, however, ruled competent and the witness replied: "Upon no other theory than that the Teller put the money in his pocket." The verdict was for the defendant, though the plaintiff had testified positively that he had made the deposits as set out in the pass-book. On appeal,

Held, The only question in appeal is whether Willie Jones, the Cashier, should have been allowed to give his theory above. The object of this testimony of Willie Jones was to negative the deposit by presenting to the jury the idea that if they found for the deposit they must consider that it had been stolen by the Teller, as there was no other way to account for the discrepancy between the pass-book of the plaintiff and the books of the bank, according to Mr. Jones' opinion. Now, was that a fact involved in this contest? The question was whether a certain deposit had been made. Any fact or circumstance connected with the deposit itself, and also the mode of doing business by the bank in matters of deposit, was no doubt competent as a fact bearing on the question; but was the theory given by Mr. Jones a fact in the sense of an occurrence connected in any way with this deposit, or with the manner in which the books of the bank were kept? Was it not rather an inference drawn from the mode in which the books were kept—an inference more or less strong, depending upon the force and effect of the facts proved; and, if so, was it not the province of the jury rather than of the witness to consider the legitimacy of such an inference? The testimony of the witness certainly did not develop a fact. It was nothing more than an opinion founded upon facts already in testimony—an opinion not upon the real question at issue, to wit, whether a deposit was made, but whether such a deposit could have been made under the circumstances consistently with the integrity of the teller. This does not seem to us to be an opinion such as experts may give or other witnesses, who testify as to the facts, as in *Ward vs. Charleston R. Co.* 19 S. C. 525. In such cases the matter in issue rests very

much in opinion, and is not susceptible of direct and positive proof, and in such cases opinion is the foundation of the verdict. But in this case whether the deposit was made could under no circumstance be a matter of opinion. It either occurred or did not occur, as a matter of fact; and no evidence was competent to that issue except direct testimony as to that fact, or as to other facts circumstantially showing either that it had or had not occurred; and if the defendant relied upon circumstantial testimony to prove the fact as to the deposit, the force and effect of such testimony should have been left to the jury unaided by the opinion of the witness.

Judgment reversed.

Meade vs. Carolina National Bank of Columbia, Supreme Court of South Carolina, February 14, 1887.

EXECUTION OF DRAFT BY AGENT IN THE NAME OF PRINCIPAL—EXCEEDING AUTHORITY—LIABILITY OF PRINCIPAL.

Sparks, the plaintiff, brought an action against King, the defendant, on a draft signed by one Gordon in the name of King. Defendant pleaded *non est factum*. The evidence showed that the only authority Gordon possessed to sign the name of King was authority to sign his name to a note for \$500. The Court below charged the jury that if King authorized Gordon to sign his name to a note for \$500 and Gordon abused his authority and signed King's name to a note for a larger amount than King authorized, and Sparks had no notice thereof, King would be liable. Judgment was rendered for the plaintiff, and defendant appealed.

Held, Gordon was but a special or particular agent to do a particular thing, to wit, to sign King's name to a note for \$500. Nor does it appear that plaintiff knew that Gordon was King's agent for any purpose, as King's name was signed to the paper and it did not purport to have been signed by Gordon as agent. The agent had no authority to sign the name of King to this draft. His having done so is a mere forgery. King is not liable on the same to any one. It is not his act and deed, and he did nothing which estops him from so declaring. The money advanced on this draft by plaintiff was to Gordon and for Gordon's benefit, and Sparks was chargeable with notice as to the genuineness of the paper. The principle that where one of two innocent persons must suffer by the act of a third person, he must bear the loss who put it in the power of such third person to inflict the injury, does not apply in this case, because the third person who did the injury did so of himself, and without warrant or authority from any one. It was not an abuse of power granted by King to Gordon, but it was an act by Gordon wholly unwarranted.

Judgment reversed.

King vs. Sparks, Supreme Court of Georgia, January 18, 1887.

ASSESSORS RULE TO ASSESS SHARES OF NATIONAL AND STATE BANKS AT PAR, THOUGH WORKING SOME INEQUALITY AFFORDS NO GROUND FOR RECOVERY OF TAXES.

The original plaintiff in this case, Edward N. Stanley, was a citizen of Illinois and claimed to be the Assignee of certain shareholders of the National Albany Exchange Bank. He brought suit to recover back certain taxes alleged to have been illegally collected from them upon their shares in that bank during the years from 1874 to 1879 inclusive, and paid into the Treasury of the County of Albany. He complained that the Assessors, by a rule prescribed by themselves, assessed the shares of the National Albany Exchange Bank at a higher rate than stock in other banks situated in the same city. The rule adopted by the Assessors was to assess all shares of stock in State and national banks in the city of Albany at par, irrespective of their actual or market value, making the requisite reduction for real estate owned by the banks. The plaintiff maintained that this rule necessarily resulted in imposing upon the shares of the National Albany Exchange Bank a greater rate of taxation than was assessed upon other moneyed capital generally, because the actual value of shares of stock was considerably less than the stock of most of the other banks in the city. The Court held that the method of assessment complained

of is applied to all banks, national and State, and comes as near as practicable, considering the nature of the property, to securing, as between them, uniformity and equality of taxation; it cannot be considered as discriminating against either. In no respect can it be regarded as adopted in hostility to the national banks. It must sometimes place the estimated value of their shares below their real value, but such a result is not one of which the holders of national bank shares can complain. It must also sometimes lead to overvaluation of the shares, but if so no ground is thereby furnished for the recovery of the taxes collected thereon. It is only where the assessment is wholly void, or void with respect to separable portions of the property, the amount of which is ascertainable, or where the assessment has been set aside as invalid, that an action at law will lie for the taxes paid or for a portion thereof. Overvaluation of property is not a ground of action at law for the excess beyond what should have been levied upon a just valuation. The Courts cannot in such cases take upon themselves the functions of a revising or equalizing board. In nearly all the States provision is made by law for the correction of errors and irregularities of Assessors through special boards of revision. To these boards of revision the citizen must apply for relief against excessive and irregular taxation where the assessing officers have jurisdiction to act. The action of the latter being judicial, their judgments in cases within their jurisdiction are not open to collateral attack. If not corrected by some of the modes pointed out by statute, they are conclusive, whatever errors may have been committed in the assessment. The judgment of the Court below is affirmed. Opinion by Justice Field.

Hattie F. Stanley, executrix, vs. Board of Supervisors of Albany, N. Y., U. S. Supreme Court, May 2, 1887.

POWERS OF BANK CASHIERS.

Continued from page 477, May number of the JOURNAL.

XVII. Power to Borrow Money from the Bank.—In the absence of any prohibition in the charter or by-laws of a bank, there is nothing to prevent the Cashier from receiving a loan from the bank upon the same conditions and in the same amount as would be given to any other party. Sharswood J. in Conyngham's Appeal (57 Pa. State, 481), says: "The officers of banks ought never to be borrowers; but, when they become so, we can only apply to them the principles of law applicable to others." The Cashier of a bank, however, cannot avail himself of the statute of limitations to defeat an action on his note by the bank, unless he can show clearly a performance of all his duties in relation to the note, in exhibiting the same as due and unpaid to the Board of Directors. Thus, where a bank brought suit against its Cashier on a note of his running to the bank, which had been due and unpaid for more than six years, the Court held that in order to avail himself of the statute the Cashier must show that the Board of Directors had official information that the note remained due and unpaid. Although the Directors might, with diligence and care, have known the real situation of the note, it was not their peculiar duty to so ascertain. It was part of the official duty of the Cashier to take proper measures to secure payment of the note, and to inform the Directors of its dishonor, that legal means might be taken to collect the amount due. The case does not depend upon what is termed ordinary care and diligence on the part of the Directors, when there has been an omission of duty on the part of the Cashier, who seeks to protect himself from payment. Until the Directors have this knowledge, the statute does not begin to run against the bank, notwithstanding the note is due. In the complicated concerns of a bank it is impossible that the Directors can be sufficiently aware of the non-payment of all notes and securities belonging to the institution, and a great deal must depend upon the Cashier, whose peculiar duty it is to attend to that part of the business of a bank. (Harrisburg Bank vs. Foster, 8 Watts, 12.)

LAW NOTES AND COMMENTS.

JURISDICTION OF THE UNITED STATES COURTS OVER NATIONAL BANKS.—The recent Act of Congress, approved March 3, 1887, which amends in many particulars the Act of March 3, 1875, relating to the jurisdiction of

the Circuit Courts of the United States, by its fourth Section makes the following provision : " That all National banking associations established under the laws of the United States shall, for the purposes of all actions by or against them, real, personal or mixed, and all suits in equity, be deemed citizens of the States in which they are respectively located ; and in such cases the Circuit and District Courts shall not have jurisdiction other than such as they would have in cases between individual citizens of the same State. The provisions of this Section shall not be held to affect the jurisdiction of the Courts of the United States in cases commenced by the United States, or by direction of any officers thereof, or cases for winding up the affairs of any such bank."

ANOTHER PACIFIC NATIONAL BANK CASE.—A decision has recently been rendered by the Supreme Judicial Court of Massachusetts (*Eaton vs. Pacific National Bank* ; March 28, 1887,) holding that a stockholder of that bank, who had paid in \$4,000 as a subscription to an increase of capital, was entitled to recover back the amount, the condition on which the payment was made not having been complied with.

As the Supreme Court of the United States have recently had this whole matter under consideration in the case of *Delano vs. Butler*, 118 U. S. 634 (governing a large number of other cases), in which the conclusion was reached that the increase of the capital of the Pacific National Bank was valid, and that the stockholders who had subscribed were liable for an assessment upon the increased capital, it will be interesting to note the reason for a different conclusion in the present case.

It will be remembered that in September, 1881, the bank had a capital of \$500,000, which, by a vote of the Directors, it was decided to increase to \$1,000,000, and notice of such vote was given to the stockholders. On November 18, 1881, the bank suspended payment and closed its doors and was taken charge of by a Bank Examiner. At this time \$461,000 of the proposed increase of \$500,000 had been paid in, and the Directors on December 18, 1881, passed a resolution reciting the former resolution to increase the capital stock to \$1,000,000, and voted that the \$38,700 not taken should be cancelled and deducted from the capital of \$1,000,000, and that the paid up capital of the association amounted to \$961,300. It was also voted that the Comptroller be notified that the capital had been increased in the sum of \$461,300, and he was so notified, and on December 16, 1881, issued his certificate approving said increase. The capital was never increased to \$1,000,000, and no certificate was ever issued by the Comptroller stating that the capital stock had been increased to the amount of \$1,000,000 voted. On December 16, 1881, the Comptroller notified the bank that its entire capital stock amounting to \$961,300 having been lost, notice was given to said bank to pay its deficiency by an assessment of 100 per cent. upon its shareholders *pro rata*. On January 10, 1882, an annual meeting of the stockholders was held and an assessment was laid in accordance with the notice of the Comptroller ; and the bank resumed business, but subsequently failed and a Receiver was appointed.

In the case of *Delano* above referred to, *Delano* was the owner of thirty shares of the stock of the bank, and wrote a subscription for thirty shares of the new stock proposed, and paid \$3,000 to the bank on account thereof. When the assessment of 100 per cent. was voted by the stockholders at their annual meeting, in order to enable the bank to resume business, he shortly thereafter paid \$6,000 as the assessment upon sixty shares, which included both his old and his new stock. Subsequently, when the bank failed and he was sought to be held liable on an additional assessment of 100 per cent. upon sixty shares, for the debts of the bank, he claimed that he was the owner of thirty shares only ; that the increase of capital was not valid or binding, and that in any event, by a contribution of \$6,000 toward a fund which had been used in payment of the debts of the bank, he had discharged his liability as a stockholder to the bank, and could not be held for any additional amount. As to this latter claim, the Supreme Court held that the assessment imposed by the stockholders by their own vote, for the purpose of enabling the bank to resume business, and to avoid liquidation under Section 5205 of the Revised Statutes, was not the assessment

contemplated by Section 5151, by which the shareholders of every National banking association may be compelled to discharge their individual responsibility for the debts of the association; that the obligations of the shareholders under the two Sections were entirely diverse, and payments made under Section 5205, could not be applied to the satisfaction of the individual responsibility assumed by Section 5151.

As to the liability of Delano as the owner of more than thirty shares, the Court first discussed whether there was a valid increase of the capital stock of the Pacific National Bank, and having decided this question in the affirmative, the Court goes on to say: "The question, therefore, seems to be converted into this: whether the subscription of Delano to a proposed increase of \$500,000 and his payment thereof can be held to be a binding agreement to accept thirty shares out of the reduced amount. It will be observed that, without waiting to see what the future action of the association and the Comptroller of the Currency might be on the question of the ultimate amount of the increased stock, Delano paid for his shares and accepted his certificate. This he did, in legal contemplation, with knowledge of the law, which authorized the association and the Comptroller of the Currency to reduce the amount of the proposed increase to a less sum than that fixed in the original proposal of the Directors, and such payment and acceptance of the certificates in accordance therewith might amount under such circumstances on his part to a waiver of the right to insist that he should not be bound unless the whole amount of the proposed increase should be subscribed for and paid in. *But without insisting upon that point or deciding it, we think that the subsequent conduct of Delano amounts to a ratification on his part of the action of the association and of the Comptroller of the Currency in fixing the amount of the increased stock at the less sum.*" The Court then goes on to specify the conduct which amounted to a ratification, showing that the voluntary payment on the part of Delano of the assessment on the whole sixty shares to enable the bank to resume business, with knowledge of all the facts, bound him to accept the increased stock, and was a ratification of the fixing of the amount at a less sum.

It will thus be observed that while the Supreme Court of the United States held that the increase of stock in the amount of \$461,300 was valid, they did not decide the question of whether, in the absence of a ratification of the action of the association and of the Comptroller in fixing the amount at a less sum, a party who had subscribed for an increase of \$500,000 would be bound to accept such reduced stock; and this is the point which the Supreme Court of Massachusetts make in holding that Mary J. Eaton is entitled to recover the amount paid by her as a subscription to an increase of \$500,000. Without going into the details of that case, it is briefly this. Mary J. Eaton was the owner of forty shares in the Pacific National Bank, and when she received notice of the proposed increase, paid the defendant \$4,000, but did not make any written subscription to said increase of capital. No certificate of stock in the proposed increase of capital in the amount of \$500,000 was made by the bank, nor was any certificate in the claimed increase of \$461,300 received by or offered to her. The full amount of the \$500,000 not having been paid in, before the opening of the annual meeting of stockholders in January, the plaintiff sent to the bank the following notice: "The conditions upon which you received \$4,000 of me on the 28th of September, 1881, not having been performed, I hereby demand payment of said \$4,000." Plaintiff subsequently sued the bank to recover back the amount so paid, and the Supreme Court of Massachusetts, in an elaborate opinion, reach the conclusion that the plaintiff paid in her money upon the implied condition that she should not be entitled to new stock unless \$500,000 was paid in and the Comptroller approved of the increase, and also upon the implied condition that she should not be required to take new stock unless the amount proposed was created; and that this condition not having been performed the result is that the plaintiff is entitled to judgment for \$4,000, with interest, from the date of her demand.

This decision is made in view of the fact that there was no ratification by the plaintiff of the fixing of the amount at a less sum than originally proposed, and consequently the case does not fall within the decision of the Supreme

Court of the United States in *Delano vs. Butler*. It will be interesting to see what decision that Court will make when this case is taken before it.

INDIVIDUAL LIABILITY OF PARTIES SIGNING NOTES AS TRUSTEES.—Following the decision in *Heffner vs. Brownell*, reported in the May JOURNAL at page 474, the Supreme Court of Iowa, in the case of *Coburn vs. Omega Lodge* (decided March 21, 1887,) have decided that two parties who signed a note, adding to their signature the words, "Trustees Omega Lodge," were personally liable on the note, and that the added words were simply descriptive of the persons who were personally bound.

PLEDGE OF UNMATURED NEGOTIABLE BONDS AND RIGHTS OF OWNER.—The Supreme Court of Louisiana in the case of *Saloy vs. Hibernia National Bank*, (January, 1-87,) have held that unmatured negotiable bonds, pledged by a depositor of a bank with it to secure overdrafts, cannot be recovered by the true owner in the absence of notice or *mala fides* on the part of the bank, and that the fact that the party pledging such bonds was duly employed by the bank to perform certain services as notary in the course of its business, did not constitute him a *quasi* officer of the bank, or charge it with notice as to the true ownership of the bonds.

WHEN IS A PROMISSORY NOTE DEEMED TO BE TAKEN BEFORE MATURITY?—This question has recently been considered by the Supreme Court of Illinois (*Johnson vs. Glover*, January 25, 1887), who, in speaking of the subject, say: "It seems to be settled commercial law that negotiable paper taken in the usual course of business, on or before the expiration of the second day of grace, is not negotiated after maturity; but whether it may be so taken on the third day so as to protect the holder against any equities that might exist between the original parties, the authorities are in a measure conflicting. Perhaps the rule most generally observed is that if negotiable paper is taken in the usual course of business, at any time before it is in fact dishonored on the third day of grace, it will be regarded as having been negotiated before maturity, so as to afford the purchaser the usual protection against prior existing equities."

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail—and which are not to be published. See advertisement on another page.

Editor of Rhodes' Journal of Banking.

DETROIT, Mich., April 30, 1887.

SIR:—A party indorses a note after maturity, which was not protested when it fell due. Will such an indorsement hold him? S. D. E.

Answer.—A negotiable note which is past due may be indorsed and circulated in the same manner as before maturity. The indorsee, however, takes nothing but the actual right and title of the indorser, and it comes to him subject to all the equities which might attach in the hands of the party from whom he received it. To hold a party who indorses a note after maturity, demand must be made upon the maker within a reasonable time and notice of non-payment given.

Editor Rhodes' Journal of Banking.

May 16, 1887.

SIR:—In a draft drawn for say \$5 with exchange, do the words "with exchange" mean that the collecting bank should collect its whole fees from the payor—that is, if the collecting bank charges 25 cents for making the collection, should \$5.25 be collected from the payor, or do the words "with exchange" mean simply the current rate of exchange and not collection charges also. FREE W. KENNEY, Cashier.

Answer.—The party on whom the draft is drawn is not obliged to pay anything more than it calls for—viz., the amount of the draft and exchange. The exchange is the cost of transmitting the funds. If, in addition to this,

the collecting bank desires a further compensation for collecting, it must look to its principal; not to the drawee.

Editor Rhodes' Journal of Banking.

SIR:—Would we be obliged to pay a check issued by the B. N. Y. & P. R. R. Co. (payable to bearer on the order of the two superintendents), if it falls into the hands of an innocent holder, but not a rightful owner, after it has been indorsed for collection by a rightful owner?

OIL CITY, May 16, 1887.

F. W. MITCHELL & Co.

Answer.—An innocent holder for value of such a check would be entitled to recover on it, notwithstanding the indorsement for collection thereon.

Editor Rhodes' Journal of Banking.

PITTSBURGH, April 28, 1887.

SIR:—In the case of the note, of which a fac-simile is given below, is D. E. French released from the responsibility of his indorsement by the previous one of A. B. C., the maker, and the subsequent one, "Pay to order of G. H. I., A. B. C.'s agent?" Would a holder for value have recourse upon D. E. F. if the others failed to pay?

\$5,000.00.

JONESVILLE, Pa., October 10, 1886.

Ten days after date, I promise to pay to order of myself five thousand dollars at First National Bank, Jonesville, Pa., for value received without defalcation.

A. B. CUMMINGS.

On the back of the note is written: A. B. Cummings, D. E. French. Pay to order of G. H. Inskip, A. B. Cummings, G. H. Inskip. Pay 1st National Bank, Jonesville, Pa., or order for collection account of National Bank of Redemption, Boston.

Please answer in the JOURNAL.

J. A. S.

Answer.—On the authority of Eckert vs. Cameron, 43 Penn. State, 120, we think D. E. French could be held liable as indorser to an innocent holder for value, before maturity. It will be observed that the note is made by the maker payable to his own order, and is indorsed in blank by him. It is then indorsed in blank by D. E. French, and then again by the maker. There are cases which hold that, where a note again comes into the possession of the maker, it is extinguished, and cannot be re-issued by him so as to hold any prior indorsers. The case above cited, however, distinctly holds that, where the maker offers for discount an indorsed note on the day of its date and before its maturity, the law does not infer from the indorsement and the possession of the maker that the note has either been paid or extinguished; the inference is rather that the indorsement was made for the accommodation of the maker, and the note left with him to raise money upon it. Also, that a bill or note is not properly paid or satisfied, according to its tenor and effect, unless it is paid when due; and the fact that the maker or acceptor of an indorsed note or bill has it in possession, and offers it for discount before its maturity, is not notice to the purchaser of its payment or extinguishment. It is also held that one who discounts such a note for the maker, before it is due according to its tenor, is an innocent holder for value, and is entitled to recover in an action upon it against any of the parties.

Under the rule laid down in this case by the Supreme Court of Pennsylvania, which would govern the present case, D. E. French would be liable as indorser on the note in the hands of a *bona fide* holder for value before maturity.

Editor Rhodes' Journal of Banking:

CLEARFIELD, Pa., May 28, 1887.

A note matures on February 27th (Sunday). The maker wishes to renew, and dates his new note February 26th; we charge him discount for the whole number of days the new note has to run. He thus pays discount twice for February 27th. Is this method of charging discount justified by banking custom?

E. BLAKE FORCEY.

Answer.—We understand that it is customary for banks to charge discount in the manner described. Had the maker not wished to renew, he would have already paid discount for Sunday, while the money would have been payable on the Saturday preceding. Regarding it as a completed transaction, and the money due on Saturday, the renewal and discount dates from that day, and Sunday is again included. Of course this is not strictly right, as it imposes

upon the borrower the burden of paying interest twice for the same day, but it is sanctioned by custom. As to the law of the matter, the case is probably one where the law would follow and legalize the custom, as in the matter of discounting, itself, where banks, by virtue of a long established and universal custom, have been permitted to receive the amount of interest in advance by holding it back at the time they make the loan.

Editor Rhodes' Journal of Banking:

ROCKVILLE, Ind., May 18, 1887.

Does the clause given in italics in the form of note below, relating to the extension of time, affect the negotiability of the note? Would any extension or extensions of time, so given to the principal, affect the liability of the endorser?

\$100.

ROCKVILLE, Ind., May 18, 1887.

Three months after date we promise to pay to the order of John Robertson, one hundred dollars, at the office of the Parke Bank, Rockville, Ind., in lawful money of the United States. With eight per cent. interest after maturity until paid (and attorney's fees). Value received, without any relief whatever from valuation or appraisal laws. The drawers and indorsers severally waive presentment for payment, protest and notice of protest and non-payment of this note. *The makers and indorsers of this note further expressly agree that the payee, or his assigns, may extend the time of payment thereof, from time to time, indefinitely, as he or they may see fit, and receive interest in advance or otherwise, from either of the makers or indorsers for any extension so made.*

Please answer in the JOURNAL.

F. H. STARK, Cashier.

Answer.—One of the essential elements of a negotiable promissory note is that the money must be payable unconditionally and *at all events*; and at first view it would seem that the above note does not meet this requirement, for the payee or his assigns are given power to extend the time of payment "from time to time, indefinitely," and thus might extend it again and again, forever; and the note never become payable. It has been held, however, that this rule that to be negotiable, a note must be payable absolutely and at all events, means only that it must appear on its face that the maker's promise will be at some time absolutely enforceable, and where the event on which the time and duty of payment depend is one over which the holder will have entire control, there is no such uncertainty regarding it as renders the note non-negotiable. (Protection Ins. Co. *vs.* Bill, 81 Com. 534.) Adopting this view as the proper one, the clause referred to does not deprive the note of its negotiability. The note is payable on a day certain absolutely, and is absolutely enforceable at that time. Whether or not the time of payment shall be extended rests entirely with the holder, and being something over which he has entire control, under the rule laid down above, its negotiability is not destroyed.

2 The indorsers are bound by the clause on the face of the note, and any such extensions could be made without releasing them from liability

Editor Rhodes' Journal of Banking:

SPRINGFIELD, Ill., May 16, 1887.

SIR:—A ships a carload of cattle to Chicago, and deposits proceeds with a Chicago bank to the credit of B, his home bank. The Chicago bank sends a letter of advice to B, the home bank stating the amount and by whom the deposit was made, the letter being signed by its Cashier and Teller. B has a correspondent at Chicago, and endorses the letter of advice to it for collection and credit. The Chicago bank refused to pay on presentation of this paper, insisting that it was irregular, and that a draft must be drawn on them. Was not this letter of advice so endorsed sufficient and as good a receipt to them for the money as a draft possibly could be? CASHIER.

Answer.—The Chicago bank had a right to insist that before it paid the money a draft should be drawn on it in regular form. Doubtless, if they had chosen to pay the money on the paper presented, the latter, together with all the collateral testimony, might have proved the payment, but technically it was not a draft, and if any trouble had ever arisen about the deposit, if, for instance, the home bank had failed after receiving the money, and A, the cattle dealer, had not got the benefit of it, he might claim it of the Chicago

bank on the ground that the deposit had never been regularly drawn out. The letter is only evidence that there is a credit which may be drawn out. The endorsement on it gave the correspondent of the home bank permission to collect, but no real power to do so, inasmuch as this power could only be given by drawing a draft in regular form and endorsing it over. The endorsement without the draft was worth no more to the correspondent than a draft without its proper endorsement.

Editor Rhodes' Journal of Banking:

PEABODY, Kas., May 2, 1887.

Will you please explain the reason that numbers between two parallel perpendicular lines are placed in the lower left hand corner of drafts drawn by banks upon their correspondents?

CASHIER.

Answer.—Banks having a large number of out of town correspondents give each of them a *number* and request that it be written or printed in the manner indicated upon checks drawn by them. The checks are more easily arranged by numbers than alphabetically, and entries on ledgers and other books as well as correspondence is facilitated. In some cases it is made to serve another purpose. A book is kept, the leaves of which, printed on one side only, are divided into strips about an inch wide by perpendicular lines of perforations similar to those separating postage stamps. There are about twelve of such strips to a page. Horizontally each strip is ruled by lines for each working day in the month, and the number of the out of town bank is printed at the head of the slip. The balance each day of each correspondent is entered on the proper line, and at the end of the month the slips are separated along the perforated lines and sent to each correspondent, thus furnishing with little trouble each with a statement showing its balance on each day of the month. This system has been introduced in the Chase National Bank of this city. The general reason for this numbering of checks is the same as that for printing the charter number on bank bills, viz.: ease of distribution and handling.

Editor Rhodes' Journal of Banking:

BOWLING GREEN, Mo., May 10, 1887.

In a note executed according to the following example are the securities bound, if it is not protested, or if it were made payable one day after date and not protested would the securities be released?

CASHIER.

The note reads: "Bowling Green, Mo., March 1, 1887. Sixty days after date we promise to pay to the order of Farmers' Bank of Bowling Green, Mo., \$500, for value received, negotiable and payable without defalcation or discount, at the Farmers' Bank of Bowling Green, Pike Co., Mo., with interest at the rate of 10 per cent. per annum from maturity, and if the interest is not paid annually, to become as principal and bear the same rate of interest.

Wm. Smith,

Jno. Jones, security,

Tom Müller, security."

Answer.—The form of note amounts to the same thing as a joint and several note. The decisions of the Courts are that writing the name on the back of a note, if done before the note is discounted and for the purpose of strengthening the first signer, constitutes the writer a maker instead of indorser. Much more are the last two signers of the sample note makers, notwithstanding the word security is added to their names, especially as the note reads *we* promise to pay. The three are equally bound to pay the note, though as between themselves it appears to be understood that the first signer is to take care of it. Being makers they would be held if the note were not protested. It would be the same if it were payable one day after date.

Editor Rhodes' Journal of Banking:

SHREVEPORT, La.

SIR:—Does not the certification of a check by a bank make it the obligation of the bank the same as an acceptance, and does the law require a certified check to be presented for payment within any definite time?

CASHIER.

Answer.—Legal certification of a check by a National bank has been defined by the United States Supreme Court (Merchant's Bank *vs.* State Bank, 10 Wall., 604) to be a form of acceptance which, from its nature, implies that the reason

of the acceptance is the fact that the drawer of the check has a credit in the accepting bank equal to or greater than the amount of the check, and that sufficient of that credit to meet such certified check will be set apart and especially held to meet it. An illegal certification is one where the bank, for any space of time, however short, assumes a liability by certifying a check to be good when the drawer has no *bona fide* credit on its books. The bank is bound equally, whether the certification is legal or illegal. There is no provision of law requiring a certified check to be presented within any definite limit of time. Being an acceptance of the bank payable on presentation, it is about equivalent to a certificate of deposit, and as between the holder and the bank it could be presented at any time before it was barred by the statute of limitations, which, according to recent decisions, runs from the date of the certificate. As between the holder and drawer or previous holder, in case of the failure of the bank an unreasonable delay in presentation would doubtless be laches on the part of the holder, and would absolve the drawer and indorsers.

Editor Rhodes' Journal of Banking:

SENECA, Kans., May 20, 1887.

SIR:—What day is a note due, dated February 28, 1887, payable "one year from date," including three days of grace, next year being leap year? W. N. JOHNSTON.

Answer.—"One year from date" means one ordinary year of 365 days. If it meant 366 days it should have said "one leap year." Therefore the note mentioned would be due on the third day after February 28, 1888, viz., on March 2d of that year.

Editor Rhodes' Journal of Banking:

PINE BLUFF, Ark., May 14, 1887.

SIR:—Referring to "Milwaukee's" letter, p. 480, of the May number of the JOURNAL, you could have suggested to him in your reply to make the receipt non-negotiable or non-transferable.

H. H. HURON, *Cashier.*

Answer.—This refers to a question as to a bank giving a receipt to customers for collaterals deposited for loans. The suggestion is a good one, and may be adopted if acceptable to the customer. Some customers may desire more latitude. The bank is fully protected if an agreement is made as was suggested in the answer in the May number, that the collaterals will not be surrendered except on return of the receipt.

Editor Rhodes' Journal of Banking:

SHELburne FALLS, Mass., May 11, 1887.

SIR:—A gives a note to B, B has it discounted at bank, A fails to pay on maturity; can it be charged to B without protesting B having an account at the bank?

A SUBSCRIBER.

Answer.—It is, perhaps, often the custom of banks to do so, growing out of an understanding either expressed or implied between the bank and customer, and if such custom had prevailed between the bank and customer an understanding would be supposed to exist. Strictly, however, a bank has no legal right to charge such a note back to a customer before protest. The best plan is to have an understanding with the customer that if notes discounted for him, and on which he is the only indorser, are not paid, they are to be charged back. Such an agreement amounts to waiver of protest.

Editor Rhodes' Journal of Banking:

CHICAGO, April 18, 1887.

SIR:—I am under the impression that the JOURNAL has mentioned, incidentally, the scarcity of banking accommodations in certain parts of the South. If I am correct, I will thank you to name one or more points in that section where a properly conducted bank will receive satisfactory support.

J. W. CARY.

Answer.—It is a well-known fact that less banking capital has been employed in the South than in other sections of the country. Probably it has hitherto been all that the existing production and trade found to be necessary. Since the revival of business and enterprise in many of the Southern States, greater banking facilities will doubtless be needed. At what particular points it would be profitable to start a bank the JOURNAL cannot assume the responsibility of replying. We will be obliged to our subscribers in the South if they will send to the JOURNAL any information they may have upon the subject of our correspondent's letter.

NEW YORK FINANCIAL LEGISLATION.

[From the Journal's correspondent at Albany.]

Banking and trust companies have received comparatively little attention at the hands of the present Legislature.

The only measure which has so far become a law and which in its practical operations affects banking institutions is Senator Reilly's half holiday bill, making every Saturday after twelve o'clock noon, a holiday; and providing that all notes, drafts, etc., presentable for payment on a Monday shall, in case the Monday is a legal holiday, be presentable for payment on the next day (Tuesday) instead of on the Saturday before, as at present.

Assemblyman Ainsworth, of Oswego, pressed a very important bill, but the change sought to be made was so radical that the bill was defeated in the House. It abolished all days of grace. It is but the forerunner of an active agitation of the subject, and is one of the legacies which the present Legislature will bequeath to its successor.

The most important general law introduced was Senator Walker's bill to provide for the organization and regulation of Trust companies. In past years the Legislature has been repeatedly called upon from time to time to pass special acts for the incorporation of particular Trust companies, and all corporations of this character now in existence, were granted special charters by the Legislature.

Governor Hill has set his face against this class of legislation. He has refused to approve numerous bills heretofore passed to create new companies. He has also repeatedly urged the passage of a general act to allow the organization of these companies, placing upon them proper restrictions. The Walker bill was introduced to meet the suggestions of the Governor. It has passed both Houses, and now awaits the Governor's approval. Companies, under this act, can be organized with a capital of from \$500,000 to \$2,000,000, notice first being published for four weeks in a newspaper in the city where it is proposed to be located. Three fourths of the incorporators must be residents of the State. The corporations may exist for fifty years, and are to possess powers similar to those now in existence under special charters.

The Governor also has under consideration the Gallagher bill to allow Savings banks to invest in "any interest bearing obligations" of any state, county or town whose bonds they may now hold. The object of this act is to allow them to purchase certificates of indebtedness issued by city governments, redeemable out of the proceeds of the next tax levy, or out of the moneys receivable from assessments for local improvements, as well as for temporary loans made to city and county Treasurers in advance of the collection of taxes.

Two more bills of Senator Walker's have been on their way through the Legislature and encounter no opposition. They seek to remedy defects in the present law by conferring on the Supreme Court authority to allow the change of name and change of location of State banks, thus doing away with another very fruitful source of special legislation.

Mr. Hogeboom's bill to compel the filing by State banks of semi-annual reports giving their condition on the first days of January and July in every year, was practically buried out of sight in the Assembly owing to the large number of bills that have been advanced ahead of it.

Senator Walker's bill to allow individual banks to be organized under the State law with a capital of \$10,000 has never come out of the Senate Committee on banks. The same is the case with Senator Parker's bill allowing the trustees of Savings banks to receive allowances not exceeding \$500 per annum for time actually spent in the business of the institution.

Upon these bills there has been practically no contest. The bills that seem likely to perish are those for which there was no particular demand and no effort has been made to secure favorable action.

There has been a decided contest however over what is known as the Cullen Savings bank bill which passed the Senate and has been killed by the refusal of the

Assembly Committee to act on it. The bill required Savings banks to report annually to the Banking Department a list of all deposits that have remained unclaimed and upon which no interest has been drawn for twenty years, together with the names and last known places of residence of the depositors. Assemblymen Finn and Mulry introduced similar bills in the House and the latter has been very active in trying to secure action on the Cullen bill, but without avail. This bill has caused considerable harsh criticism, both of the committee and of Superintendent Paine on the one, and the promoters of the bill on the other hand.

Two special charters for Trust companies have been asked for this session (New York Trust Company and Holland Trust Company), but neither have as yet passed both houses. The Governor, in view of his previous action on this class of bills, is morally certain to veto them should they ever reach the Executive Chamber.

Senator Walker, of the 30th District and Assemblyman John C. Hogeboom, of Columbia, are the respective chairmen of the Banking Committees and have had the responsibility cast upon them of protecting the banks from the people, as well as the people from the banks.

Several tax bills have been urged which are of especial interest in banking circles. Senator Vedder's bill to tax the capital stock of Trust companies at the place of business of the company, has perished in the Senate; and a bill by Mr. Erwin to tax Savings banks and Trust companies on their deposits has met a similar fate in the House, both dying in the committee room.

Senator Vedder's Brokers' Tax bill passed the Senate and was on the order of third reading in the House. There was no apparent desire on the part of any one in the House to press the bill to passage.

The Saturday half holiday law has appeared to Superintendent Paine to require explanation. Accordingly a bill was introduced by Mr. Sheehan, to define precisely when commercial paper shall be due. It provides that all paper falling due on Sunday or on Saturday or Monday, when either of them is a "whole holiday," shall be due on the next succeeding secular day. It was passed immediately.

New York City Bank Taxes.—The following table shows the amount of taxes due from the New York city banks for the years 1885 and 1886, which have had to be paid under the recent decision of the U. S. Supreme Court:

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Dakota Bankers' Association.—The third annual meeting of this Association was held at Watertown on May 24th and 25th. An interesting programme was presented, and several papers on appropriate topics were read.

Postal Estimates.—The original estimate was that the expense of the postal service for the current year would exceed the revenues by \$7,000,000. The latest calculation is that the deficit will not exceed \$3,000,000.

Wild Cat Insurances.—Through the manipulations of one of its Trustees, who is an insurance agent, the policies of insurance upon its property taken out by Dickinson College, Carlisle, Penn., are, it is stated, in Wild Cat companies.

Eugene B. Walton, who was convicted about eighteen months since of altering an account on the books of the First National Bank of New York city, where he was Teller, and sentenced for five years, was pardoned by President Cleveland on April 22d.

Mr. H. Knox Taylor has resigned the position of National Bank Examiner for Minnesota, inasmuch as it involved continued absence from his home, and has accepted the Secretaryship of the D. S. B. Johnston Land Mortgage Company. Mr. Taylor had a fine reputation for skill and attention to duty in his former position.

Mr. J. T. Phinney, for many years Cashier of the First National Bank of Frankfort, Kans., recently resigned that position to engage in business for himself in Logan County, Kans., where, in a short time, he purposes to organize a National bank. Mr. Phinney's high standing as a bank officer will insure his success in his new enterprise.

Mr. S. N. Aldrich has been appointed Assistant Treasurer of the United States at Boston, in place of Mr. M. P. Kennard. Mr. Kennard, the retiring officer, is spoken of as a model officer in every respect. Well fitted by his business education for the duties that were required of him, he was methodical, quick, diligent and faithful. He met everybody with courtesy and dispatched business rapidly. Although a Republican, he believed in the fiscal policy of the present administration. His accounts balanced to a cent.

The City of Duluth promises to become the great wheat market of the world. It is the eastern terminus of the shortest line of railroad from the Pacific, and is situated at the head of navigation of the great lakes. It is the outlet for a vast territory rich in agricultural, timber, and mineral resources. Wheat received during 1886 amounted to 26,000,000 bushels, and the wheat land of Dakota is not one-tenth developed.

Steel Works.—J. Wesley Guest, Cashier of the Citizens National Bank of Baltimore, has recently purchased for The Pennsylvania Steel Company, of Steelton, Penn., twelve hundred acres of land adjacent to the city of Baltimore. The property has a water front of over three miles on the Patapsco river. The steel company will proceed at once to erect extensive works. It promises to be a very important industrial and commercial enterprise.

The Vermont National Bank of St. Albans, which was placed in the hands of a receiver in connection with the Bradley Barlow failure, had some collateral claim on the stock of the Montreal, Portland & Boston road. Receiver Hendee purchased this stock, or had it purchased in his interest some two years ago, and the Supreme Court at Ottawa recently decided that the stock is now the property of the bank. The Canadian Pacific was the unsuccessful claimant.

Monetary Stringency.—Mr. Trenholm, Comptroller of the Currency, has been quoted as saying that he did not think there was any danger of panic or monetary

stringency. He thought the country was in a very prosperous condition, although there was no boom. This opinion was based on the fact that receivers of insolvent National banks have generally been reporting more rapid sales of property at better prices, and greater anxiety to pay on the part of the debtors of these concerns.

The State of Virginia, on May 18th, paid to the Kendall Bank Note Company, of New York, a judgment obtained in 1882 for \$30,000 and interest. The suit grew out of a decision of a contract for engraving and printing Riddleberger bonds, which decision was held to be wholly unjustifiable, the judgment of the lower Court to that effect being sustained by the Supreme Court of Appeals of the State. A bill appropriating money for the payment of the claim, including five years' interest, was passed by the Legislature.

Mexican Silver in Texas.—A bill was introduced in the Texas legislature at its last session making Mexican gold and silver coin a legal tender in that State. This is exactly the same in principle as if the State of New York or Massachusetts should enact laws making the coins of England or France legal tender within their State limits. The introducer of the bill in the Texas legislature must be some Rip Van Winkle who thinks Texas is still an independent Republic, forgetting that she is now an annex of the United States.

Union Pacific Railroad.—There has been a rumor that the Union Pacific stockholders are preparing to surrender the old Union Pacific main line for the Government debt, and abandon the Omaha & Council Bluffs termini, making of the branches owned by them independent of the Government a new system of lines with Lincoln, Nebraska, as their eastern terminus. Perhaps this can be done, but it is a question whether the Government would surrender any equitable right it might possess in the branches of the Union Pacific, if the main line should prove insufficient security for its debt, without litigation.

Treasury Cash.—The cash to be counted and transferred from the custody of Mr. Jordan to that of Mr. Hyatt is as follows: The money held in the vaults of the Treasury buildings aggregates \$95,000,000, of which \$60,000,000 is silver coin, \$26,000,000 gold coin and \$9,000,000 certificates and legal tenders. Besides this there is about \$134,000,000 of paper currency in the reserve vault as received from the Printing Bureau and not yet put into circulation. In addition to the cash there is \$240,000,000 of Government bonds. All these amounts must be counted and the Treasurer's books verified. The silver dollars fill to overflowing two vaults, of which one is 70 by 40 by 9 feet in dimensions.

The Clearing-House on May 18th, by a unanimous vote, admitted the Western National Bank as a member, and on the same day presented the following preamble and resolution, passed in reference to the Saturday half-holiday:

Whereas, Saturday from 12 o'clock at noon until 12 o'clock at night has been duly made a legal half-holiday, and there appearing to be nothing in the legal requirements of the Act that conflicts with the rules and regulations of the New York Clearing-House Association; therefore it is

Resolved, That the members of this Association continue the same relations with each other, and be governed by the same rules and regulations, and future amendments thereto, in all respects in their Clearing-House transactions as before the passage of the Act commonly called "Saturday Half-Holiday Bill," passed May 6, 1887.

Correction.—It has been announced that Wm. B. Mitchell, President of the Exchange Bank of Detroit, had disappeared with all the funds of the concern. A Detroit correspondent informs the JOURNAL that no such "bank" ever had an existence. It was only a small individual banking and brokerage affair, with probably no capital to speak of and less than \$5,000 in deposits. The use of the name Exchange Bank by such a concern is contrary to the laws of Michigan, which provide that no person shall advertise or put up signs tending to convey the impression that the business is that of an organized bank. In all cases the individual or firm name must be used, and the advertisements must state the names of every person in said firm.

Virginia Debt Conference.—Sir Edward Thornton, formerly the Representative of the English Government at Washington, and Mr. S. W. Braithwaite (of the firm of Messrs. Travers, Smith & Braithwaite) representing the English holders of Virginia bonds, held a conference commencing on May 2d, with a committee of the Virginia Legislature. It is understood that the bondholders demanded \$800,000 a year on a principal of about \$30,000,000, while the Virginia Commissioners would only allow

\$750,000 on \$22,000,000. The English Commissioners suggested that to do justice to the holders of the State debt, the appropriations for public schools and for disabled soldiers might be reduced. No agreement was reached.

Topeka, the Capital of Kansas, is a thriving city of 40,000 inhabitants, and justly entitled to rank among the most progressive cities of the West. It is situated in the very heart of Kansas, and has admirable railroad communication with all points. It has thirteen graded schools and two colleges, a fine public library and four elevators and flouring mills of a daily capacity of twelve hundred barrels of flour. There are two National and six State and private banks, three foundries and machine shops, fifteen printing offices and four book binderies, numerous churches, two opera houses, five hotels and a hospital. Thirty-five hundred houses have been built within the last three years. It also contains the general head-quarters of the Atchison, Topeka and Santa Fe Railroad Company.

Beginning of Trouble.—The free-handed good fellow who spends his money liberally with the boys is very popular always—until his defalcations are found out and he turns up in prison or in Canada. Then the free-handed good fellow is voted a very bad fellow, even by those who drank and feasted upon his employer's money. But that the free-handed good fellow is certainly destined to turn out a bad fellow in the end should be as certainly known to all who can look an inch beyond their noses before the exposure comes as after. An ordinary salary cannot support the style of living of one of these good fellows, and sensible business men ought to know whether their Tellers are good fellows or not before the cash is gone.—*Philadelphia Times*.

President E. Evans of the Lumber Exchange Bank of Tonawanda, has written to the Hon. W. L. Trenholm, Comptroller of the Currency, giving that officer exhaustive answers to the difficult questions which have arisen in reference to the perpetuation of the National banking system. Mr. Evans plan is the entire funding of the public debt into 2½ per cent "*American Consols*," payable at the pleasure of the Government after fifty years. Currency is to be issued to the par value of the bonds, but the Government is to retain interest until it amounts to 10 per cent of the circulation as an additional margin of security. It is understood that quite a number of 2½ per cent American Consols have inadvertently been appointed. Possibly there is no better way of utilizing them than in refunding the public debt.

Stump-tail Currency.—A circular issued by a dealer in ready-made clothing in Chicago, in 1857, exhibits a cut of a lank, brawny fellow driving in the stump of a cow's tail with a beetle. The cow is nothing but skin and bone, with hardly enough of the former to cover her ribs. A bold headline reads, "Last call for stump-tail currency." Then follow the quotations at which the dealer will receive bank notes of different banks, varying from par to 50 cents discount. Out of about sixty banks only six are quoted at par. New England bank money had a good reputation in those days, so much so that the notes of bankrupt institutions located in that section often passed at par in the West. Banks organized in the West would take the names and imitate the bills of Eastern banks, printing the real location in the smallest type, so that their notes might pass for New England money.

Pardoned.—Stephen H. Russell, of Boston, who was convicted of counterfeiting in 1857, was pardoned by the President in April. Russell, a silversmith, was charged with counterfeiting a large number of coins resembling the gold sovereigns of Great Britain, which coins were in actual use and circulation as money in the United States. The defendant's counsel claimed that what the defendant really did was to gild or wash English shillings, not knowing nor suspecting that the person asking to have them done had any intention of passing them off as genuine British sovereigns. There was no intent to deceive. Judge Webb claimed that if the accused counterfeited such coins, he could not excuse himself by showing what his intention was. The jury, therefore, returned a verdict of guilty. No sentence was imposed by the Judge, but the defendant was ordered to recognize in the sum of \$1,000 for his appearance from day to day during that term of the Court.

The Farmers and Mechanics' Savings Bank of Minneapolis, Minn., during the thirteen years it has been in operation, has never lost a dollar, and has never paid less than 5 per cent. dividends. It has accumulated a surplus of \$100,000. The law under which it is organized is one of the most conservative in the United States, being a copy

of the Savings bank law of New York State, with several features giving even additional security. The banking department of Minnesota which has supervision of the banks organized under State laws is presided over by Hon. H. M. Knox, State Examiner, who is well known as a careful, competent and conscientious officer.

On February 1st of each year the Savings banks of the State file with the Banking Department a detailed list and description of every mortgage and bond held by the banks. Information in regard to them can be obtained from Hon. H. M. Knox, State Examiner, St. Paul, Minn.

Credit to Wrong Account.—George W. Ryan, an insurance broker, in August, 1885, was a depositor in the Tradesmen's National Bank, of this city. He issued several small checks, directed to the bank, but they were dishonored, the bank refusing payment upon the theory that there were no funds to meet the checks. Ryan claimed that there were sufficient funds, and when an investigation was ordered it was found that a deposit of nearly \$600, made by him, had been credited to another Ryan. The dishonored checks having been sent to persons in Boston, New Orleans and elsewhere, Ryan sued the bank in the Court of Common Pleas to recover damages, claiming that the dishonoring of the checks was in effect an imputation on the part of the bank that he was insolvent, and that such an imputation injured his credit. After a trial of the case before Judge Daly and a jury a verdict of \$185 was given for Ryan. The defense was that no damage had been caused.

Will County National Bank, of Joliet, Ills.—The report of a defalcation in connection with this bank turns out to have been without foundation, as is shown by the following telegraph sent by the President:

"The Bank Examiner has concluded his examination of the Will County National Bank of this city, and states that he finds its condition quite satisfactory, and its affairs in better shape than when he last made his examination, and in this connection it is proper for me to state that Henry C. Knowlton, late Cashier of the bank, was not short in his accounts with the bank, nor a defaulter, nor has he been a fugitive, nor was his father or any other person for him, or on his account, required to make up or pay any deficiency to the bank. His affairs with the bank were all readily and satisfactorily adjusted, and he left the bank with the best wishes of the officers for his success in whatever undertaking he might engage. His residence is here, and he is at present at home with his family."

Dividends to Creditors of Insolvent Banks.—The Comptroller of the Currency has declared the following dividends in favor of the creditors of National banks in the hands of receivers: A first dividend of 25 per cent. in favor of the creditors of the First National Bank of Pine Bluff, Ark., on claims proved amounting to \$64,409; a third dividend of 10 per cent. to creditors of the First National Bank of Angelica, N. Y. This makes 85 per cent. in all on \$62,268 of proved claims. A third dividend of 10 per cent. to creditors of the Exchange National Bank of Norfolk, Va., or 40 per cent. in all upon claims proved amounting to \$2,888,986; a seventh dividend of 10 per cent. to creditors of the Pacific National Bank of Boston, making 50 per cent. on claims amounting to \$2,800,480, and a final dividend of 50 per cent. and interest to creditors of the First National Bank of Blair, Neb., making in all 100 per cent. and interest in full on claims amounting to \$80,410; a second dividend of 40 per cent. to creditors of the City National Bank of Williamsport, making in all 90 per cent. paid on claims amounting to \$180,742.

Savings Bank Bill in Illinois.—The Governor of Illinois has a Savings Bank bill recently passed by the Legislature under advisement. The bill does not provide for its presentation to the people under the requirement of the Constitution of the State that no Act of the Legislature creating a corporation or association with banking powers whether of issue, discount or deposit, shall go into effect until it has been submitted to the people at the next general election. Those in favor of the bill make the point that a savings bank is not a bank in the sense used in the Constitution, and to prove this confine themselves to the technical ideas of what a savings bank should be, that is institutions in the nature of charities for the poor, where an association is formed to take charge of funds intrusted to them and account for all moneys put into their hands for the benefit of those who intrust the money to them. Banking powers of discounting and loaning money are expressly prohibited, the deposits are not subject to check. It is thought that as the bill confines the contemplated institu-

tion to a strictly savings bank business that it does not require to be submitted to the people.

Secretary Fairchild is described in a Philadelphia paper in the following terms, whether complimentary or otherwise depends upon the stand-point of the reader. "He is extremely quiet and determined to a degree that amounts to obstinacy. In his big, barren office he is neither a striking nor impressive figure. He is short, round and comfortable looking, with a bulging forehead and a bulging chin, a short, chopped mustache, which seems to have crawled back into the comparative obscurity of his upper lip, and a pair of large dark eyes, which look both impassive and sleepy until something of consequence is said. People who go in to see him have to start the talking and frequently end it, and visitors have been known to go in, present short statements and come out again without hearing anything from him except "good day." For what is known as a hearing he is discouraging. Lawyers and business men make arguments before him, attacking each other, and wrestling with each other's arguments and figures, and in the whole time there will not be a single indication in either his countenance or his few words which will give the slightest clew to his opinions. The United States Supreme Court, with all its dignity, is not half the riddle during an argument that he is."

Boston Stock Exchange.—A great change has come over the spirit of the Boston Stock Exchange. Its operations are now of the character and magnitude which befit the second seat of capital in the United States. Under any surroundings the transactions would, of course, have shown a decided increase during the past eighteen months, but that increase has been largely augmented by the improved methods of the Exchange.

The inauguration of the open board system was the most important and progressive step ever taken by the Exchange. It has resulted in a much broader and more elastic stock market than has ever before been experienced in that city. It is true that such a change facilitates speculative trading and makes easier the marketing of "wild cat" securities, but worthless stocks will always exist while there are daring and ingenious schemers. The open board system of buying and selling makes it less dangerous to deal in these stocks, however, and also gives a greater solidity to stocks of intrinsic worth than was had when board trading was limited solely to morning and afternoon calls.

Analysis of Half-Holiday Bill.—A meeting of the Clearing-House Committee was held on May 12th, after which the following analysis of the Half-Holiday bill was sent to each bank in New York city:

"By the bill as passed, all commercial paper otherwise due on any of the whole holidays is payable the succeeding secular or business day. Saturday up to 12 M. is deemed a secular or business day.

"Therefore paper due on a whole holiday which falls on Friday is payable Saturday by 12 M. Paper due on holidays falling on Mondays, Tuesdays, Wednesdays and Thursdays is payable on the succeeding secular or business day.

"Paper due on Saturday which is a whole holiday, is payable the following Monday. If that be a holiday it is payable on Tuesday.

"Paper due on a half-holiday Saturday is due by 12 M., but may be demanded for protest and notice of dishonor or protest given the next secular or business day. There is nothing, however, in the Act to prevent demand and protest of any paper before 12 M. on a half-holiday Saturday, and this may be done whenever it may be deemed expedient.

"If a whole holiday fall on a Sunday the next Monday is a holiday, and paper falling due on such a Monday is payable the succeeding secular or business day.

"As to paper falling due on an ordinary Sunday, no provision is made, and very properly.

"Such paper is governed by the common law, and where the last day of grace falls on a Sunday, it is due on Saturday by 12 M.

"If that Sunday be also a holiday the law is not changed. The Act, it will be seen, does not apply to paper due on a Sunday, but to paper due on a Monday where Sunday is the holiday.

"Consequently it is plain that whether Sunday be a holiday or not, paper due on that day is payable on the preceding Saturday by 12 M.

"As to paper not entitled to days of grace, when by the terms thereof it is due on a Sunday, it is payable by the existing law on the Monday following.

"If Monday be a holiday, it is payable the succeeding day.

"Where paper presentable for payment or acceptance on a Saturday is received for collection, the banks are not guilty of neglect or omission of duty, and incur no liability in not presenting such paper for payment or acceptance, or collecting it on that day.

NOTE.—The Act applies only to commercial paper made on or after May 16, 1897. As to all paper made prior to May 16, 1897, the present law applies."

Kansas Bankers' Association.—The news department of the March number of the JOURNAL contained a notice of the organization of this Association upon February 22, 1887. The proceedings at the meeting have been published in a neat pamphlet, which contains the names of the organizers, of the officers elected, the constitution and by-laws adopted by the Association, and the address of John R. Mulvane, Esq., President of the Bank of Topeka, who was elected President of the Association. Mr. D. A. Moulton, Cashier of the First National Bank of Topeka, who was elected Treasurer, delivered an address upon Banks and Taxation, which is also printed in the pamphlet. This address was followed by a free discussion.

The objects of the Association as stated in the preamble to the constitution are "to promote the general interests of the Commonwealth, and to increase the usefulness of the banks, banking and financial institutions of the State, by the cultivation of more intimate acquaintance among the managers of such institutions, and through the medium of periodic meetings bring about a full and free discussion of, and secure united and harmonious action upon, all questions of custom and financial and commercial usage, existing, needed and pending legislation both State and National, as well as for the purpose of collecting and disseminating information of interest and use."

The organization already contains 21 National banks and 35 State banks and private bankers. As seen from the preamble above quoted, the main idea is to protect banking interests in and through the law-making power of the State. The necessity of such an organization was the more felt on account of the remodeling of the laws and constitution of the State in the near future.

Changes in Coinage.—The following letter addressed to the Director of the Mint by the Cashier of the Massachusetts National Bank of Boston very seasonably called attention to a point of much interest to bankers and all who have much to do with the handling of coin:

Hon. Jas. P. Kimball, Director of U. S. Mint,

MAY 13, '87.

DEAR SIR:—I notice that you are advertising for new coin designs. Allow me, on behalf of a suffering public, to ask that you do not make any more coins differing slightly in size from the existing one of the same denomination.

The last nickel five cent piece has been and is a nuisance in this respect. You cannot roll the old and new together with any convenience or neatness. You must sort them out as much as you would coins of different denominations.

More than this, Coin-Holders and Paying-Machines made to hold accurately the previous coins (still in the majority in circulation) will not hold or pass through the last issue, and of course have no place provided for the latter. The last are therefore a plague to all people who receive quantities of small coin, and these are a very considerable portion of the population.

There certainly can be no gain in a slight change of size at all commensurate with the inconvenience entailed on the people for a generation to come. CHAS. W. PERKINS.

Stock Exchange Election.—The election at the Stock Exchange this year was unexampled for excitement in the history of that institution. The trouble was about Mr. Henry S. Ives, who, on account of alleged crooked practices, had been officially determined to be unworthy of the privileges of the Exchange. Afterwards the Governors went so far as to suspend from membership a broker who insisted on continuing in partnership with Ives. Afterwards this partner was reinstated, and this excited the wrath of a number of the members, who insisted that it was a white-washing operation due to the success of Mr. Ives in his business operations. The opposition took the form of an attempt to defeat the re-election of the officers and Governors who were concerned in the alleged white-washing. The result does not appear to have been very promising for those who were opposed to Ives. In fact the only difference between the regular and independent tickets was, that for Governors the names of H. K. Enos, J. B. Dumont, W. B. Beekman and Richard Limburger had on the last named ticket been substituted for those of Donald Mackay, W. B. Lawrence, W. H. Johnson and Eugene Thompson. Three of the independent candidates were elected.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

—A plot to rob the Milmo National Bank of Laredo, Texas, was defeated, and the would-be robbers arrested.

—The Saint Nicholas Bank of this city has taken quarters in the magnificent new Equitable Building, on the Pine street side.

—The Bank of Virden, Ills., of which Messrs. Walworth and Heaton were the proprietors, has been sold by them on account of ill health to Caldwell, Henderson

& Co., who will carry it on under the old name. The members of the new firm are gentlemen who are known to be strong financially.

— The National Bank of Rahway, N. J., in liquidation, has been reorganized as a State institution called the Union County Bank, with a capital of \$50,000.

— The sum of \$600,000,000 passed through the hands of M. P. Kennard, the late Assistant United States Treasurer at Boston, during the past eight years.

— B. B. Somegys, President of the Philadelphia National Bank, returned to the city May 3d, in the steamer "British Princess" after an eight months' absence in Europe.

— Mr. Edward Gould, of Portland, at more than four score, is still Cashier of the National Traders' Bank of that city, a position which he has held continuously for fifty-three years.

— A Cashier dreamed that he was murdered while protecting the funds of the bank, and that seven angels carried him off to heaven. The very next night he was on his way to Canada.

— Mr. Samuel McD. Tate, of Morgantown, N. C., has been appointed by the Comptroller of Currency Bank Examiner in the States of North Carolina and Virginia. He is said to have had a large business experience.

— A loan company with a capital paid up of \$500,000, to be known as the National Loan & Trust Company of Kansas City, Mo., has been organized. Mr. Geo. F. Putnam, a prominent citizen of Kansas City, is manager.

— It is announced that Mr. Lyman J. Gage, for many years a widower, is to marry the widow of his brother, Lloyd G. Gage, who died about three years since. He is receiving the congratulations of his many friends.

— Upon the unanimous application of the national banks in Omaha, Neb., the Comptroller of the Currency has designated that city as a reserve city under the provisions of the Act passed at the last session of Congress.

— A fine portrait of Osmyn Brewster, Esq., of Boston, Mass., has been painted for the Franklin Savings Bank, of Boston, Mass., by Daniel Strain the artist. Mr. Brewster has been President of the Savings Bank since its organization in 1861.

— The old Plymouth National Bank corporation at Plymouth, Mass., is laying the foundation of a fine brick building, the first floor of which will be used by that bank and the Old Colony National Bank. In the building there will be a number of safe deposit vaults and lockers for rental.

— In response to the offer of the Director of the Mint of \$100 for a new design for the silver dollar, the *Macon Telegraph* suggests: On one side, the rising sun, a cornucopia rampant, and the legend, "Honesty is the best policy." On the other, "Turn the rascals out." Between the two, one dollar's worth of silver.

— There is some surprise expressed at the comparatively small number of trade dollars that has been presented for redemption. The theory is that when the coin was selling for eighty-five cents, many were melted and used for manufacturing purposes. The coin being 900 fine and containing 420 grains, it was cheaper than bullion.

— Part of the village property belonging to the estate of the late ex-Governor Page, consisting of twelve lots and a tenement house on Washington and East streets, in Rutland, was sold by auction on April 30th, in behalf of the National Bank of Rutland. The sales aggregated \$9,415, and the lots sold from \$315 up to \$1,425.

— The case of Thomas L. Huggard, George W. Bumm, William H. Bumm and Samuel P. Milligan, charged with conspiracy to cheat and defraud in the matter of the Shackamaxon Bank, Philadelphia, was called for trial by District Attorney Graham before Judge Hare, May 2d. Owing to the illness of Huggard the matter was continued. It will hardly be brought up under a month and may go over until the fall.

— An attempt is being made to have the Massachusetts Legislature pass a bill similar to the Cullen bill in New York, requiring Savings-bank Treasurers to return annually to the Savings Banks Commissioners the last-known address and amount standing to the credit of every depositor who has not added to or withdrawn any money from his deposit for twenty years, this information to be put in the Commissioners' annual report. As in New York there is much opposition to the measure.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

DRAFTS AND IDENTIFICATION.

Editor Rhodes' Journal of Banking:

SIR:—It may be that in many particulars that the "East" can give the "rowdy West" many pointers on business methods, but I fail to understand why they will persist in sending their friends and customers into the land of strangers with drafts and the remark that they "can get them cashed anywhere." The holder ascertains, in many instances, that identification is necessary, and he beyond the range of any acquaintance. Some banks have a *little* more style about them, and give with the draft a letter identifying the holder's signature, and then expect us to cash drafts on New York and elsewhere for \$500, and possibly more. In issuing these drafts they usually charge exchange, and expect us to cash them at par, where express-rates are \$1 per M, and take the risk of letter or draft or both being forgeries. Once in a while—*very seldom*—an Eastern banker enquires of his customer what part of the country he intends to visit, and then writes some bank in the vicinity that John Smith, whose signature appears below, will call with draft No. so and so, and will further identify himself with the word "money," or any other word fancy pleases. To drawers of some kinds of foreign letters or advices, this plan is familiar, and to the party cashing drafts, etc., very satisfactory.

The writer has worked in Eastern banks, big and little, and is free to say that "ye Easterner" would have the horrors if he had to conduct his business as he seemingly expects us to. We, in former times, cashed drafts for strangers as high as they chose to present them, but in those days a "billed shirt" placed the wearer thereof under suspicion. We very often now "lend our money to strangers," but are growing cautious as we become more civilized, and educated people settle in our neighborhoods. In conclusion, I do not suppose a man accustomed to Western ways would be regarded as a safe person to transact business with in the East, but I venture the remark that he would make fewer blunders than would the tenderfoot if transplanted to land of buffalo-grass. Yours truly,

HAIGLER, Neb., April 23, 1887.

"8 STATES."

LETTER FILES.

Editor Rhodes' Journal of Banking:

SIR:—I notice a form of letter-case in your May number (page 462), which, in general arrangement, is like those in use in this bank for twelve years past, except that we think we have a better form of shelf, which, in our case, is made of sheet zinc turns up at the back and down at the front to give it proper stiffness. The front end is used for the name of the correspondent, whose letters are pigeon-holed on it, and the sides of the uprights are grooved at intervals of one inch, so that the zinc shelf can be set higher or lower, to accommodate the larger or smaller correspondence during the year from any given correspondent. At the end of each year our letters are taken out, boxed and labelled as you describe. I am awaiting with much interest the publication of that promised article on "Country Collections." I hope your writer has found the long-looked-for way to handle them. I confess, after years of experience, to being still unable to find it myself—that is, to the satisfaction of myself and our customers too.

J. P. MUMFORD, Cashier.

PHILADELPHIA, May 17, 1887.

SIGNATURES.

Editor Rhodes' Journal of Banking:

SIR:—In reading your valuable JOURNAL OF BANKING, I have noticed within the past few months several specimens of monstrosities of abnormal signatures of Cashiers and others—*rareæ aves sui generis*, and may they become ere long as rare as the dodo. I have no patience with such factitious signatures, intended not to be legible, but the

reverse; more suitable for Chinese tea-boxes than Cashier's checks—reminding one of the meanderings of a spider in pursuit of a fly, both of which have fallen into an ink-stand, and having got out continue the chase and flight on paper. If your illustrations in this line do not adorn a check, they will subserve to point a moral. Therefore, apropos of such, I give you the names—if you purpose continuing your collection—of two Cashiers, our correspondents, in two Southern cities—one in Kentucky, the other in Alabama; one the Cashier of a National Bank, the other of a State bank. They will doubtless furnish you specimens of — I can't say of their chirography or calligraphy, without I use the latter word in irony.

CLAYTON CANNON.

BALTIMORE, 13th May, 1887.

WHAT IS THE UNIT OF VALUE?

Editor Rhodes' Journal of Banking:

It is claimed by some that "our gold is above par, as well as our silver below it." Statute 3511 says, "The gold coins of the United States shall be a one dollar piece, which, at the standard weight (elsewhere defined nine-tenths pure), shall be the unit of value." As in arithmetic, we reason from abstract numbers to concrete things, so here we must regard the relation between abstract and concrete.

When the statute says the unit shall be a "dollar," that is money in the abstract; for a visible dollar it directs us to concrete things. As for brevity in saying "dollar" for unit of value, for exactness it says "dollar" shall be 23.22 grains of fine gold. This concrete, or visible dollar defines to our senses the abstract dollar which exists only in the mind.

When the statute has thus stated what is the test by which this concrete, or real, dollar shall be known it has fixed its standard; its standard is its par, as its par is its standard, and cannot go above its own standard, except by putting more than 23.22 grains of gold in 23.22 grains of gold. If the unit of value may have a material sign, or standard, made of 371¼ grains of fine silver, 60,000 grains of copper, or 25 pounds of lead, as the bi, tri quadrumetalists believe, these must always be exchangeable with 23.22 grains of fine gold, or else the term "dollar" and the thing it means will not correspond. When substituted in a proportion, in the foreign exchanges, they must severally fill the place of 23.22 grains of fine gold—that is, the pure gold in a dollar is to the pure gold in a sovereign as their denominations, or (about) 23.22:113:100:4.86. It is so evident that this cannot be done that bi-metalists want the statute to override a law of economics and say that 15¼ parts of silver shall be equal to one part of gold in the coinage, whether it is worth it in bullion or not. They concede the fundamental principle that any quantity of metal in the form of bullion must be of the same value as the same quantity of metal in the form of coin, but they think that the law can do it—that the law can make or destroy value. POSEY S. WILSON.

WASHINGTON, D. C., May 23, 1887.

"THE MEANING OF THE WORD BANK."

Editor of Rhodes' Journal of Banking:

SIR:—A correspondent in the *Journal* for May quotes from a dictionary just publishing (?) as well as from Webster and Worcester to prove that Bank originally meant a Bench.

Henry Dunning Macleod, of Trinity College, Cambridge, author of "The Theory and Practice of Banking," takes an opposite view and says: "It is popularly supposed that the word Bank comes from the Italian *Banco*, a bench, or table, nevertheless there can be no doubt but that this derivation is a pure delusion." He then proceeds to show that the Italian *banca* or *banco* is derived from the Gothic *Banck*, a heap or mound, and that the true original meaning of *Banco* is a *heap*, and that this word has metaphorically applied to a common fund, or joint stock, formed by the contributions of a multitude of persons.

The first bank, that of Venice, was nothing but a public debt managed by Commissioners, and these Commissioners were appointed to receive cash on deposit and became what we call a bank. This was certainly not a Bench but a heap of money, or a fund formed by many contributions.

Mr. Macleod gives many strong reasons for believing that the Italian *Banco* meant a heap and not a bench.

Yours truly,

SCRUTATOR.

MILWAUKEE, May 17, 1887.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

HON. JOHN J. KNOX UPON THE SURPLUS REVENUES.

[From interview in New York *Commercial Advertiser*.]

The only propositions I have seen in reference to the disbursement of the surplus without calling an extra session of Congress are: First, by the purchase of United States bonds; second, by placing the surplus money in the National banks which have been authorized to be depositories; and third, by paying the interest in advance upon the government bonds. If Government bonds were not at such a high premium the Treasury could easily relieve itself of its surplus by their purchase. If it should attempt to purchase any amount, say 5,000,000 of 4 or 4½ per cent. bonds, even in the most quiet manner, it would have the effect of increasing the premium to a rate that would make the purchase injudicious and subject to criticism. The advance in the rate would undoubtedly bring new bonds into the market from holders who desire to sell at the maximum price; but notwithstanding this fact, I consider the purchase of any considerable amount of United States bonds by the Government as impracticable.

The proposition to deposit the surplus with the banks is a good one, but the terms under which such deposits are now made by the Government are such that it is not probable that any great amount can be placed with them, even if inducements were offered, to a much larger number of banks to become depositories. United States 4 per cent. bonds worth 120 are now received by the Government at 90 as security for deposits, and 4½s worth 110 are received at only 85. The transaction is not very attractive or promising to the banks at the present price of bonds, and a possibility of the premium falling in the market. If the Government should increase the deposit to par upon both the 4 and 4½ per cent. bonds, as it is reported it is the purpose of Secretary Fairchild to do, the amount placed with them would be considerably increased, but perhaps not sufficiently for the present purpose. It seems to me that if the money market should become stringent, the best disposition to be made of the surplus would be to pay the interest in advance. The interest upon the fours, four-and-a-halves, and Pacifics is about \$45,000,000, and I think the Secretary would be justified under the circumstance in anticipating a whole year's interest. In order to avoid the criticism that he was favoring the bondholder, he might rebate 2 per cent. upon the interest; thus the holder of \$100,000 of 4 per cent. bonds would receive \$4,000 interest, less 2 per cent., or \$80; net amount, \$3,920. The National banks hold more than \$200,000,000 of U. S. bonds, and there is no doubt that they would accept the interest if the offer was made. The large holders of bonds can use their money certainly at 4 or 5 per cent., and all of these holders would be likely to accept the interest at once if it was offered. Money has frequently been loaned within the last two years by the banks upon the security of Governments at 2 per cent. and even at less than that; and a 2 per cent. rebate upon a large amount of bonds is reasonable, and it seems to me is much to be preferred to calling an extra session of Congress; for if such a session was called there would be no reasonable hope of action for some weeks after it should meet.

The probability is that if the Secretary should increase the ratio of deposit with the National banks and should announce at once that it would be the policy of the Government to pay the interest in advance for six months or a year, with or without rebate, if there was a necessity for disbursing a portion of the surplus, all fear of a stringency during the fall would disappear, and such an announcement could not but have a good effect upon business during the next few months. Indeed, the announcement of the policy of the Treasury Department might make further action unnecessary.

QUOTATIONS OF CANADA BANK STOCKS.

[The *Shareholder and Insurance Gazette*.]

The "American Banker," published in New York, professes to furnish its readers with regular weekly quotations for Canadian bank stocks giving the bid price in the

principal cities in Canada, but those quoted are altogether astray and have not varied for several weeks past. The prices noted in last week's issue are from 5 to 14 per cent. below the current rates on the date they bear! * * * It would be far better to drop quotations altogether instead of giving figures which are foreign to the market quotations.

[Readers of the JOURNAL need not be reminded that the "American Banker" is nothing more than "Thompson's Solvent Bank Reporter," under another name. The so-called "new management" is composed of Anthony Stumpf and C. D. Steurer; the latter learned the business from the notorious Lewis P. Haver, and was one of his principal witnesses when he (Haver) was tried for blackmail, malicious annoyance, etc.—Ed. JOURNAL.]

"THE GAMBLE IN AMERICANS."

[London Statist.]

It is said that Mr. Philip Armour, on his last visit to Europe, spent a few days at Monaco. Men who have been brought up on strong meat, like breaks in St. Paul or corners in Hannibal and St. Jo, are apt to look down on all European forms of gambling as very small pumpkins. In Capel court this great truth is also beginning to be realized. Neither roulette nor trente et quarante, to say nothing of minor hazards like poker or napoleon, are in it with a big deal in a lively American stock. But the funniest part of the American railway gamble is its growing respectability. It is not gamblers alone who carry on the game; had it to depend entirely on them it might soon be played out. There are few professionals in it compared with the multitude of amateurs, most of whom have the vaguest possible notion of the exercise they are engaged in. Many of them imagine that they are investing in what they call "rising securities." Others consider themselves long-headed people who see miles before them, and they lock away cheap Americans in their strong boxes to ripen into dividend payers. A less conceited class of operators buy Americans for a turn, and a rise of one or two points satisfies them. They generally get out best in the long run. In the past two years they have taken many good turns out of Yankees. The advance which has been going on more or less steadily all that time made it a safe game to buy for the rise. The jumps were so strong and the reactions so comparatively slight—except, of course, the heavy one of last December—that reasonably careful "bulls" seldom went wrong. Though Americans are just now not at the highest point they have touched during the boom, it is still true that holders, as a class, must stand to win largely on them. In other words, the large majority could still realize at a substantial profit.

So long as that can be said, so long it may be expected will Americans tend to rise. Because, it will be observed, nine-tenths of the buying has been speculative, stimulated by the rise itself. The public, having two years ago been induced to come in and take a hand at the game, have ever since been running up the market against themselves. They have made pots of money by passing American stocks from hand to hand at continually increasing figures. The ultimate effect is that shares which sold two years ago at 14 are now valued at 53, some which had fallen in the bad time below 50 are now over par, and others which were made a foot-ball of at 5 or 6 are now among our coming investments at 30 or 40. The process of hoisting these stocks out of the mud into the clouds has been very artistic, and, like all true art, very simple. Intrinsic merits have had little to do with it. Confessedly it has been a market operation, engineered by heroic financiers, and promoted by a series of sensational reconstructions, amalgamations and inside deals of various kinds. That the roads operated on are much more valuable to-day than they were at the beginning of the rise nobody outside of the reconstruction rings will very seriously maintain. That they are earning much more for their shareholders has yet to be proved. That these shareholders are getting much more out of them is but too easily disproved. Three-fourths of them were not paying dividends when the rise began; they are not dividend payers yet, and it is very problematic when they will reach that privileged condition. Englishmen are no longer tyros in the American market. They have learned a good many practical lessons since, in their youthful innocence, they welcomed Erie stock as a family security, and put away Atlantic and Great Western till the happy time when it should begin to pay 10 per cent. dividends. But there is one lesson they find it hard to master, and that is the violent vicissitudes which seem to be a law of nature in the American market. The sky-high boom and the disastrous break succeed each

other every few years as regularly as the sun spots do. Our diagrams show two historical examples of them, which should still be remembered in this country, for we had to bear the brunt, at least, of the reactions. Begin with Mr. Philip Armour's favorite St. Paul, and trace it up from its low-water mark in 1877, when it sold at 10 cents on the dollar to its flood tide in 1882, when it touched 141. In less than five years it had an appreciation of 1300 per cent., and buyers at 10 in 1877 might during the boom of 1882 have taken out fourteen times as much as they put in; but those who went in at 141 would very probably have come out well shorn in 1884, when St. Paul was hammered down by persistent bear attacks to under 60. The boom of 1885 found it there, and lifted it up again by degrees to par, from which it has since receded to about 90—these being, by the way, all New York prices. Take another too familiar example, Central Pacific stock. It made its *debut* in 1880 about 63, and in course of twelve months it was run up with delightful ease to 103. Then it turned tail and went down by leaps and bounds to 26. In the year 1885 it had to climb under difficulties, for its reputation and that of its guardian, Mr. C. P. Huntington, were at that time cruelly aspersed. Central Pacific had consequently not a fair chance; nevertheless it pulled itself up again last year to 50. Louisville and Nashville makes another bright exhibit of ups and downs. Starting from about 80 it mounted in 1881 to 110½ and then performed that brilliant strategical movement to the rear which landed it in 1885 at 22. Having saved itself by the skin of its teeth from a Receiver, it started on a second upward flight, which, within the past few weeks, has carried it over 70. Need we detail the no less romantic adventures of Denver & Rio Grande, which in the 1881 boom shot up from 60 to 113¼, and in the collapse which followed came to anchor at the safe level of 4¼? Since then we have seen them up again to very near 40. In this eventful decade Erie stock has touched every price from 4½ up to 53, back again to 10, and up again to 38. Wabash preferred have dropped in a straight line from 80 to 50, and taken a shoot up to 96½, from which giddy height they have plunged head foremost down to 6; next then twisted up to 42, knocked down again to 29, and kicked upstairs again to the present price, 37.

These have all, without exception, been gymnastic movements. Every successive rise was engineered in the market, and the fall was a piece of counter-engineering. The stock itself, on its merits or prospects, had the least possible to do with the operation. Louisvilles, Denvers, Eries, and the various other members of that happy family, have since 1885 been vigorously boomed to celebrate their narrow escape from bankruptcy. It looked at one time as if they all would have to pass under the caudine forks again, but they escaped. On that providential deliverance, supplemented by a moderate increase of earning power, they have had their market value doubled and trebled—all very well while the wind continues to sit in that quarter. When it shifts round to the "bear" side it will be as powerful to knock down as it has been to rush up.

PARIS BOURSE.

[*Financial Record.*]

For transactions in international securities, the Paris Stock Exchange is ahead of all others and has been so for a long time. But it is essentially a *close corporation* in the strictest sense, and is without a peer in that respect, for barely sixty men, known as *agents de change* (official stockbrokers), hold a monopoly of all stock exchange business in France, under and by virtue of a law that fixes their number inflexibly at sixty. To become one of this fortunate number, the position of a retiring *agent* has to be bought for about \$340,000, a further sum of \$60,000 has also to be paid as "caution money" with registration fees, etc., which, together, swell the total cost of a membership of this corporation to \$400,000—separate and aside from the not necessarily large capital requisite for the business transacted severally by these agents; not large, because clients or customers have to pay a day in advance of the date upon which all purchases may mature. However, before the succession to one of these sixty memberships goes into effect, the candidate must be approved by the managing committee of the Exchange and by whom his name is then submitted to the Government for final confirmation.

But, in the course of time, there has grown up another body of brokers doing business with the members of this monopoly but not directly upon the floor (*parquet*). These brokers form what is known as the *coulisse* (side scenes). The business of this *coulisse* has become very large; chiefly in speculative securities, including *rentes* and

such foreign bonds as Egyptian, Spanish and the like, while the arbitrage business is chiefly in the immediate hands of this class of brokers. Technically, the business is illegal, as those thus engaged have no legal way to form themselves into an association of their own. Meantime the favored few of the *parquet* have recently made a regulation virtually inhibiting its members from having any dealings with the members of the *coulisse* upon any other terms than with an ordinary client or customer. This has started the idea of greatly enlarging the membership of the Bourse with a far more moderate cost of admission; preliminary to which reorganization, however, the old members are to be fully indemnified for their vested property rights. We must add that the Paris Bourse virtually controls the market in Indian, Spanish, Portuguese, Egyptian, and some of the Turkish issues of stocks and bonds, while the Berlin Exchange has come to be the chief market place for Russian and Hungarian securities, as the London stock market is the European focus for American railway securities.

A Letter to Bankers.—The following is the substance of a letter recently sent to banks and bankers who are not present subscribers for the JOURNAL, who fortunately (for us) are not very numerous:

"Everywhere in the world, except in the United States, banks enjoy the privilege of issuing notes to circulate as money based solely on their credit. Here, State banks and private bankers are debarred from a similar privilege by the 10 per cent. tax imposed by law upon their issues, and the National banks issue such circulation only as they secure by a deposit of capital in the shape of United States bonds. In Canada and the other British colonies, in England, Scotland and Ireland, in France, Germany, Italy, Russia, Austria, and in Mexico and the South American Republics, the right of banks to issue circulation on their credit is recognized by law and enjoyed, and in consequence the dividends declared by banks in the United States are less than those declared by banks in all other portions of the civilized world. The poor privilege enjoyed by the National banks must terminate with the payment of the Government debt, and the issue of bank circulation upon any other principle is an important question. It is one of interest to National and State banks alike, as a substitute for the present National bank circulation means something in which all classes of banks, State, National and private, should participate.

The policy of the Government during the next six months is likely to affect the banks as much or more than any class in the community. The accumulation of surplus revenue may force or be taken as an excuse for a manipulation of the Government debt, which will give chances of profit or loss which bankers should be ready to profit by or avoid.

From many indications the Editor of RHODES' JOURNAL OF BANKING is of the opinion that some policy not yet announced, but rather carefully concealed, has already been determined on.

The JOURNAL treats of matters of practical interest to bankers, of Government policy present and future as it may affect the profits of banks, financial topics of current interest, banking law, and the banking news gleaned from every part of the country. A journal published each month should give the news and events of the month in concise and intelligible shape. Many questions pertaining to money and banking are discussed in financial circles, which are far from being of universal practical interest, or rather the manner in which they are presented does not let the practical side be shown. For instance, *Bi-Metallism* is a subject of much magnitude, intricacy and importance, and consequently of much interest to statesmen, philosophers, and problem solvers. It is particularly delicious to college professors who feel they have a mission to instruct the bankers of the country. They apparently fear that some one may doubt their scientific attainments, and therefore constantly display them. What a banker wants to know about bi-metallism is the effect of it upon his business, and how he may reap benefit from it or prevent injury. To accurately show the results the banker has use for, requires a scientific knowledge of the subject, which, however, it is not necessary to display on all occasions.

The JOURNAL is willing to sacrifice the appearance of wisdom for the substance, and while not prone to talk learnedly about Adam Smith's *Wealth of Nations* and other text-books, will undertake to apply the principles of that and other learned works to practical questions."

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3693—Sussex National Bank, Seaford, Delaware. Capital, \$50,000.
 3694—First National Bank, Palestine, Texas. Capital, \$50,000.
 3695—First National Bank, Meade Center, Kansas. Capital, \$50,000.
 3696—First National Bank, Canton, New York. Capital, \$65,000.
 3697—People's National Bank, New Brunswick, New Jersey. Capital, \$100,000.
 3698—Fort Dearborn National Bank, Chicago, Illinois. Capital, \$500,000.
 3699—First National Bank, Decatur, Alabama. Capital, \$100,000.
 3700—Western National Bank, New York, New York. Capital, \$3,500,000.
 3701—First National Bank, Natchez, Mississippi. Capital, \$100,000.
 3702—Elk National Bank, Fayetteville, Tennessee. Capital, \$50,000.
 3703—First National Bank, Coldwater, Kansas. Capital, \$52,000.
 3704—First National Bank, Merrill, Wisconsin. Capital, \$50,000.
 3705—Merchants' National Bank, Williamsport, Pennsylvania. Capital, \$100,000.
 3706—First National Bank, Kansas City, Kansas. Capital, \$100,000.
 3707—Equitable National Bank, Cincinnati, Ohio. Capital, \$360,000.
 3708—Third National Bank, Knoxville, Tennessee. Capital, \$250,000.
 3709—Broad Street National Bank, Trenton, New Jersey. Capital, \$100,000.
 3710—First National Bank, Ashland, Kansas. Capital, \$50,000.
 3711—Atlanta National Bank, Atlanta, Illinois. Capital, \$50,000.
 3712—First National Bank, Liberty, Missouri. Capital, \$50,000.
 3713—Merchants' National Bank, Harrisburg, Pennsylvania. Capital, \$100,000.
 3714—Merchants' National Bank, Devil's Lake, Dakota. Capital, \$50,000.

ALABAMA.

- BIRMINGHAM.**—Birmingham National Bank; Vice-President, B. C. Scott.
DECATUR.—Bank of Decatur; succeeded by First National Bank. Capital, \$100,000.
 President, Christopher C. Harris; Cashier, William W. Littlejohn.
SCOTTSBOROUGH.—B. C. Ross & Co. are in business here. Style, Jackson County Bank.
 Cashier, Robert C. Ross.
SHEFFIELD.—Bank of Sheffield has been opened recently. Capital, \$100,000. President,
 Alfred H. Moses; Cashier, Paul W. Smith.
TUSCALOOSA.—Merchants' National Bank; Vice-President, B. Freidman.

ARIZONA.

- TOMBSTONE.**—Bank of Tombstone is new bank here. Pres., Geo. Berrot; Cas., R. W. Wood.

ARKANSAS.

- BENTONVILLE.**—Benton County Bank; no Assistant Cashier in place of Jesse Motler.
EUREKA SPRINGS.—Citizens' Bank has been recently opened. President, J. F. Waddill;
 Vice-President, R. J. Gray; Cashier, J. T. Champlin.
LITTLE ROCK.—Arkansas Loan & Trust Co. has been recently opened. President,
 Logan H. Roots; Vice-President, P. K. Roots; Treasurer, Lucien W. Coy; Secretary,
 W. P. Davison.
VAN BUREN.—Crawford County Bank; President, Jesse Turner; Robt. S. Hynes,
 Cashier, in place of S. A. Pernot.

CALIFORNIA.

- CLOVERDALE.**—Cloverdale Banking & Commercial Banking Co.; S. G. Frost, Cashier,
 in place of Geo. W. Frost.
COLUMBIA.—Wells, Fargo & Co.; Agent, Thos. Conlin.
ESCONDIDO.—Bank of Escondido has been opened recently. Capital, \$20,000. President,
 W. W. Thomas; Vice-President, P. A. Graham; Cashier, J. H. Anderson.
FRESNO CITY.—Bank of Central California is new bank here. Capital, \$60,000. President,
 Louis Einstein; Vice-President, Wm. Helm; Cashier, L. Gundelinger.
LOS ANGELES.—University Bank; capital, \$100,000. President, R. M. Widney; Assistant
 Cashier, Geo. Sinsabaugh.
LUGONIA.—Bank of East San Bernardino Valley has recently been opened. President,
 F. P. Morrison; Cashier, A. L. Park.
ORLAND.—Bank of Orland has been opened. Capital, \$25,000. President, A. Beerman;
 Cashier, R. B. Murdock.
PETALUMA.—Bank of Sonoma County; H. B. Higbee, Asst. Cas., in place of T. V. Nelson.
REDLANDS.—Union Bank is reported here.
SAN FRANCISCO.—Bank of America has been recently organized. President, James
 Gamble; Cashier, Luman Wadham. — Hibernia Savings & Loan Society; Assistant
 Secretary, Robert Roy. — Pacific Bank; Assistant Cashier, Emil B. Hermann. —
 Sather Banking Co. has recently commenced business, succeeding Sather & Co.
 Capital, \$500,000. President, H. L. Dodge; Vice-President, J. L. N. Shephard;
 Manager, J. S. Hutchinson.
SANTA CRUZ.—City Bank is new bank here. Cashier, Geo. W. Frost.
SELMA.—Bank of Selma will shortly be opened here. Cashier, O. J. Woodward.

ST. HELENA.—Bank of St. Helena; F. W. Kroeber, Asst. Cashier, in place of Fred. S. Ewer.

COLORADO.

AKRON.—H. Chamberlin (Bank of Akron); succeeded by Sturdevant & Northcott. — Washington County Bank is style of new bank here. Capital, \$25,000. President, C. W. Smith; Cashier, S. S. Price, Jr.

COLORADO SPRINGS.—People's Bank; discontinued.

DENVER.—Union Bank of Denver; R. C. Lockwood, Assistant Cashier, in place of Chas. R. Pierce.

DURANGO.—Colorado State Bank; President, F. L. Kimball; Cashier, B. N. Freeman.

GOLDEN.—Jefferson County Bank; Wm. H. Whitehead, President, in place of John Nicholls; Lee Larison, Cashier, in place of A. C. Smith; no Assistant Cashier in place of C. W. Tuttle.

JULESBURG.—Citizens' Bank; L. E. Loveland, Cashier, in place of F. McWilliams; no Assistant Cashier in place of L. E. Loveland.

OTIS.—First Bank of Otis has been opened. Capital, \$10,000. President, J. W. Pruyn; Cashier, John Delholm.

PITKIN.—Pitkin Bank (E. G. Richmond); discontinued.

YUMA.—Reed Bros. & Co. are reported here.

CONNECTICUT.

NORWICH.—Thames Loan & Trust Co.; in liquidation.

WINSTED.—Winsted National Bank; in liquidation.

DAKOTA.

ALTOONA.—Bank of Altoona; Assistant Cashier, E. Wilson.

ARMOUR.—Citizens' Bank; now Citizens' State Bank. Assistant Cashier, F. H. Johnson.

ATHOL.—Stewart & Nanscawen (Bank of Athol); succeeded by S. Horton.

AURORA.—C. S. Ricker is reported here.

BOTTINEAU.—Bottineau County Bank has just opened for business. President, E. A.

Harmon; Cashier, M. S. Harmon.

CANTON.—Bank of Canton is reported here.

DAWSON.—Neill Brothers; succeeded by Dawson Banking Co. Owners and officers are as follows: J. Dawson Thomson, President; Thomas Neill, Vice-President; E. F. Heyd, Cashier. Capital, \$15,000.

DEVIL'S LAKE.—Merchants' National Bank has been authorized to commence business. Capital, \$50,000. President, F. R. Fulton; Cashier, E. A. Gowran. — Prescott & Burnett (North Shore Bank); H. L. Prescott, deceased.

ELKTON.—Citizens' Bank (Murphy Brothers); Pres., H. S. Murphy; Cashier, E. F. Onstine.

FARGO.—E. C. Eddy & Co. are in business here.

FLANDREAU.—Bank of Flandreau; sold to Moody County Bank.

GRAND FORKS.—Dakota Investment Co.; President, J. C. Moore.

GRAND RAPIDS.—Farmers' Bank; proprietors, Delsem & Franks.

LEAD CITY.—Lead City Bank; D. A. McPherson, President, in place of P. E. Sparks.

MANDAN.—First National Bank; H. Van Vleck, Jr., Cashier, will hereafter be H. Van Vleck; no Assistant Cashier in place of O. T. Roberts.

MAYVILLE.—First National Bank; Vice-President, J. P. Haber. — Bank of Mayville; succeeded by First National Bank.

MILLBANK.—Millbank Collection Co.; succeeded by S. C. Jones.

MITCHELL.—Security Bank; J. H. Green, Cashier, in place of John F. Kimball.

MOUND CITY.—Campbell County Bank; proprietors, Johnston & Ormiston.

OAKES.—Bank of Oakes; T. F. Marshall, Cashier, in place of C. A. Baker.

PAGE.—Bank of Page (Louis B. Hanna); Cashier, R. C. Hanna.

PARKER.—First Nat. Bank; Vice-President, J. M. Bailey, Jr.; Asst. Cashier, F. L. Clisby.

SALEM.—J. C. Headlee (Salem Bank); succeeded by W. M. Shephard.

SIOUX FALLS.—Minnehaha National Bank; S. L. Tate, Vice-President, in place of C. S. Palmer; C. E. Johnson, Cashier, in place of G. E. Lathrop; W. H. Sherman, Assistant Cashier, in place of W. B. Fuller.

STEELE.—Kidder County Bank; discontinued.

VILAS.—Vilas Banking Co. is reported here. Capital, \$10,000. President, W. W. Gorton; Cashier, H. Winden.

WHEELER.—First National Bank, of Chamberlain, has opened a branch here. Style, Security Bank. President, D. H. Henry; Cashier, S. M. Lindley.

WHITE LAKE.—Aurora County Bank; Frank R. Preston, President, in place of F. S. Rowley; John P. Vogel, Cashier, in place of Frank R. Preston; no Assistant Cashier in place of John P. Vogel.

WOONSOCKET.—American Bank & Trust Co.; succeeded by Citizens' Bank.

DELAWARE.

SEAFORD.—Sussex National Bank has been authorized to commence business. Capital, \$50,000. President, E. E. Jackson; Cashier, M. J. Morgan.

WILMINGTON.—Security Trust & Safe Deposit Co.; Benjamin Nields, President, in place of Samuel McClary, Jr., deceased; H. C. Robinson, Vice-President, in place of Benjamin Nields.

DISTRICT OF COLUMBIA.

WASHINGTON.—National Bank of Washington; Assistant Cashier, Chas. E. White.

FLORIDA.

BROOKSVILLE.—M. E. Bishop is in business here. Style, Bank of Brooksville.

ORLANDO.—First National Bank; Vice-President, E. P. Ayer; Nat. Poyntz, Cashier, in place of J. H. Vivion; Assistant Cashier, W. B. Newton.

SEVILLE.—Bank of Seville has been opened for business. Capital, \$10,000. Owners and officers: Wm. Kemble Leute, President; M. F. Robinson, Cashier.

TARPON SPRINGS.—Bank of Tarpon Springs has recently commenced business. Capital, \$15,000. President, A. P. K. Safford; Cashier, Leandro T. Safford.

GEORGIA.

ATLANTA.—Merchants' Bank; Sam'l Stocking, Assistant Cashier, in place of W. W. Clayton. — Chas. C. Nelson & Co. are in business here. Style, North Side Savings Bank. Capital, \$40,000.

COLUMBUS.—Chattahoochee National Bank; C. H. Epping, Cashier, in place of R. M. Mulford; no Assistant Cashier in place of C. H. Epping.

IDAHO.

CALDWELL.—Stock Growers' Bank is new bank here. Capital, \$50,000. President, H. Sebree; Vice-President, A. Eoff; Cashier, G. S. Scott.

ILLINOIS.

ATLANTA.—Atlanta National Bank has been authorized to commence business. Capital, \$50,000. President, Samuel H. Fields; Cashier, John P. Hieronymus.

AURORA.—Aurora National Bank; O. D. Powell, President, in place of Orrin D. Howell; Chas. C. Earle, Vice-President, in place of O. D. Powell.

BUSHNELL.—Heaton & Randall are in business here. Style, Citizens' Bank.

BYRON.—D. H. Campbell (Byron Bank) succeeded by J. C. Woodburn.

CHICAGO.—Fort Dearborn National Bank has been authorized to commence business. Capital, \$500,000. President, Homer N. Hibbard; Vice-President, E. E. Crepin; Cashier, S. Seymour Walton. — United States National Bank; Vice-President, Joseph R. Jackson; Assistant Cashier, Elmer Dwigins. — Farmers' Trust Co.; Treasurer, Gilbert B. Shaw; Secretary, Edwin L. Lobdell. — H. CLEVELAND.—Woodward Avenue Savings & Loan Co. has been recently opened. Capital, \$50,000. President, C. A. Grasselli; Treasurer, E. O. Everts.
COLLEGE CORNER.—Corner Bank has been opened here. President, John Howell; Cashier, Oliver M. Bake.
FINDLAY.—City Bank is new bank here. Capital, \$60,000. President, Peter Hoaler; Cashier, Wm. F. Hosler.
LEIPSIK.—A. Rosecrans (Bank of Leipzig); succeeded by W. W. Edwards & Co.
PAULDING.—Paulding Deposit Bank is new bank here. President, Chas. H. Allen; Cashier, Wm. H. Mohr.
TOLEDO.—Bank of J. B. Ketcham 2d; now Ketcham's Bank.

PENNSYLVANIA.

ALTOONA.—Fidelity Banking Co. has recently commenced business. Capital, \$25,000. President, C. Jaggard; Cashier, J. W. Finley.
BEDFORD.—Hartley & Bowers; succeeded by J. S. Hartley & Co.
BUTLER.—Butler Savings Bank; Wm. Campbell, President, in place of J. W. Irwin.
ELIZABETHTOWN.—Elizabethtown Exchange Bank has recently been opened. Capital, \$35,000. President, Jos. H. Rider; Vice-President, A. R. Forney; Cashier, Adam Beem.
HARRISBURG.—Merchants' National Bank has been authorized to commence business. Capital, \$100,000. President, Hamilton D. Hemler; Cashier, John R. Shoemaker. — Farmers' Bank; John Matter, President, in place of Daniel Eppley.
MCCONNELLSBURG.—Fulton County Bank has been recently started. Capital, \$5,000. President, B. M. Lodge; Cashier, David B. Nace.
NEWVILLE.—First National Bank; L. H. Randall, Vice-President, in place of J. B. Hursh.
PHILADELPHIA.—Market Street National Bank; Vice-President, Geo. D. McCreary. — Merchants' Exchange Bank; George N. Stubbs, Cashier, in place of Thos. R. Ash. — Girard Life Insurance Annuity & Trust Co.; Effingham B. Morris, President, in place of John B. Garrett, resigned. — Cassatt, Townsend & Co.; succeeded by Cassatt & Co. — C. T. Yerkes, Jr., & Co.; succeeded by John B. Bell & Co.
TITUSVILLE.—Roberts National Bank; in liquidation.

WILLIAMSPORT.—Merchants' National Bank has been authorized to commence business. Capital, \$100,000. President, J. Wood Mussina; Vice-President, J. R. Duble; Assistant Cashier, Ralsa C. C. Clark.

WILKES-BARRE.—First National Bank; no Vice-President in place of Reuben Downing; P. M. Carhart, Cas., in place of B. W. Marcy; no Asst. Cas. in place of P. M. Carhart.

SOUTH CAROLINA.

AIKEN.—Bank of Aiken has been opened for business. Capital, \$30,000. President, F. B. Henderson; Vice-President Jas. Powell; Cashier, W. M. Hutson.

DARLINGTON, C. H.—Bank of Darlington succeeds Darlington Nat'l B'k. Same officers.

TENNESSEE.

BOLIVAR.—Bank of Bolivar has been recently opened. President, A. T. McNeal; Cashier, W. C. Dorian.

DAYTON.—Dayton City Bank has been opened here. Capital, \$50,000. President, V. C. Allen; Cashier, D. C. McMillin.

FAYETTEVILLE.—Elk National Bank has been authorized to commence business. Capital, \$50,000. President, Robert D. Warren; Vice-President, Jno. H. Rees; Cashier, Wm. B. Donthart.

GREENEVILLE.—Greeneville Bank has been organized. Capital, \$30,000. President, Newton Hacker; Cashier, J. E. Hacker.

HUMBOLDT.—Farmers & Merchants' Bank has recently been opened. President, C. H. Farrell; Vice-President, M. T. Cox; Cashier, A. R. Dodson.

NASHVILLE.—Mechanics' Savings Bank & Trust Co.; President, J. B. Richardson. — Nashville Trust & Banking Co. has recently been opened. President, Allen P. Connell; Cashier, C. W. McLister.

SOUTH PITTSBURG.—First National Bank; Vice-President, G. C. Connor; Assistant Cashier, C. B. Duncan.

TEXAS.

BOWIE.—Bowie Bank; E. W. Russey will succeed Jno. T. Slaton, as Cashier, July 1st.

HALLETTSVILLE.—John Wood's Bank; discontinued.

HENRIETTA.—Citizens' Bank will open July 1st. President, C. W. Easley; Cashier, Jno. T. Slaton.

PALENTINE.—First National Bank has been authorized to commence business. Capital, \$50,000. President, George A. Wright; Cashier, Lucius Gooch.

RICHMOND.—T. R. Beard (Mrs. T. R. Beard); assigned.

SAN ANTONIO.—Maverick Bank (Sam Maverick); S. Wm. Menger, Cashier, in place of J. T. Hall, Acting Cashier.

TYLER.—First National Bank; Vice-President, H. G. Asken.

VERMONT.

BETHEL.—National White River Bank; D. C. Denison, President, in place of Nelson Gay, deceased.

FAIRHAVEN.—Allen National Bank; I. C. Allen, President, deceased.

ST. JOHNSBURY.—Citizens' Savings Bank & Trust Co. has been organized. Capital, \$25,000. President, J. G. Hooley; Vice-Pres., C. M. Chase; Treas., J. T. Ritchie.

VIRGINIA.

FRONT ROYAL.—Front Royal Nat'l B'k; D. C. Cone, Asst. Cas., in place of T. Wolfe.

HALIFAX, C. H.—Bank of Halifax has been opened here. Capital, \$10,000. President, R. H. Earley; Cashier, R. A. Eart.

NEWMARKET.—Kagey, Shirley & Co.; succeeded by Kagey & Rosenberger.

NORFOLK.—Norfolk Clearing-House Association; W. H. Taylor, President, in place of C. G. Ramsay; G. H. Newton, Manager, in place of H. N. Page.

WEST VIRGINIA.

WHEELING.—Dollar Savings Bank has been opened for business. Capital, \$50,000. President, Nathan B. Scott; Cashier, Peyton B. Dobbins.

WISCONSIN.

COLLINS.—L. W. Heindel is reported here.

FOND DU LAC.—Fond du Lac National Bank; Vice-President, Fred Rueping.

HARTFORD.—Bank of Hartford will soon be started here.

KAUKAUNA.—First Nat. Bank; Vice-President, M. A. Hunt; Cashier, H. Kuebmsted.

MAUSTON.—Juneau County Bank is new bank here. Capital, \$12,000. President, P. R. Briggs; Cashier, Geo. H. Winchell.

MANASHA.—First National Bank has been organized. Capital, \$30,000. Pres., R. C. Russell.

MERRILL.—First National Bank has been authorized to commence business. Capital, \$50,000. President, Leander Choate; Cashier, J. W. Ladd.

SOUTH KAUKAUNA.—Manufacturers' Bank (H. Frambach); succeeded by First National Bank of Kaukauna.

WASHBURN.—A. C. Probert is in business here. Style, Bank of Washburn. Capital, \$15,000.

WYOMING.

SUNDANCE.—Crook County Bank is new bank here. Pres., G. C. Hickok; Cas., W. M. Baird.

ONTARIO.

ALLISTON.—Bank of Hamilton; N. M. Livingstone, Agent, in place of A. M. Kirkland, deceased.

BRAMPTON.—Merchants' Bank of Canada; W. A. Bellhouse, Manager, in place of John C. More.

LONDON.—Molson's Bank; Joseph Jeffery, Manager, resigned.

QUEBEC.

FARNHAM.—Eastern Townships Bank; this bank discontinued June 1st.

MONTREAL.—Bank of Montreal; C. F. Smithers, President, deceased.

QUEBEC.—Merchants' Bank of Canada; J. C. More, Manager, in place of J. L. Gault.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, June 2, 1887.

THE RAILROADS of the country continue to prosper, notwithstanding the Interstate Commerce law. During the month of April, the first since the law went into operation, the earnings of 99 roads were about 24 millions of dollars, indicating an increase of 16.3 per cent. over and above those of the same roads during the corresponding month in 1886. The Interstate Commission has been holding sessions at various points in the South to take testimony in connection with the suspension of the short haul clause with reference to the Southern roads. There was found to be much diversity of opinion among the people examined, those enjoying water communications being in favor of the enforcement of Section 4, while those in the interior, who were dependent on the railroads, were in favor of the continued suspension. The river interests, of course, favored the stoppage of the long haul rates of the railroads with the hope that the effect would be to raise freights by water carriage. The roads are beginning to drop the harsh construction of the law, which they at first insisted on, and show a disposition to offer reduced rates under certain circumstances.

THE CLEARINGS of the banks for the week ending May 7th, in thirty-six cities, footed up \$1,122,680,045, and indicated an increase of 12.3 per cent. over the corresponding week in 1886. For the week ending May 14th the clearings were \$991,474,378, showing a falling off as compared with the previous week, but a gain of 23.9 per cent. as compared with the same week in 1886. The total for the week ending May 21st was \$1,101,618,902, which was 40.2 per cent. increase over the similar week in 1886.

There has been but little variation in the price of cotton. The receipts at the various ports since September, 1886, have been greater than for the same period in any previous year since 1883. The prospect for the new crop is good. In fact, the tendency so far seems to be toward lower rather than higher prices. The prices of bread stuffs have changed but little. Flour has been in better demand, but there has been an increased supply of wheat, and its price has been variable, although a heavy export demand toward the close of the month has rather raised the figures. The receipts at the lake ports since July, 1886, have been larger than for the previous year, although not so great as in 1885. The dry goods market has been firmer, with the exception of that for domestic woolen goods. In New England the woolen industry is not in a very satisfactory condition. Many of the mills have been running on short time, while others have stopped a portion of their machinery. Trade generally has been good. *Bradstreet's* gives reports from twenty cities, and they are generally favorable. There seems to be a marked tendency toward greater activity in business.

THE TREASURY surplus still continues to be a subject of some anxiety. So far the locking up of cash has been avoided by deposits with National bank depositories, and there might be some hope of this course affording a solution of the difficulty if it were not for the very high prices of the fours and four and a-halves, which are likely to be increased rather than diminished, not only by the prospect that the Government may be compelled to purchase them in the market, but also because of the necessity the banks are under of replacing the threes called for redemption on July 1. Assuming that only one-quarter of the \$16,991,900 threes held by the banks will be replaced, there will from this quarter be a demand for over four millions of fours or four and a-halves. It has been announced with some appearance of authority that the Treasury will not purchase bonds in the market. If this were known to be the settled and determined policy of the Government, it would have the effect of weakening the prices and counteracting the bank demand.

FOREIGN EXCHANGE has been dull through the month. The first week in May it was very weak, when there was pressure from bankers' bills drawn against bond negotiations, and at the same time the demand was light. This condition of things has continued, with slight variations caused by temporary increase in demand. The low rates for money ruling in the London market have restricted calls for remittances from that side. There has, however, been some scarcity at times of commercial and bankers' bills. The Bank of England lost specie during the first two weeks of the month, but gained during the last two weeks. The total loss for the month was £811,000. The percentage of reserve to liabilities on May 26th was 47.57 as against 48.28 at the beginning of the month. The Bank of France gained 15,225,000 francs in silver and 10,675,000 in gold during the same time. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.86½@4.87; sight, nominal, \$4.88@4.88½; 60 days, actual, \$4.85½@4.86; sight, actual, \$4.86½@4.87½; Cable transfers, \$4.87@4.87½; Prime commercial sterling, long, \$4.84½@4.85; Documentary sterling, 60 days, \$4.84@4.84½; Paris, bankers', 60 days, 5.20@5.19½; sight, 5.18½@5.17½; Paris, commercial, 60 days, 5.20½@5.20¼; sight, 5.20@5.19½; Antwerp, commercial, 60 days, 5.22½@5.21½; Swiss, bankers', 60 days, 5.20@5.19½; sight, 5.18½@5.17½; Reichsmarks (4), bankers', 60 days, 95½@95¾; sight, 95½@95¾; Reichsmarks (4), commercial, 60 days, 94½@95; sight, 95½@95¾; Guilders, bankers', 60 days, 40 3-16@40¼; sight, 40¾@40 7-16; Guilders, commercial, 60 days, 40@40 1-16; sight, 40 3-16@40¼; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26¼@26 13-16; sight, 27@27 1-16. Paris dispatches quote exchange on London 25f. 20c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on May 3d, the changes in the rates as they occurred during the month, and the highest and lowest during the months of April and May:

	BANKERS'		Cable		PARIS	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.
April.						
Highest.....	4.87	4.89	4.88	4.85½	5.19½	5.17¼
Lowest.....	4.85	4.87		4.83½	5.22¼	5.19¾
May 3.....	4.87	4.89	4.87¾	4.85½	5.19¾	5.17¾
" 9.....	4.86¼	4.88¼	4.87¾	4.84½	5.19½	5.17¼

Lowest.....	4.86¼	4.88	4.87¾	4.84½	5.19½	5.17½

COINS AND BULLION.—Bar silver is quoted in London at 43 11-16d. per ounce. At this quotation for silver the bullion value of the standard dollar is 74.06 cents. The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 99 @ \$ 1 00	Twenty marks.....	4 75 @ 4 80
New (412½ grains) dollars.....	99½ @ 1 00	Spanish doubloons.....	15 55 @ 15 70
American silver ½s & ¼s.....	99½ @ 1 00	Spanish 25 pesetas.....	4 75 @ 4 83
American dimes.....	99½ @ 1 00	Mexican doubloons.....	15 55 @ 15 65
Mexican dollars.....	75¼ @ 76¼	Mexican 20 pesos.....	19 50 @ 19 60
Peru soles & Chilian pesos..	72 @ 73½	Ten guilders.....	3 96 @ 4 00
English silver.....	4 80 @	Com'l silver bars, per oz...	95½ @
Five francs.....	93 @ 95	U. S. Assay silver bars ..	95½ @ 96¼
Victoria sovereigns.....	\$4 85 @ \$4 89	Fine gold bars par @ ¼ % premium on the	
Twenty francs.....	3 86 @ 3 90	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The open market rates for call loans on collaterals for the first week in May were from 3 to 6 per cent., for the

second week from 3 to 7, for the third from 3 to 6, and for the last from 3 to 7. The rate has once or twice been forced up to 8 per cent. The usual rate during the month to stockbrokers has been from $4\frac{1}{2}$ to 5. Prime commercial paper has been from 5 to $5\frac{1}{2}$ per cent., other grades ruling from 7 to 9 up. The reserves of the New York city banks diminished during the month from \$100,061,400 on April 30th, to \$98,644,800 on May 28th. The surplus reserve on April 30th was \$7,139,925, and on May 28th, \$5,779,600. On May 14th the surplus reserve reached its lowest point, viz.: \$4,161,450, and has since been increasing. To judge by the clearings, there has been great activity in business during the month in every part of the country. New York exchange was selling in Savannah at $\frac{1}{8}$ @ $\frac{1}{4}$ premium, in Charleston bringing par to $\frac{1}{8}$ premium, and selling 3-16 to $\frac{1}{4}$ premium. At New Orleans commercial exchange on New York was 75c. per \$1000 premium, bank \$1.50 per \$1,000 premium, St. Louis par, Chicago 25c. per \$1,000 discount.

NEW YORK BANKS.—Loans have increased during the month \$3,851,600, and deposits are about the same, having decreased about \$225,100. There seems as yet to be no decided current toward New York. The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1886 and 1885:

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
May 28 ...	\$364,463,500	\$73,755,600	\$24,889,200	\$371,480,800	\$8,286,000	\$5,779,600
May 21....	365,843,600	74,439,000	23,882,200	374,056,000	8,264,800	4,657,200

The public debt settlement of June 1st shows that during the month of May the public debt less cash in the Treasury has decreased \$8,888,997 as against a decrease of \$13,053,098 during April. The total decrease in the debt since June 30, 1886, has been \$92,854,921. The outstanding interest bearing debt on June 1st was \$1,086,315,812, on which there was accrued interest amounting to \$11,709,163. This statement includes \$64,623,512, Pacific Railroad bonds. The receipts of the Government for the month of May were \$33,834,282, of which \$16,545,683 were from customs. During May, 1886, the receipts were \$27,751,724. The expenditures for May, 1887, were \$22,409,843, showing a

surplus of over eleven millions for the month. The total cash in the Treasury available for the reduction of the debt was \$277,808,997, while that considered unavailable for the purpose was \$88,960,528. This includes fractional silver coin, minor coin certificates held as cash, etc., and in addition there was \$100,000,000 of gold held as reserve for redemption of United States notes, making the total cash in the Treasury \$466,269,526. The net cash balance available for calling interest bearing bonds, exclusive of the three already called, was \$23,951,692. The gold holdings of the Treasury have increased \$6,000,000 since May 1st. The demand for small notes continues large, and exceeds the supply. The following table shows the net gold and silver held by the United States Treasury on the 1st of June and on the 1st of April and May:

	June 1, 1887.	May 1, 1887.	April 1, 1887.
Gold coin and bullion.....	\$277,628,750	\$275,336,915	\$275,985,832
Gold certificates outstanding.....	90,960,977	94,434,485	94,046,015
Gold owned by Treasury.....	\$186,667,773	\$180,902,430	\$181,939,847
Silver dollars and bullion.....	\$212,300,918	\$209,960,748	\$206,452,230
Silver certificates outstanding.....	139,143,328	137,740,430	131,930,469
Silver owned by Treasury.....	\$73,157,590	\$72,220,318	\$74,521,741

The Treasury on June 1st thus held net gold amounting to \$186,667,773 and net silver \$73,157,590. The Bank of France held £47,687,000 in gold and £46,609,000 of silver on May 12th. The Imperial Bank of Germany on May 15th held coin and bullion to the extent of £39,813,000, and the Bank of England on May 18th held £21,995,260 in gold coin and bullion. The proportion of net gold to net silver in the United States Treasury continues to increase, owing to the demand for small silver certificates and the opportunity to issue them, as the National bank circulation is retired.

