RHODES' JOURNAL OF BANKING.

Vol. XV.

JANUARY, 1888.

No. 1.

LAST month there was printed in the JOURNAL the plan of Mr. John Thompson, Vice-President of the Chase National Bank of New York city, for perpetuating the National bank circulation. In the present number we give an abstract of a pamphlet prepared by Mr. W. W. Flannagan, Cashier of the Commercial National Bank of New York city, upon the same subject. Mr. Flannagan does not agree with the opinion so generally expressed, that the financial stringency which has been complained of during the past year, is exclusively due to the excessive accumulation of surplus moneys in the Treasury. He is of the opinion that the real cause of this stringency is to be looked for in the decline for a number of years past of credit circulation in the form of notes issued by banks. He contends that at the present day bank circulation is a necessity and that its place cannot be supplied by governmental issues without detriment to trade. The basis of his argument is that there should be a due proportion between credits in the form of bank deposits and a credit note circulation. It may be inferred that he assumes that money in the form of gold and silver coin will always be inadequate to meet the wants of trade, and that real money must be supplemented by some form of credit circulation. Legal-tender notes issued by the Government, are, he contends, essentially an unsound form of currency, and their fixed amount renders any increase in conformity with the necessities of business an impossibility. Gold and silver certificates he considers but coin in another form. Regarding the National bank circulation as the only kind of circulating medium which at any time since 1866 has had the capacity of expanding in conformity with the wants of business, he shows that from 1866 to 1875 it increased somewhat in proportion to the increase of deposits, but that from 1879 to 1887, the deposits have more than doubled while circulation has diminished nearly one-half. His table is based entirely upon the returns of National banks, but to strengthen his position he points out the similar enormous increase in deposits of State and private banks, which do not issue any circulation whatever. If Mr. Flannagan's method of reasoning is the correct one his argument may be forcibly illustrated

by comparing the deposits and circulation of the State banks in the year 1862, before the organization of National banks, and before the issue of legal-tender notes by the Government. Bank deposits in that year were \$296,322,498, and bank circulation was \$183,792,079 or 62 per cent. The report of the Comptroller of the Currency for the present year shows that the deposits of all State banks, Loan and Trust companies, Savings and private banks, organized under State and Territorial laws throughout the United States, amount to \$2,019,067,250 and the aggregate deposits of National banks on October 2nd of the same year were \$1,606,782,812, making aggregate deposits for all the institutions doing a banking business in the country of \$3,625,850,062, while bank circulation is now issued by the National banks only and to the extent of \$167,283,343. Including with this last sum the legal-tender notes issued by the Government, viz., \$346,681,016, and National bank notes the redemption of which has been assumed by the Treasury, viz., \$105,103,833, gives a total credit circulation of \$619,068,192, which is about 17 per cent. only of deposits. As to the security to be required of the banks issuing circulation Mr. Flannagan's suggestions embody the use of silver bullion, and the pledge of State, municipal and county bonds under certain conditions. Circulation is to be a first lien on the assets of the bank, and the tax on circulation is to be held as a guarantee fund.

The original feature of this pamphlet lies in its calling attention to the very small proportion of credit circulation now employed in the business of the United States. If the necessity of a credit money circulation be admitted, the facts and figures brought out are of great importance. The suggestions made as to the proper security upon which additional issues of bank notes are to be based do not conflict with any of the other plans recently proposed.

THE COMPTROLLER of the Currency states in his report that the redemption of the 3 per cent. bonds during the past year has placed his office in a most delicate and trying position. It seems that on August 12, 1886, the Treasurer held as security for circulation of National banks \$103,351,650 of 3 per cent. bonds, out of a total of \$127,470,200 of the same bonds outstanding on that date. All of these bonds were called for redemption before July 1, 1887, at an average rate of between nine and ten millions of dollars per month. As they were withdrawn by the banks holding them for redemption under the various calls, it became necessary to replace them to some extent at least with 4's and 4½'s, which, on August 12, 1886, stood at 126½, and afterwards rose in May, 1887, to 129½. During the same period the premium on 4½ per cent. bonds varied from 109 to 112½. These high rates of premium appear to have rendered the banks holding the 3's called or about to be called, loath to withdraw them for redemption. The Comptroller refers to the controversy which took place as to the

legality of holding the called 3 per cent. bonds, on which interest had ceased, as basis of circulation. The Attorney-General decided that such bonds could not be held as security, and that it would be necessary to replace them, where essential to keep up the minimum of bonds required by law, with 4's and 4½'s. Serious consequences in the money market were avoided by the care exercised in dealing with the question. The Comptroller says that "if at any time within six months after August 12, 1886, the true position of the banks had been known, or if peremptory measures had been taken to effect the immediate replacement of called bonds, a speculation in the 4 and 4½ per cent. bonds would no doubt have been precipitated. If by accident or inadvertency the magnitude of the necessary replacement had got out there is little doubt that the banks would have been cornered for available bonds." He further says "that it is of grave importance to Congress to observe the perilous contingencies involved in the existence of the present relations between the public debt and the National bank circulation, and remarks that it is neither wise nor prudent to maintain a condition of things which makes the possession of financial information accessible even to the clerks of the department and an incentive or temptation for speculating in public securities."

Comptroller Trenholm is certainly deserving of much credit for the interest he took in preserving the financial equilibrium of the country during the unusual ordeal of the past year. We are unwilling to believe that, as is claimed in some quarters, he would do anything inimical to the National banking system, but, on the contrary, rather use the great power of his office to strengthen and perpetuate that system.

THE REPORT OF THE Comptroller of the Currency, is one of immense importance to the banks and bankers of the country; not only to the National banks but to all who have capital invested in the business of banking. Representing the policy of those who administer the affairs of the Government, it is more than a mere expression of opinion, coming, as it does, at a time when it is apparent to all that the National system of banking as a system for furnishing circulation to the country is in rapid decadence, and must disappear unless measures are taken which favor its continued existence. The exit of National banks from the field they have occupied so long, has perhaps as great a meaning for outside banking capital as for that invested in the National banks themselves. Those who suppose that this country is going to do without a bank note circulation in some form will find themselves mistaken. When the National banks disappear the State banks will certainly have their day, and no governmental circulation can hold its own against the cheaper money which will be issued by State banks. The greatest enemy of the National system is the feeling that it monopolizes, though at present it cannot use with effect a privilege that could profitably be used by banks under State systems.

The National system acts the part of the dog in the manger. It cannot issue circulating notes itself to any adequate extent nor will it let any one else do so. The more the circulation feature of the National banks is weakened the more obnoxious it becomes. Therefore the Comptroller makes a mistake when he only recommends a course that will still more weaken the note issuing power of the system. As a temporary expedient the reduction of the United States bonds required to be deposited is well enough, but the criticisms which the Comptroller makes upon every plan offered for perpetuating the circulation feature of the system shows that he does not appreciate the serious fact that without circulation the National banks will cease to exist as such. The refunding plan, the plan of issuing on general assets, the safety fund plan, are all rejected. There is no exhaustive consideration of any of them but all are objected to with the skill of a special pleader. While thus recommending a course that, if followed, will surely sap the strength of the system, the Comptroller further recommends the enactment of additional restrictions. If all the amendments to the Act are adopted by Congress, the amended law will be to the present law as the laws of Draco were to those of Solon. His recommendation as to Directors would make the worthy men who accepted the office pass many sleepless nights. The report offers no additional privileges, but it seeks to impose more severe restrictions. It is plain that the recommendations of the Comptroller if carried out will finish the moribund National banking system and leave the field clear for a great revolution in banking methods. As a matter of profit this would not, perhaps, be unwelcome to the aggregate banking capital of the country.

THE RESTRICTIONS imposed by the National banking laws, and especially the enforcement of them, have been recently the mark of much carping criticism. It has practically been asserted that Government supervision is worse than useless, unless it absolutely prevents failures. In other words, the failure of one National bank demonstrates the worthlessness of the system of supervision, which is directed by the Comptroller's office. Not only is the worthlessness held to be demonstrated but also the danger to the public of a system which does not accomplish what it is supposed to. This style of argument, assumes that the average man, the unit of the great public, looks at things in a very stupid way; that the average American citizen has the same blind faith in the infallibility of his Government that the subjects of effete despotisms are supposed to have. In the United States the average man knows what can and what cannot be done in the way of government, and he is aware that laws, however well enforced against murder do not prevent murder, that laws against stealing do not prevent stealing and that laws against bank wrecking will not absolutely prevent its occurrence. But stupid as the average man may be—or, what is the same thing, the public may be assumed to be

by the select who presume to instruct it—he does not jump to the conclusion that all laws against murder are worse than useless because they cannot be perfectly enforced, and that the murderer's victim fell an easier victim because he trusted to the enforcement of the law. He does not clamor for the abrogation of all laws against stealing because thieves exist and escape penalty. Nor does he blame the law as having lulled to sleep the victims of robbing. He does not think with the wise-acres we refer to that laws providing for the supervision of banks are worse than useless because sometimes their most careful enforcement does not prevent a failure or an embezzlement, nor does he believe nor any one else that depositors more frequently experience losses on account of these restrictions.

It might be said that there is no place where restrictions are enforced with such painstaking care as in State prisons, and every one knows that prisoners occasionally make their escape. Moreover though detectives, inspectors, watchmen, policemen and the Courts are constantly on the look out to send criminals to the Penitentiary there are many still at large who ought to be there. While therefore government supervision of banks will not prevent exceptional failures, it has proved to be of great value to the public and to the banks themselves.

THE RECOMMENDATION of the Comptroller that the 5 per cent. redemption fund be no longer permitted to count as a reserve on deposits, is rather a reflection on the interpretation put upon the laws by the Treasurer's office, than a criticism of the law itself. Section 3 of the Act of June 20, 1877, which provides for the redemption fund, contemplates that such association shall keep a sum on deposit with the United States Treasurer, equal to 5 per cent. of its circulation, to be used for the redemption of such circulation, and also counted as a part of the lawful money reserve to be kept on the deposits of the association. Now it is absurd to suppose that Congress did not know what it was about when it imposed this double duty on the 5 per cent. redemption fund. It did not contemplate that the 5 per cent. fund in the case of any bank would ever be permitted to be reduced by any greater sum than \$500, because the same section further provides that when the redemptions for any association shall amount to \$500, such association shall reimburse the Treasury. It was not supposed that the Treasury would go on and redeem any more notes until the five hundred dollars were reimbursed. If this course were followed, the 5 per cent. fund would practically be always intact and each association would as the law contemplates "at all times keep and have on deposit in the Treasury of the United States, a sum equal to 5 per centum of its circulation," available for reserve on deposits. But the Treasury with great latitude of construction often goes on and redeems for banks refusing to make good the five hundred dollar installment until the whole 5 per cent. fund is exhausted, and by this practice lays the law

open to the criticism of the Comptroller. Moreover in the event of the failure of a bank, the circulation being provided for by the proceeds of its bonds on deposit, the 5 per cent. fund usually becomes an asset available for the payment of deposits. Congress was right when it decided that the 5 per cent. redemption fund should count as reserve on deposits.

But we can readily see how, when National banks are permitted to organize on a deposit of bonds, the maximum of which will not exceed \$25,000, that the 5 per cent. redemption fund becomes an insignificant matter. The circulation on such an amount of bonds would be \$22,500, 5 per cent. of which would be \$1,125 only. In the case of a bank with the minimum capital of \$50,000, the bonds required would be \$5,000, the circulation \$4,500, and the redemption fund \$225 less than the \$500 which the Government would be required to redeem before it could ask the bank to reimburse it. In fact the whole redemption fund business is as insignificant and of as little importance as any change that has been effected in the movement of funds, by the law creating central reserve cities.

THE COMPTROLLER of the Currency says that the Deputy Comptroller should have a salary of \$3,500, and adds that "no less sum can be depended upon to secure or to permanently retain any one entirely qualified for the position." This is probably not meant as a reflection upon the present able deputy, or any of his predecessors who received \$2,800 only, but it seems to make no allowance for the patriotic feeling which induces many valuable men to hold public offices upon what seem to be inadequate salaries. The present efficient bank Examiner of New York, Mr. Valentine P. Snyder, was the predecessor, of the present incumbent Mr. Jesse D. Abrahams, and it is certain that the office did not afford Mr. Snyder sufficient attractions to prevent him from accepting the bank Examinership of New York city. There is no doubt but that the whole force of the Comptroller's office are very much underpaid considering the responsibility of the positions, the amount of work to be done and the Government surplus.

THE EXPENSES of the office of the Comptroller of the Currency for the fiscal year ending June 30, 1887, were \$144,155.07. Of this sum \$31,454 was for dies, plates and printing notes, \$97,653 for salaries paid by the Government, and \$15,048 for salaries paid by the banks, the total amount paid for salaries being \$112,700.17. The annual reports made to Congress are, says the Comptroller, "constantly becoming more voluminous, but more compact in their contents, and more exacting on those charged with their preparation." There is as the above quotation implies a growing complexity and voluminousness as shown by the report of 1887. The pamphlet edition with appendix makes a volume of 373 pages. Last year it contained 225 pages and

the year before 272 pages. The report is not only much larger but its arrangement grows more complex. For thirteen years or more, the reports of the office in question have shown a uniformity of arrangement very valuable to those who wished to trace the growth or decadence of certain banking items. This uniformity of arrangement enabled those accustomed to the reports to find at once what they wanted. The reports were not only distinguished for uniformity of arrangement, they were praised by experts for the clearness and fine grouping of the tables. One rule constantly followed was that every table should read down the page, so that it could be compared with the text without turning the book or straining the eyes. In the present report a wide latitude has been given to the arrangement of tables.

The salaries of the office proper have decreased from \$156,000 in 1875 to \$112,000 in 1887. In 1886 they were \$110,000 and previous to that about \$118,000 for some years. In 1886 they appear to have been reduced in answer to the cry that the office had been too expensively run, and now it is seen that they ought to be increased. But these are not the only salaries paid by the office. The salaries paid to examiners for the fiscal year 1887 were \$110,000 as against \$107,000 in 1886, \$107,000 in 1885, \$99,000 in 1884 and \$94,000 in 1883. The total salaries paid in 1887 were therefore \$222,000, in 1886 \$217,000, in 1885 \$225,000, in 1884 \$217,000, and in 1883 \$213,000.

IN THE LAST NUMBER of the JOURNAL certain objections made to the plan for the use of the surplus money of the Government in refunding 4's into bonds bearing 2½ per cent. interest, were criticised. Some of these objections arise from a misapprehension of the mathematical premises upon which that plan is based. The statement that it proposes to postpone the payment of the debt of the United States is a clear misunderstanding. This objection was first raised by Judge Ewing at the Bankers' Convention at Pittsburgh; it was reiterated in the *Bankers Magazine*, for December. Its original appearance, in an editorial in that magazine, may be excused on the ground of ignorance of the writer; but the reprinting of the editorial containing this assertion on slips for circulation among bankers, indicates a willful design to belittle and misrepresent the refunding plan.

The objection that at first sight appears most plausible is, that the Government may obtain a greater profit on the use of its money by purchasing bonds in the open market than by paying the difference between the 4's and the 2½'s, as proposed by the refunding plan. The reasoning is as follows: The Government, by purchasing a 4 per cent. bond on July 1, 1888, for \$125, prepays 100 principal and 76 successive quarterly payments of \$1 each, making in all a prepayment of \$176 by the present use of \$125. By the refunding plan, \$125 surplus enables \$546.81 in 4's to be exchanged for an equal amount of 2½'s. The amount prepaid consists of 76 successive quarterly payments of \$2.05

each, amounting in all to \$155.80. The difference in favor of the purchase of bonds appears to be \$20.20.

Assuming that on July 1, 1888, a \$100 United States 4 per cent. bond, having 19 years to run, can be purchased for \$125, ex-interest, the realized rate of interest to any investor is \$2.36 per cent., and at this rate the present value of the principal of the bond, viz., \$100, payable in 19 years, is \$63.19, and the present value of the 76 quarterly payments, of \$1 each, is \$61.10. The realized rate of Government bonds being, as indicated by the market price of 4's, \$2.36 per cent., a \$100 2½ per cent. United States bond having 19 years to run from July 1, 1888, would on that date be worth \$102.14. The difference, therefore, which the Government should pay, in exchanging a 2½ per cent. bond for a 4 per cent. bond, would be \$22.86. Whether the Government purchases a 4 per cent. for \$125 in cash or exchanges a 2½ per cent. bond for the 4, and pays \$22.86 in cash difference, the rate realized on the investment of the money is in each case \$2.36 per cent.

But still it is said that the Government prepays payments amounting to \$176 with \$125, a gain of \$51, and payments amounting to \$28.50 with \$22.86, a gain of \$5.64. The percentage of gain in the expenditure of \$125 is over 40 per cent., and in the expenditure of \$22.86 is only about 24 per cent. But that is overlooking the important fact that of the \$125 expended \$63.90 is paid for the principal of \$100 due in 19 years, and \$61.10 is paid for the 76 successive payments of \$1, one of which becomes due every quarter for 19 years; the average time of all these payments of interest being only 9½ years. Comparing the successive quarterly payments purchased under the one plan with the successive quarterly payments purchased under the other, it will be found that in the one case annuities amounting to \$76 are bought for \$61.10 at a gain of \$14.90, and in the other (the funding plan), annuities amounting to \$28.50 are bought for \$22.86, showing a gain of \$5.64. The percentage of gain in each case is precisely the same, viz., 24 per cent. on the money paid.

While a great many persons may be willing to sell a portion of the interest or annuity at its present value, on which they make a greater gain—because the future payments have a shorter average time to run, viz., 9½ years—there are fewer persons willing to sell at its present value, the principal, which has a longer time to run, viz., 19 years. The refunding plan is based on the theory that the holders of the 4's may be unwilling to part with the principal of their investment, but that they would gladly part with a portion of the interest in order to recoup at once the premium which they have paid for all they receive over 2½ per cent. Many will sell their short-time bonds when they would not dispose of those running for a long period, and the difference between the sale of the principal and the sale of a portion of the interest is precisely the same as between that of a short and long period bond.

HON. WILLIS S. PAINE,

SUPERINTENDENT OF THE BANKING DEPARTMENT OF THE STATE OF NEW YORK.*

The position of Bank Superintendent of the State of New York has more varied responsibility than any office of its kind in the United States. The Comptroller of the Currency has the supervision of banks of deposit and discount only, while the former has, in addition to these, savings institutions, trust, mortgage and safe deposit companies, loan, building and accumulating fund associations, the total resources of which aggregate over a thousand millions of dollars. Its present incumbent, who has held the office for a longer time than any of his predecessors, is the Hon. Willis S. Paine. A sketch of his life is as follows :

He was born in Rochester, N. Y., the 1st day of January, 1848. His father, Nicholas E. Paine, died in March, 1887; our readers will remember an obituary notice which appeared in the *JOURNAL*. At the time of his death he was the President of the Dakota Railroad Company, and was for many years a prominent member of the Bar in the city of Rochester, and in his early days District Attorney of Monroe County; subsequently he was Mayor and President of the Board of Education of that city. His brother, John Treat Paine, was for a considerable period one of the leaders of the Bar of Boston, Mass. The family of that name has long been prominent in New England, one of its members being Robert Treat Paine, a signer of the immortal Declaration of Independence. The mother of the subject of this sketch was Abby M. Sprague, and is a descendant of the ante-Colonial Governors, Bradford and Prince, of Massachusetts Bay. Mr. and Mrs. Nicholas E. Paine, who three years ago celebrated their golden wedding, raised to usefulness three children—a daughter, Mrs. Wallace Darrow, and two sons—Dr. Oakman S. Paine, a celebrated surgeon in the city of New York, and Willis S. Paine. The last named graduated from the Rochester Collegiate Institute as the valedictorian of his class. He thereupon entered the sophomore class at Williams College, but, finding the severe winter too rigorous, he returned to Rochester, where he entered the University in the same class, namely, that of 1868.

He was appointed one of the senior exhibitors who were selected solely on the basis of scholarship, and graduated with honor. Before leaving college, Mr. Paine became a law student in the office of the late Sanford E. Church, subsequently Chief Judge of the Court of Appeals. After graduation, Mr. Paine's father having in the meantime removed to New York, he became a student in the office of the late Charles A. Rapallo, one of the Judges of the same Court.

He began practice in the latter's office, having been admitted to the Bar in the spring of 1869. In the year 1874 the Legislature of the State of New York passed a law authorizing the Bank Superintendent to cause annual examinations to be made of the trust companies of the State. Three examiners, of which Mr. Paine was one, were appointed by such Superintendent. This examination was a thorough one, and resulted in the closing of three institutions in the city of New York, which owed depositors in the aggregate over six millions of

* A portrait of Mr. Paine appears in this number.

dollars, all of whom were subsequently paid in full. This result was highly commended by the press at the time. The examinations of the following year were also made by Mr. Paine. In the fall of 1876 the Bond Street Savings Bank of the city of New York, one of the largest savings institutions that had failed in the United States, was closed by an order of the Court. The Attorney General and the Bank Superintendent, knowing of Mr. Paine's success as a lawyer and bank examiner, united in recommending him to Judge Landon, who appointed him to fill the position of Receiver. Upon assuming the duties of the trust he began an investigation of the transactions of the bank from its beginning, and then decided to bring suits against the trustees for losses incurred for certain acts which, while not made with wrongful intent, were unauthorized by law. These suits were novel in their character, and were stoutly defended, but the result justified his theory, inasmuch as the trustees paid him in settlement the sum of one hundred and thirteen thousand five hundred dollars. At the time of the failure of the bank a meeting of the depositors was held, and a committee of their number was appointed to look after their interests. This committee recently met and passed a series of exceedingly laudatory resolutions referring to the manner in which the Receivership had been conducted, and had the same engrossed and presented to Mr. Paine. So far as known, this is the only instance of the kind in the history of these insolvent institutions—oftentimes quite the opposite feeling existing on the part of the creditors of such institutions toward the Receivers. Last November he brought the Receivership to a successful close, having paid to creditors 86½ per cent. In addition to this the preferred creditors have been paid in full. The amount received and disbursed was nearly thirteen hundred thousand dollars. No other Receivership of the twenty-three savings banks that failed in New York city and vicinity during 1878 and subsequent years paid so large a percentage—several paid less than 20 per cent. Upon his petition his accounts were examined by referees or by Attorney General deputies eight times, and each time the report presented to the Court was of an encomiastic character. In the order dated April 11, 1887, directing the payment of the final dividend the Court states "that the duties of this trust have been administered by the Receiver with rare diligence, fidelity and discretion," and in the order dated November 28d last, closing the Receivership, Mr. Paine received "the thanks of the Court for the faithful manner in which the duties of the trust have been discharged."

In 1880 the Legislature passed an Act providing for the appointment of Commissioners to make a compilation and revision of the laws of the State affecting banks and banking. William Dowd, the President of the Bank of North America, and Mr. Paine, having been appointed by Governor Cornell under this Act, submitted a revision to the Legislature of 1883, which was then adopted. The Legislature of the following year gave a vote of thanks to Messrs. Paine and Dowd for their services. This was the first vote of thanks given by that body since the civil war. Both of the Commissioners served without the slightest pay, and expended less than one-half of the sum appropriated by the Legislature for their expenses: the balance now remains to their credit in the State Treasury. In April, 1883, Mr. Paine was nominated by Governor Cleveland as the Superintendent of the Banking Department of this State, and was immediately and unanimously confirmed by the

Senate, and has since prosecuted the work incident to this office with characteristic zeal and ability. During the last Presidential campaign ex-Congressman Dugro, one of the Democratic candidates for the Comptrolership of the Metropolis, was compelled to resign two weeks before the election in consequence of the death of his father, who had left a large estate which then needed his whole attention. The nomination for the vacancy thus created was accepted by Mr. Paine, and he was beaten by a smaller majority than any of the defeated candidates upon the same ticket with him, receiving seventy-six thousand nine hundred and ninety-one votes. Mr. Paine is the author of a book known as "Paine's Banking Laws," a volume of nearly 800 pages, which is the standard work in New York financial institutions of every character. It has been commended by the press in high terms, especially the action of the author in doing the work without the smallest pecuniary compensation, directly or indirectly. The propriety of this action, in view of the fact that he is at the head of the banking department of the State, while manifest, indicates, nevertheless, a delicacy not always found in public officials. The *New York Daily Times*, in reviewing the book, says that "it covers the ground so completely as to be a library of reference. Everything bearing on the subjects treated, however remotely, is incorporated, and the banker needs no other work of reference to acquaint himself with the requirements, the obligations, and the legal limitations of his business. The historical portion of the work is well worthy of study, showing, as it does, the reasons drawn from experience for the enactments which are in force with regard to the conduct of banking and other moneyed institutions. In making this compilation of the laws, and in explaining the causes that procured their enactment, Mr. Paine has subserved a good purpose. His work has been carefully and conscientiously done, and it cannot but be of great service."

Manhattan College, at its annual commencement, held a year ago last June at the Academy of Music, New York, conferred the degree of Doctor of Laws upon Mr. Paine. President Cleveland tendered him the position of Sub-Treasurer in the city of New York upon the recent expiration of Mr. Thomas C. Acton's term. This officer is the custodian of over one hundred and eighty millions of dollars, and the action of the President may be regarded as an unusually high compliment. The post was declined by Mr. Paine because of its confinement.

We have commended from time to time in the *JOURNAL* his efforts to conserve the interests of the institutions under his charge during his term of office. The elaborately drafted Act adopted by the last Legislature providing for the incorporation and regulating of trust companies is wholly his work. He is a frequent contributor to legal and financial magazines, and his articles are notable for their lucidity and scholarship, and in showing, as they do, a comprehensive grasp of the subject discussed. Mr. Paine is a bachelor, and while not a "club man," is almost necessarily a member of several of such organizations. He was an early member of the Bar Association of the city of New York, and has served upon some of its most prominent committees. He was largely instrumental in having the last Legislature, in connection with the transfers of titles to real estate, adopt the "block system," which took effect January 1, 1887. He is also a member of the Tuxedo, Commonwealth, Manhattan and Theta Delta Chi Clubs of New York and the Fort Orange Club of Albany.

REPORT OF THE SECRETARY OF THE TREASURY.

The ordinary revenues of the Government for the fiscal year ending June 30, 1887, were \$371,408,377, of which \$217,286,898 was derived from customs, and \$118,823,391 from internal revenue, and the balance from other sources, of which \$8,929,252 was from profits on coinage, etc., and \$2,385,851 from the tax on National banks. The expenses of the Government for the same year were \$315,835,428, of which \$47,741,577 was for interest on the public debt and \$47,908,248 for the requirements of the sinking fund, leaving a surplus of \$55,567,849 for the year. This surplus, with \$24,455,720 drawn from the cash balance of the Treasury, making in all \$80,023,570, was applied to the redemption of loans of the Government, \$79,864,100 being applied to the redemption of the 8 per cent. bonds. The estimated revenues for the fiscal year ending June 30, 1888, are \$388,000,000, of which it is estimated that \$228,000,000 will be derived from customs and \$120,000,000 from internal revenue and \$2,000,000 from the tax on National banks. The expenditures for the coming fiscal year are estimated at \$316,817,785, leaving an estimated surplus of \$66,182,214. But in the expenditures of the Government are included \$46,817,785, the estimated amount required to carry out the provisions of the sinking fund law, making a total which may be applied to the payment of the public debt of about one hundred and thirteen millions of dollars. But the requirements of the sinking fund for the fiscal year ending June 30, 1888, have already been almost wholly provided for by using the surplus funds of the Government in the purchase of four and four-and-a-half per cent. bonds, leaving no way in which the Secretary can, under present law, apply the surplus of \$118,000,000.

It appears from the Secretary's report that there has been surplus revenue for the last twenty-two years, the least amount being \$2,844,882 in 1874 and the greatest \$145,548,810 in 1882. In 1883 taxation was somewhat reduced and the revenues at first fell off, but since, they appear to have been gradually increasing, and the estimated surplus for the coming year will be as before stated. The Secretary remarks that this surplus revenue comes into the Treasury in the form of gold coin, silver coin, gold certificates and silver certificates and United States notes, and suggests three expedients by which the difficulties to be expected from this locking up of the circulating mediums may be averted. First, by the purchase of the interest-bearing debt; second, by larger expenditures by the Government for other purposes than the purchase of bonds to such extent that each year they shall equal the receipts; third, the reduction of the revenue from taxation to the amount actually required to meet necessary expenses.

As to the purchase of bonds the Secretary says that it has the merit that interest immediately ceases upon the bonds purchased; but the Secretary contends that the taking of the money from the people by taxation works an injustice, because the people could use the money if left with them to better purpose in their business than the Government can use it in the purchase of bonds.

He does not recommend any change in the requirements of the present sinking fund law. He admits that these laws can only be carried out at heavy cost, but nevertheless thinks that the country should each year continue to devote the sum required to the extinguishment of so much of the interest-bearing debt as may be purchased therewith. Precedents are cited showing that the Government has paid premium but three times in the purchase of bonds under the sinking fund law, once in 1880, when it paid a premium in gold of \$2,795,820; in 1881, when it paid \$1,061,248, and again in the present fiscal year, when it paid a premium of \$2,852,015.

Mr. Fairchild thinks that the deposit of public moneys with the National bank depositories is a very limited resource for keeping the circulating medium available for business purposes, and that it ought not to be used except under exceptional circumstances, such as have existed of late, and because there is no better thing to do.

The Secretary does not believe that the second expedient, of increasing the expenditures of the Government, will be adopted. He says that every dollar taken from the man who has it employed in business which the natural wants of the community call for and carried to the Treasury, even if at once paid out again to satisfy obligations created by law, in excess of the healthy needs of the Government, is a dollar used to misemploy labor and to impoverish the people, and as a sure consequence to impose in the end the burden of excessive taxation upon the labor of the country. He uses, as an illustration, the effect of drafting ten men out of a community of one hundred men to construct fortifications and public buildings, and contends that the other ninety must expend a portion of the fruits of their labor in the support of the other ten.

Both bond-buying in excess of the sinking fund provisions and increase of expenditures are rejected, and the Secretary concludes that the only way to avoid the evil effects of a surplus revenue is by a contraction of the sources from which that revenue is derived.

The plan of compelling a decrease of imports by largely increasing the rate of duties and customs is considered, but it is not recommended, because it would largely increase the rates which the people would have to pay for similar commodities produced in this country.

The plan of reducing or abolishing internal revenue taxation is next taken up, and the Secretary cites, as the main argument in favor of such reduction, the fact that in a small part of the Southern States the internal tax on liquors and tobacco is thought to be oppressive, and proceeds to argue that the chief cause of the prejudice against this tax in the South seems to be that, as there was no such tax before the war for the Union, it is looked upon by the South as an invidious reminder of that war.

The Secretary finally arrives at the conclusion that a reduction of the customs duties is the only real remedy for the present condition of affairs. It is further suggested that, as the surplus by the 30th day of January, 1888, will most probably amount to about one hundred and forty millions, one use which can be made of this money is to diminish taxation to such an extent that the annual revenues will be less—for some years to come—than the expenditures, and the accumulated surplus can thus be used for ordinary purposes.

In reference to the currency of the country he shows there has been a net

increase in gold, silver and paper of \$116,947,704 between July 1, 1886, and November 1, 1887, and says:

"The circulation of coin and paper in denominations of twenty dollars and less from July 1, 1886, to November 1, 1887, shows a net increase of about \$109,000,000: thus nearly the whole of the increased circulation was in the form of small money. The increase in the total circulation was caused by ordinary payments made in pursuance of law, by the purchase of bonds and by increasing deposits in National bank depositories. The increase in the circulation of small money was because the Government met the people's request for it so far as it could. But for the lack of a sufficient appropriation for the Bureau of Engraving and Printing the circulation of small currency, particularly in the form of silver certificates, would have been much greater. It has been impossible to more rapidly supply the demand for that kind of currency.

After deducting the gold and silver coin, held for the gold and silver certificates in circulation, it is found that the Government owned \$80,827,898 less gold coin and \$39,675,766 less standard silver dollars on November 1, 1887, than it did on July 1, 1886; during the intervening period \$43,886,871 standard silver dollars were coined.

As there is still so much coined gold owned by the Government (\$82,657,330, November 1, 1887,) it has been thought best to allow the gold to accumulate in the form of bullion, until there is need of gold coin.

The statements of the Treasurer show that after deducting the demand and trust liabilities of the Government and the amount of money on deposit in National bank depositories, the net money in the Treasury vaults was \$92,496,704.56 on June 30, 1886; on October 31, 1887, it was \$49,459,861.77.

One of the most interesting facts shown by the foregoing statements is the decrease in the number of standard silver dollars owned by the Government and the increased use of the same money by the people in the form of silver certificates. The five, two and one dollar certificates furnish a convenient currency, and it is evident that the future use of the silver dollar will be almost exclusively in that form.

It is waste to coin and store any more silver dollars at present. There is no function which those that are coined after this time will probably ever perform, except to lie in Government vaults and be a basis upon which silver certificates can be issued. It is seldom that any one wishes to have his silver certificates exchanged for the silver dollar itself, consequently a limited number of coined dollars will perform the work of redeeming certificates. The \$214,000,000 which are now in the Treasury will more than suffice to redeem, as they may be presented from time to time, the silver certificates that have already been issued or that can be issued against all the dollars which will be coined for years to come under the present law.

The law should be so amended as to authorize the Secretary of the Treasury to issue certificates against the coining value of the bullion bought and to coin only such number of dollars as he might deem expedient hereafter. This would not restrict in the least degree the use of the silver dollar as currency. The certificates would be equally secure whether representing coined dollars lying in vaults, or representing bullion also lying in vaults, and which could be coined into dollars. The bullion should be melted into the

form of very heavy bars, which could not be easily stolen or lost. In this form the silver could be easily and quickly moved, and counted.

More than a dozen persons were occupied for several weeks last summer, when the late Treasurer turned over the office to the present incumbent, in counting the coin which is in the vaults at Washington. Safety, economy, and convenience would be promoted if this recommendation were adopted.

It would be a neglect of duty did I not call the attention of the Congress to certain safeguards which ought to be thrown about the standard silver dollar to protect from possible loss the people among whom it and its representative, the certificate, is so universally distributed.

Provision should be made against a time when there may be more of that form of money than is required for the business of the country. The first symptom of this will be increasing ownership of silver by the Government; this increase will take place because the Government pays to the people that kind of currency which they wish to have and receives from them that kind which they wish to pay; consequently the Government will accumulate the form of money which the public least desires. If the Government held no funds save those needed for its daily expenses, it would perform no different function toward currency when it had once coined or printed it than does an individual who receives and pays out money, but the two great trust funds—that for the redemption of United States notes (\$100,000,000) and that for the redemption of National bank notes, at present more than \$100,000,000, and whatever surplus there may be from time to time—form, as it were, a reservoir which takes and holds that kind of currency which the people reject. Were it not for this great Government reservoir a redundancy of any form of currency would be shown either by its exportation to countries where it was needed or by its depreciation here. The silver dollar cannot be exported because the silver of which it is made is worth less than 75 cents, and that would be its value for exportation.

The Government has bought silver bullion and coined it into about \$280,000,000, of which it has put into circulation among our people about \$230,000,000, making an apparent profit thereby of over \$35,000,000. It has always kept those dollars and their certificates as valuable as they were when it paid them out by receiving them in payment of taxes; but sometimes it has been obliged to receive them in greater amounts than the people were willing to take them. This was notably the case in 1884, 1885 and 1886, when they so accumulated that at the end of July, 1886, there were \$98,959,880 of them in the Treasury. During those years these funds in the Treasury formed the reservoir which held the silver dollars that the people did not want, and thus prevented those which they did want and still held (\$146,000,000) from going to a discount; or, in other words, from becoming worth less to the people than they were when the Government originally paid them out of its Treasury. The foregoing tables show that during the sixteen months ended November 1, 1887, this department was able to pay out at par and keep in circulation \$10,464,905 of the coined silver dollars and \$72,597,782 of their representatives, the certificates, in addition to the amounts of each in circulation July 1, 1886. If the department had been able to print enough certificates, doubtless the whole of this increased use of silver would have been in the form of certificates, and that few, if any, coined dollars would have been paid out. On the

contrary, many of those out would have been returned, and certificates taken in their place.

There should always be in the Treasury enough silver besides that held against outstanding certificates to enable the Government at once to supply any demand for it on the part of the people; but all held in the Treasury in excess of that amount is absolutely useless for any purpose, and is in fact a menace to the silver which the people hold and also to the United States notes and National bank notes, to the whole circulating medium, except gold; therefore it would be the part of wisdom to prevent any accumulation of silver in the Treasury beyond a sufficient reserve needed to meet any demand which may be made for it. This can be done by fixing the amount of such reserve, and providing that when it is exceeded by—say \$5,000,000—the purchase of bullion shall cease until the amount held by the Government again equals such reserve. Another plan, and somewhat similar to that recommended by my predecessor in his last annual report, would be to provide that when the reserve was exceeded an amount of United States notes equal in value to such excess should be cancelled, if enough of them were in the Treasury; but if not, then the purchase of bullion to cease until the maximum reserve should be reached. This would create a vacuum in the circulating medium which would be filled by silver. The amount of United States notes would be gradually reduced until the whole were extinguished; silver dollars or silver certificates would take the place of United States notes as they were retired. This plan would make our currency more uniform and as secure as now.

Neither of these plans, if adopted, would diminish the actual or potential use of silver as currency by a dollar. In my judgment it would be promoted thereby.

The report shows that out of the gross receipts of the Government, amounting to \$371,403,277, \$127,947,704 was deposited with the National banks. The estimated receipts for the coming fiscal year, exclusive of customs receipts, will be \$150,000,000, all of which can legally be deposited with the National bank depositories.

The first of the series of articles on "Bank Book-keeping," announced to be commenced in this number of the JOURNAL has been unavoidably crowded out by the unusual length of the reports of the United States Treasurer and Comptroller of the Currency. The opening chapters will certainly appear in the February JOURNAL, and our readers may rest assured that the series will be continued without interruption thereafter.

The failure of the private bank of Greenway & Smith, of Warwick, England, owing to disastrous speculation, has recalled the failure of private bankers in that country during the last forty years. An exchange remarks that every one of these failures has been caused through undertaking hazardous and speculative business outside of the scope of legitimate banking. It insists that other private banking firms of England must be in exactly the same plight, and says: "Coutts, Child, Barclay, Smith, and others, have nothing to lose by publicity, and the registration of some of these rich firms, or their consolidation or amalgamation, means increased business, increased wealth and increased confidence."

**PLANS FOR THE PERPETUATION OF THE NATIONAL
BANKING SYSTEM.**

The Comptroller of the Currency has taken pains to collect and print the various plans which he has received from bankers and others for perpetuating the National banking system, and has arranged these various plans under five heads. They might as well be classed in two divisions: one, consisting of plans which are entirely impracticable, and evidently evolved by inexperienced men, and the other containing the propositions that are more or less practical and feasible. The latter class of plans may be again divided into two classes—the new and original ones and those which, in some form or other, have heretofore been presented to the public. All the feasible propositions are far from new. Even about the plans which are presented by certain individuals there is an unusual lack of originality. There are none of them that we do not recognize as an old acquaintance.

In the division adopted by the report, the first class of schemes consists of those which propose to eliminate from the National banking laws the note-issuing function of the banks by repealing the law requiring the National banks to deposit bonds to take out circulation unless they see fit to do so. These plans are ascribed to various authors, but the real author, like the real inventor of gunpowder or of printing, is shrouded in the mists of antiquity—fossils belonging to this genus have been found in the Paleozoic age of the National banking system. One of the plans under this head, emanating from an alleged California journalist, is particularly amusing. He proposes to issue “promises to pay of the Nation a legal-tender for all purposes whatever. No National banks.” The legal-tenders are to be maintained at par by a scheme which, for its operation, necessitates that they go below par, for when they go below par by 1 per cent., one-tenth of the issue is to be redeemed in gold and silver. Of course, as long as there is gold and silver to redeem them they will not go below par, and if they do go below par it will be from scarcity of coin. How then can the Government bring the notes to par by a process that it does not have the coin to carry out when the notes are below par? It is one of those plans which will work beautifully when there is no occasion for it, and be utterly useless when it is wanted.

The plans of the second class are all modifications of one which has been before Congress for four years or more. The McPherson bill, which proposed to allow the issue of circulation to the par value of the bonds deposited is the prototype of them all. This is a good working plan, and if it had been adopted by Congress would have given great relief to the banks. The only thing new about it, however, in the present connection, is that the Comptroller ascribes it to a number of persons who never invented it. In fact, the plan of issuing notes to the par value of the bonds deposited is one that antedates the National banking system itself. We must look for it among the chaotic State systems that were superseded by the National Currency Act.

The plans of the third class are defined by the Comptroller to consist of those which propose to provide by a new issue of bonds for the continuance

of the present or some modified system of National bank circulation, based on United States bonds. One suggestion is to issue a "new long loan at $2\frac{1}{2}$ per cent. interest at par for United States notes, and the retiring of the $4\frac{1}{2}$ s on the best terms, and some of the 4s if necessary." This would be a grand scheme! To issue $2\frac{1}{2}$ s, worth certainly 2 or 3 per cent. premium, for par in United States notes, and United States notes redeemed at a premium! Would it not be fine for those who hold them! It would be cheaper to redeem them in gold.

Another suggestion is to issue United States bonds at 1 or $1\frac{1}{2}$ per cent. interest, having fifty or one hundred years to run, to be exchanged for 4s.

Others suggest the issue of \$600,000,000 of 2 per cent. bonds having forty years to run, or, if forty years be not long enough, then fifty or one hundred years—these bonds to be issued only in exchange for 4s held by the banks. Circulation is to be issued to the par value of the bonds free of tax.

A further suggestion is the issue of a bankers' bond, bearing $2\frac{1}{2}$ per cent. interest, to run perpetually at the option of the holder. The assertion is made that the price of such a bond would not fluctuate.

And again, it is proposed to cease paying the bonded debt when it reaches \$1,200,000,000. As the debt has already been reduced below this point, this plan is *passé*.

Another plan is the issue of 2 per cent. bonds to purchase the telegraph lines of the country and make the bonds the basis of circulation.

This class of propositions is most noticeable for its omission of the refunding plan recently proposed at the Bankers' Convention at Pittsburgh, and which properly belongs to it, and also for the omission of the plan of Mr. Conrad N. Jordan, at one time Treasurer of the United States. All these propose the issue of new bonds, but all, except the refunding plan, propose either an enlargement of the debt or the extension of its payment beyond the time when it is likely to be paid under present conditions. Most of them are manifestly favorable to the banks at the expense of the Government, while the refunding plan gives to both government and banks the aid which they need. The omission of the only practicable plan of this class is clearly an oversight of the Comptroller.

The fourth class of plans contains those which propose to substitute other security for United States bonds as a basis for National bank security—gold and silver dollars, gold and silver bullion, school bonds, municipal bonds, county bonds, State bonds, are all recommended as substitutes. At the Bankers' Convention at Louisville in 1883, it was proposed, in rather a jocular way, that the bonds of foreign governments might be used for the same purpose. This is about the only omission of any of the numerous plans of this class, which have been afloat for so many years, that can be detected.

The substitution of any form of indebtedness other than that of the United States as security for National bank circulation would be a serious step, which would altogether change the relation of the Government to the National banks. The United States now guarantees the payment of the National bank notes, but the guaranty is given because the United States holds its own bonds as security, and however these bonds may be depreciated in value to the public, they can never be worth less than 100% to the United States as a cancellation of its own debt. If school or municipal or State bonds were substituted the guaranty of the Government must be withdrawn from the notes. Plans for the deposit of

gold coin are impracticable, as the bank can use coin as well as any notes it might obtain in exchange, and there is, besides, the extra expense of redemption.

The expense of issuing a paper based on silver dollars would be heavy to the banks, and there could be no profit. Gold bullion would be as profitless a security as gold coin. Silver bullion might be profitable if the banks could buy it at its market value and issue a paper dollar for every 412.5 grains of it—in the same way as the silver dollar is profitable to the Government on account of seigniorage.

So far the propositions considered are those which either do away with the note-issuing power of the banks or seek to modify the security required so as to make it more favorable to the banks. One class gives up circulation altogether; the other seeks to retain it, but fully secured as heretofore.

The fifth and last class of plans contains those which, while retaining and even extending the note-issuing function of the National banks, propose to take a bold step and reduce the specific security which is to protect it. These plans are all of them in principle similar to that of Mr. John Thompson, of the Chase National Bank, of New York city, which was published in the December number of the *JOURNAL*, and contemplate the issue of notes to a greater or less extent without the deposit of bonds as security. These notes are to be a first lien on the general assets of the bank, and their payment in the case of failure of the bank is to be provided for out of a fund to be accumulated from the tax on circulation. The profits on lost circulation are also to be added to this fund.

While there is little probability that any such plan as this will ever be adopted by the National Government, it does no harm to discuss it. No doubt if adopted it would be a perfectly practicable and safe way of securing a sound bank circulation for the country. It would not be so safe, beyond a peradventure of a doubt, as the present National bank notes, but it would be as safe a bank circulation as that of any other civilized country we know of. In seeking an absolutely safe bank note, other advantages have to be given up. But a plan of the kind considered would probably give a volume varying appropriately with the real necessities of business, with a minimum of danger from loss.

The Comptroller, in considering this plan, brings against it all the arguments ever urged against the unguarded issues of State bank circulation. With proper guards as to payment of capital, the circulation itself printed and issued by the Government, and a safety fund, the notes being issued in due proportion to capital, there will be a very different state of things than ever existed under State systems of banking. Those who pay-in genuine capital will not let the notes issued go out of the bank unless their value comes in, in cash, good bills receivable or other good assets.

The Comptroller's own favorite plan is to reduce the bonds to a minimum, and he seems to claim that the more the National bank circulation is reduced the more elastic it becomes. His proposition may be stated as follows: The less aggregate bonds the National banks are required by law to hold the less price the bonds will command in the market; therefore, assuming that banks on a certain day hold minimum bonds and circulation and a demand for circulation occurs, they can buy bonds cheaper, and therefore will be apt to increase their circulation. If it should work in this way it would be elasticity

on a very small scale, and, compared with the elasticity the bank note circulation of a country should have, as the elasticity of a cane-seat chair compares with that of a cushioned seat, or the spring of a wheelbarrow to that of a palace-car. But the Comptroller argues one way in one place and another in another. He deprecates any connection whatever between the National banking system and the public debt, when he recounts with what anxiety and difficulty he avoided a panic in the money market when the 8 per cent. bonds were redeemed; and, writing of the plans for exchanging low-rate bonds for fours, he argues that the latter are so much in demand by investors other than National banks that they will not be given up. But, when enthusiastically supporting the minimum bond theory, he forgets the danger to the money market which would ensue from the temptation to National banks to buy when bonds were cheap and sell when dear, and also his other argument, that the holders of fours would not probably sell at all. The elasticity of his minimum theory would probably fail from the impossibility of getting bonds, but if it did not fail for this reason it would constantly endanger the money market by the speculation in bonds it would encourage. It is too much risk to take for so little elasticity.

THE PRESIDENT AND REFUNDING.

The President's message contains the following paragraph on this subject: "It has been suggested that the present bonded debt might be refunded at a less rate of interest, and the difference between the old and new security paid in cash, thus finding use for the surplus in the Treasury. The success of this plan it is apparent must depend upon the volition of the holders of the present bonds; and it is not entirely certain that the inducement which must be offered them would result in more financial benefit to the Government than the purchase of bonds, while the latter proposition would reduce the principal of the debt by actual payment instead of extending it."

In regard to the objection that the inducements which must be offered to bond-holders would render refunding of less financial benefit to the Government than the purchase of bonds at the market price, the *New York Evening Post* says: "The refunding plan goes on the supposition that the holders of Government bonds having twenty years to run are a greedy lot, that they do not want any change in existing arrangements, but that if there is to be a change they see the dilemma of the Government perfectly and intend to make all they can out of it." This is just it, admitting for the sake of argument that the purchase plan would be more profitable to the Government than the refunding plan, the objection to it is that no large quantity can be purchased. The partial success of the bond purchases last fall was due to the fact that the floating bonds coming into the market for more than a year had been gathered up by speculators with the hope of making the Government pay any price the speculators chose to ask. If it indicates anything it indicates that from fourteen to twenty millions of bonds would come into the market and could be annually purchased and this is not the sum to absorb the surplus. But the profit to the Government on refunding would be as large as on purchasing if the rate realized on a possible purchase be made the rate at which the surplus is to be used in paying the difference between the fours and the low-rate bonds exchanged for them.

BILLS IN CONGRESS AFFECTING BANK CIRCULATION.

Senator Farwell has introduced a bill providing that National banks may deposit as security for circulation any State or municipal bonds or any first mortgage railroad bonds upon which interest has heretofore been promptly paid, and whose market or cash value is an equivalent of their par value, bearing interest at 4 per cent. That is to say, a bond bearing 7 per cent. interest must be so much above par in the market as to make the rate realized not less than 4 per cent. State and municipal bonds are not, however, to be received by the Treasurer at more than their 75 per cent. of par value, and first mortgage railroad bonds at not more than their market value. The total amount of railroad bonds received by the Treasurer is not to exceed \$500,000,000. The bonds received must be approved by the Comptroller of the Currency and the Secretary of the Treasury. The notes are to be issued in the same proportion on these bonds as now on United States bonds, but must specify by what kind of bonds they are secured. The objection to this form of security is that the Government of the United States can hardly be expected to guarantee notes secured by better than its own indebtedness.

Senator Aldrich has introduced a bill authorizing the Secretary of the Treasury to apply the surplus money in the Treasury to the purchase of outstanding bonds, provided that the bonds so purchased shall not be held to constitute a part of the sinking fund, but shall be cancelled and destroyed. The bill also authorizes the Secretary of the Treasury to receive 4 per cent. bonds and to issue in exchange an equal amount of 2 per cent. bonds, maturing at the same time as the 4s. The 2 per cents are not to be called so long as bonds bearing a higher rate of interest are outstanding and uncalled, and the 2 per cents are to be called in the inverse order of their issue. The Secretary of the Treasury is authorized to pay out to the holders of the 4 per cent. bonds who accept the exchange, the aggregate present value of the interest surrendered, such present value to be computed at 2 per cent., compounded quarterly. On the 2 per cent. bonds, banks depositing the same shall receive circulation to their par value.

Assuming that this bill becomes a law so that exchanges can be made on July 1, 1888, the following computation indicates what will be the practical operation of the bill and the profit to be derived from it by the banks and the Government, assuming that 4 per cent. bonds are worth 125 on July 1, 1888: On this date the 4s will have just nineteen years to run to maturity, and the present value of the two dollars of interest surrendered by any holder of a 4 per cent. \$100 bond who accepts a 2 per cent. bond in exchange, calculated at 2 per cent. reinvested quarterly, will be \$31.549. The 2 per cent. bond will therefore, as compared with the market value of 4s assumed above, have a market value of \$93.55. There appears to be, therefore, an oversight in the bill (unless it is assumed the use of the bond as a basis for circulation will bring it to par, which is hardly possible), inasmuch as it authorizes the issue of circulation to the extent of the par value of bonds the market value of which is below par. This may be corrected. The bill affords the Government

the opportunity of investing its surplus at 2 per cent., which is rather less than it would make by purchasing 4s at 125, by which it could make 2.86 per cent. Therefore the rate at which the amount of difference to be paid is to be calculated ought to be at least equal to the rate which the Government can realize by the purchase of 4s. The true method of calculation is to take the realized rate as shown by the market value of 4s at any time, and on this rate calculate the market value of the 2 per cent. bond having the same time to run, then pay the difference. Otherwise the objections made to the bill may be endless. Thus assuming a \$100 4 per cent. bond on July 1, 1888, to be worth 125, ex-interest, the realized rate to an investor is about 2.86 per cent. At the rate of 2.36 per cent. the present value of a 2 per cent. bond on July 1, 1888, having nineteen years to run, is about \$94.50. The difference between \$94.50 and 125 is \$30.5. The rate which the Government would realize by the payment of 80.5 in making an exchange would be 2.36 per cent. On the same basis a 2½ bond on July 1, 1888, would be worth \$102.188, the difference to be paid would be \$22.86. Although Mr. Aldrich's bill contains the true principle, its provisions are not rightly adjusted.

NATIONAL BANK DEPOSITORIES.

The attitude assumed by the Secretary of the Treasury toward the National Bank Depositories is rather a peculiar one. In one part of his Report, speaking of methods of rendering the surplus in the Treasury less dangerous to the country, he says: "I do not mention deposits in National bank depositories as a means of keeping the circulating medium available for business purposes, for that resource is at present very limited under present laws and ought not to be used except in exceptional circumstances and because there is no better thing to do." "Very limited under present laws"—under present laws all National banking associations designated for that purpose by the Secretary of the Treasury *shall* be depositories of public money except receipts for customs. Now as of the revenues of the last fiscal year, amounting in all to \$371,403,277, \$217,286,898 were receipts for customs, \$154,116,384 could have been deposited with the National banks. For the next fiscal year the receipts for customs are estimated at \$228,000,000, and those from other sources at \$155,000,000, all of which may, under present law, be deposited with the National bank depositories. But it throws so much responsibility on the Secretary of the Treasury. If he does deposit largely with the banks, political opponents raise the cry of "pet banks." If he does not use the banks as the law allows him, then he is accused of causing such disasters, real or imaginary, as may result in keeping the money in the Treasury vaults. Notwithstanding the Secretary's objection to the use of banks, the only suggestion he makes as a remedy implies a very wide employment of the designated depositories. He says, "in the meantime" (that is, until revenues are reduced) "a portion of this money" (viz., the present and accumulating surplus) "could lie in banks where it would be available for the business of the country; and, as upon withdrawal from them it would, at once be returned to the channels of business through government payments, no shock would be caused by such withdrawal." Why does not this reasoning just as well apply to the present condition of things as to an imaginary condition after revenues have been reduced? If the use of National bank depositories is bad at one time it must be the same at another. In fact, the

Secretary is speaking his honest sentiments in the last quotation, and in the first, where he deprecates the use of depositories, he is merely appealing to the anti-bank sentiment of the country.

The President, in his message, has the following in the same style: "The proposition to deposit the money held by the Government in banks throughout the country, for use by the people, is, it seems to me, exceedingly objectionable in principle, as establishing too close a relationship between the operations of the Government Treasury and the business of the country, and too extensive a commingling of their money, thus fostering an unnatural reliance in private business upon public funds. If this scheme should be adopted, it should only be done as a temporary expedient to meet an urgent necessity. Legislative and executive effort should generally be in the opposite direction, and should have a tendency to divorce, as much and as fast as can safely be done, the Treasury Department from private enterprise."

There are two reasons why the use of National bank depositories are deprecated; first, the fear of the anti-bank sentiment of the country, and, second, that if the depositories were used to the full extent the Secretary of the Treasury has it legally in his power to do, it would be a radical remedy for the surplus evil and take away the alleged imminent necessity of reducing the revenues. In 1891, just about four years from last September, the four and a-half per cent. loan is redeemable. Assuming that the surplus is deposited in the banks at the rate of sixty millions a year in the National banks by that date the Government will have a fund ready to draw on for the payment of the bonds. There can be no danger from the withdrawal, for, as the Secretary says, the money will "at once be returned to the channels of business through government payments." But, further, the banks if pressed could easily turn over the bonds deposited as security for the public moneys for cancellation. Sixty millions a year of government deposits with the banks would keep down the Treasury cash balance to a reasonable point. Jackson, during his second administration, ordered that the public moneys should be deposited with the State banks, and this action was in 1836 sanctioned by Congress. After the disastrous experience with the State banks, owing to the inadequacy of the security furnished by them, an independent Treasury system was adopted, as a protection to the Government from a poor currency. It was a great improvement on the system of keeping public moneys that had previously existed, and excellent in any case when expenses are equal to or exceed the revenues, but fails to meet a case anomalous in the history of governments, when the receipts exceed the expenditures. Our laws, however, are already equal to the emergency in that they provide for the use of the banks as depositories. Their judicious use in the storage of surplus revenues will obviate many evils.

Their employment does not in any way interfere with the use of the surplus either in the purchase of bonds or in refunding.

The Attorney-General of Minnesota has decided that constitutional requirements were not complied with in the passage of the law, at the last session of the Legislature, compelling private bankers to cease using titles giving the impression that they were incorporated banks. It is doubtful whether this decision will be sustained by the Courts.

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Functions of Directors.—What are the functions of a Board of Directors in a bank does not seem to be fully comprehended by critics generally. The duties of the clerical force of a bank, the duties of the President as the head of the institution, and of the Cashier as the executive officer, seem to be understood with tolerable clearness; but when it comes to the Board of Directors the idea prevailing as to their duties and responsibilities seems to be very much confused. The writers, especially newspaper writers, do not seem to have a clearly defined idea of exactly what position the Board of Directors occupy in the economy of the bank. In every well-ordered institution each department must have its own sphere of action strictly defined; where there are many wheels working, each must work on its own axis and move inside of its own lines. Not only must each member have his own sphere of action but all the members must work as one harmonious whole, otherwise, there would be clashing and confusion. The Board of Directors have a clearly defined part to perform in the management of a bank; but it is not the part either of the President or of the Cashier nor is it the part which properly belongs to the stockholders in their regular meetings. The Directors act in the first instance as a committee of the stockholders, and in this capacity, their first duty is to elect one of their own number as President of the bank. Having chosen this President, their functions as a committee of the stockholders are fulfilled.

They then properly become an advisory board to the President. It is plain that a bank, like every other well organized corporation, must have one authoritative head. This head is usually the President, and it may sometimes be the Board of Directors; but it can never be both, and most men of experience agree that the better plan is to place some one man at the head of affairs, and hold him responsible for the manner in which he performs his duties. But in this view of the case, and it is the one which usually prevails, the duties of the Board of Directors are to counsel, advise and sustain the President in the management of the bank. In case of a wide difference of opinion they may at times over-rule and control him, but if they exercise their power of control too frequently, the authority of the President becomes so much impaired that his usefulness is practically destroyed, and in such a case it is better for all concerned for the Directors to choose some one else who will please them better. It is not the business of the Board of Directors to manage the bank or to dictate to the President the course of action which he should pursue. To do so would be to reduce the President to the inferior position of a clerk whose only duty it is to carry out the orders of his superiors. Under such a system, the office of the President, for all practical purposes, might as well be left vacant. Nor is it necessary, as some newspaper writers seem to intimate, for the Board to constitute themselves a sort of detective agency to watch the President lest he run away with the whole concern. The suggestion of such a duty on the part of the Directors implies a lack of confidence in their chief, which if it really existed, would be a sufficient cause for asking his resignation. While it is desirable that bank Directors should be present at every meeting of their Board when they can possibly do so, yet absences are excusable under reasonable circumstances: A good deal also depends upon the reason for which a Director is placed in the Board. Very often the position is tendered to men of well

known ability in order to obtain their advice in regard to paper offered for discount. Such persons are not expected to give attention to the internal management of the bank, nor do they, as a rule, concern themselves about that part of the business. It is said that bank Directors hold themselves out to the world as being responsible for the management of the institution under their charge; and so they are when collectively considered; but then each has his own department to look after. One director, for example, is expected to look after the discounts in his own line of trade, another to act as President, *pro tem* during the absence of the President, another to influence large corporation accounts for the bank, and so on through the list. Whenever, through the dereliction of the President, the institution suffers a loss, or perhaps a total wreck, there is a loud cry raised to hold the Directors responsible, "personally responsible," as it is sometimes put, and great wonder is expressed that the Directors did not see before what everybody now sees so very plainly. Directors are assumed to be a sort of trustees for the public at large, and get very little credit while the bank goes right, and have to bear a great deal of blame when the bank goes wrong. Whereas, in fact, the Directors are very often the heaviest losers by any wrong-doing in office on the part of the President; losers not only in purse, but in reputation as well. The functions of the Board of Directors under ordinary circumstances are confined to acting as a Board of advice to the President; should they go beyond this function and assume the actual control of the institution they trench upon the prerogatives and duties of the Presidential office, and render the position to that extent useless and unnecessary.

The Bankrupt.—The proper method of dealing with the estate of a bankrupt has long been and still remains an unsettled question. Both in this country and in England numerous efforts have been made to regulate the subject by law but the constant clashing of interests between the creditor and the debtor class has led to a great uncertainty not only in the enactment of statutes but in their continued existence even after they have been enacted. When we consider the course of bankruptcy law from the earliest days of commerce, it will be perceived that there has been a gradual tendency to relax the stringency of its provisions and to substitute milder forms of punishment where punishment is thought necessary as in the case of fraud or other dishonesty. The double object of a good bankrupt law is to preserve as much of the estate as possible for the creditors, and at the same time to grant a release to the bankrupt in order that he may continue his business. It is to be hoped that we have fully outgrown the idea of the debtors' prison, and that this country will not witness a return to that barbarous and senseless practice; but there are some who would go still farther in the direction of leniency and urge that it is better not to have any bankruptcy law at all but that the creditor should depend wholly upon the faith and honor of those with whom he may be dealing. This view of the case would strike one at first as exceedingly novel, impracticable and even chimerical, but when one considers that by far the larger part of mercantile transactions are carried on upon precisely this basis the idea appears more plausible. The larger portion of the transactions on the Stock Exchange, for example, are carried on merely on the faith and honor of the parties to them. Many of the largest mercantile transactions that are daily occurring have no other guarantee for their performance than the good faith of those who undertake to carry them out. We hear indeed of suits for breaches of contract and proceedings to compel parties to fulfil their engagements; but the amount of transactions involved in this and in similar proceedings is very small compared with the magnitude of the dealings which are never sought to be enforced except on the general ground of honesty and fair play. The chief argument in favor of those who contend for no bankrupt law is that it will effectually cut off the impecunious and defaulting creditor, for men would cease to sell on credit to those whom they did not know to be perfectly trustworthy; and, as a consequence, the privilege of credits would be extended only to the deserving. There is no doubt but that many a man who, if let alone, could have successfully struggled through a period of adversity, has been utterly ruined by the proceedings of the Court of Bankruptcy, and

been so weighed down by judgments that he finds it impossible to embark again in mercantile pursuits; consequently it would be worth while to consider whether it would not be a better plan to allow the bankrupt to settle as best he can than to put the estate through the exacting trials of bankruptcy proceedings.

The Growth of Corporations.—It is laid down by the text writers that the privilege of forming a corporation is not a right inherent in the citizen, but it is a franchise conferred by the State, and while many of the original principles in regard to corporations still obtain, yet it cannot be doubted that the original expounders of the laws governing them failed to foresee the very important part which the corporation was to play in the social economy. Indeed the growth of corporations has been one of the marvels of the nineteenth century. Many of them have assumed vast proportions, involving outlays of immense sums of money and the management of numerous bodies of men. There is scarcely any interest, however small, which is not affected more or less directly by corporate principles; and up to a very recent day but little effort seems to have been made by legislatures or by Congress to restrain the growth of corporations, to keep them in check, or to prescribe proper restrictions in the exercise of their privileges. But the corporate spirit, not content with the form of an ordinary corporation, must needs extend itself to seek fresh fields and pastures new. Corporations which formerly embraced many distinct shareholders into one harmonious body, have themselves become mere units in larger aggregations, and we hear of syndicates and trusts as embracing the newest forms of corporate combinations. Precisely what a trust is the general public has not yet found out. Indeed, there are some writers on the subject who seem to be a little at loss in endeavoring to understand what a "trust" really is. Without entering into an elaborate description of the machinery by which an aggregate of corporations is thus brought into one body, it will be sufficient to say that their very presence in the community should be regarded, if not with distrust and suspicion, at least with care and attention. What brilliant financier first conceived the idea of the modern trust is not known, but certainly he deserves credit as one of the great inventors of the day. It seems almost paradoxical that a manufacturer being a member of a trust can make more money by letting his mills stand idle than he can by running them night and day, and that his former competitors who are now his partners, also gain by the same operation. Yet such is the case. The rumors of an iron trust seem to have a substantial foundation, and should it be brought to a successful conclusion it will represent undoubtedly the largest aggregation of private property interests in this country or indeed in Europe. The Courts themselves have been somewhat puzzled by this new form of corporate aggregation, and have sought, sometimes in vain, to apply the rules of corporation law to fit this new creation. A trust being essentially a monopoly is of course regarded with suspicion, not only by the courts of law, but by the common people generally, and therefore it is not unlikely that when the true nature and extent of these new-fangled trusts becomes known to the general community their growth will be restrained by legislative enactment.

Counterfeits.—The art of counterfeiting has been gradually dying out for some years past, and though able and expert counterfeiters are still at large, yet there is very little to be feared from their efforts. The only counterfeits that are really very dangerous to the general public are the old issues. Of course, respect for the banking community precludes the idea that any counterfeit could be dangerous to bank men generally; but for the sake of the more ignorant outside public every precaution should be taken to get these counterfeits destroyed as soon as possible, and perhaps one way to that end would be a general action on the part of the bank Tellers to forward to Washington for redemption the old National bank note issues as they come to the bank, and for the Department at Washington to destroy them. If this plan were pursued thoroughly the old issues would become a comparative rarity, and a person receiving a bank note issued prior to the reorganization under the Act of 1882 would scrutinize it much more carefully than is now done, and as a consequence, any counterfeits that might come along would be subjected to a severe inspection.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

PROMISSORY NOTE GIVEN FOR PATENT RIGHT—THE FACT THAT ASSIGNMENT OF PATENT RIGHT NOT TENDERED BY PAYEE AT THE TIME NOTE WAS DELIVERED IS NO DEFENCE—SUCH ASSIGNMENT NEED NOT BE GIVEN UNTIL NOTE IS PAID.

Garland sued Moore on a promissory note for \$100, dated April 8, 1885, due October 1st, next thereafter. The body of the note showed it was given "for value received for a patent right to the Shellnut Water-engine for Crawford County, No. 802,167, patented July 15, 1884." To this action Moore pleaded (1), total failure of consideration; (2), that there was no consideration, because there was no assignment of the patent right made to him by the payee at the time he gave the note. The plaintiff on the trial introduced the note in evidence and rested his case. The defendant was then introduced as a witness and testified that he bought this patent right for Crawford County, and that at the time he bought it there was no assignment made to him of this patent right for Crawford County by the assignee or anybody else, and that the payee of the note was only an agent of the Shellnut Water-engine Company, and that he could not make an assignment of this patent right, and he rested his case on that. The Court instructed the jury, there being no controversy as to the facts, to find a verdict for the plaintiff. Defendant appealed.

Held, We have no complaint to make as to the instructions of the Court. The evidence of the defendant was not sufficient to bar the plaintiff's right to recover on this note. There was no testimony on the part of the defendant that he was to have a transfer or an assignment of this patent right at the time he gave this note, nor did he show that he had ever tendered the money due on the note to the payee, and demanded this assignment. In the absence of such testimony, the presumption would be from this note that he was entitled to an assignment of this right for Crawford County when he paid the note. He was not entitled to it, according to his own evidence, at the time he signed the note. He might have defended the suit successfully by having tendered the money to the payee and demanded this assignment, and if the assignment was not delivered to him, that would be a good defence to the note after its maturity; and he could yet defend the case after judgment, by tendering the money and demanding the assignment; and upon the refusal to assign this right, a Court of Equity would not hesitate to enjoin the collection of the judgment. For these reasons we think the Court below was right, and judgment is affirmed.

Moore vs. Garland, Supreme Court of Georgia, April 21, 1887.

INDORSEMENT OF LONG TIME NOTES—DEATH OF INDORSER BEFORE MATURITY—INSOLVENCY OF MAKER—CAN INDORSER'S ESTATE BE HELD LIABLE THEREON BEFORE THE NOTES MATURE?—AN IMPORTANT QUESTION.

On January 1, 1881, C. R. Stevens sold a farm in Indiana to Samuel H. Kisner for an agreed consideration of \$8,000. The sum of \$500 was paid in cash, and for the remainder of the purchase money Kisner executed his notes to Stevens, payable in bank in 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10 years after date,

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

with interest payable annually at the rate of 8 per cent., and secured the payment of the same by mortgage on the premises purchased. The following is a copy of one of the notes in question and the indorsement, the notes being all alike, except in amount and time of payment, the remaining notes being for \$700 each :

"\$500.

"TERRE HAUTE, Ind., January 1, 1861.

"Five years after date I promise to pay to the order of Clemuel R. Stevens. at P. Shannon's Bank, Terre Haute, Ind., five hundred dollars, value received, without any relief from valuation and appraisement laws, with interest at eight per cent. per annum from date until paid, and attorney's fees. The drawers and indorsers severally waive presentment for payment, protest and notice of protest and non-payment of this note. Interest payable annually.

"SAMUEL H. KISNER."

[Indorsed:] "C. R. STEVENS."

The notes and indorsements were both made in the State of Indiana.

Afterwards, Stevens, the payee, purchased of Richard Dunnigan some land in Illinois, and in payment therefor transferred to Dunnigan, by indorsement in blank, six of the Kisner notes, the ones falling due January 1, 1886, and after. Stevens died, and after his death his administrators sold the remaining notes—the ones falling due January 1, 1882, 1883, 1884 and 1885—to John J. Brake. The notes maturing up to January 1, 1884, remaining unpaid, Brake commenced proceedings to foreclose the mortgage in the Circuit Court of Sullivan County, Indiana, making Kisner, the maker, and Dunnigan, the holder of the six last maturing notes, the only parties defendant. Dunnigan filed an answer, also a cross-complaint, claiming an interest in the mortgaged property. A judgment of foreclosure was rendered, finding that the mortgaged property was not susceptible of sale in parcels, and directing that it be sold as a whole, and the proceeds applied, first, to indebtedness due; second, to that not due, with a rebate, etc. The sale under this judgment resulted in only enough to satisfy the Brake notes, and pay the sum of \$500 on the notes held by Dunnigan. A personal judgment in the foreclosure suit was rendered against Kisner, and an execution issued thereon, returned "No property found."

Dunnigan then filed his claim against Stevens, as indorser on the notes, so indorsed by him to Dunnigan, although none of such notes had matured, for allowance against the estate of Stevens in the County Court of Clark County, Illinois, where the claim was disallowed. On appeal to the Circuit Court, there was judgment given against the administrators for \$560, the amount of interest due on the notes, and that Dunnigan pay the costs of the proceedings, the claim having been filed subsequent to the time appointed by the administrators for the presentation of claims against the estate. The judgment of the Circuit Court was affirmed by the Appellate Court for the Third District, and an appeal was then taken to the Supreme Court of Illinois to reverse the judgment of the Appellate Court.

Held, The Statute of Indiana, at the time these notes were executed, provided as follows: "Notes payable to order or bearer in a bank in this State shall be negotiable as inland bills of exchange, and the payees and indorsees thereof may recover as in case of such bills." It is held by the Supreme Court of Indiana that the provisions of the law merchant, in regard to the presentment for payment and notice of protest and of non-payment, may be waived by the terms of the contract, and such waiver extends to the indorsers.

Our statute, concerning the settlement of the estates of deceased persons, provides: "Any creditor whose debt or claim against the estate is not due may nevertheless present the same for allowance and settlement, and shall thereupon be considered as a creditor under this Act, and shall receive a dividend of such decedent's estate, after deducting a rebate of interest for what he shall receive on such debt, to be computed from the time of the allowance thereof to the time such debt would have become due according to the tenor and effect of the contract." (Sec. 67, c. 3, Rev. St.) And Section 70 declares that all debts and demands not exhibited to the Court within two years from the granting of

letters of administration, shall be forever barred, except as to the subsequently discovered assets.

Considerable stress has been laid in argument on the fact of the insolvency of the maker (Kisner), after having personal judgment against him and his estate exhausted. Under our statute, this would be important, as showing diligence to collect of the maker; but the notes and indorsements having been made in the State of Indiana, it is the law of that State, which is to govern in respect to the liability of the indorser. The notes being payable in bank in that State, the indorser's liability by the statute there is that which arises under the law-merchant. Under that law, the indorsement of a note amounts to a contract, on the part of the indorser, that if, when duly presented, the note is not paid by the maker, he (the indorser) will, upon due and reasonable notice given him of the dishonor, pay the same to the indorser or other holder. (Story, Prom. Notes, Sec. 185.) But here there is an express waiver in writing by the indorser of presentment of the notes for payment and of notice of their non-payment. This dispenses with the conditions precedent to the indorser's liability, and makes his obligation for the payment of the notes to be unconditional and absolute. On the maturity of the notes, the holder might immediately bring suit against the indorser without the performance of any act.

An indorser may, by the form of his indorsement, make himself absolutely and positively in all events liable for the payment of the notes, with or without due presentment or due notice. (Story, Prom. Notes, Sec. 461.) Where there is an agreement in writing to dispense with any demand upon the maker, or with notice of dishonor, the language will be construed to import an absolute dispensation with the ordinary conditions of an indorsement. (Id., Sec. 148.)

We consider that the indorser here, by the form of his indorsement, made himself absolutely and positively in all events liable for the payment of the notes; that his liability was as full as that of a surety or a guarantor; and the obligation of a surety or the guarantor of a promissory note is absolute to pay the note. (Hunt *vs.* Adams, 5 Mass., 359; Luqueer *vs.* Prosser, 1 Hill, 256; and see Story, Prom. Notes, Secs. 58, 59, and note.)

It is said the indorser's contract here was to pay the notes if, when they became due, the maker did not pay them, and that when the notes were filed the condition had not been met. We do not consider that there is any such distinct condition as thus named—that there is any other condition than what is comprised in the presentment for payment and notice of non-payment. The condition in this respect, as above stated by Story, is, "that if, when duly presented, it (the note) is not paid by the maker," etc. Dispensing with presentment carries with it all conditions as to paying or the maker's failure to pay on presentment. And even if the contract were, as thus supposed, to pay the notes if, when they became due, the maker did not pay them, we hardly see how, in respect of liability to the indorsee, that would vary essentially from an absolute promise to pay the notes or that the notes should be paid. Either form of promise would oblige the payment to be made at maturity, and would create an equal liability of the indorser for their payment at maturity.

It is again said the maker might pay the notes at maturity, and so the indorser not have them to pay; but this would not be inconsistent with the indorser's liability for the payment of the notes. The same might be said in respect of a surety or guarantor that the principal debtor might pay the debt on its coming due, yet that would not militate against the previous obligation of the surety or guarantor to pay the debt. So in the case of several makers of a promissory note, upon the death of one of them, the claim for the whole note, we take it, might be fixed and allowed against his estate, notwithstanding that, on the note becoming due, it might be paid by the surviving promisors, or each of them might pay his proportion of it, so that the decedent's estate would have none, or but a proportional part, of the debt to pay.

We think that the indorser here undertook that these notes should be paid at maturity; that there was a binding obligation on his part for their payment; that there was no condition or contingency to the obligation itself, but that it was absolute and positive, and constituted a claim against the estate of the indorser; that it was properly filed as such against the estate, and that the

rejection of it by the Court, except as to the amount actually due, was erroneous. The statute required it to be exhibited to the County Court within two years from the granting of letters of administration or else be forever barred, except as to subsequently discovered assets. The statute is that "any creditor whose debt or claim against the estate is not due may present the same for allowance and settlement." "A creditor is he who has a right to require the fulfillment of an obligation or contract." (Bouvier, Law Dict.) Dunnigan certainly occupied this position, and he held a claim against the estate not due, bringing him precisely within the statute.

Judgments of Appellate and Circuit Courts reversed, and cause remanded to Circuit Court of Edgar County. Sheldon, *J.*, delivered the majority opinion. Scholfield, *J.*, and Magruder, *J.*, dissented.

Scholfield, *J.* I am unable to concur in the reasoning in the foregoing opinion. The statute therein quoted, to the effect that "any creditor whose debt or claim against the estate is not yet due, may present the same for allowance and settlement" is in derogation of the common law, and, by a familiar rule of construction, is, therefore, to be construed strictly. So construing it, the words "debts or claims against the estate" must mean existing debts or claims, and not probable future debts or claims.

But it is conceded here that the contract of Stevens, under the statutes of Indiana, where the notes were made and indorsed, is governed by the law-merchant, and that, by that law, his liability (he having waived presentment and notice) is to pay the notes when due, if Kisner does not pay them then. Kisner is liable absolutely to pay the notes; but Stevens is only liable to pay them contingently upon Kisner not paying them when due. The difference between the character of the liability of Kisner and Stevens is plain and broad.

It may be said that the day of payment, as to Kisner, might, in the event of Kisner's death, be accelerated without seriously impairing any right, since it would only affect the question of interest which the statute equitably provided for; but accelerating the day of payment as to Stevens is a very different thing. He was entitled to the benefit of the chance of Kisner being able to pay the debt at any time until after maturity. Although Kisner may not now be able to pay, it does not follow that he may not be able to pay the notes when due. By this opinion, a liability to pay in the future upon condition is converted into a present absolute liability. A new contract is made for Stevens to which he never gave his assent. This, in my opinion, cannot be done.

Magruder, *J.* I concur in the views expressed by Mr. Justice Scholfield.

Dunnigan vs. Stevens, Admr., Supreme Court of Illinois, September 27, 1887.

PROMISSORY NOTE — INDORSEMENT ON CONDITION — NO LIABILITY WHERE CONDITION NOT FULFILLED.

Plaintiff sued defendants on a promissory note for \$1,035, payable to plaintiff in one year from its date, namely, September 13, 1884, signed by defendant Huntington, and, as alleged in the complaint, indorsed by defendants Brooks before its delivery for the purpose of giving it credit, thus making them joint makers with Huntington. The defendants Brooks, in their answer, alleged in effect that Huntington owed plaintiff a note for \$1,034, due September 12, 1884; that when that note became due they proposed to plaintiff that if he would extend the time of payment of the indebtedness for one year, and take Huntington's new note therefor payable in one year, they in consideration thereof, and on no other consideration, would indorse said new note, and at the same time they indorsed such a new note, the one in suit, and left it with Huntington to be delivered to plaintiff on the sole condition that he would accept said proposition. They further alleged that plaintiff refused to accept the offer and the note, and afterwards, on October 10, 1884, he and Huntington, without the knowledge and consent of the defendants Brooks, made a new and different agreement, by which plaintiff required Huntington to pay, and he did pay of the indebtedness \$310, and that sum was agreed to be indorsed, and was indorsed on the new note, which was thereupon delivered to plaintiff, this

transaction being without the knowledge or consent of Brooks. A demurrer to this answer was sustained, and defendants Brooks appealed.

Held, The transaction of October 10th was in effect an extension of the time of payment of a part only of the original indebtedness, and the taking of a new note for that part, instead of for the whole, as required by the condition upon which, so far as the defendants Brooks were concerned, the note was to be delivered. It could not take effect as a contract until delivered to plaintiff, and there was no right in Huntington, who made the delivery, to deliver it, so far as they were concerned, except on the condition imposed by the Brooks; and if he did deliver it in violation of that condition, and that was known to plaintiff, such delivery was ineffectual as to them. We have no right to speculate on whether the transaction of October 10th was better for them than that they proposed as the condition of their becoming liable. They may have had reasons, good and sufficient, in their minds, for the condition on which they agreed to become bound. As precedent to their becoming liable, they had a right to fix upon any condition they pleased. The note sued on being different in effect from the one authorized to be delivered, was never a valid note as to them. (Bank *vs.* Lane, 8 Ohio St., 405.)

Order reversed.

Wager *vs.* Huntington and others, Supreme Court of Minnesota, November 7, 1887.

BILL OF EXCHANGE — SIGNATURE BY DRAWER AS "TREASURER" — ADMISSIBILITY OF PAROL EVIDENCE BETWEEN ORIGINAL PARTIES TO SHOW UNDERSTANDING AS TO LIABILITY OF DRAWER.

Martin drew a bill of exchange on some firm in Boston, which was accepted by said firm. The bill of exchange was in the usual form except that Martin signed it as "Treasurer." Default in payment having been made, Smith, the payee, sued Martin on the bill of exchange. To the declaration Martin pleaded the general issue and several special pleas. The third and amended plea was that he signed the bill of exchange as Treasurer, and that no personal obligation attached to him, and that these facts were known to Smith. Smith filed general demurrers to the several pleas, which were sustained on the ground that the terms of a bill of exchange cannot be varied by parol testimony, and judgment was rendered against Martin for the amount of the bill and exchange and interest, from which he appealed.

Held, It was competent to prove the facts averred in appellant's third and amended plea by parol testimony, and they are sufficient to relieve him from personal liability. There are authorities to the contrary, but the doctrine established in this State sustains the validity of such pleas, at least as between the original parties to the transaction, and it is well supported by authority. (35 Miss., 549; 57 Miss., 18; 1 Pars., N. and B., 168; 1 Danl. Neg. Instr., Sec. 418; 49 Mo., 312; 32 Md., 327; 1 Wall., 234; 5 Wheat., 326; 11 N. Y., 200; 13 Amer. Dec., 550, and note.)

It is true that, generally, extrinsic testimony is not admissible to vary or explain negotiable instruments; but one exception to the rule is that, where nothing appears upon the face of the paper to suggest a doubt as to the party bound, or the character in which any of the signers acted in affixing his name, parol testimony may be admitted, as between the original parties, to show the true intent and meaning of the parties. (See cases, *supra*.) Enough appears on the face of the bill sued on in the case at bar to bring it within this exception.

Demurrer overruled and judgment reversed.

Martin *vs.* Smith, Supreme Court of Mississippi, October 24, 1887.

NEGOTIABLE INSTRUMENT—INDORSEMENT BY CORPORATION—AUTHORITY OF AGENT TO INDORSE PRESUMED.

The National Bank of Battle Creek brought suit on two promissory notes made by defendants, each payable to the order of "Nichols, Shepard & Co., an incorporated company," and each indorsed: "Protest waived. Nichols, Shepard & Co." On their being offered in evidence, with the indorsements,

by the plaintiff at the trial, defendants objected to the indorsements being received on the ground that no sufficient foundation was laid to authorize their admission in evidence. This objection being overruled, defendants carried the case to the Supreme Court, asserting the proposition that the indorsements were not admissible, except on proof that they were made by some officer or agent of the corporation having authority to make them.

Held, The point is covered by the provisions of Section 89, Chapter 78, Gen. Sts., 1878, to the effect that "the possession of the note or bill is *prima facie* evidence that the same was indorsed by the person by whom it purports to be indorsed." This applies as well to an indorsement by a corporation as by a natural person. These notes purport to be indorsed by the corporation, and plaintiff's possession of the notes establishes *prima facie* that the indorsements are its genuine indorsements—establishes *prima facie* the fact that they are in the genuine handwriting of some officer or person having authority to make them, for without that fact they were not made by the corporation. The case comes within the decision in *Bank vs. Loyhed*, 28 Minn., 396.

Order affirmed.

National Bank of Battle Creek vs. Mallan and another, Supreme Court of Minnesota, November 7, 1887.

CHECK ON BANK—HOLDER HAS NO RIGHT OF ACTION AGAINST BANK THEREON WHERE THE CHECK IS NOT ACCEPTED—THE PENNSYLVANIA RULE—SUBSTITUTION OF DRAWER AS PLAINTIFF IN SUCH AN ACTION.

This was an action by Daniel Shepp and J. B. Harsh, trading as Daniel Shepp & Co. against the First National Bank of Tamaqua, to recover the amount of a check on said bank given by John A. Shoemaker to plaintiffs. The check was for \$399.31, and was given by Shoemaker to plaintiffs on August 26, 1874, for an indebtedness to the latter. On the same day, Daniel Shepp presented the check, properly indorsed, to the bank for payment, which was refused. The check was then duly protested for non-payment, and plaintiffs brought this suit. On the trial, in 1885, plaintiffs proved the indebtedness of Shoemaker, the giving of the check, its presentation at the bank, the demand and refusal of payment, and the fact that, including the proceeds of a note of the Tamaqua Rolling Mill Co., discounted on the 18th of August, 1874, there was sufficient money to the credit of the drawer to pay the check and \$76.58 in addition. It appeared that on June 23, 1874, the bank had discounted for Shoemaker another note of the Rolling Mill Co. for \$462.61, which fell due on August 26, 1874, the date of the giving and presentment of the check in suit, which note was protested for non-payment; that the company failed the same day, and also that Shoemaker had, earlier in the day of August 26, 1874, presented to the bank a check, and that the same had been refused payment because the bank applied the proceeds of the note discounted August 18th to the payment of the note maturing on said August 26th.

Plaintiffs offered in evidence the check in suit, with the certificate of protest, which was admitted over the defendant's objection. Plaintiffs then moved to amend the record by adding the name of John A. Shoemaker to the use of D. Shepp & Co. as party plaintiff, and this amendment the Court also allowed over the defendant's objection. The President of the bank testified that when the note of August 18th was presented for discount, it was referred to the Committee on Discounts, who agreed to discount it, provided that its proceeds should go to the note due August 26th, and that Shoemaker agreed to this.

A verdict and judgment was rendered for plaintiffs for \$671.61, and defendant appealed.

Held, It has been repeatedly held that the holder of a bank check has no right of action on the check against the bank. Although there may be funds of the drawer sufficient to pay the check in the hands of the bank at the time of presentment, and no other appropriation of them made, yet the bank may refuse payment without subjecting itself to a suit by the holder. (*Saylor vs.*

Bushong, 12 Weekly Notes Cas., 81 ; Bank *vs.* McMichael, 106 Pa. St., 460 ; Bank *vs.* Millard, 10 Wall., 162.) In Bank's Appeal, 10 Weekly Notes Cas., 41, we said that an ordinary bank check "is neither a legal nor an equitable assignment or appropriation of a corresponding amount of the drawer's funds in the hands of the drawee. It gives the payee no right of action against the drawee nor any valid claim to the funds of the drawer in his hands." Of course, if the bank has accepted the check in the hands of the holder, it then becomes liable to pay, and must respond in an action by the holder.

In the present case there was no acceptance of Shoemaker's check in favor of Shepp & Co., nor any acts done indicating an intention to accept it. On the contrary, payment was refused as soon as it was presented.

Further *held*, The action was brought by Shepp & Co. in their own name only, in August, 1874. On the trial, in November, 1885, the Court permitted an amendment of the record by adding "John A. Shoemaker to the use of D. Shepp & Co.;" and a recovery was then had upon the theory that the cause of action was the same, and it was simply adding the name of the legal plaintiff. But it is very clear that the cause of action is not the same in any point of view, and that John A. Shoemaker could not be the legal plaintiff in an action upon the check in suit. It is a check drawn by Shoemaker, payable to the order of Shepp & Co., and hence the whole right of action upon it was vested in Shepp & Co. when accepted by the bank. Shoemaker could under no circumstances bring an action *upon the check* as an obligation payable to himself. He could sue the bank to recover damages for dishonoring his check or he could bring an action of *assumpsit* to recover the amount of his deposit as for money had and received ; but in no event could he maintain any action upon the check itself. In 2 Pars. N. & B. it is thus said : One of the many reasons why the holder of a check, upon the refusal of the bank to pay it, having sufficient funds of the drawer therefor, cannot maintain an action against the bank is the existence of such a right of action on the part of the drawer, who may sue the bank in tort for the wrong done, or in *assumpsit* for the breach of the implied contract to honor promptly the customer's checks. In such action nominal damages may be recovered, though no actual damage be shown." The writer further states that the jury may give the plaintiff in such an action such reasonable damages as he may have sustained from the dishonor.

It follows that adding Shoemaker's name as legal plaintiff, conferred no additional right of action upon Shepp & Co. in relation to the check in suit. As to Shoemaker's right of action to recover damages for the dishonor of his check, or specifically to recover his deposit, it was, of course, entirely different from any right of action possessed by Shepp & Co., either on the check or for any other cause, and hence the amendment could not properly be allowed. Either of Shoemaker's rights of action was subject to the bar of the Statute of Limitations several years before the amendment was allowed, and, therefore, it was error to admit the amendment against the present defendant, who would thereby be deprived of the privilege of pleading the statute,

An amendment to a declaration will not be allowed if a new cause of action is thereby introduced, especially where the new cause is so old as to have been barred by the Statute of Limitations. (*Wright vs. Hart's Admr.*, 44 Pa. St., 454 ; see also *Smith vs. Smith*, 45 Pa. St., 404, and *Tyrrill vs. Lamb*, 96 Pa. St., 464.)

Judgment reversed.

First National Bank of Tamaqua *vs.* Shoemaker, Supreme Court of Pennsylvania, October 4, 1887.

LOST INSTRUMENT—IN WHAT COURT ACTION THEREON MAINTAINABLE—
A DISCUSSION OF THE REMEDY ON LOST INSTRUMENTS BY THE SUPREME
COURT OF RHODE ISLAND.

The declaration of the plaintiff set forth that the defendant's intestate at Providence on July 23, 1857, made his promissory note for \$500 payable to James A. Regua or order, two months after date, and that said Regua then and there indorsed and delivered it to the plaintiff ; that it was not paid at

maturity; that after maturity and before any part of it was paid it was lost by the plaintiff; that after the loss the plaintiff demanded payment of the defendant and the defendant refused payment. To this declaration the defendant demurred on the ground that an action at law would not lie on such a note so indorsed and lost, the only remedy being in equity.

Held, There is a conflict of decision on this question. The English doctrine is that the only remedy on a lost negotiable note or bill is in equity, the reason alleged being that the maker, upon paying a note, is entitled to have it surrendered to him for his protection against suit thereon by any other person coming into possession of it, and a Court of equity can afford protection by decreeing an indemnity bond, whereas a Court of law cannot. In this country the English doctrine has been adopted in several States, but in others it has been materially modified or rejected. In this State, in *Aborn vs. Bosworth*, 1 R. L., 401, which was an action on a bill of exchange lost, tried to a jury in 1850, this Court instructed the jury that the drawee was entitled to recover upon proof, either that the bill was destroyed or surrendered, or so indorsed that no third person could recover it. The counsel for the defendant disparages the authority of this case, because it was determined at *nisi prius*; but it should be remembered that at the time it was tried the full Court were required to sit in the trial of cases to the jury, and the Court, upon so sitting, was accustomed to listen to very thorough discussions of legal questions on both principle and precedent. We think that the case has been, and should continue to be, accepted as settling the law, so far as it goes, for this State. The ground of decision was that the loser is entitled to recover in an action against the maker whenever the recovery will put the maker in no worse position than he would have been if the loss had not occurred.

The averment here is that the note was lost after indorsement, but also after maturity. The averment of the loss was not necessary to the maintenance of the action; and in our opinion it is competent for the plaintiff to prove, not only the loss, but also the destruction of the note. (2 Pars. N. & B., 809.) In *Peabody vs. Denton*, 2 Gall., 351, the note was lost after maturity, and, in an action thereon by the indorsee against the maker, tried eighteen years after the loss, the Court held that, after so great a lapse of time, it was incumbent on the defendant to show either that the note existed or had been demanded of him, or that it must otherwise be presumed that no demand would ever be made. In the case at bar, for anything that is averred, the note may have been lost thirty years ago.

In *Swift vs. Stevens*, 8 Conn., 431, the note disappeared some six years before the trial. The Cashier of a bank to whom it had been delivered for safe-keeping testified that he had made diligent search for it, but was unable to find it, that he had never delivered it to any person; and that he verily believed it had been accidentally destroyed, and on motion for new trial after verdict for the plaintiff the Court held that the evidence was proper to go to the jury to prove the destruction or non-existence of the note. The circumstances in the case at bar, for anything that appears, may be equally or more cogent to prove the destruction or non-existence of the note. Moreover, all that is required to entitle the plaintiff to recover is to prove that the defendant can pay the note without hazard of being required to pay it a second time. Accordingly it has been held that the loser is entitled to recover when any future action on the note will be barred by the Statute of Limitations. (*Torrey vs. Foss*, 40 Me., 74; *Moore vs. Fall*, 42 Me., 450.) Any future action on this note would be barred, so far as appears; and if so the defendant will be protected. And, furthermore, the action here is not against the maker personally, but against his administrator; and it has been stated that the maker's estate was represented insolvent; that commissioners were appointed who allowed the plaintiff's claim; and that the allowance was stricken out by the defendant and this action brought under Pub. St. R. L., c. 186: Sec. 15. If this be so, the estate being really insolvent will be protected without any indemnity bond, since no creditor who has not presented his claim to the commissioners can maintain any action upon it against the estate unless there is a surplus remaining after all the debts allowed have been paid. We think, therefore, that the demurrer must be overruled, since it does not appear but

that plaintiff is able to show that defendant can pay the note to him without risk of being obliged to pay it again to any other person.

Further *Held*, Plaintiff contends that he is entitled to recover because, though the note was lost after indorsement, it was overdue when lost, and therefore any person taking it would take it subject to the equities and could get no better title than the person had from whom he took it. A number of cases support this view. (*Thayer vs. King*, 15 Ohio, 242; *Sloo vs. Roberts*, 7 Ind., 128; *Elliott vs. Woodward*, 18 Ind., 183; *Smith vs. Walker*, 8 Smedes & M., 131; *Chandron vs. Hunt*, 3 Stew., 31; *Fales vs. Russell*, 16 Pick, 315, 317; *Renner vs. Bank*, 9 Wheat, 531.) But against this view it is urged that the holder of the note, by simply producing it and verifying the signature, makes a *prima facie* case for himself, throwing on the defendant the burden of proving that the note was lost before maturity—a burden involving a risk which he ought not to be exposed to. (2 Pars. N. & B., 295.) We do not find it necessary to decide the point now, and therefore leave it undetermined.

Demurrer overruled.

Adams vs. Baker, Adm'r, Supreme Court of Rhode Island, October 14, 1887.

COLLECTING BANK—DUTY AS TO COLLECTION OF CERTIFICATES OF DEPOSIT—WHEN CERTIFICATE, PAYABLE ON DEMAND, BUT NOT TO DRAW INTEREST UNLESS HELD FOR SIX MONTHS, SHOULD BE PRESENTED.

On October 19, 1883, plaintiff left with the defendant, the Bremer County Bank, for collection a certificate of deposit for \$12,300 given by bankers in Jacksonville, Illinois, dated June 18, 1883, payable on demand, which certificate was to draw interest if held until the expiration of six months. The defendant executed a receipt for the certificate in the following form and language:

“WAVERLY, IOWA, October 19, 1883.

Received of O. C. Ide the following certificate of deposit for collection when due:

DATE.	MAKER'S NAME.	AMOUNT.	INT.	WHEN DUE.
June 18, 1883.	M. P. Ayers & Co.	\$12,300	3	Dec. 18, 1883.

Twelve thousand and three hundred doll.

L. L. LUSH, Cash.”

On the day of its receipt the defendant in the usual course of business sent the certificate for collection to its correspondent at Chicago, a solvent National bank, which immediately collected it. The plaintiff gave no instructions as to the time of its collection and received no information from defendant as to the usual course of business in making collections of the character of this one. The defendant sent with the certificate instructions to collect it when it became due. The defendant's correspondent collected the face of the certificate, which was remitted to defendant and paid to plaintiff. Plaintiff brings this action against the bank to recover interest on the certificate at the rate named therein for six months, claiming that defendant should have held it until the expiration of that period before presenting it for payment. The cause was tried without a jury in the District Court and judgment rendered for defendant. Plaintiff appealed.

Held, We think the judgment of the District Court may be supported on the ground that the certificate was collected pursuant to the very terms of the receipt, which declares it shall be collected when due. It was payable on demand, and was in fact due when it was received by defendant. There was nothing in the receipt obligating defendant to hold it until the expiration of six months from its date, when it would draw interest, and plaintiff gave no instructions to that effect. The statement in the receipt, that the certificate became due December 18, 1883, is not correct, which we will presume was well known to both parties. This statement does not preclude the defendant from showing the fact of the maturity of the certificate at the time. In the absence of any instructions to, or agreement by, defendant requiring it to hold the paper the presumption arises that it was the purpose of the plaintiff to

press its immediate collection. Had his intention been otherwise he would not have put it in course of collection two months before the day interest would accrue thereon, when, as he now claims, he intended to present it for payment after that time. We conclude that the defendant is not liable in this action, for the reason that neither its negligence nor violation of agreement or instructions has been established. The correspondent was not guilty of negligence or violation of instructions, for the collection was made in accord with the directions given by the defendant which accompanied the certificate. The rule of *Guelich vs. Bank*, 56 Iowa, 484, is not applicable to the case.

Judgment of District Court affirmed.

Idem vs. Bremer County Bank, Supreme Court of Iowa, October 21, 1887.

ABSTRACT OF CASES.

INDORSEMENT OF NOTE AFTER MATURITY—STATUTE OF LIMITATIONS AS TO INDORSER BEGINS TO RUN FROM THE DATE OF INDORSEMENT AND NOT FROM THE MATURITY OF THE NOTE

A note was made payable one day after date, and was indorsed to the plaintiff long after its maturity. Action was brought thereon against the maker and indorser more than six years after the date that the note matured, but within six years from the time of the indorsement. A plea of the statute of limitations was sustained as to the maker, but as to the indorser it was

Held, That the statute did not commence to run from the date the note matured, but from the date of the indorsement, and that the indorser remained liable thereon.

Graham vs. Roberson, Supreme Court of Georgia, May 9, 1887.

PROMISSORY NOTES — ACTION ON — PROOF OF SIGNATURE AND IDENTITY OF DECEASED MAKER.

Suit was brought by certain heirs of the payee of two notes against the executrix of the alleged maker. The notes were under seal, signed by a mark, and witnessed by the daughter and son of the payee, who were both dead at the time of the trial. One note was dated in 1859, payable inside of twenty years; the second was dated in 1861, and payable in eighteen years. It was proven that they were in the handwriting of a party who died in 1862. A witness testified that in 1866 he went with the payee to the house of the alleged maker of the notes; that the payee said they were to get money on some notes, and she had papers that looked like those in suit. He had never seen the alleged maker before that time nor since. This visit was nineteen years before the trial. At the close of the evidence plaintiff was nonsuited. On appeal,

Held, The notes in controversy were not sufficiently proved to entitle them to go to the jury, and the plaintiff was properly nonsuited.

Wolf and others vs. Mackrell, Executrix, Supreme Court of Pennsylvania, November 7, 1887.

BANK AND DEPOSITOR—ACTION BY BANK TO RECOVER BALANCE OF ACCOUNT—RECOVERY CANNOT BE DEFEATED BY CLAIM THAT BANK PAID CHECKS BEYOND LIMIT FIXED BY DEPOSITOR WHERE SUCH CHECKS WERE AUTHORIZED BY HIM.

Defendant, a depositor in the plaintiff bank, notified the bank that it must not allow his account to be overdrawn beyond a certain amount. Checks were drawn by a person doing business for or with defendant and authorized to draw them to an amount exceeding the limit set by defendant, and such checks were paid by the bank. In an action by the bank against defendant to recover a balance of account, defendant claimed that as he had notified plaintiff not to permit his account to be overdrawn beyond a certain limit, plaintiff could not recover.

Held, It is not disputed that the person drawing the checks was doing business for or with defendant and was authorized to draw them. There is no claim that this authority was withdrawn. Defendant, then, notified plaintiff

not to pay checks drawn by his authority. Such checks were binding upon defendant whether he had or had not a balance in the bank. He could not, by a mere notice to plaintiff not to pay after a certain limit was reached, defeat the right of the holders of such checks and the right of the plaintiff to pay and charge them to defendant's account. If there existed want of consideration or other legal or equitable grounds for arresting payment, he could require plaintiff to refuse it. But if the checks were drawn by authority in the prosecution of the business with which defendant was connected and he availed himself of the benefits of such checks, he cannot refuse to account for them even though they exceeded the limit prescribed in his notice to plaintiff. These views are based upon the plainest principles of law and equity.

Further *Held*, It is urged that as the evidence does not show what disposition was made of the money by the person drawing the checks, it fails to establish defendant's liability. But if the checks were drawn by authority of the defendant in the prosecution of defendant's business, plaintiff was not required to inquire what disposition was made of the money received thereon.

Bremer County Bank vs. Mores, Supreme Court of Iowa, October 27, 1887.

PROMISSORY NOTE—SURETY—DISCHARGE.

Where one of several signers of a joint note is surety for the others, but such fact does not appear upon the face of the paper, the payee is not, in the absence of any notice, bound to inquire into the relations of the makers as between themselves, nor, until informed thereof, is he bound to regard the equitable rights of such surety. Mere neglect to bring suit, or to take active efforts to collect the note of the principal maker at the request of the surety, is insufficient to discharge the latter.

Benedict vs. Thoe and another, Supreme Court of Minnesota, November 11, 1887.

PROMISSORY NOTE—EXECUTION BY PARTY IN HIS OWN NAME—PAROL EVIDENCE INADMISSIBLE TO SHOW THAT MAKER WAS NOT ACTING IN INDIVIDUAL CAPACITY BUT AS AGENT OF ANOTHER.

A promissory note was signed simply "John Bowman," who on being sued claimed that he signed the same as the agent and trustee of G to secure a loan of money made to G, and that no part of the consideration of the note was received by him, Bowman.

Held, Defendant cannot be allowed to avoid liability by showing by parol evidence that he was acting for another, and that it was so understood at the time. The note purported to bind John Bowman and no one else. Evidence to the effect that it was understood that he was not bound would have been in plain contradiction of the note and is not admissible.

Junge vs. Bowman, Supreme Court of Iowa, October 15, 1887.

NATIONAL BANK—POWER TO ACCEPT PERSONAL PROPERTY OTHER THAN MONEY IN PAYMENT OF REAL ESTATE SOLD BY IT.

A National bank sold and conveyed to one Carman a tract of land, and agreed to accept certain personal property, namely, hogs and grain, in part payment of the price. In a suit by the bank to recover this personal property from the defendants who had subsequently levied on it under a judgment against Carman, it was urged that the contract was one which the bank, under its charter, was incapable of entering into, and hence that it acquired no rights thereunder.

Held, It may be conceded that banking associations organized under the National Banking Act have no power to engage generally in the business of buying and selling personal property. They have power, however, under certain circumstances to acquire and dispose of real estate. No claim is made but that the bank lawfully acquired the real estate which it sold to Carman. If so, it had the right to dispose of it, and we know of no provision in the statute under which it was organized which forbids it to receive property other than money in payment. The agreement to accept the property in

question in payment was entered into at the same time that the contract for the sale of the land was made.

First National Bank of Ottumwa vs. Reno and others, Supreme Court of Iowa, October 25, 1887.

LAW NOTES AND COMMENTS.

RIGHT OF HOLDER OF UNCERTIFIED CHECK TO SUE THE BANK.—In the case of First National Bank of Tamaqua vs. Shoemaker, reported in this number, the Pennsylvania rule is shown to be against the right of the holder of a check to sue the bank thereon until the same has been accepted. This is also the rule in the Supreme Court of the United States, and in the States of New York, Massachusetts, Indiana, Maryland, Colorado and New Jersey, and *obiter* in Tennessee and Virginia. (See 10 Wall., 152; 4 Otto, 343; 6 N. Y., 412; 48 N. Y., 682; 1 Gray, 605; 107 Mass., 45; 34 Md., 581; 5 Col., 185; 69 Ind., 479; 17 Vroom, 255; 22 Gratt., 742; 7 Heisk., 199.)

And in Louisiana it has been held that the holder of a check cannot avail himself thereof as a set-off against a note of his held by the bank. (23 La. Ann., 49.)

The contrary doctrine that the checkholder may sue the bank as soon as it wrongfully refuses to pay his check is held in Missouri, Kentucky, South Carolina, Illinois and Iowa. (See 4 Mo. App., 330, 401; 7 Ib., 532; 11 Ib., 292; 8 Bush., 357; 12 Rich., 518; 28 Ill., 168; 80 Ill., 212; 26 Iowa, 315.)

The weight of authority, it will be seen, is in favor of the former rule.

LIABILITY OF ESTATE OF DECEASED INDORSER ON UNMATURED NOTES.—The attention of our readers is directed to the case of Dunnigan vs. Stevens, decided by the Supreme Court of Illinois and found in this number, bearing on the question of the right of the holder of an unmatured note to prove the same as a claim against the estate of a deceased indorser. The gist of the case is briefly this: Dunnigan held certain notes, indorsed by Stevens, deceased, not yet due, the maker whereon was insolvent, and sought to prove them as claims against the estate of Stevens. The case first came before the Court in March, 1887, and a decision was then rendered (reported in July, 1887, number, page 696), to the effect that the liability of the indorser was contingent upon the failure of the maker to pay at maturity, and could not be enforced until after the happening of that contingency; and the claim was consequently disallowed. By a subsequent decision which will be found in this number the Court reverses its former decision (two Judges dissenting) on the ground that as the notes contained a waiver in writing by the indorser of presentment for payment, and of notice of their non-payment, this dispensed with the conditions precedent to the indorser's liability and made his obligation for the payment of the notes unconditional and absolute—creating an equal liability with that of the maker for their payment at maturity and sufficient to constitute a claim against the indorser's estate under the statute for the proving of debts not due.

This decision was under the law-merchant, the notes in suit being governed by that law, and the conclusion reached that the effect of a waiver of demand and notice on the liability of the indorser is to make it absolute and equal with that of the maker before maturity, is one with which we do not agree. Notwithstanding such a waiver the maker is still the primary debtor, and the contract of the indorser is only to pay the note if the maker does not, so that until maturity his liability is still contingent, and should the maker pay would never become absolute and enforceable.

But looking beyond this to the vast majority of cases where no such waiver exists, and where there is no question but that the liability of the indorser is contingent until maturity, the inquiry is suggested how the security of an indorser is to be preserved in case of his death at a period long before the maturity of the instrument? The liability of the indorser of a promissory note is frequently an important factor in the value of the instrument, yet it would seem that where an indorser dies at a considerable period before maturity the security of his name will become practically worthless; for before the note can mature and the liability be fixed, the limit of time within which

claims against the estate of the decedent can be proved, will have been reached, and the estate itself distributed, leaving nothing to satisfy the claim of the holder should the maker or other parties liable default in payment. This is so because it does not seem that the contingent liability of an indorser on an unmatured note is such a debt or liability as can be proved against the estate of a decedent under the statutes for proving claims. We have been unable to find any previous decision wherein this question has been considered with reference to the estate of a deceased indorser. In 1861, in the Supreme Court of Massachusetts (*Stowell vs. Richardson*, 3 Allen, 64), the question arose as to the estate of an insolvent indorser. An insolvent debtor was indorser on a promissory note for \$5,000, payable in three years, and it was presented for proof as a debt against his estate long prior to its maturity. The Court held that until the note fell due the liability for the debt was contingent, and the instrument was not provable against the indorser's estate before its maturity.

In order to preserve the security of the indorsement of a deceased indorser in all such cases until maturity, it would seem equitable that some proceeding should be allowed whereby, under the notice to prove claims, the holder of an unmatured indorsed note might come in and make application to a competent Court to determine, upon a settlement of the accounts of the executor or administrator, whether any, and if so how much, of the estate of the deceased indorser should be reserved to await the question as to the liability of the deceased. It is probably an open question whether this could be done. Unless such a remedy could be pursued or some statutory enactment made covering such cases, it looks as if the security of any indorser on a note running for a period of three or more years would be practically lost should the indorser die and his estate be wound up before its maturity.

Editor Rhodes' Journal of Banking: ALVARADO, Texas, December 3, 1887.

A draft is drawn on William Duke, Waco, Texas. We send it to our correspondent at Waco with instructions to protest. William Duke cannot be found in Waco; in fact, was never there, a mistake as to his place of residence having been made by the drawer of the draft. Should this draft be protested or returned to us?

Answer.—The draft should not be protested, as it cannot be presented to any one for acceptance. It should be returned to you.

Editor Rhodes' Journal of Banking: PHILADELPHIA, PA., December 16, 1887.

Is a bank liable if it fails to act on notice from the drawer of a check to stop payment of the same, and pays the check when presented through oversight or press of business. CASHIER.

Answer.—The right of the drawer of a check to countermand payment at any time before the bank has incurred any liability to pay it, by certification or the like, is established in New York, (11 Paige, 612; 6 Wend., 369; 3 Hun., 689; 12 Hun., 537; 76 New York, 352.)

In *Schneider vs. Irving Bank*, 1 Daly, 500 (N. Y. Com. Pl., 1875), the bank was notified by the drawer of a check not to pay it and the paying Teller promised not to do so, but afterwards paid it to the holder on presentation. The Court held that the drawer might recover from the bank the amount of the check so paid.

In Pennsylvania, where the inquiry comes from, we do not find any decisions involving the point, but as in both New York and Pennsylvania, the rule that the holder of a check has no claim whatever against the bank is established, we think there is no doubt but that the same right of revocation exists in Pennsylvania as in New York.

Mr. Morse asserts that the great weight of authority is to the effect that the drawer has the right of revocation where the bank has incurred no liability by

any act before notice not to pay, and cites: (2 Bing., 7; 1 Car. & P., 247; R. & M., 68; 9 Moore, 31; 5 Ad. & El., 548; 9 M. & W., 411; 5 Exch., 601; 14 E., 582, and also New York decisions.)

In Illinois, however, where the drawing of a check operates as an assignment of the fund to the holder, and gives him a right of action thereon against the bank, it has been held that after a check has passed into the hands of a *bona fide* holder, it is not in the power of the drawer to countermand the order of payment. (Union National Bank *vs.* Oceana Co. Bank, 80 Ill., 212.)

We think, therefore, that in Pennsylvania the bank would be liable to the drawer if it paid a check after notice from him not to pay, providing it had not, in any way, rendered itself liable thereon before receipt of the notice.

Editor Rhodes' Journal of Banking:

DETROIT, Mich., December 23, 1887.

It is necessary, in the details of banking business, that payees of drafts and checks are often obliged to be identified.

I submit to you one of many instances of this kind—as to the liability of a party who is well known to the bank, identifying the payee (paying or accepting drafts, etc.), as to his responsibility to the bank by identifying the payee.

John Doe, with his friend, who says he has known him several years, and knows him to be John Doe, calls at a bank and wishes to have a bank draft or check cashed. (No question or doubt as to the issue and prompt payment of the draft or check if properly indorsed.) The draft, payable to John Doe, or order is cashed; but subsequently it is ascertained that the John Doe fully identified by his known friend was not the John Doe to whom it was payable, but another John Doe.

In this case is the friend of the wrong John Doe liable?

E. D. S.

Answer.—If you can prove that the friend of the wrong John Doe was aware of the fraud John Doe was perpetrating, he would be held equally criminal with the party he identified.

Report on Bi-Metallism in Europe.—Mr. Edward Atkinson, who was specially designated by the President of the United States to visit the financial centers of Europe and ascertain the feasibility of establishing, by international standard, the ratio of the two precious metals, in free coinage of both, recently made a report, which has been transmitted to Congress. He has arrived at the conclusion that there is no prospect of any change in the present monetary system of the European States which can modify and influence the financial policy of the United States at the present time. He says that the conclusion among the financial men in Europe is, that the United States Government is loaded with an excessive quantity of silver dollars which it cannot get into circulation. These dollars are coined at a standard which is at variance with the silver money of any other country, viz., at the rate of 16 of silver to 1 of gold. It is believed that the financial officers of the United States are convinced that the product of silver is excessive, and that the ratio of silver to gold, *i. e.*, its price as bullion is likely to fall even lower than it is now. Therefore, any initiative by the United States is looked upon as an attempt to relieve itself of an unprofitable stock, and provide a market for the future product of silver. Any effort of the United States to promote a bi-metallic treaty and restore the free coinage of silver is not, therefore, regarded as a sincere effort to promote a better monetary system of which all nations may share the benefit, but rather as being induced by a desire to promote the especial interests of the United States at the cost of whom it may concern. His conclusion is, that so long as the present coinage of the silver dollar of the United States is continued, no proposition of a bi-metallic treaty for the full legal tender of silver coin can be entertained by European States, since they will not consider, under any circumstances, a proposition for the recoinage of their own silver in order to adjust it to the standard of the United States. If European nations enter into a bi-metallic treaty, it might be with the expectation that the opening of all the mints to free coinage either of gold or silver in Europe at a standard of 15½ to 1 would bring the price of silver bullion back to a fraction over 60 pence per ounce. Inasmuch as the United States, by maintaining the present standard dollar, declares that it requires 16 oz. of silver to equal one of gold, to that extent the United States discredits and depreciates silver bullion below the standard formerly in force among European nations. The present dollar is, therefore, looked upon by the bi-metallists of Europe as a depreciation of the value of silver.

TWENTY-FIFTH ANNUAL REPORT OF
THE COMPTROLLER OF THE CURRENCY,
 HON. WILLIAM L. TRENHOLM, COMPTROLLER.

On October 5th, according to the last report made by the banks, there were 3,049 National banks in operation, having an aggregate capital paid in of \$578,462,765, a surplus fund of \$173,913,440, deposits amounting to \$1,606,782,814, and loans and discounts of \$1,580,045,647. Thirty-three banks have closed during the year, of which twenty-five went into voluntary liquidation and eight failed.

The Comptroller, in response to the provision of law requiring him to make to Congress suggestions as to amendments of the laws relative to banking, has presented a complete codification of all the statutes and acts heretofore enacted. The following indicates the principal points in which the codification presented differs from the laws now in force:

THE VIEWS OF THE COMPTROLLER AS TO THE WORKING OF PRESENT LAW, AND THE AMENDMENTS WHICH ARE NECESSARY.

The views expressed in the report of 1886 as to the sufficiency of the security now provided for the circulating notes of National banks are respectfully reaffirmed, and the suggestions then made for improving the general features of the National banking system are renewed. These suggestions, with others drawn from enlarged experience have been embodied in a bill for a National bank code, incorporated herewith, and respectfully commended to the early attention of Congress. Every material change proposed to be made by the adoption of this code, and the reasons for it, will appear in the statement appended to it. In order that due preparation may be made for the early consideration of this important measure, the explanatory statement, the bill, and a codification of all existing laws, arranged in sections parallel with those of the bill, have been sent in advance to the Senators, Representatives and delegates in Congress, in order that each may satisfy himself of the fidelity and accuracy of the codification of the laws now in force, and by means of this medium of comparison may conveniently compare with those laws the provisions of the proposed code.

Upon scrutiny it will be found that the proposed code conforms to the existing law, with some variation in phraseology and some unimportant modification of import, except in the following instances:

Sections 4, 5 and 6 increase the salary of the Deputy Comptroller of the Currency, enlarge his duties, and state in a more comprehensive manner the prohibition against the Comptroller or Deputy Comptroller having any interests inconsistent with their official positions.

Section 33 provides against such a constitution of the Board of Directors as makes the officers of the bank a majority of the Board.

Section 42 incorporates into the oath which Directors are required to take an obligation to inform themselves at all times as to the business and condition of the association. This addition to the law is, in my judgment, necessary, because in a recent case submitted to the Courts it has been decided that Directors who do not keep themselves informed as to the business of their association cannot be held responsible for the mismanagement of its affairs.

Sections 44 and 45 are new matter. They provide a formal method by which Directors may resign their positions and be discharged from further accountability.

Section 51 forbids the organization of National banks with branches. When the system was first established there were some State banks with branches, and as it was desired that these should be induced to become National banks, provision was made for their retaining their branches after conversion. This reason no longer exists, and it would appear to be in the line of public policy to take precaution in advance against any future development of the National banking system in the direction of combination and agglomeration similar to the development among railroad and other corporations controlling interests upon which the business and convenience of whole communities

depend. In Section 127 of the proposed code provision is made for National banks having more than one office under certain conditions.

Section 69 supplements existing law as to the extension of the corporate existence of National banks by providing adequate relief to shareholders who do not assent to the extension of the bank and who do not concur with the Directors as to the appraisalment of its stock.

Section 62 states in more precise language, and with some modification, the existing restrictions upon National banks as to holding real estate.

Sections 67 to 71, inclusive, provide a method by which the stockholders of National banks may substitute for their contingent liability a surplus fund to be held by the bank. In this connection I respectfully refer to the recommendations presented to Congress in the Comptroller's Report for 1886, and to what is said on the subject in the appropriate place in the Report of this year.

Section 75 makes an important change in the amount of bonds required to be deposited by the banks.

The Acts of 1863 and 1864 required a deposit of bonds not less in amount than one-third of the capital; the Act of 1874 made \$50,000 the minimum for banks of which the capital exceeded \$150,000; the Act of 1882 fixed the amount at one-fourth the capital in cases where the capital does not exceed \$150,000, and at \$50,000 for all banks of which the capital exceeds \$150,000.

The proposed code divides the banks into two classes, those with a capital of \$250,000 and less, and those of which the capital exceeds \$250,000, and reduces the amount to be deposited by the smaller banks from one-fourth to one-tenth of their capital, and that to be deposited by the larger banks from \$50,000 to \$25,000.

The reason for the change is that the bond requirement is a serious impediment to the absorption into the National bank system of the State banks, which are still numerous in those sections which were more or less excluded from early participation in the privileges of the Acts of 1863 and 1864; and it is also an impediment to the formation of new banks of large capital. While the change may induce some banks to withdraw a portion of their bonds, it may reasonably be expected that the deposit of bonds made by new banks and by banks increasing their capital will offset such withdrawals to some extent.

The danger of a spasmodic contraction of the National bank circulation is obviated by the retention of the clause in section 9 of the Act of July 12, 1832, which provides that not more than \$3,000,000 of lawful money shall be deposited in any one calendar month for the purpose of withdrawing such circulation; but there seems no reason to retain the other clause of that section, which prohibits banks that have reduced circulation from again increasing it until after an interval of six months. Among all the objections that have been made to the National bank currency none seems so well founded, and at the same time so serious, as the charge that it is inelastic in volume, and therefore devoid of one of the prime requisites of a bank currency. The clause referred to manifestly tends to aggravate this defect, and it should, therefore, be discarded from the law.

Sections 90 to 94, inclusive, provide for the custody and periodical examination of the plates and dies used in the printing of National bank notes and for the destruction of material no longer in use. Under the existing law the Comptroller of the Currency is responsible for the safe keeping and proper use of these plates and dies, but since the enactment of that provision the Bureau of Engraving and Printing has been removed from the Treasury building, and it is now a physical impossibility for the Comptroller of the Currency to have any knowledge of or supervision over the keeping or the handling of these plates and dies.

Section 97 modifies the existing law as to National bank notes so as to permit them to be counted as a part of the cash reserve of the banks. This feature is introduced rather to settle a doubt than to make a change, because there seems to be good reason to believe that these notes may be so counted under the existing law.

Section 98 provides that the Cashier's signature to the circulating notes of the bank may be affixed by an agent appointed with due formality. This provision, it is believed, will relieve many banks from an inconvenience which at times is quite serious.

Section 114 repeals the requirement that banks extending their corporate existence shall after three years deposit lawful money to the amount of their outstanding circulation.

Section 115 extends to the entire National bank circulation the provision in section 6, Act of July 12, 1882, which reserves to the United States whatever profit arises from the failure to redeem the notes of banks extending their corporate existence; and in this connection it should be observed that the other provisions in section 6 of that Act are omitted from this code. The omitted clauses provide that the circulating notes of extended banks shall be retired, and that notes of a different and readily distinguishable design shall be issued in place of them.

The purpose of the provision now omitted is not obvious, especially as the Act declares that the bank after extension "shall continue to be in all respects the identical association it was before the extension of its period of succession."

The debate on the bill (see Congressional Record, pages 2,584 to 5,878, volume 13, parts 3 to 6, inclusive, Forty-seventh Congress, first session) shows that the change in the design of the notes was connected with the provision reserving to the United States any profit arising from the non-presentation for redemption of the old issue of notes.

It seems to have been intended that the notes of new design, now known as the series of 1882, should be issued only to banks extending their period of succession, whereas it appears that all banks that have been organized since the passage of the Act in question have received notes of the series of 1882, and therefore the distinction has now been lost, which was presumably intended to be preserved, between the circulation of extended banks and of those still operated under their original certificates of organization. It is impracticable at this late day to re-establish this distinction, because of 2,263 banks issuing notes of the series of 1882 only 1,217 have been extended.

While the Act of 1882 contains the only express provision in the statutes reserving to the Treasury the profit arising from the non-presentation of National bank notes, yet under the operation of the Act of June 20, 1874, all profits from that source must necessarily remain in the Treasury, because the Treasury is the depository of the ultimate redemption fund of every bank, and it is certain that the moment will never come within the period of succession of any bank when it can be determined whether or not at some time thereafter its still outstanding notes may not be presented for redemption at the Treasury.

For these reasons it is considered no departure from existing law, and no infringement upon the rights which any bank can establish or enjoy, to embody in a code framed for continuous application to a permanent system the distinct provision that all uncalled-for moneys in the various redemption funds shall ultimately belong to the United States, while it is a distinct gain to get rid of the obligation to keep up an unnecessary and confusing distinction between circulating notes issued by banks organized prior to July 12, 1882, but not yet extended, and those issued by banks organized or extended after that date.

If these views prevail with Congress it will, no doubt, also seem expedient to adopt the series of 1882 as a uniform design for the entire National bank currency, and in that case it will be no more than just to provide by an appropriation from the Treasury for the expense of preparing new plates for the 797 banks now entitled to the notes of the old design.

Section 127 is that to which allusion is made in explaining section 51. There seems to be in some large cities, especially where the banks are concentrated in one part of the city, out of the reach of many of their customers, a growing need for some such provision as is made in this section.

Sections 134 and 185 preserve all existing provisions as to reserve, except that which allows the 5 per cent. fund in the hands of the Treasurer of the United States for the redemption of circulating notes to be counted as a part of the lawful money reserve against deposits.

It seems barely possible that the intent of section 3, Act of June 20, 1874, in this regard may have been misapprehended, but in any case it is anomalous in law and misleading in practice to count as a part of the reserve against deposits a fund wholly devoted to the redemption of circulation and not to any, even the least, extent available for paying depositors.

Except in the cases of some few banks of which the circulation is large and the deposits small, no material inconvenience is likely to be caused by the omission of the redemption fund from the items of reserve, especially if the recommendation is

adopted to count National bank notes on hand as part of the lawful money reserve against deposits. On October 5, 1887, the banks held in the aggregate in their cash \$21,937,884 National bank notes, while the total amount on deposit in the redemption fund was only \$8,810,442.25.

Section 126 relieves banks of the obligation of keeping a cash reserve against Government deposits. The existing statute requires a reserve on all deposits, and its language admits of no exception, but it is probable that this was not meant to include deposits of public money, because the Secretary of the Treasury is authorized by law to determine, in his own discretion, the security for, and the regulations applicable to, such deposits. It is believed that the proposed amendment will facilitate the operations of the Treasury. It will certainly relieve the depositary banks of a needless and an expensive requirement.

Section 146 is intended to remedy an inconsistency in the present law, which gives the Comptroller of the Currency power to place a Receiver in charge of a bank of which any impairment of capital is not made up within three months after notice from him, while under the same circumstances the Directors cannot enforce assessments against stockholders until four months after such notice.

Sections 147 to 160, inclusive, contain what is believed to be a very salutary check upon the managers of National banks in respect to investments in real estate securities. Since the liabilities of banks are payable on demand, the fundamental principle of good banking is that the assets should be readily convertible into money. Real estate and real estate securities are hardly ever readily convertible, while under conditions often arising they become inconvertible and remain so for long periods of time. Experience teaches that these conditions are sure to arise just when the exigencies of the community demand from banks the largest and readiest money accommodation.

Dealing in real estate and in bonds and debentures secured by real estate is of course an entirely legitimate employment for private or corporate capital, and there seems no lack of capital seeking such employment; it is generally safe, and often profitable; but commercial banks should be restrained from investing their deposits in such forms, lest their depositors should be exposed to the danger of finding that the cash upon which they depend for their current transactions has become locked up in investments, which, however safe and profitable for the bank, cannot be made to reproduce the cash at the moment at which it is most urgently needed. Statistics presented in the Report of this year show that real estate investments are responsible wholly or in part for the failure of 16 out of the 100 National banks of which the causes of failure have been ascertained.

While the general principle here stated is indisputable and admits of but few exceptions in its application to settled communities where real estate investments constantly tend to increased permanence, yet it should not be overlooked that in some sections of the country a very large amount of active capital is always seeking employment in real estate securities, which tends to make such securities exceptionally convertible, and it is no doubt difficult for the banks situated in those localities to keep themselves entirely free from this business. To meet these cases, section 148 has been framed in such a way as to afford to such banks an opportunity to accommodate their customers and promote the general business around them without too much risk of becoming embarrassed with locked-up funds.

Sections 151 and 152 are designed to give more elasticity to the present provision of law which limits to one-tenth of the capital of the bank loans of money to any individual, firm or corporation. This is a perplexing subject, and it is difficult to regulate it by statute satisfactorily; yet experience proves that existing restraints have been on the whole salutary in their character, for in many cases disaster has followed the disregard of them.

The statistics of failures already referred to show that excessive loans (which are generally made to officers and Directors of the banks, or to firms or companies in which they are interested) have caused wholly or in part 18 out of 100 failures.

Section 153 provides a penalty for making loans contrary to law. Heretofore the only penalty attaching to a violation of such restraints was the forfeiture of the franchise of the bank and the dissolution of the corporation, a punishment quite out of proportion to the offense, except under circumstances of concealment and aggravation rarely occurring, and still more rarely discovered, before the failure of the bank renders the penalty superfluous.

Sections 155 to 160, inclusive, are intended to throw some additional safeguards around the administration of the banks and to impress upon the Directors a more definite sense of responsibility by indicating to them practical methods for discharging their trusts.

Section 161 embodies, with slight modifications, the prohibition contained in section 5,206 of the Revised Statutes against certifying checks not drawn against actual money. I respectfully submit that it would be well to strike this provision out of the law altogether, because experience shows that it has failed to prevent the practice of certifying checks representing stock operations, against which it is understood to have been aimed, while it has excluded National banks from very valuable business which State institutions, which are not subject to the same prohibition, carry on free from the wholesale supervision to which National banks are subjected.

If, however, the provision is to be retained in the law, I earnestly recommend the adoption of the modification herein submitted, so as to relieve from its operation legitimate and well-recognized methods of accommodation that materially facilitate the commercial business of the country.

Section 163 embodies the present usury law, except that it permits of special contracts as to rate of interest in the States and Territories where no usury law exists.

In this connection I make bold to say that, in my judgment, it would be a decided step towards emancipating industry from the trammels of antiquated notions of governmental guidance to omit from this code all reference to usury and to leave only a provision fixing the rate of interest in the absence of special stipulation between lender and borrower. No one of experience can doubt that money would be cheaper and more accessible to all borrowers if there were no usury laws in force anywhere in the United States.

Section 172 reduces the penalty from \$100 a day to \$10 a day in cases where the banks fail to transmit reports within the period prescribed in the statutes. The present law has never been fully enforced, and probably cannot be; the penalty is excessive.

Sections 174 to 176, inclusive, enlarge the provisions of law applying to Examiners of National banks and define their duties and responsibilities. The effect of these sections is mainly to incorporate into the statute what has heretofore been practiced by the best Examiners.

Section 177 establishes a new scale for reckoning the assessment of examination fees upon National banks.

From many points of view it would be expedient for the Examiners to be paid out of the tax upon the National banks, and not by fees. The present system establishes relations between the bank and the Examiner which are inconsistent with the functions of that officer and with what ought to be his attitude toward the bank.

Sections 179 and 180 relieve banks of the obligation to pay fees for preliminary examination, and provide for these fees and the expenses of special examinations being paid out of such appropriation as Congress may make for that purpose.

In the Report for 1886 I recommended the employment of supervising Examiners, to be paid by the Government, and the views then entertained as to the value of such an addition to the inspection machinery of the system have been confirmed in the highest degree by the additional experience and observation of the last twelve months.

Sections 188 and 189 prescribe the duties of the Directors and officers of National banks that are in a position of insolvency. They embody existing provisions and the decisions of the Courts in respect to matters not now provided for by statute.

Sections 195 to 197, inclusive, provide for the discharge of Receivers of National banks in cases not provided for in the existing law. Justice seems to require some such enactments as are here proposed, and without them it may reasonably be expected that the difficulty now experienced of obtaining the best men for Receivers will constantly increase.

Sections 198 and 199 supplement the present law for the selection of an agent of stockholders by supplying certain details now required by the Comptroller, but which should have statutory force.

Section 206 affords to agents of stockholders the means of obtaining their discharge no such means now existing.

Sections 207 to 209, inclusive, provide for the case of a bank which has been restored to solvency during the Receivership, and which the stockholders desire to revive

under its old name. Such a case was lately presented when, within thirty days of the appointment of a Receiver for the Abington National Bank, of Abington, Mass., the creditors were paid in full, with interest, and sufficient assets remained to justify resumption of business upon a capital above the minimum limited to the locality. The name and reputation of this bank were regarded by its stockholders as of material value, and, being desirous that that value should not be lost to them by a change of name, they made application to be allowed to resume business. After careful examination of the laws, I could find nothing either permitting or forbidding compliance with this application. It appeared to be a matter not provided for either way, and therefore I could reply only that if the stockholders unanimously agreed to resume, I would recognize the bank as again in operation.

Section 213 re-enacts section 890 of the Revised Statutes, with a proviso which is intended to obviate the claim made by some District Attorneys that the statute permits them to force upon Receivers of National banks services which are neither required nor desired. I assume that it was not the intention of Congress to confer upon these officers a statutory right to act as counsel to Receivers of National banks, irrespective of their qualifications or of their local interests and connections.

Section 217 amends the provision as to a semi-annual tax upon circulation by relieving banks from the tax on so much of their circulation as is predicated upon the minimum deposit of bonds required by law. While for more than one reason it may be well to tax circulation voluntarily taken out or maintained, neither reason nor justice appears to justify a tax on circulation represented by a compulsory deposit of bonds.

Section 223 re-enacts section 5,219 of the Revised Statutes, with a change of phraseology aimed at securing to National banks adequate protection against such State and municipal assessment and taxation as places them at a disadvantage in competition with corporations which are doing the same business, but which call their operations by special names.

It is only reasonable to believe that there was no intention on the part of Congress to make the discrimination which has in some cases been inferred from the language of the present statute between moneyed capital in the hands of individuals and moneyed capital managed by corporations.

Sections 227, 228 and 229 re-enact the provisions of Section 5,200 of the Revised Statutes, with some changes suggested by experience, others prompted by precaution, and some additions applying to persons appointed to be Examiners of National banks.

Section 232 extends the general provisions for the punishment of forgers and other like offenders to persons who, without authority of law, affix signatures to the blank circulating notes printed for National banks, or who issue or circulate such notes knowing that they have not been duly signed by the proper officers of the association for which they were printed. The present law contains no provision for this offense, which is a manifest omission.

Section 235 re-enacts Section 5,243 of the Revised Statutes, and provides for its enforcement. In the last report of the Comptroller of the Currency the attention of Congress was called to several instances of violation of Section 5,243, which have been of long standing, and of which no judicial notice has been taken, either before that report was made or since.

BANKS AND BANKERS, ETC., OTHER THAN NATIONAL.

The summary of the reports received from all the State banks, loan and trust companies, and savings banks organized under State and Territorial laws, from which the Comptroller has been able to obtain returns, indicates the condition of 3,156 banks, with a capital of \$227,526,450, a surplus of \$186,204,888, and deposits amounting to \$2,096,622,727.

The number of banks organized during the year ending October 1, 1887, were 225, with a total capital of \$30,548,000. They have deposited bonds amounting to \$5,211,550, upon which circulation has been issued to the amount of \$2,600,375.

In reference to obtaining reports from State banks, the Comptroller says:

Through the courtesy of the authorities of twenty-one States, which exact returns of this nature, all the information received by them has been obtained. This information, transmitted sometimes in detail and sometimes compiled by the State officers, embraces the affairs of 1,620 incorporated institutions and 182 private banking concerns, making 1,802 in all.

In order to obtain the information about the institutions of like character in States and Territories where no returns are made to local authorities, resort was had to an extended and laborious correspondence. The names and addresses of over 4,000 concerns were collected, and to each a circular was sent asking for the information desired, and inclosing blank forms to be filled and returned. Out of the total number thus approached less than 1,400 have returned answers available for the purpose in view, and in many of these cases further correspondence was necessary in order to elicit all the information desired. In addition to this correspondence, each bank reporting its condition through the medium of State officials was written to individually, and requested to report the distribution of its stock.

The returns of 1,620 institutions obtained from the State authorities embrace a statement of the condition of 914 banks operated under State charters; aggregate capital, \$114,830,660; surplus and undivided profits, \$44,943,984; deposits, \$300,321,668; of forty-two loan and trust companies, capital, \$21,858,797; surplus and undivided profits, \$18,308,324; deposits, \$199,799,370, of 664 saving banks, of which 580 report no capital, and eighty-four report capital aggregating \$6,991,166. The aggregate surplus and undivided profits of the 664 savings banks is \$120,187,863, and their aggregate deposits amount to \$1,157,897,483. One hundred and eighty-two private banks report capital to the amount of \$5,896,144, surplus and undivided profits of \$1,720,192, and deposits of \$18,843,980.

In response to circulars sent directly, reports of condition have been received from 1,354 concerns in States and Territories where no reports are required to be made to local authorities, namely, from 499 State banks having an aggregate capital of \$26,169,717, surplus and undivided profits of \$8,023,228, and deposits of \$55,728,334; from sixteen loan and trust companies, with capital of \$14,496,972, surplus and undivided profits of \$3,884,995, and deposits of \$40,391,341; from twenty savings banks, with capital of \$3,099,700, surplus and undivided profits of \$6,712,360, and deposits of \$77,868,586; and from 819 private banks with capital of \$34,183,394, surplus and undivided profits of \$16,443,706, and deposits of \$77,736,527.

Of the 1,471 incorporated banks and loan and trust companies, reporting their condition officially and unofficially, and having an aggregate capital of \$177,356,146, 1,120 furnished statements as to the distribution of their stock, aggregating \$151,587,706 in par value. From examination of the details of those statements, it appears that the par value of the share ranges from \$10 to \$1,000, and the average par value of all the shares is \$79.53.

It was desired to make a classified report of the holdings of gold, silver, legal-tenders, and National bank notes, but as only a comparatively small number of associations outside of the National bank system separate the items composing "cash on hand," and as the majority of the State reports simply show "cash on hand" and "cash in bank," the result is not as satisfactory as was hoped for. From the reports in which "cash on hand" is classified, it appears that the amount held by 1,360 such associations in gold coin is \$27,015,962; in gold certificates, \$967,710; in silver coins, \$1,844,657; in silver certificates, \$566,313; in specie (not classified), \$12,744,973, and in legal-tenders and National bank notes, \$85,462,569.

ORGANIZATION AND EXPENSES OF THE BUREAU OF THE CURRENCY.

One subject of material importance to the banks and to the public is the more complete organization and better equipment of the Comptroller of the Currency's office.

Each year greater numbers of new banks are organized, involving increased correspondence, explanation and book-keeping, and more packages of currency to be kept safely; each year the number of banks in operation grows larger, calling for a wider scope of supervision, more reports to be examined, corrected and compiled, more letters from banks to be received, more letters to be written to banks, more examiners to be employed, and more correspondence maintained with them.

The number of receiverships also increases annually, causing more work, more correspondence and more book-keeping. The labor and anxiety of continuous and simultaneous attention to twenty-eight active receiverships cannot be described. Almost every one of them is involved in serious litigation, while in many of the cases pending not only large amounts of money and great interests, but important principles, are at stake.

On the other hand, no relief comes from the reduction of circulation, for the work in the divisions of issue and redemption varies with the number of banks and not with

the amount of bonds deposited or of circulation issued, while every change in either bonds or circulation increases the work in these or other divisions. Changes of bonds and circulation become more frequent annually.

Without entering into wearisome details, it must be obvious that the growth of the National bank system must impose upon the Comptroller and the officers and clerks who assist him labors and responsibilities which increase year by year, and if the annual reports made to Congress are compared with each other it will be found that they are constantly becoming not only more voluminous but more complex in their contents, and more exacting upon those charged with their preparation. Not only is this the case, but the growing complexity and amplitude both of mass and of detail which mark the annual reports also reflect a corresponding augmentation of mass and differentiation of detail in the daily work of the bureau.

The volume and the minute particularity of the contents of these reports imply antecedent operations of investigation, collocaation, arrangement, analysis, compilation and statistical interpretation, which were not possible when the National bank system was less fully developed, and which cannot be adequately described.