The National bank circulation outstanding has decreased \$2,640,144 during the month of May. During the previous April the decrease was \$2,118,175. The total decrease since June 1, 1886, has been \$29,409,069. The amount on deposit with the Treasurer to redeem, the notes of banks which have provided for the redemption of their circulation, is \$102,792,157. The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	June 1, 1887.	May 1, 1887.	Apr. 1, 1887.	Mar. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.....	\$3,145,000	\$3,245,000	\$3,241,000	\$3,241,000	\$3,680,000
4½ per cents.....	65,807,350	64,621,250	62,973,300	60,667,400	59,636,200
4 per cents.....	114,975,350	114,351,750	113,637,800	112,835,950	113,903,200
3 per cents.....	*17,011,400	20,223,550	27,085,900	36,894,800	52,218,950
Total.....	\$200,939,100	\$202,446,550	\$206,938,000	\$213,639,150	\$229,438,350
* Called.					

The table shows that the 4½'s have increased about \$1,200,000 during the month, and the 4's about \$600,000. In addition to the bonds to secure the circulation of National banks the Treasury held \$25,559,500 to secure deposits, as against \$24,435,500 last month. Of the \$25,559,500, \$125,000 were currency sixes, \$9,038,000 4½'s, \$14,683,500 4's, and \$1,713,000 3's.

The rate of interest realized to investors in 4 per cent. bonds of 1907, at a market price of 129.75, is computed by E. B. Elliott, Esq., Government Actuary, at 2.29 per cent., and the rate realized on 4½ per cent. bonds of 1891, at 110 is 2.03 per cent. The balance of trade has been against this country, but there have been no corresponding calls for gold, indicating that there have been foreign investments in American securities. This is sufficient to account for a marked activity and gradual advance in railroad and miscellaneous stocks during the month.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of May, the highest and lowest since January 1, 1887, and also during the year 1886:

	MAY, 1887.			SINCE JANUARY 1, 1887.			YEAR 1886.	
	High.	Low.	Closing.	Highest.	Lowest.		High.	Low.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

NEW YORK CITY NATIONAL BANKS.—The following is an abstract of the reports made to the Comptroller of the Currency, showing the condition of the National banks in the city of New York at the close of business on May 13, 1887, the number of banks being 46. The figures for March 1, 1886, are also given for comparison:

RESOURCES.

	May 13, 1887.		Mar. 1, 1886.
Loans and discounts.....	\$267,068,432		\$261,854,443
Overdrafts.....	37,082		48,484
United States bonds to secure circulation.....	9,751,000		10,525,000
United States bonds to secure deposits.....	2,140,000		920,000
United States bonds on hand.....	1,368,060		5,446,900
Other stocks, bonds and mortgages.....	17,907,230		15,746,961
Due from other national banks.....	25,573,968		17,861,869
Due from State banks and bankers.....	2,346,727		2,108,179
Real estate, furniture and fixtures.....	10,157,565		10,118,391
Current expenses and taxes paid.....	964,624		585,896
Premiums paid.....	1,425,950		507,248
Clearing-House loan certificates.....			505,000
Checks and other cash items.....	1,840,387		2,941,839
Exchanges for Clearing-House.....	55,991,869		68,723,558
Bills of other National banks.....	1,776,346		1,425,907
Fractional currency & trade dollars.....	47,940		246,718
Specie, viz:			
Gold coin.....	\$7,787,348	\$12,786,728

Due to State banks and bankers.....	36,943,856		32,832,325
Notes and bills rediscounted.....			
Total.....	\$481,638,809		\$501,285,337
Excess of reserve.....	8,313,752		20,304,999
Proportion to liabilities.....	27.74 %		31.28 %

BANKERS' OBITUARY RECORD.

Allen.—Ira C. Allen, President of the Allen National Bank, Fairhaven, Vt., died recently aged 71.

Bedell.—Jonathan Bedell, Vice-President of the State Bank of Warwick, Kansas, died of serous apoplexy on the 4th of May, aged 59 years, 6 months and 6 days.

Bigelow.—Abraham O. Bigelow, who within a few months resigned the Presidency of the Massachusetts National Bank of Boston on account of ill-health, died April 29th, aged 75 years.

Breed.—Henry A. Breed, a prominent business man of Lynn and formerly interested in the old Lynn Mechanics' Bank, died recently at the age of 90. He was the oldest Freemason in Lynn.

Carter.—Ezra Carter, of Portland, Me., died on May 11th, at the age of 88 years. He was, until the winter of 1886, a Director in the First National Bank of that place, and was formerly a Director of the Casco National Bank.

Church.—Frederick L. Church, Cashier of the Old Boston National Bank of Boston, died at Saratoga Springs, where he had gone for his health, on April 19th. His connection with the Old Boston Bank dates back thirty-six years.

Forst.—Daniel P. Forst, President of the Mechanics' National Bank of Trenton, N. J., died suddenly on May 9th.

Gay.—Nelson Gay, President of the National White River Bank of Bethel, Vt., was killed on May 7th by being thrown from a carriage at Bethel.

Greenebaum.—Henry G. Greenebaum, Cashier of the Livingston County National Bank, Pontiac, Ill., died on April 24th.

Guild.—James Guild, formerly a Director of the People's Bank in Roxbury, Mass., and President of the Roxbury Gas Company, died on May 3d, aged 75 years.

Hale.—Calvin Hale, who for twenty-five years was Cashier of the Dover National Bank, and Secretary and Treasurer of the Dover Five Cents Savings Bank of Dover, New Hampshire, and who retired from both positions one year ago, died at Dover on May 16th, aged 68 years.

Hoyt.—Oliver Hoyt, one of the oldest leather merchants of New York and a Director in the National Park Bank and in the Home Fire and Phoenix Insurance Company, died on May 11th from the effects of a fall from his carriage, aged 64 years.

Macy.—Wm. H. Macy, the oldest officer and President of the Seamen's Savings Bank and Vice-President of the Leather Manufacturers National Bank, who has for some time been ill with a derangement of the heart, died on May 18, 1887. He was 83 years old.

McKim.—Robert McKim died of Bright's disease on May 9th at Madison, Ind., aged 71. He was well known as President of the First National Bank of Madison, and was exceedingly liberal in his bequests to all public charities and institutions of learning.

Monahan.—Thomas Monahan, for twenty-eight years President of the Fulton National Bank of New York, died of pneumonia on the 13th of May. He was for ten years a member of the old Volunteer Fire Department.

Osgood.—John H. Osgood, President of the Chelsea Savings Bank, Chelsea, Mass., and a well-known auctioneer of dry-goods, died on May 7th of pneumonia. He was within a few days of 80 years of age.

Plumer.—Avery Plumer, Director and at one time President of the National Bank of the Republic, of Boston, died in that city on April 27th. He was 74 years of age.

Smithers.—C. F. Smithers, President of the Bank of Montreal, Canada, died on May 20th. He was 65 years of age.

Ward.—George Cabot Ward died in this city at the age of 63. He was a member of the firm of S. G. & G. C. Ward, who were for many years the agents of Baring Bros. of London, and was a Director of the National Bank of Commerce and Secretary of the Bank for Savings.

Westover.—Judge John Westover, President of the Bank of Richmondville, N. Y., died on May 19th.

WANTED—OFFICERS AND CLERKS, POSITIONS, BANKS FOR SALE, LOCATIONS WANTING BANKS, ETC.

[Notices under this head—space not over four lines—cost \$2 an insertion. If replies are to be sent to this office the advertiser must send us two stamped envelopes addressed to himself, in which the replies will be forwarded.]

WANTED.—Position in a bank by the advertiser, who has had over twelve years' experience as assistant in National and Savings banks. Best of references. Address: R. I., care of RHODES' JOURNAL OF BANKING, New York.

A YOUNG MAN now occupying position of Cashier of country bank in Illinois desires to make a change. Have occupied present position five years, and am well acquainted with details of the business. Would like a position in a National bank. Good references. Address: CASHIER, care of BRADFORD RHODES & Co., New York.

A YOUNG MAN now occupying the position of Teller in a small National bank desires a position where there is a chance for promotion. Address: MASS., care BRADFORD RHODES & Co., New York, N. Y.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

JULY, 1887.

No. 7.

THE failure of the Fidelity National Bank of Cincinnati, Ohio, in consequence of the speculation of its officers in wheat, is another illustration of the impossibility of securing absolute safety for depositors by any known system of banking. The National banking system has a most excellent record in this respect, and it is well when such a failure occurs as that of the Fidelity National, to bear in mind that during a period of nearly twenty-five years the National banks have held average aggregate deposits amounting to \$850,000,000. The claims proved against insolvent National banks up to November, 1886, were \$44,211,338, of which \$27,299,108 had up to that time been paid from the assets. Assuming that the remainder, \$16,912,230 were a total loss, the annual average loss during a period of twenty-four years, would foot up \$704,697, or less than one-tenth of one per cent. of the average aggregate deposits. Inasmuch as a large part of this assumed loss will be paid from assets not yet collected, the probability of loss to any National bank depositors is even less than stated. While this is the showing for the system as a system, yet it is very little comfort to the one who actually incurs the loss of his deposit to know that the average loss is small. Although a railroad may carry a million of passengers and kill or injure but one out of that number, the pangs of the actual sufferer are not in the least mitigated by the fact that 999,999 have reached their destination in safety. Likewise the depositors in the Fidelity National cannot have their sense of loss much mitigated by the fact that they are the exception and not the rule among depositors in National banks. They feel that they had a right to expect better of such an institution. To the victims it seems as if there should be some way of preventing such reckless use of the depositors' money as the failure of the Fidelity National has revealed. Within a very short time the Fidelity Bank has received the encomiums of the public because of the fancied success which had attended its business. Organized less than two years since, in March, 1886, with a capital of \$1,000,000, it had built up a line of deposits amounting to nearly five millions. This success has been due, so it was said before

the failure of the bank was announced, to its liberal dealings with its customers, charging nothing for collections and paying three and four per cent. interest on deposits. Since the failure some may not think these practices so wise as they seemed before. Of course the payment of excessive interest, and doing your customers' business for nothing, may not result in dishonesty, but if money cannot be made in legitimate ways there is great temptation to resort to methods which, to say the least, are unsafe, and if unsuccessful sure to result in actual dishonesty. No doubt there will be much criticism of the office of the Comptroller of the Currency, and the system of bank examinations. Perhaps the only dereliction of which the Comptroller can be accused is that the business methods of banks are not more closely scrutinized. A bank like the Fidelity National, which has grown like a mushroom, under what any banker would suspect to be a forcing process of some kind, should have attracted closer attention to its manner of business. In cases where there is reason to believe that unsound banking is going on, examinations should be made more frequently. Perhaps the beginning of the dangerous dealings in which the officers of this bank were engaged might have been discovered. The directors should be held to a strict accountability; but when the directors who ruin the bank and themselves form the majority of the board, what responsibility is there left for the creditors to avail themselves of? Any one can be ruined by a plot, and when the guards themselves are in the conspiracy, there is no further hope. What can the Comptroller and his bank examiner do when the directors and officers of a bank agree among themselves to use the money intrusted to them for their own purposes. Would it be possible for the Government to insure absolute safety to the individual depositor? The only way this could be done would be to indemnify, by the money raised by taxation from the whole people, the depositors who lost by failures. This would be taxation for the benefit of a class, and the depositors in National banks are no more entitled from any inherent virtue in themselves to Government protection than any other class of citizens. The Government enters into no engagement with them, and they do nothing for the Government. It has been said that the law authorizing bank examinations amounts to a Government guarantee of the safety of the bank; but even admitting this, it can be a guarantee to the extent only that such examinations are known, on the average, to be effective. That the system of examinations is effective is shown not in that it brings about absolute safety, but in that it has reduced losses to a minimum. But none the less those who are hurt will howl.

THE SINKING FUND is getting to be a great bore. It has become a sort of fetich, almost as ridiculous except to its worshippers as the defunct rag baby. The celebrated Dr. Price, the inventor of this alleged automatic machine for the payment of debts, believed that a

sinking fund once provided for by a fixed annual appropriation, would go on grinding out interest and compound interest, regardless of the revenues and expenditures of the debtor, until the debt was paid. Practically it has been demonstrated that sinking fund or no sinking fund, all that can possibly be applied to the payment of the principal of any debt is the surplus revenue which remains after the expenditures of the debtor are provided for. If the law decrees that a million dollars shall be appropriated each year for a sinking fund, the law can be executed if the surplus revenue equals \$1,000,000; but if not, then it is a dead letter to the extent of the shortage. If, on the other hand, the surplus revenues exceed \$1,000,000, there is no reason why the payment of the debt should be limited to just that amount, when the correctness of the general principle of the rapid payment of debt has been assented to. As a matter of fact, the payment of the debt of the United States has not proceeded in accordance with the terms of the sinking fund law, and if it be held that investors in United States bonds, in making their investments calculated the length of their holdings on the basis of an annual payment of 1 per cent. and compounded interest, then by paying the debt at a more rapid rate the United States has broken its contract, just as much as it would if it should insist on paying 4 per cent. bonds before they become due. The general sentiment has been in favor of a rapid reduction of the debt, and the revenues of the Government having been unexpectedly great this sentiment has been crystalized in practice. But nevertheless there was a period just after the war when there was no surplus revenue, and when the sinking fund provision was a dead letter. Its strict construction, therefore, has been violated in both ways, by deficient and by excessive payments, and it is too late to insist that any awful sanctity attaches to the sinking fund requirement, or that an abject observance of the mere letter of this law is an indication of superior financial righteousness.

The proper view to take is that, at the commencement, the 1 per cent. provision was a guarantee to creditors that the policy of the United States was to pay the principal of its debt to the extent of at least 1 per cent. annually on the original principal and compound interest calculated on the investments and reinvestments of this amount, if the surplus revenues permitted it. It did not bind the Government either to oppress its citizens by undue taxation to produce a surplus revenue, or to create new debts by borrowing money to pay the stipulated amounts on the old ones. Nor did it restrict the Government from paying more than the sum if the surplus revenue should warrant. This latter proposition is sustained by the support which the more rapid payment of the debt has actually received. There have been disputes as to the manner in which the requirements of the sinking fund law should be computed and determined. Until within a year or two the compound interest had been computed at

the higher rates of interest prevailing prior to the refunding of the debt, but by the most liberal computations the requirement was only \$44,532,702, and by changing the method to one more consonant with the present rates of interest, the Treasury Department has reduced the amount to about \$35,000,000. Payments above this are assumed to be discretionary with the Secretary of the Treasury. That the general sense of Congress is in favor of larger payments is indicated by the joint resolution passed by the House of Representatives on July 14, 1886, which provided that the excess of surplus over \$10,000,000 kept for the redemption of United States notes, should be used in payment of the bonds, payable at the option of the Government, at the rate of \$10,000,000 per month. It did not pass the Senate because it was thought best to leave the matter to the discretion of the Secretary of the Treasury; but all the same it voiced the general feeling in favor of the use of the surplus revenues and all of them, as they accrued, in the reduction of the debt.

Now that the threes are all called and the surplus continues to accumulate, it is a weak expedient to assume that the country is safe because the Secretary of the Treasury is not compelled by the sinking fund law to buy any bonds in the market. It must not be forgotten that the main object now is not to preserve this sacred old fetic, but to relieve the country from the pressure caused by locking up the surplus revenues. The sinking fund law is as inert in this emergency as the wooden image before a cigar shop would be to avert a visitation of the yellow fever, and any talk about its importance now is of the same character as a serious dissertation on the protecting principle of amulets and exorcisms.

As has been seen, Congress by the resolution of July 14, 1886, and its fate in the Senate, left the treatment of the surplus to the wise discretion of the Secretary of the Treasury, with the advice that it be used as rapidly as possible in the reduction of the debt. As indicated in the June number of the JOURNAL, law and precedent give the Secretary a wide scope, and if the anticipated pressure should come, only lack of sense or nerve can hinder that officer from relieving it. Juggling with the sinking fund law and its assumed requirements indicates a disposition to evade real responsibility.

THE REPORT OF THE DIRECTOR OF THE MINT estimates the output of gold from the mines of the United States during the fiscal year 1886 to have been \$35,000,000. This indicates an increase over any year since 1880, when the estimated output was \$36,000,000. The estimated output of silver for 1886, was \$51,000,000. The estimate for silver was made at the coining rate for the silver dollar, viz. at \$1.2929 per oz., gold value, whereas, the actual market rate was only about 88 cts. per ounce, and consequently in making any comparison between the output of gold and that of silver, the estimate is much too high.

A calculation based on the actual gold market value shows an output of silver for the year 1886 of about \$35,000,000 instead of \$51,000,000. The total gold and silver production of the world for the year 1885 is estimated to have been, gold \$105,862,857 and silver \$124,422,342. Again the value of the silver is estimated at \$1.2929 per ounce instead of at its market value. Making a new estimate on the latter basis and the value of the silver production of the world was \$82,954,077 only. In the sense of value, therefore, the production of silver is not increasing at a greater rate than the gold production, nor even in the sense of mere weight and bulk, is the production of silver increasing at a greater rate than that of gold. For instance, according to the directors of the mint, the world's output of gold for 1883 was 144,727 kilogrammes, and for 1884, 153,193 kilogrammes; an increase of 8,466 kilogrammes, or .058 per cent. of the production of 1883. The production in 1885 indicated an increase of .04 per cent. over that of 1884. The output of silver for 1883 was, 2,746,123 kilos. and that for 1884, 2,788,727 kilos. showing an increase of 42,604 kilos. or .015 per cent. on the production of 1883. The production of silver for 1885 shows an increase of .062 per cent. over that of 1884.

The world's production of silver in 1885 is estimated to be worth at the rate of \$1.2929 per oz., the coinage value of the silver dollar, \$124,422,342, and of this amount, \$51,600,00 was produced in the United States. Since the establishment of the United States Mint in 1791, the price of silver in the London market has never been so low. For the first forty years the price averaged 61½ pence per oz. sterling. During the next forty years it averaged 60½ pence. In 1859 the price rose to 62 1-16 pence, but in 1876 it had fallen to 46½ pence. The standard silver dollar is at par with the gold dollar when the London price of silver is 58 98-100 pence per oz.

While the production of silver in the United States during the year ending July 1, 1887 was \$51,000,000, the number of silver dollars coined was, \$31,423,386 upon which the Government gained a seignorage of \$7,095,361. The imports of gold during the year exceeded the exports by \$25,959 and the exports of silver exceeded the imports by \$9,333,891. The total product of silver in excess of the amount coined was about \$18,913,291, and of this it appears \$9,333,891 was exported, showing an increase of the uncoined silver in the country of about \$9,579,400, but probably as there has been a largely augmented consumption of silver in the arts, this increase has been utilized in this way.

THE SUPREME COURT of the State of Illinois has recently decided a suit brought by a depositor of a State bank against its directors individually, claiming that if deposits were received when the directors by exercising due diligence might have known that the bank was insolvent, they were liable for the deposits. The opinion of the court in brief was that the directors of a bank are trustees for the depositors

as well as for the stockholders, and are bound to the observance of ordinary care and diligence, and are liable for injuries to depositors and stockholders which result from the non-observance of such ordinary care and diligence. In the case of National banks it has been decided that no single stockholder or depositor can bring suit against the directors until after the receiver—who represents the bank, its depositors, stockholders and creditors—refuses to bring such suit, and then the depositor or stockholder must join with himself all the other stockholders and depositors. The courts, however, hold the directors of National banks responsible for neglect of duty. While this is so, yet it appears that the proof of such neglect must be very clear against any individual director before he can be held liable. An abstract of a recent decision by the United States Circuit Court for the Northern District of New York is given in the law department of the JOURNAL, in the suit of the receiver of the First National Bank of Buffalo against the directors of the association for losses alleged to have been caused by their neglect of duty. While this decision faintly adheres to the doctrine that directors may under some circumstances be the trustees of the creditors, depositors and stockholders of their institution, it refines the liability for simple neglect of duty to such a point that it virtually amounts to nothing. In this case it was proved that five directors were elected, accepted the position and qualified in a legal manner. One of them was made President, and within three months after the election had by his transactions rendered the bank insolvent. Of the other four one sold out his stock to this President within a week or two after his election and ceased to act as a director. One was sick; one went once and looked over the loans and discounts but noticed nothing wrong, and the others never went near the bank. The management was entirely left in the hands of one director, the President of the institution. It does not appear to be disputed that if the other directors had performed any duty as a board that loss might have been prevented.

The decision is that under the seventh sub-division of section 5,136 of the Revised Statutes, the business of a National bank may be done by the President, Cashier, or other officer, as well as by the board of directors. In other words, after the board of directors of a National bank has appointed the officers of the bank and defined their duties, their occupation is gone. The court even favors the view that they are not trustees of the funds and property of the bank. If they decide to take charge, and do take charge of them, they might be responsible, but if they depute this to the officers or President then they are not. But the court sees no liability created against them simply because they neglected to restrain another director from ruining the bank, especially when that director was an officer to whom the management was deputed. If the court sees any blame anywhere other than what might attach to the President individually, it would seem by implica-

tion that it was of the opinion that the clerks, tellers, etc., of the bank were the ones at fault, in that they did not refuse to discount the paper the President authorized to be discounted. If this decision is sustained by the United States Supreme Court, it will render the office of director of a National bank a sinecure, without labor or liability

HON. JOHN JAY KNOX has a letter in the *Financial Chronicle* of June 11th in which he further elaborates his plan for refunding the 4 per cent. bonds into bonds bearing $2\frac{1}{4}$ per cent. interest. The only objection urged against this plan has been that there was no sufficient inducement to the holders of the fours to exchange them for the new bonds. This objection is, however, an allegation rather than a statement susceptible of proof, but this newest form of Mr. Knox's proposition makes the exchange much more desirable to the banks and other holders than it was before. The new bonds are to be made payable either in seven installments of 100 millions—one on July 1st of each year, beginning with July 1, 1907, the last being payable July 1, 1913, leaving 37 millions to be paid the following July—or in eighty million installments, when the last 37 millions would be in the year 1917. This being arranged, the holders of fours first presenting their bonds for exchange would receive the two-and-a-halves having the longest time to run, and thus there would be a direct inducement held out to National banks, to Savings banks, to trustees and others seeking the longest solid investments, to hasten their acceptance of the new bonds in exchange for fours. The objection which obviously will be suggested is that the plan postpones the payment of the debt, the rapid liquidation of which many consider the crowning glory of our national history. As suggested in Mr. Knox's letter, none of these bonds can be paid until 1907, and it is very unlikely that the Treasury could hold in cash 737 millions of dollars to pay them all off at once on July 1st of that year. The contraction necessary to accumulate such a sum, in addition to the other funds usually kept, would never be submitted to by the public; and if it were, the subsequent inflation consequent on paying out such an enormous sum would inflict no less injury. The purchase of bonds, which has charms apparently for such a large number, is sustained on the ground that the premium paid would never equal the interest which the Government will have to annually pay if they remain until maturity. But it is not by any means certain what limit there is to the rise of that premium in case the Government should become an enforced purchaser. Some of those in favor of purchasing argue that the premium cannot exceed the interest for the time the bonds have to run, viz., 4 per cent. per year for 20 years, or \$80 on a \$100 four per cent. bond, and say that it would be better to pay even this than to lock up cash in the Treasury. But they calculate at simple interest and annual payments, when they should calculate at compound interest and quarterly payments; and if the argument

that the Government must pay out its money at any disadvantage rather than to keep it locked up is to prevail, the holder of a 4 per cent. bond might demand, and according to these people the Government ought to pay, \$221 for it, as this is what it will amount to at compound interest in 20 years. It is not fair that the transaction should be put in such shape that all the disadvantage will be on the side of the Government. By Mr. Knox's plan the difficulty under which the Government labors is reduced to a minimum. Theoretically something may be lost by extending the payment of the new two-and-a-halves, but this loss is more than made up by a gain in the exchange, and the purchase of a portion of the interest on the fours at its present value computed at $2\frac{1}{4}$ or 3 per cent. This is a positive profit realized at once, while the loss on lengthening the time of maturity of the $2\frac{1}{4}$ bonds only occurs in case the assumption be correct that the Government will be prepared to pay all the fours in cash on July 1, 1907, which is hardly possible.

IN OUR NEWS DEPARTMENT will be found a paragraph stating the withdrawal by the United States District Attorney of the criminal suit against Richard J. Lane, the President of the Abington National Bank, of Abington, Mass., who was indicted in the fall of 1886 for embezzlement. The prosecuting attorney may in this case be warranted in his action; very often, however, the settlement with creditors in civil suits for amounts lost by criminal action, and the simultaneous withdrawal of criminal proceedings, are to be viewed by the general public with suspicion. It is a very bad state of things when creditors can force settlements with defaulters by intimations that they can influence the pressure or withdrawal of a criminal prosecution. The feelings of friends and relatives of the offending party are worked on, and the money is forced from them by a species of blackmail which is derogatory to the judicial machinery of the Government. Moreover, to permit criminals to escape through the sacrifices of their friends has a tendency to remove the check upon dishonesty which certainty of punishment imposes. It is the law of the land which is to be vindicated by the prosecution and punishment, and because the few people who have been the immediate losers by the crime are willing to be bribed into a merciful view of the case, is no reason why the interests of millions of citizens, which can only be protected by rigid enforcement of penalty, should be jeopardized.

The view taken by a creditor of an institution which has become insolvent through an embezzlement is necessarily very narrow. He is angry at the embezzler, not because he has violated law, but because the creditor's money has disappeared. Return the money, or even part of it, and all the rage against the defaulter vanishes. Other men usually sympathize in this view, and say what is the use of prosecution when the money is paid back. That money is the essence of the matter is true, but not only the money that was stolen is concerned,

all the money deposited in the hands of banks or trustees is just as much involved; for if it were well known that a defaulter may escape punishment by settling with and satisfying those who have lost by him, many others in positions of trust would be exposed to greater temptation than they were before. Nothing shows greater moral obtuseness than the course frequently taken by creditors of insolvent banks. When the loss is incurred they urge criminal proceedings at once, with the utmost malignity of spirit. The criminal being captured and proceedings begun, there often commences a system of dickering, of working on the feelings of friends and relatives, on the part of the creditor to recover as much as possible, and on the part of the criminal and his friends to pay as little as possible. Of course, a criminal dependent on friends could not legally be compelled to pay anything. Judgment might of course be obtained, but it would produce nothing. What friends pay, therefore, is not really in satisfaction of the judgment, but merely a gratuity given on the ground that the recipients can in some way influence the authorities to stay criminal proceedings. This influence, if exercised, is social and political, and the public officer yielding to it generally vails the withdrawal of the prosecution with ingeniously constructed excuses and palliations of the crime which, if presented in court, would be of no weight whatever. They generally go down with the public.

ON ANOTHER PAGE we give a table made up from figures furnished by the Comptroller of the Currency, from which the effect up to May 13, 1887, of the change of Chicago and St. Louis to central reserve cities, and of Kansas City and St. Joseph to reserve cities of the second class, upon the distribution of reserves held by the National banks with their reserve agents. One object of the new law, it has been announced, was to distribute these reserves more widely, or, in other words, counteract an alleged dangerous tendency of funds under the previous law to accumulate in New York city. An examination of the table will, we think, show that the only change effected by the law has been to cause the National banks of Chicago and St. Louis to keep a slightly increased home reserve. In the first place, the amount of National bank deposits held by the National banks of New York city has not been diminished. On October, 1885, it was over 105 millions; on June 3, 1886, 94 millions; and on October, 1886, 103 millions; but on May 13, 1887, after the new law went into operation, the deposit had increased to 110 millions, or 16 millions in excess of that held at the corresponding date in 1886. In Chicago, although no amounts are on May 13 reported under the head of due from reserve agents, there is reported as due from other National banks \$10,568,000. On June 3, 1886, the Chicago banks then held due from National bank, including reserve agents, only \$10,157,000. So that under either law Chicago keeps the same amount of her funds with her correspondents. Not

being able to count any of this as reserve as formerly, the home reserve of the banks has necessarily increased from about \$16,801,000 to \$20,656,000. The individual deposits have increased about 6 millions, and the National bank deposits about five. It is very doubtful whether this increase is to be ascribed to the effect of the new law, inasmuch as there is a corresponding increase in State bank deposits, which are in no way affected by the law. It looks as if there would have been an equal gain even if the conditions in regard to reserves had not been changed. Kansas City as a banking centre is evidently outstripping St. Louis, but what profit St. Joseph can have from the change is not indicated by the May 13th report. Business appears to have increased with the banks in all the reserve cities, and as a rule they all hold larger amounts due from National banks than at the corresponding period in 1886.

CONTRACTION OF THE CURRENCY.—The contraction of the currency of the country in circulation outside of the Treasury for the month of May amounted to \$4,471,300. Gold coin increased from May 1st to June 1st by \$2,552,646. Silver dollars decreased \$363,745. Subsidiary silver increased \$43,326. Gold certificates decreased \$3,473,508. Silver certificates increased \$1,402,898. United States notes decreased \$1,541,902, and National bank notes decreased \$3,091,015. The resultant of these changes was as stated above. In the Treasury the gold coin increased \$988,650 during the month, standard silver dollars increased \$3,263,745, subsidiary silver \$173,667, gold certificates \$3,196,318, silver certificates \$281,464, United States notes \$1,541,902, National bank notes \$446,591—a total increase in all forms of currency of \$9,892,337. The gold bullion fund increased by \$1,303,184, and silver bullion, counting as bullion trade dollars redeemed, decreased \$264,732. It is plain that most of the contraction is due to the locking up of funds in the Treasury. The effect of the latter operation is counteracted to a considerable extent by the importation of gold into the country and its production.

FROM AN ELABORATELY prepared article in the *Financial Chronicle* it appears that the prospect is good for an unusually large crop of cotton. The last markedly good year was 1882. Since then, considering the wider area of land cultivated, there have been no crops that will rank as good, and those of 1883 and 1884 were poor. The crops of 1885 and 1886 are catalogued as fair rather than good or poor, distinguished from the poor crops of 1883 and 1884, because the yield was 800 or 900 thousand bales larger than in those years, but from good crops by the fact that the acreage was intended for a larger yield. If the crops of 1885 and 1886 had shown a yield per acre equal to that of 1882, there would have been an increased production of over a million bales. The prospect of great production tends, of course, to depress prices, but there may, before the new crop is available, be an advance in the manufacturing demand which will tend to restore them.

TREASURY STATEMENTS.

Complaints are often made in regard to the monthly statement of the resources and liabilities of the Treasury of the United States which is issued each month by the United States Treasurer, and widely published. It is said that these statements do not show the assets and liabilities so that people not accustomed to analyze financial statements can understand the moneyed operations of the Government. Of course it is very desirable that if possible the average citizen should be able to understand at a glance the general state of the Treasury, but matters that are naturally of a complicated nature cannot be understood without some study, and when those who are unwilling to exercise their minds even a little, make complaints that they cannot comprehend, they are not very much to be pitied. Still on the other hand if it were possible to make the Treasury statements intelligible even to the dull, stupid and lazy, it would perhaps be an advantage. The Treasury deals not only with the receipts and expenditures of the Government, but acts also as a trustee for many important interests and as a banker for many more. Some of these interests are public or governmental and others are private and individual. The operations of the Treasury can therefore be separated into two main divisions. One concerning the receipts and expenditures of the Government and the other covering all the cases where the Treasury acts as trustee or banker, for Government officers, or for private corporations or individuals. For the Government proper it receives the revenues and expends them in carrying out the laws, in paying the interest and principal of the debt, etc. As a trustee it redeems the notes of National banks and pays the interest on the bonds of the District of Columbia. As a banker it opens accounts with the Post-office Department, with United States Disbursing officers, with the National banks, and lastly in the matter of gold, silver and legal-tender certificates, with the public.

The Treasurer's statement might perhaps be made more clear for some purposes if it was arranged with reference to the foregoing division. At least it could be more readily and intelligently condensed when it was advisable to show merely the salient points. Upon this plan a concise summary of the statement on June 1st might be made as follows :

Aggregate funds exclusive of fractional silver and minor coin and cash vouchers		\$550,486,072.07
Immediate liabilities of Government for matured or called debt, interest, outstanding checks, etc.....	\$43,881,786.82	
Less cash vouchers, interest and coupons paid.....	46,797.58—	43,834,989.29
		\$506,651,102.78
Liability as trustee or banker for District of Columbia, banks, and public	424,063,439.58	
Deduct cash vouchers held	41,364,029.19—	382,699,410.34
Net balance including \$100,000,000 for redemption of legal-tender notes,		\$123,951,692.44

The subsidiary silver and minor coin are omitted from the aggregate cash because they are not available for payments in large amounts, and moreover, these items are not money in the strictest sense, being merely tokens of value

issued and redeemable by the Government. If it were desirable to bring them into the statement the best plan would be to treat them precisely like the gold or silver certificates, treating the total amount coined as a liability of the Government, which may at any time be presented for redemption and the amount on hand as a cash voucher.

The total cash on June 1st amounted to \$581,804,691.07. Of this sum \$27,208,814.28 consisted of subsidiary silver and minor coin, and \$3,610,804.72 of what may be styled cash vouchers, being items which the Treasury held as evidence of payment, made up of \$2,064.40, fractional currency redeemed; \$46,797.58, interest checks and coupons paid; \$3,552,068.74, National bank notes redeemed, and \$9,374.05 interest paid on bonds of the District of Columbia. These items being taken out, there is left in actual cash \$550,486,072.07.

Assuming the Pacific Railroad bonds to be debentures of the United States, the immediate liabilities of the Treasury on account of indebtedness properly belonging to the Government, were \$43,881,766.82. From this may be deducted \$46,797.55, vouchers in hand for interest and coupons paid leaving a net liability of \$43,834,969.29. This includes all interest due and accrued, and all principal whether actually due or merely called for payment, and also all Treasury checks and drafts issued but unpaid. Deducting this item leaves \$506,651,102.78. Next come the liabilities of the Treasury as trustee or banker amounting to \$424,068.439.53, made up, (1) of the fund for the redemption of notes of National banks, failed, in liquidation or reducing circulation, \$101,769,625.10, (2) five per cent. redemption fund for the redemption of notes of going banks, \$3,209,082.04, (3) Post-office Department account \$4,889,551.86, (4) Disbursing officers balances, \$31,094,358.46, (5) currency and minor coins redemption account, \$1,980, (6) fractional silver coin redemption account \$4,900, (7) redemption and exchange account, \$421,789.28, (8) account of District of Columbia, \$56,814.66, and (9) fund held for redemption of gold, silver and legal-tender note certificates, \$276,894,827. From the gross sum of these items must however be deducted a number of vouchers held for payments made from the several accounts which have already been taken out of the assets and which are, (1) fractional currency redeemed, \$2,064.40, (2) National bank notes redeemed, \$3,552,068.74, (3) interest on District Columbia bonds paid, \$9,374, and (4) gold, silver and legal-tender note, certificates of deposit redeemed, \$37,800,522, making \$41,364,029.19 in all. The net liabilities of the Treasury as trustee and banker are thus brought down to \$382,699,410.84, which deducted from the remaining cash, (\$506,651,102.78) leaves a net balance of \$123,951,692.44, which includes the \$100,000,000 held as reserve on legal-tender notes.

As this method of statement deals with the cash as an aggregate without separating it into gold, silver and paper, it will be necessary, in order to arrive at the net gold and silver held by the Treasury, to have in addition the balances as now given in the Treasury statement, which on June 1st were net gold, \$186,667,773.47 and net silver, \$73,157,590. That is, the Government after closing its gold and silver certificate accounts with the public would have these amounts of gold and silver to meet its own demand liabilities and to execute its other trusts.

WHEAT MARKETS OF THE WORLD.

Wheat is the king of the cereals and supplies the staple food of the largest number of civilized men. Other grain, oats, corn or more properly maize, are eaten to some extent by human beings, but the greater portion of the supply goes to sustain the existence of domestic animals, and through them is transmuted into other forms useful to human beings. Rice is very largely consumed by the half civilized portions of mankind. Barley and rye are generally utilized in the potable form of beer and whiskey. Stress of circumstances has often compelled men in all parts of the world to live upon other grain than wheat. The oatmeal of Scotland, the black rye bread of Germany and the corn bread or hoe cake of the United States have all an honorable history, but it was necessity and not preference which led to their use. Whenever wheat can be obtained the use of other grain for human consumption is soon discontinued. Wheat was the usual grain supplied to the Roman legions, and one form of punishment for lack or infringement of discipline was to give the soldiers barley instead of wheat. A short course of this food for horses usually brought the refractory ones to repentance. Egypt in ancient times was the granary of the world, and the first corner in wheat of which we have any record was engineered by Pharaoh with the assistance of Joseph, and the banks of the Nile. The early civilization of that country as well as of Mesopotamia was consequent on the ease with which the rich alluvial bottoms of the Nile and of the Tigris and Euphrates could be made to produce wheat. Agriculture made progress and other countries began to raise sufficient of this grain to supply their local wants, but that they were thus successful in competing even to this extent with Egypt was due to the constant warfare between the petty States, which had the effect of preventing commerce and was virtually a protection to the home grower. When commerce became safe the competition of countries favorably situated for raising wheat drove the agricultural population of other countries into other pursuits, and consumers became more and more dependent on imported supplies. When the Roman power was confined to Italy, and the interests of the Italian farmers were protected by an almost constant state of war from the enterprise of foreign merchants, all the grain for home consumption was raised in Italy. But as the whole world became a dependency of Rome and trade free, Egypt and other favored localities for wheat production soon successfully outstripped all competitors. The city of Rome became dependent for its supplies on the grain ships from Alexandria, and on any failure in their arrival a famine was imminent. The Roman Emperors took the greatest precautions to obtain the necessary supply, and Claudius offered to insure without charge all ships and cargoes making the voyage in the winter season. In modern times the history of the production of wheat in England has been an analogous example of the blighting effect of free competition with the regions of the world more fitted for its growth. Of course, the governing power of Great Britain has been influenced by the fact that gains in other directions have been made commensurate with the losses in this, but the result has been that more than any

country in the world, unless it is Belgium and the Netherlands, she is dependent on foreign countries including her colonies for her supplies of wheat. Nor would the grain raised in her colonies alone supply the demand.

The United States is at the present time the greatest wheat producing country in the world. The Department of Agriculture estimates the wheat produced in 1886 to have been 2,031,322,285 bushels. Of this the United States produced 457,218,000 bushels, or more than one-fifth; France, 299,107,620 bushels, or over one-seventh; India, nearly as much, 258,317,632 bushels; Russia, 213,907,084 bushels; Austria-Hungary, 143,001,488 bushels; Spain, 131,660,000 bushels; Italy, 129,412,133 bushels; Germany, 82,000,000; Great Britain and Ireland, 65,285,353; Canada, 37,219,234; Australasia, 22,258,146; Egypt, 16,457,500, and Algeria, 32,915,000. It will be seen that Great Britain and her colonies, including Egypt, produce 399,337,865 bushels. In order to arrive at the movement of wheat, and to discover just what relation each wheat producing country bears to every other, it is necessary to know in addition to the production, the supply that it is customary to keep at home. We see that France, for example, is the second largest wheat producer in the world, but on the other hand she is the very largest wheat consumer. Enormous as is her production, an examination of the figures for the years from 1872 to 1883 shows that the average annual supply required for home consumption has been larger, viz.: about 340 millions. So that France has to calculate on obtaining from abroad about 40 millions of bushels each year. In the same way, although Italy and Germany produce large amounts they have to purchase from other nations an important part of their home supply; Italy requiring 8 millions, and Germany about 13 millions of bushels of wheat more than they respectively produce. Spain and Portugal have none to export and usually require a little from their neighbors. Austria-Hungary, Denmark, Roumania, Russia, Australasia, India and the United States are the only countries that can be depended upon for a steady surplus for other countries, and of these the only ones that have a sufficient surplus to at all come in competition with the United States are Russia and India. The former has an annual average surplus of 78 millions of bushels and exported about 21,000,000 bushels in 1886, and the total exports of wheat from the latter during the same year were 43,272,000 bushels, of which 20,296,000 bushels were shipped to Great Britain, and 22,976,000 to other places in Europe. During the same year, 57,759,209 bushels of wheat and 8,179,241 barrels of flour were exported from the United States. Of this, 37,678,739 bushels of wheat and 4,914,782 barrels of flour were sent to Great Britain. The largest export in any one year from this country was in 1880, when we sent abroad 153,252,795 bushels of wheat and 6,011,419 barrels of flour.

The chief countries which furnish the markets for the surplus wheat of the world are Great Britain requiring about 143 millions of bushels, Belgium 24 millions, France 40 millions, Germany 25 millions, Italy 17 millions, the Netherlands 7 millions, Sweden and Norway about 2 millions of bushels. These figures, of course, only give a general idea. It must be remembered that crops vary from year to year. Countries that usually require more than they produce, in some years through an excessive home crop do not require to import any, and those that usually have an excessive production are in some poor years obliged to buy of others. But as a rule the figures given show the

usual course of the markets. As has been seen the only important competitors of this country in the wheat trade are India and Russia. The latter has always been a rival, but the development of wheat growing in India is recent. And perhaps to some extent the grain dealers and speculators in this country have themselves to blame for this new and dangerous competitor. Were there no surplus wheat in India, the United States would usually have a market at almost her own price for all of her surplus crop. The surplus crop is the amount that could be exported after satisfying the usual home demand. Thus for the year 1886, the total production was estimated to be 457,218,000. Of this on March 1, 1887, 122,000,000 bushels was in the hands of farmers, and 57,000,000 bushels in commercial hands, making a total of 179,000,000 bushels left in the country, and 5,620,488 were in addition exported from January 1st to March 1st. It is, of course, difficult to arrive at what portion of any given average crop the United States might export under favorable conditions, but probably it would be in the neighborhood of 150 millions of bushels. The favorable conditions are a foreign demand and the price at which it is held in this country. The average price in the United States during the years from 1875 to 1886 inclusive has been as follows: *

1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.
\$1.00	1.08	1.08	77.7	1.10	.95	1.19	.88	.91	.64	.77	.68

The average export price has been:

\$1.12	1.24	1.17	1.84	1.07	1.24	1.11	1.19	1.13	1.07	.86	.87
--------	------	------	------	------	------	------	------	------	------	-----	-----

and this indicates that in order to cause a free exportation there must be a difference of nearly 25 cents per bushel between the price here and in the foreign market. It is claimed that the speculation in wheat in the United States carried on in the grain markets has, by the use of large amounts of capital, kept the home price generally too near the rate offered abroad, and prevented the exportation of much wheat that was not really needed at home. While the United States had practically a monopoly of the trade in wheat this was for the immediate advantage of the country. Great Britain, the greatest purchaser of the surplus, became tired of paying the price the manipulators of the market might choose to fix and turned her attention to raising up a rival to destroy the monopoly possessed by the United States, and within the last five or six years India has become almost as great an exporter of wheat as the United States. On the other hand, with a smaller export demand the consumption in various forms—especially in the manufacture of whiskey—has increased within the country. The effect produced by the rivalry of India has been supplemented by the action within a year or two of most of the foreign countries, who depend on foreign grain to make up comparatively small deficiencies in their own production, in increasing duties on imported grain. A country like France, for instance, raising within forty million bushels of the amount required by her people, thinks it better to increase the duties on importations in order to keep up the home price and encourage her own agriculturists. Of course, this a tax on the rest of her people, but, as the agriculturists are similarly taxed to protect French manufacturers, neither class can very well complain, and the general prosperity of the nation is supposed to be enhanced. France exacts an import duty of 26 cents per bushel on all wheat sent to her from abroad. Her deficiency, as has

* From Bureau of Agriculture.

been shown, is forty millions of bushels, and of this Algeria producing 82 millions bushels annually can make up a large portion, so that the amount for which she is obliged to seek outside of her own production and that of her colonies is small. Germany takes foreign wheat 19½ cts.; Spain, 30½ cts.; Portugal, 29½ cts.; Italy, 15¾ cts.; Greece, 6¼ cts.; Austria-Hungary, 19½ cts.; Turkey, 7½ cts.; Switzerland, 8¼ cts.; Canada, 15 cts.; Mexico, 1.02 cts.; Cuba, 81 cts.; Hayti, 20 cts.; China, 5½ cts. per bushel. Russia, Great Britain, Belgium, Holland, Denmark and Sweden admit wheat free. The United States and Russia are alike, in that they have no fear of any one underselling them in their own markets.

The manipulation of the wheat markets of the United States has become a science. There is so much capital that can be used to store and hold wheat that the price can be forced up or down just as is required by the views of the speculators. If the farmers who grow the wheat could hold and sell when they chose, they might perhaps be sure of a reasonable price from this state of things, but as a class farmers are compelled to realize immediately on their products, and the price is generally forced down at the time when the crops are ready for market, so as to get them into the hands of the middlemen. The work of raising prices then commences, with no limit except the foreign demand, and as has been seen in the case of England and other foreign countries, with the effect of reducing the aggregate requirement from this country. This manipulation of the market does not always insure the success of the speculators, but it often succeeds in keeping prices up until the foreign demand has satisfied itself at lower rates elsewhere, and then although they tumble to a reasonable figure, the wheat stays on our hands, glutting the market about the time when the next year's crop is ready, to the detriment and discouragement of the farmer.

SCHEMES TO ATTRACT INVESTORS.

The low rates for money prevailing in England have encouraged the placing before the public of a variety of projects for the investment of capital. In fact the days of the great South Sea bubble, described so vividly by Macaulay, appear to have come again. Mining, railroad, importing, distilling, brewing, manufacturing and agricultural schemes, are started almost every day. They spring into life with a prospectus, fully equipped. They have in England men called promoters, who exercise their skill in artistically presenting a project to the public in its most attractive light, and at the same time with sufficient ingenuity to avoid laying themselves liable to legal action on account of any straining of the facts. This promoting as it is called appears to be a regular profession as well established and recognized as the legal or medical professions. The proprietor of undeveloped mines, or manufactures or lands, or inventions, who wishes to shift the load at a fair price upon the public, or at least to take the latter into partnership with himself, either acts as his own promoter or goes to a professional, who for a consideration exercises his talents in booming his employer's scheme. As the sculptor sees the perfect statue within the rough hewn block of marble, so the promoter perceives what most fascinating form of project may be best evolved from the material furnished by his principal. In addition to the promoter and the Directors,

each company has its bankers, its legal advisers (if a mining company, its bullion brokers), its brokers, its Auditors, its Secretary and its registered offices. Some of the latest projects are the Slide and Spur Gold Mines Limited; capital, £400,000, in 400,000 shares of £1 each; the Holland & Company Limited (Deptford Distillery); share capital 10,000 preferred shares of £10 each; F. J. Besley & Company Limited; capital, £100,000 in 10,000, share £10, issue £70,000 in 7,000 shares of £10 each, of which 2,830 shares are reserved to be allotted to the vendor in part payment of the purchase money, this being the largest proportion of the capital allowed by the rules of the Stock Exchange. This company is formed to buy out and carry on the business of a firm of wharfingers and warehousemen. Winfields Limited. This is a company to buy out and carry on the business of a firm of brass and iron work, including chandeliers, gasfittings, bedsteads, tubes wire, etc., etc. The capital of this is to be £160,000, and it has a full complement of Directors, headed by a noble Lord, two bankers, a firm of solicitors, brokers, Secretary and offices. The reason given for newly capitalizing the business is the death of two of the former partners. Nottingham Brewery Limited, has a capital of £186,000 and shares £272,000. The Northampton Brewery Company Limited has a capital of £150,000. The Incandescent Gas Light Company Limited; capital, £500,000, in shares of £5 each. The Omnium Investment Company Limited has a capital of £1,000,000. Morgan's Brewing Company has a capital of £185,000. The London Consumers Sanitary Milk Company, with a capital of £50,000, in shares of £1 each. The Stratford, Ilford and Romford Tramways Company Limited. Caledonian and Australian Mortgage and Agency Company Limited. The Mexican Santa Barbara Mining Company Limited. The Hotel du Nord (Cologne) Limited, and last the Invisible Trouser Stretchers Company Limited. This last has a capital of £50,000, divided into shares of £1 each. This company is, it seems, formed for the purpose of purchasing and working the patent invisible Trouser Stretcher and the patent Ball-bearing Brace. The board of Directors is headed by Sir Stephen J. Hill, K. C. M. G., C. B., and the company has its bankers, solicitors, brokers, Auditor, registered offices, warehouses, Secretary and Managers. The prospectus announces that over 50,000 of the patent Invisible Trouser Stretcher had been sold, as the Accountant's certificate shows, within six or eight months. An estimate based on the sale of only 200 gross of stretchers per month or 2,400 gross per annum of Invisible Stretchers gives a clear profit of over £5,000. It is the only stretcher for use inside trousers, and as one is required for each leg the possible number that may be need by the trousers wearing public is at once seen to be enormous. The prospectus goes on to remark: "It is a well-known fact that enormous fortunes have been made out of simple inventions of articles that are in universal demand, and the Directors consider that the 'Invisible' Trouser Stretcher is an invention that will turn out most profitable to the company, pay regular and increasing dividend and enable them to return to the stockholders the bulk of their subscriptions from the amount realized by the sale of foreign patents alone." It will be noticed that the company contemplate stretching the trousers not only of the inhabitants of Great Britain and Ireland, but also of foreign countries, and a list of the foreign patents referred to includes almost every civilized nation with the exception of Germany. The omission of Germany, perhaps, indicates the

intense commercial rivalry between that country and England, or perhaps, as in the case of Patagonia, Congo, Zululand, and Abyssinia and a few other country where patents do not appear to have been taken out, the Directors think that the inhabitants do not wear trousers to an extent worth counting on. The expectation from the Ball-bearing Brace is not so great, but the profits to be derived from the sale of this invention form a considerable part of the anticipated profits of the company.

All of the instances cited appear to be genuine and at least feasible plans for the remuneration of those who may choose to invest therein. Many of the projects started are, to judge by the references to some of them seen in the London financial exchanges, decidedly of a wild cat nature. One of them, the "Universal Stock Exchange Company Limited," publishes reports of the stock markets and professes, it is alleged, to give quotations for stocks for several days in advance, which is equal to selling combinations for beating the bank at Monaco. The newspapers have to be very careful how they criticize the various projects as they appear. A libel suit means something in England, and the projectors of companies are very quick to bring them against papers that criticize even dishonest schemes incautiously, and this is why no company is complete without its solicitors and attorneys. The Moldacot Pocket Sewing Machine Company Limited appears to be rousing the indignation of its stockholders by the supineness and apathy of its management.

If a newspaper inserts a paragraph in the least detrimental to a company, it is apt to receive some such communication as the following: "The false and defamatory statement published by you is likely to do the licensees serious injury, and we are to call upon you forthwith at your expense, to insert in the leading London and Provincial newspapers, and also in the leading engineering and financial papers a full retraction and apology for it, in terms approved by us, and also in your next issue, in the part of your paper where the libel appeared, and in as conspicuous type, manner and style, otherwise action will be brought."

As may be seen from the names of the Companies, most of them are projects for carrying on by stock concerns an industrial business heretofore conducted by private business.

In regard to this tendency, a London paper remarks: Much of the prosperity of England has been built up by the thrift and energy of the small shop-keeping class. Private enterprise has suffered severely from the tendency to amalgamate capital. When all private concerns are converted and amalgamated it will come to this, that each trade of the country will be in the hands of some great Company. One enormous venture will supply all the beer, another the boots, and a third the trouser stretchers. This tendency to consolidation of capital is manifested with equal force in this country. We hear of the Cotton Seed Oil Trust, of the Standard Oil Trust, and of proposed trusts for conducting almost all the industries of the country. The result of the success of all these undertakings would be the death of competition. There is, however, little fear that these projects as a rule will be dangerously profitable.

THE COMPTROLLER OF THE CURRENCY, the Solicitor of the Treasury, the Bank Examiner for New York, and ex-Treasurer Jordan, went to Cincinnati after the failure of the Fidelity National to protect the interests of the public.

* DOMESTIC EXCHANGES :

How Handled, to Ensure Prompt Returns with the Greatest Economy and Safety.

BY X. Y. Z. NO. 1.

Such a subject is not only of the greatest importance to the banking community, but to the country at large. What industry is it that will not be affected by anything that concerns the banks?

We shall first consider how the "domestic exchanges" of the country are divided, and then see if we can find some easier mode of handling them.

First, we have checks or written orders addressed to a bank or banker by a person having funds on deposit to his credit, directing the sum named to be paid on demand

Second, Drafts or instruments of writing, by which one person is requested to pay to another some specified sum, either on presentation or at a time in the future, named in the instrument. And, in passing, let us say we would be glad to have all laws which allow grace on sight drafts repealed; and, in fact, we can see no good grace does anyway; it is seldom that a paper is paid until the last day. It may have been very well in times past, when all travel was slow and uncertain.

The greatest economy of time and great safety consists in keeping our paper in the class to which it properly belongs. We do not intend to say we would not take a check as a collection item, but we would insist on taking drafts only for collection, to be cashed only when reported as paid by the bank collecting the same at the point upon which it is drawn. If it is of very great importance to know if the draft is paid at once, we could resort to the telegraph, or instruct our collecting bank to report by "wire" if paid. But most banks take unnecessary trouble by taking such items as cash. If the paper is returned unpaid the depositor has to be hunted up and the money refunded by him. Sometimes he is out of the way. But if the draft is only taken for collection, we notify him that it is unpaid, and that ends our responsibility. No cross entries to be made on our ledgers, but only a note of its return on our collection books. See form "A," draft for account of C. S. Smith.

As soon as a draft is brought into the bank it should be given to the clerk whose duty it is to enter the paper for collection in the "Collection Register" (form "A"). He first puts down the date, "September 10, 1886;" then "No. 100." Now the name of the party to whom it belongs, "Grover Cleveland." It is drawn by "C. N. Jordan," and the endorser, "Jay Gould," drawn on or addressed to "Fisk & Hatch, New York," amount \$10,000, dated August 6th, has sixty days to run before maturity. The clerk who sends off the paper will enter in the "Register" the name of bank to which sent, in this case to The Importers & Traders' National Bank, and for that purpose he would use our form "B."

As can be seen the same register can be used for the bank's discounted paper. In this case we would enter the number of the paper in red ink, so as to distinguish it from the ordinary collection. When this draft reaches the Importers and Traders' Bank, they would enter it on the form "C," similar to the form "A" except after the payor they would put the number of the draft which the sending bank put on. When the paper has been paid they would put down the amount of charges, and the net amount remitted to their principal or passed to their credit, using forms "D" or "E," according to circumstances. Which, when received by the bank from which the draft

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed; for particulars see page 574 of the June number.

originally came, they would enter on their form "A" the costs, net amount, date of the letter of the bank reporting and what disposition they make of it. It is of the greatest importance that banks should accustom their clerks to put numbers to all collections and report by the numbers. A bank with a large collection list will find it much easier to draft by its number than the name. I would much prefer to have the number than the name.

It will be seen that a bank which uses such forms will have the whole history of the draft from beginning to end, and one that it can refer to at any time without trouble.

As to promptness, that can only be ensured by taking such items as cash on condition that they be sent off subject to protest if not paid on presentation, and that positive instructions will be given to that end. Too many checks pass through banks these days with a waiver of protest. And there is one other point which will ensure promptness. Let the banks frown down the habit that merchants in the large cities have of taking the checks of country traders, require them to get checks from their own banks with which to make their remittances. Cases have come under the observation of the writer in which parties would let drafts drawn on them be returned, that they might send their own checks and gain a few days in time. This habit seems to be on the increase.

How shall the banks secure a fair profit for their labor, postage, and stationary? A merchant sells his wares that he may make a living for himself and family, the broker buys and sells stocks for his commission, a manufacturer makes his goods that he may make a profit on them, but the bank is supposed to be very accommodating, and work for "the honor and glory of the thing." Banks should charge for all collections, whether drafts or checks; let the rate be governed by the cost of transferring funds from the two points, put it a little under that, then let the banks divide the cost or commission with each other. If a draft is drawn with exchange, do the same thing; allow the sending bank one-half of what is collected. The sending bank does in most cases as much work as the collecting bank, whilst if the draft is drawn with exchange, under present mode, the latter bank will get all the pay. By such a plan each party makes a fair living and lays up a fund out of which they can, when necessary, pay for transferring funds from one point to another; and this brings us to consider the subject of domestic exchange, which is one that the banks cannot regulate, the supply and demand of the country can only control it, for we see by the nature of things, so long, for instance, as the South sells to the North more cotton than the North can pay for in goods made or held by the North, so long will northern funds be at a discount and currency be in demand; but let cotton stop going forward, then the South will want funds at the North, and if they cannot put it there any other way, it must be sent by express.

I, a bank in New Orleans, owe a bank in New York \$100,000 which I do not want to express. I find that my correspondents, who owe me that amount, and are in Cincinnati, have \$100,000 due them by their New York bank, so they send me a check on New York and the whole thing is settled without the passage of the money; but if the New Orleans bank is short of currency it will have to resort to the express. Some system by which a huge Clearing-House could be established for the whole country would in most cases regulate the balances between banks, and save many a transfer of funds by express.

To sum up in a few words, we have tried to show the importance of keeping checks and drafts in their proper places. The proper forms for entering drafts on the Registers and forwarding the same and making reports thereon. The importance of reporting by numbers. Protesting checks when not paid, and let the banks break up the habit of country merchants sending out their checks. Banks divide their fees with each other. And charge on all out of town items. And, lastly, a Clearing-House for the whole country.

We think if these few hasty remarks could be carried out the business of the banks would be transacted in a much more satisfactory manner, not only to themselves, but to the community at large. Their customers would soon find it just as easy and in the long run as cheap, for they would make allowance for the bank charges in their transactions.

Of course we would find some individuals, as well as banks, who are too narrow-minded to make any change in their mode of doing business, but let them give it a trial and they would soon see the benefits from such a desirable change. The writer had an occasion to open an account with a bank in a town not more than twenty-five or thirty miles away, and it was agreed that each party would make a charge of $\frac{1}{2}$ of 1 per cent. on everything sent by the other. We find the plan works like a charm. Before neither made much, now both make something.

*DOMESTIC EXCHANGES.

BY "LET EVERY TUB STAND ON ITS OWN BOTTOM."

I note the general invitation for contributions on the subject of: "Domestic Exchanges," with offer of prize for the best plan for clearing country items by city banks. I have neither time nor inclination to attempt to prepare a paper of the length and scope indicated, but would like to barely touch the general subject, and then as briefly as possible take "Out of Town" items, and points incidental to a plan for taking care of them by banks in large cities.

Bill of Exchange—"A written order or request from one person to another desiring the latter to pay to some person designated a certain sum of money therein named."

Exchange is—"The process of settling accounts or debts between parties residing at a distance from each other without the intermission of money, by exchanging orders or drafts, called Bills of Exchange."

More than nine-tenths of the world's commerce consists in the simple exchange of one thing for another by means of these paper instruments. The exchange of property passing through our banks between the people amounts to more than ONE THOUSAND MILLION DOLLARS in value per week, and in all this vast aggregate comparatively little money is used. These simple paper instruments, called "Bills of Exchange," which convey, while they do not possess true money value, perform their appointed mission, die, and are withdrawn. Of all this vast amount of paper which enters into and forms so important a part in the world's commerce, by far the greater part consists of drafts drawn against actual values in the shape of products being shipped to the great cities for market, and of drafts or orders drawn by one bank or banker on another bank or banker doing business in some one of the great commercial centers.

These two classes of papers we will not discuss; the mechanical detail of caring for it by issuing, intermediate, and paying parties, are well defined and

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed; for particulars see page 574 of the June number.

settled, as are the general rules governing it from its issue to its retirement, while the particular questions and issues liable to come up for the banker's decision and prompt action are so numerous and diversified that whole volumes are devoted to rules, discussions, and decisions, and one or more of these books will always be within easy reach of the careful banker.

By "out of town" items, as applied to city banks, we mean such paper as is born in the country, and must be returned to the country to die, but in the channels of trade finds its way to the city, and through the city banks must find its way home. In this class we will include notes and acceptances given by merchants or consumers in settlement of bills due at a future day, and checks on country banks sent to the city to pay bills already due, instead of sending regular, legitimate exchange; but will not include the city merchant's draft on his county customer, sent to remind him that his bill is due, with probabilities in favor of its being returned unpaid.

The note and acceptance are legitimate creatures of trade, and are invited to the banker's counter, for discount or collection, but the country check is a waif which should have gone to no other counter than that of the payer. Both classes come, however, and must be cared for, and by practically the same detail. How the most economically and satisfactorily?

In the first place, I think it may be safely laid down for country and city bankers that any piece of paper payable outside of a commercial center, which has no further mission to perform other than to find its payer and be retired, would better be sent to its destination by the most direct route; besides the waste in time, labor, and postage, the bank sending such an item by a circuitous route, in search of a free passage, should be charged with any loss which may occur from the paper being in transit an undue length of time. We wonder that the Denver merchant should send his check on a Denver bank in payment of his account due in New York, but not more so than that the check should find its way from New York back to Denver through banks in Cincinnati, Indianapolis, Chicago, St. Louis, and Kansas City.

In applying motor power to any machine, we recognize that any unnecessary wheel or pulley used is a waste of force; it is equally true here.

The practice which prevails to some extent among banks of undertaking to collect reciprocally for each other at points other than where they are located, is dangerously weak in point of time occupied in transit, and when traced to a conclusion, is wasteful to some and usually to all of the banks engaged in it; the extra work and postage must be paid by some one. As a country banker I might be glad to risk waste of time and allow our Chicago correspondent to collect for us free at all points where he has regular correspondent, but recognize that as we can only collect for him free in South Bend, we have no reason to expect, on the grounds of reciprocal relation, that he will collect for us free outside of Chicago; nor, on the other hand, has the Chicago banker a right to expect that we will collect free, if sent through him, for all of his thousand and one correspondents who may have items payable in South Bend, unless he will return the compliment by having his thousand and one customers collect free for us by way of Chicago. If the country bank would tamely submit, and not expect pay in kind or otherwise, a very economical plan for city banks to clear country items would be to make such arrangement among themselves that all items for any town would go from a bank having a reciprocal correspondent at such point. Thus the Merchants' National Bank, Chicago, would take for all the banks all items on La Porte, Michigan City, etc., the First National Bank all items for South Bend, Elkhart, etc. But the inevitable result of such a scheme would be to invite a flood of items of this class from their regular channel, seeking free passage via Chicago. Work is money, and time is money, and any plan which seeks to save paying exchange at the risk of largely increasing its list of free items must fail of good.

In all departments of mechanical work competition has come to demand that system lend a helping hand in getting the greatest possible amount of work done with the least possible outlay of force and money, and at the same time full pay be given for actual services rendered. The broker may sell to one party 200 tons of coal, and be fairly paid with a margin of \$35.00: if sold to five different parties, he may not be so well paid for time and work with a

margin of \$75.00. Why may not the banks in large cities take advantage of this principle in clearing country items? There is no good reason why the customer should not pay and expect to pay for his items received in a retail way the usual retail price for collecting such items, and at the same time the city banker take advantage of his ability to demand and get better rates by clearing in wholesale quantities. As country bankers we receive in one day from each of six different Chicago banks a demand bank item of \$50.00. We charge each bank 25 cents exchange, an aggregate for the six banks of \$1.50. We would remit the \$300.00 to one party for forty cents, and for less with contract for collecting such items for all the Chicago banks through one channel for a definite time. Why not all "out of town" bank items (and by banks items I mean notes and acceptances as well as checks) from all banks in any large city go from one source of collection, not from any one bank as agent for all, bank jealousies would render this impracticable, but from a special agency, created for this purpose alone, whose manager and clerical force should be in the direct employ of the associated banks.

The mechanical details of such an agency will readily occur to any accountant. They would be arranged with an eye to speed and absolute proof of all work, and at the same time would be so simple and systematic, that a very small force could care for a very great number of items.

To this agency each bank should send at the same hour each day its items of this class, carefully listed, and would secure from the agency by the same messenger a list of the items collected for it to date, with a check to balance. The hour for exchange would be about 12 o'clock, the forenoon being occupied by the bank in registering and listing items received by the morning mail and by the agency in distributing and getting ready to pay to the banks items reported in its morning mail as paid. As soon as the work of exchanging lists is over, the agency would at once distribute items alphabetically by towns, then assort, register and mail, sending at each point to the bank making the best terms.

The banks during the afternoon would check off its items reported paid, credit, and notify owners. By this arrangement there need be but little if any loss of time, the item would make its round almost, if not quite, as quick as if sent by the bank direct.

Some savings.—Six items can go out in one letter with one-third the work and one-sixth the stationery and postage required to send six items in six letters. This applies at both ends of the line. By allowing checks, notes and acceptances to go through the agency much better terms can be made with collecting banks than could be done if sight drafts on merchants were included, a large percentage of which go back unpaid. If the paper to be handled averaged \$250.00 per item, or more, the principle saving would be in clerical force and postage. But observation will show that such is not the case, that they will average less than \$100.00, and probably less than half that amount, and that much will be saved in exchange by having many items remitted for in one draft, even if regular rates of exchange be charged.

Some details.—The bank's list for agency need only include number, amount, and instructions, and the agency list for bank only number and amount. Both lists must be added and be correct, with a fine for errors.

For convenience in registering, each city bank would be known by a letter of the alphabet or a number. This letter or number, as well as the number of the item, would appear in the bank indorsement. Instructions "Protest" or "No protest" would be attached to the item. If with interest, only the amount due at maturity would be named, and on all paper the date due would be clearly marked. The advantage of having each item tell its own story clearly will be apparent when it is remembered that the items for all the banks will be mixed indiscriminately before the registering begins. The footing of the register will agree with footing of totals as reported by all the banks on their lists. The total of drafts drawn to pay agency lists to banks will agree with total receipts by mail, plus exchange paid. The expense of such an agency would be met as the banks might agree. Each could pay for all items collected a regular schedule price, about equal to the present cost of collection, and then share in the profits in the ratio of its patronage, or the entire expense could be periodically apportioned among the banks in ratio of the amounts collected.

WHAT'S IN A NAME?

The signature articles commenced in the January number of the JOURNAL with a representation of the sign manual of W. P. Hazen, then Cashier of Chatham T. Ewing & Co.'s Bank of Thayer, Kas., and who since has connected himself with the Farmers' and Merchants' Bank of Erie, Kas., and have been continued in March, April, May and June. The signatures of Carmon Parse, Cashier of the First National Bank of Plainfield, N. J., W. D. Mussenden, Cashier of the First National Bank of Bath, Me., and of Gordon, Kurtz & Co. of Indianapolis, Indiana, appeared in March; those of E. Keator, Cashier of the First National Bank of Cortland, N. Y., of L. M. Mielly, business man of Santa Fe, New Mexico, and of Hugh Harbison, Secretary and Treasurer of Colts' Patent Arms Manufacturing Company, Hartford, Conn., in April; of John Mohr, Jr., Cashier of the Hamilton National Bank of Fort Wayne, Ind., of H. G. Nolton, Vice-President of the Commercial Bank of Buffalo, N. Y., and of C. W. Bush, Cashier of the Bank of Yolo, Woodland, California, in May; and of E. Newell, Cashier of the First National Bank of Holly, Mich., of Wm. M. Peck, Cashier of the Cloud Co. Bank, Concordia, Kas., of F. C. Miller, Cashier, Salina National Bank, Salina, Kas., and of Lloyd Bowers, Cashier of the First National Bank of Mobile, Arkansas, in June. The facsimile letter in the June number was written and signed by Jas. V. D. Westfall, Banker, Wolcott, N. Y. It was not considered difficult to read, but only odd.

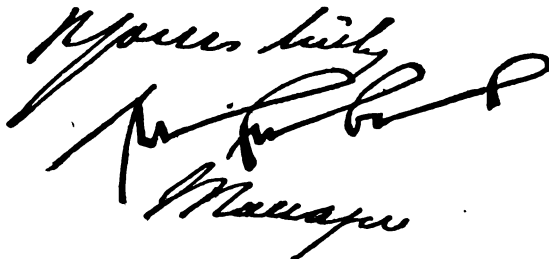

The name of Mr. Hazen was given alone, and it was intimated that he belonged in Kansas, and was correctly deciphered by over two hundred persons. Only one person gave correctly the names of all three of those whose signatures appeared in the March number. No one deciphered those given in the April number, although there were many ingenious attempts received. Some attempt was evidently made to read the illustrations given in the May article, but they were too difficult for successful elucidation. One correspondent recognized John Mohr, Jr., but says Mr. Nolton's mark looks like a Texas cattle brand, and suggests nothing that resembles the other. Another fails on Mohr, reads Nolton all right, but thinks Bush is C. T. Park. One from Iowa recognizes Mohr, but silently passes the others. Another reads the three as J. H. Ware, Jr., H. G. Nolton and C. T. Peck, just one-third right. Still another gets Mohr and Nolton, but calls Bush, L. G. Phelps. The growing difficulty seems to have induced a feeling of apathy, and we have up to the time of writing received but one attempt to decipher the names given in the June number, and that as to one of them only.

One surprising thing to many in regard to this whole business is that bankers generally are not better acquainted with each others signatures. There is an idea encouraged by politicians that banks and bankers are a guild banded together for mutual protection and the plunder of the public, and both parties affect to fear the influence of the banks. But the fact that so few correct replies have been received in regard to the names published in the JOURNAL shows that there is very little general communication among the banks. Each institution has its own little circle and is as little known outside of it as the ordinary business man or merchant.

We have received several other signatures which may be characterized as "interesting but tough," as Huck Finn said about the statements in Pilgrims Progress, but rather hesitate to present them to our readers, inasmuch as the dearth of answers to those published in the last two or three numbers seems to betray a waning interest. In fact the number of signatures of this kind received from all parts of the country does not exceed twenty-five, indicating that the signatures of business men and bankers, while they may be characteristic are generally legible. This state of things does not indicate any great need of reform. As to publishing specimens of good signatures we fear that the process would be somewhat invidious in view of the general standard of

excellence, and besides, as has been remarked of characters in fiction, the bad ones are more entertaining than the good. As a finale we give three more from our collection of curious writing.

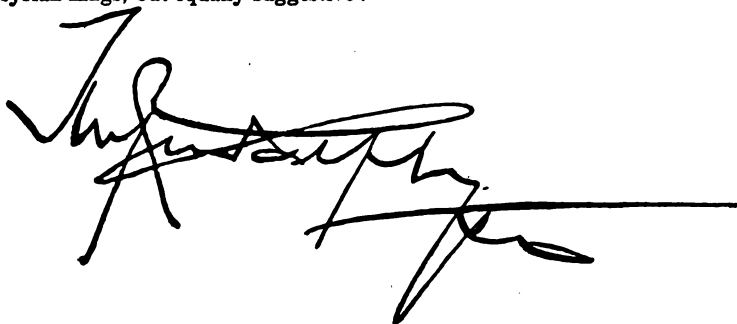

A bank Manager not in the United States provides this imitation of an ancient runic inscription :

This tea chest advertisement belongs to a Teller who is evidently seeking a Cashier's position. It is easy if one can recover from the idea that it is Chinese:

From the South comes the following interesting and beautiful signature, which is not more difficult to read than the cuneiform inscriptions of the Assyrian kings, but equally suggestive :

The first is that of R. J. B. Crombie, Manager of the Bank of Montreal, Picton, Ont. ; the second of F. S. Watts, Teller of Audubon County Bank, Audubon, Iowa; and the third of Tom Randolph, President Merchants' and Planters' National Bank, Sherman, Texas.

As to good, plain and yet characteristic signatures, the U. S. Treasury notes of recent issue present two which answer all these requirements, viz.: those of Gen. Rosecrans, Register, and C. N. Jordan, Treasurer. The latter signature is particularly fine, legible and graceful.

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

An Experiment in Savings Banks.—The value of Savings Banks as philanthropic agencies, "Helping those who help themselves" has long been recognized, so much so that they have become a part of our banking system. The main features of a savings bank are too well known, especially to readers of the JOURNAL to need any repetition here. But there has recently been established in Baltimore, at first an experiment, and now a recognized success, The Provident Savings Bank, which presents some peculiar features that may not be without interest. Some years ago a few persons, principally connected with the Society of Friends, organized a mission for moral, intellectual and religious instruction in one of the lower wards of the city of Baltimore. Their efforts were attended with gratifying success. About three years ago they started in connection with their mission work, a small savings society, which collected the scanty savings of the people who came to the mission, placed them to the credit of the society in one of the savings banks of the city and divided the interest received upon the total deposit among the respective depositors. The results were most encouraging. Little by little this branch of the work grew into more and more importance and at last it was said, Why not incorporate a savings society, and establish a regular bank of our own? Accordingly, at the last session of the Legislature, a charter was obtained authorizing the incorporators to establish a savings bank with branches in the city of Baltimore and the outlying villages. The primary object was to place the advantages of the bank within the reach of those who could not by reason of their distance from the central parts of the city, avail themselves of the older institutions.

It was found that not only was much time lost in going to and from the more distant parts of the city to the central banks, but also that it was extremely inconvenient for working people to take that much time in the busy part of the day. For children the older banks were almost entirely out of the question. The undertaking seemed rather an extensive affair, but six branches were opened, five in the outlying sections of the city and one in the neighboring village of Woodberry. The quarters at first were most unpretending in their character, but they had soon to seek more commodious places, and the rooms are now regular bank offices, with the usual counters, desks, and other necessary furniture. It has also been found necessary to open a central office in the business section of the city. This will sustain somewhat the relation of a parent bank to the various branches. The success of this bank lies not so much, for the present, in the sum total of its deposits, though that is no small item, being now, after ten months, nearly \$40,000 net; but it consists chiefly in the character of the depositors. The bank has reached most effectively that class of persons for whom these institutions are primarily intended, as is shown by the fact that the depositors, nearly 5,000 in number, have, on an average, a little over \$8.00 apiece. In other words, the persons who have taken advantage of the facilities offered are those who can save but little at a time, possibly 10, 25 or 50 cents, and to whom \$5.00 or \$10.00 seems quite an aggregation of capital. The work of this bank and its various branches has been most interesting and important. It has not only afforded absolute security with a small interest to the savings of the depositors, but it has encouraged and, in many

instances, has taught habits of thrift and economy to those who most needed the exercise of these virtues. These branch banks are not opened in the usual business hours of the day, but on two or three hours on Saturday or Monday night, thus removing one great obstacle in the way of those who might have desired to make use of the older institutions. A very interesting feature which has been developed in the experience of this bank has been the large number of little children who bring in their tiny deposits, many of them with a regularity which would be a credit to older heads. At first it has been remarked these young depositors seemed to have a great deal of difficulty in letting the money remain in the bank after it was placed there, but, after it has amounted to any sum, say \$2.00 or \$3.00, and they have realized the tangible results of saving little by little, they seem content to let it stay. The numerous small sums which the children have brought in has necessitated the adoption of what in this country is a new feature in savings banks, namely the Stamp deposit system. It was found that to keep an account of such small sums of money, by ordinary process of book-keeping, required more clerical labor than the bank could afford, and therefore, to prevent the institution from degenerating into a charity, and to keep it on a self-sustaining basis, it was necessary to devise some other method. The stamp deposit system consists in the use of a folded card about 6 inches by 9 inches, having on the outside the rules of the bank, the names of the officers and so on. The inside is ruled off into thirty squares of about the size of a postage stamp. The bank has had stamps prepared certifying on their face that the sum of 10 or 15 cents has been deposited, and will be paid to the owner of the card on demand. For every 10 or 15 cents deposited one or more of these stamps are pasted on the card. When the sum amounts to as much as one dollar, the depositor may be given a pass book with that sum entered to his credit in the regular way. The stamps are cancelled and the card continued in use until all the spaces are filled. This card system not only saves a great deal of labor, but is found to furnish an additional incentive to the children to hoard their savings; each one having an ambition to show the most stamps on his card, and bye and bye, to have a little book of his own like the grown-up people. This system of a savings bank having small branches over the city and extending to neighboring villages combined with the use of the stamp card, seems to furnish a substitute for the Government system of Postal Savings Banks more adapted to the genius of our institutions.

Rotation of Directors.—Old established banks with ample capital, and still more ample surplus fund, can well afford to move on in the good old-fashioned way, resting upon the maxim, "Nothing succeeds like success," but a new bank that has to work for business and often under difficulties must perforce resort to every honorable means to build up its line of deposits and to keep its losses from discounts at the minimum figure. A plan that is not without its advantages is to adopt a system of rotation in the board of directors, that is to provide in the bye-laws for a slight change in the directory every year. In a board, for example, of eight or ten directors, let two retire every year, and be ineligible for re election until the expiration of two more years. This plan has some advantages which may not be apparent at first sight. It affords a graceful and courteous means of exit for those who have served long and faithfully, and who may feel that they lag superfluous on the stage. It gives a chance for the introduction of new and younger elements in the composition of the directory without waiting for the uncertain chances of death or resignations. It affords opportunity to bring into the directory new depositors of wealth and influence, who will add to the strength of the council board, and who by elevation to the directory becomes so closely identified with the bank that their accounts with the institution may be regarded as a fixture. Thus, in every bank there is a certain set of men, some stockholders and some only depositors, who make up what may be called the eligible list for vacancies in the board, and this system of rotation practically constitutes the whole list of eligibles a standing board of directors.

Those who have had experience are ready with practical advice, and those who are looking forward to taking their places in the administration of the

institution are equally ready with their assistance, and take equal pride in the management of the bank and in its success and prosperity. It may be thought that this constant change would produce an element of fluctuation and uncertainty, which would be unfavorable to a settled policy in the management, but this objection disappears when it is remembered that every director serves a term of five or six years, and there is always in the board a number of experienced members. Sometimes it happens that the choice of a new director is made not wisely, and under this system of rotation there is some prospect of correcting the error without giving offence or waiting for the slow course of time.

New Ideas from the Clerks.—The general tendency seems to be to select the Cashiers of banks from the clerical force, and oftentimes a further step is taken in this direction by the elevation of the Cashier to the head of the institution. The line of distinction, therefore, between the two grades of offices, so to speak, does not seem to be very well defined, and it is proper that it should not be. Many banks are content to jog along in the same old-fashioned way, "The same old wheel in the same old rut," and appear averse to any changes whatever. But it is much better to encourage the clerks, and especially the younger ones, to introduce, test and adopt any new methods that may seem of practical value. Most men have a pretty keen eye for anything that promises to be of personal benefit, and if men, as they successfully take charge of particular desks, are allowed to introduce such improved methods as they may devise, the net result will be that the clerical work of the bank will be gotten down to as small a compass as possible, and the further result that the most work will be done with the least possible force—that is to say, the least possible expense to the bank. As the character of the business of a bank changes, its method of book-keeping must also change, otherwise, imperfections will creep in, and what was in the beginning an excellent system will become out of date and cumbrous. It is these old-fashioned ways of doing things that constitute the field for the defaulter and of the embezzler. The writer was recently told of a corporation which had been robbed to quite a large extent by one of its employees; and it appeared upon inquiry that a clerk who had come in the office, not very long before, had suggested a change in the method of book-keeping, but his advice not being supported by weight of years and experience was not heeded, matters went on and the young man finally became satisfied there was something wrong, and took the proper steps to lay the matter before the managers, investigation was ordered and the theft discovered. Had the young gentleman's advice been followed in the first instance, the defaulter would have been brought to grief much sooner, and the corporation would have been a considerable sum of money in pocket. No one knows so well how work ought to be done as the man who is doing it, and nobody is so anxious as he to find out the easiest and best way of accomplishing the desired results. It is, therefore, as a general rule, a better plan to encourage the force to suggest new and improved methods, and if it so happens that the practice of a suggestion does not bear out the theory, it will not be difficult to return to the old way.

Confinement and Bad Air.—Every occupation in life has its advantages and its disadvantages, and certainly the banking business is no exception to this rule. One of the objections urged against a clerical position in a bank is the evil effects of the constant confinement and habitual breathing of an impure atmosphere. Confinement is something incidental to the nature of the business and cannot well be helped, but the rule which prevails in some banks, prohibiting the clerks from leaving the office during banking hours, can not be too strongly condemned. There is no sufficient reason why such a regulation should be enforced, and the arguments that are usually cited in its favor are trivial and insufficient. The objections to it are weighty. In the first place, it necessitates eating cold lunches, which are a sure road to dyspepsia and, in the opinion of the writer, an invention of the Evil One. It is rather a benefit than otherwise to a bank to have its clerks on the street from time to time during the day, and a little spirit of accommodation will effectually prevent any inconvenience from the temporary absence for a few minutes of any special man.

Both the Cashier and the clerks have very often affairs of their own which need a few moments attention during business hours, and it seems unreasonable to enforce a rule which must either be subject to many infractions or else become a source of great inconvenience.

The air in most banking offices is far too warm and very impure, too little regard being paid to systematic ventilation. The janitor should be instructed to thoroughly air the entire apartment a little while before the bank opens and immediately after it closes for the day. This will prevent that daily accumulation of impurities which makes the air so very heavy and unpleasant. Modern buildings are usually constructed with a due regard to ventilation, but it is very difficult to alter an old-fashioned building so as to meet the requirements of the present day in this respect, still a good deal can be done by means of the patent ventilators, which can be applied to any window. Many of the impurities which render the atmosphere of a bank oppressive come from small particles of dust which are constantly floating about in the air. The janitor should be compelled to keep every part of the bank room and everything in it perfectly clean, and by a liberal use of soap and water prevent the accumulation of dirt and dust in any part of the office. If the floors are marble, they should be washed every day; and if wood, thoroughly scrubbed at least once a week. This may seem a trivial matter, but many of the lung complaints which seem to trouble bank men can be traced not only to stooping positions and confinement, but even more to the constant inhaling of tiny particles of foreign matter floating in the atmosphere. It seems hardly necessary, so often has that topic been treated, to insist upon the necessity of systematic exercise in the open air. In this respect, at least, we must acknowledge that as a people we are far behind our English friends. With them, everybody gets as much of the open air as he possibly can. So far as he is able, an Englishman may be said to live in the open air.

A man, who, by nature of his occupation, is closely confined during the greater part of the day, should take especial pains to counteract the evil effects thereof by living as much as possible, outside of business hours, in the open air.

Amount on Checks.—The paragraph on specimen checks among the notes and comments on "Banking Practice" in the June number of the JOURNAL has called out some criticisms. The suggestion was that the amount should be in the left hand corner of the check and the number in the upper left hand corner, and that the printing of the name of the State on the end of the check was a mere affectation of novelty with no argument in its favor. It has been stated to us by a gentleman employed in one of the large banks in this city that the name on the end of the check is a very great convenience in sorting the paper of this kind received from all over the country, which would certainly seem to be a good argument for printing it there.

Another correspondent whose letter is printed in full elsewhere writes that the only proper position for the amount of a check in figures is the *upper* left hand corner and that the number should be in the lower left hand corner. And finally Mr. Chas. E. Sprague has an article in the "Office" for April, 1887, in which he contends for placing the amount of a check in the upper right hand corner. His argument is that in running over a pile of checks the usual procedure is to hold the pile with the left hand and with the right turn up the ends of the checks, and that if the amount is in the upper right hand corner it is easier seen and the counting can proceed more rapidly and draws an analogy from the custom of placing stamps on the right hand upper corner of letters to aid the Post-office in cancelling them. There is force in all these arguments, in that uniformity of any kind in papers insures ease of handling, but if one uniform practice of placing the amount of a check were adopted by all we cannot see that it would make any difference which corner is selected. Turning the check around would bring either upper corner into practically the same position for handling or reading whether the handling is done with both hands or one, and the lower left hand corner would be no more difficult place either to read or handle after one got used to it. Our correspondents must divest themselves of any prejudice in favor of any corner and work for uniformity as far as possible. A perfectly drawn check, by which we mean one that

combines in itself all the points for ease of handling in banks doing either a large or small business, would doubtless have to contain some features that would not be necessary to all banks, but while useless to some they would be very useful to others and would do no harm to any. This we take it would be the case with printing the State on the end of the check which might seem superfluous to some and yet be a very great convenience to others; so with numbers indicating the bank and other features of the kind. Mr. Sprague suggests that the American Bankers' Association take the matter in hand and try to secure uniformity in the form of checks and drafts, but whatever interest may be taken in the matter by the association nothing will be accomplished as long as each bank desires that its own particular pattern shall be the one adopted.

Expense Account.—The practice which prevails in a great many banks, of running a "sundry expense" account, in which are gathered various items without any specific mention, is not one to be approved, or, indeed, tolerated. The legitimate expenses of a bank are sufficiently large without being unnecessarily increased, and while a parsimonious policy is to be condemned; yet, on the other hand, unless expenditures should not be allowed. The surest way to prevent such a thing, is to keep an accurate and detailed account of all the money expended under this head, such account to be open at all times to the inspection of any one in the bank who may desire to examine it. Men are not always very prudent in making experiments when the expense of the same does not come out of their own pockets, and sometimes a bank has to pay quite heavily for indulging the fancies of those, who, like the ancient Athenians, are always seeking after some new thing. Some banks adopt a plan of having one man attend to the buying and requiring all orders for supplies to go through him; while in other institutions, these matters are conducted pretty much on a go-as-you-please plan, each clerk buying what he wants, and the seller charging the bank pretty much any price he pleases. The former plan is better for the bank; the latter, for the clerks. But, at any rate, no bill should be paid until it is certified by the person who ordered the article. If, by adopting a rigid system of accountability the expenses can be cut down \$1,000 a year, that is equivalent to at least one additional clerk, and where men can be made to perceive that it is directly to their own advantage to keep the expenses at the minimum, there is established a very strong check against extravagance.

Recording Signatures.—Every bank necessarily keeps a record of the signatures of its customers in what is commonly called the signature book. The form of this book is usually that of an ordinary ledger index, but it can be vastly improved even in a small bank by arranging the index on the principle of sub-voweling. Signatures vary from year to year even with persons who are very uniform in the style of their handwriting, as may be readily seen by referring to the original signature of an account which has been in a bank say ten or fifteen years. As it is often of great importance to determine beyond a doubt the genuineness of a signature, it is desirable that a bank should, as far as possible, renew the signatures of its depositors as often at least as once a year; that is, commence a new signature book once a year. Great care should be taken to keep authentic signatures of all the officers of corresponding banks authorized to sign checks, as sometimes considerable embarrassment is occasioned by a check coming in for payment with a signature, about which the paying bank is not quite sure. Of course, it is easy in such a case to resort to the telegraph, but one does not care to ask in that way for information, which should already be in one's possession. The same remarks apply to signatures of officers of corporations. A bank should always require an official notification of the authority of officers of corporations to sign checks. A little attention to matters of this sort will sometimes prevent unpleasant occurrences. The JOURNAL has been asked, What should be done in case a depositor who can not write his name desires to open an account? The answer given was that he should make a duly executed power of attorney to some one in whom he had confidence to sign his checks for him.

BANKING LAW.

* Legal Decisions Affecting Bankers.

CHECK ON BANK—NOTICE OF FAILURE OF DRAWER BEFORE PRESENTMENT —RIGHT TO FUND AS BETWEEN CHECK-HOLDER AND ASSIGNEE FOR BENEFIT OF CREDITORS OF DRAWER.

(Without deciding the mooted question whether the check or draft of a person on a bank in which he has deposits, operates as an equitable assignment of the fund so on deposit to the holder of the check, to the amount of it, it is clear that such check or draft does not bind the fund in the hands of the bank until it has notice of the draft or check by presentation for payment or otherwise. Until then other checks drawn afterwards may be paid, or other assignments of the fund, or part of it, may secure priority by giving notice.)

The plaintiff, Schuler, a citizen of Kansas, was the owner and holder of a draft or check drawn by C. W. Israel & Co., bankers in Texas, on the Laclede Bank, a corporation existing under the laws of the State of Missouri, for the sum of \$11,250, dated at Henrietta, Texas, October 20, 1885, and payable to the plaintiff, which was duly presented for payment on the 26th of said month and payment refused on the ground that C. W. Israel & Co., the drawers of the check, had on October 24, 1885, made an assignment under the laws of Texas for the benefit of their creditors, of which the Laclede Bank had been advised by telegraph. Plaintiff thereupon brought suit against the bank, and the assignee of Israel & Co. claiming that there were funds in the hands of the Laclede Bank to the credit of C. W. Israel & Co. on the presentation of the check for payment which ought to be applied for that purpose, and that notwithstanding the general assignment of Israel & Co. on October 24th, the check in question made in favor of the plaintiff on October 20th was an assignment or appropriation of so much of those funds to the benefit of the complainant which he was entitled to enforce by suit. The bank alleged that on the morning of October 26, 1885, it received a telegram from C. W. Israel & Co., dated the 24th, stating that they had made an assignment and directing the bank to hold their funds subject to the order of the assignee. That this telegram was delivered at 8 o'clock in the morning of October 26th, and the check in favor of complainant was presented at the opening of the bank at 10.15 on the same morning, which was the first notice the bank had of it. The bank claimed that the general assignment with the notice of it by telegraph was a complete revocation of the check in question as well as all other checks drawn against it by Israel & Co., and that the assignment with this prior notice to the bank vested in the assignee the better right to any funds of C. W. Israel & Co. in the hands of the bank. The bank further alleged and set up transactions between C. W. Israel & Co. and itself by which Israel & Co. would be indebted to the Laclede Bank on a settlement of the transactions between them in a sum beyond anything which they held on deposit to the credit of C. W. Israel & Co. A part, however, of these transactions going to make up this claim of set-off against Israel & Co. consisted of notes discounted by the Laclede Bank for Israel & Co., part of which had not yet matured. The bank further claimed that Israel & Co. and itself were corresponding banks, one being in Texas and the other in St. Louis, Missouri, and that there had been a long course of dealing between them, and for this reason it had discounted the

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

notes of Israel & Co. without any other sufficient security. The assignee of Israel & Co. also appeared and interposed an answer setting forth mainly the same facts as alleged by the bank.

The case being heard before the Circuit Court of the United States for the Eastern District of Missouri, that Court found that at the date of the presentation to the Laclede Bank of the check in question, there was to the credit of the account of C. W. Israel & Co. in said bank the sum of \$5,912.41 subject to the payment of said check, and that said check operated in equity as an assignment of of said sum as against defendants, to the complainant; and the Court therefore ordered that the complainant recover from the defendants the sum of \$5,912.41 and interest. The case being appealed to the Supreme Court of the United States, it was

Held, The question of how far and under what circumstances a check of a depositor in a bank will be considered an equitable assignment to the payee of the check, of all or any portion of the funds or deposits to the credit of the drawer of the check in the bank, is one which has been very much considered of late years in the Courts and about which there is not a unanimity of opinion. In this Court it is very well settled that such a check, unless accepted by the bank, will not sustain an action at law by the drawee against the bank as there is no privity of contract between them. (*Marine Bank vs. Fulton*, 2 Wall., 252; *Bank of Republic vs. Millard*, 10 Wall., 152; *Bank vs. Whitman*, 94 U. S., 343.)

But while this may be considered as the established doctrine of this Court in regard to the rights of the parties at law, and is probably the prevailing doctrine in nearly all the Courts, it is urged in this case and very respectable Courts have so decided, that such a check is an appropriation of the amount for which it is drawn of the funds of the drawer in the hands of the bank. (*Roberts vs. Austin*, 28 Iowa, 315; *Fogarties vs. State Bank*, 12 Rich. 518; *Munn vs. Burch*, 25 Ill., 35; *German Savings Institute vs. Adae*, 1 McCrary, 501.)

But, however this doctrine may operate to secure an equitable interest in the fund deposited in the bank to the credit of the drawer after notice to the bank of the check, or presentation to it for payment—a question which we do not here decide—we are of opinion that, as to the bank itself, the holder of the fund, and its duties and obligations in regard to it, the bank remains unaffected by the execution of such a check until notice has been given to it, or demand made upon it for its payment.

In the case before us it is a conceded fact that before the bank had any knowledge or notice whatever of the check on which the plaintiff brings this suit, it had received a distinct notification from the drawer of that check that he had made a general assignment for the benefit of his creditors with an express direction to hold the funds subject to the order of the assignee. Therefore even if the check could be considered as an attempt on the part of C. W. Israel & Co. to assign or appropriate this amount in the hands of the bank to Schuler, the general assignment for the benefit of all their creditors of all their assets, including those in the hands of the bank, was made and brought to the attention of the bank, with directions to turn them over to this assignee before it had any notice of the check in favor of Schuler.

The learned judge who decided the case on the Circuit rested his judgment, in an opinion which is found in the record, on the proposition that as between these two equities, namely the equities of the general creditors under the assignment to Davidson, and this implied assignment in equity by the drawing of the check, the latter was superior. In this it would seem that he was somewhat influenced by the fact that he was enabled to trace the sources of some of the deposits to the credit of Israel & Co. in the Laclede Bank to money which in a roundabout way had been collected for the payment of a debt to Schuler and had finally been deposited to the credit of C. W. Israel & Co. in the Laclede Bank. But there is no allegation in the bill, nor any evidence in the testimony, nor any reason to believe that the bank knew anything of this connection between the sums received from several of the banks with which Israel was connected at different times and the debt of Schuler. This is expressly denied and we can see no reason why the bank should be held in any way to regard the deposit made by C. W. Israel & Co. as in law or in

equity funds in which Schuler had an interest. It must therefore be left entirely out of the argument in the contest between the bank and Schuler. Apart from this matter it is not easy to see any valid reason why the assignment of an insolvent debtor for the equal benefit of all his creditors, of all his property, does not confer on those creditors an equity equal to that of the holder of an unpaid check upon his banker. The holder of this check comes into the distribution of the funds in the hands of the assignee for his share of those funds with other creditors. The mere fact that he had received a check, a few days before the making of the assignment, on the bank, which had not been presented until after the general assignment was made and notified to the bank, does not seem, in and of itself, to give any such superiority of right. The assignment was complete and perfect and vested in the assignee a right to all the property of the assignor immediately upon its execution and delivery, with due formalities, to the assignee, and the check of this assignee, like the check of Israel & Co., could have been paid by the bank with safety, if first presented. The check given by the same assignor a few days before was only an acknowledgement of a debt by that assignor, and became no valid claim upon the funds against which it was drawn until the holder of those funds was notified of its existence. This we think is the fair result of the authorities upon that subject.

In the case of *Spain vs. Hamilton's Adm'r*, 1 Wall. 624, this Court says: "Any order, writing, or act which makes an appropriation of the fund amounts to an equitable assignment of the fund. The reason is that the fund being a matter not assignable at law, nor capable of manual possession, an appropriation of it is all that the nature of the case admits of, and therefore it is held good in a Court of equity. As the assignee is generally entitled to all the remedies of the assignor, so he is subject to all the equities between the assignor and his debtor. But in order to perfect his title against his debtor it is indispensable that the assignee shall immediately give notice of the assignment to the debtor, for otherwise a priority of right may be obtained by a subsequent assignee, or the debt may be discharged by a payment to the assignee before such notice."

The same principle is also laid down in *Christmas vs. Russell*, 14 Wall., 69; *Story Eq. Jur. Sec. 1047, 1057, and 1035a*. See especially the authorities cited in Note 1 to this latter section. See also, *Ward vs. Morrison*, 25 Vt. 599, and *Loomis vs. Loomis*, 26 Vt. 198.

For these reasons we are of opinion that at the time of the presentation of the check to the bank, the bank held no funds subject to its payment, whether we consider the delivery of it by C. W. Israel & Co. to Schuler as intended to create an equitable assignment or not. As the assignment of Israel & Co. had the effect when the bank was notified of it to transfer to the assignee all right to any funds in its hands which Israel could assert, we need not consider the other questions in the case.

Judgment reversed and bill dismissed.

Laclede Bank vs. Schuler, Supreme Court of the United States, March 7, 1887.

STATE BANK—LIABILITY OF STOCKHOLDERS—CONSTRUCTION OF LIABILITY CLAUSE IN CHARTER.

The charter of the Union Bank of Quincy, by its seventh section, provided as follows: "Provided, also, that stockholders in this corporation shall be individually liable to the amount of their stock for all debts of the corporation, and such liability shall continue for three months after the transfer of any stock on the books of the corporation."

In a suit by a creditor of the bank against a stockholder, the latter contended that the liability imposed by this section upon the stockholders was simply to pay the creditors of the bank the balance unpaid upon subscriptions for stock.

Held, The plain and obvious meaning of this language is that the stockholders are liable to creditors for their debts to an extent measured by the amount of their stock. Omitting the clause expressing the extent of the liability and we have this: "The stockholders in this corporation shall be

individually liable for all debts of the corporation." If this were all, their liability would be unlimited; they would be absolutely liable for all the debts of the corporation. The intention, however, is to limit that liability. But to what extent? The answer is "to the amount of their stock," not to the amount unpaid upon their stock. The language makes the liability because of the fact of being stockholders, and not because of the fact of being debtors of the corporation. If the liability intended was simply to pay the creditors the amount due the corporation, what would have been more natural and easy than to have used just that language? The difference between a stockholder, and a debtor for unpaid stock, is recognized in several of the sections, and so was at the time in the legislative mind, and it must therefore be presumed that words expressing the one would not have been used to express the other in this instance. (Extracts from different sections of the charter are here given to illustrate the statement of the Court.)

In no instance is the word *stock* used in the sense of a debt or obligation due from the stockholder, but it is at all times used to express the idea of property in the corporation—what may be the subject of a debt it is true—but it is not itself a debt any more than is any other property, and in this connection we will observe that we are unable to appreciate the distinction which counsel seek to draw between the words "liable to the amount of their stock" and the words "liable in a sum equal to the amount of their stock," which is frequently found in similar charters; they conceding, as we understand their position, that on the authority of decided cases, if the latter language had been here used, their client would be liable as held by the lower Courts. But since the words "to the amount of their stock" in no view mean the thing which is itself to be paid to the creditor, but are in every view simply used to express the measure by which the sum of money of, which the creditors may enforce payment is ascertained, "liable to the amount of their stock" is but stating elliptically what is fully stated by the words "liable in a sum equal to the amount of their stock." "Liable to an amount" can mean only liable to pay a sum which reaches or comes up to, or, in short, equals the given amount. So here the nominal or face value of the shares of stock are \$100 each; and if A have two shares we say the amount of his stock is \$200, the nominal or face value of his stock; and therefore to say that he is liable to the amount of his stock for the debts of the corporation is only another form of saying that he is liable to the amount of \$200 for the debts of the corporation.

Root vs. Sinnock, Supreme Court of Illinois, March 23, 1887.

LOAN OF CHECKS—BRINGING ACTION AGAINST BORROWER BEFORE PAYMENT—RECOVERY.

On September 13, 1884, plaintiff loaned the defendant a bank check for \$235, drawn by him on his bank at Littleton, with the understanding and agreement that the defendant should on the following Wednesday deposit the same amount of money to the credit of plaintiff in said bank. On September 30th he loaned defendant another check for \$225, drawn by him on the same bank and under substantially the same circumstances as with regard to the first check. At the time of the loan of the second check defendant told plaintiff that he had paid the amount of the first check into the bank. Plaintiff had on deposit in the bank an amount more than sufficient to pay the first check at the time it was drawn, but had not enough to his credit to pay both checks, or either of them, when they were presented to the bank for payment, and both were protested. Defendant deposited no money in the bank to plaintiff's credit, as he had agreed to do, and plaintiff was obliged to pay the amount of the checks to the rightful owners of them; but he did not do this until some time after he brought this suit.

Held, As to the checks, the case stands as it would if the plaintiff had loaned the defendant a like amount of money. Having treated and used the checks as money the defendant is chargeable for them as money. (Matthewson vs. Powder Works, 44 N. H., 289, and cases cited; 4 Wait Act. & Def., 470, 472, 474.) In this view it is immaterial whether the plaintiff paid the checks before or after the suit. They were simply evidence of the defendant's

indebtedness to him which might be procured after suit as well as before without in any way affecting the rights of either party. The test is not the time when the checks were actually paid, but whether the loan of them to defendant upon the agreement and under the circumstances detailed in the Referee's report gave the plaintiff a cause of action against him at the date of the writ; and that it did we are entirely satisfied.

Judgment for plaintiff.

Hilliard vs. Bothell, Supreme Court of New Hampshire, March 11, 1887.

**PROMISSORY NOTE—CONTRACT OF CORPORATION—LIABILITY OF PARTIES
INDORSING NOTE BEFORE DELIVERY TO THE PAYEE—PAROL EVIDENCE.**

Action on the following promissory note executed by the Houston Flour Mills Co., D. P. Shepherd, President, and indorsed by Shepherd and Latham before delivery to the payee :

HOUSTON, Texas, August 20, 1885.

One year (with privilege of two) after date we promise to pay to the order of Dr. D. F. Stuart five thousand dollars (\$5,000), at our office in Houston, Texas, with interest at the rate of ten per centum per annum from date until paid, interest payable semi-annually.

(Signed) Houston Flour Mills Co., D. P. SHEPHERD, President.

Held, That the note was the separate obligation of the corporation, and not the joint promise of the corporation and the individual who signed it as president.

Further *Held*, This being the nature of the contract between the payee and the corporation, the question is, what is the character of the obligation assumed by Shepherd and Latham when they placed their names upon the back of the note? This was done before delivery and their names appear before that of the payee on the back of the instrument. In such cases the obligation assumed is considered open to explanation by parol evidence and may be proved to be of any character consistent with the nature of the transaction. (9 Tex. 615; 11 Mass. 431.) When the proof is not otherwise our decisions seem to treat such indorsers as original promisers or sureties, entitled to the same rights and subject to the same liabilities. (14 Tex. 275.) The proof in this case shows that Shepherd and Latham did intend in indorsing the note to become sureties for its payment by the corporation. We have then the case of the note of one individual indorsed by two sureties and the question for determination is, what is the liability of these parties to the payee? If the note were the obligation of a natural person, and the promise were made in the singular number and the names of two sureties were signed to it along with the principal it would be the joint and several note of three makers. (1 Dan'l Neg. Inst. Sec. 94.) If the note purported on its face to be what the law construes it to mean, i.e. the individual contract of the Houston Flour Mills Co., and the names of Shepherd and Latham were signed to it as sureties, a like construction would be given to the instrument for in this respect there can be no distinction drawn between natural and artificial persons.

With the present reading of the note, were the names of other parties, whether sureties or principals signed to it in addition to that of the corporation, the note might be construed as joint only. But while the indorsement of a note by a stranger may subject the indorsers to as great a liability as if there names were written at the foot of it, such an indorsement does not change or modify the obligation assumed by the principal on the face of the instrument. His contract is evidenced by the language of the note. The contract of the irregular indorsers is what may be written above their names consistently with the transaction. What may be there written is that which the law implies from the indorsement or which the parties have agreed on as to the liability of the indorsers. This cannot affect the individual liability of the maker, for what he has agreed to do is written in the note itself and is not inferred to be different by reason of any contract, either express or implied, made between others, and contained in another writing, or resting in parol. It is on the ground that the contract of the indorsers is not to be found in the note alone

that it is held subject to proof by extrinsic evidence. If parol testimony is admissible to show that by reason of the indorsements of the sureties the maker is not liable to the same extent, in the same manner, or in the same capacity as the note fixes his liability, then his written contract is varied by parol evidence which is against a cardinal principle of law. If two or more parties make a joint and several note and two others indorse it with an agreement either verbal or written that the makers shall be only jointly bound with them for its payment, this would not affect the several character of the note. If one party makes a note and another indorses it, they in law become jointly and severally liable for its payment. (Good *vs.* Martin, 95 U. S. 91.)

But suppose the indorsers should contract that their liability should be joint only, we think this would not release the maker from his several liability. It is perfectly plain that this could not be done by parol or by implication in either of the supposed instances which is sufficient for the purposes of this case. The present note being the individual contract of the corporation was not changed by the indorsement of Shepherd and Latham into a joint contract of these parties and the corporation. The pronoun "we," which by the terms of the note—these being the terms of the contract between the company and the payee—meant the company alone cannot have a different meaning given to it by reason of any implication assumed by the sureties alone. It must still be referred to the party signing the note and not to it as well as to others whose contract it does not fully establish. The indorsers did not intend to be embraced within the term "we" but to bind themselves as in the case of irregular indorsers upon the note of a single individual. They did not propose to vary the obligation of the principal had it been in their power to do so from an individual note to that of one made jointly with another, but their intention was to become severally as well as jointly bound with the principal as certainly as if such had been the agreement written above their names. This was the effect of the contract.

Latham *vs.* Houston Flour Mills Co., Supreme Court of Texas, March 11, 1887.

DIVIDENDS BY SAVINGS BANKS—INTEREST MATURED BUT NOT ACTUALLY COLLECTED, THOUGH FULLY SECURED, CANNOT BE TREATED AS SURPLUS PROFITS—THE MEANING OF "SURPLUS PROFITS" CONSIDERED.

Defendant, a banking corporation existing under the laws of California, was incorporated on June 18, 1862, under an Act entitled "An Act to provide for the formation of corporations for the accumulation and investment of funds and savings" approved April 11, 1862. The Act provides for the formation of corporations "for the purpose of aggregating the funds and savings of the members thereof and others, and preserving and safely investing the same for their common benefit." Corporations thereunder are authorized to loan and invest their funds, receive deposits of money, loan and invest the same, collect the same with interest, and "repay such deposits without interest or with so much of the earnings and interest as the by-laws of the corporation may provide." They may make by-laws prescribing the conditions upon which deposits shall be received and the time and manner of dividing the profits. Section 10 of the Act provides that "it shall not be lawful for the corporation or the Directors to make any dividends except from *surplus profits* arising from the business of the corporation; and the Directors shall at such times and in such manner as the by-laws shall prescribe, declare and pay dividends of so much of the profits of the company and of the interest arising from the capital stock and deposits as may be appropriated for that purpose by the provisions of the by-laws."

The by-laws of the defendant provided that "at the expiration of every six months ending 30th of June and 31st of December each year, the Board of Directors shall ascertain the net profits of the corporation and shall determine the amount to be appropriated for a general dividend."

During the six months commencing June 30, 1883, the surplus profits arising from the business of the corporation including the interest arising from its capital stock and deposits amounted to the sum of \$280,092. In this amount of surplus profits, and as a part thereof, was included *first* the sum of

\$5,825, for interest which had accrued for the months of November and December in the year 1883, upon the coupon bonds of the United States held by the defendant but which by the terms of said coupons were not payable until February 1, 1884; and *second*, the sum of \$23,917 for interest which had matured since June 30, 1883, but which had not been collected, upon a portion of the loans made by the defendant upon real estate security. The value of the real estate held by the defendant as security for these loans was more than double the amount of the respective loans and the matured interest thereon.

By the conditions of each of these loans it was provided that in case the interest thereon was not paid as it matured, it should be added to the principal sum and be secured by the real estate which was given as security for the principal sum and should thereafter bear interest at the same rate as the principal sum. The defendant being about to declare a dividend from the profits arising from its business during the six months ending December 31, 1883, expressed its intention to include in the amount which it should appropriate for that purpose its surplus profits aforesaid, amounting to the sum of \$280,092 including therein the aforesaid sum of \$5,825 for interest which had accrued upon the aforesaid coupons or bonds of the United States but which would not be payable until February 1, 1884, and also the aforesaid sum of \$23,917 for interest which had matured since the 30th day of June, 1883 (but which had not been collected) upon the loans made and secured as aforesaid. The "Bank Commissioners" objected to the action of the bank in including these sums and this action is the result.

Held. The question in difference and point of controversy upon which the decision and judgment of the Court is sought is the following: "Is the defendant authorized by law to appropriate and pay as a dividend to its stockholders and depositors on the profits arising from its business any portion of the interest upon its loans and investments that may have matured or accrued but which have not been actually collected and received in money."

What are the *surplus profits* arising from the business of the corporation? The word "profits" signifies an excess of the value of returns over the value of advances. The excess of receipts over expenditures, that is, net earnings (15 Minn. 519.) The receipts of a business deducting current expenses; it is equivalent to net receipts (94 U. S. 500.) In commerce it means the advance in the price of the goods sold beyond the cost of purchase. In distinction from the wages of labor it is well understood to imply the net return to the capital or stock employed, after deducting all the expenses, including not only the wages of those employed by the capitalist, but the wages of the capitalist himself for superintending the employment of his capital stock. (Adam Smith, "Wealth of Nations," Book 1, C. 6; Mill, Pol. Econ. C. 15.) The "rents and profits" of an estate, the "income" or "net income" of it—are all equivalent expressions. (5 Me. 202; 35 Me. 420.) Profits are divided by writers on political economy into gross and net, the former being the entire difference between the value of advances and the value of returns, and the latter so much of this difference as arises exclusively from the capital employed.

In *People vs. Board of Sup'rs Niagara Co.*, 4 Hill, 20, Bronson J. said: "It is undoubtedly true that *profits* and *income* are sometimes used as synonymous terms, but strictly speaking *income* means that which comes in or is received from any business or investment of capital without reference to the outgoing expenditures, while *profits* generally means the gain which is made upon any business or investment when both receipts and payments are taken into account. *Income* when applied to the affairs of individuals expresses the same idea that *revenue* does when applied to the affairs of a State or nation."

In *St. John vs. Erie R. Co.*, 10 Blatch, 271, it was said: "Net earnings are properly the gross receipts, less the expense of operating the road or other business of the corporation. Interest on debts is paid out of what thus remains, that is, out of the net earnings. Many other liabilities are paid out of the net earnings. When all liabilities are paid either out of the gross receipts or out of the net earnings the remainder is the profits of the shareholders."

Under these definitions it is not easy to comprehend how *profits*, or *surplus profits*, can consist of earnings never yet received. The term imports an excess of receipts over expenditures, and without receipts there cannot properly be said

to be profits. Money earned as interest, however well secured, or certain to be eventually paid, cannot in fact be distributed as dividends to stockholders, and does not constitute *surplus profits* within the meaning of the statute. To hold the contrary would, we think, tend to open the door to a practice under which the assets of corporations would be liable to distribution as dividends upon no surer basis than the judgment of their Directors as to the value of their bills receivable. Such is not and should not be the policy of the law.

The capital and all the assets except surplus profits are to be retained intact and form a fund to which creditors of the corporation have a prior right over stockholders. If some portion of this fund may be distributed in lieu of interest earned, but not collected, then cases may arise in which all of it may be so distributed—a practice which we deem subversive of the essential principles upon which corporations of this character are organized and under which practically the rights of creditors *might* be greatly impaired. The fact that the defendant has security for the interest due does not make the unpaid interest a profit. Until paid in, it is not money in hand. Contingencies may arise to prevent its being realized. It is time to distribute this interest when it is actually received by the bank.

Judgment for plaintiff.

People vs. San Francisco Sav. Institution, Supreme Court of California, March 28, 1887.

INDORSEMENT OF NEGOTIABLE NOTES HAVING LONG TIME TO RUN—DEATH OF INDORSER BEFORE MATURITY—HOLDER CANNOT PROVE CLAIM AGAINST INDORSER'S ESTATE UNTIL NOTES HAVE MATURED AND BEEN DISHONORED BY MAKER.

(The holder of undue negotiable notes having a long period to run, the indorser on which having died, has no valid claim against the estate of such deceased indorser thereon until the notes have matured and been dishonored by the maker, even though the date of maturity does not arrive until after the expiration of the time allowed by law for proving claims.)

On January 1, 1881, at Terre Haute, Ind., S. H. Kisner executed six notes of that date, one for \$500 and five each for \$700, payable respectively in five, six, seven, eight, nine and ten years after date to the order of C. R. Stevens and by the latter indorsed to the plaintiff. Each of the other notes, except the amount and the date of maturity, is the same as the note for \$500, a copy of which is as follows :

\$500.

TERRE HAUTE, Ind., January 1, 1881.

Five years after date I promise to pay to the order of Clement R. Stevens at P. Shannon's Bank, Terre Haute, Ind., five hundred dollars, value received, without any relief from valuation and appraisement laws, with interest at eight per cent. per annum until paid, and attorney's fees. The drawers and indorsers severally waive presentment for payment, protest and notice of protest and non-payment of this note. Interest payable annually. No. 5. SAMUEL H. KISNER.

(Indorsed) "C. R. STEVENS."

C. R. Stevens, the indorser, died, and plaintiff, the owner of the notes, filed his claim for \$4,433.33, being the full amount of the notes, after giving credit for one year's interest against the estate of Stevens, in the County Court of Clark County, Illinois, on September 27, 1883, after the adjustment term selected by the administrator had passed. On April 5, 1884, the County Court disallowed the claim and rendered judgment for costs against plaintiff. The case being taken on appeal to the Circuit Court of Edgar County, judgment was rendered against the estate on October 4, 1884, for \$560, being for the amount of interest then due, it being payable annually. The Court refused judgment on the principal of the notes, and adjudged costs against plaintiff. The judgment of the Circuit Court was affirmed by the appellate Court. On appeal to the Supreme Court of Illinois,

Held : The question presented is whether the notes were a valid claim against the estate of the indorser at the time they were filed. Under our statute demands or debts against the estates of deceased persons must be exhibited

within two years from the granting of letters of administration. In this case when the notes were filed they were not due by their terms and could not become due until after the expiration of the two years. The maker of the notes was alive when the claim was filed and so far as appears to the contrary when the judgment was rendered. The notes were executed in Indiana and are payable in that State. They are, therefore, to be construed according to the laws of Indiana. Section 6 of Chapter 177 of the Revised Statutes of 1876 of Indiana, which is re-enacted as Section 5506 of the Revised Statutes of 1881 of that State, is as follows: "Notes payable to order or bearer, in a bank in this State, shall be negotiable as inland bills of exchange, and the payees and indorsers thereof may recover as in case of such bills." The notes in question are payable to order in an Indiana bank. Accordingly they belong to the class of notes referred to in the section here quoted, and are to be regarded as commercial paper governed by the rules of the law merchant. "Where the law merchant prevails, the indorsement of a bill or note in blank or in full, without restriction or qualification, passes the interest and property therein to the indorsee, and is an undertaking that the bill or note shall be duly honored, and that if it is not and the indorser has due notice of the dishonor, he will pay the amount to the indorsee. * * * A right of recovery accrues against the indorser as soon as the bill or note becomes due in compliance with the conditions precedent to his liability, namely making due presentment for payment, and giving to the indorser due notice of non-payment; or in case of a foreign bill, having it duly protested and notice thereof given to the antecedent parties." (Edw. Bills, Sec. 384, 385.)

The several undertakings involved in the engagements of the indorser "are all resolvable into one; namely, that he will pay the note if the maker does not, and he is properly notified of the non-payment." (*Id.*)

Notice of non-payment is expressly waived in the body of the notes involved in this suit, and the Supreme Court of Indiana has held that such a contract, if waived in a note, is valid, and the indorsers are affected by it. (*Lowry vs. Steele*, 27 Ind., 168; *Rooker vs. Morris*, 61 Ind., 286.) But the fact that the indorser waives notice of non-payment does not make his contract any the less conditional in its character. He is not liable unless the note is due and unless it is unpaid by the maker when it is due. It follows from these suggestions that the notes were not properly presented as a claim against the estate of Stevens. His contract was to pay them if, when they became due, Kisner did not pay them. When they were filed the conditions had not been met; the failure of Kisner to pay at maturity had not yet transpired.

In support of the contention that the notes were a valid claim, reference is made to Section 67 of Chapter 3 of our Revised Statutes, entitled "Administration," which provides that any creditor whose debt or claim is not due may file the same * * * and shall be entitled to a dividend out of the decedent's estate. Undoubtedly a note may be filed and allowed against the estate of the deceased maker thereof, in advance of its maturity, after deducting the rebate of interest as provided in Section 67. This is so for the reason that the liability of the maker is absolute and unconditional. That of the indorser, however, is contingent upon the failure of the maker to pay at maturity and cannot be enforced until after the happening of the contingency. Hence the section referred to is not applicable to this case. Judgment of Appellate Court affirmed.

Dunnigan vs. Stevens, Supreme Court of Illinois, March 23, 1887.

INCORPORATION OF BANK—NON-COMPLIANCE WITH CONDITIONS AS TO CAPITAL AND TIME—FORFEITURE.

An Act to incorporate the "Kendall County Banking Company," whose name is claimed to have been changed on June 1, 1872, to the "National Savings Bank," was passed by the Legislature of the State of Illinois on March 29, 1869. The tenth section of the Act was as follows: "This Act shall be void unless said corporation shall organize and proceed to business within two years after the passage of this Act." The third section of the Act provided as

follows: "The capital stock of said corporation shall be \$50,000, with power to increase the same to \$150,000, and shall be divided into shares of \$100 each," etc. On August 2, 1870, one person subscribed for ninety-five shares and five persons each for one share, making a total subscription of \$10,000, which was paid in on that day in money. No more capital was subscribed or paid for until November 24, 1885.

Held, The terms of the charter are as positive as they are explicit that the capital stock "shall be" \$50,000. Until all the capital stock was subscribed the company had no authority to commence doing business. Having failed to get more than one-fifth of the required subscriptions during the two years, it was of course unable to "proceed to business" within that period in accordance with the tenth section of the charter. It follows that after March 29, 1871, the Act in question became void.

People, *ex rel* Hunt, Attorney-General vs. National Savings Bank, Supreme Court of Illinois, March 22, 1887.

INDORSEMENT OF NOTES IN ILLINOIS AND DELIVERY IN MISSOURI—IS INDORSEMENT AN ILLINOIS OR A MISSOURI CONTRACT?—THE LAW OF PLACE AS GOVERNING THE CONTRACT OF AN INDORSER DISCUSSED BY THE SUPREME COURT OF KANSAS.

Defendant in Illinois indorsed certain notes and placed them in the hands of her husband for negotiation. He carried them to Missouri where he sold and delivered them to one Dunbar. The notes were negotiated through several hands to the plaintiff, and being dishonored he sued defendant upon her contract of indorsement. The notes were never protested and defendant never received notice of their non-payment. Under the law of Illinois no protest or notice was necessary to fix the liability of the defendant as indorser, but under the law of Missouri protest and notice was required. The question presented for determination was whether the indorsement of the notes by the defendant was an Illinois or a Missouri contract.

Held, We think the law of Missouri must control. The indorsement upon the back of the notes by the defendant at her residence in Illinois, where she placed them in the hands of her husband for negotiation, did not operate to transfer the notes or to complete the contract of indorsement. The indorsement of a note or bill is not completed until the instrument is delivered to the indorsee or put under his legal control. The husband carried the notes into Missouri where he sold and delivered them to Dunbar. Until that time the notes were in the control of the defendant and the transfer or contract of indorsement was not completed until then. The indorsement is a separate and substantive contract and is not necessarily controlled either by the place of payment named in the notes or by the residence of the indorser. The general rule is that contracts of this character are to be construed and their effect determined according to the law of the State in which they are made, unless it appears that they are to be performed in or according to the laws of another State.

In *Prentiss vs. Savage*, 13 Mass., 22, Parker, C. J., in commenting upon this rule, said that "it seems to be an undisputed doctrine with respect to personal contracts that the law of the place where they are made shall govern in their construction, except when made with a view to performance in some other country, and then the law of such country is to prevail." The Supreme Court of Indiana, referring to the liability of the indorser, states "that the indorser promises upon certain conditions which are not expressed in the contract of indorsement, but which are implied by law, that he will pay the note, but not that he will pay it at the place named in the note for payment. His promise is general for the payment of the note upon the implied conditions, and such general promise, not specifically to be performed elsewhere, is governed by the *lex loci contractus* which must determine the conditions upon which he is to be held liable." (*Hunt vs. Standart*, 15 Ind., 83.)

Judge Story supposes a case where a negotiable bill of exchange is drawn in Massachusetts on England, and is indorsed in New York, and again by the first indorsee in Pennsylvania, and by the second in Maryland, and the bill is

dishonored, the law relating to damages in these States being different; and the inquiry is made, what rule is to govern with respect to damages? He says: "The answer is that in each case the *lex loci contractus*. The drawer is liable on the bill according to the law of the place where the bill was drawn, and the successive indorsers are liable on the bill according to the law of the place of their indorsement, every indorsement being treated as a new and substantive contract." (Story Conf. Laws, Sec. 314.)

The authorities supporting this doctrine are uniform and numerous, a few of which may be cited. (12 Wend., 439; 3 Conn., 253; 13 Mass., 4; 2 Scam., 465; 9 N. Y., 279; 18 La. Ann., 257; 12 N. H., 49; 5 Blackf., 240; Dan'l Neg. Instr., Sec. 867, 868.)

The plaintiff contends that the fact that the parties to the indorsement were all residents of the State of Illinois and the circumstances under which the transfer was made in St. Louis, take the case out of the general rule which we have been considering. It is urged that the parties were temporarily in Missouri, and being citizens of Illinois are presumed to have contracted with reference to the laws of that State with which they were familiar, and not according to the laws of Missouri where they happened to be. We are referred to the case of *Vanzart vs. Arnold*, 31 Ga., 210, as an authority for this position. That was a case where the makers and indorsers of a note resided in Georgia, and the indorsements were made and delivered in Tennessee to the agents of the plaintiffs, who were residents of New York. It was claimed that it was a Tennessee contract, but the Court ruled that it being known and understood that the indorsers resided in Georgia, and were in Tennessee for the sole purpose of effecting negotiations, and as matter of convenience, and the plaintiffs' agents only happened to be in Tennessee at the time of the transfer, all the parties must be deemed to have contemplated Georgia as the place of performance and to be governed by its laws. Our attention is also called to a case supposed by Mr. Daniels, in his work on "Negotiable Instruments," at Section 876, of a business transaction between a Virginian and a Kentuckian who were transiently in California, and that the former should accept the bill of the latter, payable in the future, but not expressly at any particular place, and he raises the question whether it would be deemed a Virginia or a California acceptance. He says: "The criterion to apply would be whether or not the acceptance was to be paid in California or in Virginia. If the Virginian were *in transitu*—that is, merely there for a particular negotiation or for convenience, or merely casually passing through the State without any local business established there—the single transaction would be governed by the law of his domicile, where it is presumed he would be, and where it is presumable he would discharge his obligation at maturity, but otherwise the law of California would govern."

Judge Story says that some jurists have adopted the opinion that where a contract is made between foreigners belonging to the same country who are not domiciled, but are merely transient persons in the place where the contract is made, it ought to be governed by the laws of their own country. He then proceeds: "Without undertaking to say that the exception may not be well founded in particular cases as to persons merely *in transitu*, it may unhesitatingly be said that nothing but the clearest intention on the part of foreigners to act upon their own domestic law in exclusion of the law of the place of the contract ought to change the application of the general rule." (Story Conf. Laws, Sec. 273.)

The facts of this case do not bring it within any of these or the other authorities cited by the plaintiff. It is true defendant and her husband, as well as Dunbar to whom the notes were sold, were residents and citizens of Illinois, but there was nothing in the language of the indorsement or the circumstances of the case to show that they contracted with reference to the laws of Illinois. The husband was a conductor on a railroad running into St. Louis, Missouri. That city was the end of his run and also his headquarters. Dunbar was also a passenger conductor on a railroad, and his route was from Louisiana, Missouri, through Illinois, to St. Louis, Missouri. His headquarters were in St. Louis, and he kept some of his valuable papers in a bank or safe deposit in that city. They met in St. Louis, the headquarters of both when not in

charge of their trains, without any previous arrangement that they should so meet, and the notes were then transferred. They were not transiently in Missouri, nor did they go there for the sole purpose of making the contract as was done in the Georgia case. Neither were they *in transitu* or merely casually passing through the State of Missouri without a business established there, like the case supposed by Mr. Daniels; and as stated by Judge Story: "Nothing but the clearest intention on the part of foreigners to act upon their own domestic law in exclusion of the law of the place of the contract ought to change the application of the general rule." Much of their time was necessarily spent in St. Louis, and in fact that city may be said to have been their place of business. The contract of indorsement was actually made in Missouri; and under the circumstances mentioned it cannot be said that it was made in contemplation of the Illinois law, or that the parties intended that it should be interpreted and their liability determined by the laws of a State other than that where the contract was entered into.

Judgment for defendant.

Briggs vs. Latham, Supreme Court of Kansas, March 4, 1887.

DUE BILL PAYABLE ON DEMAND—STATUTE OF LIMITATIONS.

Action to recover the amount of the following due bill:

NOVEMBER 13, 1868.

I have in my hands to the credit of John Boustead, executor of Sarah and also of James Boustead, thirty-one hundred and eight dollars, 38-100, payable to him as such executor on demand with interest at six per cent. until paid.

Held, The plaintiff declared on a "promissory note or due bill." It is payable on demand. It is therefore evidence of a present debt. It is due and demandable immediately. The commencement of a suit is a sufficient demand. No demand is necessary as a condition precedent to a right of action. (99 Pa. St., 421; *Id.*, 488; 107 Pa. St., 352.) It follows that this due bill on its face was barred by the statute of limitations before suit was brought.

Boustead vs. Cuyler, Supreme Court of Pennsylvania, April 4, 1887.

POWERS OF BANK CASHIERS.

Continued from page 602, June number of the JOURNAL.

XVIII. Power to Bind the Bank by Declarations and Admissions.—The Cashier of a bank has power to bind it by declarations made to persons dealing with the bank relating to matters which fall within the scope of his ordinary duties, but he possesses no incidental authority to make any declarations binding the bank not within the scope of his ordinary duties; as if the Cashier should promise to pay a debt that the bank did not owe and was not liable to pay, or should admit forged bills of the bank to be genuine, the bank would not be bound by such promise or admission unless it had authorized or adopted the act. (3 Gill, Md., 96; 17 Mass., 1.)

The Cashier has power to bind the bank by a declaration to a party dealing with it that a note held by it has been paid, although the statement is erroneous. Thus should a person standing in the position of surety on a note make inquiry of the Cashier and be informed that the note on which he was liable had been paid or satisfied, and acting upon this information should give up security which he held of the principal debtor, or indorse additional paper for him, or neglect to take means at hand to secure himself, the bank would be bound by this statement and would be estopped to deny that the note was paid. It is the duty of the Cashier to receive payment of notes and to keep an account of such payments, and consequently he is the proper person to whom to apply to ascertain whether a note has been paid or not; and it is peculiarly within the scope of the business confided to him to give such information. (51 N. H., 116; 5 Neb., 527; 8 Neb., 205; 1 Dev., 454; 35 Vt., 476.)

An opposite view, however, has been taken by the Supreme Court of Maine (87 Me., 519; two judges dissenting), who hold that the declaration of a

Cashier of a bank that a note had been paid is not properly admissible in evidence, as it is not any part of the duty of a Cashier to give information respecting the past transactions of the bank to those dealing with it. This conclusion is reached by applying the general rule of agency that while the declarations, representations, or admissions of an agent authorized to make a contract, made as inducements to or while making the contract are admissible as against the principal; and are also admissible as evidence against him when made by his agent accompanying the performance of any act done by him, such declarations are not admissible and do not bind the principal when not made as before stated, but at a subsequent time.

This doctrine, however, when applied to a statement so made by the Cashier, is opposed to the weight of authority before shown, which is to the effect that the giving of such information falls within the scope of the ordinary duties of the Cashier, and is thus binding on the bank.

But where the Cashier gives false information in a case where he is under no obligation to give any information, the rule is different and the bank is not bound, even though such information may be acted upon. An instance, illustrative of this rule, is afforded by the case of *Mapes v. The Second National Bank of Titusville*, 80 Pa. State, 168. In that case the bank sued Mapes Brothers on two notes made by P. W. Garfield, a depositor, to the order of Mapes Brothers, which were indorsed by the latter for the accommodation of Garfield and discounted by the bank. Mapes Brothers interposed a defense alleging that before they indorsed the first of the notes for the accommodation of Garfield, they took the precaution to inquire of the Cashier and of one of the Directors of the bank as to the financial condition of Garfield, and whether or not it would be safe to indorse for him, and that they were informed by the Cashier and Director that they considered Garfield perfectly good financially, and that the defendants would be safe in indorsing for him. Thereupon they indorsed the notes for his accommodation, relying on these representations. That in fact Garfield was insolvent and largely indebted to the bank for borrowed money, and this fact was known to the Cashier and Director when the information was given by them. Defendants claimed that by reason of these false and fraudulent representations on the part of these officers of the bank whereby they were misled, they could not be held liable on the notes indorsed by them. The Court, however, held that the declaration, even admitting it to be wilfully false, was not binding on the bank as it was not made by the Cashier and Director in the course of their duties as officers or agents, it not being part of the ordinary duty of a Cashier or of a Director to give information concerning the financial standing of its customers.

The place where a declaration is made by the Cashier is sometimes of importance in determining whether it is binding on the bank. Thus in *Merchants' Bank v. Rudolf*, 5 Neb., 527, it is said that statements made by the Cashier of a bank at casual meetings away from the bank building to the effect that a note held by it was paid, or nearly so, have never been held to bind the bank; while in *Houghton v. First National Bank of Elkhorn*, 26 Wis., 668, where a Cashier away from the bank and in another city, was shown a note bearing his indorsement and he replied that it was "all right," the Court held that the fact that the representation was made away from the bank building made no difference; that the party to whom it was made had a right to rely upon such representation, and that it was competent evidence against the bank that the note was properly indorsed.

Whether the statements of a Cashier must be made at the counter of the banking house in order to bind the bank, or whether they are just as binding if made elsewhere, will probably depend upon the character of the information given. If it be such as can only be given accurately by reference to the accounts and records of the bank, it is probable that a casual statement made away from the bank by the Cashier, without the means at hand of refreshing his recollection or reaching a correct conclusion, would not be regarded as admissible against the bank. On the other hand, as in the Wisconsin case above cited, if the information is of such a character that the statement may be made with as great accuracy outside of as within the banking house,

the fact of its being made in a place other than the office of the bank would not be material.

LAW NOTES AND COMMENTS.

TAXATION OF NATIONAL BANK SHARES IN NEW JERSEY NOT INVALID.—The Supreme Court of the United States in the suit of the National Newark Banking Co. *vs.* The Mayor of the City of Newark brought to enjoin the collection of taxes assessed upon the individual shareholders therein on the ground that, according to the laws of New Jersey under which the assessment was made, the rate of taxation is greater than that assessed upon other moneyed capital in the hands of the individual citizens of the State, have held (April 4, 1887) that there is no material difference between the legislation of New Jersey on this subject and that of New York, as considered in the case of the Mercantile National Bank of New York *vs.* The Mayor, etc., of New York (reported in the May, 1887, JOURNAL at page 484), and that this case is therefore necessarily governed by the decision in that. A bill to enjoin the collection of the taxes was therefore dismissed.

THE CASE OF THE FIRST NATIONAL BANK OF BUFFALO—LIABILITY OF ITS DIRECTORS CONSIDERED.—The Circuit Court of the United States for the Northern District of New York has rendered an elaborate opinion in a suit by the Receiver of the First National Bank of Buffalo against the Directors of that institution (Morris, Rec'r *vs.* Lee and o'rs; decided March 23, 1887) to hold them liable in damages for heavy losses growing out of reckless discounting and mismanagement by the President, Lee, which resulted in the failure of the bank. The opinion contains several points of interest as bearing on the duties and liabilities of bank Directors, and while owing to its length we cannot print it in full, we will endeavor to extract from it the principal matters of value.

The First National Bank of Buffalo was organized in 1863 with a capital of \$100,000. At its annual meeting of shareholders held January 11, 1881, Charles T. Coit, R. Porter Lee, Thomas W. Cushing, John H. Vought, and George Coit were elected Directors. They took the oath of office required by law and chose Charles T. Coit as President, and R. Porter Lee as Cashier. George Coit died, and on May 20, 1881, the rest of the Directors filled the vacancy caused by his death by electing Francis E. Coit a Director in his place, who took the required oath of office. Mr. Cushing sold his stock by bargain made at the bank to Charles T. Coit, the President, on September 24, 1881, at the price of \$125 per share, to be paid and transfer to be made afterwards. In consequence of this trade he then and there, so far as he could by words, resigned his office of Director to the President, and never afterwards assumed to be or act as a Director. The health of the President became poor; and at a meeting of the four Directors including himself remaining after the withdrawal of Cushing, he stated that fact and that he desired to be relieved somewhat of his official duties, whereupon they voted that he be given leave of absence for such intervals and at such times as he might see proper, for one year from that date, which was October 3, 1881. They then chose the Cashier, R. Porter Lee, Vice-President, and Theodore W. McKnight as Assistant Cashier. The bank then had an apparent surplus of \$50,000 and undivided profits to the amount of \$24,277.03, which so far as the record showed was real. Mr. Charles T. Coit paid Cushing for his stock at the price agreed upon on October 7, 1881, and took a transfer of the certificates signed in blank, which was entered on the books of the bank in November as made September 24, 1881. Charles T. Coit sold most of his stock, 510 shares, to Lee; was absent from the bank on account of his health, and took no part in its management afterwards. He died December 11, 1881. The control and management of the bank was left to Lee, who used its funds in the form of discounts to his associates in business and speculations until great losses were incurred. Prior to the annual election in 1882, he spoke of the vacancies in the Board of Directors to Spaulding, one of the defendants in the present suit.

and also to the defendant Johnson, and proposed to transfer stock to them, and that each should become a Director. Spaulding was President of another National bank, and connected with other corporations, and did not wish to assume new responsibilities, and so told Lee, but consented to the arrangement, and Johnson did likewise. At the annual meeting on January 10, 1882, Spaulding, Johnson, Francis E. Coit, Vought and Lee were elected Directors and took the oath of office as required by law. Lee was chosen President, and McKnight was elected Cashier. The control and management of the bank was left to Lee as before. On January 19, 1882, Vought sold his stock to Lee, and did not act as Director afterwards. Spaulding was engaged with his other business, the family of Johnson was sick and his son died, and neither of them did anything about the management of the bank. Coit went once and looked over the loans and discounts. Lee stood well in the community as a man of honor and integrity, as financier and bank Manager, and neither of them had any suspicion that the affairs of the bank were not being well and faithfully attended to by him. Lee sent a request to Spaulding on April 11, 1882, for the return of the stock transferred to him, and Spaulding signed a transfer on the back of the certificate and returned it in pursuance of an understanding between them that he would return it on request, and as he supposed ended his connection with the bank. The bank stopped business April 13, 1882, and was soon afterwards placed in the hands of a Receiver. The whole capital, surplus, undivided profits and reserves were gone, and the individual liability of the stockholders would not pay the depositors. The losses incurred amounted in all to more than \$600,000. The Receiver thereupon brought suit to charge the Directors who were living and the estates of those who were dead with the amount of such losses.

In considering the liability of the Directors for these losses, the Court first takes up and considers separately the case of Thomas W. Cushing. Cushing interposed a defense among other things that he was not a Director at all, and therefore owed no duty in that behalf at the time when the alleged losses took place. The Court holds in his case that whether he was or not depends upon the effect of what occurred about the sale of his stock and resignation. He bargained for its sale on September 24, 1881, and orally resigned his office of Director so far as he so could to the President of the bank, in his place of President at the bank. This was prior to the time of any of the losses as alleged. He delivered the stock certificate with authority to transfer on the 7th of October following and received his pay for it. The Court states that this may have been after some of the losses occurred, and that therefore the transaction of September 24th may be of importance. Speaking of this transaction the Court says: "The statute provides that every Director must own in his own right at least ten shares of the capital stock of the association of which he is a Director; and that any Director who ceases to be the owner of ten shares of the stock shall thereby vacate his place. (U. S. Rev. Stat., Sec. 5,146.) The purpose of this statute obviously is to require the office of Director to be kept in the hands of those who are personally and pecuniarily interested in the affairs of the bank. When Cushing bargained his stock he ceased to be so interested. Good faith to the other shareholders as their interests were guarded by these provisions of the law, would seem to require that he should then cease to be a Director. He appears to have taken this view and to have done what he could to carry it out. There was no calamity impending or contemplated by him to be avoided by vacating his office or which he could prevent by retaining it. There was no reason why he should not resign if he could. He was an officer elected to his place; it was an office that he was not obliged to accept, and it would seem to be one that he was not obliged to hold. (U. S. *vs.* Wright, 1 McLean, 509; *People vs.* Porter, 6 Cal., 26; *Olmsted vs.* Dennis, 77 N. Y., 378.) No mode of resignation was provided by law, and an oral one would be as good as any. (*Rex vs.* Mayor of Rippon, 1 Ld. Raym., 563.) The President was the head of the Board of Directors who alone could fill the vacancy, and a resignation to him would be a resignation to the Board. (*Port Jervis vs.* First National Bank, 96 N. Y., 550.) The statute provides that the Directors shall be elected at meetings to be held on such day in January of each year, as shall be specified in the articles

of association, and that they shall hold office for one year and until their successors are elected and have qualified. (Sec. 5,145.) It is urged that this section prohibits resignation during the year. This is not understood, however, to be its effect. The apparent purpose of the provision in regard to the term of office is to make it conform to the time of the new election, and not to absolutely require every Director to serve the full term. Such provisions as to terms of office are common for this purpose. It is said in argument that if he might resign he would not be relieved from duty until his place should be filled by the remainder of the Board; and that if they would not fill it without, it would be incumbent on him to compel them by *mandamus* or other appropriate proceeding to fill it. But until he had vacated his place there would be no vacancy which they could fill; and when he had sold his stock he would be out of the corporation and would have no interest or standing upon which to institute any proceedings whatever to affect the conduct of its affairs. The interests of the corporation would be left with the other Directors elected by the stockholders, whose duty it would be, and on whom the stockholders had relied, to fill the vacancy or act upon it as they should be advised." The Court states that upon these considerations it appears that Cushing was not a Director at the time of the alleged losses, and cannot be held for any duty as such at that time.

The case of Charles T. Coit is next taken up and considered by the Court, who state that this case, like that of Cushing, stands upon a different footing from any of the others. His health was failing him so that he was being disabled for the performance of the duties of his office. He had owned more than half the stock up to near that time, and so far as appears had been diligent and faithful in the performance of all his duties. Of his associates in the Board, Vought had been Director since 1875, Lee since 1877, and Francis E. Coit then since the May previous, and for several years at a time previous, and all were in good repute. The Court holds that he could resign, or accept other leave of absence, which was tantamount to an undertaking and assurance on the part of his associates that they would perform the duties which might otherwise devolve upon him. They were a majority of the Board and if they would, could control, whether he was absent or present. The Court holds that the oath of office required by law bound him, so far as the duty devolved on him, diligently and honestly to administer the affairs of the bank. (Sec. 5,147.) That the duties which his associates could perform and assumed to and did perform would not appear to have devolved upon him so as to make him chargeable in any degree for the manner of their performance. He did nothing himself for which it is claimed that he became in any manner chargeable; and the conclusion is reached that it does not appear that he was so responsible for what the others did that their misdoings could make him chargeable.

In the cases of Lee and the Executrix of Vought, neither having made any defense to the suit of the receiver the bill was taken as confessed against them.

The questions as to the liability of Francis E. Coit, Spaulding and Johnson are considered together by the Court, and in this connection the manner in which the losses were sustained by the bank is looked into more closely. The losses appear to have been begun by the discount of the paper of persons engaged with Lee in business and speculations not adequately responsible for the amount of the discounts. The paper was usually indorsed by him, and sometimes secured to some extent by collaterals resulting from the avails of the discounts. Great losses from the transactions in which he was engaged fell upon him, and through him upon the bank. As the paper fell due it was renewed or replaced by other paper of like character, until a large part of the loans and discounts of the bank consisted in notes of irresponsible parties indorsed by him. All these discounts, renewals and substitutions were correctly entered as in the usual course of business upon the books of the bank, and appeared there fully with the entries of its other current business. These transactions were in violation of the prohibition in the banking law of a liability in excess of one tenth the amount of capital paid in of any person, company or firm for money borrowed. (Sec. 5200.) They did not appear, however, to be so always or generally, for they might have been so far as they showed, commercial or business paper actually owned by the person negotiating them, and

within the provisions of the same law allowed to be discounted. On January 18, 1882, Lee took from the cash of the bank \$23,680 and put a slip of paper with his name and the amount upon it in place of the money in the cash drawer, and on February 15th, \$16,787.50 in like manner without giving any other evidence of his indebtedness for these amounts. The former amount was reduced by replacement of cash to \$12,405 and the latter to \$11,435. These transactions were not concealed from the Cashier or employees in the financial matters of the bank but did not appear on the books of the bank except that they were shown on the cash blotter of the Teller. These were clear violations of the provisions of the banking law mentioned. As Lee was the President and at the head of the bank and was supposed by the Cashier and subordinates to be a man of integrity and wealth, and these things were done by him and by his direction, they excited no suspicion among these persons that loss to the bank would be occasioned thereby until the very last days of the business of the bank after all these losses had been incurred. As the suspicions of these persons were not aroused, they said nothing to any of the Directors about what was going on, and they had no knowledge, supposition or suspicion but that the business of the bank was proceeding lawfully, regularly and prosperously. In the banking law it is further provided that if the Directors of any bank shall knowingly violate or knowingly permit any of the officers, agents or servants of it to violate any of the provisions of that law, every Director who participated in or assented to such violation shall be liable for all damages sustained in consequence of such violation. (Sec. 5239.) The Court states that it is not claimed that any of these three Directors so knowingly permitted or assented to any of these violations of this law so as to become liable at all under this provision; and that as there was no misconduct, default or irregularity on the part of the Cashier, or of the clerks or agents of the bank in any respect that occasioned these losses, and what was done that did occasion them was done by Lee, and by his express direction, the question is whether these Directors by their conduct became liable to the bank for what their associate Director, Lee, did. On this point the Court holds: By the Bank Act of 1864 it was enacted that these associations should be bodies corporate and by the names designated in their organization certificates should have succession for twenty years unless sooner dissolved; that by such names they might make contracts, sue and be sued, and elect or appoint Directors, and by their Boards of Directors appoint officers and exercise under that Act all such incidental powers as should be necessary to carry on the business of banking, by discounting and negotiating promissory notes, drafts, bills of exchange and other evidences of debt, by receiving deposits, by buying and selling exchange, coin and bullion, by loaning money on personal security and by obtaining, issuing and circulating notes according to the provisions of that Act. (13 Stat. at Large, 100, Sec. 8.)

Some Courts were of the opinion that this specification of the means by which the powers granted might be exercised was a limitation of the general expression preceding it. (47 Vt. 546; 60 N. Y., 278; 42 Md. 581; 50 Vt. 388.) Others construed this part of this Section as if it had stopped with the general words. (79 Pa. State, 106; 80 N. Y. 82.) The business of banking, in either view, was as that section then stood to be carried on by the Board of Directors. In the Revised Statutes as enacted in 1874, this part of that section was brought into the seventh subdivision of Section 5186 and so added to as to authorize a National bank to exercise by its Board of Directors or duly authorized officers or agents, subject to law, the powers mentioned. After this alteration in the law the business of banks could be lawfully done by the President, Cashier or other officer, as well as by the Directors themselves. It was not necessary that the Directors or a majority of them, or any of them, should take part in individual transactions in authorized business. It is said in some books and in argument that the Directors are trustees of the funds and the property of the bank. This may be true in some sense and under some circumstances, but the relations of the Directors to and their duties towards the assets of the bank cannot be determined properly upon names merely. The bank being a body corporate under the law is a person, although artificial, with legal identity, and capable of holding and owning its own property; and

its property in the hands of those by whom it acts, is held by itself, for itself, and not by any other person for it. Therefore the Directors are not, and from the nature of things can not be chargeable for the assets of the bank as for property to which they have taken title or possession for some use or purpose for the carrying out of which they may be charged and held. They have no ownership in or title to the assets, and cannot act otherwise than as the officers and agents of the bank about them unless they actually misappropriate them, and thereby become wrong-doers about the assets themselves. They cannot be held to account for any assets they have not themselves had. These Directors are not, and are not claimed to be chargeable in this view. As the statute provides what Directors shall be liable, and how, for violations of the statutes, other Directors cannot be made liable for these things without, in effect, adding to the statute.

Directors may doubtless be liable for many things which are not express violations of the statute. (88 N. Y. 52; 99 N. Y. 185.) This would probably be the case with respect to any gross mismanagement in the actual transaction of the bank's business or the handling of its property. These Directors are not sought to be charged in this view. The complaint against them is not that they acted negligently or carelessly in actually doing anything, but that they neglected to do anything. What they did not do, the omission to do which caused damage, was the restraint of Lee in what he did. So the real question is whether they are chargeable for the consequences of what he did because they did not prevent it. He was a Director elected by the stockholders and of equal rank and authority with them. He derived his authority from the stockholders and not from them, and acted under that authority. The President has no more authority, as such, about the matters complained of than any other Director. They had no reason to suppose that he would not act honestly and fairly within the law, any more than the stockholders had who had repeatedly elected him to the office of Director, or than the depositors had who trusted the bank while visibly under his management. He was apparently more interested in the success of the bank, during the time of these losses, than any one else for he held more than the majority of all the stock. The question is not as to the liability of the bank for the negligence of its agents, but is as to the liability to the bank of some agents for not controlling others. The bank itself would not be liable to others for the frauds or thefts of its Cashier or other officers unless the untrustworthiness was known, and his employment continued notwithstanding notice of that fact. (17 Mass. 479; 29 Fed. Rep. 498.) The obligation of the corporation would be measured by the duty of its officers, and the liability of one officer for the misdoing of another would not appear to be any greater than that of the corporation for acts of the same nature. Generally one officer is not liable for the misconduct of another not appointed by him. (Cowp. 754; 15 East. 894; 7 Cranch 242.) Directors of banks and other corporations appear to stand on the same footing as other officers in this respect. The body of the directors of a National bank is charged with the supervision and management of its officers, and is bound to use as much diligence and care as the proper performance of these duties requires. (Mor. Corp. Sec. 571; Thom. Liab. Off. 356.) But this obligation does not appear to require every Director to attend himself to every part of the corporate business, nor make each liable for every act done by any of them. They do not undertake each for the others. (The English cases of *Cargill vs. Bower*, 10 Ch. Div. 502; *Perry's Case*, 34 Law T. N. S. 716; *Joint Stock Discount Co. vs. Brown, L. R.*, 8 Eq. 376; *Weir vs. Bell*, 8 Exch. Div. 238; *Turquand vs. Marshall, L. R.*, 4 Ch. 386; and *Land Credit Co. vs. Fermoy, L. R.*, 8 Eq. 7, are here cited by the Court and quoted from to the effect that Directors are not liable for the acts and frauds of their co-directors.)

That a Director is not liable for the faults or frauds of a co-director appears to be well recognized in New York. (51 N. Y. 27; 55 N. Y. 400.) In *Hun. vs. Cary*, 82 N. Y., 65 where the trustees of a Savings bank who participated in a misappropriation of the funds resulting in loss were held liable for the loss, Smith a trustee who took no part in the transactions does not appear to have been held. And in *Hand vs. Burrows*, 28 Hun., 830, the New York Supreme Court, First Department, June, 1881, Barrett J. held that the

Directors of a National bank who knowingly participate in retaining an untrustworthy Cashier are liable for his subsequent defalcations and that one who did not know of the untrustworthiness was not liable, which case does not appear to have gone any further. There is no case which has been cited or observed in which it has been decided that a Director of a corporation was liable to make good a loss occasioned by the fraud or misconduct of a co-director in which he had no part, and which was perpetrated without his connivance or knowledge. (3 Paige, 222; 88 N. Y. 52; 99 N. Y. 185; 37 N. J. Eq. 356; 38 N. J. Eq. 501; 1 R. I. 312; and 3 R. I. 9.)

The measure of the duty of the Directors is frequently and emphatically laid down, and is clear and plain; but it is nowhere adjudged that all must always act, or that they must not trust one another to act, or that any are liable for the mere omission to watch and restrain the others, without wrong intention on their own part, or actual knowledge of the wrong on the part of the others. Neither are there cases where persons standing in similar relations to the property of others have been held liable for the acts of others standing in the same relation, without some fraud or connivance on their own part. The general rule as to trustees is that they are responsible only for their own acts, and not for the acts of each other, unless by express agreement "or they have by their own voluntary co-operation or connivance enabled the other to accomplish some known object in violation of the trust." (Story's Eq., Sec. 1280.)

In conclusion the Court state that after a careful and thorough presentation of the case by counsel in all its aspects and much and repeated consideration of the facts and principles involved, no just ground of liability on the part of these Directors is presented—not on the express provisions of the statute on the subject, for they do not, and are not claimed to, come within them; nor by the common law, for by that each is liable only for his own miscarriages, and none are shown. The bill of the receiver to hold the Directors liable was consequently dismissed, except as against Lee and the Executrix of Vought, who made no defense.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking.

NICHOLASVILLE, Ky., June 14, 1887.

SIR:—If at the regular time fixed for the meeting of the Board of Directors of a National bank the President and Vice-President are both absent, is it legal for the Directors to elect one of their number President *pro tem*? DENT HOOVER, Cashier.

Answer.—The articles of association of a National bank usually provide that a majority of the directors shall be a quorum for the transaction of business, and also that the Board may elect or appoint one of their number the President of the Association, and a Vice-President who, in the absence or inability of the President from any cause, may perform all acts which the President can perform, except such as are specially limited to the President by law. Under Section 5136 of the United States Revised Statutes the directors are given power to appoint a President, Vice-President, Cashier and other officers, and define their duties, dismiss them at pleasure, and appoint others in their places. Section 5150, U. S. R. S., provides that one of the directors to be chosen by the Board shall be President of the Board. Now, it would seem from all this that the President of the Board of Directors and the President of the bank are two distinct offices, although in practice they are usually regarded as one and the same office and are held by the same person. Therefore, in the case suggested above both the President and Vice-President of the bank being absent (either one of whom in the absence of the other would usually be the President of the Board), and a quorum of the Board were present, such quorum would have the right to choose a President *pro tem*. of the Board. This President of the Board would not be President *pro*

tem. of the bank, nor could he perform any of the functions of the President of the bank, except those which the President of the bank performs in his single capacity of President of the Board. Thus the President of the Board could preside at the meeting at which he was chosen, could certify and give authority to the action of the Board at that meeting, but could go no further. If the Board should grant discounts at the meeting, the President *pro tem.* could certify such action to the Cashier, but he could not sign bills or perform any other of the numerous functions of the President of the bank.

Editor Rhodes' Journal of Banking:

STAFFORD, Kans., June 27, 1887.

SIR:—John Doe was the party who borrowed the money on the note given below, Richard Roe indorsing the paper. When the note matures Doe is unable to pay, and wishes an extension of time. Would the granting more time on his paying the interest release the indorser—Roe—from all liability?

\$100.

STAFFORD, Kans., May 20, 1887.

Three months after date, for value received, we or either of us promise to pay to the order of J. D. Larabee, President, one hundred dollars, with interest thereon at the rate of twelve per cent. per annum from maturity until paid, payable annually at the Farmers' Bank, Stafford, Kans. Should any interest not be paid when due, it should bear interest at the rate of twelve per cent. per annum, payable annually, and a failure to pay any of said interest within five days after due shall cause the whole note to become due and collectible at once. For value received the indorsers guarantee payment of this note, and waive demand and notice of protest on same when due.

JOHN DOE,

RICHARD ROE.

Please answer in the JOURNAL.

J. D. LARABEE, Pres.

Answer.—Roe is in reality a joint maker of the note, but whether maker or indorser, under the manner in which it is drawn waiving both demand and notice of protest, he would be held, even if more time be granted on Doe's sole request.

Editor Rhodes' Journal of Banking:

MILWAUKEE, May 7, 1887.

What is the interest on a note for \$100,000 dated March 26th, payable without grace April 30th at six per cent.?

The Banking law of Wisconsin says a bank may compute time at thirty days to the month.

INQUIRER.

Answer.—By Sec. 43 of Ch. 94 of the Revised Statutes of Wisconsin, it is provided that "in the computation of time thirty days shall be a month, and twelve months a year." The period of time for which the present note is made to run, and on which interest is payable, is thirty-five days from March 26th. This is equivalent, under the above law, to one and one-sixth months. The interest on \$100,000 at 6 per cent. for one month is \$500, and for one-sixth of a month \$83.33 $\frac{1}{3}$, making the interest on the note for the period stated \$583.33 $\frac{1}{3}$.

Editor Rhodes' Journal of Banking:

CHEYENNE, Wyo., June 23, 1887.

SIR:—A holds for collection a note of \$25,000 dated May 23, 1886, payable on or before May 1, 1887, interest payable quarterly. The last payment of interest was on February 23, 1887. What amount of interest is due at the maturity of the note?

CASHIER.

Answer.—The amount due on May 4, 1887, would be interest for seventy days, or \$460.27.

Editor Rhodes' Journal of Banking:

SHARON, Wis., May 16, 1887.

SIR:—Please give your opinion whether a clause on a certificate of deposit stating, "with interest at the rate of — per cent. per annum if left — months, will make the bank issuing the certificate liable for interest.

Answer.—If the holder of the certificate performs his part of the agreement and the certificate is not presented for payment until the time limited for leaving the money has expired, then the bank is liable for interest from the date of the certificate, otherwise not.

THE SPRING GARDEN NATIONAL BANK.

THE above cut gives an exterior and upon the next page will be found an interior view of the building of the Spring Garden National Bank, at Twelfth and Spring Garden streets and Ridge avenue, Philadelphia, which was authorized to commence business as a National bank on March 13, 1886, and now has a fully paid-up capital of \$500,000. Previously the institution had been doing business as a State bank, having been organized as such in November, 1870, opening for business in April, 1871. Mr. Thomas Kennedy was its first President, and his son, Mr. Francis W. Kennedy, its first Cashier.

The building first occupied was situated immediately opposite the present location, but was small and soon became inadequate in accommodations to the business done. In May, 1875, the present large and handsome building, as shown in the cut on the preceding page, was completed and occupied. The building is triangular in shape, the entrance being at the point or apex of the triangle. It is built of white marble from the Cockeysville quarries, near Baltimore, and is fire-proof in every particular. It stands at the intersection of Spring Garden street, Ridge avenue and Twelfth street. Its exposed position contributes much to render it safe from the attacks of burglars.

The interior is shaped somewhat like a kite. The lobby is tiled in marble. The furnishing is in mahogany. The ceiling is high, affording ample light on all sides.

avoiding the necessity of gaslight during business hours. The vaults are built, as it were, near the base of the triangle, removed some distance therefrom, thus allowing a view of them to be had at the back as well as in front, and not allowing them to stand against a wall, but leaving all sides in full view not only from the inside of the building, but also from the street through the windows. They are built in the most solid, safe and enduring manner that the skill and ingenuity of the well known safe manufacturing firm of Farrell & Co. could devise. A solid mass of masonry, topped with two and a half inches of boiler iron and steel, constitutes the foundation. The sides are composed of slabs of Maine granite covered with ten inches of fire brick, each vault (there are eight of them) being lined on all sides with two and a half inches of alternate layers of boiler iron and steel. There are massive double doors to each vault provided with the best known combination locks. Space is set apart in the vaults for the renting of small safes, and a room furnished with every convenience is provided for safe-renters. The upper rooms are used for stockholders' and Directors' meetings.

The business of the bank has grown in a steady and healthy manner from the beginning. In March, 1883, Mr. Thomas Kennedy, because of advanced years and ill health, withdrew from the Presidency, and Mr. Francis W. Kennedy, the then Cashier, was chosen President, and Henry H. Kennedy, Cashier.

In August, 1885, the bank was called upon to stand the most severe test of its soundness that can be imposed upon a financial institution, namely, a "run." The direct cause of it is not known. It lasted between four and five days, but was courageously met and every demand satisfied in such a manner that the "run" added to the credit and popularity of the bank.

In November, 1885, the Directors determined to apply for admission to the National system, converting the bank from a State to a National institution, and at the same time to increase the capital from \$270,000 to \$500,000. The additional capital was subscribed immediately, and on March 12, 1886, the Comptroller of the Currency issued his authority.

The bank solicits the accounts of other banks, and upon such accounts they allow the usual rate of interest on daily balances.

This institution allows interest upon Trust funds both those of Trust companies and the accounts of executors, trustees, guardians, etc., savings deposits, money awaiting investment, and money not in active use, but no interest is allowed upon active business accounts, nor are the interest-bearing accounts entitled to discount privileges. Ladies dealing with the bank are provided with special accommodations. There is a room and Teller's window set apart for their use, and they can thus transact their business with the bank, deposit and draw money without the necessity of the delay and annoyance unavoidable at a time when the bank is crowded with customers. The correspondents of the Spring Garden Bank number some of the oldest and most respectable institutions in the United States and abroad. In New York it has the National Bank of the Republic and the Hanover National Bank, in Boston the First National and in Chicago and San Francisco the Metropolitan National and the California National Bank respectively. The extent to which it is already patronized by the public is indicated by a deposit line of over \$2,000,000.

The present Board of Directors is composed as follows: FRANCIS W. KENNEDY, President; H. G. SICKEL, Vice-President; EPHRAIM TURLAND, Turland & Hoyt, dry goods; NELSON F. EVANS, President Spring Garden Insurance Company; EPHRAIM YOUNG, Van Gunden & Young, marble and granite; NATHAN MIDDLETON, N. & A. Middleton & Co., car springs; ROBERT C. THOMAS, President, Thomas Coal Company and of F. D. Bright & Co.; HENRY H. KENNEDY, Cashier.

The Chase National Bank, of New York, has experienced some delay in the fitting up of its new quarters at the corner of Pine and Nassau streets. It was expected that the change would be effected about a month ago. The business of this institution has, since the accession of the Hon. Henry W. Cannon to the Presidency, experienced a remarkable growth. The capital stock will be increased to \$500,000 on July 1st and the surplus to \$400,000 from \$300,000 and \$150,000 respectively. In amount of deposits it ranks about eighteenth among the sixty-four Clearing-House banks. The Chase National is a United States Depositary.

CONDITION OF THE NATIONAL BANKS IN THE RESERVE CITIES.

TABLE showing loans and deposits and other items, reported by the National banks in the Reserve Cities of the country, which were likely to be affected by the Reserve City law of March 3, 1887, upon May 13, 1887, after said law had been availed of by the cities of Chicago, St. Louis, Kansas City and St. Joseph, and at other dates previous to the passage of the law. It is specially designed to show what effect, if any, the changing of Chicago and St. Louis to central reserve cities may have upon the distribution of the deposits of National banks with other National banks. New York, Chicago and St. Louis being Central Reserve Cities, are grouped together. There are no previous dates given for Kansas City and St. Joseph, as this is the first time these cities have been abstracted separately by the Comptroller. The figures for May 13, 1887, were obtained from the Comptroller of the Currency, and for the other dates from the report of that officer for the years 1885 and 1886.

THE JUNE PANIC IN CHICAGO.

[From the Journal's Chicago Correspondent.]

Every careful observer of the recent panic on the Chicago Board of Trade must have been impressed with the contrast between that event and similar happenings in Wall street, and must have considered the results a strong evidence of the present sound condition of business affairs. No vital interest of Chicago was injured by it nor was any permanent set back given to speculation. The whole affair was local and superficial. The banks were interested as lenders of money but the time is past when the banking institutions of Chicago involved themselves in speculative hazards by loaning beyond the point of safety.

As the commercial interests of Chicago have become diversified, Board of Trade loans have lost their prestige, and advances on good names and miscellaneous property have grown in favor. The banks had no motive for helping the clique support the price of wheat and were accordingly not tempted to go beyond their depth. There was on their part no scarcity of money though while the excitement was in progress they husbanded their cash resources as carefully as possible in order to provide against emergencies in the future.

In a nutshell, the history of the whole enterprise and its collapse was this—that a number of capitalists, tempted by the low price of wheat, undertook to get control of the whole supply tributary to the Chicago market and ran up the price unreasonably, but finding the quantity coming on their hands greater than they could carry abandoned their scheme, and prices tumbled. The same thing has been attempted many times before in Chicago and has in almost every case ended in failure. The temptation in this instance was a strong one. The supply the world over was not large, the price was low, and almost every other article of commerce had felt the effects of the business revival. But in the past three years almost everybody who has bought wheat for the long account has lost, and this clique, in spite of the great amount of money it controlled, was doomed to the same fate. The high price in Chicago brought wheat from many parts of the country which under normal conditions would have sent their products to other points, and the efforts of the manipulators to get control of the storage room of the city were unavailing.

It is not definitely known who were the principals in the deal, though certain wealthy Cincinnati men were no doubt parties to it. The operations of the clique began in March, and the fact that a corner was forming became evident to the traders generally when cash wheat sold above the prices for futures. In a normal condition the market futures are enough higher than cash wheat to represent storage charges and interest. At the beginning of the panic week (June 13th), cash wheat sold for about 92½c. per bushel while the September option was quoted at 78½. The clique controlled the entire stock of wheat in the elevators of Chicago recognized by the Board of Trade as "regular" amounting to over 16,000,000 bushels. Their opponents tried to have other elevators declared "regular," for there was plenty of wheat to be had, and it was necessary only to have it so placed that it would be available for trading purposes. They were successful, and the clique could not carry the load that was thus thrown upon them. June wheat was 92½ on the 13th of that month, the following day it dropped to 78½. The next day carried it to 69, the fluctuations meanwhile being of the wildest sort. It is not necessary to describe the excitement of those days to persons familiar with financial affairs. All panics are alike in respect to the frenzy of the crowd. So far as the superficial phenomena were concerned, it was one of the worst affairs of the sort Chicago has ever had. There have in one or two instances been greater declines but they did not affect so large a quantity of wheat. The extreme drop after the Lyon corner, August 7, 1872, was 54 cents. The dealings last month were enormous, footing up in three days at least 200,000,000 bushels or almost half an entire crop in this country. More than a score of firms failed and the losses to the clique, the brokers and the miscellaneous crowd of speculators aggregate many million dollars. Of course some profited by the decline for there was a large

short interest, but owing to the bankruptcy of the victims a considerable proportion of the profits are uncollectible.

This collapse was the culmination of evils that have long been undermining the trade in agricultural products in Chicago. The country customers of the Board of Trade have been dropping off for years, and the trade of the brokers has fallen to a low ebb. The bucket-shops have taken away a large proportion of those people who were formerly habitués of the brokers' offices, and declining prices have discouraged many from trading anywhere. In the struggle for a living brokers have resorted to unmercantile methods, commissions have been cut, and houses which formerly confined themselves strictly to a commission business have tried to keep the wolf from the door by speculating themselves. The collapse of the corner thus found many concerns just ready to topple over. Such a collapse often discloses weaknesses that nobody had suspected. It is claimed that one of the leading clique houses had capital of its own only sufficient for a margin of a quarter of a cent a bushel on the wheat it was carrying. The disaster has resulted in a number of lawsuits in which charges of bad faith and dishonest practices are made. The decline brings the trade in wheat down to a comparatively legitimate basis. Flouring mills which have long been idle will be started up, and wheat will be shipped to its natural markets. Many lots which had been sent to Chicago have been ordered back since the drop in prices. Good orders have been received from abroad, and the shipments from Chicago by lake are heavy. The banks of the city acted on legitimate banking principles. They had loaned on the basis of 65 to 70 cents a bushel, and when the price approached their limit they sold the stuff. The money market did not at any time reach panic rates though there was for two or three days a stringency. A considerable quantity of cash was sent to the Western metropolis from New York. It is a great gain to the country that its banks now generally refuse to become involved in such dangerous speculations. Their firmness saves a local and superficial disturbance from becoming general and deep. The Chicago banks by their conservatism absolutely limited the wheat panic to the Board of Trade. In the general business of the city there was absolutely no sign that anything unusual was going on in Chicago.

H. C. B.

Kansas.—The Farmers & Merchants' Bank of Erie, Kan., has been designated as the county depository of Neosho County. One of the proprietors, and also the Cashier of this bank, is Mr. W. P. Hazen, whose intricate signature appeared in the January number of the JOURNAL, and in the deciphering of which many of our readers have manifested much interest. The advertisement of the bank will be found in another part of the JOURNAL.

Far Ahead.—Here is a letter which speaks for itself. It is recent, being dated June 23, 1887, and is signed by Mr. E. B. BRANCH, Cashier of the Union Stock Yard Bank of South Omaha, Neb.:

"I inclose our order for the *July Bankers' Directory and Collection Guide*, with extra lines referring to collections, etc., in the list of banks. The writer was in Fairmont, Neb., from 1875 to 1882 as E. B. Branch & Co., and remembers your publications of old, and still believes (after seeing many bank publications in 18 or 20 years' banking) that you are far ahead of all the others now in existence."

The Hon. C. C. Bonney, of Chicago, is named by the papers of that city as a particularly suitable candidate for the vacancy on the bench of the United States Supreme Court, caused by the death of Justice Woods. Of all the great financial centres of the country—New York, Boston, Philadelphia, etc.—Chicago has no representative in the highest Court of the land, and now when she presents a man in politics in accord with the Administration, and who stands in the very front rank of Western lawyers and jurists, of high literary culture, of judicial temperament, combined with learning and industry, and who is of an age and health promising many years of service, it seems as if the President could make no better choice. No one could be more acceptable to the banks, and banking and other conservative interests of the country than Mr. Bonney. Several prominent Southern men have also been named in connection with this position, who, by their ability and learning, are well fitted to sustain its dignity and reputation. The question of their confirmation by the Senate, as now constituted, is, however, considered doubtful.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Coinage Designs.—The circular of the Director of the Mint, calling for designs for the coinage of the United States, has been withdrawn. Some doubt had arisen as to the power to change the coinage without special action of Congress. The question has been referred to the Attorney-General for his decision.

School Savings Banks.—Once a week the children deposit with the teacher such amounts as they may have, and each child receives a bank book in which the amounts deposited are entered. The teacher keeps the money in some Savings bank. This process encourages a habit of thrift and saving in early life. The whole business does not occupy more than half an hour or so in each week. The system originated in France.

At the Cotton Exchange the election resulted as follows: President—Charles D. Miller. Vice-President, J. H. Parker. Treasurer—Walter T. Miller. Managers—T. M. Foote, M. H. Lehman, C. W. Ide, S. T. Hubbard, Jr., T. Scott, W. F. Sorey, J. O. Bloss, Wm. V. King, J. H. Hollis, R. P. Slater, T. P. Ralli, G. A. Chapman, Wm. Mohr, B. S. Clark and Harry Allen. Trustee of Gratuity Fund—Emanuel Lehman. Inspectors of Election—J. B. Guest and A. G. Munn, Jr.

The National Bank of Bristol, a thriving town, which appears to be situated on the border between Virginia and Tennessee, so as to claim location in both States, has had a growth commensurate with that of the town. It is doubtful whether the bank owes the most to the town, or the town to the bank. From the outset it has proved the lever by which public and private enterprises were moved. On April 25th it shows capital \$100,000, discounts \$120,000, and deposits \$171,000.

The Bank of Western Kansas, at Garden City, Kas., has had a unique experience in having been burnt out twice this year, once on March 9th and again on May 8th. The bank cannot, however, be said to be altogether unlucky inasmuch as nothing of value was lost in either fire, and notwithstanding the fires, has been ready for business every banking hour, since the bank opened in 1885. It is now building a two-story brick building which, it is to be hoped, will prove fireproof.

Discovery of Old Documents.—In Boston recently a package of papers was discovered in a load of rags from Alexandria, Egypt, destined for the Warren Paper Mills. It proved to contain a number of bills of exchange drawn by people in Massachusetts on bankers or merchants in England between the years 1715 and 1718. Some of the forms used were good specimens of copper plate printing and bear the imprint of Newburyport and Boston firms. That they got to Egypt and returned to the place of their origin is a curious circumstance.

Chicago Stock Exchange.—The new stock exchange recently established by the Chicago Board of Trade, began operations in a manner calculated to inspire its friends with the hope that it will prove just what was wanted in that city. Just as in Europe, there are the London, Paris and Berlin centres, the extent and wealth of this country warrants the belief that in the United States we will have several great centres of speculation each controlling some one line. Perhaps the country will get so large and rich that the markets of no one city, even New York itself, can give the prices for all.

The Consolidated Stock and Petroleum Exchange is to have a new building at the corner of Exchange place and Broadway, with a frontage on Broadway of 90 feet 11 inches, on Exchange place of 132 feet 4 inches, and on New street of 87 feet 7 inches. There will be a basement of 15 feet, a main story of 38 feet, and four stories above. The main floor of the building will be occupied by the Exchange. The material is to be exteriorly of Corne hill Scotch red sandstone, and Philadelphia pressed brick, with iron and terra cotta work in portions, and the building will be absolutely fire-proof.

Advances to Cotton Growers.—One reason why the business of cotton raising in the South seems to afford so little profit to the actual producer is asserted to be the high rate of interest charged for advances to the farmer to enable him to pick and send his crop to market. It is said that money lenders sometimes exact as high as forty to fifty per cent. for the assistance rendered by them. This must be due, to some extent at least, to the risk run of getting the money back, either from the dishonesty of the grower or unfortunate methods of doing business. Nevertheless it would seem that some system might be established which, by preventing frauds, would enable money to be obtained at lower rates.

Annual Election at Cotton and Produce Exchange.—These elections took place on June 6th. At the Produce Exchange the following ticket was elected: President—Alexander E. Orr. Vice-President, Charles C. Burke, of Eagle Oil Co. Treasurer E. C. Rice, of Rice, Quinby & Co. Managers, two years—Josiah Lathrop, of J. Lathrop & Co.; E. A. Dougherty, of E. H. Dougherty & Co.; C. A. King, of C. A. King & Co.; Chas. A. Pool, of Chas. A. Pool & Co.; A. H. Brown, of Vernon H. Brown & Co.; J. H. Locke, of J. H. Locke & Co. Trustee Gratuity Fund, to serve three years—C. B. Lockwood. Inspectors of Election—James Veitch, Henry W. Hagen, K. S. Brewster, E. Selvage, S. C. Newman and Ferdinand Loeser.

American Surety Company of New York.—The Hon. Noah Davis was appointed Referee by the Surrogates Court of the City and County of New York, to make an examination of the qualifications of the above company as a surety, proposed to be given by the life tenant to those having reversionary interests in an estate. After detailing specifically the assets and liabilities of the association and stating that the former were found to correspond with the books and were safely kept, and describing the division of the fidelity business into two classes—Judicial and Fidelity—the Referee says that the former class of business is so conducted that the cases are exceptional where the company is not indemnified against loss by the deposit of money or valuable securities, and that the latter class is conducted under such a system of inquiry and watchfulness as to the character, habits and responsibility of the persons insured, as to reduce the chances of loss to a minimum. The Referee concludes that the company presents a system of security largely superior to that which can be offered by individual sureties.

Bills of Lading.—Bankers in New York have in the past incurred heavy losses by advancing money on bills of lading for cotton, issued by agents of railway companies at remote points, when in reality no cotton had been shipped. Good lawyers have held that a railway company cannot be held responsible for the fraudulent act of its agent, on the ground that the United States Supreme Court has decided in the case of a Master of a vessel who signs a bill of lading for goods which he has not received, that such act does not make the ship liable, and does not make the owners liable, such a bill of lading being a fraud from the beginning. The suggestion is that the authenticity of the bill, after having been drawn by the agent should in some way be certified to represent actual shipments of goods by the Railway company. It would seem that any transportation company, which agreed to be bound by the acts of its agents, in this respect, would secure more business for itself than a rival, which refused to assume such responsibilities.

North Carolina Bonds.—In 1869, the State of North Carolina issued \$10,000,000 in bonds, the payment of which was secured by a provision in the authorizing Act which ordered a special tax of one-eighth of one per cent. to be levied on all the real and personal property of the State for the purpose. The State has since passed Acts forbidding this levy. A suit was brought by Alfred H. Temple of Raleigh, N. C., in the interests of Morton Bliss & Co. of New York, and other special tax bondholders. In the United States Circuit Court at Raleigh, N. C., and Judge Bond recently decided that the Acts of the State forbidding the collection of the tax are null and void, and that the agents of the State must proceed to collect the taxes and pay the interest. The mode of attack adopted in this suit to compel a State to pay its indebtedness differs from those adopted in previous suits to recover the value of State securities. One difficulty heretofore encountered has been that the Courts have declared the State a necessary party to the suit, and not open to suits of citizens of other States. The plaintiff in this case is a resident and citizen of North Carolina. But after decisions favorable to State bondholders are rendered, and judgments obtained, there is still

much uncertainty how a judgment of even the Supreme Court of the United States can be enforced against any State, or its officers, in case of resistance. It is believed that the decision above referred to will be sustained by the United States Supreme Court, and in that event the State of North Carolina will agree to a compromise on the basis of 25 cents on a dollar by issuing \$4,500,000 4 per cents. in place of the bonds outstanding, which with accrued interest now aggregate \$18,000,000. The State actually realized on the bonds when issued from 20 to 75 cents on a dollar. The proceeds were used in developing the railroad interests of the State.

Important Decision.—An opinion was rendered in the United States Circuit Court on May 20th by Judge Gresham which is of the greatest importance to bankers and banking men. A like case has never before been decided in American courts. A. J. Gillespie & Co., of Kansas City, were owners of about 1,100 head of cattle, and about the 1st of October, 1885, they shipped the herd to Chicago, consigning them to the stock yard commission firm of Rappal, Sons & Co., and immediately drew drafts for the approximate value of the cattle. Rappal, Sons & Co. between the 2d and 6th of the month sold the cattle and deposited the money, about \$25,000, with the Union Stock Yards National Bank. At the time Rappal, Sons & Co. were overdrawn at the bank about the same amount. The bank, not knowing whom the money belonged to, but only that it was deposited to the credit of Rappal, Sons & Co. appropriated the money to pay the overdraft, claiming to hold the same by lien. Gillespie & Co. filed a bill in the United States Court against the bank to recover the money. Judge Gresham decided to-day that Gillespie & Co. were entitled to the \$25,000.

Annual Convention of the American Bankers' Association.—Mr. George Marsland, Secretary of the American Bankers' Association has issued the usual call for the annual convention, which is to be held at Pittsburgh, Penn., on the 12th and 13th of October, 1887. Every banking firm, State bank, National bank, Trust company and Savings bank in the United States is entitled to send one delegate. Members who have prepared papers, and other bankers and bank officers desiring to address the convention, should send their names and papers to the Secretary before August 29th. The books of registry will be kept open from Tuesday, October 11th, to Thursday, October 13th. During the meetings of the convention the registrar will sit at the doors of the convention room to receive names and to issue tickets. On Wednesday evening, October 12th, the usual reception will be held, when all the delegates will have an opportunity of meeting the President and Executive Council. The association received invitations to hold the convention at Cincinnati, St. Louis, Niagara Falls and other cities. The first invitation, however, came from Pittsburg and was therefore accepted.

Supplementary Holiday Act.—This Act was passed May 25th and took effect from the date of its passage. The following is the text of the law:

SECTION 1.—All bills of exchange and promissory notes made after the passage of this Act, except those payable at sight, or on demand, which shall otherwise be payable on any half holiday Saturday, shall be deemed to be and shall be payable on the next succeeding secular or business day.

SEC. 2.—All bills of exchange, checks and promissory notes made after the passage of this Act, which by the terms thereof shall be payable on the first day of the week commonly called Sunday, shall be deemed to be and shall be payable on the next succeeding secular or business day.

SEC. 3.—This Act shall take effect immediately.

The effect of this supplementary Act is that no promissory note and no time draft or acceptance can be collected on Saturday at any time during the year, but that sight checks and drafts are payable up to 12 o'clock. The following is the opinion of the Counsel of the Clearing-House Association:

1.—Commercial paper otherwise due on a half holiday Saturday, *except* paper payable *at sight* or on *demand*, is payable the next succeeding secular or business day.

2.—All commercial paper, whether entitled to days of grace or not otherwise due on an *ordinary Sunday*, is payable the next succeeding secular or business day.

This Act applies only to paper made after May 25, 1887.

The American National Bank of Kansas City, located at the corner of 7th and Delaware streets, has opened a branch office at the corner of Union avenue and Mulberry streets. This is said to have been necessitated by the increasing business in the vicinity of the new location. The National Bank Act does not grant the power of establishing branches to associations, nor does it specifically prohibit branches. The fact that, as an inducement to State banks having branches, to enter the system, the

law provided that such branches might be retained, might by implication seem to favor the view that it was not the intention to permit National banks to have branches. The idea of a branch was, however, one established in some other place than that in which the parent bank was located, and it is questionable whether a branch in the same place would come within the limits of the implied prohibition. Section 5134 of the revised statutes provides that the organization certificate of a National bank shall specify the place where its operations of discount and deposit are to be carried on designating the State, territory or district, and the particular county and city, town or village. It seems plain from this that no bank was to do business in more than one city, town or village, but there is nothing to prevent it from having more than one office in such city, town or village.

Silver Bullion Certificates.—The Governing Committee of the Stock Exchange by a virtually unanimous vote on June 8th, placed silver bullion certificates upon the regular list to be classed as mining shares. The certificates are steel engraved, similar in form and size to petroleum oil certificates. Under the agreement with the Stock Exchange the following regulations will be observed in making deposits of this character:

"No bullion will be received of less fineness than 998, and no single bar of greater weight than 1,200 ounces.

"No bar which has been paid out from the deposit company will be again received except under a satisfactory guarantee from depositor as to weight and fineness, and that such bar has not been tampered with.

"The Western National Bank reserves the right to refuse deposits of the kind referred to in the preceding paragraph. It will, however, receive bars of a lower degree of fineness than 998, and cause the bars to be refined at the expense of the depositor, so as to bring them within the terms of the requirements.

"The charge for issuing certificates will be 25 cents, and the charge for storage will be 1 cent per day for each certificate of 1,000 ounces.

"The deposit company will report by 10 A. M. of each business day to the Stock Exchange, the amount of bullion on hand at the close of each business day, and furnish a statement of the certificates issued.

"The Western National Bank will furnish the Stock Exchange daily, at the same hour, the certificates registered and in hand to be registered, if any issued by the deposit company up to the close of business on the preceding day."

Dakota Bankers' Association.—This association met at Watertown, Dakota, on May 24th. The convention was a success in every particular and the addresses were good. The address of welcome was delivered by W. E. Scarret, President of the Watertown National Bank. After dwelling on the cares, anxieties and responsibilities of a banker's vocation, he appropriately drew away attention from these hardships by the information that the resident bankers had arranged to have the members of the association as their guests go for a day's pleasuring to Lake Kampeska. D. W. Diggs, Cashier of the Bank of Milbank, wittily responded in behalf of the visitors. The annual address was then delivered by President Anderson, who said:

"The association in three years has increased from eighteen to eighty-two members. In this age of organization it is an imperative necessity to loan on prime individual security or promptly available collaterals; yet it is nevertheless true that in Dakota, with large legal exemptions amounting to a small fortune, with statutory provisions that delay and embarrass the collection of debts, and that are virtually a bar to the successful foreclosure of chattel mortgages, money should readily command a rate of 2 per cent. per month. While we have not accomplished in the past two years all we desired in the way of relief from oppressive and restrictive legislation, yet it is due to the efforts of our organization that we meet to-day for the first time in the history of Dakota freed from the stain of criminality. I refer to the repeal of the usury laws." He then spoke earnestly on the unfairness of taxing National banks upon the full value of their shares.

William Powell, Cashier of the National Bank of Commerce, Minneapolis, then addressed the convention by invitation, and among other things argued that under the Reserve Cities Act recently passed, Minneapolis and St. Paul would soon, as distributing centers for the wheat country, take the place of New York and Chicago. After the discussion of minor matters, the usual committees were appointed:

On the 25th the association was called to order at 9:30 A. M., and the committees reported. The membership within the year had increased from forty to eighty-three. The receipts were \$513 and disbursements \$508. The next meeting was fixed to occur at Redfield, on May 23d and 24th, 1888. The following officers were elected for the

ensuing year: President—Charles E. Judd, Canton. First Vice-President, R. C. Anderson, St. Lawrence. Executive Council, F. E. Stevens, Huron; D. W. Diggs, Milbank; F. H. Hagerty, Aberdeen; William Taylor, Redfield; W. E. Scarrett, Watertown; F. M. Hopkins, Roscoe; B. A. Wade, Gary; F. B. Garron, Ellendale; F. R. Fulton, Grafton. The Secretary, Eugene Steere of Pierre, and the Treasurer, M. P. Beebe of Ipswich, hold over. Resolutions were then discussed and adopted, the following being of the greatest general importance:

Resolved, That the interests of the banking fraternity would be promoted by adopting a uniform rate of exchange and collection charges.

Resolved, That this Association believes that all the bank shares, both national and incorporated, should be taxed on an equal basis with other personal property.

The convention adjourned at two o'clock, and the members were taken in carriages to Lake Kampeska, where lunch was served at five p. m. On the return an elegant banquet was served in the evening, at which toasts were offered "to our guests," "our hosts," "bankers at home and away from home," "our correspondents," "our wives, sisters and sweethearts," "Dakota," "three per cent. per minute," and "The Dakota rustler."

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- A new bank building is to be erected in Shawano, Wis.
- A bank of Nicaragua with a capital of \$500,000 is to be established.
- A seat in the Philadelphia Stock Exchange sold recently for \$4,000.
- A bank has been incorporated at Minot, Dak., with \$100,000 capital.
- The First National Bank of Sheffield, Alabama, is to have a new building.
- Two National banks are making preparations to begin business at Negaunee, Mich.
- Arthur E. Hornblower, Book-keeper of the Hoboken Savings Bank, has disappeared.
- The Camden National Bank of Camden, N. J., is about to erect a new bank building.
- The Third National Bank of Philadelphia is about to make an addition to its building.
- Efforts are being made to place in France a loan for \$3,500,000 of the city of Quebec.
- On June 14th there was a great panic in wheat in Chicago, prices falling off 5 cts. within an hour.
- The city of Minneapolis has issued a new loan of \$387,000 of four per cent. bonds to mature in 1917.
- L. W. Reid of Virginia has been appointed Assistant Register of the United States Treasury.
- United States Treasurer Hyatt filed his official bond on May 20th, and assumed office on the 24th.
- Gov. Hill of New York on June 3d signed the bill authorizing banks to change names and locations.
- L. D. Parent, the Cashier of the Hochelaga Bank, has absconded, and is a defaulter to the extent of \$12,000.
- The Georgia Central Railroad and Banking Co. of Savannah, Ga., has let out the contract for its new building.
- J. Finley Hoke the defaulting Peoria banker, on June 9th received his sentence of five years in the penitentiary.
- Trade dollars have been redeemed to the extent of \$7,000,000. The Treasury officials think there are no more.
- The private bank of J. R. Beard made an assignment on May 6th. Liabilities \$64,000, assets estimated at \$62,000.
- The cotton and coffee dealers have been talking of organizing a new bank for the special accommodation of their business.
- The United States National Bank of Atchison, Kansas, is to have a new building with all modern improvements, to cost \$100,000.

— It has been reported that there was much opposition to the plan of listing silver bullion certificates on the Stock Exchange.

— The applications for the capital stock of the Chestnut street National Bank of Philadelphia ran far ahead of the \$500,000 stipulated.

— The election on June 18th of officers of the Consolidated Stock and Petroleum Exchange resulted in the success of the regular ticket.

— In the fiscal year 1883, \$124,205,500 of bonds were called; in 1884, \$121,711,000; in 1885, \$20,880,850; in 1886, \$58,133,450, and in 1887, \$116,282,060.

— The Comptroller of the Currency has appointed S. J. Kennerly of Palatka, Fla., to be Receiver of the Palatka National Bank of that city.

— A call has been issued which is numerously signed for a convention of Iowa bankers with a view to forming a State Bankers' Association.

— Goldwin Smith is in favor of commercial union between the United States and Canada, and even of annexation if necessary to obtain such union.

— The demand is made that Congress authorize the coining of a half-cent. Well, there is no objection, if only one be coined, except the cost of making it.

— There is an electric young woman at Beaver Falls, Penn. She has to do her own sparking, as to touch her is to receive an electric shock as from a battery.

— The Farmers' Bank of Atchison, Kan., is to be reorganized with a capital of \$100,000 by a syndicate who purchased the charter from John N. Reynolds.

— The Western Savings Fund Society of Philadelphia, during the rebuilding of its banking house, 1,000 Walnut street, has removed to 1,010 on the same street.

— The Pennsylvania Legislature by joint resolution have authorized a suit to be brought against the People's Savings Bank of Newcastle, to recover State funds.

— A loan of \$70,000, payable in ten equal annual instalments for the purpose of building sewers was authorised by the City Council of Lowell, Mass., on May 12th.

— The directors of the North River Bank on June 8th unanimously re-elected Mr. Levi Appar as President, and Mr. Edward E. Gedney as Vice-President of the Board.

— The Suffolk County, Mass., Court House loan of \$800,000 was awarded to the New England Trust Company at $3\frac{1}{4}$ per cent. It was offered at 3 per cent. with no takers.

— The Comptroller of the Currency has appointed David Armstrong, Cashier, of the First National Bank of Jackson, O., receiver of the insolvent Fidelity National Bank.

— Hon. Daniel F. Manning, ex-Secretary of the Treasury and President of the Western National Bank arrived from Europe June 8th. His health is said to be improved.

— The Rhode Island Senate on June 2d pardoned Chas. C. Brockway, one of the most noted and skilful forgers in the country, his term of imprisonment had nearly expired.

— The Security Bank of Eskridge, Kansas, is one of the leading institutions in that vicinity. It has been in operation two years, and is putting up a new fire-proof building.

— A. C. J. Rudolph, for four years book-keeper in the Continental National Bank, Chicago, Ills., was arrested on June 15th, on a charge of forgery. The amount forged was \$8,000.

— The State of Maine is exchanging its six per cent. bonds maturing in 1889 for three per cents. issued under authority of the last Legislature, on which interest begins on October 1, 1889.

— Funding Ohio State Bonds.—The State of Ohio has brought suit against Albert Netter, banker, of Cincinnati, O., for \$27,000, alleging this amount to be due from Netter on a contract for funding the bonds of the State which became due January 1, 1887.

— The Governor of Massachusetts on May 5th appointed and the council confirmed Hon. Starkes Whiton for Savings bank Commissioner, and Hon. Abraham B. Coffin for Gas Commissioner. Mr. Cadwallader Curry, former Savings bank Commissioner,

resigned on the 18th of April to become Treasurer of an important manufacturing corporation.

-- The Girard Life and Trust Company of Philadelphia is about to erect a new building at the northeast corner of Broad and Chestnut streets. The total front is 79 feet by a depth of 100.

-- A customer while cutting coupons, in the safety deposit parlors at Boston, dropped his shears and cut his leg--indicating the extraordinary dangers to which capitalists are exposed.

-- The total gold coinage of the United States Mints for May 1887 was \$1,600,000, of silver \$3,189,329, and of minor coinage \$68,252.88. The gold coinage consisted entirely of eagles and half eagles.

-- A petition was circulated among stock brokers and traders, requesting the Stock Exchange Governors to keep the Stock Exchange open for business the full five business hours of Saturday.

-- John H. Thurston, book-keeper of the Cambridge Savings Bank is charged with a defalcation of \$1,000. As he has restored the money it is understood that the case against him will be dismissed.

-- "Jimmy" Hope, the celebrated bank burglar, has been brought from California, and placed in Auburn Prison to serve his unexpired term. After that he is liable to be tried for the Manhattan burglary.

-- The Treasury will not be able to fully meet the demand for small notes until after the increased appropriation becomes available after July 1. After that date there will be enough to relieve all pressure.

-- The First National Bank of Minneapolis, Minn., has been designated a depository of public moneys, and especially designated for the safe keeping of funds advanced to disbursing officers in the War Department.

-- The question of the sale of \$181,000 of Rahway city bonds for 85 cts. on the dollar, remaining assets of the broken Rahway Savings Institution, to enable that institution to be finally closed, is to be investigated by a Master.

-- The Bank of Russell Springs, Iowa, recently opened for business, is officered by men experienced in the banking business. The establishment of a bank is an indication of the solid growth of the place where it is located.

-- A letter has been received by the Associated Press of New York city, from a Hindoo broker of Bhavnagar, India, requesting that daily cable quotations of cotton receipts, and cotton futures in this market be sent him.

-- The incorporators of the new Farmers' and Mechanics' National Bank at Woodbury, N. J., have purchased a site for the new building adjoining the Court house for \$13,000. The necessary stock has already been subscribed.

-- The Atlanta Produce and Cotton Exchange as well as branches of the same at Charlotte, Birmingham, Selma and Savannah, have been closed on account of the failure of S. H. Phelan, who was at the head of the institutions.

-- The Managers of the Newark Savings institution, who were sued by the Receiver to recover losses arising through their mismanagement and negligence, are seeking to settle and have offered \$100,000, which offer is under consideration.

-- The pork packing business in the West is fully up to the operations of last year in magnitude. There was an increase of 180,000 in the number of hogs slaughtered from March 1 to May 19, 1887, over that for the same period in 1886.

-- Mr. C. E. Bill recently celebrated his fiftieth year as a member of the Board of Directors of the Bank of New York, having been a Director of that institution since May 9, 1837. The celebration consisted in his presiding at a recent meeting of the Board.

-- On June 13th there was a panic on the Coffee Exchange. The prices fell off three or four cents, but recovered some at the close. Four hundred and twelve thousand bags changed hands, and \$800,000 represents the shrinkage in value of the coffee dealt in.

-- Jay W. Ballou, President, Treasurer, Receiving Teller, Paying Teller, etc., of the College Dime Savings Bank of Baltimore, was sentenced on May 6th to three years in the Penitentiary, and to pay a fine of \$1,000 for fraudulent practices. He ran the

institution simply as a bank of deposit. It was impossible to draw any money from it, hence complaints arose.

— The property and plant of the Seaboard Cotton Compress Company, in Norfolk and Portsmouth, which came into the possession of the Exchange National Bank of Norfolk, now in hands of Receiver, has been sold. This should result in an additional dividend to the creditors of the bank.

— Garret A. Hobart, Receiver of the First National Bank of Newark, N. J., has been directed to bring a suit against Mary A. Dovell and Louis Dovell, executors, to ascertain whether anything was due the bank from the latter, who had been Receiving-Teller and was alleged to be in default.

— The Farmers' Bank of Fayetteville was placed in the hands of a receiver on June 2d. Superintendent Paine made an examination on May 19th, and found its available resources were \$43,693.66, while its liabilities amounted to \$66,514.93. Amos Smith, of Fayetteville, was made temporary receiver.

— On May 27th, Sir Donald A. Smith was elected President of the Bank of Montreal to succeed Mr. C. F. Smithers, deceased. Mr. Geo. A. Drummond was elected Vice-President, and Mr. W. C. McDonald was elected to fill the vacancy in the Board of Directors. Mr. W. J. Buchanan remains General Manager.

— Mr. Hyatt, the new Treasurer, issued the checks for payment of interest on United States bonds stamped with a *fac-simile* of his signature, instead of with his written signature, according to the practice invariably pursued by his predecessors. Pressure of business is pleaded as an excuse for the innovation, and it is not to occur again.

— The Rahway Savings Institution, which failed nearly ten years ago, has not been liquidated in a manner satisfactory to its creditors, only 50 per cent. dividends have as yet been paid. It is claimed that the property of the institution in Rahway City Water Bonds and real estate will, if rightly managed, go a long way toward paying out the creditors.

— The Union Bank of this city has been incorporated with a capital of \$250,000, divided into shares of \$100 each. The corporators, and the shares held by each, are: Donald MacKay, 100 shares; Eugene Kelly, 100; A. D. Juilliard, 100; John W. Kilbreth, 900; Joseph Park, 100; Lewis Seasongood, 100; J. A. Heuson, 900; Charles M. Fry, 100, and John W. Ellis, 100.

— The bill for ascertaining the owners of unclaimed deposits in Savings Banks before the Massachusetts Legislature has undergone some amendment. The bill will not apply to deposits under \$25, or to any deposit where interest has been entered on depositors books within twenty years. Treasurers of Savings banks are to publish notice of such deposits in two local newspapers.

— The silver storage vault, for which Congress was asked to appropriate \$100,000 and for which it appropriated only \$37,000, is to be ninety feet long, fifty in width and twelve feet deep. It will hold \$100,000,000 in silver. It is to be located in one of the Courts of the Treasury building under ground and covered with turf, so that the entrance will be known only to the Secretary of the Treasury, the Supervising Architect and a few trusted employees.

— Mexico has revised her tariff and the new law goes into effect in about two weeks. The extension of the Mexican International Rail Road, commencing at Piedras Negras on the Rio Grande, connecting with the Mexican Central at Laredo will soon be completed. Under the new tariff duties have been largely reduced on many articles of American manufactures especially on canned goods and American prints. This opens up a new field for American enterprise.

— Trade dollars have been redeemed to the amount of \$7,000,000. This is the amount estimated by the Mint Bureau as liable to be presented. The dollars are still coming in in small amounts. Redemption ceases after September 1, but in the mean time there is much profit in gathering them up in China, and difficult to say how many will have to be redeemed in good gold funds. The bullion in a trade dollar is worth about 75 cents in gold, and as the Government pays 100 cents in gold for it, the profit is 25 cents, enough to induce considerable energy in looking them up. The news of the redemption has not as yet had time to take full effect in China where most of the dollars are

supposed to have gone, and it would not be any thing surprising if several millions should yet be presented from that source.

— Receiver Wilkinson of the defunct Newark Savings Institution applied to the chancellor for permission to accept the tender of \$100,000 made by the Board of Managers of the bank in settlement of all claims made against them collectively and individually. Vice-Chancellor Van Fleet, as no opposition had been made by the organized depositors, granted the permission. President Daniel Dodd, whose faith in Fisk, Hatch & Co. led to the downfall of the bank, is one of the managers who will have to assist in paying up the \$100,000.

— The suit of Linus M. Price, Receiver of the Pacific National Bank of Boston, against Lewis Coleman, John Sheppard, and others, Directors of this bankrupt institution, in which the plaintiff seeks to hold the defendants personally liable for their alleged carelessness in the management of the affairs of the bank while acting as Directors, has been tried in the United States Circuit Court, Boston, before Judge Colt. The same question in a different form has been heard before. The defendants contend that the plaintiff has no ground for equitable relief.

— Richard J. Lane, President of the Abington National Bank of Abington, Mass., arrested and indicted for embezzling the funds of that institution, has been relieved from the criminal prosecution. His friends raised a large sum of money and will make a satisfactory settlement with his creditors in the civil suits. The criminal suits are withdrawn on the ground that most of the losses arose from advances to a manufacturing establishment in Maine which advances were approved by the Directors. Mr. Lane was also Trustee of an estate which has suffered from his breach of trust although no criminal charges have been made against him on that account.

— Savings banks in Massachusetts according to a bill introduced in the Senate are to be allowed to invest in legally authorized bonds of the States of Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin and Iowa, and of the District of Columbia, and in the bonds of any city of the aforesaid States and in the State of New York, which has, at the date of such investment, more than 20,000 inhabitants and whose net indebtedness does not exceed five per cent. of the taxable property therein, and in the notes of any citizen of the Commonwealth, with a pledge as collateral, of any of the aforesaid securities, the amount of said notes not to exceed in any case eighty per cent. of the market value of the securities pledged.

— The following is the substance of the circular issued by the Bank of Buffalo, in regard to the effect of the two half holiday laws, which is claimed to be in accordance with the decisions of the Attorney-general, the Superintendent of the Banking Department, and the New York Clearing-House Association; Paper made and dated before May 16, 1887, due on Saturday, Sunday, or Monday when legal holiday, must be paid on Saturday before 12 m. (2) Paper dated May 16, to May 24, 1887 inclusive, due on Saturday or Sunday must be paid on Saturday before 12 m., that due on any legal holiday except Sunday must be paid the next business day, but when due on Sunday and Saturday is a full legal holiday, on the Friday preceding. (3) Paper dated on and after May 25, 1887, due on Saturday or Sunday or any legal holiday must be paid the next business day. Paper made on May 5 to 15, including both dates, falling due on any legal holiday except Sunday and not paid should be protested both on the next preceding and the next succeeding business day, and comments that "this is rendered necessary by a direct conflict of two sections of the Half Holiday Bill, which latter as a piece of monumental stupidity in legislation has probably never been equalled."

Mr. M. W. Chamness, of Kingman, Kan., on April 30th writes: "In banking as in other professions, there is a great need of a good journal teaching advance ideas, I consider yours up to the occasion, and it should be in the hands of all who wish to keep awake."

Mr. B. L. Olds, Cashier of the Bank of St. Lawrence, Neb., is evidently one of the bankers who believes in getting all the publications devoted to banking. In a letter dated June 13th, he writes: "We are regular subscribers to RHODES' JOURNAL OF BANKING, and we know it to be by all odds the best bank publication we have seen, and we take three others."

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

FORM OF CHECKS.

Editor Rhodes' Journal of Banking:

In June number of JOURNAL at head of page 501 I find this:—"Here is a form of individual check, very plain and neat, and which would hardly seem open to any objection. The type is clear, with no unnecessary words, and the *number, amount, etc.* are placed in their proper positions," and then appears a fac-simile of check No. 2004 on Merchants' National of Oswego, etc.; now this may do for the latitude and longitude of New York, but "We, Us & Co." in this section of the Universe, at the Hub, all along the spokes, and at the fellows all "cuss" that kind of a check—and say that the **ONLY PROPER POSITION** for the *amount of a check in figures* is at the **UPPER left hand corner**, that leaves the lower left hand corner for the number. "Come east young man" some time and learn something—come and hear the music in the air when some of your outlandish ideas on checks get into the hands of Tellers, Corresponding Clerks, to say nothing of Bookkeepers, and also see the great blue and red lines drawn through the "Numbers"—why don't you adopt our Boston idea and have a *uniformity* throughout the United States—amounts in upper left hand corner.

BOSTON, June 10, 1887.

Yours in hope,

WILL. L. WELCH, Bookkeeper.

COLLECTIONS MARKED NO PROTEST.

Editor Rhodes' Journal of Banking:

I notice in the April number of the JOURNAL, articles on "Dead-head collections" and "Collection abuses." I recently visited a number of towns in our part of Nebraska, and being a country banker myself I usually "dropped in" at the banks, and exchanged some notes. I found one young Cashier who pursues a somewhat (to me) unique course, whenever he presents a sight draft with "*No Protest*" instructions, he stamps it with rubber stamp, of which I give you herewith a copy,

REFUSED & RETURNED

Charges 15 cents. Please Remit.

....., Cashier.

and returns it. He stated that his plan had worked well, he had met with but one house that refused to remit the fifteen cents.

Another Cashier told me that he took out fifteen cents out of all drafts, whether drawn "with exchange" or not. He says in this way he makes enough on the good to lose the bad. His plan, however, has the disadvantage of making the good pay for the bad. Let us hear from others.

HERMAN FRESSE.

PENDER, Neb., June 10, 1887.

THE ETYMOLOGY OF THE WORD BANK, ONCE MORE.

Mr. Editor.

Once more to the breach—*ad punctum pennæ*. I see in the JOURNAL for June that your correspondent "Scrutator" takes issue with me as to the derivation of the word Bank from the Italian *Banco*, a *bench*—preferring to derive it on the sole *ipse dixit* of Macleod, as given in his "Theory and Practice of Banking," meaning a *heap* or mound. Professor Perry, of Williams College, in his "Political Economy" also seems to approve of Macleod's derivation. Now, with all due respect for Macleod's views as to theoretical and practical banking, and to Professor Perry on "Political Economy" (especially as he is a "free trader"), and while I would prefer to go to them for information upon their especial subjects, and be no little influenced by their views and opinions thereon, yet on the other hand as regards the meaning, derivation and use of words I would most certainly prefer to pin my faith to the lexicographers, rather than to Macleod and Perry.

Scrutator implies that I only quoted from three dictionaries (in my article in your May number), and two of which he only mentioned by name—whereas I quoted from five. The three omitted by him are of much more recent date than the two named;

and one of which is "*just publishing*." Consistent opinion as given by the best, if not all, of the lexicographers is a unit as to the Etymology of Bank from Italian *Banco*, a *Bench*. I might name an additional list, but I will in part forbear. Littré, in his celebrated, voluminous and exhaustive French Dictionary—wherein is not only copiously given the definition of words, etc., but their history and etymology also—in defining the word *banque*, also refers to it as derived from *banc*, which word he derives from the Italian *banco*, and gives the word not only in the other Romance languages, but also the Teutonic, and among the latter the English equivalent *Bench*. To refer again to Skeat's Etymological Dictionary—Skeat says that "bank is in fact a doublet of *bench*. The oldest sense seems to have been 'ridge'—whence *bank* a ridge of earth, a shelf of earth; and *bench* a shelf of wood, used either as table or seat." Thus we have the natural origin of the word, a bank or mound of earth, and its primitive and specific use accordingly; and then its secondary, conventional or metaphorical application as any ordinary elevation above the common plane, or surface, whether of earth or wood—if of the former a bank, if of the latter a bench or table. But this is by no means used metaphorically, conventionally or otherwise in the sense as quoted by Scrutator from Macleod—that is to *heap* together in a mass, whether of sand, or stones, or money. The origin of the word is clearly as given by the lexicographers; and to use a term from rhetoric is an illustration of synecdoche—a figure of speech in which a part is put for the whole. Thus the bank, or bench, simply a comfort and convenience in use in transacting the business, and therefore merely incidental to it, gives name to the whole. Gilbart, (no mean authority) in his "Practical Treatise on Banking," says, "The term bank is derived from *Banco*, the Italian word for bench, as the Lombard Jews in Italy kept *benches* in the market-place, where they exchanged money and bills. When a banker failed his bench was broken by the populace—hence our term bankrupt." Now the Jews were the dealers, lenders, etc., of Europe long anterior to the Bank of Venice (founded in, or about, 1171).

I might quote also from Hallam's Middle Ages—but I forbear trespassing too much upon your indulgence. Still I will refer to one more, an American authority—Appleton's Cyclopædia; article "Bank—derived from Italian *Banco*, a bench—a place of deposit. The name had its origin in the fact that the Jews, who were the first to follow the business of lending money, were accustomed to assemble in market-places in Italian towns, seated on benches there to transact their trade."

With regard to a fancied, or forced etymology I do not know a better exemplification of it in a burlesque way than specimens given by Dean Swift in his "Discourse on the Antiquity of the English tongue"—showing how that Hebrew, Greek and Latin were derived from the English tongue. I give a few examples. Isaac derived from *Eyes ache*—because he had a pain in his eyes. The Jews called a man Balaam, who was a shepherd, and often said *ba* to his *lambs*, and was therefore called *Baalamb*, or *Balaam*.

Alexander the Great was very fond of eggs roasted in hot ashes. As soon as his head cooks heard he was come into dinner they called out to their sub-cooks *All eggs under the grate*. I refrain from giving Jupiter the heathen god as derived from Jew Peter, the Saint Peter of the Roman Church. "Just Publishing (?)." As to this parenthetical interrogation I am rather at a loss as to its application—without Scrutator takes exception to it as good English. If so I suppose that he would have, used in its stead, the hybrid phrase of *is being published*. For this jumble together of a verb in the present tense (or present participle) and a verb of the past tense; or the using of an active participle coupled with a past verb used in a passive sense to express an action now going on, not completed—for this kind of English I would refer him to the tender mercies of Grant White in his "Words and their Uses." Having read what Mr. White has to say upon such English he will feel a sadder man, if he does not become a wiser one. For myself I will only say that with reference to a book, of which three parts only have been published, and the remainder will require twenty or more parts to complete the whole (some of which are now in hand, but not published) and perhaps almost as many years—of such a book to use the phrase "now publishing" is, I think, painfully correct, rather than questionable English. In conclusion, let me remind, Scrutator, that "one swallow does not make a spring"—however good, even so good as a Macleod; and suggest to him to *search* and *inquire* for other swallows as to when they will come and spring shall be abroad in the land.

CLAYTON CANNON.

BALTIMORE, June 12, 1897.

BANK WORKERS, SIGNATURES, ETC.

Editor Rhodes' Journal of Banking.

You certainly are taking a sound and wise line in making the JOURNAL interesting to the workers at bank desks rather than to a few financiering bank Directors. It is now the best banker's publication in this country.

I fear that the illustrations you have given of illegible signatures will increase the vanity of bank-people to write indistinctly.

Plainness in writing and talking is a necessity, and the opposite is a vice that should be discouraged.

Please mail copies of your interesting June number as per list and money herewith.
SACRAMENTO, Cal., June 21, 1887.

FRANK MILLER, Cashier.

ILLEGIBLE SIGNATURES AND FORGERY.

Editor Rhodes' Journal of Banking:

SIR:—I have read with a great deal of interest the article on Signatures lately published in the JOURNAL. Many of the accompanying fac similes have indicated an ingenuity that, exerted in other directions, must have made the possessors singularly fortunate business men.

One fact in this matter of handwriting must have occurred to every bank official. The greater degree of perfection a man attains in handwriting the more difficult it is to counterfeit. In a signature every stroke of which is perfectly formed, and in which every curve is properly made and the correct proportions observed, a business man or bank official possesses the greatest possible safeguard against forgery. Of course it is not possible for the majority of people to execute a signature of this description, but I believe that the nearer a man attains to this standard of perfection the greater his security.

A forger oftentimes can counterfeit the marvelous but indecipherable characters of an adept in the art of poor penmanship, while the plain, well-formed signature baffles his ingenuity. A straight line of which an initial and terminal letter are the only legible features is no greater safeguard against forgery than it is a proof of genius. Eccentricity in handwriting, like eccentricity in anything else, more commonly excites our pity than our envy.

June 16, 1887.

J. H. LOOMIS,
Bookkeeper First National Bank, Cheyenne, Wyoming.

CONCERNING THE VEXED QUESTION OF COLLECTIONS.

Mr. Editor:

For some time past the most cursory reader of the JOURNAL OF BANKING, or of the *Bankers' Magazine* must have noticed frequent, short, and fugitive pieces upon this topic. Of late, however, the subject has taken more form and weight by reason of the "Prize" articles now in course of publishing in your JOURNAL.

The present abnormal condition in this important branch of banking—Collection and Exchange—so vexatious and costly to banks, is brought about by cupidity and competition—that cupidity which has for its motto "every man for himself, and the devil take the hindmost,"—that competition that "makes or breaks," and too often vulgarly called enterprise, especially if successful.

Of all business carried on among men, banking should be the most conservative, both by reason of its grave responsibilities and its very small profits. There is, therefore, no margin for risk. Yet, actuated by cupidity, it has become, within the past twenty-five years, very common for banks in our large cities to buy paper, as though merchandise, having no endorser, at the miserable rate of 4 to 6 per cent. per annum, thus taking a commercial risk at a banker's profit—such a risk as nothing will justify short of a commercial profit. My corollary, however, is not the latter alternative, but that a bank should confine itself to its legitimate field of business, discounting for its depositors the bills receivable, for merchandise sold, value received, and duly endorsed by the discountee to his bank, discounting the paper at a reasonable rate, so that with a banker's profit there should be a banker's risk—the nearest approximate to zero possible. There is a moral character and safeguard in discounting paper of this kind which does not attach to paper sold on the street—too often issued like the I O U's of Micawber, the one given to take up another. Hence it is that for years past in all the heavy mercantile failures we find that banks are the chief, and frequently almost the

exclusive, creditors of defunct concerns. Upon this point I have almost unintentionally digressed, and though it is in itself a sufficient subject to write a paper upon, I forbear further to dwell upon it.

Now, a bank is much more entitled to charge for cost of cashing (or receiving as deposit) and collection, or exchange, than discount on notes. In discounting time only is involved, but in taking uncurrent items time is not only involved but the charge of your correspondent, or agent, is likewise. Therefore, until time and space can be annihilated, exchange or collection cost must be sustained. If the depositor for whose benefit it is done does not pay, his bank must, and lose it. If anywhere in the world the saying "time is money" is axiomatic, it certainly is in bank. Of course now, as hitherto, all well-regulated banks will take from good depositors (those whose average bank balance is a desirable one and worth keeping) out of town items without charging the cost for collecting—regarding themselves as compensated in the good balance kept. And as a general thing this class of depositors does not have, or rarely so, items on distant or undesirable points. But there is a class of depositors, entirely too large a one, whose average balance is rarely much more than a thousand dollars, whose deposits consist almost wholly of checks and drafts—drawn from Dan to Beersheba—and though entered up on their pass-books as "cash" (conventionally so), and permitted forthwith to be drawn upon, yet apart from mere bookkeeping entries hardly have a dollar of cash about them. These items go out of the bank and are meandering hither and thither for a week or so (and sometimes very much longer) before the mails bring a dollar in return, and in the interim every dollar has been exhausted by the depositor and other batches have been deposited. Such deposits in one kind, where a National bank is required to keep a 25 per cent. reserve in another kind—Legal tenders, whether of gold, silver, or greenbacks—make a bank poor as to the actual availability of its assets. Yet a depositor (of this large class), if he can show by his bank-book an average balance of one thousand dollars (purely nominal as it is), thinks he is of great service to a bank, etc., and entitled to very great consideration. There are banks in this city (some of whom I could name, giving names of depositors also) who are practically paying from 10 to 15 per cent. per annum for these so-called deposits. Thus we have a large class of depositors whose only idea in relation to banks is to make use of them, and make them pay for the privilege of all the care, trouble, and responsibility for working "free gratis for nothing." In all other relations of life, sacred and secular alike, the divine apothegm, "the laborer is worthy of his hire," seems to be considered worthy of all acceptance—falling only in its application to banking, a business requiring, to be successfully conducted, two of the highest qualities of man, viz., moral rectitude, and mental capacity.

Yet for this want of appreciation I do not blame the business public so much as I condemn the greed that has become too manifest within the past few years in too many of a younger generation of bankers—making it a little less than a huxtering business. The result now is that Exchange account, which used to be a credit account, has been reversed—and, if not wholly a debit account, will hardly pay in one year the cost of postage for one month.

The object of this paper is not how to make collections—at the least possible cost and trouble, but it is to show the necessity of returning to first principles—that is to make collections as direct and prompt as the mail will carry them to their respective points, and not, for the *apparent* saving of cost of collection, sending around, if not going, seven sides of Robin Hood's octagonal barn to find entrance into the eighth side. The banks thus doing, if they would only recognize it, incur grave responsibilities, with probable loss, for laches. For, certainly, if it can be shown in a litigation that if the bank had used all due care and diligence in sending the items in question they would have reached their destination in two days, and would have been paid. But there was a delay of a week or more in this indirection, to save twenty-five cents or a dollar, (and if saved really inuring to the depositor, who is now a litigant against the bank, working for him for nothing), and during which interim the collecting bank, or drawer, or drawee has failed. Even though this extreme result should not be the case, how much petty annoyance occurs from daily inquiry as to whether that check, or draft, or note has been paid—the merchant having received an order for another bill of goods, but which he is rather chary about filling until he knows that the previous indebtedness has been paid—if paid being very desirous to fill the order in hand, which he postpones from day to day—and all on his part too to save a quarter of a dollar. A

marked illustration this of the penny-wise and pound-foolish way of saving in business, Whereas if he would pay his bank for the cost, etc., it incurs the collections would be attended to with the utmost dispatch. And to do this requires no "tag," rag or bobtail appendage. All properly conducted banks should have books of record in which every item going out of the bank to a correspondent should be registered—whether check, or draft or note, sight or time—giving (in certain vertical divisions) a complete transcript of each item.

In large banks it is desirable to have two or more of these books, each 1,000 pages' running at the same time. For items that are received on deposit by the Receiving Teller, or cashed by the Paying Teller, a separate Record—called Disbursements (or any other suitable name indicating its character) can be kept; and for items sent off to be collected for the depositor, and only placed to his credit when collected, and handed direct to the Collection Clerk, another Record is kept—say Foreign Collection Record. The cash items having been passed over from the Tellers to the General Bookkeeper are by him debited to the banks to which they are respectively sent, and then handed over to the Corresponding Clerk, etc.

Now the columnar or vertical divisions of these books of Record are eight or ten in number—and so familiar to most bank clerks that I deem it entirely superfluous to encumber your pages with a diagram.

It should be the duty on two given days of every week for the Corresponding and Collection Clerk to review these Records, and making reasonable allowance for delay in mail, to push any tardy or delinquent correspondents by special letters of inquiry.

Something more by way of illustrations drawn from personal experience could be said upon this vexed question of Collection and Exchange, but I forbear.

BALTIMORE, June 16, 1887

CLAYTON CANNON.

COLLECTION FORMS.

Editor Rhodes' Journal of Banking:

Please forward enclosure to the writer of "Domestic Exchanges," by "Sutter," in the June number, and oblige, A. HANSL, care of O'Connor & Sullivan, Bankers, SAN ANTONIO, Texas, June 21, 1887.

(ENCLOSURE.)

DEAR SIR:—I have read your article on Domestic Exchanges, June number of JOURNAL, and am well pleased with your method. Would you be so kind as to forward to me a sheet each of your Collection and Remittance Register as shown on page 583. Also where do you have these books made and what do they cost. There should not be less than 500 sheets to each book it seems to me. "Time is money, especially in banking, and whenever I can shorten some of the routine I gladly do it.

Yours, etc.,

A. HANSL.

(As the editor of the JOURNAL does not and cannot know Sutter's real name and address until after the prize essay has been selected, the letter and enclosure of our correspondent is printed as the readiest way of reaching him.—ED.)

Mr. C. McLuer, of Stillwater, Minn., writes: "I would not be without the JOURNAL for many times its cost. I look for it as anxiously as I do for the *Century* and *Harper's Magazine*."

Mr. H. Weiss, Cashier of the Blue Valley Bank, Hebron, Neb., says of the JOURNAL: "It is a valuable work and since I learned its merits cannot do without it. The legal decisions alone are worth double the price of subscription."

Mr. Geo. E. Black of the German-American of St. Joseph, Mo., writes: "You may enter the above bank on your JOURNAL subscription list, as I regard it an indispensable publication to a banker who wishes to keep himself posted." St Joseph is a thriving place, and the banks there have lately elected to make it one of the cities in which National banks may keep their reserves.

The *Boston Commercial Bulletin* of June 18th, says: "RHODES' JOURNAL OF BANKING is one of the best financial publications of the country, and its discussions of banking, business, currency and financial questions are marked by a soundness of reasoning backed by a knowledge of facts. It is published monthly in New York at 78 William Street and is a useful magazine for every business office."

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

CRITICISM OF THE REFUNDING PLAN.

[New York Evening Post.]

The Louisville *Courier-Journal* objects to the plan proposed by Mr. John Jay Knox, and advocated by Mr. Hewitt and others, for refunding the 4 per cent. bonds of the Government into 2½ per cents, paying a present premium of some agreed amount for this privilege. The *Courier-Journal*, in its playful way, says that *The Evening Post* favors a premium of 30 per cent., and it then shows how unfair this would be, because, although the Government would not pay any more money than it will pay by allowing the bonds to run till maturity at 4 per cent., yet the bondholders will have the use of the premium money, which will be worth a great deal to them. Well, in the first place, *The Evening Post* never proposed to pay them a premium of 30 per cent., and this our frolicsome contemporary knew very well when he wrote his article. In the next place, the only object or purpose of paying any premium at all is to enable the Government to continue the wholesome and beneficent work of extinguishing its debt, instead of intermitting the task for four years now, and again for fourteen or fifteen years after 1891. Even on the hypothesis of 30 per cent. premium, the transaction would be useful and business-like, since it would be an application of present means to future ends and would not increase the aggregate liability of the Government. If the bondholders should make prudent use of the premiums paid to them, the country would be that much better off. The premium to be paid on a 4 per cent. basis would not be 30 per cent., but 20,583, as computed by the Government Actuary, and the saving that would be effected by the Government, if all the four per cents could be refunded on that plan would be \$21,900,000. The tax-payers would be called upon for so much less in the aggregate than they will be required to pay if the 4's run to maturity on the present basis. The thought that the bondholders might derive an advantage, even though the Government should save \$21,900,000, is no doubt very harrowing.

COMPTROLLER TRENHOLM ON BANK EXAMINATIONS AND CIRCULATION.

[Interview in New York Herald.]

The failure of the Fidelity National Bank, of Cincinnati, may be the means of introducing a much needed reform in the system by which the affairs of the National banks are examined, and prevent in future such disgraceful swindles as those that characterized the gutting of the Marine Bank by James D. Fish and Ferdinand Ward, and the Fidelity by Messrs. Harper and Hopkins. In his last report to Congress—and it is worthy of passing mention that the Comptroller of the Currency is one of the very few subordinate officers who reports direct to Congress and without the intervention of the Secretary of the Treasury—Comptroller Trenchholm, under the head "Suggestion as to the amendments to the laws relating to banking by which the system may be improved and the security of the holders of its notes and other creditors may be increased," recommended that provision be made for more frequent examinations than are now possible by adding to the amounts paid by the banks "a suitable amount to be paid out of the Treasury, in order that supervising examiners may be employed." In the report that will be laid before Congress this winter the Comptroller will give a detailed history of the Fidelity crash and the causes that led to it, and will in this connection renew his recommendations for the appointment of supervising examiners and give his reasons at length for additional examinations. Speaking about the matter, the Comptroller said:—"I want only half a dozen men. That will be amply sufficient. Under the present system a bank is examined about once a year, and should an additional examination be made—say a month or two later—the fact of the examiner being there would at once be known; it would cause gossip and rumor, and produce embarrassment when there might be nothing to justify any feeling of alarm. But with the supervising examiners it would be different. The commercial community

would understand that the supervising examiner was charged with verifying the work of the district examiner, and his appearance a week or six months after the district examiner's visit could in no way reflect on the bank, but would simply mean that the inspector was performing his duties by regularly going over his territory.

"Then these supervisors would be men more fitted to cope with rascality. You must fight artillery with artillery. Men like Fish and Harper are Paladins of finance, and it requires men of long experience and great ability to be their match, and these inspectors could watch things closer and make thorough and exhaustive examinations. It is not often that there is rascality in the management of the National banks. Probably there have not been a dozen outrageous cases, but every single instance affects the entire system, and in a measure injures its credit."

It is also likely that in his report Mr. Trenholm will make some recommendations seeking to better secure the interests of stockholders and depositors.

In connection with the cancellation of the three per cent. loan the Comptroller gave the following figures:—The banks held, as a security for circulation, on June 1, \$17,000,000, and to-day, July 1st, \$4,700,000, showing a surrender of \$12,300,000. Of fours on June 1st they held \$114,975,000, and on July 1st, \$115,927,000, and of the 4½ per cent. loan \$65,782,000 on June 1st and \$67,900,000 on July 1st. Adding the increase of the fours and 4½'s, \$3,070,000, and subtracting it from the decrease of threes leaves a net balance of a little over \$9,000,000, which represents, in round numbers, a reduction of circulation of \$8,100,000, the banks only issuing ninety per cent. of the par value of the bonds deposited. But this reduction of National bank circulation does not mean the contraction of the currency to that extent, because for every dollar of National bank note currency surrendered the Treasury will pay out a dollar of "lawful money." Hence, while the banks lose their circulation exactly the same amount will be taken out of the Treasury vaults and put into active circulation. The total amount of bonds of all kinds held by the Treasury as a security for circulation is \$191,707,300 or considerably more than twice the minimum amount required by law. Comptroller Trenholm does not believe that it would make any difference to the business of the country at this time if all the National banks surrendered their circulation, but it would be otherwise in case of an emergency, and in view of any possible contingency he believes it to be wise to continue the laws requiring banks to issue at least \$50,000, so, as he put it, that the machinery is there and not wait until the emergency arises before making the machinery.

WHO GOT THE MONEY.

[Chicago Tribune.]

It is interesting to inquire who has been the gainer where so much money has been lost. The avails of the transaction may be said to be distributed among the scalpers who were shrewd enough to operate at the right time for a break, and the men who owned the wheat at other points which has been poured in at such a tremendous rate as to break the resolution of the clique. The latter have reaped a rich harvest, and it is unfortunate for the farmer that he has not secured a larger proportion of it. Most of the wheat had been bought soon after harvest by millers or those who sold against it in this market, and for several days they realized on some half a million bushels per day an average of perhaps 10 cents per bushel more than could have been obtained for it in any other market in the West. It is consoling to know that if the whole gain has not gone where it would have done the most good, about all the loss has come out of the pockets of the speculators and their agents, the former being the men who could lose it with the least disadvantage to the rest of the community. Most of them went into the business in very much the same spirit as they would bet on a horse race or in a faro bank, and deserve as little commiseration in the event of loss as they would have shown mercy had they been fortunate enough to get the upper hand in the deal.