In order that the present work of the bureau may be properly performed the following changes are essential:

1. The Deputy Comptroller should have a salary of \$3,500. No less sum can be depended upon to secure or to permanently retain any one entirely qualified for the position.
2. There should be provided for the bureau a responsible legal adviser, with such clerks and books as may be necessary to the proper examination of the questions that are daily presented in almost every branch of commercial law.
3. There should be added to the four divisions now existing a division of archives and statistics.

Provision should be made by appropriation for an annual conference in Washington of all examiners of National banks, for the employment of supervising examiners, as recommended elsewhere, for such traveling expenses as may be incurred by the Comptroller or Deputy Comptroller in visiting different sections of the country in connection with the banks and banking interests there, and for the accumulation of a library of standard books of reference on subjects related to banking and financial legislation and administration.

BANK FAILURES DURING THE YEAR.

The First National Bank of Pine Bluff, Ark., failed because of the failure of its President, who was engaged in buying and shipping cotton on a scale too extensive for his means. To handle this business he made use of the bank, and at the date of failure he was maker or indorser of more than two-thirds of its bills receivable, the only security for which consisted of mortgages on land, crops and plantation chattels. He had also undertaken a railroad enterprise which he was unable to carry through, and the bank had a great deal of money locked up in the stock and bonds of the railroad company. A large amount of bills receivable having been rediscounted, and the President being unable, through lack of railroad transportation, to make prompt shipments of cotton to meet their maturities, the bank suspended. No run was made by the depositors. A dividend of 25 per cent. was paid to the creditors of the bank, about five months after date of failure, on claims aggregating \$64,956.06.

The Palatka National Bank of Palatka, Fla., suffered an impairment of capital through losses attributable mainly to the gradual withdrawal of deposits by customers who were moving out of the locality, general stagnation of business, and a marked decline in the enterprises of the town. The Directors made an abortive effort to place the bank in voluntary liquidation, but the requisite stockholders' vote could not be obtained. In less than sixty days after appointment of the Receiver the creditors were paid principal and interest in full on claims aggregating \$9,879.69, and the remaining assets of the bank have been turned over to an agent of the stockholders, under the provisions of the Act approved June 30, 1876.

The Fidelity National Bank of Cincinnati, O., was reduced to insolvency through the reckless management of its Board of Directors, who suffered certain of their number to divert its funds and to prostitute its credit in support of a speculation in wheat in Chicago during the months of March, April, May and June of this year. In the progress of this nefarious enterprise many provisions of the National banking laws were violated, and the public was deceived by false statements as to the capital.

surplus and business of the association. While entertaining grave apprehensions as to the management of this bank, the Comptroller had no evidence, either from its reports of condition or from an examination made in March, to justify any measure on his part likely to discredit it, or to embarrass its Directors in the conduct of its affairs.

On June 20th the Comptroller received notice of the protest in New York of \$200,000 of its drafts, and immediately notified the Examiner, who had been waiting in Cincinnati and the vicinity for several weeks to act upon any information which should justify a re-examination. He entered the bank immediately, and finding it insolvent, took possession under instructions. The doors were not opened on the morning of the 21st, and on June 27th a Receiver was appointed and took charge of its affairs. Upon obtaining evidence sufficient for the purpose, the Comptroller caused proceedings to be taken under Section 5,239, Revised Statutes, to dissolve the corporation and to have its franchises declared forfeited. A decree to this effect was made July 12th in the United States Circuit Court for the Southern District of Ohio. No appeal was taken. Upon the basis thus prepared suit has been brought by the Receiver against every Director implicated in the violations of law, and such damages as the Courts will grant, and the personal means of the Directors can be made to supply, will be collected and applied to the relief of those who have suffered loss or damage. A dividend was declared on October 31st of 25 per cent. on all claims proved and allowed, amounting to \$2,386,569.20.

A very large number of accounts with corresponding banks are still unadjusted, and claims are in dispute aggregating about \$1,000,000, of which it is feared the larger part can be settled only by litigation. Both the Examiner and the Receiver were early instructed to supply to the United States District Attorney for the Southern District of Ohio all evidence they could find indicating criminal misconduct on the part of any of the Directors or officers of the bank, and arrests were promptly made upon the evidence furnished by them. The Attorney-General joined with the Comptroller in the employment of special means for detecting the persons implicated in the misappropriation of the bank's funds, and the Solicitor of the Treasury, the District Attorney, the Chief of the Secret Service Division of the Treasury, and the officers detailed for the work entered heartily and efficiently into all measures for discovering and establishing their guilt. Indictments have been found against several persons, and their trials will shortly take place. It is to be hoped that this conspicuous instance of fraudulent conduct and lax administration may furnish occasion for establishing a just degree of responsibility on the part of Directors.

The Henrietta National Bank of Henrietta, Tex., became involved in the cattle business of its President and four other Directors, who constitute a majority of the Board, and own more than half the capital stock of the bank. In the names of their several firms these five Directors had each borrowed from the bank amounts largely in excess of the limit prescribed by law, and their aggregate indebtedness exceeded the entire capital stock. The drought in Texas last summer caused heavy losses in the cattle trade, and as soon as the firms referred to became embarrassed their property was attached, and this precipitated the failure of the bank. While the management is to be condemned, it must be said that the principal debtors of the bank had been men of large means, and that its other assets were fairly sound. Within sixty days of its suspension a dividend of 50 per cent. was paid to the creditors on claims aggregating \$64,784.31.

The National Bank of Sumter, S. C., closed its doors on August 20th. Two days before the Cashier had absconded, carrying with him a considerable amount of money belonging to the bank. This person performed the duties of Cashier, Teller and Book-keeper, and was thus in a position to conceal his embezzlements until they exceeded in amount the capital stock of the bank. The President seems to have been often absent and habitually negligent: and although a committee was appointed quarterly by the Board of Directors to examine the affairs of the bank, the members of it must have been incompetent or neglectful of the trust thus confided to them. No evidence has been as yet obtained sufficient to justify proceedings under section 5,239, United States Revised Statutes, and in presence of the decision in the case of *Movius, Receiver, vs. Directors of the First National Bank of Buffalo*, the Comptroller has not felt justified in subjecting this impoverished trust to the expenses of a suit against the Directors at

common law. The assets are estimated to be good, and a dividend of 75 per cent. will probably be paid before the end of this year.

The First National Bank of Dansville, N. Y., was wrecked by its President, who telegraphed to the Comptroller, August 26th, that the bank had closed its doors, and immediately absconded to Canada. When the National Bank Examiner took possession of the bank, the most important books and papers were missing, and those which remained contained little that was true. Nothing but a judicial investigation will unravel the tangle of falsehood and chicanery by which the public has been deceived and robbed, and a once honored family disgraced. The stock of the bank belonged almost wholly to a single family, and all its losses are chargeable to the operations of the President and one of his brothers. Evidence sufficient to justify a criminal investigation has been laid before the District Attorney of the United States for the Western District of New York, by whom proceedings have been commenced against the only parties within the jurisdiction of the Court.

The First National Bank of Corry, Pa., was crippled by mismanagement several years ago. Its stockholders have had no dividends since 1881. In 1883 a change was made in the officers and Directors, but the new men proved unequal to the exigency. It appears that the President lived several miles away from Corry, and that the Cashier was negligent and a poor business man, while the Directors were weak or inattentive. In consequence of general neglect, the bank went from bad to worse, and the Cashier is particularly censured for not fully informing the Directors of the true condition of a large amount of paper which was thus allowed to become entirely worthless. Added to the effects of weak management there was a constant shrinkage in the value of the old assets, and recently adverse decisions were rendered in important litigation, and the losses on current business proved to be large.

The bank suspended on September 16th, and upon examination it appeared that about 80 per cent. of the capital was lost. Ample time was allowed the stockholders to make this good, in accordance with section 5,205 United States Revised Statutes; but their efforts proving unsuccessful, a Receiver was appointed, who qualified and took possession on October 11th. The assets as at present estimated should pay the creditors in full; but no dividend has yet been declared owing to slow collections.

The Stafford National Bank of Stafford Springs, Conn., lost upward of \$100,000 by its Cashier, who is now under arrest, charged with embezzlement and misappropriation of the funds of the bank. It appears that he was intrusted with the entire management of the bank's affairs, and was successful in deceiving the President and Directors by means of fictitious notes and cash items, and the manipulation of the accounts of correspondent banks. His operations extended over a considerable period of time, and involve very large amounts of money lent to a lumber company, of which he was Treasurer. The true condition of this bank was ascertained by a special examination ordered in September, out of the regular term, and the arrest of the Cashier was the first notice the public had of the bank's being in trouble. The loss to the bank is nearly equal to the amount of its capital; but it is expected that enough will be realized from the assets to nearly or quite pay the creditors in full.

Tables in the report and the appendix give the detailed figures in reference to the liquidation of insolvent National banks since the year 1877.

During the year ending November 1, 1887, dividends amounting to \$2,106,208 have been paid to creditors of insolvent National banks.

Out of 3,805 National banks organized since February, 1863, only 120, or about 3 per cent., have been placed in the hands of Receivers. This includes 9 which had been previously placed in liquidation by their stockholders; but upon their failing to pay their depositors the Comptroller appointed Receivers to wind up their affairs. Out of the above total of 120 failed banks, 41 have paid their creditors in full, while 23 have besides paid interest, 18 in full and 5 in part. The affairs of 83 banks of the 120 have been finally closed, leaving 35 in process of settlement, of which, as has been seen, 7 are virtually closed with the exception of pending litigation, leaving 23 Receiverships only in active operation.

The total amount so far paid to creditors of insolvent National banks has been \$29,434,966, upon proved claims amounting to \$46,968,388. The amount paid during the year has been \$2,135,878, which includes \$29,875 paid in dividends declared prior to November 1, 1886, on claims proved since that date. Assessments amounting to \$9,945,250 have been made upon stockholders of insolvent National banks under section

5,151 of the Revised Statutes of the United States. From this source the gross collections amount to \$4,082,563, of which there has been received during the past year \$886,755. Suits are pending in some cases.

It will be observed that the gross collections from stockholders of insolvent banks amount to only about 47 per cent. of the assessments. Unfortunately the cost of the litigation attending such collections cannot be accurately ascertained from the records in this office; but it has been very great, and should be deducted from gross collections. The Comptroller is disposed to think the net amount actually realized to creditors from this source has been under, rather than over, 40 per cent. of the total assessments. In any case, the figures show that the security afforded to creditors by subjecting shareholders to liability beyond the loss of their stock is quite disproportionate to the damage inflicted upon solvent shareholders. This personal-liability feature tends to discourage prudent business men from investing in National bank stock, while contested assessments generally develop an amount of chicanery and fraud which must exercise an injurious influence upon morals.

The total circulation outstanding at the date of failure of National banks which became insolvent and were placed in the hands of Receivers from October 1, 1865, to November 1, 1867, is \$14,818,276. Of this, on November 1st, \$13,902,311 has been redeemed, leaving \$1,425,965 outstanding on the latter date.

As the laws now stand a National banking association may be formed by any number (not less than five) of natural persons, and any banking corporation having a State or Territorial charter may be converted into a National banking association. Every person applying for information as to the formation of a National bank, or the conversion of a State bank, is supplied with a copy of the National bank laws and a book of instructions as to the practical steps to be taken in effecting either of these purposes. He is also requested to cause a formal notice to be filed, setting forth the name of the place at which the bank is to be located, the title selected, and the names of at least five among those who intend to subscribe for the capital stock. After notice has been filed the person or persons acting in the matter are furnished with blank forms to be used in effecting an organization, and the title which they have selected, if it is approved, is reserved for them for a reasonable period. The forms sent include articles of association, organization certificate, certificate upon which officers and Directors are to set forth the facts which it is necessary for the Comptroller to know before authorizing the bank to begin business, oaths of Directors, and a blank order for circulating notes. As soon as these papers are returned, duly executed, and all the requirements of the law have been complied with by the incorporators, the Comptroller's certificate to that effect is issued. The requirements of law for the formation of new banks are simple and reasonable, the only one appearing onerous being that which requires the bank to deposit in the Treasury certain amounts of United States registered bonds bearing interest.

Under the Act of February 26, 1863, National banking associations were required to deposit with the Treasurer United States bonds to the amount of one-third their paid-in capital. In 1864 this provision was amended by fixing \$30,000 as the minimum amount of bonds for any bank.

The Act of June 20, 1874, permitted associations to withdraw any bonds they might have on deposit in excess of \$50,000. Obviously this affected only banks of which the capital exceeded \$150,000.

The Act of July 12, 1883, specified that banks of which the capital does not exceed \$150,000 should be required to keep on deposit bonds to the amount of one-fourth of their capital.

By a special provision of law banks and banking corporations having State charters may be converted into National banks upon satisfying the Comptroller of the Currency that they are in sound financial condition, and upon complying with such of the general requirements of the law as are applicable to them.

Tables are given showing the National banks which become such by conversion from institutions already organized under State laws, under section 5,144, and National banks which were already organized as such, with the history of every institution, whether closed by failure or voluntary liquidation, and if still in operation whether under its original charter or by extension of the same.

Under the present law the minimum deposit of bonds required to be made by the

3,049 National banks in operation in the United States on October 5, 1887, amounts to \$89,912,347.

The National banks in operation on October 5, 1887, may be separated into two classes, namely, banks of which the capital does not exceed \$150,000, and banks of which the capital exceeds \$150,000. The first-class contains 2,150 banks, with an aggregate capital of \$179,849,300; the second, 899 banks, with an aggregate capital of \$398,613,375. The minimum of bonds required to be kept on deposit by the entire body of banks in the first-class is \$44,962,347; the minimum for the 899 banks of the second-class is \$44,950,000. If all banks held only the minimum of bonds, the total National bank circulation could not exceed \$80,921,113, while the possible maximum of circulation, namely, 90 per cent. of the aggregate of the National bank capital, would be \$520,616,489.

The actual circulation on October 5, 1887, was \$272,387,176, inclusive of \$102,719,440 still outstanding, but which, having been surrendered by the banks that issued it, is no longer represented by bonds, but by that amount of lawful money deposited with the Treasurer of the United States to redeem the notes as they are presented.

The \$199,667,736 of circulation for which the banks are responsible consists of \$71,536,500 secured by the bonds deposited by the 2,150 banks having \$150,000 capital and less, and \$28,131,236 secured by the bonds belonging to the 899 banks of which the capital exceeds \$150,000. The first-class of banks have, therefore, \$31,070,387 more than their minimum and \$90,327,961 less than their possible maximum circulation, while the larger banks have \$57,676,236 more than their minimum and \$280,620,802 less than their maximum.

An accompanying table shows that 991 banks have been organized between July 1, 1882 and July 1, 1887, with a capital of \$110,898,300; that they have received circulation to the amount of \$21,495,110 on bonds deposited to the amount of \$23,882,100 and that the minimum deposit of bonds required by law for these banks is \$20,622,250.

Table showing the decrease of National bank circulation during each of the years ending October 31st, from 1884 to 1887, inclusive, and the amount of lawful money on deposit at the end of each year:

National bank notes outstanding October 31, 1883, including notes of National gold banks.....	\$352,013,787	
Less lawful money on deposit at same date, including deposits of National gold banks.....	85,998,461	\$316,020,326
National bank notes outstanding October 31, 1884, including notes of National gold banks.....	333,559,813	
Less lawful money on deposit at same date, including deposits of National gold banks.....	41,710,168	291,849,650
Net decrease of circulation.....		24,170,676
Net outstanding as above, October 31, 1884.....		291,849,650
National bank notes outstanding October 31, 1885, including notes of National gold banks.....	315,847,168	
Less lawful money on deposit at same date, including deposits of National gold banks.....	39,542,979	276,304,189
Net decrease of circulation.....		15,545,461
Net outstanding as above, October 31, 1885.....		276,304,189
National bank notes outstanding October 31, 1886, including notes of National gold banks.....	301,529,889	
Less lawful money on deposit at same date, including deposits of National gold banks.....	81,819,233	219,710,656
Net decrease of circulation.....		56,589,533
Net outstanding as above, November 1, 1886.....		219,710,656
National bank notes outstanding October 31, 1887, including notes of National gold banks.....	272,041,203	
Less lawful money on deposit at same date, including deposits of National gold banks.....	102,826,136	169,215,067
Net decrease of circulation.....		50,496,589

The actual deposit of bonds during the whole period exceeds the minimum by about 15 per cent. only, and, taken year by year the percentage of excess has decreased from 28 per cent. in 1882-'83 to less than 1¼ per cent. in 1886-'87.

Of the 217 National banks organized during the past fiscal year, 102 have a capital of \$50,000 each, amounting to \$5,100,000; 76 have a capital of over \$50,000 and not exceeding \$150,000, amounting to \$7,044,000; and 39 have a capital of \$19,300,000. The 39 largest banks deposited the exact amount of bonds required by law, and out of 178 banks of which the capital does not exceed \$150,000 only 8 have deposited bonds in excess of the requirement.

EXTENSION OF CORPORATE EXISTENCE.

The number of banks, the corporate existence of which has been extended, up to November 1, 1887, is shown to be 1,233, with a capital amounting to \$340,069,506. The number of National banks, the corporate existence of which will expire during the coming year, is ten; and the total number which will expire prior to the year 1902, including the ten already mentioned, is 717, with a capital of \$96,915,550.

DISTRIBUTION OF SHARES OF NATIONAL AND STATE BANKS.

Tables are given showing the distribution of shares of stock in National banks, from which it appears that the total shares issued, reduced to a par value of one hundred dollars each, were \$5,731,725, owned by 241,172 shareholders. The number of those owning shares to the amount of one thousand dollars and less was 139,843. The number owning shares to the value of one thousand dollars and less than five thousand was 73,206. The number of those owning shares to the value of over five thousand and less than thirty thousand, was 26,442. And the number of those owning shares to the value of over thirty thousand dollars was 1,882. In this connection the Comptroller obtained information as to the distribution, number and average par value of shares of stock of 1,120 incorporated State banks on June 30, 1887. The number of shares issued by these banks was \$1,906,133, and the average par value of these shares was \$79.53. The total number of shareholders was 47,377. Of these 24,000 own shares of a value of one thousand and less; 14,812 own shares of over one thousand and less than five thousand; 7,367 own shares of a value of five thousand and less than thirty thousand, and 559 persons own shares of a value of thirty thousand dollars and over.

GOVERNMENT SUPERVISION OF BANKS.

The report expresses the following views in regard to the governmental supervision of the banking business, a subject which has been brought into much prominence by the disastrous failures of the past year.

The Comptroller is also authorized to cause examination of banks to be made from time to time by persons selected for that purpose by him and approved by the Secretary of the Treasury.

The Acts of 1863 and 1864 seemed to contemplate only occasional examinations, and these by persons employed specially for the occasion. The compensation for each examination was \$5 a day and mileage.

Afterwards experience appears to have led to the employment of regular Examiners and to their assignment to special districts; then followed periodical examinations which in time arranged themselves at intervals of about twelve months.

The Revised Statutes adopted in 1874 changed the compensation of Examiners from a per diem allowance and mileage to fees, graded in amount according to the capital of the bank examined, but this scale of fees was not made applicable to the examination of banks in reserve cities, in certain States named in the Statutes, and in the then Territories. In these excepted cases the Secretary of the Treasury was empowered, upon the recommendation of the Comptroller, to fix the compensation of Examiners.

The Act of February 19, 1875, readjusted the scale of fees.

From the beginning of the system, however, until now all examinations have been at the expense of the examined bank, which appears to be a sacrifice of principle to governmental economy.

It would appear that the supervision of the National banks by the Comptroller of the Currency was intended originally only to protect the revenue from being defrauded and the public from suffering loss through improper issues of circulating notes, but in process of time the supervision came to be extended so as to serve as a protection to depositors against the maladministration of Directors; and quite recently it has been assumed that Examiners are expected to discover the defalcations of Cashiers and

Tellers, fraudulent entries in the books of banks, and false statements of assets and liabilities in cases where the President and Directors, or some of them, have failed to make such discoveries.

However desirable it may be that Examiners should be encouraged to fulfill this extreme expectation yet no one of practical experience would rely upon an Examiner who comes only once a year and who can afford to stay but a single day to discover thefts or false entries that have been successfully concealed from Directors who are always present and whose own money is being stolen.

All efforts must be futile that are directed to supplying by means of official examination an effective substitute for the vigilance and personal accountability of Directors. Legislative or administrative force applied to such efforts will be misapplied and wasted.

The only reasonable theory of accountability and supervision is this: The officers of the bank should be accountable to the Directors for the honesty and efficiency of its interior administration; the President and Directors should be responsible to the public for such an organization as tends to prevent fraud and to detect irregularities. To this end they should especially be required to satisfy themselves personally that all the officers are of good character and reputable conduct; that they receive sufficient compensation to lift them above undue temptation; that the books of the bank are accurately kept and always up to date; that every statement and report emanating from the bank conforms to the books and facts, and that no laxity of internal administration induces to fraud by displaying opportunities for its perpetration and concealment.

Only banks thus organized and administered are in a condition to undergo official examination, which strictly should not be extended beyond the ascertainment, first, that the bank really is thus organized and administered; second, that no law has been violated in respect to loans, reserve, investments, bad debts, or dividends; and, third, that the assets are really worth the amounts representing them on the books of the bank.

Finally it should be the aim and duty of the Comptroller of the Currency to bring every National bank into the condition of organization and administration described, and he should labor to keep every bank in such condition by a scrutiny of its reports, by correspondence and by means of examinations.

It is probable that the great majority of banks are properly organized and administered but it is unfortunately certain that quite too many are not so, and among these arise from time to time the scandals that divert public attention from the general honesty and excellence of National bank administration to sporadic cases of fraud or imbecility.

While the present system of examinations and reports has no doubt contributed materially to the general improvement of the banks, there are two things which seem to me essential to its completeness: first, a stern enforcement through the courts of the responsibilities of officers and Directors, both criminal and pecuniary; and secondly, the assumption by the Government of the expense attending examinations.

Section 5209 of the Revised Statutes of the United States seems broad enough to cover most cases of misappropriation by Directors and officers, and section 5230 subjects Directors to pecuniary responsibility for all violations of law causing damages to depositors, stockholders or others.

When the capital of a bank is found to have been impaired by losses or otherwise the Comptroller of the Currency is compelled to decide among the following:

1. He may permit a reduction of capital.
2. He may approve of voluntary liquidation.
3. He may require and empower the Directors to assess the shareholders.

4. He may proceed against the corporation under section 5230 and subject the Directors to damages for any losses to stockholders or to others by violations of law knowingly committed or permitted by them.

Manifestly the Comptroller can choose the latter course only when the losses can be shown to be fairly due to violations of law known to the directors as a body, and it is difficult to prove such knowledge because the necessary evidence is generally controlled by the Directors themselves. On the other hand it is obviously unjust that stockholders should lose their investments or be subjected to assessments when the losses are due to violation of law committed within range of every Director's scrutiny and often with the knowledge and for the benefit of one or more members of the

board, but of which personal knowledge cannot be specifically established in a sufficient number of cases.

It would appear from this point of view to be very important that the law should be so framed as to establish against all Directors an antecedent presumption that they know and consent to whatever is done in a bank habitually, and to whatever else goes on there that an ordinarily intelligent business man would discover by the use of reasonable diligence.

If this were done stockholders of National banks would come in for their due share of protection and Directors would attend to their duties more faithfully than many of them now do, while both the examinations and the reports made to the Comptroller directly by the banks would be more trustworthy.

EXAMINATIONS.

It is of the highest importance to the banks as a body as well as to the public that Examiners should be expert, vigilant and trustworthy, and that the examinations should be frequent and unexpected.

While the Examiners now employed are generally competent, and many of them excellent, yet in some cases the territory to be covered is too large to permit of anything like sustained observation by the Examiners, and the pay is too small to secure the best men for the work. Examiners must be considered as of two classes, those whose supervision is confined to comparatively a few banks in proximity to each other, and those who have to travel over a great area, visiting a number of solitary banks, each of limited resources.

In most of the large cities the banks are numerous enough to permit of an Examiner being employed for each city exclusively, and the compensation is sufficient to secure thoroughly competent men.

Again, in the South and West the banks are so sparsely scattered over great areas that it takes a great deal of time and costs a great sum in traveling expenses to make the rounds of a district, while the capital of each bank is so small that a great many must be assigned to one man in order that the aggregate fees may amount to enough to compensate him. For example, one Examiner has to travel all over South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Arkansas to examine ninety banks.

If all the State banks in the West and South were in the National system the examination districts in those sections could be subdivided to the great improvement of the supervision in thoroughness and effectiveness.

As has already been said it would be a great improvement if the Examiners could be paid by the Government, and I feel constrained to repeat the recommendation that provision be made for Inspectors or Supervising Examiners. I also respectfully recommend that provision be made for periodical conferences of Examiners.

RESERVE.

The various laws relative to the reserves of National banks which have been heretofore enacted are reviewed by the Comptroller, and he makes two important recommendations. First, that the 5 per cent. redemption fund which is permitted to be counted as reserve upon deposits, shall no longer be thus treated, and that National bank notes shall be counted as reserve. The total 5 per cent. fund amounted, on October 5, 1887, to \$3,310,442, while the National bank currency held by all the banks amounted to \$21,937,884. It would, therefore, be a relief to the banks generally to be allowed to count in their reserve the latter instead of the former amount.

DUTIES, ASSESSMENTS AND REDEMPTION CHARGES.

The National banks are subject to a semi-annual duty of one-half of one per cent. on their circulation. They are also required to pay the cost of the redemption of their notes to the office of the Treasurer, and the cost of the plates upon which their notes are printed. They are further required to pay the fees of Examiners; and it appears that the taxes and assessments collected during the past year for all these purposes amounted in aggregate to \$2,314,709, of which the semi-annual duty on circulation was \$2,044,922, and the assessments for Examiners' fees \$110,219.

STATE TAX OF NATIONAL BANKS.

In the chapter on State Taxation of National Banks, the Comptroller reprints the full text of the late decisions of the Supreme Court, which was printed in the JOURNAL of June last, and recommends an amendment of section 5,219 of the Revised Statutes, so that it shall read "that the taxation on National bank shares shall not be at a

greater rate in proportion to their real values than is assessed upon the shares of other corporations engaged in receiving deposits, negotiating loans and transacting any other business similar to that which National banks are authorized to transact, or, at any rate, which will amount on the aggregate of all the shares to more than is assessed upon a like amount of other capital similarly employed, whether in the hands of individuals or under the control of corporations."

In conclusion, the Comptroller refers to the summary printed in the appendix of the Report, of communications received from various parts of the country, suggesting a modification of the laws, by which, in the opinion of the writers, the National banking system would be improved and perpetuated. He states that upwards of forty plans were suggested, which may be classed under five propositions as follows:

1. To do away with the note-issuing functions of the banks.
2. To increase the inducements for the banks to deposit United States bonds as a basis of National bank circulation.
3. To provide by a new issue of bonds for a continuance of the present or of some modified system of National bank circulation based on United States bonds.
4. To substitute some other security for United States bonds deposited in the Treasury as a basis for National bank circulation.
5. To allow the banks to issue circulation upon their general credit, without requiring specific security to be deposited.

After considering the propositions presented under each of the five heads, and intimating that the objections to each exceed the advantages, the Comptroller concludes by recommending a reduction of the minimum amount of bonds which National banks are required to deposit to one-tenth of the capital of banks of which the capital does not exceed \$250,000, and in any case to an amount not exceeding \$25,000.

The recommendation to reduce the minimum amount of bonds to be deposited is supported by the following considerations:

1. As the law now stands; the total amount of bonds required to be deposited by the 3,049 banks in operation on October 5th is \$89,912,347, while the amount actually on deposit at that date was \$189,083,199, or \$99,170,753 more than the minimum requirement.

This excess is distributed as follows: 2,150 banks of \$150,000 capital and under, of which the minimum is \$44,962,347, hold actually \$79,485,000—an excess of \$34,522,653; 899 banks of over \$150,000 capital, of which the minimum is \$44,960,000, hold actually \$109,598,100—an excess of \$64,648,100.

If the proposed change is made the banks in operation on October 5 will stand thus: 2,562 banks with not over \$250,000 capital; minimum, \$26,400,309; actual, \$116,444,250; excess, \$90,043,941; 497 banks with over \$250,000 capital; minimum, \$12,425,000; actual, \$72,638,850; excess, \$60,213,850. Total excess, \$150,257,791.

Of course it is to be expected that some banks will be prompted by the change in the law to reduce their circulation, but the magnitude of this reduction and the rate at which it can be effected will be controlled by two influences; first, the provision of law which limits to \$3,000,000 the amount of lawful money that may be deposited in any calendar month in order to effect the withdrawal of circulation; and, secondly, the decline in the price of the bonds which must attend any sudden and large increase in the amount offered for sale. Banks will not surrender circulation except to realize the premium by selling their bonds.

2. While undoubtedly these two influences will effectually prevent any monetary disturbance arising from the change in the law, they will not even obstruct, but will materially promote, such gradual changes in the bonds on deposit as will enable the banks to be practically free from 4¼ per cent. bonds by the time these mature in 1891.

The total amount of 4¼ per cent. bonds held on October 31 as security for circulation was \$69,066,100, and therefore it will only require changes to the extent of about \$17,500,000 annually to render the banks entirely independent, in four years, of any policy the Treasury may adopt as to these bonds.

If they are redeemed the National bank circulation will be undiminished by the process of redemption; if they are refunded on terms admitting of a profit on circulation, the banks will be in a good position to buy the extended bonds.

3. One effect of a gradual shifting of deposits out of 4¼ per cent. bonds will probably be that, as the volume of circulation based on these bonds becomes reduced, a corresponding decline will be observed in the sensitiveness of the banks and of the money market to the progress of redemption of the public debt.

This is a very important consideration, because it is desirable that when the time arrives for deciding what is to be done with the 4½ per cent. loan there shall arise neither the apprehension of financial disturbance nor any strong popular pressure to influence the choice between payment and extension. From every point of view it is desirable that this choice should turn wholly on the position and prospects of the public finances.

4. Throughout the whole period of the existence of the National bank circulation there never has been a time when the volume of the outstanding notes has been determined by commercial forces only; the operations of the Treasury have always exercised an abnormal and a disturbing influence, and reciprocally the state of the currency has constantly fettered the operations of the Treasury. If the proposed change in the law tends even in the least degree to release the Treasury and the currency from this unnecessary and harassing interdependence, it will be a great public gain.

5. Once free from the disturbing cause referred to, there is no reason why the volume of National bank currency should not soon find its natural centre of oscillation; that is, the point above and below which its normal movements of increase and decline would conform to the varying needs of the commercial and other industries of the country.

From the standpoint of these industries elasticity is more important than quantity in the currency; their interests are better subserved by a currency so elastic in volume as to respond immediately to variations in the demand for it than by a great volume of money rigid in amount. Elasticity in the volume of the currency supplies to commercial operations what springs and a smooth road supply to transportation. In each case more can be accomplished with less wear and tear and less breakage than is possible when these conditions are wanting.

6. A reduction in the amount of bonds which the banks are required to have on deposit will prepare the way for a change in the basis of circulation, in case such change may hereafter seem expedient. As long as the law compels the smaller banks to invest more than one-fourth of their capital in bonds (counting in the premium) it may be unjust to them to permit circulation to be issued upon any other security, for only the large banks could then get the full benefit of such permission; but 10 per cent. of capital invested in bonds will not be a serious impediment even to banks of \$50,000 capital getting their fair share of any privileges as to circulation that may hereafter be determined upon.

7. It should be observed, finally, that owing to the two retarding influences already referred to the results here suggested can be accomplished only during a considerable lapse of time, and of course, in the interval, unforeseen conditions may arise and unexpected influences may modify or reverse the tendencies now existing; but it does not seem possible that any change of conditions or of tendencies can cause embarrassment to the banks or to the public fairly chargeable to the proposed change in the law.

The American Surety Company and the Pacific Express Company secure the Conviction of an Express Messenger.—A dispatch received from Pocatello, Idaho, announces the conviction of the embezzler Bennett.

George Alden Bennett was a messenger in the employ of the Pacific Express Company, Salt Lake Division, and was bonded by the American Surety Company of New York. He took it into his head that he could steal successfully, and about August 18th last embezzled a money package of \$10,000. Superintendent Gentsch of the express company moved quickly and caused the arrest of Bennett, and succeeded in recovering about \$8,100 of the stolen money. The American Surety Company having been notified, promptly paid its liability, and forthwith detailed two of its inspectors, A. T. Lawrence, of Denver, Col., and W. B. Green, of Pocatello, Idaho, who, in conjunction with Superintendent Gentsch, made a case for prosecution which could not be defeated. Bennett, with the assistance of able counsel, fought a desperate battle, but the Surety and Express Companies met every move, sparing neither time nor expense to secure his punishment. He was indicted, arraigned, and pleaded not guilty on October last, at Blackfoot, Idaho. The trial at the same place occupied about three days and resulted in his conviction November 19th, and on the 6th inst. he was sentenced to imprisonment in the penitentiary at Boise City, Idaho, for the period of 10 years.—*New York Times*, December 9th.

REPORT OF THE UNITED STATES TREASURER.

The annual report of Hon. James W. Hyatt, Treasurer of the United States, shows that the revenues of the Government for the fiscal year ended June 30, 1887, were \$971,408,277 and the ordinary expenditures \$967,932,179, the surplus receipts available for the reduction of the public debt being \$103,471,097. As compared with the previous year the receipts increased \$34,963,559, the expenditures \$25,449,041, and the surplus revenues \$9,514,509. There was an increase in every item of revenue, the largest being in the receipts from customs. The largest increase in the expenditures was on account of Indians and pensions and the largest decrease on account of interest on the public debt. The receipts of the Post-Office Department amounted to \$54,752,347 and the expenditures to \$53,583,835. The revenues, exclusive of deficiency appropriations, increased \$3,500,495 and the expenditures \$2,901,249. The amount drawn from the Treasury to make good the deficiencies in the postal revenues was \$6,969,133, as against \$8,714,422 in 1886.

The operations of the year involved the redemption of \$127,911,950 in United States bonds, of which \$47,894,200 was on account of the sinking fund, the issue of nearly 600,000 drafts and checks, the redemption of upward of \$196,000,000 in United States paper currency and National bank notes and the handling of \$192,000,000 in United States bonds deposited or withdrawn by National banks.

Statements of the assets and liabilities of the Treasury are given for the close of the fiscal year, and for September 30 and October 31, 1887, in comparison with the same days last year. The largest increase in any item of assets during the year ended September 30 was \$34,705,623 in gold coin and bullion, and the largest decrease \$26,143,181 in silver dollars and bullion. The largest increase in the liabilities was in the fund for the retirement of National bank notes, which ran up from \$65,612,547 to \$102,265,787. The available balance decreased \$26,132,524, and the total balance, including fractional silver and minor coin, fell off \$28,236,951. During the year ended October 31 the gold balance increased \$44,322,653, the silver balance decreased \$21,287,772, and the total balance ran up \$1,959,233. The total assets at the end of this period, exclusive of certificates and other obligations held as cash, were \$319,190,965, and total liabilities \$262,432,260.

The statement of United States notes outstanding shows that between June 30, 1884, and September 30, 1887, the circulation of one and two dollar notes generally ran down from \$51,500,000 to \$15,400,000. This decrease has been made up by changes in other denominations, the volume of fives, tens and twenties increasing about \$43,000,000. The demand for notes of these denominations has been constant and greater than the Treasury has been able to supply. The shipments of legal-tenders and silver certificates of small denominations, together with the increase in the circulation of silver coins, during the fifteen months ended September 30 amounted to upward of \$149,000,000, while in addition several million dollars in small gold coins have been drawn into circulation.

Under the provisions of the Act of June 8, 1872, certificates of deposit amounting to \$34,900,000 were issued during the fiscal year for United States notes lodged in the Treasury. The redemptions in the same period were \$43,990,000. There remained outstanding June 30 only \$9,020,000, which is the least amount shown at the end of any fiscal year since the issue began. The Treasurer attributes the limited use of these certificates at this time to the change in bank reserves from notes to coin and the demand for currency caused by business activity.

There were no gold certificates issued during the year. The redemptions amounted to \$9,887,423. Of the total of \$1,173,354,880 issued from November, 1865, there were outstanding at the close of the year \$121,486,817, of which \$30,261,380 were in the Treasury and \$91,225,437 in circulation. The holdings of the Treasury decreased nearly \$25,000,000 in the year. The amount outstanding October 31 was \$132,542,951, of which the Treasury held \$32,358,158.

The silver certificates outstanding at the close of the fiscal year amounted to \$145,543,150, an increase of nearly \$30,000,000 in twelve months. The amount in the Treasury fell off in the same period from nearly \$28,000,000 to \$3,426,133, while the

increase in the actual circulation was a little more than \$54,000,000. This increase is due in part to the demand for small notes arising from the discontinuance of the issue of legal-tender ones and twos. There were put out during the year \$14,158,000 in one dollar certificates, \$8,976,000,000 in twos and \$7,760,000 in fives. The Treasurer has been unable to supply the demand for these denominations, because it has been impossible to get them printed fast enough. He regrets that he has been obliged to put them in circulation too fresh from the presses, as it is the experience of the Department that notes, to wear well, require proper seasoning before being paid out. Many complaints have been made that notes recently issued are rapidly defaced. The Treasurer considers it very desirable that a liberal supply should be printed and available to meet the regular demands at certain seasons.

Under the provisions of the Act of March 3, 1887, there were received within the limit of six months fixed by Congress \$7,689,086 in trade dollars in exchange for standard silver dollars and fractional silver coin. Few applications for redemption of silver have been received since, and the Treasurer believes that but few trade dollars not in the hands of collectors of coins remain in the country. There were presented for redemption many defaced, mutilated and stamped pieces, which were not exchangeable under the law, and the holders were advised to offer them to the mint for purchase as bullion. On October 31, \$728,000 of the amount exchanged had been coined into dimes, the remainder being held by the mints as trade dollar bullion.

The coinage of standard silver dollars for the fiscal year was \$33,216,881, an increase of \$3,377,326 over 1886. On October 31, the Treasury held \$214,176,532, and there were \$62,540,625 in circulation. The storage vault in the Treasury building, completed in 1884, is entirely filled with standard silver dollars and gold coin and the new vault in course of erection is urgently needed.

Between June 30, 1886, and October 31, 1887, the fractional silver coin in the Treasury decreased from \$28,904,681 to \$24,468,135, and the minor coin from \$377,814 to \$51,400. The one and five-cent pieces on hand are not more than sufficient for payments over the counter. There were transferred to the Mint during the year \$757,630 in silver coins and \$10,513 in gold coins to be recoined, on which the loss was \$15,068. There were also transferred \$396,284 in minor coins to be recoined or cleaned.

The deductions on account of mutilation from the face value of United States currency redeemed during the year aggregated \$8,304. There were rejected and branded counterfeit notes of the nominal value of \$7,684, and 6,449 counterfeit silver coins were thrown out by the several Treasury offices. The Treasurer calls attention to the rapid decrease in the redemptions of fractional currency, and shows by comparison with other paper issues that a larger amount than has been estimated has probably been lost or destroyed. The amount outstanding June 30th, as shown by the books, was \$15,322,902, while the redemptions for the year were only \$7,123.

The importance of the service rendered by United States disbursing officers, who annually pay out the greater part of the moneys appropriated by Congress, is dwelt upon. During the year there were 11,000 accounts with these officers on the books of the Treasury, Sub-Treasuries and depository banks. The Treasurer renews the recommendations of his predecessors, that all of the postal revenues be deposited in the Treasury and be disbursed on the warrant of the Secretary, and that the payment of Speaker's certificates for salaries and mileage of members of Congress be devolved upon a disbursing officer.

Between the end of the fiscal year and October 31, the number of depository banks was increased from 200 to 220. At the latter date the Treasury held bonds of the market value of \$41,048,328 to secure \$31,767,478 of public moneys on deposit with these institutions, an increase of over \$9,000,000 in the market value of bonds held, and of a little more than \$8,000,000 in moneys secured for the period. The receipts of public funds by the banks during the year were \$128,482,769, making the aggregate from the beginning of the system little short of \$4,500,000,000. There was a decrease of \$84,008,100 during the year in bonds held to secure the circulation of National banks, leaving on deposit \$191,966,700, against which there was outstanding \$166,625,658 in National bank notes.

The public funds received during the year by National bank depositories amounted to \$128,482,769, and the total of such moneys intrusted to the banks since the commencement of the National banking system amounts to \$4,468,928,344.

The only losses suffered by the Government on this account since the present

system was adopted occurred over twenty years ago. Under the present method of Treasury supervision it is hardly possible for any losses to occur.

The early losses to the Government were caused by the failure of two banks, one in 1863 and one in 1864. These losses have been more than counterbalanced by the benefit derived from the increased conveniences for collecting and disbursing the revenues of the Government without incurring any expense for transportation to the Treasury and Sub-Treasuries, and also relieving the Government in many instances of the risk and expense of the transportation of funds to places where money was needed for the payment of its creditors.

A full statement of the other trusts confided to the Treasurer is given. The semi-annual duty collected from the National banks amounted to \$2,044,922, making an aggregate of \$134,637,076 since the organization of the system.

During the year there were presented for redemption National bank notes valued by the holders at \$87,689,687, the proceeds of which were \$87,213,266. The average annual redemptions during the thirteen years that the redemption agency has been in operation have been \$136,365,857.

The amount for the past year was less than in any other except the three beginning with 1880. The falling off in the demand for redemption is ascribed mainly to the contraction of the outstanding circulation. Of the receipts for the year, nearly 36 per cent. came from New York, 15 per cent. from Boston, and about 8 per cent. from Philadelphia. A little less than half the proceeds were remitted by transfer checks on the Assistant Treasurers, and about \$16,000,000 by shipments of currency, the remainder being paid over the counter or credited in account. Of the notes redeemed and assorted, \$20,786,640 fit for circulation were returned to the banks for reissue, and \$67,968,628 were delivered to the Comptroller of the Currency for destruction, of which sum \$30,506,080 was to be reissued and the rest retired. The banks deposited upward of \$75,000,000 to withdraw their circulation, an amount largely in excess of that for any previous year. The result was a net increase of almost \$38,000,000 in the balance of moneys held for this purpose, bringing the total to nearly \$98,000,000. The large increase in this fund is due to the retirement of the 3 per cent. bonds held to secure circulation. The expense of bank note redemption for the year was \$188,987, being \$29,276.35 less than in 1886. The decrease was mostly in express charges, which fell off from \$74,490 to \$48,020.

The amount paid for salaries was \$6,429.46 less than the appropriation. The rate of cost for the notes redeemed was \$1.58 6-10 per \$1,000.

A statement of unavailable funds, deficits and defaults shows an increase over last year of \$200, arising from the repayment of money erroneously applied to reduce the indebtedness caused by the failure of the Venango National Bank of Franklin, Pa.

The First Bank of England.—The first Bank of England is thus described by J. Travis:

In Grocers' Hall, since razed for the erection of a more stately structure, the Bank of England commenced operations. Here, in one room, with almost primitive simplicity, were gathered all who performed the duties of the establishment. "I looked into the great hall where the bank is kept," says the graceful essayist of the day, "and was not a little pleased to see the Directors, Secretaries and clerks, with all the other members of that wealthy corporation, ranged in their several stations according to the parts they hold in that just and regular economy." The Secretaries and clerks altogether numbered but fifty-four, while their united salaries did not exceed £1,350. But the picture is a pleasant one, and, though so much unlike present usages, it is a doubtful question whether our forefathers did not derive more benefit from intimate association with and kindly feeling towards their inferiors than their descendants receive from the broad line of demarkation adopted at the present day. It was unanimously resolved, in 1732, to erect a hall and office in Threadneedle street; and the site chosen for the new edifice was that of the house and garden of Sir John Houbton, first Governor of the bank. The structure was contracted for by Dunn & Townshend, after designs by Mr. George Sampson. On Thursday, August 3d, at one o'clock in the afternoon, the new building was commenced; a stone, on which the names of the Directors were placed, being made the foundation for one of the pillars. The building was occupied in 1734.

THE NECESSITY FOR A BANK CIRCULATION.

BY W. W. FLANNAGAN, CASHIER COMMERCIAL NATIONAL BANK, NEW YORK.

It seems a difficult task for any individual to combat an opinion entertained by a whole community, and yet sometimes such an opinion is held, because loudly expressed without opposition.

The general opinion seems to prevail that the financial stringency which pervades all departments of trade is due exclusively to an excessive Treasury surplus, and that this stringency would be entirely remedied by abolishing the internal revenue, or by a revision and reduction of the tariff, or both.

We have seen frantic appeals in the press to the Secretary of the Treasury to reduce the surplus by the purchase of bonds, and to be liberal in the prices offered. He is urged to get rid of his hoard by all lawful means, and to announce as his fixed policy his determination to hold no reserve beyond legal requirements. His response to these appeals in the offer to purchase \$14,000,000 bonds has given general satisfaction and was hailed with delight as indicative of a similar future policy.

We have presented, however, the anomaly of no complaint that the taxes collected by the Government are burdensome in themselves or difficult in the payment or collection, but that when collected they constitute such a large mass of idle capital as seriously to hamper the commercial energies of the country. If it be true that the payment of the whole amount of the annual revenue is not burdensome, only six cents per week per capita, as recently expressed by an eminent statesman, it must necessarily follow that the burden cannot come from the existence of the amount thus collected. An individual who collects from his debtors such small sums that they do not feel the payment would never be made to understand how they could complain, that the aggregate sum thus collected, in his hands, was ruining their business.

While I do not question the fact that a surplus government revenue, under a Sub-Treasury system which withdraws the circulating medium of the country from the channels of trade, thereby has a tendency to intensify and increase the evils of the present financial condition, I think a closer analysis of the situation will demonstrate that this is not the sole cause of the trouble, nor even the most important factor.

Indeed, this is proved by the fact that the surplus in the Treasury is less by twenty-five million dollars than it was twelve months ago, so that if the sole cause of the financial distress is a Treasury accumulation it would have been apparent then to a greater extent than now.

The relief lately tendered in the return of \$14,000,000 to the channels of trade must therefore be more in the belief that relief has been afforded, than in the fact that this amount can make any appreciable difference in the total circulating medium of the country.

A retirement of \$14,000,000 bank currency by the calling of bonds has had exactly the same effect upon the circulating medium as the receipt and holding of this amount by the Government in surplus revenue, and yet no one has ever claimed that the retirement of such an amount of currency could produce a financial crisis. Hence, *a priori* how can the return of this amount avert one?

We have had the withdrawal from the channels of trade of \$14,000,000 many times multiplied, by the forced retirement of bank circulation in the calling of the whole \$579,000,000, 3½ and 3 per cent. bonds, and now when the trade of the country, in being forced to adjust itself to this new order, congests and threatens ruin, the whole trouble is declared to be an excessive revenue, forgetting this has been for years our normal condition.

The difficulty is far more reaching than an excessive revenue; this can be remedied by a reduction, or, until the National debt is paid, by the application of the surplus thereto as fast as the surplus accrues. The real trouble is in the want of legislation as affecting the circulation—the forcing of all the commercial interests of the country

to base its medium of exchange on the National debt, and the retirement of this debt without the substitution of some other basis.

Mr. Flannagan next demonstrates that a bank circulation is a necessity and cannot be replaced without detriment to trade by fixed governmental issues. He says:

In all civilized countries the great bulk of trade and commerce is carried on by means of credit. Credit, indeed, may be called the corner stone on which civilization is erected. Every check drawn by an individual, every draft made by a bank, every bond issued by a Nation, State, municipality, railroad or corporation, every promise to pay of any description, whether on demand or in the future, is pure credit.

Banks and bankers are dealers in credits; they handle money as well, but the operations in credits form such a large proportion of the business of banking that it is strictly accurate to say they are dealers in credits; the money handled being only the reserve or foundation on which the business is conducted.

What is classified in a bank statement as "deposits" does not necessarily mean money therein deposited. On the contrary, a very small proportion of "deposits" represents money deposited. A deposit often is and usually arises from a mere exchange of credits; this exchange may be by checks or draft on some other banker, or it may be in the nature of a discount, as when the banker takes the "promise to pay" of his customer which he lists among his assets as "bills discounted," and gives in exchange therefor his "promise to pay," which he classes among his liabilities as "deposits." The result is the exchange of one credit payable in the future for another payable on demand. This "promise to pay" or credit, or deposit, when put into negotiable form, so as to pass by delivery without indorsement, is called bank circulation.

The Government has assumed control of this form of credit in negotiable form—the circulation—and has placed such restrictions around its issue as to make it impossible for the banks to avail of this most important and necessary function for the business interests of the country. It has legislated out of existence all bank circulation which supplied the medium of exchange prior to the passage of the National Bank Act, and has thrown around the National bank circulation such conditions that the volume is insufficient to meet the requirements of trade. These conditions were not felt by the business community when the Government debt was sufficient in form and amount to afford a satisfactory basis for the bank circulation, so that it might keep pace with the other forms of credit, which the increasing business interests of the country required; but now, with the payment of this debt, and consequently the withdrawal of this basis, it becomes necessary, either to repeal the legislation which destroyed the bank circulation, or else to provide some other mode by which this circulation may be continued.

Assuming that credits, in the form of deposits, can be made available only by the more active credits in the form of bank circulation, and that the greater the deposits the larger the amount of circulation required, Mr. Flannagan presents a table showing capital, deposits, circulation and money reserve of National banks at the three dates—January 1, 1866, January 1, 1879, and August 1, 1887. He comments as follows:

The most striking fact shown by this table is the wonderful increase in the deposits of the banks; an increase of seven hundred and eighty-five millions of dollars, or more than *one hundred and fifty per cent.* in twenty-one years!

Remembering that these deposits show not money, but credits which the banks may be called upon to convert into money, and then comparing them at the same respective periods with the circulation, which represents the limit of bank credits performing the functions of money, it will probably appear more plainly than before why the "money" market is so unsettled, why rates of interest are often unreasonable, and why the commercial business of the country is suffering, and merchants cannot get their usual bank accommodations, and why the "necessary money to move the crops" produces such wide-spread uneasiness from the financial centers.

If our statistics enabled us to compare all the banks of the country, State and private, condensed into one bank statement, we should have presented still more forcibly the necessity of an increased bank circulation. State and private banks furnish no circulation whatever, but they receive deposits, make discounts, and thus create credits which enter into the great mass of exchangeable values of the country.

There are upwards of nine thousand banks and bankers in the country, of which the National banks constitute about one-third in number. If we assume that the

other two-thirds have as much as an equal amount of deposits, and an equal amount of money reserve, then we shall have a total of exclusively bank credits of \$2,002,000,000, for the exchange and transfer of which we have only the same \$160,000,000 of bank circulation available. If we had a proper proportion of bank circulation to bank deposits in 1866 and in 1879, we should have at least \$500,000,000 of bank circulation in 1887, but in fact we have less by \$36,000,000 than in 1866, and less by \$131,000,000 than we had in 1879.

To avoid inflation, Mr. Flannagan would not permit any bank to issue circulation to an extent greater than 90 per cent. of its capital, and would require a proper basis of security. He contends that there is greater danger of inflation from Government issues than from the issues of banks. Government issues are inadequate, inasmuch as legal-tender notes have, necessarily, a fixed limit, and gold and silver certificates are but convenient substitutes for the coin, and do not partake of the nature of a credit circulation. He concludes as follows:

It is not the purpose of this paper to discuss a basis for a bank circulation, but it may be as well to make some suggestions, to be hereafter generally discussed and considered, if deemed worthy of consideration.

We think a satisfactory bank circulation may be had, which will meet all the requirements of trade, if Congress can be induced to pass a law, of which the following is a synopsis:

1. By utilizing silver bullion as heretofore suggested by the writer.
2. By the pledge of State, municipal and county bonds under certain limitations and conditions.
 - a. Bonds must be issued by a State, city or county, having taxable values under its jurisdiction, ten times the amount of its whole debt.
 - b. Interest must have been paid at maturity, and for five consecutive years previous to the pledge, or deposit with the Government.
 - c. The circulation must not be delivered to any bank in excess of 90 per cent. of the par value of the bonds deposited nor more than its capital.
3. The circulation to be a first lien on all the assets of the bank, to cover any deficiency which may arise from sale of bonds held as security therefor.
4. Tax arising from the circulation to be held as a guarantee fund for all creditors of insolvent National banks. To give flexibility, this tax to be at the rate of 1 per cent. per annum on amount issued by bank in excess of 75 per cent. of capital, $\frac{3}{4}$ of 1 per cent. on amount issued in excess of 50 per cent. of capital, and $\frac{1}{4}$ of 1 per cent. on amount issued in excess of 25 per cent. of capital.
5. In case of the sale of any bonds, held as security for the circulation of any insolvent bank, below 90 per cent. of the par value of said bonds, all similar bonds deposited by every other bank, if any, shall be retired, and satisfactory bonds or money deposited to the full extent of the circulation secured thereby.
6. All bonds accepted as security shall be first approved by a commission consisting of the Treasurer of the United States *ex-officio*, the Comptroller of the Currency *ex-officio*, and a bank officer selected annually by the American Bankers' Association in convention assembled.

The Use of Silver Certificates.—The Act of February 28, 1878, authorizing the coinage of the Standard silver dollar, also authorized the issue of silver certificates in denominations of not less than ten dollars. A section attached to the sundry civil service bill of July, 1886, authorized and required the Secretary of the Treasury to issue silver certificates in denominations of one, two and five dollars in exchange for larger certificates or on the deposit of silver dollars. On June 30, 1886, there were in circulation silver certificates in denominations of ten dollars and upwards \$115,977,675. On December 1, 1887, silver certificates amounting to \$169,621,629 were in circulation, showing an increase of \$55,643,954, of which increase \$52,083,192 consisted of certificates of the denominations of one, two and five dollars.

Of the certificates said to be in circulation on June 30, 1886, \$27,861,450 were held as cash by the Treasury Department itself, and only \$88,116,225 were actually in the hands of the people, whereas of the \$169,621,629 in circulation on December 1, 1887, \$168,149,274 were in the hands of the people, and only \$1,472,355 held as cash in the Treasury. As the total issue of one, two and five dollar certificates was \$52,083,192, the increase in the use of the certificates cannot be wholly ascribed to the Act of 1886 authorizing these small denominations.

FINANCIAL MATTERS IN CHICAGO.

[From the JOURNAL's Chicago Correspondent.]

More than the usual interest attaches to financial affairs in Chicago during the month of December. The same influences in the money market that have been noted elsewhere in the country have been manifest here; but at times they have seemed to have more effect than in New York. An incident of the money stringency was the circulation of reports in regard to the condition of certain Chicago banks. It may be stated unequivocally that there is no institution in the city which can be properly called a bank, that is in any danger of failing. The pressure on our lenders for money has been very heavy, and they, like lenders elsewhere, have tried to meet the demand as completely as possible. One or two of them have probably loaned more than they ought; but they have not gone to the danger point. Two institutions were found a little below the reserve line when the call of the Comptroller of the Currency came; but that is a sort of thing that frequently happens in the reserve cities.

The banks have had a remarkably prosperous year. It is believed that the First National has earned \$800,000 on its capital stock of \$3,000,000. The National Bank of Illinois, which has heretofore paid 8 per cent. on its stock, will pay a semi-annual dividend of 5 per cent. the 1st of January, and carry \$50,000 to surplus account, after charging off everything that is doubtful. The surplus will then amount to \$500,000. First National stock is selling at 247½. National Bank of Illinois is offered at 190. Union National is offered at 175, and so is Metropolitan National. The latter is one of the new institutions of the city, but has been very successful. There are three or four small institutions which have been organized within a year and a half that are said to be doing a fair business; but it is not so easy for a new bank to get ahead rapidly as it was before the American Exchange National got involved in the Harper wheat deal.

There is little doubt that Columbus R. Cummings will resign the Presidency of the Union National Bank soon, and will be succeeded by J. J. P. Odell, now the Vice-President. Mr. Cummings' health is poor, and he is thought to be engaged in placing his affairs in such condition as to give him little trouble. He is prominently identified with the Gas Trust and with a number of railroads. Other changes in the personnel of the banks will not be important.

All the members of the Chicago Clearing-House have signed a petition to the Secretary of the Treasury, asking that the United States Sub-Treasury in this city be made a member of that organization. The petition was placed in the hands of Congressman Adams, who has turned it over to the Secretary. The bankers want the Sub-Treasury in the Clearing-House for the same reason that they want themselves or any important banking institution there. That is the way exchanges among banks are made these days, and they see no reason why the Government should not place itself in line with the best business methods of the time. It is merely a matter of making the transfer of money easy and convenient. Great annoyance has often been experienced by our bankers by the delay in paying and receiving. They argue, too, that the connection of the New York Sub-Treasury with the Clearing-House has worked well, and they do not see why the same thing should not be true in Chicago. No reply has been received from the Secretary of the Treasury; but intimations have come out that he seriously objects to granting the request.

Bankers complain that there is considerable increase in the number of forgeries of drafts coming in from other banks. Several have recently been thrown out, and the evil is thought to be due to carelessness on the part of lithographers in giving out samples of their work. Good bankers say that no lithographer has a right to give anybody samples of drafts he has made for banks unless those samples have some mark on them which would prevent them from being used for improper purposes. It is probable that the bankers of this city will take some concerted action on the subject.

The stringency of the money market has been seriously felt here at times during the month. An active speculation in grain sprang up the latter part of November, and Board of Trade men who for months had been conspicuously absent from the money market came on their bankers with a rush. There was not a great deal of grain to be

carried in the city, but vast quantities of capital were needed on account of grain stored in other cities of the West and in the country elevators. Scarcely a point in the West where grain is stored can be mentioned that did not make requisitions on Chicago for financial help. Bankers soon had to make it a rule that they would lend to nobody but their regular customers, and the charge to them would be 7 or 8 per cent., according to circumstances. Meanwhile the country bankers were sending in paper for rediscount in large quantities and the packers were making their usual demands. Many of those persons who could not get accommodations at the banks went to the brokers, and the hoards of private capitalists were heavily drawn on. It was not a question, in many instances, what the rate was, but whether the money could be had. As high as 9 and 10 per cent. was paid, and even at these rates there was a profit in carrying wheat in the country elevators. Loans were made to run as late as the 1st of May. All these demands came at a time when the merchants were needing more than usual. The trade of the city has been large; but collections were not all they should have been, and traders who had expected to be out of the market on account of remittances from their country creditors have to be carried along by their banks. The note-brokers drove a lively business because there were many country bankers who would not lend on grain receipts in Chicago, and yet were very glad to avail themselves of the high rates on the notes of good merchants. Towards the close of the month the market showed signs of getting easier, and it was expected that by the middle of January there would be an abundance.

Of course, Eastern exchange was at a discount most of this time. Orders were frequently sent to New York for currency, and large quantities of gold were received. The shipments to the country towns were meanwhile pretty free. Of late, exchange has been stronger, sometimes selling at par. This is due mainly perhaps to the demand for the account of corporations making remittances to New York to pay interest and dividends.

The trade in local securities has been very unsatisfactory, as indeed it has been the whole year. The gas companies have been involved in a quarrel with the city on account of the monopoly held by them and the danger that they will abuse their opportunities. Negotiations for a settlement are, however, apparently near conclusion; and it is thought that, with gas at \$1.20 per thousand feet, the public will be satisfied, and the companies will get a fair return on their investment. There is a report that a dividend of 2 per cent. will be declared on the Gas Trust certificates in January or February. There has been an advance of 3 or 4 per cent. in the price of the certificates, which are now marketable at about 40. The certificates have been placed on the free list of the New York Stock Exchange. The huge operations of the Philadelphia syndicate in our street-railway properties will, in a favorable condition of the money market, lead to a large trade in securities the coming year. The cabling of the North Side Road is nearly completed, and work on the West Side Road will begin in the spring. Something like \$20,000,000 is involved in the operations of these companies. The North Side Company will refund about \$1,000,000 of 6 per cent. bonds, as soon as the money market is favorable, at $4\frac{1}{2}$ per cent. The Chicago City Railway Company has executed a mortgage for \$6,000,000 on its property, which will cover the \$4,000,000 of $4\frac{1}{2}$ per cents. now out, and allow the issue of \$2,000,000 more. The company will issue \$1,000,000 of new stock early next year.

Our speculators have recently done very little in the New York stock market, partly because they have been greatly interested in operations on our Board of Trade and partly because they saw no chance for much profit in stocks. The feeling is decidedly in favor of lower prices. The cutting down of the freight rates of the Western roads will work a great reduction in their income, and Chicago cannot see anything to counteract the natural effect of such a reduction on the list. It is believed that quite a large quantity of investment stock has been sold out by Western people in the last few weeks. Rumor has it that N. K. Fairbank and Samuel Allerton have sold Chicago & Northwestern freely. Reports have been afloat of considerable sales of Rock Island, and Chicago, Burlington & Quincy; but they are probably exaggerated.

The condition of the farmers is a matter of more than usual curiosity. The advance in wheat has been of but little advantage to them, except those who speculate, as it came after a considerable proportion of the grain had left their hands. Collections in the farm regions are not particularly good; but they are expected to be better after the middle of January.

H. C. B.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Newfoundland Government Savings Bank.—The profits of this institution are used to pay the increase the sinking fund created to pay off the public debt. In 1885 the deposits amounted to \$1,790,054, though there was a slight decrease since that date.

Counterfeiters Arrested.—Two counterfeiters were recently arrested at Mill Creek, Luzerne County, Pa. They had their apparatus in the cabin of an old boat at Mill Creek. A full and complete set of counterfeiters' tools, molds, dyes, leads, etc., were found, and a lot counterfeit coin.

The German National Bank, Little Rock, Ark., has been in existence only two years and nine months. During that time it has returned to its stockholders \$60,000 in dividends and has, besides, \$57,000 credited to surplus and profit account. This, on a capital of \$200,000 shows good, practical banking.

Banks and Real Estate Investments.—The banks at St. Paul, Minn., were accused of assuming an attitude hostile to real estate investments. An investigation of the matter shows that the banks of that city were as well inclined toward the real estate men as toward any other class of customers.

Important Change.—On January 1, the Duluth National Bank and Union National Bank, of Duluth, Minn., consolidated, with a paid-up capital of \$1,000,000. Luther Mendenhall is President and H. A. Ware, Cashier of the new bank, which is now one of the strongest institutions in the Northwest.

A Defaulter Comes to Grief.—Broker Roberts, who fled from Baltimore after embezzling some six hundred thousand dollars from the estate of which he was trustee, soon used up the money which he took with him in unfortunate speculations. He afterwards entered into partnership with a man from New York in the bucket shop business, and the new partner robbed him of the remainder of his money.

The Stock Exchange Bank, Caldwell, Kans., is a staunch friend of the JOURNAL. In renewing subscription for '88, Mr. Jno. W. Nyce, Cashier, writes: "We are more pleased than ever with the JOURNAL and think it grows better with each issue. *We cannot do without it.*"

And the above voices the sentiments of thousands who know and appreciate the value of our publications.

The Middlesex Banking Company, of Middletown, Conn., is chartered to do a banking business, and is subject to semi-annual examination by the State Commissioner. It also offers for sale debenture bonds that are guaranteed by it, and which possess this advantage that the amount so guaranteed is limited by its charter. Investors who wish to feel absolutely secure would do well to examine the securities and business methods of this company.

Spreading Out Bank Notes on the Grass to Dry.—A miserly old farmer in the oil region of Pennsylvania kept about \$60,000 in bank notes in a box in his house. On examining them one day he found that they were getting mouldy. Next day he spread them out on the grass to dry, watching the treasure with a shot gun. This incident being noised abroad, an attempt was made by an organized gang of thieves to rob his house, but the farmer, assisted by his two daughters, drove away the robbers.

United States National Bank, Omaha, Neb.—This bank occupied its new building on November 26th, last. The building is a beauty both in design and finish, being built in what is known as the modern Romanesque style of architecture. It is six stories high and thoroughly finished. The bank is the oldest institution of the kind in Omaha, having been established in 1856. In 1883 it was reorganized as the United States

National Bank. Its conservative policy has gained for it a reputation of which any bank might feel proud.

Currency and the Prices.—Mr. David A. Wells, in the October number of the *Popular Science Monthly*, shows that while the prices of commodities are generally lower than at any time within the present century the fall cannot be attributed to the demonetization of silver. The facts adduced by Mr. Wells indicate that the fall in prices is to be ascribed to the enormous increase of supply with economies in production and transportation effected through the improved appliances of steam and by mechanical invention.

Origin of Term "Bucket Shop."—Bucket shops originated in this way: In former years in all seaport towns there were places where you could only buy a cargo of grain, either in dock or on passage, but no small quantity. Seeing this, smaller places opened, who would buy a cargo and sell any smaller amount, and inside the counter they had the samples all ranged in buckets. When option trading came into vogue, the Boards of Trade would not trade in anything under 5,000 bushels, so the necessity of the hour called our bucket shops of to-day into being.

Beach's Interest Tables, for sale at this office, and advertised in the *JOURNAL*, is highly spoken of by the *New York Journal of Commerce*. In answer to a question as to the shortest way of computing interest on a certain sum, that journal says: "The 'shortest way' is to purchase the invaluable little book of Mr. O. M. Beach, which has tables for all such calculations. It ought to be in every banking room and counting house. That \$21.33 (and not \$20.78) is the correct answer to the question, is shown by adding to it six months' interest, then deducting \$2.50 and adding six months' interest on the remainder, with a similar reduction for ten terms. It will prove to a cent."

Protecting the Bank of England.—The doors of the Bank of England are now so finely balanced that a clerk, by pressing a knob on his desk, can close the outer doors instantly and they cannot be opened again except by special process. The bullion departments of this and other banks are submerged every night several feet in water by the action of machinery. In some banks the bullion department is connected with the Manager's sleeping-room, and no entrance can be effected without setting in motion an alarm. It is said that if a visitor should happen during the day time to knock one half sovereign off of a pile the whole pile would disappear, a pool of water taking its place.

A Missing Package.—It is said that the death of Col. Theo. Meumann, who was the Cashier of the East St. Louis Bank, Ill., was hastened by the disappearance of a package containing six thousand dollars. About a year ago, on opening the bank, in pursuance of his usual duties, he took funds out of the vault and placed them on the table for use during business hours. Among these funds was a package containing six thousand dollars, which in some way disappeared during the day. No doubt is entertained of the honesty of Col. Meumann, but he was legally responsible for the loss. It is said that the worry and annoyance consequent on the disappearance of the package, which has never been explained, hastened his death.

Bill Introduced by Senator Farwell, of Illinois.—Senator Farwell has introduced a bill providing for the issue of National bank circulation on the basis of railroad and municipal bonds. The banks are to be permitted to issue circulation to the extent of 50 per cent. of the approved railroad bonds deposited and to the extent of 75 per cent. of the municipal bonds. The defect in the bill, as stated by Mr. Lyman J. Gage, of the First National Bank of Chicago, is that it would lock up money instead of furnishing additional circulation. A bank depositing \$100,000 in railroad bonds would only be permitted to issue \$50,000 in circulation. In order to start such a bank the stockholders would have to invest \$100,000 in railroad bonds. Instead of \$100,000 in cash the shareholders would, after buying the bonds and starting the bank, have only \$50,000, having thus reduced their available cash means by \$50,000.

Report of the Secretary of State of Ohio.—The statistics relating to incorporated companies in this State show that during the year ending November 15, 1881 articles of incorporation were filed—the aggregate amount of capital stock on November 15, 1887, being \$160,712,475, as compared with \$108,118,960 for the year 1886. The Secretary recommends a revision of the present banking laws of the State. He

states that there is an increased desire on the part of bankers to incorporate under the laws of the State, and that this is the result of the rapid decrease in the National debt and the consequent reduction of profits on National bank circulation. On this account many National banks desire to surrender their charters under the National law and incorporate under the State system. He recommends that the free banking law of 1851 and other obsolete and un repealed laws of the State of Ohio be thoroughly revised.

Maine's Savings Banks and Trust Companies.—We are indebted to Mr. Fred. E. Richards, Bank Examiner, for a copy of the Thirty-first Annual Report of the Savings Banks and Trust Companies of Maine. The number of savings banks has increased to fifty-five, representing, on November 1st, last, 119,229 depositors, with deposits aggregating \$38,819,648. The total reserved fund now amounts to nearly \$1,500,000. Three new trust companies have been organized, and report a prosperous business. Considerable space is devoted to the Loan and Building Associations, the great advantages of which are clearly shown by the Examiner. The Report concludes by comparing the present condition of the banks with that of eight years previous, and states that "the character of their assets, as a whole, has improved to a degree that hardly admits of comparison. In eight years the savings banks have paid to the State for taxes on deposits \$1,008,000, and paid dividends to depositors amounting to \$9,098,000. The record speaks for itself."

Mr. Pierrepont on Silver.—The Hon. Edwards Pierrepont has addressed a letter to Senator Beck, of Kentucky, in which he undertakes to settle the silver question. As a sample of the queer reasoning indulged in by Mr. Pierrepont, the following is quoted: "Some tell us that we ought to stop the coinage of silver, because they say that the intrinsic value of the silver dollar is worth less by 80 per cent. than the gold dollar. This is an entire mistake. In 1851 the silver dollar of the exact weight and fineness as now was at a premium of 8.42 per cent. above the gold dollar, and for a period of forty years next prior to 1873 it was continuously at a premium; and in 1851 the gold in the world, in proportion to silver, was far less than it is to-day. Was the intrinsic value of 100 cents of silver in 1851, 8.42 per cent. more than the intrinsic value of 100 cents in gold? The legal value of a five-pound Bank of England note is five gold sovereigns—the legal value of a ten-dollar greenback is a gold eagle. But the intrinsic value of the English bank note and the American greenback together is nothing; their only value is a value imposed by law—a fiat value—there is nothing intrinsic about it. By far the chief value of all coins is fiat value."

Manhattan Company Bank.—The story of the manner in which the charter of the Manhattan Company was obtained by Aaron Burr from the Legislature periodically appears in the daily press. Popular belief at the time was that the charter was surreptitiously obtained by Aaron Burr under the guise of a bill authorizing a company for furnishing New York city with water. The bill for the charter provided that the company might employ a certain amount of capital, using as much as was necessary for the purpose of supplying the city with water and the remainder in making loans, etc. Aaron Burr always denied that there was anything underhanded in the measure, and in fact before it became a law it was passed on by the Board of Revision of the State of New York, which, it is said, well understood that the charter included a provision which really authorized the company to do a banking business. It has been denied that the Manhattan Company ever furnished water for the city of New York, but this is a mistake, as the company did supply the city for many years until the opening of the Croton Water Works about the year 1840.

Silver Scheme.—Senator Beck, of Kentucky, has introduced a bill which provides for the retirement of legal-tender notes of denominations below \$10 and above \$500, of National bank notes below the denominations of \$10 and above \$500, and of gold and silver certificates, and in place of the bills retired he proposes to issue coin certificates in denominations not exceeding \$20, based upon all gold and silver coin and gold bullion held by the United States in excess of one hundred million dollars in gold coin. This bill would effect a great contraction of the circulating medium, as it would cause the retirement of about one hundred and fifty millions of legal-tender notes and about seventy-eight millions of National bank notes, not to mention the gold and silver certificates. The object is to endeavor to destroy all distinction between gold and silver and to make the new certificates redeemable in either. If the one hundred and fifty millions of legal-tender are to be retired this can only be done by redemption

in gold, and how the Government is to effect this retirement and substitute coin certificates without causing difficulty in the money market does not appear.

Texas Banking Enterprise.—On the first day of January the North Texas National Bank, at Dallas, opened its doors for business. This is the largest banking institution in Northern Texas, if not in the entire State. Its capital—\$500,000—is fully paid up, and actual subscriptions to the stock exceeded that sum by about \$100,000. The Directors, who are representative bankers and merchants, not only of Dallas, but nearly every section of the State, are as follows:

J. S. Fowlkes, President First National Bank, Bryan, Texas; T. R. Bonner, of Bonner & Bonner, bankers, Tyler, Texas; J. N. Rushing, President Callahan County Bank, Baird, Texas; G. A. Foote, President, Collin County National Bank, McKinney, Texas; P. T. Morey, wholesale hardware, Belton, Texas; Robert Gibson, President Howard Oil Company, Dallas and Houston, Texas; C. H. Sawyer, John T. Gano, S. J. Howell, G. H. Schoelkopf, B. Blankenship, Henry Exall, F. R. Malone, J. T. Elliott, H. C. Armstrong, Joe M. Dickson.

The officers are: B. Blankenship, President; Henry Exall, First Vice-President; S. J. Howell, Second Vice-President; F. R. Malone, Cashier; Paul Furst, Asst. Cashier.

Col. Henry Exall, First Vice-President, is widely known as President of the Texas State Fair and a public-spirited man. It will be remembered that he represented the Texas Bankers' Association in the late Convention of the American Bankers' Association at Pittsburgh. Mr. F. R. Malone, Cashier, was until recently President of the First National Bank, Lampasas, Texas.

With such experienced men at the helm there can be no doubt that the North Texas National Bank has a brilliant and prosperous future before it. Attention is directed to the bank's advertisement in this issue of the JOURNAL.

The United States Secret Service.—Hon. J. J. Brooks, Chief of the Secret Service, in his annual report, states that the arrests made during the past year number 855, the great majority being of persons manufacturing and passing counterfeit coin; 42 were arrested for counterfeiting or altering United States notes or bonds or Canadian notes; 13 for presenting fraudulent claims, and others for a variety of offences; 70 of the persons so arrested have been convicted and sentenced; 91 await the action of the grand jury; a number of others have been convicted and await sentence; 80 were acquitted, and about 60 discharged by United States Commissioners or attorneys. The fines imposed by Court aggregate \$11,850. The sentences aggregate about 220 years.

Chief Brooks notes that Italians continue this year, as last, to occupy the forefront of foreign-born people as counterfeiters in this country, their percentage being as 1 to 150 of citizens of foreign birth. As to counterfeit coins, the Chief considers none of them unusually dangerous. In regard to counterfeit notes, he says, during the last fiscal year not a new counterfeit of any merit has appeared, as those put afloat were of the worst possible description, having little resemblance to the Government issue, but seeming to be the joint production of a jack-knife and stencil brush. In connection with this, he says, that of all the skilled counterfeiters who, since the war, have troubled the public, but two are known to be imprisoned in the United States, and that with so many at liberty with restive minds and enervated wills, it is natural to look for productions from some of them; but that it is a matter of congratulation that up to the present time they have not appeared. The Chief accounts for this for the reason—

- 1st. That the excellence of the work on Government issues is a preventive.
- 2d. The certainty and severity of the penalty following detection and conviction.
- 3d. The recognized faithfulness of the agents of the Secret Service by the criminal classes, together with their long and great experience.

The Chief refers to the other branches of service of his division, and recommends that the area of service be enlarged so as to enable the agents to do work for which no provision has been made, and which would involve no additional expense.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— There is a call for a bank at Webberville, Mich.

— When money is tight it is always locked up—the same as a man.

— A dispatch from El Paso, Texas, shows that during the month of November 6,722 tons of silver ore, valued at \$340,135, were imported from Mexico. The total

importations for the past eleven months were 40,476 tons, as against a total of 23,045 tons for a similar period in 1886.

- Sterling, Kans., is to have a new bank with \$50,000 capital.
- Eastern capitalists will soon open a new bank at Florence, Kans.
- It is rumored that a bank will soon be opened in West Lincoln, Neb.
- The first bank of China will probably be organized by German bankers.
- The Bank of Wakefield, Mich., was destroyed by fire on December 28th.
- A National bank is projected at White Plains, N. Y., with \$100,000 capital.
- A large number of \$3 silver certificates altered to \$5 have recently appeared.
- The Traders' Bank of New Orleans, La., has been recently opened for business.
- S. Levy, Jr., of Shreveport, La., has just completed a three-story banking house.
- Mr. M. F. Dooley has been appointed National Bank Examiner for Connecticut.
- The Sturgis National Bank building at Hillsboro', Tex., was burned on December 30th last.
- The Governors of the Stock Exchange have decided to abolish trading for the account.
- Confederate money has very recently been passed for genuine Greenbacks in California.
- W. W. Corcoran, the veteran banker of Washington, D. C., recently attained his 90th year.
- It is estimated that the population of the United States is now a little over sixty millions.
- Citizens of New Rochelle, N. Y., are agitating the question of starting a National bank.
- Mr. W. D. Snow has resigned as Secretary of the American Loan & Trust Co., New York city.
- The banks of Des Moines, Iowa, organized a Clearing-House in that city on November 17th last.
- Billings & Elder are reported as at the head of a company to organize another bank in Duluth, Minn.
- Hutchinson, Kansas, claims a gain in population during the past year of over one hundred per cent.
- The Boston Stock Exchange has leased quarters in the new Porter Syndicate building on State street.
- The building of the First National Bank of Hastings, Neb., was destroyed by fire on November 17th last.
- Frederick L. Wing, of Conway, has been elected Cashier of the First National Bank of Ashburnham, Mass.
- The Merchants' National Bank of Omaha, Neb., has been designated as a depository of public money.
- The banks in Manitoba charge 2 per cent. discount on American currency and 5 per cent. on American silver.
- There does not appear to be much prospect of passing a National bankruptcy bill at this session of Congress.
- Minneapolis, Minn., is to have another bank styled the Eighth Ward Bank. A \$30,000 building is being erected.
- It is reported that a new Scandinavian-American National bank is being organized in Minneapolis, Minn.
- It is reported that Mr. J. B. Watkins will soon establish a National bank, with \$250,000 capital, in Lawrence, Kans.
- The Southern Loan & Investment Company, with \$150,000 capital, is reported as recently incorporated at Rock Hill, S. C.
- The last of the trade dollars redeemed by the Government have been melted up ready for transformation into other coin.

— The vaults for the storage of silver in the north court yard of the Treasury building at Washington are now ready for use.

— An exchange says that C. N. Jordan, of the Western National Bank, is invariably pleasant and courteous to all who call upon him.

— An unsuccessful attempt was made to burglarize the Ballston Spa (N. Y.) National Bank. One of the burglars was captured.

— A number of bills have been prepared for introduction in the House of Representatives providing for free coinage of silver.

— The Dime Savings Bank of New Brunswick, N. J., has paid a final dividend of 20 per cent. The depositors had already received 50 per cent.

— The depositors of the Fifth National Bank of St. Louis feel very little hope that they will receive payment of the amounts due them in full.

— Judge Clement, of the Brooklyn City Court, has recently decided that a seat in the New York Stock Exchange is liable for its owner's debts.

— President Geo. F. Baker, of the First National Bank of New York, has been elected a Director of the Lake Erie & Western Railroad Co.

— It has been remarked that the trust companies are now getting the business of settling estates, which was formerly in the hands of lawyers.

— The report of the Bank Examiner for the State of Maine for 1887 shows an increase of \$1,604,571 in deposits in the Maine savings banks.

— MacNeally, who robbed the Savings bank at Saco, Me., has been released from custody. There was hardly any use in arresting him at Halifax.

— The State of Tennessee was recently compelled to borrow \$240,000 from the banks of Memphis to meet the interest on the public debt of that State.

— The corporate existence of the National Security Bank of Boston has been extended by the Comptroller of the Currency to November 22, 1907.

— The private bankers of Minnesota met at Minneapolis, December 18th last, perfected a State organization and adopted a constitution and by-laws.

— Barker Brothers & Co. are said to be the oldest banking house in Philadelphia, retaining the original firm name, under which they began business in 1840.

— The First National Bank of Logansport, Ind., has brought suit against the Receiver of the Fidelity National Bank of Cincinnati to recover \$48,441.

— A quantity of spurious quarters and fifty-cent pieces, as well as one and two dollar Dominion notes, have been put in circulation at Winnipeg, Manitoba.

— The Maverick National Bank, of Boston, Mass., has recently issued an interesting manual upon the commercial development of electric lighting in this country.

— A dividend of 10 per cent. has been paid to the depositors of the Merchants, Farmers & Mechanics' Bank, of Chicago, locally known as the Old Bee Hive Bank.

— Janitor Baker, of the National Bank of Wilmington and Brandywine, at Wilmington, Del., is 96 years old, and has held his position in the bank for 66 years.

— Harper says it is pretty hard to serve ten years for doing what nine-tenths of the bankers of the country are guilty of every day. Harper is inclined to exaggerate.

— It is rumored (according to *The Enquirer*) that the Queen City National Bank and Cincinnati National Bank, of Cincinnati, Ohio, will consolidate early in January.

— The building of the First National Bank of St. Peter, Minn., was destroyed by fire. Their safes proved reliable, and neither the books nor the cash were injured in the least.

— Some of the bills of the Western National Bank, New York city, are signed by Conrad N. Jordan as Treasurer of the United States, and also by him as Cashier of the bank.

— It is stated that the suspension of the Central Bank of Canada was due to the action of the Bank of Montreal in calling in large sums of money and raising the rate of discount.

— Another bank has been organized in the upper portion of New York city, styled the Bank of Harlem. It is a State institution, with \$100,000 capital, located on One

Hundred and Twenty-fifth street, near Eighth Avenue, and will open for business in January.

— The Flushing and Queens County Bank, of Flushing, N. Y., will soon move to Hunter's Point, Long Island City, which will in future be its head office, with a branch at Flushing.

— After the suspension of the Central Bank of Canada there were indications of a financial panic in the Dominion. Stocks declined heavily and several wholesale dry goods firms failed.

— The United States Trust Company, finding their present accommodations insufficient for the transaction of business, propose to erect a new building on lots 45 and 47 Wall street.

— There is to be a new bank in Harlem called the Hamilton Bank of New York city. It will be located at the corner of Eighth avenue and 125th street, and will have a capital of \$200,000.

— The Comptroller of the Currency has declared a first dividend of 50 per cent. in favor of the creditors of the National Bank of Sumter, S. C., on claims proved amounting to \$71,265.

— On November 17th last an attempt was made to rob the First National Bank of Nephi, Utah. The Cashier, Mr. Alma Hague, made a successful defence and drove the robbers from the bank.

— The Comptroller of the Currency has recently declared a dividend of 10 per cent. in favor of the Logan National Bank of West Liberty, O., making in all 50 per cent. on claims proved, amounting to \$80,698.

— J. E. Houtz has retired from the Presidency of the First National Bank, Lincoln, Neb. His successor is Nathan S. Harwood. Frank M. Cook, formerly of the Beatrice National Bank, is Assistant Cashier.

— W. S. McCornick, of the firm of McCornick & Co., of Salt Lake City, and President of the Salt Lake Chamber of Commerce, recently met with a severe accident, breaking his right leg and two ribs.

— The Commercial National Bank of New York city has declared a 3 per cent. dividend, payable January 5th. An interesting paper on "Bank Circulation," by Cashier Flannagan, appears in this issue of the JOURNAL.

— The Comptroller of the Currency has declared a dividend of five per cent. in favor of the creditors of the Marine National Bank, of New York city, making in all 55 per cent. on the claims proved, amounting to \$4,474,197.

— The West Michigan Savings Bank, Bangor, Mich., declared a 5 per cent. semi-annual dividend on December 19th last. The Cashier, Mr. A. B. Chase, reports that "this year has been one of the busiest since 1878, in banking."

— The bucket shops have been closed in Philadelphia. On December 8th last the police raided five of them and arrested seventeen people. The warrants in each case charged the offenders with maintaining gaming establishments.

— There are four great accumulated masses of gold in the world: \$282,000,000 in the United States treasury, \$237,000,000 in the National Bank of France, \$107,000,000 in the National Bank of Germany, and \$100,000,000 in the Bank of England.

— The Bank of Mayville, Mich., of which Eveland, Knickerbocker & Co. are proprietors and H. Knickerbocker, Cashier, occupied their new bank building about November 15th, '87. It has been equipped with all modern improvements.

— The man in New Brunswick who found and carried away a pot containing \$400,000 in gold would be a good person to lift the National debt, as the weight of the gold was one-seventh of a pound under seven tons.—*Pioneer Press*, St. Paul.

— A letter in the London *Times* states that as a result of the work of one hundred men for several months near Dongally, Wales, two thousand five hundred tons of ore have been stamped, which, it is estimated, will yield six ounces of gold to the ton.

— It is officially stated that the New Hampshire savings bank returns in January will show a large increase in deposits for the last part of the year. Investments in Western farm lands are growing less, although 25 per cent. of the deposits are of this class.

— The late Daniel Manning, ex-Secretary of the Treasury, left an estate of about \$250,000, consisting chiefly of bank-stock, gas, electric and street-railway company stock, besides three fine houses. He also owned a controlling interest in the Albany (N. Y.) *Argus*.

— The Italian merchants of New York city recently held a meeting, and effected an organization, for the purpose of organizing an Italian Chamber of Commerce. Another project is to establish a bank to facilitate the business transactions of Italian merchants. The bank will be subject to the control of the National Bank of Italy.

— The Chinese Government is making extensive preparations for the coinage of silver. Some silver advocates regard this as likely to create a heavy demand for silver and advance its price. The coinage of silver by the Chinese Government does not indicate an increased use of the metal, but only a change of the form in which it is used.

— H. J. D. Miner, a leading banker at Dunkirk, N. Y., and who has for a number of years had control of the H. J. Miner Bank of that place, recently made an assignment. There were between six and seven hundred depositors in the bank, and there is about \$320,000 due them, of which they will doubtless receive but a small percentage. Miner is in Canada, living in good style in Toronto.

— The report of the Ninth Avenue Bank to the State Banking Department, at Albany, on December 17th, indicates, it is said, an impairment of \$68,000 in its capital, caused by loans made by Cashier Hubbard, which are partly secured by mortgages on real estate. He says that the stockholders have been called upon to make good the amount of the impairment by March 1st. If they do so, the doubtful loans and securities held therefor will be turned over to them.

— The validity of the Chicago Stock Exchange has been questioned in the Courts. In 1869 an organization known as the Chicago Stock Exchange was chartered by the Illinois Legislature, which ceased doing active business in 1882. The present Stock Exchange is another corporation which, the plaintiffs in the suit claim, usurped the name without authority. On the other hand, the incorporators of the present Exchange claim that the charter granted by the Legislature was forfeited by non-user.

— Mr. Stewart's bill for the issue of coin certificates, based upon deposits of gold and silver bullion was recently discussed in the Senate. The bill permits deposits of gold and silver bullion to be made at any mint or assay office in quantities not less than 5 oz. of gold or 80 oz. of silver. In reality it makes 5 oz. of gold equal to 80 oz. of silver, and thereby establishes a relation of the two metals about 16 to 1. The bill also repeals the Act of February, 1878, requiring the coinage of a certain amount of silver dollars.

— The prospects of the Great Chinese-American Bank, as proposed to be organized by Count Mitkiewicz, are very dim. It appears that the Count obtained the agreement from the Chinese Government by representing that he was the accredited agent of Mr. Cornelius Vanderbilt and the United States Government—that is, the Chinese Government virtually entered into the agreement with the understanding that Vanderbilt would consent to become President of the bank and the United States Government would recognize the institution.

— The assets of the National Bank of the State of Missouri have turned out to be worth more than they were supposed to be. On October 20, 1879, an assessment was made on the stock of the bank. Since that time the creditors have been paid in full, with compound interest, and there remains a considerable amount of assets to be returned to the stockholders. Spite of the efforts of the Comptroller to have the stockholders elect an agent to take care of the assets, they prefer to have the affairs of the bank remain in the hands of the Receiver.

— The *New York Commercial Bulletin*, in an article entitled "Fiat Money," refers to a pamphlet recently published by the Hon. Edwards Pierrepont, in which the very key-stone of his argument is the assumption, "The chief value of all coin is fiat value; that is, a value imposed by law." The *Bulletin* characterizes Mr. Pierrepont as a relic of the financial past, and says "nowhere on earth has gold coin greater value than that of the bullion which composes it to any material extent, and nowhere has it less value to any discoverable extent. On the face of things it would seem that Mr. Pierrepont has been making an assertion entirely destitute of foundation."

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

PRIVATE BANKS AND CORPORATE NAMES.

In the December JOURNAL, we referred to the law passed by the last Legislature of Minnesota, which compels private banking institutions to do business under their own name, and not use a bank title or hold themselves out to the public as incorporated. The following, from an Iowa correspondent, shows how they look at it in that State:

BANK OF HEDRICK,
(Not incorporated),

Editor Rhodes' Journal of Banking:

HEDRICK, Iowa, December 17, 1887. }

I have just read the opening article in the December JOURNAL, and send you one of our note-heads to show how banks differ as to the private or incorporated bank. We use the form of the corporate title for convenience, but take the precaution to state in our statement that we are not incorporated. We do this for two reasons: (1) We are *not* incorporated, and do not wish to lead anyone to suppose that to be true which is not. (2) To incorporate, or lead our home patrons to think we were incorporated, would hurt, to some extent, our credit.

J. T. BROWN, *Cashier.*

The idea is a good one, and we can see no reason why private bankers generally should not adopt it.

METHOD OF PROTECTING CASH.

Editor Rhodes' Journal of Banking:

SIR:—I see that the mysterious robbery of the Union National Bank, of Duluth, Minn., has been cleared up, the thief proving to be a clerk who dodged into the vault while the Cashier's (or Teller's) nose was buried in his newspaper. While I was Paying-Teller of a large Eastern bank I prevailed on the Cashier to hang a wire door inside of the fire doors of the money vault, and for this door there were but four keys, one each for the President, Cashier, Assistant Cashier and myself. The officers sneered at this as an unnecessary precaution and cause of delay, but before six months they were as ready as myself to find fault if the door was left open, and no book-keeper or other employe was allowed to go into this vault unattended.

My key was fastened by a snap to my vest, as I had the most use for it and was in the greatest hurry.

I also introduced there an original system for dividing the care of the cash between the President and myself. Our President was in the habit of keeping a large part of the cash—say two-thirds—in an inner chest of one of the money safes. When I accumulated cash I gave him some, and when I found my till getting low I called on him; but he frequently disagreed with me as to the amount I charged him with, and this necessitated counting all both of us had. This made me nervous at times and I arranged this system, which was found to work admirably. I had printed 100 certificates of \$5,000 or \$500,000 as follows:

Received of the Paying-Teller five thousand dollars in legal-tenders.

(Signed) _____, *President.*

Also \$250,000 of the same for gold. On the day when we commenced using these he had, say, \$300,000 legal-tenders and \$100,000 gold, all in packages of \$5,000 or multiples thereof. For this amount he gave me receipts, and if during the day I wanted more money I gave him back receipts, or if I had some to put away I got more receipts; but his legal-tenders and *remaining receipts* must always equal \$500,000 and gold \$250,000. On the other hand, the production of his receipts by me debarred him from charging me with any loss that might occur after I turned him over my surplus money.

I omitted to say that all the first issue were numbered, so that it would be difficult for me to "run in" any bogus receipts on him.

S. S. GORDON,

ASTORIA, Oregon, December 15, 1887

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

A BANKERS' CONVENTION.

(*Shareholder, Montreal.*)

The success attending the organization of the Bankers' Convention in the United States, bringing together as it does the leading minds connected with the principal banking institutions of that country, suggests the advisability of an agitation having for its object the adoption of a similar organization in the Dominion of Canada. Connected with our banking institutions we have men who are not second to any in either the United States or any other country. An organization which would bring these men into closer contact with each other in an arena where an interchange of views could be made and their ideas discussed on broad public principles would be a great gain to the country. Amendments to our banking and commercial laws might be suggested, and in a multitude of counsel such as this would afford, wisdom might be developed which would otherwise never have seen the light. The reluctance of an individual to express his opinions individually would be overcome and the force of argument and example would do much to develop ideas which otherwise might not prevail. It would also have another effect, the advantages of which are worthy of consideration. It would periodically bring the different bank managers into direct personal communication, and would engender an *esprit de corps* amongst them. We have Masonic conventions, Odd-fellows' conventions, Temperance conventions, conventions of Boards of Trade, conventions in fact on almost every question, and why should we not have a Bankers' Convention? With what interest are the annual statements of our bank managers at the annual meetings of shareholders looked for, and so it would be were such a convention established. It would be a benefit to the bank managers themselves and an advantage to the public, the importance of which it would be difficult to over-estimate.

TEXAS AS A FIELD FOR INVESTMENT.

(*San Antonio Daily Express.*)

Mr. A. Hansl, Cashier of O'Connor & Sullivan's bank in this city, in his valuable work, "Texas as a Field for Investment and Immigration," says: "High interest consequent to a scarcity of money has seriously retarded development of some of the finest water power obtainable in any country. The settled wool and cotton growing districts lie almost dormant, begging, as it were, to be utilized for scouring mills, cotton and woolen factories, oil mills and what not. Richly timbered lands with great variety of lumber, lack saw mills, door and sash factories, furniture factories, wagon shops, etc. Many sections of farming country with a large acreage of wheat are without mills, compelled to import their flour which grows at their very doors. Cities surrounded with the finest quarries are shabbily and stingily built of frame and ironclad. There are hundreds of thousands of cattle on our plains, but no refrigerators, tanneries or shoe factories." We realize the truth of Mr. Hansl's assertions, and in view of these facts we must unite the labor and capital of our State in endeavoring to present this condition of affairs before the thinking men of the North and East and through them secure these much needed facilities to develop the wondrous resources of our great State. Capital and labor, together with the natural advantages offered, will soon give Texas an impetus so long denied and so richly deserved. Encourage Eastern capital and add to the wealth of our country instead of increasing the coffers of foreign lands and selling ourselves to alien landlords.

Comparatively few of us realize the increasing power English capital is gaining in our midst—the enormous rates of interest and the financial crisis which must ensue for our people, who, owing to the long period of depression in all business, will be unable to redeem their property. To the thinking mind there is food for thought in Mr. Hansl's carefully compiled volume, wherein he speaks of the loan companies doing business in Texas. These organizations, representing foreign money mostly, have now loaned out in Texas alone fully \$20,000,000. It is customary for them to

charge from 10 to 12 per cent. interest and from 5 to 10 per cent. commissions, besides actual expenses incurred inspecting lands, procuring abstracts, drawing up requisite legal documents, etc. The security demanded is invariably lands and cattle. The lands must be enclosed and earn a revenue, so that, if thrown upon the hands of the loaning parties, they would continue to bring an income on the investment. Loans are made on the basis of 40 to 50 per cent. of the cash value of the lands—cattle are a secondary consideration, etc. Now, it will be readily seen by the foregoing statements of Mr. Hansl that our state is sorely in need of money at cheaper rates of interest to save us from the avaricious paws of foreign capital and the threatening cloud of landlordism. An American tenant-class doing the drudgery of agriculture, but owning not a foot of American soil, is not a pleasing prospect for those who have at heart the continuance of our social and political equality; yet the census as far back as 1880 gave 1,024,000 American tenant farmers in the United States—200,000 more than Ireland had in the palmiest days of Irish landlordism—and this, remember, is daily increasing. Only a few weeks since our newspapers gave distressing accounts of ejections of tenants by an English syndicate in our Northern States. Shall we encourage such disgraceful scenes in our free and independent land?

THE BANKING BUSINESS.

[Exchange.]

Taken as a whole, the Directors and Managers of banks for probity, responsibility and intelligence deserve to stand in the first rank of the successful men of business. There is no other profession which demands a like amount of caution and capacity which must be developed by a rigid preliminary training. The banker stands between two classes of people, the cautious and the enterprising. The cautious man is so careful of his money that he is unwilling to risk it in ordinary business enterprises. The bad enterprising man is always ready to rush into new projects, and will risk all his own capital and as much of his neighbor's as he can get hold of in his operations. Between these two stands the banker having caution and enterprise. By him the financial interests of society are united into a solid and progressive state from which all are alike benefited. If the banker abandons his character as a trusty and responsible individual and rashly embarks in schemes outside his business, lending money without security, the fate of the Marine Bank will be his; he will become hopelessly insolvent, if not criminally responsible for funds he has hypothecated.

LACK OF CONFIDENCE IN BANKS.

[Boston Transcript.]

The man who believes that no one is worthy of trust generally pays the penalty of his ignorance sooner or later. The Maine miser who kept \$32,000 in cash in his own house had no trust in banks or bank officers, and burglars came by night and took away his treasure. Misers who distrust bank officials seem to have perfect confidence in their ability to escape the visitation of burglars, and are constantly proofs of their folly. Nor is it among misers only that a strange carelessness about money accumulations is found. The amount of money lost or destroyed in odd and perhaps forgotten receptacles in this country must in the course of a year amount to a very considerable sum. Savings banks of the most undoubted stability have no attractions for the man who hides big rolls of bills or handfuls of coin under the flooring or behind the wainscot. Even the assurance of interest will not overcome the distrust, much as it may tempt the avarice of the skeptic. It is no uncommon thing for business houses to receive in payment of very large bills rolls of notes evidently long hoarded by the debtor and often carried in a vest pocket through the crowded streets or in packed railroad trains. And what is stranger, some of the most reckless men never lose a cent by theft.

Light Gold Coin in England.—A writer in the London *Bankers' Magazine* says, "We are not far from a panic on the light gold question," and fears a run on the banks to secure full weight gold coin. This difficulty does not arise to such a degree in the United States. Small bills here supply that place in the circulation filled by sovereigns and half-sovereigns in England, and which subjects them to an attrition from which our gold coin escapes. No notes less than five pounds, or about twenty-five dollars, are issued by English banks.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report. Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3821—Fourth National Bank, Dayton, Ohio. Capital, \$400,000.
 3822—Sidney National Bank, New York. Capital, \$50,000.
 3823—First National Bank, Chadron, Nebraska. Capital, \$50,000.
 3824—First National Bank, Centralia, Kansas. Capital, \$50,000.
 3825—Troy National Bank, Troy, Ohio. Capital, \$80,000.
 3826—First National Bank, San Luis Obispo, California. Capital, \$100,000.

ALABAMA.

- BESSEMER.**—Berney Brothers open here January 10th. Manager, Charles Berney.
CLAYTON.—Jennings & Davie are reported here. Style, Clayton Exchange Bank. — State Bank is reported here.
FLORENCE.—C. H. Patton & Co.; Cashier, J. C. Brahan.
SHEPHERD.—Joe. H. Nathan & Co.'s Savings Bank is reported here. President, Jos. H. Nathan; Cashier, Sam. Keller.

ARKANSAS.

- HARRISON.**—Harrison Investment Banking Co.; succeeded by Bank of Harrison. Same officers.

CALIFORNIA.

- SAN BERNARDINO.**—San Bernardino National Bank; Vice-President, A. H. Hart.
SAN LUIS OBISPO.—Jack, Goldtree & Co.; succeeded by First National Bank. Capital, \$100,000. President, K. E. Jack; Cashier, Isaac Goldtree.

COLORADO.

- RED CLIFF.**—Lindsey, Fleming & Co. are reported here.

CONNECTICUT.

- MYSTIC BRIDGE.**—First National Bank; Vice-President, Gurdon Gates.

DAKOTA.

- ASHTON.**—James Valley Bank; discontinued.
BUFFALO.—S. G. More is in business here. Style, Bank of Buffalo. Capital, \$80,000. Cashier, James A. Winsloe.
DRATTON.—First Bank is reported here. Capital, \$10,000. President, Samuel R. Smith; Vice-President, John D. Wallace; Cashier, Henry L. Crandell.
LAKE PRESTON.—Merchants' Exchange Bank; now incorporated. Paid capital, \$20,000. Knute Lewis, President, in place of A. S. Shepherd.

GEORGIA.

- ATLANTA.**—W. M. & R. J. Lowry (Lowry's Bank); W. M. Lowry deceased.
COVINGTON.—T. J. Shepherd & Son; discontinued banking business.
FORT GAINES.—Exchange Bank; closed.
MARIETTA.—G. C. Burnap; discontinued.

ILLINOIS.

- BEMENT.**—Bank of Bement; succeeded by Farmers & Merchants' Bank.
BLOOMINGTON.—People's Bank; F. D. Marquis, Cashier, in place of A. S. Eddy; J. C. Wilson, Assistant Cashier, in place of F. D. Marquis.
BRIMFIELD.—Exchange Bank; H. O. Peters, President, in place of D. Heryer.
CLINTON.—DeWitt County National Bank; J. F. DeLand, Assistant Cashier, in place of Norman Nelson.
LINCOLN.—First National Bank has been organized. Capital, \$50,000. President, John Lincoln; Vice-President, David Vanhise; Cashier, C. W. Lincoln.
MURPHYSBORO.—Bank of Murphysboro (E. N. Smith); sold to D. C. Walker. James E. Walker, Cashier, in place of E. L. Abel.
QUINCY.—Quincy National Bank; James M. Irwin, Cashier, in place of Joseph Boehmer.
SENECA.—Bank of Seneca; James H. Harney, President, in place of G. H. Stalford; Daniel R. Harney, Cashier, in place of Geo. A. Stalford.
ST. ANNE.—N. Bastien is in business here. Style, Exchange Bank.

INDIANA.

- ALEXANDRIA.**—N. C. Vermillion & Co., are reported here. Style, Alexandria Bank.
FARMLAND.—Farmers & Citizens' Bank has commenced business. President, John W. Clayton; Cashier, I. M. Branson.
KEWANNA.—Citizens' Bank has just been opened. Cashier, R. S. Paris.
MONTPELIER.—Citizens' Bank of Hartford City, has opened a branch here. Vice-President & Manager, C. Q. Shull.

IOWA.

ALTA.—Farmers' Loan & Trust Co. (branch); F. B. Browne, Cashier, deceased.
GRINNELL.—Grinnell Savings Bank; D. G. Frisbie, President, in place of Darwin Forbes.
GUTHRIE CENTRE.—Guthrie State Bank is reported here. Capital, \$25,000. President, Frank M. Hopkins; Vice-President, Matt. Parrott; Cashier, Edgar C. Lane.
GUTTENBERG.—F. S. Barnes & Co. are in business here. Style, Clayton County Bank.
 President, M. A. Creglow; Vice-President, F. S. Barnes; Cashier, A. J. Risinger.
LE MARS.—Le Mars National Bank; Assistant Cashier, Henry J. Moreton.
MILTON.—Citizens' Bank; Assistant Cashier, H. C. Hill.
PRAIRIE CITY.—L. E. Zachary & Co.; succeeded by Farmers & Traders' Bank. Capital, \$15,000. President, Ira E. Draper; Vice-President, L. E. Zachary; Cashier, O. W. Draper.
STOUCX CITY.—Union Stock Yards State Bank; President, E. W. Skerry; Cashier, C. C. Peiroe.
SPENCER.—Clay County Bank; Assistant Cashier, M. C. Rensburg.
WALKER.—Exchange Bank (A. E. Nietert & Co.); Chas. H. Nietert, Cashier, in place of Henry J. Nietert.
WOODBINE.—Boyer Valley Bank; officers now are, President, Phineas Cadwell; Cashier, Wm. C. Cadwell.

KANSAS.

ATLANTA.—Atlanta Bank is reported here. President, T. J. Jackson, Sr.; Cashier, A. V. Jackson.
CENTRALIA.—Centralia State Bank; President, Jno. S. Hidden; Cashier, Oscar S. Cummings.
CHANUTE.—First National Bank; Vice-President, E. E. Ward.
EL DORADO.—Merchants' National Bank has been organized. Capital, \$100,000. President, A. W. Ellet; Vice-President, G. H. Parkhurst; Cashier, N. F. Frazier.
ELMDALE.—Elmdale Bank (E. Stotts); S. B. Stotta, Cashier, in place of W. R. Stotta.
FLORENCE.—Butler & Leggett are in the brokerage business here.

Totals.....	\$184,444,950	\$49,538,000
* Circulation of National Gold Banks not included in the above.....	\$230,644	

W. L. TRENHOLM, Comptroller of the Currency.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, January 4, 1888.

The year that has just passed has not been made remarkable by any great panic in the money market. There have at times been serious apprehensions, but there has always occurred a turn for the better when the pressure seemed to become unbearable. There has been no great prosperity. Considering that an important Act of Congress, seeking to control the railroads of the country, was passed at the beginning of the year, the operation of which on these important factors in the business and commerce of the country was uncertain, it is not strange that there was much doubt as to the future and little tendency to take much risk. Notwithstanding this there has been a great increase of business in the South and West. There has been a strong tendency to develop new resources in these sections. Much money has been invested in the Western and Southern States that might otherwise have remained at the money centers to encourage the favorite speculations at those points. The Inter-State Commerce bill has not proved as injurious as was prophesied, and the earnings of the roads as a rule have been rather greater than for the previous year. From the first there has been much apprehension felt on account of the drain on the currency of the country by the operations of the financial laws of the United States. The revenues exceeding the expenditures, the surplus money locked up in the Treasury, has gradually increased. Until July there was an outlet for this accumulation in the purchase of the three per cent. bonds, and after this resource was exhausted the Treasury purchased for the sinking fund fours and four and a half, at first soliciting offers at the lowest price, and afterwards fixing the price at which it would purchase. On the whole, as was said last month, we think the influence of the Treasury has been good. There was all through the year a tendency to speculation, which has been kept within due limits by the pressure for money caused by the inflow toward the Treasury. If it had not been for this the importations of gold and the continued coinage of the silver dollar would have rendered money exceedingly plenty, and many unwise schemes would very likely have received an encouragement which might have resulted in widespread disaster. The attempt to corner all the wheat in the country, which was made in June, collapsed in July, and resulted in the failure of the Fidelity National Bank of Cincinnati, whose officers were apparently at the bottom of the speculation. The American Exchange Bank of Chicago came near being dragged down by its transactions with the Fidelity National, but was saved by the shrewdness of its President and the exertions of its stockholders. Many other banks had reason to mourn the operations in which the credit of the Fidelity National Bank had been used. Other important National bank failures were those of the First National Bank of Dansville, N. Y., the Fifth National Bank of St. Louis, Mo., and the Stafford National Bank of Stafford Springs, Conn. Besides the Chicago wheat collapse there was the collapse of the coffee corner in New York City, also in June—on the 14th, one day before the Chicago panic—various rumors about the purchase of the Baltimore & Ohio Railroad, followed by the failure of Henry S. Ives & Co. Notwithstanding the apprehensions of stringency, money has not ruled very high, in fact though averaging higher than in 1886, the highest points reached have not equalled those of that year. The market was most stringent in April, June and July, and the latter part of August. The Treasury helped in July by redeeming the remainder of the threes for the sinking fund, by the purchase of fours and four and a half in August and September, and also by depositing public moneys in the National bank depositories with greater liberality. The future

of the money market is as uncertain as it has been for many months past. There is perhaps a better feeling as to the intentions of the Treasury, and a belief that something will be done by Congress. If the representations of the dangers that exist and the clear statements of the ways by which they may be avoided, that have been made to Congress by the President and the Secretary of the Treasury, have the proper effect, the situation may soon be relieved. Congress is barely ready for business, there are many plans to discuss, and it is very probable that much time will be taken before any conclusion is reached. Congress being in session, however, may be ready to act promptly if any really serious emergency should arise, but for this very reason the President and the Secretary will perhaps hesitate to act as decidedly as they would if Congress were not in session. The reduction of the revenues is a question that will require much debate. Shall it be a reduction of the tariff or of internal revenue? Congress may favor large disbursements for internal improvements, but here again there will be great differences of opinion. Almost any discussion of payment of the debt by purchase or otherwise is sure to involve the National banking system, and whether the latter will gain anything is, we think, doubtful. They have many enemies in Congress. We do not think the coinage of the silver dollar will be discontinued. Still, the probability is that money will be plenty during the month of January, or at least until something definite is known as to the make-up of Congress.

The cereal crops of the year have not been large and there is a tendency to rush prices up. Whether this will succeed in obtaining abroad the best price for the surplus wheat and corn of the year, appears somewhat problematical in the light of previous experience. Foreign buyers understand the ups and downs of the markets here and wait for the collapse which too often follows, the artificial boom. Perhaps our speculators will learn to discount even this. The coming year is the year of the Presidential election. Business is supposed to thrive better in the years when politics are off, but if Congress takes the right action at this session, they can give a confidence to the business men and bankers of the United States that will make our commerce and industries thrive, notwithstanding the distraction of politics.

FOREIGN EXCHANGE.—Up to December 9th, the market for sterling exchange was very quiet. The supply of commercial bills was limited, but cables and security bills had a tendency to lower the rates. The next week the rates worked up, gradually growing still more active during the next week, owing to the remittances in connection with remittances of January interest, and a scarcity of commercial bills. During the week ending December 31st, the market was dull, and actual rates were a trifle lower.

The Bank of England lost £356,000 in specie from November 26th to December 29th, and the Bank of France lost 22,100,000 francs in gold, and gained 250,000 francs in silver during the same period. The discount rate of the Bank of England remains unchanged at 4 per cent. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.83½; sight, nominal, \$4.87; 60 days, actual, \$4.83@ \$4.88¼; sight, actual, \$4.85¼@ \$4.86; Cable transfers, \$4.86@ \$4.86½; Prime commercial sterling, long, \$4.81¼@ \$4.82; Documentary sterling, 60 days, \$4.81¼@ \$4.81½; Paris bankers', 60 days, 5.23¼@ 5.23½; sight, 5.20¼@ 5.20½; Paris, commercial, 60 days, 5.26½@ 5.25; sight, 5.23¼@ 5.22¼; Antwerp commercial, 60 days, 5.26¼@ 5.25½; Swiss bankers, 60 days, 5.24½@ 5.23¾; sight, 5.21½@ 5.21¼; Reichmarks (4) bankers, 60 days, 95@ 95½; sight, 95½@ 95¾; Reichmarks (4) commercial, 60 days, 94½@ 94¾; sight, 95½@ 95¼; Guilders, bankers, 60 days, 40 1-16@ 40½; sight, 40¼@ 40 5-16; Guilders commercial, 60 days, 39½@ 39 15-16; sight, 40 1-16@ 40½; Copenhagen, Stockholm and Christiana, krona, 60 days, 26½@ 26 11-16; sight, 26½@ 26 15-16.

Paris dispatches quote exchange on London 25f. 34c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling bills on London, at 60 days; and sight, and prime commercial sterling, together with exchange on Paris on December 6th, the changes in rates that occurred during the month, and the highest and lowest during the months of November and December:

NOVEMBER.	BANKERS		Cable		PARIS

HOME MONEY MARKET.—At the beginning of the month of December there was considerable stringency, and the effect on the stock market was depressing, and the prices reached in many instances were the lowest of the year; there was however, some tendency to a revival at the end of the month. Stock business was very dull throughout the month. For the week ending December 3d, the rates for call loans on stock and bond collateral ranged from 2 to 7 per cent., and for prime commercial paper from 6 to 6½ per cent. For

the week ending December 10th, call loans ranged from 4 to 6 per cent., and commercial paper from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent. For the week ending December 17th, call loans continued from 4 to 6 per cent. and commercial paper at $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent. For the week ending December 24th, call loans were again from 4 to 6 per cent. and commercial paper the same as the previous week. The last week in December money was in rather greater demand, call loans ranging from 4 to 7 although commercial paper continued at from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent. The signs are in favor of a continued demand for money during the month of January. The following are the latest rates of exchange on New York: Savannah, buying $\frac{1}{4}$ discount, selling $\frac{1}{2}$ discount, to par. Charleston, buying $\frac{1}{4}$ @ 3-16 discount, selling par. New Orleans commercial, 50 @ 75c. per \$1,000 discount, bank, par. St. Louis, par to 25c. per \$1,000 premium. Chicago, 50c. per \$1,000 premium.

NEW YORK CITY BANKS.—During the week ending December 3d. the combined currency and gold received by the New York City banks amounted to \$1,808,000, and the amount shipped to the interior was \$2,842,000, showing a loss of \$534,000, but as they gained \$400,000 in their dealings with the Sub Treasury the net loss was \$134,000 only. During the week ending December 10th, the amount of gold and currency received was \$1,765,000, and the amount shipped \$2,182,000, a loss of \$417,000, but as by Sub Treasury transactions they gained \$1,100,000, there was a net gain this week of \$683,000. During the week ending December 17th, the amount of gold and currency received was \$1,349,000, and that shipped \$2,006,000, a loss of \$657,000. By Sub Treasury operations the banks gained \$1,000,000, making a net gain for the week of \$343,000. During the week ending December 24th, the amount of gold and currency received was \$1,781,000, and the amount shipped, \$2,796,000, a loss of \$1,015,000. In dealings with the Sub Treasury there was a gain of \$2,075,000, making a net gain of \$1,060,000. During the week ending December 30th, the amount of gold and currency received was \$2,589,000, and the amount shipped \$1,044,000, a gain of \$1,545,000. In addition, a further gain of \$400,000 was made in the dealings with the Sub Treasury, making a total gain for the week of \$1,945,000. The banks have therefore since November 26th, made a gain in gold and currency of \$3,897,000. The above changes indicate those which have taken place in the surplus reserve, though of course further influenced by changes in loans and deposits. During the week ending December 3d, this surplus fell off by \$818,675, during that ending December 10th, there was an increase of \$361,475, during that ending December 17th, an increase of \$1,721,200, during that ending December 24th, an increase of \$1,108,000 and during the week ending December 31st, a decrease of \$486,256. The decrease in the latter week is explained by the large increase in loans.

The following table shows the condition of the New York Clearing-House Banks for a number of weeks past.

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Dec. 31..	\$356,540,000	\$71,139,300	\$27,259,300	\$359,359,800	\$3,077,300	\$8,556,150
Dec. 24..	350,409,500	70,332,800	26,665,200	351,846,400	3,066,600	9,086,400
Dec. 17..	350,261,200	69,063,600	26,736,500	351,566,800	3,038,600	7,923,400
Dec. 10..	352,943,600	68,359,600	25,774,000	351,705,600	3,036,900	6,207,200
Dec. 3..	354,416,600	68,146,800	26,146,800	353,789,500	3,045,800	5,845,725

The clearings and balances of the New York city banks, as shown by the statements of the Clearing-House, have been as follows: For the week ending December 3d the clearings were \$729,602,366 and the balances \$33,849,154; for the week ending December 10th the clearings were \$651,852,043 and the balances \$26,109,788; for the week ending December 17th the clearings were \$652,453,782 and the balances \$31,819,355; for the week ending December 24th the clearings were \$548,596,481 and the balances \$29,698,018, and for the week ending December 31st the clearings were \$490,824,291 and the balances \$30,705,032.

From the statement of the Comptroller of the Currency for December 1st it appears that the total decrease in National Bank circulation during the month of December was \$1,480,902, as against a decrease of \$2,152,133 dur-

ing the month of November. Of the circulation issued during the month \$1,202,410 was issued through new banks, and \$1,837,898 through banks increasing circulation. The total amount of lawful money deposited with the Treasury to retire outstanding bank circulation was \$102,962,510, showing an increase during the month of \$1,177,188, as might be expected from the large amount of National bank currency redeemed during the interval. Bonds to secure public deposits amounted on December 1st to \$49,538,000, including \$566,000 6s, \$13,228,500 4½s, \$35,293,500 4s, and \$470,000, called 8s.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated :

	Jan. 1, 1888.	Dec. 1, 1887.	Nov. 1, 1887.	Oct. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.	\$3,256,000	\$3,256,000	\$3,256,000	\$3,256,000	\$3,680,000
4½ per cents	68,965,050	69,831,100	69,696,100	70,030,850	59,636,200
4 per cents	112,102,400	113,928,400	115,731,400	116,214,260	113,908,200
3 per cents	121,500	131,500	*144,500	*216,000	52,218,950
Total.....	\$184,444,950	\$187,147,000	\$188,828,000	\$189,717,100	\$229,438,350
* Called.					

On January 1st, 1879, the date of the resumption of specie payments, the National bank notes outstanding amounted to \$323,791,674, and on January 1, 1888, they were reduced to \$268,168,234, a loss of \$55,623,440. During the same period, the silver certificates in circulation have increased from \$413,860 on January 1, 1879 to \$176,855,423.

The Treasury Statement for the 1st of December shows that the Treasury net holdings were as follows : the holdings for the two previous months and for July 1, 1886 and 1887, are also given.

U. S. Treasury Net holdings of.	July 1, 1888.	July 1, 1887.	Nov. 1, 1887.	Dec. 1, 1887.	Jan'y 1, 1888.
Gold	\$156,793,749	\$136,875,669	\$202,559,832	\$211,880,528	\$206,608,130
Silver	96,229,539	73,348,425	58,183,571	51,759,969	45,294,752
U. S. notes	22,868,317	21,767,376	15,261,066	16,318,220	15,424,425
Bank notes.....	149,014	197,046	156,818	118,408	164,068
Fractional silver....	29,232,496	27,094,192	24,468,135	24,158,008	24,327,529
In Treasury.....	\$305,323,115	\$307,529,129	\$300,929,422	\$304,235,182	\$298,818,929
In Depository B'ks.	14,435,199	22,991,302	31,767,468	42,428,670	52,199,917
Total.....	\$319,758,314	\$330,520,431	\$332,696,890	\$346,663,852	\$346,018,846

The amount of public moneys on deposit with the National bank depositories has increased from \$42,428,670 on December 1st to \$52,199,917 on January 1, 1888, or about \$10,000,000.

The following table shows the net gold and silver held by the United States Treasury on the 1st of January and on the 1st of December and November.

	Jan'y 1, 1888.	Dec. 1, 1887.	Nov. 1, 1887.
Gold coin and bullion.....	\$305,342,187	\$302,661,278	\$302,544,605
Gold certificates outstanding.....	96,734,057	90,780,753	99,684,773
Gold owned by Treasury.....	\$208,608,130	\$211,880,528	\$202,859,832
Silver dollars and bullion.....	\$222,160,173	\$219,909,213	\$218,897,523
Silver certificates outstanding.....	176,855,423	168,149,274	160,713,967
Silver owned by Treasury.....	\$45,294,750	\$51,759,939	\$58,183,571

The changes during the month are a decrease in the net gold coin held of \$3,272,895 and in silver dollars and bullion of \$6,465,139. In addition the Treasury held fractional silver coin amounting to \$24,327,529.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of December, the highest and lowest since January 1, 1887, and also during the year 1886:

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Bryce.—Wm. Bryce, Vice-President of the Phenix National Bank of New York city and Director in the Continental Fire Insurance Co., died of pneumonia on December 9th, aged 73 years.

Embury.—Phillip Embury, who was born in New York city in 1732, died recently at the age of 95. He was interested in the New York Chemical Works, out of which grew the Chemical National Bank of New York city. He was at one time a large stockholder and a Director of the bank.

Hellriegel.—Henry Hellriegel, President of the German-American Bank, of Buffalo, N. Y., died on the 21st of December, at the age of 63 years.

Hunt.—Samuel L. Hunt died December 5th of apoplexy at Morristown, N. J., aged 85 years. He was a noted financier, and for forty years had been a Director in the Tradesmen's National Bank of New York city.

Lear.—Robert R. Lear, a member of the Stock Exchange, firm of I. F. Mead & Co., of New York city, died on December 28th, aged 57 years.

Manning.—Daniel Manning, ex-Secretary of the Treasury of the United States and President of the Western National Bank, N. Y. city, died on December 24th, at the age of 57. He began life as a printer, and advanced through all the various stages until he achieved reputation as a journalist. Through his newspaper connection he became prominent in politics. His shrewdness and tact as a political leader were soon recognized, and after the death of Mr. Tilden he became the leader of the Democratic party in the State of New York. On Mr. Cleveland's election to the presidency, Mr. Manning became Secretary of the Treasury. The skillful manner in which he guided the finances of the country is well known. His skill in dealing with the silver question is worthy of particular praise. During the summer of 1886 he was struck down in the midst of his labors by an attack of apoplexy, due in great measure, it is stated, to the pressure of his onerous duties, and perhaps, in some degree, to the insanitary condition of the Treasury Department. In the hope that he would rally, he was retained in office for many months by the President. A trip abroad failed to restore his health, and he returned to the United States to die. On his retirement from the Treasury Department, he was elected President of the Western National Bank. The able and conscientious manner in which he discharged his duties as Secretary of the Treasury, has given him a national reputation enhanced perhaps by the fact that in his desire to serve his country he sacrificed his life.

Murphy.—Edward A. Murphy, President of the First National Bank of Woodstock, Ill., died during the month of September of heart disease while on a visit to Chicago.

Pickett.—John Pickett, President of the Beverly National Bank, of Beverly, Massachusetts, and Vice-President of the Savings Bank of that place, died suddenly on December 24th, at the age of 80 years. He was largely interested in the coal and fishing business.

Smoot.—John B. Smoot, President of the Citizens' National Bank, of Alexandria, Va., died on Christmas day after about a week's illness, at the age of 58. He was Mayor of Alexandria at the time of his death.

Waldby.—E. I. Waldby, of the banking firm of Waldby & Clay, of Adrian, Mich., died October 21st, aged 58.

Defalcation at Little Falls, N. Y.—The long list of defalcations for the year 1887, was closed on December 31st, with the news that Marcus W. Rasbach, the Cashier of the Herkimer Bank, of Herkimer, New York, had robbed the bank of \$34,300, and had disappeared. The bank was first organized as a private bank and Mr. Rasbach was among its organizers; he was considered by all who knew him, a very cautious and conservative business man. The bank became a State bank in 1864, and Mr. Rasbach was continued as Cashier. At the time of the re-organization some \$24,000 was left in his hands to pay all outstanding liabilities of the old institution. In such cases the demands made are often very slow, and Mr. Rasbach was apparently tempted to use the money in speculation. It is said that he speculated in stocks through the firm of Vermilye & Co., of New York city. He was unsuccessful, and after using the funds in his hands, began to use money of the Herkimer Bank. In December last, he left Herkimer, and after he had been absent two weeks the other officers suspected something wrong and commenced an investigation. It soon became apparent that Rasbach was an embezzler. A careful examination of the books proved that the total amount taken by him would not exceed the sum above mentioned, viz. \$34,300. There is, it is said, some chance of recovering some of the money, as Rasbach had about \$12,000 on deposit with Vermilye & Co., and this, it is believed, will be obtained by the bank. Even if this hope be not realized the stockholders of the Herkimer Bank are wealthy and the creditors and depositors will probably be paid in full.

RHODES' JOURNAL OF BANKING.

Vol. XV. FEBRUARY, 1888. No. 2.

A BILL has been introduced in the New York Assembly by Mr. Bradford Rhodes, member from Westchester County, to modify the present law making Saturday afternoon a half holiday. It seems to be generally assented to that the law in question benefits no one, and is a serious detriment to business throughout the State. It is a holiday solely in that it compels banks only to absolutely stop business; but banks are of so much importance in modern transactions that when they close up many other classes of business have to stop too. Mr. Rhodes' bill provides that, instead of fifty-two half Saturdays as holidays, the Saturdays during the months of July, August and September shall be whole holidays. These months are supposed to be the least busy of any in the year, and if it is absolutely necessary to have holidays additional to those recognized by public custom, it will be much more convenient to all concerned to have them in those months. It will certainly be a great boon to the business community of New York State and city to abolish the half-holiday nuisance for the greater part of the year. As it is, the banks are not benefited, bank clerks work nearly as long hours as ever, the public is interrupted in its business efforts, those who would work are prevented, and those who do not wish to work have no greater opportunity of being idle than they had before. Mr. Paine, Superintendent of the State Banking Department, says, in his report, that in many of the country districts Saturday is the heaviest business day in the week. Many of the banks do not now observe the law. In New York, Brooklyn and Buffalo the banks are almost unanimous in favor of its repeal or modification. If Mr. Rhodes' bill passes it will remove some of the most odious features of the law. If it meets opposition from a desire to truckle to supposed labor interests, the result will probably be the repeal of the Half-Holiday law *in toto*, on the ground of its unconstitutionality, in that it prevents banks and bankers from working six days in the week, and permits all other classes in the community to do as they please. In other words, it is class legislation. Mr. Rhodes' bill is a fair compromise. It retains the eight holidays now observed in New York, viz.:

New Year's day, Washington's birthday, Memorial day, Independence day, the first Monday in September known as Labor day, any general Election day, Thanksgiving day and Christmas; add to these the Saturdays in July, August and September (thirteen in 1888), and we have twenty-one holidays, in addition to fifty-two Sundays, which seems to be abundant time for recreation and rest.

IN ANOTHER DEPARTMENT of the JOURNAL we print an article by John Jay Knox, President of the National Bank of the Republic of New York city, relative to the "Deposit and Withdrawal of Public Money in the Banks." It points out the very interesting historical fact that in 1836 the situation as to the Government surplus was similar to what it is now. In that year there had been deposited with the State banks nearly fifty millions of dollars of public money. These banks held but \$26,000,000 of individual deposits. The danger was not in the deposit of the money, but in the difficulty of withdrawing it when disposed of by Congress. In 1836, Congress, in view of the anticipated surplus, passed an Act depositing it with the several States. It was the shock caused by the attempt in 1837 to carry out this Act that caused the financial panic of that year. To give the States the amount intended by Congress drafts were drawn on the banks by the Treasury, and the drain on their resources caused eighty-two out of eighty-eight banks acting as depositories in May, 1837, to suspend payment before the end of the year. The condition to-day as to security of the public moneys is very different from that existing in 1836. The depository banks are stronger, have more capital, more individual deposits, and they have severally given to the Government its own bonds as security for prompt payment of the amounts deposited with them. The condition of things now is exceedingly unfavorable to the banks, because if sudden pressure should be brought on them by the Treasury they might have to sacrifice their bonds; but if the bills hereafter mentioned become laws the banks can, if they desire, when called on for the payment of public money, transfer their bonds from one vault in the Treasury to another and relieve the pressure resulting from payment of deposits by taking out circulation. The Comptroller of the Currency has recommended the reduction of the bonds to be deposited by banks to a maximum* of \$25,000, or one-tenth of capital where the latter is less than \$250,000; and Mr. Wilkins, Chairman of the Banking and Currency Committee of the House of Representatives, is pressing his bill to increase the issue of circulation issued on bonds to 100 per cent. of their par value. The fear expressed that this measure would increase the premium on bonds is answered in the article to which we refer. The fact seems to be that there are many banks who would reduce their bonds, if permitted by law, rather than keep circulation, even if it were allowed to the extent of 100 per cent. In some sections

* A bill to this effect was introduced in the 49th Congress, and Senator McPherson again introduced the measure in the Senate on January 25th.

of the country the additional circulation would be a great benefit. While the aggregate amount of National bank notes might not be increased by it, yet the bill, in connection with the measure for lessening the maximum bond deposit, will bring about a redistribution of the currency and enable it to flow to those parts of the country where it is really needed. At the last Convention of the American Bankers' Association at Pittsburgh, on October 12 and 13, 1887, a resolution was brought before the Executive Committee of the Association by its Chairman, recommending the passage of an Act increasing circulation to 100 per cent. on the bonds deposited, and also recommending a large reduction in the minimum amount of bonds required to be deposited by the National banks before commencing business. The resolution was adopted by the Committee, but through some inadvertence failed to be presented to the Convention.

THE BILL INTRODUCED in Congress under the auspices of the Hon. Beriah Wilkins, Chairman of the Committee on Banking and Currency of the House of Representatives, is the same as the McPherson Bill which passed the Senate in February, 1884, but failed to pass the House. It proposes to increase the percentage of circulation issued by the National banks from 90 to 100 per cent. of the par value of the bonds deposited by them as security. If it should become a law it would warrant a possible increase of circulation of some \$20,000,000. Even with the increased percentage proposed by the bill the profit on issuing circulation is not very great at the present prices of bonds, and we do not believe that the full amount authorized would be issued. This would more assuredly be the result if the measure for reducing the minimum of bonds to one-tenth of the paid in capital for banks with a capital of \$250,000 or less, and to \$25,000 for any other bank, for the reason that about as many banks would be tempted to reduce their bonds and circulation by this last measure as would increase their issues under the Wilkins bill. Still it cannot be denied that while the aggregate circulation would not be increased there would result from the enactment of the two measures indicated a movement of currency that cannot fail to be of great benefit. That is, the banks in sections of the country where circulation is needed would doubtless retain or increase their present amount of bonds, and put out more notes, while those in those parts where currency is already plenty would retire their bonds and circulation down to the new minimum instead of keeping up the present excessive minimum with no profit. The activity of circulation is of as much importance as its quantity, and the former quality would be increased by the two bills. The Comptroller of the Currency, as may be judged by his report, is in favor of the reduction of the minimum of bonds required to be deposited, but he does not support Mr. Wilkins' measure, assuming that it will advance the price of bonds. As above stated it is highly

probable that the bonds sold under the minimum reduction measure will counterbalance any effect the increased percentage of circulation might have in raising the price of the bonds. A letter signed by Mr. O. B. Potter, of New York City, has been circulated in Congress, in opposition to the Wilkins bill. Mr. Potter's main objection is that circulation to a greater extent than 90 per cent. should not be issued upon the bonds deposited. In his letter he asserts that the 90 per cent. provision was and is the keystone to the National banking system, of which he professes to have been the author and inventor. The basis of this last claim was considered in the JOURNAL of February, 1885. Admitting that Mr. Potter was the originator of the National banking system his claim that the 90 per cent. idea is the keystone of that system rather conflicts with the fact that the original law of February 25, 1865, permitted the issue of circulation to the extent of 100 per cent. of the par value of the bonds deposited.

THE LAW TAXING all forms of paper currency except that issued by the Government and the National banks has recently been brought into prominence by the action of the Internal Revenue Department. In New York State the ice companies on the Hudson River have been assessed on the ice tickets which, for convenience, they issue to their employes, and the banks along the Canadian border have been taken to task for using the bills issued by Canadian banks. The provisions of the laws of the United States for preventing the circulation of paper money other than that issued by the Government and the National banks are two-fold. First, a tax is imposed on all banks, corporations and persons of 1 per cent. per annum on the average amount of circulating notes issued by them, and of 2 per cent. per annum on all notes issued in excess of 90 per cent. of their capital stock; and, second, a tax is imposed on all banks, National or State, of 10 per cent. of the amount of the notes of State banks, corporations or individuals paid out by them. There is nothing to prevent a State bank or other corporation to issue notes on condition that it pay a tax of 1 per cent. on the amount kept in circulation, which is no heavier than the tax paid by National banks upon the circulation issued by them; but while all banks and corporations are at liberty to use and pay out National bank and legal-tender notes, they cannot pay out notes issued by State banks or corporations or persons without paying a tax of 10 per cent. on the amount so paid out. It is not, therefore, worth while to issue notes which no bank or corporation can pay out or use as currency. It seems that the ice companies mentioned issued tickets to their employes, showing the amount due them, as a ready and convenient way of keeping the account with them. The employes found it convenient to use the tickets to purchase supplies at stores, etc., and the tickets were accepted and used as cash. If it can be shown that the ice companies "calculated or intended" to have their

tickets used in the manner indicated they may be compelled to pay the tax of 1 per cent. annually upon the amount issued during the past three years, the Statute of Limitations barring collection for a longer period.

The banks on the Canadian border, feeling the want of a local currency which is not supplied by our present system of Government and National bank issues, use the circulating notes of the Canadian banks in advancing the business interests of their localities. By this practice they free themselves from a dependence for currency on the money centres of the country. They do not have to send to New York or Boston for the bills with which to do their local business. The liberality of issue enjoyed under the banking laws of Canada enables the Canadian banks to supply their own needs and those of their less fortunate neighbors. This practice indicates how inadequate to supply local business interests is our inelastic legal-tender and National bank note system—with the 10 per cent. tax hanging like a dead weight on all enterprise which might supplement our perfectly safe but inelastic Governmental paper money. The object of this 10 per cent. tax was to displace the State bank circulation with that of National banks, and the promise was that the new circulation should be safer and in every way better than the old. As far as safety is concerned this promise has been redeemed; but in adaptation to local business wants, the National bank circulation under the present conditions of the bond market fails lamentably. We do not, however, believe that the law can be construed to impose any tax on the use of Canadian currency, as notes issued by foreign corporations are not mentioned in it. If the 10 per cent. tax law be repealed, as far as State banks are concerned, retaining it on notes issued by all other corporations or persons, we believe that the circulation problem would be much simplified, particularly if the State laws should require their banks to keep their reserves in specie or in National bank or legal-tender notes, and make due provision for central places of redemption.

THE REPORTS of the officers having in charge the execution of the banking laws of the several States are becoming of greater interest than ever. The importance of the National banking system in furnishing circulation and in refunding the debt of the United States, has caused it to quite overshadow the State systems of banking, under which so many useful and strong institutions have been and are now doing business. It seems now as if the special reasons for the existence of the National banking system are losing strength. Currency is now furnished by the United States Treasury, and National bank notes are, like the great Auk and the Do Do, the Bison, Auroch, rapidly passing away. The National system is moribund. Valuable as it has been and is all plans to revive and preserve it should be heartily supported, but, although it is to be regretted, we believe the

feeling of the majority of the people of the country to be either one of indifference to its fate, or of desire that it may perish. If this view is correct, as before remarked the State systems become of growing interest and importance. We believe that within ten years most of the National banks now in existence will have been converted into State institutions. This belief is based on the general fact that the history of the United States shows alternate periods—the power of the general government being augmented during one and diminished during the other. A period of centralization caused by the necessities of internal warfare has existed during the last twenty-five years, but the anxieties and fears that caused it are fading and a reaction has already begun. The National system of banking was one of the results of the desire for strong government, and during the period of diminishing federal power—which it seems has commenced—this and many other results of the period of centralization will disappear. The States will take up the burdens dropped by the central Government, and most of them are strong and well able to bear them. We expect an era of State banking which will be free in a great degree from the worst errors of the past, and which will benefit by the experience of the last twenty-five years. For the foregoing reasons, the report of Hon. Willis S. Paine, Superintendent of the Banking Department of the State of New York, published on another page of the JOURNAL is of special interest. We propose in future numbers to take up the banking systems of other States and show the advantages of banking under them.

FUND FOR REDEMPTION OF NATIONAL BANK NOTES.—This fund consists of the amount deposited with the United States Treasurer by National banks that have failed, are in voluntary liquidation, or have retired a portion of their circulation for the purpose of reimbursing the Government for the redemption of such circulation. The original National Banking law did not permit banks in operation to retire their circulation, except as it might be presented for redemption in the ordinary course of business. Banks in liquidation could, however, retire their notes by depositing lawful money to an equal amount with the United States Treasurer. The Act of June 20, 1874, first permitted banks in operation to deposit lawful money sufficient to redeem their outstanding circulation in whole or in part, and to withdraw the bonds deposited for its security, provided the bonds were not reduced below the minimum required by law. Since the last Act the premium on the bonds and the refunding operations of the Government have induced so many banks to avail themselves of this privilege that the fund created has been increased by deposits more rapidly than it could be reduced by the presentation of National bank notes for redemption; and for some time it has constantly stood at a figure of something over one hundred millions of dollars. Some time ago a bill was introduced in Congress providing for the investment of this fund in United States

bonds, and recently a similar bill has been introduced in the Senate by Mr. Sherman. This latter bill proposes to invest not exceeding 80 per cent. of the fund by the purchase, in the open market, of United States interest-bearing bonds. The amount of the fund to be kept in cash is not to be below 20 per cent. of the whole, or more than 30 per cent; in other words, the bill requires the Secretary of the Treasury to buy 70 per cent., or, in the present state of the fund, about seventy millions of United States bonds as soon as he can after the bill becomes a law. National banks are to be permitted to issue circulating notes to the extent of 100 per cent. of the par value of the bonds deposited. How will this bill work? On January 1st the Treasury held in this fund about one hundred and two millions of dollars. Seventy per cent. of this sum is \$71,400,000, which, 4's being at 125, would purchase \$62,720,000, upon which the annual interest would be \$2,508,860. If the investment were made in 4½'s at 108 the amount purchased would be \$72,592,550, upon which the annual interest would be \$3,266,664. Assuming that in each case the bonds are held until maturity, the length of time the 4's would bear interest would be nineteen years, and in that time the interest received would be \$47,668,340. From this latter sum the premium of \$5,680,000 must be deducted, leaving a net accumulation of \$31,988,340 as additional security for outstanding National bank circulation. If 4½'s are purchased, the fund collected before the maturity of the bonds will be about \$5,600,000. This investment of the fund held by the Government for the redemption of the National bank notes, the payment of which is by law guaranteed by the Treasury, is a simple way of creating a safety fund which could be drawn upon to meet the notes of insolvent banks, provided a larger issue of notes in proportion to bonds deposited, or the issue of notes secured only by a first lien on the general assets of the bank, to the extent of 50 per cent. of capital, as proposed by Mr. John Thompson, were hereafter permitted.