Crane, Parris & Co., Bankers of Washington, D. C., write of it as an "excellent JOURNAL which we appreciate more than any other work of the kind in our office."

Isaac F. Nicholson, 229 East German Street, Baltimore, writes: "I have looked through the JOURNAL OF BANKING received few days since and confess to finding it much more interesting than I had in any way imagined. My only regret being that want of time and bad eyesight should have prevented my subscribing heretofore. I wish you the full success that your efforts merit."

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3715—Garden City National Bank, San Jose, California. Capital, \$100,000.
3716—Farmers & Mechanics' National Bank, Woodbury, New Jersey. Capital, \$100,000.
3717—First National Bank, Negaunee, Michigan. Capital, \$50,000.
3718—Central National Bank, Springfield, Missouri. Capital, \$100,000.
3719—Oregon National Bank, Portland, Oregon. Capital, \$100,000.
3720—First National Bank, Olathe, Kansas. Capital, \$50,000.
3721—First National Bank, Alliance, Ohio. Capital, \$100,000.
3722—Glenwood National Bank, Glenwood Springs, Colorado. Capital, \$100,000.
3723—Chestnut Street National Bank, Philadelphia, Pennsylvania. Capital, \$500,000.
3724—First National Bank, Menasha, Wisconsin. Capital, \$80,000.
3725—First National Bank, Tobias, Nebraska. Capital, \$50,000.
3726—Wyandotte National Bank, Kansas City, Kansas. Capital, \$100,000.
3727—First National Bank, Granbury, Texas. Capital, \$50,000.
3728—National Bank of Arizona, Phoenix, Arizona. Capital, \$100,000.

ALABAMA.

- BIRMINGHAM.—American National Bank has been authorized to commence business. Capital, \$250,000. President, S. T. Barnett; Cashier, R. M. Mulford.
EUFULA.—East Alabama National Bank: Vice-President, R. Cherry.
OPELIKA.—Bank of Opelika: no Assistant Cashier in place of W. B. Shapard, Jr.

ARIZONA.

- PHOENIX.—National Bank of Arizona has been authorized to commence business. Capital, \$100,000. President, M. W. Kales; no Cashier.
TUCSON.—Consolidated Bank of Tucson has been incorporated, succeeding Bank of Tucson (B. M. Jacobs) and D. Henderson. Capital, \$50,000. President, B. M. Jacobs; Vice-President, D. Henderson; Cashier, M. P. Freeman.

CALIFORNIA.

- FRESNO CITY.—First National Bank; O. J. Woodward, Cashier, in place of W. K. James; Assistant Cashier, A. H. Braely. — Fresno Savings & Loan Bank: J. G. James, President, in place of M. J. Donahoe.
MARYSVILLE.—Rideout & Smith: no Cashier in place of Geo. R. Eckart.
MERCED.—First National Bank has been authorized to commence business. Capital, \$200,000. President, C. H. Huffman; Cashier, Milton Samuel Huffman.
MONROVIA.—First National Bank has been authorized to commence business. Capital, \$50,000. President, John F. Brossart; Cashier, Joseph F. Sartori.
ORANGE.—Bank of Orange: Cashier, Geo. J. Mosbaugh.
PASADENA.—First National Bank: J. E. Farnum, Cashier, in place of D. Galbraith. — Pasadena Savings Bank has been incorporated recently.
RIVERSIDE.—Chas. Bakewell & Sons are reported here.
SAN BERNARDINO.—First National Bank; M. B. Garner, Vice-President, in place of J. A. Breneman.
SAN DIEGO.—First National Bank; R. A. Thomas, President, in place of Jacob Gruendike; O. S. Hubbell, Cashier in place of R. A. Thomas; M. T. Gilmore, Assistant Cashier, in place of O. S. Hubbell.
SAN FRANCISCO.—Bank of British North America; W. Lawson & J. C. Welch, Agents, in place of W. Lawson & C. F. Taylor. — California Safe Deposit Co.; Charles R. Thompson, Cashier, reported a defaulter.
SAN JOSE.—Garden City National Bank has been authorized to commence business. Capital, \$100,000. President, C. W. Breyfogle; Cashier, Thos. F. Morrison.
SELMA.—Bank of Selma; capital, \$10,000. President, J. G. S. Arrants; Cashier, D. S. Snodgrass.

COLORADO.

- DENVER.—Colorado Savings Bank has recently filed articles of incorporation with the Secretary of State. Paid capital, \$50,000. President, John A. Clough; Vice-President, F. K. Atkins; Cashier, W. J. Wildman.
FT. MORGAN.—J. S. Redfield & Co. are in business here.
GLENWOOD SPRINGS.—Glenwood National Bank has been authorized to commence business. Capital, \$100,000. President, John L. McNeil; Cashier, Charles H. Toll.
JULESBURG.—First National Bank has been organized here.
STERLING.—Allen Wirth is reported here.

CONNECTICUT.

- HARTFORD.—Fidelity Company (private) is reported here. — Hubbard & Farmer, assigned.
LITCHFIELD.—Litchfield Savings Society; Chas. H. Coit, Treasurer, in place of Henry R. Coit.
MIDDLETOWN.—Middletown Savings Bank; Geo. A. Coles, President, in place of Samuel Babcock.

NEW LONDON.—Mariners' Savings Bank; no President in place of C. C. Comstock, deceased.

WATERBURY.—Dime Savings Bank; Henry H. Peck, President in place of Henry C. Griggs.

WINSTED.—Mechanics' Savings Bank; Harvey B. Steele, President, in place of Lyman R. Norton; Lyman R. Norton, Treasurer, in place of E. E. Gilman.

DAKOTA.

CANTON.—Dakota Loan & Trust Co.; Assistant Cashier, Frank H. H. Wetson.

CASSIHLTON.—Cass County Bank has been organized. Capital, \$50,000. President, E. H. Paine; Cashier, O. H. Paine.

CASTALIA.—F. S. Rowley is reported here. Style, Missouri Valley Bank.

CHAMBERLAIN.—First National Bank; Assistant Cashier, L. D. Allred.

DEVIL'S LAKE.—Merchants' National Bank; Vice-President, Clark W. Kelley.

EDGEMONT.—Citizens' Bank is reported here. President, Jno. M. Hammond; Cashier, T. A. Short.

FREDERICK.—Bank of Frederick (Incorporated); President, F. H. Hagerty; Cashier, J. C. Simmons.

MINOT.—E. A. Mears is in business here. Style, Bank of Minot.

SPEARFISH.—Stebbins, Fox & Co.; succeeded by Bank of Spearfish (Incorporated). Capital paid in, \$30,000. President, L. W. Valentine; Vice-President, W. R. Stebbins; Cashier, Jas. F. Summers.

STURGIS.—Lawrence County Bank; succeeded by First National Bank. Capital, \$50,000. President, Donald A. McPherson; Cashier, J. J. Davenport.

FLORIDA.

ORLANDO.—First National Bank; B. B. Poyntz, Assistant Cashier, in place of W. B. Newton.

PALATKA.—Palatka National Bank; Receiver, S. J. Kennerly.

GEORGIA.

MACON.—R. F. Lawton; succeeded by Merchants' National Bank. Capital, \$100,000. President, R. F. Lawton; Cashier, L. P. Hillyer.

IDAHO.

MOSCOW.—First National Bank; Henry Derrham, Vice-President, in place of J. H. Maguire.

ILLINOIS.

ATLANTA.—Atlanta National Bank; Vice-President, W. S. Dunham; Assistant Cashier, Seward H. Field.

AUGUSTA.—Augusta Bank (J. B. Compton & Co.); Cashier, L. H. Dexter.

CAIRO.—Alexander County Bank; succeeded by Alexander County National Bank. Capital, \$100,000. President, Fredolin Bros; Cashier, Henry Wells.

CHICAGO.—American Exchange National Bank; D. B. Dewey, President, in place of D. W. Irwin, resigned.

ENGLEWOOD.—Citizens' National Bank is being organized. Capital, \$100,000.

GIRARD.—Bank of Girard; President, J. F. Roach; Cashier, J. M. Metcalf.

JOLIET.—Will County National Bank; C. H. Talcott, Cashier, in place of Henry C. Knowlton; no Assistant Cashier in place of C. H. Talcott.

MATTOON.—First National Bank; P. F. McNair, Cashier, in place of C. E. Wilson; no Assistant Cashier in place of P. F. McNair.

RUSHVILLE.—Bank of Rushville; Assistant Cashier, John D. Little.

SYCAMORE.—De Kalb County Savings & Loan Association; Secretary, John B. Whalen.

INDIANA.

COLUMBUS.—Irwin's Bank (Joseph I. Irwin); W. P. Alden, Assistant Cashier, in place of H. M. Rowley.

DECATUR.—Adams County Bank; Assistant Cashier, E. X. Ehinger.

FARMLAND.—A Banking Co. has been organized here. Cashier, I. M. Bransen.

GOSPORT.—Montgomery & Henry; succeeded by James R. Henry.

LOGANSPORT.—City National Bank has been organized. President, Alex. R. Shroyer; Cashier, Will H. Forest.

POSEYVILLE.—V. P. Bozeman & Co.; Cashier, Geo. J. Waters.

RUSHVILLE.—Rushville National Bank; Assistant Cashier, John Megee.

WATERLOO.—De Kalb Bank; no Assistant Cashier in place of D. A. Garwood.

WESTVILLE.—E. S. Smith, Collection Agent; now in banking business. Style, Bank of Westville.

IOWA.

ATLANTIC.—Cass County Bank; A. W. Dickerson, Cashier, in place of John P. Gerbrich; no Assistant Cashier in place of A. W. Dickerson.

BONAPARTE.—Farmers & Traders' Bank; J. A. Johnson, Cashier, in place of Thomas Crispy; no Assistant Cashier in place of J. A. Johnson.

CARSON.—Bank of Carson (Moseley Chase); Manager, S. C. Campbell.

CLINTON.—Merchants' National Bank has been authorized to commence business. Capital, \$100,000. President, B. H. A. Henningsen; Cashier, R. C. Van Kuran.

GARDEN GROVE.—Garden Grove Bank; W. M. Wood, Cashier, in place of Geo. J. Woodbury.

HUMBOLDT.—People's Bank; Assistant Cashier, W. W. Sterna.

JESUP.—Farmers' Bank; S. L. Clark, Cashier, in place of George S. Murphy.

LAWLER.—D. R. Kerby (Bank of Lawler); succeeded by Parker & Mason. Cashier, Wm. H. Parker.

MANCHESTER.—A. B. Loomis & Son; M. F. Le Roy, Cashier, in place of Henry W. Rule.

MAYNARD.—Bank of Maynard; F. E. Blethen, Cashier, in place of D. Watenpugh.

MELROSE.—Melrose Bank; Assistant Cashier, Mrs. D. J. Martin.

NEW MARKET.—Bank of New Market; G. I. Miller, Cashier, in place of C. B. Hutton.

NORWAY.—Benton County Savings Bank is the only bank here. President, F. Pickart; Cashier, E. E. Hartung.

ODEBOLT.—Odebolt State Bank; W. F. Bay, Cashier, in place of Geo. J. Low.

SHELL ROCK.—Shell Rock Bank; P. McDonald, President, in place of Clark Fairfield.

SHENANDOAH.—First National Bank; Frank Hooker, Cashier, in place of R. W. Carey.

VAIL.—Citizens' Bank; proprietor, Jno. H. De Wolf. No Cashier in place of Percy Farnilton.

WALKER.—Exchange Bank (A. E. Niertel & Co.); Cashier, Henry J. Niertel.

WHITING.—Whiting Bank; Assistant Cashier, L. E. Christie.

KANSAS.

ASHLAND.—First National Bank; Cashier, Geo. Theis, Jr.

COLDWATER.—First National Bank; Vice-President, H. H. Rich; Assistant Cashier, Wm. D. Weller.

CONCORDIA.—Citizens' National Bank has been organized. Capital \$100,000. President, W. P. Caldwell; Vice-President, B. H. McEckron; Cashier, C. P. Tilden.

DODGE CITY.—First National Bank; A. T. Soule, President in place of G. M. Hoover; Wm. W. Munsell, Vice-President, in place of R. J. Hardesty.

DOWNS.—Exchange National Bank; G. H. Skinner, President, in place of W. W. Hetherington; John Hall, Vice-President, in place of F. Everest; C. J. Sargent, Cashier, in place of J. B. Kroetch; J. M. Bower, Assistant Cashier, in place of Wm. Mellen.

HARPER.—First National Bank; George D. Thompson, Cashier, deceased.

HUTCHINSON.—Hutchinson National Bank; J. F. Greenlee, President, in place of W. E. Burns; Thos. J. Anderson, Vice-President, in place of F. R. Chrisman; A. J. Lusk, Cashier, in place of J. F. Greenlee.

KANSAS CITY.—(P. O.; Wyandotte).—First National Bank; Vice-President, D. R. Emmons. Wyandotte National Bank has been authorized to commence business. Capital, \$100,000. President, J. W. Sponable, Vice-President, Frank Fulton; Cashier, C. W. Trickett.

KINGMAN.—Citizens' National Bank has been authorized to commence business. Capital, \$50,000. President, Robert W. Hodgson; Cashier, John M. Lee.

KIRWIN.—First National Bank; Assistant Cashier, H. R. Huil.

MINNEAPOLIS.—Minneapolis National has been authorized to commence business. Capital, \$60,000. President, Joseph C. Gafford; Cashier, Benjamin F. Bracken.

OLATHE.—First National Bank has been authorized to commence business. Capital, \$50,000. President, Lewis W. Breyfogle; Cashier, John L. Price.

SHERMAN CENTER. (P. O.; Gandy).—Bank of Voltaire; succeeded by Russell Bros. Capital, \$10,000. President, H. W. L. Russell; Cashier, C. P. Russell; Assistant Cashier, Charles C. Russell.

WATERVILLE.—Searles & Hall (Commercial Bank); O. D. Hall continues.

KENTUCKY.

DANVILLE.—Citizens' National Bank; E. W. Lee, President, in place of M. J. Farris.

HICKMAN.—Hickman Bank; H. Buchanan, President, in place of R. T. Tyler.

MT. STERLING.—Farmers' National Bank; R. A. Mitchell, President, in place of J. A. Hannah.

LOUISIANA.

NEW ORLEANS.—Metropolitan Bank; Assistant Cashier, Geo. W. Young.

SHREVEPORT.—Commercial National Bank; no Vice-President in place of S. B. McCutcheon; S. B. McCutcheon, Cashier, in place of R. R. Deming; Assistant Cashier, A. L. Stringfellow.

MAINE.

BANGOR.—Kenduskeag National Bank; Fredk. W. Hill, President, in place of J. S. Wheelwright.

DOVER.—Kineo National Bank; Vice-President, John F. Hughes.

MARYLAND.

BAITIMORE.—German Savings Bank; Charles Lieberknecht, Treasurer, in place of Robt. M. Rother.

WESTMINSTER.—Wm. B. Thomas; Cashier, George Batson.

MASSACHUSETTS.

BOSTON.—National City Bank; Geo. W. Grant, Cashier, in place of Charles C. Barry; no Assistant Cashier in place of Geo. W. Grant. — New England National Bank; A. C. Kollock, Assistant Cashier, until December 1, 1887.

CHELSEA.—Chelsea Savings Bank; Otis Hinman, President, in place of John H. Osgood, deceased.

LOWELL.—Prescott National Bank; Assistant Cashier, F. Blanchard.

SPRINGFIELD.—Chicopee National Bank; Henry Fuller, Jr., President, deceased.

MICHIGAN.

ALLEN.—C. H. Winchester; Cashier, Byron Ellis.

BESSEMER.—Bessemer Bank; proprietors, Jos. Sellwood & Co., Cashier, A. D. Garner. Cashier, in place of Alex. A. Rase.

BROCKWAY CENTRE.—Brockway Centre Bank (B. R. Noble & Co.); C. R. Holden, Cashier, in place of Alex. A. Rase.

DETROIT.—Citizens' Savings Bank; E. K. Roberts, President, in place of Milton H. Butler; Edwin F. Mack, Cashier, in place of E. K. Roberts; no Assistant Cashier in place of Edwin F. Mack. — Mills Real Estate Security Bank; sold to C. H. Mills. No change in title of officers. — People's Savings Bank; President, M. W. O'Brien; 2d Vice-President, F. A. Schulte; S. B. Coleman, Cashier, in place of M. W. O'Brien; no Assistant Cashier in place of S. B. Coleman, Preston Bank; succeeded by Preston National Bank. Capital, \$600,000. President, Rufus W. Gillett; Vice-President, F. W. Hayes; Cashier, Julius P. Gilmore.

DOWAGIAC.—Lee Brothers & Co. commenced business here June 1st.

GRAND LEDGE.—Loan & Deposit Bank (George N. Berry); Cashier, L. H. Evarts.

GRAYLING.—Grayling Exchange Bank (John Staley, Jr.); Assistant Cashier, J. Wilson Staley.

NEGATUNE.—Michigan Iron Bank (H. E. Pearce); succeeded by First National Bank. Capital, \$50,000. President, Alexander Matland; Vice-President, John B. Maas; Cashier, Thos. C. Yates.

MINNESOTA.

OHIO.

ALLIANCE.—First National Bank has been authorized to commence business. Capital, \$100,000. President, Richard W. Teeters; Cashier, Le Roy D. Brown.

CINCINNATI.—Cincinnati National Bank; Frank Alter, President, in place of Joseph F. Larkin, resigned. — Equitable National Bank; Vice-President, J. K. Mardock.

— Fidelity National Bank; Receiver, David Armstrong.

COLUMBUS.—Clinton National Bank; M. M. Greene, President, deceased.

FINDLAY.—American National Bank has been authorized to commence business. Capital, \$100,000. President, Jacob F. Burke; Cashier, Sam W. Miller.

MARIETTA.—First National Bank; W. W. Mills, President, in place of Beman Gates; Beman Gates, Vice-President, in place of M. P. Wells.

OREGON.

ARLINGTON.—First National Bank; Vice-President, E. C. Frick.

PORTLAND.—Oregon National Bank has been authorized to commence business. Capital, \$100,000. President, Van B. De Lashmunt; Vice-President, Geo. B. Markle, Jr.; Cashier, D. F. Sherman. — Portland National Bank; no Vice-President in place of Rufus Ingalls; W. Lowe, Acting Cashier, in place of D. F. Sherman. — Metropolitan Savings Bank; converted into the Oregon National Bank.

PENNSYLVANIA.

CHESTER.—Delaware Co. Trust, Safe Deposit & Title Ins. Co. Capital, \$25,000.

President, Henry C. Howard; Secretary, John D. Goff; Treasurer, Thomas Lees.

GREENVILLE.—First National Bank; Assistant Cashier, Charles R. Wray.

HARRISBURG.—Merchants' National Bank; Vice-President, R. B. Mateer.

MILLERSTOWN (P. O. Barnhart's Mills).—Millerstown Deposit Bank is new bank here.

PALMYRA.—Palmyra Bank has been chartered under State laws.

PHILADELPHIA.—Bank of North America; John H. Michener, President, in place of Charles S. Lewis, resigned; Assistant Cashier, James C. Pinkerton. — Chestnut Street National Bank, organization of which was reported in April JOURNAL, has been authorized to commence business. Capital, \$500,000. Vice-President, William M. Slingerly; Cashier, William Steele. — City Trust, Safe Deposit & Surety Co.; capital increased to \$500,000. — Investment Co. of Philadelphia; capital increased to \$4,000,000. — Narr & Gerlach; Frederick Narr retires. Wm. Gerlach and Fredk. H. Harjes succeed, under style of Gerlach & Harjes.

SHIPPENSBURG.—First National Bank; J. E. Geesaman, Cashier, in place of J. D. Geesaman.

WILLIAMSPORT.—Merchants' National Bank; officers are as follows: President, J. Wood Mussina; Vice-President, Jesse B. Duble; Cashier, J. H. Boyer; Assistant Cashier, Ralssa C. Clark.

TENNESSEE.

CHATTANOOGA.—Chattanooga National Bank; Vice-President, Thos. L. Cate; Assistant Cashier, D. Cal. McMillin. — Third National Bank; 1st Vice-President, D. E. Rees; 2d Vice-President, W. H. Hart.

TEXAS.

AUSTIN.—First National Bank; no Assistant Cashier in place of J. M. Brackenridge.

BAIRD.—First National Bank; no Assistant Cashier in place of J. M. Beatie.

CALVERT.—J. S. McLendon & Co.; succeeded by First National Bank. Capital, \$80,000.

President, J. S. McLendon; Cashier, J. A. Foster.

DENISON.—State National Bank; N. S. Ernst, Cashier, in place of Wilmot Saeger.

GRANBURY.—First National Bank has been authorized to commence business. Capital, \$50,000. President, Daniel C. Cogdell; Cashier, Abraham U. Thomas.

PALESTINE.—First National Bank; Vice-President, G. W. Burkitt.

SAN ANTONIO.—Lockwood & Kampmann; succeeded by Lockwood National Bank. Capital, \$300,000. President, Joseph S. Lockwood; Cashier; Joseph Muir, Jr.

VERMONT.

SPRINGFIELD.—First National Bank; G. L. Closson, Cashier, in place of B. F. Aldrich.

VIRGINIA.

NEWBERN.—Pulaski Loan & Trust Co. has been organized here. — John B. Baaker-ville; discontinued.

WASHINGTON TERRITORY.

SEATTLE.—E. B. Downing & Co.; succeeded by Guarantee Loan & Trust Company (incorporated.) Paid capital, \$50,000. President, Leigh S. J. Hunt; Vice-President, David N. Baxter; Treasurer, Edward B. Downing; Secretary, Geo. H. Heilbron; Examiner, Charles H. Kittinger.

WISCONSIN.

CHIPPEWA FALLS.—Lumberman's National Bank has been organized.

MENASHA.—First National Bank has been authorized to commence business. Cashier, Robert Graham.

MERRILL.—First National Bank; Vice-President, Walter A. Soott.

QUEBEC.

GRANBY.—Eastern Townships Bank; E. N. Robinson, manager, in place of W. H. Robinson.

HUNTINGDON.—Eastern Townships Bank have opened an office here. Manager, W. H. Robinson.

MONTREAL.—Bank of Montreal; Donald A. Smith, President, in place of C. F. Smithers, deceased; Vice-President, George A. Drummond.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, July 1, 1887.

The events of the month have been somewhat exciting. The failure of the Fidelity National Bank of Cincinnati and the serious losses of the American Exchange National Bank of Chicago, were chiefly the result of the attempt to force up the price of wheat, and had much effect in unsettling the market. These incidents as well as the wheat excitement itself are the indications and results of circumstances which this year have had a tendency to unsettle the opinions of those who influence the money market, and to reduce traders to a condition of Micawber like expectation. The year opened with a confident anticipation of a strong and permanent revival of business to be felt in all branches of trade and commerce, and there were many indications that this belief was well founded. Money abroad was cheap and the rates in the United States were not high. Reports of rise in the price of real estate in many parts of the country were rife, and much was heard of the phenomenal energy of business enterprise in the Southern States. The railroad earnings exceeded those of the previous year. Somehow, however, none of the anticipations of a year of extraordinary prosperity have been realized. There has been no general boom in prices, in fact the usual attitude of the market has been apathetic. Every reason for a rise in prices has been followed by some counteracting influence. The Inter-State Commerce law seems to have had a depressing effect on railroad property, notwithstanding the increased earnings of most of the roads. The condition of the Treasury surplus has been a standing threat to the money market in spite of the fact that money appears to be plenty and the currency sound. Yet owing to this overhanging cloud the least excitement sends rates up. There seems to be very little margin of confidence or stamina, and very little disturbs the balance. The real condition of the Treasury does not warrant so much apprehension, but the people of the United States, though blessed with republican institutions, have for a democratic people a strange awe of the operations of their Government. The Treasury does much injury by veiling its methods in mystery and by performing all it does do in a paltering way as if it would draw back with one hand what it proffers with the other. For instance the Secretary set out to relieve the money market by paying \$9,000,000 interest a few days in advance. Some idiot criticizes this and asserts it is done to help Wall street. Immediately as if frightened at this absurd criticism the Secretary apologizes through his inspired correspondents, for an act he had no reason to be ashamed of. All this shows that the Treasury Department is merely drifting with no policy at all. Any policy announced and adhered to is better than none at all. A plain announcement that the Government will not without the authorization of Congress buy bonds at a premium would do more to quiet apprehension on that score than any other course. There is on foot a gigantic speculation in United States bonds in anticipation that the Government will be forced to buy, and every thing else seems to be waiting until the matter has been decided one way or the other. The moral effect of the Treasury policy or want of policy is vastly more than is warranted by any real danger from the locking up of money, but the market is influenced more by fears and hopes than it is by cold facts. The waiting policy pursued by the Treasury plays into the hands of those who hold United States bonds for speculation, for it gives them a chance to fob them on the banks at high prices when if the Government would plainly announce that it would not buy at a premium, bonds would be lower and the banks needing them could supply themselves at more reasonable prices. It is perfectly ridiculous to expect permanently higher prices for wheat in the face

of the London price controlled as it is by the cheap wheat from India. Our own markets are glutted with wheat and there seems no outlet sufficient to consume the supply before the new crop comes in, which is said to be promising. After the demand for flour is supplied the only other home demand is for whiskey, and there never was a larger quantity of whiskey in store than at present. Dry weather may reduce the new crop somewhat, but this merely shifts the burden from the speculators to the farmers. Neither does the prospect for higher prices of cotton seem much more fair. The Lancashire manufacturing districts in England are arranging to run mills on short time. We cannot regard this as a mere temporary attempt to force down the price of the raw material. All advices show that the Lancashire spinners are beginning to feel the competition of the cotton mills established and successfully operated in India. To compete with these Eastern rivals built up in one of England's dependencies, the home spinners must have raw cotton at a permanently lower range of prices. The iron market in this country is somewhat better than it was last year. The building of new railroads has increased the demand for rails and rendered prices firm. The nail trade is however not so good.

FOREIGN EXCHANGE has naturally been exceedingly dull during the month; the bulk of the remittances having been in this direction. Now and then the small supply of commercial bills has had a tendency to temporarily strengthen rates, but the general trend has been downward until at length a point warranting specie importation has been reached, and there have been rumors that gold had been drawn from the Bank of England for shipment to this country. This will probably result in the raising of the bank rate for discounts. The Bank of England up to June 24th had gained £62,000 in specie. The Bank of France to the same date had gained 11,475,000 francs in silver and 8,600,000 in gold. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.83½@4.84; sight, nominal, \$4.85@4.85½; 60 days, actual, \$4.83@4.83; sight, actual, \$4.83½@4.84½; Cable transfers, \$4.84@4.85; Prime commercial sterling, long, \$4.80½@4.81½; Documentary sterling, 60 days, \$4.80@4.81; Paris, bankers', 60 days, 5.24½@5.23½; sight, 5.21½@5.21½; Paris, commercial, 60 days, 5.26¼@5.25½; sight, 5.23¼@5.23½; Antwerp, commercial, 60 days, 5.27½@5.26½; Swiss, bankers', 60 days, 5.23½@5.23½; sight, 5.21½@5.21½; Reichsmarks (4), bankers', 60 days, 94½@94½; sight, 94½@95; Reichsmarks (4), commercial, 60 days, 93½@94; sight, 94½@94½; Guilders, bankers', 60 days, 39½@39 15-16; sight, 40 1-16@40¼; Guilders, commercial, 60 days, 39 11-16@39¾; sight, 39½@39 15-16; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26 11-16@26¾; sight, 26 15-16@27. Paris dispatches quote exchange on London 25f. 23c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris, on June 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of May and June:

May.	BANKERS—		Cable	Commercial.	PARIS	
	60 days.	Sight.	Transfers.		60 days.	Sight.
Highest.....	4.87	4.89	4.87¼	4.85½	5.19½	5.17¼

English silver.....	4 80 @ 4 85½	Com'l silver bars, per oz...	95¼ @
Five francs.....	98 @ 96	U. S. Assay silver bars ...	95¾ @ 96¾
Victoria sovereigns.....	\$4 85 @ \$4 90	Fine gold bars par @ ¼ premium on the	
Twenty francs.....	3 87 @ 3 92	Mint value.	

THE HOME MONEY Market during the month has as a rule been easy with sudden rises owing to speculation especially during the week ending June 25th. The open market rates upon stock and bond collaterals during the first week ranged from 4 to 7 per cent., during the second from 3 to 5, during the third 3 to 10, during the fourth from 3 to 10 and 15, and even as high as ½ per cent. per day. Prime commercial paper has not varied much having remained steadily from 4½ to 5½ per cent. The reserves of the New York city banks diminished from \$98,644,800 on May 28th to \$95,421,400 on July 2d. The liabilities also diminished from \$379,726,800 to \$375,390,400. Exchange on New York was selling in Savannah from ¼ @ ¼ premium, in Charleston buying from par to ¼ and selling 3-16 @ ¼ premium, New Orleans, \$1.50 per thousand dollars premium, in St. Louis at par, and Chicago par to 25 cents per thousand dollars discount.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of June, and the highest and lowest during the month. Actual sales marked *:

The public debt and Treasury statements for July 1st show that during the month of June the public debt less the cash in the Treasury has decreased \$16,852,725 as against a decrease of \$8,888,997 during the month of May, making the total decrease of debt during the fiscal year ending June 30, 1887, \$109,707,646. The outstanding interest-bearing debt on July 1st was \$1,086,315,862 with accrued interest amounting to \$12,351,603. This statement includes \$64,623,512 bonds of the Pacific Railway companies included as the proper debt of the United States, and doubtless the fact that they have for nearly three years been carried as such in the public debt statements,

may be construed as an act of the Government showing an intention to assume them as a direct obligation instead of simply guaranteeing their payment if the companies failed to pay, as is understood to be the position of the Government under the law. The net cash balance available for redemption of the debt and for meeting the expenses of the Government was \$40,853,360, as compared with \$23,951,692 on June 1st. It is stated that this balance is but little larger than at the corresponding period in 1886. The *total* net cash balance in the Treasury June 30, 1886, was \$276,084,619, made up of net gold net silver, United States notes, National bank notes, and the same balances on June 30, 1887, were \$287,369,900. The balances due from National bank depositories were \$14,435,199 on June 30, 1886, and on June 30, 1887, were \$22,991,802. The debt statement shows \$19,716,500 called bonds not yet redeemed which will go to reduce the balance at present held. When, however, the threes are all redeemed the Treasury will have no outlet as heretofore, and unless some decision is reached the surplus revenues will then begin to increase the balances held. The National bank depositories have been used to a somewhat greater extent than heretofore, as may be seen by the increase of \$8,000,000 in the public deposits held by them, but as long as the Government will only give 90 per cent. on a deposit of 4, and $4\frac{1}{2}$ per cent. bonds, it cannot be expected that the banks will regard the deposits as very desirable. It is, however, understood that the Secretary of the Treasury has decided to allow 100 per cent. on 4's. If this is the case the banks may be induced to take the public money more freely and afford some relief to the Treasury. The Government appears to have more distrust of its own securities than any one else. There is no real reason why par should not be allowed on $4\frac{1}{2}$'s as well as 4's. It seems therefore to indicate a purpose to buy the $4\frac{1}{2}$'s in the market, the discrimination being to keep down the price of the latter class of bonds.

The following table shows the net gold and silver held by the United States Treasury on the 1st of July and on the 1st of May and June:

	July 1, 1887.	June 1, 1887.	May 1, 1887.
Gold coin and bullion.....	\$278,101,106	\$277,628,750	\$275,336,915
Gold certificates outstanding.....	91,225,437	90,960,977	94,434,485
Gold owned by Treasury.....	\$186,875,669	\$186,667,773	\$180,902,430
Silver dollars and bullion.....	\$215,166,442	\$212,300,918	\$209,960,748
Silver certificates outstanding.....	142,118,017	139,143,328	137,740,430
Silver owned by Treasury.....	\$73,048,425	\$73,157,590	\$72,220,318

The Treasury on July 1st held net gold amounting to \$186,875,669 and net silver amounting to \$73,078,425. The changes in these items since last month are very slight. The Bank of England on June 2d held gold coin and bullion amounting at \$5 to the pound to \$111,939,575. The Bank of France on June 24th, 1887, held 242,000,000f. in gold and 236,865,000f. in silver.

Figures derived from the Treasurer's and Comptroller's offices showing the circulation of all forms of money in denominations of \$20 and under amounted on June 1, 1887, to \$1,104,058,807 as compared with \$1,061,339,027 on June 1, 1886, showing an expansion of the currency of \$42,719,280. This is principally explained by the increase in silver certificates which was nearly \$36,000,000 during the year. United States notes increased about \$10,000,000, gold coin about \$17,000,000, fractional silver, \$2,000,000, and silver dollars about \$2,600,000. National bank notes decreased about \$34,000,000 and gold certificates about \$1,000,000. This indicates an expansion for the year but there was a contraction during the month of May of over \$4,000,000 indicating a turn in the tide at a time when contraction from the locking up of funds is most likely to prove most dangerous and difficult to remedy. The figures for the month of June have not been received up to the time of writing.

National bank circulation outstanding has decreased \$3,187,423 during the month of June as against a decrease of \$2,640,144 for May. The total decrease for the fiscal year was \$29,727,897. The place of these notes has been taken by silver certificates, and both the Secretary of the Treasury and the Comptroller of the Currency seem to think that it is necessary to throw National bank circulation overboard to prevent the incoming silver from sinking the ship. The amount on deposit with the United States Treasurer to redeem National bank notes was on July 1st, \$107,384,413, as against \$102,792,157 last month. The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	July 1, 1887.	June 1, 1887.	May 1, 1887.	Apr. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.	\$3,175,000	\$3,145,000	\$3,245,000	\$3,241,000	\$3,680,000
4½ per cents.....	67,743,100	65,807,350	64,621,250	62,973,300	59,636,200
4 per cents.....	115,842,650	114,975,350	114,351,750	113,637,800	113,903,200
3 per cents.....	*5,205,950	*17,011,400	20,228,550	27,085,900	52,218,950
Total.....	\$191,966,700	\$200,939,100	\$202,446,550	\$206,938,000	\$229,438,350
* Called.					

The table indicates that, of \$17,011,400 called threes held June 1st, \$11,805,450 have been taken out by the banks. The fours have increased \$867,800 and the 4½'s \$1,935,750 only showing that the banks as a rule are reducing their bonds to the minimum. The Comptroller in an interview recently published gives figures a little different from these, and states that the reduction of circulation consequent on this retirement of bonds will amount to about \$8,000,000. He alleges that this will not contract the currency to the extent of \$8,000,000 because for every National bank note surrendered the Government must pay out a dollar of lawful money. The interviewer must have misunderstood the Comptroller, inasmuch as the banks must lock up \$8,000,000 of lawful money in the Treasury so that the Government will have it to retire the \$8,000,000 of bank notes, and this reduces the amount which would be put in circulation by the redemption of the three per cent. bonds if the banks were not compelled to surrender their circulation on account of the high price of the only bonds they can substitute to save it. If the Comptroller had used his influence and secured the passage of the McPherson Bill or some similar measure last winter the banks would now have much to thank him for.

The rate of interest realized by investors in 4 per cent. bonds of 1907, at a market price of 129.75 is 2.29, and that realized on 4½ per cent. bonds of 1891, at 109½ premium is 2.028. The stock market was quiet during the first part of the month but there was a sudden drop on June 24th in sympathy with the breaking down of the wheat pool in Chicago.

NEW YORK BANKS.—The week ending June 4th showed a decrease in surplus reserve of \$1,451,875 making a total surplus reserve held at that date of \$4,327,725. During the week ending June 11th, the surplus reserve increased \$92,800, and during the week ending June 18th it increased \$196,575. During the week ending June 25th it decreased \$1,270,725, and during that ending July 2d it increased \$305,175. The following shows the condition of the New York Clearing-House Banks for a number of weeks past as well as about this time in 1886 and 1885:

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
July 2...	\$363,563,800	\$73,288,200	\$22,133,200	\$367,081,900	\$8,209,100	\$3,651,075
June 25...	365,484,800	72,530,700	23,103,800	369,154,400	8,294,100	3,345,900

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

A Treatise on the Law of Stock and Stockholders, as applicable to Railroad, Banking, Insurance, Manufacturing, Commercial, Business, Turnpike, Bridge, Canal, and other Private Corporations. By WILLIAM W. COOK, of the New York Bar. New York: Baker Voorhis & Co., Law Publishers, 1887.

This work has met with a very favorable reception from the legal fraternity. Such authorities as Hon. Judge John F. Dillon, Hon. David Dudley Field, Hon. Chauncey M. Depew, speak of its great value and usefulness to the profession. It gives full explicit and detailed information as to the rights, liabilities, risks, remedies and general status of stockholders. It treats of the issue and liability on stock, the methods of issuing, fictitious issue, the contract entered into by subscribing, conditional and municipal subscriptions, calls and forfeitures for non-payment, parol agreements and fraudulent representations inducing subscriptions, defenses to subscriptions made for stock, stockholders' liability to corporate creditors, their statutory and partnership liability, liability of trustees, executors, agents, etc., liability as affected by transfers, preferred stock and stock on which interest is guaranteed, increase, reduction and over issue, gifts and legacies of stock, the competency of parties to buy stock, formation, legality, enforceability and performance of contract to sell stock, formalities of transfer and registry, the rule as to refusing or allowing registries or transfers of stock, non-negotiability and danger incurred in purchase of certificates, stock-brokers and their contracts, pledges and mortgages of and attachment and execution upon stock, amendment and repeal of charters, joint stock companies, right of shareholders to inspect books, liens on shares for stockholders debts, various kinds of dividends, taxation of shares, forms of action and measure of damages when stockholder has been deprived of stock, calls for time, place, etc., of corporate meetings, elections and other business, wrongs of stockholders and remedies against Directors majorities, etc., fraud, negligence, ultra vires, etc., etc., in fact, covering the whole ground. The book will be invaluable to the numerous class interested in the stocks of all kinds which form so large a part of the wealth of the country. It will also be of great use to banks and bankers in their dealings with their stockholders. There is, however, an error in Section 684, where it is stated that a National bank in liquidation, by vote of two-thirds of the stock, is wound up by a Receiver.

Tables exhibiting at a glance the interest on any sum from one dollar to ten thousand dollars for any number of days, from one day to three hundred and sixty-six days, at 3, 3½, 4, 4½, 5, 5½ and 6 per cent., and also at any rate from 6 to 24 per cent., being the most correct and prompt manual of interest for capitalists, bankers, merchants, conveyancers, Treasury clerks, and men of business in all its departments. By JAMES M. BREBAN. Thirteenth edition. Philadelphia: Edward Meeks, 1887.

The above is the title page of a work giving results as stated for calculations of simple interest. The object of using tables is to obtain accuracy and to save time. Many dispense with the use of interest tables because they have some simple and universal rule which they can apply with a readiness due to long practice perhaps quicker than they could deduce the result from the most perfect tables. In any personal calculation there is more or less liability to error even in the case of those who are most accurate and expert. The personal equation is bound to enter into it and this is dependent on the state of health or the mood with which the individual may be blessed or cursed at the time. In the long run time and mental strain will probably be saved and accuracy secured, or at least the danger of error reduced to a minimum, by the use of simple and accurate interest tables. As has been seen, Mr. Breban's work has reached its thirteenth edition. It has apparently established itself as a standard. Its advantages are simplicity of arrangement and accuracy of result. Any one can learn its use in five minutes. A large number of testimonials from Presidents of Savings Banks, Secretaries and actuaries of insurance companies, bank officers and other business men attest the value of the work by the use of terms of high commendation.

Mr. F. P. Webb, Assistant Manager of the Philadelphia Clearing-House, writes: "Allow us to compliment the JOURNAL on its success, we consider it the best publication on banking topics that we receive, and always feel sure to find the live questions of finance ably discussed in its columns."

BANKERS' OBITUARY RECORD.

Adams.—Platt Adams, a retired banker, died in this city on May 13th, at the advanced age of 94. He was formerly of Catskill and came to New York twenty-eight years ago.

Brayton.—Edward S. Brayton, President of the Second National Bank of Utica, N. Y., died June 2d of peritonitis, aged 71 years.

Clark.—James A. Clark, President of the Pulaski National Bank, Pulaski, N. Y., died on June 13, 1887.

Comstock.—C. C. Comstock, President of the Mariners' Savings Bank, of New London, Conn., is dead.

Fuller.—Henry Fuller, Jr., President of the Chicopee National Bank of Springfield, Mass., died on June 9th, aged 76 years.

Greene.—M. M. Greene, President of the Clinton National Bank of Columbus, O., died on June 26th, aged 57 years.

Husted.—Seymour L. Husted, President of the Long Island Loan & Trust Company, and of the Dime Savings Bank of Brooklyn, N. Y., died on June 13th. He was prominently connected with street railroads, a Director in the Brooklyn Gas Company and in many Insurance Companies.

Leigh.—Samuel W. Leigh, one of the oldest members of the Produce Exchange and a member of the firm of C. C. Sweet & Co., flour and grain merchants, died suddenly of heart disease at the age of 62.

Melgs.—Henry Melgs, Ex-President of the Stock Exchange, and at one time Cashier of the Metropolitan National Bank, of New York city, died June 7th, in the 79th year of his age.

Myers.—Joseph M. Myers, Cashier, City National Bank, Plainfield, N. J., is dead.

Shields.—A. H. Shields, Assistant Cashier of the Merchant's Bank of Greenville, Mississippi, died recently.

Thompson.—Geo. D. Thompson, Cashier of the First National Bank of Harper, Kas., committed suicide on June 4th. He was 30 years old. No cause is assigned for the act.

Wadsworth.—Julius Wadsworth, formerly connected with the firm of Wadsworth and Sheldon, bankers, and President for several years of the Second Avenue Railroad Company, of which he was a Director at the time of his death, died on May 28th at Middletown, Conn., of Bright's disease.

Wadsworth.—Strong Wadsworth, a prominent member of the New York Stock Exchange, died on July 1st.

Wiswell.—Joseph B. Wiswell, Cashier of the Bank of America of Philadelphia, in attempting to board a train to convey him to his place of business on the morning of the 24th was struck and fatally injured—dying in a few minutes. He was born in 1820.

Woodard.—Daniel Woodard, President of the National Bank of Granville, N. Y., died on the 13th of June.

H. Douglas Fuller, Assistant Cashier of the Shenandoah Valley National Bank, Winchester, Va., writes: "Our bank takes your JOURNAL regularly, and I will say I would not be without it for a vast deal more than the subscription price. All of us, officers and clerks alike, look forward with much pleasure each month to its arrival."

Mr. J. H. Page, Teller of the Second National Bank of Cleveland, Ohio, writes as follows: "I like the JOURNAL very much as a whole and do not hesitate to let my friends know it. Have been interested in sample copies sent here in past years, but you seem to be giving it a regular boom this year, and as I have an opportunity, I always say a good word for it."

WANTED—OFFICERS AND CLERKS, POSITIONS, BANKS FOR SALE, LOCATIONS WANTING BANKS, ETC.

[Notices under this head—space not over four lines—cost \$2 an insertion. If replies are to be sent to this office the advertiser must send us two stamped envelopes addressed to himself, in which the replies will be forwarded.]

FOR SALE.—The only bank in a new town in central Iowa. Established 1884. Fourteen miles to nearest bank. Paying business and can be run with small capital. Building with two lots, fire-proof vault, safe and furniture and fixtures complete, \$2,500. Address: G. A. R. N., care of RHODES' JOURNAL OF BANKING, New York.

A CITY bank Cashier, with fifteen years' experience, desires to form a partnership with a gentleman of integrity and means, to engage in private banking in a North-western city where the population is 25,000. Address: stating references, W. B., care BRADFORD RHODES & Co.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

AUGUST, 1887.

No. 8.

IN ANOTHER PLACE we publish a very interesting report of the action recently taken by the Bankers' Club of Chicago, indorsed by all the banks and bankers in that city, having in view the lightening the labors of bankers by securing uniformity in form of the checks and drafts used. A very large part of the work in any bank grows out of the handling of the checks and drafts presented for payment or collection. Most of the improvements in keeping accounts are aimed at lightening this labor. However perfect, the system of handling the numerous items of which a check or collection account is made up, there must necessarily remain an element of delay, which arises from the diverse appearance, size and manner of drawing up the items themselves. The report of the committee of the Bankers' Club of Chicago, is very moderate and sensible in its tone. It attempts to secure uniformity on essential points only, and leaves a wide range for individual taste and fancy as to the other features of the check or draft. While it might be even better to secure uniformity on all points, still the moderate and conciliatory suggestions of the report, will be apt to secure a more general acquiescence than would be the case with a more sweeping plan. Such reforms as this accomplished through the medium of the American Bankers' Association would demonstrate most forcibly the value and importance of that organization, and point out the way in which other needed improvements may be inaugurated. Formerly the diversity and variety of bank notes in circulation gave very nearly as much trouble in handling them as do the conditions now existing in the handling of checks and drafts. Our bank note circulation has been made uniform by the force of law, although the law accomplished this incidentally merely, having a much greater reform for its principal object. If the State banking systems had never been deprived of the privilege of issuing notes, they could by concerted action have secured the same uniformity in the appearance of their notes as the law has secured in that of the notes of National banks. In the United States, people have become so accustomed to do every thing by an Act of Congress that

they feel helpless without one, forgetting that there are many spheres in which agreement and association will accomplish what the law itself might fail in. If the American Bankers' Association can be brought to enter into a plan for uniform checks and drafts, so strongly urged by the Chicago bank and bankers, and the change sought is satisfactorily accomplished, the encouragement will be sufficient to attempt to initiate other reforms, especially one in the matter of country collections. This is the subject of much thought among bankers. The JOURNAL has already published essays sent to us on this subject, in answer to an offer of a prize. Those who have read, these articles and other suggestions on the subject, heretofore published, will be very apt to come to the conclusion, that the only way to deal with items of this class is by some uniform rule to be adopted by all the banks of the country, which shall be as binding upon all its members as are the rules of a Clearing-House on its members. The Chicago Bankers' Club has taken a step in the right direction and if successful as it doubtless will be in securing uniformity of checks and drafts will feel encouraged to undertake other reforms of equal importance to the banks and bankers of the country.

THE LEGISLATURE OF THE STATE OF ILLINOIS at its last session, enacted two laws, one to provide for the organization of Savings societies or institutions for Savings, for their supervision, and for the administration of their affairs, and the other for the regulation of corporations with banking powers. The constitution of the State adopted in 1870, provides that, "no act of the general Assembly authorizing or creating corporations or associations with banking powers, whether of issue, deposit, or discounts nor amendments thereto shall go into effect or in any manner be in force unless the same shall be submitted to a vote of the people at the general election next succeeding the passage of the same and be approved by a majority of all the votes cast at such election for or against such law." This constitutional provision was adopted on account of the feeling of disgust which prevailed in the State because of the failures of banks organized under previous general banking laws and the losses to the people consequent thereon. The law for Savings institutions above mentioned is very carefully drawn and nowhere styles them banks, and further distinctly forbids them to transact any banking business, whether of issue, deposit or discount, and that no such corporation shall be deemed a bank or company having or exercising banking powers. Those who favor the bill have no objection to submitting it to the ratification of the people, but in some way no provision for so submitting it was inserted in the bill itself, and there was no time for introducing a supplementary measure to that effect. It became a law without the signature of the governor, having been retained by him without veto for ten days after its passage, the Legislature being still in session. The opinions of some of the best lawyers of the state is that the bill not creating corporations

with banking power, will be constitutionally valid, without ratification by the popular vote. These opinions are however somewhat ex-parte and, the friends of the measure seem to have some doubts, as they intend to take measures to have the question brought before the Supreme Court of the state. It seems that the bill had many enemies and the ratification clause was omitted, in order to avert opposition to its passage, many of its opponents being less pronounced against it, because they supposed that without the ratification provision it would amount to nothing. The bill in itself is a good one inasmuch as it provides a safe and well guarded system of Savings institutions in which, if the law is lived up to, the people of the State can have confidence. The provisions are similar to those of the Savings bank law of the State of New York except that the word institution is used instead of bank. We trust that the Supreme Court of Illinois will confirm the views taken by the friends of this measure, that it does not need the ratification of the people, for if the Court takes the contrary view Illinois will have to remain without a Savings bank law until another bill can be passed by another Legislature and be properly ratified. We fear however that the mere insertion in a bill of a provision that an institution doing a Savings bank business, is not a bank, does not really make it anything else. A Savings bank or institution necessarily is a bank of deposit, however the deposits are invested. And the power to receive sums of money for accumulation and safe keeping granted in the bill is the very essence of the right to receive deposits. We express this opinion with regret as we hope the law will be decided to be valid in every respect.

The law for general banking is modelled upon the best provisions and restrictions of the National banking Act, but does not permit the issue of circulating notes, which was the feature of previous general banking laws of the State, that brought the institutions under it into the greatest disrepute, and inspired the constitutional provision of 1870. When the validity of the two important laws above mentioned have been settled the one by the decision of the Supreme Court and the other by the ratification of the people, they will be printed in the JOURNAL.

IT IS CLAIMED that the Secretary has the power to buy bonds even at the present high rates of premium, under existing laws, and the laws which are cited in support of this view are those of July 11, 1862, and March 3, 1881. The first authorizes him to purchase bonds at the current market value, *for the sinking fund*, the latter authorizes him to use surplus revenues in the purchase or redemption of United States bonds, which purchases are not to be considered a part of the sinking fund. These laws have to be considered in the light of the circumstances existing at the time they were passed. There are many laws which have never been formally repealed but which no one thinks of enforcing because the conditions which brought about their enactment

have passed away. Indisputably the act of 1862 gives the Secretary of the Treasury power to buy for the sinking fund, but as we pointed out last month, the requirements of the sinking fund do not compel the payment of an exorbitant premium. If it be admitted that they do, the Secretary would be authorized in paying such a rate for bonds, that it would virtually be increasing rather than reducing the debt. For instance if he paid \$300 for a four per cent. \$100 bond, he would be creating a debt of \$200 just for the pleasure of paying it. So looking at the requirements of the sinking fund as meaning only the purchase of bonds at a price which would really effect a reduction of the debt, the Secretary may well hesitate before he buys fours at 129—130, even for the sinking fund. The act of March 3, 1881, was passed at a time, when there were a large number of 6 and 5 per cent. bonds, which were to become due June 30, 1881, and was intended to give the Secretary power, by appropriating money, to enable him to purchase in advance of their coming due any of these bonds, which were then at a premium of about 102, and to have the control of funds to redeem them when they did become due. It was passed to meet the circumstances that existed at the time, to purchase bonds soon to become due and which from the nature of the case could not command a high premium. The sixes outstanding amounted to \$196,378,600 and the fives to \$439,841,350. Congress failed to pass a refunding bill and at the last moment the Act of March 3d was passed to give the Secretary some power to act in the emergency. On April 11, 1881, Secretary Windom issued a circular to the holders of the six per cents. offering to extend at 3½ per cent. all that were presented before May 10. At this date \$150,000,000 of the sixes had been offered for extension, and as there were indications that more would be offered the time was extended to May 20th and all but \$16,000,000 were extended on or before that date. The \$16,000,000 were redeemed on July 1st. A circular similar to that for extension of the sixes was on May 12th issued to the holders of the five per cent. bonds, and all but about \$58,000,000 of the registered fives and \$15,000,000 of the coupon fives were extended. The Act of March 3, 1881, was therefore enacted after a vain attempt to agree on a refunding bill, to give the Secretary of the Treasury command of the surplus for the particular purpose of taking care of the bonds which fell due July 1, 1881. It was not intended to apply to any other case and certainly when it was passed Congress had no intention of authorizing the purchase of bonds at the exorbitant premiums which now prevail. The Secretary is right in hesitating to regard this law as authorizing the purchase of United States bonds under any and all circumstances.

SOME OF THE FINANCIAL PAPERS are working themselves into a fever of indignation, over what they style the interference of the Treasury department with the money market. The base of the an-

imadversion is the suspicion that the Treasury takes the steps, which it is alleged affect speculation, in a way that aids one set of speculators against another. In other words the Treasury has favorites and makes its transactions in a timely way for them. How the Treasury can avoid affecting the money market, under the present condition of the laws governing the public finances, it is difficult to see. It is obliged to pay out for the expenses of the government, for interest on the debt, and for the redemption of the debt. These payments may and do have the effect of making money easy or the contrary, according to the circumstances under which they are made, but their effect is but temporary. Of course it would be fairer to all outsiders if government payments were always made at fixed dates because every one would then know what to expect and govern themselves accordingly. But this is impossible. Government expenditures may be divided into two classes, those that could be made at fixed dates, and those which necessarily are made at uncertain intervals. As to the first class there are some, the payment of which public policy might require should be left to the discretion of public officers. For instance it would be possible to decree that interest on the public debt should be invariably payable at the time it becomes due, with perhaps two or three days lee way, also that redemption or purchase of bonds should occur at fixed dates only, and that the drafts on the Treasury for pensions etc. should be made only on certain dates in the fiscal year. But of these instances, it might be better that in the purchase or redemption of bonds the Secretary of the Treasury should have some discretionary power in order that he might make such purchases or redemptions at a time when it would be for the greatest advantage of the Government.

Of course it is practically impossible for Treasury operations to be planned and carried on so secretly that no one will have any knowledge in advance of what is to be done, but this danger of information leaking out is no reason why public officers should hesitate to act when necessary. "It is an ill wind that blows nobody any good," and hardly any thing can be even proposed, much less executed, but that some one is affected either for good or evil. The law allows the Secretary of the Treasury to anticipate the payment of interest, and this form of payment has been oftener used to affect the money market than any other because it can be so easily and suddenly employed. In times of panic or tight money there is great pressure brought to bear on the Secretary of the Treasury from the money centers to use this power. It is of course not altogether the money paid out, which as a rule does not immediately go to those who need it most, but the moral effect the payment has, that makes money easier. The recent failure of the Fidelity National bank caused some apprehension in New York and other centres, the rates of money went up, there were fears of other failures. Now to those who delight in disaster and who revel in the wreck of others, fortunes it seemed a pity that the

Treasury should interfere. But there is no doubt but that the simple announcement that \$9,000,000 of interest would be paid a few days in advance had a very great effect in calming an agitation that might have grown into a serious panic. What if some of the persons most benefited by this course might happen to be personal and political friends of the Secretary of the Treasury. A public officer in the performance of a public duty is sometimes called on to sacrifice his friends, but also he is often compelled to act regardless of exposure to the criticism, that what he does seems to be for the direct benefit of his friends.

THE SUCCESS OF HARVEY the chief of the horse claims division of the Third Auditors Office at Washington, indicates how little the so called checks which are supposed to insure the safety of Government business, really conduce to that result. It appears that each fictitious claim which was pushed through required the attachment of twenty-five names, initials, or private marks, which if the claims were right should be made by very nearly that number of different persons. Each one of these claims had legitimately to pass through at least three separate Government bureaus; the second and third Auditors' office and that of the first Comptroller. Each of these offices is expected to be a check on the others, and the clerks within each bureau are expected to be a check on each other. Of course these clerks are arranged in different degrees of subordination, and there must be one at the head. Harvey was at the head in his own division. He had only to report to the Third Auditor himself. The latter was the check upon him. He gained the confidence and lulled the suspicion of his chief, who was evidently looking more for frauds in the past than in the present, from his intimating that the Government had been swindled by Harvey's predecessors by the same method which Harvey was practising. The Auditor, it is said, proclaimed to his friends the confidence he had in Harvey, and this aided to lull suspicion in other offices, and gave the forger the clear opportunity he desired. It is plain that while a system of business organization which places subordinates in an antagonistic position to each other, has its advantages, yet it is not altogether such an unvarying protection against dishonesty as many imagine. Such a system enables the real supervising head to do his work with more ease and success, but it in no way enables him to dispense with the exercise of the superior faculties for supervision which his appointment necessarily implies.

In the July number of the Journal we published some remarks made by the Comptroller of the Currency, Mr. Trenholm, in regard to the present system of bank examinations, recommending a new class of examiners whose duty it would be to supervise the ordinary examiners. The latter are paid by the banks, but the Comptroller suggests that this new kind of inspectors shall be paid by the Government a larger salary than, under the present law and system pursued by the National

bank bureau, the present examiners receive. The Comptroller intimated that by this course a superior body of men could be secured. This is nothing but a platitude of the very thinnest kind, inasmuch as a mere increase of salary does not necessarily procure better men. In the same way as the present examiners received their appointments through the friendship of influential politicians, so the new ones would theirs, and admitting that the influential politicians seldom take into consideration the general ability of the candidate they recommend, they would hardly make any discrimination between the acquirements necessary to fill one examinership and another.

But what good will it do to inspect one examiner by means of another. The last is as likely to be deceived or be dishonest as the first. If Congress had authorized an office, intermediate between the chief of the horse claims division and the third Auditor, with a higher salary for the purpose of inspecting the work of the chief of the division; who probably would have obtained the office? The man whom the Auditor had most confidence in; and who did he have confidence in but Harvey? So the latter would have held the same relative position as before with the same opportunities for cheating. The amount of all this is there is no remedy for breach of confidence either where it is confidence in honesty or confidence in the ability of another. The Comptroller has to take the same chances with his subordinates that any business man has to take and the Government and the people have to take the same chances with the Comptroller. Positions may be multiplied but single individuals have to be trusted. If more examiners are needed to do the work and it is right that the Government should pay them, there is no reason why they should not be appointed and paid in this way. The tax on circulation affords sufficient money for the purpose. In fact it would be a good idea to have the government pay all the examiners, from the proceeds of this tax and relieve the banks entirely from the present examiners charges. But don't put the recommendation for new examiners on a wrong ground, especially on one so untenable as the alleged necessity of inspectors to inspect inspectors.

NO NEW LAW is needed to enable the Secretary of the Treasury and the Comptroller of the Currency to appoint as many bank examiners as they may deem necessary. Section 5240, of the United States revised statutes provides for the appointment and compensation of bank examiners, but the provisions of this section having reference to compensation have been amended by the Act of February 25, 1875. The law as to appointment is that, "the Comptroller of the Currency, with the approval of the Secretary of the Treasury, shall, *as often as shall be deemed necessary or proper*, appoint a suitable person or persons to make an examination of the affairs of every banking association, who shall have power to make a thorough examination into all the

affairs of the association etc. etc." Now this plainly gives the power at any time to appoint an examiner to examine any association, or two or three or four examiners, if necessary for the purpose. In practice examiners are appointed, not one for each bank ; but when an experienced man is appointed for the examination of one bank he is employed to examine others. A strict application of the law warrants the employment, not necessarily of a separate examiner for each institution, but at least the employment of as many examiners as the Comptroller may deem necessary, to make the examinations he may require to give him information about the banks. If bank examinations can prevent failures, the law is not at fault, in restricting the number of examiners, or in providing for their payment, but rather the Comptroller in not employing the means which the law now gives him. The Comptroller is the general, he has ample means at his control, and should, if possible direct his forces so as to gain the end for which they are intended. We do not claim, however, that bank examiners can absolutely prevent failures. We claim that the present system of examinations is as wise an application of the law as long experience can dictate, and that all that bank examinations can be expected to accomplish is or may be, by proper direction from Comptroller's office, accomplished by it. But we do not believe that an increase in the number of examiners whether paid by the Government or the banks would prevent such failures as that of the Fidelity National bank, due as it was to causes which examinations cannot wholly control.

THE LONDON BANKERS' MAGAZINE, which we have always supposed to be a conservative journal, devoted to the single gold standard, publishes in its July number an article on the "Appreciation of Gold" in which the low prices prevalent in England seem to be ascribed to the dislocation between gold and silver brought about by the closure of the mints of the Latin Union and the United States. The use of the word dislocation appears unfortunate as it implies that the previous union was a natural and normal one. The article intimates that the low prices of wheat and other agricultural products so distressing to German and English farmers are due to the progress of the single gold standard. In substance it says that, while in the countries that, like England and Germany, have adopted the single gold standard the purchasing power of gold has increased, in India with a single silver standard the purchasing power of silver has not decreased. It would be a reasonable and natural deduction for a disinterested reader to draw from the statements made in the article mentioned, that India now is gaining more advantage from a silver standard, than are England and Germany from a gold standard.

We point this out not because we favor a silver standard, for the JOURNAL has never been in favor of it, but because the article referred to is palpably open to great misconstruction. The advantages which

India now enjoys should be ascribed not to her silver standard but to the numerous other causes which we have not space or time to enumerate, that have combined to bring about an immense industrial and agricultural development manifesting itself in the building of railways, the establishment of cotton factories, and the great advance in the culture and export of wheat. We believe this development, great as it has been, would have been greater under a gold standard.

MEXICAN FINANCES.—The appropriations for expenditures of the fiscal year 1887–88, exceed those of the previous fiscal year by nearly \$6,000,000. The increase is chiefly in expenditures for the war and navy departments and for public works. As Mexico has many foreign creditors, any increase of expenditures is regarded by them with suspicion, more particularly, when the outlay is in a direction to enable the Government to assume a more independent attitude toward foreign powers. Notwithstanding the fact that the financial history of Mexico has to some extent rendered such suspicions just, yet it must be acknowledged that the Mexicans should be permitted to be the judges of the amounts necessary to carry on their Government and develop their resources. States kept under the surveillance of foreign powers and submissive to the timid and often impertinent suggestions of foreign creditors would seldom increase their debt paying capacity. If investors in securities of foreign countries had looked more to the real financial ability and capacity of those States and had trusted less to the ultimate application of compulsion, they would have invested more warily and losses and delays would have been diminished.

THE FARMERS' PARTY IN CANADA, recommend that the whole currency of the country should be in the hands of the Government. This seems to mean that fiat money should take the place of bank currency. In the United States we have had the fiat money craze and we may have it again, but so far we have always managed to have a majority in favor of a redeemable currency whether issued by the banks or the Government. Just now however, Government issues are rapidly replacing bank issues, but they consist of gold and silver certificates redeemable in coin on demand. If the Government money the Canadian farmers want is of this character, all they have to do is to procure a law allowing them to deposit their gold and silver with the Canadian Treasury and to take certificates for it. But it is lack of capital they appear to suffer from, and this no mere Legislative enactment has ever been able to supply no matter how many bills a Government may print.

FINANCES OF THE DOMINION OF CANADA.—The revenue receipts of the Dominion of Canada have risen from \$13,687,928, twenty years ago, to \$33,177,049, for the fiscal year ending June 1886. The cost of collecting this latter revenue was \$7,808,751. The expenditures have

as a rule been less than the receipts, for in 13 years there have been surpluses aggregating, over thirty millions, and in seven years deficits aggregating about 16 millions of dollars. The deficit during the last year was the biggest of all being nearly 6 millions, which is explained by the rebellion in the North West. The debt of the Dominion has however increased very fast, owing to subsidies to the provinces and the construction of public works, railroads, canals, etc., from \$75,728,641 to \$223,159,107. The average rate of interest paid on the debt has however fallen from 4.64 to 3.71 per cent. Perhaps the people of Canada would be unanimous in favor of annexation to the United States, if the latter would assume the debt. This would relieve the Canadians of the largest portion of their burdens, and at the same time be a ready out-let for the surplus revenues of the United States, to which the Canadians would contribute their fair share.

FOREIGN BUDGETS.—There is a strange contrast between the Government of the United States burdened with a revenue too great for its expenses, and the Governments of Europe most of which have to struggle with the problem of making up an annual deficit. The deficit in Germany for this year is estimated at about 50 millions of marks, that of Russia at 100,000,000 roubles, and that of Austria at 70,000,000 florins. France and Italy are not much better off. Great Britain rejoices however in an estimated surplus of about £1,000,000.

THE SECRET community of interest existing between Russia and France as against Germany has caused the latter recently to inaugurate a war on Russian securities in the hands of German citizens. Inasmuch as a short time before the German Government, when endeavoring to cajole Russia, recommended the same securities as a good investment, this sudden change at the expense of Germans shows how merciless are the demands of diplomacy. Suppose the United States should undertake a similar game with Canadian, Mexican or South American securities. There are some complaints here of Government interference with the stock market, but it would take some time for us to get used to the methods of European rulers.

FOREIGN BANKERS remark that the National banks of the United States show a lower scale of profits and a less rate of dividends than any other group of banks in the leading countries of the world. This is because the National banks invest a large portion of their capital in bonds for the purpose of issuing circulation, upon which at present rates for bonds, there is little or no profit. They also keep reserves as great as those kept by foreign banks. If like the latter they could have the benefit of circulation in addition to their capital, instead of being compelled to invest their capital in circulation, they could perhaps make as high dividends. The truth is that in this country the function of issuing circulation is virtually assumed by the Government.

OVER-CERTIFICATION OF CHECKS.

A telegram from Washington recently announced that the Comptroller of the Currency has become aware that some of the National banks in New York city habitually violate the provisions of Section 5,208 of the United States Revised Statutes forbidding the over-certification of checks, and that Secretary Fairchild will probably take some action before long. Section 5,208 provides that if any officer, clerk or agent of any National Banking Association shall certify a check drawn upon the association, unless the drawer has on deposit at the time such check is certified an amount of money equal to the amount specified in the check, the bank becomes subject to the liabilities and proceedings *on the part of the Comptroller* as provided in section 5,234. This clearly leaves the matter of instituting proceedings discretionary with the Comptroller. Section 5,234 is the general section providing for the appointment of a Receiver by the Comptroller to wind up National banks for certain causes. Sections 5,208 and 5,234 taken together may perhaps give the Comptroller of the Currency power, if he deems it best, to place any National Bank, of which some officer clerk or agent has certified a check when there were no funds to the credit of the drawer, in the hands of a Receiver. This is a very harsh and unsatisfactory remedy, as it injures so many innocent stockholders, depositors and customers of a solvent bank, to suddenly, without trial, in order to punish an alleged offense committed by its management perhaps through error of judgment, stop the business of the institution in all its numerous ramifications and spread terror and distrust throughout the community. It is very much like chopping off a man's head to cure him of a carbuncle. In addition to this liability of the bank itself to proceedings on the part of the Comptroller, section 18 of the Act of July 12, 1892, makes it a criminal offense on the part of any officer, clerk or agent of a National bank, to wilfully violate the provisions of section 5,208, or to "resort to any device or receive any fictitious obligations, direct or collateral, in order to evade the provisions thereof, or who shall certify checks before the amount thereof shall have been regularly entered to the credit of the dealer upon the books of the Banking Association." The penalty is five thousand dollars fine or imprisonment for five years, or both. This last law requires no action on the part of the Comptroller of the Currency other than to call the attention of the Department of Justice, or the United States Attorney for the district where the bank is located, to any evidence which he may obtain of over-certification by the bank officers, clerks or agents. The Comptroller is not a prosecuting officer. It follows that the officers, etc., may be prosecuted without placing a bank in the hands of a Receiver, or that both penalties, one against the corporation and the other against its officers, may be enforced at the same time. The actual certification is usually done by some Clerk or Teller acting under the direction of his superior officer, and it seems a perversion of justice to punish the agent when the principal, the officer who directs him, does not come under the scope of the law. It applies only to the one, be he officer, clerk or agent, who certifies the check. The section does not subject to its penalties the officer, clerk or agent who directs or aids and

abets the certification. Thus in the case of the Wall Street National Bank, the Teller, who merely carried out the settled policy of the officers of the institution, was convicted, while there was no way of reaching the latter. This conclusion was so lame that further proceedings being had, the Teller finally was permitted to escape the penalty. Moreover as the Comptroller of the Currency (Mr. Knox), in his report for 1883, pointed out, the law as it stands makes it criminal for an officer of a bank to certify the check of a dealer who may inadvertently overdraw his account for a few dollars in the payment of an ordinary obligation. In the report of the same officer for 1882, there is the following resumé of the whole subject. "The practice of certifying checks prevailed for more than thirty years previous to the organization of the National banking system, and at least twenty years previous to the establishment of the Clearing-House. In the beginning this certification was not considered as legally binding the bank to pay the check. For many years the amount of the check when certified was not charged to the account of the drawer until it was afterwards presented for payment. Subsequently to the year 1854, when the Clearing-House was organized, it became the custom to present checks and also bills receivable or acceptances on the day of maturity at the bank, where they were made payable for certification. The bills and checks which were certified were then returned to the bank Messenger who had presented them, and on the following morning were transmitted to the Clearing-House with the other exchanges. The certification consisted of the signature of the Paying-Teller, written across the face of the paper inside of a stamp bearing the date of the certification and the title of the bank. This was regarded as a legal obligation of the bank, and the amount of the check was charged to the account of the drawer at the date of the certification. If the maker or acceptor of notes or bills was in good standing at the bank at which they were made payable, such bills were not infrequently certified, even if the full amount were not to the credit of the account to which they were subsequently charged. Bills or checks are usually presented for certification during the first business hours of the day, and the deposits of merchants and brokers are made subsequently. The officers of banks, knowing the usual habits of their dealers in making their deposits, do not hesitate to assume the payment of checks and drafts which they know will be provided for before the exchanges of the Clearing-House are received. If these certifications were confined to mercantile and commercial transactions, little objection would have been raised to the practice, and it is not probable there would have been legislation prohibiting it. It would certainly seem to be advisable to leave to the discretion of a bank the right to accept bills drawn by correspondents at a distance or by merchants at home, whose standing is beyond question and whose deficiency in the account is known to arise from delay in receiving remittances or making deposits. A refusal to certify or pay under such circumstances would be likely to subject the bank to the loss of its most valuable dealers. The large use of these instruments by which the banks in effect guarantee the contracts of stock-brokers with their customers has grown to be a great abuse during the past few years, and cannot be defended upon any correct principle of banking. This business is chiefly done by nine or ten National banks, although other banks, organized under State laws as well as National, certify similar checks for considerable amounts."

Referring to the provisions of section 5,208 the Comptroller said: "There are many methods of evading this law. If certification is required in excess of the amount on deposit a demand note is made, and the amount thereof is entered to the credit of the broker desiring the accommodation; or his check upon another bank is received without certification, and a temporary credit entered upon his account, and these temporary credits are canceled at the close of business when the account has been made good. Brokers asking for such over-certifications keep large balances to their credit, on which the bank pays no interest. Certification is made without charge, the bank receiving its compensation in the large deposits which stand to the credit of the broker. The banks justify the practice upon the ground that it is of great convenience to the community, and that stock transactions, particularly, could not be carried on without some such arrangement. They insist that for many years only trifling losses have arisen from the practice—very much less than the losses incurred by them in ordinary discounts. After the passage of the Act of July 12, 1882, the banks have accepted checks which have been drawn upon them instead of certifying them, and have assumed that such acceptance is not in violation of law. In some cases these acceptances are made payable through the Clearing-House, the effect of which form of acceptance is that such checks are payable upon the following day; in other cases the acceptance is made without any condition as to the mode of its payment. The banks claim that they have power to accept checks under the third and seventh paragraphs of section 5,186 of the Revised Statutes. The former authorizes National banks 'to make contracts,' and the latter provides for the 'exercise of all such incidental powers as shall be necessary to carry on the business of banking.' It is also claimed that section 5,209 of the Revised Statutes, which provides that it shall be a misdemeanor for an officer of a bank to make acceptances without proper authority, by implication authorizes acceptances to be made with the authority of the Directors, and that the Act of July 12, 1882, does not, in plain terms, prohibit such acceptance."

The question whether an acceptance was the same as a certification was referred to the Attorney-General, who, in November, 1882, decided that it was. It is very doubtful, however, how far an *ex parte* opinion of a Government law officer would have weight in a criminal prosecution.

An acceptance is a much more general act than a certification, and from time immemorial the right to accept bills and checks has been exercised by banks and bankers. Certification is a form of acceptance which properly exercised simply states that the drawer of the check presented for certification has funds to his credit to meet it. To certify that there are funds when there are none is a fraud, on its face, but to *accept* a check as good is to bind the bank to pay the check without saying whether there are funds or not.

States banks are not forbidden to certify or accept checks to any extent, and the penalty of the law of July 12, 1882, was the outgrowth of a desire, so it is understood, on the part of one or two State banks to monopolize all the brokers business. If the National banks were compelled to rigidly obey the law, their object would be accomplished. They succeeded in interesting a prominent national legislator, who was instrumental in securing the insertion of the 13th section in the Act of July 12, 1882. Former Comptrollers have been criticized for exercising too much forbearance toward the banks. We

are curious to see whether Mr. Trenholm, even with the advantage of the experience and powers of consideration of Secretary Fairchild, will be any more successful in setting the Department of Justice on the track of violators of this law.

EFFECT OF FAILURE ON COLLECTIONS.

When a National bank fails and is placed in the hands of a Receiver, much difficulty arises as to the proper disposition to be made of funds coming into the bank at or near the time of failure. Collections which have been sent to the insolvent bank are often sought to be recovered in full by the owners, and many perplexing questions arise in regard to them. The law intends that when a National bank fails its remaining assets shall be divided among its creditors *pro rata* according to the amount of their various claims, and that there shall be no preferences for any purpose whatever. On the other hand the law provides that special deposits may be delivered to the owners. The owner of a collection usually feels, if it is possible to trace the money, that it has somewhat of the nature of a special deposit. Collection of checks and drafts is a necessity of the banking business. A large part of deposits are made in this form, and checks and drafts are often credited the same as cash. This is done when the depositor's account is a large one or the depositor responsible. Where this is not the case, banks take the items for collection, enter them on a register, but do not credit them to owner's or sender's account until advised of payment. Whenever a check or cash is credited to an account, that moment it ceases to belong to the depositor and becomes the property of the bank, if there is nothing on the check to give the bank notice that the depositor's title is bad. The depositor has no further interest in that particular check, having in its stead the credit against which he may draw. The bank, however, if the check is not paid, has the right to charge back the amount to the depositor's account, because it had received no real equivalent for the credit given, and is entitled to payment for it. In order to preserve the title to the check and avoid any danger, there may be of its getting exchanged for a credit, or when not desiring or expecting an immediate credit, many holders of checks sending them to banks for collection indorse them, for collection simply, or if they do not desire that any account should be opened they indorse them for collection and remittance.

An indorsement "for collection and credit" would indicate to any bank or banks through whose hands the item might pass, that the intention was to permit the bank to which it was sent to credit the proceeds after collection to the account of the owner. If indorsed simply for collection it would be the same, for there being no instructions to the contrary the bank would have the right to credit the proceeds according to usual banking custom. Some, however, indorse such items "for collection and remittance," thinking that such indorsement gives notice to all banks through whose hands the document may pass that the owner does not wish to open an account with the bank to which he sends it. This would be a good way of making collections free from danger of having the proceeds mixed with the funds of some insolvent institution if it was the custom to pay checks and drafts with actual money. The indorsement would then mean that whoever receives the cash for this check must seal it up and send it back as a special matter until it reaches first hands.

But as a fact the check or draft is more frequently paid by the drawee with a check. The bank making the collection does not remit this check, but its own draft or check on some central correspondent, and if the collection has gone through many banks, each one of these may substitute its own check for the one it receives, and the owner of the collection will probably receive a draft of the bank to which he first sent the item. So if any bank in the chain fails, the indorsement for collection and remittance really is of little more effect as far as safety is concerned than if it had been simply for collection. A bank failing or closing its doors on a certain day will have collections in several stages and with various characters of indorsement. First, there will be those simply indorsed payable to the bank received before failure, for which credit has been given to the depositor. These belong to the common fund of the bank to be collected by the Receiver for it, and cannot be recovered as such by the depositor. Second, similar items coming by mail received after failure. The senders of these should be notified by telegraph if there is time before the items come due; if there is not the Receiver should see that they are properly presented, collected or protested, as far as he may be able, the proceeds if collected to be remitted to the owner or sender. Any other items received after failure belong to the senders and should be similarly treated. Third, there are items indorsed for collection received before failure, but not sent off. These items should be treated as belonging to the owner or sender, and should be collected for him or held subject to his order. Where such items have been actually collected and credited the owner has no further claim for them as such, his claim is then for the credit. Even where remitted for by draft of the failed bank, if the correspondent on whom the draft is drawn is notified of the failure before the presentation of the draft, it must refuse payment, and the claim will then be on the draft. This would be the same were the collection indorsed "for collection and credit," or simply "for collection." Even if indorsed "for collection and remittance," if the proceeds were in the bank before failure, the owner would only have a claim against the bank for *pro rata* dividends. But the treatment of collections *in transitu*, that is those received prior to failure which have been sent to other banks, would vary according to the character of the indorsement. Thus a bank to which the failed bank sent the item might, in fact is very likely to have reciprocal accounts with the failed bank. Being, according to the view taken by the United States Supreme Court, the agent of the principal bank and not of the owner, it would have the right in the absence of special instructions to the contrary to do the same with the proceeds of the collection as its principal might do. Therefore, if a check was indorsed either "for collection" or "for collection and credit or account," the agent bank might credit the proceeds to the account of its principal, and thus place them in the common fund of the latter. The owner could not recover of it for this action. But if the indorsement were "for collection and remittance," then the agent bank would be liable to the owner for the proceeds, and could not credit them to the account of the principal bank, because such an indorsement gives notice that the owner does not wish to open an account with the principal bank for the proceeds. If, therefore, the agent bank has collected but not remitted, the proceeds go to the owner, either directly or through the Receiver. To sum up: All items coming to the bank after failure belong to the owners. They do not get into the bank. All items for collection

in the bank or with its correspondents before failure but not collected, should be returned to owners. All items, however indorsed, the proceeds of which have been received by the bank before failure belong to the general fund. The owners are not preferred creditors. Items collected by agent bank and not remitted are governed by the indorsement. If "for collection," or "for collection and credit," or "account," then the agent bank may following its customary practice, credit the proceeds into the common fund of its principal; but if indorsed "for collection and remittance," then the agent bank would be responsible to the owner if it had not already remitted to the principal bank. The owners of collections frequently notify banks acting as agents of the failed bank to hold the proceeds of collections. It is a question what such notification would amount to where the indorsement gives the agent bank the right to credit the proceeds to the account of its principal. Can the owner revoke his written indorsement made in good faith and with the design to submit to usual banking custom? If the indorsement was for remittance, the bank would credit the proceeds to the principal's account at its peril, and no notification is needed.

When a bank fails it usually has a large number of drafts or rather checks on its correspondents outstanding, of which the payment is stopped as soon as the failure is known. Many think because the Courts have held that a check is an equitable assignment of so much of the funds of the drawer in the hands of the drawee, that therefore the holders are entitled to preference. The view whether or not a check is such equitable assignment has never been determined by the United States Supreme Court. But this Court has decided that, admitting for the sake of argument that a check is an equitable assignment of funds, the holder must in some way put himself in communication with the drawee. That is he must apparently, from the view taken by the Court, notify the drawee that he holds the check, either by presentation or otherwise, before the drawee has received notice of failure and stopped payment. If, therefore, the Receiver of a failed bank or the Comptroller notify the correspondents to hold all funds in their possession subject to the Receiver's order before the holder of a draft presents the same or notifies the drawee that it is in his possession, then the latter has no preference. A notification by telegraph is sufficient. It would seem, therefore, that it would be wise for the holder of any large bank draft to notify the drawee at once, and if he did so he might perhaps hold the funds, even if the drawing bank failed before the presentation of the draft. The Courts have held that the acceptance of a check is as necessary to its validity as between the holder and drawee as is that of a draft. A check however being payable on presentation, the acceptance is lost sight of because it usually occurs simultaneously with payment. But to bind the drawee there must be such acceptance, either involved in payment, by certification or some other way. It, therefore, seems quite doubtful whether mere notification by the holder without presentation would warrant the bank in accepting absolutely, and as the Supreme Court has not yet signified what it thinks about the equitable assignment theory, it is probable that a holder of a draft of a failed National bank will not be treated as a preferred creditor. Another thing to be considered is that the law evidently intends to have no preference in the distribution of the assets of failed National banks, although bankrupt laws often recognize such. All the decisions of the Supreme Court have gone to sustain this view.

TREASURY DEPARTMENT AND THE CURRENCY.

From the statements of the Director of the Mint, Comptroller of the Currency, and the United States Treasurer, it appears that the aggregate amount of all forms of currency in the hands of the people and banks, that is, held outside the Treasury was on July 1, 1887, \$1,818,784.081, as compared with \$1,253,054,741, on July 1, 1886, an increase of \$65,729,290. There has been an increase of \$18,742,518 in gold coin, of \$15,181,062, in gold certificates, of \$2,986,427, in standard dollars, of \$3,026,840 in subsidiary silver coin, of \$54,001,792 in silver certificates and of \$2,854,520 in legal-tender notes. All of these increases foot up \$96,798,159, and the difference between this sum and the net increase of \$65,729,290 given above is the amount of the decrease in National bank notes, viz. \$31,068,869. Instead therefore of there having been a contraction of the currency of the country as was anticipated from the locking up of the surplus in the Treasury and the retirement of National bank circulation, the circulating medium has increased to a very important extent.

The amount of cash in the Treasury on July, 1887, has not increased as compared with the amount in the Treasury on July 1, 1886, but this is not a fair comparison inasmuch as the amount in the Treasury on the latter date was exceptionally large, the amount of United States three per cent. bonds redeemed during the previous fiscal year having been only about \$44,000,000 as compared with over \$100,000,000 during the last fiscal year. The balance in 1886, was however only some 12 millions of dollars larger than it is this year, when the comparison is made with due consideration for the conditions existing in the two years.

On July 1, 1886, there was according to the Treasurer's Statement, including the \$100,000,000 reserve on legal-tender notes, the subsidiary silver coin, and the amount deposited with National banks, \$204,095,811, in the Treasury over and above the liabilities. Of this \$14,435,199, was deposited with the National banks, leaving \$189,661,502 actually locked up. But in arriving at this balance the liability for amount deposited by National banks for redemption of their notes was allowed to offset or lock up an equal amount of cash. No one contends that it is necessary to keep a full reserve on these deposits. On the other hand it is contended that the retirement of National bank notes by the deposit of lawful money does not lock up money. Assuming that the Treasury, if it could use all its surplus, need not keep over 30 per cent. reserve on such funds—about the same as it keeps on legal-tender notes—we must add to the available balance on July 1, 1886, 70 per cent. of the \$70,698,821, that was held to retire National bank notes, which will make the total amount available on that day \$289,157,177. On July 1, 1887, the balance including the \$100,000,000 reserve, the subsidiary silver coin and amounts with National banks was \$167,831,862. Add to this as in the preceding computation 70 per cent. of the \$106,106,258, held for redemption of National bank notes and we have \$219,114,938 available means on July 1, 1887, as against \$289,157,177, on July 1, 1886. As the amount deposited with National banks included in both of these balances was \$8,556,108 larger in 1887 than in

1886, the actual amount locked up in the Treasury on the latter date was only about \$12,000,000 larger than on the former. If during the fiscal year ending July 1, 1886, one hundred of millions in bonds had been redeemed instead of \$40,000,000, we would have seen the balance on that date reduced by about \$60,000,000 leaving it 179 millions instead of 239 millions. In which case the balance as it stands this year would have been about 48 millions larger than in that year. Comparing the balance for 1887 with that for the year 1885, we find that it is just about 30 millions larger at the first-named date than at the latter, the sums being \$219,114,988, and \$188,588,761, respectively, including deposits with National banks in both cases. But deposits with National banks in 1885 were \$12,928,264 only, whereas in 1887 they were \$22,991,302, a difference of 10 millions which added to the 30 millions difference in the total balances gives 40 millions more locked up in 1887 than in 1885.

The conclusion is that contraction of the currency outside the Treasury has been avoided by the increased coinage of gold, the issue of silver certificates in the place of National bank notes, the large disbursement of the Government for the redemption of bonds, and the use of National bank depositories. Notwithstanding the opportunity to relieve the Treasury by bond calls, the full benefit of which as an outlet was obtained by the issue of silver certificates, the Treasury balance has increased about forty millions since 1885. What will occur next year with increasing or even stationary revenues, with no outlet for the surplus in the optional redemption of bonds, unless some plan, of expenditure either for the debt, or for some other purpose, is authorized by Congress or adopted by the Secretary of the Treasury under present law, may be surmised. If in two years during which about \$150,000,000 have been paid out on the public debt the surplus funds in the Treasury have increased forty millions, when this mode of expenditure is cut off, the annual increase in the Treasury with the best management will be over \$100,000,000 per annum. The opportunity of putting out silver certificates will not be as great as it has been, since the National bank circulation cannot be further reduced by the calling of bonds. The 106 millions of National bank notes already retired may however be replaced with certificates, and the 70 millions standard dollars now in the Treasury with what are coined each month will perhaps get into circulation in this way. The production and importation of gold and the continued coinage of silver tend to an increase of money in the hands of the people, but whether it is sufficient to overcome the accumulation in the Treasury vaults, remains to be seen.

THE FAILURES OF TWO BANKS, the Citizens' Savings Bank of Leavenworth, Kansas, and the Columbian Bank of Philadelphia have been reported within a few days. The former with a capital of \$100,000, although called a Savings bank did a commercial business, was broken by the embezzlements of its President, R. P. Clements, who has absconded, and the latter having a capital of \$200,000, appears to have loaned too largely on paper based on transactions in railway securities. The Citizens' Savings Bank failed on July 27th and the Columbian Bank on July 30th. It is not as yet known whether the officers of the last named institution were in any way interested in the transactions mentioned.

*** DOMESTIC EXCHANGE.**

"HE, WHO BY THE PLOW WOULD THRIVE."

Domestic exchange is now one of the perquisites of depositors, the great extent to which the use of their checks is carried making it so. These checks, also, cause the trouble known in country collections, being issued, and sent to all parts of the country and their collection at par, causing them to be sent through numberless banks, is both expensive and annoying. The profit of bank exchange arising from the sale to occasional customers and to other banks, is very small, and when exchange requires to be bought, to keep up foreign balances, it is more than offset. Care in issuing drafts, in cashing of bills of exchange, and promptness in collection of remittances, to prevent any possible loss, form the most of the profit from this class of bank business. Inland exchange can readily be divided into three classes or at most four. Bankers drafts, issued on their reserve in some business center and on a point where it can be most conveniently used by the buyer; checks of depositors, the troublesome country collections are of this class; the drafts of merchants on their debtor customers, and last, accepted notes, or notes made payable by some third party or at a bank, and but little used in form of exchange. Bankers drafts being easily handled are received at par by almost every bank from its customers. Their collection is easily made, but they are not so convenient or so readily obtained by the depositors, who find their own checks far more suitable for them, making them more independent in the transaction of their business, and being so, also better for the business of the country. The banks should now by their influence throw these checks into proper channels and have established rules in regard to them, to make them more readily pass current, and to collect them promptly and with least expense. The checks of a depositor of a large city when sent to the surrounding country of which it is somewhat of a business center, can be readily used, the banks keeping accounts, or, being able by other means, very easily to take such checks at par and collect without expense. Checks sent to the city from the country are hard to use at par, often not more than one bank in the city having an account in that locality and the check often wanders about for weeks through the country banks in trying to reach its destination. As most banks receive these checks at par, to send direct for their collection would entail a collection fee and would be at a loss to the bank. To the uninitiated, the par list issued by the banks, crediting almost every point at par, would make them think that the trouble with collections was at an end. But it is this very list that causes so much trouble. The trouble could be somewhat abated if banks would explain to their depositors, by issuing to them a list of points where the bank would think it advisable for them to send their checks without great inconvenience to the receiver and the collecting banks. The list could be obtained by watching the course of checks and also getting a list of the correspondents of the other banks of the place, and when a majority of the banks of any place can easily reach any point in their collections, that place could be put on the list. For all places not on the list have depositors get drafts to use in place of checks. This any bank might do and were all to unite a great saving could be made in country collection. To save the trouble of giving drafts in payment for checks, when wanted to use on outside points, the bank could certify the check, making it payable in New York or some convenient point. A ticket being made and charged against the depositor's account, when check is returned at end of month by the paying bank, along with other cancelled vouchers, the bank can then take up the ticket and file away the check with the balance of the depositor's checks. Some banks whose customers' business extends over a large area of country have arrangements made with such depositors that their checks can be

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed; for particulars see page 574 of the June number.

paid either at their counter or by their New York correspondent. This plan is objectionable, being too burdensome if in use by a number of depositors. It also requires larger deposits or satisfactory security and a complete understanding with the New York paying bank, making extra work without an increase of business. A more satisfactory manner of dealing with out-of-town collections by individual banks is in a reformation and complete revision of its par collection list. These lists are got up mostly to make a show of business and because other banks issue such lists, and are mostly taken from their correspondents' lists, they getting theirs up in the same manner. Not much care being taken with these lists when a check is sent out the lists are looked over and the check sent to any bank thereon, and as a consequence the check often wanders aimlessly about. City banks trying to stop this have refused to receive checks that have once passed through one of the city banks. It saves them bookwork but still the check has to travel. To obtain a correct list get from the bank's correspondents a list of all their correspondents and also of all points that can be credited through them direct, or one remove from the bank's correspondent's correspondents. If two banks credit one point enter so on the list, as it may be of convenience in the making up of remittances. The list of a large bank will be found to be quite large, as large almost in fact as before, but correct. Knowing for a certainty where to send a check for credit, knowing how to dispose of checks when received, the next move for the bank is to limit the points at which they can handle for other banks. Their correspondents doing a large business should only be allowed to remit checks, etc., on points in the immediate vicinity of the receiving bank and such points as they themselves cannot reach conveniently. Other banks, who look to them as their correspondents, and expect to clear through them, if the business justifies the necessary work, should have full benefit of the list as revised. In cities and towns of several banks an association might be formed to collect the checks for each other. The small towns surrounding have each one bank or possibly two, keeping only one or two accounts in the city, the balance of the city banks being unable to collect at par on these points, except in the roundabout way so annoying. The association can form as a regular Clearing-House or not, or part of the banks of a place might unite for mutual help. Each bank sends in a list of its correspondents (both direct and one remove from the points they credit at par.) The association forms a list allotting to each bank so many points at which to collect all checks and cash drafts given them by the association. If the collections be cash, the debtor and creditor balances of the banks should be paid and received at every distribution of collections. If they are made through a Clearing-House the rules established will govern settlements. Rules and by-laws must be formed to prevent unnecessary collections being made. Each bank must agree to collect for itself on all points direct and those not on the list, also not to drop any correspondent without notice to the associated banks and to report all new accessions to its list of correspondents, to take no checks except from town customers so as to exclude all banks outside the association from using it to clear their out-of-town collections. All expense entailed by this manner of collecting must be apportioned to each bank according to the number of checks handed in for collection and not of the amount of the business, unless excessively large. The association issues a list to each bank of the points credited at par. A limit also of the territory might be added, as it would be impossible to collect closely over the United States, except in cities of a certain size. Banks in large cities doing business over the whole country should also be excepted, as collections on them are easily used. In small places the banks might take turns in detailing a clerk to conduct the exchange of checks reducing the expense to the minimum. A receipt is taken from debtor banks and one given credit banks, and balances can be adjusted at the Clearing-Room with currency thirty or forty minutes later. A plan somewhat similar to this has been tried in Boston and several other places with varying success. The country checks being sent direct to their destination from the cities, the city banks and also those of the country keeping a reliable par list, the possibility of stray checks wandering through the country at the expense of postage and clerk hire will be limited to narrow

bounds. A few banks will disregard all rules and still cause trouble to some extent. To stop the depositors from sending checks wherever they feel disposed, as the door has been opened to them, would be an utter impossibility. Country collections will increase, to stem the torrent is not possible or not prudent, but it is easy even for one bank to throw them into proper channels. The checks of depositors playing such a large part in the matter of exchange, the keeping of their accounts should be as simple as possible. Pass-books should be done away with. Each depositor filling and signing his deposit-tab, and a receipt is given him for the deposit by the receiving Teller. The account is balanced every thirty, sixty or ninety days as the business will justify on statements prepared and a receipt is taken from depositor for correctness of account and checks. This mode will be the least expensive and can be balanced at convenience of the bank. Merchants' drafts, except on points on the bank's list known as direct, should be sent to their destination and proceeds remitted in exchange. Checks drawn with exchange can often be sent direct with advantage in time, and this should be done when the bank can't credit without sending it direct. In a purely agricultural community the marketing of crops causes plenty of exchange. Farm products are most always sold for cash and the buyers give in exchange their checks or drafts on some central city. The exchange in such a community occurs with known regularity, being scarce when the community have nothing to sell. In a mercantile or manufacturing community or city the output of its products does not always bring in exchange as credit enters largely into the sale of mercantile and manufacturing fabrics. Exchange varies in such cities with the supply or demand for it. New York being the financial centre, checks and drafts drawn on banks located there pass current anywhere, and it is owing to this fact that drafts and checks on banks in other commercial cities are not generally at a premium, the New York exchange taking precedence. The rates of exchange vary most generally with the demand. The express charges on currency being heavy for the shipment of large amounts long distances to keep up a reserve to be drawn on, cause the price of exchange to advance in anticipation of such shipment. While an excessive supply of exchange and scarce currency causes a depreciation in the exchange offered for sale or credit. While exchange may be scarce in one bank or one city, another bank or place may have a superabundance and a transfer could easily be facilitated were the fact known. To let these facts be known a "Bureau of Exchange" could be established at some centrally located city, and the members of the different cities could notify when desiring to buy or sell exchange, and the Bureau could make the sales with its members taking a certain per cent. from the profits as commission to meet the necessary expense. The members to be of good financial standing and subject to the rules and by-laws of the association. A bank requiring currency might through such a "Bureau" find it close by and given for exchange, saving long and expensive shipments by express. If an institution of strength it could make better contracts for shipments of currency than most banks could. Such an exchange, covering so much territory would be hard to manage and unless a company would organize with the purpose of profit, cannot be properly carried out with the present unorganized state of the banks of the country.

The following forms accompanying this essay are referred to in the text :

*BANKING IN THE WEST,

Or Prompt Returns for Out-of-Town Items.

In Illinois and Indiana so many of the merchants in the smaller towns buy goods of wholesale dealers in their immediate neighborhood, and instead of using exchange on the larger cities send their individual checks on the local banks in payment of their purchases. So many of these checks go in a round-about way to their destination, and in some cases, when the checks are not honored by the bank on which they are drawn, are protested and returned through the same channel they came. This involves a great expense and in the end the local merchant has to pay the fees of protesting, besides causing the different banks through which the check has to pass a great deal of trouble. It might be well to add here that banks in collecting in the round-about system, call that "collecting at par." In some of the Western cities the banks have been collecting for their country correspondents in this way. All of the country banks in the immediate neighborhood opened accounts with banks in a certain city. The banks alluded to would publish a list of all the places they could collect at par, and presently had so many small accounts on their books that this system became a nuisance and they abolished it. At a recent date they refused to even take their resident customers' out-of-town checks without charging for the collection of them. The country banks then adopted the plan of collecting checks direct.

Now to the writer it seems that the following description of "Domestic exchanges" would be a good plan for the Western banks to adopt. As to other localities the writer does not know whether it could be used or not. Taking for instance the town in which the writer is a resident, the merchants pay most of their invoices of goods by check on the local banks. These checks find their way into four or five different banks before they get home. They should be sent direct to the bank on which they are drawn, but in most cases the smaller banks charge too much for remitting for their own checks. If all the smaller banks would adopt a uniform rate for exchange these checks would

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed; for particulars see page 574 of the June number.

be collected direct. The bank in which the writer is employed has adopted uniform rates for the remittance of all checks and collections sent it on the banks and merchants in the town in which it is located.

If the State of Illinois, as an example, could be divided into districts according to the location of banks in the following method, bank magazines could then publish the names of the banks that would make collections in the districts in which they are located, and in that way city banks could make prompt returns without sending every item direct to the bank or town named in the check or collection. The writer has this idea. In a district of a radius of 75 miles a bank located at a given point could make arrangements with all of the banks in its district to collect at par all checks and collections in the cities and towns in the district. The city banks could then send their collections and checks on all the places in that district to the specified bank and this bank would make the collections and remit at their advertised rate.

For the explanation of the above the writer has prepared the following descriptive diagram and designs of record books, etc.:

The bank at A has made arrangements with all of the banks in its district to collect on all the towns as are lettered above at par by opening an account with the banks in the district. The city banks having collections on any bank or town in the district sends them to the bank at A. A then sends the collection direct to the town on which it is drawn and takes credit with it at the bank there. If there is no bank in the town then have the person send the money to the bank at A on whom the collection is drawn. Upon receiving the advise of payment the bank at A remits, deducting its advertised rate for collection at the end of the month, or oftener the bank at A writes to its

correspondents in the district to send in the balance due it. They remit in convenient exchange. A sends this draft to the city bank and takes credit for it.

The bank at A first takes the following record of the check :

DATE.	NO.	MAKER.	WHERE DRAWN.	ENDORSER.	ON WHOM DRAWN.	WHERE PAYABLE.	TO WHOM SENT.	AMOUNT.	ACKNOWLEDGED.	REMARKS.
Oct. 1	500	John Black...	Charleston, Ill...	1st Chicago.	1st Nat'l.	Charleston.	1st Charleston	\$50	Oct. 12	(Remitted for.)

The bank at A then sends the following letter to the bank at E, enclosing the check :

SECOND NATIONAL BANK.

A....., 1886.

To the Cashier.

I enclose for credit the following items.

Yours respectfully,

....., Cashier.

Check on yourselves.....

\$50

The bank at E sends the advise saying the check has been credited to A's account.

A then draws a draft on Chicago to the order of the bank from which the check was received, less the exchange, enclosing the draft in the following letter of which it takes a copy. It then charges the bank at E with the check :

SECOND NATIONAL BANK.

At A,....., 1886.

W. C. Oakley, Esq., Cashier,
Chicago.

Dear Sir:

Your favor of the 12th inst. is received, with inclosure as stated.

I inclose my Draft on First National Bank, Chicago,	\$49	90
Exchange,		10
Cost of Collection,		
In payment of Check on	50	
First National Bank Charleston,	\$50	
Yours truly,		Cashier.

The bank at A receives a check from Chicago on the First National Bank at E and acknowledges receipt of the check as follows:

SECOND NATIONAL BANK.

A,....., 1886.

Dear Sir:

In reply to your favor of we advise as below.

Yours respectfully,
Cashier.

CREDITED.	CREDITED SUBJECT TO PAYMENT.	ENTERED FOR COLLECTION.
		Check on E, 50 Dollars.

The checks received during the month on the towns in the district are charged up when paid, or if returned unpaid they are accounted for in the column of "Remarks" in the record book, as kept by the bank at A. At the end of the month the bank at A receives the balances due it from the banks throughout the district. If the other banks in the district receive checks on A and send them to A for credit and at the end of the month the balance is in their favor, then A sends a draft to them to balance accounts.

In this way collections and checks in designated districts could be collected more readily by city banks and at a much more reasonable cost than the way they are collected at the present time.

The writer withholds a description of the way the books were to be kept by the bank at A for the accounts of the banks throughout the district, as no two banks keep their "General Books" the same or alike.

In regard to the shifting of funds from one city to another, the city banks with us never charge us anything for sending in any amount to any bank we designate.

J. B. MACKAY late President of the First National Bank of Abingdon, Ills., has just started the Citizens' Bank at Hutchinson, Kansas. He writes under date of July 5th: "Have been in business here just one week, and knowing that if I expect to succeed I must be a reader of your invaluable JOURNAL OF BANKING, I enclose draft \$5 to pay for same for one year." As a rule, bankers appreciate a good thing.

THE BANKERS' REFERENCE BOOK.

SOME QUESTIONS ANSWERED.

The sixth volume of this publication is now ready for issue, having been carefully corrected and proved up to July 16th of this year. We have received the following letter making some very reasonable and pertinent inquiries as to the practical value of the book to banks, bankers, and others, and are glad of the opportunity of publishing the letter and our answer to the same.

Messrs. Bradford Rhodes & Co., New York. CENTRAL NATIONAL BANK, }
PHILADELPHIA, July 28, 1887. }
GENTLEMEN:—We notice your postal card, dated July 27, concerning the *Bankers' Reference Book*, Vol. VI., professing to give among other information, the Credit Rating of banks and bankers.

We should be glad to know how you can give a Rating for a bank beyond its published statement. I speak more particularly of National banks. For instance, was there anything in the methods of business, habits of officers, or tendencies to speculation on the part of the Fidelity National of Cincinnati, that were possessed by you that would have been of advantage to your subscribers?

Do you, in connection with your volume, propose to furnish your subscribers with reliable information apart from the published reference?

Any information will be thankfully received, as we at present subscribe to your valuable publication, RHODES' JOURNAL OF BANKING, and, if satisfied as to the results, would be glad to take your *Bankers' Reference Book* also.

Very truly,

T. L. DEBOW, Assistant Cashier.

Our answer to the above was as follows:—

DEAR SIR: We are in receipt of your letter of the 28th instant., and note the pertinent inquiries contained therein in regard to the practical value of the *Bankers' Reference Book* published by us. You ask how we can give a Rating for a bank beyond its published statement, more particularly a National bank, and whether there was anything in the methods of business, habits of officers or tendencies of speculation on the part of the Fidelity National of Cincinnati, that were in our possession that would have been of advantage to our subscribers to know. You also ask whether we furnish our subscribers with reliable information apart from what appears in the regular publication. Your inquiries describe the essential points on which is based the real value of a *Reference Book* and the reports supplementing it.

1st, Information outside the regular published reports constantly obtained, and 2d, prompt transmission of the same to subscribers.

Our system of Credit Rating is the result of the consideration of two principal kinds of information: *First*, the reports published by authority, which are of course obtained with comparative ease, and serve as a foundation on which to base further inquiry, and *Second*, the information obtained by inquiries conducted by ourselves which is kept up to as late a date as possible, and covers the points mentioned in your letter. From these sources we make up the final result, taking into consideration the present condition of the bank, the usual proportion of cash to liabilities, the availability of its assets, the profits under its present management, and the character of its officers as to fitness, outside enterprises and speculations, conservatism in business methods, general reputation, etc. We believe that we are in better condition to warn our subscribers of business dangers which they may incur in dealing with incorporated banks, banking firms, etc., than any Commercial agency in the country, because we confine our investigations to this one branch of business in which years of dealing with banks have given us great experience. The book includes all classes of banks as well as individuals, companies, etc., doing any sort of banking, investment or collection business. Inquiry as to general financial responsibility has assumed such vast proportions that we do not believe an accurate book of reference comprising all branches of

business can be prepared or kept up. We confine ourselves to this most important portion of the field, and believe from the progress we have already made and the patronage we receive, that within it we shall be able to satisfy the requirements of the most exacting subscriber.

We are glad you mentioned the case of the Fidelity National Bank. We were well aware of the character and previous history of the men who caused the failure, and stood ready to answer any inquiries made in regard to them by our subscribers, and are ready to do so in regard to any bank officers in the country. We do not profess to do more than furnish information, those who receive it must draw their own conclusions and act accordingly.

We propose to furnish special reports without extra charge to subscribers for the *Reference Book*, on request (*i. e.* a reasonable number—not over two a week is the rule), in regard to any institution or its officers, and when we receive information of suspicious circumstances connected with any bank to forward it to those who we may think it will chiefly interest without special request. We have devised a plan which will enable us to do this without the risk of exposure of names to any but the recipients. In our correspondence, banks are indicated by the numbers opposite their names in the *Reference Book*. Our sources of information also use these numbers, and our whole business is conducted with the object of warning without creating unnecessary alarm or distrust. We are constantly improving our system of outside information. As a new feature we are seeking to induce our subscribers to let us know confidentially any knowledge they may have gained in course of business as to weakness, bad management, losses, character and habits of officers, of banks, etc. Many subscribers already do this, sending in promptly—sometimes by telegraph—any important information which comes to their knowledge. We pay the cost of transmission as well as any other expense incurred by the sender. We think that this feature properly managed ought to result, in connection with our other facilities, in building up a mutually protective system among banks better than any as yet realized. In all our business of procuring and furnishing matter of value and interest to banks and bankers we have endeavored to reach a high standard of practical excellence. We have been to much expense in building up the *Bankers' Reference Book* and the system of reports supplementing it, and hope to much increase the success we have already obtained in this line.

Respectfully, BRADFORD RHODES & Co.

THE BANKERS' DIRECTORY AND COLLECTION GUIDE.

In view of the great number of banks recently organized as well as the many changes in officers, capital, correspondents, etc., which have occurred since the first of July, we have decided to bring the corrections and additions on the new *BANKERS' DIRECTORY* up to date and have it ready for delivery the last week of this month—August. It will be called the *Mid-Year* issue.

The Comptroller of the Currency has called for a report of condition of the National banks at the close of business on August 1st, and the new *DIRECTORY* will contain these figures—capital and surplus—as well as all changes in officers up to near the middle of the month. On August 27th, last year, a call for report of condition was issued, but with that exception a report of condition after July 1st, or in August, has never been called for since 1868, and there is consequently no official knowledge of the National banks at this season.

Some idea of the number of new banks recently organized—most of them since July 1st—and the changes in officers, etc., may be obtained by referring to the list of "Bank Changes" in this issue of the *JOURNAL*—see page 881. All these, and many more, will be incorporated into the new *DIRECTORY*, which will be as regards correctness and in other leading features the most valuable work of its class ever issued.

None of the list books issued in July have any of the corrections referred to above; their revision and additions being closed early in June, such publications are necessarily imperfect and of little value. Bankers and others who require a *Directory* want one that is fresh and reliable.

Handsomely bound in red cloth. Price, \$2 a copy.

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Tracing Items.—Banks that keep a very elaborate set of books have little difficulty in tracing items all through the work ; but, where labor saving devices are employed, it is sometimes not so easy to trace a check or draft with certainty. Customers are at times surprised that a bank cannot give them detailed information in regard to every item which they may have deposited on a certain day. Such inquirers seem to expect a bank to keep a record of both sides of the check or draft, including dates, signatures, endorsements, and all other particulars. Of course, there is no reason why a bank should keep a record of all these particulars. If customers desire such records preserved, they should make them themselves. Most banks keep a record of the last endorser of a check, which is, practically, a record of the depositor who put it in the bank ; but, further than this, it is not at all necessary to go. It is not often that a check is to be looked up, and, when such is the case, a little ingenuity will be sufficient to bridge over any breaks in the record ; while the time and labor saved by omitting specific details on the bank books would more than compensate for any inconvenience which may arise from lack of specific entries.

Accounts with Estates.—As in the case of accounts with corporations, so in accounts with estates, great care should be taken to open the account under the proper title, for example, the entry should not be "A. B. Trustee" or "Administrator" but "Estate of C. D., A. B. Administrator" or "Trust estate of C. D., A. B. Trustee." This arrangement has a double advantage of indicating clearly and exactly what the account is, and allowing the substitution of new administrators or trustees without altering the heading on the ledger, or shifting the account from one ledger to another. As has been pointed out in the JOURNAL, confusion sometimes arises where accounts have been opened in the name of certain persons as trustees or administrators without any specification of the trust or the estate administered on.

Transferring Bank Shares.—A curious suit in regard to transferring bank shares, which grew out of the negligence of the Cashier, once came within the writer's knowledge. It seems that when the bank was first organized, the certificates of stock were made out on rather inferior paper, and not in very handsome form. After the bank was fairly on its feet, they thought it would be more becoming to the dignity of the institution to have the certificates engraved in better style on paper of superfine quality. The work was accordingly done to the satisfaction of all concerned, the old certificates of stock called in, and new certificates, on handsome blanks, duly issued. But it seems that one old stockholder, not perhaps the *beau ideal* of a man of honor, somehow or other, got the new certificate and never surrendered the old one. Bye and bye the old certificate passed into the hands of that innocent third party who always occupies so strong a position in the Courts. This latter personage being a "holder for value without notice" could not be made to understand that the old certificate which he had bought and paid for was really of no account whatever and ought to have been surrendered at the time the new one was issued. Notwithstanding the most elaborate explanation

of how it came to pass, he could not be brought to see it exactly that way; to the chagrin of the Cashier, he instituted a suit to recover the value of the stock, and, to the best of the writer's recollection, the verdict went in his favor. This little instance serves to show the necessity of the greatest care in the issuing of stock certificates.

It is very difficult for the bank to explain away a certificate of stock duly signed, sealed and delivered, as the case above cited shows. On no account should a new certificate of stock be issued until the old certificate is duly surrendered, even if the Cashier does run the risk of being accused of undue fondness for red tape. Nor is it a very good practice for an officer to sign in blank; for cases have arisen where a President, for example, has been in the habit of signing certificates ahead of requirements, and the Cashier has wrongfully signed and issued certificates without the President's knowledge.

Another Form of Ledger Ruling.—The following plan for Ledger ruling has been sent to us by a correspondent from Jacksonville, Florida. There are two sets of columns to each page, and of these sets the first lines are for checks, the next deposits; then a column for the journal page, and lastly the daily balance, as seen in example below:

1887.		JNO. SMITH.									
May	1					100 00	1			100 00	
	2			50 00		175 00	3			225 00	
	3			29 50			4			195 50	
	5			75 00		230 00	6			350 50	
	6			100 00			7			250 50	
	7			550 00		400 00	9			100 50	
	8			125 00			10	*		24 50	
	9					1 100 00	11			1 075 50	
	10					1 150 75	12			2 226 25	
	12			1 500 00			15			726 25	

* Overdraft.

We will suppose Jno. Smith opens an account by depositing \$100. We enter that in the deposit column, and also in the balance column. Next day \$175 is deposited and a check is paid for \$50. Make these entries and we find a net increase in the balance of \$125, and adding this to the balance of the day before we have \$225 as the balance at the close of the day. On the 7th there is a balance of \$100.50; on the 8th checks come in amounting to \$125, which being paid "overdraw" the account \$24.50, and that *fact and amount* are indicated in the balance column by using *red ink*. On the 9th \$1,100 being deposited, after deducting the "overdraft," there remains a balance of \$1,075.50. I think no further explanation is needed and that the work shows for itself. We carry these *daily balances* after posting to a balance book, putting the balances in one set of column and the overdrafts in another.

Forms of Checks.—On several occasions the JOURNAL has laid before its readers articles and suggestions in reference to the proper form of bank checks, and while there may very properly be a difference of opinion as to what form is really the best, yet there are certain features which are on a great many checks which cannot be too strongly condemned in any form. For example, there is no necessity for vignettes, advertisements, ornamental type, or any one of the various graces and beauties which engravers, design or depositors invent. Very small checks and very large checks are equally out of place and unnecessary, except that the latter may be excused in special cases, as for example, the case of corporations, where several directors have to sign. The main point, as was suggested in a recent issue of the JOURNAL, is to secure uniformity of usage, and while perhaps there may be a difference of opinion about the corner in which the number or amount should be put, still the more general way seems to be to put the number in the upper left-hand corner, and the amount in the lower left-hand corner. Placing the amount in the upper

corner has considerable advantages in calling off checks and notes, and would perhaps be better than the other way; still the main point is to secure uniformity, and such variations as putting the amount or number in the middle of the instrument or on the side; and putting the name of the drawee bank in the lower left-hand corner, or the name of the State on the end of the check instead of before the date as is usually the case should not be admitted. There may be certain advantages in putting the name of the State on the end of the check; but the custom has become so universal of having the name of the place immediately preceding the date that it does not seem advisable to change for what is at best a very slight and trifling improvement.

Paying Coupons.—The coupons are probably the most annoying bit of commercial papers that bank clerks are called upon to handle. When they very first invented, the genius who conceived the happy idea of making them in such small proportions should have been compelled to handle a great many himself, (but not his own), as a reward for his ingenuity. There are very few city banks who have not had an experience in the way of losing them, and have been put to considerable loss, and sometimes expense before they have been reimbursed. It is a very good plan to have envelopes printed especially for coupon purposes, and supply them to customers. In a former issue of the JOURNAL two or three forms were shown for this purpose. Here is a form which can be used by the paying teller when cashing the coupons over the counter. Different kinds of coupons are placed in separate envelopes and the person presenting the same for payment is compelled to write his name on the envelope so that if a coupon turns out to be fraudulent or questionable in any respect he can be held responsible for it. It may seem a little troublesome at first; but after customers get into the habit of doing it in that way they recognize the propriety of the system and readily co-operate in it.

Coupons Cashied by National Reserve Bank, New York, for

 1887.

50	State of Missouri.....	\$0.00	1500
----	------------------------	--------	------

Force of Character.—It is often a matter of wonder how some men, without any advantages whatever, and in spite of innumerable obstacles, manage not only to succeed, but to obtain a very high degree of prosperity. While, on the other hand, men who have begun their careers with every advantage, and seemingly with assured prospects, yet fail even to obtain a moderate degree of success. Life, it is true, is too full of ship-wrecks for us to predict success for every gallant barque "that we see from the beach when the morning is shining," but surely one would think that the craft that sets sail from port well built, well manned and well provisioned would have better chances of success than that which is illfurnished in all these particulars. Yet it often happens that the latter comes safe to its haven, while the former suffers shipwreck, or, it may be, falls into unfriendly hands. And so it is with men. Every one can recall instances of signal success in mercantile life achieved by men who could not so much as write their names, and who lacked the merest rudiments of education. Men have built up a large and flourishing business, who could not, with correctness, work the simplest problem in interest or percentage. Why such men should succeed, and others, far better equipped for the struggle, should fail is an interesting enquiry. It is difficult, of course, to determine with real accuracy the causes of success or failure in any man's career. Probably there are few successful merchants or bankers who cannot recall more than one instance where a trifling error would have entirely changed the course of their fortunes. Only persons who have known men of this sort very intimately could tell of those special times in the seemingly successful career where the chances between success and failure were very evenly balanced. If, however, one recalls to mind men, who have been successful in spite of serious disadvantages, it will be perceived that they have,

almost without exception, one striking characteristic in common, and that is, strong force of character, comprising first, the ability to make up their own minds, and to know definitely what they want to do; and secondly, strong will to carry it through,

“—a strong man:

For where he fixed his heart he set his hand
To do the thing he willed, and bore it through.”

Strong character shows itself in various ways; in one, it has the form of a quiet determined persistence; in another, an overbearing arrogant manner; in another, impatience at obstacles; in another, the determination to have one's own way; or it may be, a disposition to assume the leadership in whatever company one may be thrown. Men of this stamp are bound to succeed in almost any enterprise that they undertake, for these seem almost to compel the circumstances that surround them, and to shape to their own ends and advantage, difficulties and obstacles which would overwhelm less determined dispositions. But such men are, in spite of the lack of advantages, but an indication of what they would be had they been favored like ordinary men. Some contend that it is the very force of adverse circumstances that brings out the full character of such persons and had it not been that they were compelled to struggle against the tide they would not have developed themselves into anything more than average men. However that may be, it is quite certain that mere force of character will go a long way toward insuring a fair measure of success; and that, without this characteristic, very few ever manage to reach eminence in any walk of life. If we apply what has been said especially to bank officers, it may be admitted that the executive head of a large financial institution must of necessity be a man of strong will and large mental powers, otherwise he will degenerate into a mere figure head, standing in the way of better men, and recalling the familiar question, “Why cumbereth it the ground.” On the other hand, banks that have made a success and have taken a front rank, usually owe that success in a great measure to having been under the direction of an able man who knew what ought to be done, and had the strong will and force of character to carry out his plans.

Keep a Record.—Every now and then a most careful managed bank will somehow or other get involved in some matter that may bring pecuniary loss. An error, trivial in the beginning, may lead to serious consequences, bringing on a vexatious lawsuit with its attendant annoyance and expense. When anything of this sort occurs, it is always well to keep a record of the leading points as the case progresses. Of course, letters and documents, of importance are always copied in full; but it is meant that a sort of diary of the case should be kept so that at any time the matter can be passed in review before the board of Directors or the council of the bank without referring to a multitude of papers. Especially is this important with reference to exact dates of important parts of the transaction. The record should also embrace a brief synopsis of letters received and written, papers filed, and such like matters. Especially is this advantageous when the person at the other end of the line wields the pen of a ready writer, and takes a very long way to tell a very short story. If this work be done carefully and intelligently as the matter progresses it will scarcely be found necessary to refer to the original documents, and the matter can be reviewed on any occasion in a very short time. This record should be kept on loose sheets of legal cap, and when the transaction is completed, the synopsis can be filed away with the rest of the papers. It may also be suggested that it is well to keep a brief history of the bank's affairs, so that the work of the institution can be reviewed from time to time, and its general policy governed accordingly. This may seem a superfluous task in a bank where the officers retain their positions for a long time; but in banks where the directory is often changing it is just as well that the new hands who come in have an opportunity of reviewing the past management of the bank so as to get some idea how things have been generally done. The minutes of the board, of course, give all this information in considerable detail; but what is sought here is a brief summary that can be read over in a comparatively short time. After a transaction has become a year or two old, men forget about it and there is a little confusion as to dates and names which a record of this sort would readily correct.

BANKING LAW.

* Legal Decisions Affecting Bankers.

CERTIFICATE OF DEPOSIT—WHEN LOST BY PAYEE BEFORE INDORSEMENT INDEMNITY NOT NECESSARY AS A PRE-REQUISITE TO RECOVERY—A DISCUSSION OF THE LAW GOVERNING INDEMNITY IN CASES OF LOST INSTRUMENTS.

(A certificate of deposit "payable on the return of this certificate," is a negotiable promissory note, and is governed by the rules and principles applicable to that class of paper. When such a certificate has been lost by the payee before it has been indorsed by him, a bond of indemnity to the bank is not required as a condition precedent to his right of recovery at law on the lost instrument.)

On the 9th day of August, 1882, Eugene E. Brown deposited with the Citizen's National Bank of Cincinnati, the sum of \$1,145, and received from that bank a certificate of deposit signed by the proper officer of the bank in the following language;

No. 702.	CITIZENS' NATIONAL BANK. CINCINNATI, August 9, 1882. }
Eugene E. Brown has deposited in this bank eleven hundred and forty-five dollars payable to the order of himself on the return of this certificate, in current funds.	

On September 16, 1882, before Brown had indorsed the certificate, he lost it, and it was never afterwards found or recovered by him. Two days later Brown demanded payment of the certificate from the bank, but the bank refused to pay unless he would first indemnify it by bond, with good and sufficient sureties, against any loss which the bank might suffer by reason of the certificate being held or owned by some person other than himself who would seek to enforce its collection against the bank. Brown refused to tender any such indemnity, and brought an action at law against the bank to recover on the lost certificate of deposit. The District Court of Hamilton County, Ohio, rendered judgment in his favor, and the bank thereupon took a writ of error to the Supreme Court of that State.

Held: The certificate was in effect a promissory note. It possessed all the requisites of a negotiable promissory note, and as such was governed by the rules and principles applicable to that class of paper. In *Howe vs. Hartness*, 11 Ohio St. 449, it was held that a certificate of deposit, substantially the same as that under consideration, was a negotiable promissory note; and in *Miller vs. Austen*, 18 How, 218, where the amount deposited with the bank was payable only to the order of the depositor at a future day certain, upon the return of the certificate of deposit, it was recognized as the established doctrine that a promise to deliver, or to be accountable for so much money, is a good bill or note; that the sum named in the certificate issued being certain and the promise direct, every reason existed why the indorser of the paper should be held responsible to his indorsee, that could prevail in cases where the paper indorsed is in the ordinary form of a promissory note; and that as such notes the State courts generally had treated certificates of deposit payable to order. The fact that the money deposited with the bank was made payable

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL's Law Department as early as obtainable.

Attention is also directed to the series, "Powers of Bank Cashiers," "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

on the return of the certificate was not such a contingency as affected the negotiable character of the instrument. (37 Ill. 187, 39 Vt. 315; 40 Vt. 377.)

In the view which we take of the case before us it becomes unnecessary to inquire whether the certificate was overdue and payable at the time of its loss, or whether a demand before the loss of the certificate was an essential prerequisite to the maturity of the instrument in order to determine whether one who should come into possession of it would be subject to the equities that might exist between the bank and the depositor, and whether the bank would be secure in paying the amount of the certificate to the depositor without exacting from him an indemnity. The certificate though negotiable, was unnegotiable when lost by the payee. It was never indorsed by him, and it becomes a subject of inquiry whether in such a case a bond of indemnity to the bank was a condition precedent to his right of recovery at law on the lost instrument.

It was said by Lord Ellenborough, in *Pierson vs. Hutchinson*, 2 Camp. 211, "whether an indemnity be sufficient or insufficient is a question of which a court of law cannot judge;" and by Lord Eldon in *Ex parte Greenway*, 6 Ves. 812, "I never could understand by what authority courts of law compelled parties to take indemnities." But the difficulties which courts of law have found in adjusting indemnities is obviated in Ohio under the Code of Civil Procedure, which settles in the same action the legal and equitable rights of the parties; altering rather the form of administering justice than impairing in any manner the rights of the parties whether before denominated legal or equitable. (1 Hand. 449.)

If a negotiable note payable to bearer, or to order and indorsed in blank, is lost before maturity, it is right that the maker upon paying its contents should be made secure against being compelled to pay the same a second time. But when the lost instrument is not payable to bearer, or is payable to order and is unindorsed by the payee, as no legal title in such a case could pass so as to vest any one with the privileges of a *bona fide* holder in the usual course of trade, no indemnity would be necessary. If one should find a note negotiable by indorsement, and forge the indorsement, the holder by this title could make no valid claim against any one because the written transfer would confer no title upon him; and if the finder should not forge the indorsement his action or demand of payment must needs be in the payee's name, and the maker might then plead any judgment already rendered against him on the note in favor of the payee, or any payment thereon made by him to the payee.

Among the exceptions as to indemnity, it is said by an approved text writer, there are some cases in which the defendant can run no risk, and in which the plaintiff may therefore proceed in a court of equity or law without giving a bond of indemnity; that is where the note is not negotiable, and where, though negotiable, it is payable to order and unindorsed, or has been specially indorsed. (Dan'l Neg. Instr. 1481.)

The reason which permits notes never negotiable to be sued under the expeditious forms of the common law in preference to the more tedious and expensive ones of chancery applies, says Parsons, in his treatise on Notes and Bills, equally well to all notes which, being negotiable, have not been negotiated. The rule as laid down by Greenleaf (Evidence, Vol. 2, Sec. 156,) is that if the bill or other negotiable security be lost, there can be no remedy upon it by law unless it was in such a state when lost that no person but the plaintiff could have acquired a right to sue thereon. But if there be no danger that the defendant will ever again be liable on the bill or note, as if the indorsement were specially restricted to the plaintiff only, or if the instrument was not indorsed, the plaintiff has been permitted to recover upon the usual secondary evidence; and Judge Story, in considering the remedy afforded in equity and approving the rule allowing a recovery on a lost note at law where it is not negotiable, states that the same rule will apply, if the note were originally negotiable, where it has not been indorsed by the payee. (Prom. Notes, Sec. 451.)

In accord with the rule holding the maker liable without indemnity where the payee has lost a negotiable note before indorsing it is the decision in

Thayer vs. King, 15 Ohio, 242. That decision was rendered in the year 1846, and it has stood approved in this State from the day of its announcement. We find no adequate ground for now disturbing it. The court holds in that case that an action might be maintained at law on a note payable to order and indorsed in blank, and lost after it became due. The reason for so holding will apply with equal force to the case under consideration. In the one case it was deemed unnecessary to invoke the chancery powers of the court for an indemnity, as a maker would be protected against a double payment of overdue lost notes by reason of their being charged with all equities existing between himself and the owner of the paper; and in the case at bar no bond of indemnity was necessary, the bank being protected against a second payment of the certificate of deposit by reason of its not having been indorsed before it was lost, whereby no *bona fide* holder could invalidate the equities between Brown and the bank. In referring to the contingency of a double recovery against a maker who has been compelled to pay lost negotiable paper, which has fallen into the hands of an innocent holder, who had received it before due, Read J. in *Thayer vs. King*, *supra* says: "If former payment or recovery would be a complete bar to any subsequent payment or recovery, the reason of the rule ceases and the objection to a recovery by the owner no longer exists. Hence, if the circumstances of the case are such that the negotiable paper can never be produced for payment a second time, or if produced would permit no right of recovery in the hands of the holder, no indemnity in such case being required to guard against a second payment, recovery may be had in a court of law. Thus, if the instrument be totally destroyed, or if it pass into the hands of the holder charged with all the equities which exist against the original holder, the action may be at law."

Our attention has been called to leading authorities in different States in confirmation of the foregoing views, all going to establish the doctrine that an action at law may be sustained without tendering an indemnity on the lost note though it be negotiable if it appear not to have been negotiated, upon giving the usual proof necessary to let in parol evidence of a written contract. (The following cases are quoted by the court to the effect that a recovery may be had at law without furnishing an indemnity on a lost note which is not negotiable, or which being negotiable, has not been negotiated: *Pintard vs. Tackington*, 10 Johns. 104; *Rowley vs. Ball*, 3 Cow. 303; *McNair vs. Gilbert*, 8 Wend. 344; *Rogers vs. Miller*, 4 Scam. 333; *Depew vs. Wheelan*, 6 Blackf. 485; *Lazell vs. Lazell*, 12 Vt. 443, *Aborn vs. Bosworth*, 1 R. I. 401; *Moore vs. Fall*, 42 Me. 450; *Branch Bank vs. Tillman*, 12 Ala. 214.)

It is manifest that the principle underlying the authorities to which we have heretofore referred is that the payee or owner in an action at law against the maker on a lost negotiable instrument need not tender to him an indemnity if the paper when lost was in such a state that the maker would not be compelled to pay the contents again to a *bona fide* holder. The rule which we think should govern in the case at the bar is in keeping with the decision in *Rolt vs. Watson*, 4 Bing. 273, a case overruled in England but not in America, and which in our judgment commends itself as an authoritative exposition of the law on the subject matter adjudicated. "The question for us," says Best C. J., "is whether the bill which the defendant in this cause has accepted be an instrument which can never rise in judgment against him? Now the jury have found expressly that the bill was undorsed, and though payable three months after date it has not been heard of from 1825 to 1827. There is no decision in which the party has been held to be responsible in respect of an outstanding bill undorsed. In all the cases in which a defendant has been held to be discharged in respect of a supposed liability on a bill, the bill has been in such a state as to be likely to be used against him." See *Long vs. Baillie*, 2 Camp. 214, n.

It is contended that the words "payable on the return of this certificate" gave the bank the right to hold the depositor to the letter of the contract, and to refuse payment until the certificate was surrendered, or until a sufficient indemnity had been offered. We do not understand that those words import a stipulation for an indemnity in case of a failure to return the certificate, or

to settle the terms upon which the payee would be entitled to his money, in the event of a loss of the instrument. Under some circumstances an indemnity might be properly required for the maker's protection, as where the instrument is payable to bearer, or to order, and indorsed at the time of its loss, while under other circumstances such an indemnity might be wholly unnecessary. The words "payable on the return of this certificate" cannot be construed to have an effect beyond what might be sufficient for the safety of the bank upon its paying this certificate. At the most, the bank should not demand indemnity when not necessary to protect itself against a second liability. A note payable to bearer requires a physical presentation of the instrument before payment as much as a certificate of deposit "payable on its return." By the literal terms of the note there must be a bearer of it before payment can be exacted. And yet in the light of *Thayer vs. King*, *supra*, it will not be claimed that a note payable to bearer and lost after it becomes due, cannot be collected without first producing the note or tendering an indemnity. In every promissory note there is an implied undertaking by the payee or holder to return it to the maker on payment of the money; and an express undertaking to return it could have no greater force nor change or modify the legal effect of the instrument. As expressed by Peck J. in *Smilie vs. Stevens*, 39 Vt. 115, "the return of the instrument is an act to be done with the instrument itself, contemporaneous with the payment, and is no more than would be the implied duty of the holder of a negotiable note or bill, in the absence of such stipulation, as it is the duty of the holder to deliver up a negotiable promissory note or bill, on payment of it by the maker, as a voucher for his security, or show a sufficient excuse for not doing so." An inability to return the certificate by reason of its loss cannot operate as a payment or satisfaction. The maker is not thereby discharged; but the question arises as to what if any conditions should be imposed upon the loser before he can recover of the maker. Having failed to return the certificate, though required to tender an indemnity in cases where the maker would not be safe in paying without such return, he should not be required to go further, and indemnify when the certificate was not negotiated at the time of its loss, and its non-delivery to the maker would not subject him to a second payment.

It is assigned as error that the court below allowed interest on the certificate of deposit from the 18th day of September, 1882. On that day Brown requested payment and the bank refused. It was incumbent upon him to produce and surrender the certificate, or give an adequate reason for his inability to do so. Such a reason was furnished in the loss of the certificate. As the bank, notwithstanding, deemed it advisable to withhold payment, the certificate should bear interest from the date the bank declined to pay.

Judgment affirmed. (Spear and Minshall, J. J. dissent.)

Citizen's National Bank vs. Brown, Supreme Court of Ohio, March 22, 1887.

FORGERY OF CHECK—SUFFICIENCY OF INDICTMENT.

The defendant Vincent was indicted and convicted in the St. Louis criminal Court, under Section 1388 of the Revised Statutes of Missouri, for having in his possession a forged check, knowing the same to be forged, with intent to utter and pass the same as true and genuine. The instrument set out in the indictment was as follows:

No. 56,094.

UNION NATIONAL BANK,
NEW ORLEANS, February 23, 1884. }

The National Park Bank, New York, pay to the order of George A. Vincent,
sixty-five hundred dollars. (\$6,500.) S. CHALARON, Cashier.

Among the matters urged for a reversal of the judgment before the Supreme Court of Missouri, it was contended on behalf of the defendant that the instrument above set forth was a draft or bill of exchange, and not a check, as alleged in the indictment. On this point the Court said: "It is an order drawn upon a bank for the payment of a sum certain to a named person, and is payable instantly on demand. In legal effect it purports to be drawn upon the funds

of the maker, in the bank. It is, therefore, according to the definition or description given by Mr. Daniel, a check. (Daniel Neg. Inst., Sec. 1566.) Had it been drawn by an individual upon a bank, and not by one bank upon another, there could be no doubt but what it would be properly designated a check. But it is none the less a check because drawn by a bank. (Morse, Banks, 2 Ed., 164.) Such instruments it is believed are well known as banker's checks."

It was also contended on behalf of the defendant that the indictment did not allege that the defendant had indorsed the check, and was consequently insufficient. On this point the Court holds: "It is true the indictment does not allege that the defendant had indorsed the check nor was it necessary that it should have so stated. The Statute declares, so far as applicable to this case, that every person who shall have in his possession any such falsely made, altered or forged check, knowing the same to be falsely made, altered or forged, with intent to utter or pass the same as true, or to cause the same to be uttered or passed with intent to defraud, shall, etc. The offense under this Statute was clearly made out, without the allegations that defendant had indorsed the check, nor was it necessary to make proof of that fact. Proof that it had been indorsed by the defendant would be strong evidence tending to show an intent to pass or utter, and to defraud; but that is not the only means by which such proof can be made."

Judgment affirmed.

State vs. Vincent, Supreme Court of Missouri, May 16, 1887.

PROMISSORY NOTE—INDORSEMENT OF GUARANTY OF PAYMENT PASSES TITLE.

Suit against the maker on the following note with guaranty appended.

\$150.

GRAND RAPIDS, Mich., February 25, 1882.

Six months after date, I promise to pay to the order of R. H. Pelton, of Tallmadge, Ottawa Co., one hundred and fifty dollars, at Savings Bank in Grand Rapids, Mich., value received with interest at eight per cent. per annum, payable semi-annually.

PALMER CHURCH.

(Indorsed on the back was the following:)

"For value received I guaranty the payment, waive presentation and demand of payment at maturity, and will pay all costs of collection with annual or *pro rata* interest at ten per cent. on this note until collected. ROLLIN H. PELTON."

The maker being sued by Phelps, to whom the note had been transferred, claimed that the above indorsement of guaranty did not pass the title to the plaintiff and that he could not recover.

Held. This claim is not well founded. The indorsement was made by the party to whose order it was payable. It is not necessary that the indorsement itself should be negotiable in order to enable the original and first indorsee to sue the maker. Whether the guaranty of payment was or was not negotiable, it was upon its face intended to be operative to some holder; and it was held in *Thomas vs. Dodge*, 8 Mich., 51, where the guaranty was one of collection merely, that no name need be mentioned in it, but that it becomes operative in favor of the party to whom it was delivered. Since the Statutes have made both guaranties of collection and guaranties of payment negotiable, there is still less reason for holding otherwise. An indorsement of guaranty in blank is a complete act; and if made by a payee or other party holding title, passes the title with the obligation.

Phelps vs. Church, Supreme Court of Michigan, February 15, 1887.

PROMISSORY NOTE—GUARANTY OF COLLECTION—ACTION AGAINST GUARANTOR.

C. executed a promissory note to plaintiffs in payment for certain machinery. Before delivery thereof to plaintiffs, defendant indorsed on the back thereof "I hereby guarantee the collection of the within note, waiving demand, notice and protest. Peter Thompson." The note being unpaid at maturity, plaintiffs brought this action against defendant without having

attempted to enforce payment against the maker by legal process. On the trial the court found that the maker, C, was not proved to have been insolvent so as to render such process fruitless, and judgment was rendered for defendant. On appeal.

Held, The plaintiffs never having attempted to collect this note from the maker by due course of law, it was incumbent on them, in order to recover from the defendant (who guaranteed collection) to prove that the maker was at the maturity of the note and still continued so utterly insolvent that an action against him would be fruitless. The evidence on this point supports the finding of the court that the maker had not been from the maturity of the note up to the commencement of this action so utterly insolvent that an action against him on the note would have been fruitless if prosecuted with due and reasonable diligence, and the judgment must therefore be affirmed.

D. M. Osborne & Co. vs. Thompson, Supreme Court of Minnesota, May 5, 1887.

PROMISSORY NOTE—NON PAYMENT—AUTHORIZATION TO CONFESS JUDGMENT.

(An authorization contained in the body of a promissory note that in case of non-payment "I hereby authorize any licensed attorney at law to appear for me in court and to accept service, waive process, and confess judgment in favor of the legal holder of said note against me for the amount of said note, and interest, with ten per cent. attorney's fees additional," is binding only on the maker and does not affect the indorsers.)

Suit upon the following instrument :

GAINESVILLE, Texas, September, 1, 1883.

Nine months after date I promise to pay to the order of myself twelve thousand five hundred dollars for value received payable at the office of the Gainesville National Bank, Gainesville Texas, with interest from maturity until paid at the rate of twelve per cent. per annum. *In case of the non-payment of the above note at maturity, I hereby authorize any licensed attorney at law to appear for me in court and to accept service, waive process, and confess judgment in favor of the legal holder of said note against me for the amount of said note, and interest, with ten per cent. attorney's fees additional.*

(Signed) W. H. WILLIAMS.

(Indorsed) W. H. Williams; H. R. Washington; Jno. H. Stone; G. W. Barefoot; George J. Hall.

(Further indorsed) Pay Gainesville National Bank, or order, for collection, account of Merchants National Bank, Kansas City, Mo. O. P. Dickinson, Cashier."

On April 20, 1885, the note having been dishonored, suit was filed by the Merchants' National Bank against the maker and all the indorsers of the note, and on the same day an attorney at law appeared for the defendants, under the authority supposed to have been given in the note, accepted service, waived process, and confessed judgment against all the defendants for the full amount then due upon said note and ten per cent. attorney's fees additional, and judgment was rendered accordingly. A motion for a new trial made by the defendants was overruled, and they appealed the case to the Supreme Court of Texas.

Held: Upon the face of the note, no power is given to confess judgment against any one except the maker. We need not inquire as to whether this power would embrace others who signed the note before delivery for the legal presumption is that the present indorsers did not so sign. Treating these parties as ordinary indorsers it is very clear that they have not authorized a confession of judgment against themselves. The language of the power confines the waiver and confession to the maker and it must be strictly construed in a summary proceeding like the present. The indorser undertakes that the maker shall perform any engagement contained in the note. He contracts that the maker shall pay the principal, interest and attorney's fees at the time and place stated in the note; but this agreement is coupled with a condition that the note shall be protested and notice given him or that suit shall be brought against the maker within a prescribed time. The law dispenses with these conditions under certain circumstances, none of which are shown

to exist in the present case; and the indorser can waive them, but he must do so expressly and they cannot be waived for him by the maker. His obligation is that the maker shall perform the contract evidenced by the note. He gives his indorsee no right to take a judgment against him by confession by merely becoming responsible for the default of another who has authorized the summary proceeding and judgment against himself. To hold this would be to hold the indorser bound in the same way as if he was a signer of the note; whereas we have seen that his rights and obligations are different from those of the maker in many important respects. The court erred in allowing judgment to be rendered against the parties who indorsed subsequent to the maker, and this necessarily reverses the judgment as to all the defendants.

Williams and o'rs vs. The Merchants' National Bank of Kansas City, Supreme Court of Texas, April 12, 1887.

PROMISSORY NOTE—CHARACTER OF LIABILITY ASSUMED BY PARTY PUTTING HIS NAME ON BACK THEREOF BEFORE INDORSEMENT OF PAYEE.

Action on the following promissory note by the payees against Philip Liszman, a party placing his name on the back thereof before the indorsement of the payees.

CARLISLE, Pa., Feb. 25, 1884.

Twelve months after date, I promise to pay to the order of Cossuth, Marx & Co., at the Carlisle Deposit Bank, four hundred and fifty and 50-100 dollars without defalcation, for value received. (Credit the drawer.) With interest.

GEORGE H. LISZMAN.

(Indorsed on the back) "Philip Liszman; Cossuth, Marx & Co."

On the trial plaintiffs offered in evidence this note and the following letter:

"CARLISLE, Pa., February 7, 1885.

"Cossuth, Marx & Co. Gentlemen: I would like very much to renew my note due this month as surety of my son George. The times are so hard that it is impossible to raise money, and hoping and believing that the coming season will brighten matters up, I would like to renew the note for a year, paying interest thereon at the rate of six per cent. * * * Hoping for an early reply, I am,

Very truly yours, PHILIP LISZMAN."

Defendant denied that any such specific promise to pay, or that such identity of note and letter, was established as to take the case out of the Statute of Frauds. Verdict and judgment were given for plaintiff, and defendant appealed.

Held, It was well said in *Eilbert vs. Finkbeiner*, 68 Pa. St., 243, that "when a man puts his name on the back of a negotiable paper before the payee has indorsed it, he means to pledge in some shape his responsibility for the payment thereof." This is the reasonable conclusion which every business man will draw from such an act. The particular responsibility which the defendant below had assumed by such an irregular indorsement is clearly stated by him in writing to be that of "surety" for the maker.

Judgment affirmed.

Liszman vs. Marx, Supreme Court of Pennsylvania, May 16, 1887.

SIGHT DRAFT—AUTHORITY TO DRAW; WHEN BINDING AS ACCEPTANCE—DRAFT AS ASSIGNMENT OF FUND.

The defendants Woody and Currie on March 19, 1885, at Wilmington, addressed to their co-defendant the following letter:

"C. M. Byrd, Esq., Bunn's River. N. C.

"DEAR SIR: Enclosed find account sales raft timber. We got all we could for your timber and concluded it wasn't worth while to hold any longer. If you have not drawn a \$50 draft you can draw for the net proceeds \$223 3-100 at sight. If you have drawn \$50, draw on us for \$173 3-100. Timber still dull and low, \$2 to \$10.

Yours, etc., WOODY and CURRIE.

Byrd showed this letter to plaintiff who upon the faith thereof discounted two drafts drawn against Woody and Currie by Byrd, one for \$50.50, and the

other for \$172.58, both drafts being substantially similar, except that the draft for the smaller amount was drawn and dated a day or two previous to the other; a copy of the larger draft being as follows:

\$172.58.

FAYETTEVILLE, N. C., April 4th.

At sight pay to the order of R. M. Nimocks one hundred and seventy-two 58-100 dollars balance on timber sales, value received, and charge the same to account of

C. M. BYRD.

To Messrs. Woody and Currie, Wilmington, N. C.

Plaintiff indorsed this draft to the Fayetteville National Bank, by whom it was presented and went to protest for non acceptance, and thereupon the plaintiff took it up and brought suit on May 27, 1885. After its dishonor, the drawees paid to the plaintiff \$72.08 and refused to pay more, saying that a mistake of \$100 had been made in Byrd's account when the letter was written which had since been discovered. Byrd interposed no defense to the suit. The other defendants (the drawees) contended that not being parties to the draft they were not liable thereon; that the letter not being intended as a letter of credit, but a simple letter from a commission merchant to his customer as to the state of his account with them, the plaintiff had no right to treat it as a contract or the basis of a contract with him; and that plaintiff being a stranger to the letter could take no advantage of any promise therein to Byrd express or implied, and that consequently plaintiff was not entitled to recover.

Held: (Omitting a question of jurisdiction). The main question is whether the defendants incurred responsibility to the plaintiff who accepted the draft of Byrd upon the assurance contained in the letter shown him and on which he relied, of prompt payment on its presentation, there being money then in their hands, upon their own representation, sufficient for the purpose. It must be admitted that there is some diversity in the rulings in England and in this country as to whether a promise made in writing to accept and pay a draft for a specified amount yet to be drawn, and communicated to one who on the faith of such promise becomes the payee of it when drawn, for value, is an acceptance in law so that an action upon it can be maintained by the latter.

In the case of the Bank of Ireland *vs.* Archer, 11 Mees. & W., 883, it is decided that such a result does not follow and there are decisions in some of the State courts to the same effect. But Chief Justice Marshall in the well-considered and elaborate opinion in Coolidge *vs.* Payson, 2 Wheat. 66, 75, speaking in reference to the distinction between the cases of a bill drawn before and a bill drawn after such promise, remarks: "The Court can perceive no substantial reason for this distinction. The prevailing inducement for considering a promise to accept as an acceptance is that credit is thereby given to the bill. Now this credit is given as entirely by a letter written before the date of the bill as by one written afterwards." The general rule is then declared in these words: "Upon a review of the cases which are reported, the Court is of the opinion that a letter written within a reasonable time before or after the date of a bill of exchange, describing it in terms not to be mistaken and promising to accept it is, if shown to the person who afterwards takes the bill on the credit of the letter, a virtual acceptance binding the person who makes the promise." The same doctrine is laid down in Townsley *vs.* Sumrall, 2 Pet., 170, 185, by Justice Story, and it is said to prevail when there are no funds of the drawer in the drawee's hands; and the action may be brought says Nelson J. in Casel *vs.* Dows, 1 Blatchf., 335, by any one who makes advances on the bill upon such assurance of payment. To the same effect are 1 Dan'l Neg. Instr., Sec. 559-561, and 1 Edw. Bills, Sec. 567, and following; 49 Me., 229; 42 Pa. St., 9.

We are referred, however, to Section 562 in Mr. Daniel's first volume, who says: "It seems applicable (the rule) to the cases of bills payable on demand or at a fixed time after date, and not to bills payable at or after sight; for in order to constitute acceptance in the latter, a presentment is indispensable, since the time the bill is to run cannot otherwise be ascertained." This may be true in a strict sense. An actual presentment and acceptance being necessary to determine the time of payment, as in a sight draft, days of

grace are allowed; and the presentation in this case has been made and not only acceptance refused, but liability denied altogether. The present draft is in precise accord with the direction in the letter, and the plaintiff has advanced his money upon the assurance of its being met, and the governing general rule is that the drawee thereby incurs the obligations of an acceptor; and we see no reason why it should not be so in any form of a draft made in pursuance of the terms of the promise, though in exceptional cases, an actual presentment may be necessary to fix the time of payment and authorize the action upon it as an acceptance.

But if a recovery be obstructed upon this ground, it may be effected upon the basis of an assignment of the fund in the drawee's hands. It is a transfer of the whole, not of a part, made known to the defendants before any other disposition is made of it, or any change taken place unfavorable to their liability.

The point is expressly decided in *Wheatley vs. Strobe*, 12 Cal., 92, the opinion being delivered by Justice Field, now of the Supreme Court of the United States, in which he says: "The order though not available against Strobe, for want of acceptance operated as an equitable assignment of the demand of Wheatley to Howell. It was given for an antecedent debt and for the full amount of the demand against Strobe. The consideration was valuable, and there was no splitting of the amount due into distinct and different causes of action, and in such cases it is well settled that an order, whether accepted or not, operates as an assignment of the debt or fund against which it is drawn."

Following this ruling, Mr. Daniel says that "it seems to be settled by the authorities that if drawn for the whole amount it (the draft) operates as an equitable assignment which will take precedence of any subsequent lien or charge upon them, and that after notice to the drawee will bind him." (Sec. 431.)

As an equitable assignee, then, the action can be maintained upon an implied contract to pay.

Nimocks vs. Woody, Supreme Court of North Carolina, May 9, 1887.

PROMISSORY NOTE—POWER OF ATTORNEY TO CONFESS JUDGMENT—OMISSION TO FILL BLANK AS TO PARTY AGAINST WHOM JUDGMENT MAY BE CONFERRED RENDERS POWER INVALID.

Suit was brought upon a note made payable to the Bank of Commerce and signed by all the defendants except L. S. Williams who wrote his name on the back of the note before delivery. The note concluded in the following words:

"In case of the non-payment of the above note at maturity, we hereby authorize any licensed attorney at law to appear for us in Court, and to accept service, waive process, and confess judgment in favor of the legal holder of said note against _____ for the amount of said note and interest, with ten per cent. attorney's fees additional."

Acting under the authority supposed to be conferred by this language an attorney at law appeared in the suit, accepted service, waived process, and confessed judgment against all the signers and the indorser of said note, in favor of the Bank of Commerce for the amount of the principal and interest due thereon, as well as for ten per cent. attorney's fees. Judgment was rendered accordingly and the defendants appealed the case to the Supreme Court of Texas.

Held, It is very clear that the power contained in the note is incomplete. The blank must be filled in order to authorize the attorney to confess judgment against any particular person or persons. This blank may be filled with the names of all the parties bound by the note, or with the word "us" which would have the same effect, or it might be filled with the names of one or more of the parties. The authority of the attorney would be different in one case from what it would be in the other. The attorney did confess the judgment against all the parties bound by the note, and the Court in allowing him to do so construed the power as if the blank were to be filled with a word or words descriptive of all the parties. If these words were absolutely necessary to give the power any effect and none other could be supplied consistent with the language of the instrument, there might be some reason for the construction

given by the Court. But the makers of the note could certainly authorize the attorney to confess judgment against one or more of themselves. If so, words calculated to give the power this effect might be inserted in the blank.

As it was not absolutely necessary to construe the note so as to authorize a confession of judgment against all the makers, must it be so construed if such was the reasonable intendment of the parties? Without pausing to consider what would be the rule in the case of an ordinary power of attorney, it is sufficient to say that the instrument under discussion has nothing in it which entitles it to any presumption in its favor. The remedy given in the note for its enforcement is harsh and stringent, and while it was permissible, at the time it was made, for a party to thus submit himself to the tender mercies of a creditor, yet it must clearly appear from his own words that such was his intention. The law will not step in and supply words or indulge presumptions for the purpose of making such a contract for him. The language of the instrument will be strictly construed in favor of the makers, and the creditor allowed no benefit from it further than he has bargained for in express terms. (*Grubbs vs. Blum*, 62 Tex. 426; *Strasburger vs. Heidenheimer*, 63 Tex. 5.)

The contract in question does not in terms authorize a confession of judgment against all the makers of the note, or any specified portion of them, and the Court erred in allowing judgment to be taken against them in manner as stated.

Judgment reversed.

Morris and o'rs vs. Bank of Commerce, Supreme Court of Texas, April 8, 1887.

NOTICE TO INDORSER OF PROMISSORY NOTE—SUFFICIENCY OF DIRECTION.

Plaintiff sued defendant on a promissory note made by one Charles W. Hunt payable to the order of plaintiff, and upon the back of which the defendant had indorsed his name in blank at the notes inception. The note was dishonored and defendant claimed that he was not liable, not having received notice of its dishonor. A notice had been duly deposited in the post-office of the town where the defendant resided addressed to him at such town, but it did not reach him, having fallen into the hands of another party of the same name. The question for determination was whether the notice so given was sufficient to hold defendant liable upon the note.

Held, By St. 1874, Ch. 404 (Laws of Mass.), the defendant was entitled to notice the same as an indorser. By St. 1871, Ch. 239, it is provided that whenever a party to a negotiable instrument is entitled to notice of non payment or non acceptance, and the instrument is payable in any city or town where such party has his residence or place of business, "such notice may be given by depositing the same with the postage thereon prepaid in any post-office in said city or town sufficiently directed to the residence or place of business of the party for the usual course of mail, within the limits of said city or town, and for the usual course of delivery by postal carriers." The notice in this case was duly deposited in the post-office in Natick directed to "Mr. William H. Chamberlin, Natick, Mass." The only question is whether it was sufficiently directed. The statute makes the deposit in the post-office notice to the party, but it contemplates two modes of its delivery to him—at the post-office where it is deposited, and by a letter carrier—and requires that it shall be sufficiently directed to his residence, or place of business, for both modes. The provision is general and is intended to cover and to be applied to all kinds of places and all sorts of circumstances—to the large city where the streets are numbered and there are postal carriers, and where some persons receive their letters exclusively at the post-office and others exclusively by carriers, at their residences or places of business; and to small towns where street numbers and letter carriers are unknown, and where everybody goes to the post-office. In the case at bar the defendant lived in a village in Natick, in which the post-office was located, and he lived on a street, but there is no evidence that the houses on it were numbered, and there was no postal delivery. He received his letters at the Natick post-office and he had no other residence known to the post-office, than Natick, and an address to him there was, in effect, an address to him at the Natick post-office. It insured that the letter would be there for

delivery to him, and to that end any description of the house he lived in would be superfluous. There could be no more sufficient direction to his residence to insure the delivery of the notice. Was it insufficient in not providing against its delivery to another person of the same name? We think clearly not. The place was not so populous and the name of the defendant so common as to call for any further identification of him by describing his personal appearance, or his occupation, or the house in which he lived. (*True vs. Collins*, 8 Allen, 488.)

The facts that the defendant did not receive the notice, and that another person of the same name lived in the town who did receive it, are immaterial. If the direction was sufficient, the defendant is affected by the notice and it would make no difference if another person of the same name who lived in the same town, or the same street, or the same house, received it. If the defendant had desired a more particular direction than his residence and post-office address, he should have added it to his name when he signed the note.

Judgment for plaintiff.

Morse vs. Chamberlin, Supreme Judicial Court of Massachusetts, Middlesex May 7, 1887.

ABSTRACT OF CASES.

PERSONAL LIABILITY OF ADMINISTRATOR ON NOTE.

A note given by an administrator, although worded as the promise of the estate, binds the administrator only.

White vs. Thompson, Adm'r; Supreme Judicial Court of Maine, March 1, 1887.

PROMISSORY NOTE—PROOF AS TO GENUINENESS OF PAYEE'S SIGNATURE.

When a plaintiff as indorsee, sues the maker of a promissory note, proof of the admission of such maker that he knew that the plaintiff had cashed such note for the payee of it, will not amount to proof of the genuineness of the signature indorsed upon it purporting to be the signature of such payee.

Beckley vs. Evans, Court of Errors and Appeals of New Jersey, March Term, 1887.

ANTECEDENT DEBT NOT A SUFFICIENT CONSIDERATION TO CONSTITUTE PARTY A BONA FIDE PURCHASER FOR VALUE.

It is settled in this State that one who buys at a voluntary sale from his debtor, and pays no money, but credits the amount of the consideration upon a pre-existing debt, is not a *bona fide* purchaser for value. (Citing *McKaney vs. Thorp*, 61 Tex., 648.)

Overstreet vs. Manning, Supreme Court of Texas, April 19, 1887.

SAVINGS BANK—LIABILITY OF MANAGERS.

The managers of a savings bank may be charged with liability if they participate in prohibited acts which lead to loss complained of, or if they in any way promote them, or if they neglect to bestow in their conduct of the affairs of the bank that measure of care which the law exacts of them, and in consequence thereof their associates are not restrained, or are enabled to do those acts which prove disastrous to the institution.

Dodd vs. Wilkinson, Court of Errors, etc., New Jersey, March Term, 1887.

PROMISSORY NOTE—ASSIGNMENT AFTER MATURITY—WHAT EQUITIES MAY BE SET UP.

The promissory note on which the action was brought was indorsed to the plaintiff after maturity.

Held, This entitled defendant to set up as against it any defense which he could have interposed against the assignor and which existed at the time of, or before notice of the assignment. The institution of the action was notice of the assignment of the note, and yet defendant seeks to set up as against

plaintiff a defense or counterclaim which according to his sworn statement "has arisen since the commencement of this action and since the former answer of the defendant was filed." This he cannot be permitted to do.

Wood vs. Brush, Supreme Court of California, April 20, 1887.

NEGOTIABLE INSTRUMENT—TITLE TO AS BETWEEN PAYEE OF UNINDORSED NOTE AND STRANGER HAVING POSSESSION.

As between the payee of a promissory note, payable to order and not indorsed, and a stranger having possession thereof, the payee named in the note is *prima facie* the owner of the same. The mere possession of a note payable to order, and not indorsed, cannot avail the holder thereof in an action against him by a payee who is the legal owner. (The case of Eggan vs. Briggs, 23 Kan., 710, holding that "possession of a note—where it does not appear upon the note who the owner thereof is—is *prima facie* evidence of ownership; but it may be shown by evidence that the person in possession is not the owner of the note," distinguished and fully approved.)

Durein vs. Moeser, Supreme Court of Kansas, May 6, 1887.

NEGOTIABLE INSTRUMENT—ANTECEDENT DEBT A SUFFICIENT CONSIDERATION.

For many years, the principle that an antecedent debt might constitute good and sufficient consideration for a new contract was denied, and there is yet conflict on the subject among the cases; but notwithstanding the contrary position of New York, Maine, and other States, the decided weight of authority now supports the doctrine that such consideration is amply sufficient in connection with negotiable instruments. (1 Dan'l Neg. Instr. Sec. 184; Swift vs. Tyson, 16 Pet., 1; 3 Kent Com., 80; Roberts vs. Hall, 37 Conn., 205; Pars. N. & B., 257. For additional cases see Note found on page 273, 9 Amer. Dec.)

This court has held "that one who takes *property* in payment or security of a pre-existing debt is to be regarded as a purchaser for valuable consideration." (Knox vs. McFarren, 4 Colo., 586; McMurtrie vs. Riddle, 9 Colo., —.)

Merchants Bank vs. McClelland, Supreme Court of Colorado, March 25, 1887.

NEGOTIABLE INSTRUMENT—FRAUD OR ILLEGALITY OF CONSIDERATION CAN NOT BE SET UP AS A DEFENSE IN THE HANDS OF A BONA FIDE HOLDER FOR VALUE.

If there is nothing upon the face of a negotiable instrument, or in the written indorsement or assignment, to notify the assignee that the instrument was originally given upon an illegal consideration, (gambling debts excepted) or obtained through fraud, the assignee who pays value therefor and takes the same in good faith before maturity, may recover as against the maker. This is true even though such assignee be in possession of facts or circumstances sufficient to arouse suspicion in the mind of a person of ordinary prudence; and though he is guilty of negligence in not first following up such information for the purpose of discovering the fraud or illegality to which the suspicious circumstances may seem to point. The latter part of this rule is not wholly unquestioned. Such able courts as that of Massachusetts deny its correctness; but we think it is supported by the better reason as well as the great preponderance of authority. It is founded upon commercial necessity. The untrammelled circulation of these instruments is a matter of supreme importance in the vast field of mercantile transactions. Drafts, bills of exchange and other negotiable instruments take the place of money, and circulate almost as freely. To hold that each assignee must, before accepting them, inquire into each and every suspicious circumstance bearing upon the original execution, or pointing to possible defenses in a suit between the original parties, would produce serious inconvenience to the commercial world. Even as to instruments given for gambling debts the courts submit to the statutory command with extreme reluctance. (See the following cases and others referred to therein: Swift vs. Smith, 102 U. S., 442; Hotchkiss vs.

National Banks, 21 Wall., 354; Murray *vs.* Lardner, 2 Wall., 110; Brown *vs.* Spofford, 95 U. S., 474; Welch *vs.* Sage, 47 N. Y., 143.)

Merchants Bank vs. McClelland, Supreme Court of Colorado, March 26, 1887.

POWERS OF BANK CASHIERS.

Continued from page 700, July number of the JOURNAL.

XIX. Liability of the bank for acts of the Cashier.—In *Foster vs. the Essex Bank*, 17 Mass., 479, the question of the liability of the bank for the fraud of its Cashier with reference to property specially deposited is fully discussed. A large quantity of gold doubloons, the property of the plaintiff's testator, was left with the bank as a special deposit, and was kept in the vault in the same manner and with the same care as other special deposits, and as the specie of the bank. The Cashier and chief clerk of the bank, who had hitherto always sustained fair reputations, absconded with over \$32,000 of this deposit, as well as with other funds belonging to the bank. In discussing the question of the liability of the bank, the Court states that the question is whether there was gross negligence, and that fact may appear by suffering goods to be stolen, as well as if they were taken away by fraud. Fraud on property deposited, committed by the depository, or his servants acting under his authority, express or implied, relative to the subject matter of the fraud, is equivalent to gross negligence, and renders the depository liable. In this case, no fraud was directly imputed to the bank, it being found that the directors were wholly ignorant of the transactions of the Cashier and Chief Clerk in this respect, and the point for consideration was narrowed to whether the bank, as bailee, was answerable in law for the depredations committed on the testator's property by two of its officers. After a thorough consideration of this question, and minute examination of the authorities, the general rule is deduced that to make the master liable for any act of fraud or negligence done by his servant, the act must be done in the course of his employment; and that if he steps out of it to do a wrong, either fraudulently or feloniously, towards another, the master is no more answerable than any stranger. The cases of innholders, common carriers, and perhaps ship-masters or seamen, when goods are embezzled, are exceptions to the general rule, founded on public policy. The inquiry is then made whether when the gold was taken from the cask, the Cashier and Clerk acted in the course of their official employment. In considering this question, it is stated that their master, the bank, had no right to meddle with the cask or open it, and so could not lawfully communicate any authority, and did not in fact, give any, nor did the bank in any manner assent to, or have any knowledge of it; that it was no more within the duty of the Cashier, than of any other officer or person, to know the contents or to take any account of them. If the Cashier had any official duty to perform, relating to the subject, it was merely to close the doors of the vault, when banking hours were over. The conclusion is therefore reached that the Cashier when he committed the villany, was not acting within the scope of his employment, and the bank was no more answerable for this act of his, than it would be if he had stolen the pocket-book of any person who might have laid it upon the desk while he was transacting some business at the office. For what acts of a Cashier or Clerk the bank would be answerable, the Court says, any which pertain to their official duty; for correct entries in their books, and for a proper account of general deposits; so that if by any mistake, or by fraud, in these particulars, any person be injured, he would have a remedy. If they should rob the vault of the property of the bank, the company would necessarily lose; and if the bank has become debtor to those who have deposited otherwise than specially, its debts will not be diminished by the fraud; so that in this form it is answerable to depositors; and for the correct conduct of all its servants, in their proper sphere of duty, it is answerable. But it is not answerable for special deposits, stolen by one of its officers, any more than if stolen by a stranger; or any more than the owner of a warehouse would be, who permitted his friend to deposit a bale of goods there for safe-keeping, and the goods should be stolen by one of his clerks or servants. The Court states that the undertaking of banking

corporations, with respect to their officers, is that they should be skilful and faithful in their employments; they do not warrant their general honesty and uprightness.

In *Fishkill Savings Institute vs. Bostwick, Receiver*, 19 Hun., 354, the Cashier of the bank of which defendant was Receiver embezzled certain United States bonds belonging to the plaintiff and pledged them as security for moneys which he borrowed for said bank. Plaintiff sued the Receiver in an action of trover for the conversion of its bonds. The Court holds that a corporation is liable for the torts of its officers and agents, committed while acting within the scope of their employment, or while engaged in performing the duties devolved upon them thereby. It states that the law governing the relation of master and servant applies as well to corporations as to individuals, and circumstances that would render a natural person liable for the tort of an agent, imposes the same liability when the principal is a corporation. The Court says that while these principles are well settled and very familiar, difficulty in applying them sometimes arises from an uncertainty whether the act of the agent is within the scope of his employment. In order to bind a principal for a criminal act of his servant, there must be evidence of authority to do the particular act. The authority will not be inferred from the existence of any general power which is not comprehensive enough to embrace the specific act. On the contrary, the principal is entitled to the presumption in favor of innocence, as a shield against liability for crimes committed by his agent. But the principal may ratify the criminal act of his agent, and such ratification is equivalent to a prior command. The Court holds that the embezzlement by the Cashier in this case certainly was not within his express or implied authority; and if the case stopped here, no liability could be cast upon the bank. But the bank received the money borrowed by means of the pledge of the bonds, and still retained such moneys, and it is held that such acts must operate as a ratification of the Cashier's embezzlement; that while it was true that no one connected with the bank, except the Cashier, had any knowledge that the money so received had been obtained by means of a pledge of the plaintiff's bonds, still the receiving of the money was strictly within the scope of the Cashier's employment, and his knowledge would be imputed to the bank under the settled rule that notice to the agent is notice to the principal, if the agent comes to the knowledge of the fact while he is acting for the principal in the course of the transaction which becomes the subject of the suit. Judgment was therefore given against the bank.

An interesting case of fraud on the part of bank employees is that of *Atlantic Bank vs. Merchant's Bank*, 10 Gray, 582. Hooper, who was the Paying-Teller of the Merchant's Bank was a defaulter to a large amount. He was the principal Teller, and had the immediate charge and custody of the cash funds within the bank, and other officers who were necessarily entrusted with cash, accounted to him daily. It was the practice of the directors to examine and count the Teller's cash occasionally, ordinarily as often as once a quarter, the purpose being to ascertain whether any cash had been withdrawn. The Teller having no occasion and no authority to pay or receive money outside of the bank, if there was a deficiency it must be attributed to fraud or mistake, and this examination would afford one means of detecting either. On Monday, the 26th of March, shortly before the close of bank hours, the President gave notice to Hooper that he and a committee of the directors would attend that afternoon to examine and count the cash. The object of giving this notice was that he might be there with his keys, ready to produce the cash as called for. Short as the time was, it gave Hooper an opportunity to carry into effect a fraudulent scheme, previously arranged, by which he was to obtain a sum of money to place with his own, whilst being counted, and thus be able to conceal from the directors knowledge of his defalcation. A conspiracy had been deliberately entered into between Hooper, defaulting Teller of the Merchant's Bank, Ward, a Teller of the Atlantic Bank, and Peabody, a broker, to this effect; that Peabody should draw a check on the Merchant's Bank, where he had no funds, for \$25,000; that Hooper should certify it to be

"good"; that thereupon Peabody should take it to Ward at the Atlantic Bank, receive \$25,000 of the Bills of the Atlantic Bank, or other cash funds, take them back and deliver them to Hooper, to be placed with his own cash funds, and be counted with them as his own; and after they had been so used Hooper was to deliver back the like amount of \$25,000 to Peabody, to be delivered to Ward, and replaced with the funds of the Atlantic Bank. This conspiracy up to the delivery of the \$25,000 to Hooper was carried out, and the cash was counted and found to be correct. After it was counted the whole amount was returned to Hooper, who put it into his trunks and locked them and returned them to their usual places in the bank. Hooper shortly thereafter committed suicide without returning the money to Peabody or Ward. The facts being disclosed, the Atlantic Bank brought suit against the Merchant's Bank to recover the \$25,000 as money had and received to plaintiff's use. The defendants claimed that they never received the money and did not owe it, or any part of it to plaintiffs. The Court held that this money was the property of plaintiffs when it left their bank, and the guilty agents, including Hooper, with full knowledge of the fraud could acquire no title to it as against the plaintiffs, that Hooper could therefore give no title to the bank, as of right, nor could the bank hold the bills as negotiable securities transferable by delivery, taken for a good consideration and in the ordinary course of business, nor as money, without some consideration paid. That it appeared therefore to be the ordinary case where one party had received money, the property of another, which rightfully, equitably and in good conscience he could not hold, and the plaintiff was adjudged entitled to recover.

LAW NOTES AND COMMENTS.

POWERS TO CONFESS JUDGMENT INSERTED IN PROMISSORY NOTES.—The following blank form of clause added to an ordinary promissory note, authorizing a confession of judgment on non-payment, seem to be in vogue in Texas:

"In case of non-payment of the above note at maturity—hereby authorize any licensed attorney at law to appear for—In Court, and to accept service, waive process, and confess judgment in favor of the legal holder of said note against ——— for the amount of said note, and interest, with ten per cent. attorney's fees additional."

In case of any slip up in the payment of a note, this imposes a pretty severe penalty upon the debtor, as it enables the creditor to at once enter judgment for the amount of the note, interest, and ten per cent. attorney's fees, and unless his proceedings are stayed by an appeal, immediately seize the debtor's property under execution. Two cases involving the construction of such a clause are reported in this issue, and afford an example of how strictly the Courts will construe an instrument against a party seeking its enforcement, where its terms are harsh and exacting.

In one of the cases (*Williams vs. The Merchants' National Bank of Kansas City*), the blanks in such clause in a promissory note had been filled up with the words here italicized, so as to read: "*I hereby authorize any licensed attorney at law to appear for me * * * and confess judgment * * * against me,*" etc. This note, after its execution by the maker passed through the hands of several indorsers, and upon its non-payment an attorney at law appeared and confessed judgment against the maker and all the indorsers, in favor of the holder, under the authority supposed to be conferred as above. The lower Court refused to disturb this judgment but on appeal to the Supreme Court of Texas that tribunal held that the authorization applied to the maker only and did not bind the indorsers.

In the other case the first two blank spaces in such a clause in a promissory note had been filled up, but the third one had not, so that it read: "*We hereby authorize any licensed attorney at law to appear for us * * * and confess judgment * * * against ——— for the amount,*" etc. This note was signed by several parties as makers, and one party wrote his name on the back

before delivery, and on non-payment judgment was confessed against them all. The Supreme Court of Texas also reversed this judgment on the ground that the contract did not in terms authorize a confession of judgment against all the makers of the note, or any specified portion of them, and that consequently the power contained in the note was incomplete and judgment could not be entered against any. The Court states in this latter case that "without pausing to consider what would be the rule in the case of an ordinary power of attorney, it is sufficient to say that the instrument under discussion has nothing in it which entitles it to any presumption in its favor," and that "the language of the instrument will be strictly construed in favor of the makers, and the creditor allowed no benefit from it further than he has bargained for in express terms."

NEGOTIABILITY OF CERTIFICATION MADE UNDER THE EXCHANGE SYSTEM OF THE ROCHESTER BANKS.—By the system of exchanges established among the banks in the City of Rochester, commercial paper held by either of these banks payable at any of the others, on being presented at maturity at the bank where payable, instead of being paid on presentation, is marked "certified" by the Teller of the bank at which it is payable and then returned to the bank presenting it for the purpose of being held as an item of credit to such bank in its exchange account for the day with the certifying bank, and being off-set against any similar credit in favor of that bank against the other which might arise during the same day for paper presented at and certified by it. On the following day these exchange accounts are compared and the balance only is paid by the debtor bank to the other. Under this system the purpose of certification is not to furnish the bank receiving it a negotiable instrument which might be put in circulation, but simply to furnish it with a voucher or memorandum to be used as a credit on the settlement, the next day, of its exchange account with the certifying bank.

An interesting case wherein a draft certified under this system was diverted from the purpose for which it was intended and sought to be negotiated has recently been decided by the New York Court of Appeals. (Flour City National Bank vs. Traders' National Bank, May 10, 1887.) The Flour City National Bank of Rochester certified a draft drawn on it and held by the City Bank of Rochester for the purpose of its being used the next day as an item of credit in balancing the accounts between the two banks. The City Bank after deducting this draft would still have been in debt to the certifying bank in the balance of the day's account, but instead of keeping it as an offset as it rightfully should have done, the City Bank transferred it on the same day that it was certified to the Traders' National Bank in part settlement of a balance of account due the latter bank and that night closed its doors, being largely in debt to the Flour City Bank. The Traders' Bank was also largely indebted to the Flour City Bank and sought to off-set the amount of the draft in its account with that bank, claiming that the certification was negotiable and that it had a right to do this. The Flour City Bank refused to allow the draft as an off-set but the Traders' National Bank withheld the amount from the balance of account which it paid, and the Flour City Bank thereupon brought suit to recover the amount of the draft. On the first trial of the action the Special Term held that the certification in question was not negotiable and rendered judgment for the Flour City Bank. The Traders' Bank thereupon took an appeal to the General Term of the Supreme Court, which reversed the judgment of the Special Term and ordered a new trial holding that the certification was negotiable. On the second trial, the Court at Special Term conforming to the decision at General Term, rendered judgment for the Traders' Bank, which judgment being affirmed by the General Term, the plaintiff appealed the case to the Court of Appeals. That Court reverses the judgments of the General and Special Terms, holding that whatever might have been the rights of an innocent party taking the certified draft in ignorance of the purpose for which the certification was made and of the Flour City Bank to apply it on a pending account, in the face of the facts found the Traders' National Bank in taking this paper from a failing bank, did not become a holder in

good faith, but that it purchased what it knew to be a mere voucher for an item in an account to be settled, and necessarily took it subject to the general result of the settlement of that account. The Court say that in this view it is unnecessary to pass upon the question of whether the certification was negotiable as against the bank, and this question, therefore, remains undecided by the Court of Appeals, which is the Court of last resort. The Court says: "If paper certified under these circumstances should be used by the bank receiving it as negotiable paper, and passed off as such to any one who would receive it, it is evident that the exchange system could not subsist," and it would thus seem loth to render any decision whereby the effectiveness of such a system might be impaired.

LETTERS AUTHORIZING DRAFTS WHEN BINDING AS ACCEPTANCES.—In the case of *Nimocks vs. Woody*, reported in this number the Supreme Court of North Carolina following *Coolidge vs. Payson*, (2 Wheat. 66,) hold the general rule to be that "a letter written within a reasonable time before or after the date of a bill of exchange describing it in terms not to be mistaken and promising to accept it is, if shown to the person who afterwards takes the bill on the credit of the letter a virtual acceptance, binding the person who makes the promise." In that case the defendants had written a letter authorizing their correspondent to draw on them at sight for a specified amount and the plaintiff had cashed the draft on the faith of this letter. Plaintiff claimed that the letter made them liable as acceptors under the rule just quoted, but defendants contended that while this rule applied "to the cases of bills payable on demand or at a fixed time after date" it did not apply to "bills payable at or after sight, for in order to constitute acceptance in the latter a presentment is indispensable, since the time the bill is to run cannot otherwise be entertained." (Citing *Daniel Neg. Instr. Sec. 562.*) The Court holds that while this may be true in a strict sense, there is no reason why this general rule should not apply "in any form of draft made in pursuance of the terms of the promise, though in exceptional cases an actual presentment may be necessary to fix the time of payment and authorize action upon it as an acceptance." The Court, however, does not regard the question as free from doubt, for it proceeds to hold that "if a recovery should be obstructed upon this ground" the draft, being for the whole amount of the fund in the hands of the defendants, operated as an equitable assignment to the plaintiff, and he could recover on an implied contract to pay.

The difficulty of applying this rule to drafts payable at or after sight is recognized by Judge Story in the case of *Wildes vs. Savage*, 1 Story, 22, in which he says: "Where bills are drawn payable at so many days after sight, it is impracticable to apply the doctrine, for there remains a future act to be done—the presentment and sight of the bill—before the period for which it is to run and at which it is to become payable can commence, whether it be accepted or be dishonored. If it is said that the acceptance is treated as made where the bill is actually presented for acceptance and it is dishonored by the drawee, it is plain that we set up a prior intent or promise against the fact. Upon what ground can a Court say when a party promises to do an act *in futuro*, such for example as to accept a bill when it is drawn and presented to him at a future time that his promise overcomes his act at that time? My judgment is that the doctrine of a virtual acceptance of a non-existing bill, by a prior promise to accept it when drawn, has no application to a bill drawn payable at some fixed period after sight, for it then amounts to no more than a promise to do a future act. I have looked into the authorities and I do not find in any one of them that the bill drawn, and to which the doctrine was applied, was drawn at or after sight."

The Maryland Court of Appeals in *Brown vs. Ambler* (decided January, 1887,) consider this same question and after quoting the views of Judge Story with approval, hold that a letter written authorizing a draft at sight, and promising to accept it, could not be held as a virtual acceptance of the draft. The Court however holds that all persons who should *bona fide* take a bill of exchange at sight on the faith of a letter promising to accept it would have

ample remedy by an action for the breach of the promise to accept, so that the difference between the two cases would be of no practical importance in its bearing on their rights.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

GRAND ISLAND, Neb., June 25, 1887.

An Indiana merchant draws a draft on a New York bank payable to the order of "S. Jones, Treasurer." Jones lives in Ohio and is Treasurer of the "Jones Mfg Comp'y," an Ohio corporation. Jones for value received indorses and delivers the draft to Smith, another resident of Ohio. Smith indorses and remits the draft to a Pittsburgh bank for his credit, and the Pittsburgh bank, in turn, indorses and remits the draft to its New York correspondents.

In his indorsement to Smith, Jones omits the word "Treasurer," signing his name simply "S. Jones." The bank drawn on refuses payment on account of the defect in Jones' indorsement, and the Pittsburgh bank's New York correspondent returns the draft without protest.

Are the drawers and indorsers released by the failure to protest?

What difference would it have made with regard to the necessity for protest if the draft had been made payable to the "Jones Mfg Comp'y" instead of to "S. Jones, Treasurer."

L.

Answer.—The indorsement by Jones was imperfect and the drawee bank was in the right in refusing to pay the same. No draft is payable unless properly indorsed, and as there could be no proper presentation for payment without proper indorsements, there was no reason for any protest. The draft should simply have been returned to have the indorsement completed through the various parties by whom it had come to the Pittsburgh bank. If it had been made payable to the Jones Manufacturing Company, the indorsement S. Jones alone would have been as defective as it was on draft drawn to order of "S. Jones, Treasurer."

Editor Rhodes' Journal of Banking:

ELIZABETHTOWN, Pa., June 27, 1887.

Mr. B., who is not a customer at a bank, comes to a bank with a note and desires to have it discounted. The officers of the bank grant it. Which is the better plan, to pay Mr. B. the proceeds of the note without taking his check, or is it better to demand his check for amount paid him?

INQUIRER.

Answer.—It would seem to be entirely a matter of convenience. Some banks credit the proceeds of the discount to the person who procures it and then require him to draw it out by check on the ground that no cash is drawn out except by check, and it makes the keeping of accounts a matter of more uniformity, but there seems to be no legal or important reason why one plan should have any preference over the other.

Editor Rhodes' Journal of Banking:

BOWLING GREEN, Mo., July 18, 1887.

A B and C execute a note to D, bearing 6 per cent. interest payable one year after date. After maturity A, the maker, indorses on the back "to bear 8 per cent. interest from maturity." Does this affect the validity of the note so far as B and C are concerned? Does it release them?

CASHIER.

Answer.—There may be two views taken of this matter. First, that the action of A has the effect of a new contract between the holder and A, by which, in consideration of 8 per cent. interest from maturity, the holder agrees to look to A for the payment of the amount due, and this view would release the other makers, inasmuch as the contract was made without reference to them and without calling on them for payment. Second, it may be held that what A placed on the back of the note without consulting his co-makers was of no effect whatever, perfectly null and void, leaving the note just as it was

before, and according to this view, the holder has the same remedy as he had before against all the parties to the note. We incline to the first view, that the sureties are release.

Editor Rhodes' Journal of Banking:

SALINA, Kas, June 23, 1887.

John Smith holds a draft on the National Park Bank for \$600 in his own favor. He endorses the draft and loses it. Notices are sent out by Smith and the bank of issue warning banks not to cash the draft; but a bank not receiving this notice does cash the draft; but when sent to New York for payment it is returned protested. Is there no recourse on the drawer or drawee?

CASHIER.

Answer.—The bank cashing the draft can recover of the drawee or drawer upon showing that it cashed the draft without having had notice that it had been lost. If a check be lost by the lawful owner, and subsequently come into the hands of a *bona fide* holder for value and without notice, he will be entitled to receive the amount from the drawee. If they refuse to pay him because of instructions given them by the drawer, the holder may recover the amount from the drawer. The draft mentioned seems to have virtually been a check drawn by one bank upon another, and would come under the same rule. The length of time the check had been drawn before it was cashed might make some difference; but a longer time would doubtless be allowed in the case of a bank check on a distant correspondent than in that of a local check.

Editor Rhodes' Journal of Banking:

VICTORIA, Tex., June 21, 1887.

DEAR SIR:—On the 16th of June we sold one of our customers a draft on New York, which he sent to a Cincinnati house in payment of an invoice. The Cincinnati house advised credit June 20th, and deposited said New York exchange with the Fidelity Bank of Cincinnati for credit in account. On to-day (the 21st inst.) the Fidelity Bank closed its doors, and the Cincinnati house wires its friend here to have us stop the payment of the New York draft to save them from that much loss. Have we a right to stop payment?

And if we stop payment what liability do we assume thereby? Also, could the Cincinnati house stop payment of their own accord by wiring to the New York bankers on whom the draft is drawn?

TEXAN.

Answer.—When the Cincinnati house deposited the check with the Fidelity National Bank for *credit in account*, that check became the property of the bank, and the Cincinnati house, or your firm, have no claim whatever upon it and no right to stop payment. If you should order your correspondent on whom it was drawn not to pay it, the Receiver would sue on it and recover, with such damages as he could show had been incurred by your action in stopping the payment. The Cincinnati firm have no more right to that particular check than any other creditor of the bank, and as far as your customer is concerned they are paid.

Editor Rhodes' Journal of Banking:

LAWRENCE, Mass., June 23, 1887.

A check on the Bank of A. is cashed by the Bank of X. and collected through several other banks. At the end of the month the Bank of A. returns the check to the supposed signer, and it is pronounced by him a forgery. Can it be returned to the Bank of X., or does the Bank of A. lose it?

M.

Answer.—The general rule both in England and America is that the banker is bound to know the signature of its customer. But this rule has been very much qualified by many decisions. One point of qualification has been that of negligence. Inasmuch as the reason why the drawee bank is held to bear the loss, is because it has been negligent in failing to recognize the difference between the forged and the genuine signature of its customer, it follows that if the payee, holder or presenter of the forged paper has been guilty of negligence, prior to that of the drawee bank, or if he has by his act or failure to act contributed to induce the subsequent negligence of the drawee bank, then he may be held to pay the loss. If a custom of inquiring as to the genuineness of signatures on the part of those to whom checks on other banks are presented is shown to exist, failure to observe this custom has

been held to constitute negligence on part of payee or holder. In *Massachusetts, in National Bank of North America vs. Banks* (106 Mass., 441), it was held that "in the absence of actual fault or neglect on the part of the drawee, his constructive fault in not knowing the signature of its customer and detecting the forgery, will not preclude his recovery from one who has received the money with knowledge of the forgery, or who took the check, under circumstances of suspicion, without proper precautions, or whose conduct has been such as to mislead the drawee, or to induce him to pay the check without the usual scrutiny or other precaution against mistake or fraud." An indorsement by the payee or holder was held to throw drawee bank off guard, so as to induce payment without usual scrutiny, etc. In other States, the tendency of the decisions is to hold more to the liability of the drawee bank, and neither evidence of custom of payee or holder examining signatures, nor negligence on their part excuse the drawee bank. In other words, if the latter chooses to pay the check without usual inspection, it does so at its own risk. The period which has elapsed between the paying of the check and the discovery of the forgery is also an important point. The general rule is that if this is sufficient to cause the holder or payee to loose his remedy against those from whom he got the check, it would fix negligence on the drawee bank and deprive it of any remedy it might otherwise have against the payee or holder.

In the case cited in the question the circumstances would therefore control, in case of controversy, to fix the loss on one or the other of the parties, and these could only be fully brought out in Court.

Editor Rhodes' Journal of Banking:

WICHITA, Kans., June 9, 1887.

SIR:—Would a promissory note, drawn as follows, bear interest, and at what rate:

<p>Four months after date we promise to pay to the order of Joseph Brown one thousand dollars (\$1,000) at the First National Bank, Anthony, Kans. Value received.</p>	<p>TOPEKA, Kans., March 4, 1887. (Signed) JOHN DAVIS, HENRY SMITH.</p>
--	--

Please answer and greatly oblige

A. JOES, Vice-Pres.

Answer.—The peculiarity of this note is that it specifies nothing as to interest, and where a note is drawn in this way the presumption is that it was intended to bear interest at the legal rate, unless it can be proved that it was understood between the drawers and the holder of the note that it was not to bear interest. There being no proof to this effect, it would carry interest from its date the same as if the words "with interest" or "with use" had been written on the note. As to the rate where no rate is specified, it is understood to be the legal rate in the State where the note was made. In Kansas the legal rate is 7 per cent., though 12 per cent. may be agreed upon. If there is no testimony to prove an agreement as to rate of interest, then the note would draw 7 per cent.

Such a note, therefore, being the only evidence produced, would bear interest, and this interest would be at the rate of 7 per cent.

Editor Rhodes' Journal of Banking:

DOVER PLAINS, N. Y., July 20, 1887.

SIR:—In the case of a note drawn as follows:

<p>\$100. One year after date we promise to pay to John Doe or order, one hundred dollars, value received.</p>	<p>DOVER PLAINS, N. Y., July 15, 1886. C. D. and A. B</p>
--	---

it being a question whether C. D. or A. B. signed first, their signatures appearing one after another on the same line, and C. D. having died since the note was drawn, can the estate of C. D. be held?

R. P. KETCHAM, Cashier.

Answer.—The note is a joint note, and it makes no difference which signed first. They are both makers of the note, and each is equally responsible for it if not paid by the other. The estate can be held and action should be brought against it. The bank has the right to collect from either, but it would probably be well to bring separate actions against the estate and the other maker.

BANKING LAWS OF MINNESOTA.

PASSED BY THE LAST LEGISLATURE.

We have received from the Hon. Henry M. Knox, Superintendent of Banks and Public Examiner for the State of Minnesota, a circular giving the laws relative to banking passed by the last Legislature, and also forms and instructions for the organization of new banks.

Chapter 183, Laws 1887. An Act transferring certain duties now performed by the State Auditor to the Public Examiner. Approved March 2, 1887.

SECTION 1.—That all duties now required to be performed by, and all responsibilities now imposed upon, the Auditor of this State, under the laws regulating the business of banking, shall hereafter be performed by the Public Examiner, under the title *ex-officio* of Superintendent of Banks, and all reports and documents now on file in the State Auditor's office pertaining to banks now in existence are hereby transferred to the custody of the Public Examiner.

SECTION 2.—This Act shall take effect and be in force from and after the passage.

Chapter 39, Laws 1887. An Act to amend section forty-three of chapter thirty-three of General Statutes, 1878, relating to banks and banking. Approved March 7, 1887.

SECTION 1.—That section forty-three (43) of chapter thirty-three (33) of the General Statutes 1878 is hereby amended so as to read as follows, viz.:

SECTION 43.—No person or persons who are now or shall hereafter become engaged in the business of Banking in this State, not subject to the supervision of and not required to report to any officer elected or appointed by the State, shall make use of any office sign at the place where such business is transacted having thereon any artificial or corporate name; nor shall such person or persons make use of or circulate any letter heads, bill heads, blank notes, blank receipts, certificates, circulars, or any written or printed or partly written or partly printed paper whatever having thereon any artificial or corporate name.

No bank hereafter incorporated shall adopt or use the name of any private or unincorporated bank now existing without first obtaining consent in writing from the person or persons who have done business by or under such name.

Any person or persons violating any of the provisions of this chapter not hereinbefore specially provided for shall be guilty of a misdemeanor, and on conviction thereof pay a fine of not less than fifty (50) dollars or more than five hundred (500) dollars for each and every offense, to be recovered before any Court having competent jurisdiction, and all fines and penalties so recovered shall be paid into the State Treasury.

SECTION 2.—This Act shall take effect and be in force from and after Jan. 1, 1888.

Chapter 63, Laws 1887. An Act to amend section ten of chapter thirty-three of General Statutes 1878, relating to banks and banking. Approved March 7, 1887.

SECTION 1.—That section ten (10) of chapter thirty-three (33) of General Statutes 1878 be amended by striking out the words in the fourth and fifth lines of said section, "but the aggregate of the capital stock of said association shall not be less than twenty-five thousand dollars," and inserting in their stead the words, "but the aggregate amount of the capital stock of such association shall not be less than ten thousand (10,000) dollars in any town containing a population of not exceeding one thousand (1,000) persons; and not less than fifteen thousand (15,000) dollars in towns of not exceeding fifteen hundred (1,500) population; and not less than twenty thousand (20,000) dollars in towns of not exceeding two thousand (2,000) population; and not less than twenty-five thousand (25,000) dollars in towns of more than two thousand (2,000) inhabitants, the population in all cases to be determined by the last official census."

SECTION 2.—This Act shall take effect and be in force from and after Jan. 1, 1888.

Chapter 70, Laws 1887. An Act to amend section four hundred and fifteen of chapter thirty-four of General Statutes 1878, relating to the dissolution of corporations. Approved March 7, 1887.

SECTION 1.—That section four hundred and fifteen (415) of chapter thirty-four (34) of the General Statutes 1878 be amended by adding to the same the following words:

Provided. That in case of the dissolution, under this section, of any bank incorporated under the laws of this State, a duly certified copy of the order of the Court adjudging such dissolution shall be at once transmitted by said Court to the State Auditor or other officer having power to authorize the existence of banks, and such copy of such order shall be duly filed in the office of such State officer.

SECTION 2.—This Act shall take effect and be in force from and after its passage.

The practical effect of the first Act quoted is to give to the Public Examiner under the title of Superintendent of Banks, the duties relating to banks heretofore performed by the State Auditor. The second Act given will have the tendency to force all private bankers now doing business and calling themselves by artificial or corporate names,

either to cease using such names and do their business under their proper individual or firm names, or if they wish to continue to use the corporate name to organize themselves under the State laws and become subject to the ministrations of the Public Examiner. It will probably bring most if not all of the banking capital in Minnesota, outside of the national system, under State supervision.

Instructions as to organization in addition to those to be found in the Forms and Instructions for the Organization of State Banks issued from the office of the Public Examiner in 1886, are given in Mr. Knox's circular, and suggestions as to the best way of drawing up and executing the organization certificate, and as to the time of commencing business. The new law in reference to private banks rendering it probable that many of these will organize after January 1, 1888, as State banks, instructions are given to the effect that no poor assets will be permitted to be transferred to the new institutions, and in regard to the books, building, safe and other appliances which a bank doing an orderly and permanent business is expected to have. The Superintendent directs attention to the necessity of observing certain details in the transfer of bank stock in order to relieve the transferee of the individual liability which attaches to a stockholder under the banking laws of the State, and lays down some excellent rules to guide private bankers in the determination of the value of the bills receivable banking house, and furniture and fixtures which they may desire to use in paying up the capital of any State bank they may organize to take the place of the private institution. In closing he gives cautions and suggestions on a number of points which though general in nature are none the less valuable, viz.: "Patience and careful scrutiny is better than haste to acquire at any risk of loss," and the bank should not be in too great haste to place loans when first commencing business. "A proper and wide distribution of loans is always desirable—the province of a bank is to foster and build up all branches of legitimate business in the community, *but not at its own expense.*" "All damaging losses to banks are incurred upon their 'A. 1' paper. No paper is too good to be secured." Directors should be as a rule *loaners* and not *borrowers of money*. "Speculative loans are always to be avoided and also extravagances in bank building and appliances." "If banks *expect* prompt dealing they will usually secure it." The Superintendent concludes with the quotation of that respected saw of which Hon. Hugh McCulloch was, we believe, the author:

"No expectation of forbearance or indulgence should be encouraged. Favor and benevolence are not the attributes of good banking. Strict justice and the rigid performance of contracts are its proper foundation"

Under the energetic and intelligent supervision of her respected Superintendent of Banks, Minnesota has one of the best systems of State banking now in operation in the United States. If the systems of all the States were as well conceived and vigilantly guarded they might furnish all the banking accommodation required even if the National banking system should hereafter fall into desuetude. The new laws above quoted will by their operation add much to the stability of banking in the State of Minnesota.

FINANCIAL MATTERS IN CHICAGO.

[From the Journal's Chicago Correspondent.]

It was stated in this correspondence a few months ago that there was quite a craze for forming new banks in Chicago. The lead was taken by the organizers of the American Exchange National, which began business in May, 1886, and which immediately won the favor of the public. Within a few months of the day it opened, the Atlas National, Park National, Lincoln National, Fort Dearborn National and a mortgage loan company were started. There were several other schemes but none of them were consummated.

It was very easy to get subscriptions to the stock of these concerns; indeed, there were more applications than could be accepted. But all this is changed. The conviction has been growing in the minds of business men that Chicago has banks enough for the present. This feeling has been confirmed by the experience of the banks in the recent wheat panic. The American Exchange was a heavy loser, and some of the other institutions were obliged to put forth their best efforts to protect themselves and their customers. If there are any new financial institutions in the near future, they will no doubt be savings banks. A law, modeled on the Savings bank law of New York, was passed by the last Legislature, and there is a strong sentiment among leading citizens in favor of starting such banks. There is, however, one serious

difficulty in the way. The constitution of Illinois forbids the formation of banks of deposit and discount (save of course National banks) except after the passage of a special Act by the Legislature which shall be approved by the people at a general election. When the Savings bank Act was passed it was not considered that a Savings bank was a bank of deposit within the meaning of this provision of the constitution. Yet there is a doubt, and naturally prudent men hesitate to go into a Savings bank enterprise so long as that doubt remains. The only way out of the difficulty is to organize a Savings bank and then make up a friendly suit which would be decided by the Supreme Court. Chicago zeal on the subject is, however, not strong enough, probably, to force an issue, and we shall therefore have to wait some time for these much needed institutions. Another difficulty is that there are not many qualified men in the city who care to act as trustees of such institutions for the small compensation that the law allows. The plain fact is that the business men of Chicago are pretty fully engaged in making money for themselves. There is not in Chicago, as there is in the East, a large body of men of leisure and ability who are more than willing to accept trusteeships with little or no compensation.

The commercial banks of the city are doing a handsome business and in most cases making money. The Chicago National has this year increased its capital stock from \$300,000 to \$500,000 and will hereafter pay dividends amounting to 8 per cent. against 6 per cent. last year, the semi-annual dividend of 4 per cent. having been paid the 1st of July. All the other banks that have heretofore been in the dividend list, have kept up their rates, and the Continental National, which passed in January, paid 3 per cent. in July. None of the banks organized last year or this have paid anything, and the stockholders of the American Exchange have submitted to an assessment. The misfortune that befell this institution was just the sort of thing that is apt to come to any well-managed bank. The Fidelity Bank of Cincinnati was one of its correspondents, and the Fidelity Bank was the institution where the men engaged in the recent Chicago wheat deal did their business. The American Exchange was involved in the losses caused by the rascalities of that deal. The American Exchange may lose \$200,000, but whether it does or not it is now in a stable condition. With admirable nerve and promptness the directors decided to levy an assessment of 30 per cent. The money was paid at once, and the bank was in a condition to face all comers and ask no favors. The stock, which during the panic days was absolutely unsalable, has since risen to 110. This is equivalent to 80 without the assessment. The stock sold as high as 123 early in the year. The stockholders therefore have a loss of \$43 a share. There is, however, no doubt that the institution will yet prove a successful one, the men, in control being excellently qualified for their work.

The banks of the city are doing the bulk of the business in securities. There have been many efforts to establish stock exchanges but they have all failed thus far. The trade is therefore conducted privately by brokers or over the counter of banking institutions. Yet the local operations in securities are increasing every year. The country has been informed of the consolidation of all the gas companies of the city under the management of the gas trust. This event has stimulated interest in gas securities. The certificates of the trust are not in great favor, and it is expected that when the big holders attempt to unload there will be a collapse.

The Chicago City Railway Company has been quietly issuing \$1,000,000 more of its 4½ per cent. debentures, making a total of \$4,000,000. The bonds will soon be secured by a first mortgage, expiring in 1902, though the company will reserve the right of redeeming them before that time if it chooses.

This bond has remained at par. Local securities generally have, however, declined, bank stocks and street railway stocks being exceptions. The pressure of high rates for money is felt in the Chicago security market almost as much as in New York. There has been a heavy demand for loans all the year even to the present time, though in ordinary seasons some relaxation is expected in July. The rates now are 6 per cent. for the best paper on first-class collateral, 7 per cent. for less desirable and 8 for small amounts. A few lots of money have recently been loaned on sharp call at 5 per cent. It is not expected that there will be much of a decline in rates before fall as the county demand for currency will begin by the middle of August and counteract any effect that may be produced by the summer quietude of miscellaneous trade.

As for the general financial prospects, it may be said that they are very encouraging. There is a much larger mercantile business than is usual in summer, and great activity

is expected in the fall. But some of the best financiers of the city say that credits are being extended imprudently in many cases, and they fear for the result if this tendency continues.

The closing of the Bucket Shops is already having a beneficial effect on the business of the Board of Trade, but it will require something more powerful than that to pull that institution out of the slough into which it has fallen. Speculative transactions in agricultural products are at a low ebb, though the reports of damage to the corn crop have given a little impulse to that cereal.

The leading stock speculators of the city are generally bears, and N. B. Ream is said to be short of more stocks than ever before in his life. The small operators prefer the bull side but they lack leadership and courage.

There have recently been some large sales of the stock of the National Bank of America, and it is reported that B. P. Moulton will soon retire from the directory.

H. C. B.

UNIFORMITY OF CHECK FORMS.

The Bankers' Club of the city of Chicago are doing a good work by taking in hand the work of inducing the banks and bankers of the United States to adopt forms of checks and drafts which shall conduce to the greatest ease in handling. At one of the meetings Mr. Frank E. Brown, Chief Clerk of the First National Bank of Chicago, made certain suggestions on this point which proved of such interest that a committee was appointed to examine into their merits and practicability. The committee reported in due time, and the report, which was unanimously adopted by the Bankers' Club, is as follows:

First—The adoption of drafts and checks which shall be uniform in so far as concerns the position of the number and amount expressed in figures.

Second—Adoption of the positions for numbers and amounts as proposed.

Third—Adoption of the suggestion that all lathe and line work, *where used as a background for the amount*, be discarded.

Fourth—Discontinuance of the use of all perforators which pit, raise or roughen that part of the check or draft upon which the amount is placed.

The first recommendation needs no argument to establish the wisdom of its acceptance, being rather in the nature of a self evident truth. The third and fourth will be as generally received when it is remembered that the claim of protection made for them is a specious one; that they simply render amounts more difficult to read, without in the slightest degree increasing the difficulty of "raising" them. This is especially true in all cases where pale inks are used.

It is only upon the second suggestion that there can be any material difference of opinion. As it is upon this clause that the vital part of the whole proposal rests, the claims for the positions chosen must be made so logically, practicably indisputable as to carry conviction to any and all objectors. It is believed that the following briefly stated reasons will answer this purpose, though, should they fail to do so, Mr. Frank E. Brown is willing to attempt the answer of any questions that may arise in their consideration. These brief reasons are:

First—The amount in figures, upon every check, should be in such position that the eye will, most surely and mechanically, note not only the figures, but also the facts that the body is properly filled out and the check signed. To this end the figures should be as near the written matter contained in the check as is consistent with other necessities.

Second—The amount should be placed where, in entering same upon any book of record, it cannot possibly be covered up by the thumb of the left hand as that hand lifts the check for inspection and entry.

Third—It should be in such position that the eye will, as nearly as possible, embrace in the same glance the amount on the check and the place in the column where it is to be entered, thus obviating the loss of time now consequent on the necessity of turning the eyes or twisting the head from a search for, and inspection of, the amount, to a search for the position upon the journal or other book of record where it is to be entered. To the change of focus that the eyes are compelled to undergo in this continuous shifting to and from objects at varying distances is no doubt due something of the languor and weariness accompanying each bank clerk's daily work.

Fourth—Finally, when the amount has been put in such position as will best facilitate "calling back," it is correctly placed.

Accompanying sketches show the form as agreed upon for checks and drafts. These sketches are not intended, however, as artistic guides in their general design, but only to mark the material points of the agreement, especially that clause which determines the position of the number and the amount expressed in figures.

Sketch of a check from Merchants National Bank, Chicago, payable to the order of Dubois, Iowa, for 188 dollars. The check features a decorative border, a small illustration of a building on the left, and the text "Consolidated National Bank" and "CHICAGO" at the bottom. The amount is written as "188" and "Dollars".

Sketch of a check from The National Bank of Chicago, payable to the order of, for 188 dollars. The check features a decorative border, the text "CHICAGO, ILL." and "188" at the top, and "The National Bank of Chicago" in a large, stylized font. The amount is written as "188" and "DOLLARS".

Sketch of a check from Tenth National Bank, Chicago, payable to the order of, for 188 dollars. The check features a decorative border, the text "TENTH NATIONAL BANK, CHICAGO" in a large, stylized font, and "CHICAGO, ILL." and "188" at the top. The amount is written as "188" and "Dollars".

To fulfill each and all of these necessities (and it is claimed that the four conditions are necessary to a perfect check) there is but one position that can be selected, viz: the extreme right centre.

As upon certain books of bank record the numbers of drafts are entered, it is well to have all numbers in such relative position to the amount as will enable the clerk making such entry to note number and amount at once and easily.

In answer to a possible objection that checks are and should be entered from the amount written in the body and that clerks will become careless and both pay and

charge from the figures under a uniform system, it can be answered that inexperienced and incompetent clerks will sometimes make grave mistakes under any circumstances, even to the paying of checks that lack a signature; that the majority of bank clerks recognize the important features of a check at once; know that it is dated, signed and filled out for some amount, and that this form proposes to make that amount easy for all clerks to find and determine. This objection, followed to its natural conclusion, might be stated thus: that the more difficult to read and intricate in form a check can be made, the greater the safety ensured to the paying bank. It is easy to carry such an idea to a ridiculous conclusion. The claim here made is diametrically opposed to such an idea. It is, that the plainer and more universal a form can be made, the more rapidly and accurately will banking, and, in fact, all commercial business be transacted.

Except for their varied differences and the greater complexity of their amounts, checks should be entered at a speed and with an accuracy approximating that of the handling of our currency. Much the same reasons that can be urged for a uniform \$5 bill can be urged for a uniform \$5 check; or for that for any other amount.

No interference is intended with the exercise of individual taste as regards the shape, size or design of any check or draft, except in so far as concerns the position of the number and the amount expressed in figures.

The following agreement, which was appended to the report of the Bankers' Club committee as above given upon this whole matter, has been signed by all the National banks, banks and bankers of Chicago:

"We the undersigned banks and bankers of the city of Chicago, do hereby express our approval of the action of the Bankers' Club as recorded above, and will adopt these suggestions and recommendations at the earliest possible moment consistent with the use of our present stock of checks and drafts on hand. We will also use our influence to secure the adoption of this form by each of our customers, city and country, and will mail to each of the latter such circular bearing upon this subject as may be prepared and printed under the power granted by the Bankers' Club to their committee, Messrs. Blair, Street and Hoyt."

The following endorsement of the plan has been signed by the twenty-one leading engravers, lithographers and printers of that city. It should here be stated that the number of signatures might have been indefinitely extended if it had been deemed necessary, as there were no refusals to sign:

"We the undersigned engravers, lithographers and printers of Chicago, having carefully examined the accompanying cuts and argument proposing a certain uniformity in bank checks, as to the location of the number and amount as expressed in figures, do most heartily endorse the principles involved in the same.

"We declare the idea perfectly practicable in so far as we are concerned; and believe that the general adoption of checks agreeing in this particular will be of benefit to bankers and the mercantile public."

Each of the signers to the above, in such cases as the question was asked, agreed to alter any existing plates they might have to the new form without any charge.

The Chicago bankers intend to carry their advocacy of this idea to the American Bankers' Convention to be held in October of this year, and we are glad to be able to place the details of the plan before our readers. The subject of uniformity of checks has already received much attention in this department of the JOURNAL, and communications in regard to its desirability received from very many localities have also been heretofore published, indicating that bankers generally are beginning to feel that a uniform system of checks and drafts would very much lighten the labor and expense now attendant upon this branch of the banking business. This action of the Bankers' Club, indorsed as it has been by the banks and bankers of Chicago, appears to be the beginning of a properly organized and accredited effort, which will, without doubt, ultimately effect the needed reform. The JOURNAL is indebted for the foregoing facts to Mr. R. J. Street, of the First National Bank of Chicago.

Iowa Bankers' Convention.—On June 22d, the *Daily Iowa State Register* of Des Moines published a call to the bankers of Iowa, calling a convention on July 26th, at Des Moines. The object of the convention is to form a State Bankers' Association. The JOURNAL has advocated State associations of banks and bankers as supplementary and necessary to the success of the American Bankers' Association. If matters which come before the latter could be first discussed and put in shape by the State associations, the delegates would have matters in a practical form to act to some purpose.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

New Bank at Mamaroneck, N. Y.—Bank Superintendent Willis S. Paine, of New York, has authorized the UNION SAVINGS BANK OF WESTCHESTER COUNTY to transact business, and the bank will open at Mamaroneck about the first of September. At a meeting of the Trustees on July 16th, the following-named gentlemen were elected officers: President, Bradford Rhodes; Vice-Presidents, Samuel G. Purdy, Mathias Banta; Secretary, E. C. Benedict; Cashier, Reuben G. Brewer.

The President of the bank will have a general supervision of its affairs, but such services will in no wise interfere with his duties as Editor of the JOURNAL OF BANKING. The Cashier, an experienced banker, will be the active officer in charge of the routine business.

Mamaroneck is a thriving town, twenty-one miles from New York city, on the New York, New Haven & Hartford Railroad. The new bank is the first one organized in the place, and it will doubtless be a success from the start. The Board of Trustees is composed of well-known residents representing the towns of Mamaroneck, Rye, Harrison, Scarsdale and New Rochelle—adjacent towns of which Mamaroneck is the central point.

The First National Bank, of Charleston, S. C., is one of the oldest National banks in the South. It has a capital of \$250,000 and surplus and undivided profits amounting to \$450,000. It is a United States Depository. The career of success of this association has been uninterrupted and is chiefly due to the business capacity and banking experience of Dr. Andrew Simonds its President. Success in banking in any place is largely to be ascribed to the knowledge of how to apply the general principles of the business to the existing local conditions, and no one has understood better than Dr. Simonds the conditions existing in South Carolina and the South. Two of his sons occupy important positions in the bank, Mr. Andrew Simonds, Jr., being Vice-President and John C. Simonds, Cashier. They are each young men of marked ability, and will become worthy successors of the veteran President. Mr. Henry J. Greer is Assistant Cashier.

The addition to the bankrupt law of New York which was signed by the Governor on June 2nd, and went into effect on June 22nd, provides that in general assignments of debtors for benefit of creditors, any preference other than for wages and salaries of employees shall not be valid to an extent greater than one-third of the bankrupt estate after deducting the amount due for wages and salaries. The one-third is to be distributed pro rata among the preferred claimants.

The South Illustrated.—The boom of business in the South is characterized by an increase in the journals which chronicle the development of southern industries. Among these periodicals of an industrial or financial character one of the best is the "South Illustrated" published monthly in New Orleans, which with its June number begins the second year of its existence. The agricultural, industrial and manufacturing interests are treated of in well written articles. Any one who desires to know the southern portion of our country and the financial and industrial opportunities there cannot do better than to take the "South Illustrated."

Accumulation of Savings.—A woman employed as a weaver in a mill at Lowell deposited \$40 in the Lowell Institute for Savings in 1832. At various times between that year and 1852 she added to the deposit until it amounted to \$153. In 1875 the principal with dividends earned amounted to \$1,406. She has since drawn out \$700 and the whole amount to her credit in 1884 was \$1,027. She has since allowed \$1,000 to remain on interest and her income is \$40 a year. She is now about eighty years old. A colored

woman put \$94 in a Baltimore Savings bank in 1837, and when drawn out by her descendants the other day it had increased to a little over \$2,300.

Italian Co-Operative Banks.—Some interesting and suggestive information is to be found in a recent British Foreign Office trade report on the system and working of co-operative people's banks in Italy. There were 316 of these institutions in operation in 1884, and 107 new ones are stated to have been started in 1885. The smaller number had a paid-up capital of 55¼ million lire, and about 200 million lire of deposits in one form or another. They appear to do a profitable business, partly at least on the mutual principle, and have done not a little to lower the charges for interest which used to prevail in Italy, especially in the south, and grind the agricultural population down.

The Owl Creek Bank.—In the days of wild cat institutions this bank was well known. The customers found its sign over the door of a log cabin in a sylvan glade on the classic shores of Owl creek far from the busy haunts of men. The door was closed, but a tin horn hung outside, with which to summon the management. The President, Cashier and Board of Directors was ploughing or attending to his agricultural duties about his farm. The sound of the horn brought him, and if the customer's intent was to deposit money the bank was promptly opened, if to draw money, the urgency of rural occupations, precluded any attention to banking business on that day.

The Coxsackie Savings Institution has also been closed at the instance of bank Superintendent Paine, by order of Judge Landon of the Supreme Court. Its securities will, it is said, meet the liabilities to depositors if time is given to realize on them. It owed depositors \$148,600. Dwight the Cashier of the National Bank was Secretary of the Savings Institution and it is stated that a large portion of its questionable assets were acquired from the National bank. There are many features of this joint disaster to the National bank and Savings Institution at Coxsackie similar to those surrounding the failure of the National bank of Fishkill many years ago. In both instances the officer who caused the trouble concealed his fraudulent operations by using his double position as officer of two institutions. When one was examined he brought funds and assets from the other to enable him to keep up appearances.

Stamping Counterfeits in Canada.—A necessity is felt in Canada for a law requiring bank officers and employees and government officers and employees to stamp counterfeit, altered or worthless upon every counterfeit or fraudulent note issued in the form of a Dominion or bank note, also forbidding the disfiguring or defacing genuine notes by stamping or printing advertisements on them and preventing the printing of advertising circulars in imitation of bank or Dominion notes. Similar provisions in regard to National bank and United States notes are already contained in the Federal laws. The proposed enactment will prove of much benefit to the public in Canada as it has here. It is said that the notes issued by the Dominion government are in a very worn and filthy condition and that there is no way of securing new notes in exchange for those that are mutilated. The government it is said pursues this course with a hope that a large number of these notes will thus wear out or be lost in the hands of the people, and be so much gain to the treasury of the Dominion.

The Montreal "Stockholder" some time since intimated that the Hochelaga Bank of which the Cashier A. D. Parant, recently absconded, and which has previously had experiences of the same kind, owes its misfortune in this respect to parsimony in the payment of its officers and remarks that to get good men a bank "must pay, and pay well." Parant was arrested in this country, and on the day of the preliminary examination at Buffalo, N. Y., it was found that the Hochelaga Bank had, in consideration of the repayment to it by Parant of the larger portion of the funds stolen by him, agreed not to appear against him, in other words it had compounded the felony. The State authorities were consequently compelled to drop the proceedings against the defaulting officer. He was however arrested at the instance of the Guarantee society on warrant from the State of Illinois charging him with having, in violation of a law of that State, brought stolen property within its borders. It is possible the Hochelaga Bank took this method of securing its money, with the understanding that Parant would be punished all the same under the new charge.

The National Bank of Coxsackie.—On June 15th, Mr. E. M. Getman, National bank examiner, made an examination of the above bank, and much to the surprise of

the directors discovered that the capital of \$112,000 was impaired to the extent of \$67,200. The directors say in a circular letter issued to the stockholders that, "A recent official examination of this bank demonstrated to our great surprise that our trusted Cashier of 20 years, Mr. Sidney A. Dwight, had proved to be a defaulter," for the amount. They further say, "The utmost diligence on the part of this board, in whole or in part, would have failed to have discovered the default, as he, the said Dwight, created liabilities which did not appear, nor are they in any form on the books of this bank, he carrying the same in other banks. He also carried some fictitious accounts on the books. He, the said Dwight, was also Secretary and Treasurer of the Cossackie Savings Institution and Treasurer of a large manufacturing establishment located at this place, the financial business of the same being operated by him in the banking office, and, enjoying the fullest confidence of the whole community, it will at once become obvious to you how easily he could manipulate to cover his tracks and make one or both serve his purpose to fill defects in the other. In fact *expert* officials have been deceived, dust being thrown in their eyes, and we all are indebted to the more than usual scrutiny of the present examiner, Mr. E. M. Getman, in saving us what we have left."

The directors do no more than justice to Mr. Getman who is one of the best examiners in the service, when they confess that his scrutiny discovered what they confess their own inability to detect. The high praise involved in this can be realized when it is considered how much better chance directors who are constantly on the ground have, if they avail themselves of it, than an examiner who only visits a bank occasionally. The Comptroller on June 21st ordered an assessment on the stockholders to be made for the amount of the loss. Dwight the defaulting Cashier, who so betrayed the high appreciation which his friends and business associates entertained for him, is under arrest. He is over seventy years of age.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Atlanta, Ga., refuses to license bucket-shops.
- A bank building is to be erected at Huron, Dak.
- July 2, 1887, was observed as a whole holiday in New York.
- Gold, it is said, has been discovered in Wisconsin and northern Michigan.
- Mac Juer & Barclay, stock brokers, of Montreal, suspended payment June 24.
- Both the export and import trade of Japan show an increase during the year 1886.
- John Sailer, of Sailer & Stevenson, bankers, of Philadelphia, recently sailed for Europe.
- The new German Imperial loan of 100,000,000 marks was subscribed for seven times over.
- The *Financial Chronicle* for the first six months of 1887, can now be procured in a bound volume.
- D. W. Irwin, President of the American Exchange National Bank, of Chicago, resigned on June 27th.
- John Shaw, a private banker of Wardsville, Ontario, absconded July 4th. Liabilities about \$10,000.
- The Second National Bank, of Hoboken, N. J., was opened for business on July 1st. The capital of the bank is \$125,000.
- It is reported that the combination among the rubber boot and shoe manufacturers is making favorable progress.
- The Canadian Pacific Railway and Steamship lines are making a specialty of importing teas from China and Japan.
- The Maverick National Bank of Boston has issued a manual which gives about 200 pages of financial information.
- A bank called the Peoples Bank, has recently been organized at Perry, Mo., with capital of \$30,000, 20 per cent. paid up.
- The proceedings of the third convention of the Dakota Bankers Association held at Watertown, Dakota, on May 24, and 25, 1887, given at length in the July

number of the JOURNAL, have been printed in neat pamphlet form with constitution and by-laws of the association.

— The Governor of Georgia says that the barriers in the way of paying the repudiated bonds of the State are insurmountable.

— To see the financial reports from Washington one would think that there will be no danger of the accumulation of any surplus.

— The Stock Exchange on July 18th passed resolutions in honor of Mr. A. B. Hill, its Vice-President, who died suddenly on July 15th.

— War has been declared on bucket-shops in Montreal by large grain and stock operators on account of alleged fraudulent dealing.

— The joint resolution of March 17, 1864, authorizes the Secretary of the Treasury to pay a years interest in advance on the public debt.

— Mr. Randall of Pennsylvania recommends, as the best way of stopping surplus revenues, abolishing the tax on whiskey and tobacco.

— A. C. Lange, who embezzled \$30,000 in Muskegon, Mich., two years ago and fled to Canada, was recently decoyed across the line and arrested.

— Packages of gold imported have to be inspected for fear they may contain goods subject to duty, in other words used for smuggling.

— Some hopeful people seem to regard wheat deals, bank failures, and financial flurries as fortunate events. Doubtless they are for the survivors.

— Mr. W. H. Mellins, Assistant National Bank Examiner at New York, has been elected Cashier of the bank of New Amsterdam, of New York city.

— The Tenth National Bank, of Philadelphia, contemplates erecting a new building on a lot lately purchased by it near Columbia avenue and Broad street.

— The Act of July 11, 1862, authorizes the Secretary of the Treasury to purchase bonds at the current market value. This applies to bonds for the sinking fund.

— The customs service at the port of New York is being reorganized in accordance with the report of the Investigating Commission recently submitted on the subject.

— The first bale of Georgia's new crop of cotton was sold at the New York Stock Exchange July 8th, at 20 cents a pound. Its market value was between nine and ten cents.

— The dividends of New England cotton manufacturing companies so far declared this year indicate an increased profit over the previous year and some revival in the business.

— Wilson, the defaulting Treasurer of the Delaware & Chesapeake Canal Co., is using the money he took with him to defeat the extradition proceedings brought against him.

— The balance at the New York Clearing-House on Saturday, July 2d, was over \$11,000,000, being the largest in the history of the institution with the exception of that of July 2, 1879.

— In a case arising from an attempt to collect a license tax of commercial travelers the Court of Appeals of the State of Texas has overruled a decision of the United States Supreme Court.

— A Western bank has posted in a conspicuous place, "Bank Cashiers intending to abscond will please give the President a weeks notice." Probably so that the President may go with him.

— It is said that the price paid for cotton seed by the American Cotton Oil Trust is so low that the planters prefer to use it for manure, for which purpose it is said to exceed commercial fertilizers.

— Two hundred and fifty thousand dollars 4 per cent. ten and twenty year refunding bonds of the city of Erie were recently awarded to S. A. Kean & Co., of New York and Chicago, at 1.5624 per cent. premium.

— During the fiscal year ending June 30, 1887, 217 new National banks were authorized to commence business. Up to the same date 3,741 National banks have been organized of which 3,006 were in operation.

— The silver bullion certificate business in New York seems to have excited some alarm in London. The Bank of England has consented to become a depository of silver bullion and is to issue certificates therefor.

— During the first six months of 1887 the number of fires in the United States is reported at 1103 and the loss at \$62,921,000. During the corresponding period of 1886, the loss was \$53,900,000 and of 1885 it was \$50,750,000.

— Comptroller Trenholm has declined to make public a statement, received from Bank Examiner Snyder, of the affairs of the Fidelity National Bank on June 30th, the day of its failure. He desires to consider it carefully before doing so.

— The Mexican Financier criticises the Bureau of Statistics at Washington because it reports exports from the United States to Mexico, \$7,000,000 annually, while the Financier insists that the annual exports to Mexico from this country are \$20,000,000.

— The Stock Exchange claims that its members are preferred creditors of their indebted associates and are entitled to have the amounts due them paid out of the proceeds of the sale of the seats of the indebted members. This question is to be tried in the Courts.

— The Insurance companies charge from 85 cents to \$3 per \$100 to insure whiskey. This is said to be too high as the losses by fire since 1872, are estimated to be 1,874,585 gallons out of 554,549,454 gallons stored, showing an average loss of 34-100 of one per cent. or 38 cents only on the \$100.

— A number of creditors placed attachments on the property of the Fidelity National Bank in order to secure preferences—which are said to have been dissolved by the recent action of the Court forfeiting the bank's charter under the provisions of section 5239 of the Revised Statutes.

— The Act of March 3, 1881, authorizes the Secretary of the Treasury to apply surplus money in the Treasury not otherwise appropriated to the purchase or redemption of United States bonds. The bonds so purchased to constitute no part of the sinking fund, but to be cancelled.

— Harper says, if the Bank Examiner had not appeared just when he did there would have been no trouble with the Fidelity National Bank, and that the action of the Examiner in closing the bank at a critical time in the wheat deal, defeated what would otherwise have been a profitable scheme.

— The first deal in the registered silver bullion certificates issued by the Western National Bank and countersigned by the Mercantile Safe Deposit Company was made at the Stock Exchange on Friday, July 22d. The certificates called for 2,000 ounces of silver 1,000 fine and brought 96¾ cents per ounce.

— The Brooklyn Trust Company, since its reorganization some ten or twelve years ago, has been conducted with marked success. Its accumulations in that time have exceeded its capital by one or two hundred thousand dollars. On the 20th of June its stockholders were offered \$1,000,000 additional stock at par.

— The annual report of the New Hampshire Bank Commissioner shows that the New Hampshire Savings banks are extending their loans in the West. They have \$50,822,762 deposits an increase of \$3,760,208 within the year. The sum loaned on Western farm or city mortgage security has increased \$3,030,227.

— The machinists of Europe are, it is said, unequal to producing a monkey or screw bur wrench equal to the American and not less than 80,000 dozen are exported to Europe alone every year. Although generally spelt monkey wrench, the name is derived from the inventor Charles Monckey, who is still living.

— The failure of Julius Runge, Cotton Broker, caused some fears as to the safety of the First National Bank of Galveston, Tex., and the Island City Savings Bank of the same place. He was President of the former bank and Director in the latter. Neither bank was found to be involved in the matter, and no run occurred.

— The Lenox Hill Bank has been incorporated and is open for business on the southwest corner of Seventy-second street and Third avenue. Its capital is \$100,000, with power to increase to \$500,000. Among its principal shareholders are F. W. Williams, of Williams, Black & Co.; Anderson Fowler, of Fowler Brothers; Edgar Lockwood, of John Munroe & Co.; S. M. Milliken, of Deering, Milliken & Co.; C.

A. Troup, of C. A. Troup & Co., J. S. Radway, of Radway & Co.; Chester Billings, of Randel, Baremore & Billings; E. M. Knox, A. L. Myers, S. H. Lessynsky, and Morris Goodhart.

— Sir Edward Thornton and Mr. Bradthwaite, agents of the English holders of bonds of Virginia, state in their report of the result of their conference with the Virginia Commissioners, that there was no sincere desire on the part of the representatives of Virginia to arrive at any settlement with the bondholders other than on the State's own terms.

— A plan for increasing the business at the Boston Stock Exchange was recently presented to the Governing Committee. It consists of three propositions: Fortnightly instead of monthly settlements; a reduction of the commission charge from 1-8 to 1-16; the adoption of a rule that no member of the Stock Exchange shall be an officer of any company, securities of which are dealt in at the Board.

— Railroad earnings for five months from January 1 to May 1, 1887, of fifteen roads were as follows: Gross earnings, \$80,577,729, net earnings, \$49,852,369. For the same period in 1886, the gross earnings were, \$68,656,496, net earnings, \$23,442,458. During the first five months of 1885 the gross and net earnings were \$72,198,177 and \$5,916,121. This indicates not only an increase of earnings but a reduction of expenses for 1887.

— The suit of the Receiver of the Pacific National Bank against the Directors of that institution to recover losses incurred by their negligence, the bill included losses incurred by stockholders by reason of their having been induced to subscribe for new shares. This bill was argued on demurrer and thrown out for multifariousness. An amended bill was presented demurred to and argued on demurrer, and also thrown out for the same reason.

— The Bank of New Amsterdam, New York city, filed its certificate of incorporation in the County Clerk's office June 15th. The stock is \$250,000 with liberty to increase to \$1,000,000. Among the stockholders are Messrs. William Dowd, Jacob D. Vermilye, Jesse Seligman, Frank Tilford, Louis A. da Cunha, George Jones, Thomas C. Acton, Benjamin Brewster, S. D. Babcock, J. A. Roosevelt, W. H. Tillingast, George Bliss, W. T. Schley, Elihu Root, G. Hilton Scribner, Howard Scribner, Thomas P. Fiske, W. W. Wall, Marshall B. Blake, Robert Goellet, W. B. Northrup, George A. Parker, C. B. Agnew, John A. Stewart, Alexander Cash, and L. W. Parker.

— The new law taxing the stock of corporations, which was passed before the adjournment of the Legislature, provides that every corporation, joint stock company, or association incorporated by or under any general or special law of this State, having capital stock divided into shares, shall pay to the State Treasurer, for the use of the State, a tax of one-eighth of one per centum upon the amount of the capital stock which said corporation, joint stock company or association is authorized to have, and a like tax upon any subsequent increase thereof. The said tax shall be due and payable upon the incorporation of said corporation, joint stock company, or association, or upon the increase of the capital stock thereof; and no such corporation, joint stock company, or association shall have or exercise any corporate powers until the said tax shall have been paid. The Act does not apply, however, to literary, scientific, medical or religious corporations, or those organized under the banking laws of 1822 and 1881.

National Bank of the Republic.—Special attention is directed to the advertisement on page iii. in front of JOURNAL, of the National Bank of the Republic of New York city, and to the remarkable growth in the business of the institution since June 15, 1884, shown by the comparison between the statement of that date, and the statement of August 1st of the present year. In 1884 the loans were \$3,359,523. On August 1st they were \$7,436,905. The deposits were, \$4,822,042. By the latest statement they are \$11,141,504. The reserves of specie and legal-tender notes have increased much more than proportionately. Other elements of strength can be seen by consulting the advertisement. In April, 1884, the Hon. Jno. Jay Knox resigned the position of Comptroller of the Currency, held by him more than twelve years, to become President of the National Bank of the Republic, and the favorable change shown by the statements is chiefly due to the confidence of the public in the watchful and conservative methods of banking of which Mr. Knox has always been an exponent. In the long run, a reputation for care and safety is sure to obtain the most desirable class of deposits.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

FINANCIAL LEGISLATION.