There is, perhaps, some doubt as to the legal status of notes, for the redemption of which the National banks have deposited lawful money. It would appear, from the law on the subject, that by the act of depositing lawful money the bank relieves itself of all responsibility for the redemption of the notes, and that they become the exclusive liability of the Government. If this is correct, then the fund is the exclusive property of the Government, and it does not follow that the Government should invest its own funds to bolster up any system of banking. Any profit that might be derived from such an investment as is proposed by Mr. Sherman's bill might, however, be applied to the reduction of the National debt.

WE PRINT, ON ANOTHER PAGE of the JOURNAL, a very sensible article on the silver question from the St. Paul *Pioneer Press*. The continued coinage of the silver dollar under our present law is, it

is agreed among those who desire the remonetization of silver, a bar to the realization of their hopes. It is urged by some ardent silver men in the West that opposition to the coinage of the silver dollar, or even the recommendation to suspend its coinage, argues a desire to demonetize silver and make gold the sole standard of values. There are, it is true, a number of financiers who belong to a school which advocates the single gold standard, and these financiers are opposed to the silver dollar on the ground that, after it has been coined in sufficient quantities, it will drive all gold from the country and unsettle all values by becoming the standard instead of the gold dollar. As between the supporter of the silver standard and the supporter of the gold standard, it is plain that the one wishes the coinage of the 412½ grain dollar to continue, and the other to cease, as a means of each gaining their point. The bi-metallist, however, strange to say, ranks with the gold standard men on the subject, because he looks on it as inevitable that, if the coinage of the silver dollar is to continue, there is no hope for the bi-metallic standard. He is sure that silver will never have a chance so long as it is coined at a relation to gold so disadvantageous as that sought to be established by the law requiring the coinage of the silver dollar of 412½ grains. This relation is about sixteen of silver to one of gold, weight for weight. The recent report of Edward Atkinson, appointed by President Cleveland as a Commissioner to inquire into the condition of the silver question abroad, shows that the bi-metallists of Europe—those most eager to bring about the parity and free coinage of the two metals—insist that the result must be accomplished, if at all, at a relation of 15½ ounces of silver to one of gold. In other words, the bi-metallists of Europe value silver much higher than it is valued by those who recommend the continuance of the coinage of the silver dollar in the United States. If the relation of 15½ oz. of silver to one of gold can be permanently secured by the action of the united nations, silver will be raised to a market price of sixty pence per ounce, whereas, under the continued coinage of the silver dollar, the price has for a long time not exceeded forty-four or forty-five pence per ounce. In view of these facts, those who think it wrong to advocate the discontinuance of the coinage of the silver dollar of 412½ grains are not bi-metallists, but are, in their hearts, in favor of the single silver standard.

HON. S. V. WHITE'S bill for refunding provides for the issue of bonds bearing 2½ per cent. interest equal in amount to the 4's and 4½'s yet uncalled, to be exchanged for the bonds now outstanding at the option of the holders. The new bonds are exempt from taxes, they are protected by the existing sinking fund, and they may be paid at nine different periods between 1891 and 1907. There is no mandatory date of payment. In making the exchange the United States pays the present value of the interest surrendered by the holders of 4's

and 4½'s who consent to the exchange. The payment is to be made either in money or bonds. This bill is a modification of the bill advocated by Mr. Jordan when Treasurer, and the objections to it are that it increases the principal of the debt and gives the holders of 4½'s an undue advantage over the holders of 4's.

Ex-Secretary Windom ventures the very non-committal opinion that a funding bill should provide that the bonds shall never be taxed by National, State or municipal authority and that all uncertainty as to their payment must be eliminated by keeping the sinking fund intact. The ex-Secretary talks like a financial Rip Van Winkle. He thinks he is still funding 6's into 3½'s under the direction of Wayne McVeagh.

Ex-Secretary Boutwell is in favor of a 2 per cent. fifty year bond. He is sure such a debenture will absorb all the outstanding bonds. So are a good many others. The great difficulty with getting any such plan enacted into law, is the outcry that is made against extending the period of the maturity of the debt.

THE ARTICLE HEADED "A Natural Outgrowth of the National Banking System," which appears in this number of the JOURNAL, is a very interesting study of what may be done to improve the condition of banking in the United States. Most of the plans we receive now-a-days have more or less reference to the circulation of bank notes, but this seeks to increase the profits of banks and their customers, and the security and safety of the officers, directors, stockholders and depositors.

THE REPORT of the Hon. Willis S. Paine, Superintendent of the Banking Department of the State of New York, is a clear, intelligent statement of the condition of Banks, Trust, Loan, Mortgage, Guarantee and Indemnity Companies of the State. While the number of banks and companies in the State of New York under the supervision of the Superintendent is not, of course, as great as that of the National banks under the supervision of the Comptroller of the Currency, yet it must be said that the duties of the Superintendent are the more complex as they bring him in contact with corporations of so diverse a character. The report of the Superintendent is commendable for its orderly arrangement and lucid statement. The tables given are not numerous but they are sufficient for a full illustration of the text. The chapters on examinations, days of grace, the assumption of corporate names by private banks, limit of individual loans, the Saturday half-holiday, and State bank currency are particularly interesting reading to all those versed in banking, theoretically or practically. Mr. Paine antagonizes the doctrine of a fixed issue of government notes, he refers to the dangers to be feared from the unlimited greenback advocates, and refers to the plan heretofore recommended by him for permitting the banks of the State to issue circulating notes—upon the

basis of bonds to be deposited with the Comptroller of the Currency. Public documents are not usually drawn up with much reference to satisfying the taste of the cultured readers of belle letters, and it must be said that many of them have this year manifested uncommon inelegance of style and arrangement. Mr. Paine's report is an exception to the rule, as our readers will find by its perusal.

IT WOULD BE VERY UNFORTUNATE if Congress is deterred from passing a funding bill by the outcry that there is a job in it for the National banks. The bugbear that the National banks might possibly pick up a few crumbs of comfort or profit has prevented the passage of many measures which would have benefited the country. To refund the 4's into 2½'s or 2's will afford an outlet for the surplus money which must continue to accumulate in the Treasury and will reduce the debt of the United States. It first and foremost concerns the holders of the 4 per cent. bonds. Out of a total of about \$735,000,000 of these bonds, \$147,400,500 are held by the banks. It is, perhaps, doubtful whether any of these holders will desire to make the exchange—there certainly is no very extraordinary inducement to them to do so. If they will it will greatly aid the Government in the management and payment of its debt with the money accumulating from its revenues. If the measure should become a law and the bondholders should fail to accept the new bonds in exchange, no harm would be done—there would still be the same chance to try something else. It conflicts with no other plans, except plans for useless expenditure, and might be combined with any other measure or measures for reducing the surplus as substitutes to be put in operation after the refunding plan has proved a failure. If the National banking system is dependent on the Government debt for its breath of life it cannot continue to exist for many years. The Government must manage its finances without regard to the banks. One of the best plans in the present emergency for applying the surplus is in refunding the 4's. We believe it can be made a success; at least it should be tried. If unsuccessful, no harm is done.

MR. PLUMB, of Illinois, introduced a remarkable resolution in the House of Representatives. He has made, so he alleged, the important discovery that the law authorizing the issue of 4 per cent. bonds has been inaccurately published so as to make it appear that such bonds are payable at the pleasure of the Government *after* thirty years, whereas it should read *for* thirty years. Who has been guying Mr. Plumb?

Attention is called to a list, which appears on another page, of the numerous financial measures introduced in the 50th Congress up to January 26th. Legislation important to banks will receive special attention during the time Congress is in session, and each number of the JOURNAL will contain a list of all such bills introduced.

INTERNAL REVENUE TAXES.

Under the Constitution of the United States Congress has power to impose any species of taxation. In practice however, the National Government has obtained its revenues from taxes on imports, and has only resorted to internal taxation in case of necessity. At the close of the Revolutionary War, the idea of raising taxes by internal taxation was hardly entertained. Hamilton, in No. XII of the *Federalist* writes: "The genius of the people will ill brook the inquisitive and peremptory spirit of excise laws." So strong was the prejudice against excises that in the New York convention for adopting the Constitution, it was twice moved that Congress be prohibited from exercising the power of laying excises. The impoverished condition of the country however, finally compelled measures of internal taxation to be taken. In 1790 a measure for taxing distilled spirits of domestic manufacture was introduced in Congress. The opposition it aroused defeated its passage. The Legislature of Pennsylvania instructed its representatives in Congress to oppose the passing of an excise, "the horror of all free States," and a petition sent by the citizens of Westmoreland, Pa., claimed that the "right to convert grain into spirits was as clear a natural right as to convert grain into flour." A still was regarded as the necessary appendage of every farm, to convert grain which was difficult of transportation into spirit, occupying less bulk. After a bitter contest, a law laying a tax on distilled spirits was passed by Congress on March 8, 1791. Under this law, spirit distilled from foreign materials, (molasses) was taxed at a greater rate than those from domestic materials (grain and fruit.) The enforcement of the law caused a rebellion in Western Pennsylvania. It is said that in insisting on the passage of this law, Hamilton had in view an exhibition of power on the part of the new Federal Government, and that in the opposition to the excise he found the line of least resistance. Previously the authority had been in the State Governments, and the functions of the National Government, if it had any, were to recommend, to remonstrate, to soothe and to bear rebuffs with patience and becoming humility. The whiskey rebellion was effectually suppressed without bloodshed, but the result established the ability of the Federal Government to lay internal revenue tax on spirits and to enforce it. In addition to the taxes on spirits, taxes were laid on tobacco and on carriages. Hamilton in his report for 1795, notwithstanding that in the *Federalist* he had said that "the genius of the people will not brook the inquisitive and peremptory spirit of excise laws," expressed the opinion that "there cannot be devised objects of revenue more proper in themselves or more generally acceptable to the people." He regarded the objects on which the taxes fell as luxuries. An experience of about four years did not however, prove the fitness of this form of taxation either to the circumstances or the disposition of the people. The whole revenue from these sources in 1789 was only \$416,000. When Jefferson became President, he recommended the repeal of all internal revenue taxes and Congress adopted his advice by the Act of April 6, 1802. The war of 1812 again caused the imposition of taxes on articles grown and manufactured in the United States, the tax on spirits being

in the form of a license tax on distillers. In 1817, every internal revenue tax had been repealed, and from 1818 to 1861, no internal tax was in operation under United States law. The necessity of revenue to carry on the war of 1861-1865, caused a return to the system of internal taxation. The country passed at once under a system of excessive and burdensome taxation. Every branch of trade and industry, every kind of manufacture, raw materials and net results alike, bore the burden of taxation. No other nation, said the London "Economist," would have endured a system of excise duties so searching, so troublesome and effective. There was no system. The one necessity of the situation was revenue, and the only principle followed, was wherever you find an article, a product, a trade, a profession or source of income, tax it. By degrees Congress has repealed the laws imposing these burdens, until now the only internal revenue taxes that remain, are those on distilled and fermented liquors, on tobacco and on the circulating notes of banks. For retaining the tax on bank notes there might be some reason, if the revenue derived could be utilized in the creation of a safety fund for the security of notes, but otherwise there exists no excuse for failure to repeal this tax. The amount derived from this source is not large, and cuts no figure in the finances of the Government. The taxes on distilled and fermented liquors and on tobacco, amounts to about \$170,000,000 annually, and the opposition to their repeal comes from three principal classes. First, those who are in favor of reducing the tariff and believe the revenues from internal taxes will be needed in case of such reduction. Second, the distillers and brewers and tobacco manufacturers of the country, to whom the tax gives a monopoly of the business. Distilling is not a difficult, expensive or complicated process. If the tax were removed, every farmer in the country could purchase a still and distill spirit from the grain and fruit raised by him. The tax and the expensive processes necessary to insure its collection, has thrown the whole business into the hands of capitalists. The large distillers who pay the tax to the Government collect it from the consumers, and being protected from competition make a sure and adequate profit. It is the same to some extent with brewers and the manufacturers of tobacco. The third class who oppose the repeal, are those, who believing spirits, beer and tobacco to be injurious luxuries, wish to control their manufacture and sale. Whatever the merits of these several objections to the repeal of the remaining internal revenue taxes, it is certain that their repeal would at once settle the trouble about the Government surplus. Their retention renders necessary the keeping up of the immense machinery of the internal revenue bureau with its numerous officials, employed in every part of the country. If abolished, the regulation of the liquor traffic within its borders could be safely left to each State.

There is no doubt that the granting of federal licenses greatly interferes with the attempt to regulate local sales of liquor by local option laws. The imposition of a tax and the granting of a license certainly entitles those who pay the one and take out the other to federal protection in carrying on their business.

It would seem, therefore, that, on the whole, the repeal of the internal revenue laws would not only solve the surplus problem but would much simplify the difficulties that are encountered in dealing with the moral side of the liquor question.

HOLIDAY LAWS.

Holidays originated in religious observances, which served to authorize the cessation of ordinary labor. The greatest of holidays is Sunday—the Sabbath or Lord's day. By many the selection of one day in seven for rest from ordinary duties is regarded as a special provision of Providence. History, sacred and secular, shows that the division of time into weeks of seven days and the observance of one day in seven as a holiday was observed among the Hebrews, Assyrians and Egyptians. Other divisions existed among other nations. Among the Romans the divisions nearest approaching to the week was one of nine days, and various days were set apart for relaxation and religious observance. Days selected for this purpose were often the anniversaries of great events in the life of the people or nation, but this is not consistent with the proposition that the origin of holidays is religious observance. Victories over enemies or rescues from danger were regarded as the marks of favor to protecting deity to whom gratitude was due. The Jewish Sabbath was a day legally constituted under the Mosaic law, and was based on the tremendous fact that man in observing the day sacred from ordinary employment, was following the example and explicit command of his Creator. Sunday is the Christian successor of the Jewish Sabbath. It was first officially recognized by an edict of Constantine in 321. In Great Britain and the United States the day was early set apart as one not to be employed in secular business. The Statute which is the foundation of the present law on the subject in England and the United States was passed during the reign of Charles II., in 1678. It enacted "that no tradesman, artificer, workman or laborer or other person whatsoever shall do or exercise any worldly labor, business or work of their ordinary callings on the Lord's day." Nothing was to be offered for sale upon that day. The spirit of this law is embodied in the laws of most of the United States. Contracts made on Sunday are, under the common law, void, but the decisions of the Courts have modified this, and in substance declare that while no acts of a business nature or contracts are usually works of necessity, they may be made so by circumstances and therefore be legal on that day. Sunday has been fully described as the type of the complete holiday, upon which a cessation from ordinary business as complete as possible has been agreed upon by divine institution, by the antiquity of human observance, by custom and by law, common and statutory. From the fact that the Lord created the universe in six days and rested on the seventh, it is as natural to infer it was intended for man to labor six days, and rest on the seventh. But history shows that man has as imperfectly observed the example of working six days in the week as he has the command to rest on the seventh. Other days have from religious observance or custom come to be observed as days of relaxation from labor. The Catholic church during the middle ages caused the establishment of a large number of holidays celebrated in honor of the saints and apostles. Undoubtedly the policy of the church in ordering the observance of so many days, was to diminish the severity with which the tillers of the soil were treated by their feudal masters. Many of these days have been legalized as bank

holidays abroad. The early settlers of the United States had an antipathy to holidays both from religious prejudice and from the necessity of the situation in which they found themselves. The sparseness of population, and the immense amount of labor necessary to overcome the difficulties of a new country, encouraged no days of rest. Sunday in most of the colonies was the only day observed. By degrees, as population increased and circumstances grew easier, more and more days crept in. Christmas, New Years, Thanksgiving—at first days of local observance—gradually became recognized days throughout the country. Fourth of July, Washington's Birthday, Decoration Day, followed, and finally the Saturday half holiday and Labor Day. In fact the tendency to the increase of holidays seems so strong that we may soon see a repetition of the dilemma alleged to have occurred in the case of saints' days, when the saints became so numerous that there were not days enough, even in leap year, to go around.

The Saturday half holiday is in some respects an anomaly. It is, at the best, a half holiday only. All other days which have been made holidays by law were, previously to the statutory enactment, observed as such to a greater or less extent by public custom. The Legislature only recognized and regulated a public custom. It has, in attempting to make Saturday a half holiday, taken the half day recognized as settlement time for the whole week, and seeks to force its public observance without the indorsement of a previous public custom.

What custom was there, before the Legislature enacted this law, to make the half Saturday a holiday, or to make the so-called labor day a holiday? The holiday law, however, falls short of making either the half Saturday or the first Monday in September complete holidays, because it is not sustained by public custom. When the Legislature enacted that Christmas or New Year's Day or the Fourth of July should be legal holidays it did not overstep its duties, because these days were already observed by the majority of the public by cessation from labor. They only made it legal for the banks to do what the public sanctioned; but in making the half Saturday a compulsory half holiday they force the banks to do what the public do not want or sanction. The Act is, perhaps, unconstitutional in that it prevents banks from working six days in the week, while all other business or professional men or mechanics can do as they please.

A credit money to do its work satisfactorily should not be made too like real money, that is too much like gold and silver coin. For this reason legal-tender notes, National bank notes and gold and silver certificates do not, at the present time, possess many of the functions exercised with much benefit to the business interests of the country by the circulation of State banks. The credit of the National bank note, of the legal-tender note and gold and silver certificates is so high that for all practical purposes they are held and treated as gold and silver. The functions of credit circulation are now performed as well as may be done by such means, by the checks of individuals and by bank drafts and clearing-houses. The individual check business is becoming as much of a nuisance to the banks, causing them as much labor and useless expense as that formerly caused by the remission and redemption of a local State bank currency. On the latter, too, the banks had the chance of a profit, in that such currency was taken at a discount, whereas the collection of individual checks generally is made without charge.

THE EXAMINER ACT OF THE STATE OF MINNESOTA.

WITH ANNOTATIONS BY THE HON. HENRY M. KNOX, PUBLIC EXAMINER OF THE STATE SINCE THE PASSAGE OF THE ACT.

An Act to provide for the appointment and to prescribe the duties of a Public Examiner for the State of Minnesota (Chapter 6, Sections 89-97, General Statutes, 1878.) Approved March 12, 1878.

SECTION 1.—Appointment—Bond—Term.—That one competent person who shall be a skillful accountant, and well versed as an expert in the theory and practice of book-keeping, and who is not an incumbent of any public office under the State, or any county, municipality or public institution therein, and who is not a stockholder, officer, trustee, assignee, or employe of any banking, moneyed or savings institution or corporation created under the laws thereof, shall be appointed by the Governor, by and with the advice and consent of the Senate, who shall be styled Public Examiner, and who shall take and file with the Secretary of State an oath of office, and execute to the State a bond, with at least three sureties to be approved by the Governor, in the penal sum of fifty thousand dollars for the faithful discharge of his duties. He shall hold the office for the term of three years, and execute the duties thereof as herein prescribed until his successor shall be appointed and qualified; and in case of a vacancy by death, removal, resignation or otherwise, the Governor shall fill the same by appointment.

SECTION 2.—State Institutions.—The said Public Examiner is authorized and empowered by this Act, and it shall be his duty in his discretion, to assume and exercise a constant supervision over the books and financial accounts of the several public, educational, charitable, penal and reformatory institutions belonging to the State. He shall prescribe and enforce correct methods for keeping the financial accounts of said institutions, and instruct the proper officers thereof in the due performance of their duties concerning the same. It shall be his duty to visit each of said State institutions at irregular periods, without previous notice to the officers thereof, at least *twice each year*,* and make an exhaustive examination of the books and accounts thereof, including a thorough inspection of the purposes and detailed items of expenditures and of the vouchers therefor.

SECTION 3.—State and County Officers.—It shall be the duty of the Public Examiner to *order and enforce a correct, and as far as practicable, uniform system of book-keeping by State and County Treasurers and Auditors, so as to afford a suitable check upon their mutual action*,† and insure the thorough supervision and safety of State and County funds. He shall have full authority to expose false or erroneous systems of accounting, and when necessary, instruct State and County officers in the proper mode of keeping the same. It shall be his duty to ascertain the character and financial standing of all present and proposed bondsmen of State and County

* Twice each year is quite impracticable with the help granted. One examination per annum is sufficient in ordinary cases. Special examinations may be made if occasion requires.

† See accompanying "Address," page 6, pars. 2 and 3. It should be seen to, that existing laws do not interfere with a sound and proper system of accounting.

officers, and he shall have full power to approve or *reject any or all such sureties* † in accordance with the knowledge so obtained. He shall require of County Treasurers from time to time, as often as he shall deem necessary, a verified statement of their accounts, and he shall personally visit said offices without notice to them, at irregular intervals, at least once in each year, and at such time make a thorough examination of the books, accounts and vouchers of such officers, ascertaining in detail the various items of receipts and expenditures; and it shall be [his] the duty to inspect and verify the character and amount of any and all assets and securities held by said officers on public account, and to ascertain the character and amount of any commissions, percentages or charges for services, enacted by such officer, without warrant of law. The Examiner shall report to the Attorney-General the refusal or neglect of county officers to obey his instructions, and it shall be the duty of said Attorney-General to promptly take action to enforce compliance therewith. The said Examiner shall report to the Governor the result of his examinations, as well as any failure of duty by financial officers, as often as he thinks required by public interests; and the Governor may cause the results of such examinations to be published, or, at his discretion, to take such action for the public security as the exigency may demand; and if he shall deem the public interests to require, *he may suspend any such officer* | from further performance of duty until an examination be had, or such security obtained as may be demanded for the prompt protection of the public funds.

SECTION 4.—Banking Institutions.—The Examiner under this Act shall in like manner, and with like authority, visit, without prior notice, each of the banking, savings, and other moneyed corporations created under the laws of this State, or the Territory of Minnesota, and thoroughly examine into their affairs and ascertain their financial condition at least once in each year. It shall be his duty to carefully inspect and verify the validity and amount of the securities and assets held by such institutions, examine into the validity of the mortgages held by savings banks, and see that the same are duly recorded, and ascertain the nature and amount of any discount or other banking transactions which he may deem foreign to the legitimate and lawful purposes of savings institutions. He shall inquire into and report any neglect or infringement of the laws governing such banking, moneyed and savings institutions, and for such purpose shall have power to examine the officers, agents and employes thereof, and persons doing business therewith. He shall forthwith report the condition of such corpo-

‡ In our State the Board of Commissioners for each county may require a new bond for two causes specified in the statutes, for failure to furnish which within ten days after notice the office may be declared vacant and a successor appointed. But neither of these causes is the rejection of the sureties by the Examiner. Hence an amendment is necessary providing for that contingency and that a new bond shall be required for that reason, and for its proper approval and record, and for working a vacancy and new appointment in case of failure to furnish such new bond. In case it is so furnished care should be taken that the original bond and the rights and liabilities of the parties thereto incurred or existing at or prior to the time of the acceptance and approval of the new bond shall not be affected or impaired.

‖ A suspension of a County Treasurer under our laws did not work a vacancy. Hence no new incumbent could be appointed by the Board of Commissioners to serve for the remainder of the term. This defect has been cured by a thorough revision of the laws on the subject. The amendment provides for the appointment of a Treasurer *ad interim*, and for an orderly trial of the offender if he demands the same within thirty days. No suspended officer has yet demanded a trial. They have been quite willing to resign and save the disgrace of removal. The Treasurer *ad interim* succeeds to the office and qualifies for the unexpired portion of the term.

rations so ascertained to the Governor, together with his recommendations or suggestions respecting the same, and the Governor may cause the same to be published, or in his discretion, take such action as the emergency may seem to demand.

SECTION 5.—Facilities for Examination—Penalty for Refusal.—To enable said Examiner to perform the services herein required of him, the trustees and financial officers and managers of the several State institutions, the County and State Treasurers and Auditors, and other county and State officers, and the officers and employes of all banking, moneyed and savings institutions herein referred to, shall afford all reasonable and needed facilities, and it is hereby made the duty of all such trustees, officers, managers and employes to make returns and exhibits to the said Examiner, under oath, in such form and at such time or times as he shall prescribe; and each and every person so required who shall refuse or neglect to make such return or exhibit, or to give such information as may be required by said Examiner, shall be deemed guilty of felony; and if any person in making such exhibit or giving such information, or affording any statement required under this Act, on his oath, shall knowingly swear falsely concerning the same he shall be deemed guilty of perjury and punished accordingly.

SECTION 6.—Books and Witnesses—Penalty for Obstructing.—Every person who shall willfully obstruct or mislead the Public Examiner in the execution of his duties as herein prescribed, shall be subject to a conviction and punishment therefor in the same way as is provided for the conviction and punishment of persons obstructing or hindering other officers, ministerial, judicial or executive under the authority and law of this State. And the said Examiner shall have full power and authority for the various purposes herein named, to examine any of the books, papers, accounts, bills, vouchers, or other documents or property of any or all of the aforesaid State institutions, moneyed, banking and savings corporations and County and State officers, and custodians of County and State funds, and also to examine under oath any or all of the trustees, managers, officers, employes or agents of such institutions and moneyed and savings corporations, and other persons in control of or doing business with said moneyed and savings institutions, and the County and State officers and custodians of County and State funds aforesaid. The said Examiner is empowered to issue subpoenas, and administer oaths in the same manner and with the same power to enforce obedience thereof in the performance of his said duties, as belong and pertain to Courts of Law in this State; and any person refusing access by said examiner to any such books or papers, or any trustee, manager, officer, agent, clerk, employe or other person aforesaid who shall obstruct said access, or refuse to furnish any required information, or who shall in any manner hinder the thorough examination required by this act, of the officers, or of the affairs, books, accounts, papers and finances of the State, moneyed, banking and savings institutions, or pertaining to the County and State officers aforesaid, shall be deemed guilty of a felony, and shall be liable on conviction, to [a] fine of one thousand dollars, or imprisonment in the State Prison for a period of one year.

SECTION 7.—Annual Reports.—Said Examiner shall make an annual written report to the Governor, of his various proceedings embodying therein

an abstract of the condition and statistics of the several institutions, and County and State finances, as ascertained by him, which report shall be printed to the number of one thousand copies, and be included with other official reports in the volume of executive documents.

SECTION 8.—Salary and Contingent Fund.—For the services required under this Act, the Public Examiner shall receive an annual salary of thirty-five hundred dollars, and a *contingent fund of fifteen hundred dollars, of which one thousand dollars shall be paid for clerk hire.* § and the remainder, or so much thereof as may be necessary, for the incidental expenses of his office, which sums shall be paid by the State Treasurer in the same manner as other salaries and expenses of State officers are paid; and if the said Examiner shall directly or indirectly receive any compensation or pay for any services or extra service, or for neglect of service, other than is provided in this Act, he shall be deemed guilty of felony, and on conviction thereof, shall be subject to a fine not exceeding ten thousand dollars, or imprisonment in the State Prison not exceeding ten years, or both, in the discretion of the Court.

SECTION 9.—Attorney-General to Aid.—It shall be the duty of the Attorney-General to aid, when called upon by the Public Examiner, in any investigation or matter needing legal advice or inquiry, and to supervise the prosecution of all offenders under the provisions of this Act.

SECTION 10.—All Acts and parts of Acts inconsistent with the provisions of this Act are hereby repealed.

SECTION 11. This Act shall take effect and be in force from and after its passage.

*Other duties have been added since the passage of the Act, as THE PREPARATION OF BLANKS FOR OFFICIAL BONDS** (Chapter 110, Laws of 1881, and Chapter 9, 1883) and the examination and supervision of ANNUITY, SAFE DEPOSIT AND TRUST COMPANIES†† (Chapter 107, Laws of 1883).*

§ Section eight stands here as amended in 1881. The original Act provided for "a contingent fund of one thousand (\$1,000) for clerk hire, office rent, stationery, and all other expenses incident to the duties of the office."

The Legislature of 1887 provided "that the Public Examiner may appoint a deputy, who shall take and subscribe the oath of office required by law, and who shall execute to the State, a bond with two or more sureties, in the penal sum of ten thousand (\$10,000) dollars for the faithful discharge of his duties." In case of the necessary absence or inability of the Examiner, the deputy may perform the duties of the office. The deputy receives a salary of eighteen hundred (\$1,800) dollars, and the same Act adds seven hundred (\$700) to the contingent fund of the office, making the same twelve hundred (\$1,200) dollars per annum.

** No printed form of official bonds had been prepared prior to the creation of this office. An exhaustive examination of these documents revealed a condition of affairs for which extraordinary is a very tame and inexpressive word. All bonds of county officers must now, after record in the office of Register of Deeds of the county, be forwarded to the Secretary of State, who, before filing in his office, must obtain upon each in writing the approval of the Attorney-General as to its statutory form and execution, or in case of its non-approval the indorsement thereon of the reasons for such non-approval, which indorsement works the execution without delay of a bond perfected according to the statutes.

The bonds of all State officers and of the Treasurers of all the public institutions of the State must be approved by a Board of Auditors consisting of the Governor, Secretary of State and Attorney-General, or by the Governor and one other of said officers. The same rule as above applies to this class of bonds also, as to the Attorney-General's approval, as to legal form and execution and as to filing with the Secretary of State. These bonds are also recorded in the latter office.

†† In 1883 it was made incumbent upon this office to examine all annuity, safe deposit and trust companies "at least once in six months and as often as may be deemed necessary." It is also made the duty of the Examiner and the State Auditor to approve the bonds and securities deposited with the latter officer as a collateral security for the depositors and creditors of such corporations and for the faithful execution of their trusts. Such guarantee fund must for each company incorporated amount to the sum of two hundred thousand (\$200,000) dollars.

A NATURAL OUTGROWTH OF THE NATIONAL BANKING SYSTEM.

It is the duty of business men to improve all opportunities for advancing the credit of our banking institutions. When a doubt of the credit of a bank arises by reason of a heavy loss through a defaulting or speculating officer, or by the failure of some large firm, of whose paper the bank is known to hold a large amount, a feeling of distrust follows which gradually affects all branches of trade. The larger the institution the more widespread and harmful is the result of these doubts. If such are the results of mere distrust, how much more disastrous are the effects of an actual failure. Many who have money on deposit are led by the insolvency of one to doubt the strength of all banks. These draw their money from good institutions and hoard it, or leave it with safe deposit companies—which is much the same thing—taking that much from the circulation of the country. Their action of course influences others, and the amount withdrawn from circulation may reach large proportions and seriously affect all business and industries. The confidence of the people may be so disturbed that a panic may develop, as was the case after the failures of Jay Cooke & Co., of Grant & Ward and the Marine National Bank, of New York. As a remedy for these recurring shocks to financial credit and business prosperity the following plan is suggested.

Let an association be organized with a capital of from \$100,000,000 to \$500,000,000 in shares of the par value of \$100 each, in the following manner :

1. Let capitalists combine and raise a paid-in capital of ten millions of dollars, and either secure a special charter from Congress or organize—for the time—under the general banking laws of the United States, establishing the parent bank in New York city.

2. Let the Board of Directors of the parent bank consist of ten members, to be elected for five years, and let these Directors, with the Presidents of branches established as hereafter described, elect officers of the association, said officers to consist of a President, a Vice-President, a General Manager and a Cashier, the last two to have immediate supervision of the routine business of the parent bank, and to have the appointment of the subordinate officers and employes of that bank, subject to the approval of its Directors.

3. Let subscriptions to the stock of the association be solicited by advertisement, the shares to be issued and paid for as fast as needed for organizing branches, to be authorized in all places of five thousand population or over.

4. Let representatives be sent to the leading banks in our principal cities, who shall at first propose to them to enter the association. If the proposition is refused, a new bank will be formed ; if it is accepted, a committee of three experts are to examine the bank, throwing out all doubtful and worthless paper, appraising the real estate at a forced sale basis, the bonds at their market value, etc., etc. If the stock turns out to be worth par, the association is to be authorized to buy 51-100 of the stock, and the balance continuing to be held by the management. If a new bank is established, the association will hold 51-100 of the stock and local stockholders the balance.

5. The stockholders of each branch, representing the 49-100 of the stock,

are to elect the Directors of the branch bank, and the Directors the officers, the same as though they represented all the stock. The association has no vote in electing said Directors, but it is to have the power to remove any officer at any time for incompetency or dishonesty and to substitute any one employed by the association capable of filling the position.

6. The Presidents of the branches, with the ten Directors of the parent bank, will be in the same position towards the association as the stockholders are to the branches, and will meet once a year to elect Directors and officers and a Finance Committee of the association for the ensuing year.

7. Each bank with a capital of \$100,000 will be entitled—by its President—to cast one vote, each additional \$100,000 capital giving an additional vote.

8. Each member of the Finance Committee is to have charge of a certain number of banks, over which he is to exercise a general supervision, and all loans on official notes from such banks are to be made through him. All reports and statements of the condition of said banks must be sent to him for such action as he deems best. He is also to be one of the Discount Committee for all loans made by the New York bank. Each branch is to be required to furnish to the Finance Committee weekly a statement showing its condition. Once a quarter a list of loans and discounts, showing amount, maker and indorser, where payable, with date of maturity.

9. It is to be the duty of the Finance Committee to see that each bank has what money it needs, as far as possible. A branch having a large line of choice paper offered, and having all of its funds, above the reserve, invested, is to send on its official note for the amount required. This may be discounted by the New York bank or any of the branches which have idle money. The amount of the note, less the discount, is to be placed to the credit of the bank sending the note, the rate of discount being the same as on demand loans.

10. The local stockholders, namely, those holding the 49-100 of stock, are to be liable for an amount twice the value of their stock on all losses caused by the neglect, carelessness or dishonesty of the officers elected by them, and of the employes chosen by such officers. Bonds should therefore in every case be required of all such officers and employes to protect the stockholders as far as possible. Losses caused by poor investments, where it is shown that the Directors have done their full duty and examined the securities to the best of their knowledge, must be borne by the branch and the association jointly—the branch assuming 49-100 and the association the remaining 51-100.

* 11. Inasmuch as the local stockholders, those who hold 49-100 of the shares, elect all the officers, they are liable in double the amount of the stock, but the owners of the remaining 51-100 are not to be liable for more than the par value of their shares.

12. The President of the association will preside over all meetings of the Directors of the parent bank and Presidents of the branches, and the association, in the manner directed by the By-laws, will appoint all Examiners, see that the

* There are thus two kinds of stock, that of the association, the holders of which have no vote and are liable to the par value of the shares only, and that of the parent and branch banks, the holders of which are liable to double the amount of the par value. The word "local" used in the article as to the latter does not indicate that this double liability stock is to be held solely by residents, but by those who desire a voice in the management of the bank. Those who desire to do so can invest in bank stock without incurring any liability further than their investment, by surrendering all voice in the management.—Ed.

laws are enforced, fill all vacancies caused by the removal—during the year—of any officer of the association by death, resignation or other reason. The President will also be the Chairman of the Discount Committee.

13. The Vice-President will perform all the duties attached to the office of President during a vacancy in the office or during the inability or absence of the President. He shall also be the Chairman of the Committee on Laws and have power to appoint from the bank Presidents a committee of five to assist him in such duties (subject to the approval of the Board of Directors.)

The foregoing is the outline of the proposition. If carried into effect some of the results would be as follows: A firm doing business in a town could get all the money it wants to do business with, at one bank as long as the firm is good for it. But if it is—say worth only \$25,000—it will not be able to borrow \$10,000 at home and \$50,000 outside and then fail. The first question asked them on going outside of their local bank would be, Why, if you are all right, can you not get money at your own bank? Bankers will then have the chance of knowing how large the total indebtedness of a firm is and when its loans reach a point beyond which it is not safe to advance further funds. A firm doing a straight, legitimate business will be benefited, while one working on wind will be shown up, and will either retire from business or reduce its liabilities to a safe point.

The list of bills discounted sent in every three months will give the Finance Committee of the Association points to work from. The weekly statements will show what banks had a surplus and what ones needed more money for their business. There will not be a glut of money in one place and a stringency in another, as all parts of the country will be represented, and it will be for the mutual interest to see that all available funds are employed.

Such a combination will make larger dividends than the banks now pay possible, and with a minimum of risk to the stockholders, it will afford almost absolute protection to the depositors. The dishonest official will be pushed to the wall and no compromise made with him, restraining many who would otherwise be dishonest. The collection business of the country will be simplified, checks will be sent direct, and branches centrally located can be made clearing-houses for the collections in that district of the country.

If it were thought desirable to modify the present provisions of the National Banking laws in regard to the security for circulating notes, the law might permit all bonds of cities of a population of 25,000 and over, guaranteed by the State in which said cities are located, to be deposited as security for circulation, provided that neither city nor State has ever defaulted payment on their bonds. The amount to be issued on such bonds should not exceed 75 per cent. of their par value.

These are but a few of the advantages which will result from the plan which has just been sketched. It is of course not possible in one article to show how it will apply to the multifarious details of the banking business. The readers of the *JOURNAL*, well acquainted as most of them are with the theory and practice of banking, can readily understand how it will apply in the various relations of officers, employes, Directors, stockholders and depositors. No doubt there may be those who will see objections, but none, it is believed, can be raised which will outweigh the benefits which this plan will confer.

C. W. Yost.

*** BANK BOOK-KEEPING.**

A TREATISE ON KEEPING AND AUDITING THE BOOKS OF STATE AND NATIONAL BANKS, PRIVATE BANKING FIRMS, SAVINGS INSTITUTIONS, FINANCIAL AGENTS, ETC.

Prepared for the JOURNAL by an experienced Bank Accountant.

INTRODUCTORY ARTICLE.

A prominent New York bank President said recently: "To be a successful bank Book-keeper requires a genius possessed by few men." That was a guarded remark, and more guarded than the speaker intended. "Successful," as the word is here used, has an unusually deep significance. To be a successful Book-keeper in a large store, as well as in a bank, requires a special fitness for the work. But what the banker had in mind, particularly, was the idea that one might be a thoroughly good Book-keeper in a mercantile business or in a manufactory and not succeed if transferred to a similar position in a bank. He meant, in other words, that a bank accountant required a special qualification above and beyond the training essential to a Book-keeper in many other lines of business. That theory, however, is just as true when applied to other branches of business as to banking. Certain qualifications are necessary for one to prove himself a successful Book-keeper anywhere. Some special qualifications will be found necessary in a bank, other qualifications are requisite in a mercantile business, and others again are needed for the accountant of a factory.

To be a successful Book-keeper in any department one must be accurate in calculations and painstaking in details. He must have a keen eye, a prompt brain and a ready hand. Much depends on the accuracy of the eye, not in measuring the size or weight or discerning the color of objects, but in gathering with speed names and amounts from hastily-made pen-tracks and pencillings. Then the brain must be vigorous and active. It is that organ that takes the impression from the eye and telegraphs it to the ready hand which produces the record.

A comprehensive familiarity with the theory and principles of Book-keeping though important is not the preeminent consideration to the bank Book-keeper. A thorough acquaintance with routine practice is of greater advantage than the clearest conception of the philosophy of accounts. I say this, not that I would advise one to neglect the study of all the principles and of every theory upon which a knowledge of scientific Book-keeping is based.

A natural question is, how shall a knowledge of both the principles and the practice be acquired? The theory may be acquired by study, but the practice must be gained by experience. A student may learn in the school-room or from a book of instruction how the books of a large bank should be kept, but he would not be entrusted with the responsibility devolving upon a bank Book-keeper until by some actual experience he had demonstrated his fitness for it. The student of a technical institute may learn all about such a wonderful piece of mechanism as a locomotive. He may comprehend every part perfectly—so well in fact that given the necessary tools and materials he could go to work and construct a perfect machine. But would that knowledge warrant the management of a railroad in placing him at the throttle of an engine

* A series of papers on Practical bank Book-keeping: will be continued through h the year 1888, or until the subject is exhausted. When required the articles will be illustrated by photo-engraved plates of blank books, forms, etc.

to take a train load of humanity over a track with which he was not familiar ? It is only the experimental part of his education as a locomotive engineer he would acquire in the school and by building an engine, the actual knowledge he must get by serving as assistant under some master of his trade, who, before him, has passed through a similar course of training and is now performing the practical service. The person then who would rise to the rank of a capable bank accountant must not only become familiar with the general theory of book-keeping but he must win his way step by step, from one position to another, until those in authority are assured that he is competent to discharge the duties his advanced station would require. This experience may be acquired either by commencing in a small institution where ample time is given for reflection and precautions as a Book-keeper, or by gradual advancement from the minor to the more important holdings in a metropolitan or large concern. Many have climbed from the lowest to the highest round of the ladder of banking accounts by gradual advancement through successive positions, who, previous to his clerkship possessed not the slightest knowledge of the broad underlying principles in which banking accounts form but one of its less important divisions. This fact, however, does not disprove the generally conceded idea that a liberal knowledge of the fundamental principles of accounts is a highly important acquisition.

The work then, of these papers is to produce in the experimental field of the Bank Clerk, the Teller, Cashier and Book-keeper a comprehensive treatise based upon modern theories and practice. The entirely practical part must be left for actual operations in the bank counting-room.

In some of the foremost commercial schools a course of training has been devised and is carried out under the direction of experienced and practical heads in a manner that gives the student a fair insight into actual banking practice. Such a training may be accepted as a beneficial stepping-stone.

This treatise, it is our aim, shall be confined to the records and accounts of banking. It will embrace in its descriptive and illustrative elements every feature of the business which hinges upon this department and which it is deemed important a bank employe should understand. While keeping in view a well-defined purpose, the course of instruction will not be confined to any particular method or special theory, but will embrace the best features of a variety of methods and plans, each differing in many respects, but all aiming at the same general result. The intention will be to introduce, review and illustrate some of the most meritorious and exhaustive systems now in actual practice.

SOME GENERAL PRINCIPLES.

Banks, like other things, have their beginning, and like many other things too, their beginning is often an important feature of their existence. The methods of organizing a bank and putting it into operation are not the same under all circumstances ; if they were it would be a comparatively easy task to prescribe a set of fixed rules as a guide to such an undertaking. But, owing to the many purposes for which banks are established, and from the fact that the amount of business it is presumed a bank will command has much to do with the plan to be followed in conducting its affairs, no fixed arrangement can be well formulated for governing all such institutions. The aims of a banking institution and the conditions surrounding its establishment are important factors that influence its history and character. The character of the institution then has everything to do with its Book-keeping methods. The books and Book-keeping practice of a large metropolitan bank, with its several thousand customers' accounts and its hundreds of correspondents, would be

unwieldy and much out of place in the bank of a country town. They would be as much too cumbersome for the country bank as the books of the smaller institution would be inadequate for the metropolitan concern. As the special purposes for which banks are established are similar irrespective of the place where they are located, so the general routine to be practiced in their records and accounts will be found to bear a strong mark of similarity. The general principles which govern the operations are the same in all cases. The principles too which govern the science of bank Book-keeping are the same as those upon which the Book-keeping for a mercantile firm or that of a railroad corporation are founded. What differences exist are in the details of the work, and not in the fundamental theories.

Book-keeping is the art of recording business transactions in such a manner as to determine certain important results and conditions.

Bank Book-keeping is the art of recording the transactions of a bank in such a manner as to determine results and conditions, which will serve as a guide to those engaged in conducting the business, and enables those interested to know the current condition of affairs.

Among the important results and conditions to be determined and shown by the books of a bank are: The condition of the capital and of investments; the relation of the bank with its dealers or depositors, if it receives deposits; the relation of the bank with its correspondents, if it has any; the results of the operations, and their effect upon the capital at reasonable periods, or daily, according to circumstances, and the system in use.

These various conditions and results, together with many minor details not enumerated, are determined and shown by a systematic arrangement of the transactions under special headings, and in particular forms known as "accounts." The formula arrangement of an account is shown by the accompanying figure representing the account of cash, marked Fig. 1. The

terms "Debit" and "Credit," or "Debtor" and "Creditor," are used in accounts for the purpose of indicating additions to or subtractions from the account, assuming that the primary conditions of every account is 0, (nothing.) The debit, or left-hand side of a cash account represents additions to the account

Dr.	Cash.		Cr.

Fig. 1.

or cash receipts. The credit, or right-hand side, represents subtractions from the account or cash paid out. Thus, to say "cash received," is equivalent to "cash debit," and "cash paid out" is equivalent to "cash credit."

The principle here enunciated applies to other accounts as well as to cash.

A bank may purchase and own the building in which it does business, and the ground upon which the building stands. The usual title given such property is "Real Estate." The terms "Debit" and "Credit" apply here as

they do to the account of cash. Real estate account (see Fig. 2) is debited for

Dr.	Real Estate.	Cr.

Fig. 2.

purchases and certain improvements which increases its value, and is credited for sales and for losses which diminish its value.

One of the functions of banking is to loan money. These loans may be made on bond and mortgage or on notes. When a bank loans money on notes it is termed "Dis-

counting." The usual title of the account in which such loans are recorded is "Loans and Discounts." (See Fig. 3.) This account is debited with loans made or notes discounted, and credited when such loans and notes are paid or liquidated.

Dr.	Loans and Discounts.	Cr.

Fig. 3.

A bank must keep accounts with its correspondents. One of the first things to do when a bank is organized is to arrange with some bank in New York, Chicago, Cincinnati, St. Louis, Philadelphia, Boston, New Orleans, San Francisco or some other commercial metropolis to become its correspondent. Such arrangements are often made with two or more banks

and in two or more different cities. The purpose of this arrangement is that the bank may have on deposit with its correspondent in the commercial metropolis a fund against which it may draw in selling exchange. These correspondents' accounts are kept under the title or name of the bank with

Dr.	National Park Bank.	Cr.

Fig. 4.

which the deposit is made, and are debited for money so deposited or remitted to deposit, and are credited for drafts against such deposits. (See Fig. 4.)

(To be Continued.)

Notes and Comments on
BANKING PRACTICE.

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by occasional contributions from others who are interested in the subject.

Uniformity in Checks.—Mr. Charles E. Sprague, Secretary of the Union Dime Savings Institution, New York city, contributes the following in regard to a subject which is just now attracting much attention from bankers throughout the country :

“I have long been of the opinion that a uniform style of arrangement in the form of checks would be of great advantage to the business world, and I have frequently urged the same view in articles in the public press. I was, therefore, greatly pleased when I learned that the Bankers' Club of Chicago had formulated a plan which would probably meet with general acceptance.

One feature of this plan, however, seems to me to be, from a legal point of view, a fatal obstacle to its adoption.

The objection is this : That the amount in figures and the amount in words are both brought into the body of the check, rendering inapplicable the established rule of law that the “the words in the body of the check and not the figures in the corner are to control in case of variance.”

The remedy would be simply to put the amount in the corner, exchanging its place with that of the number. Then the four conditions named as requisites of a perfect check would be as perfectly fulfilled as by the original plan—I think even more so. In this institution for several years all deposit and draft tickets have been printed with the spaces for amount figures in the upper right-hand corner, as shown by the following samples ; and our book-keepers say that this is absolutely the best and most convenient place. By overlapping the tickets the amounts of several tickets can, if desired, be added without transcribing.

This institution would give its adherence to the plan at once if this important detail were corrected.”

Deadhead Collections.—The subject of deadheads, although an old one to the banking community, seems at present to be attracting general attention, perhaps because it is on a decided increase. A good many large firms, whose collection lists go over a wide area of country, have adopted the plan of attending to their own collections, and send them direct to the bank or banker in the place where the drawee resides. With firms of this stamp there is seldom any trouble, as they are usually willing to pay any reasonable charges, whether the draft itself is paid or not ; but in this, as in every other business, there are firms which pay more regard to saving a few cents here and there than the rules of fair dealing permit. Some are unwilling to pay any but the smallest charges when the draft is actually paid or accepted, and decline to pay anything when the draft is returned instead of the funds. Various ingenious methods have been resorted to by banks receiving this class of business, to retain such of it as is profitable and to get rid of what causes only trouble and expense without any compensating return. Perhaps the best plan is to adopt a printed notice, such as was shown in a recent issue of the JOURNAL, requesting the drawers to remit a certain small fee for the trouble incurred, and intimating that in the absence of such remittance their drafts must be sent to other correspondents. The profits of the banking business,

under the present competitive system, have become reduced to so small a margin that managers must look to every source of revenue, and cut off as far as possible every item of expense.

Uniform Letter for Credit Remittances.—Since the issuing, by the Bankers' Club of Chicago, of the circular, forms, etc., of August 1st, I have received from many bankers, and noticed in several newspapers and periodicals, suggestions in reference to other uniformities.

Principal among these I note an evident desire to see some proposal made of a letter form for credit remittances. I enclose a form which, with an explanatory circular, was sent by the First National Bank of Chicago on September 1, 1884, to all its country correspondents.

Total Credit Letter,				\$, 1 9 0 2 3 3 2	

YOURS RESPECTFULLY,

BROWN, JONES & SMITH.

Use this letter head for each business only as can be included under the headings of one of the three columns.

As a result, over 90 per cent. of the banks, and other out-of-town accounts

keeping a balance with this bank, have adopted and are still using the form for credit remittances. Foreseeing that a very large quantity of these letters would, in the aggregate, be needed, the writer made such arrangements with a printing house in this city as rendered the small cost of the letter-heads an additional argument in favor of their use, they being furnished to the sending bank by this printer direct, printed in copying ink with name of sending bank, town, etc., printed in the heading, for \$2.75 per thousand.

As this bank frequently receives more than a thousand letters of this class in a single morning, it is evident that these uniform letters add much to the speed and accuracy with which it would be possible to handle such a mail under any method devoid of some such system.

I will be happy to give any further information on this matter to those who may be sufficiently interested to address me personally. FRANK E. BROWN.

Small Clearing-Houses.—Outside of large cities clearing-houses are not so much used for the settling of exchanges between the banks. Every now and then one of the smaller cities will form a clearing-house, but the custom of doing so is by no means general. It seems strange that such should be the case, for the great convenience of such institutions is universally recognized, and in no place where they have once been established have the banks been willing to revert to the old methods. Yet even Washington and Richmond still manage to get along without this modern invention. The organization of a clearing-house and its management are so exceedingly simple that any one can understand them by very little study and attention. There is nothing complicated about clearing-house transactions, either in theory or in practice, and experience has shown that it is very seldom that anything in the nature of a lawsuit grows out of them. It may be readily admitted that one who has never seen a clearing-house in actual operation might have some difficulty in forming a definite idea of the manner in which it is worked; for it is not an easy task to gain a clear view of such matters from printed descriptions. On the other hand, there is no reason why the actual working of a clearing house should not be familiar to any bank or banker. In a town where there are only three or four banks a settling on clearing-house principles would be a great convenience to every one and save a considerable amount of time all around. In such a case it might not even be necessary to have a regular association with a constitution and by-laws, but the Messengers might meet at the rooms of the most central bank and make their exchanges among themselves, adjusting the money differences later in the day. But the advantages of a clearing-house are so generally understood as to make it unnecessary to enlarge upon them here, the object of this paragraph simply being to urge the matter upon the attention of those readers of the JOURNAL who have not as yet clearing-house facilities in their own town.

A Real Benefit.—Messrs. G. B. Stocks & Son, proprietors of the Bank of Blue Rapids, Kansas, are old patrons of the JOURNAL. In renewing subscription for the current year they write as follows concerning its value: "It may seem superfluous for us to congratulate you on the splendid work you are doing for the banking fraternity of this country, yet we cannot refrain from doing so when we think of the benefit we have derived from the reading of your JOURNAL during the past four years."

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

NATIONAL BANK—REDUCTION OF CAPITAL OWING TO IMPAIRMENT OF ASSETS—SUBSEQUENT REALIZATION FROM BAD ASSETS OF FULL AMOUNT OF DEFICIENCY—CAN THE BANK BE COMPELLED, AT THE SUIT OF A STOCKHOLDER, TO DISTRIBUTE THE MONEY SO REALIZED PRO RATA AMONG THE SHAREHOLDERS?

(A National bank was organized with a paid-up capital of \$300,000. Owing to the fact that there were among its assets \$71,000 of paper considered worthless, and to avoid an assessment upon the shares to make good the deficiency, the stockholders, in pursuance of Revised Statutes, Sections 5,143 and 5,204, reduced the capital of the bank to \$225,000. Subsequently the bank realized on such paper the sum of \$75,000, which it carried into account and treated as assets. M, the owner of seventy-seven shares of stock, brought suit to compel the bank to distribute to him the share of the \$75,000 realized proportioned to the amount of stock surrendered by him. *Held*, That the bank cannot be compelled, at the suit of a stockholder, to distribute the amount so realized among the shareholders.)

The First National Bank of Jeffersonville was organized some time prior to the 17th day of August, 1876, in pursuance of the Act of Congress which provides for the organization and prescribes rules for the regulation and government of National banking associations. The bank had, at the date mentioned, a paid-up capital of \$300,000, of which Michael V. McCann owned seventy-seven shares of \$100 each. Owing to the fact that there were among its assets about \$71,000 of bills and notes of the Ohio Falls Car & Locomotive Company, on which the interest had remained past due and unpaid for more than six months, and which were not well secured and in process of collection, the capital of the bank had become impaired, and the Comptroller of the Currency had given notice and was about to assess the stock to the amount of \$75,000 in order to make good the deficiency, according to the requirements of the Revised Statutes of the United States, Section 5,205. The stockholders thereupon, on due consideration, resolved to avail themselves of the privilege conferred by the Revised Statutes of the United States, Sections 5,143 and 5,204, in pursuance of which, by the required vote, they reduced the capital stock of the bank from \$300,000 to \$225,000. There being at the time little or no prospect that the bills and notes of the car and locomotive company would ever become collectible, they were presumably carried to the account of suspended or "bad debts," and were not thereafter included in the reports made to the Comptroller as assets of the bank, although they were retained in its custody. Some time in the year 1883 the bank realized about \$75,000 from certain collaterals which had been pledged as security for the bills and notes hereinabove mentioned. The same was carried into the account and treated as assets of the bank. McCann, after having with the other stockholders of the bank, surrendered an amount of his stock proportioned to the reduction made in 1876, commenced suit in May, 1885, for the purpose of compelling the bank to distribute to him the share of the \$75,000 realized as above, proportioned to the amount of stock surrendered. The question for determination was whether, upon the facts stated, the bank could be compelled, at the

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL's Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

suit of a stockholder, to distribute the money realized from the collection of the suspended bills and notes.

Held, An examination of the Act of Congress makes it clear that a National banking association may, within limits, reduce its capital stock. This is provided for in express terms by Section 5,143, which enacts generally that shareholders owning two-thirds of the stock may reduce the capital stock of the bank to any amount not less than the minimum required by the Act, nor than the amount required for the outstanding circulation of the bank, upon the approval of the Comptroller. Section 5,204, after providing that "no association, nor any member thereof, shall, during the time it shall continue its banking operations, withdraw or permit to be withdrawn, either in the form of dividends or otherwise, any portion of its capital," and after prohibiting the making of dividends in case losses have been sustained which exceed the undivided net profits then on hand, deducting from such profits its losses and bad debts, as bad debts are therein defined, concludes as follows: "But nothing in this section shall prevent the reduction of the capital stock of the association under Section 5,143." Section 5,205 makes provision for enforcing the payment of the capital stock in case the capital stock has not been paid in, and also provides for assessments upon the shareholders to make good any deficiency, in case the capital stock becomes impaired by losses or otherwise, and makes provision for forcing the association into liquidation in the event of a failure to pay in the capital stock, or in case the shareholders neglect or refuse to pay up assessments which have been made in order to make good deficiencies which may have resulted from losses or otherwise.

It becomes apparent upon looking into the Act of Congress under which National banking associations are organized, and which regulates the conduct of their business, that shareholders owning the requisite amount of stock in such an association may reduce the amount of the capital voluntarily, for the purpose, as it were, of producing a surplus for withdrawal and distribution, or they may be constrained to a reduction of the capital rather than submit to assessment on their stock, so as to make good deficiencies occasioned by losses or otherwise. The intent and purpose of the Act plainly is that in no contingency shall the amount of the capital stock exceed its actual value, taking into account the live assets and condition of the bank. In other words, the amount of the capital must be "in line" with its value, and this uniformity may be procured either by a reduction of the amount to any point not below the minimum required, or by assessing the stock in case of loss or impairment so as to make the actual value correspond uniformly with the amount of the capital stock.

The case under consideration proceeds upon the theory that the stockholders became the owners of the bills and notes, the suspension of which occasioned the reduction of the capital, because they surrendered an amount of their stock sufficient to restore the equilibrium, so to speak, between the amount and value of the capital of the bank. It is assumed that if the shareholders had reduced their capital without constraint for the purpose merely of withdrawing the excess of capital above the amount to which it was reduced, that the excess would necessarily have been distributable among the shareholders. It is from this premise that the conclusion is drawn that the bank became liable to distribute the \$75,000 collected in the manner hereinabove stated. In support of this conclusion Seeley *vs.* Bank, 8 Daly, 400 (Thomp. Nat. Bank Cas., 804), is cited. That was a case in which the stockholders of a bank, representing two-thirds of its stock, reduced the capital of the bank, with the approval of the Comptroller, from \$500,000 to \$300,000. The Directors resolved to distribute \$100,000 among the stockholders and to retain \$100,000 as a surplus fund to be used in the business of the bank. One of the stockholders, who refused to surrender any part of his stock, commenced suit, and the Court held that the bank was bound to pay the whole of the \$200,000 which resulted from the reduction to the stockholders. Stress seemed to be laid upon the fact that it appeared in that case that there had been no impairment of the capital of the bank. The reduction was assimilated to the winding up of the bank *pro tanto*.

There is certainly no express provision in the law authorizing the withdrawal and disposition of any part of the capital stock of a banking association prior

to the final winding up of the bank. On the contrary, as has already been seen, Section 5,204 in terms prohibits any association or member thereof from withdrawing or permitting to be withdrawn any portion of its capital stock during the time the bank continues its banking operations. Notwithstanding this prohibition it may well be, in case the banking association should find itself unable to employ the whole of the capital originally embarked in the enterprise, and should for that reason determine upon and actually effect an authorized reduction, that the excess would in that event be liberated and cease thereafter to be a part of its capital stock. In such a case the excess could well be said to have accomplished its mission as bank capital, and like a dividend duly declared, could not be carried to the surplus fund of the bank and be divested from the stockholders without their consent. Having reduced its capital upon the sole pretext that it could not find employment for the excess, the bank would not, for obvious reasons, be heard to say, after the reduction had been allowed and made, that it would retain the money for use in its business. Such a reduction would proceed upon the implied understanding that the stockholders should have, as a consideration for the surrender of a portion of their stock, a *pro rata* distribution of the excess. To refuse to distribute the excess above what was required to maintain the reduced stock at its full value would, in such a case, be in the nature of a fraud upon the stockholders. "But it is not the rule that the reduction of a capital stock of a corporation always authorizes the distribution among the stockholders of the difference between the original and the reduced amount of capital. Such a distribution is only lawful when it appears that the original capital stock is unimpaired." (Cook, Stock and Stockholders, Sections 289, 587.)

In the present case the reduction was not made to effect a distribution of a portion of the accumulated surplus or unemployed capital of the bank. The original capital had become impaired by reason of "bad debts," and the stockholders were in the situation of being compelled to elect either to submit to an assessment of their stock, or go into liquidation, or reduce the capital of the bank, so as to put the amount of the capital in correspondence with its value. They chose the latter alternative. Rather than submit to an assessment of their stock, so as to make good the deficiency, each stockholder surrendered a proportionate share of his stock, and by that means they secured the privilege of continuing the business of the bank with the reduced capital. McCann, as appears from his complaint, surrendered his proportion, receiving as a consideration therefor immunity from the impending assessment and the privilege of holding the residue of his stock in a continuing association. This was all the consideration he contemplated, and that was implied in the transaction. (*Delano vs. Butler*, 118 U. S., 684.) Having received the whole consideration upon which the surrender was made, the stockholders could not afterwards recover more, simply because the bank succeeded in realizing upon the suspended bills and notes, the suspension of which occasioned the reduction. If the stockholders had submitted to the proposed assessment of their stock, and paid in the \$75,000 instead of reducing the capital stock, it would hardly be claimed that they would have become entitled to take or receive from the bank an equal amount of its suspended assets. Nor can we perceive any reason why they should have become entitled to them because they elected to reduce the capital stock. Corporations have no implied power to enlarge or diminish their capital or to distribute among shareholders any part of the funds which constitutes the capital stock prior to the winding up of the corporation. (*Sutherland vs. Olcott*, 95 N. Y., 93.) Persons who invest moneyed capital in National banking associations must look to the Act of Congress to which such associations owe their existence and which regulates their conduct, for authority to demand the return to them of any part of the capital invested, or to receive gains in the shape of dividends therefrom. Section 5,148 under which the reduction was authorized, required the bank to obtain the approval of the Comptroller of the Currency to the proposed reduction of its capital, and the proceedings for diminishing its capital ended with the approval so obtained. The capital of the bank as reduced and the assets then held by the association, constituted a trust fund upon the faith of which it was authorized to proceed with its business. The directors of the bank had no authority thereafter to

permit its capital stock or assets to be further depleted by distributions, in one way or the other, of bills or notes among its shareholders. (*In re* Banking Co., 21 Ch., Div. 519.)

The bank held its suspended bills under the same authority and charged with like obligations in respect thereto, as measured its rights and duties in respect to other assets. It could only distribute its surplus money when it accumulated in the course of its business, and its right to distribute would depend upon an examination into the condition and affairs of the bank at that time. (*Strong vs. Railroad Co.*, 93 N. Y., 426.) The right of the shareholders to compel a distribution growing out of the reduction was fixed by the condition of the bank as it existed when the reduction was made, and is not to be determined in the light of subsequent events. If a distribution had been authorized, and made in good faith, it is settled that the stockholders could not have been compelled to refund because of subsequent losses, even though the losses were caused by the suspension of the bills and notes held by the bank at the time the distribution was made. (*Main vs. Mills*, 6 Biss, 98; *Reid vs. M'fg. Co.*, 40 Ga., 98.) For the same reason the bank cannot now be compelled to distribute because of subsequent events.

Judgment for bank.

McCann vs. First National Bank of Jeffersonville, Supreme Court of Indiana, November 29, 1887.

BILL OF EXCHANGE—LIABILITY OF DRAWER—SUFFICIENCY OF DEMAND OF PAYMENT.

(A notary public presented a bill of exchange for payment at the place of business of the acceptors, which he found closed. He thereupon protested the bill for non-payment and gave notice to the drawers. They being sued, contended that it was necessary for the notary, on finding the place of business of the acceptors closed, to have gone to their residence, or to have made further inquiry and effort to find them, and that his failure to do so discharged such drawers from liability. *Held*. The presentment at the acceptor's place of business was sufficient where the notary found such place closed, there being no explanation furnished as to why it was closed, and further effort on the part of the notary was unnecessary to hold the drawers.)

This was a suit by the Bank of Charleston, as holders for value in due course of trade, of a bill of exchange, against Sulzbacher Brothers, the drawers. The bill was drawn at Nashville, Tenn., on December 2, 1882, for \$892.95, payable thirty days after date, to the order of the drawers; addressed to Keller & Rushing, Charleston, S. C.; indorsed by Sulzbacher Brothers, and accepted by Keller & Rushing. The draft was drawn to cover the amount of a bill of goods sold by the drawers to the acceptors, and was discounted by the bank for the benefit of the drawers. The paper not being paid at maturity was protested, and the drawers were thereupon sued. The question involved was as to the sufficiency of the notarial certificate with reference to the demand for payment. The following is a copy of the material part of the certificate: " * * * I, Haywood Thayer, Notary Public, * * * exhibited the original draft * * * at the place of business of Keller & Rushing, the acceptors, and demanded payment of the same, but found it closed, and no one there to respond to the demand, which was thereby refused; whereupon I made out notice," etc.

The contention on behalf of the defendants was that it was necessary for the notary, upon finding the place of business of the acceptors closed, to have gone to their residence, or to have made further inquiry and effort to find them. Failure to do this, it was insisted, discharged the drawers.

Held, Can this contention be sustained? We think not. Being a foreign bill of exchange, the protest must show upon its face all the facts necessary by the law-merchant to charge the drawer and indorsers; and while the protest is not conclusive, but only evidence of such facts as are proper to be stated in it, it may always be rebutted by other evidence showing how the demand was made, or that proper diligence was not used to make it. With the protest before us and the presumption that the notary, as a public officer, has done his duty on the one hand, and from the proof offered in rebuttal on the other, the

inquiry always is, has due diligence been used by the notary under all the circumstances to find the party and make the demand?

Let us apply this test to the facts of this case. The language of the certificate we have already seen. The only proof in the record which it is contended tends to rebut the presumption in favor of the sufficiency of the notarial act, is that the acceptors had "suspended" and "had made a second mortgage" shortly before the maturity of the bill; from which it is argued that their place of business had been abandoned, and that if the officer was not required ordinarily to go to the residence when the place of business is temporarily closed or the parties absent, he would have to do so when the parties had ceased to have any place of business.

In the first place it is proper to reply that the proof does not show that the acceptors had ceased to have and use a place of business. There is nothing to show the character, nature and extent of their suspension. The only witness who speaks of the subject is a bank officer, who says they had "suspended;" that the bank had appropriated a small balance to their credit on deposit to the payment, in part, of a debt due by them to the bank; and that they had made a second mortgage to secure an indorser on a note held by the bank, under which property embraced therein was sold and the proceeds thereof applied to the payment of the note. All of this may be perfectly consistent with the retention by them of their old place of business, either for continuing business or in winding up their old business. Indeed, the term "suspended," in the connection in which it is used, would ordinarily mean a suspension of payment—an embarrassed financial condition—but not necessarily a cessation of business and a removal from the old stand.

Had the facts been as now assumed in the argument on behalf of the drawers it would have been a very easy matter for them to have made the proof as to accessibility, and the admissibility of such is unquestioned. We are of opinion that if the party has closed, in the sense of an abandonment of, his place of business at the maturity of the paper, but has a residence or other place of business in the city which can be ascertained by reasonable inquiry, a presentment at the former place of business would not be sufficient. But unless it is shown that he has abandoned, has permanently closed it, it is his duty to keep some one there to answer business demands during business hours; and the statement of the notary's certificate that he called at the place of business of the acceptor to make demand is sufficient, and the presumption is that the demand was made in business hours. (Baumgardner *vs.* Reeves, 35 Pa. St., 250; Wiseman *vs.* Chiappella, 23 How, 368.) In this latter case there is a very full and instructive discussion of the question by the Court, in the course of which it is said: "Merchants usually register their acceptances in a bill-book, and it cannot be presumed that they are unmindful of the days when they are matured. Should their counting-rooms be closed on such days the law will presume that it has been done intentionally to avoid payment, and on that account that further inquiries need not be made for them before protest can be had for non-payment." Continuing they say: "Cases can be found, and many of them, in which further inquiry has been deemed proper, and a failure to make it has been deemed want of due diligence; but the rulings in such cases will be found to have been made on account of some peculiar facts in them which do not exist in this case." To this view the learned author of Daniel, Neg. Instr., Sec. 1118, lends the weight of his opinion; adding, however, that "it would be safer, perhaps, to make some further effort to find the payer when the address were found closed, as the authorities are not uniform on this question."

We are content to take the view which holds further effort unnecessary as sound in principle and amply sustained by authority, and hold the presentment at the acceptors' place of business sufficient where the notary finds such place closed, there being no explanation furnished as to why it was closed. It is the duty of the acceptor, who is the principal debtor, to provide for the payment of the bill; and if he is not in himself and there is no one present to answer for him when the holder, through the notary, calls at his usual place of business, the bill may well be treated as dishonored and protested for non-payment. To so adjudge in a case of presentment for payment is not to allege that the same

would suffice where the presentment is for acceptance. The party is not under the same obligation to be at his usual place of business or to have some one there to represent him in the matter of accepting drafts generally, that he is to provide for the payment of bills already accepted, with the date of their maturity fixed. Due diligence may well require of the notary further efforts to find the party whose acceptance was desired.

Judgment for bank.

Sulzbacher and others vs. Bank of Charleston, Supreme Court of Tennessee, December 15, 1887.

NATIONAL BANK—ASSESSMENT ON SHARES—LIABILITY OF MARRIED WOMAN THEREFOR—IS THE REMEDY AGAINST HER AT LAW OR IN EQUITY?

This was a suit in equity in the Circuit Court of the United States for the District of Vermont by the Receiver of the First National Bank of St. Albans, Vermont, against Sowles and wife to charge an assessment to the amount of the par value of 400 shares of the stock of \$100 each upon the separate property of the wife. A demurrer was interposed to the bill, the principal grounds thereof being that neither a married woman nor her property was liable to such an assessment, and that the remedy, if any, was at law and not in equity. The liability sought to be enforced was created by statute of the United States, which declares that the shareholders of every National banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts, debts and engagements of such association to the extent of the par value of their stock in addition to the amount invested therein. (Rev. St. U. S., Sec. 5151.)

Held. In *Dr. Hussey's case*, 5 Coke, 132, it was agreed by all the Judges that a *feme covert* was liable to an action with her husband for the penalty incurred under the statute, 2 Westm., c. 35, for abducting and procuring the marriage of a ward against the will of the guardian. And in *Foster's case*, 6 Coke, 107, it was likewise agreed that a married woman was also liable for the penalty of £20 forfeited to the Queen by every person above the age of sixteen years for every month of non-attendance at church by force of the statute of 28 Eliz. c. 1. And it is laid down by Sergeant Hawkins that, generally, a *feme covert* shall answer as much as if she were sole, for any offense not capital against the common law or statute; and that if the wife incur the forfeiture of a penal statute the husband may be made a party to the action on information for the same, as he may be, generally, to any suit for a cause of action given by his wife, and shall be liable to answer what shall be recovered thereon. (1 Hawk., P. C., 3.) The same is stated by Lord Bacon, *Bac. Abr. "Baron and Feme," G.* The provision in the Constitution of New York, that the stockholders in every corporation "shall be individually responsible," was held to include a married woman who had stock in a State bank. (In re Bank, 22 N. Y., 9.) This case is cited with approval by the Supreme Court of Rhode Island, and a married woman holding stock held liable under a statute of that State making stockholders in corporations generally responsible. (Sayles vs. Bates, 5 Atl. Rep., 497.)

This married woman appears upon these books and cases to be personally holden for the assessment if she is in fact a shareholder. Sound reasoning appears to lead to the same conclusion, for the statute declaring the liability makes no distinction or exception among those who are shareholders, except as to those holding the stock as executors, administrators, guardians or trustees, and that exception has no application to this case. (Rev. St., Sec. 5152.) The common law as to the rights of a husband in his wife's personal property generally, and as to her right to separate property, prevailed in Vermont, where this bank was located and all the parties resided, when this liability accrued, if at all. The statutes of the State provided that stocks or bonds given by a parent to a daughter should belong to the daughter, if married, in her own right. That statute, however, does not extend to this case, for the stock was not given to this woman by her parent. (Rev. Laws Vt., Sec. 2323.) But married women have, independently of any statute, always been held to be capable of holding stocks of corporations, as well as other choses of the

same nature, in their own right in Vermont. (*Porter vs. Bank*, 19 Vt., 410; *Stearns vs. Stearns*, 30 Vt., 213; *Richardson vs. Merrill*, 32 Vt., 27; *Caldwell vs. Renfrew*, 33 Vt., 213; *Howard vs. Bank*, 40 Vt., 597; *Curtis vs. Hapgood*, 43 Vt., 228.) The laws of the United States make no provision as to the capacity of persons to take and hold stocks in National banks. Such capacity is left to be determined by the laws of the States where the stock is taken and held. (*Lorillard vs. Oil Co.*, 13 Blatchf., 199; *Fetter vs. Newhall*, 21 Blatchf., 445.)

The principal argument against the liability is that it rests upon contract, and that at the time in question in Vermont the contracts of married women were left as at common law and were wholly void. The Act of 1884, authorizing married women to make contracts generally, had not then been passed. (*Laws Vt. 1884*, p. 119.) It is true that the liability does rest upon contract, but not upon the contract of the stockholder. The contract is made by the bank when the liability of that for which the assessment is required is created. The stockholders have no part in that contract. The affairs of the bank are managed by the Directors and its contracts are made by them or pursuant to their authority. When those contracts are made the statute binds the stockholders to them to the extent of the par value of their stock. (*Richmond vs. Irons*, 121 U. S., 27.) If the stockholder was present and objected the liability would be no less. The shareholders generally become such by contract, but the liability does not accrue then. They place themselves where the law makes them liable when the banks make contracts; and any one may do that who is capable of becoming a stockholder, and married women in Vermont have, and always have had, that capacity.

The conclusion follows that under the laws of the United States and of the State this married woman is the shareholder of these shares, and as such became responsible for the debts of the bank for which this assessment is wanted, and by the action of the Comptroller became personally liable for the assessment. The question remains whether this liability can be enforced by this suit in equity.

It is said by Mr. Justice Gray, in *Price vs. Abbott*, 17 Fed. Rep., 506, that actions to recover such assessments are suits at common law. The amount of the assessment is conclusively fixed by the Comptroller of the Currency. (*Kennedy vs. Gibson*, 8 Wall., 498; *Casey vs. Galli*, 94 U. S., 673.) There is no marshalling of assets or liabilities to be had in Court. Nothing is sought but the recovery of a sum certain of money. For this a judgment at law is a plain, adequate and complete remedy, and the statute would seem to exclude a suit in equity for it. (*Rev. St.*, Sec. 723.) But whether a suit in equity can be maintained, or not, for less than the par value of the stock, it seems to be well settled that a suit for the full amount in the Federal courts against ordinary persons must be at law. (*Casey vs. Galli*, 94 U. S., 673.) This suit should therefore have been at law, unless there is some relief against the property of the married woman defendant which may be had in this proceeding and which a Court of law could not give. At law, judgment would be rendered against her, with or without her husband, as should be proper, on which execution would issue, by virtue of which her property liable to execution could be taken. If, however, her separate property can be charged in equity with her personal liabilities, still this proceeding might be upheld. Many suits in equity have been maintained to reach the separate property of married women where there was no personal liability; but none has been cited or observed where the aid of a Court of equity has been had to charge their separate property with any liability for which they were personally holden. In *Biscoe vs. Kennedy*, 1 Brown. Ch. 18, note, the orator first brought the bill to charge the separate property of the married woman in the hands of a trustee with a debt contracted by her while sole, without bringing suit at law. The bill was dismissed. Then a suit at law was brought, which was prosecuted to outlawry of the husband and a bill filed to reach the property of the wife in the hands of her trustee, which could not be taken in execution. This suit succeeded. The cases where the separate property of a married woman has been charged in equity have proceeded upon the ground that the property itself had been benefited in some way so that in equity it ought to respond: or

that credit had been given to it, so that it ought to answer to the debt. In this case there is no ground to pretend that the bank in any manner benefited the property sought to be reached so that it ought to respond on that ground.

The property of married women has been holden to be a means of credit, because, being their own separate property, they had the disposition of it in any manner they should see fit, and had expressly or impliedly, so dealt in respect to it that in equity the property ought to go in satisfaction of the debt charged upon it. In England the mere contract of a married woman having separate estate was held to be an implied appointment of the estate to satisfy the engagement, because she could bind only that; and as it was to be presumed that she intended to bind something by her entering into the engagement, it would be presumed that she intended to bind that. Therefore her property was held to satisfy her engagement as surety for others, without other evidence of an intention to charge it. (*Hulme vs. Tenant*, 1 Brown, Ch. 16; *Murray vs. Barlee*, 3 Mylne & K., 209; *Owens vs. Dickenson, Craig & P.*, 48.) In this country while her separate property may be charged by her dealings in respect to it, her general personal engagement does not appear to be sufficient to charge it. (*Partridge vs. Stocker*, 36 Vt., 108; *Frary vs. Booth*, 37 Vt., 78; *Stephen vs. Beall*, 23 Wall., 329.) Therefore when her engagement is that of a mere surety her separate property is not holden. (*Yale vs. Dederer*, 18 N. Y., 268; *Willard vs. Eastham*, 15 Gray, 328; *Dale vs. Robinson*, 51 Vt., 20.)

The liability sought to be enforced in this proceeding is in its nature that of a surety. The bank is the principal in contracting the debts to meet which, or the balance of which, after exhausting its assets, the assessment is made. The shareholders have no interest in the making of the debts, except as they may be interested in the fate of their stock. But the statute binds them for the bank. Upon the principles of those American cases, the property of married women would not be specifically charged with such liability. And if the principles of the English cases prevailed here, they would not affect such separate property. The married women, when stockholders, have no part in creating the liability; therefore there is no ground to infer an intention to charge their separate property because they are presumed to make something liable for any debts created by them. The liability is forced upon them by statute, and there is no entering into it by them from which any presumption of an appointment of their separate property to satisfy it can be drawn. The liability is purely personal, and is entirely separated from the property, except as that may be reached to satisfy a personal judgment. The remedy appears to be at law the same as it is for any cause of action accruing against a married woman. A married woman could not at that time be sued at law in Vermont apart from her husband. If he could not be made liable with her, that might be a ground for proceeding in equity against her where there might be a decree against her without him. But the common law cast upon the husband all the obligations of the wife, however arising, and there is no defect in procedure at law on this account. (2 Kent, Comm. 143.)

There is no ground to be found for maintaining this bill; therefore it must be dismissed. Let there be a decree sustaining the demurrer, and dismissing the bill of complaint for want of jurisdiction in equity.

Witters vs. Sowles and wife, U. S. Circuit Court, D. Vermont, November 1, 1887.

BILL OF EXCHANGE—ACCEPTANCE PAYABLE AT PARTICULAR PLACE—PRESENTMENT AT SUCH PLACE NECESSARY TO CHARGE DRAWER AND INDORSERS.

On February 11, 1884, plaintiffs were bankers doing business at Attica, Indiana, under the name of the Citizens' Bank. On that day, James F. Brown, the defendant, indorsed to them a bill of exchange drawn by him on F. W. Pullen & Co., Chicago, and payable to his own order. The acceptance of the bill was in these words: "Accepted and payable at 1363 Kinzie street." By a series of indorsements the bill reached the First National Bank of Chicago for collection. On the 15th of March, 1884, the bank placed the bill in the hands of Orville Pickham, a notary public, to be presented for payment. The notary went with the bill to the office of the acceptors for the purpose of presenting

it for payment, but found the office closed and locked, and was, after the exercise of reasonable diligence, unable to find any member of the firm of F. W. Pullen & Co., and the bill was thereupon duly protested for non-payment. Notice of protest was addressed to James F. Brown, and on the evening of March 16th was mailed to the Citizens' Bank of Attica. On the 18th of the month the notice was received by the Citizens' Bank, and on the same day it was mailed to Brown at his residence and post-office, together with a written request for payment. Subsequently the bank sued Brown on the bill of exchange, and one of the positions assumed by him was that he could not be held as drawer or indorser because it did not appear that the bill was presented at the place designated in the acceptance. His counsel contended that while the proof showed that the bill was presented at the office of the acceptors, it did not appear that the office was the place designated in the acceptance. Judgment was given in favor of the Citizens' Bank and Brown appealed.

Held, Where a place of payment is definitely fixed by the contract of acceptance, there the presentment must be made, or a sufficient excuse for failing to there make it be shown, or else the drawer or indorser of the bill is discharged. This conclusion has a firm support from the authorities. Mr. Daniel, after showing that to charge the acceptor it is not necessary to present the bill for payment at the place specified, says: "In respect to the indorser of a bill or note, or the drawer of a bill, payable at a particular bank or other place, the rule is different. He is not the original debtor, but only a surety. His undertaking is not general, but conditional upon due diligence being used against the original debtor, and such diligence requires presentment at the place specified, where it is presumed that funds have been provided to meet the bill at maturity." (1 Dan'l Neg. Inst., 644.) Another writer says: "When a bill or note is drawn payable at a place named, it is essential to show, against the drawer or indorser, a presentment at the place appointed." (Edw. Bills & N., Sec. 679.) In *Cox vs. Bank*, 100 U. S., 704, the Court said: "Cases arise where the drawer of the bill designates in the instrument a place of payment, and the decisions are that in such cases both the drawer and indorser will be discharged unless the bill be there presented for payment at maturity." It was held in *Marsh vs. Low*, 55 Ind., 271, that the acceptor is the principal debtor, and so all the cases hold; holding also without exception so far as our investigation has gone, that to charge the drawer or indorser, presentment for payment must be made at the place specified. (*Hartwell vs. Candler*, 5 Blackf., 215; *Bank vs. Brooke*, 31 Md., 7; *Smith vs. McLean*, 7 Amer. Dec., 693; *Glasgow vs. Pratte*, 8 Mo., 336; *Dupre vs. Richard*, 11 Rob., 495.)

Judgment reversed.

Brown vs. Jones and ano., Supreme Court of Indiana, November 5, 1887.

DRAFT OF NATIONAL BANK — FORGERY BY EMPLOYEE — A STATE COURT HAS JURISDICTION OF THE OFFENSE NOTWITHSTANDING THE PROVISIONS OF SECTION 5,209, UNITED STATES REVISED STATUTES.

H, a bookkeeper in the Merchants' National Bank of Peoria, was convicted in the Circuit Court of Peoria County of the crime of forging a draft of \$1,000 purporting to be drawn by the Merchants' National Bank of Peoria upon the Merchants' Exchange National Bank of New York, of the date of September 1, 1885, and was sentenced to imprisonment in the Penitentiary for the term of five years. The evidence showed that H, without authority, filled up in his handwriting the draft in question, which had been signed in blank by the Assistant Cashier, and delivered the same to one B in payment of margins upon certain deals of H in the Board of Trade, and that no money was paid therefor by B to H or the bank. H at the time made false and untrue entries in the books of the bank in order to conceal the fact of the unlawful issuance of the draft. The draft was afterwards paid by the Merchants' National Bank in the ordinary course of business.

Counsel for H carried the case to the Supreme Court of the State, contending that the offense charged in the proof against H was an offense under Section 5,209 of the Revised Statutes, and being an offense thereunder it was punishable

in the United States Courts alone and excluded from the jurisdiction of the State Court. Section 5,209 of the Revised Statutes of the United States is as follows: "Every President, Director, Cashier, Teller, Clerk or Agent of any association (referring to National banks) who embezzles, abstracts or wilfully misapplies any of the moneys, funds or credits of the association, or who, *without authority from the Directors*, issues or puts in circulation any of the notes of the association, or who, without such authority, issues or puts forth any certificate of deposit, *draws any order or bill of exchange*, makes any acceptance, assigns any note, bond, draft, bill of exchange, mortgage, judgment or decree, or who makes any false entry in any book, report or statement of the association, with intent, in either case, to injure or defraud the association or any other company, body politic or corporate, or any individual person, or to deceive any officer of the association, or any agent appointed to examine the affairs of any such association; and every person who with like intent aids or abets any officer, clerk or agent in any violation of this section shall be deemed guilty of a misdemeanor and shall be imprisoned not less than five years nor more than ten."

Held (After discussion), While the case does not seem to be entirely clear upon the authorities, we are disposed to hold that the crime charged in the indictment, or that established by the proof, is not excluded from the jurisdiction of the State Court.

Judgment affirmed.

Hoke vs. People, Supreme Court of Illinois, November 11, 1887.

PROMISSORY NOTE—INDORSEMENT BY PAYEE TO AGENT "FOR COLLECTION"
—SUCH INDORSEE FOR COLLECTION MAY MAINTAIN ACTION THEREON, BUT THE NOTE IS OPEN TO ALL DEFENSES THAT COULD BE MADE TO IT IN THE HANDS OF THE PAYEE.

This was an action upon a promissory note brought by Tolson, indorsee. The note was payable to a man named R. O. Randall. Randall indorsed the note "for collection" for his account to Tolson. Tolson brought an action in his own name on this note. Defendants claimed that the action could not be maintained because it appeared on the face of the note that Tolson had no interest in it and no legal title.

Held, The qualified indorsement to Tolson put such an interest, such a legal title, in him as would authorize him to bring suit. There can be no doubt about that.

Further *Held*, Although Tolson could maintain the suit, it appeared from the indorsement that he was not a *bona fide* holder for value, and the note was therefore open to all the defenses which could have been made to it in the hands of Randall, the payee.

Wilson vs. Tolson, Supreme Court of Georgia, March 14, 1887.

ABSTRACT OF CASES.

NATIONAL BANK—USURY—LIMITATION.

The limitation of two years within which suit may be brought against a national bank for taking usurious interest does not begin to run from the time of the agreement for such interest, but from the time of the receipt of the money by the bank.

Carpenter vs. National Bank at Rahway, Supreme Court of New Jersey, November 28, 1887.

SALE OF NOTE SECURED BY MORTGAGE—TRANSFER OF NOTE CARRIES WITH IT THE SECURITY.

The sale or transfer of a note secured by a special mortgage and vendor's privilege carries with it both the mortgage and the privilege. This right accrues to the purchaser by mere operation of law, and is not dependent upon the articles of the Civil Code, which treat of payment with subrogation, legal or conventional. The right is acquired by the purchaser even if the payment

of the note, which is in suit by executory process, is made to the sheriff, provided the contract be shown to be one of purchase between the seizing creditor and the transferee of the note.

Succession of Forestall, Supreme Court of Louisiana, December 5, 1887.

PROMISSORY NOTE—FAILURE OF CONSIDERATION—EVIDENCE.

Where the only defense to an action upon a promissory note is failure of consideration, and the testimony offered in behalf of the defendant has no tendency to establish that defense, or a proposition essential to the maintenance of the defense, it is the duty of the Court to direct the jury to return a verdict for the plaintiff.

Stiles vs. Steele, Supreme Court of Kansas, November 5, 1887.

RECEIVER—CUSTODY OF FUNDS BY—DEPOSIT IN BANK WITHOUT ORDER OF COURT—LIABILITY.

A Court of Equity in Georgia has no official banker, and no bank but its Receiver. When money awaiting the result of litigation is in the possession of a Receiver at the place of permanent custody, and he has no further duty in respect to it than that of preservation, it is already in Court, and the Receiver cannot part with his custody of it by depositing it in bank or otherwise, save at his own risk, without some order, leave or direction authorizing him to do so.

Ricks vs. Broyles, Receiver, Supreme Court of Georgia, July 5, 1887.

PROMISSORY NOTE—STIPULATION FOR ATTORNEY'S FEES—ENFORCEMENT.

A promissory note contained an agreement to pay ten per cent. on the amount due as attorney's fees in case of suit thereon. The amount due on the note, principal and interest, at the date of the decree was \$5,080, and the attorney's fees amounted to \$508. *Held*, That the amount of attorney's fees being unreasonable, the stipulation therefor will not be enforced, nor will the Court undertake to partially enforce the contract by fixing such sum as might be deemed reasonable.

Kimbal vs. Molr, Supreme Court of Oregon, November 21, 1887.

CHECK ON BANK—NOT AN ASSIGNMENT OF THE FUND, AND CHECKHOLDER HAS NO LIEN THEREON.

Defendant gave a check to M, *bona fide*, and for a good consideration, on October 23, 1886. An attachment execution was served on the bank by plaintiffs on October 24, 1886. The check was not presented for payment until October 29, 1886, which was the first notice the bank had of its existence. *Held*, That the check did not operate as a legal or equitable assignment of the drawers' funds in the hands of the bank, and the holder had no sort of lien or claim of any kind on the funds in the hands of the bank.

Kuhn vs. Warren Savings Bank, Supreme Court of Pennsylvania, October 3, 1887.

PROMISSORY NOTE—RATE OF INTEREST—PROVISION FOR TEN PER CENT. "UNTIL MATURITY." AFTER MATURITY THE LEGAL RATE ONLY CAN BE RECOVERED.

A promissory note called for "ten per cent. interest per annum until maturity." In a suit on the note, the jury returned a verdict for the principal with ten per cent. interest to date of verdict. Judgment was entered in accordance with the verdict for the full amount found, and further, that the judgment should bear ten per cent. thereafter. The maker appealed, claiming that the note bore ten per cent. from its execution "until maturity," and after maturity it bore only the legal rate.

Held, By the express terms of the note it was to bear ten cent. interest "until maturity," and it ceased to bear that rate at maturity. Only by a new promise

continuing the obligation to pay ten per cent. interest after maturity, could a right to that rate exist. Without such a new promise the verdict was wrong. Judgment reversed.

Hamer vs. Rigby, Supreme Court of Mississippi, November 21, 1887.

NOTICE TO INDORSER—REMOVAL FROM CITY BY REASON OF WAR—WHEN NOTICE LEFT AT RESIDENCE IS SUFFICIENT TO CHARGE.

M, an indorser on a promissory note which matured during the civil war, left his residence in Alexandria prior to the maturity of the note, owing to the occupation of that city by the federal army, and removed within the confederate lines. M's house, furniture, and most of the family wardrobe were left in charge of an old family servant, and he did not return to the city until the close of the war. At the maturity of the note it was protested, and notice thereof was left with the servant in charge of the house in Alexandria. The point at issue was whether such notice was sufficient to charge M, as indorser. *Held*, If the absence of defendant was known, or by the exercise of reasonable diligence might have been known, to the holder, and if such absence on the part of defendant continued until the close of the war, then the notice of protest left with his servant was not sufficient, under the circumstances, to fix him with the liability of an indorser.

Alexandria Savings Institution vs. McVeigh, Supreme Court of Appeals of Virginia, November 17, 1887.

PROMISSORY NOTE—NEGOTIABILITY—WHEN DESTROYED—TRANSFER OF NON-NEGOTIABLE NOTE—EQUITIES.

S gave his note to P. & Co., which contained a provision that if the note was not paid at maturity the payees might take possession of and sell the property for the payment of which the note was given. *Held*, Where a note contains other provisions than the unconditional payment of money it is non-negotiable.

Where P. & Co. transferred said non-negotiable note to L. & Co., without indorsement, before due, in payment of a debt owing to L. & Co., and afterwards, while the note was the property of L. & Co. they, desiring to procure money on said note, L, a member of both firms, indorsed the name of P. & Co. on the back of said note; and afterwards, after the dissolution of the firm of P. & Co., but before the maturity of the note, L. & Co. delivered the note, without indorsement by them, to the plaintiff as collateral security for a debt due from L. & Co.

Held, In a suit by the plaintiff against P and P, members of the firm of P. & Co., that defendants might make any defense they could have made if said note had remained the property of L. & Co.; that the indorsement of L, without the knowledge or consent of the other members of said firm of P. & Co. was void as to them, and that said indorsement gave the plaintiff no greater rights than L. & Co. had in said note.

South Bend Iron Works vs. Paddock, Supreme Court of Kansas, November 5, 1887.

LAW NOTES AND COMMENTS.

SOME RECENT LEGISLATION AFFECTING BANKERS.—In a number of the States during the last year, laws have been enacted on various subjects affecting banking interests, and a short synopsis of the new legislation is given below.

In Alabama, by the Code of 1886, which has recently been issued, we note a change in the wording and punctuation of the section which defines what paper is governed by the commercial law. In the Code of 1876, Section 2094 read as follows:

"Bills of exchange and promissory notes, payable in money at a bank or private banking house, or a certain place of payment therein designated, are governed by the commercial law."

In a case which came before Judge Wallace in the Circuit Court of the United States for the Southern District of New York (*Gwathmay vs. Clisby*

and others; reported in the JOURNAL for October, 1887, at page 1000), our readers will remember that the acceptors, when sued on a bill of exchange, drawn and accepted in Alabama, but which was not payable at any particular place therein designated, claimed that because it was not so payable it did not fall within the statute and was not negotiable; and they consequently sought to interpose the defense of fraud and want of consideration to the bill in the hands of the plaintiffs, who were *bona fide* holders. Judge Wallace stated that reading the section without the assistance of other provisions of the law of Alabama *in pari materia* or of antecedent legislation upon the same subject, the question as to the negotiability of the bill would be involved in much doubt, but by tracing the provision to its original source in the law of 1828, he showed that it never was the intention of the Legislature to restrict the negotiability of bills of exchange to those payable at a bank or other specified place; and the bill was held negotiable.

By the new code it will be seen that all doubt is now removed, as Section 1756 (old number, 2094) is made to read:

"Promissory notes payable in money at a bank or private banking house, or a certain place of payment therein designated, and bills of exchange, are governed by the commercial law."

In the Territory of Arizona, by the Revised Statutes of 1887, some sweeping changes have been made in the laws as they theretofore existed. The subjects of assignment for the benefit of creditors and attachments are now regulated by the new law, and Chapter 68 of the Compiled Law of 1877, relating to bills and notes has been repealed, and is superseded by Chapter 1 of Title 6 of the Revised Statutes of 1887, taking effect July 1, 1887, the old law on this subject being changed in many important particulars. By Act taking effect March 10, 1887, the rate of interest, in the absence of agreement fixing a different rate, is changed from ten to seven per cent.

In Colorado, by Act approved March 15, 1887, the first Monday in September is declared a public holiday, to be known as "Labor Day."

The Legislature of Illinois, by Act approved June 16, 1887, make provision for the establishment of a State banking system. The constitution of 1870 provides that "no Act of the General Assembly authorizing or creating corporations or associations with banking powers, whether of issue, deposit or discount, nor amendments thereto, shall go into effect, or in any manner be in force, unless the same shall be submitted to a vote of the people at the general election next succeeding the passage of the same and be approved by a majority of all the votes cast at such election for or against such law."

The above Act, therefore will not become a law until ratified by a majority of the votes cast at the election to be held in November, 1888. The Act provides for the formation of banks and banking associations for the purpose of discount and deposit, and to buy and sell exchange and do a general banking business, except only the issue of bills to circulate as money, and which shall have power to loan money on personal and real security, and accept and execute trusts.

The Massachusetts Legislature, by Act approved May 11, 1887, provide that the first Monday of September in each year, to be known as "Labor Day," shall be a legal public holiday to all intents and purposes, in the same manner as the holidays already existing are by law made public holidays.

In Michigan the Constitution provides that no general banking law shall have effect until the same shall, after its passage, be submitted to a vote of the electors of the State at a general election, and be approved by a majority of the votes cast thereon at such election, although the Legislature may, by a vote of two-thirds of the members elected to each House, create a single bank, with branches. The Legislature, by Act approved June 21, 1887, enacted a general banking law which, if ratified by the people at the next general election, to be held in the spring of this year, will supersede the general banking law of 1857, now in force. The new Act provides that any number of persons, not less than five, may associate to establish offices of discount and deposit, to be known as commercial banks, and also to establish offices of loan and deposit to be known as savings banks, or to establish banks having departments for

both classes of business, upon the terms and conditions and subject to the liabilities prescribed in the Act.

The Legislature also, by Act approved June 8, 1887, changed the legal rate of interest from seven to six per cent., with a provision that the Act shall not apply to contracts then existing, whether due, not due, or past due. The law is not changed as to the limit to which parties may contract in writing, viz.: ten per cent.

In Minnesota, by Act approved March 2, 1887, the duties performed by the State Auditor under the laws regulating the business of banking are transferred to the Public Examiner, under the title, *ex officio*, of Superintendent of Banks, and all reports and documents on file in the State Auditor's office pertaining to banks are placed in the custody of the Public Examiner.

Also by Act approved March 7, 1887, to take effect January 1, 1888, it is provided that no person or persons who are now or shall hereafter become engaged in the business of banking in this State, not subject to the supervision of and not required to report to any officer elected or appointed by the State, shall make use of any office sign at the place where such business is transacted having thereon any artificial or corporate name; nor shall such person or persons make use of or circulate any letter heads, bill heads, blank notes, blank receipts, certificates, circulars, or any written or printed, or partly written or partly printed paper whatever, having thereon any artificial or corporate name; the Act further provides that no bank hereafter incorporated shall adopt or use the name of any private or unincorporated bank now existing without first obtaining consent in writing from the person or persons who have done business by or under such name, and fixes a penalty for its violation. It is claimed that this Act is unconstitutional.

In Nevada the legal rate of interest is changed from ten to seven per cent., by Act approved February 24, 1887.

In New Jersey an additional holiday, known as "Labor Day," is created by Act of the Legislature approved April 8, 1887, namely, the first Monday of September in each year.

By Act approved February 17, 1887, the Legislature of New Mexico provide that any number of persons not less than three may associate to establish savings banks and trust associations, having a capital stock of not less than \$30,000, and with power to conduct the business of receiving money on deposit and allowing interest thereon; of buying and selling gold, silver, coins of all kinds, uncurrent money; of loaning money upon real estate or personal property, and upon collateral, personal or live stock security, at a rate of interest not exceeding that allowed by law; also of buying, selling and discounting negotiable and unnegotiable paper of all kinds, as well as all kinds of commercial paper; also of buying and selling the bonds and stocks of this or any other Territory or State, or of the United States; also the bonds or other evidences of indebtedness of any city, county, town or school district in any State or Territory legally authorized to issue such bonds or evidences of indebtedness; and for all loans and discounts made such corporation or association may receive and retain in advance interest thereon. Such corporation or association is also given power to issue its own evidences of indebtedness and negotiate the same to an amount not exceeding ninety per cent. of the aggregate loans made and held by it and secured by mortgages or deeds of trust upon real estate, but this does not embrace the power to issue notes for circulation.

In the State of New York, the Legislature of 1887, by Act passed May 6, 1887, amend the previous holiday Act, making the first Monday of September in each year, a legal holiday to be known as "Labor Day," and every Saturday from twelve o'clock noon until twelve o'clock midnight a half-holiday. By this, and a subsequent Act passed May 25th, the rule theretofore existing that paper falling due on a holiday or Sunday should be payable on the preceding day, has been altered, so that now, paper falling due on a holiday is payable the following business day. Paper due on Saturday, except when payable at sight or on demand, is payable the succeeding business day. Paper due on Sunday must be paid on the business day next succeeding. And where a

holiday falls on Sunday, and Monday is a holiday, paper falling due on such Sunday or Monday is not payable until the succeeding business day.

In North Carolina, by Act taking effect March 8, 1887, all incorporated banking institutions then or thereafter organized, whether savings or general, and all private bankers are required to make to the State Treasurer statements of their financial condition at such times as the Treasurer may call for them, not less than twice in each year, and must also publish such statements in condensed form, as published by the National banks, in some newspaper published in the place where the bank carries on business, or should there be none, in the newspaper published nearest thereto. The form of these statements is prescribed by the State Treasurer and they must be under oath. The State Treasurer is required to lay the reports before the General Assembly at each regular session. It is also made the duty of the State Treasurer, upon written application of one-fifth in amount of the stockholders, to make a special examination in person into the condition of any banking institution.

Before this Act, no provision existed requiring an examination of banks, nor any report of their condition. The Legislature also by Act ratified March 7, 1887, provide for the incorporation of savings banks, for the encouragement of habits of thrift and economy among the people, by any number of persons not less than ten.

The Legislature of Oregon, by Act of February 21, 1887, set apart and declare the first Saturday of June of each and every year to be a public holiday under the name and title of "Labor Day."

The foregoing review is not given with any idea of completeness, but simply to apprise our readers of some recent changes in the laws which may affect their business interests.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

BLOOMINGTON, Neb., January 30, 1888.

SIR:—We have received for collection a draft which reads "At Sight (Protest Waived)," etc. It has passed through two banks before reaching us. The bank sending it to us has attached a memorandum slip to the draft, upon which is printed "Protest." On the accompanying letter is printed "Protest all paper unless otherwise instructed." There are no other instructions as to protest. Shall we protest or not?

Answer.—We should advise protest.

CHAS. K. HART, Cashier.

Editor Rhodes' Journal of Banking:

MOOREFIELD, W. Va., January 20, 1888.

A customer of the bank gave a deed of trust on all his property, both real and personal, wherever situated, for the benefit of his creditors. Prior to date of said deed he gave a check on his bank balance, which was not presented until after the trust had been recorded. The trustees notified us of the trust and not to pay out the fund except on their orders. Who is legally entitled to the fund? Will thank you for your opinion in the next issue of your JOURNAL. The check referred to was dated November 14, 1887, and was presented for payment on November 25, 1887, and the trust was recorded on November 22, 1887. The trustees claim that the payees of said check must come in as other creditors, and the payees hold that the check was a prior assignment on the drawer's bank balance and that this bank is bound to pay. I have stated all the facts that you may better understand the case.

G., Cashier.

Answer.—The right to the fund as between the checkholder and the trustees under the deed of trust involves the question whether the check operated as an assignment of the fund when drawn. This is a question upon which the authorities widely differ, with the weight of authority, in line with the New York and Pennsylvania decisions, to the effect that a check is not an assignment of the fund drawn against. The question, so far as we have been able to learn, has not been passed upon by the West Virginia Courts. The Supreme Court of the United States, however, in *Laclede Bank vs. Schuler*, decided March 7,

1887, (July, 1887, JOURNAL, page 689) rendered a decision, which, if followed in West Virginia, would be decisive of the present case. A check was drawn, but before its presentment to the bank the drawer had made an assignment for the benefit of his creditors, of which the bank was duly notified, and the point involved was the right to the money between the checkholder and the assignee. The Court, without deciding the question whether a check operated as an equitable assignment of the fund on deposit to the checkholder to the amount of it, held that it was clear that such a check would not bind the fund in the hands of the bank until it had notice of it, and until then other checks, drawn afterward, might be paid, or other assignments of the fund, or of a part, might secure priority by giving notice, and the right of the assignee prevailed. The present case is similar. Although the check was given prior to the trust deed, it was not presented until after the trust deed was recorded and the bank notified. If, then, the ruling of the Supreme Court of the United States is followed, the trustees would have a right to the fund as against the checkholder.

Editor Rhodes' Journal of Banking:

KANOPOLIS, KANS., Jan. 15, 1888.

SIR:—I inclose copy of a note, as follows:

<p>\$200. On or before the 7th of October, 1887, for value received we promise to pay G. H. Smith or order two hundred dollars, with interest at six per cent., from date.</p>	<p>WITSON, Kan., October 7, 1885. for value received we promise to pay O. E. BROWN. (Signed) MRS. A. G. BROWN. W. T. CLARK. MRS. W. T. CLARK.</p>
--	---

Indorsed:
G. H. SMITH.
BENJ. WADE.

On October 10, 1887, a notary, at request of the holder, G. W. Ross, presented the note to O. E. Brown, one of the makers, personally, at the office of said notary in Kanapolis for payment, and payment being refused, he thereupon protested the note and sent notices to the indorsers. Two of the makers resided at Witson, Kansas, about fifteen miles distant from Kanapolis, and one other, besides the maker to whom the note was presented, resided in Kanapolis. It is claimed that a demand should have been made upon all the makers, and inasmuch as this was not done, but the demand made upon one only, this was not sufficient to charge the indorsers, and they cannot be held liable. Please publish your opinion. CASHIER.

Answer.—When a promissory note is executed by two or more parties, who are not partners, is a demand of payment upon all of the makers necessary to hold an indorser, or will a demand upon one be sufficient? This is a question of great importance to notaries and all others charged with the duty of presenting negotiable paper for payment, as can be readily seen. In cases where the makers of a note are partners there is no doubt but that a demand upon one is all that is required, but what is the law where the makers are not partners? Let us examine the authorities and see what conclusion can be reached.

In the first place there seems to be no English precedent on the question. This is stated by Mr. Daniel in a note to Section 595 of his work upon Negotiable Instruments, and in note 3 to Section 239 of the seventh edition of Story on Promissory Notes the editor says: "After some researches I have not been able to find a single English authority exactly in point on this question." Since 1882, however, the matter in England has been regulated by statute, Section 45 of the English Bills of Exchange Act providing that where a bill is drawn upon or accepted by two or more persons who are not partners, and no place of payment is specified, presentment must be made to them all; and by section 89 this provision is made applicable to promissory notes, the maker of a note being deemed to correspond with the acceptor of a bill. This statute, of course, has no force as law in this country.

Looking for American decisions, we find the case of *Union Bank vs. Willis*, in the Supreme Court of Massachusetts, decided in 1844 (8 Metc., 504), directly in point. In that case T and M were joint and several makers of a promissory note, and payment of the note had been demanded of T, but not of M. In an

action against the indorser, he claimed that he was discharged. The Court held, defendant is an indorser, liable only upon legal notice of a demand upon the promisors, and a refusal by them to pay the note; and we are of opinion that he has a right to avail himself of this neglect to make demand on M to discharge him from his liability as indorser. The Court in its opinion say: "The precise question here presented we believe has not been decided in any reported case." There are two cases, however, in which the point involved had been previously decided, viz.: Taylor *vs.* Davidson, in the Circuit Court of the United States for the District of Columbia, in the year 1828 (2 Cranch C. Ct., 434), wherein it was held that in the case of a joint and several note by persons, not partners, demand must be made of all the makers in order to charge the indorser; and Harris *vs.* Clark, in the Supreme Court of Ohio, decided in 1840 (10 Ohio, 5) to the opposite effect, which latter case will be hereafter noticed.

In a subsequent case in Massachusetts, Arnold *vs.* Dresser, 8 Allen, 435, decided in 1864, an indorser of a joint promissory note was held discharged on the ground that it was necessary for the plaintiff to show due presentment and demand of the note on both promisors, and such demand had been made upon one only.

In Iowa, the decisions are to a like effect. In Blake *vs.* McMillen, 22 Iowa, 358 (1867), a note was signed by two joint makers, not partners. The Court held that presentment to one only was not sufficient to bind the indorsers unless some legal excuse be shown for failure to make presentment to them. This decision was affirmed when the case again came before the Court in 1871, (33 Iowa, 150), and a like decision was made in Bank of Red Oak *vs.* Orvis, 40 Iowa, 332, in 1875.

In Missouri, in Nave *vs.* Richardson, 30 Mo. 130 (1865), one of the questions raised was whether a sufficient demand of payment had been made, and the Court said: "The authorities are decisive that the presentment must be made to all the makers; otherwise it is not a valid presentment to charge an indorser."

In New York, in Willis *vs.* Green, 5 Hill, 232 (1843), it was held that where two persons, not partners, indorse a note payable to their order, they cannot be made liable unless notice of non payment be given to each; though otherwise if they be partners, and in the course of the opinion, Nelson, Ch. J. said: "I do not see but the case of joint indorsers, not partners, stands on the same footing as that of joint makers of a note who are not partners; and in respect to them it is settled that presentment must be made to each in order to charge the indorser."

In Gates *vs.* Beecher, 60 N. Y., 523 (New York Court of Appeals, 1875), Folger, J., in effect, says that to charge the indorser of a note of joint makers, not partners, demand must be made of each, save where the circumstances are such as to excuse a demand.

And in Britt *vs.* Lawson, 15 Hun., 123 (1878), in the Supreme Court of New York, it is held that in order to charge the indorser of a joint and several note, the makers not being partners, a demand must be made of each maker, and the fact that the maker upon whom demand was made was the principal debtor, and the other makers simply sureties, (nothing of the kind appearing on the face of the note, and no evidence appearing that the indorser knew of this fact), did not take the case out of the rule.

All the cases thus far, it will be seen, agree that to charge the indorser of a promissory note executed by several makers, not partners, demand upon all must be made. There has been one case only, so far as our investigation has gone, wherein an opposite view has been taken, namely, Harris *vs.* Clark, decided in Ohio in 1840. In that case an action was brought against the indorser of a joint and several note executed by three makers, demand of payment whereof was made upon one only. Hitchcock, J., said: "Another objection to the recovery of the plaintiff in this case is that demand was made of only one of the three makers of the note. Upon this point we have had no little difficulty in arriving at a satisfactory conclusion. So far as respects adjudged cases, we find none exactly similar. Had the three makers of the note been partners in business, then a demand upon one would have been sufficient. It would have been equivalent, so far as an indorser is concerned, to a demand upon all. * * * But it is not pretended that the makers of

this note were in fact co-partners; they were merely joint and several promisors. In this character it is true, as in the case of partners, the property of each and the property of all could be subjected, if necessary, to the payment of the debt. If we were to hold that a demand must be made upon all the makers in order to charge the indorser, such decision would operate to discharge many, if not all, indorsers of notes of a character similar to the one now under consideration. It will be seen that the note is not payable at any particular place; if it were, a demand at the place would be sufficient. But as it is, a personal demand was necessary. Now, suppose the makers resided in different States, or in different and distant parts of the same State, how could demand be made of all so as to charge an indorser? It must be made on the day when the note falls due, or where days of grace are allowed, upon the last day of grace. Will it be said that demand can be made at different and distant places on the same day, through the agency of letters of attorney? I believe such a practice has not been heard of, at least we have found nothing like it in the books. But it is said that an indorser is to be considered in the light of security; that his undertaking is to pay only in the event of a failure of the makers; and that although one of the makers may refuse, still another, if requested, might pay. There is force in this reasoning. When, however, it is considered that an indorser is immediately notified of the fact of non-payment, and that the object of this notice is that he may procure an indemnity from those whose note he has indorsed, it is not perceived how he is in any great danger of loss in consequence of a failure to make demand of all the makers." And the Court concludes that although there are apparent difficulties in the way, there is no substantial objection to considering the makers of a joint and several promissory note in the light of partners in that particular transaction, and they held that the demand of one of the makers was sufficient to charge the indorser.

Subsequently, however, in the case of *Greenough vs. Smead*, 3 Ohio, St. 415 (1854), the decision above made is limited. There, a promissory note was indorsed by Greenough before the indorsement of the payee. Demand of payment was made at the office of the maker on the day of maturity, he having died on that day. In a suit on the note, the indorsers claimed that Greenough was a joint maker, and that failure to make demand of him, discharged them. The Court, however, held that he should be treated as an indorser, and they then say: "This view of the subject makes it unnecessary to pass upon the question made as to the sufficiency of the demand. It may not be improper, however, to say that if Greenough could be treated as a joint maker, we should be of opinion that the demand made, or rather the excuse for not making the demand, would be insufficient to charge the indorsers. The question is not covered by the case of *Harris vs. Clark*, 10 Ohio, R. 5, and we feel no hesitation in saying that the rule there adopted should be confined to the precise state of facts upon which the decision was made. A demand upon one of several partners in business is clearly sufficient, and the Court in that case considered the several 'makers of a joint and several promissory note in the light of partners in that particular transaction.' But surely the principle can have no application after the death of one of the partners has terminated the implied agency of the survivor; and it could not be deemed due diligence in the holder, to present a note at the residence of the deceased partner, when the survivor was within reach."

The decision in the case of *Harris vs. Clark* is also criticised by Mr. Daniel (Daniel, *Neg. Instr.*, 593), who says, referring to the argument of Judge Hitchcock: "These views are more plausible than satisfactory, and the argument *ad inconvenienti* is well presented. But joint promisors are no more partners than joint indorsers. To construe them to be partners is to make a new contract between them, and to vary the condition precedent of the indorser's liability. And although it might be more convenient if they were partners, the inconvenience in enforcing their contract does not change it. If they were in different places at the maturity of the note and it could be only presented to one, due diligence would only require its presentation to the others in such time as they could be reached; and the impossibility of presenting to all on the day of maturity would excuse non presentation to

those at other places. Such at least is our conception of the true solution of the question, and it is borne out by high authority, and certainly by much more satisfactory reasoning than that above quoted."

The foregoing authorities, with the one solitary exception of *Harris vs. Clark*, which has been thus criticised and limited, establish the affirmative of the proposition above stated, viz., that when a promissory note is executed by two or more parties, not partners, a demand of payment upon all of the makers is necessary to hold the indorser, unless circumstances exist, which constitute in law an excuse for non-demand. It remains to apply the rule to the facts of the present case, to determine whether or not the indorsers are discharged.

The note in question was made in Kansas. In that State, there has been no decision upon the point involved, but it may be assumed that the Kansas Courts would fall in line with the decisions of those States above given. The note being signed by four parties, and containing no words in the body thereof creating a joint and several liability, would be held a joint note at common law. By Section 1 of an Act of the Legislature of Kansas relating to contracts, etc., passed Oct. 31, 1868, however, it is provided: "All contracts which, by the common law, are joint only, shall be construed to be joint and several." The note, then, is a joint and several note, whereon demand was made upon one maker only. In such a case, speaking of the demand necessary to charge an indorser, Mr. Daniel says:

"§ 596. Where the note is several, as well as joint, the indorser might be held as indorser of the maker to whom the note was duly presented, as the holder would have the right to treat the note as the several note of each maker. But he would have lost recourse against the indorser as upon the joint note of the co-makers, or the several note of the maker as to whom no presentment was made or excuse given."

No legal decision is cited to maintain this proposition, but it is based on a similar view expressed in a note to Section 255 of Story on Promissory Notes.

On the other hand, among the decisions heretofore cited, there are three wherein the note in suit was *joint and several*, and wherein the indorsers were discharged because demand of payment had not been made upon all the makers; (*Union Bank vs. Willis*; *Taylor vs. Davidson*; and *Butt vs. Lawson*.) These decisions, in the absence of any to the contrary, with the exception of *Harris vs. Clark*, must be taken as precedents for the note in question, and the conclusion to be drawn therefrom is that the failure of the notary to make demand upon all the makers (the fifteen miles distance between them being insufficient to constitute a legal excuse for non-presentment), precludes a recovery from the indorsers.

National Bank Failures.—The National bank failures during the past year have been quite numerous and the losses caused by them large. The first failure was that of the Palatka National Bank of Palatka, Fla., on June 3d, followed twenty-four days later by the failure of the Fidelity National Bank of Cincinnati, Ohio. The Henrietta National Bank of Henrietta, Texas, failed on August 17th, and the National Bank of Sumter, S. C., on August 24th. The First National Bank of Dansville, New York, was placed in the hands of a Receiver on September 8th, the First of Corry, Penn., on October 11th and the Stafford National Bank of Stafford Springs, Conn., on October 17th. The Fifth National Bank of St. Louis, Mo., and the First National Bank of Auburn, N. Y., have failed since, both causing large losses to their creditors, stockholders and depositors. In addition, many banks have suffered losses from embezzlements and defalcations. Most of these disasters have been the result of the desire on the part of the officers of the banks concerned to outstrip all others in the competition for business. There is no doubt that banking accommodations, are fully up to if not in excess of the requirements of legitimate business, and large profits are not to be expected. Newly started banks, in communities already having sufficient banking accommodations can only be carried to the front by dangerous methods. Illegal steps though taken for the sole benefit of the bank and its stockholders, frequently lead to disaster. Ill success makes, a misdemeanor in law a crime in public opinion.

NEW YORK'S STATE BANKS.

ANNUAL REPORT OF HON. WILLIS S. PAINE, SUPERINTENDENT OF THE BANKING DEPARTMENT, SUBMITTED TO THE LEGISLATURE, JANUARY 3, 1888.

The report covers the condition and general affairs of the banks, banking associations and individual bankers, as well as the condition of the several trust, loan, mortgage, security, guarantee or indemnity companies, operating under the laws of the State of New York.

NEW BANKS.

During the fiscal year certificates of authorization have been issued to twelve new banking associations, with paid-up capital of \$900,000 in the aggregate; each of these associations is engaged in active business under the provisions of the State banking laws. The name, location and capital of the respective banks are as follows, viz.:

Bedford Bank, Brooklyn, \$100,000; Riverside Bank, New York city, \$100,000; People's Bank of Haverstraw, Haverstraw, \$50,000; Ninth Avenue Bank, New York city, \$100,000; Manufacturers & Merchants' Bank, Gloversville, \$50,000; State Bank of Norwood, Norwood, \$25,000; Union Bank of New York city, \$250,000; Lenox Hill Bank, New York city, \$100,000; Farmers & Mechanics' Bank, Fort Plain, \$50,000; State Bank of Canastota, Canastota, \$40,000; Hempstead Bank, Hempstead, \$30,000; James M. Brush & Co.'s Bank, Huntington, \$5,000.

On the first day of October, 1887, the number of State Banks of deposit and discount in operation was one hundred and six. Since that date the following banks have been authorized to transact business under the State laws, viz.: Bank of New Amsterdam, New York city, capital, \$250,000; Citizens' Bank of Dansville, capital, \$50,000; Bank of Chateaugay, capital, \$25,000, and the South Side Bank, of Bay Shore, N. Y., capital, \$25,000.

The number of banks of deposit and discount operated under the State law is greater at the present time than it has been at any period subsequent to March 9, 1865, the date of the passage by the Legislature of the Act enabling the conversion of State banks into National banks. Since October 1, 1866, the unprecedented number of sixteen new State banks have been organized and entered upon active business; this affords an indication of the regard in which the banking system of the State is held by its bankers and citizens generally.

CONDITION OF THE BANKS.

A table is given showing the items of resources and liabilities of the State banks, compiled from their official quarterly reports made to the Superintendent of the Banking Department, on the morning of Saturday, September 18, 1886, and Saturday, September 17, 1887, before the transaction of business on those days, from which it appears that during the fiscal year the aggregate resources of the banks increased \$11,707,273; the increase in deposits for the same period was \$8,618,499; in loans and discounts, \$4,502,888, and in capital, \$1,235,000; the increase in surplus fund for the year was \$839,188, and in undivided profits, \$738,173; the increase in cash items for the same period was \$6,332,901; the amount due from Directors increased \$721,523 during the year, overdrafts, \$11,244; amount due from trust companies, State, National and private banks and brokers, \$936,421, and United States legal-tender notes and circulating notes of National banks, \$488,376; the increase in bonds and mortgages for the year was \$59,857, and in amount due to trust companies, State, National and private banks and brokers, \$129,433; in miscellaneous liabilities not classified there was a net increase of \$232,994, and in loss and expense, \$13,366. During the year the net decrease in specie was \$369,968, and in stocks and bonds, \$408,393; the decrease in real estate for the same period was \$17,432. The amount due to the Treasurer of the State of New York decreased \$21,674, and the amount due individuals and corporations other than banks and depositors, \$114,333; the decrease during the year in circulation outstanding was \$7, and in miscellaneous assets not enumerated, \$63,390.

CLOSED BANK.

An examination of the Farmers' Bank, of Fayetteville, made under my direction, May 19, 1887, showed that its liabilities were \$66,814.93, and its assets but \$49,000.00. It also appeared by the examination that a large number of accounts of individual

depositors were overdrawn, among which were the personal accounts of several officers of the bank, and that the business of the bank generally was being conducted in a manner detrimental to the interests of its depositors and creditors. The deficiency shown by the examination was so large as to practically cancel the stock of the bank. In view of the reprehensible business methods pursued by its officers it did not seem desirable to me that an effort should be made to continue the corporate existence of the bank. I therefore reported the facts to the Attorney General with the request that he institute the necessary proceedings to close the bank. On June 1, 1887, Mr. Justice Williams, at Syracuse, granted an injunction restraining the bank from exercising its corporate rights, and on the same day Amos Smith, of Fayetteville, was appointed temporary Receiver. He declined to act as such, and on the twenty-fifth day of the same month William S. Andrews, of Syracuse, was appointed Receiver and the affairs of the bank placed in liquidation. The bank was organized in 1870, with capital stock of one hundred thousand dollars, which was reduced to fifty thousand dollars in 1877, and to meet losses, was again further reduced in June, 1886, to twenty-five thousand dollars.

INCREASE OF CAPITAL.

The net increase in the capital stock of banks, banking associations and individual bankers during the fiscal year was \$1,236,000. Of this amount, \$870,000 was capital of new associations, \$400,000 resulted from the increase of the capital stock of the Bank of the State of New York from \$800,000 to \$1,200,000. The apparent difference of \$35,000 in amount of capital stock reported September 18, 1886, and September 17, 1887, is accounted for by reductions.

CIRCULATION.

At the commencement of the present fiscal year there were \$85,134 of circulating notes outstanding, which are still a charge upon the assets of the banks by which they were issued. Of this amount, \$7,155 are secured circulation, for the redemption of which the Superintendent holds a like amount of cash. The remaining sum of \$77,979 is unsecured circulation which was issued by incorporated banks, the charters of which, with the exception of that of the Manhattan Company, have long since expired. During the year the secured circulation was reduced \$4,986 by the expiration of the time for the redemption of notes issued by the Bank of Geneva, the cash deposit held for the redemption of the notes of that bank was surrendered to the representatives of the bank in January of the present year, at which time the official relations between the bank and this Department terminated. During the past year the Mechanics' Bank of Brooklyn, having deposited in this Department an amount of cash equal to the face value of its outstanding circulating notes, the Superintendent has advertised that notes issued by that bank will be redeemed by him at par until February 19, 1893. The advertising of the redemption of the notes of the Mechanics' Bank is the final official action required to provide for the closing of the secured circulation account in the Banking Department. The unsecured circulation account cannot be closed until provision has been made for advertising the final redemption of the outstanding notes of five of the old incorporated banks. So far as three of such banks are concerned, the Superintendent has been unable to discover that they have any representatives living. The other two banks will redeem notes issued by them on presentation at their counters.

TRUST, LOAN AND MORTGAGE COMPANIES.

Twenty-one Trust, Loan, Mortgage, Security, Guarantee or Indemnity companies or associations were in existence in the State at the beginning of the present fiscal year.

From July 1, 1886, to July 1, 1887, the increase in assets of these corporations was \$11,864,781.71. On July 1, 1887, their aggregate resources were \$201,080,840.71. During the year deposits increased \$8,492,436.01, and surplus fund and undivided profits increased \$3,185,098.96. During the same period the increase in capital was \$342,050, resulting from the Title Guarantee and Trust Company increasing its capital stock from \$733,950 to \$860,000; the Knickerbocker Trust Company, from \$300,000 to \$500,000; and the Rochester Trust and Safe Deposit Company, from \$90,000 to \$106,000. On July 1, 1887, the amount of cash on hand and deposited with banks and other moneyed institutions was \$19,177,730.94, being \$1,082,880.71 in excess of the sum held July 1, 1886. The increase in the amount loaned on collaterals during the year was \$17,699,250.71, and in amount invested in real estate, \$82,155.93. During the same time there was a net decrease in the amount loaned on personal securities, including bills purchased, of \$4,024,215.00, and in amount invested in public stocks, of \$3,062,125.97. The decrease in

bond and mortgage securities was \$180,508.99. The total amount of interest, commissions and profits received during the six months ending July 1, 1887, was \$4,623,424.34, being \$1,362,034.82 in excess of the sum received for the corresponding six months of the preceding year. The expenses of management for the first half of the present year were \$447,376.61, against \$384,965.36 for the first half of 1886. The dividends on capital stock, declared from January 1, 1886, to July 1st of that year, were, in the aggregate, \$710,125; from January 1st to July 1st of the present year, the total amount of dividends declared was \$367,425.

The bill submitted to the last Legislature, providing for the organization, supervision and administration of the affairs of Trust companies, became a law last June (ch. 346.) The full text of the law is given in the Appendix. Only one association of persons has complied with all the requirements of the statute; its incorporation has been authorized in the city of New York, and it is now successfully carrying on business under the title of The Atlantic Trust Company.

Several companies heretofore organized under special laws maintain a nominal existence solely for the purpose of selling their charters. An officer of one of these concerns recently stated that it had three charters for the organization of Trust companies in its possession, all of which are for sale. These institutions are technically solvent, and are so managed that it would be exceedingly difficult to effect their dissolution by the usual methods. No good reason can be given for their existence, therefore the enactment of a law is recommended whereby the charters of all such companies not now actually engaged in carrying on business, shall be vacated after the lapse of a reasonable period.

SECURITIES HELD IN TRUST.

At the beginning of the fiscal year, October 1, 1887, the total amount of securities held by the Superintendent in trust for banking associations, individual bankers, and for the depositors with and creditors of certain Trust companies was \$1,553,033.98.

The sum of one hundred and five thousand dollars is held as a guaranty of good faith on the part of banking associations and individual bankers, in accordance with the requirements of Chapter 400 of the Laws of 1882. Prior to 1880, each bank, banking association and individual banker which had not given notice of intention to close the business of banking, was required to keep on deposit in the Banking Department, interest-bearing stocks of the State of New York or of the United States, to the amount of five thousand dollars, the same to be held by the Superintendent of the Banking Department as a pledge of good faith, and guaranty of compliance with the banking laws of the State, on the part of the bank, banking association or individual banker. By an Act of the Legislature passed May 8, 1880 (Ch. 202), the amount of the stock deposit required to be made with the Superintendent was reduced from five thousand dollars to one thousand dollars. Of the securities held by the Superintendent the sum of twenty-four thousand dollars became released through the Act of 1880, and is held subject to the order of the banks to which the stocks belong. Of the cash in the custody of the Superintendent \$7,155 are held as security for the redemption of outstanding circulating notes issued by the Bank of Commerce in New York and the Mechanics' Bank of Brooklyn, and \$378.98 are held in trust for certain creditors of the failed Buffalo Trust Company.

The remaining securities, \$1,416,500 in amount, are held by the Superintendent in trust for the depositors with and creditors of such of the Trust, Loan, Mortgage, Security and Guaranty or Indemnity Companies or Associations as are engaged in receiving deposits of money in trust in this State. Such securities are subject to sale and transfer, and to the disposal of the proceeds by the Superintendent only on the order of a court of competent jurisdiction.

SAFE DEPOSIT COMPANIES.

On October 1, 1887, there were sixteen corporations for the safe-keeping and guaranteeing of personal property engaged in business in this State, under the provision of chapter 613 of the Laws of 1875 and the Acts additional thereto and amendatory thereof.

EXAMINATIONS.

During the present year there have been several notable failures of National banks; one of which in this State, while not large, was of an unusually unfortunate character. There is no evidence that this was the result of any defect in the organic law, and very little proof exists that, as has been alleged, the examiners employed by

Comptroller of the Currency were, in this connection, incompetent. In case of failure, the Directors of a bank are, as a rule, much more to blame than the Examiners, for the reason that when a balance sheet of the general ledger is handed them they have more time to verify it. For example, one item is that of "individual deposits." Probably more thefts are committed in this than in any other of the credit balances. It is true that to be sure that this account is correct, every dealer's book must be called in and balanced, and this to a great extent is impracticable, but the book-keeper should be directed to make a statement of the sum due each dealer, which can be to some extent verified. It is suggested in this connection that it would be wise to require the book keeper at regular intervals to make a statement of the sum due each dealer, which, after being verified by the cashier or his assistant, should be mailed to the depositor; if no overdraft account is kept the aggregate of these sums, less the overdrafts, must agree with this item on the general ledger balance sheet. All failures originate in one or two ways, either because of the defalcation of employes or what is in one sense the same thing, the misuse of the assets by officers, or through the ambitious desires of the managers who assume hazardous risks in loaning money that large dividends may be earned for stockholders, and in very few instances to the end that interest may be paid to depositors.

It must not be forgotten that Directors and not Examiners are the guardians of a bank; they are the agents of the stockholders, and as such are responsible for the management. Between the visits of the Examiner a bank may be eviscerated, and in such cases no responsibility can attach to him. Shareholders are oftentimes practically indifferent to the qualifications of those of their number whom they elect to act as Directors, who are frequently ignorant of the details of the business they have undertaken to protect. No one will contend that any system of espionage can prevent failures, but examinations are of incalculable value because outside of the specific faults of management which may be detected, and which officers sometimes unconsciously make, the Examiner's report will indicate whether the bank's general management is contrary to the methods which experience has shown to be wise. An examination occasionally discloses a critical condition of affairs in time to prevent a failure. It is said by way of illustration that the contest between an Examiner and a bank officer, the one to discover and the other to conceal, is like the rivalry which exists between safe makers and burglars, or between the makers of large guns and the designers or manufacturers of armor, but these are not altogether parallel cases, for the reason that the Examiner has such familiarity with the methods of wrong-doers that against his penetration it is almost impossible to continuously guard. The efficiency of examinations is shown in the progress of the savings banks of this State. Fifteen years ago the present system of biennial examinations of those corporations was established. Slowly but surely the inferior institutions have been weeded out, errors in the management of others have been corrected and at no time have they had the confidence of the people more completely than at present.

DAYS OF GRACE.

The bill before the last Legislature to abolish days of grace was defeated in the Assembly, a majority of all the members elected not voting, and three-fifths being present. The vote was, however, fifty-six ayes to forty-one noes. It is reasonably certain that the business world has outgrown the time when days of grace are necessary, and the question arises whether the continuance of the custom is desirable. In the State of California they have been abolished by statute. The universal use of the telegraph, the introduction of telephones, and the present perfected condition of the postal service have created different conditions in the transaction of business from those that obtained when the custom originated. Upon the other side it may be alleged that the abolition of the custom would be a source of expense and annoyance for a considerable period. If such a statute be adopted, it should not take effect until a considerable length of time after its enactment.

PRIVATE BANKS.

It is my duty to again protest against the failure to enact a law whereby private bankers may be prohibited from using corporate names. The present statute (Ch. 229, Laws of 1885) forbids the adoption of corporate names by only such persons as were not engaged in the business of banking at the date of its enactment. No necessity exists for such concerns which could not be met by State institutions, such as banking associations or individual bankers; the capital of the last named need not exceed the

sum of \$1,000. Several of these private concerns stand exceedingly high, and it is to be presumed, deservedly so, in the estimation of their dealers and others, but it is equally true that no investigation can be had as to the responsibility of the persons who control their affairs. They are not restrained in the slightest degree in their investments, and neither the depositors nor other creditors can appeal to any official source for reliable information in emergencies. It is no answer to say that if dealers do not possess sufficient intelligence to exercise proper discretion they should suffer. In the case of the failure of one of these concerns located in Suffolk county many depositors were females and a few were children, all of whom were evidently misled by the use of the word "bank." This word naturally implies and should necessarily imply that the institution employing it as part of its name is a regularly incorporated association, subject to State supervision. I am informed that twenty persons are now in the county poor-house who were made helpless paupers by reason of the insolvency of a like institution in May, 1885, at Dunkirk. Six persons have died from the effects of this failure, and three have become insane. In this case an assignment was made, and while some of the preferred creditors were paid in full, \$320,000 are due to its depositors. A series of lawsuits of an intricate character have naturally resulted from such assignment. The present law should at least be amended by compelling private bankers using corporate titles to insert therein either the words "private banker" or the word "unincorporated," or both.

DIRECTORS.

With a view to remedy an imperfection in the present law in respect to directors of State banks, it is my intention at an early day to submit a bill for your consideration, which will fix the minimum number of directors for a bank of deposit and discount. The clear intent of the banking law is that such number shall not be less than five. This requirement may now be evaded by designating a less number in the articles of association at the date of organization.

Another omission in the law has reference to directors. A careful examination of the statutes does not disclose any provision of law requiring a director of a State bank to be a stockholder thereof. A director of a banking association, at all times, should be the owner in good faith of at least ten shares of the capital stock of the corporation, the management of the affairs of which he directs. The statute should be made mandatory in this respect.

LIMIT TO INDIVIDUAL LOANS.

The suggestion has been made that the State banking laws should be amended to conform to the provision of the National Banking Act, which is intended to limit the loans to any single person to ten per cent. of the capital of an association organized under that Act (Sec. 5,200). This portion of the Act is evaded by such associations, because it is qualified by the provision that the discount of business paper actually owned by the person negotiating the same shall not be considered money borrowed.

It is possible, of course, in all cases to evade the letter of the Act by creating "business paper," or by making loans to a clerk in the employ of the party borrowing, the clerk giving his note, thus oftentimes making the loan to an irresponsible party. But without attempting these subtleties, the law is practically ignored by the National banks whenever desirable. The report of the Comptroller of the Currency suggests an amendment to the present law by which the ten per cent. limit on capital shall be extended to include the surplus, and increased to twenty per cent., the former limit not to be exceeded in any case except where a bank holds security of unquestionable market value. This would seem to be an admission that the law cannot be enforced; and if this be true, certainly the adoption of a similar provision is not to be advocated when it is remembered that State banks, notably those in the metropolis, are from time to time necessarily increasing the magnitude of their operations. Sometimes, the needs of business in a locality, such as the reorganization of a railroad, will call for a sum much larger than the capital of any bank in the country. The enactment of a statute, which it is admitted cannot be enforced, would be worse than useless.

BRANCH BANKS.

The granting to Banking Associations and Savings Institutions of the privilege of establishing branches has recently been advocated. Under certain restrictions, much may be said in favor of authorizing the last-named institutions to have subsidiary depositories for receiving and disbursing moneys. This topic will be considered in the

forthcoming report relative to Savings banks, but the same reasons only in part apply to banks of deposit and discount.

The theory of a bank with a central office in the metropolis, and subordinate ones in the surrounding country, has been reduced to successful practice in England. Two notable organizations are the National Provincial Bank and the London and County Bank; their combined assets aggregate about \$300,000,000, and they have upwards of three hundred branches in the suburbs of London and in the provinces. The advantage would accrue to a bank in a large city, in the way of using its funds through subordinate offices located in agricultural and manufacturing communities, are patent, and under the control of men of perfect integrity, no harm, presumably would result. Such a corporation, however, whether National or State, in the hands of persons not of the character indicated, might prove an instrument for great harm. Experience has shown that under our system, where a close alliance existed between a small and a large bank, the former has had, generally speaking, in an emergency to go into liquidation. The independence that our banks located in the rural districts possess of those located in the cities where at times, without notice, values are seriously depreciated, has doubtless been the means of effecting the restoration of confidence, by aiding in the amelioration of monetary disturbances. In enacting the Free Banking Act of 1838, the Legislature of the State gave ample scope for the creation of banks, and no limitation is made as to their number or location, so that each community may have the benefit a banking institution gives. Certainly no necessity exists for the adoption of the suggestion mentioned at the beginning of this article; it undoubtedly tends to centralization, which under our form of government is to be deprecated in connection with corporations of a public or semi-public character, unless absolutely necessary for the well-being of society.

THE SATURDAY HALF HOLIDAY LAW.

The statute designating the holidays to be observed in the acceptance and payment of bills of exchange, bank checks and promissory notes, were so amended during the last session of the Legislature, that each Saturday from twelve o'clock at noon until twelve o'clock at midnight was designated a half holiday, and it was also enacted as to the transaction of business in the public offices of the State, or counties of the State, that such period of time should be observed the same as the first day of the week, commonly called Sunday (chs. 289, 461).

Advices have been received from nearly every banking association, savings bank and trust company under the supervision of this department and indicate that they have, except in the following named cities, very generally resumed their former business hours since the first day of September. A majority of the institutions that close at noon, Saturdays, assert that it is their intention to do so until such time only as the Legislature convenes and opportunity has been given to modify the law. In New York, Brooklyn and Buffalo, many of the banks continue to close at the time mentioned, yet they are practically unanimous in the opinion that the present law should be either repealed or modified.

An observance of the proposed custom by banks in the interior of the State would seriously hamper all kinds of business. In the country, Saturday is the day which has, from natural causes, become the trading time of the farmers, and the villages are then crowded; laborers also on that day usually receive their weekly wages, and purchase most of their supplies. If a bank is of use to these people at any time, it is decidedly so on Saturday. At that period the checks scattered through the week come pouring in, and the demand for banking facilities is greater than on any other day of the week. To close the doors of the banks at noon on Saturday is to check the stream at the flood. While that day is the heavy one outside of the banks, Monday is the heavy one inside, for on that day the banks have the remittances of their customers together with their own correspondence, which has accumulated on Sunday, added to their transactions; the present law makes the business of this heavy day with the banks, much heavier.

It is the prevailing opinion among New York city banks that the present law is antagonistic to the commercial interests of that city and the State as well. In the competition between the great cities of the East for trade, it is believed that it places the metropolis, the money centre of the nation, at a disadvantage. It can hardly be claimed that the amelioration of the condition of clerks in the public offices of this State is of sufficient importance to justify the introduction of the new and perilous

elements in this Commonwealth which have now to be considered whenever financial credits are used.

As a general proposition, the people of this State should not be compelled to do business in either five or five and one-half days, where competing States have six days, and therefore legislation on the subject, if any, should come from the National Legislature. Unless the Saturday half holiday law is adopted throughout the several States of the Union it discriminates against industrial interests of those States by which it may be adopted.

In the large cities, during the heat of summer, a kindly and sensible custom has grown up in many kinds of business of discontinuing traffic at noon on Saturday, and a statute applicable to the whole of each Saturday in July and August would meet with general approval in such localities; certainly this modification would be of more advantage to those for whose benefit the present law was specially designed, and interfere less with the business interests of the community than the existing one.

The banking interests of this State are among its most important interests, and as they are injuriously affected by the so-called Saturday half holiday law, the Legislature of 1888 will be asked to repeal or to materially modify that statute.

STATE BANK CURRENCY.

The plan indicated in the last discount bank report to the Legislature, whereby circulating notes may be issued to State banks, has been the subject of comment, and thus far no unanswerable reason has been given to show that the plan is not practicable. Since the close of the Rebellion the payment of the National debt has gone on continuously and rapidly, and yet the circulating notes of State banks are subject to a tax of ten per cent. by virtue of a Federal law passed nearly twenty-three years ago.

It is reasonable to believe that none of the many devices for perpetuating this debt, one of the most disagreeable reminders of the civil war, will be adopted. Its substantially complete payment would create a feeling of reserve power which would prove of incalculable value in many ways. The pride of the wealthiest nation on the globe demands its extinguishment, precisely as local pride is accomplishing the payment of State and municipal indebtedness throughout the country, and will not tolerate such payment by any questionable method.

Within the last ten years a political party in this State organized to accomplish the payment of the Federal debt in "greenbacks," gave seventy-five thousand one hundred votes to its nominee at a State election when but one State office was to be filled. Each year since that time, including the present, it has possessed sufficient vitality to call a State Convention and place a ticket in the field. The nation as a whole is too prosperous not to be impatient of any delay which may give the opportunity for existence of just such partisan organizations. Had it not been for the resumption of specie payments, whereby the liquidation of the debt in the medium mentioned is no longer desirable, that party would not have so few followers.

The advocates of a fixed governmental issue of circulating notes in preference to that of banks seem to forget that as the business of the Government is distinct from that of the mercantile community, it cannot well carry on that portion of the business of banking without it undertakes all of that business, for the reason that circulation is needed in proportion to the amount of credit required; circulating notes are simply credits in a negotiable form.

It will be remembered that the plan suggested was that banks of deposit and discount should have the privilege of issuing circulating notes upon depositing with the Comptroller of the Currency under the like conditions which now exist in connection with the deposit of Government bonds by National banks, the best obtainable stocks, for example: The stocks or bonds of any State of the Union that has not within ten years defaulted in the payment of any part of either principal or interest of any debt authorized by any Legislature of such State to be contracted. Also in the stocks or bonds of any city, county, town or village in such State, issued pursuant to the authority of a law of the State. Stocks or bonds of a body politic to be unavailable when the indebtedness exceeds a certain percentage of the assessed valuation of its real estate. The objection is made that the substitution of the before-mentioned securities for Government bonds as a basis of circulation would compel the creation of a power which must be lodged somewhere to accept some and reject others of these securities, and its exercise would raise and depress their prices, and the vesting of such power in any officer or set of officers would be dangerous. This objection seems to be

frivolous. The carrying on of Government in any manner necessarily gives power to those who are charged with the duty of administering its affairs. The Governor of the State of New York, for example, has long possessed the absolute power to pardon all persons who have been convicted of offenses except treason and cases of impeachment, and not one instance is known where that power has been otherwise than properly exercised.

It might as well be said that the Comptroller of the Currency should not have the very great power granted to him which the National bank law specifically gives of appointing the Receivers of insolvent National banks. But no one has ever accused the successive incumbents of the office named of violating their trust in this or any other respect; assuming, however, that the objection has merit, the party aggrieved at the decision of this officer could have in certain cases an appeal to the Secretary of the Treasury.

It has been further urged that these securities could not be promptly converted into cash in case of an emergency, that the public must be sure not only that it will ultimately get the money, but that it will be immediately available, and that even if there were but the shadow of doubt, although a mistaken doubt, a panic as to such notes could not be averted, and even the remote possibility of such a lack of confidence would destroy the usefulness of such currency.

If this statement is met with the answer that the Government would be ready to redeem this currency because fully protected by reason of holding those securities, it is replied that the Government would be compelled to maintain a reserve to meet these notes if presented for payment, and that Congress representing the people would not permit the Government to go into the business of keeping money at hand to meet such emergencies.

In answer to the foregoing it may be shown that the currency contemplated can be made much more secure than the present National bank currency, and without the slightest necessity for maintaining a reserve. In case of a foreign war it is not unreasonable to believe that Government bonds might become greatly depreciated in value, and upon these bonds the circulating notes of the National banks are based.

The circulation of each State bank could be made a preferred lien upon the assets of each institution, to be paid before any other liability is met. The stockholders should be individually liable precisely as the law of this State contemplates. Assurance would be doubly sure if a yearly revenue tax of one-half of one per cent. collected upon the amount of circulation of each bank was to be placed in the Treasury as a safety fund for the redemption of all the circulating notes in any case where the security mentioned might be inadequate. When the accumulation of a safety fund as herein suggested exceeded a certain percentage of the amount represented by the circulating notes, it could be disposed of in various ways, *e. g.*, it would be equitable to refund to each bank the sum which it had contributed, above a certain ratio, to its liability for its currency.

The "safety fund" system of the State of New York, as it was generally termed, would have proved successful had the banks of the State been subject to other conditions. While by law each bank was forbidden to issue circulating notes to a greater amount than twice its capital, yet there was no system of examinations, and no provision of law existed whereby a supervision could be exercised like that which obtains at present; a number of institutions violated the statute, and the fund which was intended to secure the payment of a bank's deposits, as well as of its currency, was found to be too small. No bank was compelled to contribute to the fund beyond one-half of one per cent. annually on its capital for six years, because the law provided that when three per cent. of its capital had been paid its contributions should cease.

By the proposed system, no matter how injudiciously the affairs of a bank may be managed or how lax may be the supervision exercised by the authorities of the State wherein it is located, its currency would be secure, elastic and in all respects quite as desirable as that issued by the National banks.

What He Thinks of the Journal.—CHARLES E. SCOTT, Cashier of the Farmers' National Bank of Bucks County, Bristol, Pa., writes on December 14, 1887: "Your JOURNAL is an eminently practical publication, as necessary in a banking house as a whet-stone in a joiner shop."

FINANCIAL MATTERS IN CONGRESS.

BILLS RELATING TO BANKING AND FINANCIAL MATTERS, INTRODUCED TO JANUARY 29TH IN THE FIFTIETH CONGRESS.

Senate Bills.

- No. 8.**—Introduced December 12, 1887, by SENATOR BECK.
To provide for the retirement of United States legal-tender and National bank notes of small denominations, and the issue of coin certificates, and for other purposes.
The synopsis of this bill may be found on page 30 of the *Congressional Record*.
- No. 107.**—Introduced December 12, 1887, by SENATOR BOWEN.
Providing for a new basis for the circulation of National banks, and for other purposes.
The synopsis of this bill may be found on page 32 of the *Congressional Record*.
- No. 365.**—Introduced December 12, 1887, by SENATOR FARWELL.
To perpetuate the National banking system.
The synopsis of this bill may be found on page 37 of the *Congressional Record*.
- No. 792.**—Introduced December 14, 1887, by SENATOR GEORGE.
To prevent contraction in the currency, and to increase the circulation of silver and silver certificates.
The synopsis of this bill may be found on page 66 of the *Congressional Record*.
- No. 1,316.**—Introduced January 9, 1888, by SENATOR SHERMAN.
Providing for the investment of certain funds in the Treasury.
The synopsis of this bill may be found on page 305 of the *Congressional Record*.
- No. 1,301.**—Introduced January 10, 1888, by SENATOR VOORHEES.
Relating to National Banking Associations.
The synopsis of this bill may be found on page 359 of the *Congressional Record*.

House of Representatives.

- No. 1,394.**—Introduced January 4, 1888, by Mr. ADAMS.
In regard to the deposit of bonds by National banks as security for their circulating notes.
The synopsis of this bill may be found on page 223 of the *Congressional Record*.
- No. 1,358.**—Introduced January 4, 1888, by Mr. WEAVER.
To provide for the issue of fractional paper currency.
The synopsis of this bill may be found on page 226 of the *Congressional Record*.
- No. 1,359.**—Introduced January 4, 1888, by Mr. WEAVER.
To retire National bank notes and to prevent fluctuations of the currency by substituting Treasury notes in lieu of bank notes.
The synopsis of this bill may be found on page 226 of the *Congressional Record*.
- No. 1,403.**—Introduced January 4, 1888, by Mr. PERKINS.
To prevent contraction in the currency, and to increase the circulation of silver and silver certificates.
The synopsis of this bill may be found on page 227 of the *Congressional Record*.
- No. 1,425.**—Introduced January 4, 1888, by Mr. MORRILL.
To amend Section 5,159 of the Revised Statutes.
The synopsis of this bill may be found on page 228 of the *Congressional Record*.
- No. 1,451.**—Introduced January 4, 1888, by Mr. PETERS.
To provide for the deposit of gold and silver coin, or gold and silver bullion, as securities for the circulating notes of National banks.
The synopsis of this bill may be found on page 229 of the *Congressional Record*.
- No. 1,711.**—Introduced January 4, 1888, by Mr. SENEY.
To amend Section 5151 of the Revised Statutes, so as to make shareholders in National banks jointly and severally liable for the debts of the banks.
The synopsis of this bill may be found on page 239 of the *Congressional Record*.
- No. 1,735.**—Introduced January 4, 1888, by Mr. WILKINS.
To reduce the amount of United States bonds to be required of National banks, and for other purposes.
The synopsis of this bill may be found on page 240 of the *Congressional Record*.

- No. 1,736.**—Introduced January 4, 1888, by Mr. WILKINS.
To provide for the issue of circulating notes to National banking associations.
The synopsis of this bill may be found on page 240 of the *Congressional Record*.
- No. 1,800.**—Introduced January 4, 1888, by Mr. BRUMM.
To provide for the security of deposits in National banks.
The synopsis of this bill may be found on page 243 of the *Congressional Record*.
- No. 1,801.**—Introduced January 4, 1888, by Mr. BRUMM.
To retire National bank notes and substitute therefor Treasury notes.
The synopsis of this bill may be found on page 243 of the *Congressional Record*.
- No. 1,802.**—Introduced January 4, 1888, by Mr. BRUMM.
To facilitate the payment of the public debt, and to provide a uniform paper circulation.
The synopsis of this bill may be found on page 243 of the *Congressional Record*.
- No. 1,803.**—Introduced January 4, 1888, by Mr. BRUMM.
To fix the maximum limit to the capital stock of the National banking associations.
The synopsis of this bill may be found on page 243 of the *Congressional Record*.
- No. 1,806.**—Introduced January 4, 1888, by Mr. BRUMM.
To amend the National Bank Act.
The synopsis of this bill may be found on page 243 of the *Congressional Record*.
- No. 1,869.**—Introduced January 4, 1888, by Mr. CULBERSON.
To prevent the contraction of the currency.
The synopsis of this bill may be found on page 246 of the *Congressional Record*.
- No. 1,871.**—Introduced January 4, 1888, by Mr. CULBERSON.
To repeal the proviso to Section 12 of an Act entitled "An Act to enable National banking associations to extend their corporate existence and for other purposes."
The synopsis of this bill may be found on page 246 of the *Congressional Record*.
- No. 1,934.**—Introduced January 4, 1888, by Mr. CASWELL.
Authorizing the issue of United States bonds, and providing a permanent security for National bank circulation.
The synopsis of this bill may be found on page 248 of the *Congressional Record*.
- No. 2,011.**—Introduced January 4, 1888, by Mr. MCRAE.
To prevent the National banks from contracting the currency.
The synopsis of this bill may be found on page 251 of the *Congressional Record*.
- No. 2,014.**—Introduced January 4, 1888, by Mr. DINGLEY.
Authorizing the Secretary of the Treasury to invest the lawful money deposited in the Treasury in trust by National banking associations for the retirement of their circulating notes.
The synopsis of this bill may be found on page 251 of the *Congressional Record*.
- No. 4,328.**—Introduced January 10, 1888, by Mr. WILKINS.
To amend Section 5,191 of the Revised Statutes, relative to the reserve of National banks designated as Government depositories.
The synopsis of this bill may be found on page 377 of the *Congressional Record*.
- No. 4,329.**—Introduced January 10, 1888, by Mr. JOS. D. TAYLOR.
To authorize National banks in cities, towns and villages whose population is less than 20,000 inhabitants to make loans to the extent of one-half of their capital and surplus upon mortgage of real estate, and providing that National banks whose capital does not exceed \$150,000 shall be entitled to receive circulating notes, equal in amount to 80 per cent. of the market value of bonds deposited as security therefor, and not less in amount than the par value thereof.
The synopsis of this bill may be found on page 377 of the *Congressional Record*.
- No. 4,407.**—Introduced January 10, 1888, by Mr. LA FOLLETTE.
To protect depositors in National banks and to punish any officer of such bank who receives a deposit when said bank is insolvent.
The synopsis of this bill may be found on page 380 of the *Congressional Record*.
- No. 4,954.**—Introduced January 16, 1888, by Mr. ANDERSON.
Preventing a contraction of Currency by the withdrawal of National bank notes from circulation.
The synopsis of this bill may be found on page 498 of the *Congressional Record*.
- No. 4,965.**—Introduced January 16, 1888, by Mr. MCCOMAS.
To prohibit speculation by officers of National banks.
The synopsis of this bill may be found on page 499 of the *Congressional Record*.
- No. 5,054.**—Introduced January 16, 1888, by Mr. TOWNSHEND.
To retire the circulation of the National banks, and to substitute Treasury notes therefor.
The synopsis of this bill may be found on page 508 of the *Congressional Record*.
- Those who desire copies of any of the above bills can procure them by writing to their Representatives in Congress.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Forged Check.—A forged check for \$17,000 on the Third National Bank of New York city was recently detected at that bank, to which it was presented for payment by the American Loan & Trust Company of New York, with which it had been left for collection. The check purported to be signed by Charles F. Brown, a molasses manufacturer.

Sawdust Swindlers.—The crusade against this variety of criminals recently instituted by the police of New York city has driven them into the surrounding towns. They have appeared in Danbury, Conn., and other places. These people make their living out of the concealed dishonesty of the community. There seems always to be a sufficient number of those who are willing to experiment with counterfeit money.

A New Colner.—Dr. Henry Leffman has been appointed colner at the Philadelphia mint, to succeed William S. Steel, who had held a position in the mint for twenty-five years, the last four as colner. The new appointee is a Philadelphian by birth. He has been in politics, was a candidate for coroner in 1880, and has served one term as post physician. His medical skill will doubtless fit him for the position of colner at the mint.

Defaulter Arrested.—Thomas H. Hood, the defaulting Cashier of the Norwich Board of Water Works, absconded from Norwich, Conn., in September, 1887. He returned home to spend Christmas with his wife, arriving late Saturday night. He was recognized, however, and arrested. His embezzlement amounted to \$4,130. The method pursued by him was to collect water rates, pocket the money and give no credit.

Saco Savings Bank Bonds.—The Saco Savings Bank will probably recover the U. S. bonds which were stolen from it by its precocious clerk Frank C. McNeally. This will be done with the free consent of the latter. The public looks on, and like Sam Weller when he felt that his master had been insulted by having his name blazoned on a stage coach as Moses Plowwick, indignantly asked, "Is nobody to be whopped for this?"

Old National Bank of Rutland.—The stockholders of the old National Bank of Rutland, Vt., are endeavoring to wind up its affairs. This bank was wrecked by its President, the late Governor John B. Page, who borrowed a large portion of its funds to carry on his railroad schemes. Excessive amounts of the bank's money were loaned to the Howe Scale Company. The deposits in the bank were due to stockholders chiefly, and therefore the institution was permitted to go into voluntary liquidation.

Burglars Identified as Bank Robbers.—It will be remembered that on September 29, 1887, the Farmers' National Bank, of Delaware, at New Castle, Delaware, was broken into by four masked burglars, who were driven off by Cashier Cooper after a lively fight. Two of them, named Williams, and Lynch—the former a man of many aliases—were arrested for house breaking in Massachusetts and lodged in the Pittsfield jail from which they escaped. They were recaptured in New York and admitted that they were engaged in the attempt to rob the bank at New Castle. Williams was identified by Cashier Cooper.

Public Deposits.—A recent dispatch from Washington announced that it had been decided by the Treasury authorities not to make any further deposits of public moneys with the National banks. This caused at first some excitement in the money market, but it was soon discovered that the decision reached was merely not to designate any more National banks as public depositories at present. About two hundred and fifty had already received such designations, but only about one hundred

and seventy had received public deposits. There was therefore enough designated to receive all the funds collected from internal revenue taxes for some time to come.

History Repeats Itself.—When the five cent nickel piece appeared there was nothing on it to indicate its denomination, and it was frequently gilded and passed as a five dollar gold piece. The die was changed, the word cents being added. Pieces without the word cents are now rare and much sought for as a curiosity. On the occasion of the Queen's Jubilee in England a new sixpenny piece was issued which, like the new five cent nickel in this country, had nothing to indicate the denomination. These sixpences were gilded and passed for half sovereigns. This led to the alteration of the die, and new coins are to be issued with the words "six pence" plainly stamped thereon.

Language of United States Four Per Cent. Bond.—In response to the request of a JOURNAL subscriber we give the correct language of a United States four per cent. bond:

"This bond is issued in accordance with the provisions of an Act of Congress entitled 'An Act to authorize the refunding of the National Debt, approved July 14, 1870,' amended by an Act approved January 20, 1871, and is redeemable at the pleasure of the United States, after the first day of July, A. D. 1907, in coin of the standard value of the United States on said July 14, 1870, with interest, in such coin, from the day of the date hereof, at the rate of four per centum per annum, payable quarterly, on the first day of October, January, April and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal or local authority."

The Birmingham Trust & Savings Company, of Birmingham, Ala., was organized on the 10th of last December with a subscribed capital of \$500,000. One hundred and thirteen thousand dollars is already paid, and the balance will be paid in monthly installments of 10 per cent. The officers are: H. M. Caldwell, President; S. J. Murphy, Vice-President, and S. G. Hudson, Cashier. While authorized to do a general banking business, the aim of this institution will be to secure savings deposits upon which a reasonable interest will be paid. No stronger indication of the increasing prosperity of the South can be given than the springing up of savings banks in various sections. It shows that the masses are accumulating money and are seeking for a safe place to invest it.

Long and Faithful Service.—Major S. B. Phinney, of Barnstable, Mass., having been connected with the Yarmouth Bank and with the Hyannis National Bank continuously for more than a quarter of a century, has retired from further service. In his letter of declination he says that his connection with the directory of the Hyannis Bank has continued through twenty-two years, seventeen years as President, and an opportunity is now afforded him to go out with "flying colors." The bank Examiner reports the bank as among the strongest and best in the State. Since its organization it has paid to stockholders \$181,544, and the stock is quoted in the market at 37 per cent. above par. There have been connected with it for many years some of the wealthiest and most practical business men of Barnstable.

Remarkable Success.—A recent number of the Topeka (Kansas) *Daily Capital* refers in a highly complimentary manner to Wm. C. Knox, senior member of the firm of Wm. C. Knox & Co. He was for many years connected with Hodges & Knox as a loan and investment broker, and has recently succeeded to the large business built up by this firm by close attention and square dealing. At present Mr. Knox is erecting a four-story building, the first floor of which will be devoted to the firm's business and the balance to offices. The *Capital* says "the new firm of Wm. C. Knox & Co., is one of the safest and most reliable in the State of Kansas, and is equally responsible as the old—Mr. Knox possessing in his own right over \$100,000 worth of real estate in this city and other portions of Kansas, besides personality in mortgages, bonds and other stocks."

Statistics of Canadian Banks.—We have received from Mr. J. Gault, of the Merchants' Bank, an interesting table of Canadian banks. It is, in condensed form, a comparative statement for the years 1885, 1886 and 1887 of all banks having \$1,000,000 capital and over, showing percentage of rest to capital, past due bills and real estate to rest, percentage of bank premises, circulation and deposits to capital, and percentage of demand deposits to total deposits; also, assets immediately available to liabilities to public, circulation and deposits, loans and discounts, and total liabilities to public

as well as total assets. The banks reported are: Montreal, Canadian Bank of Commerce, Merchants', Bank of British North America, Quebec, Toronto, Molson's, Banque Nationale, Union, Dominion, Ontario, Imperial, Eastern Townships, Federal, Banque du Peuple, Bank of British Columbia, Bank of Nova Scotia, Merchants' Bank of Halifax, Bank of New Brunswick, Ottawa, Hamilton, and Standard Bank.

President of Fourth National Bank of New York City.—Mr. J. Edward Simmons has been elected President of the Fourth National Bank in the place of O. D. Baldwin, whose recent resignation caused some surprise. Mr. Simmons was born in Troy, September 9, 1841. He was graduated from Williams College in 1862, and in 1863 he was admitted to the Bar in Albany. In 1866 he embarked in Wall street as a banker and broker, and in 1872 he became a member of the Stock Exchange. In 1884 he was elected President of the Exchange, and in 1885 he was re-elected. In 1881 he was appointed a Commissioner of Education, and has ever since served continuously on the Commission, having been since 1886 its President. The Fourth National has always been known as a brokers' bank, and the election of Mr. Simmons indicates that, in this particular at least, the policy of the management will not be changed, although Mr. Baldwin's ideas as to keeping reserve will not hereafter be permitted to control.

Certificates of Deposit of Fidelity National Bank.—The Assistant Cashier of the Fidelity National Bank was recently on trial, and in the course of the trial the Book-keeper of the bank testified that "the certificates of deposit sent to the Chemical National Bank should never have been issued. The proper thing would have been to issue bills payable signed by the Cashier and President and authorized by the Board of Directors. The Chemical National Bank had, the Book-keeper thought, rendered itself liable in the matter. He probably meant liable to loss, because the certificates were irregular; but even this is not plain, because the Chemical National appears to have taken the certificates and advanced money on them in good faith. The Chemical may lose because the Fidelity National cannot pay its creditors in full, but not because of irregularity in the certificates. The Fidelity Bank would be liable for the money received, even if the evidence of indebtedness given were not in proper form.

The Neglected Estate Society.—Andrew Jackson Colborn, of Mill Run, Pa., received a letter from the "Neglected Estate Society of New York," informing him that he was entitled to a share in an estate the heirs to which the society had succeeded in tracing. Colborn had never heard of such an estate, but he took the first train to New York to get his portion of it. He found the agent of the society, and was pleased to learn that there was \$1,200 to his credit on its books, to receive which he had only to pay a fee of \$200. He paid the fee, and the society's agent advised him to have his share of the estate forwarded to him by express, as it would not be safe for him to carry such a large amount on his person. He consented and saw twelve crisp \$100 bills safely sealed in a box and addressed to him. Then he returned home to tell of his good fortune.

The valuable express package arrived in good time. A number of Colborn's friends gathered to gaze on the small fortune as the box was opened. The neatly enclosed brick that greeted them instead of the twelve \$100 bills was scarcely worth the price the credulous Colborn paid for it.

The Herkimer Bank, Herkimer, N. Y.—Reference having been made in the January JOURNAL to the flight of M. W. Rasbach, former Cashier of this bank, it is proper that the exact situation of its affairs should be stated. And first: the present Herkimer Bank has *no interest whatever* in the embezzlement of Mr. Rasbach—for any money he may have taken belonged and was due to the old partnership banking firm of M. W. Rasbach & Co., which went out of existence some four years ago. As soon as it was positively settled that Rasbach had gone for good, Hon. John W. Vrooman was elected Vice-President and asked to assume the general management of the bank. Mr. Vrooman is very widely known from having been Clerk of the New York State Senate for ten years. Upon retiring from its duties at the beginning of the present year, having a natural liking for financial business and being a Director of the institution withal, he accepted the position tendered. He will receive a salary and devote his entire attention to the bank as consulting officer. Mr. Vrooman has had considerable experience in finances, and was considered the best financial clerk the Senate of the State of New York ever had. He is very popular at home and will prove valuable to the bank. Since his accession it is gratifying to note a large increase in the bank's business—the deposits alone showing a gain since December 17, 1887, of some \$84,000

according to statement of January 7th, while a later statement shows a still further increase. The bank is more popular than ever, and there seems to be no doubt its future prosperity will eclipse the palmiest days of the past.

Precious Metals Produced in the West.—The annual statement of the Wells-Fargo Company of precious metals produced in the States and Territories west of the Missouri River (including British Columbia and receipts by express from the west coast States of Mexico) during the year 1887, show aggregate products as follows: gold, \$33,074,022; silver, \$51,578,118. This aggregate result is stated to be reliable. The gold produced in the United States west of the Missouri River—exclusive of British Columbia and Mexico—was \$32,500,067, and the silver, \$50,893,884. A table giving the production of gold and silver as estimated by the Wells-Fargo Company for each year from 1870 to 1887, shows a gradual increase in the production of silver from \$17,320,000 in 1870 to \$52,136,851 in 1886. The highest production of gold was in 1877, when it reached \$44,880,223. The production of silver in 1887 is a little less than it was in 1886, while that of gold was some \$3,000,000 greater. Mexico is, like the United States, a great producer of the precious metals. In 1886-87 the silver produced there was \$34,600,000, and the gold, \$1,077,000. Large quantities of silver go to China, Japan, India, etc. Last year over \$43,000,000 were shipped there, and the year before over \$44,000,000.

Shot While Defending His Bank.—The Citizens' Bank, of Limestone Gap, Indian Territory, was entered on January 21st by four masked men, who presented a pistol at the Cashier's head and demanded that he give up what cash he had on hand. He locked the safe and was instantly shot dead by one of the robbers, while the others took \$2,300 from the cash drawer and fled. They were subsequently captured, however, the leader treated to lynch law and the remainder turned over to the United States authorities. The stolen money was all recovered. An exchange says of this occurrence: "All of the despatches agree in stating that the Cashier was a brave man. Aye, but was he a prudent one? When the four masked robbers asked for his cash he said, 'All right, gentlemen,' turned toward the vault, closed its doors, looked them, and then, with folded arms, faced the robbers. They shot him to death. What does he get for this? Did he examine the precedents? Twice in the last decade—once in Minnesota and once in Iowa—a bank Cashier has gone to his death in the same way, and, in each instance, the corporation which he served has left his wife to provide for their children by her own labor. While considering that this Cashier was 'a brave man,' we must insist that he was, nevertheless, a great fool. The proper thing for him to have done was to divide the spoils with his guests. The banks do not properly pay a man for getting shot." Take it altogether, the life of a Cashier in a bank is not a happy one.

Ten per cent. Tax.—The National Bank of Calais, Me., has for years used the bank bills of the St. Stephen's Bank, just over the river in New Brunswick, even more freely than the bills of American banks. The St. Stephen's institution is owned and managed by a number of lumbermen living on both sides of the line. Bills of several denominations are in circulation, and nobody knows what the total amount is. The bills of this bank are circulated more freely in Calais than greenbacks or National bank notes. The matter was brought to the attention of the Internal Revenue Department. The Calais Bank has been circulating the bills of the St. Stephen's institution for years. The capital of the National bank is \$100,000, and it has been doing a business of \$1,500,000 a year. Of this amount about \$300,000 yearly, it has been ascertained, has been done in Canadian bills. The tax for which the bank is liable, therefore, amounts to about \$30,000 annually, but the bank, according to law, cannot be held liable for this tax further back than three years, and the amount due, therefore, is about \$90,000. The bank's surplus amounts to \$40,000. It is said that the St. Stephen's Bank has made it a very profitable practice for the Calais institution to help circulate its notes. Business men of Calais have protested against taking the money, but in most cases they have been unable to get anything else. There are cases against a half-dozen other banks along the border, and they may have to pay the 10 per cent. tax upon all Canadian bills which they have paid out within the past three years.

The Old Chicago Stock Exchange.—In the last number of the JOURNAL it was mentioned that the validity of the present Chicago Stock Exchange was questioned in the Courts. The following will further explain the situation: J. J. Richards, an elderly man, well known in New York and Chicago for his eccentric operations in stocks and securities, holds the original charter of the old Chicago Stock Exchange.

long ago dead. It is worthless for ordinary purposes, but he is using it just now to make things very unpleasant for the Chicago Stock Exchange now in operation. First, he demanded and got from the Post Office all the mail of the Stock Exchange. Then he began suits to have all the profits of the Exchange turned over to him and to have it make an accounting to him. Lately he rented rooms adjoining the quarters of the Exchange and put out the sign, "Chicago Stock Exchange." Under the terms of their lease, which provided that all tenants of the building should be acceptable to them, the real Exchange attempted to turn Richards out. He resisted. They tore down his sign. He got a Pinkerton guard to watch it with a gun when he nailed it up again. They turned off his steam and gas. He sat in his office with his overcoat on. The Exchange then organized a band of janitors and sturdy laborers and started to throw the old man and his furniture out of the building. He heard of their coming, got an armed force from Pinkerton and threw the invaders out and chased them downstairs. Both sides then appealed to the Courts, but in the meantime the old man has his quarters carefully guarded.

Ice Tickets as Currency.—It has been the custom of the large ice companies of the Hudson River for several years past to issue ice tickets to the men employed in cutting ice, to be cashed by the pay-master at the end of the ice-cutting season. These tickets are issued, the companies claim, as memoranda for the purpose of identifying the men until they are paid off. Some 20,000 men are usually employed for about one week each season in cutting ice, and the companies have found it difficult to identify them except by giving them checks from day to day. As these tickets are payable to bearer the storekeepers in the vicinity of the ice fields have readily accepted them as currency. Section 3408 of the U. S. Revised Statutes places a tax of one per cent. per annum on the average amount of circulation issued by any bank, association, corporation, company or person, including as circulation all certified checks and all other notes and other obligations *calculated* or intended to circulate as money * * * * and an additional tax of one-sixth of one per centum each month upon the average amount of such circulation in excess of the capital of any such bank, association, corporation, company or person. The Government holds that the ice tickets above referred to circulate as money and the Commissioner of Internal Revenue has directed the Collector of the District to levy an assessment on the aggregate sum given out in ice tickets during the past fifteen months. Whether any tax can be collected from the ice companies seems to depend on the construction to be put upon the words "calculated" and "intended" in the law.

Train Robbers Defeated.—Express messenger Grimshaw was on a train that was stopped in Indian Territory by robbers on Christmas day. His story was as follows: "Two men," he said, "who boarded the engine just as the train was leaving Stringtown, commanded the engineer to run to the bridge across North Buggy Creek, and stop. The command was obeyed, and the train came to a standstill on the bridge. I supposed we were at Atoka, and, as I had some goods for there, I opened the car door. Instantly there were two or three shots fired, and I hastily closed the door. Baggage Master Sparrow, who was in the car with me, was lying down, and I called to him to put out the lights, and he did so. I at once began hiding the money packages.

"Meantime the robbers were calling on me to open up. I had only a five-shooter with which to defend myself, and Sparrow had no weapon. We had several boxes filled with meat, and we piled these up as a breastwork. Then we awaited developments, while a fusillade of pistol firing was going on outside. The doors were filled with bullets, and then an effort was vainly made to batter them in.

"There were seven or eight robbers in the party, but only one person gave orders, and I believe I could recognize his voice again. They were not experienced in the business, but if Sparrow and I had shown any evidence of weakening they would have made a success of their venture. We were due to pass a train at Atoka, and were in danger of being run into from both front and rear, as there was a freight train following us. It was a close call, and Sparrow and I breathed easier when the train pulled out, without the car having being fired or the robbers gaining an entrance."

Correspondence Between John Thompson and John Sherman.—The following interesting correspondence between John Thompson, of the Chase National Bank, and Senator John Sherman has placed the record and present position of the latter as favoring increase in National bank circulation, before the public. Mr. Sherman's

measure for issuing circulation to within ten per cent. of the market value of the bonds would, if there had been more far-seeing men like himself in Congress to pass it, have proved a remedy for existing financial difficulties.

THE CHASE NATIONAL BANK, }
UNITED STATES DEPOSITORY, }
NEW YORK, January 6, 1888. }

Hon. John Sherman, United States Senate, Washington, D. C.

DEAR SIR:—By giving to the banks par instead of ninety on the bonds deposited will give an addition to the volume of currency of \$20,000,000, and by removing the tax of one per cent. on National bank notes will encourage the banks to enlarge their issues, I think, to the extent of \$20,000,000 more during the coming six months. I can see no reason why these amendments to the law should not be granted promptly. Some relief to the money market must be had soon, or the cry for an unlimited or an enlarged coinage of silver will be successfully raised. Silver notes are satisfactory currency, despite all the arguments against the "daddy dollar." Except for a short period prior to and during a panic there is always money enough, for depreciation and liquidation will quickly bring about an adjustment of prices to the volume of money usable in making prices. I have the impression that you are opposed to granting the issue of more National bank notes, and I feel that I am not trespassing on you in apprising you that every National bank is desirous to get that extra 10 per cent. on their deposits of bonds, and certainly the business community, even the farming population of our country, will be gratified in a better and more adequate issue of currency, for it is the prevailing opinion that more money is necessary to stop depreciation. I therefore ask you to take the initiative, not so much as a favor to the banks, but as an advantage to the public at large, in securing to the banks the two advantages indicated. Please excuse my pointed brevity.

Very respectfully yours, JOHN THOMPSON.

Mr. Sherman made the following reply:

SENATE CHAMBER, }

WASHINGTON, D. C., January 6, 1888. }

MY DEAR SIR:—Your letter of the 5th is received. I agree with you entirely as to the propriety of increasing the currency to National banks in the mode suggested, and you are mistaken in supposing that I had been opposed to such issue. I introduced a bill three or four years ago allowing an issue of bank notes approaching within 10 per cent. of the market value of the bonds deposited. This was defeated in the Committee on Finance, and a proposition to give them circulation to the face of the bonds was reported and passed the Senate, but was never acted upon in the House. I would most heartily vote for a bill authorizing the issue of bank notes equal to the par value of the bonds deposited.

Very truly yours, JOHN SHERMAN.

John Thompson, Esq.

Strikes and Lockouts.—The third annual report of the Hon. Carroll D. Wright, Commissioner of Labor, has recently been submitted to Congress. It relates to the strikes and lockouts which have occurred during the six years ending December 31, 1886, the statistics for the year 1887 having not yet been fully made up. During the period of six years mentioned the total number of strikes was 8,908, involving 22,396 establishments. The number of strikes each year was 471 in 1881, 454 in 1882, 478 in 1883, 443 in 1884, 645 in 1885, and 1,412 in 1886. As far as information has been collected, the number of strikes in 1887 was 853. The building trades furnished 6,060 of the total number of strikes. The whole number of persons employed in the establishments where the strikes occurred was 1,862,045, the number originating the strikes 1,020,832, and those employed after the strike was over numbered 1,636,246, showing a reduction in those employed of 25,798. During the strikes 103,038 new employes were engaged and 87,483 were brought from other places. The Commissioner recognizes many possible sources of error in the figures given and suggests that they are only approximate. Of these strikes, 82.12 per cent. were ordered by labor organizations. The causes were demands for increase of wages or reduction of hours, or protests against reduction of wages and increase of hours. About 39.89 per cent. of the cases resulted in failure to attain the object desired, partial success was attained in 13.45 per cent. of the cases, and demands were fully acceded to in 46.59 per cent. of the strikes entered upon.

There were 2,069 lockouts during the period, and of these 25.85 per cent. only were successful, 8.71 per cent. were partially successful, while 59.8 per cent. failed. The losses to the strikers are estimated to have been \$51,316,165, and loss to employers through lockouts during the same time \$3,132,717. The total assistance rendered to those out of employment, either from strikes or lockouts, was \$4,430,595. The employers' losses are estimated at \$34,164,914. Thirteen industries bore the chief burden of these contests between labor and capital. It does not appear, therefore, from the results of the Commissioner's labors, that either strikes or lockouts are so utterly futile in gaining the desired object as is sometimes represented. The figures given are not conclusive, but from the fact that of the lockouts started by employers,

only about 25 per cent. were successful, while of the strikes started by employes, 49 per cent. accomplished their object, it would appear that as a rule the employers are more inclined to yield than the employes; in other words, that capital is more impatient under idleness than labor. The influence of the labor organizations is seen in the large number of strikes due to their action. The record of losses to each party involved appears very even, but probably does not include the loss to the public at large in the shape of broken engagements and bad debts which almost necessarily result from such wide dislocation of industries.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Bank burglar O'Connor has been sentenced to seven years' imprisonment.
- W. P. Lardner, of Paine & Lardner's banking house, Duluth, Minn., was recently married.
- The Jackson Institution for savings, Providence, R. I., has gone into voluntary liquidation.
- Mr. J. E. Houtz has retired from the Presidency of the Lincoln National Bank, Lincoln, Neb.
- Mexico has negotiated a conversion loan of £10,000,000 with Bleichroder, the Berlin banker.
- The Flour City National Bank of Minneapolis, Minn., has increased its paid up capital to \$500,000.
- The Stockgrowers' National Bank, Pueblo, Col., moved into its fine, new banking office on January 7th.
- The *Minnesotan* is the name of a new journal, devoted to financial topics, soon to be issued in St. Paul.
- The Minnesota Savings & Investment Company has been incorporated at Minneapolis with \$150,000 capital.
- Seats in the New York Stock Exchange are now quoted at \$17,000. One year ago they were selling at \$33,000.
- The Merchants' National Bank of Middletown, O., on January 1st, paid a semi-annual dividend of 5 per cent.
- The National Bank of Kansas City, Mo., paid 5 per cent. dividend for the six months ending December 31st.
- The affairs of the Cimarron (Kansas) Bank are being adjusted. It is believed the depositors will be paid in full.
- John Findlay, Teller in the Equitable National Bank, Cincinnati, O., fell on the ice recently and broke his left arm.
- The business men of Whitman, Mass., have circulated a petition for the establishment of a savings bank in that place.
- Financial writers are still eagerly asking the question: What is money? Most of them seek to answer their own question.
- The Jamestown National Bank has been organized at Jamestown, N. Y. This makes the fourth bank in that enterprising town.
- The Ozaukee County Bank, Port Washington, Wis., has suspended. The President, Jas. W. Vail, is reported to have fled.
- The Maverick Bank of Douglas, Wyoming Territory, assigned on January 7th. The cause was inability to collect outstanding debts.
- The Queen City National Bank, Cincinnati, Ohio, has been reorganized, with J. N. Kirtley, President and only one of the old Directors.
- The Anderson-Chiles banking house, Independence, Mo., claims to have done 50 per cent. more business in 1887 than in any previous year.
- It is said that a New York city party is buying up claims on the defunct Citizens' Savings Bank of Leavenworth, Kan., at 75 cents on the dollar.
- The Broad Street National Bank, Trenton, N. J., has purchased property on Broad street and a new building to cost \$10,000 will be erected.

— Shares of stock of the Chemical National Bank of New York City sold on the 16th of January at \$3,375, the highest price yet recorded for this stock.

— The American Exchange Bank, Duluth, Minn., has recently declared a semi-annual dividend of 5 per cent. and reports surplus and profits of \$153,000.

— There are now sixty-two banking associations under the general law of the State of Michigan, twelve having been organized during the past nine months.

— The Camden Bank, Camden, O., recently commenced business with S. S. Puckett, President, and H. L. Glenn, formerly with the Lynchburg Bank, as Cashier.

— William G. Milligan, formerly Cashier, has been elected President of the National Herkimer County Bank, at Little Falls, N. Y., succeeding the late Gen. Priest.

— The Fargo (Dak.) banks re-elected all their old officers. The First National declared a semi-annual dividend of 4 per cent. and passed \$12,500 to surplus.

— It takes \$500,000 monthly to pay the 11,000 employes of the Pennsylvania Railway Company along the road, and the wages are paid for the most part in gold.

— The Receiver of the Fifth National Bank, St. Louis, Mo., states that no dividend will be declared until March 1st. All the claims against the bank have not yet been filed.

— The Western papers defend the good standing of loans on farm mortgages as an investment. They say that interest is promptly paid when due and there are few foreclosures.

— The banks of St. Louis were very prosperous during the six months ending January 1, 1888. They all declared their usual dividends and added largely to their surplus funds.

— The heaviest deposit in the failed Auburn bank turns out to be that of the Railway Commissioners of that place, aggregating \$120,000. The Commissioners were Directors in the bank.

— The National Bank of Commerce, Kansas City, Mo., commenced business Aug. 10, 1887. On Jan. 1st, a dividend of 5 per cent. was declared which is at the rate of 13 per cent. per annum.

— On January 23d the building occupied by the Bank of Mound Ridge, Kan., was destroyed by fire, causing a loss of about \$1,000. A new, fire-proof building will be erected early in the spring.

— Isaac N. Stanley, paying Teller of the National Bank of Commerce of Cleveland, Ohio, who in 1886 embezzled \$100,000 of the bank's funds, was sentenced on January 5th to five years in the Penitentiary.

— Superstitiously inclined people think the number "thirteen" had something to do with the failure of the Fidelity National Bank, because Harper had thirteen letters in his name and was born on the 13th day of the month.

— J. Nevsbiner, H. Tenji and G. Tamaki are three Japanese manufacturers now traveling in this country. They say business in Japan has been much depressed on account of the depreciation of large issues of paper money during the civil wars.

— The failure of the First National Bank of Auburn, N. Y. is no surprise to those who have been aware for some time of the dangerous manner in which it has been managed. An examination eight months ago would have detected its condition.

— A horse belonging to a farmer in Georgia, recently got hold of his master's pocketbook accidentally dropped in the manger. He devoured \$425 in greenbacks and left \$30 in gold. This shows that horse sense destroys greenbacks and keeps the gold.

— C. N. Jordan has been elected President of the Western National Bank in place of Daniel Manning, deceased. Charles J. Canda has been elected Vice-President in place of Mr. Jordan. Mr. Canda has resigned his position as Assistant Treasurer of the United States.

— Mr. F. D. Kitchel, Cashier of the Potters National Bank, East Liverpool, Ohio, favored us with a brief call recently, while passing through this city *en route* to Washington. Mr. Kitchel is a strong friend of the JOURNAL, and agrees with the majority that no progressive banker can afford to be without it.

— The Committee on Banks and Banking of the Massachusetts Legislature, on January 26th, considered the petition of the Boston & Lowell Railroad corporation,

that savings banks be allowed to invest in bonds and notes of the corporation. The counsel for the road appeared for the petition and there was no opposition.

— Two of the strongest banks in Duluth, Minn., the Duluth National and the Union National, have consolidated. The capital and business of the latter will be transferred to the former, which will then have a capital of \$1,000,000, making it the largest bank in Duluth and one of the strongest in the North-West.

— Ammi Baldwin, the Cashier of the Fidelity National Bank, Cincinnati, O., died January 5th. He was under indictment for his conduct as Cashier of the bank named, but has saved the United States the trouble of trying him. He can never be tried in this world. If there be trial in the next he has discovered it.

— The Sault Ste. Marie National Bank has just completed a new building. It is of pressed brick with sandstone trimmings, and is one of the most thoroughly equipped banking institutions in that section of the country, having complete burglar proof fittings, vault linings, vault doors, burglar proof safes, time locks, etc.

— A bill has been introduced in the Assembly of New York State to compel corporations or individuals to pay employes by check on bank located nearest to place where work is done, and to keep account with such bank for the purpose. This should be supplemented by a bill compelling every one to buy his groceries at the nearest store.

— The Banking and Currency Committee have before them a bill authorizing the issue of \$50,000,000 in fractional paper currency for small transactions. It took some time and expense to substitute silver for the fractional paper currency, and now there is agitation to get back the paper again. Its convenience to dealers who receive small remittances by mail would be immense.

— The latest prices of membership in the various Exchanges are as follows: New York Stock Exchange, \$18,000; New York Consolidated Stock & Petroleum Exchange, \$1,000; New York Produce Exchange, \$1,700; New York Cotton Exchange, \$1,400; New York Coffee Exchange, \$600; Real Estate Exchange & Auction Rooms, \$1,065; Boston Stock Exchange, \$15,000; Philadelphia Stock Exchange, \$8,500.

— The Central National Bank of Boonville, Mo., on January 10th re-elected the old officers for another year and declared the usual semi-annual dividend of 5 per cent. This is one of the oldest and strongest banks in Central Missouri. It has been in existence as a National bank for twenty-two years, and declared dividends to the amount of \$275,000 since its organization.

— The newly-elected President of the Fourth National Bank, New York city, Mr. J. Edward Simmons, was President of the Stock Exchange, and is at present President of the New York city Board of Education. He is a gentleman of great experience in financial affairs, and his assumption of this new position is matter of congratulation for all who are interested in this staunch institution.

— A well-known Chicago banker notes an increase in the number of forged drafts of country institutions. His bank threw out three recently. He thinks that country bankers ought to be more on their guard against persons who are constantly trying to get hold of blanks for the purpose of swindling, but it is even of greater importance that lithographers should be careful about giving out samples.

— Mr. Hopkins of the Fidelity National Bank of Cincinnati, testifying in his own defence claimed that he had no idea how far Harper had involved the bank. When, previous to its failure, Mr. Jordan of New York came here and offered to put in \$600,000 if the Directors would raise an equal amount, he asked to see a statement of the bank's condition. Hinch prepared one, and it showed \$1,275,000 represented by Harper's worthless paper. Jordan said: "This bank is 'busted,'" and left at once for New York.

— A party calling himself M. Harrison or M. H. Lewis, has been travelling in the West drawing small drafts on the Pennsylvania White Lead Company of Pittsburgh. He represented himself as an agent of the company. His scheme is to sell small dealers a bill of goods at a ridiculously low rate, after which he requests them to honor a small draft on his employers, as he is short of funds. The request is generally granted, and as soon as he secures the money he disappears only to turn up again at some other place.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

PRIVATE BANKS AND CORPORATE NAMES.

Editor Rhodes' Journal of Banking:

SIR:—Pursuing the subject of "Private Banks and Corporate Names," would it not be well for your correspondent, the Cashier of the "Bank of Hedrick," to explain why they prefer to call themselves a bank when they are only a firm of private bankers? The argument drawn merely from convenience does not seem to me specially forcible. The word "Unincorporated" is hardly sufficient to distract attention from the corporate title itself. If the institution is not the "Bank" of Hedrick, why call it such? Why not merely call it by the firm name of its members? I do not clearly understand why it would hurt the credit of any firm of private bankers either to incorporate or to lead their home patrons to think that they are incorporated, though ideas in Iowa may be somewhat different from those that prevail at this end of the line. It seems to me that it would be better for all concerned if bankers as well as other people would hold themselves out to the public to be only precisely what they are.

NATIONAL BANK.

BALTIMORE, January 23, 1888.

NO PROTEST.

Editor Rhodes' Journal of Banking:

SIR:—We have a small self-inking stamp which reads, "No Protest." This is tied to a convenient spot, and all collections requiring this objectionable instruction are stamped on their face with these words. The result is that dunning drafts do not go through our hands to any great extent.

We believe that the United States Congress should enact that days of grace should be abolished and that all mercantile paper should be protested, except where the words "No Protest" plainly appear on the face.

Business would be facilitated greatly if, in addition, it should be prescribed that negotiable paper must be payable on a day certain and at a definite place, and without interest.

SUTTER.

SACRAMENTO, California, December 31, 1887.

SMALL CLEARING-HOUSES.

Editor Rhodes' Journal of Banking:

SIR:—With all the well known advantages of a Clearing-House in facilitating the transactions of business between the banks, it seems strange that scarcely more than forty of these institutions are organized in the United States, and that cities of such size even, as Washington, or Richmond, Virginia, still manage to get along without this effective modern improvement. The organization of a Clearing-House is so extremely simple and practical, and its management a matter of such easy routine that one would suppose that such an institution would be in vogue where there were only three or four banks to partake of its advantages. Precisely how any considerable number of banks make their exchanges without the intervention of the Clearing-House the writer could never very clearly understand; but certainly in no city where a Clearing-House has once been in use, would the banks consent to return to former methods. With a Clearing-House of twenty banks the clerical settlement should not occupy more than fifteen or twenty minutes, while the money settlement, later in the day, does not take each clerk more than two or three minutes to put in or receive his money and pass the necessary receipt. The chief advantage of the Clearing-House, however, is the economy in the use of circulating medium as by its methods, the exchanges are effected with considerably less actual money. Indeed, where a bank has occasion to borrow funds to meet its indebtedness for the day, the borrowing frequently consists in the simple transfer of credits from the creditor to the debtor bank. To actually organize a Clearing-House in a city where none has ever been in

use requires, of course, the assistance of a man who is practically acquainted with the workings of such an institution, but once organized it can easily be kept in operation by any one familiar with the details of the banking business. The expense of a clearing is comparatively light, the only items of expense being the small office rent, the salary of the manager and the necessary stationery. Besides the advantages which accrue to the banks actually members of the association, there are general advantages which accrue to the whole banking community. The weekly returns of the clearings in different parts of the country are a guide to the general condition of business even where the returns are, as now, confined to a simple statement of the actual bulk of the clearings, and do not, with the exceptions of two or three cities, go into any further particulars. Moreover, the establishment of Clearing-Houses in all the larger towns would greatly facilitate the solution of the problem of collecting country checks, as, with numerous Clearing-Houses in existence, a system might be organized for clearing country checks through the means of correspondents, members of the various Clearing-Houses.

JOHN H. BLACKLOCK.

BALTIMORE, January 16, 1888.

CO-OPERATION AMONG BANKS.

Editor Rhodes' Journal of Banking:

SIR:—I read with considerable interest the letter published in the December issue of the JOURNAL from President Carter, of the First National Bank of Ashland, Neb., in regard to the desirability of co-operation among banks and bankers. While all agree with him as to the desirability of such co-operation, any one who has had any practical experience in banking associations must be aware how very difficult it is to make an association of bankers an actual working body. Of all branches of commerce, the banking community seem less desirous of co-operating with each other for the common good. Why this is, I have never been able to satisfy myself. Sometimes I have thought it owing to the fact that bank Presidents, as a rule, are very independent and self-reliant men who have attained their position in the community more by their own exertions than by the help of others, and consequently are inclined to look, if not with disfavor, at least without any special partiality upon co-operative enterprises. The interests of the banking community are substantially the same in all parts of the country, and while there may be certain local differences in banking customs, yet they are hardly of sufficient importance to render the real interests of the banks in different sections of diverse character. In other words, a law that is good for one will be good for all. Nevertheless, it must be admitted that bankers, like other men, are prone to disagree with each other, and it is wonderful how many different views they can take of the same subject.

A glance at the report of the Comptroller of the Currency will show that the opinions of the banking community as to the proper method of extending the National bank system are by no means uniform, and this does not include the opinions of quite a number of persons who thought that the system ought not to be extended at all. If we take so simple a matter as an improvement in an ordinary form of a bank check or draft, the most strenuous means are required even to bring it to the proper attention of the banking fraternity. The spirit of conservatism, which is a very proper element in bank management, is carried in this respect too far, and causes a great many bank managers to oppose changes and innovations simply because they are such, and not because the specific change or innovation proposed is objectionable in itself. I am inclined to think that your correspondent over-estimates the influence which the Bankers' Convention, or, indeed, any association of bankers, would have in shaping the legislation of the country. If the banking legislation was confided to a committee of clear-headed and intelligent men, the Bankers' Association would doubtless find that it had a potent voice in shaping the banking laws; but as our representatives in Congress are, many of them, neither clear-headed nor intelligent, for a bank measure to come before Congress with the formal approbation of the Bankers' Association is sufficient to condemn it in the eyes of many members of that august body. However, any suggestion looking towards a cultivation of a spirit of co-operation among the banks should be encouraged, and perhaps the most practical way for your correspondent to carry out the ideas which he promulgates would be to organize the bankers of his own State into an association.

CONVENTION.

PKNOBSCOT, Me., January 12, 1888.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

DEPOSIT AND WITHDRAWAL OF PUBLIC MONEY FROM THE BANKS.

By John Jay Knox, President National Bank of the Republic.

(Rand & McNally's *Bankers' Monthly*, February.)

In an article in the *North American Review* for January, 1887, upon "The Future of the National Banking System" legislation was suggested authorizing the refunding of the United States four per cent. bonds, which mature in 1907, into two and a-half per cents. by paying to the holders the difference between two and a-half per cent. and four per cent. interest, for nineteen (19) years from July next, such difference to be ascertained by an exact calculation by the Actuary of the Treasury Department.

A bill was introduced by Hon. Abram S. Hewitt, of this city, for this purpose on December 18, 1886, just previous to his resignation as member of Congress; and there is no doubt that if a bill similar to that recommended by him had become a law the surplus which has accumulated in the Treasury would now be in process of distribution, thus giving the legislative branch of the Government an opportunity to mature with deliberation an Act for the permanent reduction of the revenue. But Congress adjourned without any legislation for the reduction of the surplus, and the Secretary of the Treasury has endeavored as far as possible to disburse the accumulations; first, by the purchase of bonds, and, second, by largely increasing his deposits in the National banks.

More than fifty years ago, during the administrations of Jackson and Van Buren, a large amount of public moneys were kept on deposit with the banks, and Secretary Woodbury furnishes the following statement of the condition of these pet State banks in which these moneys were deposited on November 1, 1836:

<i>Eighty-nine Banks.</i>	<i>November 1, 1836.</i>
LIABILITIES.	
Capital	\$77,576,449 67
Profits on hand	11,048,696 90
Circulation	41,482,897 82
Public deposits	49,377,986 30
Other deposits	26,573,479 65
Due to banks	24,083,161 28
Other liabilities	13,700,279 50
Totals	\$243,842,950 21
RESOURCES.	
Loans and discounts	\$163,972 830 24
Stocks	5,184,908 45
Real estate	3,451,490 96
Due from other banks	26,682,609 70
Notes of other banks	16,412,324 57
Specie	15,520,202 42
Other resources	13,038,623 88
Totals	\$243,842,950 21

From the above statement it will be seen that nearly fifty millions of public deposits were placed in banks whose total capital was but seventy-seven millions, and all their individual deposits but twenty-six millions!

The whole public debt had been paid on January 1, 1835, and during that year the receipts were more than thirty-five millions, the principal revenue having been from the sale of the public lands. The surplus in the Treasury on January 1, 1836, was \$26,749,808. In view of the large balance, which was chiefly on deposit in the banks,

and its probable increase, the Act of January 23, 1836, was passed authorizing the distribution of the surplus among the States.

The proposition originally was to make a permanent distribution of the surplus among the States, but owing to Constitutional difficulties the Act was so amended as to authorize the placing of the surplus, amounting to nearly thirty-seven and a-half millions, with the Treasurers of the different States, in proportion to their respective representation in Congress. These moneys were to be distributed in quarterly instalments, commencing on the first day of January, 1837. The first and second instalments were paid in specie funds, the third was accepted in depreciated paper, and Senator Benton states that the fourth and last instalment would have been readily accepted in the same kind of money; but the banks with whom these moneys had been deposited, and from whom they were being withdrawn, suspended in May, just after the payment of the second instalment.

The fifth section of the Distribution Act prohibited a deposit of public money in such banks as did not redeem their notes in specie. The number of the deposit banks in May, 1837, was *eighty-eight*, but in September of the same year the number had been reduced to *six*, and the fact that no more of the public money could be placed in institutions which had suspended specie payments added to the embarrassment of the banks and intensified the financial crisis of 1837.*

It is a somewhat extraordinary fact that the amount now on deposit with the National banks, under the administration of a party which has been unfriendly to such institutions, should at the present time be considerably larger than it was at any time on deposit with the pet banks during the administration of either Jackson or Van Buren; and it is probable that the amount will be largely increased during the present year.

The circumstances under which the public money has been recently placed in the banks are, however, widely different from those existing in 1836. A much greater number of banks now hold the public money, and these banks have large capital and great resources, and the Government money is but a small portion of their aggregate deposits. The Government also holds its own bonds as security for the prompt payment of these deposits whenever the Secretary of the Treasury shall desire to withdraw them. There is no question whatever now in reference to the safety of the public money on deposit with the banks; but it will require very delicate management on the part of the Secretary of the Treasury to withdraw so large an amount from the banks at any time in the future, without great disturbance to the business interests of the country. The United States bonds which are held by the Secretary are now quoted in the market at about their true value. They realize to the holders at the prices quoted something less than $2\frac{1}{2}$ per cent. per annum, and that is about the present borrowing power of the Government. The profit realized by the banks upon these transactions is not likely to be large. It depends entirely upon the price of the bonds. If they should largely decline and the banks should be forced to dispose of them upon a declining market, there will be a loss instead of a gain to the banks who have invested in the Government funds. It would be undignified on the part of the Government, after having received its own bonds as collateral security for a deposit, in any way to attempt to diminish the value of the collaterals which it holds. Such a transaction on the part of a banker would be considered dishonorable in the highest degree. The desire of the Government and of Congress should be to have its financial machinery move smoothly and silently, so that the public money now on deposit with the banks may be withdrawn when needed, without disturbing in any way the business of the country.

The article in the *North American Review* for January, 1867, to which reference has been made, also proposed that the minimum amount of bonds required to be deposited by each National bank as security for circulation should be greatly reduced, and that the amount of circulation to be issued should be increased from 90 to 100 per cent. upon the par value of the bonds. Bills for this purpose were introduced during the last session, and have again been offered and printed during the present session of Congress. A bill for the increase of circulation, thanks to the energy of Hon. Beriah Wilkins, of Ohio, Chairman of the Banking and Currency Committee, has already been reported from that Committee, and is the first to be reached upon the calendar. On

* See chapter on "The Distribution of the Surplus among the States," page 167, Knox "United States Notes." Scribner. Third edition, revised, 1888.

the face of the bill it would seem that its purpose was to increase the circulation of the banks about twenty millions; but that is not its chief merit, and if to this bill an amendment should be made authorizing the reduction of the minimum amount of bonds held by each National bank as security for circulation to one-tenth of its capital (banks having a capital of more than \$250,000 being authorized to reduce United States bonds to \$25,000), it is probable there would be but little, if any, addition made to the paper circulation of the country. There is very little, if any, profit upon circulation to the banks in the South and West, even from an issue of 100 per cent. upon the par value of the bonds. Many banks would therefore reduce their circulation, while a few would increase it, and at the end of the current year the circulation would be likely to be at about its present volume; but if the bill reducing the amount of bonds held by each bank should pass by itself, it would authorize a reduction from the aggregate now held, one hundred and eighty-six millions, to less than forty millions, thus releasing one hundred and forty-six millions of bonds now held by the Treasurer as security for circulation. These bonds, together with the bonds held by the banks as security for deposits, amounting in all to nearly two hundred millions, notwithstanding the fact that they might be gradually withdrawn, would be a *continual menace* upon the bond market, and the banks which hold the Government moneys would be likely to be disagreeably affected from time to time by the various propositions for financial legislation introduced into the present Congress. They would fear that if they were called upon by the Secretary to return the money to the Government that they would be obliged to sacrifice their securities in a falling market. The effect would be to cause large contraction upon the part of the banks, when money is in most demand and is most needed to move the produce of the country.

There is no reason whatever why the Secretary at one end of the Treasury should receive bonds as security for deposits at 110, and the Comptroller of the Currency at the other end of the Treasury receive the same bonds as security for circulation at only 90 cents on the dollar. If the rate of issue upon circulation should be advanced to 100 cents, the effect of such legislation would be to quiet all apprehension, which would be particularly desirable in the fall season, when every dollar is needed for legitimate business purposes. The banks, which are depositories, would have an opportunity to transfer their bonds from the vault, where they are held as security for deposits, to another vault in the Treasury, and take out circulation within 10 per cent. of the amount withdrawn by the Secretary from the depositories. This would make the financial machinery run smoothly, and give the banks an opportunity to hold their bonds and dispose of them at their leisure, without serious loss. The Secretary would feel that he could at any time call upon the banks for a portion of their deposits without creating a financial crisis, and the banks could readily respond, because they would know that if it should be necessary they could again use a portion of the bonds which are withdrawn without any contraction of loans or any derangement of the money market.

We trust that the bill which has been reported by the Banking and Currency Committee with such laudable promptness will also be promptly considered by Congress and pass with the proposed amendment.

ONE KIND OF FINANCIER.

[Pittsburgh Press.]

I know a dozen of these railroad manipulators, and every one of them is a good type of a man of the world. Their one care is to keep up appearances. To do this they often sacrifice such little things as their stomachs, and go without food that they may be impressively clothed. Some of them even put up for tremendous swells, the most promising specimen I know of being an enthusiast on mines from Nevada. That is, he says he is from Nevada; but when he forgets about the cares of the millions he has on paper, and drinks a glass of wine too much, and has a good time with his cronies, there is an accent in the voice that suggests Dublin from afar. In appearance he is a swell of the most tremendous and impressive type, and he drives a mall phaeton with a pair of 16-hand bays, and an absolutely correct footman, every day in the year. He is rather careful to pass the principal hotels and restaurants on his way to the park. He is scrupulously shaved and barbered at all times, and he told me in confidence one day last week that he had no less than eighteen overcoats with which to begin the

winter season. His bill at the tailor's was over \$4,000 for a portion of last year. The ambition of his life is to get into the clubs, but never could manage it; for the inquiries from the Committee on Admission invariably disclosed such peculiar facts about the mining operator that he is blackballed with a vengeance when his name comes up. He believes absolutely in show and glitter, and says so without any reserve.

All he does is to float mining stock, and the first money that comes in goes in his own pocket. He asks a small percentage, but he gets it, and, as his operations are numerous, his income must reach close to \$25,000 to \$30,000 a year. The only people he pays are his liverymen and tailor, for these are absolutely necessary to his success. He has been through supplementary proceedings so often that he knows more about the law than the Judges themselves; and whenever he gets an extra thousand dollars he blows it merrily into a big game in the Stock Exchange, and then drowns his sorrow in drink. Probably nineteen-twentieths of the people who know him by sight believe him to be many times a millionaire, and yet, though he deals in big sums of money constantly, he is practically poor; for he cannot meet his obligations, and is pressed on all sides for ready cash. People often wonder that men who are shrewd enough to make sums of money of this sort are not shrewd enough to keep a nest-egg or two against bad weather. The fact of the matter is that the qualities that go to make up a shrewd adventurer and speculator of this kind are just the qualities that are lacking in a man of prudence and good ability.

WHAT BECOMES OF THE SILVER.

[St. Paul Pioneer Press.]

To those who understand the difficulties presented a year or two ago by the continued compulsory coinage of silver, who saw the mass of metal heaping up yearly in the Treasury vaults and looked with apprehension upon the dangers to our currency system that must ensue, it probably seems strange that we have heard so little of late about the silver problem. The coinage does not cease. The standard dollars accumulate. Other issues, it is true, like that of tariff reform, coming to the front, have somewhat crowded out of the public mind a subject that was so full of interest. But still the question suggests itself, what becomes of all this silver? Where are the aggravated features of the situation which seemed so threatening a little while ago?

The answer is found in an examination of the more recent functions of the silver coinage, bestowed upon it by an Act which received little discussion, but which has, for a time, arrested the evils that threatened to follow the compulsory coinage Act, though it must in the end intensify them. The public is to be reminded, in the first place, that our silver currency becomes a menace only as it promises to enter into international exchange. The silver dollar should be in law what it is in fact, a subsidiary coin. Of such subsidiary coinage a commercial people use large quantities, the limit being as yet so variable as to defy attempts to fix it. As long as these dollars circulate freely at home, as tokens, as long as they enter into our currency for domestic purposes, they do not derange it. It is the legal-tender quality which makes them dangerous. It is when they gather in the Treasury and refuse to go out of it, when the public revenues are put into bullion, to be coined and stored away uselessly in vaults, that the country feels the pressure. Just so much wealth produced by the people is transformed into idle metal. The silver surplus grows to be a burden. And then we hear a clamor for payments in silver of the public debt, or for some kindred policy that shall debase our money to the level of a depreciated coinage.

This crisis has been deferred, in the case of silver, by a clause in an appropriation bill that became law in 1886. It will be remembered that a little more than a year ago the demand for paper money of small denominations became extremely urgent. The general retirement of greenbacks below five dollars in value left the public dependent upon the silver dollars for small payments. These were unpopular and cumbrous to handle. They could not be sent from point to point by mail. People everywhere were asking for a substitute for the old one and two dollar bills. And the Treasury, at the same time, was anxious to rid itself of surplus silver. By the Act of 1886 the Secretary of the Treasury was authorized and required to issue silver certificates in denominations of one, two and five dollars, in lieu of certificates of larger denominations, or

upon deposit of silver dollars. It is under this Act that a great amount of silver has been put in circulation, through paper notes representing the metal held on deposit. So greedy was the country for this paper convenience, so little mindful of the intrinsic value of the practically subsidiary money demanded, that the amount absorbed has been beyond all expectation.

On the first day of July, 1886, there was not one silver certificate of the denomination of one, two or five dollars in circulation in the United States. By the first of April, 1887, nearly \$22,000,000 were in the hands of the people. And by the first of December, seventeen months after the first issue was made, over \$52,000,000 of these small certificates were distributed throughout the country. This is more than the total coinage under the Bland Act for the same period. It has provided a temporary use for the silver dollar, it has quieted the agitation for and against coinage, and gratified the American propensity for letting things run as they are until they get so bad that they must perforce be mended. It is to be admitted, of course, that this issue of small bills has performed a useful office in supplying people with a convenient form of currency. It is probable also, from the proportions of the demand, that they will go on putting into use large amounts of these certificates for some time to come. How long that may be will be determined by economic and business conditions. And it is just as certain that, when they have taken all of this currency that is needed for domestic exchanges, they will refuse to take any more. The demand for subsidiary money is no more unlimited than that for hats or wheat. When it is satisfied, then we shall come face to face with the silver question once more, rendered all the more aggravated and all the more impatient of solution by the fact that the last possible outlet for silver from the Treasury has been stopped. The silver problem is not troubling us now, but every evil involved in it is actively at work. It will not do for the public to mistake the effect of an anodyne for a permanent cure.

AFRICAN MONEYS.

[*London Bankers' Magazine.*]

A letter from Mr. Stanley, lately published by the Emin Pasha Relief Committee, contained the following postscript: "P. S.—In the bottom of your ditch put splinters, keep four or five weak men doing this light job; cut fuel ten days for Stanley. Give one brass rod per week to each man to buy fish, etc. In five months these will amount to 2,500. Give also six cowries per man per week. In five months these will amount to 15,400. Let Mr. Jameson attend to the sick daily.—H. M. S."

Brass rods are hardly money, being used rather for the making of ornaments and flagree work by the natives; still they serve the purpose. Cowrie shells are well-known in many parts of Africa and, indeed, in this country also, serving as mimic money in children's Christmas games. The average price of cowries, wholesale, is about £30 per ton. A copper "manilla," is worth about 5d.; that is, twenty-five manillas go to a "kroo" of palm-oil (say five gallons) and 300 gallons of that oil go to the tun, the value of which runs from £30 to £50. In these primitive moneys, it will be seen there is an intrinsic as well as customary value. Even in the civilized or, as some persons prefer to say, "Europeanized" districts of South Africa, the old pastoral form of money is still used. A successful schoolmaster receives the grant of sheep according to the number of scholars who pass the required standards, thus recalling the original pecus or basis of the Roman system of moneys. These are illustrations of the sound statement: Useful things having intrinsic values can be used also as money; but the act of stamping it on the face of valueless things does not communicate value. And the same thing may be said of the "tobacco notes" current in the Portugo-African settlement of San Paul de Loundo. The note professes to be based on the deposit of tobacco to the extent of its face-value (60 reis—3d.) but it would have no value unless the people of that settlement had a reasonable confidence in the existence of the tobacco; and, in the district, such notes must depend upon the value of the tobacco obtainable on presentation rather than upon the sum which the issuers choose to print on the notes. None of these moneys, however, answer the main requirement of exact similarity. With countries having bimetallic and forced note currencies, Africa shares the misfortune of possessing moneys the exact nature, weight and intrinsic value of which cannot be precisely depended on by creditors. The connection of good money with good credit in a country need not be insisted on.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the *JOURNAL* will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report.
Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3827—Presque Isle National Bank, Presque Isle, Maine. Capital, \$50,000.
 3828—California National Bank, San Diego, California. Capital, \$150,000.
 3829—First National Bank, Homestead, Pennsylvania. Capital, \$50,000.
 3830—First National Bank, Marietta, Georgia. Capital, \$50,000.
 3831—First National Bank, Latrobe, Pennsylvania. Capital, \$50,000.
 3832—First National Bank, Somerset, Kentucky. Capital, \$100,000.
 3833—Merchants' National Bank, El Dorado, Kansas. Capital, \$100,000.
 3834—North-Texas National Bank, Dallas, Texas. Capital, \$500,000.
 3835—First National Bank, Fredonia, Kansas. Capital, \$50,000.
 3836—First National Bank, Kaufman, Texas. Capital, \$50,000.
 3837—City National Bank, Knoxville, Tennessee. Capital, \$100,000.
 3838—Spokane National Bank, Spokane Falls, Washington Territory. Capital, \$60,000.
 3839—First National Bank, Mt. Pulaski, Illinois. Capital, \$50,000.
 3840—Miami Valley National Bank, Hamilton, Ohio. Capital, \$100,000.

ALABAMA.

BIRMINGHAM.—Birmingham Trust & Savings Co. has been organized. Subscribed capital, \$500,000; paid capital, \$112,900. President, H. M. Caldwell; Vice-President, S. J. Murphy; Cashier, M. G. Hudson.

DECATUR.—First National Bank; Assistant Cashier, W. B. Shackelford.

LAFAYETTE.—Bank of Lafayette has been organized. Capital, \$50,000. President, S. W. Allen; Cashier, J. C. Griffin; Assistant Cashier, J. G. Andrews.

TUSCALOOSA.—R. H. Neilson & Co., stock and bond brokers, are in business here.

ARKANSAS.

FORT SMITH.—American National Bank; B. F. Atkinson, President, in place of B. H. Tabor; Stephen Wheeler, Vice-President, in place of B. F. Atkinson. — National Bank of Western Arkansas; title changed to First National Bank.

LITTLE ROCK.—First National Bank; A. A. Mendlebaum, Assistant Cashier, in place of L. W. Coy, resigned. — German National Bank; J. H. McCarthy, President, in place of C. F. Penzel.

CALIFORNIA.

COLTON.—First National Bank; W. R. Fox, President, in place of John W. Davis; Vice-President, M. A. Murphy; John W. Davis, Jr., Cashier, now John W. Davis.

FRESNO.—First National Bank; O. J. Woodward, President, in place of J. H. Braly; E. F. Dahnan, Cashier, in place of O. J. Woodward; E. A. Walrond, Assistant Cashier, in place of A. H. Braly.

RIVERSIDE.—First National Bank; A. H. Nafziger, President, in place of Isaac C. Gilbert; Vice-President, L. C. Waite; A. Haeberlin, Cashier, in place of A. H. Nafziger; Stanley J. Castleman, Assistant Cashier, in place of A. Haeberlin.

SAN DIEGO.—California National Bank has been authorized to commence business. Capital, \$150,000. President, William Collier; Cashier, John W. Collins.

COLORADO.

DENVER.—Union Deposit & Trust Co. has been organized. President, Wm. D. Todd. — Rollins & Young; succeeded by Rollins Investment Co. Paid-up capital, \$200,000. President, E. W. Rollins; Vice-President, N. P. Seeley; Treasurer, F. C. Young.

GOLDEN.—Bank of Golden; Assistant Cashier, W. S. Keeney.

LEADVILLE.—Carbonate National Bank; A. V. Hunter, Vice-President, in place of H. I. Higgins. — Trimble & Hunter; consolidated with Carbonate National Bank.

CONNECTICUT.

ANSONIA.—Ansonia National Bank; Vice-President, Chas. E. Bristol.

DEEP RIVER.—Deep River National Bank; Vice-President, A. R. Shailer.

MIDDLETOWN.—First National Bank; J. N. Camp, President, in place of Benjamin

Douglas, resigned; E. G. Camp, Cashier, in place of J. N. Camp.

MYSTIC BRIDGE.—First National Bank; Thomas S. Greenman, President, deceased.

NORWICH.—Norwich National Bank; Frank Johnson, President, deceased.

SOUTHINGTON.—Southington National Bank; Vice-President, Charles D. Barnes.

DAKOTA.

CASSELTON.—First National Bank; W. F. Holmes, President, in place of H. P. Watts; Vice-President, A. F. Neyhart.

LIDGERWOOD.—Bank of Lidgerwood is reported here. Capital, \$50,000. President, Chas. H. Tulley; Cashier, Harry S. Leonard.

LIBBON.—First National Bank; Vice-President, B. M. Frees.

- ST. THOMAS.**—Bank of St. Thomas has been recently opened. Capital, \$25,000. President, Jno. D. Batson; Vice-President, Wm. McBride; Cashier, Andrew B. Little.
- VALLEY CITY.**—Farmers & Merchants' National Bank; Assistant Cashier, Linwood Foster.
- DELAWARE.**

J. G. Vivion, Cashier Second National Bank, Galesburg, Ill., under date of Dec. 21, 1897, writes: "We think your Banking Law Department the best in your JOURNAL, and that is saying a great deal, because *all the departments are first-class.*"

Whist!—The most expert players of this "finest of all games" say that the little book containing the principles and rules of the modern scientific game of whist, as explained and compiled by a well-known Milwaukee lady, and published by the Chicago, Milwaukee & St. Paul Railway, as a clever advertising medium for that great institution, is a true guide for the beginner, and a better standard reference for the American admirers of the game than the treatises of Pole, Cavendish, and others. No family circle or whist club can feel properly equipped without a copy of "Whist and How to Play It," which can be easily obtained by enclosing *ten cents* in postage, with your full name and address, to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—*Adv.*

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, February 4, 1888.

Last month we ventured to say that money would be cheap during the month of January, in part owing to uncertainty as to the action of Congress which always has a great effect upon the minds of investors whether in stocks, bonds, etc., already existing, or in new enterprises. There are so many things which Congress may or may not do affecting the value of investments that the period during which that body is maturing its plans is apt to be one of stagnation. Easy money with confidence as to investments makes business brisk, but cheap money is very frequently the result of lack of demand, and this seems to have been the case during the month of January. The uncertainty of Congressional action, has been supplemented by the continued deposit of the surplus revenues with the depository banks, until the amount on February 1st was \$59,372,967. This deposit it is said will be suspended for a while. The change of policy on the part of the Secretary of the Treasury is due to the fact that a fear has arisen that inasmuch as the market has recovered from any symptoms of stringency, and appears to be tending to the other extreme, the Treasury should begin, as the governor regulating the financial engine, to reverse its action. In December we commented that the surplus in the Treasury had acted as a safety valve, relieving the pressure in the money market when it became unbearable in other directions. Now, under changed conditions, it will again begin to absorb the redundant currency. The ease in the money market here has been supplemented by low rates abroad. All reports go to show that large amounts of money are seeking investment in all the European financial centres with the exception of Paris. The comparative stringency at the latter point is to some extent due to the large investment of French capital in the Panama Canal, and the extremely dubious condition and prospects of that enterprise. In London the apprehension in regard to exportations of gold to the United States has ceased, as the time is approaching when the current usually turns. As to the future it is of course impossible to say what may grow out of present conditions. The great abundance of money seeking investment here and abroad may lead to the inception of new enterprises and we believe as soon as the probabilities as to Congressional action become more capable of being calculated, that we will see many schemes for refunding railroad debts. The plethora of funds abroad will be apt to tempt to investments here, but as these funds have to be moved and handled in our currency, the condition of the latter will control the market. For instance a tendency of foreign funds towards investment in the United States would raise prices here, but if, at the same time, the locking up of money in the Treasury should be permitted to proceed too far it would cause a stringency in currency that would counteract the inclination of prices to rise. It all comes to this—that the surplus revenues enable the Treasury to control the money market. However able and disinterested a Secretary of the Treasury may be his action must rest largely on the advice of a comparatively few men, and who can tell that the advisers relied on will always be as disinterested as the Secretary of the Treasury. We do not believe there is much probability of the deposits already made with the depository banks being withdrawn for some time to come, nor that they will be withdrawn except to meet expenditures occasioned by appropriations by Congress; in which case the money will not go back into the Treasury but to the public who will redeposit with the banks. Unless therefore there should be an appropriation necessitating payments very suddenly and in large sums there is little danger to be apprehended from this source. The action of Congress may increase the currency in several

ways. If the Wilkins bill authorizing the increase of bank circulation on bonds to 100 per cent. of the bonds deposited, passes. It may effect some little increase, but it is more likely that the banks will in most cases take the opportunity to reduce their bonds retaining the circulation as it is on the less amount of security permitted. The proposition to issue fifty to seventy-five millions of fractional currency will increase the circulating medium to that extent unless it is contemplated to exchange it for the subsidiary silver, and put the latter in the Treasury vaults. The proposition to buy bonds with the fund now held in the Treasury to redeem National bank notes would effect a considerable outpour of money, but we do not believe it will pass.

The great danger of inflation comes from none of these sources but from the continued coinage of the silver dollar. We believe in an intelligent bi-metallism, that is, that both metals should be used in the currency of the country, but that our present gold dollar should be the standard to which the silver dollar should be made to conform—not at the relation of 16 to 1 as with the present standard dollar, not at the relation of say 20 to 1 indicated by the present market price, but at a relation to be established by international agreement, giving a value to silver greater than that shown by either of the two relations mentioned. The continued coinage of the present silver dollar threatens a glut of currency, but it further threatens the consummation desired by the greatest friends of bi-metallism. It can only result in the single silver standard. Admitting that the business of the world needs both metals, if it has to get along with one it certainly can do better with gold alone than with silver alone. If business seeking to thrive with gold alone has been aptly compared to two men struggling under a blanket only big enough for one, business seeking to progress with silver alone might be compared to one man trying to sleep under a towel. The coinage of the standard dollar should be stopped, and we believe the stoppage would force Europe to international action. Iron is depressed but this we believe is temporary only, caused by the cessation of railroad building during the winter season, and perhaps some fears as to the tariff action of Congress. Fears as to changes in the tariff will doubtless check importations to some extent.

FOREIGN EXCHANGE.—For the first two weeks in January sterling exchange was quite active, the demand being considerable on account of interest and dividend remittances. Commercial bills were limited in supply. The next week the demand fell off, but rates were kept up by the scarcity of commercial bills although security bills were plenty. This condition of things has continued up to the present time and is likely to last owing to the excessive cheapness of money abroad and a tendency to investment in this country, and depression of importations on account of tariff agitation. From December 29th to January 28th the Bank of England gained £1,421,000 in specie, the reserve on the latter date being 45 per cent. On January 12th, the discount rate was reduced from 4 to 3½ per cent., and on January 19th to 3 per cent. The Bank of France continues to lose gold and silver having lost 19,950,000 francs in gold and 10,150,000 francs in silver since last month.

The following are the latest posted and actual rates of the principal dealers; Bankers' sterling, 60 days, nominal, \$4.84½@ \$4.85; sight, nominal, \$4.86½@ \$4.87; 60 days, actual, \$4.83½@ \$4.84; sight, actual, \$4.85¼@ \$4.85½; Cable transfers, \$4.85½@ \$4.85¾; Prime commercial sterling, long, \$4.82½@ \$4.83; Documentary sterling, 60 days, \$4.82@ \$4.82½; Paris bankers', 60 days, \$5.21½@ \$5.21¾; sight, \$5.20@ \$5.19¾; Paris commercial, 60 days, \$5.23¼@ \$5.23½; sight, \$5.21½@ \$5.21¾; Antwerp commercial, 60 days, \$5.24¾@ \$5.23¾; Swiss bankers', 60 days, \$5.22½@ \$5.21¾; sight, \$5.20@ \$5.19¾; Reichsmarks (4) bankers', 60 days, 95¼@ 95½; sight, 95¾@ 95¾; Reichsmarks (4) commercial, 60 days, 94¾@ 94¾; sight, 95@ 95½; Guilders, bankers', 60 days, 40 1-16@ 40½; sight, 40¼@ 40 5-16; Guilders, commercial, 60 days, 39¾@ 39 15-16; sight, 40 1-16@ 40½; Copenhagen, Stockholm and Christiania, krona, 60 days, 26½@ 26 11-16; sight, 26¾@ 26 15-16.

Paris despatches quote exchange on London 25f. 23½c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling bills on London, at 60 days; and sight, and prime commercial sterling, together with exchange

on Paris on January 3d, the changes in rates that occurred during the month and the highest and lowest during the months of December and January :

Five francs.....	93 @ 96		U. S. Assay silver bars . . .	96½ @ 97
Victoria sovereigns.....	\$4 84 @ \$4 87		Fine gold bars par @ ¼ premium on the	
Twenty francs.....	3 84 @ 3 88		Mint value.	

HOME MONEY MARKET.—Money has been easy during the month. For the week ending December 7th, call loans on collaterals were from 3 to 6 per cent., commercial paper (prime), 5½ to 6½ per cent. For the week ending January 14th, call loans ranged from 3 to 5 per cent., commercial paper, 5½ to 6 per cent. For the week ending January 21st, call loans ranged from 3½ to 4 per cent., and commercial paper from 5½ to 6 per cent. For the week ending January 28th, call loans ranged from 1 to 4 per cent., commercial paper 4½ to 5 per cent. Commercial paper is in good supply, and there is a fair demand. Sixty to 90 days' indorsed bills receivable are quoted at 4¾ @ 5½ per cent.; first-class four months' commission house names at 5 @ 5½, and good single names—jobbers—having four to six months to run at 6 @ 7. The following are the latest rates of exchange on New York; Savannah, buying par; selling ¼ @ ½ premium. Charleston, buying par; selling ¼ premium. New Orleans commercial 50c. per \$1,000 premium; bank, par. St. Louis, 55c. per \$1,000 premium. Chicago 50c. per \$1,000.

NEW YORK CITY BANKS.—During the week ending January 7th, the combined currency and gold received by the New York banks was \$1,942,000, and they shipped \$807,000 a gain of \$1,135,000. By Sub-Treasury operations they made a further gain of \$4,700,000, making a total gain for the week of \$5,835,000. During the week ending January 14th, the banks gained \$2,498,000 from the interior and \$350,000 from the Sub-Treasury, making a total gain of \$2,848,000. During the week ending January 21st, the banks gained \$3,095,000 from the interior and \$1,000,000 by the Sub-Treasury,

making \$4,095,000 in all, and during the week ending January 28th they gained from the interior \$4,108,000 and \$600,000 by the Sub-Treasury, making \$4,708,000 in all. The total gain for the four weeks was \$17,486,000. There has naturally been a large increase in surplus reserve.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of January, and the highest and lowest during the month. Actual sales marked *:

From the statement of the Comptroller of the Currency of January 31st, it appears there was a decrease of \$2,535,386 in National bank circulation during the month of January as against a decrease of \$1,480,902 during the month of December. The total amount of lawful money deposited with the Treasury to retire outstanding bank circulation was \$101,799,643, as compared with \$102,962,510 last month. Bonds to secure public deposits amounted to \$56,928,000, including \$966,000 sixes, \$15,358,500 4½s, \$40,358,500 4s, and \$245,000 called threes.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated:

	Feb. 1, 1888.	Jan. 1, 1888.	Dec. 1, 1887.	Nov. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.	\$3,156,000	\$3,256,000	\$3,256,000	\$3,256,000	\$3,680,000
4½ per cents	69,335,550	68,955,050	69,831,100	69,696,100	59,636,200
4 per cents	110,141,900	112,102,400	113,823,400	115,731,400	113,903,200

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1887—actual sales—are given for comparison.

████████████████████
BANKERS' OBITUARY RECORD.
 ██████████████████████

Albright.—Joseph J. Albright, President of the First National Bank of Scranton, Pa., died January 12th, aged seventy-six years. Until one year ago he was also agent of both the Delaware, Lackawanna & Western and the Delaware & Hudson Canal & Railroad Company.

Axtell.—Imri P. Axtell, President of the Painesville National Bank, of Painesville, Ohio, died at San Diego, Cal., on January 8th, in the sixty-sixth year of his age, of pneumonia. He was for thirty years identified with banking interests in Painesville.

Bancroft.—Amasa Bancroft, who was President of the First National Bank of Gardner, Mass., from 1865 to 1872, died January 24th, aged 75 years.

Boynton.—Gen. Gorham L. Boynton, President of the Penobscot Savings Bank, of Bangor, Me., died on January 12th. He was eighty-one years of age, and one of the oldest and most prominent residents of Bangor.

Chaffee.—Edward L. Chaffee, a well known broker of Boston, died on January 12th. He was the Treasurer and General Manager of the Boston Loan Company since the organization of that corporation.

Cohen.—Edward Cohen, President of the City National Bank of Richmond, Va., died suddenly on the 18th of January of heart disease.

Dansard.—Benjamin Dansard, a prominent merchant and banker of Monroe, Michigan, died suddenly January 26, 1888, aged 75 years.

Davis.—John W. Davis, President of the First National Bank of Colton, Cal., died on November 8th at the age of sixty-five years.

Fee.—Darlington E. Fee, Cashier of the First National Bank of New Richmond, Ohio, died suddenly on December 26th of heart disease.

Green.—John Green, President of the Central Safe Deposit Company of New York city, died January 30th, aged 76 years.

Greenman.—Thomas S. Greenman, President of the First National Bank of Mystic Bridge, Conn., died on November 27th.

Hann.—Aug. P. Hann, Cashier of the First National Bank of Washington, N. J., died on December 11th, aged thirty-one years.

Hill.—Hon. Edson Hill, who from 1853 to 1858 was Cashier of the National State Capital Bank at Concord, N. H., died on January 22d. He was a Director of the Amoskeag Bank of Manchester under a State charter, and trustee of the People's Savings Bank of that city at the time of his death. He was 71 years of age.

Johnson.—Frank Johnson, President of the Norwich National Bank, of Norwich, Conn., died on January 10th of paralysis, at the age of sixty-five years. In various capacities he had been connected with the bank for over half a century. He was also President of the Norwich Water Power Company, and Trustee of the old Norwich Savings Society.

McCune.—John R. McCune, President of the Union National Bank of Pittsburgh, Pa., died suddenly of apoplexy on January 31st, aged 61.

Mott.—Richard Mott, President of the Toledo Savings Bank & Trust Company of Toledo, O., died January 23d. He was over eighty years of age, and one of the oldest settlers in that section of the country.

Riggs.—Thomas Lawrenson Riggs, of Riggs & Co., of Washington, D. C., died January 19th, at the age of thirty-three years.

Schuyler.—George W. Schuyler, who was Superintendent of the Banking Department of the State of New York from 1868 to 1870, died at Ithaca, N. Y., on February 1st, aged seventy-eight years. He was born at Saratoga in 1810 and was a descendant of General Philip Schuyler of Revolutionary fame. He was Treasurer of the State of New York in 1864 and 1865. He was elected to the Assembly in 1875, was a Director of the First National Bank of Ithaca, and a Trustee of Cornell University.

Sidle.—J. K. Sidle, President of the First National Bank of Minneapolis, Minn., died January 24th, at the age of 67. He was one of the pioneers of the city.

Sweet.—Edward S. Sweet, of the firm of E. S. Sweet & Co., bankers of New York city, died on January 7th.

Van Dyke.—Herbert Henry Van Dyke, President of the American Safe Deposit Company, of New York city, died on January 23d. Mr. Van Dyke was well known as a journalist and public official. He was born in 1800, and was successively editor of the Goshen (N. Y.) *Independent Republican*, Albany *Argus*, State Senator, State Superintendent of Public Instruction, Superintendent of the State Banking Department, and Assistant Treasurer of the United States at New York city. He was Superintendent of the State Banking Department during the late war, and in his reports at that time opposed the establishment of the National banking system as interfering with the right of a State to grant privileges to banks of its own creating.

Walker.—George Walker, who was appointed Consul-General to Paris by President Hayes in 1860, and occupied that office until June, 1867, died on January 16th at his residence in Washington, D. C. Mr. Walker was a financial writer of note, and was a frequent contributor to the *JOURNAL* during past years. He was born at Peterborough, N. H., in 1824, graduated from Dartmouth College in 1842, and was admitted to the bar at Springfield, Mass., in 1847. In 1867 he was elected to the Massachusetts Senate, and

took an active interest in banking and financial questions. He held for several years the position of State Bank Commissioner of that State. After retiring from this office he became President of the Third National Bank of Springfield, Mass. In 1865 he was sent abroad on a confidential mission by Secretary McCulloch, and in 1869 he again visited Europe in behalf of the State of Massachusetts. He afterwards settled in New York city, engaging in the business of banking, and was elected Vice-President of the Gold & Stock Telegraph Company. In 1879 he was sent by Secretary Everts to Europe to investigate the question of a bi-metallic standard, and, as before stated, was in 1880 appointed Consul-General to Paris. On the occasion of his departure to assume the duties of this office he was given a complimentary dinner by the Union League Club of New York city.

Wannschaff.—Alfred Wannschaff, Cashier of the Atchison County Bank, of Rockport, Mo., committed suicide on January 4th. He was thirty years of age, and there was no apparent reason for the act.

Watson.—William H. Watson, President of the Union Bank of Medina, N. Y., died on January 25th, aged 73 years. He was born near Troy, N. Y., and engaged in the dry goods business in New York city fifty years ago.

Woodman.—W. C. Woodman, President of the First Arkansas Valley Bank of Wichita, Kan., died December 28th, after a lingering illness, aged 71 years. He opened the first bank in Wichita, and was an enterprising and influential citizen.

Woodman.—Hon. Charles W. Woodman, President of the Savings Bank for the County of Strafford, Dover, N. H., died on January 24th of heart disease at the age of 79 years. In 1829 he was graduated from Dartmouth College, and four years later, after studying law with his father, was admitted to the bar. A brief term of practice in Somersworth, and then Mr. Woodman removed to Dover, where he remained until his death. From 1839 to 1844 he was Solicitor of Strafford County, and from 1854 to 1855 was Judge of the Court of Common Pleas, the office being abolished in 1855. In 1861, '62, '78, and '79 he represented Dover in the State Legislature, following his first term with service in the army as United States paymaster. For many years he was Commissioner of the Circuit Court of the United States.

NOTICES OF NEW BOOKS.

UNITED STATES NOTES. *A history of the various issues of paper money by the Government of the United States*, By JOHN JAY KNOX, late Comptroller of the Currency, with an appendix containing the recent decision of the Supreme Court of the United States, and the dissenting opinion upon the Legal Tender Question. THIRD EDITION REVISED. New York: Charles Scribner's Sons. 1888.

A foreigner who reads the Constitution of the United States and studies the circumstances and the arguments that led to its adoption by the Federal Convention and the several States, will be surprised that there can be a history of United States notes. He will find a clause forbidding any State to emit bills of credit, and no authority to emit them granted to Congress. Moreover, in the debates in the Federal Convention he will discover that when it was proposed to grant this power to Congress the Convention declined to do so. How, then, can there be a "History of United States Notes"? Mr. Knox' work explains this anomaly. The final decision of the United States Supreme Court, given in the appendix, declaring legal-tender notes Constitutional, shows from what clauses in the Constitution the power to make such issues is derived, and the gradual steps by which this conclusion has been reached are traced in the body of the book. Not only have United States notes formed a part of the financial history of the country, but a very important part. They are the clue at almost every turn in the fiscal operations of the Treasury. This history of the political, social and financial reasons that led to their use is in reality the best starting point from which to study the financial management of the Government. It is therefore especially valuable as a text-book in all institutions of learning. This is the third edition. Although reduced in size and price, the type and general finish are the same as those of the earlier editions. The first edition appeared in 1884, and it has been carefully examined and has received the highest commendation for accuracy of statement of facts and judicious conclusions, from those best acquainted with the sources from which the work is drawn. One or two minor errors have been discovered and corrected.

While there is hardly a fact in the financial history of the United States to which "United States Notes" does not make some reference, the point of most importance at the present time is that it contains a chapter upon the accumulation of the surplus during the administrations of Jackson and Van Buren, the causes of the accumulation, its deposit with the banks, its subsequent withdrawal from the banks and their consequent suspension, and the opinions of Jackson, Benton, Webster, Cushing, Calhoun, Clay, Woodbury and Buchanan upon the surplus and its distribution among the States.

RHODES' JOURNAL OF BANKING.

Vol. XV.

MARCH, 1888.

No. 3.

BANKING and financial legislation does not advance very rapidly in Congress. The fate, thus far, of the bill of Mr. Wilkins, Chairman of the House Committee on Banking and Currency, authorizing the issue of circulation to National banks to the extent of 100 per cent. of the par value of the bonds deposited, indicates that the anti-bank minority in Congress is very strong. Mr. Wilkins is not sure of his ground. His bill has not received the approval of the Comptroller of the Currency or of the administration. The opposition is led by Mr. J. B. Weaver, the eminent Greenbacker who, if not sound in his financial ideas, is certainly a strong and pertinacious debater and parliamentarian. He has now at his back the silver advocates, the State bank men, and all the other elements of opposition to National banks—both reasonable and unreasonable. The National banks themselves are in a difficult position as far as circulation is concerned. The present price of Government bonds and the consequent low rate of interest realized on them, renders this class of securities unavailable as a basis for circulating notes. If the issue of notes as money by banks is a matter of public policy, if such issues advance business, and business prosperity, then however good the National system is as a system of banks for discount and deposit, it fails lamentably to confer the benefits which the issue of bank notes is supposed to confer. It is not at all surprising that the attitude assumed by most of the National banks is one of waiting. The excellent reputation of the system for safety and the erroneous public belief that the Government is in some way responsible for deposits made with the National banks, gives them some slight compensation for the loss of profit they have to submit to in making the required deposit of bonds, but we believe that if the ten per cent. tax on State bank circulation were repealed, that a very large number of the National banks, outside the great money centres, would enter State systems where greater liberality as to the issue of circulating notes would be permitted. The action as to bills for using the surplus to refund the existing debt at lower rates of interest is also very languid. The bill for investing the fund held for the redemption of

retired National bank circulation does not seem to make headway. The measure which seems to meet with the greatest approval is that authorizing the purchase of bonds at market rates by the Secretary of the Treasury. We do not think this meets the approval of the administration, except perhaps as a temporary measure. That is, the Secretary might not like to be left with this permission as the only remedy against the accumulating surplus. Reduction of the tariff seems as far off as ever. The silver men alone are happy, as their mill still continues to grind out the 412½ grain dollars, regardless of the outcry of the bi-metallists. The profits of banking average less than they have been for many years, there is so much competition. The State bankers, even those who are well established, feel a certain jealousy that the mere assumption of the National title enables men with perhaps less real capital and experience to get the lion's share of deposits. This is felt especially in the newer parts of the country.

We believe, as the Government reduces its requirement as to bonded security deposited, it should increase the number of examinations. This applies more to the banks in the newly settled States and Territories where the distance is great and supervision difficult, than to the older established institutions at the centres of financial development. The drift of Congressional action as regards National banks is very uncertain, with the chances against the enactment of any measure which will make the present burdens of these institutions any lighter.

THE BANKING SYSTEM OF CANADA has recently attracted much attention, especially since the failure of the Central Bank, at Toronto. It is stated that recent disclosures have caused the public to demand a thorough remodeling of the banking Act, by which stockholders and depositors are, it is claimed, at the mercy of dishonest Directors and Managers. In the JOURNAL, for last September, a sketch of the Canadian banking system was given, and we do not agree that as a system it is loose, as is asserted, or that if the existing laws controlling the banks were enforced there is greater danger of loss under it to stockholders or depositors than under the National banking system in this country. In other words, we believe that the only difference is in the enforcement of law by rigid governmental supervision in the one case and not in the other. If, under the National banking system the Comptroller should neglect his duty, if the Examiners are incompetent or careless, the depositors and stockholders of National banks are as much at the mercy of dishonest Directors and Managers as are the depositors and stockholders of the Canadian banks. As we have always contended, we believe the Comptroller's administration of the laws regulating National banks has always been reasonably efficient, and the generally good results of the National banking system have been due to this fact. In Canada there is not, as far as we understand, any plan for Government examinations of the banks, to see that their

Managers do not use their means in an unwise and dangerous manner. If there is no law permitting the proper Government officials to conduct such examinations, this is a defect of detail in the system, but if there is such a law, then for much of the alleged trouble the Government is responsible. It is suggested that the Dominion authorities intend to institute a reform, and, imitating the National banking plan here, to require the Canadian banks to secure their outstanding circulation by the deposit of Dominion bonds. This may now be a good remedial measure, and one that would be regarded favorably, because it would enhance the securities, but we do not think that such a deposit is at all necessary to give stability to the circulating notes of a system of banks, and that such a plan sooner or later, as in the case of the National banking system, is sure to restrict the scope and usefulness of bank circulation.

The law of Canada provides that the issue of circulating notes by any bank must not exceed the *unimpaired* paid-up capital. Monthly returns to the Finance Department are required, and if the issues are excessive, fines are imposed. It may be that the law does not give the Finance Department sufficient power of inspection to prove that the monthly returns are correctly made—in fact, it is intimated that there have been overissues of circulating notes. But it is evident that if the law were enforced and the paid-up capital kept *unimpaired*, and the issue of circulation never permitted to exceed the par of such paid-up unimpaired capital, the circulating notes would be adequately secured. For, assuming that when a bank commences business there is an unimpaired capital of \$100,000 in gold, an issue of \$100,000 of notes is allowable. This gives \$200,000 in cash and \$200,000 in liabilities. If the cash, except what is kept as reserve, is loaned on good notes worth their face there is no impairment of capital and no lack of security for the circulation. The moment any of the resources become shaky, the capital—assuming no surplus as yet—becomes impaired. It is then the duty of the Government to compel the bank to reduce its circulation to a corresponding point. The failure of the Canadian system is not, therefore, due to the law itself, but to the lack of proper enforcement. The correction to be applied is not to the general scheme for issuing circulation, but to the means of enforcing the law. To copy the National system will compel the Canadian banks to take out about one-half of their available means from loans to the public and put them in a loan to the Government. As far as Managers and Directors are concerned, loans to themselves should be judged on the same basis as loans to others, if they are good and—as long as good, they cannot be excessive—there is no impairment of capital. Rigid Government supervision will always determine such impairment, and when determined, the circulation would by the law be reduced to a safe point. The time will come when people will recognize the fact that the success of the National banking system is as much due to

judicious enforcement of law as to any peculiar virtue in the requirement of a deposit of Government bonds to secure the circulating notes; which latter requirement may or may not be judicious, according to the credit of the Government and the amount of and interest borne by the debt.

THE CODIFIED NATIONAL BANKING LAW, prepared by Comptroller Trenholm, contains several good features. It has been introduced as a bill in Congress, and will probably be favorably reported by the Committee on Banking and Currency, but of its passing there is as little chance as there is of building a bridge across the Atlantic. It is a great pity that a work to which the Comptroller has devoted so much time and labor runs so much risk of having even its good points overlooked. One of the good features of the Code is the proposition to reduce the minimum of United States bonds that the National banks are required to deposit, which has been embodied in a separate bill. Another excellent suggestion is contained in Section 223, which is an amendment of Section 5,219 of the Revised Statutes of the United States. Permission is given in Section 5,219 to the States to tax the shares of National banks, subject to the restriction that the taxation shall not be at a greater rate than is assessed on other moneyed capital in the hands of individual citizens. This provision has been the subject of endless litigation, growing out of alleged unjust taxation of National banks as compared with the taxation of State institutions doing a similar business. The original law, of which Section 5,219 is a modification, contained a provision that the shares of National banks should not be taxed more heavily than those of State banks. This of itself was too restrictive, as there were other varieties of capital than that of State banks, which came into competition with the capital of National banks. The expression, "moneyed capital in the hands of individual citizens," was added, and the provision as to State bank shares dropped out with the intention of widening the scope of comparison, and it would seem for the purpose of enabling National banks to compete with any form of moneyed capital likely to be used in making loans. Instead of having this effect, there has been a series of decisions in the Courts, including the Supreme Court of the United States, that have rendered it difficult for National banks to compete with other forms of capital used in business similar to their own, particularly with the Trust companies. The United States Supreme Court has defined "moneyed capital in the hands of individual citizens" to consist "of stock or other interests owned by individuals in all enterprises in which the capital employed in carrying on its business is money, where the object of the business is the making of profit by its use as money." Railroad shares are not such moneyed capital, because the railroad makes the profit, not the money invested in the shares. The Supreme Court discriminated between Trust Companies

and banks, although admitting that the former, like the latter, received deposits and made loans. The Comptroller's amendment, as embodied in Section 223 of his Code, seeks to make clear that all capital engaged in business similar to that of National banks shall be subject to equal taxation. The language adopted follows that of the Supreme Court when stating the resemblance between trust companies and banks. The condition as stated in Section 223 is as follows: "The taxation (on shares) shall not be at a greater rate in proportion to their real value than is assessed on the shares of other corporations engaged in receiving deposits, negotiating loans, or transacting any other business similar to that which National banks are authorized to transact, or, at any rate, which will amount on the aggregate of all the shares to more than is assessed upon a like amount of capital similarly employed, whether in the hands of individuals or under the control of corporations." This proposed amendment of the Comptroller would seem to cover the ground and render any unjust discrimination in State taxation easy of detection. If the Comptroller could secure the passage of this one section the benefit will be great. This feature should be presented as a separate bill.

HARPER, the Vice-President of the Fidelity National Bank, of Cincinnati, who is now serving a term in the Penitentiary at Columbus, Ohio, for using the funds of the bank in his private speculations, has had the complacency to criticize the system of National bank examinations, required by the National Bank Act. He has remarked, oracularly, from behind the prison bars that if the Bank Examiner had done his duty he, Harper, would not be serving a term in the Penitentiary. This is an exceedingly new and refreshing view of the subject of bank examinations and of the duty of Government officers in connection therewith. The Bank Examiner must, according to this, be a sort of moral insurance company, guaranteeing the character and action of National bank officers. If he is outwitted by the dishonest Cashier and made to believe that champagne is available for reserve, he is responsible for the dishonesty and trickery which makes him its victim. According to Harper, the attitude of a responsible bank officer, in view of the fact that the Government Examiners are created by the law, is as follows: "Here I am," says the bank officer to the Examiner; "keep me honest, prevent me from using the funds of the bank, for if you relax your vigilance a moment I know I shall steal. The only hope is that you will keep such a close watch on me that I cannot exercise my natural disposition. When I offer you champagne you should regard it as one of my wiles, and all of my other acts, however innocent they may be in appearance, should be recognized by you at once as having a sinister motive; all my statements, you should see, are steeped in mendacity, and all my oaths look upon as perjured." A Bank Examiner's position, under this view, becomes exceedingly complicated.

Seriously, there is no class in the community who live up to a higher standard of commercial honesty than the bank officers, and the intimation that the system of bank examinations is intended to be responsible for their moral character and condition, or that they are kept from crime by the vigilance of Bank Examiners, will not hold water.

THE LIABILITY OF STOCKHOLDERS in banks — banks organized under the laws of the State of New York—is limited to the amount of their stock. That is, if such a bank fails, its stockholders may lose the money they have invested in their stock, but they cannot be called upon to pay anything more. The stockholders of a National bank are liable to double the amount of their stock. That is, if a National bank fails, the stockholder loses his stock, if the liabilities are sufficient, and, moreover, if the liabilities are still greater, he may be called upon to pay them to an extent equal to the par value of his stock. The liabilities of stockholders of banks organized under the laws of other States are determined some after the rule of the New York law, but most of them after that of the Federal Statute. Neither in the case of National banks nor State banks does the individual wealth of stockholders have anything to do with the solidity of the banks with which they are connected. The partners in private banks, on the contrary, are liable, to the full extent of their individual fortunes, for any debts that the firm may incur. The difference between the limited liability of the stockholders of State and National banks and the unlimited liability of partners in a private banking firm have heretofore been fully discussed in the JOURNAL. It is, however, not unfair to remind our readers that the partners in private banks are generally Managers of the business, while the stockholders of State or National banks are not necessarily Managers of the institutions with which they are connected. The partners in a private bank may, in case of disaster, use up or sequester their private means, while the stockholders whose liability is double the amount of their stock can not usually do so. A National bank or a State bank, where the stockholders incur the double liability, has a fund in the hands of shareholders which cannot be reached by dishonest Managers, and which is available for creditors after the Managers have done their worst.

THE TRIAL OF David L. Stain and Oliver Cromwell, accused of the murder of John W. Barron, Treasurer of the Dexter Savings Bank, of Dexter, Me., on February 22, 1878, calls to mind one of the most puzzling and mysterious cases in the history of bank robberies. On the evening of the day mentioned Mr. Barron was found lying bound and gagged in the savings bank. A reward of \$4,000 was offered for the discovery and arrest of the murderers. For two years the case exercised the ingenuity of the detectives without result, and one by

one they at length gave up. Mr. Barron was looked upon as a hero who had sacrificed his life rather than permit robbers to secure the funds which were intrusted to his charge. The case attracted so much attention and sympathy that money was sent from all quarters to erect a memorial church to the memory of the martyred Treasurer. Presently some detective set up another theory, namely, that Mr. Barron was a defaulter, and had committed suicide to hide a defalcation. The bank officials claimed to have made discoveries in the accounts of the bank that sustained this theory, and brought suit against the executors of Mr. Barron's estate to recover \$6,000, the amount alleged to be missing. On investigation by auditors appointed by the Supreme Court, the amount was reduced to \$2,000, and there were some doubts as to the accuracy of that sum. The advocates of the murder theory contended that no one could voluntarily and unaided place himself in the position and condition in which Barron was found. On the other hand, a detective in the interest of the suicide theory, showed more or less satisfactorily by experimenting on his own person how Barron might have accomplished the result. In November last, one Chas. F. Stain made a confession, in which he accused his father, David L. Stain, Oliver Cromwell and others of the murder. The statements of the younger Stain were in many particulars proved false, but the investigation which followed brought out some evidence in consequence of which Stain and Cromwell are now undergoing trial. The conviction of these men will remove the stigma which has been placed on the memory of Treasurer Barron. The very small amount of the defalcation which is alleged to have been discovered is against the suicide theory, and the difficulties of accounting for the condition in which Mr. Barron was found are very great under that theory. The subject ought to be one of great interest to bank Cashiers, who seem to be exposed not only to dangers from robbers, but to the liability of having their characters unjustly aspersed after they have sacrificed their lives in the protection of the funds entrusted to their care.

HON. HENRY M. KNOX, who, since May 1, 1878, has been Public Examiner of the State of Minnesota, has resigned that office to become Vice-President of the Security Bank, of Minneapolis, the largest bank in the city. The resignation was tendered to the Governor some weeks since, but the matter was not made public until the 21st, when both the resignation and its acceptance by the Governor were announced. While the duties of the Public Examiner comprise examinations of the banks doing business under State law, they are much more important and far-reaching than those of a Bank Examiner. The main purpose of the creation of the office was not the examination of banks, but to control the accounts of the County Treasurers and the management of State institutions, asylums, prisons, etc. Annuity, Safe Deposit and Trust companies are also under the same supervisi on

At the Convention of the American Bankers' Association at Pittsburgh' in October last, Mr. Knox read a paper explaining the scope and object of the office. This interesting paper was published in the JOURNAL for December, 1887. A law was enacted by the Legislature of Minnesota early in 1887, to take effect January 1, 1888, seeking to bring private banks and bankers under the supervision of the Public Examiner. This law required private bankers to become State banks if they wished to retain the banking titles under which they were doing business with the public. There has been much opposition to the Act, and its constitutionality is now being contested.

The law of 1887 also provides that the Public Examiner shall, *ex officio*, be Superintendent of Banks and receive their reports as well as examine their affairs—these reports having previously been received by the State Auditor. The supervision of the banks is thus intrusted to one officer instead of two. During the nine years of Mr. Knox' service as Public Examiner there has been great development of the banking interests in Minnesota. There were but 13 State banking institutions in 1878, when the office was created. In 1887 these had increased to 55. The offices of the County Treasurers were in great confusion in 1878. There was a laxness in the method of keeping accounts that often tempted dishonesty. This has all been corrected, in spite of political influence and opposition. The efficiency of the oversight exercised toward the banks is shown by the very small proportion of failures occurring among the State banks. We publish elsewhere an article from the St. Paul *Pioneer Press*, which shows to how great an extent the successful results of the creation of this unique office is due to the personal qualifications of its first and only incumbent. Perhaps the greatest objection to a supervision of banks and public accounts is the difficulty of procuring men fitted to conduct it. As the success of a part is due in the greatest measure to the actor, so the practical success of the Minnesota plan or "notion" has been worked out by Mr. Knox' industry, intelligence and honesty of purpose. The Security Bank has shown its wisdom in obtaining him as one of its managing officers.

ONE OF THE IMPORTANT BILLS affecting National banks, now before Congress, is that introduced by Mr. Adams, of Illinois, which passed the House February 7th. It is designed to amend Section 5,209 of the Revised Statutes, which imposes a penalty for certain acts, if committed by the President, Directors, Cashier, Teller, clerk or agent of any National banking association; among other things, for making a false entry in any book, report or statement of the association, with intent to injure or defraud the association, or any other company, body politic or corporate, or any individual person, or to deceive any officer of the association, or any agent appointed to examine the affairs of the association. The section, as it now stands, does not provide for the

punishment of bank officers who make false reports with intent to deceive the Comptroller of the Currency; nor is there any provision of law for punishing a National Bank Examiner who makes a false report of his examination of a National bank with intent to deceive the Comptroller of the Currency. Mr. Adams' bill is intended to supply these omissions. The amendments were suggested by Mr. Trenholm, the Comptroller of the Currency, in the proposed codification of the National banking laws, which he presented with his last report to Congress. There has always been serious difficulty in holding bank officers accountable for false reports made to the Comptroller, but convictions have been obtained under Section 5,322 of the United States Revised Statutes, which provides for the punishment of any one who takes a false oath in any case where a United States law authorizes an oath to be taken. The reports of National banks to the Comptroller of the Currency are signed and sworn to by the President or Cashier of the bank. Their correctness is supposed to be attested by the signatures of three Directors. From the form used in the Comptroller's office it is difficult to tell whether the Directors attest the correctness of the reports or the correctness of the signature of the President or Cashier. The signing officer certainly swears to the correctness of the report, and if he takes the oath before a proper officer, and the report is known to him to be false, he is liable to five years' imprisonment for perjury. A proper officer to take the oaths of bank Presidents and Cashiers signing and swearing to a report of the bank made to the Comptroller of the Currency is defined by the Act of February 6, 1881, to be a notary public properly authorized and commissioned by the State in which the notary resides and the bank is located, or any other officer having an official seal authorized in such State to administer oaths. Prior to this Act there was nothing in the Statutes of the United States having any bearing on the matter—unless Section 1,778—which provides generally that where oaths may be taken before a Justice of the Peace they may also be taken before a notary public, etc., is held to control. The officers of the National bank of the State of Missouri were indicted for making false returns, and the validity of the indictments was questioned, and for final decision an appeal was taken to the United States Supreme Court. In 1882 that tribunal decided that the oath to the correctness of the reports of the bank mentioned having been taken before a notary public prior to the passage of the Act of February, 1881, the indictments were not good. The same defect in the law, existing prior to 1881 as to oaths of officers signing reports, still exists as to the oaths of Directors of National banks. We trust Mr. Adams' bill will pass.

THE DECISION OF Judge Sage, on releasing a Director of the Fidelity National Bank, of Cincinnati, from all responsibility for the wrecking of that institution, was no more than was to be expected.

It could not have been otherwise, with the precedent of the decision of the United States Circuit Court for the Northern District of New York, in the case of the Receiver of the First National Bank, of Buffalo, against the Directors of that institution. That decision, which was given in the July number of the JOURNAL, was that where the entire business of the bank is deputed to the President or other officers of the bank, the Directors are not responsible for any losses which may occur through the mismanagement of such officers. In other words, after Directors have appointed officers and defined their duties, the Directors have no further occupation or responsibility. We remarked that if this decision were sustained by the United States Supreme Court that the office of Director in a National bank would be a mere sinecure without labor or liability. Our readers will remember that the case of the First National Bank, of Buffalo, was appealed to the Supreme Court of the United States, and that an attempt was made to have it advanced on the calendar, which did not succeed, the Court not regarding the question involved as one arising under the Federal law.

THE FREQUENT INSTANCES where deception has been practiced by bank officers, and Bank Examiners successfully imposed on by the plea that cash which ought to be found in the bank is securely stowed away with some safe deposit company, indicate that the Bank Examiners who accept such a plea are either deficient in their understanding of the law, or the law itself is ambiguous and needs amendment. When the Currency Act was enacted safe deposit companies had not been invented, and a bank was supposed to be an institution that, inasmuch as it contracted to keep other people's money safely, could be depended upon to keep its own. The provisions of the law in regard to reserve, interpreted in an intelligent manner, mean that the reserve a bank does not keep with reserve agents must be kept in its own vaults. Money with a safe deposit company is not a legal reserve. An Examiner who accepts anything except money in the vaults of the bank as home reserve is ignorant of the true meaning of the law, and unfit for his position.

JUDGE ALEXANDER McCUE, who has been appointed to succeed Mr. Canda as Assistant Treasurer of the United States at New York, is well known as an upright and honest Judge. He was appointed Solicitor of the Treasury Department by Mr. Cleveland, and filled that office most acceptably. Although Judge McCue has never been brought before the public as a financier, his successful administration of other public trusts indicates that he will successfully perform the duties of his new position. He is said to be the richest man who has ever held the place. His bond for \$400,000 having been approved, he assumed control of his new office on March 1st.

NATIONAL BANK EXAMINERS.

If there is any branch of the Government service that should not be affected by politics or political influence, it is certainly that which carries on the examinations of National banks. Whether the law contemplated that these examinations should be made to protect the public or not, such is the construction that has been given to it by the Comptroller's office, and, rightly or wrongly, the public hold the Examiners responsible whenever a National bank fails. If, therefore, there is reason why any portion of the civil service should be placed beyond the reach of political influence, this reason applies with great force to the appointment and management of National bank Examiners by the office of the Comptroller of the Currency. We quote from an excellent paper read by Mr. H. B. Wilson, formerly Cashier of the First National Bank of Ironton, Ohio, at the Convention of the American Bankers' Association at Pittsburgh, October 13, 1887, the following description of the qualifications of a National bank Examiner :

"I go farther now and declare that in my opinion no person should be eligible to the office of Bank Examiner who is not only a thorough accountant, but has had some practical experience in the banking business. No man knows or can know how to examine a bank as well as a banker. It is true that after several years of service a Bank Examiner who, at the start, does not possess the pre-requisites to which I allude, may become tolerably efficient. But what of suffering and loss those first years of inexperience might cost it would be impossible to compute. The details of the banking business are so numerous and intricate that no novice can comprehend them to an extent sufficient to enable him to ferret out and bring to light whatever of crookedness may exist. And it is this feature that demands particular attention. Until the millenium dawns you will find rascality in this world, and you are as likely to find it behind the plate glass and polished brass of a bank counter as anywhere else, or even in the executive officers themselves. If this were not so, there would be small need of Bank Examiners. The Examiner, then, should be not only a thorough accountant but an experienced bank accountant. One who can comprehend at a glance the multifarious systems of bank bookkeeping which he meets, for the systems of keeping their accounts are as numerous as the banks themselves. He should be not merely a plodding, methodical, accurate accountant but he must be alert, active, vigilant, one who knows a kite when he sees it, especially if it have a long tail, and can't be bamboozled into counting the same money twice over to make the cash balance, as we are informed was the case in what was once represented to be the largest bank in Ohio. In addition to these qualifications he should be a man of good judgment and prepared by experience and observation to impart sound advice, to such as need it, upon the general management of a bank's affairs, and his ability and high character should be so manifest as to inspire unquestioning confidence in his judgment and motives."

This description may represent rather an ideal sketch and one that cannot be realized in the person of any one individual, but there have been, and still are some men in the service who approach the indicated criterion very closely. It would be invidious to mention names—although the number of such persons now employed by the office of the Comptroller of the Currency would not render the task a long or difficult one and National bank Examiners of this kind are growing rarer every day. It is a fact that since 1885 these positions have been filled largely with new men, who have been selected without any

reference to their fitness or previous experience, and who have not been subjected to the civil service rules for determining their qualifications. These offices have not only been bestowed upon inexperienced men, but, after appointment, the new Examiners have not always been required to commence with the easy accounts of small country banks, and work up to the more difficult and complicated operations of the banks in the larger towns and money centers. In not a few instances entirely new men who had never examined a bank were put in as the monitors of some of the largest and most important banks of the country. Either the examination of a banking institution is a very simple matter that any one can learn to make at first sight, or there is something radically wrong in the present methods of selecting men for this purpose. Strange to say too, the civil service law does not extend to these important offices. There is no protection given by law either to the public, in securing competent men, nor, if by chance competent persons are secured, is there any protection to them, if they do their duty regardless of political, social or trade reasons. A large bank with its officers, depositors and stockholders, is a powerful machine. The Examiner may find it is violating law in the interests of its stockholders for there are violations of law that although they would be very disastrous to the community if practiced by all banks, are yet very profitable and not unsafe if indulged in by one bank. An Examiner detecting a powerful institution in forbidden practices, may call down on his head the wrath and revenge of all who are concerned. He cannot always expect the support of the Comptroller's office, for as long as appointments are made from political or social motives, so long similar influences may bring about removals. Truly under the present regulations controlling the National bank examination service the lot of the Examiner is not a happy one. He must exercise the wisdom of the serpent toward the invisible powers that may influence his removal, and the harmlessness of the dove toward those whom it may be dangerous to offend. Congress should pass a bill bringing these appointments under rigid civil service rules. Examiners should be appointed for life or during good behavior and be subject to the same rules as to removal for cause, as army officers, that is, they should when under charges be tried by other Examiners appointed for the purpose. The pay should be liberal and fixed by law. This would permit the organization of a body of Examiners experienced and fully disciplined who would effect all that can be effected to prevent banking disasters.

Senator Sherman's Plan for Bond Purchases.—The Senate Committee on Finance has reported favorably the bill of Senator Sherman for permitting the investment in United States bonds, by the Secretary of the Treasury, of the fund held for the redemption of the notes of National banks which have been retired either voluntarily by the associations issuing them or on account of their failure or liquidation. This fund belongs to the Government, and is a simple book account, and all the verbiage and complication of the bill can be reduced to a permission given by Congress to use an amount of the surplus equal to the book account of the fund named to buy bonds. The bill is of no service to the banks, unless profit that may be derived—which is problematical—is permitted to be used as a safety fund.

THE METROPOLITAN NATIONAL BANK, CINCINNATI.

Cincinnati has, during this past year, been very unfortunate with her National banks. The Fidelity National failed in June with liabilities amounting to nearly five millions of dollars, and now the Metropolitan National joins the rapidly increasing list of banks under the Federal banking system whose Managers have speculated wildly but not too well. The merits of champagne as a reserve were fully tested by Harper, of the Fidelity National. Whether similar tactics were pursued by the Metropolitan National Bank does not appear. The position of the man whose duty it was to make examinations of the National banks in Cincinnati is, at this time, not an enviable one. It is clear that the trouble at the Third National of that city, averted, with great decision and great good sense, by the present Managers of that institution, should have caused a watchful eye to be kept by the Examiner on the Fidelity, in order that, as Harper says, with as much truth as will be admitted in regard to the statements of a man who has been sentenced, the steps leading to the final catastrophe might have been prevented. However this may be, when the Fidelity National struck its colors the Examiner had many reasons to doubt the condition of the Metropolitan National. It was only by the most ingenious manipulation that the dangerous condition of that institution was then concealed. In fact, those most involved were bright enough to secure the unwitting co-operation of the Comptroller of the Currency, who appointed Mr. De Camp, the Vice-President of the Metropolitan National, temporary Receiver of the Fidelity National, and it is alleged, with great apparent truth, that Mr. De Camp used the drops of life blood remaining in the veins of the Fidelity National to bolster the cash balance of his own bank. In other words, Mr. De Camp, as Receiver, deposited such available funds as he found in the former with the Metropolitan National. The law requires the money coming into the hands of a Receiver of a National bank to be at once deposited with the Treasurer of the United States, and as there is a sub-Treasury in Cincinnati, there was no reason even for a moment to use any other depository. Assuming, for example, that the amount deposited by Mr. De Camp was \$100,000, the balance sheet of the Metropolitan National showed an increase of that amount in deposits and of an equal amount in cash. But as the cash reserve to be kept by law on any deposit is but 25 per cent., \$25,000 of the cash would suffice as reserve on the \$100,000 deposit, leaving \$75,000 in cash to make good any deficiency on previous deposits. The Bank Examiner, who was supposed at the time to be assisting the temporary Receiver, could not but have been aware of the illegal deposit and of the difference of showing it would make in the books of the Metropolitan National Bank. Such warning and the supervision which ought to have followed should, according to Harper, have prevented Mr. De Camp from going wrong afterwards. But it did not.

The Metropolitan National Bank, of Cincinnati, was one of the largest banking institutions in that city. It had \$1,000,000 capital and over \$1,600,000 in deposits. Its office was situated in the United Bank Building, of Cincinnati. According to the *Magazine of Western History*—a periodical published in

Cleveland, Ohio—in one of a series of articles on Banks and Bankers of Cincinnati, “the imposing interior of this flourishing bank exceeds in commodiousness and elegant finish anything of the kind in the Ohio valley.” William Means, the President, is spoken of in the same article as having at one time been Mayor of Cincinnati, in which office his career is described as “marked by unusual executive ability—modest, calm, strong and confident, he never feared to face a responsibility nor turned aside from duty to swim with the current or go with the multitude.” Mr. Means, we learn from the same source, is descended from the Counts le Maine, who descended from Charlemagne. Mains, Means, Maynes, Magne, are, it seems, all one name. One Geoffrey De Maine was a companion of William the Conqueror. Ernulphus De Maine was his standard bearer at the battle of Hastings. As an old chronicler hath it :

“Le Stre Geoffrey de Maine,
An old and good knight,
And Onfroi de Bohun,
Were both in the fight.”

William Means has, as is understood at the time of writing, sustained the honor of his descent by paying his liabilities to the Metropolitan National Bank.

It was not entirely a surprise when, on February 3d, the wires from Cincinnati brought the news that the Metropolitan National Bank was in difficulties. On this date a prominent bank President is reported to have remarked, “There will be no failure. Every bank in town will pay out its last dollar before we permit the Metropolitan National to go to the wall. We can't afford such a catastrophe.” The developments of the next day changed this somewhat, and on the 5th, Mr. De Camp was deposed and Louis Krohn was made Vice-President in his stead. It was thought that this reorganization would restore public confidence in the bank. The condition of things was still regarded as a flurry of excitement unwarranted by any real trouble—a mere deficiency in reserve. On the 7th the plot thickened; William Means was arrested charged with misappropriating \$224,000 of the bank's money. The day before, Vice-President De Camp was arrested and the bank suspended. The Cashier of the bank, Mr. Edwards, was not, it seems, a party to the operations which resulted in the failure of the bank. He refused, it is stated, to sign reports made to the Comptroller except on the guarantee of the President and Cashier that the amount of cash reported was actually in the bank. The failure of the Metropolitan National Bank, following so closely on that of the Fidelity National in the same place, is a shock—not to the credit of the banks of the country—but to the system of National bank examinations as now conducted.

Queen City National Bank, of Cincinnati.—The Bank Examiner at Cincinnati, has made a careful scrutiny into the affairs of the Queen City National Bank, of that city. A new Board of Directors has been elected, and they immediately made an examination of the institution. After satisfying themselves, they called in the Bank Examiner to verify the results. The impairment of capital will not exceed twenty-five per cent., which will be made good in the usual way by assessment on the stockholders. This is a most satisfactory conclusion, after the many rumors that have gained currency as to this bank.

FRACTIONAL PAPER NOTES.

Fractional currency or paper notes issued by the Government were a necessity during and subsequent to the war. After the suspension of specie payments in December, 1861, the premium on silver change drove it out of circulation and people were obliged to resort to the use of postage stamps and shinplasters to carry on the smaller transactions of the day. The ordinary postage stamp was not at all fitted for the purpose as it was apt, when kept with others in the pocket or pocket book, to degenerate into a sticky, inseparable mass. Shinplasters were only profitable to those who issued them. They were of all shapes and sizes and became an intolerable nuisance. They were issued by individuals and firms, and ingenious devices were often adopted in order to prevent the possibility of their return for redemption. A favorite scheme was to issue three cent notes of large size bearing the legend, "redeemable when presented in sums of even dollars." The lowest sum that could be redeemed under such an agreement was of course three dollars, and so great an accumulation seldom occurred in the hands of any one person. To remedy these inconveniences caused by the lack of small change the Government issued fractional postal notes, which bore the impression of postage stamps. These were superseded by small notes of other designs. The Act of July 17, 1862, authorized the Secretary of the Treasury to furnish to the Assistant Treasurers, etc., postage and other stamps of the United States, to be exchanged by them on application for United States notes. After August first such stamps were receivable for all dues to the United States less than five dollars, and they could also be redeemed in United States notes when presented in sums of not less than five dollars. The issue of shinplasters was, by the same Act, forbidden under severe penalties. The Secretary of the Treasury issued what was known as postal currency under this law. It consisted of notes on which fac similes of stamps were impressed. This law in reference to postage currency was superseded by the Act of March 3, 1863, which provided for the issue of fractional notes. These fractional notes were receivable for all dues under five dollars and were redeemable in United States notes when presented in sums of three dollars. The whole amount to be in circulation at any one time including the postal notes and postage stamps then in use as currency was not to exceed \$50,000,000.

The original postal notes and postage stamps were receivable for *all* dues to the United States, but the fractional currency authorized in 1863 to supersede the postal notes was not receivable for customs. Both the postal notes and fractional currency were at first issued in three and five cent denominations, but in 1866 the issue in denominations less than ten cents was forbidden, and all under that were called in. The total amount authorized, as has been seen, was fifty millions of dollars and the largest amount outstanding at any one time was \$49,102,660.27. As the law permitted the substitution of new notes for those mutilated or worn out, the total amount of issues and reissues was \$368,720,079.51. The Act of January 14, 1875, providing for the resumption of specie payments in 1879, also provided for the coinage of subsidiary

fractional silver coin, to be issued in exchange for the fractional paper currency. This Act did not produce any great effect, inasmuch as Mr. Richardson, who was then Secretary of the Treasury, feared that the silver if issued at that time would be hoarded, and that the public would lose the use of both the fractional paper and the fractional silver. He therefore refused to redeem the fractional notes in sums greater than five dollars. This action of the Secretary was much ridiculed at the time, and christened "homeopathic resumption." Another Act of Congress approved July 22, 1876, put some life into the movement for the substitution of fractional silver coin for the fractional currency. It authorized the issue of ten million dollars of the subsidiary silver for an equal amount of legal-tender notes, the notes to be set aside and kept as a special fund only to be reissued upon the cancellation and retirement of a like amount of fractional currency. This law was rendered necessary by the great public demand for the small notes, which prevented them from being taken out of use even for the time required to make the exchange into silver. The temporary use of legal-tender notes enabled the silver to go into circulation before the fractional currency was withdrawn. By the latest report of the Director of the Mint it appears that the total amount of subsidiary silver in circulation in the United States on July 1, 1887, was \$75,547,799.

There were in all five separate issues of fractional paper currency. 1st, That of the postal or more properly postage notes, which began August 21, 1862, and ceased May 27, 1868. The second issue superseded the postage notes October 10, 1868, and lasted until February 23, 1867. The third issue began December 5, 1864, and ceased April 16, 1869. The fourth issue began July 14, 1869, and ceased February 16, 1875. The fifth issue began February 26, 1874, and continued until February 15, 1876. Although the amount outstanding at any one time never exceeded the authorized \$50,000,000, the total amount issued to keep the notes in good condition from August 21, 1862 to February 15, 1876—a period of nearly fourteen years—was \$368,724,079; the total amount redeemed up to June 30, 1887, as shown by the report of the Treasurer of the United States was \$353,401,176, leaving \$15,322,902.70, outstanding. The amount outstanding for which the United States is still liable appears at a less amount than this in the debt statements and financial reports. This discrepancy arises from the fact that of the \$15,322,902.70 not yet presented for redemption the Treasury authorities have estimated that some seven or eight millions of dollars have actually been destroyed or utterly disappeared, and will never be presented for redemption. In regard to this, it is contended that the facilities afforded by the Treasury for the substitution of new notes for worn out and mutilated ones kept the mass of the fractional currency in tolerably good condition, and, owing to this, the chances of absolute loss or destruction were largely reduced. Moreover, many think that a very considerable amount of the notes of different denominations of the various issues, is held in the cabinets of collectors, by banks and others as curiosities. In fact it is believed that possibly a very much larger proportion of the \$15,322,902.70 is in existence than has been estimated by the Treasury authorities. Unless this is admitted the percentage of loss upon the issue of the aggregate amount (\$368,724,079) is quite large, being over 4 per cent. of the entire sum. The losses of the public upon legal-tender and National bank notes, from the best data obtainable, do not much exceed 1 per cent. It would

naturally be expected that the fractional currency which performs so much more work would suffer the most. It is certainly a great argument against the proposition before the present Congress to return to the use of a fractional paper currency. The public will lose more than it will by the use of subsidiary silver. The loss by the latter must not be underrated however. It is subject to loss and mutilation, the same as the fractional paper currency but the loss by mutilation will not perhaps exceed the deductions made in the redemption of fractional currency on account of parts torn off the notes. Silver coins may perhaps be lost somewhat more readily than the paper currency. Their weight sinks them out of sight more readily.

Another argument against the issue of fractional currency at present is that no additional quantity of small money is needed. During the period from 1862 to 1876, about forty-nine millions of fractional notes effected all that money of small denomination was required to do. Now that the forty-nine millions of fractional paper has been superseded by seventy-five millions of subsidiary silver, it seems hardly necessary to supplement this last large amount with fifty millions more of fractional notes, making \$125,000,000 of small money in all. The great and only argument in favor of the issue is that of convenience. There is a large number of enterprises that depend for their success on small contributions from all parts of the country. These would be much encouraged by the revival of fractional notes. At present, if one wishes to remit less than one dollar, he is obliged either to send the silver which is very heavy and inconvenient and apt to wear through the envelope and be lost in the mail, or personal checks which are costly and inconvenient to collect, or postal notes, that require journeys or messages to the Post-office, the signing of names and other details. It is the same with postal money orders. The express is safe but requires time and formality. Doubtless if the fractional paper notes were revived, passing as they do from hand to hand, they would very acceptably take the place of small checks, postal orders and notes and small express orders, saving much inconvenience and expense. They would doubtless also encourage business in a small way which now languishes because of the trouble of making small remittances.

Without venturing to settle the merits of the question, it has been our endeavor, in this article, to set out what may be said on both sides. In some respects the issue of fractional notes would be a benefit to the banks as it might do away with many of the small country checks which now make the business of collection so arduous.

Mr. Logan C. Murray, President of the United States National Bank of New York city, and now serving his second term as President of the American Bankers' Association, is one of the pleasantest men to meet among the bank Presidents of the city of New York. When he is obliged to refuse a favor he never gives offense and even wins those whom he may be obliged, by the strict rules of business, to disappoint. This happy combination, in its President, of a pleasing manner with rare firmness and business foresight, comes from an innate goodness of heart joined to a clear and cultivated mind, and to a great extent accounts for the success of the bank, and the high estimate in which it is held by its correspondents.

COUNTRY BANKING.

The importance of the relations which the bank sustains to the mercantile interests of the community can scarcely be over-estimated. Indeed, it would be difficult to conceive of a commercial community without banking facilities. The functions of a bank are two-fold ; not only does it afford a place of safe-keeping for the money not in actual use, but it also affords the means of gathering together into one fund the surplus capital in the community, and distributing it on reasonable terms to those desiring its use. But to discourse of the general functions of banking and the relation of banks to the business community generally would be to pursue a threadbare subject. Whether the National or the State system of banking be preferable depends entirely from the point of view from which we contemplate the subject. From the point of view of the country banker, the State system presents many advantages. It allows the rich men of the neighborhood to combine together and to make the banking business a sort of monopoly, and to manage things pretty much to suit their own ideas. Under a system of State banks and private banking the small stockholders are, to a great extent, shut out, and the whole business lies in the control of a few hands. While such a system may be very profitable for the capitalists themselves, it is not so profitable for the community at large, for there cannot be any question but that, so far as general business is concerned, the National system for the country as well as the city banks is by far the better. From the point of view of public policy and general convenience the National system has advantages which far outweigh any that may seem to inhere in the system of the State banks. We do not now refer to a general comparison of the advantages and disadvantages of National and State banks, for that question belongs rather to the general subject of banking than to a paper devoted specially to the subject of banking in small towns and villages. Nor do we here propose to discuss the comparative safety of the two institutions for the same reason. Let us consider the case of a small town of five or ten thousand inhabitants, which is a new place without banking facilities, and yet with a large and growing commerce. Suppose, also, such a town to be the centre of a considerable country trade. Such is the case with many towns in the West and South, and such will continue to be the case for some years to come.

NATIONAL OR STATE BANK.

Which is the more advantageous for a town of this sort, a State bank or a bank organized under the National system? Is the bank to be organized solely for private interests, or is it to be a public enterprise? Is it to be the affair of one individual to make as much money out of it as he can, or is it to be in the nature of a general undertaking on the part of the whole business community? So far as the interests of the whole community is concerned the bank should undoubtedly be constituted on this basis. It is easier to organize a National bank than one under a State charter. In the first place, every one knows precisely what a National bank is; the method of organizing it, the rules by which its business is to be conducted, the laws which govern its

administration and its transactions are all known and settled. Persons are more willing to subscribe to an institution whose nature they thoroughly understand, or think they understand, than to an institution about which their ideas are indefinite, and, though the view is erroneous, the majority of business men are thoroughly impressed with the idea that the Government is somehow or other a special guardian and protector of the National banks.

To organize a National bank but two things are required—a man at the head of the enterprise who has the confidence of the community, and funds of the community at large awaiting a good investment sufficient to put the institution on a solid basis. So well understood are the provisions for organizing National banks, and so great is the general confidence in these institutions that, having found the man able to organize and manage the bank, there is no difficulty in obtaining the funds to bring the institution into existence. Not infrequently it is the case that a large proportion of the bank's capital is sought and found outside of the town in which the bank is to be located; a certain proportion of the fund is raised in the latter place, but the balance is obtained in the East in the large cities where unemployed capital is apt to collect. Sometimes Eastern capitalists themselves take the initiative and send out a man of their own to manage the institution, and solicit only enough subscription in the town to insure it public support and confidence. The restrictions contained in the National Bank Act are only such as commend themselves to the judgment of every prudent banker, and in special cases, where such restrictions become a little burdensome temporarily, there are ways of not paying very much attention to them. On the whole, so far as a country bank is concerned, the advantage seems to be decidedly in favor of organizing a National bank as compared with organizing one under a State system of banking.

POLICY OF NEW BANK.

In organizing a country bank the policy to be pursued is usually determined by the special object had in view by the organizers. If they are men of large means themselves, and desire to conduct the institution simply for their individual profit, they will, of course, subscribe to the bulk of the stock and control the whole affair; but if the object of the organizers is to benefit themselves as part of the general business community, and also to benefit the community at large, the course of proceeding will be somewhat different. This latter case is similar to that in which the enterprising men of a town would undertake to build a new hotel or public hall, or any other institution designed to develop the resources of the community and to be a public benefit. If such be the controlling view in organizing the bank, and, from the standpoint of the public interests, such should be the controlling view, the object will be to interest as many people as possible in the prospects of the institution, and, with an eye to the future, to cut off any unnecessary competition in business. To this end the stock should be widely distributed, every one who can possibly be induced to do so taking a few shares. This makes the bank a matter of public interest and concern from the outset; every one will feel that it is his bank, and all have a local pride in the prosperity of their financial institution. These views must be modified somewhat where a bank is to be opened in a town which is already supplied with banking facilities; but under any circumstances, the more people interested in the institution the more

prosperous will the institution be. But when it comes to the constitution of the Board of Management the opposite rule must be observed. In the distribution of the stock the idea of diffusion was prominent, but in the organization of the management the idea of concentration must be the controlling one. If the bank is to prosper the bank must be in comparatively few hands. The homely saying "that too many cooks spoil the broth" is, at least, as applicable to running a bank as to preparing a dinner. Indeed, it might be justly said that a bank ought to be under the management of one man only, the Board of Directors acting rather as a council of advice than as a controlling influence. The amount of capital should be as small as possible. The days of banks with large capital have gone by, and banks are now organized with capital as small as is consistent with the volume of business which they expect to do. In a certain sense a bank with a large capital is safer than one the capital of which is comparatively small; but there are so many elements which enter into consideration of a bank's safety that the mere amount of capital paid in is not, perhaps, of as great relative importance as formerly. The advantage of having a small capital is that it allows larger dividends to the stockholders, and also makes the accumulation of a surplus an easier task. The capital stock should be paid in in cash before the bank opens its doors for business. Paying in of the capital by installments and little by little is not to be commended either as sound banking or on the grounds of general policy. If a bank can raise the capital at any time it can raise it when it commences business. If it cannot raise it at that time it had much better postpone its business until it finds that it actually has all its capital funds in hand.