Editor Rhodes' Journal of Banking:

Those persons who watch the course of legislation in reference to banking and financial interests are looking forward with considerable interest, not unmingled with anxiety, to the next session of Congress. Whether it will be a fruitful one in financial legislation cannot be predicted now; but certainly it cannot fail to be a very important one, for matters are in such a condition that no legislation will be almost as hurtful as any legislation, however bad. The disposition of the surplus fund; the silver question, which has been held up to the country in every aspect of which it is capable; the extension of the National bank system, and the Inter-State Commerce Act are among the measures which imperatively demand the attention of Congress. There are other measures, such as tariff reform and commercial treaties with foreign nations, of no less importance to the public interests, though, perhaps, not so closely connected with the banks themselves. Important measures have been brought to the attention of Congress, and have not received the discussion which was their due; for example, the bill drawn up by Mr. C. C. Bonney, of Chicago, providing for a National Bills of Exchange Act, and the several bills providing for a guarantee of deposits in National banks. What will Congress do in regard to these matters? Most probably nothing. The silver interest will no doubt be strong enough to block legislation which it does not approve; while the opponents of the National system, though they may not be able to overturn it entirely, may muster sufficient force among the labor men, greenbackers and State's Rights people, if not to overturn the system, at least to prevent its extension and development.

I have always considered one of the most valuable functions of the JOURNAL to be the discussion in its pages of these various measures, as they are proposed in Congress itself or in the press generally; and I read with interest anything that appears in your publication bearing on these matters.

B.

PROVIDENCE, R. I., July 10, 1887.

HOW TO READ THE "JOURNAL."

Editor Rhodes' Journal of Banking:

Having been reading the JOURNAL for a good many years, I have found out by experience that there is a right and a wrong way of doing that as well as everything else. Formerly it was my custom to glance rapidly over the pages of the JOURNAL, to pick out what I thought was interesting, and to give what was left but scanty attention. Very often, of course, it was mere chance whether I really got the best of the JOURNAL or not, for my attention was frequently caught by an attractive head line, or by two or three pleasing sentences in an opening paragraph. The legal decisions, it must be confessed, I at first passed over, thinking them too abstruse to repay attention, or too dry to invite it; but experience, as I have said, taught me the error of my ways, and I have found that the plan that I now systematically pursue is the best way to get all out of the JOURNAL that there is in it—at least for me. First I run over the table of contents, in order to form a clear idea of what is before me. The first thing I read after that is the advertisements. These, I may say, never escape close and careful attention, for I find that they reflect, as it were, the spirit of the times, and one can tell by the wording of different advertisements the general way in which the banking business is being conducted, what parts of it are paying best, and what parts are gradually falling into disuse. Particularly is this the case, since, under the influence of Journalistic enterprise, banks advertise now much more freely and liberally than formerly. Every now and then one picks up an idea in reference to a new correspondent or some improvement in bank furniture or fixtures which will repay several times the price of his subscription bill. After the advertisements in the

first part of the JOURNAL, I read the editorial comments very closely, and, though I am not personally acquainted in the editorial rooms, I would venture to say, from the diversity and ability of these notes, that they are the product of more than one able mind. If one glances over the editorial notes in, for example the June issue of the JOURNAL, one finds some useful remarks upon almost every topic which had interested the financial world for the previous month. Following these editorial comments come carefully considered papers on several important topics. Among them a biographical sketch of a distinguished Western banker, who not only achieved success himself, but whose life affords a brilliant example to all who, avoiding the delusive short cuts to fortune, would follow the well-beaten track of honesty, industry and economy. Indeed, this number seems peculiarly fruitful in practical papers, for it includes two of the prize essays on country collections. The interesting and amusing signature articles are well continued. Then follows the notes and comments on Practical Banking. After this comes the important Department of Banking Law, which, when rightly used, constitutes, in my opinion, one of the most important parts of the JOURNAL. The style of the editor in charge of this department is so simple and direct that any layman can readily understand it. One may not become a bank lawyer from reading these comments and cases, but one may certainly acquire a very large and varied knowledge of law, and a knowledge of the more practical cases which embody the most recent decisions of the Court. The cases are exceedingly practical, for they all arise out of circumstances which have actually occurred. But perhaps the chief use in reading these comments and cases is that there is stimulated a desire for more thorough and accurate knowledge; and after one has become accustomed to read this part of the JOURNAL, carefully and profitably, the mind craves more solid food, and one easily passes on to the pages of Morse and Daniel and the learned and brilliant commentaries of Story and Chitty. The replies to law and banking questions, which find a place in this department, are of immense practical value to the careful reader, and no one who has any question of general interest to propound should hesitate to forward it to the editor. The Department of Banking and Financial News has always been to me extremely interesting, presenting as it does, a bird's-eye view of what is going on all over the United States. This I should suppose to be a very difficult department to conduct successfully, as the person in charge, must of necessity, be compelled to read constantly the papers from all the leading financial centers of the Union. The correspondent's department, recently opened, has been a valuable addition to the JOURNAL, and one I hope as welcome to all its readers as it has been to me. Indeed I must confess that once or twice, under a modest *nom de plume*, I, myself, have imposed upon the patience of my fellow readers. The clippings from exchanges have often suggested lines of thought, interesting and profitable, though perhaps some of them show that their readers were not very well accustomed to follow lines of thought upon any subject, least of all, upon finance. A bulletin of new banks, etc., has always kept me well posted as to changes of officers, of corresponding banks, and, occasionally give me useful points on other matters. The general monthly review of the financial situation shows careful thought and long experience, the tables and quotations being particularly useful for reference. Last, but not least, in point of consideration comes the record of those, who having finished their work in this world, have passed over to the silent majority. I have thus endeavored to indicate what seems to me the most profitable way of using the pages of the JOURNAL, and have illustrated it by reference to a recent issue. As my method is the result not of theory but of experience, I have ventured to impose upon your patience at some length in order to set it definitely before my fellow subscribers.

NATIONAL BANKING.

Editor Rhodes' Journal of Banking:

In a recent issue of the JOURNAL a correspondent from Baltimore took occasion to offer some criticisms upon the National banking system, and seemed to favor a return to the old system of State banks. It will probably be admitted without dispute that banks of some kind or other are a necessity to civilization, at least to civilization as we know it to-day, and as civilized people have known it for many hundred years past. It may be contended that government supervision of banks is not an absolute necessity, but I do not remember ever to have seen that contention by any writer of

authority. All seem to admit that government supervision in some form or other is indispensable. The arguments in support of this proposition are, in the main, the same as those adduced in favor of government supervision over corporations of various kinds, over common carriers, inn-keepers, manufacturing establishments, and to some extent, over merchants conducting a private business. Exactly where the line should be drawn between private liberty and governmental control is, of course, a fair matter for argument, and perhaps it will be difficult to lay down any definite rules which would apply in every case. Each case, it would seem, must be determined on its merits. The right of the State to exercise control over corporations can scarcely be disputed. The combination of persons for the purpose of forming a corporation is in itself a franchise or privilege granted by the State as a matter of grace. It is not an inherent right like the right of private property, for example. The State in granting this privilege to form a corporation has a right to accompany the grant with such restrictions as it may see fit, and charters are usually granted with a great many restrictions, the general rule of the law being that a corporation has no rights whatever except those that are conferred in its charter, and that its charter, even then, must be construed strictly. A bank being a corporation is the creature of the government, and it is not only the right, but it is the duty of the Government in granting the charter to throw around that grant such restrictions and safeguards as may best tend to carry out the purpose of the charter, and, at the same time, to protect the interests of the State and of her citizens. We do not take notice of private banking, for, whatever may have been the case in the past, it is not likely, at this day, that private banks will ever flourish again to so large an extent as to make their interests in this discussion of any great practical importance. Two questions then arise. First, Whether, under our system of Government, this control is to be exercised by Federal or State authority, and second, What form that control should assume. From a practical point of view, the latter has been tried in this country very faithfully, and has been found sadly wanting. The former has also been tested by actual experiment, and, comparatively at least, has been found a success. The control of the Federal authority is much stronger than the authority of an individual State. It is also more uniform, substituting for the various laws of many different communities one form of law for the whole country, subject to the uniform interpretation of the Federal Courts. This latter advantage is simply enormous, and has greatly tended to facilitate commercial transactions between distant parts of the country, and to secure a uniformity not only of banking law but of banking customs. It would be admirable indeed if the same uniformity of law and custom could be extended still farther so as to include bills of exchange, promissory notes, and other commercial paper. While the action of Congress, especially in financial matters, is at best uncertain, it is not so uncertain as that of the State Legislatures, for their ways are in the depths of the sea. Perhaps there has been no one force which has so tended to mould the people of this country into a homogeneous body as the uniformity of banking law, which has been brought about by the National system. Varying laws and customs always act as a barrier to commercial intercourse, and while they benefit largely the favored few who make these differences a special study, they are always highly disadvantageous to the general body of traders. The right of the Federal Government to create National banks has been too often affirmed to be longer a subject of argument. The National banks present a strong united body, acting under well defined and settled laws, and amenable to the strong power of the Federal Government. The State banks present an aggregation of independent bodies, under many different and conflicting laws, and amenable, some to one authority, some to another, and, for all practical purposes, some of them to no authority at all. As to the practical operations of the system, much stress, if I recollect rightly, was laid by your correspondent upon the failure of the Marine National Bank of New York in the panic of '84: the suspension of the Metropolitan; and what came very near being the failure of the Second National; but these examples show rather the strength than the weakness of the National system. No one has ever contended that the National bank Act could put "honesty into dishonest hearts, or brains into empty skulls," but it is contended that the National bank Act is much more effectual than the old State system in keeping dishonest people from breaking banks, or foolish people from ruining them. Under the old State bank system the panic of 1884 would have swept over the country, and bank after bank would have burst like bubbles. The after results would have been felt for years, and

the business of the country would have been set back for a decade. As it was, the evil effects of the panic stopped precisely where it began, namely, with the banks that had been improperly administered, and with their immediate dependents. If there is any truth in the old saw that "The proof of the pudding is in the eating," we certainly had an excellent illustration of it on that occasion.

The powerful aid which the National banks are capable of rendering the Government in the event of war is so important that it may be mentioned again, notwithstanding your correspondent seems to think that the time is near at hand when it may be truthfully said:

No war nor battles sound
Is heard the world around.

The security of depositors under the National system has been proved by experience to be far greater than that which was obtained under the system of State banking, for, while National banks do fail, and sometimes very badly, yet on the whole they have averaged hitherto nearly seventy cents on the dollar to the depositors: paying the note holders in full on demand. Can your correspondent give us a showing like this, for the precious State banks which deluged the country with wild-cat money, and when they did break, which was very frequently, and usually very badly, scarcely paid anybody anything. The confidence which the public have acquired in National banks as compared with State and private banks is the result of experience and observation, and is fully justified by past history. National bank failures are to be expected and will occur from time to time, but taking the whole number of failures on an average, the showing is not discouraging to the friends of the National system. In another letter I may discuss the specific restrictions which are imposed upon banks organized under the National system endeavoring to show that they are only such as have commended themselves to the judgment of the experienced and prudent.

BALTIMORE, July 15, 1887.

SUBSCRIBER.

THE WORD "BANK" AGAIN.

Editor Rhodes' Journal of Banking:

SIR:—I notice the discussion going on in the open letter department of the JOURNAL OF BANKING relative to the derivation of the word bank. One side contends that it is derived from the Italian *banco*, or bench, because the Lombard Jews used benches as the basis of their exchange offices, and the term bankrupt originated from the custom of breaking the bench of the unfortunate or dishonest dealer who did not meet his engagements. The other side contends that the term is derived from the fact that a bank is an aggregation of money, brought together by its stockholders and customers—a bank or heap formed by the contributions of many. The authorities for both of these derivations are fully given in the correspondence referred to. It seems to me, however, admitting that the derivation from "*banco*," or bench, may have some historical support derived from the practice prevalent among money dealers before banks in the modern sense were conceived of, yet the application of the name "Bank" to a moneyed institution the capital of which is contributed by a number of persons is the result of the analogy between such a mass of capital so contributed and a bank of sand or other materials formed by the aggregation of particles.

If it be true, that the Lombard Jews conducted their money-changing business on benches in the open air, as apple and peanut vendors do in modern times, with ducats, zechins and caroluses spread out temptingly before a public, who seem to have been under little police restraint, inasmuch as they are stated to have broken the benches of insolvent dealers without trial by judge or jury, it will be found that business was conducted in this way, if at all, long anterior to the establishment of banks in the sense now used. Scott does not describe Isaac of York as doing business in this way, nor what is more to the purpose do we learn that Shylock, an undoubted dealer in money, had a bench of the kind at Venice. Many tales are told upon authority that have passed current for centuries and yet have proved to be myths on later investigation. Even dictionaries and scientific works frequently fall into respectable and long worn ruts which are found to have no reason for existence except the softness of the heads in which they were originally marked out. I would like the correspondent whose letters teem with such eminent marks of minute erudition to point out at what date the Lombard Jews did business in the manner indicated, and whether this date was anterior to the establishment of the banks of

Genoa and Venice. Also to give sufficient of the history of the organization of those banks, which he doubtless can do from his knowledge of the records of those times, to enable a judgment to be formed of what the men who organized these institutions meant when they used the term "bank." Even if we admit the existence of the money benches of the Lombard Jews, it is very difficult to see any connection between their methods of business and that of a bank.

In the oldest sense bank meant a ridge or mound, and ridges and mounds of sand and earth were just as surely and obviously aggregates of particles of sand and earth as they were slight elevations above the surface. Both senses are indisputable, and from one comes the word "bank" and the other the word "bench." Is it not more correct and direct to argue that an institution called a bank, which institution actually is an aggregation of capital, is so called because the term bank meant an aggregation originally. It seems a little more like "going around the seven sides of Robin Hood's octagonal barn to reach the eighth side," to define the original meaning of bank to be a rise of ground, hence a bench, and then from bench and the Lombard Jews get back to bank again. If there is any foundation other than fanciful to this, why was not associated capital called a bench, and the man who runs it a bencher. I think there is no evidence whatever that the founders of the banks of Genoa and Venice used the word "bank" in any other sense than the natural and obvious one of an aggregation of credits or money, the old story of the Lombard Jews and their benches to the contrary notwithstanding. In fact the authorities for this story remind one of the ancient satyr described by Bret Harte: "Scratching his ear with his hoof and painfully mumbling his chestnuts."

The history of banking in later times shows that the founders of the Bank of England, the promoters of so called banks of paper money in New England and other countries, Alexander Hamilton and Robert Morris, the fathers of banking in the United States, all used the term bank in the sense of an aggregation of credit or money. Macaulay says that the Bank of England received the support of the Government because it was an aggregation of the funds of many, from which the Government could draw. He writes: "Formerly * * * it had been necessary for the Chancellor of the Exchequer to go hat in hand up and down Cheapside and Cornhill * * * and to make up a sum by borrowing a hundred pounds from this hostler and two hundred pounds from that Iron Monger. These times were over. The Government instead of laboriously scooping up supplies from numerous petty sources, could now draw whatever it required from one immense reservoir, which all these petty sources kept constantly replenished." Mr. Thorold Rogers, in his "First Nine Years of the Bank of England," says that the Act which founded the Bank of England sought to raise a loan of a million and a half pounds, and promised to such subscribers as raise an aggregate of £1,200,000 the title of Governor and Company of the Bank of England. Here it is plain that the term bank means an aggregation of money; but, less this should not be decisive, we find further from this authority that the first seal of the Bank of England printed on the earlier notes, represented Britannia seated on a bank or mass of money. In a chapter on "Colonial Paper Money," in "United States Notes," by Hon. Jno. Jay Knox, we find that issues of paper money were authorized to be made by the Colonial Treasuries, to be loaned to citizens on mortgages. The round sum or aggregate amount to be so loaned was called a bank. Alexander Hamilton and Robert Morris, who copied the English system, always speak of a "bank" as an aggregation of capital or credit. The word is moreover used in the same sense in the case of a bank for gambling purposes. I am not now referring to the Fidelity National of Cincinnati; but to faro Banks or the bank at Monaco. In the latter case there might be some reason for deriving the word from a bench or table, as the operations of banks of this kind, like those of the mythical Lombard Jews, are confined to the table, around which the players gather.

EXTERIOR.

WASHINGTON, D. C., July 20, 1887.

Swindler.—A person representing himself to be T. J. Carleton, has been swindling various Illinois banks during the past month by cashing checks of fifty dollars each, purporting to be drawn on the Indiana National Bank of Indianapolis by "R. S. Foster & Co." "Moore Combination Desk Co." etc These checks also bear the forged certification of the cashier of the Indianapolis bank.

NATIONAL BANKS OF THE UNITED STATES.—Abstract of reports made to the Comptroller of the Currency, showing the condition of the National Banks in the United States at the close of business on May 13, 1887; and, for comparison, an abstract of the reports of October 7, 1886. [Cents omitted.]

* The amount of circulation outstanding on May 13, 1887, as shown by the books of the Comptroller of the Currency, was \$233,548,294; which amount includes the notes of insolvent banks, of those in voluntary liquidation and of those which have deposited legal-tender notes under the Acts of June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report.

Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3744—Second National Bank, Hoboken, New Jersey. Capital, \$125,000.
 3745—First National Bank, Mankato, Kansas. Capital, \$50,000.
 3746—Carbonate National Bank, Leadville, Colorado. Capital, \$100,000.
 3747—Sault Ste. Marie National Bank, Sault de Ste. Marie, Michigan. Capital, \$100,000.
 3748—Citizens' National Bank, Concordia, Kansas. Capital, \$100,000.
 3749—First National Bank, Lamar, Colorado. Capital, \$50,000.
 3750—Third National Bank, Piqua, Ohio. Capital, \$100,000.
 3751—First National Bank, Cimarron, Kansas. Capital, \$50,000.
 3752—Quincy National Bank, Quincy, Illinois. Capital, \$100,000.
 3753—Oglethorpe National Bank, Brunswick, Georgia. Capital, \$100,000.
 3754—First National Bank, Harrisonville, Missouri. Capital, \$50,000.
 3755—Citizens' National Bank, Attica, Indiana. Capital, \$50,000.
 3756—West Side National Bank, Wichita, Kansas. Capital, \$100,000.
 3757—Carver National Bank, St. Helena, California. Capital, \$50,000.
 3758—First National Bank, Millbrook, Kansas. Capital, \$50,000.
 3759—First National Bank, Kinsley, Kansas. Capital, \$100,000.
 3760—National Bank of Commerce, Kansas City, Missouri. Capital, \$2,000,000.

ALABAMA.

MONTGOMERY.—Commercial Fire Ins. Co., W. H. Hubbard Secretary, in place of Thos. E. Hannon.

ARIZONA.

NOGALES.—Henry Hewitt, Jr., & Co.; Cashier, P. D. Norton.

FLAGSTAFF.—Bank of Flagstaff is new bank here; President, W. G. Stewart; Cashier, E. S. Clark.

CALIFORNIA.

HANFORD.—Bank of Hanford is reported here; President, E. Jacobs; Vice-President, J. E. Rawlings; Cashier, S. E. Hiddle.

MERCED.—First National Bank; Vice-President, E. T. Dixon.

REDLANDS.—Union Bank; authorized capital, \$10,000; paid capital, \$12,500. President, Curtis Wells; Cashier, R. H. Lane.

RIVERSIDE.—Thos. Bakewell & Sons is style of the new firm here.

SAN JOSE.—Garden City National Bank; Vice-President, J. B. Randol.

SAN FRANCISCO.—Pacific Bank; Assistant Cashier, Emil Belleremann, not Emil B. Hermann.

ST. HELENA.—D. B. Carver; succeeded by Carver National Bank. Capital, \$50,000. President, D. B. Carver; Cashier, A. L. Williams.—W. A. G. Smith; closing.

COLORADO.

AKRON.—Bank of Akron; President, Wm. Sturdevant; Cashier, R. H. Northcott.

DELTA.—Delta County Bank; proprietors, McGranahan, King, and Kellogg.

DURANGO.—Colorado State Bank; Vice-President, D. L. Sheets; Assistant Cashier, T. F. Burgess.

GLENWOOD SPRINGS.—Glenwood National Bank; C. N. Greig, Cashier, in place of Charles H. Toll.

LAMAR.—First National Bank has been authorized to commence business. Capital, \$50,000. President, Josiah S. Springer; Cashier, T. H. Cecil. — Lamar State Bank; Capital, \$15,000. President, Francis Hall; Cashier, Geo. Theis Jr.

LEADVILLE.—Carbonate Bank; succeeded by Carbonate National Bank. Capital, \$100,000. President, David H. Dougan; Vice-President, H. I. Higgins; Cashier, John C. Mitchell.

WALSHEBURGH.—T. F. Martin in business here. Style, Huerfano County Bank. Capital of \$20,000.

YUMA.—Reed Bros. & Co.; Cashier, F. W. Reed.

CONNECTICUT.

WATERBURY.—Fourth National Bank has been organized. Capital, \$100,000. President, E. T. Turner; Cashier, B. G. Bryan.

DAKOTA.

ASHTON.—First National Bank; S. F. Hammond, President, in place of F. W. Rogers.
RIG STONE CITY.—David J. Craig is in business here. Style, Craig's Bank.
BISMARCK.—Bismark National Bank; Assistant Cashier, F. L. Coe.
CANTON.—Bank of Cloud; President, C. B. Kennedy; Cashier, J. D. Cloud.
CENTRAL CITY.—Stebbins, Mund & Fox; succeeded by Central City Bank. Capital, \$25,000. President, Wm. R. Stebbins; Cashier, Fred. M. Clary.
EDGELEY.—Bank of Edgeley has been incorporated. Capital, \$5,000. President, E. A. Mears; Vice-President, E. Kimball.
FORMAN.—D. F. Vail & Co., of Milnor, have opened a branch here. Style, Bank of Forman.
GROTON.—Bank of Groton; Assistant Cashier, W. B. Neeley.
HILLSVIEW.—E. L. Hopkins is in business here. Style, Exchange Bank. Capital, \$10,000. Assistant Cashier, D. W. Wood.
IPSWICH.—Bank of Ipswich (M. P. Beebe); now incorporated. Paid capital, \$25,000. President, M. P. Beebe; Vice-President, A. J. Beebe; Cashier, C. A. Kinney.
JAMESTOWN.—North Dakota Bank; discontinued.
LAKOTA.—Nelson County Bank; no President in place of Geo. Martin; no Assistant Cashier in place of T. G. Turner.
LANGFORD.—Bank of Langford is reported here. Cashier, L. R. Knight.
LEOLA.—Bank of Leola is reported here.
MELLETTE.—Bank of Mellette is reported here. Cashier, A. J. Gange.
NECHE.—Bank of Neche has been incorporated. Capital, \$12,000. President, H. L. Holmes; Cashier, James Thomson.
PORTLAND.—Citizens' Bank; President, George A. White; Cashier, C. Cranston.
REVILO.—Bank of Revillo is reported here. Cashier, J. F. Bryan.
SIOUX FALLS.—Sioux Falls National Bank; Cashier, C. L. Norton; no Assistant Cashier in place of A. L. Currey. — German-American Loan & Investment Co.; merged in German-American Loan & Trust Co., Algona, Iowa, and Sioux Falls.
STURGIS.—First National Bank; Assistant Cashier, H. O. Alexander. — Stebbins, Fox & Co.; merged into First National Bank.
WAPFETON.—Farmers' & Merchants' Bank has been recently opened. Capital, \$15,000. President, C. B. Pinney; Cashier, R. B. Carson. — People's Savings Bank is new bank here. President, T. L. French; Cashier, C. N. Wood.
WHEATLAND.—Bank of Wheatland (Geo. Brandenburg); no Assistant Cashier in place of N. M. Campbell.

DISTRICT OF COLUMBIA.

WASHINGTON.—Cooke & Co.; Jay Cooke deceased.

FLORIDA.

DAYTONA.—Bank of Daytona has recently been opened. President, Fred. S. Goodrich; Cashier, Robt. B. Wolseley.
OCALA.—Bank of Ocala; Cashier, R. B. McConnell.
SANFORD.—The Lyman Bank; to be succeeded by First National Bank. Capital, \$50,000. President, F. H. Rand; Vice-President, M. Lyman; Cashier, F. P. Forster.

GEORGIA.

AMERICUS.—Bank of Americus; Assistant Cashier, W. E. Murphy.
ATHENS.—Athens Savings Bank has recently commenced business. Capital, \$10,000. President, Julius Cohen; Cashier, Wm. A. Gilleland.
AUGUSTA.—National Bank of Augusta; Charles Estes, President, in place of George R. Sibley, deceased.
BRUNSWICK.—Oglethorpe National Bank has been authorized to commence business. Capital, \$100,000. President, Max Ullman; Cashier, John L. H. Henman.
DAWSON.—J. R. Mercer & Co.; President, J. R. Mercer; Cashier, J. F. Lark.
SAVANNAH.—National Bank of Savannah; Assistant Cashier, A. L. Rees.

IDAHO.

CALDWELL.—Stock Growers & Traders' Bank; no President; Cashier, Clarence S. Scott.
DELTA.—Bank of Murray have opened an agency here. Cashier, F. F. Johnson.
WORDNER.—Bank of Wordner; sold to S. J. Chadwick.

ILLINOIS.

ARGENTA.—Brown & Gerber are reported here.
BRACEVILLE.—People's Bank; A. A. Wetmore, Cashier, in place of Thos. Jones.
BUSHNELL.—Bank of Bushnell (W. W. Bell); discontinued.

Prepayment of Interest and Bond Purchases.—The following circular was issued on August 3d by the Treasury Department:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY. }
WASHINGTON, August 3, 1887.

By virtue of the authority contained in Section 3,699 of the Revised Statutes of the United States, notice is hereby given that the interest due September 1 and December 1, 1887, on the 4½ per cent. bonds of the United States, October 1, 1887, and January 1, 1888, on the 4 per cent. bonds, and January 1, 1888, on the bonds issued in aid of the Pacific Railroad, will be prepaid on and after August 15, 1887, with a rebate at the rate of 2 per centum per annum on the amounts prepaid.

Coupons due on the above specified dates may be presented for prepayment at the Treasury of the United States in Washington, or at the office of any Assistant Treasurer of the United States. Applications for prepayment of interest on registered bonds may be made to the Secretary of the Treasury.

Registered bonds on which interest has been prepaid may be transferred upon the books of the Department in the usual manner, if accompanied by a release, signed by the new owners, of all claim to the prepaid interest, and the Department will furnish to owners, on application, certificates that the interest on their bonds has or has not been prepaid, as the case may be.

Notice is also given that in pursuance of the provisions of section 3,694 of the Revised Statutes, proposals for the sale to the Government of the United States 4½ per cent. bonds of 1891, acts of July 14, 1870, and January 20, 1871, to be applied to the sinking fund will be received and opened at the office of the Secretary of the Treasury, in Washington at noon on Wednesday, August 10, 1887, and on each Wednesday thereafter until further notice.

Proposals should state the specific character of the bonds offered, whether registered or coupon, and must be for the sale of the bonds with accrued interest to and including the day of sale, whether interest thereon has or has not been prepaid and adjustments of prepaid interests on bonds purchased under this circular will be made when payment for the bonds is made.

The right is reserved to reject any or all proposals for the sale of bonds if it is thought to be for the interest of the Government to do so. (Signed) C. S. FAIRCHILD, Secretary.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, August 3, 1887.

The last week of June was one of great excitement in the stock market. The collapse of the wheat corner in Chicago had preceded the fall in stocks and was doubtless more immediately the cause of it than was at first supposed. Those who are hopeful and optimistic always regard panics as the precursors of a better market, and this opinion was largely expressed after the first excitement about the wheat corner began to subside. It is evident however from the history of the month of July, that the panic of June 24th, was no radical crisis, shaking everything down to a permanently lower level, but merely a temporary ebullition the effects of which soon passed away leaving things much as they were before. The fact seems to be that at present stocks are held at as high a figure as their value compared with other investments which are now offered will warrant. There is no decided movement in any direction. Many argue that the increased railroad earnings, the favorable crop reports, and the great activity in business shown by the Clearing-House returns from all sections of the country, are indications that the tendency of prices must be upward, and this belief founded on conditions which often have this result, has kept stocks constantly at higher figures than their value as an investment, speculative or otherwise, warrants. A large part of the increased railway earnings is derived from the transportation of railway material for the construction of new railways, there being great activity in railway building this year. The earnings of any particular road of course affect the price of its stocks and bonds, but the new roads which are building have a counteracting influence by increasing the supply of stocks and bonds offered on the market. The crop reports are favorable only in regard to the quantity that may be raised. All the indications are that the prices received for wheat and cotton will be low. Where the agricultural classes in the community are induced by previous high prices of any commodity to increase the yield however successful they may be in obtaining an augmented crop, the consequent depression of prices generally involves the producer in a loss. Wheat at a dollar a bushel one year, may induce the raising of a crop so large that from this fact combined with other causes, the price goes down. The outlays to raise the crop, including labor, interest, etc., are usually calculated at the higher price, and the producers, receiving the lower price find themselves without profit, and often in debt. Those who handle the product, may receive a usual percentage, and some classes may prosper at the expense of others. Incomes are made up of credits. If a very large portion of the people are crippled by prices for their products much smaller than anticipated there will be a very wide collapse of credit. The Clearing-House statements while showing great activity in business, do not in any way prove what the profits are, except, as the only inducement to do business is profit, the operators must at least imagine they are making something. Most of the great increase in Clearing-House transactions is due to the speculation in real estate which has been so marked in all sections of the country. Some of it doubtless represents a genuine rise of value based on an increase in public desire to invest permanently in this form of property. But every real movement of this kind is accompanied by a large proportion of purely speculative dealing, buying in the hope of immediate sale on the first rise of price, and with no more intention of holding than is the case with the usual dealings in the stock market. This sort of business generally forces prices much above those which the public demand for permanent investment will warrant, and of course such prices cannot be maintained. When the bottom does drop out of a real estate boom,

the recovery is a matter of time. While therefore all the circumstances alleged as reasons for future prosperity and consequent rise in the stock market, do tend that way, yet they are all of them liable to have a different effect. The speculation in real estate has been directly antagonistic to speculation in stocks, offering apparently larger returns, as well as apparently greater solidity of investment.

Whatever else dullness in business in any direction may be ascribed to, we do not think it is due to lack of money. There has yet been no contraction of the currency, but on the contrary, if the newly coined gold goes into active circulation a considerable expansion within the past year. From the fact that the figures of the Directors of the Mint, show nearly \$300,000,000 of American gold coin in the hands of the people outside of the Treasury and national and State banks, when so little is seen in circulation, it would seem that for some reason, perhaps fear of a coming silver standard, this gold is largely hoarded and is not available for commercial business. The cash reserves of the banks are no larger than they have been in previous years, and if this immense amount of gold coin were in circulation it would certainly make a show in the banks.

The Secretary of the Treasury to day issued a circular, which is published in full on another page, ordering the payment of six months interest in advance on the 4s and 4½s, on and after August 15th to all who are willing to grant to the Government a rebate of two per cent. Also inviting proposals for the sale of 4½ per cent. bonds for the sinking fund. We are glad to see that the Treasury Department has at length taken some decided action. It has made a great point in showing that it is not afraid to act. The hesitation heretofore manifested is criticized in the London *Economist* of June 9th, which describes the American money market as drifting toward a crisis which it never seems to reach, and ascribes this state of things to the unwillingness of the Secretary of the Treasury to do any thing from the fear he has of adverse criticism.

FOREIGN EXCHANGE has been very dull all the month, and nothing occurred during the first two weeks to indicate any demand. During this time \$1,051,831, arrived from Europe in gold bars and in United States gold coin. This movement seems to have ceased about the end of the third week, and there was a slight advance in the rates. Even with rates favorable to importations there is little probability of any very great flow of gold from Europe at present. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.83½@4.84; sight, nominal, \$4.85@4.85½; 60 days, actual, \$4.82½@4.83; sight, actual, \$4.84½@4.85; Cable transfers, \$4.85@4.85½; Prime commercial sterling, long, \$4.81½@4.82; Documentary sterling, 60 days, \$4.81@4.81½; Paris, bankers', 60 days, 5.23½@5.23½; sight, 5.21¼@5.20½; Paris, commercial, 60 days, 5.25@5.24½; sight, 5.22½@5.21½; Antwerp, commercial, 60 days, 5.25½@5.25; Swiss, bankers', 60 days, 5.23¼@5.23½; sight, 5.21¼@5.20½; Reichsmarks (4), bankers', 60 days, 94½@94½; sight, 95@95½; Reichsmarks (4), commercial, 60 days, 94½@94½; sight, 94½@94½; Guilders, bankers', 60 days, 39 15-16@40; sight, 40½@40 8-16; Guilders commercial, 60 days, 39¾@39 13-16; sight, 39 15-16@40; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26 11-16@26½; sight, 26 15-16@27. Paris dispatches quote exchange on London 25f. 21½c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris, on June 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of June and July:

June.	BANKERS		Cable		PARIS	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.

COINS AND BULLION.—Bar silver is quoted in London at 44 5-16d. per ounce. At this quotation for silver the bullion value of the standard dollar is 75.13 cents. The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 90 @ \$ 1 00	Twenty marks	4 74 @ 4 80
New (412½ grains) dollars...	99¾ @ 1 00	Spanish doubloons.....	15 55 @ 15 70
American silver ½s & ¼s...	99¾ @ 1 00	Spanish 25 pesetas.....	4 75 @ 4 85
American dimes	99¼ @ 1 00	Mexican doubloons.....	15 55 @ 15 70
Mexican dollars	75¼ @ 77	Mexican 20 pesos.....	19 50 @ 19 60
Peru soles & Chilian pesos..	72¼ @ 74	Ten guilders.....	3 96 @ 4 00
English silver.....	4 80 @ 4 85¼	Com'l silver bars, per oz....	96½ @
Five francs.....	93 @ 95	U.S. Assay silver bars ...	96¼ @ 97
Victoria sovereigns.....	\$ 4 85 @ \$ 4 90	Fine gold bars par @ ¼ premium on the	
Twenty francs	3 87 @ 3 92	Mint value.	

The Home money market after the flurry on June 24th settled down and has been generally easy. The week ending July 9th, rates on call loans were from three to ten per cent, the week ending July 16th, from three to six per cent, that ending July 23d, the rates were from two to five per cent, and for the week ending July 30th they were from three to six per cent. The rates for prime commercial paper were from 6 to 6½ per cent, through the month. The following are the latest rates of exchange on New York. Savannah, par; selling ½ @ ¼ premium; Charleston, buying par @ ¼; selling 3-16 @ ¼ premium; New Orleans commercial, par @ 50c. per \$1,000 premium; bank, \$1.50 per \$1,000 premium; St. Louis, par; Chicago, 60c. per \$1,000 discount.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of July, and the highest and lowest during the month. Actual sales marked *:

† Ex dividend.

The public debt and Treasury statements for August 1, show that during the month of July the public debt less cash in the Treasury has decreased \$4,844,894, as compared with a decrease of \$16,812,725, during the month of June. The outstanding interest bearing debt on August 1, was \$1,066,600,362 with accrued interest amounting to \$7,168,653. This statement includes \$64,623,512 bonds of the Pacific Railway Companies. The net cash balance available for the reduction of the debt and for meeting the expenses of the Government was \$45,698,594.15. This is in addition to the \$100,000,000, gold coin kept as a reserve on legal tender notes. The net cash has increased \$4,845,234, during the month of July which has been characterized by heavy payments. The balances due from National bank depositaries on July 1st,

were \$22,991,302 and on August 1st, \$23,493,267, an increase of \$501,965. Either indicating little extension of the use of these depositaries or large drafts on them during the month.

The following table shows the net gold and silver held by the United States Treasury on the 1st of August and on the 1st of July and June :

	Aug. 1, 1887.	July 1, 1887.	June 1, 1887.
Gold coin and bullion.....	\$281,296,417	\$278,101,106	\$277,628,750
Gold certificates outstanding.....	94,990,087	91,225,437	90,960,977
Gold owned by Treasury.....	\$186,306,330	\$186,875,669	\$186,667,773
Silver dollars and bullion.....	\$216,621,247	\$215,166,442	\$212,300,918
Silver certificates outstanding.....	144,166,141	142,118,017	139,143,328
Silver owned by Treasury.....	\$72,455,106	\$73,048,425	\$73,157,590

The changes in the above items are a decrease of \$569,339 in net gold coin and bullion held and of \$5,3319 in silver dollars and bullion. In addition to the silver dollars and bullion mentioned in this table the Treasury held in Fractional silver coin \$26,691,105. Silver certificates in circulation have increased \$2,048,134.

National bank circulation outstanding has decreased \$2,759,231, a very little more than the increase in silver certificates. The Treasury must have made a mistake and redeemed some of the notes presented in gold or legal tender notes. The amount on deposit with the U. S. Treasurer to redeem National bank notes was on August 1st, \$106,901,094 as against \$107,334,413, last month. The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated.

	Aug. 1, 1887.	July 1, 1887.	June 1, 1887.	May 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.....	\$3,176,000	\$3,175,000	\$3,145,000	\$3,243,000	\$3,680,000
4½ per cents.....	69,029,500	67,743,100	65,807,350	64,621,250	59,636,200
4 per cents.....	115,890,950	115,842,650	114,975,350	114,351,750	113,903,200
3 per cents.....	*1,349,350	*5,206,950	*17,011,400	20,228,550	52,218,950
Total.....	\$189,445,800	\$191,968,700	\$200,939,100	\$202,446,550	\$229,438,350
* Called.					

It is interesting to note that since January 1, 1887 the banks have reduced their three per cent. bonds from \$52,218,950 to 1,349,350, or \$50,869,600. Currency sixes in the same time have been reduced \$504,000, making a total withdrawal of bonds of \$51,373,600. Of this sum only \$11,381,050 have been replaced by other bonds. Of the \$11,381,050 new bonds deposited, \$9,848,300 were 4½s and \$1,987,750 were fours. This analysis of the table indicate that the banks are still willing to take chances on the 4½s in the hope that Congress may do something for the relief of the system.

NEW YORK BANKS.—The week ending July 9th showed an increase of \$2,701,375 in surplus reserve, that ending July 16th an increase of \$1,573,650, that ending July 23d an increase of \$571,225 and that ending July 30th a decrease of \$366,350. The following shows the condition of the New York Clearing-House Banks for a number of weeks past, as well as about this time in 1886 and 1885.

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
July 30...	\$355,294,800	\$75,648,000	\$22,924,400	\$361,765,700	\$8,105,100	\$8,130,975

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

AMERICAN STATESMEN. *Life of Henry Clay*, by CARL SCHURZ, in two volumes. Boston and New York, Houghton, Mifflin & Company. The Riverside Press, Cambridge, 1887.

The chief reason why Henry Clay never attained the height of his ambition by being elected President of the United States, was that he had Jackson for an antagonist, and the success of the latter was due to the triumph of ignorance and prejudice over intelligence and liberal views. Not that Clay was an educated man in the ordinary sense. He was born in poverty, and had few educational advantages, but he had natural aptitude of mind and the influences he fell under from his association with George Wythe, Chancellor of the High Court of Chancery of Virginia, a man wise and liberal minded, were exceedingly fortunate.

Mr. Schurz remarks in substance that in the early days of the Republic the American people were, owing to circumstances, uneducated and ignorant and had a reverential respect for superiority of talent and breeding, and this habit was sufficiently strong to permit a succession of Presidents to be taken from the ranks of professional Statesmen; but that there always comes a time in the life of a democracy, when the masses grow impatient of all pretensions or admissions of superiority, when there arises a vague distrust of professional Statesmen, and it is thought safer to put in the highest places "men of the people" rather than skilled Statesmen. This was first faintly manifested when Jefferson was elected, but came out in all its strength in the history of Jackson. The politicians, in the view of the masses, get too sharp, over-trained in fact, and a new stock of raw material has to be secured. This sort of thing is a political storm clearing the atmosphere, though it may destroy many valuable institutions, political, financial and industrial. Mr. Schurz seems to regard such convulsions as necessary and perhaps desirable, and by a similar mode of reasoning periodical war and pestilence may be looked at in the same light. The advanced thought of the present day looks to a time when war and pestilence may be suppressed as evils, and it is rather retroactive to regard these manifestations of political and social ignorance and suspicion as in any sense desirable. He intimates a parallel between the election of Jackson and Lincoln, but the difference both in the training and the character of the men and the object of their election forbid the acceptance of any similarity. Lincoln was a trained politician, Jackson a hereditary Indian fighter, with all the courage and audacity and all the capacity for treachery and vice of that character. Lincoln was elected for a great purpose, Jackson's election was an act of idolatry based on an ignorant suspicion of trained statesmen. Jackson had no capacity as a Judge or a Legislator; in attempting to speak he "choked with rage." As a military man he had an intrepid spirit, a natural gift of command, but was impatient of restraint, had a reckless disregard for law and an uncontrollable temper. In private life he delighted in broils and encounters. Against his faults his friends offset his courage and his alleged honesty. His integrity was said to be unimpeachable, and when he acted savagely, unjustly and even basely, he was excused on the ground of a sincerity of purpose said to spring from love of country: a wonderful man because from mistaken moral purpose he did unjust and mean acts with vigor. Yet this excuse becomes even more weak if on examination it is found that his temper far from being an uncontrollable defect was often used by him as a means, which he had cultivated and encouraged, to accomplish his purposes, and that the intrigues and wiles which his friends and admirers ascribe to his subordinates and satellites were really winked at and relished if they were not conceived and prompted by him. His history as a backwoods lawyer, the circumstances of his duel with Dickinson, the affray with the Bentons, all show as much cunning as courage. In those early days he was the gatherer up of, to say the least, rather doubtful affidavits to sustain his high-handed acts, and there was as much bandying of vituperative falsehood on the part of his satellites then as on that of his partisans in the days when he was President of the United States. It seems incredible that any one can believe that a man surrounded as Jackson was at all times in his career by a maze of political chicanery could have been himself a man of unimpeachable integrity in any wide sense.

Such was the great antagonist of Henry Clay, and in no occurrence does the plausibility, the willingness, the treachery and the persistent falseness of Jackson's character appear, with no support from his acknowledged intrepidity, as they do in the history of the accusation of corruption brought against Clay in 1824. In that year

there were six candidates for the presidential office. Clinton and Calhoun withdrew before November, and Crawford, Jackson, Adams and Clay received the votes of the people. There was no choice and the election was thrown into the House. Clay of the four had received the least number of electoral votes, and as the House could only vote on the three highest candidates he was thrown out, but with his thirty-seven votes he held the balance of power. In 1817, during the Seminole war, Jackson had, without warrant of law either civil or military, hung Arbuthnot and Ambrister. The House of Representatives moved a resolution disapproving his proceedings, which failed to pass, but of which Clay was the most earnest supporter. From this time until after the election of 1824, there had been non-intercourse between Jackson and Clay. The former had been very haughty and had almost given Clay the cut direct when meeting him accidentally in 1819. But after the election Jackson became more conciliating, Clay could be of service to him and Jackson and his friends made advances to Clay, which the latter received with his usual courtesy. When however it was found that Clay had already made up his mind to give his vote and influence to Adams, all this designing friendliness was changed. Jackson and his friends sought to drive and to frighten him. He received menacing and abusive anonymous letters, but was of course not affected. Jackson and his friends induced an insignificant, simple, uneducated and eccentric Pennsylvania Congressman named George Kremer, who was principally distinguished by a variegated overcoat made from a leopard skin—in fact a man little more than half-witted—to send a letter which they prepared, to a Philadelphia newspaper, stating that Clay had corruptly agreed to vote for Adams in consideration of being made his Secretary of State. Consider the vile ingenuity of this scheme, and that it was winked at and affected to be believed by Jackson, and where does his vaunted integrity stand. The fact is that all investigation of the subject convinces the investigator that if there was any offer made, it was made by Jackson and his friends to Clay, and failing in this attempt, like the wife of Potiphar they revenge themselves by accusing the man they failed to gain of the act they attempted to commit. They well knew that if Adams became President, he could not avoid making Clay Secretary of State, and by ascribing to corruption that which was about to happen in all honor, they made that honorable and proper transaction when it afterwards actually occurred, a plausible proof of its own dishonor. A vilely cunning trick and one from the effect of which Mr. Clay never was able to recover.

On the publication of the letter in his first anger Clay published a card, denouncing the statement as a lie and offering to fight the one who made it. Kremer, good innocent, having implicit faith in what his instigators told him, published a counter card, avowing the authorship. Mr. Clay could not fight an idiot, so he withdrew his general challenge and demanded a committee to investigate the matter. Kremer consented to this and said he could prove the charges. He doubtless at the time believed it, having been so told by Jackson and his friends, but Clay's demand for a committee had been too sudden to enable his instigators to see him. It was far from their design to permit an investigation, and they deflected it by writing another letter for their tool which he sent to the committee, stating that the House had no constitutional authority to assume jurisdiction over the case. He was going, he said, to communicate his proofs to his constituents. This get-off was plainly Jacksonian, the usual arrogant personal interpretation of the constitution backed by an appeal to the people on the stump. When Adams became President, Clay became Secretary of State. "Did we not tell you so," said the Jackson people? If he had not accepted, their cry would have been, that "fear only prevented him from claiming the corrupt reward." An address of Kremer to his constituents, was used in an attempt to prevent Clay's confirmation by the Senate, and Jackson then a member of the Senate voted against confirmation. No one of those opposed to the nomination dared open their mouths to charge a corrupt bargain on Clay. If any one had, a committee of investigation would have been demanded for Clay. Does any one believe that had Jackson at this time believed what he asserted and acted on in private, he would have feared to assert the same thing in the Senate. His friends may say he was no speaker, but he could at least have "choked with rage," as he was accustomed to do. Jackson knew that the whole thing was a lie, and yet with the merciless spirit of an Indian he used it not only to defeat but to torture his great antagonist until his dying day. On the day of the inauguration he congratulated President Adams. But in Tennessee he claimed in every public place that he had been cheated out of his rights by a corrupt bargain. Mr

Schurz says: "Nobody believes that lie now. But it defeated his (Clay's) dearest ambitions and darkened the rest of his public life. It kept him refuting and explaining, explaining and refuting, year after year." Yes, it is admitted to be a lie, but it is not so generally admitted that it was a lie, instigated if not actually invented, by that great hero, that man of unimpeachable integrity Andrew Jackson.

This history of the "corrupt bargain and sale" business indicates the usual methods pursued by Jackson and his friends. The history of his attack on the Bank of the United States similarly shows the power of audacious and reiterated statement upon the minds of an ignorant and prejudiced public. This story is well told by Mr. Schurz. No man hated another as fiercely as Jackson hated Clay. The sentiment was doubtless returned, but there is a great difference in intensity between the hatred of a narrow and ignorant bigot, and that of a broad and liberal minded man who has other things to reflect on than his personal likes and dislikes. The triumph of Jackson and his election to the Presidency was due to the ignorance of the populace, and to no real fault on Clay's part. Mr. Schurz speaks in several places deprecatingly of Clay's desire for the Presidency, and makes the rather gratuitous assertion that "men who want very much to be President are often not fully conscious of their motives." This is a genteel renewal of a gag which is so old as to be particularly nauseous. It also somewhat savors of the envy with which the ordinary native born citizen who has at least theoretically rights to the Presidency equal to those of any other citizen, regards those favored individuals who seem to lie closest to the providential hand that is periodically thrust into the great lottery wheel. But why Mr. Schurz should feel envy of this kind is not so plain seeing that he cannot possibly be a participator in these divine chances. He speaks of Albert Gallatin as one of the few princes of finance that this country has had, ranking him second to Hamilton, and remarks, "Gallatin during his long career, had much to suffer on account of his foreign birth, etc., etc." He was denounced, "as an impertinent foreigner who should go home."

But why should it be a disgrace to crave to be elected President of the United States, and who have a better right to claim the office than those who gifted with natural aptitude have devoted their lives to the study of politics. Why study and labor, which in every other sphere are regarded as honorable stepping-stones to the highest success, are derided in political life is not far to seek. It comes from that suspicious ignorance characteristic of large masses of men, which should not be regarded as a virtue but as a fault to be cured, if ever, by the advance of education and culture.

Eighteen Hundred Dollars deposited with the Fidelity National Bank by the Government to be paid on the fulfillment of a contract for furnishing coal to the Custom House was lost. The bank was not a designated depository of the United States. Bankers generally do not seem to be aware of the provisions of section 5497, United States Revised Statutes, which make it an act of embezzlement for the officers of any bank not a designated depository to receive deposits of public money from any officer or agent of the United States.

Proposals were opened recently at Hartford, Conn., for a new 3½ per cent. \$1,000,000 loan of the State, due in ten years, and payable earlier at the option of the State Treasurer, the highest numbers to be payable first. An award was made of \$500,000 of the lowest numbers to the Aetna Life Insurance Company at 108.27, and the second \$500,000 to the Williamsburgh Savings Bank, of Brooklyn, N. Y., at 102.25. The total of the bids was nearly \$7,000,000. This indicates the large amount of money ready to be invested in good stocks.

The Union Savings Bank, of Lincoln, Neb., seems to be a thriving institution. The object of the bank is to afford a secure investment to persons of either sex who receive money in small sums and are desirous of saving it, to assist and encourage the industrious and frugal to lay by such part of their earnings as they may be able to spare, and to provide for the safe keeping of money. Its deposits amount to \$115,520.28. As will be observed by consulting the bank changes published in the present number of the JOURNAL, banking business appears to be thriving in the State of Nebraska. The establishment of commercial banks merely may indicate nothing more than general activity in business, without, of necessity, any guaranty of profit or permanency; but if a Savings bank can do a thriving business it indicates that the people are prospering.

BANKERS' OBITUARY RECORD.

Boardman.—Isaac H. Boardman, the President of the Merchants National Bank of Newburyport, Mass., died on July 10th. He was a director in the bank for forty years. President for the last ten. He had been Mayor of Newburyport, and had served both as State Senator and member of the State House of Representatives.

Clague.—John Clague, President of the Bank of Benson, Minn., died in May last.

Cooke.—Jay Cooke, banker and broker of Washington, D. C., son of the late Governor H. D. Cooke and nephew of Jay Cooke, the famous Philadelphia banker, died on July 15th in Georgetown, D. C., of Brights disease.

De Rivas.—Manuel E. De Rivas, a member of the stock exchange, died on July 18th.

Harvier.—Calixte Harvier, an old resident of New York City, and well known foreign exchange broker, died during the month at the age of 79. He was at one time a director in the Bank of the State of New York, the old Union Bank, the Sterling Insurance Company and other prominent institutions.

Herschmer.—G. S. Herschmer, Manager of the branch of the Central Bank of Canada at Brampton, O., is dead.

Hill.—A. B. Hill, Vice-President of the stock exchange, died suddenly on July 15th, at the stock exchange, while making the announcement of the death of another member.

Parry.—Charles T. Parry, who had for sixteen years been a member of the Board of Directors of the National Bank of the Republic of Philadelphia, Pa., died on July 18th. At a meeting of the Board of Directors of the bank resolutions expressive of the high appreciation in which he was held were passed and ordered to be put on record.

Perkins.—Wm. Perkins, President of the Tremont National bank of Boston, Mass., died on July 13th, at the age of 82. He was also President of the China Insurance Company. He was a representative of the very highest type of old-time Boston merchants and his career was marked by modesty, honesty and unostentatious benevolence. He was largely interested in the India and China trade.

Sargent.—Ignatius Sargent, President of the Machias Bank, Machias, Me., died on August 1st, at the age of 72. He had been county Treasurer thirty-one consecutive terms.

Sibley.—Geo. R. Sibley, President of the National Bank of Augusta, Augusta, Ga., died suddenly on July 15th, at Summerville, Ga.

Sturgus.—Z. B. Sturgus, Cashier of Farmers & Merchants' Bank, New Concord, Ohio, died July 18th.

Thomas.—George R. Thomas, Cashier of the Second National Bank of Utica, N. Y., died July 25th at the age of sixty-five. He was also Treasurer of the Episcopal fund of Central New York and of most of the charitable institutions of Utica.

Vance.—James M. Vance, a director of the Union National Bank of Philadelphia died on July 26th. The next day resolutions of respect and condolence were passed by the Board of Directors and entered on the minute book.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on August 1, 1887, showing the amounts of National Bank notes and of Legal-Tender notes outstanding at the dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

NATIONAL BANK NOTES.

Amount outstanding June 20, 1874.....	\$349,894.123
Amount outstanding January 14, 1875.....	351,861.450
Amount outstanding May 31, 1878.....	322,755.965
Amount outstanding at date*	276,204.523
Decrease during the last month.....	2,759.231
Decrease since August 1, 1886.....	30,311.815

LEGAL-TENDER NOTES.

Amount outstanding June 20, 1874.....	\$382,000.000
Amount outstanding January 14, 1875.....	383,000.000
Amount retired under Act of January 14, 1875, to May 31, 1878.....	35,313.984
Amount outstanding on and since May 31, 1878.....	348,686.016
Amount on deposit with the Treasurer of the United States to redeem notes of insolvent and liquidating banks and banks retiring circulation under Acts of June 20, 1874, and July 12, 1882.....	106,901.094
Decrease in deposit during the last month.....	433.319
Increase in deposit since August 1, 1886.....	45,056.797

*Circulation of National Gold Banks not included in the above, \$242,754.

W. L. TRENHOLM, *Comptroller of the Currency.*

RHODES' JOURNAL OF BANKING.

Vol. XIV. SEPTEMBER, 1887. No. 9.

SOME misunderstanding exists as to the manner in which the rebate of 2 per cent. is to be computed which is to be granted to the Government by the holders of fours and four and a half per cents, who accept the payment in advance of six months' interest on their bonds. Some seem to have been under the impression that they would be required to surrender two of the four or four and a half per cent. and receive only two or two and a half per cent. from the Government. Mr. Fairchild has taken pains to give to the public the following illustration. An application for prepayment of interest being made on August 18 by the holder of \$100,000 four and a half per cents. would receive a check for \$2,242.90, based upon the following computation: Two quarters' interest on \$100,000 at $4\frac{1}{2}$ per cent. is \$2,250; rebate at two per cent. for the 12 remaining days in August on \$1,125, one quarter's interest, 74c, and for 12 days and 3 months on the remaining \$1,125, \$6.36; total rebate, \$7.10.

We have always regarded the prepayment of interest in this manner by the Government as one of the best measures that could possibly be adopted by the Treasury to palliate the worst effects of the locking of the redundant revenues. There is no class of bondholders in better condition to avail themselves of the offer than the banks, particularly at the season of the year which is now approaching. There is hardly any National or other bank holding U. S. bonds that cannot make more than two per cent. on the advance interest they receive from the Government. Any of them can loan it immediately at five and six per cent. and many of them for much more. It would seem to be especially advantageous to the banks in the Western States where the interest rates are highest. Assuming that a bank can use the amount received at six per cent. a computation based on the one already given will show the profit to be derived from the acceptance of the Secretary's offer.

If a bank holding \$100,000 of $4\frac{1}{2}$ per cent. bonds accepted the Secretary's offer on August 18th, it would, as before seen, receive a check of \$2,242.90, having granted a rebate of \$7.10. Loaning the

money say within four days and getting six per cent., it would have the use of \$1,124.26 of the sum for eight days longer than it would if had waited until September 1st for payment. Interest at six per cent. for eight days on \$1,124.26 would be \$1.47. On the September interest, allowing four days in which to loan the money, there would be a gain of 73 cents. On the \$1,125, otherwise payable December 1, the bank would allow a rebate of \$6.36 and receive \$1,118.64, and could loan this at six per cent. for three months and twenty days longer than if retained by the Treasury until December 1, and receive a total interest of \$20.42. Deducting the rebate from this leaves a net gain of \$14.06, and adding the 73 cents gained on accepting the September interest, the total net gain on the whole transaction is \$14.79. The bank, moreover, goes to no other expense and trouble than that involved in ordinary correspondence. The gain in accepting interest on the fours is greater than on the four and a half. The bank accepting on August 18th prepayment of quarterly interest on \$100,000 fours would pay a rebate of 2 per cent. for one month and twelve days, viz.: \$2.32, on \$1,000 due October 1st, and would receive \$997.68. On the \$1,000 due January 1st it would pay rebate for four months and twelve days, viz.: \$7.32, and receive \$992.68. In all it would grant a rebate of \$9.64 and receive \$1,990.36. Of this, \$997.68, allowing four days' delay, could be loaned for one month and eight days at six per cent., and \$992.68 for four months and eight days at the same rate. The interest on the first sum would be \$6.30 as against a rebate of \$2.32, and on the second \$21.15 as against a rebate of \$7.32, being a profit of \$3.98 in the one case and of \$13.83 in the other, or a total profit in acceptance of advanced interest on \$100,000 in fours amounting to about \$18, more than would be made if interest were received at the usual time. Where rates of interest are higher the profit would, of course, be greater.

Very likely the policy of advanced interest payments, having now been inaugurated, will be continued. When September 1st arrives, the Secretary can then offer to prepay the interest on the four and a half from December 1st to March 1st, and on October 1st offer, in the same way, the interest on the fours from January 1st to April 1st, renewing offers every quarter on each class of bonds, thus making the acceptance more advantageous both to the banks and the Government, the full period of six months being granted to each.

THE SUBJECT OF uniformity in check and draft forms, which has been brought so prominently before the bankers of the country by the action of the Bankers' Club of the city of Chicago, mentioned in the August number of the JOURNAL, has since received the indorsement the newly organized Iowa Bankers' Association held at Des Moines. We see that it is announced that the subject will receive further consideration at the convention of the American Bankers' Association

to be held at Pittsburgh in October. We trust that this eminently practical subject will receive the attention it deserves, and that the Bankers' Association, which has it perfectly in its power to do so, will take action securing the uniformity desired, which will no doubt lighten the labors of banks and bankers at least one-third. Another important subject for discussion and possible settlement is that of the "country exchanges," how they may be made uniformly profitable to all the banks. These collections have heretofore served more as a lure to the public in capturing business from rival banks than as a source of profit. The JOURNAL, having observed from the proceedings of former bankers' conventions, the great extent to which bankers deprecated the present system, has given much attention to the subject. Some months ago we offered a prize for the best descriptive essay on the subject of "Country Collections." Our first idea was to have the successful essay determined by five judges, but the number of essays received complying with the conditions of our offer being limited, we have been enabled to present to the JOURNAL'S readers all of them containing new and practical ideas. The seventh and last appears in this number. As stated in the June number we ask the JOURNAL'S readers to indicate on a postal card the one entitled to the prize—each subscriber being entitled to one vote—indicating the essay by the name or motto below the heading. The voting is limited to four weeks' after the publication of this number, or to fix the date more exactly, the vote must be received here on or before the eighth of October, 1887. These essays contain many valuable ideas on the subject, and are all evidently written by practical bankers. These essays have, as we have reason to know, been read with much attention and interest, and while they may not cover all the ground, they are certainly very suggestive and form a good basis for a perfect system.

Another subject which will excite much interest at the convention, will be that of bank circulation. Under the present laws governing the National banking system and the bonded debt of the United States, it is plain that bank circulation, assuming that State banks will never regain the right to issue notes, will soon become a thing of the past. It is very doubtful whether in the present condition of the National debt it is possible to perpetuate a circulation based on United States bonds. In some respects, particularly as regards distribution, no currency is equal to a bank currency. This subject in its entirety has never been adequately considered.

Undoubtedly the Silver question will occupy some of the time of the Convention. It always does. It has been the favorite subject for those who desired to exploit themselves to expatiate upon. It is an important question, but bankers should consider it practically from a banker's standpoint. Undoubtedly the continued coinage of the silver dollar is a standing threat to the gold standard. By a gold standard we do not mean the use of gold or of paper redeemable in

gold to the exclusion of silver or paper redeemable in silver, but only that the value of the silver and paper based on silver shall be measured by the gold. We believe in a use of silver as liberal as is consistent with the maintenance of such a standard. We think to maintain it gold funds strictly must predominate, and fear that by the continued coinage of silver we are risking the paramount position of gold. When the silver end of the teter-board goes down from excessive weight, then will come a change of standard. The thing for bankers, simply as bankers to know, is when this change is likely to occur, so they may prepare for it; but as citizens they should endeavor to maintain the standard best for the general interests of the country.

Above all, we hope the Convention will meet in a serious spirit, feeling that they have business to transact of vital importance to the banks and bankers of the country, and that the Convention is not called for social or junketing purposes. We trust each delegate will do his utmost to make this coming Convention one that in practical benefit to banking interests has never before been equalled. It is too much the custom to look on such meetings as a method of relaxation and amusement, and to show a lack of appreciation for the reason for having any Convention at all. This is why the American Bankers' Association has never accomplished the usual results which are supposed to follow united effort. There is no class in the country that includes among its members a larger proportion of men of ability than the men who run our banks, but heretofore they have failed to show any consistent unity of purpose.

COMPTROLLER TRENHOLM recently sent a circular very courteously worded to the bank officers of the country, including those of State banks, requesting information, to be used in his annual report to Congress, relative to the distribution of bank stock. In reply to one of these circulars he received the following letter :

OFFICE LAFAYETTE COUNTY BANK, }
Lexington, Mo. }

SIR:—As the Comptroller is simply legal counsel and lobbyist for the National banks, is an enemy of the State banks and the Constitutional coinage, it is a sufficient trial of our patience to be taxed to pay his salary, and as I believe any statistics furnished him would be distorted into an argument for perpetuating the public debt in order to keep alive the undemocratic Federal bank-system, I must decline to honor the draft you make on my good nature in your circular asking information.

Very respectfully,

GEORGE WILSON, President.

This is an extreme view, and possibly based on the ideas and banking experiences of former times; but in view of the fact that the National banking system does not, under the financial laws now in force, at all fulfill what at one time was regarded as a principal function of banking, and that the State banks are prevented from doing it, there is some apparent ground for dissatisfaction. The Federal Government, with its banking system, neither permits the National banks to give any elasticity to the currency nor permits the State banks to do so. Naturally an old State banker regrets the time

when, by the issue of bills, he could send the crops to market without waiting for the slow return of currency from the money centres. There was doubtless a tremendous element of danger in the loose way in which many State banks were permitted to enlarge the circulating medium of the country, but there is also something unsatisfactory both to the banks and their customers in the present hide-bound system of currency. The full inconvenience of the present paper money system is somewhat palliated by the immense increase in the metallic circulation, including both coin and coin certificates, which has taken place within the past few years, but a drain of coin would soon show the great rigidity of legal-tender notes and National bank notes issued under present conditions. While the National system has lost its usefulness as a supplier of currency, its history has shown how creditably banking may be carried on under a uniform Federal law, and how safely and profitable for those who have dealings with the banks in any capacity. When we make comparison, however, between the National banks and the State banks now doing business, we cannot say that it is at all unfavorable to the latter. Most of them are conducted with conservative ability and are in every respect equal to National banks of the same capital. This is due, perhaps, to the example set by the banks in the National system. It is as a system of banks without currency, simply of deposit and discount, that the National system has won its chief laurels.

If, however, the banks in the city of New York for instance, when money was tight, could issue bills to a reasonable extent on their credit as the State banks formerly did, it would certainly remove much of the apprehension which is based on what is called a bad bank statement. The surplus reserve, as it is called, simply represents the height of the cash above the zero point, as in other words above the point at which their legal loaning power ceases. The power to issue bills without a deposit of bonds on a reserve of say twenty-five per cent. of specie or legal-tender notes would increase the loaning power of the banks just four-fold, provided the total issue did not exceed the limit permitted.

Of course our Missouri banker naturally regards the National system as the cause of all his woes, and the Comptroller as the personification of the evil. He is not to be tempted by mere suavity of diction to give any aid or comfort to the enemy. Even if there is a certain aggressive tone of defiance in the Missouri banker's reply, it savors of old-fashioned independence, to say the least.

THE ACTION of the Secretary of the Treasury in paying interest in advance and in soliciting proposals for the sale of U. S. four per cent. bonds, seems to have been finally determined on after much hesitation, which euphuistic reporters delight in calling reflection and consideration. When determined upon it was announced with excuses and

apologies. The Secretary regarded this plan as the best thing to be adopted under the circumstances. He is well within the law on the purchase of bonds, for they must be purchased for the sinking fund, and the payment of advance interest at a rebate is only what any good business man would do if he had money on hand to discount his obligations. The sinking fund requirements for the year are \$26,000,000 in addition to the \$20,000,000 of redeemed three per cents. already applied to that fund. It would appear from these statements that the Secretary of the Treasury has determined not to buy bonds to any greater extent than is authorized by the sinking fund, and this amount, assuming that so many bonds will be offered, is \$26,000,000. This and the semi-annual interest of \$22,000,000 gives an exit for Treasury surplus amounting to \$48,000,000. On January 1st the Secretary can anticipate another \$22,000,000 of interest, and on July 1, 1888, still another installment; but it must not be lost sight of that, although three or more installments are paid, he gains actually six months' time on one only. The most ingenious insinuation yet made in regard to the whole matter is contained in the intimation said to have been given by Mr. Fairchild, that the surplus can only be put out through the co-operation of the bondholders. That is if the Treasury through any cause does not get out its surplus, but through keeping and hoarding it causes a disturbance in the business finances of the country, the bondholders are to be held responsible, inasmuch as they will not sell bonds, which they are legally entitled to keep, at the Secretary's price. The bondholders, of whom the National banks form an important proportion, will doubtless see that patriotism requires them to sacrifice their interests in order that the Secretary of the Treasury may have the credit of great financial ability. The bids opened on the 10th and 17th and the first acceptance of \$260,000 offered at 1.10 flat by the Suffolk Savings Bank of Boston, and the next acceptance of the \$1,000,000 coupon and \$1,500,000 registered bonds offered at 1.09 44-100, by Harvey Fisk & Sons, New York, looks like a scheme to refuse any price which is not below the lowest bid at the last bidding. In other words, a bidder, to have any chance, must bid something below the price previously accepted. This is a very ingenious plan to force the market down. The holders of $4\frac{1}{2}$ per cent. bonds ought to form an association for mutual protection, and they could very easily keep the market to at least 110. The advance purchase of enough of the four and a halfs, renders more certain the payment of what remains on the day they become due. If all the holders should stoutly refuse to sell, a large portion of the bonds will necessarily run beyond that time. It would be very beneficial to all, if such an association should enter the lists as against the Government, buying at a slight advance on what the Government might be willing to give, though never more than the calculated value of the bond as an investment, say as compared with

four per cents. The Government would thus have to give at least what the bonds were worth, and not be able by its immense influence to push prices down.

THE PRACTICE of over certification of checks by the banks, both State and National, in New York City is one that results in much evil to the customers of the banks and the community at large not to say the banks themselves. It should be discontinued by the New York Clearing-House Association, who have it in their power to suppress its most dangerous features if not to do away with it altogether. Not even the banks which most indulge the practice will deny the risk that is run. Hardly any bank president who has permitted it to any extent, but has passed many a bad quarter of an hour fearing these loans of the bank's credit might be dishonored. No one will pretend that over-certification is necessary to the advancement of any mercantile, manufacturing, or commercial business. Its defenders claim only, that the business of dealing in stocks cannot be carried on without it. That it is a great aid and in fact a principal inducement to over speculation in stock no one will deny, but it is equally certain that any legitimate business in stock could be carried on with equal efficiency to any extent by other methods, as is already proved by that followed by one of the Stock boards of New York City, and by those which have always been followed in London, and other European money centres. The real truth is that in order to deal in stocks under the present rules of the stock exchange it is necessary to have temporary use of large sums of money, and this fact affording as it does an excuse for the practice of overcertification, enables the banks who do the brokers business to share in the brokers profits. But rules which require so large a use of cash to effect what may be done more simply and safely must be regarded as much an instance of financial barbarism, as it would be to do away with the operations of the Clearing-House itself and return to the original custom of presenting checks at each bank. A bank which consents to overcertify a brokers check, usually does so at an enormous risk. It takes none of the usual security which banks require for loans, being as a rule dependent on the honor, and honesty of the broker. But the desire to share in the profits of stock speculations is doubtless in many cases the secret motive which impels bank officers to permit the funds of their stock-holders and depositors to be risked in this manner. Many bank managers appear to be possessed of such a hankering after transactions of this sort that they neglect other customers, and deprive merchants and traders of money that they need for carrying on the solid and paying enterprises in which they are engaged, probably of much more real value to the community than the ordinary operations of the stock board. We desire in this connection to call attention to the statements in the letter of our Chicago Correspondent who makes some remarkable statements as to the growth of that city as a financial centre, especially to the fact that the deposits

of the First National Bank of that city recently exceeded those of any bank in New York City. There is too, it would appear from our correspondent a freedom from the speculative methods indulged in by some of the New York Banks, which has made money easier for legitimate business enterprises in Chicago, than in New York City.

The Comptroller of the Currency should do all in his power to enforce the law against overcertification by furnishing the evidence which he either has or may obtain if he desires, against banks which practice it, to the Department of Justice, and not let political affiliations overcome the inflexible devotion to law and duty he professes, and seems to manifest in other directions. Legal methods alone may not stop a practice which is so profitable to those who engage in it, as the federal law does not apply to State banks. This does not however excuse the Comptroller from doing his duty.

The only way in which overcertification can be made a thing of the past, is to have the more conservative bankers use their influence in the Clearing-House to bind the Associated Banks to refuse all certifications which are beyond the drawers balance at the time the check is presented. There could be no better time for action of this kind than the present when speculation in stocks is dull, and the temptations to overcertification, presumably less.

THE PROPOSITION TO return the surplus revenues of the general Government to the States has been revived by Mr. Edward L. Andrews, a lawyer, who represents certain holders of State and municipal bonds which the States have found it inconvenient to pay. This method of relieving the Federal Treasury of superabundant resources was first suggested in 1827 by Mr. Dickerson, of New Jersey, who introduced in Congress a bill for the distribution of \$5,000,000 per year for four years. This was premature, as the debt of the Government was not, at that time, fully paid, and the proposition received little attention. President Jackson revived it in 1829, but, doubting its constitutionality, suggested that the Constitution be amended so as to permit such a distribution. It was not until 1836 that final action was taken by Congress, and in the meantime Jackson had changed his views, and strenuously opposed the measure. In 1835 a Senate committee, of which Webster and Calhoun were members, reported a resolution approving a distribution, and in 1836 a bill authorizing such a disposal of the surplus revenues passed the Senate, supported by Mr. Clay and Mr. Webster. The House regarded a *distribution* as unconstitutional and altered the bill to a measure authorizing the *deposit* of the surplus with the States subject to the call of the Secretary of the Treasury, and it became a law in this form June 23, 1836. The surplus over \$5,000,000 on January 1, 1837, was to be deposited in four quarterly installments, the first on January 1, 1837. The amount turned out to be \$37,468,859, and consisted of

that sum to the credit of the Government with some eighty-nine State banks. The first three installments were withdrawn from the banks and deposited with the States, the first two in specie or its equivalent. The second installment, paid in April, 1837, exhausted the deposit banks, which suspended specie payments, and the third installment was deposited in depreciated bank notes. The great panic of 1837 began with the failure of the deposit banks, revenues ran down, and the fourth installment was due October 1st. A special session of Congress met on September 4th. The Secretary of the Treasury reported a deficiency of \$10,000,000 in the revenues. If the fourth installment were deposited it would have to be drawn back immediately, therefore it was better not to deposit it. Most of the funds the Government had were in the failed banks and unavailable. The available funds did not equal the fourth installment by \$4,000,000. If the deposit was to be made the money must be borrowed. A bill was introduced by Silas Wright to postpone the transfer of this last amount to the States. It was hotly debated. The States counted on the money, had expected it, to complete public works already begun. Mr. Buchanan proposed an amendment to the law, taking from the Secretary of the Treasury the power to recall any of the three installments already deposited. The bill—as it finally became a law—contained this amendment and postponed the payment of the fourth installment until January 1, 1839. From that day to this Congress has never authorized the Secretary to recall the deposits then made with the States. Technically and constitutionally they are a part of the funds of the Government to-day the same as are the public funds in National bank depositories. No State can be said to be free from debt until it returns these deposits to the United States; but no State has, of its own volition, ever offered to return them. In return for the money the Secretary of the Treasury received from the Treasurer of each State, not a receipt, but a certificate of deposit, subject to the future call of the Government. No appropriation of the money was ever made by Congress, nor was any warrant ever issued by the Secretary of the Treasury, which is the only way in which Federal funds can be constitutionally disbursed. In 1860, Secretary Dix suggested that Congress authorize the withdrawal of these moneys from the States to meet the pressing exigencies then existing.

This is a brief history of the deposit of the surplus with the States condensed from an interesting chapter on this subject in "United States Notes," by Hon. John Jay Knox. The differences between that time and this are: 1st. The United States in 1836 had no debt, now we have a debt of over \$1,000,000,000. The surplus then deposited was over and above all indebtedness and expenditure. A distribution now would involve paying away money which may be need hereafter to meet the bonds when they become due. 2d. It was believed in 1836 that to give the money outright to the States was unconstitutional.

Is it any less so now? 3d. It was objected in 1836, that to make the States dependent on the revenues of the general Government is to make them subservient to the central power, and must destroy the balance between the States and the Federal power, thought so desirable in our institutions. Does not this reasoning apply with even greater force now? 4th. It was objected that the distribution of the revenues among the States would give to any existing administration an immense patronage. If this was feared with \$40,000,000 would it not seem to be worthy of apprehension with \$400,000,000? 5th. There was no *distribution* or gift of money among or to the States in 1836-37. The surplus was deposited with them until Congress should authorize it to be called for. It is still in the United States Treasury. A self-respecting State, desiring to announce itself out of debt, cannot do so until it returns to the Treasury of the United States this deposit of public money and receives back from the Secretary of the Treasury the certificates of deposit, signed by its own Treasurer, which are held as a part of the Government assets at Washington. Luckily these certificates do not call for interest, or a liquidation of these honest debts of the States to the United States might place the Federal Treasury in a dangerous condition of plethora.

RECENTLY THE COLLECTION of coins made by Dr. Linderman, formerly Director of the United States Mint and now deceased, was offered for sale, and the sale was forbidden by the present Director of the Mint, apparently on the ground that Dr. Linderman had used his position to have coins struck for his collection from Government dies, either on soft metal or in gold, silver, or copper. At the same time the present Director of the Mint issued a circular declaring it to be contrary to law to emit impressions of experimental dies, whether in soft metal or not, except in the case of pattern pieces of coin that are coined for circulation during the calendar year of their date. The law is intended to prevent the coinage of pieces in one year which bear date of a different year, and to preserve the authenticity of the coinage. For instance, a die for coining silver dollars was prepared in 1804, and a few pieces were struck from it in that year, but for some reason were melted down before issue, so that actually no dollars of 1804 coined in that year, and therefore no authentic pieces of that date are in existence. The die was, however, preserved, and a few pieces were struck from it as curiosities at some later date. This, were there no law to prevent it, might happen with any pattern or authorized coin. When experiments are made to select new coinage designs, several dies may be prepared and specimen pieces struck, although the designs of all but one will be rejected. The law is intended to prevent these specimens pieces not finally adopted from getting into circulation. Whether the obtaining such pieces for private collections is an infringement of the spirit of the law may be a

question. Dr. Linderman, when a Director of the Mint, evidently did not regard it as a violation of the statute to procure such specimens for his own cabinet, and his action in making such a collection, being an expert in such matters, may readily be defended on the ground of advancement of knowledge. The action of the present Director of the Mint, though perhaps characterized by a laudable zeal for the observance of law, is somewhat harsh in that it may, without due cause, asperse the memory of his predecessor.

THE PROPOSED LAW FOR restricting the investments of Savings Banks in New Hampshire largely to securities within the State, now before the New Hampshire Legislature, has doubtless been suggested by the fact recently shown by the report of the Bank Commissioners of that State, that the Savings Banks have invested quite largely in Western farm mortgages, about which there has been of late a spirit of inquiry, indicating some distrust in them as an investment. In another part of the JOURNAL we give an exhaustive article on the subject. There is doubtless some reason for calling a halt in Savings bank investments of this kind, not so much for the purpose of condemning them altogether, but to take stock, as it were, and to reform some of the methods known to prevail in making loans on securities of this kind. Such a sweeping remedy as that proposed in the New Hampshire Legislature is, it seems to us, calculated to do more injury in one direction than it will accomplish good in the other. We do not believe that the confining of fifty per cent. of Savings investments within the State will work any benefit either to the business of the State or to its Savings banks. We do not believe that taking the capital already invested in business enterprises there, as probably nearly sufficient for all requirements, that fifty per cent. of the Savings bank funds could, in addition, be profitably and safely employed within the State. The bill, the substance of which is given in the news department of the JOURNAL, provides that investments may be made in stock and bonds of railways, incorporated by the State, although located outside of it. The result of such a provision would apparently be to encourage the building of new railroads under New Hampshire charters for the purpose of having stocks and bonds in which to invest the means of the New Hampshire Savings banks. Similarly the Savings banks would be tempted to furnish capital for commercial banks and other moneyed corporations in order to be able to invest in their stock, etc., etc. New Hampshire would then be well provided with railroads, banks, etc., but it might not be so well provided, immediately, at least, with business for them to do.

UNDER THE HOLIDAY ACT of May 6, 1887, the first Monday in September, to be known as Labor Day, became a legal holiday, the same as Fourth of July or Christmas. The first Monday this year was the 5th.

LOANS ON WESTERN MORTGAGES.*

Some interest, not to say apprehension, has recently been excited by the proportions to which the business of loaning on mortgages on Western farm lands has grown. It is represented that in Kansas and Nebraska alone one hundred and thirty-four companies have been incorporated for the purpose of making such loans, and there are in the East a large number of insurance companies, mortgage loan companies and savings banks that engage in the same business. The great development of the agricultural interests of some of the Western States—notably Kansas and Nebraska—has afforded a basis of apparent security that has been made the most of. The fact that a large proportion of the loans of this description are made through agents at a distance has thrown into the business a conflict of interests which has tended to much looseness of method, and which may result in serious disaster to many. When an individual or corporation loans money on real property in their own locality they cannot be easily carried away by any wild tales as to the present or prospective value of the same. Distance always lends a certain enchantment. Money seeking secure investment has been plenty in the East, good bonds and stocks have sold at rates realizing very little to the investor; sound real estate investments in the East produced but little more. Offers of bonds of municipalities, counties, cities, or States, having good credit, have generally been subscribed for three times over. There has been an absence of speculative spirit but a desire for long and sure investments. This being the state of things in the East, those who desired larger returns but still under conditions compatible with safety, naturally listened appreciatively to the offers of investments in mortgages on Western farm lands. The basis of value was the rapid development of the country, and the consequent increase of value of the farms loaned upon. Every one who notes the rapid growth of population in the United States, and the tendency of the more energetic portion with their way to make to settle the better agricultural localities of the Western States, sees that land in some of those sections must have a very rapid and sure increase in value. There can be no doubt about this. The actual loaning, both for mortgage companies and individuals, is usually done by the Western agent who lives on the spot and is supposed to know the character and prospects of the property loaned on. Where a business offers so many prospects of present and prospective profits there is going to be fierce competition for the prizes. The business of investment broking in farm mortgages is doubtless very profitable to the brokers, for they have become in numbers like the grasshoppers. The arguments contained in their circulars and advertisements have a broad basis of truth, but in many respects are simply plausible and taking. Loans are alleged to be made on real estate to the amount of one-third of its estimated value. Annual interest of eight per cent., payable

*The authorities from which much of this article is derived are the address of Mr. H. M. McDonald, President of the Traders' Bank, Pierre, Dakota, before the Third Annual Convention of Dakota Bankers, published in the proceedings of that convention, and an article in the *Chicago Inter-Ocean*, stating the results of answers received to questions sent out by Chicago capitalists to persons residing in various counties in Kansas and Nebraska as to the state of existing mortgage loans.

semi-annually, the lender has no expenses to pay, the borrower pays all. Titles are said to be rigidly searched. The brokers agree to pay interest on money from the time it is received until it is invested. All laws of the locality relative to real estate, etc., are set forth minutely and interpreted for the investor. All is so plain that the latter needs not exert any thought whatever, the energetic and accommodating broker does all that for him. All he needs to do is to send on his money and eight per cent. per annum, payable semi-annually, rolls right in upon him. If he does not desire to take the risk of loaning on a mortgage on a particular piece of property, he can buy debenture bonds issued by the mortgage loan company, which are secured by a mass of mortgages placed with some large trust company.

The money advanced by Eastern investors on Kansas and Nebraska real estate mortgages is not less than \$50,000,000, and the total on the same security in all the West is estimated to be at least \$150,000,000 yearly. In Dakota thirty-seven mortgage companies have been incorporated under Dakota laws, fifteen of which are in active business with a capital of \$1,000,000. Ten other companies incorporated by other States also do business in Dakota. They have \$750,000 capital. They do, it is estimated a business of over \$8,000,000. In addition to the business done by the companies there is a large number of firms and individuals who put out money for Eastern investors. As to the extent to which these mortgages have been given, we learn that an examination of the records in Dakota, shows that on June 1, 1886, there were 17,708,388 acres of farm lands in the territory, and one of our authorities estimates that of this 18,778,191 acres were subject to mortgage. Estimating the value of the mortgages on Dakota farms on June 1, 1886 to have been \$44,000,000, the same authority places their value in 1887 at \$45,000,000 at least. Answers received by the Chicago *Inter-Ocean* from forty-four counties in Kansas and Nebraska would indicate that on an average nine-tenths of the land in each county were under mortgage. Other answers received indicated that the loans ranged in the proportion of from fifty to ninety per cent. of the cash value of the lands. There is no doubt that the anxiety of agents to make their commissions induces them to offer excessive inducements to borrowers. They it is alleged even solicit farmers to take loans on their lands, and often induce them to take loans for speculation.

The chief element of strength in this class of investment, is the advance in value of Western farm lands which is surely though unequally taking place. Among all the newer Western States there is none where the prices of farm lands fail to advance materially in market value every six to ten years. In Western Iowa lands that in 1880 sold for \$8 to \$10 per acre or less now being ten to fifteen, and lands in Eastern Dakota that brought only four to six dollars in 18-3, now command from eight to ten dollars. The strongest elements in the increase of value are immigration and the extension of railroads. How much this element of strength in which all others are involved will prevail against the dangers of over loaning, caused by the competition of large sums seeking investment, the greed of agents and mortgage companies, remains to be seen. It is plain that the farmers of the new West have little surplus capital. They depend for money to pay interest on the produce of their farms. One or two bad crops usually makes it necessary to foreclose the mortgage. What the result of a large number of foreclosures of mortgages resulting from

a general failure of crops would be may be judged from the usual answer received to a question of this kind sent out by the *Chicago Times*. "There is no accumulation of capital in the hands of farmers, and in the case of a failure of crops the loaners would have to buy the lands." This means loss of interest until they can sell them again unless they can rent or work the farms, although a final sale may realize enough to make up for the temporary loss of interest. A general foreclosure of mortgages and abandonment of farms might result in a large depreciation in the lands of an entire section of the country.

There is hardly any doubt that there have been, to say the least, serious over-valuation of some of the farms loaned on. That is while ostensibly loans are not made to a greater extent than two-thirds of the value of the property, cases are cited where farmers have obtained loans of amounts greater than they have previously demanded for an absolute sale of their farms. Of course where a farmer has the worth of his farm in a loan, there is a temptation to retain the produce for the one or two years which may elapse before foreclosure and then abandon the farm more especially as long as there opportunities to take up new land further West.

On the whole it is plain that if the business had been wisely and cautiously conducted investments in Western mortgages would have been safe and profitable. The method of loaning through agents and mortgage companies at a distance and the competition among these companies and agents, has given the borrower undue advantage over the lender. The general safety of the business as it now stands depends on the extent to which unwise methods have prevailed. We are inclined to think that some unnecessary alarm has been created by sensational reports, and that the majority of these investments are sound. Nevertheless the tendency is to recklessness in investment. Investors, both individuals and mortgage companies, should be more cautious and demand a thorough reform of all unsound practices and this reform should begin with the agents they employ. We quote from Mr. McDonald: "Such agents are necessary, but their duties should be well defined. They work for a commission. They are interested in having the mortgage company which they represent, accept every loan tendered, and at the highest possible amount; since, thereby their commission will reach the largest possible sum. The local agent may be honest, usually is, but his interests are diametrically opposed to those of any company, which intends to furnish in every instance a strong security, since the agent is pecuniarily interested in having the largest average amount loaned upon a given line of security, while the company should aim to keep the average loan in amount to a minimum. The office of the local agent should, therefore, merely consist in taking the application for a loan or in other words writing out the statements made by the applicant for submission to the managing officers of the mortgage company. A conservative, competent, tried, salaried examiner of the company should then visit and thoroughly examine the property upon which the loan is desired; he should also make the acquaintance of the applicant and inform himself fully as to his financial condition, habits and general character. The knowledge thus obtained should be submitted to the mortgage company. Then, and then only are the managing officers of the company in a position to pass intelligently and safely upon the application.

This is an expensive method of conducting the business; but I am positive, through a knowledge gained by a somewhat costly experience, that it is the

only safe and satisfactory way in which farm mortgage loans can be made." If the above very proper reforms are inaugurated in time and Eastern investors refuse to deal with companies or individuals who refuse to do their business in a conservative way, we believe that this form of investment will be comparatively safe and and surely profitable. We advise all those who desire to inform themselves more fully on the subject to read the address quoted above.

NOTE.—It is not the object of this article to advertise mortgage companies nor to discredit those which are prudently managed and backed by sufficient capital to make them safe beyond question. In the JOURNAL's advertising department will be found the advertisements of a number of companies and firms which we believe conduct their business on the right basis. Owing to the rapid extension of this class of business we have taken some pains to satisfy ourselves as to the methods, management, and financial strength of those who apply for space herein.

INTEREST ON DEPOSITS.

It is not the purpose of the JOURNAL to condemn the payment of interest on deposits when legitimately managed. As an inducement to encourage savings it has effected an immense amount of public good. Nor are its benefits confined to Savings bank. Commercial banks have a class of accounts on which they can afford to pay interest, inasmuch as the depositors never expect or ask for any return in the shape of bank accommodations. The balances are permanent and can be counted upon. The question of the payment of interest should, however, be determined by the permanency of the account, and the rate by the state of the money market. A depositor must know that a bank cannot afford to pay a greater rate for money than it loans it for. As the rates received fluctuate, so should the rates paid. If a depositor is aware that a bank customarily pays more interest than can be obtained in the open market, he has only to blame his own lack of judgment if he finally loses by the failure of the institution.

Of course as a bank is a machine especially fitted for dealing in money, its opportunities in the profitable use of funds are immensely greater than are those of an individual. Therefore a depositor who becomes such, simply to get a greater return for his money through a bank than by his own efforts in the market, is really not a borrower but a lender of money. In his relations with the public and the banks he stands more in the attitude of a stockholder than of a depositor in the ordinary sense, who is supposed to be a borrower rather than a lender. In fact a depositor for interest is really a partner in the institution with about half the liability of an ordinary stockholder. An individual with ten thousand dollars may invest it in bank stock. In any well established institution he would have to pay a considerable premium for the stock, so that it would not realize more than six per cent. As a stockholder he incurs a liability to double the amount of his stock. If he elects to simply deposit the money, he can get three or four per cent. perhaps, and run no risks as to further liability in case of failure, and at the worst becomes a creditor of the institution with an average chance of recovery from the proceeds of the liquidation. Moreover his money is within his own control, ready if a more profitable investment should at any time warrant. The bank benefits by the arrangement as it is under no obligations to this class of depositors, and can loan their money in any direction it may see fit without doing them any injustice. The capital of an ordinary commercial depositor is invested in his

business. His deposits are usually the proceeds of his sales either in the form of cash or commercial paper. He is at all times more or less of a borrower, and the surpluses of his account at one time are counter balanced by its deficiencies at another. He benefits the bank, but equally the bank benefits him, and in exchange for the use of his money he receives accommodation when he needs it. There is no doubt, however, that the large deposits made by depositors for interest are of great benefit to the commercial community. Business men get the use of more money, and where the payment of interest on deposits is properly regulated, at less rates than they would otherwise.

There is, however, another side to this argument. Competition among banks has a tendency to increase the rate of interest paid on deposits until some institutions offer inducements not warranted by the current rates for commercial loans. Of course cautious and experienced depositors are not influenced by such offers as they are well aware of the safety limit. To very many, however, the rate of interest offered is the only thing considered. For quick returns they are willing to take the risk. The bank offering the high rates gets the money. Its managers are supposed to be men who have special gifts in transmuting one dollar into two, or even three, and all apparently goes well for a time. What greater temptation can there be to bank officers to indulge in grand speculative operations than to see a heavy interest account eating up more than all the legitimate profits? One successful speculation, one wheat deal resulting fortunately, will place the institution on its feet for a time, until the inexorable tooth of extravagant interest compels a liquidation, or a new financial exploit which may either postpone or hasten the final explosion. The profit and expense including interest account of such an institution would be an instructive exhibition, and we do not think the Comptroller of the Currency could do better than to publish an analysis of that of the Fidelity National Bank from the date in 1886, on which it commenced business, to that of its failure. We think that as a measure of protection both to themselves and the public, banks in any locality should have some common understanding as to the amount of interest to be paid on deposits and the circumstances under which it should be allowed. Any bank paying excessive rates, or under circumstances where it must necessarily lose, should be regarded with suspicion.

The Prize Essay.—We publish the seventh and last of the essays on "Domestic Exchanges" received in response to the offer heretofore made by the JOURNAL of a prize of \$100 for the best essay on this subject. Two were published in the June number of the JOURNAL, two in July, and two in August. The several essays which have now been published are all that were received strictly complying with the conditions of our offer. At first it was proposed to have the merits of the various papers decided upon by five gentlemen prominent in banking circles, who had consented to act as Judges. Various causes intervened to prevent this course being taken, and it was finally concluded to leave the decision to the subscribers to the JOURNAL. The publication of the seven best essays having been completed, we now ask the JOURNAL's readers to indicate on a postal card the one entitled to the prize—each subscriber to be entitled to one vote. The voting will be limited to those who are subscribers on September 25th. The cards to be counted must reach us by October 10th. Each subscriber should indicate the essay he selects as worthy of the prize by the name or motto below the title. After October 10th the cards will be counted, and the name of the successful contestant duly announced in the JOURNAL.

THE GOLD AND SILVER COMMISSION.

[From the *London Economist* of August 6, 1887.]

Last week we showed that no definite information either as to the amount of the production of, or demand for, gold and silver has been elicited by the inquiry of the Commission; nor have we gained from it any further insight into the movements of the prices of commodities. The result to which the investigations on this point have thus far led is, that the series of index numbers published in the *Economist* are about as reliable an indication of the movements in the prices of wholesale commodities as can be obtained. These index numbers are not to be taken as a perfectly accurate reflex of the variations in prices, both because they deal with only a limited number of commodities, and because it is impossible, in compiling them, to make exact allowance for the relative importance of the different articles. No one can be more fully sensible of their imperfection in these respects than we are, and we follow with interest the attempts that others have made to draw up a better record. What the Commission has found, however, is that, although there are points of difference between the *Economist* index numbers and those which other statisticians have drawn up, the broad results brought out are the same. And as regards what may be called the natural movement in prices, the *Economist* record is a much better guide than the records of prices which have been compiled in Germany and the United States, since prices in those countries have been materially influenced during late years by tariff changes. It may be well, therefore, to reproduce the table of index numbers for the past seventeen years:

"INDEX NUMBER" REPRESENTING THE COMBINED PRICES OF TWENTY-TWO LEADING COMMODITIES.

Close of 1866 2,059	Close of..... 1878 2,202
Close of 1865 2,023	Close of..... 1877 2,529
Close of 1864 2,068	Close of..... 1876 2,728
Close of..... 1863 2,221	Close of..... 1875 2,711
Close of..... 1862 2,342	Close of..... 1874 2,778
Close of..... 1861 2,435	Close of..... 1873 2,891
Close of..... 1860 2,376	Close of..... 1872 2,947
Close of..... 1879 2,588	Close of..... 1871 2,885
			Close of..... 1870 2,591

Briefly stated, this shows a great rise of prices between 1870 and 1878, followed by an almost continuous fall till 1886, in which year there was a slight improvement. Unfortunately, there is no comprehensive record whatever of the movements in retail prices. We are thus left in doubt as to how far the purchasing power of gold in retail transactions has increased, and it is just in this retail business that the employment of gold is largest. The general conclusion, however, to which all available evidence on the part of the subject points is that, although retail prices have fallen, they have not fallen to the same extent as wholesale prices.

Passing from the evidence as to the movements in prices to that portion of the inquiry which was directed towards eliciting information as to the alleged adverse effect upon trade of the fall in the gold price of silver, we come upon fresher ground, and to more definite conclusions. This is, of course, the most important part of the investigation, because, unless substantial injury can be shown to have resulted from the fall in silver, the schemes of the bi-metallists

have no *raison d'être*, and on such a crucial point as this, it may be well rather to let the witnesses speak for themselves, than to put any interpretation of our own upon what they did say. The first witness examined on this point was Mr. Henry Waterfield, the Financial Secretary at the Indian Office, whose evidence was brought to a point by Mr. Chamberlain thus :

1838. I understand that you consider that the fall in exchange is a great injury to the Government of India, and the people that it represents, but that it does not materially affect traders with India?—That is my view.

1839. Or producers in India?—I think that perhaps to some extent it is of advantage to the producers as distinguished from the taxpayers. In so far as they are producers, I think they may get an advantage by the greater number of rupees which they receive for their produce, but as taxpayers, the tax-paying community, I should say, has to pay more taxes for its gold disbursements, and taking the country as a whole, I think there is no advantage.

1840. But the producers in India would not receive a greater number of rupees, would they? The purchasing value of the rupee in India having practically remained the same, they would receive, *cæteris paribus*, the same number of rupees for the same amount of produce that they have done?—Quite so.

1841. Therefore, if they benefit at all, it is only by natural advantages, or the railways, or similar things, which are independent of the fall or fluctuation in exchange?—Yes.

1842. But, as far as your opinion goes, neither the producers in India, nor the purchasers of Indian produce, nor the exporters of European goods to India, nor the Indian purchasers of European imports, are materially affected by the fall in exchange?—No, I think not in the long run at all.

1843. Then there is only one other class of people who are affected, and those are the *employees* in the civil administration; but they are beneficially affected, I think?—They are paid in rupees at the old rate; but in so far as they have to remit their savings to England, or, when they come on furlough, to draw their furlough pay in England, or when they take their pensions, if the pensions are payable in rupees, they are injured by the fall in exchange. If the pensions are payable in sterling, they receive the same sterling amount as before, and therefore, I think, are benefited.

1844. But the soldiers?—The soldiers are benefited; that is, the British soldiers.

1853. Therefore we come to this, that in your opinion the one ground for interference is in the case of the Government of India?—It is the main ground, I think.

It may, perhaps, be well to add that the reason why the English soldiers are said to have benefited, is that their payment being calculated in gold, they get more rupees than before, and as the purchasing power of the rupee in India has not diminished, they have a greater command of commodities than formerly.

This is what may be called official evidence, and what we have next to deal with is the evidence of persons actually engaged in trade with the East. Amongst these, the first to be examined was Mr. J. K. Bythell, a member of a Manchester firm, who thus described the mode in which business with India is conducted :

1906. I should like just to impress upon the Commission first of all that nearly all of the business now, since telegraphic communication was so perfect, is done simultaneously. There is very little produce shipped, I believe, from India for sale, on what you might call speculation, as merchants' speculation, and there are very few Manchester goods, I think, shipped to India in that way. Business is nearly all done either in execution of orders made, or through the exporter making offers in the currency of the country in which he sells. For instance, if we sell 1,000 bales of cotton to a man in England that will be at so much per pound delivered in England. Well, we do not sell that unless at the time we can contract for the cotton in India at a price fixed in rupees, sell our bills on England at an exchange which the bank for the time being will then fix for bills to be delivered when the produce is ready, and engage our freight, so that if we can close those three operations in India, of course we have fixed

our price in sterling, and if we get the price fixed per pound simultaneously from our buyer in Europe, our transaction is closed, provided all parties to the contract fulfil it—provided we have no failure.

To this it was objected that, although the merchant might thus shift the possibility of loss off from his own shoulders, the risk would have to fall somewhere. But Mr. Bythell demurred.

1908. I do not think so, because the banks who buy the one class of bill and sell the other put one transaction against the other and keep themselves covered from day to day as nearly as possible, I believe. For instance, I believe if some bank manager here who had branches in the East had telegrams to-day that his managers at his branches had bought bills for forward delivery against produce to a very large extent, he would practically cover himself almost immediately in some shape or form here. He would either buy Council drafts from Government or he would buy silver, or he would buy from day to day bills drawn from here against shipments to India.

1909. That is, the base of the whole is on a fixed exchange?—On a fixed exchange. Of course I am only inferring what Eastern bankers' business is. I believe you would find that the exchange banks with their head offices in London and their branches in the East scarcely speculate at all. They put the imports against the exports; and the silver and the Government Council drafts, bills drawn by the Secretary of State for India, virtually finance the balance.

In other words, the transaction being completed by all parties at the exchange of the moment is practically arranged at a fixed exchange, and no party to the transaction need run an uncovered risk.

Mr. R. Barclay, who is a strong bi-metallist, agreed in the main with Mr. Bythell as to the possibility of eliminating from trade with India the speculative element, so far as exchange is concerned, his statement being:

2241. In the great bulk of your transactions you secure yourself against any speculative loss?—As much as we can.

2242. And on the whole you succeed?—Yes; and without violent fluctuations, no doubt we would succeed.

This statement, however, he subsequently qualified by explaining that if from any cause a manufacturer is unable to complete his contract within the specified time, he becomes liable for any loss on exchange that the delay may cause, and that in this way he very frequently suffers loss.

The possibility of guarding in all cases against loss on exchange was, however, denied by Mr. Paul F. Tidman, of the firm of McTaggart & Co., East India merchants, whose view of the subject may be gathered from the following:

2819. Some of the witnesses that we have examined have told us that that particular source of loss (alteration in exchange) is obviated by arrangement with the banks, and by telegraphic transfers, by which the merchant exporting to the East and from the East is saved from all loss?—Yes. I think, however, it must be evident to the Commission that there is a risk incurred if the article which a man must take in exchange for his goods falls in value between the time of the commencement of his operation and the close. That risk must be borne by somebody, and if I put it on to a bank I simply shift the risk, and the person who takes that risk makes me pay for it. But, as a matter of fact, you will find that, whereas it has been asserted that Eastern banks are always willing to take this risk, there are times out of number when they decline to do so, and when the purchase of goods is simply stopped because the merchant cannot make his arrangement for the exchange.

On the other hand, however, Mr. A. D. Provand, M. P., the only other person examined on the business side of the question, gave it as his opinion that the Indian merchant can always "cover" himself, but that in trading with China or Japan it was impossible to do so, except at a relatively high cost.

As to whether the fall in exchange has or has not stimulated the Indian

export trade, opinion differed. Mr. Bythell holds strongly (Q. 1938) that "the fall in silver or the fall in exchange, put it in which way you like, has been a very great benefit to the Indian producer, and has largely helped to develop the export trade." As to national loss or gain, Mr. Barclay is not quite clear.

2422. Well, now, taking the broad view of the trade between the United Kingdom and India, has not the course of it been that we get from India a much larger valuation of commodities than we send to India?—Yes.

2423. And we have been sending from year to year bullion to make up part of the balance?—Yes.

2424. We buy commodities that we receive from India more cheaply than before?—Yes.

2425. That is gain?—To this country, yes.

2426. We sell the commodities that we send out more cheaply?—Yes.

2427. That may be a loss?—A loss.

2428. But if we get much more than we lose, and we make up part of the balance in silver, which is cheaper, is there not, on the whole, a balance of gain to the United Kingdom?—Yes, in a sense.

2429. Whatever Manchester or Lancashire may suffer, the United Kingdom gains?—In a sense, yes; but it is not merely a matter of balance; each may gain something as against its loss, and still both be greatly worse off than if these difficulties did not exist.

2430. Well, now turn our attention to India. In consequence of the same facts, India has been able to develop a very large and increasing manufacture and export of cotton goods to the East?—Yes.

2431. Is that a gain to India?—A gain to India.

2432. And what has India as a community lost?—As against that?

2433. Yes.—Nothing, as against that individually; Lancashire has lost.

2434. But you say the United Kingdom, as a whole, has gained?—By cheap produce.

2435. The result is that the United Kingdom as a whole has gained?—No, I do not admit that. I said that the price of things that we export has gone down; besides, cheap Indian produce would not compensate England for the loss of her cotton manufactures.

2436. India has gained through the fact that silver has become cheaper relatively to other commodities. Why should we be discontented when we have a gain on both sides?—It is not easy proving things off-hand, but you would find a difference.

This evidence may be left to speak for itself. Its general tenor is to show that trade with the East is quite capable of accommodating itself to alterations in the exchangeable value of gold and silver; and that while the fall in silver has injured certain individuals and classes it has benefited others. Whether, if a balance could be struck between the losses and the gains, the preponderance would be on the side of the former or the latter is a question on which opinions differ. For our part, we are inclined to regard the net result of all such currency fluctuations as adverse. But the question is, whether the loss or inconvenience shown is so great as would warrant us in entertaining revolutionary currency schemes, and to that question the evidence laid before the Commission gives a very emphatic negative. The case for bi-metallism has, in fact, broken down completely, and in view of that fact, it is hardly worth while to discuss again the schemes of its supporters. There are, however, some further points of interest in the inquiry, to which we purpose referring at another time.

THE LOW RATES OF EXCHANGE prevailing between this country and England and France is beginning to cause importations of gold. The London *Economist* says the Bank of France sold on August 18th 5,000,000 francs of gold for export to this country; the price paid was four per mille premium. Large amounts of American stocks have been bought by London houses, and this also tends to encourage gold importations.

DOMESTIC EXCHANGES.*How Bankers Can Handle Them to Insure Prompt Returns, a Fair Profit and the Greatest Degree of Safety.**

(BY EDMUND.)

The question propounded by RHODES' JOURNAL is one that is necessarily of profound interest to bankers and the study bestowed on it is constantly evolving plans, methods and ideas that have proven of vast benefit to the commercial interests of the whole country.

Railroads perhaps, have done more than any other thing to cheapen the cost of making exchanges.

Still the cry is for cheaper means, a fair profit, and safety. Doubtless a great variety of opinions and plans will be suggested and laid before us, and out of these great good will probably result.

By the term Domestic Exchanges I infer is meant all checks upon banks and every kind of negotiable paper in use in this country, notes, acceptances, sight, demand and time drafts, etc.

In this sense I shall use the phrase, and while this view will make the scope of the question wide and intricate, it is not wholly devoid of practical solution.

A long time ago (ere the Clearing-Houses were first established) the bank labored under great and serious difficulty to effect their city exchanges. Now how easily, systematically and cheaply is this work performed. I do not, therefore, anticipate that many years will elapse before the present laborious, clumsy and expensive system will give way to a thoroughly comprehensive plan easy of operation.

But to proceed.

Let us divide Domestic Exchanges into three parts, analyze each part, find out the trouble there, if any, and offer a solution, poor as it may be.

PART I.—COLLECTIONS RECEIVED.

Collections, in the sense in which I shall speak of them first, are such classes of paper as are received by a bank for presentation and acceptance, or collection upon merchants and others.

How are these collections now made ?

Generally in this manner :

After the mail is opened, all drafts, notes, checks, etc., etc., and all paper not drawn upon the receiving bank is handed to the Register Clerk who enters them upon his collection register. There are various forms in use by the different banks but they are all substantially like Form 1.

After the registration takes place the paper is handed to the "runner" (together with that maturing the same day) for collection. (A memorandum book is kept by some banks for entry of paper such as last mentioned. This, to keep tract of. A wise plan where the runner, as is often the case is inexperienced, or is compelled to leave collections with drawees for examination, etc., etc., or on account of temporary absence of party authorized to approve, or pay.)

After the runner makes his rounds he proceeds to make out his "tickets" for what cash he has collected, and turns over the accepted or refused drafts to the Correspondence Clerk for attention, and then marks off on the register and the memorandum book before mentioned what disposition has been made of the paper in his hands that day.

* One of a series of articles on "Country Collections," in competition for the prize of \$100 offered by the Publishers of the JOURNAL. Subscribers are invited to vote on the best when the series is completed; for particulars see page 884 of this issue and page 574 of the June number.

Form No. 1.

COLLECTION REGISTER.

" Bank.

OUR NO.	DATE.	DRAWER.	DRAWER.	DESCRIP- TION.	DATE.	RE- MARKS.	AMOUNT.	EX- CHANGE.	THEIR NO.	PAY- ABLE AT.	TO WHOM SENT.	DATE OF SENDER'S LETTER.	OWNER.	RESIDENCE.	DATE.	DISPOSAL.
7,000	1886 Nov. 6	Jones & Smith	A. Robinson	Demand	Oct. 22	Protest	\$500	\$2 50	2,301	Athens		10 22	1st Nat. B'k	Dickens, Ga.	11 6	Remitted
1	" "	Brown Mer. Co.	T. Copeland	60 d d	25	No pro.	\$20 25	1 60		do.		10 25	T. Copeland	Marlboro, N. Y.	11 6	Returned

The "tickets" referred to above are printed in the following form :

Collected by THE CITY BANK OF ATHENS, For Account of

NO.	NAME.	AMOUNT.
	<i>Exchange</i>	

These tickets are then compared with the cash by the Teller. If found all right are entered by him on his cash book and then put on the city book-keeper's spindle, or the general book-keeper's spindle, or the correspondence clerk's spindle, most generally the latter, particularly when the items are subject to advice or remittance.

When the letters have all had proper attention the tickets are rapidly passed up to the bookkeepers, for entry on their books. The next day these tickets are taken by the collection register clerk and the items are entered "credited" or "remitted," as the case may be. The items "returned" are gotten out of the letter book.

With all due regard for the banks pursuing this system I desire to say that it is a laborious, clumsy and expensive work. What is the difficulty?

Too many clerks "hammering" away at the same thing, for in addition to the handling above mentioned there is the copying of the letters and then the addressing, stamping and mailing. There is also a thorough lack of combination in the work and a scattering of the forces in the bank over a wide field. This should not be. I suggest an innovation. But there will be objections raised if innovations are suggested even.

I shall endeavor to anticipate and overcome those objections in what I shall have to say.

If one clerk can do the duty of two within the same time and quite as well then it is good policy in a bank to have but the one clerk. "The way to resume is—to resume." The way to cheapen collections handled by a bank is—to cheapen the handling.

A great many banks claim that they do not make any money in handling collections. I do not doubt it. They are generally banks pursuing the system I have outlined above. But some bank friend will stop me here and say that I am off my foundation, that the "exchange" is a considerable source of revenue on collections. I deny it. First, because not one in five collections are paid. There is time, there is stationery, there is postage thrown away. I have been employed in two banks, for eight years in the largest State bank in my native State, and the last three years in a country bank. In the first mentioned institution the system I have spoken of above was in vogue; in the last, it is not, and yet the last bank I venture to say made nearly as much money on this branch of its business as the former, doing only one-fifth of the volume. Secondly, the rates for Eastern exchange are less now than they have ever been. This is caused by cheaper express rates, by insurance on registered (money) packages, and by sending money in ordinary mail. This last is risky, but it is done to a considerable extent I understand. The competition, therefore, in the collection business is very great, and the money that is made is often found on the left-hand side of the ledger appropriately displayed under the heading of Dr. Here is a calculation that is not far astray. On each letter written on the subject of a collection, whether it be credited, or paid, or held for goods, or whatever action has been taken, there is paid by the receiving bank.

1. 2½ minutes in writing (correspondence clerk, \$5.00 per day).....	\$0.0825
2. 1½ minutes in copying and addressing letter.....	0.0175
3. Postage and envelope and sealing.....	0.0216
4. Stationery (letter paper)	0.0400
5. Time in mailing.....	0.0200
Total.....	\$0.1816

So on each collection (not taking into consideration the cost of opening the mail, arranging the letters, registering the collections, and getting reports on these collections, probably 5 cents more,) the cost is 18 cents. I think I have underestimated the amount rather than computed it too high. I have said that a great many banks claim they do not make any money in handling collections. After studying the matter over considerably I really believe they do not. But there is a way to cheapen the handling of collections. It is by throwing a greater variety of work and under less pressure upon the clerks in our banks.

To show clearly what I mean, a form is introduced on page 892.

Section 1 is the stub. It contains all the essential headings necessary in a register.

Section 2 is the remittance letter.

It is brief and pointed.

If a mistake should be made the receiving bank would simply refer to the number, and the error could at once be discovered and corrected.

Section 3 is the acknowledgement.

If a paper is "held for maturity," "for arrival of goods," "accepted," "credited," "party out-of-town to-day," or for any other reason, or if it is to be returned for any reason, this sheet is to be used. (On the line of "Remarks" in Section 1 such like reports are to be made).

A great many banks use rubber stamps with above expressions and also dating stamps. They could be used on this blank and thus save considerable time. If such rubber and dating stamps are used all that would then be necessary would be the filling in of the date of the correspondent's letter and the correspondent's name on the third line. And even this latter work can sometimes be saved by using rubber stamps with the correspondent's name when it is understood that in both Section 1 and 2 the name of the bank, its Cashier and location, as also the collection number, are all printed. It can readily be seen what a small amount of work is to be done and what a saving in time can be effected.

The copying of the letters is totally unnecessary in the writer's opinion, every item in them having its counterpart on the stub, or the other books of the bank. Still banks desiring to copy such letters could of course do so but it is a barbaric custom. I do not claim that Form No. 2 is the best that could be devised but as far as I have seen it is the best yet printed. I have introduced it here for the purpose of provoking study. If I succeed only partly I shall feel that my time and thought has not been entirely thrown away.

PART II.—CASH EXCHANGES.

Here is a branch of the business that year in and year out has shown a satisfactory exhibit for the banks. It is quick work and paying to discount a check one quarter of one per cent. and sell the amount the next minute at even a sixteenth advance. There need be absolutely not the veriest minimum of risk, where thousands and thousands of dollars are handled daily, and millions a year a fractional part of a fraction profit pays handsomely. But there is great competition and the fear may well be expressed that the large profits will soon be dwindling down to zero. Fixed rates by all the banks in the large cities for buying and selling both banker's and merchant's exchange should be made. In a large number of cities this is the case. In others it is not, and here the competition is fierce, and the profits small.

Sometimes, too, our bank friends have been caught with forged bills of lading, for which it may as well be understood, the railroads are not responsible, and so the Courts have declared in numerous instances.

I believe that the rates for buying and selling exchange cannot well be permanently fixed. They are bound to be more or less affected by crop movements, etc., etc., and change with the varying tides of commerce.

But the method of making these exchanges let us inquire into.

Here is a form before me. It is in common use.

Form No. 3.

REMITTANCE REGISTER.