COMMENCING BUSINESS.

After this is the case and the bank opens for business, the next object is to accumulate a surplus to provide against unforeseen contingencies. The National Bank Act makes certain restrictions with regard to the payment of dividends until a surplus of a certain percentage of the capital has been accumulated; but it is a better policy not to declare any dividends at all until enough surplus has been accumulated to tide the bank over ordinary and even extraordinary losses. The returns to the shareholders will be greater than under the system of paying dividends, for any shareholder desiring to realize his profits can dispose of his stock at a premium, while those who hold on will, in the end, realize larger profits, owing to the increased business which the bank will gain with the exhibition of a handsome surplus account.

BANKING OFFICE.

It has been somewhat the fashion of late to spend a good deal of money in the fitting up of the banking office; and such money, within judicious bounds, may properly be said to be well spent. The dingy banking office of former days, when the clerks sat with their feet up on the counter, and customers gathered around the stove, has happily gone out of fashion, and in place of such is seen large and well-lighted rooms with the most approved designs for convenience and comfort. The important points in a banking office are the light and the ventilation. If possible, the light should come in on the right-hand side; that is to say, so as to fall over the clerks' shoulders, and in no case should the light be so arranged as to fall in the eyes of those engaged at the desks. Ventilation has of late been reduced almost to a science, and it would

be needless to expatiate on it here, any further than simply to insist upon its great importance. It is unnecessary, also, to insist that the bank and everything about it should be kept scrupulously clean. This is not only a matter of propriety, but of health and comfort. Cleanliness is said to be next to Godliness, but there are many bank Managers who do not rank it so high in the scale of virtues.

CLERICAL FORCE.

The number of clerks that a country bank should employ of course depends entirely upon the circumstances in each individual case. It is impossible to lay down any rule in regard to this point, except to say that the force should always be sufficient to get through the work, even in the busiest time, without undue strain. Where there are several clerks in the institution the salary list should be so graded that there will not be any very considerable difference between any two desks, as an arrangement of that sort is apt to induce a feeling of jealousy on the part of the lower salaried men. The terms of engagement should be for good behavior. There is nothing more injurious to a bank than a constant changing of the force. The promotion should be regular from desk to desk as vacancies occur, and by such a system a bank constantly keeps in its employ a force of trained and experienced clerks. Bank hours are usually supposed to be comparatively short, but such is not always the case, and it is for these exceptions to the general rule that the Board of Directors should keep a lookout.

PROTECTION FROM BURGLARS.

The mechanical appliances for protection from burglaries and so on have been very much improved of late years, and now there is no reason why every bank should not be made both fire and burglar proof. The safest material for constructing a bank building is brick, as in the case of a general conflagration a brick building will stand more heat than a building of stone. The building should, if possible, be isolated, and windows arranged so that passers-by can see into the banking room at night. It may be remarked that the room should always be kept sufficiently well lighted at night for any one accidentally passing by the window to get a full view of the premises.

OFFICERS' BONDS.

It is not customary to require the President of a bank to give bonds for the faithful performance of his duty. It is generally thought that the President will do the right thing by the institution without any bond. The bonds should be in the custody of a committee of a Board of Directors, should be inspected by them, and a record kept of them in order that they may be renewed from time to time as the necessity arises. The establishment of corporations for the express purpose of going on the bond of clerks has greatly simplified this department of banking management, and many banks express a decided preference for that kind of suretyship.

MANAGEMENT AND BOOK-KEEPING.

The duties of the Cashier has been the theme of so many essays that it seems almost impossible to say anything new upon the subject, or even to say the old things in a new way. The clerical force of a bank is not always as closely looked after by the Managers as would seem to be desirable. Having once chosen a clerk their duty appears to be performed, and they frequently neglect entirely to investigate from time to time to ascertain whether their force

is in proper condition. It is true that a machine, if it be well and strongly made, will run after a fashion whether it is well attended to or not; but certainly any machine is capable of performing much better work when kept in thorough order than when the wheels are allowed to become dry and harsh and small breakages are left unrepaired. So it is with the clerical force of a bank. Indeed, it is better to do the work of the inefficient one entirely than to be annoyed by constant blunders and oversights. Perhaps in no department in the work of a bank has there been in the last few years greater improvement than in the system of keeping books. The old-fashioned style of keeping both cash-book and ledger has to a great extent fallen into disuse, and what is known as the Boston system has almost entirely taken its place. The great advantage of the latter system is that it not only saves work and time, but is also conducive to greater accuracy. There are some minor disadvantages which attend the Boston system, but these are not sufficient to outweigh the points in its favor. Even this style, excellent as it was thought to be when it was first adopted, has been to a certain extent improved upon until really it seems that the force of evolution can no farther go. Where a bank has been running on the same system of book-keeping for fifteen or twenty years, the nature of its business will naturally have changed to such a degree that the work itself can be greatly reduced by radical changes in the system of accounts. How these changes are to be brought about is quite another question, for bank clerks, of all people in the world, love to keep the same old wheel in the same old rut. They have a certain way of doing things, and at times nothing but a peremptory exercise of authority can bring about a change, however desirable and necessary such a change may be. Again, the fault lies more often with the Manager than with the clerks. If he be a man slow to originate new ideas himself, and still slower to receive the new ideas of others, it becomes almost impossible to effect any radical change. It is so difficult to explain exactly how a system will work until one has an opportunity to put it into actual operation. The best way to keep the book-keeping department up to the latest improvement is to allow to every clerk the privilege of making such changes in the manner of doing his work as he may from time to time devise for his own convenience, subject, of course, to the approval of his superior officers. When any improvement in the system insures a less degree of work to the clerk who devises it, one may be quite sure that nothing will be left untried that is known, and very few things that are not known will be left untried. There is nothing more important than to keep the books in such a condition that an analytical statement of the bank can be drawn off at any time. Outside of such a statement of the bank's condition, as shown from the face of the statement book submitted to the Board of Directors, few Managers take the trouble to inquire. But figures are very deceitful, and the statement of a bank's condition gotten up in this form is sometimes extremely misleading. One special defect in such a system is that it does not show any comparative figures, so that all one has by which to test the growth of the bank's prosperity and business is to rely either upon one's memory, or else to laboriously plod through successive numbers of previous statements. The art of combining and arranging the different items which go to make up the statement of a bank's condition is one not generally known or practiced among bank Managers, and yet such a system, especially if it be made on a system of

comparison with previous statements, is a very great help to the President and the Board of Directors. It is one thing to work out what one wishes to know by a long process of calculation, but it is much easier to see at a glance the whole thing stated at large on one page. The successive reports of the ex-Comptroller of the Currency, John Jay Knox, afford very striking illustrations of what may be learned of the condition of the banking business by a study of the various combinations of these several items that go to make up its statement. The reports of a bank's condition to the Government and the reports to the Board of Directors are made up for different purposes and on a different basis.

REPORTS TO GOVERNMENT AND STOCKHOLDERS.

The Government reports are required in order to give the proper Government official specific information in regard to various matters which it is his province and duty to know. They are published but five times a year and are necessarily in a condensed form. The reports of a bank's condition to the stockholders, however, are of a different nature. They are made twice a week and sometimes as often as once a day. The design of these reports is to keep the President and Directors fully informed as to the bank's business, and therefore it is necessary that these reports should show every matter in great minuteness of detail, as has been intimated above. Especially should the Board be kept informed of the amount of loanable funds which the bank has on hand or anticipates of having during the next few days, in order that they may be fully advised how much money is on hand to meet the demands of the customers. Such a plan followed during ordinary times may seem of no very special advantage, but its great usefulness at a time when there is a constant demand for money and the calls of depositors verge almost on a run or panic justifies the practice itself at all times and under all circumstances.

DIVIDENDS.

In regard to the paying of dividends there has been a growing disposition on the part of bank Managers to pay out as little money in dividends as possible, and to pile up into a surplus fund all the undivided profits that they could possibly retain. In the case of new banks such a rule can be adopted and carried through because the stockholders are usually wealthy men who would as lief invest their dividends by allowing them to remain in a bank as by drawing them out and placing them in some other enterprise where there would not be any larger results on the money. A handsome surplus fund inspires more confidence in the mind of the average depositor than all the arguments that could possibly be laid before him. Such a surplus fund is not only an evidence of the ability of the management of the bank but also of their conservative spirit.

DISCOUNTS.

In managing the line of discount granted by the bank to its customers there is more than one consideration to be borne in mind. It is not so much a question as to how much money a bank can loan out as it is where the money can be loaned with the greatest safety and security for its return. To manage a large line of discount floating incessantly in and out requires a great deal of experience, judgment and tact. The object of a country bank in reference to its general policy of discounting should be to encourage as far as possible the commercial and manufacturing interests of the town and to avoid getting its

money locked up in real estate. The success of a bank depends, to a large extent, upon the commercial activity of the place in which it is located, and therefore it is a policy of the bank to build up the mercantile and manufacturing enterprises. In and apart from, not interfering with the profit of the bank in the matter of discounts, this part of its business, if skillfully handled, ought to be made a powerful lever in the development of the community. It would be in a case like this that a bank would be fully justified in displaying what is called public spirit. In this connection, perhaps the hardest part of the duty of a Manager of a country bank is to turn down needy applicants who seem worthy of relief, but who must be denied on account of the great risk attending their ability to repay funds when once advanced. A philosophical mind might reason that it is by these processes of natural selection that the strong and able are encouraged and made stronger while the weak and unworthy are forced to the wall and obliged to succumb. Perhaps there may be some truth in this theory, although it seems a hard one.

INFORMATION.

The rapid multiplication of banks in different parts of the country has rendered necessary a more perfect system of information in regard to their mutual standing than was called for even as much as fifteen or twenty years ago. It is much more difficult to secure trustworthy information in regard to the standing of a bank than it is in regard to the standing of a commercial firm; and for the reason while merchants know each other's standing pretty well, there is really no one outside of the Board of Directors itself who can give any very trustworthy information in regard to the responsibility of a bank. In other words, those who would be willing to give the information do not possess it, while those who have the information are unwilling to impart it. Letters of introduction are frequently sought by traveling salesmen who desire them not so much for the purpose of obtaining funds as they do for the purpose of putting them on a friendly footing with the banks in the places where they are to make their visits. A traveling salesman being furnished with a letter of introduction to the leading banks at the place where he happens to be stopping can, by judicious inquiries, find out pretty much all he wants to know in regard to the standing of the several firms in the town; but such letters of introduction should be given with great care and discrimination, for while they are extremely serviceable to those who use them properly, they are capable of being greatly abused by any one who might be disposed to make an improper use of them.

OVER-DRAFTS AND COLLATERAL LOANS.

However careful and strict a bank may be with regard to over-drafts, there will be customers who, from time to time, either by accident or intentionally, will overdraw their accounts. This is principally done through the clearing in the morning, the checks being received in that way before the deposits arrive which are to make them good. It is not always desirable to have a hard and fast rule in regard to these matters, though it is well enough to be strict with those who make it a practice to overdraw their accounts, knowing that they will be overdrawn at the time they issue the excessive checks. But where men are in fair credit and are evidently not intentionally offending, it is perhaps the better policy to honor their checks and immediately notify the customer to make his account good. As a general principle, loans on collateral are better

than loans unsecured, though there are often special circumstances where an unsecured loan is quite as good as many of the collateral loans on the book, and a good deal better than some of them. This is one of those instances concerning which no general rule can be laid down, for it would hardly be correct to say that of the two classes of loans in a bank the collateral loans are really much safer than those which have been made without the collateral support. In time of great stress, when money is very stringent, it is impossible to realize on very good collateral except at ruinous rates, and the pressure on the banks to hold the paper and keep the collateral off the market is just as great as the pressure to renew unsecured notes. There is one kind of note, however, which does not commend itself to the principles of sound banking, and that is the single-name paper—paper simply signed by the makers and unsecured either by indorsement or by collateral; or, in other words, paper manufactured like the razors in the old story—simply to sell.

RUNS.

There is but one way to meet a run on the bank, and that is to pay out your money until the run stops, if it takes the last dollar to do it. There is no use arguing with a man who comes after his money with the supposition that he will not be able to get it. Even if you send him away apparently satisfied by your arguments or overcome by your persuasions, he soon realizes that his mission was not accomplished, and he becomes more anxious than ever to get those funds which he now more than half suspects are hopelessly lost. But it is not often that a run occurs on a well managed institution; but when that ever does take place the bank must respond in cash money to all demands made upon it. It is on an occasion of this kind that the value of the discount line, which has been kept well in hand, is appreciated. If the Cashier can bundle up his notes and hurry around to neighboring banks, securing nearly their face value in ready money, he is in a much better position than if his notes are such as require close and careful scrutiny. As soon as the run commences, every effort must be made to pile up all the cash money possible in the vaults of the bank. Out-of-town correspondents should be telegraphed to remit at once, call loans should be brought in, and time loans pledged for advances as far as they will go. All this no doubt costs a good deal of money in the way of interest and so on, but the costs will not break the bank; but the run, if it is not met successfully, will greatly discredit the institution and cut more deeply into its profits than the largest interest charges could possibly do. Conservative depositors who are not easily alarmed, and come in merely to inquire of the President the cause of the run on the institution, should be met with the reply that the bank is cashing and is prepared to cash all claims upon it on demand. Nothing so reassures a depositor in such a time as a direct and *bona fide* offer on the part of the bank to pay him his money cash on demand if he wants it. Such an assurance, coupled with the fact patent before his eyes that other depositors are being paid off as fast as the Tellers can count out the money, goes a long way to relieve any suspicion he may have had as to the solvency of the institution.

RESERVE.

The law requires the cash reserves of a country bank, if in the National system, to be 15 per cent. of the deposits. A portion of this 15 per cent. may be kept with an approved reserve agent. How much reserve should be carried

by a country bank is a matter which must be decided by each bank for itself, as conditions vary too much for any general rule; but certainly it is better to err on the side of safety and to carry as large a cash reserve as possible consistent with reasonable profits for the bank. A large cash reserve is the friend in need which is said to be the friend indeed. Nothing so redounds to the credit of a bank as an ability to meet its obligations when other banks have difficulty in doing so. This having been done once in the community gives a bank a stand above all its competitors, and one which cannot fail to be a great advantage to it in the obtaining of additional business.

MINUTE BOOKS.

The minute books of a bank should be kept as briefly and precisely as possible, and one invariable rule should be followed; they should be written up at the time the meeting which they record is being held; on no account should the writing of the minutes be postponed even for a day. Few men can trust their memory as to details after the lapse of any considerable time, and the crowding of fresh events greatly tends to weaken original impressions. As a minute book of a bank is usually regarded as conclusive evidence of the facts which it states, it is very important that it should be absolutely trustworthy in every respect. The minutes should be properly signed by the Cashier in his official capacity, as his official signature stamps the minutes with the legal impress of truth, and gives them a presumption of truth which it is hard to overthrow.

JOHN H. BLACKLOCK.

Practical Banking.—The following communication explains itself:

Editor Rhodes' Journal of Banking: COMMERCIAL BANKING COMPANY, }
MARSHALLTOWN, Iowa, Feb. 4, 1888. }

SIR:—Have the articles on "Practical Banking" which appeared a year or so ago in the JOURNAL been as yet published in book form? If so, where can I obtain a copy?

J. M. WOODWORTH, *Cashier.*

Answer.—The book our correspondent refers to has not been published. The copy is being prepared as rapidly as possible and, it is hoped, will be in the printer's hands in the near future. When the work is ready for the public due notice thereof will be given in the columns of the JOURNAL.

Lectures on Social and Political Subjects.—An interesting course of lectures on social and political subjects is progressing in Philadelphia, under the auspices of the Philomathean Society of the University of Pennsylvania. The course consists of five lectures, by such well known professors of finance and political economy as Frederick W. Taussig, Richmond Mayo Smith, E. Benjamin Andrews and Hon. Simon Newcomb. The course is calculated to lay a sound foundation for a broad knowledge of economic and social subjects. The time has been and still is when, in some parts of the country, banking may be made profitable without much general knowledge of underlying principles of finance or social science. For years, the value of a thorough education in political economy to the banker and business man has been recognized abroad. The Institute of Bankers in London publishes in its *Journal* the papers and lectures and discussions that take place once every one or two months. These papers are striking, for their living and practical interest. There are many indications that a greater estimate is, in this country, being placed on the value of economic principles applied to practical work.

BANK BOOK-KEEPING.

A TREATISE ON KEEPING AND AUDITING THE BOOKS OF STATE AND NATIONAL BANKS, PRIVATE BANKING FIRMS, SAVINGS INSTITUTIONS, FINANCIAL AGENTS, ETC.

Prepared for the JOURNAL by an experienced Bank Accountant.

Banks which receive deposits must have in their books a separate and distinct account with each of their several or many customers of this kind.

Dr.	Wm. Wood & Co.	Cr.

Fig. 5.

These accounts may be kept in the same formular arrangement as that used for Cash, Loans, etc. (see Fig. 5). The depositor's account is credited with deposits and debited with checks paid by the bank or checks certified for the depositor.

Another account much like that of a

depositor, though of a more general character, is for keeping a record of Certificates of Deposit issued. This account, too, may have the same formular construction, but it is not an account with any particular individual or firm. A certificate of deposit is much in its nature like a note payable on demand. If the money so deposited is left a reasonable time, according to the rules of the bank the depositor is entitled to interest.

Dr.	Certificates of Deposit.	Cr.

Fig. 6.

These certificates, irrespective of who they may be issued to, are all treated under this general heading. The account is credited with deposits made or certificates issued, and debited with payments made or certificates returned and cancelled.

From the foregoing general directions we are able to formulate some important invariable principles that will govern all our operations in the

* A series of papers on Practical bank Book-keeping; will be continued through the year 1888, or until the subject is exhausted. When required the articles will be illustrated by photo-engraved plates of blank books, forms, etc.

book-keeping of a bank. Besides this—and what is equally important—we have discovered that there are two general kinds, or classes, of accounts. One of these classes, and that embracing the accounts named and described by the first to fourth illustrations or figures inclusive, as will be seen, represents property or value either in the possession of the bank, belonging to it or owing to it, thus :

Cash.—Money, or its equivalent, in our possession.

Real Estate.—Property owned by us.

Loans and Discounts.—Money owing to us.

National Park Bank.—Money on deposit with that bank subject to draft, and, therefore, owing to us.

The other of these classes, and that embracing the accounts named and described by the fifth and sixth figures or illustrations, as may be observed, represents an indebtedness—something in our possession, but belonging to another, or a value due another, thus :

Wm. Wood & Co.—An account with that firm as a depositor, and representing that, for the money deposited with us, we are indebted to them.

Certificates of Deposit.—Money deposited with us, for which we are indebted to various persons.

The first of these classes is termed, in Book-keeping, **Assets or Resources**, and the second **Liabilities**.

And here we arrive at an important principle to be engraven upon the attention of every person who would master the theory of Book-keeping.

The **Liabilities** of the bank, added to the actual **Capital**, must exactly equal the **Assets**.

The actual **Capital** of a bank may consist of: 1. The money invested. 2. The undivided profits. 3. The surplus.

From these general principles we are able to formulate and analyze a statement showing the financial standing of a banking institution :

Bank Statement.

ASSETS.	LIABILITIES.
<i>Cash Items :</i>	<i>Due Depositors.....\$240,850.25</i>
<i>United States Bonds. \$50,000.00</i>	<i>Circulation (our notes issued).. 25,000.00</i>
<i>Checks on other Banks 15,210.50</i>	<i>Capital paid in... \$150,000.00</i>
<i>Cash on hand..... 75,580.21—\$140,790.71</i>	<i>Surplus..... 50,000.00</i>
<i>Loans and Discounts..... 250,210.80</i>	<i>Undivided Profits. 34,022.15</i>
<i>Real Estate, Furniture, etc..... 25,280.10</i>	<i>Actual Capital. ————— 234,022.15</i>
<i>Current Expenses and Taxes Paid 2,750.19</i>	
<i>Due from Banks and Bankers.... 80,240.60</i>	
<i>Total..... \$499,872.40</i>	<i>Total.....\$499,872.40</i>

ORGANIZING A COUNTRY BANK.

The American Bank of Farmer stood among the most honored and best managed institutions of its particular class in the New World. It was a country bank and a thoroughly solid and conservative one. Its capital was

large for such an institution, and was fully paid in. A handsome surplus stood ready to meet unexpected emergencies, and semi-annually the stockholders were made happy with good dividends. But it was once a child in the financial world, though it grew rapidly to its high station when it became the "United National," with its paid-up capital of a million dollars.

A look into the history of the American Bank of Farmer will furnish material for an instructive chapter, and serve to enlighten us upon the circumstances which, in many cases, lead up to the organization of many similar institutions, especially in the smaller cities and towns of America.

It was but a few years ago that Farmer was a small town, though favorably situated within the borders of a beautiful country rich in every natural advantage and holding out to the energetic and work-loving people of many classes great inducements and golden opportunities. The country prospered and the town grew rapidly. From a small trading post for farmers it became a busy, flourishing village.

Among the most highly honored citizens of this thriving town lived three men whose names and fortunes were long connected with the American Bank of that place. The first of these was for many years a country merchant who established and managed in the village a typical country store; the second was the proprietor of the busy flouring mill, a conspicuous edifice in the village which stood upon the bank of a small but ever restless little stream; the third of these was a successful farmer, an enterprising and frugal man, well versed in the knowledge of his chosen occupation, and who was thrifty and industrious.

In the office of Nicholas Brown, for such was the name of the country merchant and one of the prominent figures connected with this history, was a commodious safe. Safes are not unusual parts of an office equipment, even in towns and villages; but those commonly in use are small in size compared with the one in Mr. Brown's place of business. The purchase of this unusually large and expensive piece of furniture by this country merchant was one of the earliest incidents connected with the history of the American Bank. The safe was not directly connected with the bank, nor did it at any time form a part of the bank's assets, yet it would be ungenerous to write a history of the great institution without giving some credit to this particular article of equipment which so long occupied a prominent place in Mr. Brown's office.

Mr. Brown was highly respected by his fellow-tradesmen and neighbors. In his dealings the soul of honor, in his enterprises straightforward and sagacious, in his ordinary business affairs considerate, prompt and exacting. That he should win and hold the confidence of his fellow-townsmen could be no subject of doubt with any person familiar with his disposition and character. Merchant Brown's enviable reputation, coupled with the large fire-proof safe in his office, were all that was necessary to suggest security to many townspeople who had spare cash while there was no regular institution of deposit in the vicinity. It was not many days after the large safe was placed in Mr. Brown's establishment when he was asked as an accommodation to become the custodian of various sums of money belonging to merchants, farmers and other of his friends and acquaintances. Money entrusted to Nicholas Brown's safe and under the eye of the vigilant proprietor was invariably considered better guarded from rogues and protected from fire than

when most securely kept under lock and key in the best bureau drawer or the quaintest old attic in the town.

This gratuitous service to friends and neighbors grew ere many years with the obliging merchant to be an unwelcomed honor. Aside from the petty annoyances to which the merchant was subjected, there arose also a burden of responsibility and risk that was far from pleasant to contemplate. When from a few hundred the trust had grown to many thousand dollars, the careful custodian realized how his accommodations were fast jeopardizing his own welfare and comfort. Should it become generally known that so large sums of money reposed within the walls of this safe a strong inducement would be offered to the crooks who might become possessed of the information. A plan for obviating this serious annoyance and suspicion without interference to the accommodation of the people formed a question of high importance to this worthy holder of many trusts. The problem demanded and received the merchant's earnest attention, and a practical solution was soon wrought out. Checkton was the metropolis of the State and the commercial headquarters of a wide territory. To this city proceeded Mr. Brown with a large amount of money taken from the safe in his office, and here, with one of the best banking institutions, he opened an account by depositing a snug sum, and returned to his home. Heretofore money entrusted to Mr. Brown was put into an envelope, sealed, and the name of the owner marked upon it. Now the plan was adopted of obtaining in nearly every case permission to deposit the money in the Checkton Bank to the credit of the merchant's personal credit. This plan, by placing the money out of the control of the owner, made it necessary that the merchant should issue some sort of an acknowledgment for the money placed in his hands. To meet this necessity Mr. Brown issued either his demand note, without interest, or his check on the Checkton Bank. When it was desired to remit money to some distant place, Mr. Brown's personal check was almost invariably made use of. As the Checkton institution allowed a small rate of interest on the balances of Mr. Brown's account, he was enabled in that manner to derive some benefit in return for the gratuitous service rendered his patrons and friends.

The increasing demand upon the country merchant and the comparatively small return he could derive for the accommodation fostered in Mr. Brown's mind the need of a banking institution in the prosperous and rapidly growing town of Farmer. After careful consideration he decided to interest himself in the establishment of a bank, at the same time determining upon whom he should invite to join him in the enterprise. The plans being somewhat matured, the merchant waiting a favorable opportunity, invited into his office his fellow-townsmen—Amos White, the miller, and Ezra Gray, the clear-headed farmer—the two prominent citizens we have before alluded to. When the three had assembled according to appointment the merchant laid before his friends the scheme which had engrossed a good share of his attention.

"And to organize a bank must we procure a charter from the State?" inquired Farmer Gray.

"That depends on circumstances," answered the merchant. "We may form a simple partnership if we choose, under which we may conduct a banking business in receiving deposits, paying checks, selling exchange, discounting notes, and making collections. We may proceed by incorporation,

procuring a charter from the State, if that be our wish, and thus have a specified capital with shareholders, Directors and officers. It is a question for us to decide whether we are to form a partnership or incorporate and secure a charter. I am ready to listen to anything you gentlemen may have to offer."

"There are certain advantages, I understand, to be derived from incorporation," said Mr. White, "but I think there are some objections to be offered also. If we adopt that plan we must incur expenses of procuring a charter, then we must issue shares, and must have a Board of Directors who shall meet regularly, and who shall choose officers. In my judgment I am inclined to favor a simple partnership for the present, though I shall waive any personal preferences to come in harmony with a majority."

"I think I should favor a partnership for a time at least," ventured Mr. Gray.

"And that arrangement meets my ideas perfectly," assuringly answered Mr. Brown, "and for the present I propose that we use a simple partnership or firm name. What shall it be, gentlemen?"

"I say 'Nicholas Brown & Co.,'" promptly responded Mr. White, "if that is satisfactory, or 'Brown, Gray & Co.,' which is equally as favorable and just as satisfactory to me."

"Why not 'Brown, White & Co.,'" suggested Mr. Gray. "Those words, it appears to me, join together with perfect euphony, and, as for myself, there is no special desire to see my name so prominent. It is an honor quite sufficient to be associated with the firm and share in the profits without the name being made conspicuous. But, Mr. White," continued the speaker, "the firm name you first mentioned, 'Nicholas Brown & Co.,' is, I should presume, as good as anything we can adopt; if Mr. Brown will consent, and you are satisfied, I will favor it."

"Gentlemen," said Mr. Brown, "I am very grateful for the compliment, but, really, I can see no reason why the firm name should not be 'Amos White & Co.,' or 'Ezra Gray & Co.,' with as much propriety as the one you suggest. If left with me, I should prefer to see it so, but I shall cheerfully assent to whatever may be thought advisable by the majority."

"Then the firm name is fixed, as proposed," remarked the miller, with an air of satisfaction, "and I suggest that we have articles of partnership prepared as soon as we can decide upon the details."

(To be Continued.)

The Attack on Massachusetts Savings Banks.—There are indications that the savings banks—the repositories of the wealth of the laboring classes—are, like all other treasure houses, to receive the attentions of the class who like to use other people's capital for their own profit. The laws protecting savings in such States as Massachusetts and New York assume it is necessary to limit the investment of the people's money to safe securities. These are usually defined, outside of good mortgages, to be United States bonds, the bonds of States, under certain conditions, and a few other first-class securities. There is in the Massachusetts Legislature a determined attempt now being made to bring railroad bonds into the circle of permitted investments. Of course, as a rule, danger comes with widening the limits. Yet there are securities outside the legal pale that are good. The danger is not in permitting the bonds of one solvent railway to come in, but in the precedent afforded.

**Notes and Comments on
BANKING PRACTICE.**

SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

The Comptroller and the National Banks.—When the National banks were originally instituted, the principal object in establishing them was in part to provide a currency for the country and in part to establish a market for Government bonds, and in the pressing exigencies of those times, the latter part was by far the chief part as far as the Government was concerned, and the former part was the inducement held out to the banks to come more willingly into the National system. The office of the Comptroller of the Currency, as the name indicates, was established in order to provide a proper Government official to look after the currency issues of the Government banks. It did not at all enter into the original conception of the functions and duties of this officer to charge him with an entire oversight of the banks, much less with their internal management. One of the great evils which had been characteristic of the old State banks, was the frequent overissue of notes; and it was thought that to prevent this overissue would be the real, principal duty of the Comptroller of the Currency, and incidentally the adoption of one form of a bank note and having that form printed under Government supervision would be a great check upon counterfeiters; but, as is usually the case, with the growth of the system, the duties of the Comptroller's office grew also. With the aid of the National bank Examiner the Comptroller was from the first required to inform himself as to whether the banks were observing the various provisions of the National Bank Act, and to that end was authorized to make a thorough examination of any bank at any time, but such an examination did not afford the presumption that the Comptroller was a sort of managing official for all the banks in the United States. Each bank is supposed to have its own President, and the Comptroller of the Currency should not by any means be regarded as a sort of President-General for the whole banking fraternity. His functions were supposed to be strictly limited to ascertaining by means of his examiners, whether the provisions of the law were complied with, and in case of neglect on the part of the bank to conduct its business according to the legal requirements, then it became the duty of the Comptroller to take such measures as would result in the proper observance of the law. Partly owing to the concentration of affairs in the office of the Comptroller of the Currency, and partly to the high character and ability of the gentlemen who filled that office, the duties of the Comptroller became somewhat more extended than had been originally contemplated by the framers of the National Bank Act. Inasmuch as the duties originally imposed upon the Comptroller were performed with great skill and fidelity, the public began to demand, perhaps unconsciously, that the Comptroller should be expected not only to enforce the law

but also to give considerable gratis advice—advice not always received either gratefully or gracefully. As the public became more and more accustomed to the National bank, and as the old State banks began to drop one after one into line, the National bank finally became an established institution, and the public began to insist that the National bank should be National not only in name but in everything else, arguing that the Government had created them, and therefore should see to it that its creatures conducted themselves in a proper and becoming manner, hence it happens that whenever a National bank fails there is a great uproar raised about the neglect of the Comptroller of the Currency, and the National Bank Examiners, and everybody else connected with the United States Government, while the President and Directors who are really the only persons to blame in the matter, are usually, except in cases of gross and open negligence, allowed to go entirely free of blame. However much we may be disposed to criticise this attitude of the public mind, it is well to remember that the Comptroller's office has simply followed the ordinary laws of development, and that what has happened has only been the natural outcome of current events. It would be well if some high judicial authority would lay down in clear and distinct language exactly what are the functions of the Comptroller's office, and draw a sharp and distinct line where the duties of the Comptroller's office end, and those of the President and Directors of the bank begin.

Uniform Checks.—Mr. Frank E. Brown of the First National Bank, Chicago, referring to the articles in the February JOURNAL on the subject of "Uniformity in Checks," contributes the following: I notice in your February number an adverse criticism by Mr. Charles E. Sprague, upon the Uniform Check, and as this criticism is founded upon what he believes to be a legal objection and may possibly affect the action of banks and commercial houses about to adopt the new forms, will you kindly give space for a view of the case from the same—the legal—standpoint by an authority on banking law.

The rule of law which Mr. Sprague refers to, rests principally, at least, on the presumption of greater deliberation in the writing of words than in the setting down of figures; it being considered that a man is more likely to make a mistake in the latter than in the former. The fact that the figures are, or have been, usually in the margin or corner is referred to by the Courts, but not as the reason for the rule of law; certainly not as the main reason. The rule in question is not stated in such language as permits any doubt whatever but that the rule of law would be the same, in the case of the forms of checks and drafts adopted by the Bankers' Club of Chicago, as in the case of checks and drafts on the old forms. This opinion is given me by the attorney of the First National Bank of Chicago, who refers me to "Morse on Banking," 2d edition, p. 326 and cases there cited. FRANK E. BROWN, Chicago.

Protecting the Cash.—Of late years some of the more progressive city banks have gotten into a custom of separating the money department of the bank from the rest of the office, and of keeping the actual cash money under lock and key; but in a great many banks, indeed in almost all, the old fashioned plan of letting the money take care of itself when it once gets behind the railing, is pursued to a greater or less extent, usually greater. It is no uncommon thing to see money stacked up on an open table with the clerks passing to and fro, and in addition to the clerks of the bank, Directors, Directors' clerks, occasional visitors, and every now and then the plumber,

gasfitter, or carpenter, or anybody else. Occasionally, it may be, the cash runs considerably short and then there is a great uproar to discover who has the missing funds, and usually with very little result in finding out anything about it, for where so many persons are about, it is practically impossible to fix the blame on any one person in particular. The cash reserve of the bank ought not to be in the charge of the same person who handles the current money of the day. The paying Teller should be provided with sufficient funds to run his counter, and from time to time during the day, with such further amounts as he may require; but to throw upon the paying Teller the entire and sole custody of the money of the bank is putting upon that official a burden heavier than he should be required to bear. More especially as it is impossible for him to prove this large amount of cash at the close of the day. The methods suggested in a recent issue of the *JOURNAL*, by which the Cashier has charge of the reserve fund of the bank and supplies the Teller from time to time with such amounts as he may want, or receives from the Teller in even amounts, such surplus funds as may accumulate, is certainly an excellent one and one which should be adopted in all carefully managed banks. The cash money itself, ought never, under any circumstances, to be kept out in a public place, but should be carefully kept in a safe or drawer, specially set apart for that purpose. To avoid the trouble of locking and unlocking the drawers of the inside safes, such safes may be provided with inside wire doors, which can be easily secured by the Yale lock, thus making the safe itself secure from intrusion during the day, and at the same time easy of access. The money department should also be furnished with a wire door and Yale lock, and should be entered only by the properly authorized persons.

Collection Register Forms.—The following forms are furnished by the Cashier of a National bank, who has found them of great practical value :

FIRST NATIONAL BANK, }
 Editor Rhodes' Journal of Banking : ROCK HILL, S. C., February 1, 1888. }

SIR :—I beg to enclose herewith a form of Collection Register which has been originated, in some measure, by the Teller of this bank, and is now in use by us. We find that, in many respects, it is an improvement over the old form in use by country banks, and, as we have been reading with pleasure the articles on "Banking Practice," we take the liberty of sending these forms.

Form No. 1 is the one used for our correspondents (see opposite page), and their items sent us for collection and credit are entered upon the Register, and the credit of deposit ticket, made out at the same time that the collections are entered, and the items, together with the credit ticket, are passed to the Teller for verification.

Form No. 2 is that used for collections sent us by other than correspondent banks. As soon as the collections are entered they are remitted for on the form which is detached, and forwarded with the exchange.

We have found these forms of Register to be labor-saving and economical, and in every way more satisfactory than the ordinary Collection Register.

Trusting that they may be of some use to you, and with the assurance, as subscribers, that we are thoroughly alive to the good that is being done to the banks at large—and more especially to country banks and bankers—by the valuable suggestions that appear in the *JOURNAL* on the methods and practice of banking,

Yours,

W. J. RODDEY, *Cashier.*

* LEGAL DECISIONS AFFECTING BANKERS.

CHECKS AND BILLS OF EXCHANGE—THEIR POINTS OF SIMILARITY AND DIFFERENCE STATED—WHEN IS BANK CHECK OVERDUE AND TAKEN SUBJECT TO EQUITIES?—NEGOTIABILITY UNAFFECTED BY BEING MADE PAYABLE "IN CURRENT FUNDS."

(An instrument drawn by a Minnesota bank upon a bank in New York, where it had funds, was in the following words: "\$500. The First National Bank of Kasson, Minn., October 15, 1881. Pay to the order of Mr. A. LaDue five hundred dollars in current funds. E. E. FAIRCHILD, Cashier. To Ninth National Bank, New York City." It was indorsed by the payee to M. Edison, and by the latter subsequently indorsed to plaintiffs. *Held*, That the instrument was a bank check and not a bill of exchange; that consequently it was not due until payment was demanded, and could be enforced against the drawer by a *bona fide* holder to whom it had been transferred more than five months after its execution, but before dishonor, free from any equities to which it might be subject in the hands of the transferor. Further *Held*, That the negotiability of the instrument was not affected by the fact that it was made payable "in current funds.")

This was an action in the Circuit Court of the United States for the District of Minnesota upon two drafts or bills of exchange (as they were termed in the record) brought by the holders thereof against the drawer, the First National Bank of Kasson, after non-payment. The following is a copy of one thereof, the other being exactly similar in everything except the number :

\$500.

October 15, 1881.

THE FIRST NATIONAL BANK OF KASSON, MINN.

Pay to the order of Mr. A. La Due five hundred dollars in current funds.

To Ninth National Bank, New York City.

E. E. FAIRCHILD, Cashier.

Indorsed: "Pay to the order of M. Edison, Esq.—A. La Due, M. Edison."

Immediately after their execution these instruments were transferred by indorsement of the payee to one M. Edison, at Kasson, Minn. Edison was, at the time, largely indebted, and on the following day he absconded from Kasson, carrying the drafts with him. These drafts he retained in his possession until March 24, 1882, when, at Quincy, in Illinois, he sold and indorsed them for a valuable consideration to the plaintiffs, who had no notice of any set off to them. The plaintiffs then forwarded them to New York city, where on the 27th of March they were presented for payment to the drawee, the Ninth National Bank of New York, and payment was refused by it. The drafts were then protested for non-payment and notice thereof given to the drawer and indorsers. In the meantime the First National Bank of Kasson, the drawer of the drafts, had become the owner of certain demands against Edison, which, under the statute of Minnesota, could be legally set off against its liability on the drafts in the hands of Edison, and also in the hands of the plaintiffs, unless they were protected against such set off as innocent purchasers of the paper before maturity, and without notice of the set off. At the time the drafts were drawn and at the time of their presentation for

*All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

payment the Ninth National Bank of New York had in its hands money of the drawer sufficient to pay them.

The action was tried by the Court without the intervention of a jury by stipulation of the parties, and the facts stated above were embodied in its findings. Upon these facts the following question of law arose, viz.; whether the said drafts or bills of exchange were to be regarded as overdue and dishonored paper at the time they were presented by the plaintiffs to the drawee for payment, and payment refused, so as to admit the set off. Upon this question the Judges were divided in opinion, and the case was carried to the Supreme Court of the United States on a certificate of division. The Circuit Judge who presided at the trial was of the opinion that the question should be answered in the affirmative, and judgment was ordered for the defendant, to review which the case was brought to the Supreme Court.

Held, In the record the instruments upon which the action is brought are designated as "drafts or bills of exchange." In a general sense they may be thus designated; for they are orders of one party upon another for the payment of money, which is the essential characteristic of drafts or bills of exchange. They are also negotiable and pass by delivery, and are within the description of instruments of that character in the Act of March 3, 1875, prescribing the jurisdiction of the Circuit Courts of the United States. But, in strictness, they are bank checks. They have all the particulars in which such instruments differ, or may differ, from regular bills of exchange. They are drawn upon a bank having funds of the drawer for their payment, and they are payable upon demand, although the time of payment is not designated in them. A bill of exchange may be so drawn, but it usually states the time of payment, and days of grace are allowed upon it. There are no days of grace upon checks. The instruments here are also drawn in the briefest form possible in orders for the payment of money, which is the usual characteristic of checks. A bill of exchange is generally drawn with more formality and payment at sight or at a specified number of days after date is requested, and that the amount be charged to the drawer's account. When intended for transmission to another State or country they are usually drawn in duplicate or triplicate, and designated as first, second or third of exchange. A regular bill of exchange, it is true, may be in a form similar to a bank check, so that it may sometimes be difficult, from their form, to distinguish between the two classes of instruments. But when the instrument is drawn upon a bank or a person engaged in the banking business and simply directs the payment to a party named of a specified sum of money, which is at the time on deposit with the drawee, without designating a future date of payment, the instrument is to be treated as a check rather than as a bill of exchange and the liability of the parties thereto is to be determined accordingly. If the instrument designates a future day for its payment it is, according to the weight of authorities, to be deemed a bill of exchange, when, without such designation, it would be treated as a check. (Bowen *vs.* Newell, 8 N. Y., 190.)

The instruments upon which the action is brought being bank checks, the liability of the parties is determinable by the rules governing such paper. A check implies a contract on the part of the drawer that he has funds in the hands of the drawee for its payment on presentation. If it is dishonored the drawer is entitled to notice; but, unlike the drawer of a bill of exchange, he is not discharged from liability for want of such notice unless he has sustained damage or is prejudiced in the assertion of his rights by the omission.

In *Bank vs. Bank* this Court said: "Bank checks are not inland bills of exchange, but have many of the properties of such commercial paper; and many of the rules of the law merchant are alike applicable to both. Each is for a specific sum payable in money. In both cases there is a drawer, a drawee and a payee. Without acceptance no action can be maintained by the holder upon either against the drawee. The chief points of difference are that a check is always drawn upon a bank or banker. No days of grace are allowed. The drawer is not discharged by the laches of the holder in presentment for payment, unless he can show that he has sustained some injury by the default. It is not due until payment is demanded, and the statute of limitations runs only from that time. It is by its face an appropriation of so

much money of the drawer in the hands of the drawee to the payment of an admitted liability of the drawer. It is not necessary that the drawer of a bill should have funds in the hands of the drawee. A check in such case would be a fraud." (10 Wall, 647.)

Similar language is used by Mr. Justice Story with reference to the time when checks are to be regarded as due. In stating the difference in point of law between checks and bills of exchange he refers to the rule that a bill of exchange taken after the date of payment subjects the holder to all the equities attaching to it in the hands of the party from whom he receives it. "But," he adds, "this rule does not apply to a check; for it is not treated as overdue, although it is taken by the holder some days after its date, and it is payable on demand. On the contrary the holder in such a case takes it subject to no equities of which he has not, at the time, notice; for a check is not treated as overdue merely because it has not been presented as early as it might be, or as a bill of exchange is required to be, to charge the drawer or indorser or transferrer. One reason of this seems to be that, strictly speaking, a check is not due until it is demanded." (Prom. Notes, Sec. 491. See also *In re Brown*, 2 Story, 502, 513.)

Accepting these citations as correctly stating the law, the question presented for our decision is readily answered. The drawer was in no way injured or prejudiced in his rights by the delay of Edison to present the checks. The funds against which they were drawn remained undisturbed in the hands of the drawee, and therefore the drawer had no cause of complaint. The instruments in suit were not overdue and dishonored when presented for payment. Until then the plaintiffs, as purchasers for a valuable consideration without notice of any demand against Edison in the hands of the drawer, were protected against its set off.

The certificate of division of opinion presents to us only one question, and yet to answer that correctly we must consider whether the negotiability of the instruments in suit was affected by the fact that they were payable "in current funds." Undoubtedly it is the law that, to be negotiable, a bill, promissory note or check must be payable in money or whatever is current as such by the law of the country where the instrument is drawn or payable. There are numerous cases where a designation of the payment of such instruments in notes of particular banks or associations or in paper not current as money has been held to destroy their negotiability. (*Irvine vs. Lowry*, 14 Pet., 283; *Miller vs. Austen*, 13 How., 218; 228.) But within a few years, commencing with the first issue in this country of notes declared to have the quality of legal-tender, it has been the common practice of drawers of bills of exchange or checks or makers of promissory notes to indicate whether the same are to be paid in gold or silver or in such notes; and the term "current funds" has been used to designate any of these, all being current and declared, by positive enactment, to be legal-tender. It was intended to cover whatever was receivable and current by law as money, whether in the form of notes or coin. Thus construed we do not think the negotiability of the paper in question was impaired by the insertion of these words.

It follows from these views that the question certified to us must be answered in the negative. The judgment will therefore be reversed and the cause remanded with directions to enter judgment for the plaintiffs upon the findings, and it is so ordered.

Opinion by Field, J.

Bull and others vs. First National Bank of Kasson, Supreme Court of the United States, October 31, 1887.

DEMAND NOTE PAYABLE "WITH INTEREST"—PRESENTMENT FOR PAYMENT—INDORSERS NOT RELEASED THOUGH NOT PRESENTED FOR SIXTEEN MONTHS—THE PROVISIONS OF THE CALIFORNIA CODE ON THE SUBJECT CONSIDERED—PAYMENT BY ACCOMMODATION INDORSER—CONTRIBUTION.

Machado and Fernandez were accommodation indorsers of a promissory note which was made and dated February 26, 1885, and was payable on demand with interest. On the 9th day of July, 1886, the payee of the note demanded payment thereof from the makers, and his demand not being complied with,

gave notice of its dishonor to the indorsers. Subsequently the payee brought suit on the note against the makers and indorsers, and thereupon Machado, without any trial of the case, paid to him the full amount due for principal, interest and costs. This action was then commenced by Machado to enforce contribution from Fernandez of one-half the amount so paid. A general demurrer was interposed to the complaint and sustained. Judgment was then entered against the plaintiff, Machado, and from that judgment he appealed to the Supreme Court of California.

In support of the judgment it was argued for Fernandez that as the note was payable on demand, with interest, its apparent maturity, under Section 3,135 of the Civil Code, was one year after its date; and as it was not presented for payment till more than four months after that time had elapsed, and no reason for not sooner presenting it was shown, the indorsers were released from all liability, and consequently the payment by the plaintiff was voluntary, and no cause of action for contribution was thereby created against Fernandez.

Held. It is undoubtedly true that a payment to be the foundation of a claim for contribution must be compulsory; that is, there must be a fixed and positive obligation to pay. And if one has voluntarily paid money where there was no fixed and positive obligation resting upon him to pay it, he cannot maintain an action for contribution. The question then is, Did the mere delay in presenting the note in question for payment for more than four months after its apparent maturity release the indorsers from all obligation to pay it?

The rule upon this subject has not been uniform. For example, it was held in this State, before the Codes were adopted, that a note, payable on demand, with interest, must be presented within a reasonable time in order to hold an indorser, and that in the absence of any showing why the demand was not sooner made, a delay of two weeks was unreasonable. (*Keyes vs. Fenstermaker*, 24 Cal., 329.) On the other hand, it has been held in New York that such a note is a continuing security; that an indorser remains liable upon it until demand is actually made, and that the holder is not chargeable with neglect for omitting to make such a demand within any particular time. (*Merritt vs. Todd*, 23 N. Y., 28; *Pardee vs. Fish*, 60 N. Y., 265.) It is claimed for Machado that the rule announced in *Keyes vs. Fenstermaker* was changed by the provisions of the Civil Code, and that, in effect, the rule prevailing in New York was adopted. The sections of the Code referred to read as follows:

"Section 3,135. The apparent maturity of a promissory note payable at sight or on demand is (1), if it bears interest, one year after its date; or (2), if it does not bear interest, six months after its date."

"Section 3,248. If a promissory note, payable on demand or at sight, without interest, is not duly presented for payment within six months from its date, the indorsers thereof are exonerated, unless such presentment is excused."

"Section 3,214. Mere delay in presenting a bill of exchange payable, with interest, at sight or on demand, does not exonerate any party thereto."

"Section 3,247. Chapter 1 of this title and Sections 3,181 and 3,214 of this Code apply to promissory notes."

Now, if Section 3,214 be changed so as to apply to promissory notes, it will then read: "Mere delay in presenting a promissory note, payable with interest, at sight or on demand, does not exonerate any party thereto." What party is referred to by the words "any party thereto?" It must be the indorser, for the maker, the surety, and the guarantors are never exonerated by any mere delay till the Statute of Limitations runs in their favor. It would seem, then, as claimed by Machado, that a distinction is clearly made as to the liability of indorsers between notes payable on demand without interest and those payable on demand with interest. In the one case it is clearly declared that the indorser is released from liability if the note is not duly presented for payment within six months after its date, and, in the other, that he is not released from liability by any mere delay in presenting it. If this be the correct construction of the sections cited, and we are unable to see how any other construction can be given them, it must follow that the indorsers upon the note in question were not released from their obligation to pay it because presentment and demand of payment were not sooner made. It must also follow that, when suit was

brought against all the parties to the note, Machado had the right to at once pay the amount due, and to then call upon Fernandez to contribute his share of that amount.

Judgment reversed and cause remanded with instructions to overrule the demurrer.

Machado vs. Fernandez, Supreme Court of California, December 20, 1887.

SHARES IN STATE BANKS—LIEN OF BANK THEREON FOR INDEBTEDNESS OF SHAREHOLDER—IN MINNESOTA, UNDER SECTION 48 OF THE GENERAL BANKING LAW, WHICH IS IDENTICAL WITH SECTION 35 OF THE NATIONAL BANK ACT, NO SUCH LIEN CAN BE ASSERTED BY BANK—RIGHTS OF CREDITOR HOLDING SHARES AS SECURITY.

Defendant, a banking corporation created under the laws of Minnesota, adopted a by-law in 1872, embracing the provisions that no transfer of the stock should be made, without the consent of the Directors, by any stockholder who should be liable to the bank, either as principal debtor or otherwise, and that the stock should be assignable only on the books of the bank. In 1884 the defendant bank issued to one Kelley stock certificates, which bore upon their face a statement that the stock was transferable only on the books of the bank, and that it was not transferable by any stockholder liable to the bank as principal debtor, or otherwise, without the consent of the Board of Directors. In 1886, Kelley, who was then indebted to the bank, without the consent of the defendant's Directors, assigned and delivered to the plaintiff, the Nicollet National Bank, his stock certificates as security for a debt then contracted. This debt being still unpaid, the plaintiff notified the defendant of the indebtedness and assignment. After this the defendant, in an action against Kelley upon his indebtedness, attached the interest of Kelley in this stock; after which the plaintiff, producing to the defendant and offering to surrender the stock certificates, demanded that the proper transfer be made on the books of the bank, which was refused. This action was then commenced to recover the value of the stock.

Held, The defendant asserts a lien on the stock for the indebtedness of Kelley and claims that whatever rights the plaintiff acquired by the assignment or pledge were subject to that lien. It is asserted that the by-law, in terms charging the stock with a lien in such cases, was authorized by the statute in force at the time the by-law was adopted. This law (Sec. 14, c. 33, Gen. St. 1878), was as follows: "The shares in such bank are personal property, and transferable on the books of the bank in such manner as may be agreed upon in the articles organizing such bank, or prescribed in its by-laws; and every person becoming a stockholder therein shall, in proportion to his interest, succeed to all the rights and be subject to all the liabilities of prior stockholders." In view of the construction and effect which must be given to a later enactment—Chapter 77 of the Laws of 1881—which was passed before the issuing of this stock to Kelley, we deem it unnecessary to determine what, independently of the later act, might have been the force of the earlier statute and of the by-law referred to.

By the Act of 1881 a new section was added to the prior banking law designated Section 48, which is: "No association shall make any loan or discount on the security of the shares of its own capital stock, nor be the purchaser or holder of any such shares, unless such security or purchase shall be necessary to prevent loss upon a debt previously contracted in good faith; and stock so purchased or acquired shall, within six months from the time of its purchase, be sold or disposed of at public or private sale." This is an exact transcript from Section 35 of the National Banking Act of June 3, 1864, and was undoubtedly intended to be, as it is, a copy of that part of the Congressional Act. More than ten years before we thus incorporated this provision in our statute, the Federal statute had been authoritatively construed by the Supreme Court of the United States in *Bank vs. Lanier*, 11 Wall., 309. It was there held that a pledge of stock to a bank by a stockholder, as security for obligations in the nature of a debt, was a violation of the 35th Section of the Act of 1864. It was also considered by the Court that the claim of the bank of

a lien upon the stock, apart from any special agreement, was also opposed to the law of 1864, although a by-law authorized by the Act of 1863 under which the bank had been organized (but which was repealed by the Act of 1864) provided for such a lien.

Again, in 1873, in *Bullard vs. Bank*, 18 Wall., 589, it was decided, following *Bank vs. Lanier*, that a National bank organized under the Act of 1864, could not acquire a valid lien upon the shares of its stockholders for money loaned, even by express provision therefor in its articles of association and its by-laws. This, as the opinion shows, was deemed to be within the prohibition of the 35th Section of the Act. In 1871 and 1874, the Courts of New York, Maine and Kentucky were called upon to follow these decisions of the Supreme Court of the United States as to the effect of Section 35 of the Act of 1864. (*Conklin vs. Bank*, 45 N. Y. 655; *Hagar vs. Bank*, 63 Me. 509; *Bank vs. Bank*, 10 Bush, 367.) It is further to be noted that Section 12 of the Congressional Act of 1864 contains, in substance, the same provisions as Section 14 of our General Statutes above recited, and upon which the defendant places some reliance.

It is a well-recognized principle that where a statute, the construction of which has been judicially determined, has been adopted into the statute law of another State, a presumption arises, which, however, should be considered in connection with other principles of construction, that the Legislature adopted the statute with that special construction. (*In re Railway Co.* 33, N. W. Rep. 701, 703; *Cooley Const. Lim.* 52, and cases cited.) There is no reason in the circumstances of this case to oppose the applicability of this rule of construction, or to weaken its force. But even without regard to this, it seems to us impossible to place any other construction upon the Act of 1881 than that which gives to it the effect of prohibiting the bank from loaning money to a stockholder upon the security of its own capital stock. To make such a loan, upon an express agreement that the stock should be held as security, would be plainly opposed to the statute. In the absence of such a special agreement, it would be equally opposed to the letter and spirit of the Act, that the bank should have a lien upon the stock, as security for such a loan, by force of any by-law adopted by it, or by legal implication. It was within the power of the Legislature, by general law, to declare such a prohibition which should be effectual as to future transactions, notwithstanding any regulation or by-law of the corporation to the contrary.

The matter in question is one of public concern, affecting the permanent solvency of banking corporations created, as well to subserve public interests, as for the benefit of its members (*Bank vs. Lanier, supra.*) and the manner in which they may conduct their business is not beyond such legislative control as may be necessary for the protection of the public. The by-law alone was ineffectual to oppose proper legislative control, by general law, and as to future transactions. To justify construing a statute for the creation of corporations as authorizing the adoption of by-laws of such a nature as to place the control of matters of public concern wholly within the power of the corporation, and excluding the future exercise of ordinary legislative functions, would, at least, require language admitting of no other reasonable meaning. The provision in Section 14 of the statute above recited, authorizing corporations to prescribe by by-law the manner of transferring stock, does not involve any such bargaining away or self-deprivation of legislative authority.

The assignment to the plaintiff, without a transfer on the books of the bank, did not constitute a complete transfer in merely legal contemplation, so as to effect an actual substitution of shareholders binding upon the corporation. But, as between the immediate parties to the transaction, the assignment was effectual and would be recognized and enforced, at least in equity, as against all parties not showing a superior right. (*Baldwin vs. Canfield*, 26 Minn. 43; *Black vs. Zacharie*, 8 How. 483, 513; *Bank vs. McElrath*, 13 N. J. Eq. 24; *Dickinson vs. Banks*, 129 Mass. 279; *Cushman vs. Manufacturing Co.* 76 N. Y. 365.)

The asserted lien of the defendant upon the stock, being illegal, did not oppose the acquisition by the plaintiff of the rights here asserted. The prior claim of the plaintiff must be allowed to prevail over the attachment of the defendant, the latter having actual notice of the facts. (1 *Mor. Corp.* 2d Edn.

Sec. 196-199, and cases cited; Jones, Pledges, 179.) What would be the result if there had been no such notice it is unnecessary to consider. Although the assignment to the plaintiff was for the purpose of collateral security, the plaintiff was entitled to have the same entered upon the books of the bank. (Cook, Stocks, Sec. 466 and cases cited; Coleb. Coll. Secur., Sec. 273.) The refusal of the defendant to make the proper entry on its books, upon an unjustifiable assertion of a superior lien upon the stock in its own favor, subjected it to liability in an action for damages, and under such circumstances the value of the stock affords the measure of recovery. (1 Mor. Corp., Sec. 217; Cook, Stocks, Sec. 576, 581; Kortright vs. Bank, 20 Wend., 91; 23 Wend., 348; Blanchard vs. Gaslight Co., 13 Gray, 212; Sargent vs. Ins. Co., 8 Pick., 90; Wyman vs. Powder Co., 2 Cush., 168; Pinkerton vs. Railroad, 42 N. H., 424; Building Ass'n. vs. Sendmeyer, 50 Pa. St., 67; Railway Co. vs. Sewell, 35 Md., 233; Bank vs. McNeil, 10 Bush., 54; McMurrich vs. Harbour Co., 9 U. C. Q. B., 333. See also, Baker vs. Marshall, 15 Minn., 177.)

The rights of the plaintiff in making the pledged securities available were not confined to a sale of the stock, encumbered as it was by the refusal of the bank to complete the transfer to the plaintiff.

Judgment for plaintiff.

Nicollet National Bank of Minneapolis vs. City Bank, Supreme Court of Minnesota, December 27, 1887.

PROMISSORY NOTE—IRREGULAR INDORSEMENT—LIABILITY OF PAYEE AS FIRST INDORSER TO PARTY WHOSE INDORSEMENT IS ABOVE PAYEE'S, AND WHO HAS TAKEN UP THE NOTE AFTER DISHONOR—ADMISSIBILITY OF EVIDENCE TO SHOW MISTAKE IN INSERTING DEFENDANT'S NAME IN BODY OF THE NOTE AS PAYEE.

This was an action of *assumpsit* brought by August Ahlborn against William Wolff to recover the contents of a note, of which the following is a copy:

\$746.79.	PITTSBURGH, December 18, 1885.
Four months after date I promise to pay to the order of William Wolff seven hundred and forty-six dollars and seventy-nine cents. At ———. Value received.	
R. C. WOLFF.	

Indorsed: "August Ahlborn, William Wolff; J. H. Ortman & Co."

The maker of the note in suit, R. C. Wolff, was the real debtor, and it had been discounted by the Duquesne National Bank, of Pittsburgh, for J. H. Ortman & Co., the last indorsers. The note was dishonored at maturity and notice duly given to all the indorsers. Afterwards August Ahlborn, the plaintiff, paid off and took up the note from the bank, and, claiming that his indorsement on the note before that of the payee was irregular and created no liability, and treating himself as the owner and holder of the note for value by purchase from the bank, he thereupon brought this action against William Wolff, as the first regular indorser, to recover its amount.

On the trial the Court permitted the defendant, William Wolff, under objection, to prove substantially the following facts: That the note in suit was the last of a series of renewal notes, the original note having been given by R. C. Wolff, payable to the order of August Ahlborn, and indorsed first by August Ahlborn, second by William Wolff, and third by J. H. Ortman & Co., for which firm the notes were from time to time discounted by the Duquesne National Bank. That William Wolff, the defendant, indorsed the note at the request of R. C. Wolff for the purpose of enabling him to renew the preceding note; that at the time the defendant put his name on the back of the note the body of the note was in blank, though the evidence on this point was conflicting; and there were no other indorsements on the back of it; that the defendant indorsed the note and handed it to R. C. Wolff in the absence of August Ahlborn, and without any understanding or agreement, or even conversation, with Ahlborn or with any one else as to the way in which the note should be filled up or whose name should be inserted as payee, or as to

the order in which Ahlborn and the defendant should be liable as indorsers thereon ; and that after the note in suit had been indorsed by Ahlborn and defendant, as aforesaid, it was delivered by R. C. Wolff to J. H. Ortman & Co., who filled up the blanks in the body of the note and indorsed it and had it discounted. Judgment was rendered for defendant, and Ahlborn, the plaintiff, appealed.

Held, In the absence of evidence *dehors* the note in suit and its indorsements, the legal relation of defendant to plaintiff is that of payee and first indorser ; and the note having been duly protested for non-payment, he is *prima facie* liable for principal, interest and costs of protest. To escape that liability defendant undertook to show that by mistake his name instead of plaintiff's was inserted in the body of the note as payee ; in other words, he assumed the burden of so reforming the instrument as to make plaintiff payee and first indorser instead of himself. Under our peculiar system of jurisprudence this may sometimes be done, even in the case of a negotiable instrument ; but the evidence that will warrant such reformation of the instrument on the ground of mistake must be clear, precise and indubitable. In such cases the trial Judge exercises the functions of a Chancellor, and unless the alleged mistake is so clearly and conclusively established that he would not hesitate to reform the instrument the question of fact on which the right to equitable relief depends should not be submitted to the jury.

In this case it may be conceded there was some evidence tending, perhaps, in a slight degree, to show the mistake alleged ; but was it of such a clear, precise and indubitable character as would warrant a Chancellor in reforming the note ? We think not, and therefore the learned Judge erred in submitting the question of mistake to the jury. Evidence was introduced tending to prove that the note in suit was given in renewal of a former note payable to the order of and indorsed by the plaintiff, and the jury were instructed that, if such was the fact, they might infer therefrom that the parties to the note in suit intended it should be filled and indorsed precisely as the former note was, and that by mistake it was not so done. In this we think there was error. The assumed fact which the evidence tended to prove and which may have been found by the jury did not warrant the inference they were permitted to draw therefrom. In view of all the testimony, the defendant failed to present such evidence of mistake as warranted the submission of the question to the jury.

Judgment reversed and a *venire facias de novo* awarded.

Ahlborn vs. Wolff, Supreme Court of Pennsylvania, January 8, 1888.

●COLLECTING BANK—LIABILITY TO DRAWER FOR FAILURE TO RETURN UNCOLLECTED DRAFT—BURDEN OF PROOF IS ON DRAWER TO SHOW SUBSTANTIAL DAMAGES.

This was an action at law by the drawer of a draft against the bank to whom it had been sent for collection to recover damages for the alleged negligence of the defendant in not collecting the draft or returning it to the plaintiff. The action was tried before a jury and verdict and judgment was rendered for the plaintiff. The bank appealed.

Held, The plaintiff drew a draft on Okane & Carroll on the 20th of October, 1885, and it was sent to the defendant for collection. The draft was accepted and became payable on the 25th of October, 18 5. It was not paid, and it is stated in the petition that the defendant failed to return said draft, or collect the same, and that the said Okane & Carroll were solvent, and at all times able to pay their debts between the 20th day of October and the 1st day of December, 1885, but they became insolvent on or about the day last named ; that if the defendant had used due diligence in the matter of presenting the draft, the same could have been collected, or had it returned said draft to the plaintiff as required by law to do, plaintiff could, by proper proceeding, have collected the same, but that, by reason of the negligence of the defendant as aforesaid, the balance due on said draft has been wholly lost to him. In substance, the answer denies that the defendant was negligent in failing to collect or return the draft, and denies that Okane & Carroll at any time between the dates above mentioned were solvent. The Court properly, we

think, declined to submit to the jury the question whether the defendant had been guilty of negligence in failing to present or collect the draft, but did submit to the jury whether the defendant had failed to return the draft, and in relation thereto said, in the fifth paragraph of the charge, that "as a general proposition of law, it may be stated that, if the bank failed to return the draft when ordered, and the acceptors failed while it was so held, and consequently the amount of it was lost to the plaintiff, the bank would be liable;" and in the seventh paragraph of the charge the Court said to the jury that "there is no question but that, under the conceded facts and undisputed evidence, the defendant is presumptively liable."

The draft, in fact, was not returned to the plaintiff until the 30th day of November, 1885. As to this fact it may be said there is no dispute. It will be observed that the Court, in the fifth paragraph of the charge, made the defendant's liability depend on the fact that the plaintiff ordered the draft to be returned. As this portion of the charge was not excepted to, it must be regarded as the law of the case. Therefore it is immaterial whether the defendant was liable for a failure to return the draft in the absence of any order from the plaintiff to do so.

But conceding the defendant failed to return the draft when ordered to do so, and that Okane & Carroll became insolvent on the 1st day of December, 1885, does this make the defendant presumptively liable, unless, by reason of the defendant's failure to return the draft "the amount of it was lost to the plaintiff," as stated in the fifth paragraph of the charge? We think not. The action for the purposes of this opinion must be conceded to be based on the negligence of the defendant in failing to return the draft. In order to recover substantial damages the plaintiff was required to show he had suffered such damages by the negligence of the defendant. The burden was on him. Now the Court, in substance, said he had done so, and as this was a question for the jury, the Court erred in giving the seventh paragraph of the charge. It cannot be said that it was a conceded fact, or that the undisputed evidence showed that Okane & Carroll were solvent at all times between October 20th and December 1, 1885, or whether, if they were, the defendant could, by legal means, have collected or secured the amount of the draft if it had been returned when ordered.

Judgment reversed.

Fox vs. Davenport National Bank, Supreme Court of Iowa, December 21, 1887.

TAXATION OF NATIONAL BANK SHARES—IOWA—SUCH SHARES NOT TAXED AT A GREATER RATE THAN THAT LEVIED UPON OTHER MONEYED CAPITAL IN THE STATE.

The question presented for determination grew out of an allegation on the part of the Davenport National Bank, located in Iowa, that the shares of its stock were taxed at a rate which was in excess of the taxes levied upon other moneyed capital of the State. The foundation of this allegation was that the statute of the State on this subject taxed savings banks, one of which was in the same town with the Davenport National Bank, on the amount of its paid-up capital, and did not tax the shares of those banks held by the individual shareholders. The case, passing through the State tribunals, was decided by the Supreme Court of the State against the bank, who carried the question to the Supreme Court of the United States for review.

Held, The proposition of counsel seems to be that the capital of savings banks can be taxed by the State in no other way than by an assessment upon the shares of that capital held by individuals, because, under the Act of Congress, the capital of National banks can only be taxed in that way. It is strongly urged that in no other mode than by taxing the stockholders of each and all the banks can a perfect equality of taxation be obtained. The argument is not conclusive if the proposition were sound; for the Act of Congress does not require a perfect equality of taxation between State and National banks, but only that the shares of the National banks shall not be taxed at a higher rate than other moneyed capital in the hands of individuals. That this does not mean entire equality is evident from the fact that, if the

capital of National banks were taxed at a much lower rate than other moneyed capital in the State, the banks would have no right to complain, and the law in that respect would not violate the provisions of the Act of Congress for the protection of National banks. It has never been held by this Court that the States should abandon systems of taxation of their own banks or of money in the hands of their other corporations, which they may think the most wise and efficient modes of taxing their own corporate organizations, in order to make that taxation conform to the system of taxing the National banks upon the shares of their stock in the hands of their owners. All that has ever been held to be necessary is that the system of State taxation of its own citizens, of its own banks and of its own corporations shall not work a discrimination unfavorable to the holders of the shares of National banks. Nor does the Act of Congress require anything more than this; neither its language nor its purport can be construed to go any further. Within these limits the manner of assessing and collecting all taxes by the States is uncontrolled by the Act of Congress.

In the case before us the same rate per cent. is assessed upon the capital of the savings banks as upon the shares of the National banks. It does not satisfactorily appear from anything found in this record that this tax upon the moneyed capital of the savings banks is not as great as that upon the shares of stock in the National banks. It is not a necessary nor a probable inference from anything in this system of taxation that it should be so, and it is not shown by any actual facts in the record that it is so. If then neither the necessary, usual or probable effect of the system of taxation discriminates in favor of savings banks against the National banks upon the face of the statute, nor any evidence is given of the intention of the Legislature to make such a discrimination, nor any proof that it works an actual and material discrimination, it is not a case for this Court to hold the statute unconstitutional. The whole subject has recently been considered by this Court in the case of *Bank vs. New York*, 121 U. S., 138. In that opinion it was held that while the deposits in the savings banks of New York constituted moneyed capital in the hands of individuals, yet it was clear that they were not within the meaning of the Act of Congress in such a sense as to require that, because they were exempted from taxation, the shares of stock in National banks must also be exempted. The reason given for this is that the institutions generally established under that name are intended for the deposits of the small savings and accumulations of the industrious and thrifty; that to promote their growth and progress is the obvious interest and manifest policy of the State; and as was said in *Hepburn vs. School Directors*, 23 Wall., 480, it could not have been the intention of Congress to exempt bank shares from taxation, because some moneyed capital was exempt.

It is not necessary to inquire whether the savings banks of Iowa are based upon principles similar to those of New York which were the subject of the opinion in *Bank vs. New York*, for, while in that case the savings banks were exempt from taxation, the Iowa statute imposes a tax upon them equal to that imposed upon the shares of the National banks. The whole subject is so fully reviewed and reconsidered in that opinion, delivered less than a year ago, that it would be a useless repetition to go further into the question.

Judgment of Supreme Court of Iowa affirmed.

Davenport National Bank vs. Board of Equalization, etc., Supreme Court of the United States, October 31, 1887.

PROMISSORY NOTE—CONDITIONAL SIGNATURE OF SURETY—NEGOTIATION BY MAKER WITHOUT FULFILMENT OF CONDITION—LIABILITY OF SURETY TO BONA FIDE HOLDER WITHOUT NOTICE.

On November 28, 1885, judgment was entered on a warrant of attorney contained in a judgment note for the sum of \$200, and attorney's commission \$10, in favor of I. J. McCandless against T. R. McCall, John Grossman and George K. Baker. The defendant Grossman filed a petition asking for a stay of execution, alleging substantially as follows: That T. R. McCall, the principal in the note, called upon Grossman some time prior to the date of the:

note and requested him to act as security on his note. This Grossman refused to do, but, as McCall insisted, he finally informed him that, if he would get another good man to sign a note as security with him, he would sign as requested. A few days thereafter McCall returned and informed Grossman that George K. Baker, a man known to be good, would sign the note with him as surety. Grossman then signed the note with the distinct understanding that it was not to be used unless George K. Baker also signed as surety. Grossman further alleged that the note was never delivered, but was handed to McCall for the purpose of getting the signature of said Baker, which was to be done before McCall should deliver the note; that Baker never signed the note, but that his name thereon was a forgery, and that plaintiff had directed the money to be made from Grossman alone. Grossman's petition being denied, he appealed.

Held, The Court below committed no error in refusing to open the judgment. It is not material that Grossman signed the note with the expectation that Baker would also sign it as co-surety. No knowledge of this understanding was brought home to McCandless, who loaned the money. If, then, Grossman signed the note, and entrusted it to McCall to get an additional signature, he put it in the power of the latter to perpetrate a fraud upon McCandless. The latter had agreed to loan the money to McCall in case both Grossman and Baker became sureties. McCandless had no reason to suppose that the signature of Baker was a forgery. It is a familiar rule of law that, when one of two innocent persons must suffer a loss, he shall suffer whose negligence was the cause of such loss. The application of this principle to the case in hand affirms the decree.

Appeal dismissed.

Grossman's Appeal, Supreme Court of Pennsylvania, October Term, 1887.

NEGOTIABLE PAPER — PURCHASE FROM BONA FIDE HOLDER FOR VALUE, BEFORE MATURITY, WITHOUT NOTICE OF ANY INFIRMITY, BY PARTY HAVING SUCH NOTICE—PURCHASER'S RIGHT OF RECOVERY.

Defendant being sued upon a negotiable instrument, insisted that because, when the plaintiff bought the instrument, he was aware that the defendant claimed that it had been made and put into circulation without authority by persons who assumed to be its agent, the plaintiff could only recover what he paid for the paper, although he purchased it from a holder who acquired it before maturity for value, without notice of any infirmity or ground of defence, and under circumstances that estopped the defendant from asserting that there was any defence.

Held, The law of commercial paper does not recognize any principle upon which this contention can be maintained. The rule is familiar and elementary that a purchaser of such paper acquires the title of his vendor and all the right of his vendor to enforce it for the full amount of the promise against the maker; and although the purchaser has knowledge of equities existing between the original parties to the paper, which his vendor did not have when he became the owner, the purchaser is not affected by such equities, but stands upon the title of the prior owner, and his title is intact. It is entirely clear that if any previous owner of the bonds and coupons in suit was a *bona fide* holder for value, the plaintiff, upon showing that he has paid value, can avail himself of the position of such previous holder.

There is a class of cases in which a purchaser of negotiable paper before maturity, who acquires knowledge that his vendor was not a *bona fide* holder of the paper, and that the paper was subject to a defence in his hands, is permitted to recover only what he has advanced upon purchasing the paper before he acquired such knowledge. These are cases in which there was no *bona fide* holder previous to the plaintiff. The principle is that the plaintiff was only a *bona fide* purchaser *pro tanto*, and therefore entitled to recover to that extent only. (*Dresser vs. Construction Co.*, 98 U. S., 92; *Harger vs. Wilson*, 63 Barb., 237; *Holcomb vs. Wyckoff*, 35 N. J. Law, 33; *Allaire vs. Hartshorn*, 21 N. J. Law, 665; *Campbell vs. Nichols*, 33 N. J. Law, 88.) These cases have no application to the present case.

Butterfield vs. Town of Ontario U. S. Circuit Court, N. D. N. Y., Nov. 16, 1887.

ABSTRACT OF CASES.

NEGOTIABLE INSTRUMENT—RIGHTS OF PURCHASER FROM BONA FIDE HOLDER FOR VALUE—KNOWLEDGE OF INFIRMITIES.

The purchaser of a negotiable instrument from a bona fide holder for value, acquires as good a title as the innocent holder had, and may recover thereon, although he may have had notice of infirmities in the note when he took it.

Bodley, et al. vs. Emporia National Bank, Supreme Court of Kansas, December 10, 1887.

CONFESION OF JUDGMENT ON DRAFTS NOT DUE—VALIDITY OF JUDGMENT.

A judgment was confessed and entered on certain bills of exchange before their maturity for their face value. *Held*, that the fact that judgment was entered for that amount before the maturity of the bills of exchange cannot affect its validity. The statute contemplates that a judgment may be confessed for a debt to become due.

Mechanics' Bank vs. Mayer, Supreme Court of Missouri, December 19, 1887.

NEGOTIABLE PROMISSORY NOTE—TRANSFER AFTER DUE—PAYMENT BY MAKER TO INDORSEE AFTER HE HAS TRANSFERRED THE NOTE, THOUGH IN IGNORANCE THEREOF, IS NOT VALID AS AGAINST THE HOLDER.

Where the payee of a negotiable promissory note indorses it to a third person after it becomes due, and the latter subsequently indorses it for value, to the holder, a payment by the maker to such third person, intended as a payment of the note, made after his indorsement to the holder but without notice thereof, will not constitute a valid payment of the note as against the holder and is no defense to an action by him against the maker. So held, notwithstanding Section 28 of the Civil Code of Oregon provides that "in case of an assignment of a thing in action, the action by the assignee shall be without prejudice to any set off or other defense existing at the time of, or before notice of, the assignment; but this section shall not apply to a negotiable promissory note or bill of exchange transferred in good faith and upon good consideration *before due*;" the Court saying: "A number of cases from the different States have been cited in which a similar provision or statute has been adopted, which have construed it as applicable to promissory notes *after due*. That construction has been adopted in the cases referred to by construing the negative words 'but this section shall not apply to a negotiable promissory note,' etc. as implying the affirmative, that a negotiable promissory note, or a bill of exchange transferred after due, stands upon the same footing as an assignment of a thing in action; and in an action by the holder, shall subject the same to any set off, etc., 'existing before notice of the transfer.' We are not willing to assent to this view. The cases referred to in our opinion were not well considered."

Adair vs. Lenox, Supreme Court of Oregon, December 19, 1887.

NATIONAL BANK—TRANSFER OF SHARES—ASSESSMENT ON STOCK AFTER FAILURE OF BANK—WHERE TRANSFEREE'S NAME WAS NOT ENTERED IN TRANSFER-BOOK, AND TRANSFEROR HAS BEEN COMPELLED TO PAY ASSESSMENT, CAN HE RECOVER AMOUNT FROM TRANSFEREE?

On February 24, 1873, L and B, shareholders in a National bank, sold to K forty shares of the capital stock of the bank and signed a transfer of the shares sold upon the transfer-book of the bank, leaving the name of the transferee blank. On the 15th of March, K sold the same stock to A, a responsible person, but at the request of the purchaser the transfer on the books of the bank was made to D, who was irresponsible, by writing his name in the blank left for the name of the transferee in the assignment which had been made by L and B. On the 17th of March the Comptroller appointed a Receiver of the bank, who on August 14, 1874, brought suit against the shareholders to enforce

their individual liability. To this suit K was made a party as the holder of the shares sold to him, but he appeared and set up his sale to A in defense. Upon the hearing the bill was dismissed as to him. Suit was then brought against L and B, alleging that they were owners of the stock at the time of the failure of the bank. They notified K of this suit and that if their defense failed they should fall back on him and hold him for whatever they might be compelled to pay on the stock they had transferred to him. Judgment was rendered against them, which they paid, and then brought the present suit against K to recover the money they had been compelled to contribute on account of the shares which they had previously sold to him. They claimed that upon the sale of the stock to K and the signing of the transfer on the books of the bank it became his duty to insert his name in the blank left for that purpose, and that he had failed in his obligation and duty in not so doing. The Supreme Court of Louisiana rendered judgment in favor of defendant, whereupon plaintiffs brought a writ of error to the Supreme Court of the United States.

Held, From the statement of the case it is apparent that the suit was not brought against K to enforce any liability of his under the National banking Act. That liability was disposed of in the suit of the Receiver against him for its enforcement. Neither did L and B claim under the Receiver, nor are they seeking to enforce the liability of K as a shareholder. Their claim, and their only claim against him, is for his failure to insert his own name, or that of some other responsible person, in the blank which had been left by them in the transfer they signed on the books of the bank of the stock he had bought. His obligation to them, if any there is, grows out of his contract with them as a purchaser, and not out of the banking law. That presents no Federal question. There is nothing in that law which makes it his duty to save his assignors from harm by reason of their former ownership, or which required him to register his ownership for their protection. Neither is it at all important that in its opinion the Supreme Court of the State expressed a doubt as to the correctness of the judgment against L and B. That judgment, as it stood, was conclusive on that point, and if K had been liable to them at all it would have been for the amount adjudged, because he had been called upon to defend if he desired to do so. He was discharged, not because the judgment was wrong, but because he had not, in the opinion of the Court, been guilty of any neglect of duty toward those against whom it was rendered which would make him liable to them therefor.

Motion to dismiss granted.

Levasseur and another vs. Kennedy, Supreme Court of the United States, December 5, 1887.

LAW NOTES AND COMMENTS.

NEGOTIABLE INSTRUMENT CODIFICATIONS.—It is a fact, almost too plain to admit of argument, that codification of the entire body of the law on the subject of negotiable instruments in the United States would be a vast improvement over the present system, relieving to a great extent the uncertainty which at present exists, and substituting a definite and uniform system of rules, intelligible as well as accessible to the banker and merchant. In the various States of the Union, however, conservatism is very strong; and innovations of this character, although obviously for the best interests of the community, make their way but slowly. With the exception of California, Dakota, and, to a certain extent, Georgia, the law in relation to negotiable instruments has not been codified. In all, or nearly all, the States statutory enactments to a greater or less extent have been made covering branches of the subject, such, for example, as acceptances, days of grace, damages after protest, and various other matters, but the entire body of the law governing the instruments of commerce still remains evidenced by the large body of judicial decisions contained in many volumes of reports, whose number is constantly increasing. To these decisions, the various text books on the subject act as indexes, classifying and arranging the cases, explaining their points of similarity and difference, and deducing the rules of law therefrom. In

the present state of the law the text writer renders invaluable services, for without his aid it would be an endless task in every case which arose to wade through the multitude of decisions to get the correct rule.

Across the water, however, we find a different state of affairs, and codification, in many countries, an accomplished fact. In Germany, France, Spain and England the law on the subject of negotiable instruments has been reduced to a codified form, and the subject, in each of these countries, is treated with much minuteness of detail. Space will not permit an adequate description or comparison of these several enactments. It may be said; however, that they seem admirably designed to establish that definiteness and certainty in the law so necessary in all commercial transactions.

The English Bills of Exchange Act defines a bill of exchange to be "an unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand, or at a fixed or determinable future time, a sum certain in money to or to the order of a specified person, or to bearer."

A bill of exchange is not invalidated by reason of the fact that it is not dated; that it does not specify the value given, or that any value has been given therefor; or that it does not specify the place where it is drawn or the place where it is payable.

Under the German code the essential requisites of a bill of exchange are (1) a designation of it as a bill of exchange contained in the bill itself; or if the bill is drawn in a foreign language a statement of similar import in that language; (2) a statement of the amount to be paid; (3) the name of the person or the firm to whom or to whose order it is to be paid; (4) a statement of the time at which it is to be paid. The time of payment must be for the entire sum at once, and can be fixed only at a day certain, at sight on a certain time after the date of the bill; or at a fair or market; (5) the signature of the drawer by his name or that of his firm; (6) a statement of the place where, and day of the month and year when, drawn; (7) the name of the person who, or firm which, is to make payment; (8) a statement of the place where payment is to be made. The place mentioned in connection with the name or the firm of the drawee is considered both as the place of payment of the bill and the place of residence of the drawee, unless a particular place of payment is mentioned.

By the Spanish Commercial Code, bills of exchange, in order to have the full effect given them by mercantile law, must contain all the following particulars:

1. Designation of place, day, month and year of giving the bill.
2. Time when it is to be paid.
3. Full name of the person to whose order it is to be paid.
4. Amount which the drawer orders to be paid, specified in actual money or in nominal currency recognized by commerce for exchange.
5. The consideration of the bill or the manner in which the drawer declares himself to have received it, specifying whether he received it in money or goods or whether it is value agreed on, or in account, with the payee.
6. The full name of the person from whom the consideration of the bill is received or to whose account it is to be charged.
7. The name and residence of the person on whom it is drawn.
8. The signature of the drawer with his own hand, or that of some person duly authorized to sign his name.

The Commercial Code of France provides that bills of exchange are drawn from one place on another place; they are dated; they are specific; must contain the sum to be paid; the name of the person who is to pay the same; the time when and the place where the payment is to be made; the value furnished, whether in money, merchandise, in account, or in any other manner. They are drawn to the order of a third person, or to the order of the drawer himself; and if they be in sets of 1, 2, 3, 4, etc., it is so expressed.

The English act prescribes with much minuteness the rules as to presentation for acceptance, and for payment, and as to giving notice of dishonor, etc.

In general, unless presentment is duly made, and notice of dishonor duly given, the drawers and indorsers are discharged. It also treats in detail of the form and interpretation of bills of exchange; the capacity and authority of parties; the consideration for a bill; their negotiation; the general duties of the holder; the liability of parties; the discharge of the bill; its acceptance and payment for honor; of lost instruments; of bills in a set; of the conflict of laws thereon, etc. Also of checks on bankers, and promissory notes.

In Germany, in order to have legal recourse against drawer and indorser upon non-payment, it is necessary that the bill should be presented for payment, and both the presentment and non-payment be shown by a protest therefor made in due time. The holder of a bill of exchange protested for non-payment must notify the party immediately preceding him thereof in writing within two days after the day of the protest. It is sufficient if within this time the written notice is placed in the Post-Office. Every party receiving notice must within the same time after its receipt give notice to the party immediately preceding him.

The German, French and Spanish Codes are, like the English, very full and complete.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking: BALDWIN, Kan., February 20, 1888.

SIR:—Is a National bank note legal tender between private citizens? CASHIER.

Answer.—No, a National bank note is not a legal tender between private citizens.

Editor Rhodes' Journal of Banking: BOSTON, Mass., February 25, 1888.

SIR:—Can a bank charge up a note to the maker after it is due if he does not have any money in bank at the time it is due, but deposits enough to cover two weeks after? SUBSCRIBER.

Answer.—The bank has a right to charge up the note against the deposit.

Editor Rhodes' Journal of Banking: WOODBURY, N. J., February 20, 1888.

SIR:—Has a bank the right to hold a customer's balance towards the payment of a note, which they have discounted, before the note is due, when they have reason to believe the party will not be able to meet it when due? JERSEY.

Answer.—As a general rule it may be stated that no such right exists.

Editor Rhodes' Journal of Banking: CLINTON, Mass., February 16, 1888.

SIR:—Is it the duty of a National bank clerk detecting counterfeit specie offered for a deposit, to break or mutilate the same before returning it to a customer? * * *

Answer.—The law requires National bank officers to stamp all counterfeit notes offered, but we are not aware of any law requiring them to cut or mutilate counterfeit coin. Still by doing so they do not render themselves liable, and are doing the public a service.

Editor Rhodes' Journal of Banking: KANSAS CITY, KANS., Feb. 17, 1888.

SIR:—1. Does the law require a majority of all the stock of a National bank to be represented at an annual meeting before the election of Directors can take place?

2. Does it require a majority of the stock present, or a majority of all the stock, to elect a Director? * * * * *, *President.*

Answer.—A majority of all the stock is necessary to be represented at the annual election; but a majority of the stock present is sufficient to elect a Director.

Editor Rhodes' Journal of Banking:

MILWAUKEE, Wis., February 18, 1888.

SIR:—Will you please inform me whether private banks have or have not the right to mutilate counterfeit coin and to stamp counterfeit currency received on deposit, before returning it to the depositor? * * *

Answer.—We do not know of any law requiring them to do so, but they would not render themselves liable to any one, for doing so.

Editor Rhodes' Journal of Banking:

NEW YORK, February 19, 1888.

SIR:—If a check is drawn payable to John Doe or order and John Doe presents the check, is it necessary that he indorse the check, and, if so, why? CASHIER.

Answer.—It is necessary as evidence to the drawer that the check was paid to the right person. If paid without any indorsement, it might be inferred that the bank had paid a lost or stolen check.

Editor Rhodes' Journal of Banking:

BALTIMORE, Md., February 15, 1888.

SIR:—Is a bank liable if it fails to notify parties at headquarters of the non-payment of a sight draft sent them for collection, provided their traveling and collection agent calls at the bank and instructs them to hold until he makes the town again, which would be in about two weeks, during which time party on whom draft is made fails? CASHIER.

Answer.—It is of course the duty of a collecting bank to immediately notify its principal of the non-payment of a draft; but where, as in this case, the traveling and collection agent of the parties sending the draft has notice of such non-payment, and, acting in their behalf, directs the draft to be held for two weeks, they would probably be chargeable with his knowledge, and the collecting bank held to have performed its full duty in the matter.

Editor Rhodes' Journal of Banking:

MONTGOMERY, Ala., February 3, 1888.

SIR:—I wish to ask a question and would be glad to have you answer it.

There is no law compelling a payee to identify when presenting a check for payment, neither is there any law compelling a bank to pay the check of an unidentified payee, it is simply the best for both parties to adhere to the rule of identification.

Now, if the bank should refuse to pay Mr. Jones' check, which is presented by Mr. Smith (the payee), Mr. Smith would no doubt protest the check and recover the principal and costs from Mr. Jones the drawer; and Mr. Jones could then sue the bank for damages which it is thought, no jury would award him. This is the opinion of the *Journal of Commerce*, if I mistake not.

Now I wish information on this point. Suppose Mr. Smith presents this check and payment is refused because he cannot identify himself. He retires for the purpose of finding some one to accompany him to the bank. He finds it impossible to do this on the next day, but on the day following he returns with identification, to find the bank has suspended. What is the remedy? BANKER.

Answer.—The remedy of the payee is against the drawer of the check, who is not released from liability unless he has suffered from the failure of the holder to give him notice of the non-payment when first presented, and then only to the extent of such loss.

Editor Rhodes' Journal of Banking:

MILLERSBURG, PA., February 7, 1888.

SIR:—Will you have the kindness to answer the following questions:

1. A check is presented by a correspondent from abroad. The check is not indorsed by the payee, but bears several indorsements, being transmitted from one person to another, and by them indorsed. Should such check be protested and returned?

2. Can the indorser be held liable on the inclosed note and indorsement in our State to the bank holding the paper? A SUBSCRIBER.

Answer.—1. The check should not be paid, unless the correspondent presenting it will guarantee that the holder has a good title and right to receive the amount, and will agree to indemnify the bank should it turn out otherwise.

2. The note inclosed is non-negotiable in Pennsylvania, as it contains a

confession of judgment, and so far as the liability of the maker thereon is concerned, our correspondent takes it from the payee subject to any defenses the maker may have thereto. The inquiry, however, is as to the liability of the payee. His indorsement thereon is as follows: "For the amount of the within note received I hereby guarantee the prompt payment of the within note at maturity, together with the five per cent. additional, with costs of suit." His obligation to the bank, then, is that of a guarantor. In *Campbell vs. Baker*, 46 Pa. St., 243, wherein the payee's guaranty was somewhat similar (viz., "For value received I assign the within note to H. Campbell, and guarantee the payment of the same when due"), the Court said: "When the guaranty is general, that is, without having any of its terms fixed in writing, the law adds to the usual conditions that there shall be due and unsuccessful diligence used by the creditor to collect the claim from the principal, unless it appears that all diligence would be hopeless. But the law adds or implies no such condition when the parties have themselves fixed the terms of the contract. They have done so in this instance. The guaranty is special for the payment of the note 'when due,' and it was broken by the non-payment at maturity; and so the law seems to have been usually understood. Yet such a guarantor is a species of surety and is discharged from his liability if the creditor do, by a subsequent valid contract, give time to the principal."

These remarks apply to the present note and guaranty. The guaranty here is special for the payment of the note when due, and is broken by the non-payment of the note at maturity, and the guarantor may be at once proceeded against by the bank, who is not bound to pursue the principal or show his insolvency. But should the bank by a subsequent valid contract give time to the principal, the guarantor, like a surety, would be discharged thereby.

Editor Rhodes' Journal of Banking:

WEST BRANCH, IOWA, January 31, 1888.

SIR:—Is a Cashier liable for any loss occasioned by overdrafts? Does the fact of the overdraft being made with the knowledge and tacit approval of the Board of Directors relieve him from liability?
CASHIER.

Answer.—Inherently, a Cashier has no power to allow overdrafts. In practice, it is frequently done with the tacit approval of the Board of Directors. Whether a long course of dealing in this respect with the knowledge and tacit consent of the Directors would relieve the Cashier from liability in case of loss, is a question not free from doubt. While the justice of the matter would dictate an exoneration of the Cashier from liability where he has acted in good faith, and where the Directors have approved of his acts by their silence, the cases hold that not only has the Cashier no power to permit overdrafts, but that the Board of Directors cannot invest him with such power. Thus in an early case in the Supreme Court of the United States (*Minor vs. Mechanics' Bank*, 1 Pet., 46.) Mr. Justice Story held that a usage and practice on the part of a Cashier to permit overdrafts in his discretion was a manifest departure from duty, and could not be supported by any vote of the Directors however formal; and therefore whenever done by the Cashier was at his own peril and upon the responsibility of himself and his sureties.

Also in *Market Street Bank vs. Stumpf*, 2 Mo. App., 545 (decided in 1876), where suit was brought against the Cashier and his sureties to render them liable for loss on overdrafts permitted by the Cashier, it was claimed that the sureties were not liable for the overdrafts of the depositor for the reason that overdrafts were allowed and sanctioned by the Board of Directors. The Court said: "The fact—and it appears to be a fact—that the Board of Directors, or some of them, knew that from time to time one or another depositor was allowed to overdraw his account, is by no means a justification of the act of the Teller in allowing a man, whom he must have suspected to be in straightened circumstances to overdraw his account nearly \$7,000. It is held that the Directors of a bank have no power to allow overdrafts, and that the fact that they sanction them does not relieve the Cashier or his sureties. The rule is a most wholesome one; it is well supported by authority, and so far as we know has not been departed from in this State. (Citing *Minor vs. Mechanics' Bank*, *supra*.)

FINANCIAL MATTERS IN CONGRESS.

BILLS RELATING TO BANKING AND FINANCIAL MATTERS, INTRODUCED IN THE FIFTIETH CONGRESS.

Senate Bills.

No. 1,522.—Introduced January 18, 1888, by SENATOR FARWELL.

To amend the National Bank Act, and for other purposes.

The synopsis of this bill may be found on page 559 of the *Congressional Record*.

No. 1,674.—Introduced January 29, 1888, by SENATOR MCPHERSON (by request.)

To authorize the reduction of United States bonds and National bank circulation. This bill authorizes the reduction of the maximum of bonds required to be deposited by a National bank to one-tenth of the capital, where such one-tenth does not exceed \$25,000. If it does, then \$25,000 is to be the maximum.

The synopsis of this bill may be found on page 764 of the *Congressional Record*.

House Bill No. 1,215, to amend Section 5,209 of the Revised Statutes of the United States, which passed the House February 7th, was sent to the Senate on the same day, and referred to the Senate Committee on Finance. The object of the bill is to make it a criminal offense for a bank officer to make false reports to the Comptroller of the Currency, and to punish National Bank Examiners who make false reports or suppress important facts in regard to the banks they examine.

The synopsis of this bill may be found on pages 1,073, 1,097 of the *Congressional Record*.

No. 2,169.—Introduced February 23, 1888, by Mr. SHERMAN.

Authorizing the issue of circulating notes to National banks to the par value of bonds deposited therefor, which was read by its title.

The synopsis of this bill may be found on page 1,608 of the *Congressional Record*.

SENATE REPORT.

Report of Committee on Finance, February 28, 1888, on Senate Bill No. 1,216, by Mr. SHERMAN, who said: "I am directed by the Committee on Finance, to whom was referred the bill (S. 1,216) providing for the investment of certain funds in the Treasury, to report it with one amendment. The original bill contained a provision authorizing National banks to issue circulating notes to the par value of their bonds. The Committee thought it proper to separate this feature from the remaining part of the bill, and the amendment simply is to strike out that clause. I shall introduce a bill at a later stage to provide for that object."

See page 1,602 of the *Congressional Record*.

House of Representatives.

RESOLUTION BY MR. WEAVER.—On February 7th a resolution of Mr. Weaver's, which had been referred to the Committee on Appropriations, was returned with the approval of the Committee and adopted. Its object was to obtain information from the Secretary of the Treasury as to the purchase of United States bonds at a premium, the deposit of public moneys with the National banks, and other operations of the Treasury in connection with the surplus. The inquiries in regard to public deposits with the banks cover a period of twelve years back.

No. 1,737.—Introduced January 4, 1888, by Mr. WILKINS.

Authorizing the issue of specie certificates.

The synopsis of this bill may be found on page 240 of the *Congressional Record*.

No. 1,738.—Introduced January 4, 1888, by Mr. WILKINS.

To revise and consolidate the laws relating to the issue and regulation of a National currency secured by United States bonds.

The synopsis of this bill may be found on page 240 of the *Congressional Record*.

This bill is the Codification of the National Banking Laws, recommended to Congress by Comptroller Trenholm in his annual report.

No. 3,363.—Introduced January 9, 1888, by Mr. LAFFOON.

To amend Section 5,198 of the Revised Statutes of the United States which fixes the rate of interest that may be taken by National banks.

The synopsis of this bill may be found on page 337 of the *Congressional Record*.

Resolution by Mr. ANDERSON, of Kansas, as to limit of United States notes outstanding, introduced on January 16th.

The synopsis of this resolution may be found on page 499 of the *Congressional Record*.

Mr. Anderson has an idea that a portion of outstanding legal-tender notes, limited to \$346,681,016 by the Act of May, 1878, has been destroyed through accidents of

business. The object of the resolution is to obtain information on this point from the Secretary of the Treasury. The resolution was referred to the Committee on Banking and Currency.

No. 4,954.—Introduced January 16, 1888, by Mr. ANDERSON, of Kansas.

Preventing a contraction of the currency by the withdrawal of National bank notes from circulation.

The synopsis of this bill may be found on page 498 of the *Congressional Record*.

No. 4,955.—Introduced January 16, 1888, by Mr. ANDERSON, of Kansas.

To provide for the issue of fractional currency.

The synopsis of this bill may be found on page 498 of the *Congressional Record*.

No. 4,965.—Introduced January 16, 1888, by Mr. MCCOMAS.

To prohibit speculation by officers of National banks.

The synopsis of this bill may be found on page 499 of the *Congressional Record*.

No. 5,930.—Introduced January 25, 1888, by Mr. DARLINGTON.

To amend Section 62 of the Act relating to National Banking Associations. By Section 62 appears to be meant paragraph 62 in the compilation of the laws used by the office of the Comptroller of the Currency, which is Section 5,183 of the United States Revised Statutes. This section forbids National banks to issue post notes or any other notes to circulate as money, except the circulation authorized by the Act. If this section is repealed, it would open a way to the National banks to issue all the circulating medium they might wish in the form of certificates of deposit, certified checks, etc.

The synopsis of this bill may be found on page 747 of the *Congressional Record*.

Resolution introduced January 30, 1888, by Mr. BAKER, of Illinois:

Resolved, That the Committee on Banking and Currency be instructed to inquire into the expediency of providing by law for the reissue of fractional currency to meet the demands for its use in the mails, and to report by a bill or otherwise. Referred to Committee on Banking and Currency.

The synopsis of this resolution may be found on page 841 of the *Congressional Record*.

No. 6,140.—Introduced January 30, 1888, by Mr. WILKINS.

Authorizing the issue of fractional silver certificates.

The synopsis of this bill may be found on page 844 of the *Congressional Record*.

No. 6,147.—Introduced January 30, 1888, by Mr. DARLINGTON.

To provide for the issue of circulating notes of National Banking Associations, and to prevent the contraction of the currency.

The synopsis of this bill may be found on page 844 of the *Congressional Record*.

No. 6,182.—Introduced January 30, 1888, by Mr. BLAND.

For the further coinage of silver and for the redemption of bank notes, and for other purposes.

The synopsis of this bill may be found on page 846 of the *Congressional Record*.

No. 6,634.—Introduced February 7, 1888, by Mr. CANDLER.

To refund all outstanding 4 per cent. bonds of the United States at 2½ per cent.

The synopsis of this bill may be found on page 1,020 of the *Congressional Record*.

No. 7,409.—Introduced February 20, 1888, by Mr. BLAND.

Limiting the coinage of double eagles and discontinuing the coinage of certain United States coins. Referred to the Committee on Coinage, Weights and Measures, and ordered to be printed.

The synopsis of this bill may be found on page 1,306 of the *Congressional Record*.

On January 31st, Mr. Wilkins, Chairman of the Committee on Banking and Currency, asked unanimous consent to postpone the consideration of his bill—H. R. 1,733—for issuing National bank notes to the par value of the bonds deposited for two weeks. There was a majority in favor of the bill, but the minority were determined and aggressive, and it is believed this postponement virtually ends the measure.

Amendment—Introduced February 8, 1888, by Mr. BLAND to House Bill No. 2,012.

Authorizing the Secretary of the Treasury to invest the lawful money deposited in the Treasury in trust by National banking associations for the retirement of their notes.

The amendment is about the same thing as Mr. Bland's separate bill No. 6,182. Bill No. 2,012, as amended, authorizes the Secretary to use the lawful money in the National bank fund to buy and cancel United States bonds. To make good the fund so used the Secretary is to issue coin notes of the United States payable in standard gold and silver coin at the option of the Government. These notes are to be used to redeem the National bank notes when presented. For the redemption of the notes the Secretary is required to purchase and coin the maximum of silver bullion authorized by the Act of February, 1878. H. R. No. 2,012 is Mr. Dingley's bill: it is the same as Mr. Sherman's in the Finance Committee. When Mr. Dingley called up his bill for consideration, on February 8th, there was some discussion as to permitting it to be discussed. Messrs. Weaver and Bland seemed to be anxious to have some conclusion reached, but the morning hour passed without reaching the merits of the question. Mr. Bland, however, afterwards had a chance to inject his silver note amendment, as above

stated. On the 9th of February, on Mr. Dingley's motion, an agreement to postpone was reached. This bill can be called up at any time.

REPORT FROM COMMITTEE ON WAYS AND MEANS.—On February 14, 1888, Mr. Mills, from the Committee on Ways and Means, reported back favorably the bill H. R. 5,084 for the purchase of United States bonds by the Secretary of the Treasury, which was referred to the Committee of the Whole House on the State of the Union, and, with the accompanying report, ordered to be printed.

The synopsis of this bill may be found on page 1,244 of the *Congressional Record*.

REPORT FROM COMMITTEE ON CLAIMS.—On February 14, 1888, Mr. Taubee, from that Committee, reported back with amendment the bill (H. R. 1,761) for the relief of the First National Bank of Portland, Oregon, for money advanced the Oregon Iron Works, the contractor in building the United States Revenue Cutter Thomas Corwin, which was referred to the Committee of the Whole House on the Private Calendar, and, with the accompanying report, ordered to be printed.

The synopsis of this bill may be found on page 1,247 of the *Congressional Record*.

BILL FOR THE PURCHASE OF UNITED STATES BONDS.—The only measure of importance that has as yet passed the House was the bill authorizing the Secretary of the Treasury to buy bonds with the surplus. The bill, as finally passed, reads as follows: "That the Secretary of the Treasury is hereby authorized to apply the surplus money now in the Treasury, and such surplus money as may hereafter be in the Treasury, and not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds, provided that the bonds so purchased or redeemed shall constitute no part of the sinking fund, but shall be cancelled by the Secretary of the Treasury."

Mr. Randall, in his remarks on the bill, claimed that the Executive already had authority to make bond purchases, and that the bill was but a reaffirmation of a right already existing under a law previously enacted. Its passage indicates, if anything, that the sentiment in Congress is still in favor of protection and against any startling tariff innovation.

No. 6,636.—Introduced February 6, 1888, by Mr. LANDES (by request.)

Providing that the fund held for the redemption of United States notes shall be composed of gold and silver—half in gold coin and gold bullion, and half in silver bullion equal in value to the gold half. It was referred to the Committee on Banking and Currency.

The synopsis of this bill may be found on page 1,020 of the *Congressional Record*.

No. 6,660.—Introduced February 6, 1888, by Mr. HENDERSON, of North Carolina.

To repeal the tax of 10 per cent. on notes of State banks used as circulation. Referred to the Committee on Banking and Currency.

The synopsis of this bill may be found on page 1,022 of the *Congressional Record*.

Those who desire copies of any of the above bills can procure them by writing to their Representatives in Congress.

State and Savings Banks of Rhode Island.—The annual report of these institutions, as prepared by Elisha W. Bucklin, State Auditor, is at hand. It shows their condition on the 15th of November, 1887. There are now nine State banks—one less than last year—with an aggregate paid-in capital of \$1,766,685.00; total deposits \$1,358,838, and total resources of \$3,325,604.49.

A comparative statement of the various savings institutions of the State for the past ten years shows:

Year.	Number of Depositors.	Total Deposits.
1878.....	93,063	\$44,266,682
1887.....	120,144	55,863,283

Three savings banks are in voluntary liquidation, and two—the Cranston Savings Bank and the Franklin Institution for Savings, both in Providence—are in the hands of Receivers. The largest amounts due any one depositor are \$160,148 by the Savings Bank of Newport, and \$66,460, \$43,066 and \$43,066 by People's Savings Bank, Mechanics' Savings Bank and Citizens' Savings Bank, all of Providence, respectively. There is also one other individual deposit of \$32,000 and several ranging from \$10,000 to \$22,000. The bank holding the largest amount of deposits is the Providence Institution for Savings—\$12,007,337—while eight others, six in Providence, one in Westerly and one in Woonsocket, hold aggregate deposits of \$29,270,000.

The assets of the various banks show a good assortment of railroad bonds and stocks as well as United States bonds and miscellaneous municipal securities, with a fair sprinkling of Western mortgage debentures, notably those of the Jarvis-Conklin Mortgage Trust Company, Equitable Mortgage Company, Fidelity Loan & Trust Company, Dakota Loan & Trust Company, Kansas Loan & Trust Company, Lombard Investment Company, Western Farm Mortgage Company, etc.

REPORTS OF NEW YORK CITY SAVINGS BANKS.

Following are abstracts from the official semi-annual reports of the New York city Savings banks, showing their condition on January 1st, reported to Bank Superintendent Willis S. Paine as required by law. The increase in deposits in New York city during the year has been about \$12,000,000; the increase in the entire State for the same period will approximate \$26,000,000. To exhibit the increase or decrease in the several items, the amounts reported by the same banks January 1, 1887, are also given :

Bank.	Date.	Total Resources.	Due Depositors.	Surplus.
BANK FOR SAVINGS.....	January 1, 1888.	\$51,571,000	\$42,972,000	\$8,599,000

A FORGER'S RAID.

HISTORY OF BROCKWAY'S GANG IN BALTIMORE IN 1880.

The professional rogues of America are the equals of their fellows in any other part of the globe. This is so because of the intricate character of American civilization, and of the manifold commercial interests here at stake, elements that have a tendency to school the minds of those criminally inclined, and to disclose opportunities to plunder sufficiently seductive to induce the risk of liberty.

Of all the classes of criminals there is none that have displayed greater intelligence or cleverer facilities for working illegal injury to the moneyed holdings of the people than the forgers. They are the bane of the business world. Vaults of steel and armors of electrical appliances may guard in the night the wealth of men, but no guaranty of security can be offered the individual, in broad daylight, against the machinations of the artist, whose ability enables him to so accurately counterfeit the agencies of commercial intercourse as to deceive even those who have originated such mediums. The forger must be accorded a niche in temple of criminal fame as high as that of any other law-breaker, who brings all the attributes of an inventive mind and the adroitness of skilled hands to the work of his trade. In him the art of the mechanic is compounded with an accurate knowledge of human nature; the skill of the artist who can use his scientific tools is reinforced by the learning of the chemist and the mathematician. The hand that can execute the finest sort of tracing can as readily detect the composition of inks. In a word, the expert forger is an inventor, a designer, an engraver, a chemist, a mathematician, an artist and a mechanic. At the start his resources are put into play, for if he be unable to get samples of the paper used by the bank or firm whose checks he intends to counterfeit, he is compelled, when he knows he will have to deal with keen-sighted men, to manufacture his sheets. The paper for his imitation may be of linen, or have silk woven through its fibres, or be of a kind made solely for the use of some certain establishment. All these difficulties he must surmount by his inventive tact. Again, his dies and his other tools must be of his own or his accomplice's make, since to buy them would give a clue toward his detection. As a lithographer he can take an impression from stone and engrave it on a steel or copper plate to fill his blank.

Charles O. Brockway is unquestionably the foremost forger of America and the equal of any of his kith across the water. His was the most successful gang of its kind that ever traveled the States, succeeding as they did in victimizing banks to the extent of at least \$500,000. The history of this band reads like a romance. Men of infinite cunning, men of consummate boldness, men who had the prison mark time and again stamped on them, the Brockway gang represented the pick of the criminal profession, bound together by the honor of thieves for the purpose of plundering the people through the forgeries devised by their wily leader. Well fitted was Brockway for his work. From the very day he reached manhood's estate in his native city of New York, twenty-six years ago, his life has been one of continued crime. His quality of holding others to him by his superior individuality has had much to do with his success. No man was used by him whose will was not submissive to his, and in return for such allegiance the noted forger gave unswerving friendship and financial aid when the hour of distress arrived. Thus it was that George Bell, Albert Wilson, Henry Cleary, William Ogle, George Hamill, William Bartlett and Charles Farren, a coterie of sneaks and burglars, possessing all the essential qualifications for "laying down" the "stuff" which Brockway produced, were singly and in numbers, at various times before and during 1880, under his control. It was only in the latter year that the forces were recruited and the gang as named fully organized.

Bell, a highwayman who had served time in the Eastern Penitentiary of Pennsylvania for grabbing a package of money from the hands of a bank messenger in Philadelphia during the Centennial year; "Al" Wilson, burglar and shoplifter; Henry Cleary and William Bartlett, burglars, arrived from England after an unsuccessful trip to that country. They had gone there at the invitation of George Wilkes, the

notorious forger, to operate for a company of American and French forgers who had invented a method by which the banking houses of Europe could be defrauded on a gigantic scale by means of spurious circular notes. Identified with Wilkes in the management of this scheme were Dan Noble, who with Brockway kept a faro game in New York at one time, George Engells and Charles Becker, known to every detective as most skillful check imitators. Hardly had they reached England before Bell, Cleary, Bartlett and Wilson were deputized to visit Brussels, Rotterdam, Amsterdam, Berlin, Hamburg, Cologne, Aix-la-chapelle, Milan, Turin, Florence, Geneva and Bremen, with instructions to procure drafts from merchants of those cities on their correspondents in London. They had brought with them from America a letter of credit to the Société Générale of Brussels, and with this as a "blind" started out on their mission. While at their work, each having a route of his own to cover, Dan Noble passed a forged check on a London bank and was arrested. Just as the trio reached there, after completing the duties assigned, Noble was sentenced to twenty years' imprisonment at hard labor. His extreme punishment, coupled with information Wilkes received that the New York police had disclosed their presence to the English authorities frightened the others, and the whole job was abandoned. Bell, Cleary, Bartlett and Wilson were each given £2 and sent back to the United States with their passages paid. This little fund of money they had did not last long. The Fourth of July overtook them riding on the ocean's foamy crest without a shilling in their pockets. But their patriotism was not to be quenched so easily. Smiling and plausible, they approached the captain of the vessel and whispered to him in confidence a tale, which so impressed him that he advanced them £50 in order that they might appropriately commemorate the birthday of their nation. They enjoyed a glorious celebration. When the steamship touched her New York pier the quartette quickly disappeared. It is needless to say that the captain never saw his fifty pounds again. The criminals were once again free to seek their favorite haunts; to roam the land for spoils.

On a pleasant morning toward the end of June, 1880, a handsome man, in the prime of life, elegantly dressed, and wearing a well-trimmed beard, entered a well-known drinking place kept by a man named Reilly, not far from the City Hall in the city of New York, and requested the barkeeper to serve him a glass of sherry. As the attendant turned to fetch a bottle from a buffet ledge behind him the patron looked cautiously over his shoulder in the direction of a group of customers who stood conversing at one end of the saloon and eyed them critically for an instant. Besides himself and the barkeeper, they were the only ones in the place. His sharp, quick glance, expressive alike of expectation and disappointment, was in marked contrast to the leisurely manner assumed as he sipped the wine set before him. With an air of composure he paid for his drink and sauntered into the street. Even the practised observer could detect nothing in his manner foreign to the appearance of a well-to-do merchant. It would have been as far from the minds of any of the hundreds of individuals who passed, busy with their own affairs, to suspect that the man they saw was Charles O. Brockway, faro dealer, counterfeit money handler, and renowned forger, as it would have been for them to think that the athletic-looking young man, who approached him from an opposite direction with a look of recognition, was a thief's companion. Brockway it was though, and the fellow who accosted him was his protegee, Charles Farren, just finding his way into police notoriety in consequence of the frequency with which he was found in the society of known criminals. The pair had agreed to meet at Reilly's, where they had frequently gone before, but Farren being late, Brockway was going in search of him. Together they walked along, chatting in subdued tones. Said Brockway:

"Made up your mind to do it?"

"Certainly; I'll go over," replied his companion; "there aint any danger."

"None in the least," assured the forger; "the play is common enough. When will you go?"

"Whenever you say."

"All right. Start to-morrow. I'll give you the stuff to-night. You know how to work it."

"Yes."

"Be careful not to go in on the jump. Wait till things open up; then lay down. Get paper, you understand."

An affirmative nod of the head was Farren's answer, and so they talked and strolled until they were lost in the surging crowds of the great city.

That conversation indexed the history of the forgeries perpetrated on the Merchants' and the Third National Banks of Baltimore by Brockway and his satellites, whereby they managed to get from the former institution \$7,455, and from the latter \$2,690.50.

The great forger had selected the Monumental City as the scene of his operations. The details were carefully mapped out; the first and important one of which was that the check of some prominent banker or firm should be obtained that it might be counterfeited, and the imitation passed for a large sum on the bank where the face of the original indicated the account was kept. Brockway knew the names of several prominent banking firms of the city, including Messrs. J. Harmanus Fisher & Co., Middendorf & Oliver, D. Fahnestock & Co., Wilson, Colston & Co., Roche & Coulter, and William Fisher & Sons, whose checks he intended securing. The sequel will show that he succeeded to the extent of only one-half of his expectations.

The extensive scale of the proposed fraud surpassed anything of the kind ever attempted in Baltimore. Had it not been interrupted by the refusal of some of the firms to deal with strangers the loss of more than \$10,000 would have been many times greater. A check of a banker was the initial requisite. Hence it was that Brockway instructed Farren to obtain one. Mr. J. Harmanus Fisher, whose office was on South street near German street, was selected as the first whose paper was wanted. The admonitions of Brockway to Farren, as applied to this case, were that the latter should go to Mr. Fisher's and tender for sale the "stuff," which in this instance was a \$50 United States Government bond, and ask for a check in payment. As a precaution, Farren was not to enter the office until a couple of hours after business for the day was commenced, the point involved being that an early caller ran greater risk of identification and suspicion in subsequent trouble than one who called after many faces had been presented to the view of the clerks. The night of the day of their conference Brockway gave the bond to Farren. Bright and clear was the morning of June 18, 1890, when a young man of stout build quitted the office of J. Harmanus Fisher, at about eleven o'clock, with a check for \$54.13 in his pocketbook, in return for a \$50 bond he sold to the banker. The seed had been sown and the harvest was soon to be reaped. The next day Brockway, from the hands of Farren, received the check, which was lithographed by A. Hoen & Co., of Baltimore, and bore in its centre in buff colors the internal revenue stamp. He was no longer seen idly parading the streets, or visiting his former haunts, for work was before him of such delicate and intricate character that the closest attention was necessary for its execution. Hid away from the world in quarters he had engaged in Providence, R. I., he labored assiduously in the production of his duplicate. One week from the day Farren first came to Baltimore on his nefarious mission he got possession of checks from Messrs. Middendorf & Oliver and D. Fahnestock & Co. There was nothing strange in the transaction, for it was an almost daily occurrence for persons to sell bonds to these firms. Into Brockway's hands all the checks went, and from his skill came forth imitations so cleverly engraved that the aid of a magnifying glass was necessary to unveil their difference from the originals. The lithographers themselves were unable to discern with naked eye the parts of divergence, save in the color of the revenue stamp, which was a shade darker in the counterfeit than in the genuine. The workmanship was of such high order, the private stamps, numbers, the lithographer's imprint at the bottom, even the die used by Mr. Fisher for punching the amount of the check, were brought out so intelligently as to baffle detection by those used to handling the *bona fide* checks daily. Brockway had done the task well, and he was giving it the finishing touches when the news reached him that Bell, Cleary, Wilson and Bartlett had landed in New York. The information upset his minor plans; withal it was glad tidings. Instead now of having to rely on Billy Ogle and George Hamill, who on calmer consideration Brockway was inclined to believe were too well known in the East, and Farren, a novice, he was in a position to dicker with the new arrivals and organize them, with those he already had, into a formidable "mob." One of his first questions was in reference to the financial standing of the tourists, and when told by the harbinger of current doings that they were "dead broke," he saw the last barrier to his success swept away. Accordingly he came on to New York and met his future allies. They were eager for a job and listened readily to his propositions. By

his advice they made Belly's saloon their rendezvous. At certain hours every morning for a week the entire gang would visit the place in twos and threes, and, after a social glass, depart. Those who saw them thought the men doing business in that locality. During this time Brockway was perfecting his arrangements, until on the morning of Thursday, July 15, 1880, he announced to his companions that all was consummated. The report was hailed with delight, for funds were low. The chief, who asserted his authority from the start, and whose right to do so no one questioned, said further that a "backer" had been secured, who would put up money for expenses and legal counsel, as customary when a thoroughly regulated gang goes on the road, to defend any member of it who might be entrapped in the net of the law.

"Furthermore," said Brockway, "we will leave Billy and George behind (meaning Ogle and Hamill) to look out for snags, and I will go down to Baltimore with the rest of you this afternoon; but before we trip it, suppose we settle the stakes."

"Take what you want," laconically spoke Bell.

"If we flash up anything I want one-half the whole pile. Is it a go?"

The others agreed it was. The demand seemed exorbitant at first glance, but longer thought showed it to be only a fair division with the man who not alone chanced his liberty, but to whose arm and head were due the essential step to victory. This done, the remainder of the prospective winnings were to be parted into halves, one of which was to go to the "backer" and the other to be apportioned equally among the "layers down." All being in readiness, Brockway and his men embarked for Baltimore.

The resumption of business in Baltimore on the morning of July 16th, found the accessories patiently awaiting their respective opportunities to pounce on the offices that were to furnish them, innocently, the firms' signatures and figures wherewith to impose on the banks. Brockway knew that Cleary and Farren were the best for his purpose. Both were quick and ready of speech and action, smacking of the commercial order, and innately polite. A few words of explanation and they entered on the discharge of their duties. Cleary made the first move. In he stepped briskly to the counting-room of J. Harmanus Fisher and tendered for sale a \$100 United States bond, 4 per cent., to Mr. Harry Orrick, the chief clerk, now a member of the firm of Orrick & May, stock brokers. The offer was accepted and Cleary paid partly cash and the balance in a \$34 check on the Merchants' National Bank, payable to George Hunter.

Without further ado he left the office and went directly to that of D. Fahnestock, a few doors removed, where he repeated his operation and was given another check for \$34, this time drawn to the order of Samuel E. Hunt, and \$50 in cash. In the meanwhile Farren was not idle. He had gone to Middendorf & Oliver's with three \$100 bonds of the same issue as those used by his cotemporary. For one of them he obtained in return all cash, and for the others checks for \$54 in favor of Henry Murdock and George W. Kimball, and Treasury bills. This division of the work accomplished they sought their source, who was waiting on Exchange Place, and to him they handed their receipts. Armed with these Brockway went off to a hotel where he alone had a room, to press his die and pen into service. The checks gave him the signatures of their makers and the numbers of the checks of the firms for that day, everything that was needed to aid him in completing the make-up of his forged orders. While he was doing this, Cleary and Farren made a round of these same offices shortly after dinner and bought back the bonds they sold in the morning, thereby removing any clues which the numbers of the securities might present.

During the interim between the departure of Brockway and his return to the corner of South and Lombard streets, where he promised to station himself, Bell was loitering around the Second street entrance to the Post Office and his colleagues, Wilson and Bartlett, around the corner of Gay street. They knew when their chief would be at his post. He was punctual to the minute, and so was Cleary, who was to "lay down" the beginning of the series of forged orders. Brockway gave his man one of the engraved checks for \$1,304, bearing on its front the fictitious signature of Middendorf and Oliver.

"If they don't take it this way," said the chief to Cleary, "come out and meet me at the corner above, and I'll shape it."

"Correct!" was the word from Cleary as he walked alone towards the Third National Bank.

[To be Continued.]

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Unclaimed Deposits.—According to the first annual report of the Massachusetts Savings Bank Commissioners there are, in that State, 69 banks having 1,727 accounts aggregating \$619,965, which practically are unclaimed—no book having been presented or alteration made in the deposits for twenty years or more. The Mechanics' Savings Bank of Worcester has \$18,806 in such accounts.

The Bank of Springfield, Kansas, is an incorporated institution with \$50,000 capital. Reports surplus and profits on February 1st, of \$4,500. The Post Office of this town—formerly La Grand—has recently been changed to Springfield. Referring to the business outlook the Cashier, M. L. Turner, writes: "Money, all over South, western Kansas is getting easier, and, with the plenty of rain we are now having—farmers are all getting lots of land prepared for crops."

Prosecutions of Bank Officers.—Harper and Hopkins, of the Fidelity National Bank, of Cincinnati, have been convicted and sentenced, and Baldwin is dead. It was announced that Briggs Swift, the President, and three of the Directors would be prosecuted. Great activity was manifested in the attempt to prove the criminality not only of the President and Directors, but also of Wiltshire and Miss Josie Holmes—Harper's Secretary. Notwithstanding all this it has been decided to drop these proceedings. It is very doubtful whether there is sufficient evidence against the Directors to convict them.

Among the Deposits in the Middlesex Institution for Savings at Concord, Mass., which have been unclaimed for 20 years, and to which publicity is given through the carrying out of the law of 1887 relating to these amounts being published, is one made February 27, 1849, by Captain Peter Tenney, Isaac Barker and Samuel Jones, a committee of the Acton Blues, which at that time was a noted militia company. The deposit now amounts to upward of \$80. But seven members of the company are known to be living. Formerly there were 42. A committee of the survivors has been chosen to draw the money from the bank.

Paid by the Bondsmen.—The Directors of the Charles River National Bank at Cambridge, Mass., held a meeting on January 28th, when a report was submitted relating to the defalcation of John H. Thurston, who had held a position as bookkeeper in the bank. At the time of the discovery of the wrong-doing the bookkeeper confessed his criminality to the President, and said the amount was in the vicinity of \$1,500. This story was believed, and the examination proved the correctness of that belief, the sum embezzled being \$1,635. Of that amount, \$1,412.82 has been restored, leaving a balance of \$222.18 to be made good by the ex-bookkeeper's bondsmen.

Counterfeit Dollars and Halves.—The coin Teller at the United States Assistant Treasury in St. Louis, says that the number of counterfeit dollars and halves received there is increasing. Where a short time ago only one or two counterfeit standard dollars and an occasional half were received, from ten to fifteen standard dollars and from six to ten half-dollars are received every day. The newest counterfeit dollar is made of type metal, antimony and lead, silver-plated, and is a very good counterfeit. The city is flooded with them, and they appear to be manufactured in St. Louis. Memphis, Tenn., seems to be headquarters for a dangerous counterfeit. There may be some startling arrests in Memphis within a very short time.

National Bank Examiner Young Superseded.—Col. Hugh Young, United States Bank Examiner for the Western District of Pennsylvania, has been notified of the appointment of his successor, Joseph Neal, of Titusville, who assumed the duties of the office March 1st. The announcement of this change will be learned with regret by

stockholders and bank officials generally. During his ten years' service Col. Young has proved himself to be an Examiner who examines. His thorough knowledge of the duties of the office, and his fearless performance of the same, have won for him the admiration and respect of all who have dealings with the banks. Comptroller Cannon bore testimony to his efficiency, declaring that he had no superiors in the service. It is said Examiner Young will go into the banking business next fall, having received a number of offers from financial institutions.

Buenos Ayres.—Five railroads radiate from Buenos Ayres in different directions, 122 miles of street car tracks are within its limits; there are more telephones in use in proportion to the population than in any other city on the globe; the electric light is employed more generally for streets, dwellings and business houses than in New York or Boston; nine theatres are constantly open; Italian opera is given twice a week for six months in the year at \$6 a ticket, and there are twenty-one daily newspapers! There are banks which do a larger volume of business on a greater capital than almost any in the world, and occupy magnificent buildings of glass and marble. One has a capital of \$37,000,000, a circulation of \$22,000,000, deposits amounting to \$56,000,000, and \$67,000,000 of loans and discounts. The deposits in all the banks amount to \$84 per capita, against \$49 in the United States.

Thanks to William H. Rhawn.—The Philadelphia Clearing-House Association, representing all the National banks of that city, at their monthly meeting held February 13, passed the following resolution:

Resolved, That the thanks of this association are due, and they are hereby cordially tendered to Mr. William H. Rhawn, who has served the association for more than twenty-one years as its Secretary in the most efficient and satisfactory manner.

Mr. Rhawn, who is the President of the National Bank of the Republic, was re-elected the Secretary of the Clearing-House Association at the January meeting, and began his twenty-second year of service in that important post. He is the oldest officer of the association in continuous service, and that important body, as well as Mr. Rhawn himself, are to be congratulated upon the renewed confidence thus reposed in so capable an official.

Resignation of Examiner Knox.—The resignation of Bank Examiner H. C. Knox, shortly after making an unfavorable report as to the condition of the Fourth National Bank, of New York, is an event that calls for an explanation which has not yet been made. The fact that Mr. Knox has long had the reputation of a careful and efficient officer, that his work was always well done, would naturally have resulted in an increase of his salary. This, however, was not the case, and in place of an increase he was informed his salary would be diminished. The examination of the Fourth National Bank showed that its cash reserve was less than the amount required by law, the bank letting the money out on call loans and thereby making a handsome profit. This perfectly illegal position was detailed by Mr. Knox in his report to Washington, and was followed by the voluntary resignation of Mr. Octavius D. Baldwin, who had been President for eight years. There is a mystery in the matter that has not cleared up.—*Financial Critic, Philadelphia.*

Ten Per Cent. Tax.—Burlington (Vt.) banks have been much exercised over a notice from Calvin Page, of Portsmouth, N. H., Collector of Internal Revenue for that district, to the effect that under Sections 3,412 and 3,413 of the Revised Statutes, and Sections 19 and 20 of the Act of February 8, 1875, they were liable to pay a tax of 10 per cent. upon the amount of Canadian and other bank notes other than notes of National banks paid out by them, and that they are required to make under oath returns of the monthly amount of such notes paid out on June 1 and December 1 for the previous six months. Should Collector Page's interpretation be accepted and enforced by the Treasury Department and the Courts, some of the banks would in all probability be compelled to go into liquidation, as the \$200 penalty for each failure to report semi-annually the amount of tax averages and penalties would exceed their capital stock. The banks have established a discount of 25 per cent. on Canadian bills, but the permanent discount will depend on the intelligence received from Washington.

Prof. Bonamy Price.—When Prof. Bonamy Price, the English economist, who has just died, visited New York city, sixteen years ago, he was found to be the hardest kind of a case for the agile interviewer. He was dry, stiff, and reserved in his manner, and his talk consisted of a mingling of masses of statistics with the abstruse principles

which he drew from them. One reporter who interviewed him regarding the financial policy of our Government, and who induced him to enter upon the subject, soon got all muddled up with Prof. Price's figures and logic; but the professor though undoubtedly aware of the fact, continued to talk for over an hour, with constantly increasing profundity and complexity, until finally the interviewer became thoroughly stupefied. He subsequently tried to write out a sketch of what he had heard; but the report, when printed, was even more bewildering to those who tried to understand it than Prof. Price's outpouring had been to the interviewer. The learned English professor's views upon the financial policy of our Government remained unknown so far as that attempt to learn them was concerned. He lived to be over 80 years of age.

Smooth Worn Silver Coin.—In reply to a question raised by the Post Master at Sacramento, California, asking whether silver coin which had been worn smooth by usage and was not otherwise mutilated, could legally be refused by Federal officials, Assistant Secretary Thompson, of the Treasury Department at Washington, has returned the following answer:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY, }
WASHINGTON, D. C., February 2, 1888.

SIR:—I return herewith, as requested, the silver half dollar inclosed in your letter of the 24th ult., with the information that this coin has been examined by experts in the office of the Treasurer of the United States and would be accepted if presented at that office for deposit or redemption, as there is no law or regulation under which it could be declined, it being simply worn smooth by natural abrasion.

Under Department's regulations of August 1, 1887, copy inclosed, mutilated silver coins are not redeemed, but "reduction by natural abrasion is not considered mutilation."

Respectfully yours,

HUGH S. THOMPSON, *Assistant Secretary.*

Fractional Paper Currency.—The question of issuing paper fractional currency has been very carefully considered by the House Committee on Banks and Banking. From the communications received by the committee from private citizens and the tone of the press, it may be inferred that there is a public demand for the small paper notes. Information was sought of the Treasury officials and the following answer was received from the Treasurer of the United States:

"In reply, permit me to state that while, as a matter of public convenience, it might serve an excellent purpose, yet it is considered impolitic to place in circulation any more currency for which no provision appears to have been made in this bill for its redemption at any time in the future.

"The present supply of fractional silver coin appears to be largely in excess of the public needs, as it is shown by the last monthly statement, December 31, 1887, that \$24,000,000 in round numbers is held in the Treasury, for which there is no call. As no complaint has been made by the public generally against the use of fractional silver coin since the resumption of specie payments in 1879, in my opinion no good purpose can be served by a further inflation of the small currency of the country beyond its present needs. It may be stated that the postal note for commercial purposes answers every end, and better than the fractional currency note, as it may be obtained at a trifling expense in sums from one cent to \$4.00."

That Limestone Gap Bank Robbery.—In the February JOURNAL appeared an item headed "Shot while defending his bank," which purported to relate how the Cashier of a bank, in the Indian Territory, sacrificed his life while protecting the institution from the attack of masked robbers. A Texas correspondent writes as follows about the matter, which, it is but just to admit, seemed at the time rather mythical: "Limestone Gap is a short, deep cut through a small limestone hill in the Indian Territory, on the Missouri Pacific Railway between Atoka and McAllister. There is no town, no store, no bank at Limestone Gap—except the 'bank' of limestone thrown up by the railroad hands in cutting through the hill. This item, like many of the items of crime and lawlessness in Texas that find their way into some of the leading dailies, is without foundation. In fact, there is not a bank in the Indian Territory, never was and never will be until it is made a Territory of the United States with Territorial laws. There are no collection laws in the Territory, and banks do not organize where the payment of their notes is left entirely to the honor of their customers. I saw this item in the daily papers and was amused at the idea of a bank robbery in the Indian Territory!"

Tariff Bill.—The Ways and Means Committee of the House are slowly preparing a tariff bill. There is much division in the committee and it is probable there will be both a majority and a minority measure. The radical steps proposed in the President's message will probably be much modified. The reduction contemplated is said to be

\$60,000,000 on the basis of last year's importations. Ten millions are to be gained by extending the free list and \$50,000,000 by reduction of rates. The committee have from the first agreed on free wool. Free salt and lumber have been much debated but will probably be a feature of the bill. Neither coal, iron or lead ore will be placed on the free list. There was a strong attempt to substitute specific for *ad valorem* duties, but this has been abandoned and the *ad valorem* rates will remain. The reductions on woolsens and cotton are said to be considerable. Everything indicates that there will be the usual squabble over any tariff measure that may be introduced and that after all the various factions have had their way in paring and smoothing its provisions to suit their several views, and reductions which such a measure will make in the revenues, estimated on last year's importations will be counterbalanced by increase of importations the year the law goes into operation.

Final Dividends.—The First National Bank of Angelica, N. Y., was placed in the hands of a Receiver April 19, 1886. On February 20th E. W. Chamberlain closed his Receivership, the depositors of the bank having been paid in full with interest from the date of the appointment of the Receiver. In addition to paying depositors in full the Receiver has placed in the hands of the stockholders \$85,000 worth of securities, a good share of which are worthless, but it is thought that \$85,000 are collectable. The citizens of Angelica are loud in their praises of Mr. Chamberlain's management, for at the time he took hold of the broken institution it was not supposed that the depositors would even get twenty-five cents on the dollar. The Angelica bank collapse was one of the most unexpected that has taken place in the Canadian exile list. The Cashier of it, familiarly known as "Checker" Robinson, on account of an impediment in his speech, was eighty years old and universally respected as a church member and citizen. Suddenly he ran away to Canada, and it was found that he left the bank in a terrible state. In partnership with young Dick Charles, his Teller, he had for some years been industriously getting on the wrong side of the Chicago wheat market. Besides this he had been used by Mr. Paul, a Director, as a stool pigeon to lend money on worthless notes, which Paul discounted and quietly took chattel mortgages for. When discovery became inevitable, old Robinson seized \$2,000 and went to Clifton, Ont. He is now living at Hamilton, a dishonored old man. Two of the bank Directors died of broken hearts.

National Bank Taxes in Massachusetts.—The annual report of the State Treasurer of Massachusetts shows that a large portion of the National bank tax paid into the Treasury by the cities and towns has been collected under protest during the last three years, because of suits instituted by several of the banks for the recovering of taxes collected. Some of the protests have been withdrawn, but of the tax collected there still remains under protest \$1,951,157.93. Of this amount there has been distributed to cities and towns \$631,539.45. There is held in the Treasury because of protest, rebates, due savings banks, corporations and institutions, on account of National bank stock held by them, amounting to \$464,419.62. The amount due for rebates, on account of National bank stock, is merely so much money held by the State in trust and cannot be considered as an asset to make up the deficit of the year. If the decision of the Courts results favorably to the banks, it may be difficult to define the position of the Commonwealth as to that portion of the National bank tax collected under protest and distributed to the cities and towns. The income to the Commonwealth from this tax in these three years was \$1,311,492.03. A large part of this amount is included in the taxes received under protest, and if the Courts decide in favor of the banks, the Commonwealth will be called upon to refund.

The Saco (Me.) Savings Bank has recovered every dollar of the \$235,000 in registered bonds stolen by Frank C. McNeally in August. A registered package posted in Liverpool February 3d, directed to Stephen L. Goodale, President of the Saco & Biddeford Savings Institution, was received at the Saco Post Office on February 14. Upon being opened at the meeting of the Trustees on February 15th it was found to contain the thirty-seven United States registered 4 per cent. bonds of \$5,000 each, amounting to \$185,000, together with the negotiable bonds, amounting to \$80,000, with all their coupons attached. The bonds were recovered by Harry McNeally, brother of the exile. After his flight, it will be recalled, the young fugitive landed safely across the Canadian border, whence he soon sailed for Liverpool. With the \$3,000 in cash stolen at the same time as the bonds, this six-dollar-a-week bank clerk traveled the Continent in fine style, and

mingled only in the very best society. His brother Harry, by cipher, communicated with Frank, who was finally induced to return to Halifax, N. S., where his attempt to conceal his identity was frustrated by a *Boston Globe* reporter, whose activity led to McNeally's arrest. Being released, he disappeared as mysteriously as in the first instance. He went to London and was there joined by his brother, to whom he gave the key to the safety deposit vault where the bonds were left. Harry arranged with Brown, Shipley & Co., of London, for the safe delivery of the bonds at Saco. The bank officers say the return of the bonds is accompanied with no conditions whatever. They also say Harry is entitled to the reward offered. Besides this, he has earned the gratitude of the institution and of its depositors by his efforts, begun on the day of the discovery of the theft and continued until success crowned his labors, and, until his last trip to Europe, all his expenses in these efforts were paid from his own earnings and savings. Frank McNeally is believed to be still in England.

Daring Bank Robbery in Texas.—About three o'clock on the afternoon of February 16th a man entered the Cisco Land & Collecting Agency of Cisco, Tex., situated about one hundred miles west of Fort Worth, on the Texas Pacific Railroad, and asked F. C. Leveau to change a fifty-dollar bill. As Leveau, who was Cashier, stepped to the front to comply with the request, three other men walked into the bank, one of whom presented a cocked revolver at his head, remarking: "This is the kind of change we want." F. R. Blake and M. B. Owens were in the bank, but started out. They were stopped by the four men and marched into one corner of the room and while they, with the Cashier, were guarded by three men who held cocked pistols at their heads, the fourth went through the bank and secured cash to the amount of \$6,000. After the money had been secured the robbers forced Leveau to open doors opening into the yard back of the bank, and marched him with Owens and Blake out doors, still holding pistols at their heads. The robbers then climbed a seven foot fence, jumped into an alley, jumped another fence into a wagon yard, where their horses were tied, mounted the animals and rapidly rode away toward the northwest, firing their pistols as they went at every person who appeared in sight. In a short time after the robbery was committed the entire town was alarmed and in arms. A company of men under the command of the Sheriff was immediately organized, and while the robbers were still in sight on the prairie a pursuit was begun. The robbers, besides their pistols, had each a Winchester rifle, and it was realized that an encounter with them meant danger. The Sheriff's party gained rapidly on the fugitives, and at a point about twelve miles from Cisco approached within shooting distance of them and opened fire. The robbers at once halted, and jumping from their horses, made breast-works of the animals, and with their Winchesters poured a volley into the ranks of their pursuers, but without effect. This had the result of checking the pursuit.

Failure of First National Bank of Auburn, N. Y.—The following notice was posted on the doors of the First National Bank of Auburn, N. Y.:

"Pending an examination of the affairs of this bank, and in the absence of the Cashier, this bank will be closed until further notice. Demands payable here will be received here."

Bank Examiner Clark visited the bank on January 20th ult., and, discovering that something was wrong, took possession of the bank. The Cashier, Chas. O. Brien, and book-keeper Elmer E. Morse have fled to Canada. The deficiency, it is supposed, will amount to over \$200,000.

The annual statement of the bank, published December 15, 1887, shows capital stock paid in, \$:50,000; undivided profits, \$42,378; deposits subject to checks, \$248,270; demand certificates of deposit, \$356,045. The loans and discounts were given at \$844,078, and the overdrafts at only \$2,812. It will take several days to straighten out the books and verify the entries. A Director is reported to have said that the deficiency amounted to \$200,000.

This bank was the depository of the City Treasurer, the Board of Education and the State Prison and Asylum, the deposits amounting to \$250,000, but these are secured by a bond.

It would appear that for a year or two past the Bank Examiner has been systematically deceived. The trouble commenced with the exercise of a liberal policy; loans were allowed on insufficient security, overdrafts were permitted to large amounts. The Cashier kept two sets of books—one for his own guidance and the other for inspection. False reports have been made. It remains to be seen to what extent

the Directors were aware of the way in which transactions were concealed. This failure, following so rapidly upon the other serious National bank failures during the year, seems to point at some serious defect in the direction of Bank Examiners by the Comptroller's office. The history of the failures of the Fidelity National Bank of Cincinnati, of the First National Bank of Dansville, New York, of the Stafford National Bank, of Stafford Springs, Conn., of the Fifth National, St. Louis, of the First National of Corry, Penn., and now of the First National, Auburn, N. Y., all reveal frauds and mismanagement which, it can hardly be thought, could have been concealed from an attentive Examiner. There is no doubt that in many of these cases there have been for months, if not years previous to the final catastrophe, indications of danger which ought to have led to great watchfulness on the part of the Comptroller's office.

Values of Foreign Coins.—The following estimation of the value of foreign coins, made by the Director of the Mint, I hereby proclaim to be the values of such coins expressed in the money of account of the United States, and to be taken in estimating the values of all foreign merchandise, made out in any of said metallic currencies, imported on or after January 1, 1888.

C. S. FAIRCHILD, *Secretary of the Treasury.*

TREASURY DEPARTMENT, BUREAU OF THE MINT, }
WASHINGTON, D. C., January 1, 1888.

Hon. C. S. Fairchild, *Secretary of the Treasury.*

SIR:—In pursuance of the provisions of Section 3564 of the Revised Statutes of the United States, I have estimated the values of the standard coins of the various nations of the world, and submit the same in the following table:

Country.	Standard.	Monetary Unit.	Par of exchange or equivalent value in terms of U. S. gold dollar.	Coins.
Argentine Rep'lic.	Double.....	Peso	\$0.965	Gold: argentine (\$4.82,4) and $\frac{1}{4}$ argentine. Silver: peso and divisions.
Austria	Single silver	Florin34,5	Gold: 4 florins (\$1.92,9), 8 florins (\$3.85,8), ducat (\$2.28,7) and 4 ducats (\$9.15,8). Silver: 1 and 2 florins.
Belgium.....	Double.....	Franc.....	.19,3	Gold: 10 and 20 francs. Silver: 5 francs.
Bolivia	Single silver	Boliviano...	.69,9	Silver: Boliviano and divisions.

* Gold the nominal standard. Silver practically the standard.

† Coined since January 1, 1886. Old half-imperial = \$3.98,6.

NOTE.—The "Standard" of a given country is indicated as follows, namely: *Double*, where its standard silver coins are unlimited legal-tender, the same as its gold coins; *Single gold or Single silver*, as its standard coins of one or the other metal are unlimited legal-tender. The par of exchange, of the monetary unit of a country, with a single gold, or a double, standard is fixed at the value of the gold unit as compared with the United States gold unit. In the case of a country with a single silver standard, the par of exchange is computed at the mean price of silver in the London market for a period commencing October 1st and ending December 24, 1887, as per daily cable despatches to the Bureau of the Mint.

JAMES P. KIMBALL, *Director of the Mint.*

Information for Investors.—A communication, signed by leading banking and investment houses, has been addressed to the New York Stock Exchange. It calls attention to what is regarded as the need of a "Statistical Department," to be presided over by an auditor thoroughly conversant with railroad reports. Among the signers are the following: Drexel, Morgan & Co., Kidder, Peabody & Co., J. & W. Seligman & Co., Blake, Bros. & Co., Maitland, Phelps & Co., W. S. Nichols & Co., Work, Strong & Co., Whitehouse & Co., Henry Clews & Co., R. P. Flower & Co., H. L. Horton & Co., Winslow, Lanier & Co., Brown Bros. & Co., Morton, Bliss & Co., Vermilye & Co., Ladenburg, Thalmann & Co., John Paton & Co., Hallgarten & Co., Van Schaick & Co., Jameson, Smith, & Cotting, Charles Head & Co., J. K. Grace & Westervelt, H. H. Hollister & Co.

It is set forth in the communication that "to-day the public demands such information as a well-trained and independent auditor can alone give. At a meeting of the 'Institute of Bankers,' held on the 4th of January, 1888, in London, the report of which has just reached us, Mr. J. W. Birch says: 'American railroads open an enormous field for the investment of English capital, if people are careful enough in the selection of the securities, but there is now extreme want of knowledge of these securities.' Mr. Joseph Price, who is well known in this country as the manager of the English Association of American Bondholders, said 'those who play with American speculative shares are at the mercy of Wall street operators;' and again he said: 'What are called auditors of the American railways are really only the accountants of the companies themselves.' What we need to restore the confidence of the investing and speculative

public is an auditor who shall have no connection with the company whose report he examines, accountable only to the Committee of the Exchange; who shall expose all the weak points, uncover the mysteries, and lay facts alone before the people. Directors of railroads, knowing that their reports would be carefully analyzed as soon as issued, would be extremely cautious in signing reports that they had not personally investigated most thoroughly. It may be urged that the railroad companies would not permit access to their books to settle any doubtful items in their reports. We answer, in that case the Exchange should immediately strike their securities off their list. Adopt this plan and the American public will again appear in the Exchange as investors and speculators; and Europe, seeking for securities paying reasonable returns, will take all that their ever-growing surplus will permit."

The State Banks of Minnesota.—Abstract of Reports made to the Hon. Henry M. Knox, Superintendent of Banks, showing the condition of the State Banks of Minnesota at the close of business on December 31, 1887, and for comparison an abstract of the reports for October 15, 1887.

Other resources	99 76	452 30	Dec., 352 54
Total resources	\$21,085,368 30	\$21,761,030 52	Dec., \$675,662 22
LIABILITIES.			
Capital stock paid in	\$5,453,000 00	\$5,303,000 00	Inc., \$150,000 00
Surplus fund	710,410 20	701,908 33	Inc., 8,501 47
Other undivided profits	702,410 20	646,434 28	Inc., 55,975 92
Dividends unpaid	61,322 00	3,568 00	Inc., 57,754 00
Due to depositors	12,585,046 20	13,753,366 16	Dec., 1,168,319 96
Due to other banks	313,280 73	807,972 75	Inc., 5,307 98
Notes and bills rediscounted	457,845 55	314,268 62	Inc., 143,576 93
Bills payable	205,863 49	225,200 84	Inc., 70,462 65
Other liabilities	6,589 83	5,311 04	Inc., 1,278 79
Total liabilities	\$21,085,368 30	\$21,761,030 52	Dec., \$675,662 22

From the foregoing it appears that there has been an increase in capital and profits of \$214,500, in re-discounts and bills payable of \$213,800, and a decrease in loans of \$723,600—a total of \$1,151,900. Deposits show a decrease of \$1,168,320. The cash reserve shows, on December 31st, the following percentages: In banks, 12.3 per cent., cash on hand, 13.5 per cent., total, 25.8 per cent. On October 15th, 14.3 per cent. in banks, and 10.6 per cent. cash on hand—total, 24.9 per cent.

Unclaimed Deposits in Savings Banks.—According to the State Treasurer's report, the returns made by Massachusetts savings banks, in accordance with Chapter 319, Acts of 1887, of deposits unclaimed for twenty years, and depositors of the same unknown to the bank holding said deposits, or known to be dead, show a very large amount of this class of deposits, aggregating in all the savings banks, several hundred thousand dollars. As all estates, in default of heirs, escheat to the Commonwealth, it is evident that the State has a large interest in these deposits. Says the Treasurer, "I noticed in one of the published returns deposits amounting to over \$26,000, made by John Heard as Judge of Probate, trustee. As Treasurer I addressed a letter December 31, 1887, to the savings bank in whose return I found these deposits, stating

the probable interest to the Commonwealth in the same, and asking for the names of the parties for whose benefit these deposits were made. It was an inquiry which I considered it my duty to make, and naturally supposed it would be promptly and fully answered. The Treasurer of the savings bank replied, that upon the suggestion of the State's interest mentioned by me he had called the attention of a public administrator to the matter, but he did not give me the information asked for. These deposits were made fifty years ago, and the Judge who made them has been dead over forty years. Why the Treasurer of the bank preferred to give the asked-for information to a public administrator rather than to the Treasurer of the State he did not explain. The published return does not in this instance carry out the intent of the law. The information which the law says shall be given is studiously concealed. I suggest legislation looking to the payment of such deposits into the State Treasury, to be held for depositors, if ever claimed, and, so far as may be, to be administered upon as intestate estates, which, in default of heirs, would escheat to the Commonwealth."

Saving the National Credit.—On February 14th Mr. George S. Coe, President of the American Exchange National Bank, of New York, wrote a letter to ex-Congressman E. G. Spaulding, President of the Farmers & Mechanics' Bank, of Buffalo, N. Y., asking him for information about an interesting financial episode which occurred just before the war, and which resulted in the appointment of General Dix to the Secretaryship of the Treasury. The following are the chief features of Mr. Spaulding's reply, which is of historic interest:

Soon after the assembling of Congress in December, 1860, it became more and more apparent that a number of the Southern States would at an early day secede from the Union, and that the Senators and members of the House would resign their seats in Congress and return to these disloyal States. Howell Cobb resigned the office of Secretary of the Treasury, leaving his disloyal deputy, Philip Clayton, of Georgia, in charge of the Treasury Department. President Buchanan then appointed Philip F. Thomas, of Maryland, Secretary of the Treasury to fill the vacancy, and John J. Cisco, who was loyal to the Union, continued to act as Sub-Treasurer in the city of New York, while the Assistant Secretary at Washington was disloyal, and apparently acted with a view to discredit the bonds and financial credit of the United States. More money was needed to pay current expenses and the interest on the bonds, and Secretary Thomas advertised for bids on the loan of bonds to be issued, such bids to be opened at the office of the Secretary of the Treasury on a specified day, toward the last of December, 1860. The credit of the Government in this emergency was considerably impaired, and it was difficult to get bids for this loan in an amount sufficient to prevent default on the maturing obligations of the Government. Being a member of the Committee of Ways and Means, I attended the meeting for the opening of these bids at the Secretary's office. The bids came in slowly, and it was not until the last moment a bid came from the Bank of Commerce, in New York, made by loyal banks in that city, of an amount sufficient to meet the present needs, payable by instalments. After this loan was made it became apparent that more money was being transferred to the Southern States than was necessary, and that the United States army was, to a large extent, located in the Southern States. One or more of the instalments was paid on the bids on the last of December, 1860. The financial situation became more and more alarming at the attitude of the disloyal men in Mr. Buchanan's Cabinet, and Mr. Buchanan was himself in some degree vacillating and undecided, but was generally believed to be loyal to the Union. Three of his Cabinet, namely, Jeremiah Black, Edwin M. Stanton and Joseph Holt, were known to Mr. Seward and others to be loyal to the Union, and were ready to co-operate in preserving the finances and other important measures until Mr. Lincoln could be inaugurated on the 4th of the following March. Under these circumstances, on January 1, 1861, upon consultation at Mr. Seward's private office, it was decided that I should leave Washington that evening for New York to consult with the bankers who had bid for the loan, with a view to have them hold back the payments of further instalments until the new Secretary of the Treasury could be selected and appointed by Mr. Buchanan, and General Dix was mentioned as a good man for the place in this emergency. I left for New York the same evening, January 1, 1861, and on arriving at New York proceeded to the residence of John A. Stevens, President of the Bank of Commerce, on Twenty-second street. I had a personal acquaintance with a large number of prominent bankers, but no personal acquaintance with Mr. Stevens. It took me some time to make his acquaintance and impress him with the importance of my mission. We rode down to the Bank of Commerce and sent for John J. Cisco, Sub-Treasurer, and other bankers, and on being fully informed of the situation at Washington—financially and otherwise—a fuller meeting was called, to be held in the Director's room, at the Bank of Commerce, at 2 P. M. The adjourned meeting was well attended by prominent bankers and business men. Among those I recollect being present were John J. Cisco, George S. Coe, A. E. Silliman, J. D. Vermilye, David Lord, A. A. Low, J. C. Green, Moses Taylor and others. The meeting seemed to fully appreciate the gravity and importance of decisive and early action. They appointed a committee consisting of A. A. Low, John C. Green and Moses Taylor to go to Washington with me the same evening to co-operate with our friends in procuring the removal of Mr. Thomas from the Treasury Department and the appointment of John A. Dix as Secretary in his place. The same evening (January 2, 1861) I went with the committee to Washington. I immediately arranged

for a meeting of the committee with Mr. Seward, Mr. Black, Mr. Stanton and Judge Holt, loyal members of Mr. Buchanan's Cabinet. This meeting was only partially successful, but negotiations continued from day to day, and more influence was brought to bear on President Buchanan. He finally, in a very few days, removed Mr. Thomas and appointed John A. Dix Secretary of the Treasury in his place. General Dix came to Washington and took possession of the Treasury Department. The remaining installments due on the loan were duly paid, and the Treasury Department was thereafter well managed, and General Dix made his home in the White House with Mr. Buchanan until Mr. Lincoln was inaugurated President, March 4, 1861.

The venerable Mr. A. A. Low, commenting on the above, remarked :

I doubt whether I can add much to what Congressman Spaulding has written, for his narration of the facts is much more complete than I could have made it. My memory, never particularly retentive as to minor details, is not as strong now as it once was, but I can still remember enough of the events mentioned by Congressman Spaulding to say that they are true in every respect. I remember very well serving with the committee sent to Washington by the New York banks, but the meeting at the Bank of Commerce has escaped my memory, and I could not for my life have recalled the names of those who attended it, although Mr. Spaulding's mention of them brings them back vividly to my mind. I remember, too, that when we arrived in Washington our first visit was to Mr. Seward, and what impressed me most deeply was a paper that he read to us. It was a forecast of what was soon to happen, and seemed, when I thought of it later, rather the inspiration of a prophet than the mere utterance of a mortal. Our mission in Washington was to procure the removal of Secretary of the Treasury Philip F. Thomas, of Maryland, whose methods seemed likely to injure the Government's credit at home and abroad, and to secure the appointment of General John A. Dix in his place. In addition to Mr. Seward, we called upon President Buchanan and Mr. Black, but these interviews did not impress me as did that with Mr. Seward. It was fortunate that we succeeded in our mission, for the crisis was a critical one in the financial history of the country.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- A bill has passed the House to discontinue the coinage of three-cent pieces.
- President William Means has paid his indebtedness to the Metropolitan National Bank of Cincinnati.
- Liquidators of the Central Bank of Canada, at Toronto, have declared a dividend of 25 per cent. to depositors.
- Canada has no gold coins, and all the silver and copper coins are made in England at the Royal Mint.
- The excitement over the proposition to tax the banks on the border that have been paying out Canadian money continues.
- The Aetna Insurance Company of Hartford, Conn., has accepted 50 per cent. cash for \$250,000 bonds of the city of Elizabeth, N. J.
- The eighty-two savings banks of Connecticut have \$102,823,996 of deposits. This is equal to \$150 apiece to every man, woman and child in the State.
- The demand for one and two-dollar certificates has been supplied in some measure by the issue of over \$2,500,000 in these notes during the month.
- The Comptroller of the Currency, on February 20, appointed Judge S. Edwin Day, of Moravia, N. Y., to be Receiver of the First National Bank of Auburn, N. Y.
- The Supreme Court on February 20th decided in the cases of the Pacific National Bank against Mixer and Whitney that the property of a National bank is not subject to attachment before final judgment.
- The banking institutions of Halifax have formed what is called "The Halifax Clearing-House Association," for the purpose of effecting a more perfect and satisfactory settlement of daily balances between them.
- Rochefoucauld has said that "we take a secret pleasure in the misfortunes of our dearest friends." It would be a refutation of this maxim if the banks of the country did not take a secret pleasure in the discomfitures of their dearest friend, the Bank Examiner, that has been so lamentably apparent during the past eighteen months.
- A bill will probably pass the Massachusetts Legislature compelling the savings banks of the State to call in their depositors' books at stated intervals. The depositors cannot be compelled to answer the call, but most of them will, and this will lessen the opportunity of fraud on the part of bank clerks and others, by making one entry on the bank and another on the depositors' books.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

CIRCULATING NOTES BASED ON RAILROAD BONDS.

Editor Rhodes' Journal of Banking:

SIR:—Mr. Lyman J. Gage, of the First National Bank of Chicago, is quoted as saying that "Senator Farwell's bill would lock up money instead of furnishing additional circulation."

His argument is fallacious, as the following analysis will show:

For instance, a bank is organized in Chicago with a capital of \$100,000; this is invested in bonds yielding 6 per cent. per annum, or say \$6,000, and, in addition, the \$50,000 in circulating notes is loaned at 7 per cent. per annum, or say \$3,500—a total of \$9,500.

Now, suppose that it had not gone into the bond system, but starts with the same capital, namely, \$100,000, and loans this at 7 per cent., or say \$7,000—a difference of \$2,500 in favor of the bond system.

The bank has not tied up any money, provided it has bought its bonds in Chicago, but, on the contrary, has increased the circulating medium \$50,000, and has done so at a profit to itself of \$2,500.

You have already presented the objections to the system that will be urged by Congress against its adoption, and there cannot be the slightest prospect of its becoming a law. It must be admitted, however, that it would be a good thing for banks entering the system where money circulates at no higher rate of interest than about 9 or 10 per cent.

M. S. TOUSEY.

CLAY CENTER, Kan., February 3, 1888.

INCREASING BANKING FACILITIES.

Editor Rhodes' Journal of Banking:

SIR:—I have just read the article on "A Natural Outgrowth of the National Banking System," by C. W. Yost, with much pleasure. It is an idea I have had for some time, and wrote to Messrs. Latham, Alexander & Co., of New York, last year on that subject, asking if they would assist me in carrying it out. Their reply was that they feared it would be too large an undertaking, unless one had the wealth of a Vanderbilt.

My ideas were formed from the wants in this city. At certain seasons of the year tobacco requires large amounts of money to be moved; and, again, we have money here that could be spared to other points. I should like to see the plan put into practice, and would aid in any manner I can.

J. L. WARING, *Cashier.*

DANVILLE, Va., February 16, 1888.

The Banks and Bankers of Missouri.—We are indebted to the Hon. Michael McGrath, Secretary of State, for the following abstracts of the condition of the State banks and bankers and private bankers of Missouri on December 31, 1887:

	Capital.	Deposits.	Assets.
STATE BANKS AND BANKERS:			
Banks in St. Louis.....	\$6,020,000	\$29,827,649	\$48,157,055
Banks outside of St. Louis.....	7,001,378	21,864,905	82,375,982
PRIVATE BANKS AND BANKERS.....	1,376,241	6,703,117	9,564,254
Total State banks.....	\$14,397,619	\$57,895,671	\$88,127,291
NATIONAL BANKS.....	11,242,280	22,998,000	51,323,057
Grand total in Missouri.....	\$25,639,899	\$80,893,761	\$139,450,348

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

A PUBLIC LOSS.

[St. Paul Pioneer Press.]

The immediate friends of Hon. Henry M. Knox, who has filled the office of public Examiner since its creation some ten years ago, have known for some weeks that he had placed his resignation in the hands of the Governor in consequence of his having accepted the tender of a position as Vice-President of the Security Bank of Minneapolis, which he has had under consideration for some time. The information was withheld from the public in order that the Governor might have an opportunity to make choice of a fit successor to Mr. Knox without being subjected to the embarrassment of that political pressure which so often results in unfit appointments. It will be very difficult for the Governor to find any one who can fill Mr. Knox's place. The men who possess his wide range of qualifications for the varied and comprehensive duties of this office are very rare. The public Examiner must not only be an expert accountant in all the various branches and systems of accounting peculiar to banking, to the administration of public finances—in State and county—and to the different State institutions, but he must be a man of large intelligence, familiar with all the laws bearing on all these different branches of financial administration. He must be a man of great judgment and tact in dealing with men of extraordinary industry and application, and must possess a high degree of moral firmness. Above all, he must be a man of unimpeachable integrity. The men are rare, we repeat, who unite all these qualities in the same degree as the retiring Examiner. The Governor will be extremely fortunate if he is able to find anybody capable of meeting the exacting requirements of the office, even after all its machinery and methods have been placed on their present footing of efficiency by the labors of Mr. Knox. The valuable work which he has accomplished in the reform of the loose methods of financial administration which existed before the office of public Examiner was created has never been fully appreciated—and these reforms would have been vastly more extensive if the Legislature had adopted his recommendations. His resignation is a great loss to the public, though the bank which secures his services is to be congratulated on its good fortune. It is to be hoped that in the appointment of his successor the Governor will disregard all political pressure, and be governed solely by considerations of fitness.

MONEY IN ENGLAND.

(*Monetary Times, Toronto.*)

The value of money in England has declined very much below the bank rate, which is maintained at three per cent., while discount in the open market is easy at one and one-half per cent. The competition of the other banks has beaten down the outside rate to this low point; yet they expect the Bank of England to abstain from following their example and to protect an adequate reserve for them as well as itself by maintaining its rate. As the outside rate throughout the country on ordinary trade bills is generally regulated by the bank rate, being charged one per cent. higher, the smaller traders, who are thus made to suffer, feel the maintenance of the bank rate so much above the market rate to be hardship. But as Mr. Thomson Henkey, for over half a century a Director of the Bank of England, shows in his new book, "The Principles of Banking," the one object that must be kept before them by bank Directors, whether of the Bank of England or any other, is to see to its reserve being sufficient to meet all demands made, or likely to be made, upon it. He argues that the Bank of England has no influence upon the state of the money market—no concern even with import and export of gold. It can only deal with facts as they arise, and if a demand sets in which might imperil the reserve, the rate of discount must be raised and maintained till the danger disappears. According to this reasoning, in the anomalous position the bank is made to occupy as practically the one guardian of the cash reserves for all the banks of the country, for they all habitually rely upon it in that respect, the bank cannot follow their example and look only to finding

employment for its money; it must make the maintenance of an adequate cash reserve a chief aim, on which account its rate will often be far and way above the open market rate.

RAILWAY ENTERPRISE AND INVESTMENTS.

[Speech of Earl of Derby.]

In a recent address, at the opening of the St. Helen's & Wigan Junction Railway, England, by the Earl of Derby, he is quoted as saying: "There were many there, and he was one who, without being very old, could well remember the opening of the first passenger railway in the world, all its striking and tragic circumstances, the death of an eminent statesman, and the consequent abandonment of all rejoicings which would naturally have accompanied the occasion. That was only fifty-seven years ago, but in that half-century it was not too much to say that the iron road had revolutionized the world. When they heard of Vancouver Island, 7,000 miles off, being brought by rail and steam within fourteen days' journey from England; when they heard, as a Russian gentleman had told him the other day, that Samarcand, in the depths of Central Asia, would be in a few years—he was not sure whether he did not say in a few mouths—within ten days' journey from London; when they looked forward to the probability, almost the certainty, that the next generation would see a through line from Paris to Pekin, it was not too much to say that the various races of the world have been brought together in a manner absolutely new since man had inhabited this planet. ("Hear, hear," and cheers.) The consequences of this change were enormous; perhaps it was too early for them to appreciate it. He supposed there never before were so many people wanting to know what they should do with their money. Foreign loans were not trusted because people saw, what they had certainly taken some time to see, that the State which was solvent could generally borrow at home, whereas the State which was insolvent had better not borrow at all. Our leading colonies were raising money—well, quite fast enough; but after all they could only absorb a small fraction of the English surplus. As for limited liability companies, so many people had burnt their fingers in concerns of that kind that merely speculative enterprise was happily rather at a discount. (Cheers.) They could judge of the financial condition when people were willing to give £104 in money for £100 of 3 per cent. stock, on the bare assurance that they would not be bought off for thirty years. Indeed, if a great European war were to begin, and we were unhappy enough, or foolish enough, to become mixed up in it, then the state of things would alter; but that risk was not imminent or even probable (cheers), and a merely foreign war, unfortunate as it would be, would not greatly affect our home enterprise. (Hear, hear.) On the whole, therefore, he would say that there never was a time when moderate returns on capital, provided they were fairly safe, would be so readily accepted as now. Other conditions at the moment were favorable. Labor was not dear; iron and steel were cheaper than a few years ago, and probably cheaper than they would be a few years hence; and there was no great undertaking calling for large investments of capital. If they looked at the savings bank returns, they would see that the capital put into those banks exceeded £3,000,000, or rather approached £4,000,000. These banks gave only 2¼ per cent. Their promoters' estimate of profits gave 7½ per cent. Undoubtedly that might be considered sanguine, and probably it was, but the difference was wide and allowed for a good deal of margin. Even 3 or 3½ per cent., with a constantly improving property, was not a bad return in these times, and he imagined it was more agreeable to have their investments under their own eyes than to be obliged to rely upon some American or Colonial agent, who might be a perfectly upright person, but whom they had never seen, and whom they never expected to see."

Bismarck National Bank, Bismarck, Dakota. A lengthy report was published in the *Bismarck Tribune* of December 17, 1887, stating that the Bismarck National and Capital National Bank had consolidated—the former going into voluntary liquidation while the capital of the latter was increased to \$100,000. On the strength of this supposedly authentic report the necessary changes were made and the Bismarck National removed from the list. Later advices are to the effect that the announcement of consolidation—although not given up—was, at least, premature. This will explain why the Bismarck National Bank does not appear in the January Directory.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

HALIFAX.—People's Bank; Peter Jack, Cashier, deceased.

NORTHWEST TERRITORY.

EDMONTON.—Lafferty & Smith are reported here. Manager, P. G. Gray.

FORT MCLEOD.—Cowdry Brothers are reported here.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, March 2, 1888.

Until the second week in February the tendency was toward an easy money market. The large deposits with the National bank depositories have this effect, as well as the reduced demand for money for stock speculations during the month of January. The stock sales at the New York Stock Exchange for January, 1888, only amounted to 3,926,117 shares of a par value of \$326,142,550, and an actual value of \$210,126,675, as compared with sales during the month of January, 1887, of 8,147,127 shares, par value being \$712,998,400 and actual value \$414,449,380. This indicates greatly decreased speculation in the face of a plethora of money, and the nearer correspondence between the par and actual value of the stocks sold in 1888 shows the smaller margin of profit. The slightly firmer tone shown since the middle of the month is due largely to the fact that there was a check placed upon the deposit of public moneys with the National bank depositories. This check was due probably to the knowledge on the part of the Administration of the growing feeling against the banks in Congress, and that the extensive deposits already made would be criticised. The deposit being checked, the currency locked up by surplus revenues increased, at the expense of the public stock of currency. The course of Congress has all along indicated a preference for the passage of a bill authorizing bond purchases. Such a bill was reported from the Ways and Means Committee, and passed by the House on February 29th. The debate on the occasion of its final passage was interesting, both for what was said and what was not said. Mr. Weaver, the man who believes the unlimited issue of greenbacks a panacea for all human ills, public and private, scouted the necessity of the passage of the measure, on the ground that the Executive already had the power under Section 2 of the Act of March 3, 1881. He did not approve the plan of paying a premium for bonds, but proposed that the Government should exercise its power of sovereignty, offer to redeem the bonds at par, and cease paying interest to all who refused this offer. He further arraigned the Administration for depositing public moneys with the National banks. Mr. Reed accused the Administration of neglecting to use the power it had of buying bonds under the Act of 1881, for the purpose of piling up a surplus to be used in terrifying the country into free trade. Mr. Breckenridge defended the course taken by the Secretary of the Treasury during the past year, not on grounds of its intrinsic wisdom, but because it was the best that could be accomplished. The Act of March, 1881, was not to be regarded as a sufficient grant of power to purchase bonds at high premiums, and therefore the bill under discussion was necessary. There was much said about protection and free trade, but very little about the actual merits of the bill. Strange to say, it seems to be taken for granted that the measure would be sure to accomplish the object intended. No discussion was had whether month in and month out the Secretary could invest say even ten millions of dollars of the surplus in bonds. This is really the objection to the bill. There is certainly no inducement to holders of fours and four and a half to sell them at any less than the full value of the investment. This bill, if passed, establishes a steady demand that must necessarily force up the premium. We do not believe the Government can get \$10,000,000 in its own bonds per month except at exorbitant rates. There is no reason why the money market should object; it will be a great benefit to the holders of the bonds, banks and others, and will put out the largest possible amount of surplus money in this direction. The news of its passage at once made an improvement in the stock market, and there is every reason to believe it

will pass the Senate. The exports of breadstuffs, cotton, provisions and petroleum were $13\frac{1}{2}$ millions of dollars less for the seven months ending January, 1888, than for the corresponding period in 1887, according to the report of the Bureau of Statistics. The balance of exports over imports is now but very little in our favor, and is likely in February to turn the other way. There may some stringency result from this cause and the piling up of surplus revenues, that will keep bond premiums down even in the face of purchases by the Government. There is a cautious feeling pervading the trade situation, though if the surplus question were settled the outlook would be hopeful. The Reading miners have resumed work, and the railroad rate questions are likely to be settled. The iron trade is still somewhat unsettled.

HOME MONEY MARKET.—Money has been easy during the month, but firmer towards the close. For the week ending February 2d, call loans ranged from 2 to $3\frac{1}{2}$ per cent.; commercial paper, from $4\frac{3}{4}$ to $5\frac{1}{2}$ per cent. For the week ending February 9th, call loans ruled from 2 to 3 per cent., and commercial paper from $4\frac{1}{2}$ to 5. For the week ending January 16th, call loans were from 2 to 3 per cent., and commercial paper from $4\frac{1}{2}$ to 5 per cent. For the week ending February 23d, call loans were from 2 to $2\frac{1}{2}$ per cent., and commercial paper from $4\frac{1}{2}$ to 5 per cent. For the last week the rates were about the same, though there was rather more demand. The following are the rates of exchange on New York: Savannah, buying $\frac{1}{8}$, selling $\frac{1}{4}$ premium. Charleston, buying 1-16, selling $\frac{1}{4}$ premium. New Orleans commercial, 50 @ 75c. per \$1,000 premium; bank, par. St. Louis, 75c. per \$1,000 premium. Chicago, par to 25c. per \$1,000 discount.

FOREIGN EXCHANGE.—There have been indications of an increase of rates for money in the London markets, owing, it is supposed, to collections of revenue. Perhaps, however, the rumor that the Russian Government intended to establish a metallic standard in that country had something to do with it. Before the resumption of specie payments by the United States it was a common assertion that gold could not be drawn to supply the needs of the Treasury here from the great stock then held in Europe. The drawing power of a great nation was then, as is now seen, underrated. There are therefore apprehensions that if Russia is in earnest in resuming specie payments she may want a share of the gold and silver held by England, France and Germany. If Russia should resume on a silver rather than a gold basis, it might prove a blessing to those who think silver is a drug.

For the first week in February, although commercial bills were in limited supply, there were so many bills drawn on foreign purchases of American securities that rates for exchange were very weak and unsatisfactory. There was also but little demand. This condition continued until the beginning of the second week, when the demand, on account of importations, began to increase, and rates advanced. This fell off soon, but security bills being out of the way the scarcity of commercial bills kept rates steady and firm. During the week ending February 24th there was a tendency to advance rates through scarcity of bills, though there was still no great demand. The rest of the month, exchange showed a tendency to advance on account of the scarcity of bills and the anticipation of an increased demand. From January 28th to February 23d the Bank of England gained £1,039,000 in specie, the reserve at the latter date being 46.78 per cent. On February 16th the discount rate was reduced from 3 to $2\frac{1}{2}$ per cent. The Bank of France gained 20,625,000 francs in gold and 9,775,000 francs in silver during the month. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.86@ $4.86\frac{1}{2}$; sight, nominal, \$4.88@ $4.88\frac{1}{2}$; 60 days, actual, \$4.85 $\frac{1}{2}$ @ 4.86 ; sight, actual, \$4.87 $\frac{1}{2}$ @ 4.88 ; Cable transfers, \$4.88@ $4.88\frac{1}{2}$; Prime commercial sterling, long, \$4.84 $\frac{1}{2}$ @ 4.85 ; Documentary sterling, 60 days, \$4.84 $\frac{1}{2}$ @ $4.84\frac{3}{4}$; Paris bankers', 60 days, 5.20@ $5.19\frac{3}{8}$; sight, 5.18 $\frac{1}{8}$ @ $5.17\frac{1}{2}$; Paris, commercial, 60 days, 5.21 $\frac{1}{8}$ @ $5.21\frac{1}{4}$; sight, 5.20@ $5.19\frac{3}{8}$; Antwerp commercial, 60 days, 5.21 $\frac{1}{2}$ @ $5.21\frac{3}{8}$; Swiss bankers, 60 days, 5.21 $\frac{1}{2}$ @ 5.20 ; sight, 5.18 $\frac{3}{8}$ @ $5.18\frac{1}{8}$; Reichmarks (4) bankers, 60 days, 95 $\frac{1}{4}$ @ $95\frac{3}{8}$; sight, 95 $\frac{1}{4}$ @ $95\frac{3}{8}$; Reichmarks (4) commercial, 60 days, 95@ $95\frac{1}{8}$; sight, 95 $\frac{1}{4}$ @ $95\frac{1}{8}$; Guilders, bankers, 60 days, 40 3-16@ $40\frac{1}{4}$; sight, 40 $\frac{3}{8}$ @ $40.7-16$; Guilders commercial,

Twenty francs.....	3 85 @	3 90	Mint value.		

NEW YORK CITY BANKS.—During the week ending February 8d, the combined currency and gold received by the New York banks was \$2,432,000, and they shipped \$649,000, a gain of \$1,883,000. By Sub-Treasury operations they made a further gain of \$100,000, making a total gain for the week of \$1,983,000. During the week February 10th, the banks lost \$113,000 to the interior, and lost \$2,500,000 by Sub-Treasury operations, a total loss of \$2,613,000. During the week ending February 17th, the banks lost \$176,000 by shipments and \$2,700,000 through Sub-Treasury operations, a total loss of \$2,876,000; and during the week ending February 24th they gained \$1,300,000 by shipment, and lost \$3,300,000 by Sub-Treasury operations, showing a net loss of \$1,960,000. The total loss for the last four months was \$5,466,000, against a gain for the previous four weeks of \$17,486,000. The important Sub-Treasury losses during the four weeks indicate the great change made by the cessation of the deposit of public moneys with the National bank depositories.

The following table shows the condition of the New York Clearing-House Banks for a number of weeks past.

1888.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
February 25.	\$356,680,000	\$77,011,100	\$33,306,100	\$380,467,100	\$7,680,700	\$15,200,425-

From the statement of the Comptroller of the Currency of February 29th, it appears there was a decrease of \$3,125,309 in National bank circulation during the month of February, as against a decrease of \$2,535,386 during the month of January. The total amount of lawful money deposited with the Treasury to retire outstanding bank circulation was \$99,272,034, as compared with \$101,799,643 last month. Bonds to secure public deposits amounted to \$57,233,000, including \$901,000 sixes, \$15,788,500 4½s, \$40,408,500 4s, and \$135,000 called threes.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated :

	March 1, 1888.	Feb. 1, 1888.	Jan. 1, 1888.	Dec. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents..	\$3,131,000	\$3,156,000	\$3,256,000	\$3,256,000	\$3,680,000
4½ per cents.....	69,433,050	69,335,550	68,955,050	69,831,100	59,636,200
4 per cents.....	109,466,150	110,141,900	112,102,400	113,928,400	113,903,200
3 per cents.....	131,500	131,500	131,500	131,500	52,218,950
Total.....	\$182,161,700	\$182,764,950	\$184,444,950	\$187,147,000	\$229,438,350

The following table shows the net gold and silver held by the United States Treasury on the dates given :

	March 1, 1888.	Feb. 1, 1888.	Jan'y 1, 1888.
Gold coin and bullion.....	\$309,567,827	\$307,809,155	\$305,342,187
Gold certificates outstanding.....	96,697,913	104,853,971	96,734,057
Gold owned by Treasury.....	\$212,869,914	\$202,955,184	\$208,608,130
Silver dollars and bullion... ..	\$231,693,623	\$227,477,903	\$222,150,173
Silver certificates outstanding.....	184,452,659	179,321,053	178,855,423
Silver owned by Treasury.....	\$47,241,064	\$48,156,850	\$45,294,750

The changes during the month are an increase in the net gold coin held of \$9,914,700, and a decrease in silver dollars and bullion of \$915,786. In addition the Treasury held fractional silver coin amounting to \$25,855,452.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of February, the highest and lowest since January 1, 1888, and also during the year 1887:

	FEBRUARY, 1898.			SINCE JANUARY 1, 1888.			YEAR 1887.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1887—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Biddle.—Thomas A. Biddle, senior member of the Philadelphia firm of Thomas A. Biddle & Co., bankers, died on February 1st in his seventy-fourth year. He had been in active business more than fifty years.

Boswell.—W. D. Boswell, President of the Northern Bank of Kentucky, at Lexington, Ky., died on February 15th. He was Cashier of the bank for many years, but was elected President in 1886. He was fifty-eight years of age.

Corcoran.—W. W. Corcoran, the well-known and venerable philanthropist and banker, of Washington, D. C., died on February 25th, at the age of 90 years. He was born in 1798, and has the unique distinction of having personally met every President of the United States with the exception of Washington. He started in life as a merchant in Georgetown, D. C., and early acquired a reputation for industry and integrity. In the panic of 1837 his accumulations were swept away and he became bankrupt, but afterwards paid all his indebtedness incurred at this time with scrupulous exactness including interest and compound interest. Soon afterwards he formed a partnership with Mr. Riggs, of the District, and entered into the banking business, establishing the house of Riggs & Co. The commencement of the success of this well known banking firm and the foundation of Mr. Corcoran's fortune was laid by the successful placing of a United States loan during the Mexican war. Mr. Corcoran was intimately connected with Webster and other distinguished statesmen of that period and was accustomed to relate many interesting anecdotes in regard to their financial dealings. He has of late years been more distinguished as a philanthropist than as a banker. The Corcoran Art Gallery and the Louise Home in Washington are distinguished monuments of his desire to benefit the public. His name will always be mentioned among those who have used their wealth in wise and liberal manner for the benefit of their fellow men. His long and useful life is his self-constructed monument, that cannot be eclipsed or added to by any that his friends and fellow citizens may build in his honor.

Davis.—Major Chauncey Davis, President of the Lumberman's National Bank of Muskegon, Mich., and one of the most prominent and influential citizens of that city, died on February 14th. He had been President of the bank since its organization, in 1873.

Gale.—George T. Gale, Director of the National City Bank of Cambridge, Mass., died on February 22d, at the age of seventy-seven. He was formerly President of the bank for a number of years but last year resigned the office.

Gile.—Wilbur Fisk Gile, Vice-President of the Lawrence Savings Bank, and a Director in the National Pemberton Bank of Lawrence, Mass., died February 2d, at the age of 56 years.

Holton.—Albert Holton, Treasurer of the Bangor (Me.) Savings Bank, died on February 18th, aged eighty years. He had been a resident of Bangor fifty years, and was one of the organizers of the savings bank.

Jack.—Peter Jack, the faithful and able Cashier of the People's Bank of Halifax, N. S., died in that city on February 8th.

Knapp.—Herbert W. Knapp, Cashier of the Deposit National Bank, of Deposit, N. Y., died suddenly on February 14, 1888.

Logan.—John E. Logan, Vice-President of the Bank of Lineville, Iowa, who has occupied that office since the bank was organized in 1875, and has resided in the county since 1844, died February 2, 1888, aged 77 years.

McCullough.—Neal C. McCullough, of the firm of N. C. McCullough & Co., proprietor of the Citizens' Bank of Anderson, Ind., died on February 8th. He was one of the oldest citizens of the place, and identified with its larger business industries.

Mellon.—Geo. N. Mellon, of the firm of Mellon Brothers, bankers, of Bismarck, Dakota, died recently of consumption.

Oglesby.—Hon. Joseph H. Oglesby, President of the Louisiana National Bank of New Orleans, La., died after a very long and painful illness on February 1st. He was elected President of the institution named in 1889, and continued in that office up to the time of his death. He was 66 years old.

Parker.—John D. Parker, President of the Collateral Loan Company of Boston, Mass., died February 2, 1888. He was a Director in the Traders' National Bank.

Ridgely.—N. H. Ridgely, President of the Ridgely National Bank of Springfield, Ill., died January 31st. He left an estate said to amount to \$2,000,000.

Somes.—Hon. Daniel E. Somes, who organized the City Bank of Biddeford, Me., and was for several years its President, died at Washington, D. C., February 13th, in the seventy-second year of his age. He was elected to Congress in 1858, and settled in Washington in 1862.

Stirling.—Archibald Stirling, Sr., who resigned the Presidency of the Savings Bank of Baltimore, Md., January 26th, died on February 26th, at the age of 90 years. He first became connected with the bank in December, 1825, was made a Director February, 1826, Treasurer in May, 1832, and President in June, 1852. He has thus been identified with the institution over 62 years. On the occasion of his resignation in January last on account of increasing infirmity, the following resolution was adopted by the Directors of the bank: Resolved, "that a committee of three, consisting of the

President and two Directors designated by him, be appointed to wait personally upon Mr. Stirling and express to him the regret of this Board that failing health has necessitated his resignation, and its hope for his recovery and prolonged life. That this committee also express to Mr. Stirling the affectionate regard which this Board feels for him personally, and its high appreciation of his long, faithful and efficient service; also its belief that his high moral and intellectual power, combined with wisdom, prudence and sound financial management, have mainly contributed to the success of this bank, and have been very largely instrumental in establishing in this community the confidence which the Savings Bank of Baltimore now enjoys."

Tripp.—Azariah S. Tripp, Cashier of the Metacomet National Bank of Fall River, Mass., died on February 15th, at the age of sixty-two. He was one of the most prominent business men of Fall River.

Weiss.—Francis Weiss, President of the Lehigh Valley National Bank, Bethlehem, Pa., died on February 14th, aged sixty-nine years. He was also President of the Alden Company, and largely interested in business operations in the Lehigh Valley.

Winn.—Albert Winn, formerly President of the Arlington Five Cents' Savings Bank of Arlington, Mass., died on January 31st. He had been President of the institution named for many years, being the first to fill that position.

MONETARY CHRONOLOGY.—FEBRUARY, 1888.

JANUARY 31.—Mr. Wilkins, Chairman of the House Committee on Banking and Currency, announced that he desired to postpone for two weeks consideration of his bill increasing National bank circulation to 100 per cent. of the par value of the bonds deposited. The opponents of the bill, led by Mr. Weaver, regarded this as a virtual admission of the defeat of the measure.

FEBRUARY.

3. **FRIDAY.**—The United States Treasurer sent a circular to National banks and others, saying that he is prepared to issue one and two dollar silver certificates in redemption of mutilated United States notes. — Judge Sage delivered his charge to the jury in the case of Benjamin E. Hopkins, of the Fidelity National Bank, of Cincinnati, Ohio. — Rumors of trouble at the Metropolitan National Bank, of Cincinnati, Ohio.
4. **SATURDAY.**—The depositors of the Third Avenue Savings Bank, of New York city, received their last dividend of 1 $\frac{1}{4}$ per cent. The public debt statement for January showed a decrease of \$15,397,330 during the month of January. This makes the reduction since the beginning of the fiscal year \$69,217,655. The total debt is \$1,700,191,432.00, and the debt less available cash in the Treasury is \$1,210,211,061.49. — The People's Savings Bank, of Bridgeport, Conn., held \$50,000 of the water bonds of the borough of Nowalk, Conn., issued to run twenty years and to bear seven per cent. interest, with the privilege of payment at the end of ten years. The borough refunded the bonds at a lower rate of interest without giving the bank sufficient notice. Suit having been brought, a verdict was rendered in favor of the bank for the entire principal, one day's interest at seven per cent., and one year and seven months' interest at six per cent.
6. **MONDAY.**—The semi-annual reports of the savings banks of New York State made to Hon. Willis S. Paine, Superintendent of the Banking Department of the State of New York, were published. — Lewis Krohn was selected as Vice-President of the Metropolitan National Bank, of Cincinnati, Ohio, in hope that a change of management might save the institution from failure. It was still claimed that the bank was able to meet all demands upon it. Examiner Saunders continued his investigations. — Two forged checks purporting to be drawn by the officials of the Manhattan Life Insurance Company, of New York city, on the First National Bank of that place were detected. — Reports of the Trust Companies of New York city on January 1st were published by Hon. Willis S. Paine. — Vice-President De Camp, of the Metropolitan National Bank, of Cincinnati, was arrested. The Directors passed a resolution suspending the bank.
7. **TUESDAY.**—A bill passed the House making false entries by officers or employes of National banks with intent to deceive the Comptroller a misdemeanor. — President Means, of the Metropolitan National Bank, of Cincinnati, was arrested.
8. **WEDNESDAY.**—The Cashier of the Metropolitan National Bank, of Cincinnati, claimed that the indebtedness of the bank would be paid in full, leaving \$320,000 for the stockholders.
9. **THURSDAY.**—At a meeting of the Ways and Means Committee action upon bills introduced by himself and Mr. Breckenridge, of Kentucky, was called for by Chairman Mills. The bills provide for investment of surplus revenues in United States bonds. The Committee agreed to report favorably Mr. Mills' bill, which reads as follows: "Be it enacted, etc., that the Secretary of the Treasury is hereby authorized to apply the surplus money now in the Treasury and not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds."
10. **FRIDAY.**—James McConville, of Steubenville, Ohio, was appointed Receiver of the Metropolitan National Bank, of Cincinnati. It is expected the bank will pay in full. — A National bank at Lansing, Mich., was defrauded of \$2,000 on a spurious draft.

11. **SATURDAY.**—A new counterfeit of the five dollar silver certificates, about three-sixteenths of an inch too short, was discovered in circulation by the secret service division of the Treasury Department. — There has been a quarrel between the parties appointed to liquidate the affairs of the Central Bank, of Toronto, Canada. One of them, Campbell by name, it is asserted, is too friendly to the interests of the principal debtor of the bank.
12. **MONDAY.**—The following case was argued before the United States Supreme Court: The National Bank of Redemption, of Boston, Mass., refused to pay the State tax upon National Bank shares for the current year, on the ground that it is unconstitutional, and the case has been appealed on a writ of error to the full Bench of the Supreme Court. City Solicitor Bailey, of Boston, appeared for the city which collected the tax. Senator Hour appeared, under a special resolution of the Legislature of Massachusetts, in behalf of the Commonwealth.
14. **TUESDAY.**—Cashier O'Brien and Book-keeper Morse, of the First National Bank of Auburn, N. Y., sailed for Europe from Halifax on the steamer Oregon. — The Bavarian Lieutenant, Max Dieglmeyer, was sentenced to eight years' imprisonment for forgery. He forged the name of Mr. Levy, of L. Levy & Co., of New York city, to a check on the Importers & Traders' National Bank. — Mr. Mills' bill for use of surplus in the purchase of bonds was reported favorably to the House by the Committee on Ways and Means. — Suits were instituted against A. Frank, of the Bank of Warsaw, and D. McNaughton, of Rochester, to recover on claims against the Rochester and State Line Railroad Company, which it is claimed should be paid out of money placed with Mr. Frank for that purpose some years ago. — Judge McCue was confirmed as Assistant Treasurer of the United States at New York.
15. **WEDNESDAY.**—Charles F. Curry, of Olean, N. Y., has been appointed Solicitor of the Treasury, in place of Alexander McCue, appointed Assistant Treasurer of the United States at New York city. — The bonds stolen by Frank C. McNeally from the Saco Savings Bank in August last, were restored to that institution.
23. **THURSDAY.**—Miss Josie Holmes, indicted at Cincinnati for complicity in wrecking the Fidelity National Bank, was discharged in consideration of giving important testimony. — The evidence at the Dexter, Me., murder trial is becoming more unfavorable to the defendants, Stain and Cromwell, and it is expected that they will be convicted of the murder of John W. Barron.
24. **FRIDAY.**—In the libel suit brought by Amasa E. Moore against the Manufacturers' National Bank, of Troy, N. Y., the jury rendered a verdict of \$200 damages for the plaintiff. Moore was Teller of the bank, and was accused of misappropriating the funds.
25. **SATURDAY.**—An application was made to Judge Sage, of the United States Circuit Court, at Cincinnati, to allow Benjamin E. Hopkins, of the Fidelity National Bank, recently convicted, to be removed from the jail to his home, because he was said to be suffering from dropsy. The motion was denied. — The bond of Judge McCue, the new Assistant Treasurer of the United States, was approved.

Massachusetts Savings Banks.—The Savings Bank Commissioners, in their report just published, give compiled returns of the Savings banks of that Commonwealth for the year ending October 31, 1887. Under the head of liabilities—the total deposits are \$302,948,624; surplus, \$5,502,170; guaranteed fund, \$8,631,746; sundries, \$314,958. The assets, principally, are as follows: United States, State, city, county and town bonds, \$40,304,050; bank stock, \$23,850,920; railroad bonds, \$21,185,901; railroad notes, \$3,080,000; real estate (by foreclosure and for banking purposes), \$4,902,502; loans on real estate mortgage, \$119,792,832; loans on personal security, \$78,518,753; loans to Commonwealth, \$950,000; loans to counties, cities and towns, \$8,791,579; deposits in banks on interest, \$7,717,976; deposits in banks, not on interest, \$528,942; cash on hand, \$611,720. Total number of banks is 173—a gain of one over last year.

The comparative aggregates for 1886 and 1887 show an increase in the following items: Number of open accounts, 38,779; amount of deposits, \$11,750,723.12; deposits of and not exceeding \$300, 1,604; amount of same, \$830,888.51; withdrawals, 62,230; amount, \$7,903,530.71; accounts opened, 7,799; closed, 16,287; guarantee fund, \$1,004,491.58; loans on public funds, \$462,480; bank stock, \$128,408.11; loans on same, \$19,807.54; railroad bonds, \$3,900,933.42; loans on same, \$147,100; railroad notes, \$165,000; loans on railroad stocks (an item not heretofore included in reports), \$232,525; loans on mortgages of real estate, \$7,583,954.29; loans on personal security, \$7,122,238.39; earnings, \$1,267,370.99; ordinary dividends, \$850,579.11; outstanding loans not exceeding \$3,000 each, 2,494; amount of same, \$3,613,008.50; expenses, \$49,207.60.

Decrease—Number of deposits during year, 118,858; amount of same, \$7,549,730.78; surplus, \$188,924.85; public funds, \$3,010,222.74; deposits in banks on interest, \$3,795,864.38; invested in real estate, \$14,929.51, real estate by foreclosure, \$388,015.64; loans to counties, cities or towns, \$245,458.95; cash on hand, \$336,685.83.

RHODES' JOURNAL OF BANKING.

Vol. XV.

APRIL, 1888.

No. 4.

IN the February number commenting on the bill introduced in the New York Assembly by the Hon. Bradford Rhodes (managing editor of the JOURNAL OF BANKING), member from Westchester county, modifying the present law making Saturday afternoon a half holiday, we made the point that the present law is unconstitutional in that it discriminates unjustly against one class in the community. The law as it stands prevents banks and bankers from carrying on their business more than five days and a half in each week and permits all other business men to work or not as they please. In other words, any one who wishes can do what work he may choose on Saturday afternoon, but bankers must have no dealings with the outside public on that half day.

A well-known firm of private bankers doing business in New York city recently wrote a letter to the Judiciary Committee at Albany, calling their attention to the principal evils of the present half holiday law in that, by making illegal all contracts and agreements made, and promissory notes drawn after mid-day on Saturdays, it compels banks, bankers, brokers and moneyed institutions to confine their transactions on that day to two hours' time, thus causing a loss of three-fifths of a business day each week, equal to over a month of business days annually, while all rent, clerks' hire and other expenses of said business continue. It also in this way discriminates against one class of the business community, since merchants, farmers, manufacturers, professional men, mechanics and laborers can, after mid-day, pursue their daily callings or not, at their option, while those engaged in financial pursuits are legally debarred from doing so.

The main point made is the one, first suggested in the JOURNAL, of unconstitutionality. We do not however think that an appeal to the Judiciary Committee is the best way to attack the law on this point. The Legislature will not feel bound to recognize this defect until some judicial opinion has been obtained. The proper course to pursue would be for some bank to protest a note on Saturday afternoon and make a case which could be argued before the Courts. There is little

doubt but that if such an issue were made that the law would be declared unconstitutional.

The leading bankers of this city and throughout the State are seconding Mr. Rhodes' efforts to secure a just modification of the law before the present Legislature adjourns. If the members will honestly represent the true interests of the people and banish demagogism and duplicity from their councils the obnoxious law will not remain longer as a menace to the business of the State. The law was passed last year under stress of the idea that it would be a great boon to the wage-earner — primarily, however, as a net to catch votes — but experience has shown it of no value to workingmen as the holiday costs them just so much of their wages, and but few of them are willing to give up a half-day every week in the year. They can do that just as well without any law, and in that event would have the satisfaction of knowing that they were not being humbugged by a *quasi* enactment standing on the statute books of the great empire State.

THE HOUSE OF REPRESENTATIVES has passed the bill for the issue of Fractional Silver Certificates. It provides that these Certificates may be issued in denominations of ten, twenty-five and fifty cents, in exchange for silver certificates of larger denominations, or standard silver dollars. The effect of the bill if it becomes a law will be to gradually substitute a paper fractional currency based on legal-tender silver dollars for the present fractional subsidiary silver coins. The new paper currency will be redeemable, not in subsidiary silver, but in standard silver dollars. The subsidiary silver coin now in circulation is redeemable in legal-tender notes, and therefore under the construction of the Act of July 12, 1882, which holds that legal-tender notes are redeemable in gold, the silver halves, quarters and dimes now circulating are issued on a gold and not on a silver basis of valuation. In 1885 the banks of New York city willingly lent the Treasury of the United States, in answer to a proposition made by Treasurer Jordan, some five or six millions of dollars in gold in exchange for an equal amount of subsidiary silver. It was the same as if in exchange for a loan of gold a gold certificate had been issued. If in answer to the demand for a fractional paper currency for making small remittances, Congress shall permit the issue of small notes payable in subsidiary silver, or in other words of subsidiary silver certificates the issue might not be so objectionable. The present supply of subsidiary silver change is ample, in fact a large quantity of the present supply remains unused in the Treasury, and certificates based upon such silver would not have caused either undue expansion or contraction of this form of currency. Much benefit might result in the saving of express charges to the public, and other charges that are now borne when small remittances have to be made. As against this the cost of storing the silver in the Treasury would be somewhat increased. But the bill adopted

by the House, making the new fractional notes dependent on standard silver dollars, at once removes the small money of the country from a gold to a silver basis. There will be, if the bill becomes a law, two kinds of change—one, the present subsidiary silver based on gold, and the other the new fractional paper notes based on standard silver dollars. The adoption of such a law will indicate a further step toward a silver basis. It is a further menace not only to those who desire to retain the gold basis, but also to those who from a desire to make the silver industries of the United States profitable, encourage the coinage and use of the standard silver dollar. The present condition of equilibrium between the gold and silver dollar may be maintained, and silver miners may for a long time receive gold prices for silver bullion, but every change calculated to increase circulation based on silver at the expense of circulation based on gold, hastens the time when the present double basis of gold and silver will give way to a silver basis, and then the production of the mines will be paid for on a silver basis. The bill should be amended by the Senate to make the fractional notes issuable by the Treasury on the deposit of subsidiary silver coin. If the present bill becomes a law all of this coin will be thrown back on the department to be stored or coined into silver dollars, and the new fractional notes based on silver dollars will supply its place.

THERE HAS RECENTLY BEEN in the State of Massachusetts much discussion as to the character of securities in which the Savings banks of that State may be permitted to invest the money entrusted to them by their depositors. This recalls the general subject of Savings bank investments. The object of the Savings bank is to safely invest the money of depositors and at the same time secure an income from such investments sufficient to pay the interest which the depositor is entitled to on his money. In the United States, the history of first-class investments outside of real estate has been exceptional during the last twenty-five years. The great civil war, and the public debts incurred, caused an immense increase in the amount of public bonds and stocks, National, State and municipal, in which the funds of Trust and Savings institutions might legally be invested. United States bonds could be purchased at less than par in gold that brought in interest of more than six per cent. A Savings bank investing at that time secured large interest for a long period of years, besides all the opportunities for profitable re-investment that the refunding operations of the Government afforded. A bank making such investments could continue to pay better interest to its depositors than one that was organized later provided that the law with regard to permissible investments continues the same. Since Government bonds, the stocks of solvent States and municipalities and all securities representing the greatest degree of certainty, no longer as a rule pay interest at a greater average than about three per cent., new Savings institutions are brought into severe

competition with the older organizations. If they do not pay the same rates of interest to their depositors as the older banks they are left behind in the race. It may therefore be said in favor of permitting Savings banks to invest in railroad securities that there is now a large number of such securities of as high credit as United States bonds were twenty-five years ago, and as likely to improve within the next twenty-five years. The danger of permitting such investments consists in the lack of uniformity of railroad securities. Some have escaped from the incubus of bad and dishonest management, others have not ; and a general permission might be made a pretext for the purchase of the most worthless securities. There are dangers also connected with the admission to the list of stocks and bonds in which the Savings banks of a State may invest, of the securities of a particular railroad or railroads. The temptation will offer itself to the managers and stock and bondholders of the poorest roads to endeavor to obtain the legislative enactment by undue influence. The more the subject is considered the more it appears how inadequate is legislative enactment to control matters that are best managed by trained private judgment. If the law seeks to make safe rules to guide all bank managers it necessarily restricts them to a very great extent to the detriment and loss of their depositors. It teaches the public to rely less on the men who manage the Savings bank deposits, and leaves such managers with a reduced sense of responsibility. If more latitude of private judgment were allowed, there would at once be a safe and more profitable use of a much larger amount of Savings bank funds. The State should seek to protect the public, not by tying down bank managers, but by an intelligent inspection from time to time of the results of their management.

MR. GAIRDNER, THE GENERAL MANAGER of the Union Bank of Scotland, recently read a paper at Glasgow, in which he maintained that a scarcity of gold instead of increasing discount rates, as might be supposed, in reality lowered them. His reasoning was as follows : "Let me make the supposition that a mountain of pure gold is discovered in our midst * * * the *vox populi* would exclaim, 'Now at last shall we have money abundant and cheap !'—meaning by cheap, low rates of discount. Yet this expectation would assuredly be disappointed. The extraordinary addition made to the world's stock of gold would greatly diminish its value in relation to and in exchange for other commodities ; that is to say, the value of other commodities measured in gold would tend to rise, and that enormously. All persons possessed of gold would thereupon desire to exchange it for other commodities or for property in one form before the great depreciation in the value of gold had fully taken place. This movement would not be confined to the actual possessors of gold. All potential holders of gold—those, for example, who control the deposits

in banks ; all mortgagees whose debts are repayable in gold ; in a word, all creditors—would desire to transform the debts repayable to them in gold into some form of ownership of property. * * * Many others would wish to become borrowers of gold money in order further to increase their purchases of property ; and just in proportion to the greatness of the rise—just in proportion, that is to say, to the depreciation of gold because of the abnormal addition to the supplies—would be the rates of interest offered by contending borrowers.” On the other hand, Mr. Gairdner reasons, that a scarcity from any cause on a sufficiently important scale would produce the opposite result. Depression of prices of property would follow, leading to a fear to purchase or hold, and a desire to loan on security, payable in the gold that was appreciating. This eagerness to loan would necessarily depress the rates of discount. This reasoning applies equally well to any money, whether silver or paper, that is based on a gold valuation, and practically exchangeable for gold. It very ingeniously seeks to ascribe the low rates of discount in the money markets to-day to the inadequacy of gold as a basis of valuation. The conclusion reached may in some cases be correct. It must, however, be remembered that similar efforts are frequently produced by causes widely diverse. If, as Mr. Gairdner concludes, the belief that money is increasing in value leads holders to loan it at low rates in order to secure repayment at an advanced value, it cannot be the only cause that leads to this result, inasmuch as in this country there is a general belief among financiers and investors that the continued coinage of the silver dollar threatens the future payment of all money contracts in silver or cheaper dollars than the gold dollar that now forms the basis of such contracts. Yet the rate of discount is now very low here, and money is very plenty, without any great demand for it. Of course, Mr. Gairdner might answer, that if it were not for the apprehension in regard to silver the discount rates here would be much lower.

ALL ALONG THE CANADIAN border the National and State banks are being called upon to pay the tax or penalty imposed by Sections 3,412 and 3,413 of the United States Revised Statutes, for using for circulation and paying out the notes of any person or of any State bank or State banking association, or of any town, city or municipal corporation. The penalty is ten per cent. of the amount so used for circulation and paid out. The banks are further required to make to the Commissioner of Internal Revenue returns of amounts so paid out every six months, and if they fail to do so become liable to an additional penalty of two hundred dollars. Many of the banks now called upon to pay the tax have not, it is alleged, made the returns for a number of years and they are now called upon to pay such incurred penalties as are not barred by the Statute of Limitations—that is for the last — years. The intent and object of the law was to prevent

the circulation within the United States of any paper money other than that issued by the National banks and the Government of the United States. It might be urged as against the taxation of the banks for paying out Canadian bank money that such money did not consist in the notes of any person, State bank or State banking association. Admitting that a Canadian bank is an artificial person, the word person in the section refers most probably to a natural person; if otherwise, the words natural or artificial would have been added. Further, a Canadian bank is neither a town, city or municipal corporation. According to the strict letter of the law, therefore, we do not see how the penalty can be made to apply to the using for circulation or paying out of the notes of Canadian banks. The spirit of the law would perhaps warrant the attempt to collect the penalty, but it is the custom of the Courts to construe punitive laws very strictly, and if this law is so construed the banks involved will most likely escape. If it be held that the use as circulation or paying out of Canadian money is taxable, then the same rule should apply to all foreign paper money, notes of the Bank of England, Bank of France, etc. The banks of Michigan have communicated with the Commissioner of Internal Revenue claiming, that in effect they have not used as circulation or paid out, Canadian bank bills; that they receive this money and when sufficient has accumulated send it either by express or messenger to the Canadian bank, for redemption, or sometimes to the Chicago or Detroit correspondent of the American bank, to be forwarded by the correspondent for the same purpose; or they sometimes pay notes presented for collection by Canadian merchants in such money, or they pay the notes to customers who intend to use them in Canada. In reply to these statements by the Michigan banks, the Commissioner of Internal Revenue has stated,

"That banks are liable to a tax of 10 per cent. on the amount of Canadian bank notes used for circulation and paid out by them in this country, and that such notes are paid out in this country whenever in this country they part with the custody and ownership of them. If this is correct as a general rule, it only remains to apply it in the several cases. According to my understanding of your statement of cases numbered 1 and 2, the messengers and the express companies act, not as the agents of the Canadian bank, but as the agents of the bank that sends out the notes, and the notes remain the property of the last named bank, subject to its control and recall, until they are delivered to the Canadian bank. If this is so, they are not paid out in this country. In a letter addressed to the Hon. William L. Trenholm, Comptroller of the Currency, this office said: 'A bank is not regarded as paying out Canadian bank notes within the meaning of the statute when it simply sends them to Canada for redemption. If the National Bank of Menominee, when it sends such notes to its correspondent in Chicago, sends them, not to be placed to its credit on the books of the Chicago bank in settlement of balances, or to be appropriated to the payment of debts, etc., but simply to be forwarded to Canada for redemption, and the Chicago bank as its agent thus forwards them, they need not be treated as paid out in this country by either of the banks. This would seem to cover case number three if the notes remain the property of the country

bank until they reach Canada; but if, upon entering up their value to the credit of the country bank after computing the discount, they become the property of the Detroit bank, they have, in my opinion, been paid out in the United States by the country bank. They have been passed to the credit of the country bank in the settlement of balances or to be appropriated to the payment of debts, etc. In the last two of the cases stated the notes have passed from the country and ownership of the bank in this country, and, in my opinion, have been paid out in this country."

In this communication it is evidently assumed that the paying out of the notes of Canadian banks renders the bank liable to the 10 per cent. tax. The Comptroller of the Currency has issued a request to the National banks to specify in their returns the amount of Canadian bank notes held by them.

Whatever may be the outcome of this controversy the free use of Canadian money on the border shows how inadequate are the facilities for business now afforded by our National bank circulation, and how unjust it is to our own banks to make them dependent largely for currency on the notes of foreign corporations. There can be no doubt but that in all parts of the country there would have been the same activity in business that appears to have prevailed in that happy region near Canada, if there had been some freedom in the issue of a credit circulation by the banks. There has been a profit in the use of Canadian notes both to the banks issuing them and to the banks on this side that handled them at a discount of 1 per cent. The latter were compelled to handle them because the cheaper money always drives out the better, and, doubtless, if the truth were known, Canada money would be found to be the sole medium of exchange in many parts of the United States lying contiguous to that foreign province. In justice to the banks that have been forced to use this currency it may be said that a fair construction of the law does not render them liable to the 10 per cent. penalty. In justice to the other banks of the United States the use of Canadian money in the future should be stopped. But in justice to the public, the law should permit the banks of this country both State and National to issue a credit circulation.

THE HOUSE HAVING PASSED the bill authorizing the Secretary of the Treasury to purchase United States bonds with the surplus, it was, in due course, referred to the Finance Committee of the Senate. That Committee reported that while they believed no additional legislation was necessary to give the Secretary of the Treasury power to buy bonds—Section 2, of the Act of March 3, 1881, giving him that power—yet, as the President had expressed a doubt as to the authority granted under the Act mentioned, the Committee recommended the passage of the House bill in order to remove any doubts. When the bill came up for discussion, Senator Plumb at once offered an amendment, requiring the Secretary of the Treasury to issue additional Treasury notes equal in amount to the National bank notes surrendered

and retired. These new Treasury notes are to be in the same denominations as the legal-tender notes now outstanding; they are redeemable in the same way in coin, they are receivable for salaries and all dues to the Government, including duties on imports, and are a legal-tender between National banks and for all debts due National banks. They differ from legal-tender notes in not being a legal-tender between individual citizens, and being receivable for duties on imports, which legal-tender notes are not. The coin held in the Treasury for the redemption of legal-tender notes must be held for their redemption also. The amendment further provides that the coin reserve held in the Treasury shall not be less than 25 per cent. nor exceed 30 per cent. of the total amount of legal-tender notes and new Treasury notes. This amendment excited much debate. It was once laid on the table by a vote of 23 to 22. Renewed by Mr. Plumb, it escaped a similar fate by a tie vote of 24 to 24, and was finally adopted by a vote of 28 to 21. The poor little Bond Purchase bill was entirely overlooked in the debate on this amendment. If the provisions of this pet measure of Mr. Plumb become law, another form of paper note will be added to the currency now issued by the Government. The effect of this scheme will be as follows: When a National bank retires its circulation by depositing lawful money in the Treasury, it generally procures the lawful money by the sale of its bonds. If the Bond Purchase bill becomes a law, Senator Plumb thought it probable that the price of bonds would be sufficiently raised to induce quite a rapid transfer of bank holdings to the Treasury. Inasmuch as sufficient of the proceeds would be held to redeem the outstanding bank circulation when it comes in, there would only be an actual output of surplus by the purchase of a \$1,000 4 per cent. bond of the difference between \$900 and—say \$1,250 or \$350. The \$900 under present methods would be held, and whenever the National bank notes are, in course of time, presented, silver certificates are issued therefor. Instead of using silver certificates, if Senator Plumb's amendment becomes a law, the Treasury can redeem retired National bank notes in the new Treasury notes authorized. At first sight it might appear that the Treasury could not use the new notes for this purpose, inasmuch as no individual citizen is forced to take them. But first the individual citizen would take them because they are receivable for customs—better than the legal-tender note for that purpose—and, second, National bank notes are generally presented for redemption by National banks, and the new notes are payable for all debts due to National banks. It remains to be seen whether the Bond Purchase bill is strong enough to carry Plumb's amendment, or whether the latter will sink the bill.

THE JOURNAL HAS HERETOFORE held that the National banking law left it to the discretion of the Secretary of the Treasury whether or not, National banks should be required to keep a reserve upon the

public money deposited with them for which they give ample security by depositing bonds of the United States with the United States Treasurer. Under ordinary circumstances and such as at present exist the bonds are ample security, not only for the ultimate but also for the prompt payment of the public moneys. In view of the fact that Congress at the time of this writing manifests indubitable symptoms of passing the bill authorizing the Secretary of the Treasury to use the surplus in making bond purchases, there could be no better security for prompt payment than the bonds held as security. For if any bank should fail to have on hand the cash necessary to meet a call for the payment of the public deposits made with it, it can at once dispose of its bonds to the Government. Fears have been expressed that the deposit of public moneys in the depository banks might result, when the Government sought to draw the money, in a sudden and disastrous contraction of the currency. The precedent of the attempt to withdraw the deposits from the banks, in 1837, during the administration of President Van Buren, and the melancholy consequences of that attempt, though not at all parallel, seem to have acted like a wet blanket, and made the Treasury change the course it began so auspiciously. Perhaps no one act of the Secretary did more to quiet apprehensions in New York city than his consenting to deposit public moneys on the security of 4 per cent. bonds, at the rate of \$110 in deposits for every \$100 in bonds. The direct consequence of the change of policy was a contraction of the currency of \$11,000,000 during the month of February. The attitude of Congress had also an undoubted effect on the Secretary. This attitude has been one of uncompromising hostility to the National banks, and the head and front of this opposition in the House has been Mr. J. B. Weaver, of Iowa. Speaking of these public deposits with the National bank depositories—deposits, or loans, if you please—for which the banks gave to the Government larger security than they ever require from individuals to whom they loan the money, Mr. Weaver said: “It is true that there are fifty or more National banks in this country that have been literally stuffed with Government money for the past quarter of a century; money wrung from the people by unjust and oppressive taxation has been stuffed into the banks, and by them loaned back to the poor wretches from whom it was extorted.” Such rot as this, and worse, was received with applause. One would think that we were living under the despotism of the Sultan and that the banks were the minions who carried the bowstring. No one in the House has as yet had the courage to defend the banks from these demagogic attacks, or the Secretary for using them to avert the consequences of the accumulation of surplus.

AS WAS PREDICTED in the last number of the JOURNAL, the codification of the National banking laws, made by the Comptroller of the Currency, and printed, explained and recommended in his last annual

report has been reported upon favorably by the Committee of Banking and Currency of the House. We think that the reference of this extensive legal effort to the Committee on Banking and Currency was a mistake; it should have been referred to the Judiciary Committee instead. The questions involved in the codification of any of the laws of the United States are such as the Judiciary Committee is appointed to pass upon. Most of the sections of the law as they now stand have been construed by the Courts. It is not a work of making new law that is in question but one of making such modifications and changes of present law as in the defects revealed in light of the many judicial decisions rendered under it may seem to make necessary. The Committee on Banking and Currency having examined the work of the Comptroller, it should now be referred to the Judiciary Committee for further examination to see that the changes suggested are in all cases necessary, called for by ambiguities of language impossible for the Courts to explain away or construe, and also to see that none of the changes suggested contain further uncertain provisions that will demand further judicial construction and cause additional litigation.

THE LONDON STATIST SAYS that Mr. Goschen, the Chancellor of the Exchequer, is considering the propriety of imposing a stamp tax on foreign securities invested in England. His intention is said to be to impose a uniform duty on all bonds and shares, without regard to the value of the security. The effect of this will be to impose a much heavier proportionate tax on some securities than on others, and it will also render it unprofitable to buy, say, American securities in New York for London account, unless the price in London is higher than the New York price by at least the amount of the duty. If the Lord Chancellor carries out this proposition it will be a protection of home investments much at variance with the boasted free trade principles of England. Indirectly it will have the effect of strengthening home industries, and a corresponding depressing effect on American securities. The adoption of such a measure will indicate how evenly balanced are the free trade and protection factions.

IN THE LAST number of the JOURNAL we printed the resolution of the Philadelphia Clearing-House Association passed at their regular monthly meeting, February 13th, tendering the thanks of the Association to Mr. William H. Rhawn, President of the National Bank of the Republic of Philadelphia, who has, as the resolution says, served the Clearing-House Association for more than twenty-one years as its Secretary in the most efficient and satisfactory manner. Mr. Rhawn is a prominent member of the Executive Council of the American Bankers' Association, and has done much to advance the common interests of the banks and bankers of the country. He is a man noted for independence of thought and energetic action and has in every sphere in which he has been tried rendered capable and intelligent service.

CONVERSION OF ENGLISH CONSOLS.

The Chancellor of the Exchequer, Mr. Goschen, has proposed a plan for refunding the English 3 per cent. consols at a lower rate of interest. He proposes to issue in exchange new stock bearing interest at the rate of $2\frac{3}{4}$ per cent. for fifteen years and after that time at $2\frac{1}{2}$ per cent. There are now outstanding £560,000,000 of the 3 per cents, and there is no law to prevent the English Government from paying them at any time it may have the money to do so. On the other hand the Government is not obliged to pay the principal at any time. Mr. Childers, when Chancellor of the Exchequer, attempted a refunding of the consols into stocks bearing a lower rate of interest but, the exchange being a purely voluntary one, there being no element of force in the offer made, it was found that the holders of the consols would not consent to the exchange. Mr. Goschen, however, is to take another course. The main outline of his plan is to offer to pay in money the whole amount of the 3 per cent. debt, amounting to £560,000,000, at par at the end of a given period, say three months. In the mean time such holders as may desire to do so, can accept the new stock in exchange. If an exchange of the whole amount should be effected the saving of annual interest would be £1,500,000 for the first fifteen years, and £3,000,000 per annum after that time. To insure success it is necessary that the Government should be able to command a very large amount of money and that the holders of the consols should understand the Government can command the money to pay their investments at par. The English Treasury is not as well situated in this respect as that of the United States. The former has no surplus available for the payment of its debt, though if it had such a surplus it has the option of paying its stocks. The United States Treasury, though blessed with a surplus, cannot pay its bonds. Mr. Goschen expects to provide the money to carry out his refunding plan, through the assistance of the banks. In other words the banks are to enter into an engagement to have a fund ready to pay at par the principal of all consols the holders of which refuse to exchange them for new stock during the period of three months, in which the privilege is held open. The success of the plan therefore depends on what kind of an agreement the Chancellor of the Exchequer can make with the banks. Under favorable and favoring circumstances it is possible that the sum it would be necessary for the banks to advance at the end of three months would be a very insignificant one. The holders of the consols might be so impressed with the power of the Treasury to carry out the refunding that nearly all of them would accept the new stock. On the contrary, under unfavorable circumstances the banks might have to furnish the money to redeem the full amount of the 3 per cents at par, and even if able to do this, they might lose the chance to use their money at better rates, or actually lose interest in the transaction. The favorable or unfavorable circumstances which may arise during the time from the inception of the scheme to its conclusion become of the utmost importance to the banks who may contemplate entering into this engagement with the Chancellor. The consols now stand at a little over 102 in the market. If this rate is maintained

the holders would probably prefer to accept the new stocks, on the mere confidence that the banks could carry out their engagement with the Chancellor, than to have the principal paid at par. The maintenance of the price of consols at the present figure depends on the maintenance of peace in Europe. If the war is not a general one, it might have little effect, but if any of the great powers are engaged in a conflict with each other, they would become large borrowers and affect the money market, raising the rate of interest. England would be more or less involved and might even be drawn into the struggle. Consols would doubtless go below par in the markets and the holders would of course, with the opportunities offered of using money, prefer to take their principal rather than to accept stock bearing a lower rate of interest. If, then, there should be no sudden rise in the value of money from any cause, the banks might have a very easy time in fulfilling the agreement to pay the principal of the 3 per cent. consols on a given date; but if war, or any other cause unfavorably affecting the money market, should supervene, then to fulfil the agreement might be excessively burdensome if not impossible. On what terms will the banks guarantee the payment of the sum required to meet the principal of the 3 per cents? It depends on the answer to this question whether the Chancellor of the Exchequer can effect his object. If the banks consider the risk so great that they must be paid more for their services than the profit to the Government in the exchange, then of course the plan must fall through. There are other considerations that may induce the banks to take what risk there may be. Perhaps they may understand that if the conditions become too difficult and the prospect is one of imminent failure, that the whole scheme will be permitted to quietly drop—both the Government and the holders of consols being willing to cry quits. That some such belief is possible is evident from the fact that all such funding schemes depend for their success on the taking an advantage of stockholders, that is not in strict unison with the highest business morality.

The first and as yet only instance of the successful outcome of a funding scheme of this kind was the extension by Secretary Windom in 1881, of the 5's and 6's maturing in that year at $3\frac{1}{2}$ per cent. Congress adjourned on March 4th of that year, and made no provision for the extension or redemption of the bonds (5's and 6's), the principal of which the Government had bound itself to pay during that year. The Secretary of the Treasury had no legal power to issue new bonds at any rate of interest, and he could not have on hand cash sufficient to carry out the contract and redeem at par the \$196,378,600 of 6's, and \$439,841,350 of 5's then outstanding. Now, if all of these 6's and 5's had been held by one holder, or if all the holders had acted as a unit the plan that was adopted could never have been successful as it was. The one holder would have said to the Secretary, I am well aware that you will have the cash to redeem only about ninety millions of the \$640,000,000 held by me, I will accept your ninety millions in cash and continue to take 6 and 5 per cent. on the balance until in course of time you get ready to redeem them. This would certainly have been the most profitable course for a single holder. It was by exciting the jealousy and fear of the numerous holders that the Secretary was able to carry out the extension at $3\frac{1}{2}$ per cent. On each one there was brought to bear through the situation a degree of force that would probably be held by the Courts to amount to duress. But as the loss in any

single case was very small it was not likely that any suit would be brought. It is certain however that in dealing with the divided holders of its debt the Government of the United States took advantage of their necessities and weakness, and pursued a course which it could not have pursued in dealing with one individual if that individual had held the whole debt. The actual unfairness in principle of this method is the same as that existing in the debasement of the coin of a country by despotic power. By the general public in the United States among whom the bond holder is not the object of much sympathy, the success of this scheme was approved as an instance of business smartness on the part of the Government.

The scheme was the invention of a Kentucky banker though claimed by the admirers of Secretary Windom as the product of that statesman's brain. Hon. John Jay Knox, in the paper read before the Bankers' Convention at Pittsburgh on October 12, 1887, says: "That the plan for extending the 6 and 5 per cents into 3½'s originated with a distinguished banker of Lexington, Kentucky, and that it had passed through the hands of the Senate Committee on Finance and of Treasury officials without consideration." It is impossible to believe that the letter containing this plan which was on the files of the Treasury Department at the time was not seen by Secretary Windom as has been claimed for him.

The success of this original method of refunding first tried in the United States led to the imitations by Mr. Childers and Mr. Goschen under changed conditions. Mr. Childer's scheme failed because he perhaps had not the heart to apply the necessary force to the stockholders. Mr. Goschen is attempting to induce the banks to supply this rather unfair but necessary element to success.

DEBITS AND CREDITS.

The depression of stocks and the consequent falling off of speculation has attracted much attention to the flow of capital West for investment in farm mortgages and other enterprises of that new country. Some months ago the JOURNAL took the ground that if investments in Western farm mortgages were carefully made they were safer than any other form of investment that paid as well. The trouble was in the rashness and carelessness which had characterized the operations of many of the so-called investment companies. The increase in this form of investment has recently been made the text for that class of statesmen, philosophers and economists who think it necessary for the success of their theories to prove that the country is going to destruction, that its citizens are poverty-stricken and oppressed with debt, and that the rich are growing richer and the poor poorer.

One class, who desire tariff reduction, asserts that farm mortgages have reached enormous proportions, and that one can walk from the Atlantic to the Pacific without stepping off of mortgaged ground, and point to this as proving the terrible effect of the tariff on the farmer. Another class, like Mr. J. B. Weaver, ascribes this alleged terrible indebtedness to the lack of a sufficient paper currency, to the oppression of the bond-holder and the greed of the gold bug. Another class, going further and deeper, treating the woes of humanity with more breadth and exhaustiveness, do not assert as the cause of the inequality of the conditions of human life either the tariff or the currency, but they attack what they style the "credit system" and hold it alone responsible.

In an address before the National Board of Trade at Washington, the

amount of indebtedness existing in the United States on December 1, 1887, including the National debt, the debts of States, county and municipal debts, railway debts, liabilities of banks, debts of record, mercantile debts, and individual debts, is estimated to be nearly twenty-eight billions of dollars. These are tremendous figures, and on this basis, every man, woman and child in a population of 60,000,000 is estimated to owe \$465.

After such an appalling exhibit, it is no wonder that the author of the address mentioned proposes a radical remedy. His proposition is to prevent the giving of credit by abolishing the laws for the collection of debts. If debts are contracted the creditor must rely solely on the honor of the debtor for its payment. The State shall no longer be called upon to collect a debt. The difficulty with all these arguments is that they only mention debts and never the corresponding credits. The Jeremiah who laments the mortgages that cover the land fails to see the richness of the land itself, its prospective increase in value, the energy and skill of the farmer and the capital and tools that the placing of the mortgage has permitted him to employ. The mourner who looks aghast at individual indebtedness, turns his head away from individual resources. The critic who looks sadly at the liabilities of the banks of the country doesn't seem to realize that he sees but one side of a balance sheet. The one who sinks beneath the burden of a public debt which, in his imagination, he thinks rests on his individual shoulders, does not take into account the resources from which the sums for its payment is drawn or the resources which its payment creates. Macaulay, in speaking of the public debt of England, said: "Those who so confidently predicted that England must sink, first, under a debt of fifty millions, then under a debt of eighty millions, then under a debt of one hundred and forty millions, then under a debt of two hundred and forty millions, and lastly, under a debt of eight hundred millions, were under a two fold mistake. They erroneously imagined there was an exact analogy between the case of an individual who is in debt to another individual, and the case of a society which is in debt to itself, and they were under an error not less serious as to the resources of the country." This exactly describes the fallacy of those who are deploring the indebtedness, public and private, within the United States. The fact that those who thus complain are looking on only one side of the shield is evident when it is reflected that wherever there is a debtor there is a corresponding creditor, and, that a statistician from the standpoint of the creditor might, with equal truth, count up the amounts owed to individuals, corporations, and National, State and Municipal governments; the result is the same. If twenty-eight billions of dollars are owed on the one hand, twenty-eight billions of dollars are owing to some one on the other. It is only where the debtor has nothing or not enough to pay with that the debt, or a portion of it, becomes a bad debt, and must be charged off the account. This is always the case with some of the debts in any country, and when the proportion of such debts becomes excessive the country at large suffers. There is nothing to prove that such is the case in the United States, nor have any of those who raise their voices in lamentation shown any facts and figures to prove such a state of facts. Nor can they do so.

There may be much in the laws governing the collection of debts that is oppressive to individuals, but the large majority of individuals continue to

thrive under them. Until the millenium comes there will be imperfections of human law, and individuals who will suffer in consequence. The larger the population, the larger absolutely the number of those who fail to thrive. There is nothing to indicate that the number is larger relatively than it was a century ago. In fact, statistics prove that the individual to-day has a better chance to enjoy life, liberty and the pursuit of happiness than he then had.

"A MONOPOLY OF THE PEOPLE, BY THE PEOPLE, AND FOR THE PEOPLE."

There are probably not very many bankers that would be willing to go into a combination where they thought their own interests might suffer, or whereby they might be placed in a subordinate position from what they were, at the time, filling. Those that would do so would have some personal object in view detrimental to the institution or firm they represented while benefitting themselves, or else they were not of the timber that one would expect bankers to be selected from. But if a combination was formed without the objectionable features above stated, "any banker or financier can see plainly the vast advantages which the system would have over all other methods of banking yet proposed."

The National Banking system now contains something like three thousand and seventy banks, representing in capital and surplus over seven hundred millions of dollars, and, although they are considered as a whole, each bank is as entirely alone as though there were not three thousand and odd in the same association, each working for itself alone, and, in small cities or towns, where there is a limited amount of business, to obtain customers and business, will figure under each other, until the profit is so small there is no money in the account. When too late, they realize they have gone too far and have educated their customers to a lower rate than can be sustained, which, if raised, the customers take their accounts to other banks, in some cases even when out of the city. The results are, the combined National banks pay only about 4 per cent. on the capital invested.

In the article, "The Natural Outgrowth of the National Banking System," published in the February number of the JOURNAL, an outline of a plan was given whereby the dividends in the aggregate would be increased, and where individual enterprise, shrewdness and business thrift would reap their own reward by an increased dividend over the general one, as each bank would pay its local shareholders whatever rate was declared by that branch, while the general shareholders would have their dividends from the averaged amount paid by the parent bank and all its branches.

At the first glance it seems almost impossible to concentrate the amount of capital necessary to establish an association of the kind mentioned, while in reality, after the parent bank is established, the subscriptions for the general stock will be so large as to astonish the people themselves. There being no liability beyond the stock, it will afford the very best kind of security offered for the investment of trust funds and the accumulations of years of business thrift, etc., the principal being protected beyond the chance of impairment, and the interest as reasonably sure of being 4 per cent., or better, as United States bonds are of being safe. As to the local stock, it would be taken very

rapidly, judging from the expressions of bankers who have ventured an opinion on the subject.

With an association of banks, working together, established in all the States and Territories, there could be a combined effort made to have the laws relative to banking, collection of debts, etc., made the same in all, and favorable to the banks. It would remove disastrous competition, as the business men would be willing to pay a reasonable amount for transacting their business, knowing they could always be accommodated by the bank as long as the paper offered was good or their wishes within reason, and that their money on deposit was almost absolutely safe. It would enable manufacturers, with profit to themselves, to move their business to country towns having good railroads and other facilities—where a branch had been established—giving the employes the opportunity of having homes of their own, thereby making strikes less frequent. It would enable the easy movement of wheat, cotton, tobacco and other crops, placing the money back in the cities or reserve centres in time for the wholesale merchant and manufacturer. It would be so large, so safe and conservative, that the United States could, and in all probabilities would, deposit its surplus millions with it, giving the people the benefit of a lower rate of interest than would be possible otherwise; and when the time came for the Government to use the funds, so deposited, the withdrawal of the same would not cause the suspension of the bank or precipitate a panic on the people, as was once the case when the banks held the United States surplus. It would make New York the money centre of the world, and the rate of loans there would be the rate for the United States. As all the money would be in active use, it would have the same tendency to develop the country as have the railroads. It would enable the banks to save a large amount yearly in purchasing supplies, as arrangements could be entered into with different firms to furnish all the banks—some with the blank books, others with the drafts, checks, stationery, etc., etc. It would make it possible to have a uniform system in all the banks, where there are scarcely two banks now that keep their books and accounts or do business the same way.

In the plan proposed, those that had a complete system would have the opportunity of explaining it before a committee of experienced bank accountants—the system, if any adopted—to be known by the name of the originator. Banks would then be divided into classes—each class would have the system best suited to their business; or, again, the committee having the same in charge might, from the plans submitted, form one applicable to all banks, large or small.

To sum the plan all up, it would be a monopoly of the people, by the people, and for the people.

C. W. Yost.

National banks are said to count the notes of other National banks held by them as a part of their reserve. These notes are legal-tender as between National banks and might perhaps be legitimately counted as reserve on deposits due to National banks, but not on individual or State or private bank deposits. These notes are also receivable for all dues to the United States, and, if there is any reserve required on United States deposits, should be permitted to count as such. The Comptroller of the Currency allows them as a deduction.

*** BANK BOOK-KEEPING.**

A TREATISE ON KEEPING AND AUDITING THE BOOKS OF STATE AND NATIONAL BANKS, PRIVATE BANKING FIRMS, SAVINGS INSTITUTIONS, FINANCIAL AGENTS, ETC.

Prepared for the JOURNAL by an experienced Bank Accountant.

“One of the first things, I suppose,” suggested Farmer Gray, “is to decide upon what amount we shall contribute as a partnership capital? We can make it a reasonable amount, I suppose, to begin with, and increase it as circumstances may require.”

“That is the plan I should favor,” added Mr. Brown. “We want a good, substantial bank account in Checkton, though the low rate of interest is not an inducement to carry a balance so large as to interfere with ready cash in our own institution. Then, until we have a demand for the money, we need not endeavor to secure a capital which would necessitate an interference with our present personal investments. As the business of the village increases there will be more demand on us for money in discounting commercial paper, and that will be time enough to increase our capital.”

“What amount, Mr. Brown, would you suggest that we start with? You have had some experience in your business that will aid you in reaching an estimate,” said the miller, who seemed desirous of hastening a conclusion.

“If it is convenient and satisfactory to all,” proceeded the merchant, “I would suggest a cash capital of thirty thousand dollars, which may be contributed equally by us. Less would answer the purpose, but I should like to have about half that sum as the foundation for an account with our correspondent.”

“That is satisfactory to me,” answered Mr. White, “and I can raise my part within ten days, if we are able to commence business so soon.”

“I agree to that, and my part of the money will be ready at any time it is needed,” said Mr. Gray. “How, now, about a place of business?”

“I would suggest renting the vacant storeroom adjoining Mr. Brown’s store, here on the left,” proposed Mr. White.”

“I would prefer the vacant building just down the street, Mr. White,” replied the merchant. “A storeroom in a wooden block like this I do not consider so favorable as a building standing by itself, or, at least, somewhat isolated. The vacant building would not offer the opportunity of secret approach from adjoining rooms, nor would it be in as much danger from fire as a room in a block. Another advantage the building offers is the opportunity for the janitor—and, I think, we can secure a trusty one—to be domiciled in close proximity, as he could occupy the upper part for a residence.”

“That’s a good idea,” was the indorsement of Mr. Gray, “and I shall favor such a course if it is satisfactory all around.”

“It is perfectly satisfactory to me,” assented the miller, “and I would propose that the matter of renting the building, fitting it up, and procuring

* A series of papers on Practical Bank Book-keeping: will be continued through the year 1888, or until the subject is exhausted. When required the articles will be illustrated by photo-engraved plates made from pen drawings, showing some new ideas in blank books, and other labor-saving forms.

the necessary equipments to commence business with be left with Mr. Brown. I'm sure I shall be satisfied with what he does, acting upon his own judgment."

"And I—"

"But, gentlemen, I would prefer to have some expression of your views upon the more important details at least. For example, about a safe—shall we have a vault constructed, and would it be advisable to procure a time lock for the door? This is a question of considerable importance, and one that involves some expense. I do not wish to assume all this responsibility, however much I appreciate this expression of your confidence in my judgment. I prefer to act in these important details only in conjunction with my associates. I would suggest, therefore, that we have a regular hour of the day when we shall meet to talk over matters together during the next ten days, while these preliminary arrangements are pending and the principal work of organization is under way."

"That is a prudent suggestion, Mr. Brown," said Farmer Gray, "and I will supplement it by proposing that we meet here at your office for the present at nine o'clock every morning. Should one be called away, or from any cause prevented from being here, the other two can act upon matters for the day, and there will be no interruption."

"That is all satisfactory to me, gentlemen," answered Mr. White. "I would suggest that Mr. Brown make inquiry concerning the cost of safes with combination and time locks, and also as to the expense of constructing a vault with burglar-proof door and time lock. I am inclined to think we shall not need the vault for the present, and I hope we may feel inclined to put up a building before many months which will be designed especially for banking purposes—a substantial stone or brick building is what I would like to see."

"Good," said Farmer Gray; "I indorse that hope," and he caught the eye of the merchant just in time to observe an emphatic approval of what had been said, while an approving nod of the head assured both the farmer and miller that the merchant was fully in harmony with their views in this direction.

"Yes," said Mr. Brown, "it is not only my hope, but I feel fully assured that within a year we shall be justified in commencing to build a suitable structure for our young enterprise. But, gentlemen, there is another question of special importance which, I believe, we ought to begin thinking of very soon. The work of fitting up the room and arranging details will require but a short time, and we must decide as soon as possible upon an arrangement for a Cashier. Somebody must have immediate charge of the cash and the accounts, and have authority to draw checks or drafts and issue certificates of deposit, as the case may be."

"And you think, Mr. Brown, that some one must be engaged for that position who will give it his full time and attention?" asked Mr. Gray.

"Indeed, I think that will be an important consideration. We may have but little business at first—not sufficient to keep one fully employed—but it will grow, and it will be important that some one shall always be in readiness at least four or five hours during the day. It is only by demonstrating our ability and readiness to do the business that we can hope to establish a successful institution. But, gentlemen, I am ready to act upon any better suggestion."

"I think you are quite right, Mr. Brown," responded the mill proprietor. "I had not thought especially about employing a Cashier, but that, I suppose,

was because I somehow took it for granted that you would attend to the business yourself. However, I can see it now in a better light, and I can understand that you cannot be confined so closely to this business as I now see the necessity will demand. Somebody, as you say, must be in attendance during reasonable hours, and I trust we shall be able to have somebody capable of filling such a position, and who can keep the accounts in a systematic manner—make up statements for us—and upon whom we may rely for accuracy and honesty. I see it is an important matter for our attention.”

“And have you thought enough upon this point, Mr. Brown, that you are prepared to suggest some one for the place?” inquired Mr. Gray.

“I cannot say that I have considered the subject sufficiently for that,” answered the merchant; “but there’s your son, Mr. Gray, he is a promising young man, and I should think him quite capable, is he not?”

“I appreciate the suggestion and thank you for it, Mr. Brown, but I cannot agree with you. I should be very glad, indeed, to have my son fill such a position. He is as honest as the day is long, and every dollar of the concern would be as safe in his hands as in the care of any person I know, so far as honesty goes; but that is not all there is to be considered. My son has not had the necessary experience. He would not be able to keep the accounts with the accuracy and system I should prefer to see inaugurated. I have seen and heard quite enough of cases where inexperienced persons have been placed in such positions, because they were sons or relatives of stockholders or Directors, to know that considerations of that kind should not be taken into account. I shall favor having some one of more experience, and therefore better competent than my son for the position. With the permission of you, gentlemen, I shall be pleased to have my son come in as an assistant of some kind as soon as an opportunity offers, that he may be able to learn the business, step by step, and under the direction of some thoroughly competent person—not under pay, but gratuitously—for six months or a year, or at least until it is demonstrated that his services are valuable and necessary. So far as my acquaintance goes, I don’t know of a person in the village, excepting Mr. Brown, who is capable of filling the position. I have no doubt our friend White, here, could conduct the business if he would undertake it, but that is out of the question, and, besides, I don’t think either of us could properly open and conduct a set of books for a small country bank in a perfectly systematic manner, and upon a plan that we would care to have the accounts kept should we afterwards desire to incorporate and largely increase the capital. But I may be in error about these things, gentlemen; I would like your views.”

“I am glad,” spoke Mr. Brown, “that you have so frankly expressed your opinion, and I want to assure you that in general I can fully indorse your views. About your son, I shall favor leaving that entirely to yourself. So far as I am concerned, he shall be welcome to come in at any time and render such assistance as he can, learning at the same time the business and preparing himself for advancement as soon as circumstances will warrant additional service. I agree with you about having an efficient and experienced man as a Cashier, and would favor finding such a person as soon as we are ready for business; in fact, I think we ought to commence our inquiries very soon.”

“Then you will attend to it, will you, Mr. Brown? I fully concur in the proposition. We want a capable as well as an honest man for the place,”

was the hearty approval of Mr. White, as he excused himself for the day that he might meet an engagement at his own place of business.

Articles of agreement for this copartnership were properly drawn and regularly signed. In this agreement it was provided that the three partners should invest equal amounts, and that they should share alike in the results of the enterprise. A clause in the agreement also provided for the incorporation of the business and a dissolution of the copartnership whenever two of the partners favored such a change in the arrangement.

Mr. Henry Payson was engaged as Cashier. He had been long and favorably known in Checkton, where, for many years, he had served in a large bank, beginning in a subordinate position and gradually rising to the office of Paying Teller. For many years he had charge of the books and accounts of the bank, and in many ways was especially qualified for his new appointment, though this was the first time he had been honored with the title of Cashier, yet he had many times been temporarily called to perform such a duty.

The Cashier of a country bank is often a man of all work, and many were the duties of Mr. Payson in his new position. He was in reality clerk, book-keeper and Teller as well as Cashier.

ORIGINAL ENTRIES AND HISTORY OF TRANSACTIONS.

FARMER, March 25, 18—.

A copartnership has this day been formed under articles of agreement between Nicholas Brown, Amos White and Ezra Gray, who have become associated under the firm name of Nicholas Brown & Co. The purpose of this copartnership is to conduct a limited banking business, which shall include the receiving of money on deposit for customers, selling exchange and sight drafts, discounting paper and making loans. The capital shall be \$30,000, of which each member of the firm shall contribute one-third. The copartners are to share equally in the results of the business, and the partnership shall continue five years, unless under terms stipulated in the agreement it is sooner dissolved.

25	Nicholas Brown has paid in, in cash.....	\$6,000	
	And his sight draft on Union Bank of Checkton for.	4,000	\$10,000
	Amos White has paid in, in cash.....	4,500	
	And acceptance of M. Wilson & Co., Checkton, which is sent to Union Bank for credit, the same being now due.....	5,500	10,000
	Ezra Gray has paid in, in cash.....	10,000	10,000
	This day sent by express to Union Bank of Checkton N. Brown's sight draft for.....	4,000	
	Acceptance of M. Wilson & Co. in favor of Amos White for.....	5,500	
	Currency and checks.....	5,500	15,000
		\$45,000	\$45,000

EXPLANATION AND JOURNAL ENTRIES OF THE DAY'S TRANSACTIONS.

Under the usual methods of mercantile book-keeping it would be proper, in these opening entries, to credit the partners respectively, in their several separate accounts, for the amounts of their respective investments, debiting to cash or other assets the equivalent. The same plan might be followed here, though a different course may be adopted with advantage. In presenting a

statement of the condition of the bank, as from time to time it will be found advisable to do, the investment will be better represented in one general account than in the several accounts of the partners. This may be accomplished by creating what will be termed "Capital Account," in which the entire amount of the several investments will appear in the aggregate. The respective accounts of the partners under such a process would appear in a private ledger kept for the purpose. The journal entry for the first series of transactions, those recording the investments, would be:

Cash.....	\$30,000.00.
To Capital Account.....	\$30,000.00.
Investment of N. Brown, \$10,000.	
" A. White, 10,000.	
" E. Gray, 10,000.	

For the second transaction, that of remitting funds to the correspondent at Checkton, the entry would be:

Union Bank.....	\$15,000.00.
To Cash.....	\$15,000.00.
N. Brown's draft.....	\$4,000.
Acceptance of M. Wilson & Co..	5,500.
Currency and checks.....	5,500.

(To be Continued.)

The Banking and Currency Committee of the House has made an unfavorable report on all bills for repealing the 10 per cent. tax on State bank circulation. Perhaps the time has not come for the repeal, but as a measure of fairness to the State banks we believe the committee should report a bill of this description to the House so that the sentiment of the country in regard to it may be taken. Mr. Trenholm, Comptroller of the Currency has been quoted in Congress as saying, "That our National bank notes, are, strictly speaking, not bank circulation; they are Government currency, maintained in a cumbersome manner at unnecessary expense, and no longer of advantage to the Government, the people or the banks. Moreover, the bonds on which they are based are approaching maturity, and are growing scarcer and dearer, so that the extinguishment of this currency is now obviously only a question of time, and not a very long time." According to this we have no bank currency in the United States, and if it be held, in opposition to the opinion expressed by the Comptroller, that National bank notes are a true bank currency, the time when there will be no bank currency in the country is only briefly postponed. Assuming, as is held by many, that Government notes only meet the wants of a business community very imperfectly, and that the currency furnished by well managed banks is the best form of money for the purpose, there are only two ways of meeting the difficulty. One, by permitting the National banks under proper safeguards to issue bills secured by their credit, and the other, to permit the State banks to avail themselves of the same privilege now accorded to them by the several States. Propositions granting supposed privileges to National banks are not favorably received in Congress. Whatever side is taken on other financial and economical questions gentlemen are very anxious, and even go out of their way to explain that they do not mean to support the National banks. If this sentiment in Congress is based on the known feelings of constituents, why not allow some discussion that will bring out the exact standing of the bank question? No bill would be better fitted to effect this than that repealing the law imposing the 10 per cent. tax on State bank circulation.

**Notes and Comments on
BANKING PRACTICE.**

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

CUSTOM AS TO CHARGING EXCHANGE.

Editor Rhodes' Journal of Banking: FLAGSTAFF, Arizona, March 14, 1888.

SIR:—We have a practical question in banking which we wish you would answer for us as one of your subscribers:

We are the only bank in a town of one thousand inhabitants. Our nearest reserve point is Albuquerque, where there are two National banks, with each of which we keep a balance constantly of from \$1,500 to \$2,500. They credit all items we send them at par. They get numerous checks on us. Ought we to be expected to credit or remit for these checks at par, or ought we to charge them exchange in paying for them? They keep no balance with us.

J. H. HOSKINS, Jr., *Cashier.*

Answer.—The checks on the bank at Flagstaff are, it is understood from the above question, placed with the bank at Albuquerque for collection. If the latter bank charges exchange for such service it should be paid by the one who presents the check for collection and not by the bank on which the check is drawn, for a check drawn on a bank is payable at that bank and not elsewhere. On the other hand, the bank on which the check is drawn ought to pay without charging exchange, unless it is required to remit the currency, in which case the bank requesting the remittance should pay express charges, etc.

BANK OF BANK OFFICERS.

Editor Rhodes' Journal of Banking: HILLSBORO', Ohio, March 8, 1888.

SIR:—Will you state in the JOURNAL which is the highest officer and which the most responsible in a bank—both in cities and in banks in smaller towns. SUBSCRIBER.

Answer.—The President is designed to be the highest officer in a bank. He is the President of the Board of Directors, and with their authority and direction is supposed to manage the general policy of the business of the institution. The Cashier is supposed to have charge, under the President, of the clerical force and the detail of the business of the bank. The Vice-President is an officer to aid the President and act in his absence. It is, in small banks where there is little business, rather an honorary and ornamental office—very few duties, as a rule, devolving on the incumbent. In large banks, where the business is specialized in departments, the Vice-President often has charge of some particular branch, and generally, for this reason, more than one Vice-President is found necessary. He is supposed to be under the general direction of the President. Such would seem to be a fair view of the natural relation of the officers in a bank, but the duties of the three are sometimes interchanged. The President, by habit, or incompetence, or indolence, or age, or some other reason, will often permit an active and competent Vice-President or Cashier to usurp his own proper duties. The Board of Directors acquiesce in this, and the Vice-President or Cashier becomes the real managing and directing officer. As a rule, this is undoubtedly the very best thing for the bank. The nominal President is retained for other reasons than his ability or willingness to act as such, and the Directors, the clerical force and the public come to look upon the active Vice President or Cashier as the President *de facto* if not *de jure*. The bank prospers and all are satisfied. We do not suppose that there is any special wrong tendency in such a management; it is not

illegal, and it gives the bank the advantage of having its best talent used in its behalf. Perhaps it might be urged that it would be better to have the man who actually performed the duties of the President called President; but, to take a notable instance, it cannot be supposed that the Fidelity National Bank of Cincinnati would have been any safer an institution if Harper had been the real President, instead of a Vice-President acting as President.

PAY OF BANK EXAMINERS.

Editor Rhodes' Journal of Banking:

FLAGSTAFF, ARIZONA, March 23, 1888.

SIR:—Can you give me the average net earnings of a National Bank Examiner, and would you consider a Tellership in a bank at \$1,000 a year salary better than such a position? Also, if you were an applicant, what is the best territory or district to work in and what district would you apply for? Having been a reader of your JOURNAL for some years and having an application on file with the Comptroller, I have taken the liberty of addressing you and trust you may be able and willing to give me more light on the subject. Before proceeding with personal and political influences I want to know if it will pay me to make the change. I am told there is nothing in the office, some few doing well and making a good living by being favored with good districts to work in.

TELLER.

Answer.—The National banking law provides (Section 5,240, United States Revised Statutes), that the Comptroller of the Currency, with the approval of the Secretary of the Treasury, shall, as often as shall be necessary or proper, appoint a suitable person or persons to make an examination of the affairs of every banking association. It is therefore apparent that a separate and distinct Examiner might be appointed to examine the affairs of each bank, or that any reasonable number of persons might be appointed to examine jointly the affairs of one bank. According to the capital of the bank each Examiner would, for examining one bank, receive from \$20 to \$75. If four Examiners were appointed to examine one bank, they would each be legally entitled to receive (if the bank had a capital of \$50,000), \$20. There being over 8,000 National banks in the country, assuming each to be examined once each year by one Examiner, and the average fee for one examination to be \$40 the total sum received would be about \$120,000. The Comptroller's report for 1887 shows that the assessment for the year ending July 1, 1887, was actually \$110,214.88, to be divided say, among forty Examiners. If, from the sum named be deducted the amounts paid to Examiners in New York city, \$12,000; Boston, \$8,000; Philadelphia, \$8,000; Chicago, \$6,000; and one or two other of the more profitable districts, say \$5,000 apiece, it would make a reduction to \$66,219 to be divided among, say thirty-four Examiners or an average of about \$1,900 apiece, out of which travelling expenses must be paid. It is necessary to make these calculations and estimates as no information has ever been given on the subject in any Government report. Under the law, as it stands, if the Comptroller and the Secretary of the Treasury should deem best, the whole sum assessed could be given to one man who might be appointed to examine all the banks. Of course it would be physically impossible for him to personally make the necessary examinations but he could employ assistants and have the supervision of the whole business. The civil service rules do not apply to these positions, and the appointments resting with the Comptroller of the Currency and the Secretary of the Treasury, they are doubtless exposed to much pressure from the friends of rival applicants. If there were no combinations of this kind against which an applicant had to contend, and the appointments were to be based solely on merit, each self-respecting candidate for an Examinership should, without doubt, ask for the examination of banks in New York city as this position pays the best. We believe, however, that the number of applications for these positions is so great and the struggle to get them so severe that the patience of the Comptroller and the Secretary is often much tried. On the other hand, the chances of the success of any candidate are rendered very problematical. It is very difficult to give more than the most general advice, but on the whole, considering the difficulties from every point of view, we are inclined to think that a Tellership in a bank, at \$1,000, in a place where living is cheap, is much better than to encounter

the turmoil, trouble and vexation of spirit, that surely will be met in the attempt to secure a larger salary as bank Examiner.

STARTING A SAVINGS BANK.

Editor Rhodes' Journal of Banking:

PHILADELPHIA, March 1, 1888.

SIR:—If not asking too much will you oblige me with what information you can regarding the details of the establishment of a Savings bank; both as to incorporation and the outlay of money necessary until a surplus fund has been accumulated. I am under the impression that all expenses must come from some fund that represents profit, and that no expenses for building, equipment or salary can be deducted from deposits. Am I right?

A. N. CHANDLER.

Answer.—A definite answer to your questions will depend on whether you contemplate starting a Savings bank in New York State or in Pennsylvania. In the State of Pennsylvania in order to incorporate a Savings bank it is necessary to obtain a special charter from the Legislature. These charters are granted to managers or incorporators and the institutions usually have a capital stock. These are not Savings banks in the same strict sense as Savings banks under the law of New York State. If you wished to start a Savings bank in the State of Pennsylvania it would be necessary for yourself and associate managers mentioned in the charter to pay in the capital required by the charter. The preliminary expenses would as in the case of any other newly started institution have to be charged to profit and loss account, to be charged off as the profits warranted. The profits of such an institution would be derived from the loans made, etc. The deposits or capital could not be used to pay expenses, for if this became necessary the institution would soon become bankrupt. The excess of profits of a Savings bank operating under a special charter in Pennsylvania after interest on deposits and expenses are paid would go to surplus and belong as the charter might direct to the stockholders, or perhaps after certain dividends were paid to stockholders, to a common fund for the ultimate security and benefit of stockholders.

In New York State, Savings banks are incorporated under a general law and the theory of the law is that they are run for the benefit of their depositors. The usual proceeding when it is desirable to inaugurate a Savings bank in any locality is for a sufficient number of prominent and responsible residents of the locality to meet and organize themselves as a Board of Trustees and apply to the Banking department for permission to open a Savings bank under the New York law. The preliminary expenses are inconsiderable, mainly for calling meetings, printing, stationery, etc., and for rent for suitable rooms, and the expenditure for necessary books and furniture. No capital being paid in, all money for these expenses must be advanced temporarily by the Trustees. The only source of profit is from loans of the deposits received. The bank is liable for these deposits and interest on them from the first day they are made. Those who advance the money for expenses can of course be credited as depositors and receive interest on the amount, but the investment of such deposits in expenses is purely a matter of private arrangement with the depositors. Under the New York law all profit after running expenses and interest to depositors is paid, goes to surplus. It cannot be distributed unless by special legislative Act.

Official Conference.—On March 10th, Secretary Fairchild, Comptroller Trenholm, Treasurer Hyatt, Assistant Treasurer McCue and ex-Treasurer Jordan had a conference at Washington. The discussion was general, and various propositions pending in Congress affecting the banks and finances were talked over. The conference grew out of the desire of Judge McCue, on assuming his new office, to be thoroughly informed as to the views of the Department. The Secretary of the Treasury has declined to approve any of the numerous measures introduced in Congress—some of them he has distinctly opposed. A discretionary purchase of United States bonds appears to be the only measure he regards with any favor, and this only as a temporary measure, pending a reduction of taxation.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

INSOLVENT BANK—LIABILITY OF DIRECTORS TO STOCKHOLDERS FOR NEGLIGENCE AND MISMANAGEMENT—THE DILIGENCE NECESSARY TO BE EXERCISED BY THE DIRECTORS IN THE CONTROL OF THE AFFAIRS OF THE BANK—THE QUESTION OF LIABILITY CONSIDERED WITH REFERENCE TO THE FACTS IN THE CASE OF THE FAILED TRADERS' BANK AND WAREHOUSE COMPANY OF KENTUCKY.

This action was instituted by the stockholders of the Traders' Bank & Warehouse Co. to compel its assignee, Ullman, to settle the business of the corporation and distribute its assets, and to make the President and Directors of the bank liable for the negligent manner in which they had managed its affairs. By an answer and cross-petition, Thomas Emery's Sons set up a large claim against the corporation, asking a judgment for the amount against it, and that the stockholders be compelled to pay up the stock for its satisfaction. The lower Court adjudged that Emery's Sons were not creditors of the bank, and dismissed their complaint, from which they appealed. It was also adjudged that the Directors were not liable to the stockholders by reason of any neglect of duty, and from that judgment the stockholders appealed.

Held, The organization of the Traders' Bank & Warehouse Company, as well as the subscription to its capital stock, was mainly due to the personal exertions and influence of George P. Doern, its Cashier, who was reputed to be a man of much wealth and regarded as possessing the highest order of personal as well as business integrity. His father-in-law, Nuenberger, had retired from business, owning, as was supposed, a large estate, and was indorsing and sustaining Doern in all of his business transactions. James Johnson was made President of the bank, and his co-appellees, Thieman, Clifton, Chase, Hecht, etc., were the Directors. They seem, from the record before us, to have been inexperienced in the business of banking. Doern was elected Cashier by reason of his superior business qualifications, and for the additional reason, no doubt, that himself and his father-in-law owned more than one-half of the stock subscribed. The stockholders and Directors were looking to Doern as the medium through which the enterprise was to be made a success. A great deal of the stock taken had not been paid, but notes executed for the amount by the stockholder, under the belief that one half of the amount subscribed would soon be paid in dividends. Some \$40,000 of stock taken by Doern was paid for in real estate, or at least that much was unproductive capital. Doern, as Cashier, seems to have had almost the complete control of the bank; and the Directors having the utmost confidence in his integrity, as well as his pecuniary ability to meet all of his engagements, were not vigilant in the examination of his accounts with the bank, and within less than a year he had become largely indebted to it, and in fact had wrecked the entire enterprise.

The corporation having assigned to Ullman, and Ullman declining to sue the Directors for their alleged neglect of duty, the stockholders, or a portion of them, instituted this action, alleging,

First. That the Directors, knowing Doern to be insolvent, allowed him to largely overdraw his deposit account, and, with a full knowledge of the facts,

*All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

permitted him to take cash out of the Teller's drawer and apply it to his private use; he placing his tickets in the drawer showing the amount taken, and the Directors counting these tickets as cash.

Second. That they had discounted Doern's paper for large amounts when they knew it was not good and the parties to it insolvent; and had permitted insolvent parties to overdraw their respective accounts, and had afterwards accepted Doern's check for these over-drafts.

Third. That the Directors had cancelled the bond of Doern executed as Cashier and released his sureties.

Fourth. That the Directors had sold to Doern 400 shares of stock and took his notes therefor; and when he paid in \$20,000 on his notes they made him a present of or permitted him to check out \$1,492.82 of the amount.

Fifth. That they elected him a Director after he was removed as Cashier, and had paid him his salary as Cashier when he was entitled to nothing.

Sixth. That the Directors, after settling with Doern and his father-in-law his overdrafts, had permitted Doern to check out the balance said to be due him on the settlement.

Seventh. That they had released certain stockholders—Horace Scott and William Johnson—from the payment of their stock subscribed.

Eighth. That the Directors, except Chase, drew from the bank various sums amounting to \$4,844 for their own use, and surrendered worthless stock therefor. Other charges of mismanagement and neglect are made, not necessary to be considered, as those enumerated embrace the principal subjects of controversy.

This corporation was organized in September, 1871, and in March, 1872, it was discovered that the balance-books showed an indebtedness by Doern of nearly \$40,000. Doern was then removed as Cashier and a settlement demanded, resulting in the execution of the notes of Doern and his father-in-law for the amount of this indebtedness, and secured by a mortgage on real estate then of ample value to satisfy the indebtedness. That Doern had at times drawn more than his deposit account was a fact known to the Directors; his account showing at times credits to Doern, by way of deposit, of more than he had drawn out, and at other times an amount exceeding his deposit account; but that he had overdrawn so largely was a fact unknown to the Directors until March, 1872. It is shown by Johnson, the President, that when the committee was appointed to investigate the condition of the bank and the accounts of the Cashier, the money was always on hand, and no tickets exhibited as cash; that the accounts were proper and no reason existed for the belief that Doern was betraying the confidence of the Directors or withdrawing such large sums of money. It appears that Doern was a commission merchant, engaged in the purchase and sale of whiskey; and when his account was overdrawn he gave as a reason that he was then engaged in settling up his commission business with a view of closing his house, and required more funds than he otherwise would, as he was compelled to pay out and was making few collections. He was regarded as amply able to meet all his engagements, and his solvency was not doubted by any of the Directors and but by a few business men. He and his father-in-law owned a majority of the stock; and overdrafts that were not too large were not unusual, as the evidence shows, with those connected with such institutions, if regarded as solvent. An exercise of the utmost vigilance might have produced different results, but this was not required of the Directors; but when they did discover the condition of Doern's accounts and that practices had been resorted to by him in order to deceive, they obtained the settlement and the mortgage to secure this indebtedness. Several of these appellants, who were stockholders in common with the officers of the bank, had been permitted to overdraw their deposit accounts, and now complain of the Directors for permitting the Cashier to do the same thing. But it is evident that the Directors secured the bank and its stockholders for every dollar that Doern had overdrawn, by mortgages executed to secure the notes of the latter and those of his father-in-law given in settlement of this claim; so it is needless to discuss this branch of the case further than to show the confidence of these trustees, who were representing the stockholders, in their Cashier, Doern, and their belief in his ability to pay

his entire indebtedness, indulged almost to the moment of time at which the corporation was declared to be insolvent. Their only remedy was in a settlement with the Cashier and to secure, as much as possible, the amount of his indebtedness. This they seem to have done in good faith, and to protect the bank, regardless of the rights of others.

It is proper to notice next the character of the paper discounted by the bank for the benefit of Doern. It is alleged that the parties to the paper were insolvent, and known to be so by the Directors, and if the facts proven establish the charge made they are no doubt liable. This controversy between the stockholders and Directors renders it proper to determine the question of diligence to be exercised by bank Directors in the control of the bank, its officers and business. Thompson, in his work on Officers and Agents of Corporations, says that "Directors of a corporation are not liable to the corporation for mistakes of judgment, however disastrous such mistakes may be. In all these cases the question is: 'Have the Directors been guilty of negligence of a gross and flagrant character?'" Every case must depend necessarily on the facts and circumstances surrounding it, and here it is plain that Doern, Caldwell, Chambers & Co. and Chamberlain, Doern's indorsers, were believed to be perfectly solvent when the paper was originally discounted. The testimony of Chambers would confirm that belief; and the Directors, in the exercise of a discretion that must necessarily pertain to the exercise of their power, saw proper to discount the paper. That it turned out to be worthless is not sufficient, of itself, to convict the Directors of gross neglect in discounting it, but on the contrary they had every reason to believe that Doern's name made it desirable paper. There is no fraud shown or combination between the Directors and Doern to defraud the bank, or any fact tending to establish neglect, except the implicit confidence they had in Doern's financial ability and personal integrity; and so far as the discount of his paper is concerned, although worthless, these Directors are not liable. That a higher degree of vigilance is to be required of the President of a bank, whose salary for a general supervision of its affairs is sufficient to compensate him for devoting his entire time and attention to its business, may be conceded; but Directors who receive no compensation or a President who is a mere figurehead of the institution are liable only for gross neglect (in the absence of fraud) in the management of the corporation, and this rule most certainly applies when stockholders are attempting to make them liable.

It is further urged that after Doern was removed as Cashier he was elected a Director of the bank, and that he was allowed pay for his services when he was entitled to no compensation. We find no damages resulting to the bank by reason of the compensation assigned to Doern after his removal as Cashier; and when the Directors attempted to make a settlement with him so as to secure his overdrafts they saw proper to remunerate him that a settlement might be obtained. This allowance was made in the exercise of a discretion that belonged to the Directors; it was done in good faith and to protect the corporation. They seem to have made an effort, as they swear, to reconcile Doern by making him a Director, so that an exposure might not be made, and suits under the Act of 1856 instituted, under which, if the mortgage made by Doern and his father-in-law had been assailed by the creditors as a preference within six months, the bank would have lost the security, except a *pro rata* distribution between all creditors; and if this reason should not be regarded as satisfactory, no injury or damage having resulted from his appointment as Director, the stockholders cannot complain.

The appellants also complain that the Directors released Horace Scott and William Johnson from the payment of their stock subscriptions, without any reason therefor, and in disregard of the rights of those interested with them. After the organization of the bank, Doern, the Cashier, importuned Scott to take \$100,000 of the stock upon condition. The note he gave evidenced the terms of the contract; and that he had the option at a certain period of time to determine whether or not he would take the stock is conceded by the Directors and shown by the notes of Scott executed for the stock, all of which were left, including the certificates of stock, with the bank. The note stipulated that the certificates should be received in discharge of the note; it

was so received, and this ended Scott's connection with the bank. The contract was binding on the bank, and if so, the stockholders, who were in no manner misled by it, cannot enforce the contract when the party—the corporation—they represent is bound by its terms. As to the claim of William Johnson for his services as superintendent of the warehouse, its validity not being questioned, the Directors surrendered to him his note executed for stock, in full discharge of the claim for services. The value of his services exceeded the value of his stock, and as between him and the other stockholders they cannot complain.

The Court below held that the stock issued to some of the Directors for extra services should be cancelled, and further held that shares of stock purchased by the Directors in their own names, although done to sustain the credit of the bank, and for which they gave their individual notes, should be enforced, each Director being liable to the extent of the stock purchased by him. In this conclusion we also concur.

A careful examination of this entire record, so far as it affects the rights of stockholders, leads to the conclusion that the Board of Directors acted in the best of faith; and while a careful and vigilant business man might have detected the fraudulent purposes of the Cashier at an earlier date, still the financial standing of Doern, connected with his business capacity, influenced the Directors and stockholders to give him the control of an experiment in banking, connected with the business of a warehouse, upon a limited capital that was constantly begging for additions to its capital stock, resulting in less than one year in a complete financial wreck. Those ordinarily careful in business transactions could not well have done more than these Directors to protect the bank's interest and preserve the rights of the stockholders.

Other charges of neglect of less importance than those noticed have been made and were properly disposed of by the Court below. No bond seems to have been executed by Doern as Cashier, although a resolution of the Board shows that it was cancelled. If, however, a bond had been executed, the settlement by the Directors with the Cashier included his liability on such and would have released his sureties. His sureties would not have been liable by reason of the failure of Doern to pay his notes discounted by the bank. Whether or not the charter required the Directors to take a bond is not a question raised, and if so, the settlement made in good faith by the Directors extinguished Doern's liability caused by the abuse of his official position. A large number of the stockholders who were among the original plaintiffs disclaimed in open Court the intention of making charges of bad faith and neglect against the Directors before the action terminated in the Court below, and those who made no such disclaimer and who have, by their connection with the bank and the Directors, been conversant with its management have failed to testify. We find no bad faith or gross neglect on the part of the Directors.

Further *Held*, as to the claim of Emery's Sons (after full discussion of the facts and law), that they were creditors of the bank, and its assets and stock must pay their debt.

Judgment below affirmed, except as to complaint of Emery's Sons.

Jones vs. Johnson, et al, Court of Appeals, Kentucky, January 14, 1888.

LIABILITY OF BANK FOR MISAPPROPRIATION OF TRUST FUNDS—DEPOSIT BY CLERK OF COURT OF FUNDS OF VARIOUS BENEFICIARIES—MANNER OF PAYMENT BY BANK.

This suit was brought by James Reilly against the State National Bank on a dividend-warrant, or check, drawn by the clerk of the District Court of the United States for the Southern District of Illinois on a fund deposited to the credit of that Court, by the present clerk and his predecessor, with the defendant bank, for the sum of \$221.77. The check was countersigned by the judge of that Court and was an absolute order to pay that sum of money to plaintiff. It was in the usual form of a bank check drawn upon the general fund of the drawer, without specifying any particular fund out of which it

was payable and differed from such check only in the fact that it had, on the face of it, some marginal memoranda, and also some in the body of the check.

About the 1st of March, 1873, the defendant bank was designated a depository for the United States District Court for the Southern District of Illinois, under Section 995 of the United States Revised Statutes and "Rule 28 in Bankruptcy." Shortly thereafter, George P. Bowen, since deceased, then clerk of said Court, made the first deposit of funds belonging to the registry of the Court, with the defendant bank, and the bank then by his direction opened an account with the "United States District Court for the Southern District of Illinois" and entered such deposit to the credit of said Court. The clerk continued to make deposits of funds belonging to the registry of the Court with the bank up to the time of his death in February, 1880, and the bank continued to enter such deposits to the credit of the Court, in the manner directed by the clerk making the same. At first, each deposit so made by the clerk was, by the bank, entered on its books and in the deposit-book of the clerk to the credit of the particular case (naming the case) with the number to which the funds so deposited belonged. Afterwards by the direction of the clerk, all deposits so made were entered by the bank in the name of the "United States District Court for the Southern District of Illinois" dropping the name but retaining the number of the case, as for example: "1876, January 21st. To Dep. 1,637, \$5,200." The bank understood, when these entries were made, the number on either side of the account referred to the case in which the deposit, in the first place was made, and on which the check, in the second place, was drawn. The bank always treated the account as an entirety and paid out of it all checks drawn by the clerk and countersigned by the judge, until the deposits were exhausted. This mode of keeping the account and making payments out of it was acquiesced in by the Court and its principal officer—the clerk under whose directions the deposits were made; and between the time of the first deposit in March, 1873, and the death of Bowen in 1880, the bank balanced the account with the Court nine different times, returning all checks to the clerk at each balancing and entering the case number and amount of each check so returned in the depositor's book.

The check in suit was given to the plaintiff for a dividend due him from the bankrupt estate of H. Sandford & Co. The case was numbered 2,105. Prior to his death Bowen had made large deposits with defendant of funds derived from that estate, and after his death his successor in office made quite large deposits of funds received from the same estate in precisely the same way Bowen had been accustomed to do. It appeared that of the funds deposited as having been received in case No. 2,105, after deducting all checks drawn for dividends in that particular case, including the check in suit, there would remain a considerable balance to the credit of that case, if the same had not previously been paid out on the check drawn by the clerk, and countersigned by the judge of the Court. The difficulty arose out of the admitted fact that the former clerk failed to deposit all the funds that came to his hands belonging to the registry of the Court. Had he done so, there would of course have been enough in bank with which to pay all checks drawn upon the funds of the Court. Payment of the check in suit was refused because the bank, prior to its date, May 12, 1881, had actually paid out on checks similar to this one, signed by the clerk and countersigned by the judge, and differing as to the number of the case, names, dates and amounts, all funds ever deposited with it to the credit of the Court, either by Bowen or his successor in office.

Held, The principle upon which plaintiff seeks to recover is that the bank had notice, by the manner of receiving and keeping the account, and the form of the checks, that monies deposited as having been received from No. 2,105 could only be paid to persons presenting checks containing that number, and that making payments otherwise was a misappropriation of such funds in its possession. The position assumed does not, in the opinion of this Court, seem to be warranted by either the facts or the law. That the deposits made by the respective clerks of the Court were Trust funds, and were known to the bank to be such at the time the deposits were made, will be conceded and taken for granted in all the further consideration of the case. It then becomes a question

of law what duty the bank owed to the beneficiaries in regard to such funds. The depository of Trust funds, whether a corporation or an individual, may not divert such funds from the beneficiaries, for private debts or otherwise, and the beneficiaries can, no doubt, compel such trustees to preserve such funds for their benefit. The law in respect to the duties of trustees, in regard to Trust funds committed to them, is so well understood that no discussion of that branch of the law is deemed necessary. It is proper, however, to bear constantly in mind the fact that the depository or trustee in this instance is a banking corporation, and that the Trust funds are placed in its custody for the purpose of being checked out by the depositor for the use of the beneficiaries entitled to the same. The law on this branch of the case is well expressed in the opinion of the Court in *Bank vs. Insurance Co.*, 104 U. S. 54, where it is said: "A bank account, it is true, even when it is a Trust fund, and designated as such, by being kept in the name of the depositor as trustee differs from other Trust funds which are permanently invested for the sake of being held as such; for a bank account is made to be checked against, and represents a series of current transactions. The contract between the bank and the depositor is that the former will pay according to the checks of the latter and, when drawn in proper form, the bank is bound to presume that the trustee is in the course of law performing his duty, and to honor them accordingly." Certainly a bank may properly make payments on checks of the person whose deposits it holds until notice of some adverse claim. Otherwise there would be no safety for corporations transacting a banking business with its customers.

Applying these familiar principles, which accord with the common understanding of the manner in which banking business is usually transacted, the case in hand will present no serious difficulty. It will be seen the account was kept by the bank in exact conformity with the Act of Congress, Section 995; that is, it was kept as a unit in the name of the Court, requiring funds coming under its control to be deposited. No one can insist, with any show of reason, that this Section of the United States statute made it the duty of the Court to cause its depository to keep a separate account with each case pending, or that had been adjusted, from which the deposits may have been received by the Court or its officers. That is the appropriate work of the officers of the Court, under its direct supervision. All the statute requires of the depository is that it safely keep all Trust funds entrusted to its custody by the Court or its officers, and pay out the same on the checks or order of the Court, through its proper officers. Further than that the statute imposes no duty or obligation upon these designated depositories of the funds being administered under the direction of the United States Courts; nor is it correct to say that Rule 28 in Bankruptcy has enlarged the duties imposed by the Act of Congress upon the depository in this case, or placed it under different or other obligations in respect to the keeping of the account of the funds entrusted to it by the Court, under whose appointment it was acting. This rule was, no doubt, adopted with the view to point out more specifically the duties of certain officers of the Court in respect to funds belonging to, or in the custody of, the Court; but when subjected to a close study it will be seen that it adds nothing of any value to the statute on the same subject. The Act of Congress requires that all monies paid into any Court of the United States, or received by the officers thereof, be forthwith deposited in a designated depository of the United States "in the name and to the credit of the Court." Rule 28 requires the same thing in regard to such funds and nothing more. The insistence in argument seems to be that the phrase in Rule 28 that "every assignee, and the clerk of said Court shall deposit all sums received by them severally, on account of any bankrupt's estate, in one designated depository" requires that the account in the bank should be kept with each bankrupt estate, and not as a unit with the Court. This does not seem to be a correct reading of the rule. It might be suggested the word "severally" as used in that connection is not happily selected. Its meaning, as usually defined, is, "distinctly," "separately," "apart from others." Understanding the word severally in either sense, how are assignees and clerks to make deposits of funds coming to them in their official capacity? Obviously it was to be done "separately" and "apart from

others." What the rule really means is that "every assignee and the clerk" shall deposit all sums received by them, respectively, on account of any bankrupt estate, in one designated depository. That is its plain meaning and nothing more. It will be noted also that Rule 28 directs how, and in what manner, such Trust funds may be withdrawn from such designated depositories. In that respect, while it is a little fuller, perhaps, it follows closely Section 996 United States Revised Statutes on the same subject, but makes no material change of the mode or manner of withdrawing such funds.

Holding then, as this Court does, that the account was properly kept as a unit with and in the name of "The District Court of the United States for the Southern District of Illinois" in conformity with the Act of Congress and Rule 28 in Bankruptcy, and that it was properly withdrawn on checks, drawn as directed by the statute, and the same rule, for the benefit of beneficiaries entitled to share in the common funds there was no misappropriation of such funds by the bank, and there is and can be no liability upon the bank for any deposit of the amount due such beneficiaries, arising from the wrongful conduct of the former clerk in omitting to deposit all the Trust funds that came to his hands as an officer of the Court. This view would seem to be conclusive of the whole case, and to render further discussion unnecessary; but as great stress is laid upon the fact that certain memoranda appear upon the face of all checks drawn against the funds in the hands of the bank, that phase of the case will briefly be remarked upon.

Over the check was written or printed "In the District Court of the United States for the Southern District of Illinois." "Check No. 53." "Case No. 2,105." "In the matter of H. Sandford & Co., bankrupts." In the body of the check it is said the sum directed to be paid to plaintiff "being in full of the dividend of 7-10 per cent. declared April 30, 1881, on his claim for \$31,380 proved against said bankrupt estate." No doubt the check was drawn in this form for the reason the statute requires that "every such order shall state the cause in, or on account of, which it is drawn." Rule 28 in substance requires the same thing. It cannot be known certainly why it was made necessary every such order should contain these things or this particular information. Many reasons might be suggested why it should be so. *First*, it was an assurance by the Court to the bank that the Trust funds in its custody were being withdrawn for the use of the beneficiaries, and were, therefore, not being misappropriated. *Second*, it might be of advantage to the Court and its officers in making up the accounts with each estate in bankruptcy pending, or that had been adjudicated, in the Court; and *third*, it would be a convenient mode of obtaining vouchers from the parties receiving dividends, that would operate as a protection to the officers making such payments. What reason may have existed for so providing by statute, and by rule, matters little. It is only important to have declared the check or order for withdrawing such funds shall contain the things enumerated. Without looking for a reason why it is so, the only concern is what such memoranda indicated, or what obligation, if any, there was thereby imposed upon the bank. Beyond what has already been said that it was an assurance, from the Court itself, that the funds were being withdrawn for a legitimate purpose, it is not perceived the memoranda either on the margin or in the body of the check, contained anything for the guidance or information of the bank in any manner whatever, nor was the bank under any legal duty to observe such memoranda. The bank could not know, nor was it important it should know that "H. Sandford & Co." were the bankrupts whose estate was being administered in "Case No. 2,105" nor that the payee of the check was a creditor of such bankrupt, nor that the sum ordered to be paid to him was in full of a dividend declared to a certain date, and was a certain per cent. of his claim allowed against the estate of such bankrupts. These were matters exclusively within the knowledge of the Court and its officers and with which the bank had no rightful authority to intermeddle. It is well-known, and the testimony is full to that point, the practice among banks, paying checks of their depositors, is not to observe memoranda upon such checks; but the custom is to regard them as having been made for the convenience of the drawers, and the practice in that regard,

it is thought, has the sanction of the law in its support. Judgment of Appellate and Circuit Courts against bank, reversed,

Opinion delivered by Scott, *J.* Shope and Magruder, *J. J.* do not concur in this decision.

State National Bank vs. Reilly, Supreme Court of Illinois, November 9, 1887.

**PAYMENT BY BANK OF CHECK WHEREON DRAWER'S SIGNATURE IS FORGED—
DISCOVERY OF FORGERY SEVERAL DAYS THEREAFTER—REMEDY OF PAYING
BANK.**

(A stranger presented to the bank of O a check purporting to be drawn by one C on the bank of A for \$385. The Cashier of the bank of O, where C also kept an account, compared the signature of the purported drawer with his genuine signature in a book kept by such Cashier, and cashed the check without requiring proof as to the identity of the person presenting the same, or making inquiry in regard to him. The check was sent to a bank in Lincoln and there credited to the bank at O, and by the Lincoln bank sent to the bank at A, on which it was drawn, and was paid by such bank. Several days afterwards it was discovered that the check was a forgery, and notice was thereupon given to the bank at Lincoln and also at O. *Held*, That the bank at O was liable for the amount received by it on the check.)

This was an action by the State Bank of Alma against the First National Bank of Orleans for money paid on a forged check. The facts were as follows:

On or about the 1st day of January, 1886, a stranger appeared at the counter of the First National Bank of Orleans, Neb., and presented a check of which the following is a copy:

\$385. State Bank of Alma pay to A. J. Gype of Alma, Neb., or bearer, three hundred and eighty-five dollars.	ALMA, Neb., December 18, 1886. B. R. CLAYPOOL.
--	---

At the date of said check and its presentation, and for a long time prior thereto, B. R. Claypool, whose check it was represented to be, was a customer of the First National Bank of Orleans, and also the State Bank of Alma, and each bank had money to his credit, subject to check, and both of said banks supposed that they were acquainted with his signature. The Cashier of the First National Bank of Orleans was unacquainted with the person who presented the check, and did not request him to produce any proof as to being the person entitled to the money on the check; neither was he identified as being the A. J. Gype, mentioned in the said check, before paying the check. The Cashier compared the signature of B. R. Claypool on the check with the genuine signature on the signature book of said bank, for the purpose of ascertaining its genuineness, and after said comparison, believed the signature to be genuine, and thereupon paid said check, charging the person who purported to be A. J. Gype the sum of eighty cents exchange. At the time of paying the check Claypool had money in the bank paying the check sufficient to pay it. On the 1st day of January, 1886, the First National Bank of Orleans transmitted the check to the Capital National Bank of Lincoln, which bank at the time, and for a long time prior to that time, was a correspondent of both the State Bank of Alma and the First National Bank of Orleans, Neb. None of the foregoing facts were known to the Capital National Bank. On the receipt of said check on the 2d day of January, 1886, the Capital National Bank of Lincoln credited the First National Bank of Orleans with its amount, and on the 4th of January forwarded it to the State Bank of Alma, and charged the State Bank of Alma with that amount. The check was indorsed both by the Capital National Bank and the First National Bank of Orleans. On the 5th of January, 1886, upon the arrival of the check at the State Bank of Alma, the State Bank paid the same by giving the Capital National Bank credit therefor, not knowing at the time that the check was forged. The check, in fact, was a forgery, and the name of Claypool was never written by him or by his authority. On the 23d of January, 1886, when the bank book of Claypool was balanced at the State Bank of Alma and his checks were presented to him which had been paid by said bank, he denied the genuineness of this check in controversy, which was the first that the officers of the State Bank knew of

the check being a forgery. On the next day, the 24th of January, the State Bank officers notified both the Capital National Bank and the First National Bank of Orleans that the check was forged, charged the same back to the Capital National Bank of Lincoln, and forwarded the check to Lincoln to the Capital National Bank, who refused to take the same or to credit the State Bank with the amount thereof. The signature of the check was very similar to the genuine signature of Claypool. A. J. Gype, the payee, had not been heard of since the cashing thereof by the First National Bank of Orleans, and was an entire stranger to all of the banks above mentioned before the presentment and payment of the check.

The facts above given were in substance those agreed upon in a statement of agreed facts by the plaintiff and defendant, and it was further agreed that if the Capital National Bank was liable, according to such facts, to the State Bank of Alma for the amount of said check, then that judgment should be given against the First National Bank of Orleans, instead of the Capital National Bank. On the trial of the cause the Court found in favor of the State Bank of Alma, and the First National Bank of Orleans took the case to the Supreme Court of the State on a writ of error.