DATE.	NO.	DRAWER.	WHERE DRAWN.	ENDORSE.	DRAWEE.	WHERE PAYABLE.	TO WHOM SENT.	AMOUNT.		EX-CHANGE.	WHEN AC-KNOWLEDGED.		REMARKS.
1886 Oct. 22	1,000	O. Thompson	Athens, 10 22	I. Riggins	Nat. Park B'k	N. Y.	Chemical	5 000		25	10	26	Or'd
"	1	I. T. Finley	Maypole, Ga., 10 8	Brown Mer. Co.	Atlanta Nat.	Atlanta	Atlanta Nat.	25 02			10	25	Remitted

Another form will be found on page 894. The advantages of this latter are :

- 1st. It embraces a register, a charge ticket for the bookkeeper's spindle and a letter, all in one.
- 2ndly. It requires only the same amount of work to fill out Form No 4 as No. 3, and nearly three times the advantage is gained.
- 3rdly. The letter does not need to be copied.
- 4thly. There is a combination and effectiveness in the method not observable in the other form.

Form No. 4.

5thly. If the exchange is not cashed of course the charge ticket is not made out (until the exchange is heard from), consequently it is a constant reminder to the clerk that it has not been reported on.

6thly. Books like the above can be made for each correspondent and one for "miscellaneous" as in draft books thus still further lessening the work, I believe.

There are objections to the form, I know, but the merits must be undoubtedly great.

The principal objection appears to be to the charge ticket. A great many bookkeepers make their entries from the register itself and never use "charge" or "credit" slips. This plan is an old one and only has its age to recommend it. In my humble opinion it would be better to divorce everything from the Tellers' except their legitimate work of keeping an exact account of the *cash*, the dollars, dimes, etc. This can be done by the use of charge and credit slips. A great many banks entail a double work upon their Tellers by forcing them to do a species of miserable bookkeeping. And oftentimes this affords a glorious opportunity for swindling.

PART III.—COLLECTIONS FORWARDED.

These are items that are received by the bank for collection on outside points.

No money has been advanced upon them. It may be that a doubt has crept into the mind of the bank official as to the good fortune awaiting their presentation; on the payer's not being sufficiently responsible, the bank will not attempt the risk of cashing, or for various other reasons the preferable way is to await returns.

Oftentimes a merchant who makes large shipments all over the country deposits his drafts in bank for acceptance or collection, or both. It cannot be as cheap a way for him to get returns as if he forwarded his own drafts. The bank immediately becomes responsible for the proper handling of the paper and is entitled to a charge proportionate to the risk and amount for its services. This depends a great deal upon the course the draft takes. If it is sent direct to a bank in the drawee's town, drawn "with exchange," it is handled strictly for the exchange, no charge being made to the forwarding bank. Otherwise every bank through whose hands it passes is entitled to a charge. Some do not charge but most of them do. I have in my mind's eye a note that passed through five banks' hands before reaching us. A banker's directory should have been sent to four of those banks.

The following is the routine pursued in handling this class of paper. The form of register most generally in use is similar to No. 1 and 3, differing only in the space reserved for "To whom Sent". Some prefer to class all collections together, while others prefer to enter collections forwarded in their Exchange or Remittance Register. The form No. 4 I have shown above can be used for this purpose.

In reference to No. 2 and 4, I must say that I have seen nothing in all my experience as a bank clerk or as an officer that is at all like No. 2, and that some bank use a form a trifle, though only a trifle, like No. 4. The forms I refer to have a stub for Registering collections, and a letter very much more voluminous than the one attached to No. 4.

I must admit that these two forms have but lately been put to use in our bank, but the rapidity with which the work has been done has but confirmed the confidence I first had in them. They have undoubtedly been a labor saving thing for us. There can be no doubt be improvements made on them, and none would more gladly hail these improvements than the parties who are the authors of the original ideas, if they can be called that.

In regard to collections of merchants in large Cities a friend suggests the use of the Cleaning House for the purpose. A "Collection Department" might be established whereby a direct system might be put into operation and in the end, by throwing a vast amount of this character of business into its hands, proving of great practical benefit at much reduced cost perhaps.

I have not given the matter sufficient attention to justify an unprejudiced opinion but from a hasty view, imagine that the benefits to be derived would

certainly claim an attempt, if nothing more. By combining together, the members of the Clearing Houses throughout the Country could force all their depositors and customers to collect such items through the Clearing Houses as those they were not willing to "Cash". In this I do not refer to the collections received by mail.

SAFETY.

With reference to the word safety in handling collections I have only a few words to offer.

The "direct" system is the best. If you have an exchange on a certain town, send it to that town, or if there is no bank in the place sent it to the nearest banking town. In order to be able to do this invest in a Directory the cost is a trifle compared to the advantages, and the risk you run by sending your items all over the country.

It is the cheapest plan too, what is the risk ?

You are liable to lose the full amount of a draft sometime by simply delaying presenting. The law gives you a reasonable time in which to present a check, either in person, or by forwarding to an agent through the mails, but it does not allow you an unreasonable time.

An indorser, if he be a good one, is a good thing to have on a note but unless he be legally notified on the maturity of a note his liability on the note ceases in some States.

I have several time noticed the tardiness of paper. Have seen notes of a large amount with many indorsers reach our hands a day too late for the owner's good.

It may be argued on the other hand that the sender bank does not know the responsibility of the other bank, the one to whom the paper is to be sent, and therefore does not care to assume the risk in intrusting paper to a stranger's hands. I hardly think this is a valid excuse. The banking business is getting very extensive, most "cross roads" towns have a bank now a days, and when the vast amount of business now transacted by these banks is taken into consideration I think it will be found upon investigation that the failures among them are fewer in number proportionately than those of larger capital in the Cities of the country. A hasty survey of the failures in my native State, a comparatively new one, of this class of banks, reveals not one half dozen in twice that number of years. Again I say adopt the direct system. It is less risky to you, and less expensive to your customer.

A few words upon a Fair Profit, what is a Fair Profit ?

Surely a hard question to decide for the banks, what may be a fair profit in a country town might be considered extortion in the large Cities. It is custom with nearly all banks to charge simply the exchange in making collections.

This did not use to be the case. I have in my mind's eye a rich banker who made his "first start" by charging ten per cent. This was before Railroads had entered our State and transfers of funds were rather difficult, and dangerous to make. He is doubtless now satisfied with one fourth of 1 per cent.

THE VARYING RATES OF EXCHANGE AND WHAT CAUSES THEM.

I have barely mentioned one cause, the crop movements.

It is probably the principal one in the South and West.

In the South bank exchange on the East fluctuates considerably. I have seen it sell at three fourth of per cent discount, and as high as three fourth of per cent premium.

The cause of the first was an extraordinarily heavy movement of cotton within a few days.

In the latter case there had been no shipments of consequence for nearly six months and the rate had advanced gradually until it reached the figure I have mentioned.

It was about the time of the former rate when one day there entered the bank in which I was employed a tall heavy-set man, wearing a huge overcoat and carrying in his right hand a travel-stained bag. His whole appearance denoted a man of small means, if we are to judge humanity by outward looks, but the sequel proved otherwise.

It was Mr. L., a banker from a growing, thriving City of 20,000 people two hundred miles west of our City (we were fifty miles from the coast), upon opening his bag there came to view over one hundred thousand dollars in crisp bills, which he had brought from New York City by rail, two thousand miles away. Questioning him the Cashier discovered that Mr. L. had bought more exchange on the East than he could profitably get rid of in his town and so had taken the very great risk of going after the money and bringing it back by hand. He probably made six hundred dollars by his venture, but think of the anxiety, the great risk of such an undertaking.

The nearer he got home the more anxious he was to get rid of his precious bag, and so left it with us.

He said he slept with it, he ate with it, he drank with it, he smoked and chewed with it. He never got out of its sight and a good six shooter buckled around his waist was his only friend and companion during the whole trip. Four days of restless thought! Four days of sleeping with "one eye" open!

In the past few years there has been a gradual decline in the margin on exchange in the South. This has been caused by several things. In Texas, shipments of cattle by rail in the spring, of wool in the early summer, and again in the fall, cotton in the winter, and grain from May first.

Formerly the cattle went overland and the exchange was not brought back until late summer, when cotton shipments would begin. The grain shipments were small, and the wool went only from Corpus Christi, and not a great deal at that.

Now it amount to (40,000,000) forty millions pounds a year, I believe, and the grain shipments are yearly becoming larger.

The more varied are its industries, the better for the State.

Alabama and Georgia, and several of the other Southern States are seeing the good effects of such a policy.

I cannot speak with any great authority, in fact with none scarcely as to the varying rates of exchange in the West. There is but little difference in reality throughout the seasons. I opine this is caused by the following:

1st. Nearness to the Eastern Seaboard.

2nd. Cheapness of Railroad transportation.

3rd. Cutting of Express rates down to a very narrow margin.

4th. Equalization of shipments to and from the East. During the seasons when three of these four causes operate throughout the South we shall in time witness the same effect and the small range of prices for exchange as in St. Louis, Chicago, etc.

Until that time the margin will be as great as now.

Counterfeits.—Notwithstanding the scientific methods which are followed in the preparation of the paper, the engraving of the plates for and the printing of the paper money in this country all of which both for the National bank notes and for the notes issued directly by the Government is now done under the supervision of the latter, counterfeits still occasionally make their appearance. There is, however, much unnecessary alarm felt on this subject, and this feeling among the banks and the public is made the most of by those who are interested in the publication of counterfeit detectors. Although the ignorant and unwary may still be deceived, the average of the few counterfeits now seen show such poor execution and so many defects that no one experienced in handling money can be deceived by them. On the other hand no one should be thrown off their guard or neglect to take the usual precautions when handling money against being deceived, but as before said, there is no necessity of thinking that counterfeiting just at present is a very paying business. In the days when the State banks issued circulation, each bank having its own plates and paper, and issuing bills of very many different denominations, there was a fine field for the operations of the counterfeiter and as a consequence for the counterfeit detector. To successfully counterfeit any of the present paper money issues require great skill and the command of some capital. The risks are exceedingly great and the chances of profit are small. Everything including the very small number of even poorly executed counterfeits that now and then appear, points out that the danger to banks and bankers, and the public from this class of criminal action has been reduced to a minimum.

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Responsibilities of Directors.—The responsibility of Directors for mismanagement of the affairs of a bank is often a matter of discussion, and has been passed upon by the courts in various cases. While the principles which govern the responsibility of Directors cannot be strictly considered as settled law, still they have been laid down with sufficient fullness and precision to afford persons interested a body of rules for their conduct. But the theories which have been put forward in various quarters in reference to individual responsibility of Directors seem to rest not upon a legal basis, but upon what may be called a moral theory. The responsibility that is sought to be imposed upon the Directors is generally spoken of as a "moral responsibility." Measures have been suggested from time to time which aim to make this responsibility legal as well as theoretical. For example, it has been suggested that Directors should be liable in their personal property for damages which a bank may suffer from their negligence; or, that they should be held, at least, to a larger responsibility than the other shareholders. The law, as it stands now, is amply sufficient to hold a Director responsible for criminal negligence, which, by the way, is usually very difficult to prove. The circumstances under which a man accepts a position in a Board of Directors are so various that it hardly seems possible to lay down any general rule in regard to the matter, but there is one fundamental principle which should not be lost sight of, and that is, that the Directors are nothing more than stockholders, who undertake to manage the affairs of the corporation for the benefit of all their fellow stockholders. As a rule they do this without any direct or immediate compensation. It therefore seems hardly fair that having undertaken this gratuitous service they should be held any more responsible for their acts than any other shareholder. Chosen on account of their financial ability, they are almost always busy men who have their own affairs to attend to, and very often, the affairs of a great many other people besides. Directors, as a rule, do not undertake to do more than exercise a very general supervision over the course of the business of the Institution, to give their opinions upon notes offered for discount and suggest the general lines of the policy to be pursued. They cannot be expected to give the same time and attention to the business of the bank that they do to their own. For this reason, a man is usually at the head of his own business, its Chief Manager, assuming all the responsibility, doing all the executive work, receiving all the profits, and likewise, bearing all the losses. In other words, he is the President of his own firm; but as a Bank Director, he occupies no such position. The bank employs a President who is supposed to occupy the same relations towards the business of the bank that each Director occupies towards his own affairs. The President is paid for his services, and it is reasonable to suppose that he will perform them, and while Directors should not be excused for knowingly placing in that position a dishonest or incompetent man; still Directors are not infallible, and if they chance to put the wrong man at the head of affairs, and fail to discover it until too late, they cannot be justly charged with wilful negligence; for that position, if it proves anything, proves too much; for it will logically follow that the shareholders are equally responsible for the choice of Directors, and it would be pushing the principle very

little further, to say that the depositors in the bank were likewise blameworthy in dealing with an institution having a dishonest or grossly incompetent man for its President. Instances can be cited, and too many of them, where Bank Directors have grossly neglected their duties, and, through sheer negligence, have allowed the bank to be broken; but that is an entirely different case, and one for which the law provides a remedy. As a matter of fact, it is not very easy to secure the services of competent men to act as Directors of banks unless there be directly or indirectly some compensation for their services, and if the law is made so strict that Directors will be held personally responsible for errors of judgment, the difficulty will be greatly increased.

Corresponding Banks.—The importance of exercising care in selecting one's correspondents cannot be too strongly insisted upon. So much confidence has grown up in the banking community under the operations of the National Bank system that correspondents are not selected now with the same care and discrimination as formerly. Under the old system, or rather no-system, of State Banks and private bankers, everything depended upon the character of the men at the head of the institution, and consequently before a correspondent was selected very strict inquiry was made as to the character and standing of the persons in charge; but, under the National system failures have been comparatively rare, and the very word National has become a sort of guaranty of a bank's strength and solvency. This has tended to throw careless people somewhat off their guard, and it is only when some big failure occurs that they begin to bestir themselves about the various correspondents to whom they may have sent funds. The number of banks has increased so largely in the last few years, and they are scattered over so wide an area of country, that it is impossible for anyone to keep track of them all by mere individual effort. A bank may be good to-day and five years hence its condition may be quite different and none of its correspondents be any the wiser, consequently it has become necessary to have some central agency, which can make a speciality of keeping records of the statements of all the banks throughout the country, and to be able to report on the condition of any bank from time to time. Such an agency could act somewhat in the nature of a mercantile agency, keeping records of the various banks, their officers, their published statements, and such other matters as may be of interest in connection with them. Such an agency, working on this special line would be able to accumulate a large amount of useful information, and so be in position to inform its members of impending disasters in time to save them from any harmful consequences.

Cashiers Acting as Clerks.—There is wide diversity as to how much clerical work a Cashier should reasonably be expected to perform. It is difficult to lay down any general rule in this respect, as circumstances vary greatly in every case, but it may be taken for granted that no man can do two things at once, and the Cashier who is obliged to do a large amount of clerical work, cannot at the same time have his mind properly free to attend to the executive duties of his position. It is both proper and desirable that the Cashier should take a hand in the clerical work of the bank, going first to one desk and then to another, as this enables him to keep thoroughly posted on the way the different desks are run, and how the various clerks are performing their duties. Especially might this be the case when there is absence on account of sickness or holidays; but it certainly not desirable to burden the cashier with a large amount of clerical work to be regularly performed each day. The President is the real head of the bank, and is more or less active in its management according to his disposition and the time he may have at his disposal, but the Cashier is the executive officer who is always on hand, and with whom customers become better acquainted than with the President or any of the Directors. The Cashier, therefore, should be free at all times to attend to persons who come on business connected with the institution. He should always be at leisure to give time to those who are disposed to be prolix, not to say tedious in their explanations, and should not be annoyed by the reflection that a mass of clerical work is piling up for lack of his attention. Few men can think and work at the same time, and a Cashier who is engaged in

performing all sorts of miscellaneous duties, has his hands too full to allow his head to dwell consecutively upon any one subject. It is always cheaper in the end, in such a case, to employ an extra clerk to do this kind of work so as to allow the Cashier freedom to attend properly to the more important duties of his office.

Registered Mail.—The question has been previously discussed in the JOURNAL whether it is safer to send coupons by express or registered mail, and the views which were given in regard to the safety of registered mail was not entirely in accord with the present regulations of the post office. It goes, without saying, that for absolute safety, the express company is, of course, to be preferred, but where the amount is small and the express rates high, registered mail may be resorted to without any serious risk or loss. It is true that occasionally a registered package goes astray and is never heard of after, but this happens very rarely. In the handling of registered matter, there is one rule which runs all through the system, and that is that the registered matter is receipted for by every person who receives it at any point in its passage. The receiving clerk at the post office gives the sender a receipt, and, in turn, receives a receipt from the clerk to whom he passes it. Before the registered packages leave the office, they are placed in a special registered pouch, which is receipted for by the driver who receives it, and in turn by the railway or steamboat clerk who takes it from him; and so on receipts are given and taken as the registered matter passes from hand to hand until each package or letter reaches its final destination. In other words, while the Government does not guarantee the safe delivery of registered mail, yet, there is used the greatest care to insure absolute safety in the handling of this class of post office matter. As a precaution, it is better for a bank to protect itself in the first instance by getting explicit instructions from the customer as to how he wants his coupons or bonds sent forward for collection.

Interest or No Interest.—Whether a bank should or should not pay interest upon balances is a question upon which bankers have differed for many years. There are those who contend that the practice of paying interest is not only an advantage to the bank but of great benefit to the commercial welfare of the whole city. Many New York bankers take the position that much of the commercial prosperity of their city is due to the bank balances which are attracted there by the inducement in the way of interest on balances. The money thus attracted to New York being lent out to the merchants there enables them to extend their operations far beyond the limits to which their own capital would necessarily confine them. The reply to this usually is that it simply makes money plentiful in New York at a time when nobody can use it; and as soon as money becomes of value and commands high rates, then the country banks call it home to use it themselves. The interest payers also contend, and not unreasonably, that it is perfectly legitimate to borrow money at a low rate in order to lend it to more advantage, comparing their position, for example, to a person who would lease a large block of houses on very reasonable terms, in order to let them out singly at a profitable rent. There are some banks that never have, and never will pay interest to anybody, under any consideration. They make the non-payment of interest an ironclad rule, and hold out this regulation as an inducement to depositors, claiming, not perhaps very justly, that a bank cannot pay interest on deposits and at the same time do a perfectly safe business.

Some managers adopt an intermediate course and pay interest only on even sums of \$5,000 or \$10,000, adopting this as sort of a compromise between paying interest on all balances and not paying at all. In the larger cities the banks are, to a certain extent, almost forced into paying some interest on account of the competition of the trust companies, which have, partly by this inducement, and partly by other means, succeeded in building up large lines of deposits, to the envy of the regular banks. Occasionally a strong effort is made to induce all the banks to come into some special agreement not to pay interest to anyone, but it is very difficult to enforce such a rule, even under favorable circumstances and in the face of the competition of the trust com-

panies it is almost impossible either to adopt it or to enforce it when adopted. The payment of interest is one of those questions which every bank must decide for itself according to circumstances. It is rather stretching the argument against interest payments to claim that there is anything unsafe in the system, for many banks have grown very prosperous under it, and it is difficult to see where any loss could come in by hiring anything at a low rate, and hiring it out again at a sufficiently high rate to cover expenses and probable loss. The theory about inflation of business, and blowing speculation bubbles, and all that sort of thing reads very well on paper, but, somehow, it is difficult for a practical man to understand exactly where it all comes in.

About Identification.—The system of requiring identifications of holders of checks drawn to order has, for some time, been done away with in London. The banks there found that it was practically impossible to get through the day's work if every one who presented a check drawn to order had to be personally identified to the teller; and so a special Act of Parliament was passed relieving the banks of this necessity. The English banks then are justified in paying checks to any person presenting the same provided the endorsements appear to be in regular form there being nothing in other circumstances of the kind calculated to put the bank upon its enquiry. Englishmen do not understand how we manage to get along with the old-fashioned system of requiring personal identifications, and are rather surprised that, in a country where so much enterprise is shown in public matters, commercial people should still be content in this respect to go along in the old-fashioned way. It cannot be denied that there are certain advantages attaching to the identification system which disappear under the English rule, but whether those advantages are sufficient to outweigh the attendant disadvantages is worthy of consideration. It is often highly inconvenient to holders of checks to furnish the necessary identification, and this is particularly the case with that class of persons who from the fact of not having bank accounts themselves are most frequently under the necessity of having the checks cashed directly at the teller's counter. We do not, in this country, clearly perceive all the disadvantages which grow out of our present system because business has, to a large extent, accommodated itself to the present state of affairs, and persons have suffered the inconvenience so long as not to be aware of its existence. It would perhaps be rather difficult to get the English rule adopted in this country because it seems to be very troublesome to get even the most necessary legislation attended to either in Congress or the State Legislatures. Any one who attempts to push any small reform of this kind to a successful issue is likely to find himself in the position of the charity boy, after he had learned his alphabet; "whether it is worth while," he remarked, "going through so much, to get so little is a question."

Signing for Corporations.—In the January number of the *JOURNAL* there were two, and, in the May number, one case, which are very interesting to those who have occasion to sign commercial paper in their capacity of corporation officers. The principles embodied in the decisions were not specially new, but were, perhaps, presented in a somewhat novel light. The Courts deciding these questions were the Supreme Courts of Ohio, Maine and Iowa. In one case a draft was drawn by a certain coal company upon "John A. Robinson, Agent" and was accepted by him, "John A. Robinson, Agent K. & O. C. Co." It was held, no doubt to Mr. Robinson's surprise, that the acceptance was that of Mr. Robinson individually, the words: "Agent K. & O. C. Co." being merely descriptive of his person. In the Maine case the signature to a promissory note was "D. P. Livermore, Treas., Hallowell Gas Light Co.;" and in the Iowa case the signatures to a promissory note were as follows, the names being directly under each other: "Independence Manufacturing Company, B. I. Bromwell, President, D. B. Sanford, Secretary." In both these cases the signatures were held to be individual signatures, the added words being merely descriptive of the persons signing. The Courts do not seem in these cases to have laid down any rule as to what ought to have been done, but contented themselves, as is not unusual, with informing the

defendants that they ought not to have done it just as they did. The rule, however, is not so very difficult of observance if one understands the principles upon which these decisions are based.

The law requires in a promissory note, above all other things, the element of certainty, and therefore it is the duty of persons drawing up and signing such instruments to do so in such a way as to leave no doubt as to the precise meaning of the words that they use. If the note is the note of a corporation it should be distinctly expressed on the face of the instrument that such is the case, for example: "New York Publishing Co. promises to pay." Worded in this way there can be no reasonable doubt as to who it is that undertakes the payment of the note. The signature should be equally definite and exact, the signers meaning not only what they say but saying it in such a way that they can not be made to mean anything else. A note, for example, should be signed "New York Publishing Co., by Thomas Brown, Treasurer and William Jones, Secretary." This may seem too nice a refinement for the "practical" business man, but as was once tersely remarked by an English judge, "Lombard street does not make the law for Westminster Hall." It may be added that in the Ohio case the Court was considerate enough to remark that the decision laid down would not apply to the case of a Cashier signing for his bank.

Dead Head Collections.—The following has been received from Mr. William Post who is the Discount and City Collection Clerk of the Central National Bank of Philadelphia, Pa.

"We have been interested in noting the communication in the April Journal, relative to "Dead Head Collections" and "Collection Abuses", and also Mr. Herman Freese's letter in July Number relative to the same subject.

The abuse complained of is not confined to banking in the country alone, but obtains with the city banks as well. This bank makes no effort whatever to secure transient collections and yet numbers of these drafts or "duns" from out-of-town concerns, find their way into our mail bag, and we must either return them without presentation (a course which we hardly think courteous) or we must present for payment and run our chance of remuneration for the trouble and labor taken. If the draft is paid we can of course deduct from the remittance, but unfortunately not over twenty-five per cent of such items are collected, hence the question; how to be rid of this unproductive portion of our business or rather how to place it upon a paying basis, is a *live one* with us as it is with your other correspondents.

The plan adopted with us during the past year, and we do not offer it as the best, is to request the maker of these drafts to *return twenty-five cents for each draft presented and refused* and in doing so the following slip is used:

Please remit the Central National Bank, Philad'a, 25 cents to cover expense and labor incurred in endeavor to collect draft herewith returned.

The proportion who have complied with this demand has been about fifty per cent and those who have made no return are *black-listed* and if any further collections are received from them the same are returned uncollected.

It is our conviction that if this plan were universal with the banks a very large proportion of this business would be forced back to the *home bank* where the makers keeps his account and where he should pay for his accommodation according to the value of his account, and the remainder could then be handled at some profit to the distant bank making collections for a transient customer who wants a quick return for his draft and who will not object to the charge made where the draft has been presented and refused."

Draft Forms.—We present the following from Mr. H. G. Townsend connected with the Fitchburg National Bank of Fitchburg, Mass.:

"I would like to offer some suggestions relative to the improvement of the usual form for drafts upon individuals or business houses. Having had a

number of years' experience in the banking business, I feel that I shall not be out of place in suggesting a change of this kind.

In my own experience as teller I have many times been puzzled to determine the date of an acceptance, because in writing across the face of the draft the figures of the date came directly over some writing or printing of the draft. I think that Tellers and Book-keepers who have so frequently to handle such drafts, will generally agree with me that an acceptance which does not cross or otherwise conflict with the rest of the draft would be desirable.

I enclose herewith two forms drawn according to my ideas.

FORM A.

No. printed. Accepted _____ 188- Payable at _____	No. _____	Pittsburg, Mass. _____ 188-
	A. _____	

	_____ Pay to the order of _____	
	_____ Dollars.	
value received, and charge same to account of _____		

FORM B.

No. printed. Accepted _____ 188- Payable at _____	A. _____	Pittsburg, Mass. _____ 188-
	_____ No. _____	
	_____ Pay to the order of _____	
	_____ Dollars	
	value received, and charge same to account of _____	
Accepted _____ 188- Payable at _____ } _____		

To my mind they possess two marked advantages. 1st: The name and address of the drawee are very prominent. 2nd: The form for acceptance is a part of the draft, and yet does not conflict with any other portion of it. Of the two forms, that marked A, I think is preferable, as it is more easily examined, and seems more a part of the draft than the other.

The position of the figures of the amount I think also an advantage, it being the same plan recently adopted by the Chicago banks in printing their checks.

If you find my suggestions worthy of your attention, I would thank you to call attention to the matter in your JOURNAL. I think an improvement in this respect is desirable, and perhaps some of your other subscribers may have something better to offer."

Stopped Checks.—The check "lost, mislaid or stolen" is a standing nuisance in the banking community. Why people should lose, mislay or allow anybody to steal so many checks is a mystery, and it is equally puzzling to tell what becomes of these numerous estrays, for very few of them are ever pre-

sented, notwithstanding the haste and trepidation with which the drawers and holders come to the bank with instructions to stop payment. A convenient form for keeping a record of these stopped checks is shown below. It can be made up in the shape of a small tickler to lay conveniently at the teller's hand, original order being filed for reference in case of need. It is just as safe and much neater to keep a record in this way than to have the ledger folios marked up with marginal memoranda.

STOPPED CHECKS.

When stopped.		Drawer.	No.	Date.	Amount.
1887				1887	
July	1	Merchant & Co.	3150	June 30	\$27.63
"	1	J. B. Trader.	412	" 25	104.63
"	2	Brown Publishing Co.	9672	" 30	19.57
"	5	Trader, Merchant & Dealer.	23	" 30	43.64
"	6	Northern R. R.	15763	" 15	73.46

The Notary Public.—The exact relations which subsist between a bank and its notary public, and how far the latter is the agent of the former, are questions which the courts are often called upon to decide, and about which there is considerable difference of opinion, according to the varying circumstances of each case. In some respects the notary acts upon his own responsibility, and whether correct or in error, his acts do not bind the bank as its representative. On the other hand, there are times when the notary acts directly as the agent of the bank, knowledge in such case brought home to the notary is properly chargeable to the bank. It is sometimes a very nice question to determine to which of these two classes any special case belongs, but it may be laid down as a general rule that a bank cannot be too careful in selecting its notary public. Not every one who hangs out his sign is competent to perform the duties of his office. These duties frequently require not only a theoretical but a practical knowledge of the law merchant. It sometimes comes in the range of a notary's duties to advise the bank as to its course in regard to protesting commercial paper, and it is undoubtedly a great assistance to a bank manager to have a notary upon whose opinion he can rely with some confidence.

A Scrap Book.—A good many years ago a certain bank clerk, whose name need not be mentioned, invested a small sum of money in an artist's sketch book, the pages of which he decorated from time to time with illustrations of scenes and incidents which came under his observation. As a matter of prudence, this little book was reserved for the amusement of himself and a few chosen friends; but, outside of this charmed circle, very few escaped his pencil. The chief officers of the bank, with, perhaps, a little exaggeration of peculiarities, came in for the lion's share, and a series of illustrations commencing with "Our President" and ending with "Our New Director" was pronounced the master-piece of the volume. The unsuspecting customers were fixed upon the pages as graphically as though they had been taken by the camera; and even now, though the little circle of artists has long been broken, a contemplation of this book serves to awaken many pleasing reminiscences. It might not be amiss to add that in addition to the artist there was a literary member who contributed sketches in prose and verse, much of which would have been received with little favor in higher official quarters. This was a sort of a clerk's scrap book, but not exactly the kind of one that has been recommended in the pages of the JOURNAL; for such clippings from newspapers, magazines and so on which found a place on its pages were calculated rather to amuse and entertain than to instruct. While the practice of making merry over the defects of one's superiors is rather to be reprov'd than recommended, still allowance must be made for the lightness and indiscretion of youth.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

CARELESS DRAWING OF CHECK—ALTERATION TO LARGER AMOUNT BY HOLDER AND TRANSFER TO BONA FIDE PURCHASER WITHOUT NOTICE—AS BETWEEN SUCH PURCHASER AND THE DRAWER WHO STANDS THE LOSS? A REVIEW OF THE AUTHORITIES AND ARGUMENTS ON BOTH SIDES OF THIS VEXED QUESTION.

This action was founded on a check drawn by the officers of the Texas & St. Louis Railway Co. on the Commercial Bank of St. Louis, payable to Peter Vaught or bearer. As originally signed and prepared it was a check for \$8.40, and was so drawn as to leave space between the figures "8" and "40" in one corner thereof, sufficient for the insertion of a cipher without crowding, and in the body of the check where the amount was written, sufficient space was left after the word "eight" and the word following to add to the word "eight" the letter "y", without giving it the appearance of being added after the check was written. After the execution and delivery of the check, without the authority, consent or knowledge of the drawer, a cipher was inserted between the figures "8" and "40", and the letter "y" was added to the word "eight", and the amount of the check was thereby fraudulently changed from \$8.40 to \$80.40, and in that form, and with no mark or indication of alteration observable by a man of ordinary prudence, was negotiated to Kosminski and Co. before maturity for a valuable consideration in due course of trade and without notice of the forgery. They having brought suit on the check against the receiver of the drawer, the lower court gave judgment against such receiver, who appealed.

Held: It is contended by appellees that appellant is liable to them on the check for the full amount of the same as altered. This contention is sustained by many authorities, which lay it down, as a general principle of the law merchant "that when the drawer of a bill or the maker of a note has himself, by the careless execution of the instrument, left room for any alteration to be made, either by insertion or erasure, without defacing it, or exciting the suspicion of a careful man, and the opportunity which he has offered has been embraced, and the instrument filled up with a larger amount or different terms than those which it bore at the time he signed it, he will be liable upon it as altered to any *bona fide* holder without notice." But upon this proposition there is an irreconcilable conflict of authority, and the authorities which sustain the doctrine are not agreed as to its basis. In casting about for some principle on which it can be based, several have been suggested which we will notice:

1. It is said by some that the true principle upon which this doctrine rests is "that the party who puts his paper in circulation invites the public to receive it of any one having it in possession with apparent title, and he is estopped to urge an actual defect in that which through his act ostensibly has none." It is true as between the maker of negotiable paper, which he has voluntarily and intentionally executed and placed in circulation, and an innocent party acting upon the faith of the paper, that the maker as a general rule would be precluded from showing that the paper was not intended to have the effect its face indicated, for it is upon the representation he has made by his paper that he has authorized and induced the innocent party to act. But

*All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

this reason only applies to paper as made and issued by him, or as authorized by him to be made or issued. When the paper is a complete legal instrument, as issued, he does not thereby make any representation that he will be bound by any alteration made without his authority. To hold him bound by the contract as altered by such forgery, involves the idea that the person committing the forgery was his agent in committing it, (a ludicrous absurdity,) or at least he had authorized innocent third parties to so treat him.

2 Some authorities sustaining the doctrine contended for by appellees say it is based on the ground that the maker is estopped to allege that the paper has been altered. This idea originated in a misconception of *Young vs. Grote*, 4 Bing. 258, which was the case of a check drawn by a customer upon his bankers. The plaintiff, Young, having occasion to be absent, left with his wife certain printed checks upon the bankers, signed by him in blank, to be filled up by her, and drawn as his business might require. She delivered one of these checks, so signed, to the plaintiff's clerk to be filled up by him with the sum of fifty pounds and some shillings and pence. The clerk filled out the check beginning the word "fifty" with a small letter and in the middle of the blank line left for the same, and showed it to the plaintiff's wife, who directed him to draw the cash. Before presenting it to the bankers this clerk altered the check by inserting before the word "fifty" the words "three hundred and" thus making it a check of three hundred and fifty pounds instead of fifty pounds, all in the same handwriting, and then himself presented the check to the bankers, and drew the whole larger sum. The action against the bankers was not, of course, brought by Young upon the check, but for money which he claimed had been paid out by the bankers without authority. Under the circumstances stated the court held the plaintiff was not entitled to recover.

In commenting upon that case in *Swan vs. North British Australasian Co.* 2 Hurl. & C. 175, Chief Justice Cockburn said: "The case of *Young vs. Grote* on which so much reliance has been placed and which is supposed to have established the doctrine of estoppel by reason of negligence, when it comes to be more closely examined turns out to have been decided without reference to estoppel at all. Neither the counsel in arguing that case, nor the judges in deciding it, refer once to the doctrine of estoppel. The question arose on a disputed item in an account between the banker and his customer which had been referred to arbitration; and the question raised by the arbitrator was on whom the loss which had arisen from the payment of a check in which, by the carelessness of the customer, an opportunity had been offered for increasing the amount, should fall. It was held not that the customer was estopped from denying that the check was a forgery, but that as the loss, which would otherwise fall on the bank who had paid on a bad check, had been brought about by the negligence of the customer, the latter must sustain the loss. As the question arose on an account submitted to arbitration, the matter was decided without reference to any technicality; but I am disposed to think that technically looked at the matter would stand thus: The customer would be entitled to recover from the banker the amount paid on such a check, the banker having no voucher to justify the payment. The banker on the other hand would be entitled to recover against the customer for the loss sustained through the negligence of the latter. Possibly to prevent circuitry of action, the right of the banker to immunity in respect of the loss so brought about would afford him a defence in an action by the customer to recover the amount." And in *Halifax Union vs. Wheelwright*, L. R. 10 Exch. 188, 192, which was very similar in its facts to *Young vs. Grote*, and in which the alteration of certain drafts was made by a clerk entrusted with the duty of filling them up, the Court of Exchequer, after advisement, expressed the opinion that the ground assigned by Chief Justice Cockburn of avoiding circuitry of action was certainly the most exact ground.

3. The doctrine contended for is sometimes based on the principle that "where one of two innocent parties must suffer by the fault of a third, he shall sustain the loss who put it in the power of the third to occasion it," or as expressed in *Isnard vs. Torres*, 10 L. Ann. 108, "where one of two parties, neither of whom has acted dishonestly, must suffer, he shall suffer, who by his

own act, has occasioned the confidence and consequent injury of the other." In investigating the nature and extent of this principle, by tracing it through many cases in which it has been applied, Chief Justice Richardson, speaking for the court in *Goodman v. Eastman*, 4 N. H. 457—a case like this, the question involved and decided being the same—said: "We are inclined to think that the true rule to be extracted from all the cases is that, where one man reposes in another a special confidence, and a loss arises from an abuse of that confidence, if the question, who shall bear the loss, arises between an innocent third person and him who reposed the confidence, the law will throw the loss upon the latter." The same conclusion was reached in *Wade v. Withington*, 1 Allen, 562. It being correct, it will necessarily follow that the principle that where one of two innocent parties is to bear a loss it must fall on him who put it in the power of the third to occasion it, can have no application to negotiable paper which has been fraudulently altered in material particulars by third persons, as in this case, holding no relation of agency to the maker, and after it has been executed and delivered as a binding contract.

4. Another reason assigned is: "It is the duty of the maker of commercial paper to guard not only himself, but the public against frauds and alterations by refusing to sign negotiable paper made in such a form as to admit of fraudulent practices upon them with ease, and without ready detection." The idea is, the failure to discharge this duty is negligence on the part of the maker, and that he should be held liable for losses suffered by innocent holders on account thereof. The effect of such a doctrine, if carried into practice, would be to require the maker to anticipate and provide against the many ways through or by which forgery is committed and to compel him to perform a contract he never made, because some one has committed a forgery by altering a contract he did make. If this be a correct principle, then the owner of goods stolen through his negligence, should not have the right to recover them after they have passed into the hands of a *bona fide* purchaser.

In reply to an argument like this, in *Holmes v. Trumper*, 23 Mich. 427, which was an action on a promissory note which consisted of a printed blank, with the amount and the time and place of payment filled in with writing, and was altered without the knowledge or consent of the maker by adding after the printed words "with interest at" at the end of the note, the words "ten per cent.," Mr. Justice Christiancy, speaking for the court, said: The argument amounts simply to this: that by the maker's awkwardness or negligence, his note was issued by him in a shape which rendered it somewhat easier for another person to commit a crime than if he had taken the precaution to erase the word "at" and draw a line through the blank which followed it; and that a forgery committed by filling this blank would be less likely to excite suspicion than if committed in some other way. But how such a crime, whether committed in this or in some other way, could create a contract on the part of the maker, we confess ourselves unable to comprehend; nor are we satisfied that forgery committed in this way would be less liable to detection than if committed in many other ways. The negligence, if such it can be called, is of the same kind as might be claimed if any man in signing a contract, were to place his name far enough below the instrument to permit another line to be written above his name in apparent harmony with the rest of the instrument; or as if an instrument was written with ink, the material of which would admit of easy and complete obliteration or fading out, by some chemical application, which would not affect the face of the paper; or by failing to fill any blank at the end of any line which might happen to end far enough from the side of the page to admit the insertion of a word. * * *

Whenever a party in good faith signs a complete promissory note, however awkwardly drawn, he should, we think, be equally protected from its alteration by forgery, in whatever mode it may be accomplished; and, unless perhaps when it has been committed by some one in whom he has authorized others to place confidence as acting for him, he has quite as good a right to rest upon the presumption that it will not be criminally altered, as any person has to take the paper on the presumption that it has not been; and the parties taking such paper must be considered as taking it upon their own risk, so far as the question of forgery is concerned, and as trusting to the character and credit of those

from whom they received it, and of the intermediate holders. If promissory notes were only given by first class business men, who were skilled in drawing them up in the best possible manner to prevent forgery, it might be well to adopt a high standard of accuracy and precaution which the argument of the plaintiff in error would require. But for the great mass of the people who are not thus skilful, nor in habit of frequently drawing or executing such paper, such a standard would be altogether too high and would place the great majority of men, of even fair education and competency for business, at the mercy of knaves, and tend to encourage forgery by the protection it would give to forged paper."

5. It has been said the free interchange of negotiable paper requires the establishment of the rule insisted on by appellees. But we do not understand the law in giving peculiar sanction to negotiable paper in order to secure its free circulation, and to protect *bona fide* holders for value before maturity, to go to the extent of holding the maker liable on a contract into which he never entered or gave his assent. On the contrary, the well settled doctrine is that a material alteration in a negotiable instrument, after its execution and delivery to the payee as a complete contract, avoids it, except as against parties consenting to the alteration. This doctrine rests on the principle that parties are only liable on their contract as made and entered into by them. If the contract has been changed by a material alteration, without the privity of the party liable on it, it ceases to be his contract and he can no longer be held by it. (*Overton vs. Matthews*, 35 Ark. 154; *Wade vs. Withington*, 1 Allen, 562; *Greenfield Sav. Bank vs. Stowell*, 123 Mass. 198.)

The authorities upon the question involved in this case are reviewed at length by Chief Justice Gray in *Greenfield Savings Bank vs. Stowell*, 123 Mass. 198, in a very able and elaborate opinion; and after deliberate advisement and careful examination he concluded that the preponderance of authority was to the effect that the alteration in negotiable paper, after it has been signed and delivered as a complete legal instrument, by increasing the amount for which it was made by the insertion of words and figures in blank places left in the instrument in such a manner as to leave no mark or indication of the alteration, avoids the paper as to the makers not consenting thereto even in the hands of a *bona fide* holder for a valuable consideration. Mr. Justice Christiancy, in *Holmes vs. Trumper*, 23 Mich. 427, and Mr. Justice Seever, in *Knoxville National Bank vs. Clark*, 51 Iowa, 264, likewise reviewed the authorities and reached the same conclusion. See also, *Goodman vs. Eastman*, 4 N. H. 455; *Wade vs. Withington*, 1 Allen, 561; *Washington Sav. Bank vs. Ecky*, 51 Mo. 272; *Gerrish vs. Glines*, 56 N. H. 9; *Bruce vs. Westcott*, 3 Barb. 374; *Bigelow, Bills & Notes*, (2 Ed.) 573, and cases cited; 1 Rand. Com. Paper, Sec. 187.

The railroad company, the maker of the check sued on, did not authorize the alteration made in it, nor did or omitted anything to induce the belief that it had authorized any one to make it. It was not made by its consent or by any person standing in a confidential relation to it or held out as such by it. According to the evidence introduced on the trial and the findings of the trial court the check is void in the hands of appellees.

Judgment reversed.

Fordyce, Receiver, vs. Kominski and ano., Supreme Court of Arkansas, April, 1887.

FAILURE OF NATIONAL BANK—LIABILITY OF DIRECTORS FOR BAD LOANS AND EXCESSIVE DIVIDENDS.

This was an action by the Receiver of the First National Bank of St. Albans, Vermont, against the defendants Burton, Hall, Edward A. Sowles and Albert Sowles, Directors, to charge such defendants with liability for losses resulting in its failure. The bank was organized and continued in existence with a capital stock of \$100,000 under the laws of the United States relating to National Banks. It failed and stopped doing business April 8, 1884, and was soon after placed in the hands of a Receiver. The defendants, except Hall, Edward A. Sowles being President, and Albert Sowles Cashier, were Directors, with George W. Foster, now deceased, after February 11, 1880, and with H. H. Bowman until 1882, when he died, and with Hall since January 11,

1883. At the time of the failure there were among the assets of the bank large amounts of paper in various forms taken for loans and discounts to one Marshall; large amounts taken for loans and discounts to Albert Sowles for his own use, and for others for whom he was surety and indorser; and to the amount of \$30,000 for loans to Edward A. Sowles. The loans and discounts to Marshall to the amount of \$35,808.75, and all of the others were made after February 11, 1880, and all were almost wholly uncollectible and valueless when the failure came. No dividends were declared in 1880, or in the first six months of 1881, and the bank had on July 4, 1881, surplus and surplus funds to the amount of \$64,000 or thereabouts. A dividend of six per cent. was declared on that day; another of the same amount November 1st; another of the same amount December 6th; one of five per cent. July 4, 1882; one of ten per cent. December 5, 1883; one of three per cent. May 1, 1883; and one of five per cent. November 6, 1883—all of which were paid. Some of these dividends were declared when there were not sufficient assets, in view of subsequent events, to warrant making them. This bill was brought to charge the defendants, as Directors, with the losses to the bank in consequence of these bad loans and discounts, and with the amounts of these dividends taken from its assets. The Directors all resided at St. Albans where the bank was located, except Burton, who resided at Burlington. The business of the bank was managed principally by the Cashier who was of large experience, able and competent and of good reputation, and until near the time of the failure, of considerable wealth. All the loans and discounts were approved of and made by him, and he voted for and concurred in all the dividends.

The opinion of the Court is delivered by Wheeler, *J.*, who holds:

The increase of the debt of Marshall appears to have been accomplished by bills of exchange drawn against existing values, and by the discount of business paper owned by him to such an extent as not to be in violation of any express law. Those who took part in it on behalf of the bank appear to have acted, in view of the liabilities he was already under to the bank, and of the conditions of his business as then understood by them, in good faith, and as they thought would be for the best interests of the bank. They had no interest with him nor any apparent object to accomplish by increasing his accommodations aside from taking the wisest course for the interests of the bank. As these loans and discounts have resulted, they were unwise and hazardous looked back upon, but they are to be considered as they could be looked forward to, and not from the present standpoint. In this view there is no just ground upon which any of the Directors can properly be charged for that debt. (*Scott vs. Depeyster*, 1 Edw., Ch. 518; *Sperling's Appeal*, 71 Pa. St. 11; *Thom. Liab. Off.* 233.)

The loans to Albert Sowles, and some of those for which he became liable as surety or indorser, appear to have been in violation of the provisions of Section 5,200 Rev. St. U. S., by which the liability of any person to a National bank for money borrowed in excess of one-tenth of the capital stock is prohibited. None of the Directors who are living and are defendants, are shown to have knowingly participated in or assented to any of the loans or discounts constituting the debts against him, or those for which he is liable as surety or indorser.

The liability of Edward A. Sowles originated in a direct loan to him soon after February 11, 1880, of \$36,000. This loan was in excess of one-tenth of the capital stock and in direct violation of the provisions of Section 5,200. All those who were then Directors, which includes all the defendants, except Hall, knew of and assented to this loan. This is not disputed. Section 5,239 provides that if the Directors of any National bank shall knowingly violate, or permit any officer, agent or servant to violate any of the provisions of that title, which includes Section 5,200, the rights, privileges and franchises of the bank shall be forfeited; and that in case of such violation every Director who participated in or assented to the same shall be held liable in his personal and individual capacity for all damages sustained in consequence of such violation. By force of these provisions the defendants Albert Sowles and Burton, by their participation in and assent to this loan, became liable to the bank, as now

represented by the orator, for all damages in consequence of it. The loan was made to Edward A. Sowles. He procured it in his own behalf and became liable as debtor for it. He would not appear to be liable as participating in or assenting to it on behalf of the bank. (*U. S. vs. Britton*, 108 U. S. 193.)

On the question of the liability for dividends, the Court holds: This bill is not brought to charge the defendants for money received by them as stockholders from dividends, but for losses to the bank itself for unlawfully or wrongfully declaring dividends. By Section 5,204, dividends to a greater amount than net profits, after deducting losses and bad debts, are prohibited; and debts on which interest is past due and unpaid for six months, unless well secured and in process of collection, are defined to be bad debts. The assets of this bank did not so consist of bad debts, with this definition, at the time when they were made, as to make the dividends improper. There were debts which were in fact bad in result to an extent so great as to wipe out profits from which dividends could be made when the latter ones were declared. The defendant Burton is not shown to have participated in making the dividends. Those who did, misjudged as to the value of the assets. The evidence does not warrant the conclusion that they took this method of dividing the assets of the bank among themselves when they knew that dividends could not properly be made. It is not considered therefore that the defendants are liable for the amount of the dividends because they were unlawfully or wrongfully declared. Whether those who received the dividends are chargeable for the amount received, on the ground that the money from which they were paid was needed to pay the liabilities of the bank, is a question not presented in this case. (*Spring's Appeal*, before cited; *Thom. Liab. Off.*, 351; *U. S. vs. Britton*, 108 U. S. 199.)

It is strongly urged that the defendants are liable at common law for inattention to duty as directors, although not liable under the express provisions of the statutes mentioned. This ground of liability is not applicable to the Marshall debt, for the circumstances of the increase of that debt are such that those who participated in it are not found to be liable. *A fortiori* those who did not participate are not liable for that. If there is any liability in this behalf it must arise upon the manner of the loans to Albert Sowles and those for whom he became liable, and for some smaller loans to Edward A. Sowles, and to some others for which he became liable. There were some of these latter for which the defendant Burton became liable as surety or indorser, and from which he has become discharged in the course of the receivership. He was and always has since been amply good for these liabilities, and none of the Directors incurred any liability for negligence in trusting to his solvency. This question is narrowed down to whether the defendants Burton and Edward A. Sowles and Hall are liable for the loans on which Albert Sowles is liable and which were made to him, because they did not prevent these loans.

The question as to the liability of Directors of National banks for mere inattention was much considered in *Morris vs. Lee* (*RHODES' JOURNAL OF BANKING*, July, 1887, p. 702.) in the Northern District of New York, lately decided. It was there held that Directors were not liable for the acts of their associates in which they had no part, and of which they had no knowledge, and towards which they did not connive in any manner. Upon these principles these defendants are not liable on account of the loans to Albert Sowles, or of those for which he became liable, because they did not participate in them, nor assent to or connive at making them, so far as has been made to appear.

There remains the liability of the defendants Albert Sowles and Burton for the loans to Edward A. Sowles. If there were liabilities of these defendants alone, or with other defendants for other loans, or for dividends, it would be somewhat anomalous to include them in a decree with this liability, which is entirely distinct, although of the same nature. It is not necessary to consider whether the liability of the Directors, under such circumstances, is for the whole debt or only for the excess; for this loan which was \$36,000 in the first place was reduced to \$26,000, the exact amount of the excess, December 5, 1882. It then stood in the form of drafts of Edward A. Sowles—one of \$5,000 on

H. B. Weeks, due January 8th; one of \$5,000 on B. C. Hall, due January 11th; one of \$5,000 on H. B. Weeks, due February 8th; one of \$5,000 on B. C. Hall, due February 11th; and one of \$6,000 on H. E. Lewis, due January 15, 1888. These appear to have remained of the identical loan for which the money was passed over to him, with the full knowledge and assent of Albert Sowles and Burton, and of the other two Directors now deceased. This debt, was not, according to the evidence, further reduced, but was wholly lost. The damages resulting to the bank in consequence of this loan are equal to the amount of the sums due on these drafts, with interest from the times they respectively fell due. This interest to April 6th amounts to \$6,559.33, and the whole amount of the loss or damage resulting from this loan is \$82,559.33. This money was borrowed by Edward A. Sowles to pay for stock of the bank for the purpose of securing harmony among the officers and stockholders, and it is said in evidence that the transaction was reported to the Comptroller of the Currency and received his approval. Whether his approval extended beyond the organization of the Board of Directors who had lately been constituted does not appear. If it did, he could not, and probably did not attempt to, vary any liability imposed by express statutes. It is suggested also that the conduct of the Receiver who preceded the plaintiff has contributed to increase the loss from the poor assets. Such, however, does not appear to be the fact, and if it did it would not affect the liability of any of the defendants on account of this unlawful loan, unless some part of the loss resulting from the loan was due to it. When the Directors let this sum of \$86,000 of the money of the bank go into the hands of Edward A. Sowles as money borrowed by him of the bank, they placed it outside of where the law authorized them to place it, and became liable, then and there, for the excess above the legal limit at least, and chargeable for it, if in consequence, it should be lost. What occurred afterwards had no effect upon the liability, except as it may have varied the amount of the loss. The result is that the defendants Albert Sowles and Burton are chargeable for the amount of this loss. There is no occasion for an account of it as the amount distinctly appears. The defendants Edward A. Sowles and Hall are not upon these considerations chargeable for any of the losses in this suit; but they are so connected with these matters that they do not appear to be entitled to costs.

Witters, Recr. vs. Sowles and others, Circuit Court, D. Vermont, April 6, 1887.

INDORSEMENT OF NOTE FOR ACCOMMODATION OF MAKER BY PAYEE IN CONNECTICUT—NEGOTIATION BY MAKER IN GEORGIA—WHICH LAW GOVERNS THE CONTRACT OF THE INDORSER?

G a resident of Savannah, Georgia, made a promissory note payable to the order of the defendant, who was a resident of Connecticut, and mailed it to the latter in Connecticut, who there indorsed it for the accommodation of G and returned it by mail to him at Savannah. G thereupon transferred the same for value to the Citizens' Loan Company of Savannah, who for value transferred the same to the plaintiff. Payment of the note having been demanded at maturity and the same remaining unpaid, plaintiff brought suit against defendant in the United States Circuit Court for the District of Connecticut to recover its amount. The complaint alleged substantially the foregoing facts and defendant demurred thereto on the ground that there was no allegation that he had received notice of dishonor. Two questions arose upon the demurrer.

1st. Did the law of Georgia at the time of the indorsement of the note in suit, require notice to the indorser of the demand of payment and of the non payment of the note at maturity, and that the holders looked to the indorser for payment?

2nd. If the law of Georgia did not require such notice, is the contract of indorsement to be governed, under the facts stated in the complaint, by the law of Connecticut which requires such notice to the indorser, or by the law of Georgia?

On the first proposition, the Court after reviewing the provisions of the various statutes of Georgia on the subject holds: Without undertaking to decide what effect the provisions of the law of 1876 in regard to protest had

upon previous legislation upon that subject, it seems to be clear that notice of the non payment of a promissory note need not be given to the indorser unless the note is made for the purpose of negotiation, or is intended to be negotiated, at a chartered bank. This state of the law of Georgia is expressed, with considerable blindness, in the Code of 1882, which however it is said has never been enacted by the Legislature of the State.

The remaining question as to whether the indorsement of the defendant was to be governed by the law of Georgia or of Connecticut is then considered by the Court, as follows: The note was accommodation paper made to the order of the defendant, sent to him by mail, indorsed by him in Connecticut, and returned by mail to the maker in Georgia and by him delivered to the company which discounted it. It is agreed that an indorsement constitutes a new contract which is to be governed by the law of the place where it is made, though the note was made or is to be payable elsewhere. The question in this case is confined to the case of accommodation paper having been indorsed for the purpose of its being discounted, and the paper so indorsed having been delivered to the maker in another State for the purpose of negotiation, and negotiated by him in that State. The question is: In which State was the indorsement made—the State where the name was written, or the State where the note was negotiated?

The theory of the law on the subject of the place of the indorsement of accommodation paper is given in *Tilden vs. Blair*, 21 Wall. 241; *Lawrence vs. Bassett*, 5 Allen, 140; *Cook vs. Litchfield*, 9 N. Y. 279; *Young vs. Harris*, 14 B. Mon. 477; and in *Mott vs. Wright*, 4 Bliss. 58, and is to the effect that the accommodation indorsement does not become operative until the paper is negotiated. So long as the note remained in the hands of G (the maker), or of the defendant, the liability of the indorser did not arise, but commenced when the note was negotiated to a *bona fide* holder. The note was sent to Georgia for the purpose of negotiation and the maker to whom it was sent was thus constituted the agent of defendant "to initiate a liability not only of himself but also of the defendant." (*Tilden vs. Blair, supra.*) The place where the liability on the indorsement commenced is the place where the indorsement was made. This statement of the law is given in various modes of expression in the decisions which have been rendered. The turning point is the fact that accommodation paper only becomes a valid promise to pay money and binding upon the indorser when it is delivered to the person who gives a valuable consideration for it, and that consequently the place where the indorsement becomes effective is the place where, legally speaking, it was made. The Court in *Tilden vs. Blair* regards the person to whom the paper is sent for negotiation as by that act the agent of the indorser to give the note life and create the liability. The law is thus stated in 1 Dan'l Neg. Instr. Sec. 868: "Where a note is indorsed for accommodation in one State and delivered in another, the indorsement is governed by the law of the latter; for the accommodation indorser makes that party to whom he lets his signature his agent for putting the instrument into circulation, and his own contract with those to whom it is negotiated must consequently be judged on the principles of agency, which refer it to the place where the circulation commences."

Demurrer overruled.

Stubbs vs. Colt, United States Circuit Court, D. Connecticut, March 26, 1887.

TAXATION OF MICHIGAN SAVINGS BANKS—DOUBLE TAXATION—INJUNCTION.

The city of Adrian in 1885 taxed all the shareholders in the complainant's Savings bank upon their shares, and in addition thereto, undertook to tax the complainant as a corporation, for its bank fixtures valued at \$1,000 and for \$30,000, as an alleged surplus of property beyond its nominal capital stock of \$60,000. Complainant claimed it was not taxable except for real estate, and it filed a bill to restrain the city from enforcing the tax on its property which defendant was proceeding to do by seizure of the bank furniture and fixtures.

Held, Under the law of 1885 this controversy could hardly have arisen as its terms are very explicit and sustain complainant's claim; which however seems equally well based under the tax law of 1882, which is in furtherance of

the settled policy of the State. (The provisions of the tax law of 1882 are here reviewed, and the Court holds:) This statute is very full and shows with great precision how corporate property is treated. It indicates that the shares include in their value all of the property of the bank and then treats the real estate as so included, and requires it to be deducted for a separate taxation. If the shares were regarded as only covering the nominal capital paid in, it might easily happen that this capital might remain intact, and a surplus only be invested in real estate, in which case the result would be to deduct from what ought to be taxed so much as the value of the land would amount to, and if the land is worth as much as the nominal capital, that would on this theory escape taxation entirely. This would lead to absurd results.

The statute says expressly, there shall be no taxation whatever of shareholders where the corporation property is assessed to itself, and the meaning of this is obvious. A corporation is always, so far as its property is concerned, a mere trustee for its stockholders whose interests are in its corporate charge. It can make no great difference to the State whether the *cestuis que trust* pay their taxes directly in person or have them paid by their trustee out of the trust funds. But the conditions imposed by Congress on the taxation of property in National banks made it desirable for the State to make bank taxation as nearly uniform as possible; and our tax law has provided that except as to real estate, all such taxation shall be against the shareholders who are the equitable and beneficial owners of all the assets, although in law the corporation is a distinct person. Under this statute the value of the shares must necessarily depend upon the financial condition of the bank. Presumptively an earned surplus will add proportionately to the value of the stock. There may be circumstances which will make the market value larger or smaller than this proportion, depending very much on the standing of the bank and its management, as well as on the condition of the money market. But in the eye of this statute every share represents an aliquot portion of all the bank assets, and all the shares represent all the assets. This is the plain meaning of the statute and it is better adapted than any other system to avoid the risk and mischief of double taxation. Whether it is legally possible to levy double taxation under any circumstances, as it is claimed some authorities justify, there is no doubt they ought not to be levied and we have no doubt this statute has prevented banks and other shareholders from being subjected to them.

Further Held, As the bank was not liable to taxation at all on its personal property and the levy was made in such a way as to directly interfere with its business, the case comes within the analogies of the cases represented by *Osborn vs. Bank of the United States*, 9 Wheat. 738, and a Court of Equity has jurisdiction to interfere by injunction to restrain the enforcement of the tax.

Lenawee County Savings Bank vs. City of Adrian and another, Receiver of Taxes, Supreme Court of Michigan, June 9, 1887.

STATE TAXATION OF NATIONAL BANKS—RIGHT TO REMOVE CASE OF ALLEGED EXCESSIVE TAXATION FROM STATE TO FEDERAL COURT.

Plaintiff, the President of the First National Bank of Rock Rapids, Iowa, appeared before the Board for the Equalization of Assessment for taxation of the property situated within the incorporated town of Rock Rapids, and made complaint on behalf of the stockholders of the bank that the assessment of the capital stock was in excess of the amount assessed upon other moneyed capital of individuals in said town, and to that extent was illegal. The Board refusing to equalize the assessment, plaintiff appealed to the Circuit Court of Lyon County in pursuance of a State statute providing that the ruling of the Board of Equalization was subject to review by appeal to such Circuit Court within sixty days after the adjournment of the Board. Plaintiff then filed a petition in that Court demanding the removal of the cause to the Circuit Court of the United States, alleging that the amount in controversy exceeded the sum of \$500 exclusive of costs, and that the questions arising in the proceeding were to be determined under the Constitution and laws of the United States and thus involved a Federal question which it was his right to have determined by the Federal Courts. Plaintiff tendered with his petition for removal a bond

as required by law, and this bond was approved by the Court. The Court refused to order the removal of the cause, but entered an order affirming the acts of the Board of Equalization. Plaintiff then appealed to the Supreme Court of the State.

Held, It is not denied that the question involved in the case requires the application of the rule of taxation prescribed by Section 5,219 of the Revised Statutes of the United States. The controversy therefore involved a Federal question. The fact that the laws of the State prescribe the same general rule does not defeat the jurisdiction of the Federal Courts. If the contrary position were correct, a State might by re-enacting any Federal statute take away the jurisdiction of the Federal Courts. The case is clearly removable under the Act of Congress approved March 3, 1875. The parties were before the Court, a controversy existed between them in a proceeding involving a question under a Federal statute, and the order of removal should have been made.

Richards vs. Incorporated Town of Rook Rapids, Supreme Court of Iowa, June 18, 1887.

ALTERATION OF INSTRUMENTS—UNAUTHORIZED FILLING UP BLANKS IN PROMISSORY NOTE WITH INTEREST IN EXCESS OF LEGAL RATE IS A MATERIAL ALTERATION AND AVOIDS THE NOTE.

A note was made and delivered to the payee before maturity in the following form :

\$744.12.

BRECKENRIDGE, Col., February 17, 1881.

Eleven days after date we promise to pay to the order of W. W. Goodrich, seven hundred and forty-four and 12-100 dollars with interest at.....per cent. per..... from until paid.

E. J. COLLINGWOOD,
GEO. H. BRESSLER,
R. B. STAPP,
W. J. SWIFT.

Goodrich, the payee, indorsed the note to the Bank of Breckenridge and the note was then filled up by the bank without the knowledge or consent of the makers, so as to read "With interest at two per cent. per month from date until paid." The bank transferred the note to the plaintiff who brought suit thereon against the makers.

Held, Such a note, with such blanks, does not thereby carry authority to the purchaser thereof to fill the blanks in the manner shown, whereby the rate of interest was changed from the legal rate, viz. ten per cent. per annum, to twenty-four per cent. per annum, and the note is vitiated and avoided by such change in its terms by the purchaser without the knowledge or consent of the makers, for thereby it ceases to be the promise they made, and the effect is the extinguishment of the promise.

Judgment for defendants.

Hoopes vs. Collingwood, Supreme Court of Colorado, May 18, 1887.

BILL OF EXCHANGE—LIABILITY OF ACCEPTOR—PAYEE WHO DISCOUNTS BILL AFTER ACCEPTANCE BUT BEFORE MATURITY CAN ENFORCE SAME FREE FROM EQUITIES OF ACCEPTOR AGAINST DRAWER.

The action was founded upon a bill of exchange and was by the payee against the acceptors. The pleas were : not indebted, set-off and recoupment. The pleas of set-off and recoupment went upon the theory that the bill was the property of the drawers, and that the payee was their agent, seeking to collect for their benefit, or at all events, that the payee was affected by the equities subsisting between the drawers and the acceptors in regard to the consideration for the acceptance. That consideration was the final installment of the price of certain machinery which the drawers had sold and shipped to the acceptors prior to the date of the acceptance and which, save as to the amount of the bill, had been paid for. The pleas taken together alleged a breach of contract as to this machinery in two particulars. First, it was imperfect and incomplete and not suitable to the purpose for which it was sold and warranted; secondly,

it was delivered two months later than the time stipulated in the contract. From the former of these causes the acceptors incurred certain specified expenses which would have been saved to them if the contract had been complied with. These expenses amounting to something more than half the face of the bill were pleaded as a set-off. The delay to deliver resulted in deferring the completion of a certain steamboat on which the machinery was to be used and in preventing the defendants, and the steamboat company in which they were interested, from engaging in business for a period of eight months to their damage nearly twice the face of the bill. This damage they offered and prayed to recoup. It appeared from the evidence that the bill was drawn at Jeffersonville, Indiana, and sent by the payee, a bank there situated, to Columbus, Georgia, for acceptance, and after acceptance was returned to the bank and by it discounted, the drawers indorsing it in blank and receiving credit in their account with the bank for the amount of the bill, less the discount. The acceptance matured thirty days after October 14th and was discounted on the 16th of October.

Held, The effect of accepting a bill is to acknowledge that the drawer has funds in the hands of the acceptor applicable to its payment, and the payee is entitled to repose with absolute trust and confidence upon that admission, and is under no duty to inquire further. If the admission proves injurious he who made it must take the consequences. What has the payee to do, after parting with his money on the faith of the acceptance, with the state of the accounts between the drawer and acceptor? Nothing whatever. The acceptor is the party primarily liable and his dealings about consideration for the acceptance are with the drawer. The payee's dealings are with the drawer. If the payee gives value to the drawer and acquires the bill in due course of trade before maturity, he is entitled to all the protection which commercial law can afford to the most favored class of creditors.

Flournoy vs. The First National Bank of Jeffersonville, Indiana, Supreme Court of Georgia, February, 1887.

ABSTRACT OF CASES.

TAXATION OF NATIONAL BANK STOCK—DEDUCTION OF INDEBTEDNESS.

Plaintiff returned for taxation his shares of National bank stock less the amount of his interest bearing indebtedness. The selectmen refused to deduct the indebtedness and assessed taxes upon the full amount of the bank stock. Plaintiff appealed.

Held: "Money on hand, or at interest, more than the owner pays for," being a statutory limit of the taxation of such moneyed capital, and shares of National Banks not being taxable "at a greater rate than is assessed upon other moneyed capital" the plaintiff's return was correct. (Citing Gen. Laws, c. 53 Sec. 6; Rev. St. U. S. Sec. 5,219; Evansville Bank vs. Britton, 105 U. S. 322; Pelton vs. National Bank, 101 U. S., 143; Western vs. Manchester 62 N. H.) Tax abated.

Peavey vs. Town of Greenfield, Supreme Court of New Hampshire, March 11, 1887.

NEGOTIABLE PAPER—FRAUD OF PARTNER—LIABILITY OF PARTNERSHIP.

Whenever a partnership adopts and is engaged in a course of business in which the use of its commercial paper is appropriate and reasonably to be expected, or does in fact make use of it with common knowledge of the members of the firm, whenever the convenience or necessities of the firm may require, then the firm is liable upon commercial paper made in its name by one of its members to one who takes it *bona fide* in the usual course of business before maturity and for a valuable consideration notwithstanding the fraud of the partner making the paper, or misappropriation by him to other uses than those of the firm. The court holds that such liability is not restricted to the case of a trading partnership, if by that term is intended one engaged in the business of buying and selling, though it would, as a rule, include such, but extends to all cases where the nature of the business fairly and reasonably implies such

use as an appropriate incident thereto, or where the actual course of business pursued adopts the practice of issuing the mercantile paper of the firm to accommodate its necessities or convenience whenever the occasions occur, and such occasions do in fact occur and are thus provided for. (Citing *Kimbro vs. Bullitt*, 22 How., 256; *Irwin vs. Williard*, 110 U. S. 499, 505; *Johnston vs. Dutton*, 27 Ala. 245; *McGregor vs. Cleveland*, 5 Wend. 475.)

National Exchange Bank vs. White, Circuit Court W. D. Michigan, 1887.

PROMISSORY NOTE—ATTACHMENT OF MAKER'S PROPERTY—INDORSER DISCHARGED BY RELEASE OF ATTACHMENT WITHOUT HIS CONSENT.

L. made a promissory Note in favor of T. who indorsed it to the Augusta Savings Bank. The note being dishonored, notice of protest was duly given to the indorser, T. L. the maker, was sued and certain of his property was attached. Part of the property so attached was subsequently released by the bank to a party who claimed to have a bill of sale thereof and this was done without the consent of either the principal or the indorser.

Held: The bank had no right to release the attachment without the knowledge or consent of the indorser, and in undertaking to do so the bank took upon itself the risk of making the money out of the property, and must account for its value, and to that extent it should be considered as a payment of the judgment, and *pro tanto* a discharge of the indorser.

Twiggs vs. Augusta Savings Bank, Supreme Court of South Carolina, April 20, 1887.

LOAN BY NATIONAL BANK ON NOTES AND MORTGAGE—ORAL AGREEMENTS AND REPRESENTATIONS OF CASHIER VARYING CONTRACT NOT ADMISSIBLE TO BIND BANK—LOAN IN EXCESS OF STATUTORY LIMIT.

Action by a national bank to foreclose a mortgage.

The Circuit Court sustained a motion to strike out part of defendant's answer. The parts so stricken out contained allegations to the following effect:

(1) The cashier of the plaintiff represented to the defendants when the mortgage was executed that he only wanted it to show to the bank examiner, and for no other purpose.

(2) At the same time the cashier agreed that the principal defendant "might renew the note from time to time until he could make the money out of his stock then on his farm."

(3) He also agreed that the plaintiff would not foreclose the mortgage.

(4) The notes and mortgage were given for a loan of \$10,000 which exceeded the restriction of the statute of the United States upon the amount of loans which may be made by national banks. Defendants appealed.

Held: The first, second and third defenses above stated involve matters contradictory of the contracts and terms of the notes and mortgage and are based upon oral agreements which are not admissible to contradict or vary the written contract as expressed in the notes and mortgage. Besides this, these agreements were not based upon a consideration, and if in writing could not for that reason be enforced.

The fourth defense stated above cannot be urged to defeat securities given for a loan made by a national bank. (Citing *Gold Min. Co. vs. National Bank*, 96 U. S. 640.)

Mills Co. National Bank vs. Perry and o'rs, Supreme Court of Iowa, June 15, 1887.

ORDERS ON VILLAGE TREASURER—NOT NEGOTIABLE INSTRUMENTS.

Certain orders were drawn by the recorder of a village upon the treasurer in payment of certain work done and material furnished under a contract for paving one of the streets of the village, and by the order of the Common Council. These orders were regularly indorsed by the payee and were purchased by a third party in good faith for a valuable consideration, and without notice.

Held: That such orders or warrants were not negotiable instruments and while in the hands of such third party were subject to all the equities existing

between the payee and the village, or between the payee and any other person, without reference to the good faith of the holder in his purchase.

Miner vs. Vedder, Supreme Court of Michigan, May 5, 1887.

FORGERY OF MEMORANDUM OF INDEBTEDNESS ISSUED BY MERCANTILE FIRM—UNLAWFUL ISSUE NO DEFENSE.

The defendant was indicted for forging a written instrument in these words: "Due 8.50c J. D." Defendant demurred to the indictment on the ground that the instrument set out therein and alleged to have been forged was too vague and indefinite to predicate forgery thereon; and that the instrument was illegal, vague and indefinite, and hence not the subject of a legal liability, and therefore not of forgery.

The instrument as originally drawn was as follows: "Due 50c J. D." meaning that the sum of fifty cents was due to the bearer, as change, from the mercantile firm of Mayer Brothers at the store of the firm as certified to by Mr. John Daffin, a clerk in their employment who had authority to make such certificate in the regular course of business at said store.

Held: Such instrument, coupled with sufficient explanatory averments of fact, may be the subject of forgery.

Further Held: An instrument which shows on its face that it was "issued with the intent to circulate as money" though its issue is prohibited under heavy penalties, civil and criminal, (Code 1876, Sec. 1424, 4433) is not void, but may be the subject of forgery.

Nelson vs. State, Supreme Court of Alabama, June 14, 1887.

DEPOSIT BY PARTY AS GUARDIAN—DEATH OF DEPOSITOR—EXECUTOR CANNOT WITHDRAW FUNDS BY CHECK.

G deposited in the Peoples National Bank \$4,861.65 to his credit as guardian. This deposit was in fact made by G as guardian for E and others. G died leaving a will of which plaintiff was the duly qualified executor.

Plaintiff duly notified the bank of his qualification as executor of G, and demanded payment of the money deposited to the credit of G as guardian. The bank declined to pay on the ground that the money could only be drawn by the official successor of G, guardian, and that the check of the plaintiff, as executor, would not be a sufficient discharge of the bank.

Held: (Simpson C. J. dissenting,) that the executor of G had no right to draw out upon his check as executor the deposit standing in the name of G, guardian. That such money, set apart from his own by the testator, and designated specifically as the money of his wards, constituted no part of the assets of the testator's estate and cannot lawfully be paid to his executor.

Gary, Ex'r, vs. Peoples National Bank, Supreme Court of South Carolina, April 21, 1887.

LIABILITY OF BANK FOR SAFE KEEPING OF COLLATERALS AND OF SPECIAL DEPOSITS.

If bonds are held as collateral security by a bank at the time they are stolen, the bank is obliged as bailee for reward to exercise that degree of care in their safe-keeping which a reasonably prudent and cautious man would exercise in the care of his own property of the same kind. If however, the custody of the bank at the time the bonds were stolen is only that of gratuitous bailee for safe-keeping, it is not liable for the loss unless it resulted from its gross carelessness.

Prather vs. Kean, Circuit Court, N. D. Illinois, 1887.

NOTICE TO INDORSEER—SUFFICIENCY OF DIRECTION IN CASE OF FAILED PARTNERSHIP.

F. S. and B. S., copartners, carried on business at No. 268 Purchase Street, Boston, and were indorsers on certain promissory notes. Before the notes matured they made an assignment for the benefit of their creditors, and the assignee took possession of the business, and continued it for some little time

until it could be wound up. On the non payment of the notes at maturity, notices of dishonor were mailed to such copartners at No. 268 Purchase street where they had formerly carried on business.

Held: that the mailing of the notices to such address was sufficient and the indorsers were held.

Importers and Traders National Bank vs. Shaw, Supreme Judicial Court of Massachusetts, Suffolk, May 9. 1887.

CHECK—PRESUMPTION OF COMPLETENESS BEFORE DELIVERY—FORGERY OF INDORSEMENT—RECOVERY.

A check (the drawer's signature being genuine) in the hands of one not the drawer, is presumed to have been complete when signed, and to have been then delivered to the payee.

If a check payable to a payee named, or order, (it having been delivered to the payee,) comes into the hands of one not entitled to it, who forges the payee's indorsement and passes the check to another person, who receives the money on it, such other person is not liable for such money to the drawer, but may be liable to the payee.

Hensel vs. Chicago, St. P. & M. & O. R. Co., Supreme Court of Minnesota, June 13, 1887.

LAW NOTES AND COMMENTS.

LIABILITY OF NATIONAL BANK DIRECTORS.—Another decision by Judge Wheeler, of the United States Circuit Court, will be found reported in this number, bearing on the liability of National bank Directors where losses have been incurred resulting in the failure of the bank. In the July number we published an extended abstract of his decision upon the liability of the Directors in the case of the First National Bank of Buffalo, wherein the conclusion was reached that Directors were not liable for the acts of their associates in which they had no part, of which they had no knowledge, and towards which they did not connive in any manner. In the present case the Directors of the failed First National Bank of St. Albans, Vermont, were sought to be held liable for bad loans and discounts, and with the amounts of certain dividends paid to the stockholders which the bank was not in a condition to pay. Section 5,204 of the Revised Statutes prohibits dividends to a greater amount than net profits, after deducting losses and bad debts; but the Court holds that the assets did not so consist of bad debts at the time when the dividends were made as to make them improper; that the evidence did not warrant the conclusion that the Directors declared such dividends when they knew they could not properly be made, and therefore they were not liable for the amount of such dividends as being unlawfully or wrongfully declared. In the matter of the bad loans and discounts the Court, after reviewing the various transactions, fails to find any ground of liability except in the single instance of a loan of \$36,000 to one of the Directors, which being in excess of one-tenth of the capital stock was a violation of Section 5,200, and all the Directors who assented to this loan are held liable for the loss thereon. The proof showed other loans made in violation of this provision, but in all these instances the Directors are exonerated from liability, as none of them were "shown to have knowingly participated in or assented" thereto.

If this decision and the one reported in the July number be good law, a Director would escape liability even though he absented himself entirely from the bank, took no interest in its business, and acquired no knowledge of the transactions in which it engaged, and the bank was totally wrecked by bad management which his presence and supervision might have averted.

CONSTRUCTION OF SECTION 5,198 REVISED STATUTES AS TO PENALTY FOR USURY.—Section 5,198 of the Revised Statutes of the United States, providing the penalty for taking usury by National banks, has been frequently before the Courts of late upon the question of the party entitled to recover from the bank double the amount of interest paid in violation of law as therein pro-

vided. The section is as follows: "The taking, receiving, reserving or charging a rate of interest greater than is allowed by the preceding section, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill or other evidence of debt carries with it, or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid, or his *legal representatives*, may recover back, in an action in the nature of an action of debt, twice the amount of interest thus paid from the association taking or receiving the same, provided such action is commenced within two years from the time the usurious transaction takes place."

In the case of *Barret vs. Shelbyville National Bank*, in the Supreme Court of Tennessee (*RHODES' JOURNAL OF BANKING*, June, 1887, pp. 597, 598,) the question was as to the right of the judgment creditor of an insolvent debtor to subject the forfeiture provided by the above section. The Court held that by the terms of the section the relief granted was confined to the debtor or his *legal representatives* and it did not therefore extend to the creditor of the debtor, as he was in no sense the debtor's legal representative. The Court say that the question of the right of a creditor to sue has not been before the Supreme Court of the United States.

In *National Bank vs. Trimble*, 40 Ohio, 639, it was held that "if the payer of such interest before action brought was adjudged a bankrupt, his assignee in bankruptcy became his *legal representative* and as such was entitled to bring the action."

Following this decision the Supreme Court of Ohio in *Barber vs. National Exchange Bank* (decided April 25, 1887,) holds that the principle of that case reaches the case of an action by a Receiver, who would be entitled to the relief provided by the section above given.

While, according to the Supreme Court of Tennessee, the judgment creditor of the debtor cannot sue the bank, the Receiver or assignee in bankruptcy, under the decision of the Supreme Court of Ohio, may maintain such an action.

LIABILITY FOR LOSS ON RAISED CHECKS.—A case is reported in this number where a check for \$8.40 was so carelessly drawn that the holder was enabled to raise it to \$80.40 without leaving any trace of the alteration discernible by a man of ordinary prudence, and in its changed condition it was purchased before maturity by an innocent third party. In a suit by him against the receiver of the drawer (an insolvent railroad company,) the Court relieves the estate from liability on the ground that the alteration was not authorized, or consented to, by the drawer and was not made by any person standing in a confidential relation to it. Other cases, some of which are cited in the decision referred to (generally the cases of promissory notes) go to the same length and hold the makers of a note or bill freed from liability to *bona fide* holders where the paper has been materially altered, even though the fraud is the result of the makers own negligence in the careless execution of the instrument.

We think this is carrying the rule too far. While it may be conceded that a note or bill, which has been altered in a material respect without consent of the maker, such as by increasing the amount, is not the contract of the maker, and that he should not be bound by it, still this rule should have a limit and not be extended to those cases where the loss is the result of the maker's own negligence. If a man is reasonably careful in drawing a note or bill, and then it is raised without his consent and a third party purchases it for value, it is not then the fault of the maker and he would be rightfully discharged from liability. But surely the case is different where he has drawn the instrument so imperfectly that a dishonest person is enabled to take advantage of his negligence and increase the amount in such a way that it cannot be discerned. Suppose in the case of the check above stated the forger had presented it to the bank for payment, instead of to a third party for discount, and the bank, knowing the signature of the drawer to be genuine and seeing nothing suspicious about the instrument, had paid the check. A banker would strenuously resist being charged with the loss by reason of such payment, yet the rule in the one case should hold good in the other, for there

is no more equity in the case of a banker who cashes a check raised under such circumstances than in the case of a *bona fide* purchaser before maturity. The rule laid down in the present case, ignoring the maker's negligence, and shifting the loss from the party whose fault has caused it, to the party who is entirely free from blame, will not meet with general approval.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

MILWAUKEE, August 18, 1887.

SIR:—Kindly state the interest on a note for \$100,000, dated January 2, 1886, payable 363 days after date (without grace) six per cent. The Revised Statutes of Wisconsin, Sec. 43 of Ch. 94, provide that in the computation of time 30 days shall be a month and 12 months a year. On a note for \$100,000 @ 6%, dated March 26th, and payable April 30th (no grace), a banker construes that the law allows him 35 days, *i. e.*, March 26th to March 31st, 5 days, April 30th—total 35 days, and claims \$500 on 30 days and calls 5 days 1-6 month, \$83.33; total \$583.33. According to this interpretation, taking 30 days to the month, the January 2d note would give him 12 months and 3 days, or 363-360 = \$3,050. If I would offer him \$5,987.12, the interest on 363-365 of a year, that would not content him, but he would insist on the interest for 363 days, which, although it lacks 2 days of a full year, would give him *\$50 more than for a full year*—(\$100,000 1 year, 6% = \$6,000). If that is the proper construction of the law, where is the justice? Will the law allow the construction to any individual, or is it the banker's privilege only?

G. W. MARLING.

Answer.—This question brings out the peculiarity of the Wisconsin interest law. By Section 43, of Chapter 94, of the Revised Statutes of Wisconsin, as stated on page 708 of the July number of the JOURNAL, it is provided that "in the computation of time thirty days shall be a month and twelve months a year." We see no other conclusion to come to than the one our correspondent says the banker has arrived at, than that on a note running 363 days he is in Wisconsin entitled to twelve months and three days' interest, or a year and three days' interest. That the law of Wisconsin conflicts with the calendar is not the banker's fault. For a calendar year this law gives interest for twelve and one-sixth months, or for leap year twelve and one-fifth months. The interest on the note given, at six per cent. would be for twelve months of thirty days constituting an interest year \$6,000, for one-tenth of a month \$50, in all \$6,050.

Editor Rhodes' Journal of Banking:

In California a note outlaws four years from maturity. When will a note outlaw which is drawn one year from date, with the privilege of two? Does it outlaw four years from the expiration of the first or second year? FRED M. WEST, Cashier.

Answer.—The privilege being given in the note does not necessarily imply that it was taken. It would seem that if the privilege of extension for the second year was not claimed of the holder of the note by the maker at the end of the first year, either verbally or in writing, then the note matured at the end of the first year, and the statute of limitations would run from that date. This would seem to be a question of fact.

Editor Rhodes' Journal of Banking:

GRAND ISLAND, Neb., August, 21, 1887.

SIR:—In a town where there is no Clearing-House, the Messenger of one bank presented checks on another bank for payment and received from the other bank checks on his own bank in part payment of the amount due on the checks he presented. In the absence of an agreement to the contrary, is the receipt of such checks by the Messenger absolute payment of the checks so received, and are the endorsers thereon discharged from their liability as endorsers except as to the guaranty of the genuineness of prior endorsements? Or, is the bank sending out the Messenger entitled to reim-

bursement from the other bank, if after the Messenger's return and on examination of the bank books, it should be ascertained that the drawers of the checks brought in by the Messenger had no funds or that there was any irregularity about the drawing or indorsing of the checks. T.

Answer.—If the bank receiving the checks drawn on itself brought by its Messenger, which the latter received in exchange of checks presented to another bank for payment, finds that the drawers have no funds, or that the checks could not ordinarily be paid by it because of some irregularity about the drawing or endorsement of such checks, the mere taking of them by the Messenger of the bank does not constitute payment of them. The endorsers are not released. The bank on which they were drawn is entitled to reimbursement on them.

Editor Rhodes' Journal of Banking:

MIDLAND CITY, Mich., August 16, 1887.

We have a check presented to us for collection on an out of town bank which bears date August 30th. The bank upon whom drawn declines to pay. Can payment be legally deferred under such circumstances.

W. D. MARSH, Cashier.

Answer.—A past dated check, payable to order or bearer, is legally due when the date is reached, if that is not a holiday, when rule as to holidays governs. (See "Daniels on Negotiable Instruments," Vol. 2, Sec. 1,578.)

Editor Rhodes' Journal of Banking:

DENISON, Texas, July 26, 1887.

Can a resident of Massachusetts or Missouri, owning and holding shares of stock in a National bank in Texas, pay city, county, and State taxes to the State of which he is a resident, and not to city and county where the bank may be located?

"COMMERCIAL LAW."

Answer.—Section 5,219 of the Revised Statutes of the United States distinctly provides "that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located, and not elsewhere."

Editor Rhodes' Journal of Banking:

YANKTON, Dak., August 20, 1887.

H. & B. drew a check on the C. Bank payable to the order of M. This check was lost, the C. Bank was notified of the loss, and a duplicate check was then issued to M. and paid by the C. Bank.

At a later date, the original check unendorsed by the payee, but bearing several other endorsements, was presented for payment by another bank, and was paid by the C. Bank, that bank overlooking the fact that it had paid the original, and neither bank noticing that the payee's endorsement was lacking.

Several days after paying it, the C. Bank discovered that the check did not bear the payee's endorsement, and demanded repayment of the bank to whom it had paid it. Is the C. Bank entitled to such repayment? And if one of the endorsers should voluntarily redeem the check, would he be entitled to collect the amount from prior endorsers?

* * *

Answer.—If the original check had been lost when properly endorsed and had been presented by an innocent holder for value the amount could have properly been credited to the drawer's account, although he had issued a duplicate check, which had been previously paid and charged to his account. The remedy of the drawer would in this case have been against the payee who endorsed and then lost the check. The original not being endorsed by the payee, and being paid by the banks through error, they have a right to correct that error within a reasonable time. If the last endorser should redeem the check, we think he can collect from prior endorsers.

Editor Rhodes' Journal of Banking:

GRAND ISLAND, Neb., August 21, 1887.

In a town where there is no Clearing-House, is it competent for banks to agree among themselves, that after making the daily exchange of checks and on or before an agreed hour, each bank may recover from the other, the amount of all checks that for any reason it may see fit to refuse? If so, what would be the legal status of

checks after the daily exchange had been made and before the agreed hour for reclamation? Would they be *paid checks*? And would their return and the reclamation of the amount that had been paid, revive them and subject all the parties thereto to the liabilities of drawers and endorsers of checks? T.

Answer.—There is nothing to prevent banks from making such an agreement, and to that extent they would become a Clearing-House Association. The checks would not be legally paid checks until after the hour for reclamation had passed. Even if reasons for recovery are not discovered until after that hour, the checks might under some circumstances be revived.

Editor Rhodes' Journal of Banking:

CHEYENNE, Wyo., August 18, 1887.

A note dated March 28, 1887, payable on or before four months after date, falls due, including three days' grace, on July 31, which was a Sunday. The maker calls at bank on Saturday and tenders payment of note, with interest for four months and two days. Is the bank entitled to interest for the full three days of grace? The maker claims that the note being payable on or before four months from date, he need not pay for the third day of grace.

J. D. FREEBORN, *Asst. Cashier.*

Answer.—If the last day of grace had not been Sunday the maker's claim would be just. The three days of grace from custom are just as much a part of the term of the note as the four months; in other words, it is as if the note read four months and three days. But assuming that in Wyoming notes falling due on Sunday are payable by law and custom on the previous Saturday, if a maker does not appear to pay such a note until Saturday he is really availing himself of the full time, and has not in any sense paid before maturity.

Editor Rhodes' Journal of Banking:

OMAHA, Neb., July 21, 1887.

SIR:—Has a stockholder of a bank, simply as such, a right to go behind the bank counter, examine the accounts of the bank, the stock transfer book, the Directors minute book, or other books of the institution? CASHIER.

Answer.—A stockholder at common law has a right to examine at any reasonable time the books and records of the corporation. The directors and officers however, being in charge may refuse him permission to do so, they may think the time unreasonable or the proposed examination vexatious. The stockholder has then as a remedy either to bring an action for damages or procure a mandamus from a competent court compelling the directors to permit him to make the examination. Before granting a mandamus the court will take into careful consideration all the facts and circumstances of the case. The condition and character of the books, the reasons for refusing the examination, the specific purpose of the stockholder and the general reasonableness of the request. If it appears to the court that the stockholder is meddling to no good purpose the writ of mandamus will not issue. It will not be granted just to gratify curiosity or to further speculation in the stock. Either the property rights of stockholder must be involved, some controversy exist, or some specific or valuable interest be in question, to settle which it becomes necessary to inspect the corporate records.

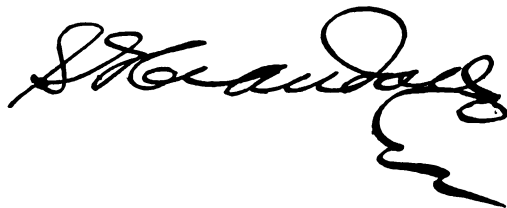

It would take a very strong case indeed to permit a stockholder to examine the directors minute book. It could not be done at all unless there was litigation. This is under the common law. It would seem that under the National Banking law inasmuch as by Section 5136, United States Revised Statutes, a National Banking Association after it has become a body corporate, has power among other things to prescribe by its Board of Directors, by-laws, regulating the conduct and management of its business, and that if these by-laws provided that a shareholder should or should not make an examination, such by-laws would control. There is nothing in the National Banking law that specifically gives a stockholder the right of examining the affairs of the bank. The directors of any banking institution with due regard to the rights and interests of all the stockholders and depositors, would be very foolish to permit any stockholder to force himself into the bank, and make a general examination unless he compelled them to do so by making a proper showing in a court of justice.

WHAT'S IN A NAME?

We have no means of knowing what symbols were used by primitive men to indicate their personal identity. The earliest historical records of Egypt and Chaldea reveal the fact that each individual had some sign or mark which stood for him. Signet rings and stamps for pressing or printing the device on clay or wax or papyrus were the earliest means of expressing and recording the consent of men to engagements and authenticating the commands and orders of rulers.

Writing was of later date. The Egyptian priests deduced a sort of script from the more ancient hieroglyphics. These priests controlled the trade and general policy of the country, and their advances in alphabetic science were largely due to the abbreviations invented by the clerks and agents they employed to watch and record the every-day transactions of the people. But the Egyptians never advanced very far. The people, it is true, improved somewhat on the hieratic or priestly script, making it still easier to write.

To the Phenicians, with their trading instincts, we are indebted for the development of the alphabet and of ordinary hand writing. They doubtless got their first hints from early contact with the Egyptians, and seizing on the demotic or popular script in use in Egypt, they still further improved upon and developed it into the form of which all modern alphabets and scripts are modifications. We do not generally reflect that we owe our literature to trade and commerce. In former numbers of the JOURNAL we have given a number of curious instances of the diversity in the manner of wielding the pen, caused evidently by differences in taste and personal temperament. The manuscript or hand writing of any individual is always as characteristic as his face. No two persons, except the two Dromios, were ever exactly alike, nor were ever the manuscripts of two persons. The signature is the most characteristic part of the handwriting of an individual, and we have given in the JOURNAL specimens which are unequaled for the ingenious distortion and confusion of the single letters which compose them. In these queer signatures we see, perhaps, some proof of the doctrine of hereditary traits. As we have seen, ordinary hand writing is a development of the hieroglyphic. There is something about these signatures which suggests their source. As children often exhibit qualities derived from long forgotten ancestors, so the modern queer signature merely "crys back" to the marks of the venerable Egyptian mummies. In the July number we imagined we had completed the list of the illegible marks made by bankers and business men, but such a number of additional ones have been received that we feel it is necessary to give a few more. A man who is ingenious enough to sign his name so it cannot be read seems always to have hosts of admiring friends anxious that his sign manual should take the jackknife from all competitors. Here is a signature which bears an appearance of legibility that is quite deceptive. A second glance makes one raise his eyebrows with an expression of incredulity. It is the signature of the Cashier of a well known National bank in Washington Territory:

The sender of the next specimen states it to be the signature "of one of the best men New England ever produced, and a man who, for a number of years, was the President of a bank in this (New York) State." The owner of the signature is not identified by the sender, and we confess that all the experience we have had reason to

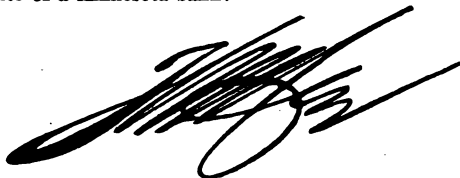

gain in cryptic lore does not enable us to decipher it. We presume some of our readers will have better luck:

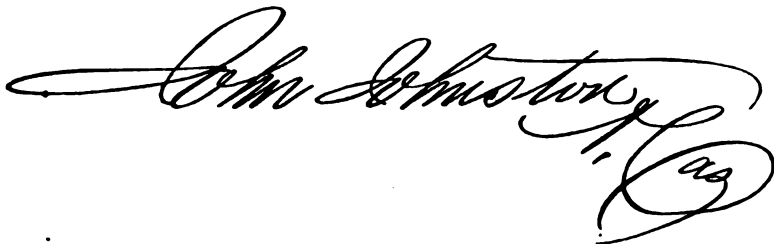

The sender of the following remarks with just pride: "I hand you herewith our Cashier's signature, which is no slouch of itself." It is that of a Cashier of a prosperous National bank in the State of Missouri, and we agree that it is "most excellently" illegible. It reminds us of an old Chaldean poem:

We have also had sent to us for publication the signature given below, which is that of the Cashier of a Minnesota bank:

As a specimen of a good, strong, legible signature, we give that of Mr. John Johnston, Cashier of the Wisconsin Marine & Fire Insurance Co. Bank of Milwaukee, Wis., and are sure that on a draft or check it adds as much to the beauty as it does to the credit of the document:

At the time the above signature was written Mr. Johnston was acting Cashier, having become Cashier since the death of the Hon. Alexander Mitchell, President of the institution.

We still have quite a number of interesting specimens of chirography, good and bad, which we will present to our readers in future numbers of the JOURNAL.

We recently received a call from Mr. E. E. Goodrich, President of a Banking Company organized under the laws of the State, located at Fairbury, Neb. The bank has a paid-in capital of \$50,000, on which its net profits the past year amounted to 33 per cent. Mr. Goodrich informs us that his advertisement in the JOURNAL has brought more business to the bank than any other investment in the advertising line he has made.

FINANCIAL MATTERS IN CHICAGO.

[From the *Journal's Chicago Correspondent.*]

The money market in this city is on a relatively lower level than the markets of the East. Calls loans are made as low as 5 per cent and the best time loans go at 6. This is quite in contrast with the old state of things, in which Chicago was about 1 per cent above New York and Boston. One reason for this is the transfer of large amounts of money from the East to Chicago in consequence of the requirements of the new reserve law. It is estimated that the National banks of this city keep on an average \$2,500,000 less than last year on deposit in the banks of New York city. Another reason is that the banks of this city are not involved in any of the current stock speculations. They have no occasion to worry about the liabilities of such a man as Ives, and therefore feel free to lend their funds on a generous scale for legitimate purposes. And then the capital available for lending is constantly on the increase in this city at a much more rapid rate than in other parts of the country. It is said that some loans have been made as low as 4 and $4\frac{1}{4}$ per cent on sharp call. There are certain concerns in the city which can borrow 1 per cent below the regular market because of their great wealth, the prestige of their business and the large deposits they ordinarily keep with the banks. Chief among these concerns is the house of Armour & Co., whose deposits in the banks of this city range from \$400,000 to \$2,000,000. Armour, by the way, is almost always a borrower and very rarely a lender. In this respect he differs from the great dry goods house of Marshall, Field & Co. The latter concern is a bank as well as a mercantile house. It receives deposits from its customers and frequently has large sums of money of its own to lend. Marshall, Field & Co., have been known to lend round amounts to Armour & Co., the McCormick Harvester Co., and others. More money than usual is now being loaned by brokers. Mercantile houses which have secured all the funds they can at their own banks go to these brokers for accommodation. This is thought to indicate that credits are being unduly extended in Chicago. The brokers, however, insist that the loans which they are making are secured by excellent collaterals, or by first-class indorsements and that the quality of the paper in the market is excellent. These brokers are finding a much larger sale for mercantile paper throughout the West than formerly. They used to rely almost entirely on the eastern cities for their purchasers, but there are many men in the West whose wealth has rapidly increased and who prefer mercantile paper for an investment to stocks or bonds.

The ease of the money market in Chicago is the more notable in view of the fact that Boston men have almost entirely withdrawn from this city as lenders. It is said that the Atchison, Topeka & Santa Fe road and its collateral lines have absorbed from \$30,000,000 to \$40,000,000 of Boston money in the last two or three years, and it is well known that immense quantities of capital from the same source have gone into real estate enterprises at home and in the West and South.

It is not believed however, that the present comparative ease in the Chicago money market will last very long. August is proverbially a dull month, but the requirements of the country for moving the crops and the revival of business which always comes in the fall will inevitably place heavy demands on our market. The westward movement of currency has begun, but it is not yet large. Nevertheless there is already a scarcity of small bills, particularly ones and twos. The banks of this city have repeatedly asked the United States Treasurer if he would send them small silver certificates on the deposit of funds to his credit in New York. His reply has uniformly been that he could accommodate them with small amounts, but not with such large amounts as they have called for. The bankers here feel that the treasury department does not appreciate the needs of the West in this respect. A few thousand dollars of small bills are of very little use to a city which from the middle of August to the first of January has to ship out perhaps \$25,000,000 of small money. It is true that silver dollars can be had to any amount and that the government charges nothing for transportation, while the expense of carrying paper money from New York to Chicago

is 75 cents per thousand dollars. But silver dollars are very inconvenient to send to the country towns and the bankers are more than willing to incur the additional expense of transporting the paper if they can only get it.

The First National Bank of this city, which has for some time been one of the first three or four banks in the country in the magnitude of its business, took the leading place during the month of August. On the 13th the deposits of the National Park Bank of New York city were \$21,623,000, after deducting checks for the clearing house while those of the First of this city were \$21,660,000. These were the two largest aggregates of deposits in the United States.

Chicago is justly proud of the management of its banks, but along with the sound institutions have grown up two or three affairs whose management is very objectionable. They are trying to get business by offering interest on deposits, which they cannot pay without resorting to methods in lending which all good bankers consider unsound and unprofessional. One of these institutions, which bears a somewhat pretentious name, pays interest on deposits and then charges borrowers from 2 to 4 per cent per month, taking as security bills of sale, chattel mortgages and other evidence of indebtedness which belong to Shylock practice. One money-lender, who calls himself a banker, has issued a circular, in which he advertises to lend to young men of good prospects sums of money ranging from \$500 to \$1,000 without security. But on making application the would-be borrower finds that it is the same old game. He must give security in the shape of goods or endorsement. Another proposes to lend any bank clerk \$50 and upwards on the endorsement of two other clerks connected with the same institution. A curious offer is that of one of the new banks which proposes to pay 8 per cent on deposits and guarantee that 75 per cent of the deposits so secured shall be kept constantly on hand. Of course the only way to make money under this arrangement is to charge exorbitant rates of interest on the other 25 per cent.

The American Exchange National Bank is recovering from the losses it suffered through the failure of the Fidelity National Bank of Cincinnati and the rascalities of the wheel deal. It will be remembered that the stockholders voluntarily assessed themselves 80 per cent to meet that loss. Some of the stock has defaulted on the assessment, and has been sold, but it went on the basis of 110 assessment paid, or 80 without the assessment, and it has passed into very strong hands. It is understood that some of this stock was that of C. B. Eggleston, a special partner in the unfortunate firm of Kershaw & Co. One of the buyers is John C. Welling, auditor of the Illinois Central Railroad, who now holds 100 shares.

Business in this city has been considerably affected by the highly unfavorable reports in regard to the corn crop. Orders for all sorts of merchandise have been countermanded, and the buying by country merchants is on a moderate scale. But business was under such good headway that an active trade is expected during the fall, and if former years are any guide the reports of damage will soon be found to have been considerably exaggerated.

The center of interest among operators in local securities is the manipulation of the gas and street railway properties. It will be remembered that a syndicate composed of Chicago and Philadelphia men got control of the gas companies of this city some months ago and formed a gas trust. They issued \$25,000,000 of gas trust certificates and also increased the interest charges on the bonded securities. Before the consolidation of these companies the annual interest and dividend disbursements amounted to \$626,000. As near as can be ascertained, the interest charges under the new arrangement will amount to \$998,000. The managers of the trust also expect to pay 4 per cent on the certificates, which will amount to \$1,000,000 a year, making a total interest and dividend account of nearly \$2,000,000 against \$626,000 under the old regime. These figures are rather startling to the Chicago people, who not only distrust the securities of the gas combination but fear that they will have to pay high prices for gas. The price has already been advanced 25 cents per thousand. A syndicate composed partly of the same persons controls the street railway system of the North Side, and is acquiring possession of the West Side system. It is presumed that these men will try to secure all there is left of the transportation, lighting, and heating facilities of the city, and Chicagoans naturally think that they have a big monopoly on their hands. These operations create suspicion as to the value of the securities involved, and not a few people expect that there will be a collapse some day.

H. C. B.

IOWA BANKERS' ASSOCIATION.

As stated in the August number of the JOURNAL, the Iowa bankers, pursuant to a call signed by some twenty-eight of the most prominent bankers of the State, met at Des Moines on July 26th, at the Grant Club rooms, for the purpose of forming a State Association of Iowa Bankers. The meeting was called to order at 10 o'clock by Mr. Geo. H. Maish, of Des Moines, who in a few well-chosen remarks nominated as temporary Chairman one of Iowa's oldest bankers, Mr. John H. Leavitt, of Waterloo. On motion of Mr. W. D. Lucas, of Des Moines, Mr. J. E. Henriques, of Marshalltown, was appointed temporary Secretary. Mr. G. L. Tremain was called upon to state the object of the meeting, which was in the main to organize a State Association of Iowa Bankers, for the better protection of their business interests. On motion of Mr. John S. Black, of Creston, a committee of nine was appointed on permanent organization, with Mr. G. L. Tremain, of Humboldt, as Chairman, to report at 2 o'clock P. M. The Chair appointed G. L. Tremain, Chairman, Geo. H. Maish, W. A. McHenry, W. T. Fenton, J. W. Reed, P. M. Casady, John S. Black, J. M. Dinwiddie and A. O. Garlock.

At 2 P. M. the meeting was called to order by the Chairman, and the Committee on Permanent Organization reported. Mr. A. O. Garlock in behalf of the committee presented the following Declaration and Constitution. The Declaration was as follows:

In order to promote the general interests of our commonwealth and welfare and usefulness of banks and banking institutions throughout the State, and to secure uniformity of action, together with the practical benefit to be derived from personal acquaintance, and from the discussion of subjects of importance to the banking and commercial interests of the State, and especially in order to secure the proper consideration of questions regarding the financial and commercial usages, customs and laws which affect the banking interests of the entire country, and for protection against loss by crime, we have to submit the following Constitution for the Iowa Bankers' Association.

The last section of the Constitution recommended that G. L. Tremain be selected as President of this Association, and that Geo. H. Maish act as First Vice-President, and that the Association select Vice-Presidents from each Congressional district.

The report was on motion of Mr. J. G. Rounds, of Des Moines, received and adopted, and Committee discharged.

Mr. G. L. Tremain was introduced as the permanent president of the Association, who with a few appropriate remarks awaited the further pleasure of the Convention.

On motion of Mr. W. A. McHenry, of Denison, a recess was taken for the selection of Vice-Presidents, one from each Congressional district represented, which resulted in the following being chosen:

Second District—J. H. Branch, Marengo. Third District—John H. Leavitt, Waterloo. Fourth District—H. Meyer, Elkader. Fifth District—A. F. Allen, Blairtown. Sixth District—W. T. Fenton, Ottumwa. Seventh District—Wallace M. Greeley, Ames. Eighth District—O. S. Stearns, Garden Grove. Ninth District—A. E. Noble, Casey. Tenth District—W. A. McHenry, Denison. Eleventh District—Noah Williams, Ida Grove.

According to the Constitution, the Vice-Presidents, with the President, form the Executive Council. Finding the First District was not represented, it was moved and carried that the Executive Council fill the vacancy when representation from that district could be had. Mr. W. A. McHenry moved an intermission for the purpose of allowing the Executive Council to select a Secretary and Treasurer, which was carried. After a short conference the President reported: J. E. Henriques, of Marshalltown, Secretary; W. T. Fenton, of Ottumwa, Treasurer. Moved by Mr. J. J. Smart that a committee of one from each Congressional district be appointed to consider the matter of exchange, collections, banking hours, etc., to report at 7 o'clock in the evening. Adopted and the following appointed:

Second District—A. M. Henderson, Marengo. Third District—H. A. Miller, Eagle Grove. Fourth District—H. Meyer, Elkader. Fifth District—Jno. W. Dobbin, State Center. Sixth District—J. H. Drake, Albia. Seventh District—W. D. Lucas, Des Moines. Eighth District—John S. Black, Creston. Ninth District—J. H. Henry,

Walnut. Tenth District—O. E. Dutton, Manning. Eleventh District—O. P. Miller, Rock Rapids.

Moved by Mr. W. D. Lucas that the Convention recommend a uniform system of checks and drafts, suggesting that all line works and perforations be abolished. This was referred to above committee. Mr. John Nollen, of Pella, was then introduced as probably the oldest banker in the State, and entertained the Convention with some reminiscences of early days in Iowa.

After remarks by Mr. W. A. McHenry, Mr. W. T. Fenton, of Ottumwa, and Geo. G. Wright, of Des Moines, the session was adjourned until 7 o'clock. The evening session was called to order at 7:30, but adjourned soon after to accept the invitation of the Des Moines bankers to dinner that evening at the Aborn House.

Wednesday morning the Committee on Resolutions presented the following, which with slight amendment were adopted:

Resolved, That the members of this Association recommend that a reasonable rate of exchange be charged on all checks drawn on their respective institutions, when received from abroad, whether the same be received for credit or remittance.

Resolved, That the members of this Association recommend a collection charge of twenty-five cents each for all sight drafts received from wholesale merchants and jobbers and returned unpaid.

Resolved, That the members of this Association recommend a charge on all drafts and other collections requiring presentation of twenty-five cents per one hundred dollars or fractional part thereof and current rate of exchange.

Resolved, That the members of this Association recommend a charge of not less than ten cents per order for cashing orders issued by the express companies.

Resolved, That this Association, as a body, and its members individually, thoroughly appreciate what Des Moines bankers have done to make our meeting pleasant and profitable, and that we take this occasion to thank the bankers of Des Moines for our cordial reception and pleasant entertainment.

Mr. J. M. Dinwiddie, in behalf of the bankers of Cedar Rapids, invited the Association to meet in their city at its next annual meeting. Mr. O. P. Miller, of Rock Rapids, called the attention of the Association to the superior advantages offered by calling the next meeting at Spirit Lake. Mr. Geo. H. Maish, of Des Moines, also advocated Spirit Lake as the next meeting place, and would like to have the call made for a four-day meeting. Mr. Joseph Sampson, of Storm Lake, extended a kind invitation for the Association to meet in his city. He would have the large camp-meeting tent raised on the banks of their beautiful lake, and he would guarantee that it would be much cooler than being penned up in some hall. The place for holding the next meeting of the Association was referred to the Executive Council.

No. 1 of Article 6 of the Constitution was amended to make membership fees three and annual dues two dollars instead of five. The following additional resolutions were then adopted:

Resolved, That in the opinion of this Association, the giving of exchange and the making of collections free of charge is not consistent with sound banking.

Resolved, That in the opinion of this Association the Executive Council should arrange for the next and each succeeding annual meeting for essays and addresses upon appropriate subjects, and to this end they should select suitable persons to prepare and deliver such essays and addresses.

Resolved, That we recommend to the banks of the State that the day in banking phraseology shall close not later than 4 o'clock P. M., and that as far as possible they should regulate themselves accordingly.

Resolved, That the Secretary of the Iowa Bankers' Association is authorized to publish the proceedings of this Association, to send one to every bank in the State, with the request that they become members of the Association.

The Bank of New Amsterdam of New York.—This institution has been delayed in commencing business longer than was expected, as it has been obliged to wait until the completion of its new building—the Holland Building—at the corner of 40th street and Broadway. Its rooms will probably be ready for occupancy on or soon after the 15th of this month. The bank starts under the best of auspices, with an exceptionally strong board of Directors, which is composed of the following well known men: J. D. Vermilye, John A. Stewart, T. D. Tappen, Thomas Denny, George G. Haven, Robert Goellet, Thomas C. Acton, Frank Tilford, James W. McLane, M.D., Jesse Seligman, James A. Roosevelt, William Dowd, John T. Terry, Elihu Root, S. D. Babcock, G. H. Scribner, Frank Curtis, J. L. Riker. The officers are Thomas C. Acton, late head of the Assistant Treasury of the United States at New York city, President, Frank Tilford, Vice-President, and William H. Mellins, Cashier. The latter, previously to his acceptance of his present position, was one of the two Assistant National Bank Examiners for New York city.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

New Bank Building.—A new bank building is in course of erection at Fort Gaines, Ga., to be occupied by Peterson & Co., bankers and brokers, who are doing a thriving business at that place.

Pacific National Bank Cases.—The attempts to hold the Directors of the insolvent Pacific National Bank of Boston, Mass., have so far met with poor success. There have been three bills in equity brought against them. Each has been demurred to by the defendants on the ground of multifariousness, and each time the Court has sustained the demurrer.

Counterfeit Silver Dollars.—A counterfeit of the silver dollar is made of ground glass combined with tin, lead and other metals. Experienced bank Tellers say they can easily detect this counterfeit. These glass dollars are brittle. If held in the palm of the hand and rapped vigorously with a knife-handle, the dollar is easily broken. They have the metallic ring of a genuine dollar, are the correct size and of nearly the exact weight.

The Merchants and Planters' National Bank, of Sherman, Texas, with a capital of \$800,000 and surplus of \$28,000, is one of the reliable and prosperous institutions in that section of the country. We are in receipt of a circular recently sent out by the bank, giving a list of its stockholders, together with a statement of its affairs on June 30th. On that day, in addition to its surplus the bank had \$58,985 of other undivided profits, from which to declare its semi-annual dividend. The signature of the president of this institution, Mr. Tom Randolph, appeared among the characteristic signatures given in the July number of the JOURNAL.

New Swindle.—A stranger named Powell went to J. J. Hartigan, of Tracy, Minn., and proposed to him to start a bank. After the concern was started, Powell, who had put in little or no capital, issued a certificate of deposit to an alleged brother, who presented the certificate to be cashed at a bank in New York city. The New York bank telegraphed to Tracy to know if everything was all right, and received an answer from Powell that the money was on deposit. On this it cashed the certificate, and Powell disappeared from Tracy, leaving his partner, who had furnished the capital, to meet the certificate when presented.

Resignation.—Thomas Mitchell, Cashier of the First National Bank of Lexington, Ky., presented his resignation, to take effect July 31, 1887, at a meeting of the Board of Directors of the bank held on July 15th. The resignation was accepted and a committee appointed to draft resolutions of regret at Mr. Mitchell's resignation, to be spread on the minutes of the bank, made the following report:

"The Committee appointed by the Board desire to say as expressing the sentiments of the whole Board, that in accepting the resignation of Thomas Mitchell, as Cashier it was done with the greatest regret and only after repeated efforts to get him to withdraw it. That the pleasant associations of the last twenty-two years cannot be entirely severed, and that wherever he may be he will carry with him the best wishes of the entire Board of Directors of the Bank."