Held, On principle it would seem that a bank paying a forged check drawn on another bank would do so at its peril; that where it is proposed to draw funds belonging to another by means of a check, such check should be drawn by the proper authority. The bank to which the check is presented by a stranger may require his identification and proof that he is the lawful holder of the check. It must take the necessary steps to ascertain the genuineness of the instrument, and the identity of the person presenting it, or, in case of loss from such neglect, will be the party at fault. A bank receiving a check from one which has paid it may rightfully assume that the paying bank required the necessary proof both as to the genuineness of the instrument and the authority of the holder to receive the money thereon. Ordinarily, it will not be known in the second bank that the person presenting the check to the bank paying the same was a stranger, and no identification was required; nor can it be known that the drawer was not present in the bank when the check was presented and paid. The second bank, therefore, having received the check from a creditable bank, may assume that it has taken the necessary precautions to ascertain the genuineness of the signature and the identity of the person presenting the check. In this case, had the bank of Orleans required the holder of the check to prove who he was, and the manner in which he came by the check, in all probability he would have declined the ordeal, and the check would not have been paid. The loss, therefore, may be traced directly to the bank's negligence.

The case of *Ellis vs. Trust Co.*, 4 Ohio St., 626, is similar, in many respects, to that under consideration. It is said, page 662: "To entitle the holder to retain money obtained by mistake upon a forged instrument, he must occupy the vantage ground by putting the drawer alone in the wrong; and he must be able truthfully to assert that he put the whole responsibility upon the drawee, and relied upon him to decide, and that the mistake resulting from his negligence cannot now be corrected, without placing the holder in a worse position than though payment had been refused. If the holder cannot say this, and especially if the failure to detect the forgery and consequent loss can be traced to his own disregard of duty, in negligently omitting to exercise some precaution which he had undertaken to perform, he fails to establish a superior equity to the money, and cannot, with a good conscience, retain it. To allow him to do so would be to permit him to take advantage of his own wrong, and to pervert a rule designed for his protection against the negligence of the drawee into one for doing injustice to him." See, also, *Goddard vs. Bank*, 4 N. Y., 147; *Bank vs. Bank*, 3 N. Y., 280; *Bank vs. Bank*, 1 Hill, 287. In the last case the indorsement of the payee was forged and the money paid by the drawees was recovered back, although the forgery was not discovered for two months after payment, and the remedy against the other indorsers was lost.

In *Bank vs. Bank*, 59 Mo., 311, a bank had paid to a stranger a check drawn upon another bank, and collected the amount from the latter. At the

time of the payment neither bank was aware of the forgery. The next day after the payment the bank on which the check was drawn ascertained the forgery, and on that day, or the succeeding one, notified the first bank of that fact. It was held that the notice was given in a reasonable time, and that the money could be recovered back. In that case the money had been drawn on a check for the sum of \$20, payable to a stranger, who, before presenting it to the bank, had altered it by substituting \$228.68 instead of \$20, and also by changing the name of the payee, the signature of the check being genuine.

In *Espy vs. Bank*, 18 Wall., 604, a check was drawn by Stall & Meyer on the defendant for \$26.50 in favor of Mrs. Hart. This was raised by substituting \$3,920 for \$26.50, and the name of Espy, Heidelbach & Co. for that of Mrs. Hart as payee. The check thus altered was presented to the bank, and paid by it through the Clearing-house. The Court held if this were all the case there would be no doubt of the right to recover. E. H. & Co. however, had sent the check to the bank before paying the same, and were informed that it was good—a question which does not arise in this case.

After a careful examination of the authorities, we have no doubt that a party who pays a forged check does so at his peril; and if by means of his indorsement and use of the same he thereby obtains money from another, he is liable for the amount thus received. The Capital National Bank, and also the State Bank of Alma, had the right to assume that an instrument sent forth with an indorsement of the First National Bank of Orleans, on which they received value, was genuine.

Judgment affirmed. Opinion by Maxwell, J.

First National Bank of Orleans vs. State Bank of Alma, Supreme Court of Nebraska, January 5, 1888.

CHECK—COLLECTION THROUGH CLEARING-HOUSE—WHAT CONSTITUTES ACTUAL PAYMENT?—RIGHT TO RETURN CHECK UNDER RULES OF CLEARING-HOUSE.

(The rules of a Clearing-House allowed the drawee banks until one o'clock to return checks that for any reason they declined to pay. The F bank presented to the G bank through the Clearing-House a check drawn on the latter, and was allowed credit therefor. The check being taken to the office of the G bank was placed on a file of paid checks and entered in the journal. Shortly after 12 o'clock of the same day, the drawer notified the G bank to stop payment of the check. Thereupon the G bank took the check off the file, cancelled the entry in the journal, and returned the check to the F bank before one o'clock. The F bank, after requiring the Messenger to indorse thereon "cut guaranteed," accepted the check, charged it back to the holder, and gave the G bank a Teller's check therefor. In a suit by the F bank against the G bank to recover the amount of the check on the ground that defendant had unconditionally accepted and paid said check, *Held*, (1) that the drawer had the right to stop payment of the check; and (2) that placing the check on the file and entering it on the journal of the bank was a conditional acceptance only of said check, and payment having been stopped and the check returned to the F bank before one o'clock, it had never been actually paid; and the F bank should have been non-suited.)

This was a suit by the Farmers' Deposit National Bank, the agent for collection of a check the amount of which it had received from the drawee bank through the Clearing-House, but which it had subsequently refunded to said drawee, to recover from the latter the amount of said check.

On May 24, 1884, the Germania Savings Bank drew and delivered to the Penn Bank a check on the German National Bank for \$20,000. The Farmers' Deposit National Bank and the German National Bank were members of the Clearing-House. The Penn Bank was not, but was represented therein by the Farmers' Deposit National Bank as its agent. For the purpose of collecting said check through the Clearing-House the Penn Bank indorsed it "For deposit, Clearing-House, May 26, 1884. Penn Bank, Pittsburgh. C. F. McCombs, A. Teller," and deposited it with the Farmers' Deposit National Bank. The check was sent through the Clearing-House on May 26th in the usual manner and the Farmers' Deposit National Bank received credit at the Clearing-House for the amount thereof. The check was then sent in the usual course of business to the German National Bank, upon which it was drawn,

where the envelope containing it was opened by C. Van Buren, Jr., the Teller, who examined it and placed it on file. Shortly after this John E. Wessler, the Assistant Teller, took it off the file and entered it in the journal, but it was not then, nor has it ever been, posted in the ledger. This was on May 26th. On the same day the Penn Bank failed and closed its doors a little after 12 o'clock. The Germania Savings Bank, hearing of this, and having, it was alleged, a defense to the check as against the Penn Bank, immediately notified the German National Bank to stop payment. On receipt of this notice the German National Bank cancelled the entry on its journal and handed the check to its Messenger, with instructions to return it to the Farmers' Deposit National Bank, where it was presented before one o'clock, with the information that payment had been stopped, and a demand was made upon the latter bank for the money. The Messenger was requested by the Teller of the latter bank to guaranty the cut (made by the file), whereupon the Messenger wrote upon the back of the check the words "Cut guaranteed. O. C. Bergdorf, Messenger," whereupon the check was accepted, charged back to the account of the Penn Bank, and a Teller's check for the amount given to the German National Bank, which was duly paid through the Clearing-House next day. The Farmers' Deposit National Bank held the check, as already stated, for the mere purpose of collection, as agent of the Penn Bank. There was nothing in the case to show if it ever asked the German National Bank whether it had accepted it or would accept it; that it had any knowledge that the check had been on the file (except what the cut would imply) or entered upon any book of the German National Bank; nor that it was induced to give credit or change its position in any way by any action taken by said bank. The Penn Bank never resumed business, and on May 28th made an assignment to Henry Warner, who some time afterward notified the Farmers' Deposit National Bank that he held it responsible for the amount of the check.

The Clearing-House Association was not responsible for anything except the proper distribution of the money paid to settle balances, its purpose being to provide a convenient place where checks might be presented and balances adjusted. Its rules provided: "Errors in exchanges shall be adjusted by the banks, and checks not good shall be returned to the bank depositing them, according to the regulations now in force, viz., before one o'clock p. m. The Association not to be responsible in any case." The course of business in the Clearing-House was as follows: The Association was composed of nineteen different banks. At half-past nine each morning each bank would send a clerk and a Messenger to the Clearing-House with all the checks received by it on the previous day on the other banks, the checks on each particular bank being placed on a separate envelope. The checks were then examined and a balance struck. If the bank was a debtor bank it was required to pay the amount of its indebtedness to the Clearing-House before 11:30 of the same day in money. If a creditor bank, it received its balance from the Clearing-House from 11:30 to 12 o'clock. When the checks were assorted all the checks on any one bank were placed in an envelope and handed to the clerk or Messenger of that bank with a memorandum stating whether it was a creditor or a debtor bank, and the amount of such debit or credit. If a debtor, the bank then made up a package of money corresponding with the amount it owed, and sent it to the Clearing-House before 11:30 a. m., as before stated. If a creditor, it sent to the same place before 12 o'clock and got its money. When the checks were returned by the Clearing-House to the banks upon which they were respectively drawn, the latter had until one o'clock in which to correct mistakes. If there were no funds to meet a particular check, if payment had been stopped, or if from any reason the bank declined to pay it, the rule of the Clearing-House above stated and the practice under it allowed the bank until one o'clock to return it to the bank from whence it came. If not returned before that hour, the bank was fixed absolutely for the check. There appeared to be no uniform practice on the part of the banks composing the Clearing-House Association as to the time of entering on their books the checks received from said Association. Some deferred entering them until

after one o'clock, when the time for the correction of errors had passed. Others placed them on file and entered them immediately. This was done by the German National Bank with the check in question. It was put on the file, a spear-shaped instrument, which made a cut in the check, and was then entered in the journal, but it was not carried forward to the ledger. The officers of the bank, however, certified that this was done for the convenient transaction of its business; that to defer all such entries until after one o'clock would prevent the bank getting through its business during banking hours; that the placing it on file and entering it on the journal was only a conditional acceptance, subject to be revoked for cause at any time before one o'clock. As to the right of a bank to return a check before one o'clock received from the Clearing-House there was no question. The evidence on this point was overwhelming and uncontradicted.

Under this state of facts the Farmers' Deposit National Bank, claiming that the German National Bank had accepted and paid the check, sought to recover from it the amount thereof.

Held, Under these circumstances what are the legal rights of the parties to this suit? The Farmers' Deposit National Bank, the plaintiff below, had no interest in this check. It was merely the agent for collection of the Penn Bank. When the check was returned to it from the defendant bank and it was notified that payment had been stopped, it received said check and gave that bank a Teller's check for the amount. It gave the latter a check for the reason, I presume, that it had received a credit therefor that morning at the Clearing-House. It then charged the check in question back to the Penn Bank and sent the check itself to that bank. The surrender of the check was voluntary, and there is no evidence that it was procured by any fraud or misrepresentation on the part of the German National Bank. Under these circumstances I am unable to see what claim the plaintiff bank has upon the latter. It has no interest in the check or the money which it represents. It is not a dollar out of pocket, and a recovery in this suit would add \$20,000 to its assets, for which it paid nothing, unless, as I assume to be the case, this suit is for the benefit of the Penn Bank. This would enable the latter to do indirectly what it could not do directly, viz., to avoid a contest with the drawer of the check and recover, or at least attempt to recover, from the drawee. It is the voice of Jacob, but it is the hand of Esau.

As I understand the case there are but two principles involved, namely:

(a) Had the German Savings Bank the right to stop payment of the check? and

(b) If so, was the right exercised in time; that is to say, before actual payment? All other material questions in the case are but subdivisions of these.

I presume no one at this day questions the right of the drawer of a check to stop the payment thereof. This is usually done by notice to the bank on which the check is drawn. If the bank pays after such notice, it does so at its peril. The holder of a check has no remedy against the bank upon which a check is drawn after its refusal to pay it. He must look to the drawer. The right to stop payment ceases, of course, with actual payment. The case then narrows itself down to the single point, was the check paid when notice was given to the German National Bank not to pay it?

The plaintiff contends that it was, and points to the "cut" on the check and the entry in the journal of the German National Bank as evidence of that fact. We may say just here that a vast amount of time was wasted at the trial in the Court below over the meaning of the words "cut guaranteed." They are of very little importance in our view of the case. This is not a suit upon the guaranty, and its meaning is only indirectly involved. The existence of the "cut" was a circumstance that had some bearing, as it showed, in connection with other testimony, that the check had been on a file where paid checks are usually placed. But there is no magic in a file cut or in an entry in a journal. Both required explanation, and that was fully given. The "cut" and the entry on the journal, if uncontradicted evidence is to be believed, were made for the convenience of the defendant bank. Together they, perhaps, constituted a conditional acceptance of the check, subject to the right of the

bank, under the rules of the Clearing-house, to revoke it and return the check before one o'clock. It cannot be seriously questioned that, had the defendant bank pigeon-holed the check instead of placing it on the file, it would have had the right to return it before one o'clock. And can it make any difference that, for its own convenience, and to expedite business, it entered the checks from the Clearing-house as soon as received? It had until one o'clock to correct any errors, and I am unable to see upon what principle or what reason the plaintiff bank could have refused to receive the check with the "cut guaranteed" when offered at any time before that hour. It may be that, had the check been passed over the counter, or received by the defendant bank outside of the Clearing-house, the rulings of the Court below would have been adequate. But we do not think sufficient weight was given to the regulations of the Clearing-house. As between it and its associate banks its rules have the force of law. It is the law to them because they have made it so. One plain object of the rule in question was to give the banks until one o'clock to correct any mistakes and return checks that for any reason they declined to pay. No Clearing-house could exist for a week without some such regulation. And in the face of this rule, the placing of a check on file, and even entering it on the journal, is not *per se* payment. It becomes so after one o'clock if the check is not returned to the bank depositing it before that hour. This is the plain construction of the rule, and the Court below would have been justified in nonsuiting the plaintiff at the close of its case.

Judgment reversed. Opinion by Paxson, J.

German National Bank vs. Farmers' Deposit Bank, Supreme Court of Pennsylvania, January 3, 1888.

NOTE PAYABLE "ON DEMAND AFTER DATE"—WHEN DOES STATUTE OF LIMITATIONS COMMENCE TO RUN?—MASSACHUSETTS.

Fenno sued Gay upon the following promissory note:

\$550.

BOSTON, Mass., May 20, 1880.

On demand, after date, I promise to pay to the order of John Everitt five hundred and fifty dollars, payable with interest. Value received. C. H. GAY.

Indorsed: "Pay Isaac Fenno, or order. JOHN EVERITT."

The action was begun May 21, 1886. Defendant claimed that the action was not commenced within six years after the cause of action accrued. At the trial in the Superior Court, without a jury, defendant having waived all defenses except the Statute of Limitations, the Court ruled that the action was not commenced within six years next after the cause of action accrued, and found for the defendant. Plaintiff appealed.

Held, It was held in *Hitchings vs. Edmonds*, 132 Mass., 388, that a promissory note payable "on demand after date" is not a note payable on time, but "is an ordinary demand note, payable at once on demand, on which an action could have been brought immediately after it was given, without any demand." This is decisive of the case at bar. An action might have been brought on the note in suit at any time on May 20, 1880, after it was given. It follows that this suit, commenced May 21, 1886, was not brought within six years after the cause of action accrued, and that the Statute of Limitations is a bar.

Fenno vs. Gay, Supreme Judicial Court of Massachusetts, January 16, 1888.

ABSTRACT OF CASES.

PROMISSORY NOTE—ACCOMMODATION MAKER—LIABILITY THEREON TO THIRD PARTY.

Where one man gives to another an accommodation note it will be good, against the maker, in the hands of a third person, though passed to him as security for a pre-existing debt. Of course this statement precludes the idea of fraud in the procurement of the note. Even where the note is procured in bad faith, and is passed to a third person for a valuable consideration, he may

recover from the maker at least the amount he actually paid or credited the payee on the faith of the paper.

Beckhaus vs. Commercial National Bank of Pennsylvania, Supreme Court of Pennsylvania, January 23, 1888.

ACCEPTANCE OF DRAFT BY WRITING "EXCEPTED"—VALIDITY—ADMISSION OF PAROL EVIDENCE TO EXPLAIN.

The drawee of a draft wrote across the face thereof the words "excepted, September 18th, L. B. Maben." *Held*, A valid acceptance; and parol evidence that such was the purpose of the writing, not being inconsistent with the writing itself, was admissible.

Cortelyou vs. Maben, Supreme Court of Nebraska, January 5, 1888.

PROMISSORY NOTE—PROVISION FOR "ATTORNEY'S FEE"—NEGOTIABILITY.

A promissory note contained a provision for the payment of "attorney's fees," and the only question was whether these words rendered the sum to be paid uncertain and destroyed the negotiability of the instrument. *Held*, Such provision destroyed the negotiability of the instrument.

Altman vs. Rittershofer, Supreme Court of Michigan, January 19, 1888.

NEGOTIABLE INSTRUMENT — TRANSFER AFTER DUE — PURCHASER TAKES SUBJECT TO EQUITIES — TITLE.

Where a negotiable promissory note is transferred after due, its non-payment is a suspicious circumstance, and if the note has been paid in whole or in part before the transfer, such purchaser will take subject to such payment. (Citing *Davis vs. Neligh, 7 Neb., 78.*)

Where a negotiable promissory note is transferred by indorsement after maturity, the legal title is thereby vested in the indorsee, and the amount due on the note cannot thereafter be garnished in the hands of the maker as a debt due to the original holder, whether the maker has notice of the transfer or not.

Edney vs. Willis, Supreme Court of Nebraska, January 5, 1888.

BANK COLLECTIONS—BANKER'S LIEN FOR BALANCE OF ACCOUNT—RIGHT OF COLLECTING BANK (HAVING NO NOTICE OF OWNERSHIP) TO RETAIN, AS AGAINST TRUE OWNER, PROCEEDS OF COLLECTION FOR DEBT OF FAILED TRANSMITTING BANK.

The Penn Bank, of Pittsburgh, Pa., and the Exchange Bank, of Wheeling, W. Va., had mutual and extensive dealings for years, each transmitting paper to the other for collection, collecting and crediting the sending bank with the proceeds, and from time to time settlements were made between them. On the 24th day of May, 1884, the Penn Bank inclosed in a letter to the Exchange Bank "for collection," marked "no prin.," the following draft:

\$1,500.	PITTSBURGH, May 24, 1884.
At sight pay to the order of Penn Bank fifteen hundred dollars, value received, and charge to account of	D. W. C. CARROLL.
To <i>Riverside Iron Works, Wheeling, W. Va.</i>	

The draft was indorsed "Pay Exchange Bank or order, for account of Penn Bank, Pittsburgh, Pa. G. L. Reiber, Cashier." It was received by the Exchange Bank on Monday morning, May 26th, at once placed to the credit of the Penn Bank, sent out by messenger for collection, and paid by the drawee at 9:30 A. M. At that time, after giving the Penn Bank credit for the \$1,500 draft, it still owed the Exchange Bank \$205.43. At 12:05 P. M. on that day the Penn Bank failed. The Exchange Bank had no other notice than as above set forth that the Penn Bank did not own the paper. D. W. C. Carroll, the real owner of the paper, brought an action of *assumpsit* against the Exchange Bank for the amount of the draft and interest, and recovered

in the Court below. The Exchange Bank carried the case to the Supreme Court of Appeals of West Virginia.

Held, (Following the Supreme Court of the United States in *Bank of Metropolis vs. New England Bank*, 1 How., 234; 6 How., 212.)

1. Where there have been for several years mutual and extensive dealings between two banks, and an account current kept between them in which they mutually credit each other with the proceeds of all negotiable paper transmitted for collection when received, and accounts were regularly transmitted from the one to the other and settled upon these principles, and balances remitted when called for, and upon the face of the paper transmitted it always appeared to be the property of the respective banks, and the collecting bank had no notice that the transmitting bank did not own the paper, and such paper was transmitted by each of the two banks on its own account, there is a lien for a general balance of account, no matter who may be the real owner of the paper.

2. If the receiving and collecting bank at the time of the mutual dealings with the bank sending the paper had notice that such bank had no interest in the bills or notes transmitted and that it transmitted them for collection merely, as agent, then the collecting bank would not be entitled to retain, against the owner of such paper, for the general balance of account with such bank.

3. If the collecting bank had no notice that the bank sending the remittance was merely an agent, but regarded and treated it as the owner of the paper transmitted, yet the collecting bank is not entitled to retain, against the real owner, unless credit was given to the bank sending the paper or balances suffered to remain in its hands, to be met by the negotiable paper transmitted or expected to be transmitted in the usual course of dealings between the two banks.

4. But if, in the mutual dealings between the two banks, the collecting bank regarded and treated the bank transmitting negotiable paper as the owner of such paper which it transmitted for collection, and had no notice to the contrary, and on the credit of such remittances made or anticipated in the usual course of dealings between them balances were from time to time suffered to remain in the hands of the bank sending the remittances, to be met by the proceeds of such negotiable paper, then the collecting bank is entitled to retain against the real owner of the paper for the balance of account due from the bank transmitting such paper.

5. The words "no prin." said to mean "no protest," were not evidence of ownership in Carroll, and the Exchange Bank taking the paper without notice of his title, the judgment in his favor must be reversed and judgment entered for the defendant.

Carroll vs. Exchange Bank of Wheeling, Supreme Court of Appeals of West Virginia, November 26, 1887.

ACTION ON PROMISSORY NOTE—DEFENCE OF PAYMENT—NOTE AS EVIDENCE.

Where an action is brought upon a promissory note a copy of which is attached to the petition, and defence of payment is made, and evidence is offered tending to show that the defendant paid and took up the note sued on, *Held*, Error for the Court to refuse to permit the defendant to offer as testimony the note taken up and paid by him, although his signature has been torn off.

Chinberg vs. Gale Sulky Harrow Manufacturing Co., Supreme Court of Kansas, January 7, 1888.

LAW NOTES AND COMMENTS.

COLLECTING BANK'S LIEN FOR INDEBTEDNESS OF FAILED CORRESPONDENT, AS AGAINST OWNER OF PAPER.—A case, growing out of the failure of the Penn Bank of Pittsburgh, will be found in the "Abstract of Cases" reported in this number, involving the question of the right of a collecting bank which has received paper from its correspondent (with whom it has had

mutual and extensive dealings) for collection, without notice of the rights of the real owner therein, to retain, on the failure of its correspondent, the paper or its proceeds, for a balance of account due by the latter, without regard to the rights of such real owner. The decision is by the Supreme Court of Appeals of West Virginia, and follows the rule laid down by the Supreme Court of the United States in *Bank of the Metropolis vs. The New England Bank*, 1 How., 234; same case, 6 How., 212. When this case was first before the Supreme Court in 1 Howard, Chief Justice Taney said: "If an advance of money had been made upon this paper to the Commonwealth Bank (the transmitting bank) the right to retain for that amount would hardly be disputed. We do not perceive any difference in principle between an advance of money and a balance suffered to remain upon the faith of these mutual dealings. In the one case as well as the other, credit is given upon the paper deposited or expected to be transmitted in the usual course of the transactions between the parties." The lower Court having misunderstood the principles laid down in this decision, the case came a second time before the Supreme Court (reported 6 How., 212), and Taney, *C. J.*, then laid down the following instructions for the jury as embodying the principles first decided:

1. If, upon the whole evidence before them, the jury should find that the Bank of the Metropolis (the collecting bank), at the time of the mutual dealings between them, had notice that the Commonwealth Bank (the transmitting bank) had no interest in the bills and notes in question, and that it transmitted them for collection merely as agent, then the Bank of the Metropolis was not entitled to retain against the New England Bank (the real owner) for the general balance of account with the Commonwealth Bank.

2. And if the Bank of the Metropolis had not notice that the Commonwealth Bank was merely an agent, but regarded and treated it as the owner of the paper transmitted, yet the Bank of the Metropolis is not entitled to retain against the real owners, unless credit was given to the Commonwealth Bank, or balances suffered to remain in its hands to be met by the negotiable paper transmitted or expected to be transmitted in the usual course of the dealings between the two banks.

3. But if the jury found that, in the dealings mentioned in the testimony, the Bank of the Metropolis regarded and treated the Commonwealth Bank as the owner of the negotiable paper which it transmitted for collection, and had no notice to the contrary, and upon the credit of such remittances made or anticipated in the usual course of dealing between them balances were from time to time suffered to remain in the hands of the Commonwealth Bank, to be met by the proceeds of such negotiable paper, then the Bank of the Metropolis is entitled to retain against the New England Bank for the balance of account due from the Commonwealth Bank.

The principles thus enunciated by the National Court have met the approval of the highest Courts in Indiana, Ohio, Maryland, Colorado, and in West Virginia, in the case referred to. On the contrary, the leading commercial States of New York and Pennsylvania, through their highest Courts, do not concur in the principle that a collecting bank which has had mutual and extensive dealings with its correspondent has a right to retain for a balance of account suffered to remain on the *faith of these mutual dealings*. In *McBride vs. Farmer's Bank*, 26 N. Y., 450, Balcom, *J.*, says: "The rule laid down by the Federal Court in that case (*Bank of Metropolis vs. The New England Bank*) has never been adopted in this State. * * * The decisions of our Courts have been uniform from the time *Coddington vs. Bay*, 20 Johns., 637, was determined, that before the holder of a note can acquire a better title to it than the person had from whom he received it, he must pay a present valuable consideration therefor; and that receiving it in payment of, or as security for, an antecedent debt is not such a consideration. * * * The case is not altered materially by a long course of dealing between the parties by which the holder of the note has been in the habit of receiving payment of balances due him in notes, or because he has omitted to collect a balance due him, by reason of an expectation or promise of payment of it in notes, or in consequence of his omission to collect it after taking such a note in payment

of it. He has not in either case parted with or paid any present valuable consideration for the note; and if he fails to collect it or hold it, he is in no worse situation legally, than he was before receiving it. He has only been disappointed by not obtaining payment of an antecedent debt; and that consideration is insufficient to prevent the true owner of the note from claiming the same or its avails, or the maker or indorser setting up a defense to it existing in his favor as against the payee or a former holder. The defendants (the collecting bank) never parted with anything or gave any credit, or relinquished any security, or assumed any burden or responsibility on the faith of the notes, and in commercial language, were not *bona fide* holders thereof or of the money received thereon, for value."

Also in the Pennsylvania case of *Hackett vs. Reynolds*, decided November, 1886, in the Supreme Court of that State, it is said: "It must be shown that the balances were suffered to remain upon the faith of *remittances received, or, under some circumstances perhaps, in process of transmission, and that Reynolds, Lambertson & Co.* (the collecting agents) *relying upon such remittances, actually did something, or forbore to do something, by which their condition was worse than it would otherwise have been.* To this extent we are willing to follow the rule laid down in *Bank of the Metropolis vs. Bank of New England.* * * * We cannot consent to the doctrine that a mere usage and course of dealing between banks in the transmitting of bills and notes for collection, by which they mutually credit the avails in account to overbalances due, can, without more, deprive a third person, the real owner of the notes or bills, of his rights.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking: WOODBURY, N. J., March 10, 1888.

SIR:—Will you please answer through your valuable JOURNAL: Can a President of one bank be a Director in another? T.

Answer.—Certainly, unless some statutory or charter provision prohibits. In New Jersey we find no statutory prohibition.

Editor Rhodes' Journal of Banking: PHENIX, R. I., March 22, 1888.

SIR:—Will you be so kind as to inform me whether an Assistant Cashier of a bank has the authority to sign and indorse checks without a special vote to that effect?

GEORGE E. SHELDON.

Answer.—If it has been the custom of the bank to have the President or Cashier sign and indorse checks, it would require special action of the Board of Directors to enable an Assistant Cashier to do so. The authority of the President or Cashier to sign and indorse checks is derived either from the previous action or subsequent ratification of the Board. They are the officers who usually perform these acts. For an Assistant Cashier to do it is somewhat unusual and would necessitate the previous authority of the Directors.

Editor Rhodes' Journal of Banking: DALLAS, Texas, February 25, 1888.

SIR:—1. We are the third party and hold a note, dated at Dallas and made payable in Dallas, *with exchange on Dallas or New York.* Who has the privilege of deciding whether the note shall be paid in Dallas exchange or New York exchange, the maker or the present holder? 2. Are notes drawn for an open amount, similar to above, or "with a reasonable attorney's fee," good negotiable instruments? 3. Should not all bankable paper be for a specified (fixed) amount? J. B. OLDHAM, Chief Clerk.

Answer.—1. The maker has the privilege of exercising the option.

2. We know of no decision in Texas on the question whether a provision in a note making it payable "with exchange" on a given place affects its negotiability. The Courts of different States take opposite views of this

question. Likewise with reference to a provision for the payment of an "attorney's fee" inserted in a promissory note, it is held in some States to destroy the negotiability of the instrument, while in others the negotiability remains unaffected by such a provision. On this latter point, although we are not aware that it has been passed upon by the Supreme Court of Texas, the Federal Court in that State has held that a note providing for the payment of "ten per cent. for attorney's fees" is negotiable (*Adams vs. Addington*, U. S. Circuit Court, N. D. Texas, 1883; 16 Fed. Rep., 89); and the Supreme Court of that State has held that a stipulation for an attorney's fee contained in a promissory note is valid and enforceable. (*Miner vs. Paris Exchange Bank*, 53 Tex., 559; 1880.)

3. Certainty in the amount to be paid is one of the essential elements of a negotiable instrument.

Editor Rhodes' Journal of Banking: LONG PRAIRIE, Minn., March 17, 1888.

SIR:—A grocery firm sent a draft here for collection on a merchant, without stating whether to protest or not. Payment was refused. Was it proper to protest, and can the protest fees be collected from the drawer? Your opinion through the JOURNAL will oblige,
C. F. MILLER, *Assistant Cashier.*

Answer.—If the grocery firm were the drawers of the draft, making it payable to their own order and sending it directly to you for collection, no protest would be necessary as there would be nobody to hold thereby, and you probably could not recover the useless expenditure. If the grocery firm, however, were payees, or indorsees of the draft, a protest would be necessary to hold prior parties, and you, of course, would be entitled to reimbursement for the amount paid therefor.

Adoption of common Silver Coin.—On the 22d of March the Senate passed a bill which had previously passed the House authorizing the President of the United States to arrange a conference between this country, Mexico and certain governments of Central and South America for the purpose of promoting arbitration and encouraging reciprocal commercial relations. Section 6 of this Act provides for the "adoption of a common silver coin, to be issued by each government in such an amount proportionate to the population of each as may be determined upon, the same to be a legal-tender in all commercial transactions between the citizens of all the American States." This is an attempt to bring about a control of the silver coinage on this continent similar to that exercised by the Latin Union in Europe. The expediency of such a measure is questionable, and it is very much to be doubted whether the people of this country will take kindly to the adoption of any such European notion.

The uncertainty of the passage of any measure through Congress, how important soever it may be to the public, is a matter attended with so much delay and uncertainty that when any bill is in a fair way to safely endure the ordeal, Senators and Representatives who have pet measures of their own, which, by any twisting, can be made to seem germane to the bill, seek to tack such pet measures to it. The bill authorizing the purchase of bonds has passed the House, and would have passed the Senate were it not for the disposition manifested by certain Senators to make it act as the locomotive to pull the dead weight of their freight trains. Senator Plumb's Treasury note amendment is already securely coupled. Senator Stewart's silver certificate amendment is being switched here and there in order to be attached on the same track. Senator Beck has a coin certificate measure that he wants the bill to wait for. Senator Reagan desires to add to the train an amendment repealing the Resumption of Specie Payments Act, and there are several other heavy freights to be heard from. Can this poor little bond purchase locomotive drag them all through the Senate, and can it perform the still greater feat of pulling them safely into the depot of Presidential approval? Every Senator seems fully prepared and primed on financial questions, but after all there seems to be very little comfort for the National banks.

SAVINGS BANKS AND TRUST COMPANIES.

ANNUAL REPORT OF THE BANK SUPERINTENDENT OF NEW YORK STATE.

The annual report of Hon. Willis S. Paine, Superintendent of the New York Banking Department, relative to the Savings Banks and Trust Companies of the State was transmitted to the Legislature on March 1st. It shows the condition of those institutions on January 1, 1888.

RESOURCES OF STATE FINANCIAL INSTITUTIONS.

The aggregate resources of several classes of financial institutions, organized and operated under the laws of this State and subject to the supervision of the Banking Department on the 1st day of January, 1888, are as follows: Savings banks, \$590,458,751; Banks of discount and deposit, \$193,324,287; Trust companies, \$200,087,230; Safe deposit companies, \$4,214,504, a grand total of \$988,084,753, or a net increase during the last five years of \$219,988,259.

NEW BANKS AUTHORIZED.

During the year applications were received for authority to organize new Savings banks, as follows: the Carthage Savings Bank at Carthage, and the Union Savings Bank of Westchester County, at Mamaroneck. Certificates of authorization were issued upon both applications June 28th.

The Richmond County Savings Bank and the Amsterdam Savings Bank, receiving authorization certificates in 1886, commenced business during the last year.

CLOSED BANKS.

On June 14, 1887, a special examination of the Coxsackie Savings Institution was ordered, its Treasurer having been reported a defaulter in his capacity as Cashier of the National Bank of Coxsackie. Both institutions carried on business in the same rooms and were practically under the same management.

Considering that the affairs of the bank had been conducted in an unsafe manner generally, and that it was unwise under the circumstances for the bank to further continue business, on the 28th day of the same month an injunction was granted, with an order that the securities of the institution be taken possession of by the Banking Department, which was accordingly done.

The corporate franchise of the Chautauqua County Savings Bank was terminated by an order of the Supreme Court dated March 4, 1887, upon an application of the bank's representatives for that purpose, and the sum of two dollars and twenty-four cents, being the total amount due depositors, placed with this department.

NUMBER OF BANKS.

One hundred and twenty-five Savings banks were in existence in this State January 1, 1888, of which seven are inactive and measures toward winding up their affairs have been recommended.

The name, location and amount due to depositors of each of the latter are as follows: Hope Savings Bank, Albany, \$320.71; Southern Tier Savings Bank, Elmira, \$381.24; Mechanics' Savings Bank, Brooklyn, \$330.61; Equitable Savings Institution, New York city, \$150.49; Central Savings Bank, Troy, \$65.26; Manufacturers' Savings Bank, Troy, \$414.11; Mutual Savings Bank, Troy, \$717.88.

CHARACTERISTICS OF 1888.

The total amount of resources of the Savings banks of the State on the morning of January 1, 1888, was \$590,458,751. January 1, 1887, \$568,236,867, showing a net increase for the year of \$22,171,884. The increase during the year 1886 was \$33,750,234, and during the year 1885 it was \$28,809,137. On January 1, 1878, the total amount of resources of the Savings banks of the State was \$346,726,202, showing a net increase in ten years of \$243,732,549.

BONDS AND MORTGAGES.

The Savings banks of the State, on January 1, 1888, had loans outstanding on bonds and mortgages amounting to \$193,764,194. The total sum of their mortgage loans on January 1, 1887, was \$169,972,375, the increase for the year being \$23,791,819. On January

1, 1878, the aggregate of such loans was \$107,973,299, showing an increase in ten years of \$85,798,895.

STOCKS AND BONDS.

On January 1, 1888, the Savings banks held securities in which they were entitled to invest amounting at par value to \$279,112,024. The aggregate cost of such securities was \$298,020,822. The market value of the same was estimated at \$338,904,920, being \$35,384,107 in excess of cost, and \$54,792,906 in excess of their par values.

LOANS ON COLLATERALS.

The total amount loaned on collaterals by the Savings banks of the State, January 1, 1888, was \$10,078,190; the total amount of such loans on January 1, 1887, was \$14,412,289, showing a decrease of \$4,334,099.

The outstanding loans on miscellaneous securities which are now unauthorized amounted to \$177,931, being a reduction during the year of \$60,190.

REAL ESTATE.

The total estimated value of real estate held by the Savings banks of the State, January 1, 1888, was \$7,736,103. Of this amount \$6,730,439 represent the aggregate estimated value of bank buildings. The remaining amount \$1,005,664, is the estimated value of real estate which had been acquired under foreclosure proceedings.

CASH ON HAND AND WITH BANKS AND TRUST COMPANIES.

On January 1, 1888, the savings banks held \$5,776,043 in cash, and had \$33,630,607 deposited with State and National banks and trust companies incorporated under the laws of this State, a total of \$39,406,650. On January 1, 1887, it was \$36,682,120, an increase of \$2,774,530.

DEPOSITS.

The deposits held by the savings banks of the State on January 1, 1888, amounted to \$505,017,751. On January 1, 1887, they were \$482,486,730, showing an increase during the year of \$22,531,021, which sum includes \$16,731,002 of accumulated interest which was credited to depositors, leaving a net increase of deposits during the year of \$5,800,019. During the year 1887 the savings banks received \$179,021,049 from depositors, and paid to them \$173,070,683. On January 1, 1888, the total deposits were \$41,422,672—an increase in the last thirty years of over \$450,000,000.

DEPOSITORS OR OPEN ACCOUNTS.

The number of open accounts of depositors with savings banks on January 1, 1888, was 1,325,062; on January 1, 1887, it was 1,264,535, an increase during the year of 60,527. The average amount of each account January 1, 1888, was \$381.12. On January 1, 1887, it was \$381.55, showing a decrease in the average of each account of forty-three cents.

SURPLUS.

The surplus on the estimated market value of assets held by the savings banks, on January 1, 1888, was \$85,249,647, on par values \$30,456,742. At the beginning of the preceding year the surplus on market values was \$85,633,329, on par values \$26,685,965, indicating a decrease on market values during the year 1887 of \$383,682, and an increase on par values of \$3,770,757.

EXPENSES.

The total expenses of the savings banks for the year 1887 were \$1,633,343; for the year 1886 they were \$1,590,967. The average cost for the care of each account during the past year was \$1.23; for the year 1886 it was \$1.26.

COMPARATIVE STATEMENTS.

The following table, showing the par surplus, surplus as reported, or surplus on estimated and market values, and the amount due depositors at intervals of five years from January 1, 1863, to January 1, 1888, should be seriously considered:

YEAR.	Par surplus.	Surplus as reported.	Deposits.
1863.....	\$4,090,719	\$3,846,102	\$76,538,183
1868.....	11,901,343	11,119,861	151,127,562
1873.....	19,683,819	19,776,864	285,298,621
1878.....	24,001,237	32,050,550	312,823,058
1883.....	19,221,259	60,630,827	412,147,218
1888.....	30,456,742	85,249,647	506,017,751

From this table the fact is deduced that the percentage of surplus to the amount due depositors on market values has been steadily increasing during the last ten years

while the percentage of surplus on par values has decreased. The decline in the par surplus of the savings banks is a warning that their excess of annual income must be carefully guarded, and possibly increased. As they are now receiving the maximum rates of interest on investments which the market affords, the inevitable tendency is toward a further reduction of the rate of interest to depositors.

The twenty-one trust, loan or mortgage companies report aggregate resources on January 1, 1888, of \$200,067,230, as against \$189,624,288 on same day in 1886, and liabilities of \$200,067,230—an increase of \$10,462,947 over 1886.

INTEREST TO DEPOSITORS.

The amount of interest allowed depositors during the year 1887 was \$16,731,002; for the preceding year it was \$15,777,022, an increase of \$953,980. The rate of interest paid depositors was as follows: 15 banks paid 3 per cent.; 5 paid 3, 3¼; 1 paid 3, 3½, 4; 32 paid 3, 4; 1 paid 3, 4, 4½; 1 paid 3½, 3¾; 20 paid 3¼; 2 paid 3¼, 4; 2 paid 3¼, 4½; 30 paid 4; 2 paid 4, 4½.

RECEIVERSHIPS IN THE CITY OF NEW YORK.

During the last year the affairs of the Bond Street (formerly the Atlantic) Savings Bank were closed and the Receiver discharged.

The final winding up of the affairs of the Guardian Savings Institution is prevented by several unusually involved litigations. At the final accounting of the late Receiver, who was recently ejected from his position, it was determined that he had in his hands belonging to the trust the sum of \$77,000.00 and upwards, which was principally made up of surcharges against him.

The adjustment of the affairs of the Bowling Green Savings Bank is impeded by various law suits in the Appellate Courts, which were brought by the late Receiver, now deceased. The present Receiver has promised to push these litigations to an early termination. The affairs of this bank are closely interwoven with those of the Guardian Savings Institution.

The Receivership of the Third Avenue Savings Bank is nearly closed. The final dividend of one and one-half per cent. is now being paid by the Receiver at the Lincoln National Bank. The Receiver of the Yorkville Savings Bank states that the receivership will be closed "on termination of one pending suit and final accounting." The Teutonia Savings Bank Receiver reports that he is negotiating the sale of bonds of certain towns in Richmond county, having a nominal value of \$108,000; when these are sold the trust will be ended.

Before it was closed the East Side Savings Bank for Sailors had not been in active business for some years. One reason that led to the reporting of its condition to the Attorney General was that several alleged illegal claims were made against it, which, with the legal claims, made the liabilities of the bank much larger than the assets. The undisputed liabilities of the bank amount to \$516.76, and the unfounded claims, which have been rejected, to \$1,253.90. The gross assets of the bank aggregate \$827.12. The Receiver states that he has duly advertised for claims; the time to file the same has long since elapsed, and he has received proofs of only three unquestionable claims, the sum of which is \$76.24. He says: "There is deposited with the Central Trust Company of this city \$590 to my credit as Receiver of said bank; the balance is in my hands subject to be accounted for."

The affairs of the German Savings Bank of the town of Morrisania are practically closed; the final papers are now being completed.

FAILED SAVINGS BANKS.

In the year 1879 a statute was enacted which provided that whenever the Receiver of an insolvent savings bank shall have paid the full per centum of the amount due to depositors and creditors which the avails of the assets enabled him so to do he must, before he can be discharged from his trust, make a transcript from the books of the bank of the names of all those who did not claim or receive the balances to their credit and file such transcript in the Banking Department, and also transfer all unclaimed deposits to the Superintendent of that Department. Receivers of savings banks who held any such balances after having been previously discharged from their trusts were required to forthwith make and file with said Superintendent a like transcript and pay over to him such balances.

Upon being requested so to do, the editors of two newspapers located in the city of New York agreed that if I would furnish a list of the names and addresses of the

depositors in such institutions who had to their credit the sum of five dollars or more at the time of the close of the respective receiverships and which have not since been called for, the same would be published gratuitously as an act of charity. On the 13th day of last December, the daily *Times* and the daily *Herald* accordingly published a list of two thousand and six hundred names of such persons. The number of written inquiries received from the date mentioned to the present time concerning unclaimed dividends is seventeen hundred and two. The number of claims audited and paid to the date of this report is seven hundred and ninety-nine, and the amount disbursed from that time to this date is \$13,008.31. Many cases occur where the deposit book is lost or the depositor is deceased, or both. The greatest care has been exercised to prevent fraud, and so far successfully. Investigations, in the nature of personal visits and the like, have been and will continue to be made whenever circumstances make it necessary. To enable the persons entitled to unclaimed dividends to obtain the same it is only necessary for them to forward their pass-books by registered or ordinary mail addressed to the Superintendent of the Banking Department at Albany, N. Y., accompanied by written directions as to whom the amounts due are to be sent. No necessity exists for the employment of attorneys, nor is there any occasion for making application in person. Depositors entitled to unclaimed dividends will save themselves expense by bearing these facts in mind.

The following is a complete list of failed Savings bank, the Receivers of which have been discharged, the amount of unclaimed moneys deposited by them in this department together with the rate per cent. of dividends declared during the Receivership, and the amount of payments from the respective funds since so deposited: Newton Savings Bank, 100 per cent.: amount unpaid, \$1.40. Port Jervis Savings Bank, 100 per cent.: amount unpaid, \$251.97. Morrisania Savings Bank, 100 per cent.: unpaid, \$842.74. Park Savings Bank, Brooklyn, 100 per cent.; unpaid, \$329.44. Chautauqua County Savings Bank, 100 per cent.: unpaid, \$2.44. New Amsterdam Savings Bank, 77 per cent.; unpaid, \$429.79. Security Savings Bank, 61¼ per cent.: unpaid, \$1,865.72. Haverstraw Savings Bank, 75 per cent.; unpaid, \$596.04. Oriental Savings Bank, 60¼ per cent.; unpaid, \$2,255.50. Abingdon Square Savings Bank, 48 per cent.; unpaid, \$980.37. Trades Savings Bank, 15 per cent.; unpaid, \$547.32. Mutual Benefit Savings Bank, 64 per cent.; unpaid, \$7,554.86. Clinton Savings Bank, 63.169 per cent.; unpaid, \$831.91. German Uptown Savings Bank, 64 per cent.; unpaid, \$5,598.70. Sixpenny Savings Bank, 85.55 per cent.; unpaid, \$39,819.89. People's Savings Bank, 48.7-12 per cent.; unpaid, \$5,530.96. Central Park Savings Bank, 80 per cent.; unpaid, \$1,497.76. Union Savings Bank, Saratoga Springs, 68 per cent.; unpaid, \$190.89. Saratoga Savings Bank, 88 per cent.; unpaid, \$437.88. Mechanics & Traders' Savings Institution, 71 per cent.; unpaid, \$14,315.91. Bond Street Savings Bank, 86.½ per cent.; unpaid, \$21,132.88.

NEW SAVINGS BANKS.

Efforts should be made to establish Savings institutions in certain localities where none exist. In thirty counties of this Commonwealth there is not one such corporation. At the beginning no building nor office furniture is requisite, while its affairs may be transacted in any business office by a Treasurer who can devote to it a stated period of time once or twice in each week. The only necessary expense for an outfit is the cost of blank-books for keeping the accounts.

Early in the present century pauperism prevailed in this country to so great an extent that Governor Clinton in his message to the Legislature in the year 1818 said: "Our statutes relating to the poor are borrowed from the English system, and the experience of that country, as well as our own, shows that pauperism increases with the augmentation of the funds applied to its relief. This evil has proceeded to such an alarming extent in the city of New York that the burdens of taxation which it has imposed menace a diminution of the population of that city and a depreciation of its real property." * * * * He added, "while we must consider as worthy of all praise and patronage religious and moral societies, Sunday, free and charity schools, houses of industry, orphan asylums and Savings banks * * * * we are equally bound to discourage those institutions which furnish the ailment of mendicancy by removing the incentive to labor, and administering to the blandishments of sensuality."

During the following year the Legislature authorized the creation of the first Savings bank in this State. While poverty continues, and doubtless will continue to exist, the fact that on the first day of the present year the sum of \$506,017.751 was on deposit in the Savings institutions of this Commonwealth, indicates the wisdom of

Governor Clinton in his efforts to promote their creation and thus suppress mendicancy by the encouragement of the industrious poor in safely keeping and investing a portion of their earnings.

The fact that the interest on money deposited in Savings banks is every six months added to the principal, thus becoming a part of it and in its turn earning interest the same as the original deposit, makes such a deposit better, all things considered, than Government bonds; it is ordinarily quite as safe and returns a higher rate of interest; it is better than most, if not all forms of life insurance; it is preferable to investments in building and loan associations, because the latter operate only in connection with real estate, while the former have a comparatively large field of securities from which to select. An illustration in point is found in the fact that a pass-book was brought during the year 1881 into a Savings bank upon which was the following entry: "1887, January 3d, deposited \$100." The book was not presented during the interim, but was produced solely to have the interest added in compliance with the recommendations made in the new by-laws adopted by the bank. The accumulated interest was \$1,082, which, added to the original deposit, gave \$1,182 as the amount then due the depositor.

UNCLAIMED DEPOSITS.

Bills and resolutions were introduced during the last session of the Legislature, calling, among other things, for statements from the savings banks of the State of what are termed unclaimed deposits, but after debate failed of passage. Similar bills are now before the Assembly.

The first action taken by the Legislature in regard to the alleged large sums of unclaimed deposits, having in view the taking of the same from the savings banks and placing them in other custody, was had during the year 1858. At that time a bill was introduced requiring savings institutions to pay over to the Boards of Supervisors of their respective localities the sums to the credit of all depositors not known to the officers of the institutions, whose accounts had not been disturbed by drafts or new deposits for the period of twenty years. Opinions were written by Hiram Denio and Charles O'Connor, which showed most clearly the unconstitutionality of this proposed statute, and the bill failed to become a law. In the year 1859 a further debate was had by the Legislature which resulted in the appointment of a committee to visit and examine savings institutions for the express purpose of finding out the amount of the unclaimed deposits. The report of this committee may be found in the Assembly documents of that year, and is dated March 21st. The whole amount of unclaimed deposits found in all the savings banks of the State, held for ten years and upwards, was but \$160,205.18, of which only "\$70,670.39 have lain dormant twenty years and upwards." The subject was again debated in the year 1862 by the Legislature and a committee of three appointed, with full power to send for persons and papers, to examine any of the Courts of Record, savings banks or other moneyed institutions in the State having, or supposed to have, under their control, or in their custody, any of the said unclaimed funds, said committee to report the result of such examination to the next Legislature.

The committee's report (Document 21) made to the Legislature of the succeeding year was an unusually able one, and contains inherent evidence that a most complete investigation of the subject had been made. The committee state the results of their examinations were as follows:

"The subject of unclaimed moneys, supposed to be lying in the several banks in this State, has been for many years, inside and outside of the Legislature, a fruitful source of discussion. The public press has, periodically, teemed with articles on the subject, and year after year bills and propositions have been introduced into the Legislature proposing to transfer these unclaimed moneys to the custody of the State, supposing them to amount to millions. The result of the present investigation, however, fully demonstrates that the public mind has been greatly misled as to the amount of these moneys. Whatever may be the power of the Legislature as to the disposition of the money itself, the amount is clearly not as large as it has generally been supposed to be, judging from the tone of the discussions of the question in the public press and in both branches of the Legislature. No doubt many have confounded the surplus moneys of our savings banks with the unclaimed, and to this fact, probably, may justly be attributed the extravagant ideas that have been so prevalent in the public mind upon the subject of the latter."

It is evident no need exists for a depositor to disturb his account for the purpose of making it more secure, or that the interest it earns may be added to the principal. As stated previously, the latter is done by the bank twice each year, and at once the interest becomes a part of the principal. The enactment of the proposed law does not

seem to be advisable for the present, at least, and if urged will tend to create apprehensions in the minds of the beneficiaries of these trusts, and destroy to a considerable extent their confidential relations. Savings banks in this State are purely fiduciary corporations, the direct benefits of which are received almost entirely by their depositors. The contract between these parties has been held by the Courts to be necessarily a private one. Admitting "a profit" may be had from these unclaimed deposits, the depositors are its sole beneficiaries.

BRANCH OFFICES.

The opinion seems to be somewhat prevalent that savings banks should have the right to establish branch offices for the reception of deposits. The advocates of such a plan are impressed with the belief that the residents of the suburbs of our large cities are placed at a disadvantage, owing to the distance between them and the savings banks, which, it is alleged, results in indifference and loss of desire to save from their earnings; this defect, it is asserted, would be supplied by the establishment of branch offices by existing savings banks for the purpose mentioned. That the location of a savings bank in any of our large cities has little or no effect on its success is shown by the situation of several of the largest savings banks in the city of New York, which are located in the business centre and not in the thickly populated districts. It is also a fact that some of such institutions are daily refusing deposits and yet rapidly becoming larger, while many of the smaller ones, although located in more convenient and populous districts, are increasing very gradually.

If the Legislature should enact a law granting savings institutions the right to establish subsidiary offices, it is not likely that any of the stronger ones, whose deposits are already increasing more quickly than desired, would take advantage of its provisions; and the smaller ones, by so doing, would reap no benefit, because the tendency of the savings banks' depositors is to seek the largest and strongest institutions, and the distance therefrom is of very little consequence.

TENURE OF OFFICE.

A limited tenure of office for the trustees of savings banks is a measure worthy the consideration of the Legislature. There is reason to believe it would be wise to amend the law so that thereafter the Board of Trustees of any savings bank should consist of not less than sixteen members, and be divided by lot into four classes, of which the first shall serve one year, the second two, the third three, and the fourth class four years. As the terms of members in each class expire, vacancies should be filled by a three-fourths vote of all the members of the then existing Board, and the persons so elected should serve for four years, retiring members to be eligible for re-election.

MORTGAGE LOANS.

It is recommended that the Legislature should amend the law so as to permit trustees of savings banks to make mortgage loans without compelling the borrower to pay all the expenses of searching titles, etc. Instances have occurred where savings institutions have been compelled to reduce the rate of interest by way of an equivalent, which reduction has by far exceeded the amount of outlay that would have been incurred if the bank had been permitted free action in the premises.

A bill amending Section 284 of the Revision of the Banking Laws, in accordance with the foregoing suggestion, will be submitted to the Legislature.

INVESTMENTS.

A constant effort is being made to enlarge the scope of investments for savings institutions. It is proposed that, inasmuch as savings banks in several other States are permitted to loan money on Western farm mortgages, the limitations in the law of this State should be broadened sufficiently to permit our savings institutions a like privilege. It is not questioned that heretofore very many Western farm mortgages were paid; neither can it be questioned that in numerous instances such payments were met by mortgaging the same lands for larger amounts. The money for the new and heavier lien was readily obtained, because it was claimed the land appreciated in value through the increase in population and the improvements on the same and adjoining property. Time will determine whether what are termed "betterments" are in many instances improvements of so permanent a character as to justify borrowers in very materially increasing their loans and paying high rates of interest. It would be most unfair not to admit that some of the companies engaged in the

loaning of funds for Eastern capitalists upon Western farm lands are controlled by conservative men of perfect integrity, who carefully loan such funds as though the same were their own; but when a company is managed so that its promoters receive a bonus of 10 per cent. on procuring money for agriculturists, who agree to pay 8 per cent. yearly for its use, it is not unreasonable to believe that there is room for apprehension. It is axiomatic that the rate of interest is necessarily in inverse ratio to the certainty of the realization of the principal.

One feature of this business is as follows: Reputable trust companies permit themselves to act as depositories of mortgages; the concerns depositing such mortgages thereupon offer through the public prints to sell their own "debenture bonds," the collection of which is "guaranteed" by the deposit of such mortgages held by trust companies as trustees. An erroneous impression in some instances exists with persons unaccustomed to business methods that such trust companies are responsible for the realization of the amounts invested in these mortgages.

Mortgage companies have not, in this State at least, met with conspicuous success. Within the last decade the three large corporations of this class which have been under the supervision of this department have practically discontinued business, owing to the great financial losses they sustained through Western mortgage loans; each of these companies had at its disposal respectively one million, one million and a half, and two million dollars capital. But if there is a guarantee fund, it is invested in nearly all cases in precisely the same securities as those which the company sells. But admitting for a moment that it is invested in bonds as available as those of the Government or of this State, what security is one or two hundred thousand dollars capital, for example, when the sums guaranteed aggregate millions of dollars? In most instances the amount mentioned is wholly inadequate for the purpose of security.

EXAMINATIONS.

This topic was treated at some length in my report sent to the present Legislature, and it is not intended to further discuss the subject in a general way; a new phase, however, of the subject has recently been pressed upon my notice which is of more than usual interest. During the autumn of 1878 and the four subsequent years twenty-three Savings banks failed in the city of New York and its vicinity. Such corporations especially suffered from the lack of confidence in financial institutions of every character which pervaded the community during that period. One of the most prominent Savings banks in that city suffered severely by reason, among other things, of the dissensions of its trustees, which were so acrimonious and so unceasing that they became a matter of unusual notoriety. The acting Superintendent issued a commission September 24, 1877, accompanied by a letter of instructions, to the end that a careful examination of this corporation might be made. The Examiner began work the 26th day of the month mentioned, and alleges he continued work until the 27th day of the following February; at which time a report was filed in this department as the result of his labors.

The Examiner states that he made no demand for a certificate and allowed the matter to rest until the present time. He now asks me to certify pursuant to the statute for such sum as I deem him entitled to receive. Before considering the question as to the value of the services rendered I concluded to decline to issue the certificate on the ground that the claim for payment is barred by the statute of limitations. Counsel appeared for the Examiner and for the bank, made oral arguments before me and submitted elaborate briefs.

The most reasonable view seems to be that the burden of action was placed on the Examiner, and that it was his duty to secure the certificate at an early day, or have the Superintendent refuse to grant it. It is customary in similar cases for creditors to apply for the usual certificates, warrants or analogous documents, and the Examiner has established no claim that he should be considered an exception to the custom. On the issue or refusal of the certificate the period of limitation would begin and the Examiner should prosecute his remedy before its expiration * * * * *

The very purpose of the statute of limitations and the object of the doctrine of laches seem to point out this case as distinctly within their influence and amenable to their provisions. The period of limitations was intended to force men to settle their disputes within a reasonable time or close the Courts forever against them; it is eminently applicable in a controversy where perfect inaction has prevailed, and the

lapse of time has removed witnesses, inaugurated a new administration and changed very materially the status of the parties.

BUILDING AND LOAN ASSOCIATIONS.

A bill introduced at the last session of the Legislature met with the approval of this department, which materially changed the legal status and the mode of doing business of building and loan associations (ch. 566, Laws 1887.) These corporations, while inferior to Savings banks, are meritorious as accumulators and custodians of the earnings of the poor workmen and women. They have been very popular in several cities of this State. Distrust was at times awakened by the uncertain financial condition into which some of them had fallen. The Act referred to will tend largely toward the restoration of confidence. It remedies the great defect of leaving to each association the choice of adopting its own particular mode of business procedure, and enacts a general law for all, declaring special powers, explicit duties and a fixed method of business.

A general law covering all the corporations of a given class, and giving explicit powers and duties is a vast improvement on the chaos of varied and innumerable by-laws in which the rules of conduct of many associations were formerly to be found. Under the Act of 1887 their powers and duties are limited and explained by one comprehensive statute, in which their corporate features and their lawful methods of business are clearly defined.

One great obstacle to the growth and increased popularity of those associations was the difficulty of returning to the shareholder the savings he had paid in under the name or form of dues on shares. Neither principal nor dividends could be returned or withdrawn until the end of the corporate life of the association. The Act of 1875 recognized this defect and provided that dividends might be paid, when earned, if the by-laws of the association so allowed. The Act of 1887 provides that accumulated dues or savings, as well as the dividends, may be withdrawn by the shareholder on one month's notice to the Secretary of the association. The uniformity of this new Act is not only a benefit to the shareholders and investors dealing with these associations, but also to those who are called upon in the discharge of their official duties to examine and wind up these corporations when it is required for the public good.

Half-Holiday Bill.—The measure to which we refer is the repeal of the Saturday Half-Holiday law. All the pros and cons of the subject have been fully considered. As there is now really nothing left to justify further discussion, is it too much to ask of the Assembly, when the bill comes up as the special order on Thursday next, to pass it without further delay? The demagogues of both parties, we are not unaware, are doing what they can to extract political capital from it by resorting to the old trick of flattering the industrial classes, and also by endeavoring to create the impression that half a day's time without the whole day's pay is an inestimable blessing; but the trades' unions and the great body of intelligent workmen, it seems to us, must be pretty far gone in credulity if they cannot see through the subterfuge and appraise it for just what it is worth. Any legislation which tends in any respect to prejudice the business interests of the community—and especially a community like ours, which lives upon commerce—or to compel trade to seek refuge in other States from bad laws here, cannot benefit the mechanic or laborer, but on the contrary must operate to his disadvantage; and any argument that aims to work in him a contrary conviction is simply an affront to his intelligence which, as a matter of self-respect, he ought to be the first to resent. This being the true aspect of the case, then, we do not hesitate to say that the Legislature will be recreant to its duty if another week is permitted to pass without disposing of this question in accordance with the canons of common sense and an honest desire for the public welfare, which demand that the law in question be erased from the statute book, where it has never had any business to be.—*New York Commercial Bulletin.*

A Handy Book.—We acknowledge receipt of the *Financial Review* for 1887, published by Wm. B. Dana & Co., New York City. As usual, it is replete with financial information regarding banking, trade and commerce, investments, etc. As a reliable compendium of valuable statistics of the subjects treated, it is without an equal.

A FORGER'S RAID.

HISTORY OF BROOKWAY'S GANG IN BALTIMORE IN 1880 (Continued).

It was two o'clock as he crossed the threshold of the main door. The Paying Teller, Mr. N. B. Medairy, was deep in his accounts and did not raise his head until the figure of a person passed the opening in the screen in front of him. Then he lifted his eyes and saw a well-dressed young man approach a desk used by depositors and take from an inside pocket of his cut-a-way coat a check, which he indorsed on the back in the manner of one accustomed to such doings. With a business air the new comer stepped to the counter in front of Mr. Medairy and passed through the screen the paper he had just signed. The Teller read on its face that it was in favor of George W. Kimball and that the same name was inscribed on the back. The check was regular looking enough, but as a matter of business precaution Mr. Medairy said, "You will have to be identified, sir, before I can pay you this amount."

"Oh! very well," replied Cleary, "Just give me the check and I'll step around to Middendorf & Oliver's and get their indorsement."

The check was once again in his pocket and with it Cleary left the bank. At the south east corner of South and Second streets, Brockway had taken up his stand and was on the watch for him. No sooner did he make known the trouble than the chief took the check and stepped briskly into the cigar and tobacco store of H. W. Totebusch and asked of Mr. R. C. Totebusch, a clerk, the use of pen and ink. On their being furnished he pushed to a far end of a showcase and in a minute had the name of Middendorf & Oliver on the back of the check. The imitation was excellent in all respects. Cleary again sought the bank and appeared for the second time before Mr. Medairy, who, all seeming satisfactory, paid out \$1,394. The "layer down" counted the money carefully and, finding it correct, politely thanked the Teller and left. The first undertaking had progressed so easily that Brockway was delighted and determined to push his game further through Bell, whom he now summoned and directed to "do" the Merchants' National Bank for a like amount.

"Hit it just before it shuts up," advised the forger. "Here you are, all shaped, George, the same as Hen (meaning Cleary), layed down, excepting you've the brace on the back," and he gave him another check for \$1,394, also drawn to the order of George W. Kimball, but in this instance by J. Harmanus Fisher, seemingly indorsed by that broker's attorney, H. A. Orrick.

"Won't be any trouble," said Bell, "the fist is so well known and you have covered it nicely. I'll take Farren with me, and he can nose around for tips."

"While you're inside, George, I'll pipe all the duffers who come along," put in Farren, who had strolled up and heard the last sentence of Bell's speech. "If they drop to you, mind, I'll give you the go-by."

"That's proper; all you have to do if I make a break for the outside is not to let them turn me up if you can help it." Together they went—the one to his prey, his partner to lounge around the building entrance in wait for any indication of police interference.

The hands of the big clock on the City Hall wanted a few minutes before striking off the three taps of the bell that were to notify the officials of the Merchants' National Bank that public transactions for the day were ended, when the figure of a tall young man with hollow cheeks and cleanly shaven face broke the sunlight in the Second street entrance. He walked straight to the window of Paying Teller Thomas H. Morris, and with an expression of having escaped disappointment, exclaimed as he deposited his check on the desk, "I am a little late."

"Yes, you are late," the Teller replied as he noticed what a handsome man his vis-a-vis was, in his Prince Albert coat and silk hat. "I have sold some bonds to Mr. Fisher," Bell continued, "and I would be thankful if you would give me large money for this check, as I have some bills to pay up street."

"I have no large money," Teller Morris explained during his scrutiny of the check; the best I can do will be to give you ten dollar notes."

"That will do, then, thank you," replied the swindler. He received the money and was gone.

Emboldened by the success of his emissaries, Brockway sent a messenger for Wilson, who was not far away, ready to be summoned to do his part. The latter arrived in a few moments.

"Al, go lay down this billet on the Third National!" ordered the arch conspirator. "I think we can take another trick there. Work it quick, as it is after banking time. If you can get in on the 'jays' you'll win, for they'll not 'rap' to you, they will be so busy fixing accounts for the day." The "pigeon" flew at once to his destination, and reached it at 3.06 o'clock, with a forged check to the amount of \$1,206.50, payable to Henry Murdock, from Middendorf & Oliver. The doors were about being closed. The following conversation took place, opened by Wilson as soon as he dropped the check into Teller Medairy's palm:

"Can I reach the First National Bank? I want to deposit some money there."

"I would rather not cash this. My books are closed for to-day. I will certify it though, so you can deposit it."

"That will not do. I need a portion of the money this afternoon." Upon this statement, the Teller, being he recognized Wilson as a man who had had a check honored some time previously from Middendorf & Oliver, passed over the amount. Two hours later he unearthed a discrepancy in his ledger that he was positive came from his giving too much money to the last caller. To save himself from the loss he slipped into his coat and hurried to the office of Middendorf & Oliver, to find the address of the man to whom they gave their check for \$1,206.50. His inquiry was answered by the horrifying announcement that the firm knew no such man, nor did they give any checks for such sums as Cleary and Wilson presented that day. The news of the forgeries fell like a thunderbolt on Mr. Medairy, who was so crestfallen, as any first-class Teller would be who had been outwitted by clever rascals, that he had not the heart to make known the raid that night to any of the higher officials of the bank.

That night the gang gloated over their pickings. Instead of being satisfied they decided to remain in Baltimore until the next morning, Saturday, July 17th, when they would resume their plundering. The members separated, each to find lodgings for himself. Sleep did not come to the eyes of Brockway until he had in readiness a second check in the name of Mr. Fisher, signed and indorsed by H. A. Orrick, for \$3,901.50, that he intended Bell should pass on the Merchants' National the following day, and one of \$2,160 for Wilson to "lay down."

When the morning came the forger and his men emerged from their hiding places. As the needle to the pole, so they sought him. Quick and concise were the orders for duty. Bell, it was settled, should tackle the Merchants' National again and Bartlett, who had been kept in the background, was sent to the office of D. Fahnestock & Co., to sell a \$100 United States Government bond, and ask for a check and cash in payment, as had been done the day before with the other two brokers whose names were played upon. As soon as the order on the bank where the firm deposited, the Western National, on Eutaw street, was secured it was to be carried to Brockway to forge the signature and check numbers of the Messrs. Fahnestock to one of the engraved duplicates he had prepared from the copy got in June.

Meanwhile Wilson visited the Merchants' National Bank and got \$2,160 for his bogus check. He attacked the bank in the busiest moment of the day, and had little difficulty in getting the check cashed.

Bartlett returned in a short time with the check from the Messrs. Fahnestock. With his usual facility Brockway had his work done by the time Bartlett had made his second visit to the Messrs. Fahnestock and bought back with bank notes entirely the bond he had so shortly before sold them. Nothing remained now to reach the climax but a trip to the Western National Bank, and this Bartlett undertook. He tendered a check for \$2,670 to Paying Teller Charles Nolting, who refused to credit it, since the bearer was unknown to him. The reply came handy: Bartlett would have Messrs. Fahnestock indorse it. Off he went to Brockway to have the accepted move made. In the lapse of as many minutes as it would consume to walk at a fair gate from Second and South streets to Baltimore and Eutaw streets, Bartlett was before Mr. Nolting again with the indorsed check. The Teller, however, was obdurate. He said he never paid money orders, even when properly indorsed, unless he knew those

who presented them, and he saw no reason now to alter this rule. Nothing was left for Bartlett but to abandon his scheme, and in this way his gang was shut out from the perpetration of any of their tricks on that bank. Undaunted by the failure of one of his projects, Brockway caused the gang to know he would make a final effort with his consummate skill, and, win or lose, the "mob" would leave the town after it. The daring of Bell and his keen-witted style made him a favorite with the "boss." Once more he was selected to make the final *coup*. When he got through with it he was \$3,901.50 ahead. At eleven o'clock promptly, as the merchants, contractors, brokers, and the hundred-and-one other kinds of depositors who daily seek, in the rush of business hours, the accommodation of the Merchants' National Bank, were moving to and fro, giving the ordinary observer a kaleidoscopic view of restless, bustling, solicitous humanity, the man of the day before elbowed his way to the wire opening behind which Teller Morris was again employed and spoke to him thus:

"I am not late to-day."

"No; you are not late to-day," with emphasis on the last word by the Teller.

"I sold some bonds to Mr. Fisher this morning. Will you please give me large money?"

This time he obtained it, for the check complied in every detail with similar requisitions from the office of J. Harmanus Fisher. In fact, it was such a good imitation that a clerk of Mr. Fisher's, Mr. F. Samuel McMurrin, who was behind the desk that divides the bank employes from visitors, a distance of not more than four feet, nodded his head in the affirmative when the Teller held up the check to his gaze for his opinion as to its genuineness. Bell vanished and with him the bank's money.

A lull in business and Mr. Morris looked over his checks. Words are inadequate to express his feelings when, on comparing the checks of Mr. Fisher presented by the strangers with others that were received, he first discovered the forgery. Nervously the deceived Teller reported the facts to the Cashier, Major Douglas H. Thomas, who is now President of the bank. The introduction to the affair then given to Major Thomas was the source of his subsequent brilliant action, which enabled the police to bring the criminals to justice. The hands that linked the chain of evidence around the men whom the penitentiary bars afterward inclosed were those of Cashier Thomas and to him the banking interests of America are indebted for a display of pluck and brains that rid the community of the most dangerous organization of forgers known in the criminal annals of the country.

The hue and cry went abroad that afternoon of Saturday, July 17, 1880, that forger were in town. The alarm was sounded too late, for they had decamped. No possibility of surprising them by arrest in this city was held up to hope. Only patient strategetic agencies were remaining if their apprehension was ever to be accomplished. Major Thomas informed the police at once. From headquarters to the bank came detective Joseph Mitchell in obedience to instructions from the then Chief of Detectives Crone. To him was recited in detail the doings of the forger and a description of his appearance as well as Teller Morris could remember it. The data were carried back to police headquarters and entered on the blotter of the department. Every officer in citizen's dress was ordered out to scour the town, and no stone was left unturned. For two days search was unavailing save for the discovery of the fact that an unsuccessful attempt had been made to utter forged paper on the Western National Bank. Mr. Nolting, the Paying Teller, though sure he had done right in refusing to pay over the amount of the Fahnestock check, felt annoyed for the sake of the Messrs. Fahnestock, whom he thought might be aggrieved at his not honoring the order their supposed customer presented, visited the residence of the senior member of the firm Sunday morning to explain matters to him. He was overjoyed to know the man he had repulsed was an imposter. Everybody concerned was at sea until the mail of Monday morning, July 19, brought to Major Thomas an anonymous, letter postmarked Philadelphia, wherein it was stated that George Bell and Henry Cleary had been implicated in the thievery. This communication the Cashier forwarded to Chief Detective Crone, and waited a few days to see the results it would stir to the surface. But the police could not use the clue. Major Thomas then began the conduct of the case himself, and he did not cease his labors until he had put the convict's uniform on several of those implicated. The Board of Directors authorized him to take charge of the case for the bank, and to leave no stone unturned to bring the criminals to justice, and to entertain no propositions of a compromise. With marked intelligence did he pursue

the clue of his unknown correspondent, until Saturday, July 24th, he took the train for New York, having positive information regarding the descriptions of the men he was following and the haunts they frequented in that city. Landed in the metropolis, he jumped into a carriage and was driven at once to the office of Inspector Thomas Byrnes. The latter was absent on the arrival of the Baltimore bank official. Mr. Thomas left his card for the noted detective, and made an engagement to meet him on Monday morning, July 26th, at the Brevoort House. At the appointed hour the inspector was with Major Thomas. The latter detailed all the circumstances of the forgeries, not mentioning at that time his own detective work, however.

Inspector Byrnes believed he recognized the wanted forgers by their methods. His assurances were of so encouraging a character that Major Thomas telegraphed to Mr. A. H. Stump, then President of the Merchants' National Bank: "Send Morris, Medairy and McMurran," that he might be in readiness with his witnesses for identification when the arrests were made. The very next day Detectives Adams, O'Neill and Slevin, of Inspector Byrnes' staff, took into custody Bell, Farren and Cleary. The first two were arrested on the street, and the latter while in bed in a house where he often lodged. The capture was not made a day too soon, since it was afterwards learned the trio were to leave New York the day succeeding that on which they fell into the hands of the police. Brockway, accompanied by Billy Ogle and George Hamill, whom he left behind for protective purposes when he went to Baltimore, and Al Wilson, had already "jumped."

The prisoners were taken before Justice Duffy, at the Tombs court, and given a preliminary hearing. There was no charge that could be preferred against Farren, who was only seen lounging around the Merchants' National Bank, and he was discharged from custody. Cleary, it appeared, was "wanted" in Albany for a \$1,000 forgery. He had been arrested on the charge, admitted to bail, and "skipped." The New York authorities urged priority on this score, and demanded his custody. The claim was upheld by Governor Cornell of that State, who subsequently refused to issue requisition papers for Cleary until he had been arraigned in Albany for the offence alleged. He was escorted thither, tried, and sentenced to two years and six months' imprisonment at Clinton. Bell doggedly denied his identity, but in vain. He was picked out from among a crowd of other men by Teller Morris.

Satisfaction it was, in a measure, to Major Thomas to have this one of the gang, and for fear any mishap should prevent the ends of Maryland justice being satisfied, at least in this instance, the major came to Baltimore, swore out a warrant on July 28th, before Justice John P. Grindall, at the Central Police Station, accusing Bell of uttering forged checks to the amount received by him from the Merchants' Bank. He then went to the office of State's Attorney Charles P. Kerr, whose co-operation he asked to have a requisition issued by Governor William T. Hamilton for Bell. The attorney for the Commonwealth gladly gave his aid. To obviate a hitch in another direction, Major Thomas telegraphed Mr. Morris to start for home in time to appear before the Grand Jury of Baltimore on July 31st, the first and only session the inquest held that week. On the strength of the Teller's testimony an indictment against Bell was found that day. Twenty-four hours later the requisition from Governor Hamilton was received by Deputy-marshal Jacob Frey, who was commissioned to carry it to the Governor of New York. The deputy-marshal departed, and on August 2d was at the capital of New York. To his disappointment he was told Governor Cornell would not be at his mansion for several days, having gone to another section of the State. A question of convenience was not to be entertained, therefore the only thing to do was to wait, which the Baltimore officer did, at Albany, until the Governor of New York returned. After that there was little or no delay to the production of the warrant for Bell.

(To be Continued.)

Journals Wanted.—We will pay fifty cents each for a limited number of copies, in good order, of the JOURNAL for January, 1886.

"Worth Twice as Much."—We know the JOURNAL is worth the regular subscription price, \$5.00 per year; but it is not often we receive such testimony as the following from a subscriber who inadvertently sent us more than the bill called for: "Your JOURNAL is worth ten dollars (\$10) per year; but I can hardly afford to pay more than you ask!"

CALSB L. BRIGHAM, Cashier.

BANK CIRCULATION.

BY JOHN THOMPSON, ESQ., VICE-PRESIDENT OF THE CHASE NATIONAL BANK.

As the life of one man is short and the power delegated to his influence only limited by the manner in which he uses his abilities, to the extent that in the history of a country or nation the effulgence of his wisdom is either a flash of light or a North star, shining to-day, to-morrow and into futurity, ever being an uncompromised nucleus of principles to which the weary toilers look for hope and from which the mariners of government take their reckoning.

Thus it behooves those chosen by fortune or gifted by nature to become our thinkers, orators and senators—if they desire to benefit their country and leave a work which will live after them—to shear their works and legislation of all superfluities which may creep in through carelessness or a desire for personal or mercenary aggrandizement, and choose the subjects most beneficial to the public as well as those from which their efforts will bring the greatest results.

“Land Theories,” Prohibition and Tariff questions we have always with us, but none of them should be agitated until we are settled in regard to Currency. If we had currency of double the amount now in circulation, increasing as it would the number of our enterprises, the tariff question would settle itself.

Prior to and during a panic there is always money enough for purposes of business. But when the volume of currency is contracted there is not enough to ward off a disastrous decline in the prices of property and labor, which are at all times governed by the quantity of money in circulation.

Contraction of currency means deprivation for the poor, stagnation for the merchant, and bankruptcy for the debtor, although the reduced volume of money may be sufficient as a medium of exchange. For prices being reduced, a dollar controls more property and labor in proportion to the diminution of the amount used in measuring values or making prices. This reduction in the price of labor always creates dissatisfaction among laborers, and the country's liability to strikes and riots is increased.

The Treasury statistics and estimates give but an imperfect idea of the amount of money in circulation. Take, as an instance, “Gold Coin.” It is stated that there is \$302,586,770 in circulation, while it is a known fact that more than one-half of the amount issued is laid aside as a keepsake and will come into use only on one of two conditions, namely, “dire necessity” or in the purchase of property when it can be had at a figure much below its actual value. As with gold so it is with the greenbacks, as well as a limited amount of the National bank notes, added to which is the amount held in bank reserves and currency lost and destroyed. Hence it is safe to assert that there is two-fifths of our currency withheld from circulation as follows:

In the United States Treasury	\$328,420,547
In bank reserves	81,862,400
In the public hoarding	200,000,000
In currency lost, but still counted	25,000,000

Making a total of

withheld from circulation, leaving in actual circulation on June 1, 1887, only \$781,229,402 among 50,803,000 inhabitants, or \$12.20 per capita, while at the same time the aggregate of capital, surplus, undivided profits and individual deposits of National, State, savings and private banks, loan and trust companies in the United States amounted on June 1, 1887, to \$4,563,192,203.59, or \$76.19 per capita, showing an inflated condition of credit to the extent of \$63.99 per inhabitant; or in other words, the banking institutions of the United States are to-day liable for demands which could be made upon them to the extent of \$76.19 per inhabitant and to pay which they would have only \$12.20, or would be short currency to the extent of \$63.99 for each claim of \$76.19.

The National banks alone had on deposit on November 7, 1887, \$1,250,000,000, or \$30.87 per each inhabitant, and to pay this amount there was in circulation only \$12.20 for each inhabitant.

It may be thought that this leads to a gloomy view of the money situation;

nevertheless it is an unembellished presentation of facts; and when we go a step further and consider the increase of population, which

It is estimated will be in 20 years (or 1907).....	84,843,680
" " 40 years (or 1927).....	128,651,840
" " 60 years (or 1947).....	195,080,688
" " 70 years (or 1957).....	230,222,372

This last will happen during the lifetime of some now living. Hence we see ourselves on the verge of the following problem, which we will soon be compelled to solve, viz., a population of 60,000,000 people, constantly increasing, and \$731,229,402 only in actual circulation, gradually decreasing, and no system in operation by which the amount can be recuperated.

To add to the difficulty, the pushing enterprise of our people constantly increases the sums of money necessary to give it free scope, and we can arrive at but one conclusion: that if we wish to relieve our present stringency in money matters and stem the current on which we are drifting toward greater panics and suffering than we have ever had, we must have some system which will at once give us a larger circulation, and at the same time, both now and for the future, regulate the money in circulation in proportion to the demands and increase of the population.

The Hon. W. L. Trenholm, the Comptroller of the Currency, in speaking of the importance of remedies which should be made in our existing laws in relation to our National banks and currency, says: "Speaking broadly, it may be assumed that remedies are sought: First, for the continual reduction in the volume of National bank circulation; and, second, for the obstacles which scarcity and high prices of United States bonds present to the formation of new banks and to the increase of capital on the part of those already existing. Beyond remedying these defects in the present law there is a general desire to provide a permanent, safe and popularly acceptable basis for continued existence and the further growth of the National bank system."

He further says (on p. 125 last report): "The public needs and demands a continual increase of banking facilities, and to supply those facilities it is necessary to have not only more banks, but banks in a greater number of localities, and also some increase of capital among banks previously established."

After examining all the plans submitted (some forty in number) for revision of National bank laws, the following plan seems to be the only one by which these remedies can be accomplished. This plan originated with Mr. Coe, of the American Exchange National Bank, and was enlarged by Mr. John Thompson, of the Chase National Bank—the father of our National bank system—and is undoubtedly the most comprehensive and feasible of any that has ever been brought out, and by a united effort will succeed.

THE PLAN.

Make it legal for banks to issue currency in amount equal to fifty per cent. of their capital and divert the annual internal revenue tax of one per cent. per annum on circulation into an insurance fund to be held in the Treasury of the United States as a guarantee for the redemption of any currency which may fail to be redeemed.

Reserve in the National bank law all the requirements now in force under that Act, keeping intact the central redemption at Washington and the deposit of five per cent. for such redemptions, keeping also in force all the restrictions and regulations as to the organization and management of banks; also the system of examinations, adding special Examiners as suggested by the present Comptroller.

These simple amendments to the National Bank Act will obviate the necessity of creating any new banking schemes, will make the National bank system a permanency, give to the people an increased circulating medium of over \$1,000,000,000 within a few years, a currency as universally accredited at par as our present issue of National bank notes, and will invite into the system State banks and individual bankers to an extent that will make banking of the country almost uniform.

As to the extent upon which the guarantee fund of one per cent. will be drawn upon and its sufficiency, an extract from the 1885 report of Hon. H. W. Cannon, late Comptroller, gives a very lucid understanding. He says:

"The results of liquidation by Receivers under the direction of the Comptroller's office shows in a very interesting manner how far it may be safe to permit National banks to issue circulation unprotected by a deposit of United States bonds. Of 104 banks, 70 have been finally closed, and for them the results are absolute. The remaining 34 are still in process of liquidation, but have progressed so far that the

final result can be estimated with comparative accuracy. The dividends paid to the creditors of all banks from the proceeds of their general assets amount to \$28,379,060. They had an aggregate capital of \$21,828,900, upon which, under the law, they could, on deposit of bonds, issue 90 per cent., or \$19,678,010, of circulation. If at the time of their failure the law had permitted an issue of circulation to the amount of 90 per cent. of capital, unsecured except by a first lien on general assets of the 104 banks mentioned, the note-holders of 58 would have experienced no loss. If the law had authorized an unsecured issue equal to 70 per cent. of capital, the notes of 71 of these banks would have been redeemed from the proceeds of their general assets. At 40 per cent. the notes of 90 would have paid in full, and upon an unsecured issue of 25 per cent. of capital, loss to note-holders would have occurred in the case of five banks only."

From careful estimates we find that since the National bank system was organized their transactions have amounted to the enormous sum of \$1,163,343,000,000, and that during the same time, out of 3,905 banks organized, 120 have been placed in the hands of Receivers, of which there are now only 23 receiverships in active operation, representing proved claims for \$17,508,402, nearly the whole amount of which will be ultimately paid; and if we add to the deficiency the total expense of all the receiverships, we will have a shrinkage or loss of about one dollar for every \$100,000 which passed through the hands of the banks, and had the amount now taxed the banks (one per cent.) on circulation been set aside as a guarantee fund, to pay the loss of about \$10,000,000, it would now amount to \$65,541,721.30 (the total amount of this tax collected to date), and does not include the interest which would have accumulated had it been invested in bonds. From these figures we see that an insurance fund of one per cent. paid annually on circulation issued by banks is ample protection against loss on account of any notes failing to be redeemed.

Finally, every American citizen should bear in mind that it is not only wise to indorse a system which has given us safe banking accommodations and a currency negotiable from California to Maine without discount, but it is policy to strengthen and perpetuate the system of banks which so ably came to the rescue and relieved the desperate position of our Government at the opening of the Rebellion, when we were stripped of "Army and Navy," with a "Treasury plundered," "funds squandered," and "our National credit" gone. Many to-day can well remember the fruitless appeal for loans made by the Secretary of the Treasury to the public, and well should they recollect how the people stood "aghast and silent:" shook their heads as if waking from a dream; while dolefully the questions passed in review before their minds: Was the fabric of our nation sinking? Was property but a name and a thing of the past? Our nation in the balance?—until the Secretary of the Treasury changed his appeal from the people to the banks of New York, Philadelphia and Boston, with a result never to be forgotten: for noble was their response—\$50,000,000 was advanced, and instantly, as if by magic, there arose an "Army and Navy." Our country "was saved," the nation's credit restored, and confidence regained. The banks did not cease to sustain the Treasury, for they advanced not only another \$50,000,000, but twenty times that amount: the banks of New York city alone advancing over \$500,000,000.

Again I say, make money the issue, increase the circulation, sustain the banks, and thus will our Government be strengthened and the people helped and disaster prevented.

Bill for Bond Purchases.—The reception of the House bill authorizing the Secretary of the Treasury to use the surplus revenues in the purchase of United States bonds, by the Senate Finance Committee was not the most cordial. Senator Aldrich desired to substitute for it his bill for refunding the fours into two and a half per cents, and Senator Sherman wished to substitute his bill for the expenditure of the fund for the redemption of National bank circulation, now held in the Treasury, in the purchase of United States bonds. But nevertheless the House bill (No. 5,024) was on March 6th unanimously reported by the Committee. It was called up for debate several times but not reached until March 28th, when the Senate proceeded to its consideration. Mr. Plumb immediately offered an amendment which, in substance, provides for a new kind of Treasury note to be issued in lieu of National bank notes retired. The net gold in the Treasury is never to be less than 25 nor more than 30 per cent. of the paper, legal tender and National bank notes outstanding. This amendment was adopted by a vote of 28 to 21.

SOME UNSOLICITED TESTIMONY.

The following business letters from wide-awake bank officers go far to confirm the very general opinion that the JOURNAL is not only the leading bankers' publication in this country, but also that it is an effective advertising medium. We are quite sure our friends will pardon the liberty taken in using these unsolicited testimonials:

Thomas H. Brown
President

J. C. Luff
Vice-President

John H. Leathers
Cashier
W. P. Brown
Asst. Cashier

Scuisville Banking Company

Capital and Surplus over \$100,000.00

Scuisville, Ky. *Feb. 7, 1888.* 1888

Rhodes' Jour. of Banking.
New York City.,

Dictated.

Gentlemen:-

We take your Journal and congratulate you upon it. Up to this time we have never advertised in such a publication. I send you herewith a Card, one year, quarter page, and our Greetings, with my compliments.

Yours Truly,

Frederic Davis Pres't.

Here is another *fac-simile* of a brief letter, which speaks for itself, and shows what an advertisement in the JOURNAL did:

Gainesville, Texas March 12 1888

J. M. LINDSAY, President.
J. R. STEVENS, Vice Pres.
G. S. DENNING, Cashier.

*Mess Messrs Rhodes & Co
New York*

Dear Sirs:

*The ten line advertisements in your Journal
has been the means of placing a large amount
of our stock in the last of 310.*

*Yours truly
C. Chambers.*

Cushing

The publishers wish to emphasize the fact that the JOURNAL's circulation is over double that of any other bankers' publication in the United States, while its advertising rates are but little higher than those having a small circulation and practically no influence with their readers.

CANADIAN BANKS.

Following is a summary of the assets and liabilities of the chartered banks of Canada, made from the reports furnished by them to the Department of Finance on January 31, 1888 (cents omitted):

ASSETS.	LIABILITIES.
Specie	Capital authorized
Dominion notes	Capital subscribed
Notes of and checks on other banks	Capital paid up
Balances due from other banks in Canada	Reserve fund
Balances due from agencies of the bank or from other banks or agencies in the United Kingdom	Notes in circulation
Balances due from agencies of the bank or from other banks or agencies in the United Kingdom	Dominion Government deposits payable on demand
Dominion Government debentures or stock	Dominion Government deposits payable after notice or on fixed day
Provincial, British or Foreign or Colonial public securities other than Canadian	Deposits held as security for execution of Dominion Government contracts and for insurance companies
Loans to the Government of the Dominion	Provincial Government deposits, payable on demand
Loans to Provincial Government's	Provincial Government deposits, payable after notice or on a fixed day
Loans, discounts or advances on stocks, bonds, etc., other than Canadian as collateral	Other deposits, payable on demand
Loans, discounts or advances on current accounts to municipal corporations	Other deposits, payable after notice or on a fixed day
Loans, discounts, etc., on current accounts to other corporations	Loans from or deposits made by other banks in Canada, secured
Loans to or deposits made in other banks, secured	Loans from or deposits made by other banks in Canada, unsecured
Loans to or deposits made in other banks, unsecured	Due to other banks in Canada
Other current loans, discounts and advances to the public	Due to agencies of bank or to other banks or agencies in foreign countries
Notes and bills discounted, overdue and not specially secured	Due to agencies of bank or to other banks or agencies in the United Kingdom
Other overdue debts not specially secured	Other liabilities
Notes and bills discounted, overdue and other overdue debts secured by real estate or securities	
Real estate the property of the bank (other than the bank premises)	
Mortgages on real estate sold by the bank	
Bank premises	
Other assets	
Total assets	Total liabilities

Loans to Directors or firms in which they are interested, \$3,223,601. Average amount of specie held during the month, \$4,008,251. Average amount of Dominion notes held during the month, \$9,989,536.

FINANCIAL MATTERS IN CONGRESS.

BILLS RELATING TO BANKING AND FINANCIAL MATTERS, INTRODUCED IN
THE FIFTIETH CONGRESS.

Senate.

No. 5,034, H. R.—March 1st a message from the House announced the passage of this bill to provide for the purchase of United States bonds by the Secretary of the Treasury. The bill was referred to the Committee on Finance. On March 6th, Mr. Morrill, Chairman of the Committee on Finance, reported the bill favorably. On the 12th he moved to proceed to its consideration, but it went over. On March 20th, Mr. Morrill gave notice that he would call up the bill the next day. The bill did not, however, come up until March 28th. On that day Mr. Morrill succeeded in getting it before the Senate. The full text of the bill, as reported, is:

Be it enacted, etc., that the Secretary of the Treasury is hereby authorized to apply the surplus money now in the Treasury, and such surplus money as may hereafter be in the Treasury, and not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds; provided, that the bonds so purchased or redeemed shall constitute no part of the sinking fund, but shall be cancelled by the Secretary of the Treasury.

The Committee's report, in substance, was that, although they believed that the Secretary of the Treasury already had power to purchase bonds under the Act of March 3, 1881, yet they favorably reported this bill in order to remove all doubt. The amendments reported were to insert the words "from time to time" after the word "apply," and the words "not held for specific purposes" after the word "Treasury." Senator Plumb then moved to amend by adding a section providing for the issue of additional legal-tender notes in place of National bank notes retired. There was much opposition to this amendment, but Mr. Plumb insisted, and though once ordered to lie on the table, it was taken up and finally passed, after some slight amendment, by a vote of 28 to 21. The new Treasury notes are not a legal-tender between individual citizens, nor can an individual citizen be obliged to take them except for salary when in public employ; but they are receivable for all public dues, including the duty on imports, and are a legal-tender between National banks and for all debts due such banks. After this amendment was agreed to, Senator Stewart presented another for the issue of certificates, in denominations of dollars, on deposits of gold and silver bullion in quantities not less than five ounces of gold and eighty ounces of silver. The price for gold bullion to be paid in certificates is one dollar for each 26.8 grains 9-10 fine. The price to be paid for silver bullion nine-tenths fine shall be stated by the Secretary of the Treasury on the 1st and 15th of each month, at the average New York quotations for silver bullion for the previous fifteen days.

This amendment of Mr. Stewart injected the whole silver question into the debate. The contest seems to lie between those who claim that the United States can alone, by throwing open her mints to silver, bring about the double standard, and those who believe that this course is not safe until other commercial nations have agreed to do the same thing. Those who have such faith in the wealth, power and prosperity of the United States as to believe that this country can take the lead and force other nations to follow suit are represented by Messrs. Stewart and Teller. Those who believe that it is necessary in order to secure a permanent relative value between gold and silver through international conference were represented by Messrs. Evarts and Platt. The debate on this amendment occupied most of the time on March 28th and 27th. On the last named date the Senate adjourned for Good Friday. The debate will probably be continued and may result in the preparation and passage of an elaborate financial bill.

No. 8, S.—Mr. Morrill, Chairman of the Committee on Finance, reported, on March 6th, adversely to this bill, which was introduced by Senator Beck, and provides for the retirement of United States legal-tender and National bank notes of small denominations and the substitution of coin certificates (i. e., certificates payable in either

gold or silver coin) for them, and also for the present gold and silver certificates. It was placed on the calendar, and Senator Beck gave notice that he intended to take every opportunity to take it from the calendar and put it on its passage.

On March 13th, the bill was called up by Senator Beck. The full text of the same is found on page 2,109 of the *Congressional Record*. The substance of Mr. Beck's speech in advocacy of his bill was that it had from the earliest times been the policy of the United States Government to maintain a standard of value based on both gold and silver; that up to 1873 the law had maintained this position, but that in that year an Act regulating the coinage of the country was passed that demonetized silver. Mr. Beck claimed, as he has heretofore done, that this Act was passed secretly, and that no one, unless the originators, were at that time aware of its true purport. He intimated that the demonetization of silver accomplished by this Act was a part of a conspiracy among creditors and creditor nations tacit, or otherwise, that had in view the demonetization of silver throughout the world. In view of the fact that the mischief had been accomplished and silver demonetized, and such demonetization followed by a great decrease in the value of silver, he was in doubt whether the United States should single-handed undertake to open her mints to a free coinage of silver, but his bill was intended as a move in this direction to secure the purity of gold and silver. Mr. Sherman replied to Mr. Beck. So far from the coinage Act of 1873 having been passed secretly or surreptitiously, it originated in the Treasury Department in 1870, and was a bill framed by Mr. Knox, Comptroller of the Currency, to codify all the coinage Acts of the United States then in force. The bill was sent to the Senate by Mr. Boutwell, Secretary of the Treasury, with a favorable report, and was printed and 500 additional copies printed for the use of the Treasury Department. It did not become a law till thirteen years after. The records of Congress show it was printed thirteen different times, debated over and over again, the debates in the Senate occupying sixty-eight columns of the *Globe* and those in the House seventy-eight pages. No Senator could say he did not see the bill; no man would plead the baby act in that way. Mr. Sherman was in favor of both gold and silver. He regretted the disparity of value and hoped it could be removed by international action. The bill went over.

On March 20th, Mr. Stewart, of Nevada, presented an amendment to this bill, to be proposed when the bill was taken from the calendar. It was to substitute certificates based on market value of silver bullion periodically fixed by the quoted price. Mr. Beck will probably seek to attach his measure to the bill for the purchase of United States bonds, No. 5,034, H. R.

No. 2,392, S.—Introduced on March 15, 1888, by Mr. Morrill, at the request of the Director of the Mint. It provides to amend Section 3,510 of the Revised Statutes, which now specifies the manner in which new designs for coins may be prepared, and indicates how new designs for authorized coins may be prepared. It was referred to the Committee on Finance.

The synopsis of this bill may be found on page 2,106 of the *Congressional Record*.

No. 1,216, S.—Mr. Morrill, on March 20th, moved that a letter from the Secretary of the Treasury, addressed to the Chairman of the Finance Committee, stating the opinion of the Secretary in regard to this bill, be presented and referred to the Committee on Finance, which was done. No. 1,216, S. is Senator Sherman's bill for investing the fund now held for the redemption of retired National bank notes in U. S. bonds—mentioned last month. The Secretary's letter was adverse to the bill, on the ground that while it would at first have the effect of expanding the circulation it would be apt to subsequently subject the currency to sudden and severe contraction.

No. 3,004, H. R.—This bill passed by the House authorizing the issue of fractional silver certificates, was received by the Senate on March 21st, and referred to the Committee on Finance.

No. 7,409, H. R.—This bill to discontinue the coinage of the gold three dollar and one dollar pieces, passed by the House, was received by the Senate on March 21st, and referred to the Committee on Finance.

House of Representatives.

No. 5,034, H.—On February 20th this bill, for the purchase of United States bonds by the Secretary of the Treasury, was called up by Mr. Mills, Chairman of the Committee

of Ways and Means. The bill was debated by Mr. McKinley, Mr. Mills, Mr. Weaver, Mr. Reed, Mr. Breckenridge of Kentucky, Mr. Kelly and others. The main point of interest in the debate was the attack on the National banks by Mr. Weaver, mainly because they had been used, in the manner provided by law, by the Secretary of the Treasury as public depositories.

The action of the Secretary of the Treasury in this respect was defended by Mr. Breckenridge of Kentucky. The bill was finally passed without calling for the yeas and nays.

The text of the bill is given under the head of "*Senate.*"

No. 7,933, H.—Mr. Bland, from the Committee on Coinage, Weights and Measures, on March 1st reported as a substitute for the bill H. R. 6,631 this bill providing for the exchange of worn, defaced, clipped, punched or otherwise mutilated silver coins of the United States of smaller denominations than one dollar for new or unworn silver coins at designated places and under certain circumstances. This was placed on House Calendar and ordered printed.

The synopsis of this bill may be found on page 1,696 of the *Congressional Record*.

No. 7,214, H.—On March 1st, Mr. Bland, from the Committee on Coinage, Weights and Measures, reported this bill to prohibit the coinage of three-dollar gold pieces. This bill was afterwards combined with No. 7,407, which came up on the 19th of March.

LETTER FROM SECRETARY OF TREASURY.—On March 2d the Speaker laid before the House a letter from the Treasurer of the United States showing the probable losses by the destruction of United States bonds and Treasury notes, which was referred to the Committee on Banking and Currency.

The synopsis of this bill may be found on page 1,715 of the *Congressional Record*.

No. 1,761, H.—Bill for the relief of the First National Bank of Portland, Oregon, for money advanced to the Oregon Iron Works on a contract for building the United States Revenue Cutter Thomas Corwin. This bill passed on March 2d.

The synopsis of this bill may be found on page 1,718 of the *Congressional Record*.

No. 8,047, H.—On March 3d Mr. Woodburn introduced this bill to authorize the issue of United States coin notes, which was referred to the Committee on Coinage, Weights and Measures, and ordered to be printed.

The synopsis of this bill may be found on page 1,819 of the *Congressional Record*.

No. 8,004, H.—Mr. Dargan, on March 3d, from the Committee on Banking and Currency, reported this bill as a substitute for H. R. 6,140. It authorizes the issue of fractional silver certificates. Bill 6,140 was laid on the table and the substitute was ordered to be printed. On March 19th, Mr. Wilkins from the same committee moved to suspend the rules and pass the bill which was at length agreed to. The bill reads:

Be it enacted, etc., That the Secretary of the Treasury be, and he hereby is, authorized and directed to issue silver certificates of the denominations of \$5, 15 and 10 cents, in such form and design as he may determine, such certificates to be received, redeemed, paid and reissued in the same manner as silver certificates of larger denominations, and to be exchangeable for silver certificates of other denominations. And the Secretary of the Treasury is authorized and directed to make such regulations as may seem to him proper for distributing and redeeming the denominations of silver certificates herein authorized.

The debate occupied about seven pages of the *Record*. The main argument in favor of the bill was that of convenience in transmitting small sums of money by mail. The point that these small certificates were redeemable in silver dollars and not in silver subsidiary coin was not brought up. The main argument against the bill was that the people experienced great loss in the use of small paper money, and the danger of its getting into a filthy condition. The convenience of the use in the mails for small remittances superseding the inconvenient postal notes, money orders and express orders, carried the bill. It finally passed by a vote of 177 yeas to 67 nays. The laws at present regulating the issue of silver certificates are first, the Act of February 28, 1873, Section 3, of which authorizes any holder of not less than ten standard silver dollars to present them in exchange for silver certificates of not less than ten dollars each; and second, the Act of August 4, 1886, which authorizes the issue of silver certificates in denominations of one, two and five dollars, in exchange for those of larger denominations authorized by the Act of February 28, 1873. This bill will probably be also passed by the Senate.

No. 8,068 H.—On March 3, Mr. Breckenridge, of Arkansas, introduced this bill to authorize the Secretary of the Treasury to anticipate the payment of interest on the

bonded debt of the United States, and to provide for special deposits of the public money. Referred to the Committee on Ways and Means and ordered to be printed.

The synopsis of this bill may be found on page 1,820 of the *Congressional Record*.

No. 8,071 H.—On March 8, Mr. Hogg introduced this bill revising the law relative to the purchase and redemption of Government bonds and for other purposes; referred to the Committee on Ways and Means and ordered to be printed.

The synopsis of this bill is on pages 1,820 and 1,821 of the *Congressional Record*.

Nos. 1,816 & 6,660 H.—These bills both provided for the repeal of all acts and parts of acts discriminating in taxation against the circulating notes of State banks and State banking institutions—in other words for repealing the ten per cent. tax on State bank circulation. They had previously been referred to the Committee on Banking and Currency, and on March 8th, Mr. Wilkins from that Committee reported back both bills adversely.

No. 8,564 H.—This bill was for the relief of the Merchant's National Bank of Poughkeepsie, New York. It was introduced on March 13th by Mr. Bacon from the Committee on Banking and Currency as a substitute for a previous bill (No. 932) of the same purport. It was to authorize the Secretary of the Treasury to issue a new 4 per cent. registered bond for \$10,000 to the bank named in place of one lost or destroyed in 1890. The bank was to file an indemnity bond. On March 18th, on motion of Mr. Ketcham the bill was called up and passed.

No. 3,715, H.—On March 13th, Mr. Shaw, from the Committee on Claims reported favorably this bill which is for the relief of the State National Bank of New Orleans.

The synopsis of this bill may be found on page 2,060 of the *Congressional Record*.

No. 8,652, H.—Mr. Wilkins, on March 20th, introduced a bill to reduce the amount of United States bonds to be required of National banks. It was referred to the Committee on Banking and Currency and ordered to be printed. This bill reduces the minimum bonds to National banks of capital of \$200,000 or less are required to deposit to one-tenth of such capital, all banks having capital in excess of \$200,000 are required to deposit a minimum of \$20,000 in bonds.

The synopsis of this bill may be found on pages 2,336, 2,337 of the *Congressional Record*.

No. 8,725, H.—Mr. Weaver, on March 21st, by unanimous consent introduced this bill to provide for the issue of legal-tender Treasury notes in lieu of notes estimated to be lost or destroyed. It was referred to the Committee on Banking and Currency and ordered to be printed.

The synopsis of this bill may be found on page 2,381 of the *Congressional Record*.

Report.—The Committee on Banking and Currency have reported favorably to the House the codification of National banking laws prepared in the office of the Comptroller of the Currency, and known as **H. R., No. 1,788**. No action has as yet been taken on it.

Resolution.—Introduced on March 19th by Mr. Macdonald instructing the Committee on Ways and Means to report a bill placing all such articles and products as are protected by any "Trust" or monopolistic combination on the free list.

See page 2,326 of the *Congressional Record*.

Bills of Lading Legislation.—The Senate Inter-State Commerce Committee has had a hearing of those opposed to the House bill, making bills of lading conclusive evidence of shipment. It will be remembered that, in the *JOURNAL* of July, 1887, the fact was adverted to that banks in New York city and elsewhere had incurred heavy losses by advancing money on bills of lading for cotton, issued by agents of railway companies at remote points when, in reality, no cotton had been shipped. Good lawyers hold that, under the decisions of the United States Supreme Court, a railroad cannot be held responsible for the fraudulent act of its agent. The House bill above mentioned is intended to make railroad companies responsible in such cases—although the demand for legislation of this kind is felt by the banks and by other commercial interests, yet there have been no petitions received or arguments made in its favor. The representatives of the railway companies who bitterly oppose it have been however on hand. Much good and important legislation is defeated by the active opposition of minority interests because of the passive attitude of those who really need it.

CALIFORNIA BANKING INSTITUTIONS.

The following tables show the condition of the California Savings and Commercial Banks on January 1, 1888, and, by way of comparison, on January 1, 1887:

LIVE SAVINGS BANKS.

RESOURCES.	1887.	1888.	Increase or Decrease.

Taxation of Foreign Gold and Silver Coin.—Mr. Isaac F. Abbott, Cashier of the Dover National Bank, Dover, N. H., has received the following letter:

TREASURY DEPARTMENT,
OFFICE OF INTERNAL REVENUE,
WASHINGTON, February 25, 1888.

Mr. Isaac F. Abbott, Cashier Dover National Bank, Dover, N. H.

SIR:—Your letter of the 21st inst. has been received, inquiring: "Are National banks liable for any tax or penalty for circulating foreign gold and silver?" They are not liable under the internal revenue laws of the United States for any tax or penalty on this account. The 10 per centum tax is imposed by these laws on notes, not on coin. Respectfully yours, E. HERNDON, Acting Commissioner.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

The Guaranty Investment Company, of Atchison, Kan., offers 7 per cent. guaranteed farm mortgages, which are a first lien on some of the best farms in Kansas. Aside from the good rate of interest, the guaranty of this company makes the investment absolutely secure. Their card appears in another part of the JOURNAL. For full particulars address the main office at Atchison, or Henry A. Riley, General Eastern Manager, 191 Broadway, New York city.

Labor's Savings.—The following bill was on March 29th reported by the Committee on Banks and Banking of the Massachusetts Legislature:

Section 1. Savings banks and institutions for savings shall keep a record of the occupation, at the time of deposit, of their depositors.

Section 2. Commencing with the year ending with the last business day of October, 1888, and annually thereafter, they shall return to the Commissioners of Savings Banks the number and amount of the deposits of mechanics, laborers, operatives, house servants and others of kindred occupation.

Philadelphia Stock Exchange Election.—On March 3d, officers of the Philadelphia Stock Exchange were chosen as follows: President, W. W. Kurtz; Secretary & Treasurer, John C. Johnson; Chairman, T. C. Knight; Vice-Chairman, William J. Morris. The following were elected members of the Governing Committee to serve for three years: Lindley Haines, H. C. Fell, John G. Howard, C. A. McManus, C. D. Barney, W. H. Tevis, W. Y. Carver. William Gerlach was elected to serve for one year.

The Louisville Banking Company, Louisville, Ky., celebrates its twenty-first anniversary in right royal style. It commenced business in 1867 with deposits of \$10,000. On March 2, 1888, twenty-one years afterward, its capital and surplus amount to \$825,000, with deposits of nearly \$2,000,000. As an evidence of the excellent management of this institution, the original stock has been repaid *three times* in dividends, and cannot now be purchased for less than \$255 per share. We take especial pleasure in calling attention to the card of this bank on another page of the JOURNAL.

Two Per Cent. Bonds for Bank Circulation.—Among those who advocate the perpetuation of the circulation feature of the National banking system, is Mr. W. McDermott, Cashier of the First National Bank of Conshohocken, Penn. He advocates the issue by the government of a low rate bond, interest not to exceed two per cent., payable quarterly, payable in not less than thirty nor more than fifty years. Upon the deposit of these bonds that will not, he thinks, ever rise much above par, circulation to the par value is to be issued. Whatever may be the opinion as to the possibility of such a plan being enacted into law by Congress, there is no doubt but that it is a practical way of perpetuating National bank circulation. Mr. McDermott also proposes that the government fix the premium it will pay for four per cents. some years in advance, offering 20 per cent. premium for all bonds surrendered say during the year 1888, 18 per cent. for all bonds presented for sale during the year 1890, and so on year by year in a gradually descending scale. He thinks the banks would gladly accept the two per cent. bonds proposed at the scale of premiums fixed, and that all the National banks having been supplied with the two per cents, the demand for fours will be so much lessened that holders, other than banks, will gladly accept the reduced premiums.

Legal-tender Notes Lost and Destroyed.—On January 16th a resolution was introduced in the House of Representatives calling on the Secretary of the Treasury to furnish information showing the aggregate amount of United States notes lost or destroyed that would never be presented for redemption. On March 2d, this information was presented to the House in the form of a letter from the United States

Treasurer and indicates that the aggregate loss on all the issues of Government notes by destruction up to January 31, 1888, would not be less than \$8,700,000, and that \$8,400,000 of this sum may be regarded as having been destroyed and out of circulation prior to May 31, 1878.

The percentage of destruction of notes, the Treasurer says, will undoubtedly be greater in notes of small denominations than in those of large denominations. Of the \$50,261,952 of small notes outstanding on June 30, 1871, when the issue had ceased, 96 per cent. were redeemed during the next sixteen years. Further redemptions are expected to increase the total to an extent that will leave only 1 per cent. of the issue permanently outstanding. Of the series issued between 1874 and June 30, 1867, probably less than six-tenths of 1 per cent. will remain unredeemed.

Condition of New York City Trust Companies.—The resources, deposits, and surplus reported to Bank Superintendent Paine by the Trust Companies of New York city on January 1st, were as follows: The combined resources of these companies is \$182,540,389.91; deposits, \$141,063,894.72; and surplus, \$20,510,836.06. The increase in resources during the year was \$5,612,402.68; deposits, \$6,408,219.19; and surplus, \$2,786,264.43. **FARMERS' LOAN AND TRUST.**—Resources, \$25,093,631.90; deposits, \$20,973,283.09; surplus, \$3,042,274.14. **UNITED STATES.**—Resources, \$40,759,262.32; deposits, \$31,401,473.19; surplus, \$6,727,642.68. **TITLE GUARANTEE AND TRUST.**—Resources, \$959,111.99; surplus, \$51,411.99. **NEW YORK LIFE AND TRUST.**—Resources, \$18,707,244.02; deposits, \$14,195,743.97; surplus, \$2,187,710.83. **MERCANTILE.**—Resources, \$18,100,908.99; deposits, \$15,200,923.07; surplus, \$899,980.32. **UNION.**—Resources, \$33,204,496.63; deposits, \$28,912,727.41; surplus, \$2,980,502.09. **AMERICAN LOAN AND TRUST.**—Resources, \$4,604,263.71; deposits, \$3,484,714.99; surplus, \$112,233.42. **ATLANTIC.**—Resources, \$2,938,161.48; deposits, \$1,911,096.46; surplus, \$527,065.02. **EQUITABLE TRUST.**—Resources, \$3,908,361.91; deficiency, \$472,354.62. **METROPOLITAN.**—Resources, \$6,624,439.73; deposits, \$5,137,193.21; surplus, \$445,563.94. **KNICKERBOCKER.**—Resources, \$1,823,123.11; deposits, \$1,252,694.26; surplus, \$63,043.36. **UNITED STATES MORTGAGE COMPANY.**—Resources, \$2,993,735; surplus, \$489,127.77. **CENTRAL.**—Resources, \$22,823,650.02; deposits, \$18,593,539.43; surplus, \$3,054,280.52.

Public Examiner of Minnesota.—Governor McGill has appointed Mr. M. D. Kenyon, Deputy Auditor of the State of Minnesota, to fill the position of Public Examiner, recently vacated by the Hon. Henry M. Knox, who resigned to become Vice-President of the Security Bank of Minnesota, at Minneapolis. The Governor gave the following account of the appointment:

"It has been a hard matter to find just the right man to step into Mr. Knox's shoes, as Mr. Knox had rare qualifications for the work. Perhaps in all the State there is not to be found the man fully his equal, and I regret exceedingly that he is to leave the office. I hit upon Mr. Kenyon in this way: I determined from the first that I would try to find the best qualified man in the State, and when I found him appoint him without regard to race, location, political affiliations, color, or previous condition of servitude, and starting by different roads I always came out at the same place, with Kenyon in full view at the end. I have conferred with leading men in the party, with leading business men without regard to party, and without exception they have finally recommended Kenyon. In the first place he is a thoroughly honest man, as well as being a man of ability, and he has a familiarity with public accounts, such as State, county and State institution accounts, that no other man in the State possesses. He has been for many years Deputy State Auditor, and in that capacity has gradually absorbed knowledge in regard to the financial affairs of the State that makes him a very valuable man in the State Government."

Dansville, New York, Bank Wreckers.—The First National Bank of Dansville, New York, was run by James Faulkner, President, and Lester B. Faulkner—known as General Director. In August, 1887, the President telegraphed the Comptroller of the Currency that the bank had closed its doors and he then disappeared in the direction of Canada. Bank Examiner Getman took possession of the bank and found that not only the cash and the President, but even the books had disappeared. He soon discovered that General Lester B. Faulkner had as much to do with the operations that wrecked the institution as his brother. Notwithstanding their action with regard to the bank, the Faulknors were both very popular in Dansville, and the Receiver had many difficulties thrown in his way. Mr. Getman, however, finally gave testimony on which Lester B. Faulkner was arrested, but was released on bail. James Faulkner, the President, has been wandering in many lands, and finally, disgusted with the hardships of such a life, returned to this country. It is believed that he gave evidence by which the charges against his brother were made more definite. The latter was again arrested

on an indictment found against him containing twenty-four counts charging him with the embezzlement of \$150,000. From all that can be learned, it seems that General Lester B. Faulkner had terrorized the town of Dansville for years, that he was really the leader in the transactions leading to the ruin of the bank, and that he forced his brother to take the course he did, both before and since the failure.

The Florida Bankers' Association, First Meeting.—Pursuant to a call issued January 25, 1888, and signed by H. G. Garrett, Nat. Poyntz and others, a convention assembled at the office of the Citizens' National Bank of Orlando, Fla., at 11 o'clock A. M. February 28th, for the purpose of organizing a Florida Bankers' Association. The following banks were represented:

First National Bank of Florida, Jacksonville, by James M. Schumacher, President. National Bank of the State of Florida, Jacksonville, by D. G. Ambler, President. Bank of Jacksonville, by B. H. Barnett, Vice-President. State Bank of Florida, Jacksonville, by W. N. Baker, Cashier. Florida Savings Bank, Jacksonville, by John F. Rollins, Vice-President. Ambler, Marvin & Stockton, Jacksonville, by F. Marvin, Cashier. First National Bank of Sanford, by F. P. Forster, Cashier. Indian River Bank, Titusville, by W. M. Brown, Cashier. Polk County Bank, Bartow, by F. W. Page, President. Kissimmee City Bank, by A. E. Drought, President. Bank of Tavara, by A. A. Parker, Cashier. First National Bank of Orlando, by T. J. Shine, President; E. P. Hyer, Vice-President; Nat. Poyntz, Cashier, and D. D. Porter, Director. Orange County Bank, Orlando, by C. H. Smith. Orlando Loan & Savings Bank, by J. B. Parramore, President, and James M. Raleigh, Treasurer. Bank of Seville, by M. F. Robinson, President. Bank of Leesburg, by Ernest Yager. Citizens' National Bank of Orlando, by H. G. Garrett, Cashier, and C. E. Pierce, Director.

The Convention was called to order by H. G. Garrett, who stated the object of the meeting and presented the name of W. N. Baker, of Jacksonville, as Temporary Chairman of the Convention, which motion was seconded and carried.

The Chairman thanked the gentlemen of the Convention for the honor bestowed upon him, and spoke eloquently of the benefits to be derived from such an organization.

The next business in order being the election of a Secretary, the name of F. P. Forster was proposed, who thanked the Convention, but declared his inability to accept. Mr. W. M. Brown was then placed in nomination and duly elected.

Several communications were read by Mr. Garrett from absent bankers, all of whom expressed their earnest wishes for the success of the Association and pledged their support to the same, and among which were letters from the following banks: Bank of Apopka; Volusia County Bank, De Land; Sanford Loan & Trust Company; Plant City Bank; Bank of Fernandina; Morrison, Stapyton & Co., Leesburg; Merchants' National Bank of Ocala; Bank of Eustis; Bank of Lake Weir, Stanton; First National Bank of Tampa; H. F. Dutton & Co., Gainesville; L. J. J. Nieuwenkamp, Lakeland; Bank of Daytona; Bank of Tarpon Springs, and the First National Bank of Palatka.

Mr. Garrett moved that the Chair appoint a committee of five on Constitution and By-laws and Permanent Organization, which motion was duly seconded and carried.

At the afternoon session the Committee on Constitution and By-laws reported that it had completed its labors, and presented to the Convention a form of Constitution and By-laws for its consideration.

Upon motion the report was accepted, and the Constitution and By-laws, as presented by the Committee, were adopted by the Convention, with a few alterations from the original, and upon motion of Mr. Schumacher the Constitution and By-laws, as revised, were adopted as a whole.

The Committee on Permanent Organization reported the following list of officers, and recommended their election:

President—James M. Schumacher, President of the First National Bank of Florida, Jacksonville. First Vice-President—W. J. Winegar, President of the First National Bank of Palatka. Second Vice-President—F. P. Forster, Cashier of the First National Bank of Sanford. Third Vice-President—T. C. Taliaferro, Cashier of the First National Bank of Tampa. Secretary & Treasurer—H. G. Garrett, Cashier of the Citizens' National Bank of Orlando. Executive Committee—J. L. Marvin, Manager, Ambler, Marvin & Stockton, Jacksonville; E. P. Dismukes, Vice-President Merchants' National Bank of Ocala; W. J. Robinson, of H. F. Dutton & Co., Gainesville.

On motion of Mr. Ambler, the Secretary was instructed to cast the vote of the

Association for the candidates recommended for the several offices by the Committee, as per report, which was done, and the Chairman announced the election of the officer above named.

The President addressed the Association, and called attention to the many ways and means by which the Association may be of value to its members, as well as to the general banking and commercial interests of the State.

On motion of F. P. Forster, the thanks of the Association were tendered to the temporary organization.

On motion, it was resolved that the next annual meeting be held in Jacksonville on the second Wednesday in December, 1888.

On motion of Mr. Baker, the Secretary was instructed to have three hundred copies of the Constitution and By-laws, together with the proceedings of this meeting, printed, and to distribute the same among the bankers of the State of Florida.

On motion of T. J. Shine, it was resolved that when the meeting adjourns, it adjourn to meet at Banlet's Cafe at 10 o'clock P. M.

Mr. Garrett addressed the Association upon the object of its organization, suggesting the modification of the homestead exemption clause of the Constitution, the amendment of the laws governing the assessment and collection of taxes, recommending changes in the sending and collecting of "no protest" collections, and a number of other matters.

Mr. Baker made a very pathetic appeal to the Association in behalf of the present homestead laws.

Mr. Ambler addressed the Association in regard to the appointment by the State of a traveling auditor whose duties it shall be to regularly audit the accounts of all county officers.

On motion of Mr. Barnett, Mr. Ambler was requested to prepare a paper upon the same subject, to be presented to the Association at its next annual meeting.

Remarks were made by Messrs. Barnett, Baker, Forster, Page, Parker and others, after which the meeting adjourned.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Debenture bonds may or may not be secured by a mortgage.
- It is said the Fractional Currency bill passed by the House will be strenuously opposed in the Senate.
- A Judge in South Carolina has decided county and township subscriptions to railroad bonds unconstitutional.
- A bill passed the Massachusetts Legislature requiring savings banks to register the occupation of each depositor.
- W. G. Rutherford, at one time Cashier of the National Bank of Walden, N. Y., killed himself on March 17th by poison.
- We should think the paragraph about the high price of Chemical National Bank (New York) stock, was no longer news.
- Men who deal in stocks are to-day highly esteemed. In colonial days the men in stocks were on a different financial level.
- A very liberal bill in the interest of safe deposit and trust companies was recently introduced in the Ohio Legislature.
- The Bank of Sparta (J. J. Borders & Son), of Sparta, Ill., was raided by burglars on March 16th, the safe blown open and \$2,500 taken.
- According to the Treasury statements the money circulation of the country decreased during the month of February by \$11,043,782.
- Forged checks on the City Bank of Hartford, Conn., have had some circulation recently. The last came for collection from Lexington, Ky.
- The part that Canadian currency is beginning to play in our financial affairs is another reason for the annexation of that interesting province.
- The Twenty-third Ward Bank of the City of New York has been incorporated with a capital of \$100,000, which may be increased to \$500,000. Among the shareholders are Richard E. Eimer, R. N. Hazard, Louis Fitzgerald, Hugh N. Camp, Theodore N.

Vail, Joel B. Erhard, John O. Bache, Emmet R. Olcott, Thomas MacKellar, M. W. Cooper and Edward P. Steers.

— Hon. Willis S. Paine, State Superintendent of banking in New York, has published a strong protest against the Saturday half-holiday law.

— The Farmers & Merchants' National Bank of Baltimore, Md., will occupy temporary quarters during the building of a very fine banking house.

— From Jeffersonville, Ind., comes a warning to look out for a very dangerous ten-dollar counterfeit silver certificate, series of 1880, No. 1,862,487.

— A blind man of Toccoa, Ga., is able to tell the denomination of a bank note or check by feeling, and can count money as rapidly as a bank clerk.

— The depositors of the Mechanics & Laborers' Savings Bank of Jersey City, are likely to get another dividend of Washington B. Williams, Receiver.

— The attempt to collect the tax alleged to be due from banks in the United States that pay out Canadian bank currency continues to excite great interest.

— Some prominent citizens of Toronto, Canada, have been summoned to answer to a charge of compounding a felony in destroying certain forged notes.

— The newspapers announce that Means and De Camp, the President and Vice-President of the Metropolitan National Bank of Cincinnati, will be tried this month.

— The Committee on Banking and Currency of the House has reported adversely on bills pending to repeal the law imposing a 10 per cent. tax on State bank circulation.

— John H. Thurston, referred to in the March JOURNAL, was book-keeper of the Cambridge Savings Bank and not the Charles River National Bank, of Cambridge, Mass.

— Dispatches from China indicate that a syndicate is still actively engaged in securing the organization of an Associated National Bank and the construction of a railroad.

— The suit brought by the Banque Franco-Egyptienne, of Paris, against the Trustees of the defunct New York, Boston & Montreal railroad scheme, has been dismissed.

— The Receiver of the Lancaster National Bank of Clinton, Mass., has brought suit to recover a \$1,000 note given by its defaulting Cashier to a marble company at Rutland, Vt.

— The Committee of Banks and Banking of the Massachusetts Legislature report it inexpedient to have further legislation as to the attendance and duties of Trustees of savings banks.

— The House Committee on Coinage has reported favorably a bill to enable holders of mutilated United States silver coin, in amounts smaller than one dollar, to exchange them for new coin.

— The scare about counterfeit five-dollar silver certificates has caused some of the genuine, machine-printed ones to fall under suspicion. They look different from the hand-printed and are slightly shorter.

— Creditors holding bonds of the city of Houston, Tex., have applied for a Receiver of the city. The bonds form part of a debt of seven millions of dollars, on which interest has defaulted for several years.

— The efforts of Russia to raise a loan, of any where from 250,000,000 to 600,000,000 roubles, either in Germany, France, England or the United States have proved fruitless. Her credit, it is said, is utterly gone.

— The Mexican Government has decided to accept the offer of German bankers to take \$3,600,000 of the £10,500,000 bond issue at 70 per cent. Other parties it is said have offered to take the remainder at 86 per cent.

— It is alleged that over \$50,000 in counterfeit five-dollar silver certificates have been put in circulation in Illinois during March. The supposed leader of the gang, James Sapp, was arrested on the 24th of March.

A. R. Gumaer, Cashier of the Exchange Bank of Canon City, Colorado, was arrested for receiving deposits within thirty days after he knew the bank was insolvent. This is a penitentiary offense under the laws of Colorado.

— The wholesale merchants of Kansas City, Mo., have entered a protest against payment by country merchants in checks on their local banks. The Kansas City banks very properly charge exchange for their collection.

— There has been some talk in the Massachusetts Legislature on a bill to authorize savings banks and institutions for savings to invest in the bonds and notes of the Boston & Lowell Railroad Corporation. There is much opposition.

— The Merchants' National Bank of Eldorado, Kan., announces that it intends to transact business in strict accordance with the usury laws of the State, and charge 12 per cent. as the maximum rate of interest whether for long or short time.

— The statement of the condition of the Cincinnati National banks on March 4th, made to the Comptroller of the Currency, shows these institutions to be in sound condition—all the better because the lame ducks have been weeded out.

— The Assistant Cashier of the Metropolitan National Bank of Cincinnati, Mr. Frank Riegel, who was accused of forgery by the President of the Arcade Building Association, has been acquitted. There was no ground whatever for the charge.

— Henry Clews has prophesied that if Senator Sherman's bill pass, authorizing the fund kept for the redemption of National bank notes to be invested in U. S. bonds that "it will put the market up by run and jump strides." Yes, if the bonds can be bought.

— In Russia, instead of increasing bank holidays, they are decreasing them. Excluding Christmas holidays and Sundays, the closed days amount to thirty-six in the year. In New York the closed days are thirty-three—counting the Saturday half-holidays.

— The real cause of the death, in 1878, of Barron, the Treasurer of the Savings Bank of Dexter, Me., remains as mysterious as ever. Even the conviction of Stain and Cromwell does not quiet discussion of the subject. These parties will probably have a new trial.

— The National Security Bank of Philadelphia occupied its new building on the corner of Franklin street and Girard avenue on March 3d. The building is of granite, forty feet wide, one hundred feet deep and forty feet high. The cost, inclusive of lot, was over eighty thousand dollars.

— That was a very loyal citizen who enclosed a twenty-five cent silver piece as a contribution to the conscience fund as the principal and interest on a five-cent stamp he had used a second time thirty years before. He ought to have sent his photograph as a design for a new postage stamp.

— An exchange remarks of the President of the Western National Bank of New York city: "President Jordan has a fund of humor and jocundity unequalled by that of any of his banking compeers, upon which he draws for the benefit of his playmates when not overburdened with financial duties."

— The Ways and Means Committee recommend changes in the internal revenue laws which, it is expected, will reduce revenues from this source some \$24,000,000. There are important remissions and changes in the taxation of tobacco, and some modification of the method of the taxation of distilled spirits.

— Abner I. Benyon, who was formerly the President of the Pacific National Bank of Boston, Mass., and who had the honor of wrecking that institution, died at Toronto, Canada, on March 28th. He disappeared from the United States immediately after the failure of the Pacific National Bank in May, 1882, and has since been living in Canada and Mexico.

— It was considered very amusing, in Cincinnati, that the First National Bank of that city was, on March 4th, caught with its reserve short. The shortage was due to the large deposits of public money held by it, that, as the JOURNAL has always contended, are amply secured by a deposit of United States bonds. It is a great compliment to the First National that this technical deficiency in reserve attracted any attention.

— The gross exchanges at the leading Clearing-Houses of the United States for the month of February, 1888, were \$3,383,281,191 as against \$4,047,198,046 for the same month in 1887. The clearings at New York city for the dates mentioned were \$2,218,468,485 in 1888, and \$2,468,788,772 in 1887. Outside of New York the clearings were \$1,671,812,806 in 1888, and \$1,577,414,274 for 1887. The percentage of decrease of business shown by these figures is very evenly divided between New York city and the rest of the country.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

BANK FAILURES AND THE NATIONAL SYSTEM.

Editor Rhodes' Journal of Banking:

SIR:—It seems unreasonable to charge upon the National Bank system the failure of every National bank that may chance to come to grief. In all fairness, the opponents of the National system should be constrained to show, not simply that the failed bank is in the system, but also that its being in the system is the cause of the failure, or, at any rate, that the failure would not have occurred if the bank had been conducting its business under State laws. It is inherent in the very nature of the thing that the business of banking must be conducted under law of some kind. The most extreme disciple of the *laissez faire* school would hardly contend seriously that great banking corporations should be allowed to carry on their business as they might see proper, and to be, in all things, a law unto themselves. It is a question of how much and what kind of law, and not, by any means, a question as to whether there shall be any law at all. Assuming, then, that there must be some kind of a banking law, let us examine one of the most common objections which the opponents of the National Bank Act make to a banking law of this particular kind. Briefly stated, their objection is that the National Bank system does not prevent bank failures. When a National bank fails all the objectors to the system hold up their hands in holy horror and exclaim, with one accord: "We told you so. It is just as we predicted. Here is one of the results of this wonderful 'system.' What is the use of your National system, with its burdensome restrictions, of your Comptroller of the Currency, with his clerks and Examiners, if banks are to fail just as they used to do?" Now, is it not rather hard to find fault with a system for not doing what it never pretended to do, and what its advocates expressly say that it cannot do. Did anybody ever pretend that the National system or any other system could prevent bank failures—could prevent men being dishonest or absurdly stupid and criminally careless? If a thief gets into your house will he not steal your household goods, and if he gets inside of your bank will he not steal your money? Can any law or any system prevent either the one or the other? Was it the fault of the National Bank Act that Eno plundered the Second National and Fish the Marine National, or that Harper robbed the Fidelity? Upon what section of the Act do persons, who make an assertion of this kind, base their argument? Would the case have been better in any one of these instances if the bank had been organized under a State law? On the contrary, it would have been much worse, for not only the depositors but the note-holders as well, would have suffered, while the only persons benefited by the State law would have been the stockholders, the very persons who, through their chosen agents, the Board of Directors, could and should have prevented the disaster. I challenge the opponents of the National Bank system to go over the whole list of National bank failures, examine every one with the most minute and jealous scrutiny, and then to put the finger upon one instance in which it can be fairly said that the bank would not have failed if it had been organized under the law of the State in which it was doing business, or to show one example in which the creditors would have fared better under the State law than under the National Bank Act. It is not enough to show that the National system is defective, but it lies upon the objectors to propose some other system that shall be more nearly perfect.

Though the National Bank Act is somewhat lengthy and contains numerous provisions, can those who argue against it point to one section which is either directly or remotely conducive to a bank failure? Has any bank been "driven" to suspend by reason of anything contained in the National Bank Act? The question suggests its own answer; for, instead of suspending, such a bank would naturally withdraw from the National and go into its own State system.

In conclusion, that may be stated which is known to every student of the National system, namely, that it is no part of the duty of the Comptroller of the Currency or

of his Examiners to detect *dishonesty* in the management of a bank. That duty rests, under any system, upon the Board of Directors. It is the part of the Comptroller, through his authorized officers, to ascertain if the provisions of the law are complied with. That done, his duty is performed.

NATIONAL SYSTEM.

BALTIMORE, March 16, 1888.

A NATIONAL BANKING ASSOCIATION.

Editor Rhodes' Journal of Banking:

SIR:—To perpetuate our excellent National Banking system we do not want a temporary expedient such as that proposed by those who advocate the refunding of the 4 per cent. United States bonds into 2 or 2½ per cents. Such a plan would, it is true, bridge over difficulty for a decade or two, when the question would have to be agitated again, and the same feeling of uncertainty would once more check the promotion of new National banks, as has been the case during the past year. In addition to this, when the question should again come up for decision the country might not be in as prosperous a condition as it is at present, with the entire banking system on an unusually sound basis, and the National coffers overflowing with wealth which it is impossible to disburse with sufficient rapidity and at the same time prudently. Then, too, I am convinced that while this temporary expedient is in force promoters of banks will be reluctant to organize under a system which can last but a few years, and which presents no greater inducements than does the National banking system at the present time. This will turn the attention of bank promoters to State banks and the advantages the State banking laws have, particularly in new and rapidly developing sections, where the most of our new banks are formed at present. In fact, this has already begun, as any intelligent reader of our financial journals can testify. Let us, then, place the banks on an enduring basis now, and whatever system is adopted do not let its life be limited to a few short years—scarcely long enough to place a strong bank upon a paying basis.

But the serious question is, What shall that system be? That it will necessitate an entire remodeling of the present law is evident. The plan proposed by your correspondent, Mr. Yost, in a late issue, has many good points, but it savors too much of the trust system, which seems to be pervading every branch of business in a deplorable manner. According to that plan the Association, with a capital of one hundred millions, comes into a town, gives the established banks there a chance to come in on terms made by the Association (which, by the way, are anything but tempting to a prosperous bank), and if they refuse, the Association proceeds to establish itself among them and strangle them by means of its enormous financial strength. Then, too, the plan involves the maintenance of too ponderous and costly a machinery to be at all practicable.

A plan has occurred to me which certainly seems feasible, although it may, when held up to the light of thoughtful criticism, reveal flaws which have so far remained hidden from me. It is with this end in view that I present to your readers a synopsis of it:

Let there be a National Banking Association, presided over and controlled by a board of five or seven capable men—styled, for instance, Governors of the Finances—who shall be appointed as the Supreme Judges now are.

The Association shall comprise all those banks which have the proper proportion of capital to the size of the town in which they are located, and which can satisfy the Board of Control that they are worthy of the advantages the Association offers.

All members of the Association may have a circulation amounting to—say 90 per cent. of their capital stock—except in such cases where the Board of Control is in doubt, when the percentage may be reduced or even the circulation retired entirely, although should the latter seem expedient, in the light of what follows, it would probably be advisable to suspend the doubtful member from the Association. Likewise, in times of financial panic, the Board of Control may permit such banks as they deem proper, and such as will accomplish the greatest good, to inflate their circulation even in excess of their capital stock. This, I consider, one of the chief advantages of the plan, for I am convinced that many failures are caused and most panics inaugurated by the inelasticity of our currency. No one can doubt the truth of this who is familiar with the history of the Bank of England. Before Parliament permitted the inflation of the currency during financial stringency several disastrous panics occurred, which,

after experience showed, might have been averted had the bank been permitted to inflate its circulation, and thereby enable it to supply all demands made upon it by its panic-stricken customers.

In case of the failure of any of the associated banks the stockholders shall be liable to twice the amount of their shares; and should this prove insufficient, with the assets, to settle up the affairs of the bank, an assessment shall be levied by the Board of Control upon the associated banks in proportion to their capital stock and sufficient to make up the deficiency. This plan would answer the purpose of a safety fund without the necessity for having a vast sum of money lying idle and profitless. This would also create a mutual interest among the associated banks and give each a motive for protecting its neighbor, which is sadly wanting now. It would undoubtedly lead to a National Clearing-house, which would solve the question of country collections, and it would perfect a system of intelligence for mutual protection, which now is attempted in some sections with success. Other advantages would accrue which I shall not take time to mention here, but they will undoubtedly present themselves to the majority of your readers.

An annual tax shall be levied upon the associated banks only sufficient in amount to defray the expenses of the Association.

Another important provision is that the Board of Control should have authority to deny admission to the Association of a bank in any town or city which, in their opinion, has banking facilities amply sufficient for its business. This would prevent the handling of questionable business by the associated banks, which, under the present system, sometimes seems unavoidable in order to allow a new bank to live, and consequently leads to many failures and much destruction of credit.

In the above article I have mentioned merely the chief points wherein the plan I have suggested differs from the National system now in force. There would necessarily be other and minor changes, while much of the present banking law would be embodied in the new—such, for instance, as the Examiner's and monthly reports—although, in my opinion, these, too, would be better for a little revision, making them more trustworthy indices of a bank's condition and less susceptible of "doctoring" when occasion requires.

H. M. JORALMON.

CHICAGO, March 3, 1888.

A Successful Showing.—Frank Brown, Receiver of the Henrietta National Bank, of Henrietta, Texas, that failed August 17, 1887, on March 20th paid a 25-per-cent. dividend to the depositors, making, with previous payment, 75 per cent. of total deposits. The Receiver thinks he will be able to collect a sufficient amount to pay in full without an assessment on the stock.

Fifth National Bank, St. Louis.—Lon V. Stephens, the Receiver of the above defunct institution, has a happy way of announcing his successful liquidation of his trust, and the St. Louis papers appear to be willing to give him full credit for the influence in this direction of his personal efforts and energy. One exchange says:

"Mr. Stephens has practically had charge of the bank's affairs only four months, and the expeditious and satisfactory manner in which he has transacted the business and brought it so near a state of completion in that brief space of time is certainly a matter deserving of praise from both the creditors and stockholders. * * * It will be remembered that Receiver Stephens paid 50 per cent. of the liabilities on the first day of last February. There has now been collected the sum of \$715,000 since Mr. Stephens was appointed Receiver. Another dividend will be struck on April 1st, and will be ready for distribution in St. Louis on the 10th of April. The total liabilities of the bank amount to the sum of \$1,100,000. The \$715,000 collected is 65 per cent. of the total liabilities. Receiver Stephens says he has in sight an additional \$100,000, which will then make the collections aggregate \$815,000, that will have been secured before the stockholders of the bank are touched. The Receiver says that he has no doubt but that the bank will be able to pay 90 cents on the dollar, which is certainly a good showing."

Giving due credit to Receiver Stephens, there is a great deal of gush in the above, in that the speedy and fortunate settlement of the bank's affairs is ascribed to his efforts. This pleasant outcome is due to the good condition of the assets of the bank remaining at the time of failure, which came into Mr. Stephens' possession. The best Receiver in the world cannot hasten the collection of slow and poor assets, and the poorest Receiver cannot help taking in money on good promissory notes and securities when it is offered. It is as laughable for a Receiver to take entire credit for the collection of good assets as for a political party to take credit for a good wheat and corn crop.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

MR. GOSCHEN AND BUSINESS TRAINING.