Rights of Aliens to hold Real Estate in the United States.—The Attorney-General on May 20th delivered an opinion relative to the effect of the "Act to restrict the ownership of real estate in the Territories to American citizens and so forth" approved March 3, 1897. He concludes that mines are real estate and cannot be owned by aliens, that an alien can hold stock issued by an American Mining Company, but if more than 20 per cent of the stock of any such company is held by aliens, that such company can neither acquire, hold, own or hereafter acquire real estate so long as 20 per cent of its stock is so held by aliens. An alien can however legally advance money

for working mines, though they obtain no lien on the real estate, and can contract with American owners to work mines owned by the latter for a reasonable time.

California.—The Southern California National Bank, of Los Angeles, California, was authorized to commence business in the latter part of August, 1886, with a capital of \$100,000. The report of the condition of the bank, on August 1, 1887, made to the Comptroller of the Currency, indicates that the bank was needed in that locality, and that it has improved its opportunities both for itself and the community. On August 1, 1887, its deposits, individual and bank aggregated over \$500,000, its loans being over \$300,000, with available funds in reserve amounting to \$275,000. This record in building up a business within less than a year has seldom been equalled, and the confidence of the public thus indicated is warranted by the evidences of strong and conservative management shown by the report. The officers of this bank are John J. Redick, President, L. N. Breed, Vice-President, and W. F. Bosbyshell, Cashier.

Counterfeiting a Rare Coin.—It is said that no silver dollars for the year 1804 are in existence. All that were struck in that year were for some reason recalled, and recoined in some other form. In some succeeding year six pieces were struck by the Mint authorities from the die of 1804, and these are all the dollars of that year having any claim to be called genuine. To obtain one of these is the height of a coin collector's ambition. Some years ago at an auction of valuable coins, a dollar purporting to be of 1804 was offered for sale. Its genuineness was questioned, and on being tested at the Mint, it was discovered to be a modified dollar of 1806. The "6" had been drilled out and the opening plugged with a "4" taken from some other issue. An investigation of the cabinets of collectors revealed no less than 127 of these modified dollars of 1804, indicating quite a successful speculation in this ingenious method of gratifying unwary numismatists.

Exports and Imports at New York.—The exports from the city of New York for the month of July, 1887, including specie amounting to \$1,447,274, were \$29,338,888. During the month of July, 1886, they were \$31,523,188, including \$1,791,640 in specie, and during the month of July, 1885, they were \$28,452,253, including \$2,069,518 in specie. During the same month in 1887 the imports were \$38,684,574, including \$2,270,245 in specie. In 1886, \$36,989,531, including \$553,839 in specie, and in 1885, \$38,842,678, including \$616,920 in specie. In addition there were entered at New York for immediate transshipment to interior points \$1,916,579, in July, 1887, \$1,757,695 in July, 1886, and \$1,655,448 in July, 1885. For first seven months ending July 31, the imports in 1887 were \$277,937,617, and \$14,169,678 for immediate transshipment to interior points, paying duties amounting to \$86,055,440. In 1886 the imports for the corresponding period were \$255,386,805, and \$11,990,894, for transshipment to interior points, on which duties amounting to \$79,056,922, were collected. In 1885 the total imports for the same period were \$219,219,445, and \$11,896,628 entered for immediate transshipment, on which the customs receipts were \$72,985,487.31. This indicates an increase in two years of over \$13,000,000 in the customs receipts of a period of seven months, or of over twelve millions of dollars in semi-annual receipts, or about \$23,000,000 per annum.

Testing Gold.—The only wholly reliable test of the fineness of gold is by assaying it, either by means of cupellation, which is known as the dry method, or by chemical analysis, called the humid method. When, therefore, any large quantity of gold is to have its fineness tested, a small quantity of it is subjected to assay by one of these methods, which separate the precious metal from all other associated substances, and shows its proportion by actual measurement. In the case, however, of pieces of jewelry and small quantities of gold which it is impossible or inconvenient to assay by the usual way of melting or dissolving the metal, the fineness is determined by means of touch-needles and touch-stones. This method is known as "assay of the touch." Touch-needles are made of sets of gold of different degrees of fineness and differently alloyed with copper and silver. The touch-stones are usually of black basalt, but pieces of good black pottery answer the purpose well enough. The stone is marked with the piece of gold to be tested, and this mark is compared with the marks made by the needles, one by one. When the two marks are found to be exactly alike, the fineness of the two marking substances is assumed to be the same, but a further test can be made by heating the touch-stone to redness and moistening the marks with *aqua-fortis*, their appearance, resulting from oxidation, showing the nature of the alloy in the substance.

Examination of Treasury Balances.—The recent examination of the books and accounts of ex-Treasurer Jordan, resulted in discovering a shortage of \$2.50 in a bag of gold coin of that denomination. The remaining coin and currency was found to agree with the amount called for by the books. In the examination made at the time the office was transferred from Mr. Wiman to Mr. Jordan, this bag was weighed not counted as in the last examination. It will be remembered that in that examination the total coin on hand was arrived at by weighing and that there was no discrepancy discovered. If between the methods of counting and weighing the millions of dollars of coin in the Treasury there is only a chance of an error amounting to \$2.50, it would seem to be useless to put the Government to the greater expense involved by the counting method, which is really less scientifically accurate than the other. Even this error may prove when the next examination is made to have been balanced by some miscount in the case of the other bags. Mr. F. B. Daskam the experienced chief of Division of Public Moneys in the Secretary's office conducted the examination.

Circular of August 3, 1887.—This circular of the Secretary of the Treasury offered to pay, on and after August 15, with a rebate at the rate of 2 per cent. per annum, the interest due from the Government as follows:

4½ per cent., Sept. 1 and Dec. 1. 4 per cent., Oct. 1 and Jan. 1. 6 per cent., Jan. 1.

Taking the statement of the public debt published August 1, the amount of money thus placed at the command of capitalists would be as follows:

Loan.	Amount.	Due.	Interest.
4½ per cent.	\$250,000,000	September 1.	\$2,812,500.00
		December 1.	2,812,500.00
4 per cent.	787,804,950	October 1.	7,378,049.50
		January 1.	7,378,049.50
6 per cent.	64,823,512	January 1.	1,938,705.86
		Total.	\$22,319,804.86

The rebate of 2 per cent. will be about equivalent to two months' interest, or say \$111,000, which is a half of 1 per cent. on the total amount due, and less than 11-100 of 1 per cent. on the total debt (\$1,062,623,462). Of course the offer is entirely a matter for each bondholder to accept or reject as he sees fit.

Savings Bank Investments.—A bill has recently been introduced in the New Hampshire House of Representatives requiring the savings banks of that State to invest one half of the deposits they receive and make one half of their investments within the State in the notes and mortgages of individuals residing or doing business and having a place of business in the State, in stock of banks located in the State, in first mortgage bonds of railroad companies incorporated under the authority of the State which is in possession of and operating its own road, and which has earned and paid regular dividends for the two years next preceding such investments, or in the bonds of any such railroad company which is unencumbered by mortgage; in bonds or loans of this State, or of any city, county or town thereon; or in notes of individuals or corporations residing or doing business and having a place of business, in this State, with sufficient sureties or collaterals.

The last report of the New Hampshire savings banks indicated that a very large portion of their investment was in Western Farm Mortgages.

Mr. Cannon, Ex-Comptroller of the Currency, in an interview published recently in the *Commercial Bulletin*, comments on the financial situation from a banker's standpoint. He thought that there would be an active demand for money this fall, and that the rates at times would be high. He anticipated that the Secretary of the Treasury would be able to protect the business of the country from any serious effects, resulting from redundant revenues. That the dangers to be apprehended from this source had been discounted by the public. Mr. Cannon evidently was careful to confine himself to dangers apprehended from irregularity in the movement of currency. That money will be more or less plenty as far as paper aggregates can show is doubtless true. There is, however, an undercurrent of distrust that at any moment may depreciate securities. The moment securities fall off money is scarce in the true financial sense. All this year there has been a tendency to lower prices, and those who loan money have as a consequence demanded larger margins of security.

Nullification in Kentucky. In 1867, Muhlenburg County, Ky. issued bonds to provide for a subscription to a railroad. In 1874 it repudiated them. In 1876, the bond-

holders obtained a judgment against the County, in the United States Court but have never been able to have it enforced. The act authorizing the railroad provides that if any county failed to pay the interest on its bonds, it should be the duty of the County Court to levy a tax for that object. County Court was in Muhlenburg County held to mean the convocation of the Judge and Justices of the Peace within the County. The Justices of the Peace resigned whenever a levy was sought for, and the Judge refused to act alone. The bondholders applied for a mandamus to the United States Court, to compel the County Judge to make the levy. The District Judge refused it on the ground that "County Court" did mean the County Judge and Justices of the Peace. The United States Supreme Court, however, reversed this judgment on appeal, and ordered that a mandamus issue on the County Judge. The latter fled, and an attachment has been issued to bring him before the United States Court for contempt but he could not be found. The amount of bonds and interest is said to be \$900,000, equaling the value of the real estate of the County.

Capture of an Absconder to Canada.—In September, 1886, the American Surety Company of New York issued its bond for \$5,000 to the Canadian Pacific Railway Company on Clarence P. Dixon, agent of that corporation at Portland, Oregon. Dixon had a good position and was receiving \$1,200 per annum salary, but he thought that the accumulation of a competency was too slow by honest methods, and therefore embezzled \$1,223.07 of the railroad company's funds, and took refuge in Victoria, British Columbia. The American Surety Company secured his indictment soon after at Portland, Oregon, and set about effecting his capture, which was done after eight months, and he was safely lodged in jail at Portland, Oregon, to await trial. He endeavored to escape by sawing off the gratings of his cell, but was discovered in time. He had previously undertaken to escape by drawing a pistol on the Sheriff who effected his capture, and altogether showed himself to be a desperate character. When arraigned for trial on the 7th of July, 1887, his bravado left him, and he pleaded guilty, and was sentenced to three years' imprisonment in the Oregon State prison. This is the third absconder to Canadian territory prosecuted through the efforts of the above named company.

Condition of St. Louis Banks.—The abstract of the reports of the condition of the five National banks of St. Louis, at close of business on August 1st, is interesting as showing the status of the banks in that city since its designation as a reserve city. It cannot be said that any real change appears either from the figures of May 18th, or of the more recent ones of August 1st, both dates being since the designation of St. Louis as a reserve city. The reserve held on August 1st was over thirty-one per cent. of liabilities. Of course all of this was at home. The actual requirement was \$2,649,958 and the reserve held was \$3,285,829 an excess of \$635,871. On May 18th, the requirement was \$2,144,798 and the amount held was \$3,237,590, an excess of \$1,142,792. Taking October, 1886, before St. Louis became a central reserve city the total requirement was \$2,382,170 of which \$1,181,085 was required to be in bank. They actually had in bank \$2,182,789, and were only short of having the total reserve in bank by \$169,381. They had an actual excess in total reserve of \$711,704 which they kept with their reserve agents in New York city. The difference appears to be that under the new law the banks keep their excess of reserve at home instead of with reserve agent. All of this is not due to the operation of the law inasmuch as the banks could now, if they wish, deposit all the excess they hold at home, with banks in New York city or elsewhere. In fact the St. Louis banks on August 1st had as much money deposited with National banks, as with both reserve agents and other National banks together at any date previous to St. Louis becoming a central reserve city. On August 1st, the amount with National banks was \$2,521,358, and on October, 1886, the amount with reserve agents and National banks together was \$1,910,394 only. The excess of home reserve held on Oct. 7, 1886, over requirement of \$1,181,085 was \$1,011,704, showing a greater excess than under the law as it then stood than there is held under the law as it now stands. The gross amounts of money held in bank are somewhat greater, but this as has been seen is more than the law requires. It is due therefore not to the law, but to the fact that this year there has been an unusual tendency of money to the West. If investments in New York city or other centres had been more inviting than in St. Louis and the West, we would not see these excessive home reserves kept in that quarter.

Statements of Minnesota State Banks.—Hon. H. M. Knox, Superintendent of Banks of the State of Minnesota has just completed an abstract of the reports received by him from the State banks of Minnesota in response to the last call made. It shows also an abstract of the statement made July 31, 1886, the whole giving in a comprehensive shape the business of the State banks for the year ending July 31, 1887. The abstract is as follows, and the Superintendent pronounces it a fine showing:

RESOURCES.	July 23, 1887. 54 banks.	July 31, 1886. 41 banks.	Changes.
Loans and discounts.....	\$15,439,215 06	\$12,375,050 78	Inc., \$3,064,164 28
Overdrafts.....	99,161 24	108,827 90	Dec., 9,666 66
United States bonds on hand...	21,550 00	8,000 00	Inc., 13,550 00
Other stocks and bonds.....	948,445 11	265,241 96	Inc., 673,203 15
Due from banks.....	2,434,323 65	1,654,639 55	Inc., 779,684 10
Banking house furniture and fixtures.....	598,000 46	352,403 20	Inc., 245,597 26
Other real estate.....	237,374 20	214,081 31	Inc., 23,292 89
Expenses paid.....	61,553 37	47,784 41	Inc., 13,769 09
Taxes paid.....	8,294 60	9,842 56	Dec., 1,547 96
Checks and cash items.....	75,228 70	54,158 28	Inc., 21,070 42
Exchanges for Clearing-House.	213,463 95	228,950 28	Dec., 15,486 33
Cash on hand.....	1,872,901 95	1,261,814 41	Inc., 611,087 54
Other resources.....	430 67	Dec., 430 67
Total resources.....	\$22,009,512 39	\$16,581,225 31	Net inc., \$5,428,287 08
LIABILITIES.			
Capital stock paid in.....	\$5,228,000 00	\$4,363,000 00	Inc., \$864,400 00
Surplus fund.....	691,587 03	554,094 05	Inc., 137,492 98
Other undivided profits.....	501,538 43	281,725 78	Inc., 219,812 65

Re-discounts.....	235,902 77	195,154 20	Inc., 60,748 57
Bills payable.....	111,783 54	23,156 00	Inc., 88,597 54
Other liabilities.....	16,966 82	Dec., 16,966 82
Total liabilities.....	\$22,009,512 39	\$16,581,225 31	Net inc., \$5,428,287 08

From this report it will be seen that the increase in banks during the year has been thirteen, and the net increase in resources has amounted to \$5,428,287.

The reserve in banks amounted to 15.99 per cent., in cash 12.30 per cent. An epitomized statement of the business of the seven saving banks of the State for the same period is made as follows:

Total resources, \$4,242,890.29; increase in the resources, \$307,300; total loans, \$2,686,533.92; decrease in loans, \$104,000; stocks and bonds, \$717,712.06; increase in stocks and bonds, \$226,000; due from banks, \$650,883.53; increase in amount due from banks, \$188,000; individual deposits, \$3,591,650.26; increase in individual deposits, \$236,000; surplus and other profits, 138,909.07; increase in surplus and other profits, \$42,200.

Banks of Canada.—The statement of the assets and liabilities of the chartered banks of Canada for May 31, 1887 issued by the department of Finance at Ottawa, has recently been received. The total authorized capital of these institutions was \$77,579,990, the subscribed capital \$63,988,150 and the paid up capital \$61,007,475.26. The stock holders in case of insolvency are liable, first for any amount not paid on their subscriptions and second for an amount equal to their subscribed stock. The notes in circulation were \$30,086,808.06. Deposits are payable either on demand or on notice. The government deposits of both classes Dominion and provincial, amounted to \$5,581,124, other deposits were \$49,520,634 payable on demand and \$55,476,021 on notice or future fixed day. The Bank deposits were only \$4,739,749. Against the foregoing liabilities they held \$5,917,613 in specie \$9,630,802 in Dominion notes and \$5,823,060, notes and checks of other banks, or \$21,361,475 cash. From other banks and Agencies \$19,215,579 was due, Government stock, and securities and loans to the Dominion and Provincial Governments were \$9,885,366. Loans on stocks, etc, were \$11,908,687, other loans of all kinds, \$157,610,890. The bank buildings were valued at \$3,645,165. In addition, mortgages on real estate and real estate held amounted to \$2,040,962. The general banking Act of Canada passed in 1871, but has been much amended since. Its

effect was to bring under one uniform system of restrictions and privileges all the chartered banks of the Dominion, although some of the previously existing banks having special charters were permitted to retain certain special privileges granted by those charters. None but the chartered banks are permitted to issue notes, and the notes issued must never exceed the unimpaired paid up capital. Monthly returns are made to the finance department, and if excessive issues are shown by them fines are imposed. There is some inducement to make small over issues in stringent times, as the fine for an excess of \$20,000 or less is only \$100, while it increases in geometrical proportion on larger excesses. The banks cannot issue notes in denominations less than five dollars, and all the denominations must be some multiple of five dollars. The notes are a first charge upon all the assets of the bank including the liability of stockholders. No particulars proportion of reserve is required but of the reserve one half if practicable and not less than 40 per cent must be kept in Dominion notes. The banks may have branches and offices and notes may be issued and made redeemable at any of them. The notes need not be redeemed in Gold or Dominion notes except at the place where they are made payable, but each bank must take them in payments at any of its different branches or offices. The banks are required, if requested, to make at least \$60 of any one payment in Dominion notes of denominations of one, two, and four dollars. The theory of the Government as to Dominion notes appear to be to issue them in denomination less than five and \$500 and over. Thus, out of \$17,469,380 outstanding in 1886, \$6,000,000 were under \$5, and \$10,700,000 in denominations of \$500 and over. The requirement that the Bank reserves be kept in Dominion notes absorbs the big bills and the small ones have a clear field for circulation, as no bank note can be issued under five dollars. The bank note circulation therefore monopolizes the space between the small notes and the \$500 notes. The Dominion notes are understood to be secured by debentures or bonds of the Dominion Government held by the Receiver General for which they may be exchanged, and also by a certain proportion, twenty per cent of specie. The financial system of Canada has many good points, and seems to be calculated to effect the largest use of funds with the greatest safety.

Making the Banks Come to Time.—This is the heading of a dispatch from Washington which reads as follows: "The Comptroller of the Currency has called upon the National banks for a report of their condition at the close of business August 1st. No report was ever called for in the month of August until last year, when August 27th was the date fixed upon, nor since 1868 has any date in July later than the 1st been selected. The information to be embodied in the report just called for is expected to be particularly valuable, as showing how the banks are prepared to meet the approaching demands for funds to move the crops. All banks that failed to send in reports under the last call within the time specified by law were fined, and the fines have been collected and paid into the Treasury. Even political pressure was brought to bear in several cases to obtain a remission of the penalties, but the Comptroller would not consent to any such arrangement. He has frequently said he was determined to enforce this statute, and has so informed the banks."

This is an instance of what is merely a change being claimed as a reform. Why a report in August should show any more than one in July is difficult to conceive. From the last portion of the paragraph it looks as if the Comptroller thought that the banks had to be kept under the lash of departmental displeasure to get prompt reports from them. Every one who is acquainted with the subject knows that the cases where the banks do not report promptly are exceptional, and that those thus delinquent are always fined. The object of the law is to get the report; but one would think from the above expression the Comptroller thought it was a merit to collect as many fines as possible.

Proposals for United States Bond Sales.—Under the terms of the circulars issued on August 3d, by the Secretary of the Treasury, bids were opened as follows:

On August 10th, Harvey Fisk & Sons, New York, \$700,000 coupon bonds and \$1,000,000 registered bonds, each at 110½; Robert S. Graham, New York, \$300,000 registered bonds and \$100,000 coupon bonds, at 111 flat; Kessler & Co., of New York, \$71,000 coupon bonds at 110¼; First National Bank of New York, \$1,450,000 registered bonds at 110 48-100; James Talcot, New York, \$25,000 coupon bonds at 112 with accrued interest to June 1, 1887; Drexel, Morgan & Co., \$350,000 registered bonds at 110 94-100 William Fellows Morgan & Co., New York, \$400,000 coupon bonds at 110¼; The Suffolk

Savings Bank of Boston, \$200,000 registered at 110 flat; Andrew Leeper, of Chillicothe, Mo., \$4,000 registered bonds at 110 with interest to September, 1887. The total amount of bonds offered was \$5,462,000 of which \$4,166,000 are registered and \$1,296,000 coupon.

On August 17th, P. V. Hagner, of Washington, \$2,900 registered at \$1.10 flat; J. Reynad, of New York, \$100,000 registered at \$1.10 flat; A. S. Pratt & Son, Washington, \$12,500 registered at \$1.10; Harvey Fisk & Sons, New York, \$1,000,000 coupon at \$109 44-100, \$2,500,000 registered at \$1.10 and \$1,500,000 registered at \$1.09 44-100; Dickinson & Allen, New York, \$10,000 coupon at \$1.10; Chas. B. Barney, Philadelphia, \$5,200 registered at \$1.09%, \$960 coupon at \$1.09%; G. F. McRae, Charlestown, W. V., \$2,000, coupon at \$1.10 flat; New Bedford (Mass.) Savings Institution, \$50,000 registered at \$1.10 flat; Saml. Bailie, Philadelphia, \$9,000 coupon at \$1.10; Eugene L. Clarkson, New York, \$10,000 coupon at \$1.10%; First National Bank of Jefferson City, Mo., \$5,150 registered at \$1.10% flat; Maverick National Bank of Boston, \$20,000 registered at \$1.10, and \$5,000 coupon at \$1.10; New England Mutual Life Insurance Company, \$100,000 registered at \$1.10; J. Talcott, of New York, \$25,000 coupon at \$1.10; Unger, Smithers & Co., New York, \$330,000; registered at \$1.09 92½-100; American Exchange National Bank of New York, \$25,000 registered at \$1.10; William Fellows, Morgan & Co., New York, \$400,000 coupon at \$1.10; Wachusett National Bank of Fitchburg, Mass., \$150,000 registered at \$1.10; John M. Foote, New York, \$400,000 registered at \$1.10; Tainter & Holt, \$5,000 coupon at \$1.10; First National Bank of New York, \$1,450 registered at \$1.09 98-100. The total amount of bonds offered was \$1,465,960 coupon and \$3,761,750 registered, making a total of \$5,216,700.

On August 24th: First National Bank of New York, \$1,450,000 at 109.98; J. Reynal, of New York, \$100,000 at 1.09%; the Boston Marine Insurance Company, \$100,000 at 109; the New England Mutual Life Insurance Company, \$200,000 at 108.88, \$200,000 at 107.24, \$200,000 at 107.48, and \$200,000 at 108; the Provident Institution for Savings, of Boston, \$300,000 at 109; New Bedford Institution for Savings, \$150,000 at 109; Foote & French, of Boston, \$20,000 registered at \$1.09½, \$10,000 coupon at 109½; Mrs. Cora E. Harriman, of Windsor, Conn., \$500 at 109; Benj. H. Field, of New York, \$20,000 at 108½, \$40,000 at 108½, \$100,000 at 109; George W. Phelps, Mount Morris, N. Y., \$5,000 at 110; Lockwood & Croesman, of New York, \$25,000 (coupon) at 109; P. V. Hagner, of Washington, \$2,900 at 109 or any lower rate at which the Department may accept bonds to-day; Mary E. Lathrop, of Hawkinsville, Ga., \$4,000 at 109½; Samuel Bailie, of Philadelphia, \$9,000 (coupon) at 109 net; A. S. Pratt & Son, of Washington, \$12,500 at 109½; Harvey Fisk & Sons, of New York, \$2,000,000 at 110, \$2,000,000 at 109½, \$300,000 at 109, \$300,000 (coupon) at 108 11-16, \$100,000 (coupon) at 108 11-16, \$200,000 at 108 11-16, and \$1,000,000 at 108 11-16; The bonds mentioned above and not otherwise specified are registered. The total amount of the bonds offered is \$7,148,900, of which \$3,804,900 are registered and \$344,000 are coupon.

On August 31st: Maverick National Bank of Boston, \$23,000 registered and \$7,000 coupon at 109.48; same, \$36,000 registered and \$9,000 coupon at 109.48; same, \$70,000 registered at 108.50, and \$100,000 registered at 108.75; Harvey Fisk & Sons, New York, \$300,000 registered at 109.44; \$100,000 registered at 109.82, \$100,000 coupon at 109½, and \$100,000 coupon at 109.73; the American Exchange National Bank, New York, \$25,000 registered at 109; Charles D. Barney & Co., Philadelphia, \$7,700 registered at 109; Samuel Bailie, Philadelphia, \$9,000 coupon at 108.75; Mrs. T. Fernburg, New York, \$3,500 registered at 109.44; Lewis Johnson & Co., Washington, \$10,000 registered at 108½, ex interest Paul Fenn, New York, \$30,000 coupons at 109.97; First National Bank, New York, \$1,250,000 registered and \$300,000 coupon at 109.98; David Baldwin, Baltimore, \$15,000 coupons at 109; James G. Fair, San Francisco, \$670,000 registered at rates paid by Department to-day; Salem Marine Insurance Company, of Salem, Mass., \$5,000 registered at 108 15-16; Salem Savings Bank of Salem, Mass., \$170,000 registered at 108 15-16. The total offerings were \$3,450,200, of which \$2,980,000 were registered and \$480,000 coupon bonds.

The amount accepted by the Government on August 10th was \$200,000 at 110, on August 17th, \$2,500,000 at 109 44-100; on August 24th, \$3,138,400 at prices varying from 107.9 to 109, and on August 31st, \$401,700 from 108 15-16 to 109.

It will be noticed the offers on the 31st were much less in amount and at rather higher prices than in the case of the three previous biddings. Either the holders, who are willing to sell, are not very numerous, or the prices the Government is willing to give are unsatisfactory.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- A stock exchange is to be opened in the city of Mexico in September.
- The clearings at the Baltimore Clearing-House for the month of August were \$48,648,866.
- The *Livingston Journal*, of Livingston, Ala., thinks highly of Messrs. Brown Bros., bankers of that place.
- An attempt to rob the People's National Bank of Waterville, Me., was detected and frustrated by the police.
- Poor's Directory of Railroad Officials will prove of great use to those likely to have relations with such officials.
- The First National Bank of Ashland, Wis., is to have a new building, also the First National Bank of Alameda, Cal.
- J. Stanley Brown, once the Private Secretary of President Garfield, is now a carpenter and builder in Washington.
- The *North American Review* for August contains an interesting article on State Interference by Professor W. G. Sumner.
- The private bank of Geo. F. Sturgis at Hillsboro, Texas, will, it is announced, soon be organized as a National banking association.
- Vincent, State Treasurer of Alabama, has been convicted of embezzlement. He used the money of the State in cotton speculations.
- The Sub-Treasury of the United States, at Cincinnati, was recently examined by Assistant Cashier Meline, of the Treasury at Washington.
- R. H. Thomas, of Thomas, Palmer & Odell has been elected Vice-President of the New York Stock Exchange to succeed A. B. Hill, deceased.
- Labor day appears to have been observed quite generally in New York city. The banks of course were closed, and so were many business houses.
- This country seems to be the refuge of as many escaped bank Cashiers and Managers as Canada of the same class of unfortunates from this side.
- The Bank of London, located at London, Canada, has suspended. It was organized in the fall of 1884 with a capital of \$1,000,000, of which \$223,568 was paid in.
- The Comptroller of the Currency has declared a dividend of 75 per cent. in favor of the First National Bank of Livingstone, Montana, on proved claims amounting to \$28,360.
- The Henrietta National Bank of Henrietta, Tex., recently suspended payment, and was placed in charge of a National Bank Examiner by the Comptroller of the Currency.
- Hon. Alpheus Hardy who recently while cutting coupons accidentally pierced his leg with the points of the scissors, died on August 7th from the effects of resulting blood poisoning.
- Isaiah W. Hillman, President of the Farmers & Merchants' Bank of Los Angeles, Cal., a Hebrew, has given \$20,000 to the Sisters of Charity toward a new orphan asylum they propose to erect.
- The report that the First National Bank of Cincinnati was a creditor of Ives & Co., was greatly exaggerated. The mistake was to say Ives & Co. owed them \$750,000 when it was \$10,000 only.
- The Ontario Investment Association of London, Ontario, is financially embarrassed, having lost over \$400,000 through bad management. Charles Murray, the Manager, has left for Omaha.
- The Cashier of the Farmers' Bank of Fayetteville, recently closed, was arrested recently for appropriating three \$1,000 bonds entrusted to him as agent. It was shown that he was wrongly accused.
- The First National Bank of Dansville, N. Y., has closed its doors. The bank has been running down for some time. The management seems to have excited distrust in the immediate locality of the bank.

— A Savings bank started at Raleigh, N. C., in two months, had over five hundred depositors—among them many colored people. Another in operation at Greensborough, is said to have been very successful.

— The monthly statements in regard to the currency issued from the office of the Comptroller of the Currency are to be issued in a new form, which are to be more comprehensive and at the same time more simple.

— The time allowed for the redemption of trade dollars expired September 8d. The amount redeemed was a little over \$7,400,000. The Director of the Mint, estimated that the number held in the country was \$7,086,000.

— The California Bank has filed articles of incorporation. It is located at Los Angeles, Cal., and will occupy the lower corner of a new \$80,000 building which is about ready for occupation on Fort street in that city.

— The deposits made by the people in the Canadian Post-office Savings bank increased largely during the year ending June 8th. There were 90,157 accounts opened with the bank. The average amount of each deposit is \$24.

— Henry R. Wooster, who in February last was appointed Bank Commissioner of the State of Connecticut by Governor Lounsbury for the term of four years from January 1, 1887, has resigned. It was somewhat of a surprise.

— The National Penny Bank of London, England, recently published its twelfth annual report, showing that after making provision for all expenses, a balance of £254, 8s, 6d remaining, out of which to pay dividends to stockholders.

— W. L. Gilbert, President of the Hurlburt National Bank at West Winsted, Conn., has given \$400,000 to found, at Hartford, Conn., an institution for the education of friendless boys and girls. He has also given \$400,000 for a high school.

— George Bidwell, the celebrated forger, who in 1872 was sentenced in England to imprisonment for life for his participation in forgeries on the Bank of England, was set at liberty on account of ill-health, and has returned to this country,

— The seventh and final dividend of 1½ per cent. was recently paid to the depositors of the Bond street Savings Bank of New York city, which failed about ten years ago. The total amount paid to depositors is 86½ per cent. of their claims.

— Charles Page, who raised a check of \$25 to \$25,000 on the Jacques Cartier Bank of Quebec, Canada, and obtained the money, was arrested while escaping to the United States, at Versailles, Que., near the border line. The money was recovered.

— Claudius B. Linn, of 113 South Front street; Henry H. Ellis, of 1004 Arch street, and James W. Salter, of 436 Walnut street, all of Philadelphia, were appointed by Judge Tell, on August 10th, appraisers of the assigned estate of the Columbian Bank.

— The President has commuted the sentence of Wm. H. Chadwick formerly Cashier of the Pacific National Bank of Nantucket, Mass., who in May, 1885 was convicted of embezzling the funds of the bank and making false entries, from five to three years' imprisonment.

— Daniel Spraker, President of the National Mohawk River Bank, at Fonda, N. Y., is probably the oldest bank President in the country. He is ninety years old, and blind and deaf, but attended to his duties until within a few days. He has been President of the bank since 1835.

— The Second National Bank of Hoboken has commenced business at the corner of Second and Hudson streets, with a paid-up capital of \$125,000. The officers of the bank are: President, Rudolph F. Rabe; Vice-President, Herman L. Timken, and Cashier, John P. Schofield.

— The Suffolk Trust and Investment Company have recently commenced business in Boston. It will transact a general banking business. It works under a special charter from the Massachusetts Legislature and is under the supervision of the Savings Bank Commissioners of the State.

— There has been some talk about a great Chinese bank to be started in that country by foreign capitalists, American and others. Even the railroad schemes which were to have been exploited seem to have lost the life they seemed to have in them. The Chinese are evidently inclined to go slow. If there is any money to be

made in the development of their country, in a modern sense, they are quite in the right to want to make it themselves.

— The United States Treasurer, having accumulated a supply of \$1 and \$2 silver certificates sufficient to meet the current heavy demand, has arranged for the prompt delivery of these notes to banks, bankers and others. The issue of these notes has been suspended since the first of May last.

— The French Government has discovered, in the course of the trial of a gang of stamp counterfeiters, that the peculiar shade of blue used in the printing of postage stamps and notes of the Bank of France, supposed to baffle attempts at imitation, can be counterfeited by photographic process.

— The Accident Insurance Company of North America, of Montreal established in 1872, has since its establishment paid 201 death claims aggregating \$242,783, and 16,668 claims for indemnity for injuries aggregating \$525,989. Within two months three claims of \$10,000 have been promptly paid.

— The preliminary report of Hon. Joseph S. Miller, Commissioner of Internal Revenue, shows that the total collections of the Internal Revenue service from all sources were \$118,835,757 for the fiscal year ending June 30, 1887, being \$1,982,888 more than the collections for the previous fiscal year.

— The experience of an operator in bonds of Western States and cities, as the result of investment of the recent semi-annual dividends, has been that he sold more bonds in the first five days of August than during the whole month of last January, and the gross amount of his dealings has gone into the millions.

— Mr. Robert Hyslop, recently connected with the Third National Bank of New York City, has accepted a position as one of the Assistant National Bank Examiners, under Examiner Valentine P. Snyder. Mr. Hyslop succeeds Mr. Wm. H. Mellins, who has been appointed Cashier of the Bank of New Amsterdam, of New York City.

— Francisco Danusa, supposed to be a member of a gang of Italian counterfeiters was recently arrested in Boston with a quantity of counterfeit standard dollars in his possession. The gang is believed to have its headquarters in New York, and to have done a large business. The dollars are good imitations as to appearance, weight and ring, but are brittle.

— On July 21st the city of Evansville, Ind., compromised the remainder of its old bonded debt of \$1,651,000. The new debt is \$2,145,000, including several years' defaulted interest. The first half was compromised February last by issuing new 4½'s and 5's for the old 6's and 7's. The last settlement was by issuing 6's for the water works, and 7-80's and 4's for railroad aid.

— The National Bank of Deposit has been organized in New York city. It is located at the corner of Nassau and Liberty streets, in the Bryant Building. The capital is \$300,000. The following are the names of the officers, Lewis E. Ransom, formerly of the Chase National Bank, President, Charles F. Sanborn, Vice-President, George H. Southard, Cashier.

— The first bids for sales of bonds to the Government were opened on Wednesday, August 10th. The total amount of bonds offered were \$5,462,000, of which \$4,106,000 were registered and \$1,296,000 coupon. The offers ranged from 111 flat to 110 flat. The Suffolk Savings bank offered \$280,000 registered at the latter price, and they were accepted by the Secretary of the Treasury.

— The Hunter forgeries, referred to in the May number of the JOURNAL, are the subject of litigation in Philadelphia between Keen Bodine & Co., who hold about \$200,000 of the paper, and James Long, whose name Hunter forged. Keen Bodine & Co. claim that Long's signature is genuine on much of the paper, notwithstanding his denial of it, and have brought suit to recover the amount.

— The Atlantic Trust Company of New York city has been organized, with \$500,000 capital. Among the incorporators are Walter R. F. Jones, Alexander M. White, Matthias Nicoll, Clifford A. Hand, Edward H. R. Lyman, Charles D. Leverich, Henry S. V. Post, Edward F. Knowlton, J. Langdon Ward, Thomas Hitchcock, John Elliott, William H. H. Moore, William J. Riker, Anton A. Raven, Alfred Wagstaff and Joseph H. Chapman.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

Editor Rhodes' Journal of Banking:

SIR:—I am in receipt of a circular letter from a Chicago banking institution offering "4 per cent. on balances above \$1,500, 3 per cent. on entire balances, 4 per cent. on time certificates, 3 per cent. on demand certificates, 5 per cent. on trust deposits and, to persons keeping satisfactory accounts with credit at par, on day received, checks, drafts, etc., on the Eastern, Middle and Western States, will also furnish check books, drafts and "other stationery" free of charge. This institution represents a capital of \$500,000, and asks us to "consider the additional \$500,000 liability of its more than sixty shareholders, composed of responsible bankers, merchants and manufacturers." Is this a benevolent institution comprised of sixty or more wealthy bankers, merchants and manufacturers who stake all they possess on their reputation as philanthropists, or is it an organization for the purpose of profit to its shareholders?

If the former, should we not patronize it; if the latter, might not we as its patrons become philanthropists? I am reminded of the time when it was something of a conundrum in the minds of conservative men of Chicago as to how the savings institutions there could afford to pay 6 per cent. on deposits, when the current rate for money was two to three per cent. greater than at present, and although not a sufferer myself I well remember when those philanthropic institutions tumbled, one by one in quick succession, led by the great "State Savings Institution" with its many thousand depositors—widow ladies, school teachers, dressmakers, servant girls, wash women, fruit peddlers, clerks, accountants, mechanics, laboring and professional men, and people filling almost every vocation in life, left to mourn the loss of that philanthropic, fatherly gentleman (the bank's President) who, failing to find an incentive to honesty in a realization of legitimate profits, was compelled to "pocket" a liberal sum to provide him a livelihood in some foreign land. This was but the signal for a general disclosure of the rottenness within the walls of those institutions, and quickly followed the "Bee Hive," the "Cook County," and the "Fidelity," due possibly not so much to crookedness or bad management on the part of their several heads, as to the system of **PAYING MONEY FOR BUSINESS.**

The Fidelity National Bank, of Cincinnati is another illustration of the fact that the elements in a man's nature which will cause him to pay the unreasonable price for business, can furnish no assurance that he will not engage in wild speculation. He who will do an unbusinesslike thing in one direction is apt to do so in another. The jobber who buys his goods at what they are worth can afford to sell them to the responsible dealer who is not compelled, by impaired credit, to pay more than the reasonable profit while he who pays the fabulous price, must, to realize his fair profit seek his trade among the "poor pay" dealers. There is but one result—failure.

The banker who cannot afford to wait the legitimate growth of his business, depending upon the fair, honorable and courteous treatment of his patrons, and the practice of well established rules for sound banking, for its growth, may, by some good stroke of fortune, be safe; but experience has demonstrated that the success and safety of the banker who builds on the more substantial foundation of correct business methods is not dependent upon luck or chance.

A. A. MCFADEN, *Cashier.*

OMAHA, Neb. Aug. 22, 1887.

CUTTING FIGURES ON DRAFTS.

Editor Rhodes' Journal of Banking:

SIR:—I note that the Chicago Bankers' Club will present for the consideration of the American Bankers' Association in October, a form of draft which has been adopted by all of the bankers in Chicago, and urge that its essential features be recommended to all banks and bankers wheresoever dispersed upon the face of the earth. We say amen, most heartily, but wish that the recommendation could include a uniform and simplified protection against raising. It is not at all certain that a draft can be so issued that an expert may not succeed in raising the amount so nicely as to almost or quite

defy detection; but attempts are made in this direction, and that which seems to meet with the most favor by bankers, and is coming to be quite generally adopted, is to cut in the draft the figures indicating the amount written.

The primary objection to this method, as now used, is not the expense of the machine, but the time it takes to use it. I write a draft for sixteen hundred forty-two dollars and must cut \$1642\$, which requires six strokes. If I have but one draft to write, and other parties are not in line, impatient to be waited upon, I may not feel the loss of time, but if ten or more drafts are wanted, and other customers are waiting, the loss of time is so serious that it cannot well be tolerated.

It occurs to me that this loss of time could be so reduced that while it might still be an objection it would not be a fatal one. By reducing the cutting for each draft to two figures instead of the four, five or six, as now required, the protection would be equally good—I think that I may say better, because two figures always in the right place would be seen and read, while six figures cut at any point of the draft without regard to other matter are very likely to be entirely ignored unless attention is called to them. I write sixteen hundred forty-two dollars, and cut 16 with the general understanding that we are to cut *only thousands and hundreds*, and if the draft is raised, it will be for less than \$100. Something too unlikely to occur, and with so small a loss if it does, that it seems like an unnecessary waste of time to guard against it. I write six hundred forty-two dollars and cut 06, indicating no thousands, six hundred. I write forty-two dollars or any other amount less than \$100, and I cut 00, indicating no thousands and no hundreds, and in each case with a general understanding to this effect. All parties are as well protected as though the usual six characters were cut.

(In writing a lot of say ten drafts for one party, if I handle but one draft at a time, I protect with twenty strokes what will now require from forty to sixty strokes, but ordinarily in this number of drafts, at least five will be for amounts less than one hundred dollars. These five will be bunched together, and two strokes will punch 00 through the whole five. If the remaining five are for amounts between one and two hundred dollars, two more strokes will punch 01 through these five, and with four strokes we have protected the ten drafts).

For drafts of \$10,000 or more I would not cut at all, but would advise the paying bank by mail.

MYRON CAMPBELL.

SOUTH BEND, Ind., August 16, 1887.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on September 1, 1887, showing the amount of National Bank notes outstanding and the amount of lawful money on deposit with the Treasurer of the United States to redeem National Bank notes:

Total lawful money on deposit		\$104,067,515
Decrease in aggregate deposit during the preceding month	2,333,579	
Increase in aggregate deposit during the preceding 12 months ..	41,866,017	

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

TRADING ON APPEARANCES.

(*London Money*).

There is a great deal more of this going on than some people seem to imagine. Were it otherwise it would be difficult to understand how many men contrive to carry on business. There are many people in London at the present moment who are trading on appearances and on nothing else: if they were suddenly pulled up a collapse would inevitably result. A case in point came prominently before public notice last week. Mr. Ernest Bartels, who had carried on business as a stockbroker in a very extensive way, was before the Court in the character of a bankrupt; not a very unusual character nor a very original one; and yet there are some features about Mr. Bartels' assumption of the rôle which are striking and interesting, inasmuch as they throw a broad ray of light on gentlemen of his way of thinking, who, like himself, are "trading on appearances." Nothing seems to be known of Mr. Bartels until 1884, in which year he appears to have started on his meteoric and short-lived career as a stockbroker. All his available capital comprised the sum of £300. Within a fortnight he had "contracted" to sell £2683,000 worth of stock, and he had also re-purchased £800,000. Could a similar thing have happened in any other business? What is there specially pertaining to dealing in stocks and shares different to any other marketable commodities that such facilities should be afforded for "trading upon appearances?" Could Mr. Bartels, with a capital of only £300, have embarked in tea or sugar, cotton or iron, and bought and sold to the extent of close on a million pound's worth within the short space of a fortnight? We throw not. In no other business is there so much gullibility as in the Stock and Share market—so much "trading upon appearances." And yet stocks and shares are as tangible as any other negotiable goods. Why should the Stock Exchange display such sublime faith, and implicitly trust a man of straw, simply because he cuts a dash, and assumes a character and position he is by no means qualified to fill or occupy? No other body or institution of sane men would dream of doing such a thing. Would the Mincing-lane brokers cordially welcome into their arcana and do business at the rate of thirty millions a year with a man, no matter how much bluster and bounce he might be endowed with, if he had no more solid recommendation than a paltry capital of £300? The Stock Exchange and its fraternity is far too prone to be caught with chaff. The strutting peacock, or the masher type of adventurer, is regarded as only too seductive, and instead of being treated as a decoy duck, and at once and for all plucked accordingly, he is permitted—nay, actually encouraged—not merely to plume himself on his facility of hoodwinking his victims, but to absolutely tear the feathers of those who have wantonly and unwisely recognised his sham and absurd pretences to be accepted as one of themselves.

Consolidation of Fulton and Market National Banks.—The Fulton National Bank, of New York city, is to be consolidated with the Market National Bank. The former has a capital of \$300,000 and the latter of \$500,000, and a proposition from the Board of Directors of the Market National Bank has been submitted to the Directors of the Fulton National and accepted by them, to consolidate the business of the two institutions under one management and name. The result will be one strong bank with a capital of \$800,000, surplus of \$300,000, and deposits of about \$4,000,000. The expenses will be considerably less than are required to manage both banks. The process will be to place the Fulton National Bank in liquidation by the vote of shareholders owning two-thirds of the stock. The shareholders will each receive the ascertained value of their shares. The Market National will increase its capital stock with the understanding that the shareholders of the Fulton National shall have the privilege of subscribing for the increased stock at a rate to correspond with the book value of the stock when liquidated. A meeting of the stockholders of the Fulton National has been called for November 9, 1887, to vote on the question of the liquidation of the bank.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report.

Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3729—American National Bank, Findlay, Ohio. Capital, \$100,000.
- 3730—Preston National Bank, Detroit, Michigan. Capital, \$600,000.
- 3731—Minneapolis National Bank, Minneapolis, Kansas. Capital, \$60,000.
- 3732—German National Bank, Hastings, Nebraska. Capital, \$50,000.
- 3733—First National Bank, Merced, California. Capital, \$200,000.
- 3734—American National Bank, Birmingham, Alabama. Capital, \$250,000.
- 3735—Alexander County National Bank, Cairo, Illinois. Capital, \$100,000.
- 3736—Merchants' National Bank, Clinton, Iowa. Capital, \$100,000.
- 3737—Citizens' National Bank, Kingman, Kansas. Capital, \$50,000.
- 3738—Lockwood National Bank, San Antonio, Texas. Capital, \$300,000.
- 3739—First National Bank, Sturgis, Dakota. Capital, \$50,000.
- 3740—Merchants' National Bank, Macon, Georgia. Capital, \$100,000.
- 3741—Citizens' National Bank, Norfolk, Nebraska. Capital, \$50,000.
- 3742—First National Bank, Calvert, Texas. Capital, \$80,000.
- 3743—First National Bank, Monrovia, California. Capital, \$50,000.

Banks reported above were omitted from this place in July JOURNAL, by error, although detailed information in regard to each appeared under respective State and town heads.

- 3761—First National Bank, Escanaba, Michigan. Capital, \$50,000.
- 3762—Farmers' National Bank, Hillsboro, Texas. Capital, \$50,000.
- 3763—First National Bank, Renovo, Pennsylvania. Capital, \$50,000.
- 3764—Plano National Bank, Plano, Texas. Capital, \$50,000.
- 3765—First National Bank, Greenville, Texas. Capital, \$100,000.
- 3766—Bryn Mawr National Bank, Bryn Mawr, Pennsylvania. Capital, \$50,000.
- 3767—Thomasville National Bank, Thomasville, Georgia. Capital, \$100,000.
- 3768—Fourth National Bank, Waterbury, Connecticut. Capital, \$100,000.
- 3769—First National Bank, Alma, Kansas. Capital, \$50,000.
- 3770—German-American National Bank, Pekin, Illinois. Capital, \$100,000.
- 3771—National Bank of Deposit, New York, New York. Capital, \$250,000.
- 3772—Ohio National Bank, Lima, Ohio. Capital, \$120,000.
- 3773—First National Bank, Madison, Nebraska. Capital, \$50,000.
- 3774—First National Bank, Heppner, Oregon. Capital, \$50,000.
- 3775—First National Bank, Russell Springs, Kansas. Capital, \$50,000.
- 3776—First National Bank, Wa Keeney, Kansas. Capital, \$50,000.

ALABAMA.

OPELIKA.—First National Bank; surplus increased to \$10,000.

ARIZONA.

PHOENIX.—National Bank of Arizona; Cashier, Geo. W. Hoadley. — Hartford Banking Co. is reported here. Capital, \$50,000. President, L. W. Blinn; Cashier, E. H. Hiller.

ARKANSAS.

OZARK.—Arkansas Valley Bank is reported here. Capital, \$20,000. President, J. F. Qualle; Cashier, J. B. Carter.

CALIFORNIA.

HEALDSBURG.—Bank of Healdsburg; S. Cohn, Cashier, in place of J. D. Hassett.

LOS ANGELES.—California Bank has filed articles of incorporation. Subscribed capital, \$500,000. President, A. M. Newhall.

INDIANA.

ATTICA.—Citizens' National Bank; Vice-President, Thos. P. Campbell; Assistant Cashier, W. B. Schemerhorn.

FRANKFORT.—First National Bank; T. B. Cox, President, in place of James H. Paris; J. W. Coulter, Vice-President, in place of T. B. Cox.

IOWA.

EMMETTSBURG.—Palo Alto County Bank; W. J. Brown, Cashier, in place of John J. Robins.

LE MAR.—Security Savings Bank is reported here.

MARCAS.—Marcas Bank; President & Cashier, Louis Gund.

KANSAS.

ALMA.—J. F. Limerick & Co.; succeeded by First National Bank. Capital, \$50,000. President, John Francis Limerick; Cashier, Lawrence Travell Whalley.

ARKANSAS CITY.—Strong & Ross are reported here.

BURLINGAME.—Bank of Burlingame succeeds Burlingame Savings Bank and Traders' State Bank. Capital, \$50,000. President, C. M. Sheldon; Vice-President, J. A. Finch; Cashier, C. E. Wood; Assistant Cashier, A. M. Miner.

BURDEN.—Burden Bank; S. C. Day, Cashier, in place of E. A. Henthorn.

CONCORDIA.—Citizens' National Bank; Vice-President, B. H. McKekron; Assistant Cashier, F. W. Morgan.—C. W. McDonald; succeeded by Citizens' National Bank.

DOWNS.—Exchange National Bank; in voluntary liquidation.

ELK CITY.—Elk City Bank; Assistant Cashier, J. W. Berryman.

FORT SCOTT.—State Bank; Assistant Cashier, E. D. Marr.

GENESEO.—Central State Bank is reported here.

GLASCO.—Citizens' State Bank is reported here. Capital, \$20,000. President Albert Bissell; Vice-President, W. R. West; Cashier, S. W. Keiser.

HOLTON.—Exchange Bank is reported here. President, Samuel Newman; Cashier, J. Dickey.

KANSAS CITY.—Armourdale Bank is reported here. President, A. W. Little; Cashier, O. L. Squier.

KINSLEY.—First National Bank; Vice-President, C. C. Sellers.

LATHAM.—Citizens' Bank is reported here. Cashier, Geo. Sherar.

LAWRENCE.—National Bank of Lawrence; Emma Hadley, Assistant Cashier, in place T. E. Newlin.

LEBANON.—Lebanon State Bank is reported here. President, I. J. Finch; Cashier, Horace Winegar.

MANKATO.—First National Bank; Vice-President, Geo. S. Bishop; Assistant Cashier, J. A. Montgomery.

MANHATTAN.—First National Bank has been organized. Capital, \$50,000. President, G. S. Murphy; Cashier, T. R. Board.

PIERCEVILLE.—Pierceville State Bank; President, A. J. Hoisington; Cashier, A. S. Cooke.

PRATT.—Bank of Pratt; succeeded by First National Bank.

PROTECTION.—State Bank is style of bank here. Capital, \$5,000. President, Thomas E. Berry; Cashier, Ira B. Kirkland.

RUSSELL SPRINGS.—First National Bank has been authorized to commence business. Capital, \$50,000. President, James S. Warden; Cashier, J. T. Phinney.

SCOTTSVILLE.—Bank of Scottsville is reported here. President, W. W. Caldwell; Vice-President, F. A. Southwick; Cashier, C. H. Sawyer; Assistant Cashier, E. M. Sawyer.

SMITH CENTRE.—Bank of Smith Centre (Reid Brothers); succeeded by State Bank. Capital, \$30,000. President, G. W. White; Cashier, C. S. Barnett.

SPIVEY.—Bank of Spivey; John A. Cragun, President, in place of Chas. Manning; Edgar Anderson, Vice-President, in place of John A. Cragun.

SUPERIOR.—State Bank is reported here. President, O. G. Heggelund; Cashier, Leon Depp.

SEWARD.—Frank Cox Bank is style of bank being organized here.
STERLING.—State Bank; capital, \$10,000. President, J. H. Rickaecker; Vice-President, J. Larne; Cashier, A. M. Thorn.
TOPEKA.—Kansas National Bank is being organized here. Capital, \$500,000. President, Samuel T. Howe; Cashier, R. M. Crane.
TURON.—Bank of Turon; J. B. Potter, President, in place of J. D. Larabee; Vice-President, T. W. Hickman; M. H. Potter, Cashier, in place of J. S. McCurdy; no Assistant Cashier in place of F. S. Larabee.
WA KENEY.—First National Bank has been authorized to commence business. Capital, \$50,000. President, A. H. Blair; Cashier, R. C. Wilson.
WICHITA.—West Side National Bank; Vice-President, O. Martinson.
WINONA.—Winona Banking Co. is reported here. President, J. C. Rice; Cashier, J. E. Rule.

KENTUCKY.

CLINTON.—Clinton Bank is reported here. Capital, \$50,000. President, E. O. Beld; Cashier, W. I. Reed.
LEXINGTON.—First National Bank; John M. Bell, Cashier, in place of Thomas Mitchell; H. P. Kinkad, Assistant Cashier, in place of John M. Bell.
OWENSBORO.—Citizens' Bank; Cashier, H. C. Gans. — Citizens' Savings Bank; W. H. Moore, Cashier, resigned.
SOMERSET.—Citizens' National Bank is being organized.

LOUISIANA.

LAKE CHARLES.—J. B. Watkins Banking Co.; no Cashier in place of A. C. Gordon; Assistant Cashier, F. H. McCann.

MAINE.

HALLOWELL.—Hallowell National Bank; A. D. Knight, Cashier, in place of A. K. Perry.

MASSACHUSETTS.

GLOUCESTER.—Gloucester National Bank; Benj. H. Corlies, President, in place of E. W. Merchant.
MALDEN.—First National Bank; Assistant Cashier, Edw. P. Kimball.
NEWBURYPORT.—Merchants' National Bank; P. H. Blumpey, President, in place of Isaac H. Boardman, deceased; no Vice-President in place of P. H. Blumpey.
NORTHAMPTON.—Hampshire County National Bank; Luther Bodman, President, deceased.
SPRINGFIELD.—Chicopee National Bank; Horace Smith, President, in place of Henry Fuller, Jr., deceased.

MICHIGAN.

ESCANABA.—Exchange Bank (C. G. Royce); succeeded by First National Bank. Capital, \$50,000. President, Covell G. Royce; Cashier, Frank C. Buck.
LITCHFIELD.—Lovejoy & La Fleur are reported here. Style, Citizens' Bank.
SAUGATUCK.—Wisner, Rowe & Co. have commenced business here. Style, Exchange Bank. President, J. Wisner; Vice-President and Manager, Edward Wisner; Cashier, N. L. Rowe.
SAULT DE STE. MARIE.—Sault de Ste. Marie National Bank; Vice-President, Albert Prenzlauer; Assistant Cashier, W. B. Cady.
SANDUSKY.—Sandusky Bank; President, F. W. Hubbard.

MINNESOTA.

DAWSON.Bank of Dawson; Samuel Lewison, Cashier, in place of O. F. Stensrud.
DOVER CENTRE.—Dover Bank (E. D. Dyar); change in officers reported in August JOURNAL were erroneous. No change made or contemplated.
HECTOR.—State Bank of Hector has applied for State Charter. Capital, 25,000. President, G. K. Gilbert; Vice-President, Wm. D. Griffith; Cashier, A. R. Gress.

MISSOURI.

BOWLING GREEN.—Farmers' Bank; C. E. Porter, President, in place of S. P. Griffith; J. T. McCune, Assistant Cashier, in place of I. D. Kirtland.
COLUMBIA.—Columbia Savings Bank; Jno. M. Samuel, President, deceased.
HUNTSVILLE.—J. M. Hammett & Co.; W. F. Hammett, Cashier, in place of C. H. Hammett; J. D. Hammett, Assistant Cashier, in place of W. F. Hammett.
KANSAS CITY.—National Bank of Commerce; Vice-President, L. F. Wilson; C. J. White, Cashier, in place of L. F. Wilson; Assistant Cashier, H. C. Schnitzgebie. — German-American Bank; to be succeeded by German-American National Bank.
LOUISIANA.—Bank of Louisiana; R. J. Hawkins, Cashier, in place of R. H. Goodman; Assistant Cashier, R. H. Goodman.
POLO.—Exchange Bank; Cashier, John Cox.

MONTANA.

LEWISTOWN.—Bank of Fergus County is reported here. Capital, \$50,000. President, Simeon S. Hobson; Vice-President, T. C. Power; Cashier, James H. Moe; Assistant Cashier, N. M. Erickson.

NEBRASKA.

BENKLEMAN.—Bank of Benkleman; O. Callihan, Cashier, in place of Walter Chamberlin.
BLAIR.—Blair State Bank is reported here. Capital, \$80,000. President, F. W. Kenny; Vice-President, A. P. Howes; Cashier, T. E. Stevens.
BURNETT.—Elkhorn Valley Bank has been opened here. Capital, \$12,000. President, James Stuart; Cashier, C. E. Burnham.
FULLERTON.—First National Bank; Cashier, Theo. C. Koch.

ASBURY PARK.—Asbury Park National Bank has been organized. Capital, \$100,000. President, Egbert Towner; Vice-President, Stephen S. Willetts; Cashier, Harold E. Willard.

HOBOKEN.—Second National Bank; Vice-President, Herman S. Tinken; Assistant Cashier, Arnold R. Dodge.

NEW YORK.

BALLSTON SPA.—Ballston Spa National Bank; Geo. L. Thompson, Cashier, in place of John J. Lee.

BREWSTER.—Putnam County Savings Bank; F. A. Hoyt, Treasurer, a defaulter.

CANASTOTA.—Canastota Banking House; succeeded by State Bank of Canastota (Incorporated.) Authorized capital, \$100,000; paid capital, \$40,000. President, Wm. H. Patten; Vice-President, E. N. Bruce; Cashier, Milton Delano.

DANVILLE.—First National Bank; failed.

HORNELLVILLE.—Citizens' National Bank; Charles Hartsborn, President, deceased.

MALONE.—Farmers' National Bank; O. S. Lawrence, Cashier, in place of Wm. F. Creed; no Assistant Cashier in place of C. J. Lawrence.

NEW YORK CITY.—Grovesteen & Fell; Assignee, Philip W. Harding. — N. L. Hunting; deceased. — Henry S. Ives & Co.; Assignee, Wm. Nelson Cromwell. — Geo. H. Palmer; deceased. — Loomis L. White & Co.; Wm. Viall Chapin admitted to Stock Exchange.

PALMYRA.—Lyman Lyon; deceased.

UTICA.—Second National Bank; Wm. M. White, President, in place of Edward S. Brayton, deceased; Henry Roberts, Vice-President, in place of Wm. B. Jackson; David A. Avery, Cashier, in place of Geo. F. Thomas, deceased; Assistant Cashier, Willard Conkey.

NORTH CAROLINA.

GREENBORO.—People's Five Cents Savings Bank has been organized.

WASHINGTON.—W. P. Baughman, of Warrenton, has also opened an office here.

OHIO.

ALLIANCE.—First National Bank; Vice-President, C. C. Davidson; W. M. Reed, Cashier, in place of Le Roy D. Brown.

CINCINNATI.—Atlas National Bank; Henry Meyer, President, in place of Wm. Stichtenth, Jr. — Fidelity Safe Deposit & Trust Co.; F. Alter, President, pro tem. in place of Briggs Swift; L. T. Barr, Superintendent, in place of Jno. G. Brotherton.

LIMA.—Ohio National Bank will shortly open for business. Capital, \$120,000. President, I. C. Thompson; Vice-President, Jos. E. Roberts; Cashier, Jas. H. Woods.

NORTH BALTIMORE.—People's Bank; President, J. A. Crofford; Cashier, M. B. Waldo; Assistant Cashier, C. Crouse.

SOUTH TOLEDO.—Name changed to Maumee.

OREGON.

HEPPNER.—First National Bank has been authorized to commence business. Capital, \$50,000. President, C. A. Rheo; Cashier, J. G. Maddock.

PENNSYLVANIA.

BRYN MAWR.—Bryn Mawr National Bank has been authorized to commence business. Capital, \$50,000. President; Hamilton Egbert; Vice-President, J. L. Stadelman; Cashier, A. A. Cadwallader.

MCKEESPORT.—Bank of McKeesport; paid capital, \$25,000. President, James Evans; Cashier, E. G. Bankin.

PITTSBURGH.—Marine National Bank; Wm. W. O'Neill, President, in place of W. H. Everson.

RENOVO.—First National Bank has been authorized to commence business. Capital, \$50,000. President, James A. Williamson; Cashier, W. B. Reilly.

YORK.—City Bank; President, C. B. Wallace; Cashier, R. H. Shindel.

SOUTH CAROLINA.

LAURENS C. H.—Peoples Loan & Exchange Bank; President, Albert Dial; Cashier, Jos. H. Sullivan; Assistant Cashier, J. W. Todd.

SUMTER C. H.—National Bank of Sumter; C. E. Bartlett, Cashier, a defaulter.

TENNESSEE.

BELLBUCKLE.—Bank of Bellbuckle is reported here.

ROGERSVILLE.—Citizens' Bank; President, J. C. Stamp; Cashier, J. M. Gray.

TEXAS.

BOWIE.—Bowie Bank (C. W. Easley); closing and consolidating with Citizens' Bank, of Henrietta.

EL PASO.—El Paso National Bank; Vice-President, Wm. S. Hills.

GALVESTON.—First National Bank; E. G. Flint, President, in place of Julius Runge.

HILLSBORO.—Farmers' Bank has been authorized to commence business. Capital, \$50,000. President, J. D. Warren; Vice-President, V. H. Ivy; Cashier, R. P. Edrington.

MCKINNEY.—Collin County National Bank; J. L. White, Cashier, in place of Wm. L. Boyd; L. A. Foote, Assistant Cashier, in place of J. L. White.

PLANO.—Plano National Bank has been authorized to commence business. Capital, \$50,000. President, Geo. W. Bowman; Cashier, T. C. Jasper.

SAN MARCOS.—National Bank of San Marcos; title changed to Glover National Bank.

SCHULENBURG.—Charles Proetz; discontinued.

VERMONT.

WHITE RIVER JUNCTION.—White River Savings Bank has been opened for business. President, Samuel E. Pingree; Vice-President, David H. Moore; Treasurer, C. A. Kibling.

VIRGINIA.

HARRISONBURG.—Commercial Bank is being organized.

RICHMOND.—State Bank of Virginia; John L. Bacon, President, deceased.

WASHINGTON TERRITORY.

TACOMA.—Tacoma Trust & Savings Bank is new bank here. Cashier, W. B. Allen.

WISCONSIN.

EAU CLAIRE.—Eau Claire National Bank; William Carson, Vice-President, in place of L. M. Vilas.

NEW LONDON.—Perrin & Bingham (Bank of New London); succeeded by Murray & Klepser.

WYOMING.

ROCK SPRINGS.—Sweetwater County Bank; capital, \$25,000. President, Henry G. Balch; Cashier, A. Kendall.

ONTARIO.

LONDON.—Bank of London in Canada; suspended.

NIAGARA FALLS.—Imperial Bank of Canada; J. A. Langmuir, Manager, in place of Edward Hay.

NORWICH.—Canadian Bank of Commerce; closed.

ORILLIA.—A. W. Gordon; discontinued.

PETROLEA.—Bank of Toronto; a branch of this bank will be opened here shortly.

FORT HOPE.—Bank of Toronto; Stuart Armour, Manager, in place of W. R. Wadsworth.

STRATFORD.—Bank of Montreal; Thomas Plummer, Manager, in place of G. A. Farmer.

TORONTO.—Molson's Bank; C. A. Pilon, Manager, instead of Acting Manager.

QUEBEC.

MONTREAL.—Merchants' Bank of Halifax have opened an office here. Agent, E. L. Pease.

QUEBEC.—La Banque Nationale; Joseph Hamel, Vice-President, resigned.

NOVA SCOTIA.

HALIFAX.—Merchants' Bank of Halifax; Manager, W. B. Torrance.

PICOU.—Bank of Nova Scotia; W. E. Stavert, Manager, in place of D. C. Chalmers.

NEW BRUNSWICK.

FREDERICTON.—Merchants' Bank of Halifax have opened an office here. Manager, A. S. Murray.

MONCTON.—Bank of Nova Scotia; D. C. Chalmers, Manager, in place of Geo. Sanderson.

ST. JOHN.—Bank of Nova Scotia; Geo. Sanderson, Manager, in place of J. M. Robinson, resigned.

Interest Tables.—The attention of our readers is called to the new "Interest Tables" by Mr. O. M. Beach, advertised on the last page of the JOURNAL. Those who purchased this book of tables find it to be all the advertisement claims, and are highly pleased with it, as is indicated by the following extracts from some of the letters received from bank Cashiers who have used it:

"I know of nothing in this line to equal your tables for convenience and accuracy." * * "I unhesitatingly pronounce your book the most convenient and labor-saving arrangement ever offered." * * "The most convenient and practical book of the kind ever published." * * "I have become in love with these tables and cheerfully indorse the same." * * "I have tested their accuracy, and for labor-saving I do not think they have their equal." * * Price, \$4 a copy.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, September 2, 1887.

The month of August opened with a decided step taken by the Secretary of the Treasury in offering to prepay the interest on the National debt accruing on or before January 1, 1888, at a rebate of 2 per cent. per annum and in soliciting bids for the sale of four and a half per cent. bonds. The caution with which the offer was made and the exceeding hesitation with which bids have been accepted have deprived the action of the Secretary of any great effect. The first result of the announcement was to send the bonds up slightly but the subsequent action of the Treasury, has had a depressing effect, showing that the agitation about bond purchases, as we have hitherto pointed out, has had much to do with the very high prices of the four's and four and a half's. There have also this month been three collapses. That of the great California wheat deal, in which the Nevada bank was supposed to be involved. The failure of Ives and Company in their railroad manipulating scheme, and the smaller affair of Grovestein and Pell. Notwithstanding the general decline in railroad stocks, the earnings of the railroads usually indicate prosperity, being generally in excess of the earnings for the same period of 1886. While ordinary business has exhibited much vitality as shown by the increased railroad earnings the augmentation of bank clearings, etc., it has so far been a bad year for speculative business. All the corners attempted in commodities seem to have come to grief, the Chicago wheat deal, the coffee corner in New York city, not to say any thing of prunes, and the cotton speculation at Galveston, have been disastrous to those engineering them. The fact of general prosperity with no tendency to speculation seems to astonish the speculative dealers, and they have as a rule ascribed it to lack of currency. We think they are partly right and partly wrong. Wrong because all the statistics indicate that, counting estimated increase in the stock of gold coin, there is now about 70 millions of currency now in the country outside of the Treasury than there was in 1886, at this time, but right perhaps in that there is no such amount of money lying idle at the money centres as there was in 1886 and previously. Assuming that so far as speculation is affected by the condition of the currency, it is the surplus not invested in ordinary business, which encourages speculation in stocks, then there is a lack of currency for this purpose. There has been an immense amount of money drawn to the West for investment in Western land mortgages—and to the South for investment in various enterprises there. What the ultimate effect of these investments will be it is as yet impossible to say. Any sudden recession of confidence in regard to them might be accompanied by disastrous consequences. There have been quite a number of bank difficulties during the month, none of them however of much importance. The Citizens' Savings Bank of Leavenworth and the Columbian Bank of Philadelphia led off, followed by trouble in the Putnam County Savings Bank of Brewsters, New York, and a defalcation in the Sumpter National Bank of Sumpter, S. C., and the failure of the First National Bank of Dansville, New York.

FOREIGN EXCHANGE has been dull throughout the month. The Bank of England advanced its discount rate from 2 to 3 per cent. on August 4th. The first week in August there were free offerings of bankers' bills against foreign purchases of bonds and stocks. The second week the rates were still lower. The third week there was some demand—it was anticipated that the Bank of England would further advance its discount rate. Gold to the amount of \$850,000 arrived from abroad. The fourth week was much the same as the previous week, \$1,000,000 in gold arrived, a rise in the rate of discount of the

Bank of England was apprehended but did not take place. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.81½@4.82; sight, nominal, \$4.85@4.85½; 60 days, actual, \$4.80@4.80½; sight, actual, \$4.83½@4.84; Cable transfers, \$4.84@4.84½; Prime commercial sterling, long, \$4.79@4.79½; Documentary sterling, 60 days, \$4.78½@4.79; Paris, bankers', 60 days, 5.25½@5.25; sight, 5.23½@5.22½; Paris, commercial, 60 days, 5.27½@5.26½; sight, 5.25@5.24½; Antwerp, commercial, 60 days, 5.28½@5.28½; Swiss, bankers', 60 days, 5.25½@5.25; sight, 5.23½@5.23½; Reichsmarks (4), bankers', 60 days, 94¼@94¾; sight, 94½@94¾; Reichsmarks (4), commercial, 60 days, 93¾@94; sight, 94¼@94¾; Guilders, bankers', 60 days, 89¾@89 18-16; sight, 89 18-16@40; Guilders, commercial, 60 days, 89¾@89 9-16; sight, 89 11-16@89¾; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26 11-16@26¾; sight, 26 15-16@27. Paris dispatches quote exchange on London 25f. 83¼c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris, on July 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of July and August:

July.	BANKERS		Cable Transfers.	Commercial.	PARIS	
	60 days.	Sight.			60 days.	Sight.
Highest.....	4.84	4.85½	4.85½	4.81½	5.23½	5.20¾
Lowest.....	4.83½	4.85	4.84½	4.81	5.24½	5.21¼
August 1.....	4.83½	4.85½	4.84½	4.81½	5.24½	5.20¾
" 2.....	4.83	4.85	4.84½	4.81	5.23½	5.20¾
" 4.....	4.83½	4.85	4.84½	4.80¾	5.23½	5.20¾
" 5.....	4.83½	4.85	4.84½	4.80¾	5.23½	5.20¾
" 9.....	4.83½	4.85	4.84½	4.80¾	5.23½	5.21¼
" 12.....	4.82	4.84½	4.84	4.79¾	5.24½	5.22¾
" 15.....	4.82	4.85	4.84½	4.79¾	5.24½	5.22¾
" 19.....	4.82	4.85	4.84½	4.79¾	5.24½	5.22¾
" 23.....	4.82	4.85	4.84½	4.79¾	5.23½	5.22¾
Highest.....	4.83½	4.85½	4.84½	4.81½	5.23½	5.20¾
Lowest.....	4.82	4.84½	4.84	4.79¾	5.25½	5.22¾

COINS AND BULLION.—Bar silver is quoted in London at 45½d. per ounce. At this quotation for silver the bullion value of the standard dollar is 76.66 cents. The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 99 @ \$ 1 00	Twenty marks.....	4 73 @ 4 80
New (412½ grains) dollars...	99½ @ 1 00	Spanish doubloons.....	15 55 @ 15 70
American silver ½s & ¼s...	99½ @ 1 00	Spanish 25 pesetas.....	4 75 @ 4 85
American dimes.....	99½ @ 1 00	Mexican doubloons.....	15 55 @ 15 70
Mexican dollars.....	76 @ 77½	Mexican 20 pesos.....	19 50 @ 19 60
Peru soles & Chilean pesos..	72½ @ 74	Ten guilders.....	3 96 @ 4 00
English silver.....	4 78 @ 4 85	Com'l silver bars, per oz....	97½ @ 97¾
Five francs.....	93 @ 95	U. S. Assay silver bars	97½ @ 97¾
Victoria sovereigns.....	\$4 88 @ \$4 88	Fine gold bars par @ ¼¢ premium on the	
Twenty francs.....	3 87 @ 3 92	Mint value.	

The increased price of silver shown by the above is said to be due to an increased inquiry in London for export to the East acting on, a limited supply on hand.

The home money market has been easier through the month of August than during the previous month. The first week rates for call loans ranged from three and a half to six per cent., the second from three to eight, and the third and fourth weeks from three to seven per cent. The rates for prime commercial paper have ranged from six to seven per cent., generally from six to six and a half. The following are the latest rates of exchange on New York: Savannah, par; selling ¼@¾ premium; Charleston, buying par; selling ¼@3-16 premium; New Orleans commercial, 50c. per \$1,000 discount @par; bank, 50c. per \$1,000 premium; St. Louis, 75c. per \$1,000 discount; Chicago, 60c. per \$1,000 discount.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of August, and the highest and lowest during the month. Actual sales marked * :

There is no better proof that money has not been locked up in the Treasury as compared with the year 1886, than the following table derived from data prepared at the Treasury Department, which shows the actual net holdings of the United States Treasury at corresponding dates in this and the previous year:

U. S. Treasury Net holdings of.	July 1, 1886.	June 1, 1887.	July 1, 1887.	Aug. 1, 1887.	Sept. 1, 1887.
Gold	\$156,793,749	\$186,667,778	\$186,875,669	\$186,806,390	\$193,274,198
Silver	96,229,539	73,157,591	73,348,425	72,455,106	70,390,483
U. S. notes	22,868,317	25,689,202	21,767,376	20,013,797	21,157,538
Bank notes	149,014	375,176	197,046	273,802	219,313
Fractional silver...	29,232,496	27,208,314	27,094,192	26,803,845	26,259,313
In Treasury.	\$305,323,115	\$309,176,230	\$307,529,129	\$305,472,823	\$311,270,859
In Depository B'ks.	14,435,199	22,802,573	22,991,802	23,498,287	25,024,902
Total	\$319,758,314	\$331,978,803	\$330,520,931	\$328,966,090	\$337,194,760

The following statement taken from Treasury estimates and figures shows still more forcibly that not only the amount of actual cash money in the Treasury has not increased, but that there has been an increase in the currency in the hands of the people and banks:

Forms of Circulation.	July 1, 1886.		August 1, 1886.	
	In Treasury.	With Banks and People.	In Treasury.	With Banks and People.
Gold coin and bullion.....	\$156,793,744	\$433,980,211	\$186,806,390	\$475,837,319
Silver dollars	96,229,539	140,585,945	72,455,106	196,123,174
Legal-tender notes.....	22,868,317	323,812,669	19,633,740	327,047,276
National bank notes	149,014	308,541,966	273,802	276,390,721
Fractional silver, etc.	29,232,496	46,155,000	26,803,845	66,644,534
Total	\$305,323,115	\$1,253,075,841	\$305,472,823	\$1,380,583,024

It will be observed that the amount under the head of gold coin and bullion forms more than one-third of the amount in the hands of the people. The whole sum we believe of \$475,837,319 is gold coin. Whatever gold bullion

there is in the hands of the Treasury. One would suppose that gold coin forming over one-third of the currency outside of the Treasury would appear more in circulation or in the banks but it is well known that very few payments are made in gold coin. It would seem probable either that some overestimate has been made in the amount or that gold coin is hoarded or carried out of the country to a greater extent than is supposed.

The public debt and Treasury statements for September 1st show that during the month of August the public debt less cash in the Treasury has decreased \$4,809,475 as compared with \$4,844,894 during the month of July. The outstanding interest bearing debt on August 1st was \$1,066,600,862, and on September 1st it was \$1,060,858,712. The accrued interest, on the same at the latter date was \$10,114,386. This statement includes \$64,623,512 bonds of the Pacific Railway Companies. An additional statement is issued by the Department this month in regard to these latter bonds. We criticized the inclusion of them in the public debt statements as debt of the Government without explanation or qualification, and are glad to see this effort at elaboration, which is after all a return to the old method of reporting these bonds followed under Secretaries Sherman and Folger. From the figures given it appears that the interest already paid by the United States on these bonds is \$74,731,786, of which the roads have reimbursed \$22,091,897, leaving them in debt to the Government on account of interest alone to the extent of \$52,639,889. The sinking fund for the reduction of debt amounts in bonds and cash to \$8,855,183. The net cash balance, in addition to the \$100,000,000 set aside in the debt statement as a reserve on legal-tender notes, available for the reduction of the debt and meeting the expenses of the Government was, \$44,760,908 as against \$45,698,594 on August 1st. The amounts due from National bank depositories were \$25,923,902, as against \$23,493,267, an increase of \$2,430,635.

The following table shows the net gold and silver held by the United States Treasury on the 1st of August and on the 1st of July and June :

	Sept. 1, 1887.	Aug. 1, 1887.	July 1, 1887.
Gold coin and bullion.....	\$282,039,534	\$281,296,417	\$278,101,106
Gold certificates outstanding.....	88,765,340	94,990,087	91,225,437
Gold owned by Treasury.....	\$193,274,193	\$186,306,330	\$186,875,669
Silver dollars and bullion.....	\$218,236,868	\$216,621,247	\$215,166,442
Silver certificates outstanding.....	147,876,385	144,168,141	142,118,017
Silver owned by Treasury.....	\$70,360,483	\$72,453,106	\$73,048,425

The changes during the month are an increase of \$6,967,863 in net gold coin and bullion held and a decrease of \$2,094,623, in silver dollars and bullion. In addition to the silver mentioned above the Treasury held trade dollar bullion, \$6,637,495, trade dollars, \$515,709 and fractional silver coin, \$26,148,531. The receipts of the Government for August were \$35,619,115 and the expenditures \$28,717,162. Showing an excess of receipts of \$6,902,053. Silver certificates outstanding have increased \$3,710,244. As seen from a table previously given the increase in the holdings of net cash by the Treasury during the month of August have been \$5,798,036.

The total National bank circulation outstanding has decreased during the month, \$2,185,623. This is the resultant of a retirement of \$3,185,133 offset by an issue of \$999,510, \$439,300 of which is to new banks and \$559,710 additional circulation to old ones. Of the total outstanding \$169,951,335 is secured by bonds and \$104,067,515, by legal-tender notes deposited with the United States Treasurer. Most of the circulation secured by bonds is that of banks in actual operation, and this has decreased \$72,216,861 within the preceding twelve months. The Comptroller issues his statement in a new form this month. Something simple and easily understood was recently promised. It is rather astonishing that the change was not made sooner to suit the condi-

tions which have prevailed during the last three years when changes in National bank circulation have been so marked. To be complete, however, the statement should give, first, the increases or decreases, of circulation of going banks secured by bonds, of retired notes of going banks secured by legal-tender notes (this would be of special benefit to the banks), of notes of banks in liquidation secured by bonds, of notes of insolvent banks secured by bonds, of notes secured by bonds on which interest has ceased, of retired notes of liquidating and insolvent banks secured by legal-tender notes. The statement should be made from the standpoint of each class of banks, divided into banks in operation, banks in voluntary liquidation, and banks insolvent. Each class may have circulation secured some by bonds and some by legal-tender notes. That secured by legal-tender notes may have been retired, under one of several different laws. Nothing could be more interesting than a statement showing with some degree of clearness all the operations of the Comptroller's office in regard to bank circulation. The amount on deposit with the United States Treasurer to redeem National bank notes was, \$104,067,515 as against \$106,901,094 on August 1st.

The bonds to secure public deposits amounted to \$27,702,000 including \$225,000 currency 6's, \$9,784,500 4½'s, \$7,042,500 4's, and \$700,000 3's.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated :

	Sept. 1, 1887.	Aug. 1, 1887.	July 1, 1887.	June 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.	\$3,208,000	\$3,176,000	\$3,175,000	\$3,145,000	\$3,680,000
4½ per cents	69,963,550	69,022,500	67,748,100	65,807,350	59,686,200
4 per cents	116,208,900	115,890,950	115,842,850	114,975,350	113,903,200

NEW YORK BANKS.—The following table shows the condition of the New York Clearing-House Banks for a number of weeks past, as well as about this time in 1886 and 1885.

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
August 27..	\$348,485,000	\$68,698,300	\$22,543,100	\$345,483,700	\$3,073,800	\$4,865,725
August 20..	350,710,700	68,816,900	22,252,500	347,314,900	8,084,200	4,265,675
August 13..	352,925,800	70,364,100	22,565,500	352,742,900	2,067,000	4,738,625
August 6..	356,137,500	73,978,000	22,754,300	359,221,400	8,091,400	6,922,550
1886.						
August 28..	342,383,200	68,582,100	25,678,300	349,398,600	7,982,900	6,907,150
1885.						
August 29..	320,112,500	115,655,000	30,040,400	391,140,600	9,684,200	56,910,250

Up to August 27th the New York Clearing-House banks had during the month received in currency \$3,668,000 and had shipped, in currency \$7,476,000 and \$1,925,000 in gold, making an excess of shipments over receipts of \$5,783,000. In their operations during the same time with the Treasury of the United States, the banks received \$28,700,000 and paid out \$26,300,000, losing \$2,600,000 in gold and currency, making a total loss of cash during the month of \$8,333,000. The reduction of liabilities has however borne such due proportion to the loss of cash means that the surplus reserve has only fallen off about \$2,000,000.

Stocks and bonds have as a rule been dull during the month of August. There was some rise after the issue of the Secretary's circular of August 3d, but, this effect did not last long and the course of prices was very similar to that during the month of July. Prices fluctuated slightly but became better toward the middle of the month, and from that fell off until the lowest point was reached from August 25th to August 31st. The most noticeable fall was in Manhattan Consolidated which went down to 98½ on August 31st although it has since recovered. The whole tendency is now toward a rise, and we should not be surprised at a better market for September.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of August, the highest and lowest since January 1, 1887, and also during the year 1886:

	AUGUST, 1897.			SINCE JANUARY 1, 1887.		YEAR 1886.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

Poor's Directory of Railway Officials. 1887. Second Annual Number, containing Lists of the Officers of all Railways in North America, and the Leading Organizations Auxiliary to the Railway System, Lists of Officers of South American and British Railways, etc., compiled from official information. POOR'S RAILROAD MANUAL, 70 Wall St., New York.

This work, which is a supplement to Poor's Manual of Railroads, contains lists of officers of all Steam Railroad Companies in the United States and Canada; officers of all Street Railroad Companies in the United States and Canada; officers of Private Tram and Lumber Railroads, etc., etc.; officers of Auxiliary Enterprises—Express, Sleeping Car, and Equipment Companies, etc., etc.; officers of Industrial Enterprises Dependent on the Railway System—Car-Axle Manufacturers, Car Builders, Car-Wheel Manufacturers, Car-Spring Manufacturers, Rail Mills, Locomotive Builders, Bridge Builders, Contractors, etc., etc.; officers of Associations of Railroad Officials and of Railroad Employees, Boards of Railroad Commissioners, etc., etc. To these are added Special Lists of General Managers, General Superintendents, Chief Engineers, Master Mechanics, Master Car Builders, Master Car Painters, General Freight and Passenger Agents, Purchasing Agents, etc.; an Alphabetical Index to the Names of all the officials above mentioned, with a convenient system of reference, showing lines with which each is connected; and an Alphabetical Index of Cities and Towns, by means of which can be ascertained the names of all officials in any particular city or town at once. The work also contains a list of railroads in Mexico, the West Indies, Central and South America and the Hawaiian Islands. It will be especially valuable as a mailing list, containing over 30,000 names of persons connected with railways, and is the first publication containing information of this kind.

The Margin of Profits; How it is Now Divided; What Part of the Present Hours of Labor can be Spared. By EDWARD ATKINSON. An Address delivered before the Central Labor Lyceum, of Boston, on Sunday Evening, May 1, 1887. New York and London: G. P. Putnam's Sons. 1887.

There is no writer on economic subjects who approaches the Labor question with greater insight, greater power of explanation, or greater charity for opinions which may not coincide with his own, than Mr. Atkinson. He is opposed to the arbitrary methods of labor associations as now organized, thinking them unlikely to result in good to the working classes they assume to protect, but he recognizes the necessity of more leisure, more variety and better opportunity for laboring people. The present publication contains in addition to the address mentioned on the title page, a reply to the same by Mr. E. M. Chamberlin, and Mr. Atkinson's rejoinder to Mr. Chamberlin, and in an Appendix is a short essay on Economy in Domestic Cookery.

In his address Mr. Atkinson undertakes to set before his hearers the relations between capital and labor in a cotton mill, by showing the manner in which the proceeds of one year's production are distributed among the various classes of individuals interested either as capitalists or working-men. The result shows that a very large proportion goes to labor, and also that a larger sum is received by labor working with the assistance of capital owned by so-called capitalists than would be received by labor if working on a co-operative or any other plan as yet known different from the one usually adopted at the present day, and that under this system there is ample opportunity for any workman who manages his own life and wages honestly, temperately and economically, to support himself and family well, and to save money. Further, that it is much easier for a man who has sufficient capacity and character to make himself a good man and a good workman, to advance himself in life to-day than it was even thirty-five years ago. The truths in this address are perhaps not new, but they are put with clarity and force. That it does not go to the bottom of the subject, in the minds of some, is due to the fact that Mr. Atkinson does not attempt to show, what so many have in vain attempted to show, how men as a rule can live without labor; how every man, regardless of character, capacity, morality, or special talent, can surround himself with all the appliances of luxurious living. He does not attempt to solve the riddle why some are born apparently lacking the qualities, physical and moral, which make men successful in life; of inequality and diversity in the intellectual and emotional natures of men—and of course it is to this side that Mr. Chamberlin's argument is mainly directed. This reply, while

temperate and reasonable in tone, voices the complaint which those who are unfortunate in life are constantly making. Why should not one man, after political equality is admitted, be the equal of every other man in the enjoyment of the good things of this life. Mr. Chamberlain's concern is not for the men who scramble out of their class by the exercise of superior innate qualities, but for the men who are scrambled over, too weak to act other than as stepping-stones. While Mr. Atkinson thinks that capitalists pay in wages all that the consumption of their productions warrants, Mr. Chamberlain contends that by the increase of wages the power of consumption is increased. If capitalists were satisfied with four per cent. profit instead of six, and gave the difference in wages, both the consumption and the amount of the product would increase, and the four per cent. under new circumstances will more than equal six.

We cannot say that from their peculiar standpoints either Mr. Atkinson or Mr. Chamberlain has the best or the worst of it—but we know this, that however much human nature in adversity may rebel against the conditions that surround it, Mr. Atkinson has clearly pointed out two facts. First, that it is perfectly possible for all to better their circumstances; but, second, that in order to do so they must follow the old and only certain road of honesty, sobriety, economy, with all its hardships and all its self-denials.

The Silver Pound and England's Monetary Policy since the Restoration, together with the History of the Guinea, illustrated by Contemporary Documents, By S. DANA HORTON (a delegate of the United States of America to the International Monetary Conferences of 1878 and 1881.) London: Macmillan & Co., 1887.

"And I'll give thee a Silver Pound to row us o'er the ferry."

We are very strongly of the impression that the author of this work is impervious to criticism, however just, but as the object of criticism is not to convert the author but to warn the public, we venture to point out to what lengths of absurdity the endeavor to establish a theory without regard to facts will convey an individual of some intellectual force. With sufficient ingenuity and a wide field to exploit it, any one can make a plausible argument in favor of almost any proposition. As an instance of what may be accomplished in this line, we point to the success which has attended the efforts of the Hon. Ignatius Donnelly in discovering and translating a cipher injected by the late Lord Bacon into the first folio edition of Shakespeare's alleged works for the purpose of revealing to future generations and Ignatius Donnelly in particular (a short life and eulogy on the latter person have, we understand, been recently discovered in the second folio edition) that Lord Bacon, and not Shakespeare, wrote the plays in dispute.

Mr. Horton reasons upon the data, which his industry has collated, to establish the desirability of the double standard and the alleged danger to modern civilization of the exclusive gold standard, with the same convincing earnestness that enables Mr. Donnelly to establish the existence of his amusing cipher. Both Mr. Donnelly and Mr. Horton have reached that heaven of egotism to which all hobbyists seem to tend and from which they gaze with pitying scorn on those who venture to dispute their conclusions.

Of all the facts and arguments which the advocates of Bi-metallism have to encounter, the most difficult to down is the financial history of England under the single gold standard since 1816. This amid all the fluctuating successes of the monetary war, remains a solid wall against which theorists and hobbyists have dashed their heads in vain. Mr. Horton, with some acumen, recognizes that if he can undermine and destroy this bulwark, he will have gained an important victory. A theory and a statute are on trial. The theory is the theory of the world (bi-metallism), the statute is the British law establishing the gold standard. The issue is whether England does well by maintaining the Disinherison of silver. What a word for bi-metallic Congressmen to use next winter! The "Silver Pound" is dedicated to the memory of "Somers, Montague, Newton, Locke, monetary Counsellors of England." Mr. Horton assumes, almost as an axiom, that the cure for existing monetary evils is none other than the reinstatement of silver in its former position as money by the joint action of nations. The "attitude of England toward silver is plainly vital." To influence the attitude of England now, Mr. Horton enters into an investigation purely historical, of the past and present of the English standard. His line of argument seems to be that because once England used silver exclusively, therefore she should use it now. Because the

silver was the elder, therefore, it is necessarily the better standard. By his researches into old records, he either has discovered, or believes he has discovered, that the men to whose venerable shades he dedicates the "Silver Pound" were, if their writings are interpreted from the standpoint of a faithful bimetalist, in favor of the remonetization of silver at the present day. He intimates that Lord Liverpool and Sir Robert Peel misinterpreted the views of their illustrious predecessors, and leaves it to be inferred that if he, Mr. Horton, had been present to point out the true interpretation of the views of Somers, Montague, Newton and Locke, Lord Liverpool and Peel would never have been led astray, and modern English statesmen would not now follow the disastrous teachings of 1816. Inasmuch, therefore, as the statute of that year was a ghastly error, founded on misapprehension of the ancient monetary history of England, now that Mr. Horton has corrected that misapprehension it follows that English statesmen will agree to an international conference for the purpose of reinstating silver. So far from making it clearer what a monetary standard should be, or even what a silver pound is or was, Mr. Horton's book involves the subject in deeper obscurity than before, dwelling as it does rather on the disagreements than the agreements of the various authorities, historical and personal. The introduction points out nine different meanings attached to the word standard in monetary discussions. The author is fertile in discriminations, and indulges in them in order to impress his readers that the subject is too complex to be understood by any but a sapient savan like himself.

One of the clearest and most practical definitions of a standard of value ever formulated, is that given by Sir Robert Peel in his speech in Parliament May 6, 1844, when he said that, "according to practice, according to law, according to the ancient monetary policy of this country (England) . . . a 'pound' is a certain definite quantity of gold with a mark upon it to determine its weight and fineness." He further said, "No one contends that there is or can be an absolutely fixed and invariable standard of value. No one denies that the value of gold with reference to all commodities, excepting gold itself, may be subject to slight variations; but what other substance is not more subject to variations in value than the precious metals?" Later history has shown, and the "Silver Pound" only proves it, that of the two precious metals gold is less subject to variation than silver. Mr. Horton criticizes Peel as being only the transmitter of an erroneous idea—accuses him of misrepresenting those "gentle sages" Sir Isaac Newton and John Locke—and when he himself attempts a definition of a standard, he bases himself on the expressions of a Mr. Smith, who, in 1810, was examined by the Committee of Parliament, and who, when asked whether the suspension of cash payments was to exist without any standard of value, answered "No, the pound should be the standard." When asked to explain what he meant by the pound, he answered, "I find it difficult to explain, but every gentleman in England knows it." Following Mr. Smith, Mr. Horton says "that a National unit of account is a legal entity, a creature of law," and illustrates, so that the least intelligent reader can understand, by using the analogous terms "incorporeal hereditament, an office, a dignity, a right, a franchise, an official but impersonal corporation." If there is such a thing as a monetary standard it should have at least something definite about it, but Mr. Horton's attempt at explanation is vagueness apotheosized. Apart from the unpleasant and absurd manifestations of the peculiar bias of the author's mind, the "Silver Pound" is an interesting, and to some extent valuable compilation of interesting facts in English monetary history. Mr. Horton possesses much industry, some taste, and immense egotism, and these constituents frequently combine to make a very readable book. We can see more than ever before how the United States was unable to gain anything at the international monetary conferences of 1878 and 1881. Mr. Horton is entirely unfitted for a National delegate. He is too opinionated to conciliate, and too illogical to command the respect of practical men. With such a load to carry it is no wonder that the monetary conferences of 1878 and 1881 were both dead failures. He reminds us of the scientific tailors of Laputa, who used a sextant and a theodolite to measure a man for a suit of clothes. We trust that many people in the United States will read the "Silver Pound," first for its really interesting features, and second in order that a howl of popular rage may hail any President who ever again appoints such an impractical theorist as Horton a delegate to an International Monetary Conference. The author of the "Silver Pound" should confine himself to writing entertaining financial works.

BANKERS' OBITUARY RECORD.

Bodman.—Luther Bodman, President of the Hampshire County National Bank of Northampton, Mass., died recently.

Davis.—Edward S. Davis, a prominent citizen of Lynn, Mass., at one time Cashier of the old Nahant Bank of Lynn, died August 7th.

Dow.—James N. Dow, Treasurer of the Woburn Five Cents Savings Bank, Mass., from 1854 to 1880 when he became a trustee, died August 6th, aged 73 years. He was also Treasurer of the town from 1883 to 1887.

Fellowes.—Col. John F. Fellowes, at one time Treasurer of the Chelsea Savings Bank of Chelsea, Mass., died at Chelsea on July 6th. In 1885 he was appointed Deputy Collector of the Port of Boston. He was 72 years of age.

Greenleaf.—Richard C. Greenleaf, of Boston, died on August 3d, at the age of 79. He was vice-President of the Franklin Savings Bank of Boston.

Hartshorn.—Charles Hartshorn, President of the Citizen's National Bank of Honesville, N. Y., died on August 20th.

Hunting.—Nathaniel Hunting, a member of the New York Stock Exchange, and one of the proprietors of the Murray Hill Hotel, New York, died at Poughkeepsie of apoplexy, August 16th. He was 38 years of age.

Learned.—Ebenezer Learned, of Norwich, Conn., died recently, aged 75 years. He was senior director of the Thomas National Bank of that place, having served forty years in that capacity.

Lyon.—Lyman Lyon, banker of Palmyra, N. Y., died August 22d at Palmyra.

McCarthy.—Joseph Austin McCarthy, at one time a prominent bank official in Halifax, died recently at Rottessay, Isle of Bute.

Palmer.—George H. Palmer, a member of the New York Stock Exchange, died August 12th.

Rogers.—John H. Rogers, a well-known merchant of Boston, died on August 1st, at the age of 78. For fifty years he had been a director of the Freeman's Bank, and during the last fifteen of this period President of the institution. In January last he declined re-election.

Samuel.—John M. Samuel, President Columbia Savings Bank, Columbia, Mo., died last month.

Schlund.—C. Schlund, banker, at Mokelumne Hill, Calaveras County, Cal., died recently.

Standiford.—Dr. E. D. Standiford, formerly President of the Farmer's & Drover's Bank, Louisville, Ky., died on July 28th.

Stormont.—D. W. Stormont, M. D., who had been a member of the Board of Directors of the Central National Bank of Topeka, Kans. since its organization, died August 18th, aged 87 years. He was also a director of the Topeka Bank for many years. He had accumulated a fortune in a long life of careful and conservative business. Resolutions, expressive of the high appreciation in which he was held were passed by the Board of Directors of the Central National Bank.

WANTED—OFFICERS AND CLERKS, POSITIONS, BANKS FOR SALE, LOCATIONS WANTING BANKS, ETC.

[Notices under this head—space not over four lines—cost \$2 an insertion. If replies are to be sent to this office the advertiser must send us two stamped envelopes addressed to himself, in which the replies will be forwarded.]

FOR SALE.—A half interest in a bank in a town in Northern Kansas. Established 1883. Thirteen miles to nearest bank. Paying business; profits over 20 per cent. on capital invested. Building with two lots, fire-proof vault, safe and furniture and fixtures complete. Address: E. E. G., care Goodrich Bros. Banking Co., Fairbury, Neb.

A YOUNG MAN now occupying the position of book-keeper and assistant cashier in a small National bank, would like to change for a position in a large bank or corporation offering better facilities for promotion. Am thoroughly competent, and can furnish recommend from present employers. Address: VASSAR, care of the JOURNAL, 78 William Street, New York.

BOOK-KEEPER or Correspondent. Position as book-keeper or correspondent wanted by a young man, 21 years old, who has nearly four years' experience in National and Savings banking. Good reference. W. 75, care of the JOURNAL.

WANTED in a Bank, a responsible position by a gentleman with 18 years' experience in the National and Savings banks of Massachusetts, and undoubted references as to character and ability. Address: Clerk, care of Bradford Rhodes & Co., N. Y.

FOR SALE.—The controlling interest in a National bank of \$50,000 capital, located in a growing town of 5,000 population in Northern Michigan. This stock held by the present Cashier. Bank doing good business and paying 10 per cent. dividends and business constantly growing. Best of reasons given for selling. A rare opportunity for a young man to take present Cashier's position, salary now paid, \$1,800. Address: Cashier, care Bradford Rhodes & Co., New York.

RHODES' JOURNAL OF BANKING.

Vol. XIV.

OCTOBER, 1887.

No. 10.

A STATEMENT from the Treasurer's Office shows that the amount of currency in circulation, outside of the Treasury, of the denomination of \$20 and under was, on August 31, 1887, some \$71,257,834 in excess of the amount in circulation twelve months ago—on August 31, 1886. The larger portion of this increase consisted of silver certificates. Notwithstanding this great increase in the available amount of money, there is in New York city great stringency in the money market; and, considering that a very large proportion of the available funds of the country banks are kept in New York exchange, there is ground for the apprehension that now exists as to the future effect of locking up surplus money in the United States Treasury. The greater part of the taxes paid to the Federal Government from customs, and a very large proportion of those derived from internal revenue, are collected in New York city. Of those paid in other parts of the country, a large portion is paid in New York exchange. It is plain, then, that the rush of the revenues into the Treasury first depletes the funds at the great financial heart of the country. And the funds do not return as fast as they are paid out, not only because the revenues of the Government exceed the expenditures, but because Government payments are made not necessarily in New York but in all parts of the United States, making the return a matter of time, whereas the depletion is sudden and constant. It therefore has little bearing on the question of financial stringency in New York city to show by tables that the amount of notes and coin in the country has increased, inasmuch as it is rather a question of distribution than of mere amount. It has been suggested by some that the Act of March 3, 1887, allowing several of the interior cities to become cities where National banks are required to keep their total reserves at home has had an influence in depriving New York city of funds previously kept there. If any influence of the kind can be ascribed to such law, it is most unfortunate for the administration that the measure should have been enacted, when it was so important to repress any influences tending to lower New York funds. We do not, however, think that this law has had much to do

with the pronounced tendency of funds to the West, which has been so noticeable this season. Even if the law of reserve had been left unchanged we think that this Western demand would have prevailed just the same. But it would have been met by a freer circulation of drafts and checks and a less use of actual currency. Payments now made by drafts on Chicago and St. Louis would have been just as well made by drafts on New York, and the currency necessary to meet the drafts at the former places need not have been withdrawn from the latter. In other words, one pernicious effect of this reserve law has been to lessen the draft circulation of the country and increase the amount of money necessary to do the same amount of business. To do at three centres what can as well be accomplished at one is to increase machinery and friction without increasing the power. Whatever may have been the effect of the reserve law upon the amount of available funds in New York city, it is certain that these funds are the first to feel the strain of the taxes paid to the Government and the last to recuperate. The week ending August 12th the New York banks lost \$2,100,000 through the operations of the Sub-Treasury, the week ending August 19th they lost \$1,600,000, that ending August 26th they gained \$100,000, that ending September 2d they lost \$400,000, that ending September 9th they lost \$1,600,000, and that ending September 16th they lost \$2,000,000; all of which shows conclusively that payment of taxes to the Government causes a drain on the New York banks that is not compensated for by drafts on the Treasury issued in Government payments. It is this direct contact between the Treasury and the banking machinery of the country, at the most important point, that makes the excess of receipts over expenditures so vital to the country. When it is remembered that through this banking machinery the amount of cash required in transacting the business of the country is reduced to less than one-twentieth, the remaining nineteen-twentieths being accomplished by checks and drafts, it will at once be understood how pressure at the centre of the banking system distresses the whole.

We do not think that the purchase of bonds by the Government will afford any relief, because the New York banks do not hold United States bonds to any great extent; and they are, besides, in a situation to utilize them if they need relief in obtaining circulation or Government deposits. Neither will the advance payment of interest help them to any great extent, because they do not hold many United States bonds.

One certain form of relief would be to permit them to issue notes to the amount of their capital, based on a reserve of 25 per cent. coin. But to permit the banks in New York city to do this without extending the privilege to all parts of the country, however useful it might prove, would be regarded as the worst form of monopoly.

Probably the best method of obtaining an outlet for the surplus, and the one most advantageous to the public, would be to refund the

4 per cents. into bonds at 2 per cent. If an extra session of Congress is called this plan might be adopted in some shape as a method of relieving the present accumulations and of giving time for considering the more important topic of reducing the revenues, which is, after all, the only radical cure for the difficulty.

A CHECK UPON THE United States Treasury, issued by a pension agent in May, 1885, for the amount of \$2, in payment of a surgeon's examination fee, was recently presented at the Treasurer's cash office in Washington. The date had been changed to May 31, 1887, the amount had been raised to \$2,450, and the name of the payee was also changed. In fact, all of the original check, except the signature of the pension agent, had been erased by the use of acids, and what was virtually a new check manufactured. If this check had been paid by the Treasurer's office the funds of the Government would eventually, perhaps, have been discovered to be short \$2,448; but this discovery would have been a matter of time, made after all the accounts of the numerous pension agents had been fully audited. In the mean time everything would have gone on as usual, perhaps, for years. It was certainly an evidence of the efficiency of the Teller who discovered the forgery. But the assertion which has been made that Treasurer Hyatt would have been obliged personally to make up the difference is not warranted by the precedents which have been established as to losses and defalcations in the Treasurer's Office. In the past, Congress has, as a rule, relieved the Treasurers who have been short in their cash account through the carelessness or dishonesty of their employes. And this is no doubt just and right, for where large sums of money are handled there must, in the course of years, be a certain percentage of loss from such causes. Such losses occur in all moneyed institutions dealing with private capital, and a similar leniency is shown toward managers unless there is personal dishonesty. Treasurers Spinner and Wyman were both relieved from personal liability by appropriations made by Congress to cover amounts stolen by employes during their administration, and we cannot see that Treasurer Hyatt would be any less entitled to relief from a loss which, if it had occurred, would have been the result not of dishonesty but simply of oversight. Nor do we think that the banks which are said to have accepted this check should bear the loss. Although a recent decision, given in the JOURNAL for September, rather favors the doctrine that the drawer of a check, however much his carelessness in drawing the same invites the alteration of the same, is not to be held responsible, yet there are many decisions and many good arguments to the contrary. It appears that the Government furnishes to its pension agents a very inferior quality of check on poor white paper, while the ordinary checks of the United States Treasury are on specially tinted and prepared paper, which it is impossible to alter without leaving visible traces. We therefore believe

that inasmuch as in permitting its agents to use checks which are an exception to those ordinarily used by the Department, the Treasury becomes liable, to some extent at least, for the consequences, and that the banks which have been victimized through the carelessness of the Government should have redress, either through the action of the Courts or of Congress.

A CURIOUS FEATURE of the responses to the bond circular of the Government of the 22d of September, as well as of those to the circular of August 3d, are the comparatively low prices the holders of 4 and 4½ per cent. bonds have been willing to accept. Through June the quoted market price of 4½s averaged 110, through July 109½, and through August about 108½. During this latter month the price was of course affected by the first Treasury circular. But although the prices had ruled so much higher through July, yet the responses to the circular of August 3d showed some holders willing to take as low as 106.88. This indicated that the previous high price was caused, to some extent, by the belief that if the Government became a purchaser the premium on the bonds would necessarily rise, and that the holders had to some extent purchased the bonds not as an investment but as a speculation. The advancing tightness of money and the difficulty of carrying forced the holders to take less for the bonds, and many of them have doubtless sold them to the Government at a loss to themselves of perhaps as much as 1 per cent. The real holders for investment do not appear to have figured in the offers, and it is for this reason that the latter gradually declined in amount. The effect of the circular of September 22d, proposing to buy 4s at 125 and 4½s at 108.4, further supports this view. The previous circular had about exhausted the floating 4½s and very few were obtained, but a surprising lot of 4s were purchased. In July the market price of 4s averaged over 128, and in August 127½, so those who bought 4s at these or previously even higher prices in the hope that a forced Government demand would enhance the premium, must have lost even more than those who purchased 4½s with the same hope. The error which appears to have been made by these speculators consisted in supposing that there was some irresistible force which would compel the Government to purchase bonds at any price, and also that the moment the Government began to buy prices would advance. This argument of unlimited advance of premium under the pressure of an assumed demand for United States bonds was used among other arguments to defeat the McPherson bill for the issue of circulation to National banks to an amount equal to the par value of the bonds deposited by them. It was reasoned that if the bank demand for 4s, caused by the reception of 90 per cent. of circulation, kept the bonds at 124, that the issue of 100 per cent. of circulation would drive them to 130. The same process of argument has been used in various ways to defeat other propositions for an

increase of National bank circulation. In either case due weight has not been given to counteracting circumstances, which might—which, in fact, were almost sure to exist.

THE SAVINGS BANK COMMISSIONER of Massachusetts recently discovered that the Fall River Savings Bank, of Fall River, has been loaning United States bonds to National banks, which they deposited with the United States Treasurer at Washington as security for circulation issued to them. The advantages of this transaction, to the National banks, were that the banks were relieved from the necessity of paying a high premium for the bonds and had the use of the cash which otherwise would have been expended in premiums. The savings bank received from the National banks, in exchange for and as security for the loan of the bonds, certificates of deposit bearing interest at 5 or $5\frac{1}{4}$ per cent., to an amount equal to the par value of the bonds, whereas if the bonds had been held 4 per cent. only would have been realized. If the National bank had failed, the Savings bank would merely have had a claim against it for the market value of the bonds, since the latter would have been sold by the Government to obtain funds to redeem the circulation issued upon them. The surplus would have been returned to the common fund of the failed bank for distribution among its creditors. It may be said that the title did not pass to the National bank, but in order to meet the requirements of the law in regard to the deposit of bonds for the security of circulation it was necessary that the bonds should be transferred to the Treasurer of the United States in trust for the bank, and it is not likely that the Comptroller of the Currency would have approved the transfer if he had reason to believe that the bonds did not belong to the bank on whose behalf they were deposited. This incident, showing that the National banks in Massachusetts were willing to pay 5 per cent. per annum for bonds for circulation—provided they could have the use of the premium—indicates that they would exchange their high-priced 4 per cent. bonds for $2\frac{1}{4}$ per cents. if the Government would pay the present value of the difference in interest.

EVERY FAILURE of a National bank brings out from the daily press the stock remarks, “do Bank Examiners examine,” “does protection protect.” The failure of the First National Bank of Dansville following so soon after that of the Fidelity National Bank of Cincinnati is the most recent instigation of these cries. We have frequently pointed out the impossibility of absolute, unflinching protection by such or any other means, but that the system of public examinations reduces the dangers from unwise and dishonest banking to a minimum. As far as we can learn, the President of the First National Bank of Dansville was a man of great personal popularity and political influence in the town and vicinity. Papers published in the locality

speak of him, since his departure for an unknown bourne, in terms which would befit an expert in mortuary eulogy. He is represented as charitable to an unusual degree; though somewhat diffident, he was enterprising and energetic, and noted for the steadfastness to those to whom he gave his friendship. He was sociable and fond of telling stories, and always had a fund of anecdote on which to draw. He was domestic in his habits, seldom leaving Dansville, and familiar to and popular with everybody in town. When an attempt to arrest him was made it was frustrated and an opportunity of escape afforded by the aid of his numerous friends. The Bank Examiner who took charge of the bank and conducted the investigations which pointed to the necessity of the arrest, was regarded with hostility, and even threatened, by many who desired to protect Mr. Faulkner. Papers published in Dansville ridiculed and belittled the Examiner. A man who commanded to such an extent the respect of his neighbors and townsmen, while in effect deceiving and robbing them, could not readily be detected by any ordinary examination. All the facts in regard to this failure have not yet been made public; but whenever they are, we think it will be made plain that the system of National bank examinations is not responsible for this failure.

IN ANOTHER PART of the JOURNAL we publish a statement said to have emanated from the Comptroller's office, which in substance is that the National banking law is defective, in that it imposes no penalty on bank officers and Directors who agree not to prosecute embezzling or defaulting officials or employees who will return the whole or a portion of the funds which have disappeared. There is law enough now to prosecute those who compound felony, both under the statutes of the States and those of the United States. Moreover, criminal prosecutions under the National Banking Law are under the supervision of the Attorney-General of the United States and the United States Attorneys in the various judicial districts. Under the system of National bank examinations embezzlements and defalcations are always discovered after a time, and this discovery generally furnishes all the evidence necessary to secure the conviction of the offenders. It does not rest in the power of the Directors of any National bank to grant immunity to offenders. Even if promises of this kind are made, they only amount to a stipulation that the promising Directors will not initiate proceedings. But this amounts to nothing, seeing that the Comptroller has the evidence of the embezzlement or theft, which he can furnish to the Department of Justice. When proceedings have been instituted the Court can compel the Directors, notwithstanding any promise they may have made, to appear as witnesses. In fact, the same evidence that would be required to convict Directors of compounding a felony would convict the criminal, notwithstanding any promise of immunity the Directors might have

given. Besides, if the criminal were foolish enough to put confidence in the protection the Directors could afford him he would probably be on hand when the police wanted him. Moreover, there are certain advantages, in the way of recovering stolen funds, to be obtained by leaving the law as it is, and it is a double triumph to both recover the funds and punish the criminal.

THE TREASURY DEPARTMENT has shown that it wishes to do all that it reasonably can to avert the evil consequences which, real or fancied, are supposed to result from the constant excess of the revenues of the Government over its expenditures flowing into the Treasury. It has proceeded cautiously and, as is to be expected, with due regard to political as well as financial effects. The circular of August 3, soliciting proposals for lowest terms of sale of $4\frac{1}{2}$ per cent. bonds, was not without success, \$33,905,200 of these bonds having been offered at prices varying from 110 to 107, the average being about 108.4. The transactions have been profitable to the Government, they have doubtless accommodated those who sold the bonds, and they have had a moral effect on the money market. The circular of September 22 was the result of the recognition of the fact that about as large an amount of bonds as could be obtained by that method had been accepted. The danger of an unwarranted reduction in price of their bonds seems to have alarmed some holders, and the offerings were less and less as weeks went on. Moreover, the first circular provided for offers of $4\frac{1}{2}$ per cent. bonds only. There is, however, no doubt that the pressure for more pronounced Government action became very severe, not only from New York city, but from other parts of the country. The condition of the banks of New York city is of great importance to the whole country, and the apprehensions of tight money in New York have caused a demand for Government action, assumed to be the panacea for the difficulty, from many quarters. The immediate effect of the circular has been good. It remains to be seen whether Government action alone will permanently avert the tendency to financial apprehension so noticeable during the past two months, or whether this condition of things is due to other causes in whole or in part. At all events, the Government could not do less than it did, on the ground, as empirics say, that it might do good and could do no harm.

THE BANK STATEMENT of September 24th showed a decrease of loans and deposits and an increase of legal-tender notes and specie. If, in their reports to the Clearing-House, the banks include in loans all their holdings of stocks and bonds, such a statement would seem to be impossible to explain. But it appears there is no rule of the Clearing-House which requires any uniform treatment of this class of their assets, and that, as a matter of fact, some of the banks include