[*London Bankers' Magazine.*]

The speech which Mr. Goschen recently delivered at Aberdeen, as his inaugural address as Lord Rector of that University, though made to an audience composed of Scotch students, drew its inspiration really from the counting-house in Austin Friars, where the firm of which he was a member till political interests drew him away from the city, continue to carry on their business. Though some thirty years have elapsed since Mr. Goschen entered upon parliamentary life, his remembrance of his former work is still as keen and his business capacity as acute as ever it was. This gave not only the keynote but the brilliant interest to his address, the motto of which might have been, "Devotion to duty, and hence to work."

No one is better qualified to give the advice which Mr. Goschen gave his hearers and a far wider circle than he. To the intellectual interest in work which he described, Mr. Goschen ascribed the success of other nations. "Let us take an illustration," he said, "from a very prominent controversy of the present day. Many of our commercial cities are at this moment terribly exercised by the fact that foreigners are ousting Englishmen in our counting-houses at home, and in the competition for new trade abroad." Mr. Goschen proceeded to explain why this should be the case, and he traced the cause, and we believe correctly, to the fact that the foreigner takes a greater interest in his occupation. Mere increase of knowledge will not be sufficient to supply this. "When you have taught the English clerk five languages, have instructed him in the technicalities of his business, you will still not have done enough till you have succeeded in making him as fond of work as his German competitor. The man," he continued, "who mentally sweats at his work, who regards it as drudgery to be done from necessity, or from a sense of duty, but to be got over as soon as possible, and forgotten, is at a disadvantage in competing with the man to whom that work is constantly suggesting topics of interest, and to whom therefore it is not a drudgery, but a pleasure." Then Mr. Goschen went on to describe how in his own experience he had seen German senior clerks listening to a discussion on some complicated question of commercial law, "not with the bored faces of men who keep their eye upon the clock, anxious only to know when the hour of release will strike, but with the keen interest of experts who delight in the analysis of an intellectual problem." It was the pleasure in the discussion, not the hope of gain in the shape of an increase in pay, which was the motive. Mr. Goschen did not fail, whilst saying this, to do full justice to the English clerk, and to his loyal devotion to the interests of his employer. He sympathized with his occupations outside the counting-house or the warehouse, which led him the moment the hour of release had come to rush off to ride his bicycle, to the boat, or to the cricket field, or to his wife and children at home. "But, as a man of business, the rival to whom his work is not a mere task, who gets rid of it with alacrity, who finds pleasure in it as well as outside it, will beat him in the race."

Now, we believe this principle which Mr. Goschen proceeded to explain, with a vast and brilliant force of illustration, to be strictly and entirely true. Mr. Goschen drew the picture he described from the life. He spoke of his own father and his devotion to work, and the pleasure which he found in endeavoring to establish a principle in commercial dealings. It was to his being an intellectual man of business, he considered, that he owed his success in life. It is not merely greater knowledge which is needed, but greater love of knowledge. Mr. Goschen deprecated, and with much justice, any hasty changes in our method of education or of preparation for work. What he desired to develop is something which lies far deeper—an improvement in natural tone and character in regarding a subject. He would have been the last, we are sure, to underrate the qualities of the English man of business, or of the English bankers' clerk and bank Manager, or to deter them for a moment from that pleasure in athletic pursuits and outdoor life which is so characteristic of our age and

country, and which presents such special attractions to those whose lives are necessarily spent so much in dark, close rooms, lighted for many months with artificial light, with men who never, probably, except on Sundays and perhaps on an occasional afternoon, really see their own dwellings by daylight for more than a few hurried moments of a morning for a considerable part of the year. But these more active pursuits need not prevent those who follow them from possessing also a keen interest in their work from the higher point of view which Mr. Goschen desires to put before them. "Greater knowledge," he said, "is good, but there is a higher ideal, greater love of knowledge. You may frighten people into working harder, but the results will disappoint you unless you have made them fonder of work."

There is one other word of advice in Mr. Goschen's speech which we should like our readers to treasure in their memories. It was on "talking shop"—too often spoken of in terms of reproach. "What does this mean? What is 'talking shop'?" It means talking of the interests of the work which you do, or the profession to which you belong. I know men to whom the very idea of 'talking shop' appears something odious and vulgar. I can think of professions which scout the idea of shop being talked out of business hours. But injustice lies in the word and a snare in the thought. Too often it means the exclusion from lively conversation and pleasant discussion of that which forms the dearer intellectual interest of a man's life. Fashion has much to say in determining what men may talk shop, and to whom the privilege is inexorably denied. Be on your guard against this fashionable criticism. Many men are never so interesting as when they 'talk shop.'

Into the wider question of the principles on which education should be conducted, which formed the theme of the latter part of Mr. Goschen's address, we cannot enter here. To do so would take us beyond the limits of business and business training, with which we are principally concerned. Mr. Goschen has said the weightiest words on these subjects which have been spoken for many years, and we hope they will be seriously taken to heart by our business men.

FUTURE PRODUCTION OF GOLD.

[*Mining and Scientific Review*, Denver, Col.]

Probably nine-tenths of all the gold obtained by man has been taken from placer deposits, and our American experience has been no exception to the general rule. Previous to 1847 our total gold production amounted to \$12,000,000, but between 1847 and 1887 about \$1,750,000,000 were contributed to our stock of gold. Of this, nearly three-fourths came from placer deposits. In 1850-56 we obtained more than \$50,000,000 per annum in gold from the placers of California, and almost nothing from gold-bearing veins. Now, with an annual production of \$30,000,000 about one-half only is from placers. Our own territory has been so thoroughly explored that no considerable superficial deposits of gold are likely to be discovered, and nearly the same thing can be said of the entire world.

In the northern extension of our western mountain ranges in British Columbia and Alaska there are probably important deposits of gold. These mountains are everywhere auriferous within our territory. In Alaska, gold mines are successfully worked in a few localities, and gold is reported from many others. Dr. George M. Dawson has also found indications of gold for five hundred miles along the mountains north of Frazer's river. Hence we may hope that a considerable contribution will be made by Northwestern America to the gold product of the world. It is likely, however, to come from this region in a moderate but perennial stream, and not in a flood. Great difficulty will attend the working of mines, and especially placer deposits, in the mountains of Canada and Alaska. The winter is long and terribly severe and the snowfall heavy, limiting active operations to three or four months in the year; the surface is very much broken, entirely unproductive, covered with a dense forest and peopled by unfriendly Indians. All supplies must be imported by long, rough and expensive routes. These difficulties will restrict the production of gold to such a degree that unless the mines and placers should prove to be rich beyond all present indications, the gold product of this region must have a good and not a bad influence on the finances of the world.

Eastern North America contains, in the Allegheny belt, a vast quantity of gold; but this is generally in the form of low-grade, pyritous ores, difficult to treat. With

skill, energy and economy they may, however, be worked at a profit, and we may look upon them as offering a handsome reward for the exercise of these cardinal business virtues, and as promising to supply a not strong, but steady stream of this financial vital fluid.

Mexico has no important deposits of gold. For three hundred years her territory has been explored and her mines worked by an industrious and avid race of miners, who would certainly have discovered and unearthed any considerable golden treasure. In a few localities gold veins and surface deposits are worked, but the relative quantity of this metal is everywhere small, and the rainfall has been in the past too slight to furnish the motive power for extensive erosion, as it is at present insufficient to supply the needed water for successful gold washing. When no revolutions have interfered with the production of precious metals in that country, Mexico has steadily yielded about \$1,000,000 per annum in gold. This contribution may be kept up for many years, but can hardly be exceeded.

The west coast of South America, so rich in silver, is, like Mexico, poor in gold. The superficial deposits which formerly existed here and there, were diligently worked and practically exhausted by the Incarial population. We learn from the Spanish chronicles that a very large sum was realized from the invaders from the golden decorations of the Temple of the Sun at Cuzco, and that many of the vessels with which the prison chamber of the unfortunate Atahupala was filled, were composed of gold, but since that time the gold product of the whole coast from Ecuador to Chili has been insignificant. The mines which subsequently poured hundreds and even thousands of millions into the Spanish treasury yielded only silver.

Colombia, Venezuela and Brazil have, on the contrary, always been producers of gold. It is estimated that from Brazil alone more than \$1,000,000,000 in gold were obtained during the first three hundred years after the advent of the Portuguese. Colombia and Venezuela are now yielding about \$4,000,000 each annually, but the great Callao mine, which furnished one-third of this sum, has of late greatly fallen off in its productiveness. The superficial gold mines of this portion of South America were diligently worked by the ancient inhabitants, and they probably secured the greater part of the gold they contained. The gold images which they buried with their dead are now sought by a special class of miners, if such they may be called, who exploit the cemeteries with considerable success, and gold washing is carried on in many localities. But these gold fields are no longer virgin ground, and we cannot expect them to yield more gold than they do at present.

The gold production of Australia has been but little inferior to that of our own country. At first it was exclusively from the placer deposits, and when the richest of these were worked out the yield was greatly reduced. It has, however, been revived by the development of reef mining, and the annual yield from both sources is now about \$90,000,000. We may hope, too, that the present rate of production will be maintained or approached for many years to come.

The great Asiatic continent once had its famous gold mines like Australia and America, but it has been so long occupied by a dense human population that its stores of gold have apparently for the most part been exhausted. The Chinese, the Hindoos, the Tartars and their ancestors, who so long occupied the interior of Asia, have all been diligent gold hunters, and they have left no stone unturned beneath which this, the first found and most highly prized of metals, could be concealed. From the continent of Asia and its dependencies we may then expect little more than the present modest contribution, which may reach four or five millions of dollars per annum.

Bank of Highmore, Dakota: "Enclosed find draft for subscription to *JOURNAL OF BANKING*, beginning with March number. *Cannot get along without it!*"

"I thought I would not subscribe for the *JOURNAL* this year, but I cannot afford to be ignorant when information comes in such a quantity for \$5.00 a year." Ed. S. Scott, First National Bank, Springfield, Ill.

W. Goodrich Jones, President Temple National Bank, Temple, Tex., March 23d, writes: "Wish you would send me January and February *JOURNAL*, as, in some way, they have been lost. If they are as valuable to others as to myself, they may have been stolen from the mails."

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report. Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

3850—First National Bank, Beaver, Pennsylvania. Capital, \$50,000.
 3851—First National Bank, Prineville, Oregon. Capital, \$50,000.
 3852—First National Bank, Stafford, Kansas. Capital, \$50,000.
 3853—Meade County National Bank, Meade Center, Kansas. Capital, \$50,000.
 3854—Merchants' National Bank, Aurora, Illinois. Capital, \$100,000.
 3855—First National Bank, Sedan, Kansas. Capital, \$50,000.
 3856—First National Bank, Hopkinsville, Kentucky. Capital, \$64,000.
 3857—McMinnville National Bank, McMinnville, Oregon. Capital, \$50,000.
 3858—Temple National Bank, Temple, Texas. Capital, \$80,000.
 3859—Taylor National Bank, Taylor, Texas. Capital, \$65,000.

ALABAMA.

BESSEMER.—Berney Brothers; Cashier, T. J. Cornwell.
BIRMINGHAM.—Birmingham National Bank; R. D. Johnston, President, in place of John W. Read. — Hudson & Perryman; out of business.
MOBILE.—Thomas P. Miller & Co.; failed.
MONTGOMERY.—First National Bank; J. W. Dimmick, President, in place of W. L. Chambers.
TUSCALOOSA.—Merchants' National Bank; W. R. Foster, Cashier, in place of E. N. C. Snow.

ARIZONA.

NOGALES.—Henry Hewitt, Jr., & Co.; discontinued.
ARKANSAS.
HOPE.—People's Bank has been opened here by Sidney B. Wood; Cashier, Alfred M. Patterson.
MORRILLTON.—Bank of Morrillton; capital, \$50,000; President, Wm. Irving; Vice-President, T. N. Doyle; Cashier, W. J. Stowers.
FORT SMITH.—First National Bank; Samuel McLoud, Vice-President, in place of L. H. Roots; no Assistant Cashier in place of G. W. Schneider.

CALIFORNIA.

COLTON.—First National Bank; John W. Roberts, President, in place of W. R. Fox; W. R. Fox, Vice-President, in place of M. A. Murphy.
OAKDALE.—Bank of Oakdale is reported here. Capital, \$150,000. President, J. Haslach; Cashier, Louis Kahn.
PASO ROBLES.—Bank of Paso Robles has been organized. President, J. Goldtree; Cashier, David Speyer.
SAN BERNARDINO.—First National Bank; 2d Vice-President, W. N. Crandall; Joseph Brown, Cashier, in place of W. N. Crandall.
SAN DIEGO.—Bank of San Diego has been opened. Paid capital, \$100,000. President, J. H. Braly; Vice-President, J. C. Braly; Cashier, Geo. M. Dannals.
SAN FRANCISCO.—California National Bank; admitted to Clearing-House. — Pacific Bank; F. V. McDonald, Cashier, in place of S. G. Murphy; no Assistant Cashier in place of Emil Bellermann. — Hibernia Savings & Loan Society; C. D. O'Sullivan, Vice-President, deceased.
SANTA MONICA.—First National Bank; Vice-President, John Steere.
SANTA ROSA.—Santa Rosa National Bank; Assistant Cashier, J. H. Brush.
WEST FALL BROOK.—West Fallbrook Banking Co. is reported here. President, Wm. M. Scott; Cashier, J. S. Richardson.

COLORADO.

ALAMOSA.—First National Bank; John L. McNeil, President, in place of Wm. Barth; A. A. Salazar, Vice-President, in place of John L. McNeil.
BOULDER.—Boulder National Bank; George R. Williams, President, should be George R. Williamson.
BRIGHTON.—Carmichael & Kidder are in business here. Style, Bank of Brighton. Cashier, Willard C. Kidder.
DENVER.—People's Savings & Deposit Bank has been opened. Capital, \$150,000. President, M. J. Lawrence; Vice-President, E. F. Hallack; Cashier, C. Y. McClure.
GLENWOOD SPRINGS.—Glenwood National Bank; no Assistant Cashier in place of H. W. Higgins.

CONNECTICUT.

MYSTIC BRIDGE.—First National Bank; no Vice-President in place of Gurdon Gates
NORWALK.—Central National Bank; Geo. M. Holmes, President, in place of A. S. Hurlbutt; E. L. Boyer, Vice-President, in place of Geo. M. Holmes.

- SOUTH NORWALK.**—First National Bank; no Vice-President in place of E. K. Lockwood.
- WILLIMANTIC.**—Willimantic Savings Institute; suspended.
- DAKOTA.**
- BISMARCK.**—Bismarck National Bank; in voluntary liquidation.
- CANTON.**—First National Bank; T. J. Fosdick, Vice-President, in place of M. E. Rudolph; no Assistant Cashier in place of Geo. Olsen.
- DE SMET.**—First National Bank; no Vice-President in place of W. H. H. Phillips.
- LANGDON.**—J. McPhail will shortly open the Bank of Langdon.
- ONIDA.**—Sully County Bank (Branch of Bank of Highmore, Highmore); discontinued.
- WATERTOWN.**—Citizens' National Bank; Assistant Cashier, H. L. Sheldon. — Watertown Banking & Investment Co. has been incorporated. Capital, \$200,000. — Watertown Mortgage & Trust Co. has been organized. Capital, \$200,000. President & General Manager, Walter Wilson; Treasurer, O. Gesley; Secretary, C. E. Boyden.
- WHITEWOOD.**—Whitewood Banking Co. has been organized here. Capital, \$10,000. President, D. K. Dickinson; Vice-President, T. J. Greer; Cashier, Wm. Selbie.
- FLORIDA.**
- JACKSONVILLE.**—Florida Savings Bank; H. Morgan, Treasurer, in place of Lowell D. Hosmer.
- KEY WEST.**—Key West Loan & Investment Co. has been organized. Capital, \$25,000. President, James R. Shackelford; Vice-President, Frank Shavers; Secretary, James Dean.
- OCALA.**—Merchants' National Bank; no Cashier in place of R. C. Jelks.
- ORLANDO.**—Orlando Loan & Savings Bank is in business here. President, J. H. Farmore; Treasurer, James M. Raleigh.
- SANFORD.**—Sanford Loan & Trust Co.; President, E. R. Trafford; Vice-President, King Wyll; Treasurer, C. C. Haskell; Secretary, H. Seagrave Adams.
- TAVARES.**—Bank of Tavares has been opened. Cashier, A. A. Parker.
- GEORGIA.**
- FORSYTH.**—W. H. Head & Co.; succeeded by W. H. Head Banking Co.
- NEWMAN.**—First National Bank; P. B. Murphy, Cashier, in place of H. C. Fisher; no Assistant Cashier in place of P. B. Murphy. — Newnan National Bank; John S. Hollinshead, Cashier, in place of R. W. Andrus.
- ILLINOIS.**
- ATHENS.**—Kincaid & Scott; succeeded by Lee Kincaid.
- CAIRO.**—Alexander County National Bank; Vice-President, Peter Neff; Assistant Cashier, F. J. Kerth.
- CARLINVILLE.**—Carlville Bank has been opened for business. President, Sylvester Hoblit; Cashier, A. L. Hoblit.
- CARLYLE.**—Rufus N. Ramsay; John W. Corcoran, Cashier, deceased.
- CHICAGO.**—American Exchange National Bank; Assistant Cashier, R. M. Orr. — National Bank of Illinois; 2d Assistant Cashier, Henry D. Field. — Western Investment Bank is new State bank here. Capital, \$75,000. President, Wm. P. Kimball; Cashier, W. M. R. Vose.
- DELAVAN.**—Tazewell County National Bank; James N. Hall, Cashier, in place of R. Frey; no Assistant Cashier in place of James N. Hall.
- DU QUOIN.**—Du Quoin Bank; proprietor, Henry Horn; Cashier, Thomas Horn.
- FARMER CITY.**—John Weedman National Bank; Assistant Cashier, G. M. Kincaid.
- HEYWORTH.**—J. Van Ordstrand & Co. are reported here.
- LANSARK.**—First National Bank; W. L. Franck, Cashier, in place of John Paley.
- METROPOLIS.**—First National Bank; R. W. McCartney, President, in place of John F. McCartney.
- OAK PARK.**—Dunlop Brothers are reported here. Cashier, A. N. Draper.
- PEORIA.**—Commercial National Bank; C. B. Allaire, Vice-President, in place of Elliot Callender.
- SHELBYVILLE.**—First National Bank; H. M. Scarborough, Vice-President, in place of P. Parker.
- STAUNTON.**—Elochberg, Friedman & Co. (Staunton Bank); succeeded by S. A. Friedman & Co.
- TENNESSEE.**—Exchange Bank; discontinued.
- WENONA.**—First National Bank; Vice-President, Isaac Vaughan; Assistant Cashier, J. W. H. Hodge.
- INDIANA.**
- CRAWFORDSVILLE.**—First National Bank; Joseph Milligan, President, in place of Wm. H. Durham, resigned.
- DANVILLE.**—First National Bank; no Assistant Cashier in place of L. D. Rawlings.
- FRANKLIN.**—National Bank of Franklin; in voluntary liquidation.
- FRANKTON.**—C. Quick & Co. are in business here. President, C. Quick; Cashier, Geo. T. Quick.
- HUNTINGTON.**—Huntington County Bank is reported here. President, J. W. Ford; Vice-President, W. K. Windle; Cashier, H. L. Emley.
- INDIANAPOLIS.**—Bank of Commerce; N. T. De Pauw, President, in place of John H. Stewart; Vice-President, John W. Ray; Wm. Bosson, Cashier, in place of John W. Ray.
- JEFFERSONVILLE.**—First National Bank; S. C. Taggart, President, in place of James H. McCampbell, deceased.
- MT. VERNON.**—First National Bank; Albert Wade, Assistant Cashier, in place of G. W. Robertson.
- TERRE HAUTE.**—First National Bank; A. Rosenburg, Cashier, in place of H. S. Deming.
- WABASH.**—First National Bank; Vice-President, John Whisler; no Assistant Cashier in place of W. H. Morse.

WASHINGTON.—People's National Bank; Cashier, R. O. Davis. — Washington National Bank; W. M. Hayes, Cashier, in place of R. N. Read; N. G. Read, Assistant Cashier, in place of W. M. Hayes.

WINAMAC.—Bank of Winamac; W. S. Huddleston, Cashier, in place of W. H. Bouslog.

IOWA.
COLUMBUS JUNCTION.—Farmers & Merchants' Bank; President, W. W. Bokman.
COUNCIL BLUFFS.—State Savings Bank has been opened. Capital, \$50,000. President, Chas. B. Waite; Cashier, John Bennett.

CRESCO.—Howard County Bank; discontinued.

DES MOINES.—Iowa National Bank; C. B. Worthington, Cashier, in place of Geo. H. Maish.

DUBUQUE.—Commercial National Bank; closed.

GEORGE.—Farmers & Merchants' Bank has been opened. Capital, \$30,000. President, J. D. Bassett; Vice-President, U. K. Losee; Cashier, H. A. Moore.

GLADBROOK.—Bank of Gladbrook; succeeded by Blossom & Hughes. Style, Tama County Bank. Cashier, Chas. A. Blossom.

GREENE.—First State Bank is reported here. Capital, \$25,000. President, Jeremiah Perrin; Cashier, Moulton Harris.

HAMPTON.—First National Bank; in voluntary liquidation.

NEWTON.—Jasper County Bank; J. M. Woodrow, President, in place of James Wilson, deceased; Frank Wilson, Cashier, in place of J. M. Woodrow.

OSCEOLA.—Clarke County Bank; B. F. Garrettsen, President, in place of J. V. Banta.

OTTUMWA.—Iowa National Bank; J. W. Edgerly, Cashier, in place of T. H. Eaton.

SHELDON.—Empire Loan & Investment Co. is in business here. Paid capital, \$25,000 surplus, \$5,000.

KANSAS.

ANTHONY.—First National Bank; S. A. Darrough, President, in place of T. H. Stevens D. F. Sholly, Vice-President, in place of S. A. Darrough.

ARGENTINE.—Argentine Bank (McAlpine, Taylor & Little); Cashier, G. A. Taylor.

ARKANSAS CITY.—Snyder, Hutchinson & Co. are in business here. — Strong & Ross Banking Co. has opened up. Capital, \$100,000. President, E. M. Strong; Vice-President, A. A. Newman; Cashier, Howard Ross; Assistant Cashier, Amos Stock.

— Union Bank; Cashier, E. S. Hutchinson.

ARMOURDALE.—Provident Savings Bank; President, John L. White.

ASHLAND.—Lincoln Mortgage & Trust Co. is in business here. Capital, \$100,000. President, Charles P. Woodbury; Vice-President, John S. Myers; Secretary, Isaac B. Woodbury; Treasurer, George Theis, Jr. — Winton & Deming State Bank;

C. C. Highley, Vice-President, in place of Robt. O. Deming.

CAWKER CITY.—Security Investment Co.; paid capital, \$250,000; surplus, \$25,000. President, E. E. Parker; Secretary, V. H. Branch.

CERRYVALE.—State Bank; capital, \$50,000.

COTTONWOOD FALLS.—State Exchange Bank; President, J. M. Tuttle; Cashier, O. L. Hulbert.

ELLSWORTH.—Central National Bank; M. K. Brundage, Cashier, in place of Edward H. Tenney; Assistant Cashier, Geo. A. Tenney.

ERIE.—City Bank; business here turned over to Farmers & Merchants' Bank and removed to Moran.

GANDY.—Post Office changed to Goodland.

GRAINFIELD.—Bank of Grainfield; Vice-President, G. W. Sheldon; Cashier, W. F. Morrison; Assistant Cashier, S. B. McClurken.

GREENSBURG.—First National Bank; succeeded by Ross & Emmert. — Greensburg State Bank; J. P. Rice, Secretary, in place of H. H. Patten. — Wilson & Toms Investment Co., of St. Louis, have an office here. Resident Agent, H. B. Graves.

GYPSUM.—Gypsum Investment Co. has been chartered. Capital, \$10,000.

KANSAS CITY.—Kaw Valley Investment Co. has filed articles of association. Capital, \$25,000.

NORTH-WEST TERRITORY.

LEATHERIDGE.—Union Bank of Canada; F. R. Godwin, Manager, in place of Arthur Mercer.

Massachusetts Savings Bank Depositors.—The statistics of Massachusetts Savings banks, recently published, show that these institutions have not been allowed to depart from their character of depositories for people in middle circumstances. When the banks were established they were intended to promote thrift and cultivate the habit of economy among "seamen and others," as the title of the Suffolk quaintly sets forth. They were intended to be *savings* banks. Of late years it has been freely charged that the Savings banks had become conveniences to the rich. The suggestion is frequently made that the maximum amount of deposit and accrued interest should be placed much below the present limit of \$1,000. That there is no imperative demand for such a change is made manifest in the Commissioners' report. Of 944,788 open accounts of Massachusetts Saving banks 344,640, or more than one-third, are for \$50 or less; exceeding \$50 and less than \$100, 91,072; exceeding \$100 and not over \$200, 113,671; exceeding \$200 and not over \$500, 155,547. Thus it will be seen that of the total number of open accounts 704,980, or about three-quarters, are for sums not over \$500. Nearly one-half the open accounts are to the credit of women. Here and there may be a wealthy man who splits up a considerable sum of money among a large number of Savings banks, but the opportunities for turning money at rates that pay much more than the Savings banks give to depositors are so numerous that such instances are rare. The vast majority of depositors in Massachusetts Savings banks are "well off" only in the sense that the person who saves something is well off as compared with those who are unable or unwilling to spend less than they receive."

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, April 2, 1888.

During the month of March there has been very little change in the condition of the money market. The state of uncertainty as to the action of Congress and the effect on the National finances continues. The large absorption of currency by the Treasury causing a decrease in currency of some \$11,000,000 during the month does not appear to have caused any great stringency, and it may be supposed that this was because there was extreme dullness in the demand. No one can guess what Congress will do in regard to the tariff and whatever other financial measures may be enacted, they can have little effect until the question of reduction or no reduction of the revenues is settled. Two important financial measures have already passed the House. One authorizing the issue of silver certificates in denominations of less than one dollar. If this measure becomes a law, it will when the new notes are printed by the slow operation of the Bureau of Engraving and Printing, do much to stimulate those varieties of trade that depend on small remittances. The second financial bill passed by the House is that authorizing bond purchases. How long this may linger in the Senate is now a matter of some doubt, inasmuch as at present writing the whole silver question has become a portion of the discussion upon it. A caucus of Republican senators was held to endeavor to divorce the bill from these clogging additions but the proposers of the amendment, were it is understood obdurate. The bond purchase bill will undoubtedly aid the banks of the country, and cause the circulation of a large amount of money especially if the bill reducing the minimum amount of bonds that the banks are obliged to hold also becomes a law. With such an outlook as to the effect of Congressional action, and with no special motive toward increase of enterprise in any direction, it is not to be wondered that dullness prevails in the money market and that rates are low. Moreover such influence as the foreign money market has here is in the same direction. The Chancellor of the Exchequer, Mr. Goschen, is engaged in an attempt to refund the English 3 per cent. consols at a lower rate of interest. To carry out his plan successfully, requires much secrecy and the borrowing of much money from the banks at a low rate of interest. There is therefore the same uncertainty prevailing abroad as to Governmental action as here. At this season of the year the imports of this country are greater than the exports, and it is probable that exportation of gold would begin were it not for the tendency to foreign investment in American securities. This arises from the fact that many investors in England are selling out their 3 per cent. consols in view of the prospective refunding and are seeking better paying stocks and bonds. The investment in Western farm mortgages continues but though the amounts used in this way are high, and largely drawn from the East, we do not think that such investments cause any permanent transfers of currency. The actual payments are made in goods and machinery sent from the East, or from money centres. In fact the movement of currency may be somewhat quickened but the general direction of the current is not changed. The Reading strikes resulted in great loss to all concerned, probably proportionally less to the railroad than to the strikers. During the week ending March 17th, business in New York city was suspended by the blizzard that commenced early Monday morning the 12th of March and continued through Tuesday. Hardly any business houses were opened. The banks were unable in many cases to present paper falling due. As much allowance was made for individuals as a due regard for law would permit.

FOREIGN EXCHANGE.—During the week ending March 3d, sterling exchange was fairly active, and the demand though not particularly brisk was greater

than the supply. All classes of bills were scarce, especially commercial. There was some influence exerted by purchase of stocks on foreign account. Prices were therefore somewhat higher. During the week ending March 10th sterling exchange was very dull, not keeping up the promise of the previous week. There was at times some slight increase in the supply of commercial bills, which, with the prevailing dullness, caused a little weakness in actual rates, though on the whole the market was pretty firm. During the week ending March 17th there was little or nothing done in sterling exchange, and the market was practically unchanged. Rates were easier at times owing to the lack of demand and the purchase of securities for foreign account, though there was no quotable change, and posted figures continued the same. During the week ending March 24th sterling exchange was quite active, the demand having been brisk on several days. Commercial bills were scarce and the supply of security bills was readily absorbed, and these facts kept the market strong. Rates advanced on Wednesday. A small amount of gold arrived from France, but this was exceptional and had no effect on the market. During the week ending March 31, the demand for sterling exchange was quite limited and the market very quiet. On account of the small supply of commercial bills in the market, rates were well maintained. From February 23d to March 29th the Bank of England gained £536,000 in specie, the reserve at the latter date being 37.69 per cent. On March 15th the rate of discount was reduced from 2½ to 2 per cent. This reduction in the rate is supposed to have been made in furtherance of Mr. Goschen's refunding plan. The Bank of France lost 1,475,000 francs in gold and gained 2,275,000 francs in silver. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.86½; sight, nominal, \$4.88½; 60 days, actual, \$4.85½@ \$4.86; sight, actual, \$4.87¼@ \$4.87½; Cable transfers, \$4.87¼@ \$4.88; Prime commercial sterling, long, \$4.84¾@ \$4.85; Documentary sterling, 60 days, \$4.84½@ \$4.84¾; Paris bankers', 60 days, 5.20@ 5.19½; sight, 5.18½@ 5.17½; Paris, commercial, 60 days, 5.21½@ 5.21¼; sight, 5.20@ 5.19½; Antwerp commercial, 60 days, 5.22½@ 5.21½; Swiss bankers, 60 days, 5.20½@ 5.20; sight, 5.18¾@ 5.18¼; Reichmarks (4) bankers, 60 days, 95¾@ 95½; sight, 95¼@ 95⅞; Reichmarks (4) commercial, 60 days, 95@ 95¼; sight, 95½@ 95½; Guilders, bankers, 60 days, 40¼@ 40 5-16; sight, 40 7-16@ 40½; Guilders commercial, 60 days, 40½@ 40 3-16; sight, 40 5-16@ 40¾; Copenhagen, Stockholm and Christiana, krona, 60 days, 26½@ 26 11-16; sight, 26½@ 26 15-16. Paris dispatches quote exchange on London 25f. 26¼c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling bills on London, at 60 days; and sight, and prime commercial sterling, together with exchange on Paris on March 1st, the changes in rates that occurred during the month and the highest and lowest during the months of February and March:

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated:

	April 1, 1888.	March 1, 1888.	Feb. 1, 1888.	Jan. 1, 1888.	Jan. 1, 1887.
Currency 6 per cents..	\$3,181,000	\$3,181,000	\$3,156,000	\$3,256,000	\$3,680,000
4½ per cents.....	69,475,050	69,433,050	69,335,550	68,955,050	59,636,200
4 per cents.....	109,068,850	109,466,150	110,141,900	112,102,400	113,903,200
3 per cents.....	119,000	181,500	181,500	131,500	52,218,950
Total.....	\$181,863,700	\$182,161,700	\$182,764,950	\$184,444,950	\$229,438,350

From the statement of the Comptroller of the Currency of March 31st, it appears there was a decrease of \$2,552,559 in National bank circulation during

the month of March, as against a decrease of \$3,125,800 during the month of February. The total amount of lawful money deposited with the Treasury to retire outstanding bank circulation was \$97,211,845, as compared with \$99,272,084 last month. Bonds to secure public deposits amounted to \$57,333,000, including \$901,000 sixes, \$15,838,500 $4\frac{1}{2}$ s, \$40,458,500 4s, and \$135,000 called threes.

The following table shows the net gold and silver held by the United States Treasury on the dates given :

	April. 1, 1888.	March 1, 1888.	Jan'y 1, 1888.
Gold coin and bullion.....	\$310,772,202	\$309,567,827	\$306,342,187

Silver owned by Treasury.....	\$43,887,782	\$47,241,064	\$45,294,750

NEW YORK BANKS. During the week ending March 8d, the combined gold and currency received from the interior by the New York banks was \$1,973,000, and they shipped \$1,092,000, making a gain for the week of \$886,000. By Sub-Treasury operations they lost however during the same week \$3,314,000, and their net loss for the week was therefore \$2,428,000. During the week ending March 10th, the banks gained \$479,000 from the interior and lost \$1,628,000 by Sub-Treasury operations, a net loss of \$1,149,000. During the week ending March 17th, the banks gained \$65,000 from the interior and lost \$1,800,000 by Sub-Treasury exchanges. Their net loss was \$1,235,000. During the week ending March 24th, the banks lost \$1,012,000 to the interior and gained \$400,000 by Sub-Treasury operations making a net loss of \$612,000. During the week ending March 30th, the loss to the interior was \$1,754,000, and to the Sub-Treasury \$2,000,000, a net loss for the week of \$3,754,000. The total loss from February 25th to March 30th was therefore \$9,173,000. The following table shows the condition of the New York Clearing-House Banks for a number of weeks past.

1888.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
March 31....	\$368,532,000	\$71,351,300	\$31,124,000	\$373,318,900	\$7,602,700	\$9,145,576
March 24....	369,377,900	72,541,400	30,641,100	375,077,100	7,613,900	9,413,225
March 17....	369,695,400	72,798,700	31,627,800	377,657,000	7,622,700	10,012,250
March 10....	369,197,100	74,592,300	31,634,400	378,157,600	7,632,500	11,487,300

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1887—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Acker.—David D. Acker, Vice-President of the New York National Exchange Bank for nearly twenty years, died on March 23d, aged 65 years. In their resolutions on the occasion the Board of Directors of the bank said: "The Directors now desire to make this formal and public recognition of how fully they have realized the value of his services; the soundness of his counsel; the unselfishness of his devotion to their interests and, above all, the instinctive, unswerving integrity and uprightness of his character."

Bingham.—Lucius C. Bingham, a member of the banking firm of Bingham Brothers, of Mount Morris, N. Y., died on March 10th, aged 70 years.

Brown.—J. Woods Brown, President of the First National Bank of Milton, Pa., from its organization in 1864 until his death, died on January 6th.

Carson.—James M. Carson, Cashier of the Simonds National Bank of Sumter, S. C., died on March 17th, at the age of fifty-eight years.

Corcoran.—John W. Corcoran, Cashier of the private bank of Rufus N. Ramsay, of Carlyle, Ills., died recently.

Downer.—Charles Downer, Teller of the National Bank of Castleton, Castleton, N. Y., for sixteen years, disappeared on February 27th. He was found dead on March 7th, in the cellar of the church in that town.

Drexel.—Joseph W. Drexel, at one time a member of the banking firm of Drexel, Morgan & Co., died in New York city on March 25th, at the age of fifty-eight, of Bright's disease, from which he had suffered for the past eighteen months.

Everitt.—John Leggett Everitt, for many years Paying-Teller of the Seventh National Bank of New York city, died March 14th, at St. Augustine, Fla., at the age of 78. When the National Broadway Bank of New York city was established he was made Cashier. He was actively interested in the establishment of the New York Clearing-House.

Fairbanks.—Horace Fairbanks, ex-Governor of Vermont and President of the First National Bank of St. Johnsbury, Vt., died on March 17th at the Fifth Avenue Hotel, New York, of pneumonia, at the age of sixty-eight. His father was the founder of the celebrated firm of E. & T. Fairbanks & Co. of which the ex-Governor was a member. He was elected Governor of Vermont in 1876.

Gibson.—Robert Gibson, Cashier of the First National Bank of Somerset, Ky., died on March 19th from the effects of injuries received from falling from a precipice during a blinding snow storm in February last.

Graham.—John Graham, charter member and Trustee of the North River Savings Bank, died recently in New York city, at the age of sixty-six.

How.—James How, a Director of the Brooklyn Savings Bank and a well-known citizen of Brooklyn, N. Y., died recently very suddenly at the age of 70 years.

Lehman.—Isador Lehman, President of the German National Bank of Newark, N. J., died recently.

McCampbell.—James H. McCampbell, President of the First National Bank of Jeffersonville, Ind., from the date of its organization in January, 1865, until his death, died on February 15th, after an illness of a few days, at the age of seventy-one years. His public life was one of great usefulness and peculiarly valuable to the community. He was public spirited and always ready to assist in any worthy enterprise.

Morgan.—Minot Canfield Morgan, formerly a member of the banking house of Winslow, Lanier & Co., died on March 12th, in the eighty-fourth year of his age.

O'Sullivan.—C. D. O'Sullivan, one of the founders of the Hibernia Savings & Loan Society of San Francisco, Cal., died on March 4th, aged sixty-six years.

Sands.—D. Jerome Sands, a prominent stockholder and Director of the First National Bank of Port Chester, N. Y., died on February 29th, aged 73 years. He was President of the village.

Whiteman.—Reuben Whiteman, of Dansville, New York, died March 18th, aged seventy years. He was Receiver of the Bank of Dansville, an institution that failed some time since, and one of the wealthiest men in Livingston County.

Wilson.—James Wilson, President of the Jasper County Bank, of Newton, Iowa, died recently.

MONETARY CHRONOLOGY.—MARCH, 1888.

1. **THURSDAY.**—A banquet was given at St. Paul, Minn., the previous evening in honor of Public Examiners H. M. Knox and M. D. Kenyon. — Robert Lyttington, a forger from Toronto, was arrested in New York. — The bond purchase bill debated in Congress. — Sub-Treasurer at New York, Judge McCue, sworn in. — Public debt reduced seven and a-half millions during February.
2. **FRIDAY.**—Ten shares of Chemical Bank stock sold on Stock Exchange for \$3,000 a share.
3. **SATURDAY.**—Receiver of the Bank of Dansville, New York, died. — Proposition to revive fractional currency, before the House. — Stain and Cromwell convicted of murder of Cashier Barron in 1878.

5. **MONDAY.**—Bill introduced in House authorizing Secretary of the Treasury to prepay interest on bonds. — Mr. John Graham, Trustee of North River (N. Y.) Savings Bank died. — J. B. Snyder was arrested at Denison, Texas, for robbing the United States mail. He had in his possession drafts on New York aggregating \$146,000.
6. **TUESDAY.**—Mr. Beck introduced a measure to abolish the sinking fund. — The Bradford National Bank, of Bradford, Pa., was robbed and the Cashier, Mr. Tomlinson, killed. — The annual report of Hon. Willis S. Paine, Superintendent of the State Banking Department of New York, on the savings banks was transmitted to the Legislature to-day.
7. **WEDNESDAY.**—Lewis D. Howes, of New York, was arrested in Baltimore for passing a bogus check there in 1886. — Charles Downer, Teller of the National Bank of Castleton, N. Y., was found in a dying condition in the cellar of the church in that village.
8. **THURSDAY.**—Five Italian counterfeiters of silver coin were arrested at Norfolk, Va. — A Canadian forger was arrested near Lockport, N. Y. — It is claimed that Stain and Cromwell will get a new trial on account of newly discovered evidence.
9. **FRIDAY.**—Counterfeit five dollar silver certificates appeared at Toronto, Ont. — A Frenchman named Morell was arrested in New York city charged with passing forged checks.
12. **MONDAY.**—Day of the great blizzard in New York city; no business of consequence done. — Union Savings Bank of Toledo, Ohio, incorporated.
14. **WEDNESDAY.**—John Leggett Everitt, Paying Teller of the Seventh National Bank of New York city, died in St. Augustine, Fla.
15. **THURSDAY.**—A new State Bank, called the Twenty-third Ward Bank, was incorporated in New York city.
16. **FRIDAY.**—W. G. Rutherford, at one time Cashier of the National Bank of Walden, New York, killed himself by poison. — James France, a banker of Rawlins, W. T., failed for \$143,000.
17. **SATURDAY.**—The estate of the late Judge Luke P. Poland is said to amount to \$250,000. — James France arrested for fraudulent failure.
19. **MONDAY.**—George Smith, arrested for passing forged check in Jersey City. — The Supreme Court decided adversely to the claim of the National Bank of Redemption, Boston, against the City of Boston to recover taxes illegally assessed. — A man named Lowenthal was arrested for passing forged checks at Ansonia, Conn. — The bill for fractional paper currency passed the House.
20. **TUESDAY.**—Gattman and Co.'s bank failed at Aberdeen, Miss.; the liabilities were \$300,000; only \$10,000 was found in the vault.
21. **WEDNESDAY.**—The Commercial National Bank of Dubuque, Iowa, suspended. — Depositors will be paid in full. — Amariah H. Bradner, formerly President of the Dansville Bank of Dansville, N. Y., now in the hands of a receiver, died in State Prison.
22. **THURSDAY.**—James Supp, a business man of Goodland, Ind., was arrested for dealing in counterfeit money. — There is much excitement in and about Logansport, Ind., over the discovery that large amounts in counterfeit five dollar silver certificates have been passed.
23. **FRIDAY.**—H. F. Royce, Treasurer of the Willimantic Savings Institute, of Willimantic, Conn., was suspended on account of a misappropriation of the funds of the bank to the extent of \$152,000. A run was prevented by the directors taking advantage of the law requiring four month's notice of withdrawal of deposits.
24. **SATURDAY.**—For conspiracy to defraud the Shackamaxon Bank, George W. Brumm and Samuel R. Mulligan were sentenced in Philadelphia to imprisonment for one year and six months each, and Thomas L. Huggard one year and three months. — The directors of the Willimantic Savings Institute are seeking to recover money loaned without authority by Secretary Royce. — Joseph W. Drexel, formerly of the firm of Drexel, Morgan & Co., died.
26. **MONDAY.**—Levorsen Stavv, a Swedish forger, was arrested in Philadelphia on Sunday on the arrival of the steamer on which he took passage from Europe. He will be held for extradition proceedings. — The tax on banks using or paying out Canadian currency is agitating the banks and bankers of Michigan. — A secret service agent threw the town of Parkersburg, W. Va., into a panic by asserting that certain silver certificates printed by the steam printing process were counterfeits. — The bond purchase bill was amended in the Senate by an amendment authorizing the issue of Treasury notes.
27. **TUESDAY.**—Treasurer Hyatt has adopted a new seal for use on United States notes. — Senator Reagan introduced a resolution to use the \$100,000,000 gold now held as reserve on legal-tender notes in the purchase of bonds. — The firm of John R. Wiltsie & Son, of Newburgh, N. Y., failed, liabilities from \$40,000 to \$100,000. — The State National Bank of Raleigh, N. C., was robbed by its President and Cashier. — President Faulkner, the defaulting President of the First National Bank of Dansville, N. Y., has returned to this country, and has been arrested and is in jail at Rochester, N. Y.
28. **WEDNESDAY.**—John M. Pollock, of the failed banking firm of J. R. Wiltsie & Co., has absconded. — The private banking house of Thomas P. Miller & Co. Mobile, Ala., has failed, liabilities about \$230,000; assets, \$30,000. — It is expected that the creditors of the State National Bank of Raleigh, N. C., will perhaps get all their money after some delay.

RHODES' JOURNAL OF BANKING.

Vol. XV.

MAY, 1888.

No. 5.

THE DEATH OF MR. CONKLING removes one who was a prominent figure in the legislation under which the system of National banking has grown to its present proportions. Not that it can be claimed for him that he was in any way the originator or supporter of the measures which resulted in taking the control of the issue of bank circulation from the States and giving it to the National Government. Mr. Conkling's mind was more critical than creative. His strength lay rather in detecting the weak spots in the propositions of others than in formulating any of his own. The history of the legislation from 1862 to 1865, relating to the establishment of the National banking system, shows him far from favorable to the new order of banks. This attitude was due not only to the peculiar bent of his intellect, but also to the fact that both as a member of the House and as Senator he represented the State of New York. The State banking system of that State was one of the best then in existence, rivaled in this respect only by the banking systems of the New England States. The bills of the New York State banks, as well as those of New England, had an enviable reputation throughout the United States, and this high standing was particularly valuable to the institutions that issued them. The miscellaneous State bank systems of the West and South had depended largely for the redemption of notes issued by Western and Southern banks on the use of Eastern money. The value of this monopoly of the best credit was a thing to be cherished by the citizens of New York. The representatives of New York and New England were therefore opposed to the National banking system as calculated to supersede State banking. It was this opposition that delayed the passage of the bank Act, so urgently recommended in 1861 by Secretary Chase, and made it necessary to pass as a substitute the legal-tender Acts, which have proved, and are likely to continue to prove, the worst enemies of bank circulation of any description. In his report of December, 1861, the Secretary of the Treasury, after remarking upon the inadequacy of the existing State bank circulation, states that two substitutes have been suggested—United States notes

and the issue of a National currency by banking associations. As to the first, the Secretary concludes that "the possible disasters so far outweigh the probable benefits * * * that he feels himself constrained to forbear recommending its adoption." As to the second, the Secretary entertained the opinion "that if a credit circulation in any form be desirable, it is most desirable in this." If there had been no opposition in Congress from the representatives favoring State banks, a bill authorizing National banks might have been passed during the session of 1861-1862, and the country might perhaps have been saved the necessity of an issue of legal-tender notes. Mr. Conkling was among those who were opposed to the National bank Act. With Mr. Collamer, of Vermont, and others, he was unfavorable to a bill that would deprive the banks of his own State of the vested privilege of issuing circulation. These opponents were unable to defeat the measure. They delayed its passage until the field was occupied by the legal-tender note, and they grafted on it a permission to the States to tax the new banks that has seriously impaired the growth of the system.

ALTHOUGH IT IS SOMETHING of a mystery, it is nevertheless a fact that the bonds of the late Confederacy have a quotable price in the London market. This indicates a hope of the possibility of the payment of the Confederate debt at some time in the future. The tendency of late years has been in a direction to encourage this hope. Englishmen who have invested in these bonds have for some time been organized, and have appointed a committee to do all they can to secure the payment of the Confederate debt by the United States. This committee has employed American lawyers, who are to properly present the matter to the Courts. The first question that arises to any one considering for the first time the attempt to collect Confederate bonds is, Does not Section 4 of the Fourteenth Amendment to the Constitution of the United States render any such attempt absolutely futile? This amendment says, among other things: "Neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States." The alleged argument of the bondholders is that the United States having by this amendment prevented the States that form the Confederacy from paying either singly or in combination the debt incurred by them, the United States itself is in honor bound to pay it. This, it would appear, is too weak to base any serious hope upon. The real reason that Confederate bonds still bear a price, low as it is, must be the feeling that there are infinite possibilities of change in the public sentiment of the United States, and that all institutions and laws, including the Constitution, must conform to the changes. As far as this goes, the holders of Confederate bonds are right. The very history of the Fourteenth Amendment itself shows how vacillating many of the States have been in their support of it. New Jersey ratified it in

1868 and withdrew its ratification in 1868. Georgia, North Carolina and South Carolina rejected it in 1866 and ratified it in 1868. Georgia duplicated its ratification in 1870. Ohio ratified it in 1867 and withdrew the ratification in 1868. Texas rejected it in 1866 and ratified it in 1870. Virginia rejected it in 1867 and ratified it in 1869. These changes are the indications of the ups and downs of the two political parties. The possibility of the change of one State indicates that of many more, and the repeal of the amendment, after a revolution of public opinion in the required direction, is as easy as its original adoption. The basis for hope has been strengthened by political events in the United States. The animosities of the war are disappearing, and the party most in sympathy with the Confederacy is regaining power not on account of that sympathy, but because of its jealousy of centralization. The Supreme Court of the United States, though slowly, moves in the same direction. May there not come a time when majorities in every State will think it right to repeal the Fourteenth Amendment? It will then be easy for the Courts to find legal grounds on which bondholders may recover the money advanced by them either from the States or the United States.

There is, however, another view of the matter which is much less favorable to the wishes of the foreign holders of Confederate bonds. It is not in human nature for citizens of any country to wish to subject themselves to taxation to pay a foreign debt that is of an exceedingly doubtful character. If the Confederate bonds were held in this country by the original holders, perhaps after a time a public sentiment might arise in favor of paying them. It is probable that the present holders of these bonds are not the original holders, and that they have bought them for little or nothing. It is doubtful whether those who were the most enthusiastic supporters of the Confederacy would be in favor of any amendment to the Constitution that would permit the payment of the bonds out of revenues which must be drawn from the pockets of the citizens of all the States, whether North or South.

THE PASSAGE OF THE BILL to provide fractional silver certificates is regarded with favor by merchants who receive much money through the mails in small amounts. Postage stamps are inconvenient to send, and not easy to get rid of in large quantities. Postal notes cost something, and cannot be obtained at all the offices. One curious result if the bill becomes a law will be the effect it may have upon the incomes of postmasters throughout the country. The pay of many postmasters is regulated by the number of stamps they sell. In many places the number of stamps sold is largely increased by the demand for the same for remittances. These stamps so purchased are sent to dealers in manufacturing and trading centers, who sell them to those who may desire them for mailing purposes, thus depriving the post-office, in such centers, of a portion of their legitimate sales. Thus it is

said that the fractional silver certificate bill, if it becomes a law, will add \$5,000 a year to the stamp sales of the Lowell, Mass., post-office, because about this amount are sold each year by a patent medicine firm in that town, who take them from small dealers in country towns. The Secretary of the Treasury objects to the bill because the fractional notes will not effect the purpose of expediting small remittances unless they are issued in large quantities, and then they will drive out the fractional silver coin, and also because the cost of printing the notes will be a heavy one to the Government. This last objection is hardly tenable, inasmuch as the postage stamps now purchased for remittances doubtless cost the Government large sums, both for the actual printing and also for the additional salaries that have to be paid to postmasters on account of their sale. Moreover, the increased cost of making small remittances now paid by the people is undoubtedly much larger than the cost of printing fractional notes would be to the Government. The great objection to the fractional notes is the immense loss to the people through wear and tear.

MR. CONKLING, as a lawyer, was connected with the case decided in 1883 by the Supreme Court of the United States involving the question whether the United States Government, as the creditor of an insolvent National bank, was entitled to preference over other creditors. This question had arisen in a number of instances, and a very large amount of money was involved. The Venango National Bank, of Franklin, Penn., the First National Bank of New Orleans, La., the Cook County National Bank, of Chicago, were all, in one form or another, debtors of the United States Treasury at the time of their failure. The indebtedness of the Cook County National arose as follows: the postmaster at Chicago had deposited Government moneys in the bank in excess of the amount of bonds deposited to protect such deposits. The United States authorities, instead of filing a claim against the bank, proceeded against the bondsmen of the postmaster and collected the claim from them. The bondsmen having paid the debt, became subrogated to the rights of the United States in the claim against the bank, and obtained permission to sue for the claim in the name of the United States. Suing in the name of the United States, they claimed the right to be preferred to ordinary creditors, under Section 3,466, which gives the United States a priority for all claims it has against insolvent debtors. This section embodies a statute passed as early as 1797, and was intended to protect bondsmen. The case had first been heard in the United States Circuit Court at Chicago, and the decision was favorable to the bondsmen, declaring that the United States had preference under the section named. On appeal it came to the United States Supreme Court. Mr. Goudy, the eminent lawyer of Chicago, appeared for the bondsmen, and Mr. Conkling for the Receiver of the Cook County National Bank. It

was one of the first arguments Mr. Conkling had made before the Supreme Court after his resignation of his Senatorial office, and his appearance in Washington excited much interest. When it became known that he was to make an argument before the Supreme Court the room was quickly crowded. Mr. Conkling's brief had been skillfully prepared, and contained strong points in favor of the intention of the National banking law to place absolutely all of the creditors of National banks, including the United States Government, on the same footing. Many lawyers in making their oral arguments do little more than repeat the printed book to the Court. They do nothing to excite interest in the points further than repeating what the Judges are supposed to have read. Mr. Conkling excelled in presenting a brief. He had the art in exciting interest and attention of a skillful book reviewer, who leaves his reader full of curiosity to see the book itself. His manner to the Court was one of the most dignified yet winning courtesies. In the presentation of his argument he was clearness itself. The distinctness and force of his enunciation, the regular marshalling of his logic, at once made an intricate and recondite point of law plain and unimpeachable not only to the Court, but to the least learned of the spectators. The argument lasted over an hour, and, though in itself dry, was rendered so full of interest by the personal genius of the man that no one left the Court. When Mr. Conkling finished, Mr. Goudy rose to reply. Though a man of great reputation, he was so overslaughed and apparently dazed by the force and perspicacity with which Mr. Conkling had presented the case that he was unable to formulate anything coherent in reply. He stammered and repeated two or three involved sentences, and finally sat down in utter and apparently hopeless confusion. The weight of logic so clearly and courteously presented by Mr. Conkling had overpowered even an unwilling and determined opponent.

THE BOND PURCHASE BILL has proved a fizzle. After the protracted debate in the Senate, it finally passed with Mr. Beck's silver amendment attached. This amendment required silver dollars to be coined to the extent of the National bank notes retired in consequence of bond purchases. It was learned that this amendment was very objectionable to the President, and that he would veto the whole bill if it came before him in this form. Consequently the measure was shelved by the Committee on Banking and Currency, and in place thereof Mr. Wilkins, the Chairman of the Committee, introduced a resolution the purport of which was that the Act of March 3, 1881, already gave the President power to purchase bonds. This resolution is similar to one already passed by the Senate to the same purport. It seems to be somewhat of a comedy in the history of legislation that, after the great alleged necessity of some authority to purchase bonds in order to relieve the Treasury from the accumulation of surplus had induced

both Houses of Congress to introduce such a measure, after it had been debated at length in both Houses and passed by both, it should, after it at last failed on account of the Senate amendment, have been found to be entirely unnecessary—both Houses agreeing that existing law already authorized what it was the purpose of the bill to accomplish. The history of this fiasco, as well as the treatment of several other measures for the use of the surplus, shows that the intention of the majority in Congress is to avoid all financial legislation until the fate of the Tariff bill has been settled. This is the radical relief for the accumulation of surplus that is relied on to render all other measures unnecessary. Acting on the permission given by the resolutions of Congress, the Secretary of the Treasury has, during the month, solicited offers for the sale of bonds, but the prices that have so far ruled have been high, and the offers accepted have not been of sufficient quantity to make any serious impression on the funds accumulated in the Treasury. Whether the Tariff bill will pass in a form to accomplish any adequate reduction of the revenues is doubtful. There are so many conflicting interests to be reconciled that any legislation on this subject must be a matter of compromise. If no tariff bill or an inadequate one passes, there will still be not only room but necessity for an enactment authorizing the use of the surplus, which must still continue to accumulate, in refunding the four and four and a half into bonds bearing a lower rate of interest. To sum up the situation, the majority in Congress evidently intend to use all their energies on passing some kind of a tariff measure. When the tariff question is settled, plans for using the surplus will receive more earnest consideration than they do at present.

SENATOR ALDRICH OF RHODE ISLAND has a plan for new postal notes that will accomplish all the good which it is argued the proposed fractional silver certificates will accomplish, and will not be open to the objections made to the small silver certificates. The plan is to issue a form of postal note in denominations of five, ten, twenty-five and fifty cents, which can be purchased in quantities at the post-offices and redeemed in lawful money at money order offices. Secretary Fairchild, in conversation with Senator Aldrich, expressed the opinion that these notes would be much better than the fractional silver certificates. Being redeemable at money order offices they would be much more negotiable than postage stamps, while they could be bought in quantities in the same manner as the latter. Another advantage is that fractional silver would not be driven out of circulation as it must necessarily be by the large quantities of fractional silver certificates it would be necessary to issue to accomplish the purpose for which they are principally designed, *viz.* to facilitate small remittances from all parts of the country. The notes proposed by Senator Aldrich, if issued without fee, will only be called for in the

quantities needed for remittance, and will probably accomplish this object without the danger of driving out fractional silver. Business requiring small remittances has assumed large proportions in the United States, and it is evident something must be done by Congress to meet the public want. Senator Aldrich's proposition is certainly the best yet made.

WE HAVE RECEIVED a letter from a Canadian banker stating that in a recent editorial in the *JOURNAL* on the Canadian system of bank circulation the fundamental point of the whole matter was left out, in that we omitted to state that the bills of all Canadian banks are a first charge on all their assets. The editorial referred to was intended to contrast the issue of circulation under the National banking system in the United States with that under the Canadian system. The point to which our correspondent refers is common to both systems. Under the National system, the circulating notes are a first lien upon all the assets of the bank, and nothing can be paid to the depositors or other creditors of an insolvent National bank until the redemption of all its notes have been fully provided for. The process is that upon the failure of a National bank the Government at once assumes the payment of its notes. The Government reimburses itself for the funds used in such redemption by selling the bonds the bank had on deposit with the United States Treasurer to secure such circulation. In every case of failure up to the present time the proceeds of the bonds have proved ample for the purpose, but if by any chance they should not, the Government has a first lien on all other assets of the institution. In order to enforce this first lien, the moment a National bank fails the Comptroller of the Currency appoints a Receiver, and that Receiver takes possession of the assets, and on their collection deposits the proceeds in the United States Treasury. If the bonds already held by the Treasury should by any chance prove insufficient to redeem the circulation of the bank, the funds collected by the Receiver afford further security. If Congress should repeal the law requiring bonded security for circulation, the notes of National banks would still be a first lien on all their assets. As there was no special contrast between the Canadian system and the National banking system in this respect, the point was not dwelt on.

MR. GOSCHEN'S PLAN for converting English consols bearing three per cent. interest into consols bearing two and three-quarters per cent. has proved successful. The holders of £472 millions of consols, out of a total of £560 millions, accepted the new securities offered in exchange, leaving less than £100 millions subject to redemption, and it is probable that in view of the pronounced success up to this point that the larger part of the remainder will also be converted. The success of Mr. Goschen's plan under the conditions existing in England indicates how

readily, under the circumstances existing in the United States, the four per cent. bonds could be funded into two-and-a-halves. The English Chancellor of the Exchequer had no surplus money lying idle that he could use in the transaction. For the funds necessary to carry out his threat of speedy redemption he had to rely upon loans from the banks, for which he would have to pay interest. It is true that although the Secretary of the Treasury has money in abundance, he has not the option of redemption of the fours, while the Chancellor had the option of redeeming consols. Nevertheless, the desire to realize the premium on the fours on the part of their holders and the offer to pay the present value of the difference in rate of interest for the time that must elapse until the maturity of the fours, would abundantly compensate for this disadvantage. If the Secretary can get offers from holders of fours and four-and-a-halves to sell them outright, much more would he be able to obtain offers to exchange them for two-and-a-halves.

It is a melancholy satisfaction that the plan adopted by Mr. Goschen for the conversion of English consols is an American invention, one that avails abroad after the inventors have forgotten how to use it.

THE SENATE and the House of Representatives having each resolved that additional legislation was unnecessary to authorize the Secretary of the Treasury to purchase United States bonds with the surplus, inasmuch as he already had sufficient power to do so under the second section of the Act of March 3, 1881, Secretary Fairchild, on April 17th—Thursday—gave notice that on Monday, April 23d, and daily thereafter, proposals would be received at noon for the sale to the Government of fours and four-and-a-halves. The policy of the Secretary, as announced, was that small purchases would be made daily, believing that by this course the market would be less disturbed. The price, however, was to govern the purchases, to be larger as the prices justified. Before the action of Congress had declared that the law of March 3, 1881, gave the necessary authority, the Secretary had already determined that it did, inasmuch as bond purchases with the surplus were made under that law during the period from August 10, 1887, to October 8th of that year. The full amount of bonds then purchased was \$19,455,400—\$11,565,300 of which were 4½ per cents. and \$7,890,100 4 per cent. bonds. The prices paid for four-and-a-halves ranged from 107.9 to 110 premium, and for fours from 124 to 125 per cent. The larger portion of the four-and-a-halves were bought at 108.4, and of fours at 125. These purchases indicated a preference on the part of the Secretary for the four-and-a-halves. The offers under the circular of April 17th began on the 23d. Up to the 30th \$10,737,850 had been regularly offered, of which \$8,082,750 were fours, and \$2,655,100 were four-and-a-halves. After the bids were opened each day, it appears that informal offers were permitted, and the bonds

accepted were from both sources. This gave opportunity to those who wished to do so to change their bids in order to meet the ideas of the Secretary, and is a perfectly fair method if accorded to all bidders alike. The amount of bonds accepted to and including April 30th is \$6,595,250, of which \$4,005,250 were fours and \$2,590,000 four-and-a-halves. The average price paid for fours was about 126, \$2,718,000 having been bought for 126½. The average price paid for four-and-a-halves was about 107½. The offers of fours have been much larger in amount than those of the four-and-a-halves, and the prices paid for fours have been proportionately much higher than they were last fall. Probably if the Secretary had, instead of stopping purchases in October last, continued to buy fours, he might have made greater savings for the Government. The four-and-a-halves are cheaper now than they were then. The gradual rise in price in the fours, noticed from April 23d to April 30th, would seem to indicate that the constant pressure will raise the premium to a higher point than has yet been reached. The main argument against the bill introduced by Mr. Wilkins, Chairman of the House Committee on Banking and Currency, providing for the issue of National bank circulation to the extent of the par value of the bonds deposited, was that the premium on bonds would increase. The inconsistency of the opponents of the National banks is shown by their rejection of the bill on this ground and their eager support of the bond purchase measure, which is more certain to produce the same result.

THE BILL modifying the present Half-holiday law, which some time ago passed the New York Senate, has at length passed the Assembly. This bill was introduced by Senator Walker, and limits the effect of the Saturday Half-holiday law to Saturdays in the months of June, July, August and September. Mr. Rhodes, in the Assembly, attempted to amend the Walker bill as it came from the Senate by making Saturdays in June, July and August whole holidays. The last was much the preferable measure, but the Assembly would not consent to amend the Senate bill, and finally passed it. The whole holiday involves but one mode of treatment for paper falling due on the day, whereas a half-holiday involves two, and this inconvenience falls not only on the banks but on the general public. The whole holiday on Saturday for the three months mentioned, the hottest in the year, when the business done is comparatively light, is a benefit to the employes of all the financial institutions in the State. The half-holiday increases the labors of the employes, inconveniences the public and is an aggravation to the banks. There is not, however, much hope that the bill, as it has passed the Legislature, will receive the signature of the Governor. Propositions like that to make the first Friday in May a legal holiday, to be called Arbor Day, pass both the Assembly and the Senate, and are signed by the Governor. All

the industries and business of the country have to submit to political necessity. There was much greater probability of obtaining the signature of the Executive to Mr. Rhodes' proposition for whole holidays for the three summer months, which was a compromise measure, than to the bill that has passed.

THERE HAS BEEN some discussion of late as to the proper way of reporting legal-tender notes issued by the United States in the monthly debt statement. The main criticism made on the present form of statement is that the legal-tender notes held by the Treasury should not be counted as an asset, and that the \$100,000,000 in gold held as a reserve on the legal-tender notes outstanding should not be treated as a liability. The outstanding legal-tender notes are undoubtedly an ultimate liability, but as long as the Act of May 31, 1878, requires the reissue of all notes presented for redemption, and that the aggregate amount outstanding shall not be reduced below \$346,000,000, it is impossible to consider these notes an immediate liability. The law requires the Secretary to treat the legal-tender notes coming into his hands as an asset. In the same way the Act of July 12, 1882, requiring \$100,000,000 of gold to be kept as a reserve makes it necessary, in order to balance the account, to place also \$100,000,000 among the liabilities.

IN THE CASE of the city of Louisville, Ky., against the Citizens' and Merchants' National Banks of Louisville, an action was brought to recover unpaid taxes for the year 1886. The defense set up by the banks was that they had paid under the bank Act of the State fifty cents on each one hundred shares of capital stock, which was in lieu of all State and municipal taxes. The Court held, that while the Act of Congress allows National banks to be taxed, it never contemplated they should be taxed heavier than other banks. By the State bank act, State banks are allowed to pay fifty cents on each one hundred shares of capital stock in lieu of all other taxes, and the Court held that National banks could not be placed in any worse position.

THE CODIFICATION OF THE National banking laws recommended by Comptroller Trenholm has, as anticipated, been reported favorably by the Committee on Banking and Currency. Representative Dingley, who has, it is stated, been active in securing the agreement of the Committee to the favorable report, is represented by the Washington correspondent of the *New York Commercial Bulletin* as saying that there is nothing in it except the provision reducing the amount of compulsory deposit of bonds for circulation that can be construed as benefiting the banks. The banks certainly ought to be grateful to the Comptroller for undergoing so much labor to attain so little for them. If it passes, it will at least be a monument to the industry and research of Mr. Trenholm.

THE DECADENCE OF NATIONAL BANKING.

During the past twenty-five years the largest part of the banking capital of the United States has been operating under laws enacted by Congress, as distinct from laws enacted by the legislatures of the several States. Up to this time, the federal laws have operated under conditions that have enabled National banks to make fair profits on the use of their capital. The main features of these laws have been to insure the credit of the banks established under them by certain restrictions enforced by governmental supervision, and to grant a privilege of issuing circulation under conditions. The condition of enjoying the privilege of issuing circulation was the deposit of United States bonds as security for the redemption of the same with the Treasurer at Washington. So long as the interest on the bonds deposited, together with the interest received from loans on circulation less expenses of the circulation, exceeded the income which might be obtained by the direct loan of the capital that it was, (in order to become a National bank) necessary to invest in bonds, it was profitable to bank under the National banking laws. But the rate of interest realized on United States bonds has gradually decreased as the premium rose, and the expenses of circulation have gradually increased until now a man possessed of banking capital finds he can use it more profitably by not taking out National bank circulation. In other words the privilege of issuing circulation under United States law is no longer worth anything. There remains, however, a certain advantage in being a National bank, derived from the prestige and credit the system has obtained in the past from the general good management of banks under it caused by the governmental enforcement of wise restrictions. This advantage manifests itself in a line of deposits proportionately larger in a National bank, than it would usually be in a State or private bank of the same capital. This fact applies more particularly to National banks established in the remoter and newer parts of the country than to those located in the business centres. In a new town the National bank is looked upon by the public as in some way a branch of the Government, and the public places its money with it more freely than with a State or private bank that has perhaps equal capital and is equally as well managed. The question is, will this advantage alone be sufficient to preserve the National system, since the privilege of issuing circulation has become valueless? Do the possessors of banking capital care to submit to a series of restrictions including close outside inspection of their business, with no adequate compensating advantage? So far the system has been kept up on hope. There has an illusion prevailed that Congress would so modify the banking laws that circulation would again become profitable. As long as Congress is in session this illusion will doubtless continue to some extent, but from the action or attempts at action already had, it is almost certain that there is no hope that any legislation will be enacted which will be favorable to the National banks. When the highest recommendation that can be pointed out by the advocate of any financial measure is that it neither openly nor covertly provides any thing that can profit the banking community, it indicates that Congress intends to

let the National system perish by the logical working under changed circumstances of the laws under which it was created. The decadence of the system has been brought about by indirect attack. There has been no interference with vested rights, no attempt to deprive banks of their franchises; the warfare has been in the nature of a siege where resource after resource necessary to the welfare of those beleaguered has been cut off. It might properly be said that the scope and power for good of the system as conceived and recommended by Secretary Chase, in 1861, was seriously restricted before its inception. The first step in this direction was the passage of the legal-tender acts, which by the amount of legal-tender notes issued, narrowed the field for a bank circulation. Another was the provision permitting the taxation of the shares of the banks by State authority. The intention and expectation at this time was that after peace was declared or at least as soon as specie payments were resumed the greenbacks would be funded and their place taken by the National bank notes. The limit on the aggregate amount of bank circulation was first fixed at \$300,000,000, afterwards increased to \$354,000,000. Specie payments being postponed longer than was originally expected, the limit on the aggregate of bank circulation was not removed until the passage of the act for the resumption of specie payments of January 14, 1875. This act after removing the limit of \$354,000,000 theretofore fixed on the aggregate amount of National bank circulation, provided that as new notes were issued to the banks, legal-tender United States notes then outstanding in excess of \$300,000,000 should be redeemed to the extent of eighty per cent. of the new National bank notes issued. The legal-tender notes outstanding at the date of the passage of the resumption act were \$882,000,000, and of these, therefore, \$82,000,000 might be retired on the issue of \$102,500,000 of new National bank notes. It is plain that at this time it was the belief that with the resumption of specie payments the legal-tender notes would finally disappear, and in order to insure their successful redemption in coin, it provided for the gradual reduction of such notes during the period anterior to the date fixed for resumption, and also contemplated that National bank notes would more than fill the void left by the retired legal-tender notes, calculating perhaps that the excess of 20 per cent. in the new issues of bank notes would meet the demands of the gradually increasing business of the country. If this policy had been adhered to it is probable that with the resumption of specie payments, the remaining legal-tender notes would have been presented, would have been cancelled and not reissued, National bank notes taking their place, which with the gold coin issued in redemption of the legal-tender notes would have formed the circulating medium of the United States. Under this law an actual reduction of the legal-tender notes in circulation on January 14, 1875, did take place until May 31, 1878. To the latter date \$35,818,984 in greenbacks were retired and cancelled. National bank notes were not increased as expected inasmuch as the amount retired by the deposit of legal-tender notes for their redemption was greater than the new issues. The shrinkage of legal-tender notes was as stated, \$35,818,984, and of National bank notes nearly \$30,000,000. Although this shrinkage indicated a natural automatic contraction of the paper currency in response to the natural laws of business, the inflation element became alarmed and the sentiment against further contraction became so strong that Congress on May 31, 1878, passed an act

forbidding any further contraction of the legal-tender note circulation, and the amount of these notes outstanding has since remained as they were on May 31, 1878. It was very natural that in the face of the resumption act that there should be some contraction of the paper currency of the country, when the legal barriers existing against it were removed. A constant liquidation had been going on during the period from 1873 to 1878, and all classes were preparing for the new basis to be established in 1879. But the National banking system was not to be permitted to reap any benefit from an increase of circulation after specie payments were resumed. The greenback advocates gained their point when they stopped the redemption and cancellation of the legal-tender note. In February, 1878, the act authorizing the coinage of the silver dollar and the issue of silver certificates was passed, and from that time National bank circulation had to contend with two rival forms of paper money instead of one. Whether the opponents of the banks acted according to a preconceived plan, or whether they merely scored a point whenever they could and left the rest to Providence, does not appear. It is plain that no more complete methods for suppressing National bank notes could have been devised, which would accomplish the object without any obvious unfairness to the banks. The act of June 30, 1874, had permitted the banks to withdraw their bonds on depositing legal-tender notes to retire the circulation which such bonds secured. This act was just to the banks and enabled them to avail themselves of the increasing premiums their bonds commanded whenever circulation became unprofitable on account of such premiums. The proper way to have prevented a contraction of the bank currency from this cause, was to increase the amount of circulation that might be legally issued on the bonds as the market value of the latter rose with the increased credit of the Government. And this course would have become unavoidable had it not been for the coinage of the silver dollar and the consequent issue of silver certificates. From the moment that the Government began to issue the silver certificates the last chance for obtaining legislation favorable to an increase of bank circulation passed away. The contraction of National bank notes no longer had any terrors for the inflationist except as an argument to support a demand for a larger coinage of silver and a larger issue of certificates. All attempts to secure any legislation favorable to the National banks are now met by the reply that the demand for additional paper circulation is fully met by the silver certificate.

In the rise, growth and decadence of the National banking system, the history of the United States has but repeated itself. In three great emergencies, banks have been chartered by congressional action as a means of relieving the financial difficulties of the country. Such banks have, it would seem, never been regarded as a permanent necessity. When prosperous times have returned, the principal instrument by which the prosperity has been brought about are thrown aside and neglected until another emergency arises. National banks seem to be the crutches on which the National finances rely when they are crippled, to be thrown aside as soon as the injury is mended and strength has returned. At the close of the revolution after the adoption of the federal constitution, Alexander Hamilton funded the debt incurred during the war, and gave strength and credit to the securities of the Government by means of the first bank of the United States. This bank

chartered in 1791, continued until 1811. During that period the revolutionary debt of over 76 millions of dollars had been reduced to 45 millions. With remarkable lack of foresight Congress in 1810 refused to recharter the bank, and it went out of existence in 1811. For several years the signs of the times had pointed to a war with England, and in 1812 it broke out. Then the need of the bank was felt. The credit of the Government sunk so low that from 80 millions of bonds placed on the market the Treasury only realized 34 millions of dollars. The debt rose during the war from 45 millions to 127 millions in 1816, and the financial affairs of the country were in such confusion that Congress was absolutely forced to charter the second bank of the United States as the only remedy. Men like Henry Clay who in 1811 had refused to recharter the first bank of the United States on alleged constitutional grounds, came to the opposite conclusion and created a new institution of the same kind. The constitutional ground of necessity always prevails in this country. It not only justifies wise measures that are not found in the letter of the instrument but also some foolish ones, but above all it is a most excellent excuse for the inconsistencies of constitutional statesmen. The fate of the second bank of the United States was similar to that of the first, the ground of necessity by which it had been created in 1816 by the votes of the majority of Congress, slipped away, when in 1835 President Jackson by his veto annulled every measure to recharter it, on the ground that he had grave constitutional doubts of the necessity of its longer existence. Again in 1861-65 when another emergency arose the appeal was to the same remedy—a National bank. Although somewhat different in form, the National banking system was similar in the principles on which its right to exist were founded to the two banks of the United States already mentioned. It has served its turn equally well with its predecessors. National credit has, through its aid, been brought to the highest point ever known in the history of this country or any other. The nation no longer needs its help, and it may be suffered to fall into desuetude. Perhaps when some future war or other emergency shall strain the resources of the country, when its credit again droops, the resort will again be to the method which three times has tided over the financial effects of disasters. Perhaps when such events occur, the statesmen who control things then will look back with regret and wonder that so valuable a sustainer of National finance in times of difficulty was not preserved for the benefit of posterity.

Defalcation at the National Park Bank.—A defalcation of about \$100,000 has been discovered at the National Park Bank. The vacancy in the Presidency, caused by the death of the late George H. Potts, necessarily led to a thorough examination of the accounts and funds of the institution before the incoming President would take charge, and the anticipation of this appears to have caused the disappearance of the guilty party, who, it is believed, is the Assistant Cashier of the bank, Charles I. De Baun. While this occurrence may reflect somewhat on the routine management, it does not in any way affect the soundness of the National Park Bank. It is understood that the system of accounts and handling checks and cash was as perfect as ingenuity could devise. Such a loss only shows the impossibility of absolutely preventing dishonesty. The surplus of the institution is nearly two millions of dollars.

IDENTIFYING SIGNATURES.

There are few positions more delicate or more trying for a bank officer than to be placed on the witness stand to testify as to the genuineness of a signature to an important document. Is there any such thing as an absolute identification of a signature? Do the professed experts in handwriting really know quite as much about the matter as is commonly supposed? Every one knows how easy it is to be mistaken at the first glance as to the identity of even a familiar acquaintance; how, sometimes, it is necessary to take a second look, and perhaps a very good look, in order to be quite sure whether the person in question is really the one with whom we are acquainted or not. What a difference does even the arrangement of the toilet make in the same person. On the other hand, how nearly alike the same dress and general arrangement of the costume will make two persons who really do not resemble each other to any great degree at all. An excellent illustration of the latter suggestion is afforded by the appearance of the principal actors in such a play as the "Comedy of Errors." As to the former suggestion, that the same person can totally change his appearance by altering his dress and manner, who that has seen such an actor as Booth play the "Fool's Revenge" on one night and "Hamlet" the next could doubt its truth. Mistaken identity is a familiar theme, and more than once has some unfortunate narrowly escaped an unhappy fate through resemblance to some curious "double" who has come within the censure of the law. Most persons can readily recall instances of the most singular resemblances between twins—instances in which even intimate friends could scarcely tell one from the other. If, then, there is often so much difficulty in identifying an individual who does not change his identity, but only his personal appearance, how much harder is it to say with certainty that a specific signature has been made by a specific person merely because one has seen that same person's admittedly genuine signature written so many hundred times before? It will be observed that the proposition is not to identify the same identical signature which one has seen often before, but to testify from a recollection of admittedly genuine signatures as to the genuineness of a signature which one now sees for the first time.

The difficulty, sufficiently great in itself, is further enhanced by the fact that in case of a forged signature in dispute has been intentionally made as nearly like the genuine as the forger's skill would admit. And that the crime of the forger has been brought to a state of the highest perfection, the instances are, alas! too many and too strong. The actual value of the so-called expert testimony on this point is shown by the fact that on every trial involving the genuineness of a disputed signature the testimony of experts differs point blank, and as many can be brought to testify on the one side as on the other, and the jury, if they wish to reach a just conclusion, have to be guided not so much by the testimony of experts as by the collateral circumstances of the case.

It is an admitted fact that very few persons write a perfectly uniform signature. In by far the greater number of cases, if a batch of checks, all signed by the same person, be arranged so that the signatures will be one above

the other, hardly any two signatures will be found to be precisely alike, and those few persons who do write a uniform signature usually contrive such an hieroglyphic that no one can tell where one letter ends and the other begins.

But, it may be said, does not the handwriting of most persons have such characteristics as enable it to be readily distinguishable from that of every one else? To a certain extent—yes; especially in the case of an extended document, as, for example, a will; but in the case of a signature we have but two or three words at best—a slender foundation on which to build a decision charging a man with the execution of an instrument the genuineness of which he absolutely denies. From the inherent circumstances of the case, then, the testimony of experts as to the genuineness of signatures is to be received with great care and discretion. Such testimony is valuable, but not conclusive, and in all cases the burden of proof ought, in justice (if not in law), to be thrown on the one offering to prove the signature, and not on the one who denies it.

THE AMERICAN RAILROAD MARKET.

(LONDON STATIST, APRIL 14TH.)

At the present time the whole Continent is in apprehension of a great war, and yet the market for foreign Government bonds has been booming for weeks past. On the other hand, the United States of America will not be drawn into a war, even if one should break out in Europe; on the contrary, they would benefit by such a conflict, since it would give rise to a demand for American commodities of various kinds. And yet the market for American railroad securities is extremely depressed, and has been so for months past. What is the meaning of this seeming paradox? Last week we pointed out the principal causes of the rise in the prices of foreign Government bonds, and now we will inquire into the causes of the depression in the American market. First among those causes is undoubtedly the war scare at the beginning of last year. When the West Shore was bought by the New York Central in the middle of 1885, the belief sprang up in Europe, as well as in America, that we were about to witness an extraordinary boom in the American market, and buying on a great scale began on European account. The rise that followed was therefore due to the assistance given by Europe in that market. But after Prince Bismarck's notorious speech in the Reichstag in January of last year there followed a kind of panic upon the Continental Bourses. Unprecedented masses of stock were sold by Continental holders and bought on American account. Since then Continental capitalists and speculators have held aloof altogether from the American market; and experience has shown that American capitalists and speculators unaided are unable to sustain the high prices which had been reached at the end of 1886. The inability of American capitalists to do so was partly due to the fact that in the middle of 1885 railway construction upon an enormous scale began. The great capitalists throughout the Union advanced large sums to the railway companies which engaged in this construction, and they were unable last year to sell the bonds which were given to them in payment for the advances. In short, too much of their money was locked up in new bonds on account of new railway construction to permit of their being able to sustain the high level of prices to which the market had previously been raised.

The inability to sell, in its turn, was due to the apprehensiveness of the

money market, because of the accumulation of cash in the Treasury. It will be in the recollection of our readers that all through the summer grave fears were entertained in the United States of a panic because of that accumulation. In August and September the rates of interest and discount rose to from about 6 per cent. at New York to about 14 per cent. in the remoter parts of the South-West. When the value of money in the short loan market was so high, there was, of course, no inducement to buy bonds only yielding 4 or 5 per cent., and therefore bankers and capitalists generally were unable to dispose of their bonds at home. Here in Europe, owing partly to the scare and to the losses that followed it at the beginning of the year, and partly to the continuance of political apprehension, there was no disposition to buy the bonds, and thus, in spite of all efforts to sustain it, the market gave way towards the end of the year. The financial embarrassments caused by the accumulation of money in the Treasury in this way put an end to the advances to the railway companies. The railway companies were obliged to suspend the construction of new lines, and the check thus given to railway building gave a check to the great industries ancillary to railway building, especially coal and iron. Thus, trade itself did not appear so prosperous as previously, and the inducement to speculate in the stock markets became consequently less. In addition to all this, public attention had been diverted to a large extent from the stock markets to other forms of speculation. There was an extraordinary speculation in real estate, and there was a very large speculation, too, in wheat, coffee and other commodities. Then there followed strikes, wars of rates, and extremely bad weather, which caused railway traffics to compare unfavorably with the previous year. Lastly, the approach of the Presidential election has exercised a depressing effect upon the market, and still more depressing has been the influence of the uncertainty as to the action of Congress. No one knows whether it will enable the Secretary of the Treasury to dispose of his surplus, and no one knows, on the other hand, whether it may not adopt some policy that will bear heavily upon the railways.

Some of those adverse influences have already ceased to exist. Spring is setting in, the strikes are at an end, and there is a prospect of an arrangement of the wars of rates. Then, again, there appears to be a considerable speculative account open for the fall in New York and other American cities. If this be the case the speculators will, some day or other, have to buy back what they have sold without possessing, and will thus themselves contribute to send up prices. As regards the action of Congress, it is clearly not to the interest of either political party to bring about a panic during the Presidential election. It is reasonably probable, therefore, that some measure will be adopted which will enable the Secretary of the Treasury to get rid of at least a portion of his surplus, and if this occurs the addition made to the supply of loanable capital in the outside market will certainly send up prices. Already money is cheap and abundant, and it will then be certain that it will continue both cheap and abundant throughout the year. Besides, it is to be recollected that the redemption of debt would in that case be enormous, and those whose bonds are redeemed by the Secretary of the Treasury will have to invest in something else. There would, in short, be a shifting of investments, similar to what we have seen here during the past few weeks, upon the letting out of the surplus from the Treasury. Then, as regards the adverse influence of

strikes and bad weather upon traffic returns, it is to be recollected that much of the traffic has simply been delayed. Thus, we learn that for the month of March the loss of gross earnings on the New York Central, compared with March of last year, was only \$72,000; in other words, while there was an enormous loss in the first three weeks, the gain in the last week was so immense that it nearly made up for all the loss of the previous three. Now the good weather has set in, there will be a hurry to dispatch all the traffic that has been delayed, and the next few months are likely to show very considerable increases, and these increases will appear all the larger because the Inter-State Commerce Act came into operation at the beginning of April last year, and for a month or two exercised a depressing influence upon traffics. Lastly, it is reasonable to conclude that the influence of conversion which has been so great upon home railway stocks, colonial bonds and foreign Government bonds will, bye and bye, extend to American railroad securities, and if European buying of these securities begins, there will undoubtedly be a very considerable recovery. But the recovery is hardly likely to begin until there is a reasonable prospect that Congress will adopt some legislation that will put an end to the accumulation of money in the Treasury, or else until the Secretary of the Treasury announces that he will use his surplus in the purchase of bonds. And, further, the recovery is unlikely to begin until a demand arises for the mass of new bonds held by American capitalists. If a European demand springs up for these bonds, then capitalists will be able to act with vigor in the money market, but for the moment it seems clear that too much of their money is locked up. As regards the springing up of a European demand, we have to bear in mind the loans for military purposes on the Continent and the new issues of all kinds there and here.

Bank Accounts for Women.—Mr. James G. Cannon, Cashier of the Fifth Avenue Bank, of New York city, has published a neatly printed brochure upon the above subject, starting out with the following graceful compliment to the business abilities of women :

“ ‘ Woman is only one of nature’s agreeable blunders,’ says the old play, and many a business man, in the conceit of his narrow training, is fain to amplify this irreverent quip into the form—‘ Woman is only one of nature’s agreeable blunderers.’ But the truth of the matter is this: with far less technical training than a man requires, a woman becomes the keenest and most accurate of business managers, excelling particularly in those departments which make the severest demands upon an intuitive judgment. All over Great Britain the largest and best hotels are to-day managed by women; in Berlin, Dresden, Leipsic, Magdeburg, Zurich, and in many other great cities of the Continent, by women in all details; and in New York city, the banks and capitalists will tell you of sound and conservative judges of business questions and enterprises among women of refinement, social standing and domestic tastes.”

Full and explicit instructions are given as to the details of opening a bank account, signing names, method of keeping bank book, drawing checks, and verifying the account, and all other matters likely to arise in a depositor’s dealings with a bank.

Notes and Comments on
BANKING PRACTICE.

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by occasional contributions from others who are interested in the subject.

Bank Accounts.—The consideration of the subject of bank accounts in this article will be not so much the statement of specific forms of bank book-keeping as a consideration of the general principles which should underlie all bank accounts, which can be roughly classed as the English and American way. The former is very comprehensive, minute and exact; the latter is rough and ready, not very exact, but gets there just the same—except when it doesn't. The object of the accounts of the bank is to show the exact condition of the affairs of the institution. By showing the exact condition is not meant such a statement as would enable one to form a general estimate of the resources and liabilities of the institution, but a statement from which can be gained a perfectly accurate idea of exactly how everything stands. This method is peculiarly characteristic of English book-keeping, and indeed, in this respect, the English are excelled by their continental neighbors. Any one who has had occasion to come in contact with the book-keeping departments of the best German houses in this country must have been struck by the extreme thoroughness by which all their accounts are kept, everything being noted to the last cent; and everyone must have marked the minute detail with which English banks and banking houses keep a record of all their transactions. The reason that this is so is that the English bankers have found by long experience that the longest way is the best way in the end, and that while some additional expense is incurred in the way of clerk hire, etc., that losses are frequently averted by reason of the extreme accuracy and thoroughness of the bank accounts; not to speak of the savings which are effected by this habitual looking after small things, thus illustrating afresh the maxim: Take care of the pennies and the pounds will take care of themselves.

The rather loose and inaccurate way in which a good many banks have kept their accounts in this country is well illustrated by the remark of the Comptroller of the Currency, in his last report, that 63 per cent. of the bank failures are attributable in whole or in part to ignorance and loose methods of business (Rep. Comp. Cur., 1887, page 10). That is to say, that the Managers of the banks are often ignorant as to the exact condition of their institutions. While having a general idea of the way affairs are going, still they lack that exact and accurate knowledge which is essential to the proper conduct of the business. What, after all, is the object of keeping bank accounts? Is it not to show the exact condition of affairs, and is there any other way of showing that condition except by keeping them with entire thoroughness and accuracy? The underlying principles of all good bank book-keeping are thoroughness

and accuracy. In addition, it may be stated that the system should be such as to be easily understood and as free as possible from unnecessary complications and repetitions. The work itself should be kept well up to date, everything being all the time in the most thorough and perfect order. The accounts of a bank seem to come under three heads. The Cash Department, the Collection Department and the Department of Discounts. Each of these departments should, so far as possible, be kept entirely to itself, so that their accounts may not become intermingled in such a way as to cause confusion. The first department, that of the actual cash, is comparatively easy, so far as the books to be kept are concerned, but it must be remarked that the Teller should be allowed to carry as little as possible on the settling books in the way of cash items, represented by checks, memoranda, and so on; and further, that every dollar that is paid out for expense account should be shown clearly in a permanent form on the regular expense book.

The Paying Teller is commonly presumed to be the custodian of the funds of the bank, and in that capacity receives at the close of the day all moneys which have come into the bank. It is much better, however, that the Paying Teller should be charged only with the custody of the active cash in the bank, while the reserve should be held in a separate vault, to which the President and Cashier should have joint access. The collection department is equally simple in its management. Some banks have a system of numbering items, while others are content to continue on with more old-fashioned methods. The numbering system, however, by which all items are numbered as they come into the bank, has many advantages, and is certainly an improvement both in speed and accuracy over the older methods. The discount department is by far the most important in the bank. It is in this department that the real business of the bank is done, and it is precisely in this department that a system of book-keeping in most banks seems to break down. The discount books, as a rule, do not show the condition of affairs with that fullness and detail which is desirable, whereas, in no department of the bank should the business be set forth with greater care. There must, of course, be a book of original entry, and this original book should show clearly and distinctly all the information desirable in reference to the note discounted; the makers; the indorsers; the collateral, if any; the time; due date; and amount of discount. Certain of these items should be regularly posted to the ledgers kept for that purpose. There should be a ledger for the makers, for the indorsers and, if the bank lends largely upon collateral, for collaterals also. This ledger should be kept with the same accuracy as any other book in the bank, and a proof sheet of the same should be taken off regularly once a month. The statement of the discounts of the bank, when laid before the Board of Directors, should show the condition of that department in full detail; how much paper is out, what kind of paper it is, how much is single name, how much is regular commercial paper, how much accommodation, and how much secured or unsecured by collateral, with such additional information as may occur to the Cashier, to submit to the President and Directors.

Bills Receivable.—The object of the form shown herewith is to present in detail the amount and character of the bills receivable held by a bank. Nothing is more satisfactory to a Board of Directors than to have before them a clear and detailed statement of the discount line. Especially is this the case

when the demand for money is active and regular customers of the bank are pressing for loans :

Banking is becoming every day less and less of an art and more of a science. It is being perceived more and more clearly that there are certain natural laws which obtain in the financial as in the scientific world ; that cause produces effect, and that no long series of operations can be carried on in defiance of these natural laws without ending in disaster. Hence it becomes necessary to have every point which may bear upon the matter in hand brought out in full detail, so that there may be no need of estimates as to probable amounts, but that there may be exact information as to everything under consideration.

The form here given is intended to be laid before the Board of Directors at every meeting, and it is more desirable if a sufficient number of copies are made for each Director to examine the statement for himself. It will be observed that the time loans are stated separately from the call loans, and that in both cases a further sub-division is made. The exact nature of these

sub-divisions, as indeed of the entire classification, depends upon the nature of the business done by the bank and the specific kind of information that the Directors deem most desirable. It may be noted that the term "Sundry Foreign" is intended to include all out-of-town items except New York (if that be the nearest principal city). The "Memoranda" are intended for such items as may require the special attention of the Board.

Order of Desks.—Pursuing the subject of the rank of bank officers, it may be remarked that the custom in regard to the order of the clerical position varies in different banks. The Paying Teller is usually ranked as the highest desk, the Second Teller, Discount Clerk, Corresponding Clerk and General Book-keeper coming next, but in no fixed order; then come the individual Book-keepers, Messenger, and so on. Let us take a glance at the duties of the respective positions and see if something like a correct order cannot be arranged. The most important desk in a bank seems to be that of the Discount Clerk. It is here that the principal work of the bank is done and that long experience counts for most. The Discount Clerk should know the standing of every customer on the bank's books, and be able to inform the Cashier as to all minor details; in short, he should act as a credit clerk, and should also have a fair knowledge of the collaterals usually offered at the bank. Theoretically, the discount desk should be next to that of the Cashier, so that, in the absence of that officer, a trained and experienced man may be at hand to supply his place. As a matter of fact, the Paying Teller, as has been stated, usually ranks the Discount Clerk; but, from the consideration stated, it would seem that he ought really to take the second place. The position of Paying Teller requires a man of experience and long familiarity with the business of the institution, and is properly filled by the clerk second in point of seniority. The Receiving Teller naturally comes next in order, and after him the General Book-keeper. In some banks the individual Book-keepers come next, but it would seem better to place the corresponding desk next after that of the General Book-keeper. This desk is one of considerable importance, and, as through it the business of the bank with out-of-town customers is carried on, it should be filled by a clerk of some experience. Next in order come in the individual Book-keepers, and last, but by no means least, the Messengers. As the business of every bank is somewhat different from that of its neighbors, so its method of managing its business will vary, and therefore the order indicated above is only meant as a general guide, to be departed from as occasion may require.

Bank Book-keeping.—We regret to have to state that the usual instalment of the treatise on this subject, which is being prepared for the JOURNAL by an experienced bank accountant, has been omitted from the present number on account of the severe and unexpected illness of the author. The articles already furnished have attracted much attention, and we know from letters received in reference to them that many of our subscribers will be disappointed at the failure to continue them in the present number of the JOURNAL. Our subscribers cannot be more disappointed than we are at this unavoidable failure. The articles will be continued as soon as the health of the author will permit, which we trust will be during the coming month, and will fully sustain the interest they have already excited.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

INSOLVENCY OF BANK—RECOVERY IN FULL FROM ASSETS OF PROCEEDS OF NOTES TRANSMITTED FOR COLLECTION—THE EQUITABLE DOCTRINE AS TO THE TRACING AND RECOVERY OF TRUST FUNDS APPLIED—THE QUESTION OF BANKER'S LIEN—A DECISION BY THE SUPREME COURT OF TEXAS IN THE CASE OF THE FAILED CITY BANK OF HOUSTON.

This was a suit by the Continental National Bank, of New York, as a claimant *pro interesse suo* against the estate of the insolvent City Bank of Houston. The facts were as follows:

On the 19th of December, 1885, William R. Baker, as President of the City Bank of Houston and one of its largest stockholders, and the Houston Insurance Co., another stockholder, filed a petition in the District Court of Harris County, Texas, against certain of its creditors and other stockholders, alleging its insolvency and praying for the appointment of a Receiver, and for the collection and distribution of its assets among the holders of claims against it, according to their respective priorities; and on the same day, B. F. Weems was appointed Receiver in accordance with the prayer of the petition and thereafter acted under the direction of the Court in that capacity.

By the course of dealing kept up through a series of years between the City Bank of Houston and the Continental Bank of New York the New York bank had discounted the paper of the Houston bank, and just before it fell due had forwarded it to the latter "for collection and returns." Immediately before its failure the Houston bank had received a large amount of paper so discounted for it by the New York bank, and had collected it in part and placed the proceeds to the credit of the latter. For others of these notes the Houston bank received renewals, which were discounted by other banks in New York and the proceeds applied to the payment of its debts. On the 3d day of September, 1886, the Continental Bank intervened in the original suit, claiming to be a creditor of the City Bank of Houston, and claiming a priority of payment out of the assets in the hands of the Receiver of the amount due to it by reason of the collection and appropriation of the proceeds of the notes sent by it to the Houston bank.

The Receiver resisted the claim, denying claimant's right to priority, and answered further that the City Bank, before its failure, had sent to the Continental Bank several promissory notes for sums amounting in the aggregate to over \$20,000 to be discounted; that the latter refused to discount the notes, but retained them without authority, and then collected some of them and was proceeding to collect others. To this counter claim the Continental Bank replied, setting up a lien upon the notes to secure the payment of a general balance due it from the City Bank at the time of its failure.

Upon the trial of the issues so presented, the Court gave judgment disallowing the claim of priority, but allowing the claim of the Continental Bank as a general creditor and awarding a recovery against it in favor of the Receiver for the full amount of the notes claimed by him to have been converted by it, less about \$5,000 paid upon drafts of the City Bank upon it, after the paper went into its hands. The judgment further provided that the Continental Bank should deliver up the notes or their proceeds to the Receiver

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

within thirty days, and that upon its failure so to do the judgment against it should be charged against its dividends and the Receiver should have execution against it for the balance. From this decree the Continental Bank appealed to the Supreme Court of Texas.

Held, The first assignment is, in substance, that the Court erred in decreeing that the Continental Bank was not entitled to have the amount of notes sent by it to the City Bank for collection paid in full from the assets in the hands of the Receiver. The evidence shows that some of these notes, amounting to about \$5,000, were collected by the City Bank and were mingled with the funds after being credited to the Continental Bank, and that others were renewed and the renewed paper discounted in New York for the account of the City Bank—the proceeds going to pay its debts.

The first question to be determined is whether, under the agreement and the course of dealing between the two, the collecting bank is to be deemed the trustee of the funds received by it upon the notes which were paid and of the renewed obligations which were taken in lieu of those which were not paid. Before the trial an agreed statement of the facts was signed by counsel representing the parties and filed among the papers in the case. The agreement appended to the statement is as follows: "The matters and facts set forth in the foregoing eight pages are for the purpose of the trial of the above entitled cause, admitted to be true and correct, and may be used in evidence upon the trial of said cause, the parties thereto reserving the right to introduce such additional evidence not inconsistent with the foregoing as may be decided." The agreed statement contains the following paragraph: "That in the course of dealings between the City Bank and complainant the latter was in the habit of discounting notes for the City Bank and of forwarding the same, on maturity, to the City Bank for collection and returns, with an understanding that the proceeds of such discount notes should be preserved by said City Bank as the property of the complainant and returned to it as such." The agreement further shows that the notes last referred to were received by the City Bank "for collection and return of proceeds."

We think these facts settle the question of trust in the affirmative. If the securities had been sent for collection merely, the proceeds to be credited to the New York bank, it is clear that after their collection the relation of creditor and debtor would have subsisted, and the Continental Bank would have no claim upon the funds. But by the understanding between the banks and the actual transaction between the parties as shown by the agreed evidence a special agency was created and the City Bank had no authority to hold and credit the proceeds of the notes, but was bound to remit them immediately to its correspondent. This principle was clearly recognized by this Court in the case of *Bank vs. Weiss*, 67 Texas, 331, and is sustained by the great weight of authority, as appears from the citations in the opinion in that case.

But it is insisted by the counsel for the Receiver that there is other evidence in the record, not inconsistent with the agreement, which shows that the relation of debtor and creditor, and not that of trustee and *cestui que trust*, was created by the transaction. We think, however, that any evidence to show this fact in the face of the explicit statement in the admitted proof would be inconsistent with the agreement and should have been disregarded by the Court, whether objected to or not. But we do not regard the evidence relied on as being in conflict with that in the agreed statement. The Receiver, who was Cashier of the insolvent bank for many years previous to its failure, testified to the effect that, in previous transactions of a like character, it had been the habit of his bank to collect and credit the proceeds of the discount notes sent it for collection. But the Continental Bank showed, on the other hand, by the testimony of its President, that in discounting paper for its customers at a distance it was the custom to charge interest after the maturity of the paper, to allow for the transmission to it of the proceeds after collection, as well as exchange, on the amount; and that in order to avoid these charges the City Bank agreed to keep with the New York bank sufficient funds to meet the discounts as they matured, and that in all previous transactions this promise had been complied with. As long as the City Bank kept with its correspondent a sufficient sum to cover the amount of the discounted paper as

it fell due it had the right to the proceeds when collected; for it had then virtually taken up the securities. But we do not see how the conclusion can be drawn from this that it was entitled to credit its collections when it had no funds in the hands of the New York bank to make good its account, as was shown to be the fact in this particular transaction. Had the Continental Bank permitted this, it might as well have extended credit to the Houston bank in the first instance, without security, which the testimony shows it was very careful to avoid. It may be inferred from the Receiver's testimony that his bank did not always have funds with its correspondent to cover its discounts at maturity. But he also testified that in every instance its account was immediately made good. As this was all the Continental Bank could have legally demanded, it is not seen that the fact of the City Bank's crediting the proceeds of the discounted notes returned for collection in such cases could have affected the Continental Bank's right as to future cases, under their express agreement, or under the restrictive indorsements, made upon the notes in the particular instance now under consideration. We think, therefore, that when the City Bank collected the last notes they acted in a fiduciary capacity and received the proceeds in trust for the Continental National Bank, and that it was its duty to remit them to the latter.

This brings us to the further question whether, under the circumstances of this case, they were divested of their character of trust funds when they were placed by the collecting bank in its vaults, and there mingled with its other moneys. It is a principle of equity long recognized and applied that when one who is entrusted with the money of another invests it in property, the *cestui que trust* may follow the fund, and fixing upon the property the character of the original trust, may claim it as his own. (Ryall *vs.* Rolle, 1 Atk., 172; Scott *vs.* Surman, Willes, 400; Burdett *vs.* Willett, 2 Vern., 638.) But in an early case it was said: "But if the factor have money, it shall be looked upon as the factor's estate, and must first answer the debt of a superior creditor, * * * for in regard that money has no earmark, equity cannot follow that in behalf of him that employed the factor." (Whitcomb *vs.* Jacob, 1 Salk., 160.) The idea thus suggested seems to have long prevailed in the Courts of England. But at a later day a different doctrine has been established in those Courts (Taylor *vs.* Plumer, 3 Maule & S., 562; Pennell *vs.* Deffell, 4 De Gex M. & G., 372; Knatchbull *vs.* Hallett, 13 Ch. Div., 696), and has generally been applied in the Courts of last resort in this country in the more recent cases. (Bank *vs.* Ins. Co., 104 U. S., 54; Brocchus *vs.* Morgan, Tenn. 5 Cent. L. J., 53; People *vs.* Bank, 96 N. Y., 32; McLeod *vs.* Evans, 66 Wis., 401; Harrison *vs.* Smith, 83 Mo., 210; Stoller *vs.* Coates, 88 Mo., 514; Peak *vs.* Ellicott, 30 Kan., 156.)

The rule thus followed in the cases last cited, we think, is founded on the better reason. Where the trustee kept the fund separate, and the original money was capable of being identified, there never was any question. The *dictum* above quoted is not understood as having been applied to such a case. It is when the trustee has mingled the trust money with the mass of his other funds that the difficulty arises. It may be that when the entire mass is paid away the right to claim a trust in any money or property is forever lost. But if, as in the present case, throughout all the trustee's dealings with the funds so mingled together, he keeps on hand a sufficient sum to cover the amount of trust money, we think it capable of demonstration that the trust should attach to the balance that is found to remain in his hands. Let us take the case before us for an illustration. It is shown by the evidence that after the bank received the money, amounting to about \$5,000, its cash assets were never reduced below the sum of \$6,000 until they went into the Receiver's hands. Even admitting that in the course of its transactions this identical money was paid out by the bank to its uttermost farthing, yet we know that every dollar so expended left its representative and exact equivalent in the vault from which it was taken, and that, when again the money so left was expended, it left in turn its equivalent behind it. We see, therefore, that whatever changes may have taken place in the funds from the receipts and expenditures of the bank, the balance left at the date of its failure was the result of the proceeds of notes to the extent to which such balance was thereby increased, and that the cash which went into the hands of the Receiver should be deemed the

representative of these proceeds and impressed with the trust character which pertained to them. The equity would have been no stronger if the City Bank had used the Continental Bank's money in the purchase of bonds or other securities, which were found in its vaults and identified, and if the Continental Bank were now seeking to recover the securities so bought. For the reasons given we are clearly of the opinion that the Continental Bank was entitled to priority of payment for the proceeds of the notes collected by the City Bank; but we think that the claim for full payment on the notes received and rediscounted by it, stands upon a very different ground.

The agreed evidence shows that these renewed obligations were indorsed by the City Bank, and deposited as collateral with banking houses in the city of New York, and were paid to the holders, either in whole or in part. As to the one which was only partially paid, the agreement recites "that said renewal notes to the amount of \$1,250 went to pay the debt of said City Bank, and benefited its estate accordingly." As to the other two, the language in reference to the disposal of the proceeds is a little different, but we presume it means the same thing. We therefore deduce from the admitted facts that with the proceeds of the notes now under consideration, obligations of the insolvent bank were discharged, and that no other benefit accrued to its estate.

Now, then, the question is, Has the Continental Bank a lien upon the general assets in the hands of the Receiver for the proceeds so appropriated? We think not. To hold the affirmative of this proposition would be to declare that every one who receives the money of another in a fiduciary capacity, and expends it in payment of his own debts, thereby creates a lien upon his entire estate in favor of the owner of the money so expended. But this is clearly contrary to the doctrine of constructive trusts. The true rule is that the trust estate must be clearly traced into other specific property, in order that the *cestui que trust* may claim either the property itself or a lien upon it. This is the doctrine uniformly applied in the older cases and laid down by the text writers upon the law of trusts. (*Perry vs. Phelps*, 4 Ves., 107; *Lewis vs. Madocks*, 17 Ves., 48; *Denton vs. Davies*, 18 Ves., 499; *Taylor vs. Plumer*, 8 Maule & S., 562; *Pennell vs. Deffell*, 4 De Gex, M. & G., 373; *Knatchbull vs. Hallett*, 13 Ch. Div., 696; *Phares vs. Leachman*, 20 Ala., 662; *Noble vs. Andrews*, 37 Conn., 346; *Roberts vs. Broom*, 1 Har. Del., 57; 2 *Perry, Trusts*, Sec. 835, *et seq.*; 2 *Story, Eq. Jur.*, Sec. 1,253; 2 *Pom., Eq. Jur.*, Sec. 1,051.)

We have a line of decisions in our own Courts which, we think, have an important bearing upon the question before us. It is held that the wife may follow, through all its mutations, the proceeds, in the hands of the husband, of her separate estate converted by him, and claim the property into which they have been invested. But at the same time it has been repeatedly decided that to enable her to do so the proceeds must be clearly and distinctly traced. (*Rose vs. Houston*, 11 Tex., 163; *Chapman vs. Allen*, 15 Tex., 278; *Love vs. Robertson*, 7 Tex., 6; *King vs. Gilleland*, 60 Tex., 271; *Glasscock vs. Hamilton*, 62 Tex., 143.) This results from an application of the doctrine of constructive trusts to the separate property of the wife in the hands of the husband.

The principal whose money has been misapplied by his agent occupies with us no higher ground than the married woman whose husband has misappropriated hers; and our Courts have never held that the wife, in the latter case, is entitled to priority of payment out of the husband's estate as against his general creditors. This is shown by the case of *Richardson vs. Hutchins*, 68 Tex., 81, in which the wife recovered a large judgment against her husband, executor for her separate property, used by him in payment of his debts; but recovered only as a general creditor.

The Continental Bank's claim for priority as to the funds which went into the vaults of the bank also has a materially different effect upon the rights of other creditors from the claim we now have under consideration. As to the former, we have attempted to show that it clearly appears that the direct equivalent and substitute for the proceeds of the notes collected by the City Bank went into the hands of the Receiver. The authorities also hold that where the trustee mingles the trust money with his own, whenever he pays out (leaving enough to cover the trust fund) he is presumed to pay out his own

money. (*Knatchbull vs. Hallett, supra; Bank vs. Ins. Co., supra.*) Upon whichever ground we put it, the proceeds of the collected notes are traced into the bank vault and their specific substitute found there; and it works no injury to the general creditors to require the Receiver to pay back money which never belonged to the bank. On the other hand, to allow a like priority for payment for the conversion of the renewed notes would be to diminish the assets, which the insolvent bank both legally and equitably owned to repay trust money, which merely went to pay its debts. These payments may have gone to benefit its estate in one sense, but they did not contribute to swell the assets. The decisions relied upon by the counsel for the Continental Bank to support their position upon this question can hardly be deemed applicable to the facts of the present case. (The cases of *Brocchus vs. Morgan, supra; Bank vs. Ins. Co., supra; Peak vs. Ellicott, 80 Kan., 156; People vs. Bank, 96 N. Y., 32; Harrison vs. Smith, 83 Mo., 210; Stoller vs. Coates, 88 Mo., 514, and McLeod vs. Evans, 66 Wis., 401, are here discussed and distinguished by the Court, which says: "With the greatest deference to the Courts who decided these cases we are constrained to differ with them upon the point, and to hold that in order to fix the trust upon any part of the assets, the particular property into which trust money has been converted must be pointed out with at least practical definiteness and certainty."*)

The Continental Bank next complains of the action of the Court below in charging it with the notes sent to it by the City Bank for discount. The facts in regard to this matter are, in brief, that the City Bank sent the notes to the Continental Bank to be discounted and to have the proceeds placed to its credit, according to a previous course of dealing between them. The Continental Bank refused to discount the paper and so notified its correspondent; but before the note was received by the latter, not doubting that the paper would be discounted, it drew upon the Continental Bank to the amount of about \$5,000. The Continental Bank paid these drafts, relying upon the notes for reimbursement. It is now contended that it has a lien upon this paper for the payment not only of the \$5,000 so paid, but also for its general balance on account against its correspondent. This proposition cannot be maintained. It is frequently said that a banker has a lien upon the funds in his hands for the indebtedness of his customer, and it is agreed that this rule applies unless there is an express agreement to the contrary. But we understand the rule to be that in order to give such lien there must be a contract for that purpose either expressed or implied. "The credit must be given on the credit of securities or valuables either in possession or expectancy." *Russell vs. Haddock, 8 Gilman, 238.* This is the extent of the banker's lien." (*Bank vs. Bank, 68 Ill., 898; see, also, Jarvis vs. Rogers, 15 Mass., 389; Lucas vs. Dorrien, 7 Taunt., 279.*) In the case last cited a lease was presented to a banker by his customer as collateral for a loan, which the banker declined to accept, and it was casually left with him. It was held he had no lien upon it. So in this case, the Continental Bank having refused the paper, had no right to hold it and should have returned it. Having failed to do so, it has no lien except for the amount of the drafts paid, after the paper was renewed. We think, however, the Court erred in rendering judgment against the Continental Bank for the full value of the notes, although it decreed that the judgment might be satisfied by turning over to the Receiver such as had not been collected together with the proceeds of those that had been paid. A proper judgment would have been to charge the Continental Bank in account with the moneys collected upon the paper, and with the value of so much of it as remained unpaid, to be set off by the amount of the drafts drawn upon the Continental Bank by the City Bank after the notes were forwarded for discount.

For the errors pointed out the judgment will be reversed and the cause remanded with instructions to the lower Court to have evidence as to the value of the notes sent to the City Bank for discount and not discounted at the date of the filing of the Receiver's plea in reconvention, and to charge the Continental Bank with such value, instead of the face value, as in the former judgment; to allow the Continental Bank's claim for priority of payment out of the assets in the Receiver's hands to the amount of the notes sent to the City Bank for collection and collected by it, but not for those renewed and

rediscounted, and in all other respects to state the account as before, and to give judgment accordingly.

Continental National Bank vs. Weems, Supreme Court of Texas, January 17, 1888.

DEPOSIT OF DRAFT INDORSED "FOR COLLECTION"—TRANSMISSION TO CORRESPONDENT AND COLLECTION—RIGHT OF COLLECTING BANK TO RETAIN PROCEEDS, AS AGAINST OWNER, FOR DEBT OF TRANSMITTING BANK WHICH HAS FAILED.

This was an action brought by the First National Bank of Circleville against the Bank of Monroe to recover the proceeds of a draft for \$3,095 drawn by Warner & Co., of Rochester, New York, and accepted payable at the defendant's banking house at that place. The draft matured June 18, 1887, and was paid on that day to the defendant. The plaintiff became the owner of the draft prior to May 23, 1887, and on that day transmitted it by mail to the Fidelity National Bank of Cincinnati, indorsed, "For collection, for First National Bank of Circleville," accompanied with instructions "for collection and credit." On May 25th the Fidelity Bank transmitted the draft by mail to the defendant indorsed, "For collection, Fidelity National Bank, Cincinnati," accompanied with instructions to collect and credit the proceeds to the Fidelity Bank. For a considerable time prior to May 23rd the plaintiff had kept an account with the Fidelity Bank and the latter had collected negotiable paper for the plaintiff and, by the course of business, the collections when made were credited to the plaintiff by the Fidelity Bank. The plaintiff was allowed interest by the Fidelity Bank upon daily balances. The Fidelity Bank sent the draft for collection to the defendant, pursuant to an arrangement by which each sent to the other commercial paper for collection, it being understood that the proceeds were not to be specifically returned, but were to be credited to the sending bank by the receiving bank and enter into a general account between them consisting of such collections and other debit and credit items. When the draft was paid by the drawee to the defendant the latter credited the Fidelity Bank with the proceeds and notified the Fidelity Bank by due course of mail; and on June 21st the Fidelity Bank charged the defendant on its books with the proceeds. The Fidelity Bank suspended business at the close of the day of June 20th, being then insolvent, and did not resume business but passed into the hands of a Receiver. After this, on July 21st the plaintiff was credited on the books of the bank with the proceeds of the draft. When the Fidelity Bank failed it owed a balance of \$2,634 on account to the defendant, exclusive of the proceeds of the draft.

Held, Upon these facts it appears that the relations between the defendant and the Fidelity Bank in respect to paper received by the former from the latter for collection were those of debtor and creditor, and not merely of agent and principal (Morse, Banks, 52), and the defendant having received the paper with the right to appropriate its proceeds upon general account, to offset or apply upon any indebtedness existing or to accrue from the Fidelity Bank, growing out of the transactions between the two banks, was a holder for value. (Bank vs. Railroad Co., 14 Blatchf, 242; affirmed 102 U. S. 14.)

If the defendant had been justified in assuming that the draft was the property of the Fidelity Bank it would have been entitled to a lien upon it for a balance of account, no matter who was the real owner of the paper (Bank vs. Bank, 1 How., 234.) But the draft bore the indorsement of the plaintiff in a restricted form, signifying that the plaintiff had never parted with its title to the paper. The indorsement by the plaintiff "For collection" was notice to all parties subsequently dealing with the draft that the plaintiff did not intend to transfer the title or the ownership of the proceeds to another. The defendant could not acquire any better title to the draft or its proceeds than belonged to the Fidelity Bank, except by a purchase for value, and without notice of any infirmity in the title of the latter; and as the indorsement upon the draft was notice of the qualified title of the Fidelity Bank, the defendant simply succeeded to the rights of that bank. These propositions were fully considered and decided by this Court in Bank vs. Bank, 22 Blatchf., 58, and the authorities cited in the opinion in that case amply support the conclusions stated. In

view of the restrictive indorsement of the plaintiff upon the draft, if the defendant had actually made an advance to the Fidelity Bank on the faith of it, it could not have retained the proceeds as against the true owner.

The real question in the case is whether the defendant can defeat the plaintiff's recovery, in whole or in part, upon the theory that the Fidelity Bank has acquired title to the proceeds of the draft. If the course of dealings between the plaintiff and the Fidelity Bank was such as to imply the understanding of both that the proceeds of all paper entrusted to the latter for collection should be retained and used as the money of the latter, the law must give effect to this intention and understanding; and it would follow that the proceeds would become the property of the Fidelity Bank the moment when, according to the contemplation of the parties, the relation of principal and agent was to be superseded by that of debtor and creditor. If the proceeds of the draft became at any time the property of the Fidelity Bank the plaintiff cannot look to the defendant, but must assert its claim as a general creditor of the bank against the Receiver. The business relations between the plaintiff and the Fidelity Bank differed in no respect from the ordinary one of banker and customer, in which the account of the latter is made up of credit items of various kinds, including deposits, discounts and collections. The custom of bankers to credit customers with the proceeds of paper left for collection when the paper has been collected, is universally recognized; and customers and bankers are presumed to contract and deal together in view of this usage. The law therefore authorizes the banker to credit the customer with the proceeds, in lieu of making a specific delivery; and the necessary effect of an authorized credit is to create the relation of debtor and creditor between them from the time when the credit is given. Where, as was done in the present case, the customer gives instructions for "collection and credit" he merely expresses in terms what the law would imply if no instructions had been given. When paper is thus delivered to a banker for collection the banker becomes the customer's agent to make collection, with authority to pass the proceeds to the customer's account by a credit after they are collected; and he undertakes the duty of an agent for all the purposes of making the collection. He cannot terminate his responsibility as an agent until he has fully discharged it and has substituted in its place his unqualified obligation as a debtor. Until the banker becomes a debtor, and his obligation as such is complete and irrevocable, he remains an agent merely; and until then he acquires no title to the proceeds of the paper beyond the banker's lien. It is not unusual for bankers to credit their customers with paper left with them for collection in advance of the actual receipt of the proceeds. Ordinarily this is a provisional credit only, made in anticipation that the paper will be promptly paid and with the right to cancel the credit if the paper is dishonored. (*Bank vs. Bank*, 4 Dill., 290.) When the paper consists of sight drafts or checks and the credit is given when the paper is delivered as upon a deposit of money, the transaction may be equivalent to the discount of the paper, or the delivery may be treated as a deposit of money, in which case, of course, the title to the paper passes to the banker. (*Railway Co. vs. Johnston*, 27 Fed. Rep., 248.) These are exceptional transactions, however, in which the rights and obligations of the parties are to be ascertained from the special facts of each case; and they furnish no rule which can be applied to a case like the present, where the credit is not given by the banker until the collection of the paper. If the Fidelity Bank had credited the plaintiff with the proceeds of the draft while it was a going concern, notwithstanding it had not actually received the proceeds, the question would arise whether the plaintiff would not be concluded and its position fixed as that of a creditor instead of a principal. In a case like that it might be urged with much reason that when the banker has, through his sub-agent, collected the paper entrusted to him, and given credit for the amount to the customer, he has done just what both parties contemplated should be done, and hence has properly substituted himself a debtor in place of an agent. The case of *Levi vs. Bank*, 5 Dill., 104, decides in effect that the holder of paper who delivers it to a banker "for collection and credit" is at liberty to treat the banker as an agent until the proceeds are collected by the banker in money, and that the authority of the latter to credit the customer does not

arise until he has actually received the money. If that adjudication should be followed in the present case it would be decisive against the contention of the defendant, inasmuch as the Fidelity Bank had never received the proceeds of the draft in money. But it is not necessary, for present purposes, to adopt the views of the learned judge expressed in the opinion in that case. Up to the time when the Receiver took possession of its assets the Fidelity Bank had neither credited the proceeds of the draft to plaintiff, nor notified the plaintiff that the draft had been collected. It had not elected to terminate its character as an agent and assume that of a debtor to the plaintiff when it suspended business. It could not do this when *in articulo mortis* and thus divest the plaintiff of title to the proceeds of the draft without disloyalty and injury to its principal. The ordinary relation of banker and customer was then at an end and the implied contract founded on that relation did not extend to the new situation.

The defendant's position is no better than the position of the Fidelity Bank. It cannot withhold the proceeds of the draft from the plaintiff because it has any title of its own or any right as against the plaintiff to apply them upon the indebtedness of the Fidelity National Bank. Its defense rests solely on the right of the Fidelity Bank to retain the proceeds as the property of that bank. If it had remitted the proceeds to the Fidelity Bank, instead of crediting them to that bank, it would have fulfilled its whole duty toward the plaintiff as the owner of the draft.

Judgment for plaintiff.

First National Bank of Circleville vs. Bank of Monroe, United States Circuit Court, Northern District of New York, December 20, 1887.

DEPOSIT OF NOTE WITH BANK INDORSED "FOR COLLECTION"—COLLECTION OF NOTE BY CORRESPONDENT—FAILURE OF TRANSMITTING BANK—RECEIVER CANNOT HOLD PROCEEDS AGAINST OWNER.

This was an application by David Armstrong, Receiver of the Fidelity National Bank, for instructions as to his action in regard to \$2,000 received in payment of a certain note. His petition set out the following state of facts on which the instructions of the Court were asked:

On the 18th day of May, 1887, the Winters National Bank, of Dayton, Ohio, being the holder and owner of a certain note for \$2,000 made by L. R. Lee & Bro., of Baltimore, Maryland, dated March 17, 1887, payable three months after date at the Third National Bank of Baltimore to the order of Whitely, Fassler & Kelley, and by them indorsed to said Winters National Bank, forwarded the same to the Fidelity National Bank, of Cincinnati, for collection and credit, placing on the note the following special indorsement: "Pay Fidelity National Bank, Cincinnati, O., or order, for collection for account of the Winters National Bank, Dayton, Ohio, J. C. Reber, Cashier." The Fidelity National Bank forwarded the note to the Drovers & Mechanics' National Bank, of Baltimore, for collection, and on June 20, 1887, the day of its maturity, it was paid by the makers, and the amount thereof was on the same day credited on the books of the Drovers & Mechanics' National Bank to the Fidelity National Bank. On the morning of June 21, 1887, before receiving any advice of payment of said note, and before any credit was given on its books to the Winters National Bank for said note, or for the amount collected thereon by its correspondent, the Fidelity National Bank was closed by the officers of the Treasury Department as insolvent and its assets placed in the hands of David Armstrong as Receiver. No charge was made of the amount of said note to the Drovers & Mechanics' National Bank by the Fidelity National Bank, nor was any credit given to the Winters National Bank for the same until after the Fidelity Bank was in the possession of the Receiver. On the 20th of June, the Drovers' Bank by letter advised the Fidelity Bank of the collection of the note and of the credit given it for the amount. Upon the receipt of this advice the Receiver credited the Winters Bank and charged the Drovers' Bank with the amount on the books of the Fidelity Bank under, or as of date of, June 20, 1887. The Winters Bank did not anticipate the payment of the note by drawing on the Fidelity Bank for the whole or any portion of the amount

thereof. The Winters Bank had a credit balance with the Fidelity Bank and in the course of business would not have drawn on the amount of said note until after being advised that said note had been paid. The Drovers' Bank's account with the Fidelity Bank showed a debit balance. The Winters Bank and Drovers' Bank both had reciprocal accounts with the Fidelity Bank. The \$2,000 collected as aforesaid having come into the possession of the Receiver since his appointment and since the doors of the Fidelity Bank were closed, was demanded by the Winters Bank, and the Receiver prayed "instructions from the Court as to whether said amount belongs to the Winters National Bank or to himself as Receiver."

Held, Under the facts thus presented the \$2,000 in question is clearly the property of the Winters National Bank and cannot be retained by the Receiver as part of the assets of the Fidelity National Bank. Under the special and restrictive indorsement which the Winters Bank placed upon the note when it was transmitted to the Fidelity Bank for collection and credit, *viz.* : "Pay Fidelity National Bank, Cincinnati, Ohio, or order, for collection for account of the Winters National Bank, Dayton, Ohio," no title to the note or its proceeds passed or was transferred to the Fidelity National Bank. Nor was any relation of creditor and debtor between the two banks created by the Fidelity Bank's reception of the note under the terms of the indorsement. Aside from the indorsement the statement of facts submitted and on which the Court's instructions are asked, shows no arrangement or understanding between the two banks that the note, so remitted for collection, was to be treated as cash. The relations between the two banks in respect to the note were simply that of principal and agent under which the Fidelity Bank was authorized and directed to collect for the account of the Winters Bank, with no right on the part of the latter to draw against it, until actually collected and placed to its credit on the books of the Fidelity Bank. The transaction as disclosed in the petition was in no sense equivalent to a discount of the note whereby the Fidelity Bank acquired a title to the paper and its proceeds. The indorsement under which it was forwarded to the Fidelity Bank is clearly inconsistent with any such idea; and if that indorsement was subject to explanation or variation by parol evidence (which is not conceded), the facts presented establish no such arrangement or understanding as would serve to vary the plain meaning and intention of the special indorsement which merely made the Fidelity Bank the agent of the Winters Bank to collect the note for the account of the latter. By this restricted indorsement the Winters Bank gave notice to every one into whose hands the paper might come of its title to the note and its right to the proceeds. The case presents no question between the Winters Bank and the Drovers' Bank. The latter does not claim, and under the special indorsement giving it notice of the Winters Bank's right to the note and its proceeds could not assert any valid claim to the fund, no matter what may have been the course of its business with the Fidelity Bank nor how its account stood with that bank when the collection was made. When, therefore, the note was collected and the amount thereof was placed to the credit of the Fidelity Bank by the Drovers' Bank, the money still belonged to the Winters Bank. The act of the collecting bank, exercising only a delegated agency, in placing the collection to the credit of the Fidelity Bank in no way affected the rights of the owner of the paper for whose account, as shown by the indorsement, it was to be collected. The crediting of the collection to the Fidelity Bank by the Drovers' Bank on June 20th, and its letter of advice of the fact meant, so far as the Winters Bank is concerned, merely that the money was received for the Fidelity Bank's principal and was subject to its order for account of that principal. It could have no other legal effect or significance without assuming that the Drovers' Bank under its delegated agency to collect "for account" of the Winters Bank could, by the manner in which it might keep its account, change the relation which the Winters Bank and the Fidelity Bank occupied towards each other. It is too clear for argument that no act of the Drovers' Bank in the face of such an indorsement as the note bore, could convert the relation of principal and agent which existed between the Winters Bank and the Fidelity Bank in respect to the note and its proceeds, into another and different relation of creditor and debtor. As against the Winters Bank, the

credit which the Drovers' Bank made to the Fidelity Bank for the amount of the collection did not vest the latter with the legal and beneficial ownership of the funds represented thereby, nor did it have the effect of terminating the agency relation which the Fidelity Bank sustained towards the Winters Bank for whose account the collection was to be made. The Winters Bank could on the morning of June 21, 1887, have made a valid demand on the Drovers' Bank for the amount of the note so collected for its account. Before completing the collection by actually receiving the money from the Drovers' Bank, or making countercharges and credits by which the funds would be placed in the Fidelity Bank subject to the right of the Winters Bank to draw against the same, the Fidelity Bank became insolvent—suspended business—and its doors were closed. This suspension or failure terminated or revoked its agency and authority to proceed in the matter, and the Receiver could not *thereafter* divest the Winters Bank of its right to the money collected for its account by the Drovers' Bank by making entries on the books of the Fidelity Bank charging the Baltimore bank and crediting the Winters Bank with the amount of the note so collected. These debit and credit entries made by the Receiver cannot operate to vest the Fidelity Bank with title to or ownership of money, nor in any way affect the rights of the Winters Bank. When the Fidelity Bank failed and suspended, and its agency to collect *for account of* the Winters Bank terminated, the note or the money collected thereon was still subject to the control of the Winters Bank as the owner thereof.

The entries made by the Receiver after the suspension of the Fidelity Bank in no way change that ownership. This case, on the state of facts presented by the petition, is clearly distinguishable from that class of cases where a party sending a draft, check or note through his banker for collection is credited at the time with the amount of such paper as *cash*, and has the right to draw against such credit before actual collection by the bankers. Where a bank and its customer treat checks, notes or drafts as cash, and place the amount of such paper to the credit of the depositor with the right to draw immediately upon such credit, the bank may be considered as having purchased or discounted the paper, and thereby become its owner. The present case does not fall within the principle which controls that class of cases. The authorities on the question here presented have been examined, but I have not deemed it necessary to review them in detail. On the facts presented, the principles of law which control the rights of the parties are clear and well settled. (See *Levi vs. Bank*, 5 Dill., 107; *Bury vs. Woods*, 17 Mo. App., 245; *Bank vs. Bank*, 76 Ind., 561; *White vs. Bank*, 102 U. S., 658-661.)

The conclusion of the Court is that the Winters National Bank is entitled to the \$2,000 collected by the Baltimore Bank for its account; that the money having come into the hands of the Receiver, should be paid over by him to the Winters Bank, to whom it rightfully and justly belongs.

In re Armstrong, U. S. Circuit Court, S. D. Ohio, W. D., December, 1887.

RECOVERY OF MONEY PAID ON FORGED DRAFT—WHERE PAID TO COLLECTING AGENT, AND NOTICE OF AGENCY APPEARS UPON DRAFT, SUIT SHOULD BE AGAINST PRINCIPAL—WHETHER PRINCIPAL LIABLE TO REFUND NOT DECIDED.

This was a suit by Vogel & Ross against Ball, Hutchings & Co., bankers, to recover back from the latter \$1,150 collected from the former on a forged draft. The defendants alleged that at the time of the payment of the draft by Vogel & Ross, the firm of Heard, Allen & Barnes were private bankers at Cleburne, Texas, in good standing, and correspondents of defendants, who were also engaged in business as private bankers at Galveston. As such, defendants received the draft and a bill of lading, or what purported to be such, for collection *for account of Heard, Allen & Barnes*, and on the 3d of February, 1883, presented the draft with the attached bill of lading to Vogel & Ross for payment, which was paid to them without question, and defendants thereupon placed the amount to the credit of said Heard, Allen & Barnes in due and regular course of business and it was paid over to the latter before notice from Vogel & Ross, or anyone else, of anything being wrong in the

transaction, and without any notice, information or suspicion on the part of defendants that the draft and bill of lading were not in all respects genuine. The Court instructed the jury as follows:

"The written evidence is for the Court to construe; and I construe the evidence to be that the defendants have collected the money for the draft and paid over the same to their principals, Heard, Allen & Barnes and the plaintiffs cannot recover back the money from these defendants, and I instruct you to find for the defendants." Verdict and judgment were thereupon given for defendants, and Vogel & Ross took the case to the Supreme Court of Texas.

Held. The Court instructed the jury to find for the defendants and this instruction is assigned as error. A draft for \$1,150, on Vogel & Ross, of Galveston, in favor of Heard, Allen & Barnes, bankers, of Cleburne, was indorsed to Ball, Hutchings & Co., bankers, of Galveston, for collection, as follows: "Pay Ball, Hutchings & Co. or order for account of the Bank of Cleburne. Heard, Allen & Barnes." Ball, Hutchings & Co. stamped in printed letters on the draft "Paid, Ball, Hutchings & Co." In this condition the draft was presented to the drawees, Vogel & Ross, and by them paid. The draft and bill of lading attached, for 32 bales of cotton were afterwards discovered to be forgeries, and the drawees sued Ball, Hutchings & Co. as indorsers, claiming the right to recover of them the amount paid, because it was paid by mistake and in ignorance of the fact of the forgery.

It is apparent from the indorsements on the draft that Ball, Hutchings & Co. were mere agents for its collection. The legal effect of the indorsement stamped upon it by them was a cancellation of the obligation, and a receipt for the money. It was a mere acknowledgement that the draft had been paid to them. They were not indorsers of the paper and could not be held liable as such; and hence it could not be said that the money was paid to them upon the faith of their indorsement. But would they be liable for the money had and received upon the ground that the payment was made to them under mistake? We answer that they would not. If it could be conceded that their principals, Heard, Allen & Barnes, would be liable, Ball, Hutchings & Co. would not be, because it is apparent from the indorsement of the former, who were the payees, that the latter were acting as agents for the collection of the money and were duly authorized to receive it for their principals. There was no concealment of their agency. Vogel & Ross were bound to take notice of the indorsement of the payees, constituting defendants their agents, and were bound to know that there was no personal liability assumed or undertaken by the agents. There was no personal responsibility incurred by Ball, Hutchings & Co. in the collection for their principals. (Story, Ag. Sec. 261, et seq. and references; *Sydnor vs. Hurd*, 8 Tex. 99.)

This case is different from the case of *Bank vs. Bank*, 45 Tex. 203. In that case the City Bank had indorsed an altered check, and assumed the liability of indorser; in this case there is no indorsement at all, but merely a receipt for the money, with the authority to do so for the principals indorsed on the draft. We do not intend to intimate that Heard, Allen & Barnes could not be made to refund the amount collected for them on the draft. It is not necessary to a decision of this case that we decide the point, and we withhold any opinion on the subject. Ball, Hutchings & Co. were not liable as indorsers and were not required to make further defense after it appeared from the indorsement on the draft that they were acting as agents.

Judgment affirmed.

Vogel vs. Ball, Supreme Court of Texas, January 31, 1888.

CHECK OR BILL OF EXCHANGE PAYABLE ON DEMAND—PRESENTMENT MUST BE MADE IN REASONABLE TIME TO HOLD INDORSERS—DRAWER OF CHECK NOT DISCHARGED BY DELAY IN PRESENTMENT EXCEPT TO EXTENT OF LOSS OCCASIONED THEREBY.

Parker bought a check or bill of exchange from Snyder on a New York bank. Parker indorsed the check to another, and the check passed through the hands of several parties by indorsement, finally coming into the hands of one Reddick. Reddick presented the check to the New York bank after it

had been out several weeks, and payment was refused because Snyder had failed between the time of the drawing of the check and its presentation. If the check had been presented in due course by mail after it was drawn it would have been paid by the New York bank. After payment was refused notice was given in the proper manner to the several indorsers. Reddick brought suit against Snyder, the drawer, and Parker, the first indorser, and the Court having instructed the jury that the presentment of the check was made within a reasonable time, verdict and judgment was given in favor of Reddick. Parker appealed.

Held, It is uncertain from the evidence whether the drawees of the instrument upon which Snyder and Parker were sued were bankers or not; but whether the paper be called a "check" or a "bill of exchange," it expresses no time for payment, and was therefore payable on demand. A bill or check payable on demand must be presented for payment within a reasonable time. What constitutes reasonable time, in such case, is a question of law, to be determined by the Court when the facts are ascertained. (*Baskerville vs. Harris*, 41 Miss., 535.) No delay in making presentment of paper payable on demand can be termed reasonable if it is more than is fairly required in the ordinary course of business, without special inconvenience to the holder, or by the special circumstances of the case. (*Insurance Co. vs. Gray*, 13 Mich., 191.)

Such paper contemplates immediate payment. It cannot be said that it is intended for circulation. One who holds a bill or check, payable on demand, beyond the time necessary, in the usual course of business, for its presentation for payment, does so at his peril. The general rule, derived from the authorities, but subject to modification by special circumstances, is that if the drawee of such paper resides in a different place from that in which it is drawn, and the instrument must be sent by mail for presentment, it must be mailed on the day next after that on which it was received by the holder. (*Daniel*, Sec. 605; 2 *id.*, 1,586, 1,592; *Byles*, Bills, 7th Am. ed., 211, 213; *Chit. Bills*, 13 Am. ed., 433; *Fortner vs. Parham*, 2 *Smedes & M.*, 151.)

Paper payable on demand, while not commonly intended for that purpose, may be put into circulation, but its ultimate presentment for payment cannot be delayed beyond a reasonable time, by transfer or successive transfers, any more than it can by being locked up or held an unreasonable time by the first or any subsequent holder. (*Chit. Bills*, 13 Am. ed., 430; *Daniel*, Sec. 1,595; *Story*, Prom. Notes, Sec. 494.)

If the paper sued on be regarded as a bill, the drawer as well as the indorsers would be discharged by the negligence and delay in respect to the presentment; but if a check, the indorsers would be discharged by such laches, while the drawer would not unless he could show he was injured by the default. He would be entitled only to such presentment and notice as would save him from loss. (*Daniel*, 1,587.) No excuse is shown by the record for the delay which intervened in presenting the paper in question for payment, and the loss thereby occasioned cannot be imposed on the indorser, Parker.

Judgment reversed as to Parker, who alone appealed.

Parker vs. Reddick, Supreme Court of Mississippi, February 20, 1888.

NATIONAL BANK—INCREASE OF STOCK—LIABILITY OF STOCKHOLDER.

This was an action at law by Peter Butler, Receiver of the Pacific National Bank, against William Aspinwall upon his subscription to an increase of the capital stock of that bank, and was one of the numerous suits brought by Butler, as Receiver, against the stockholders, under section 5,151, Rev. St. The facts in this case differed somewhat from those before the Supreme Court of the United States in *Delano vs. Butler*, 118 U. S., 634, and therefore the defendant contended that the reasoning of the Court in that case was inapplicable here. The main ground on which the Court placed its decision in the *Delano* case was that the subsequent conduct of the stockholder, especially in the payment of the assessment of 100 per cent. on the old as well as the new stock, for the purpose of allowing the bank to resume business, amounted to a ratification of the validity of the new stock. In the present case the defendant subscribed for the new stock on the proposed increase of

\$500,000, and received his certificate; but at the subsequent meeting of the stockholders, in January, 1881, where, he is quite positive, but not certain, he learned for the first time that the actual increase of stock was \$461,800 instead of \$500,000, he protested by himself, or through counsel, against the validity of the new stock. Upon the old stock, which he held as guardian or trustee, he voted against the assessment; upon the new stock, which was subscribed for in his own name, he refused to vote at all. His position, therefore, was that he subscribed to a proposed increase of stock which was never carried out, and that he had never, by implication or waiver, consented to the increase as finally approved.

Held, While the Supreme Court in *Delano vs. Butler* decide the case on the ground of the subsequent conduct of the stockholder amounting to a ratification of the act of the Association and the Comptroller of the Currency in fixing the amount of the increased stock at a less sum, yet the Court also say: "It will be observed that without waiting to see what the future action of the Association and the Comptroller of the Currency might be on the question of the ultimate amount of the increased stock, the plaintiff in error paid for his shares and accepted his certificate. This he did, in legal contemplation, with knowledge of the law which authorized the Association and the Comptroller of the Currency to reduce the amount of the proposed increase to a less sum than that fixed in the original proposal of the Directors; and such payment and acceptance of certificates in accordance therewith might amount, under such circumstances, on his part, to a waiver of the right to insist that he should not be bound unless the whole amount of the proposed increase should be subscribed for and paid in."

In the present case I am of opinion that the acceptance of his certificate by the defendant and the retention of the same during the period of reorganization, and until after the bank finally passed into the hands of a Receiver, in May, 1881, several months after all the facts were within his knowledge, amounted to a ratification on his part of the act of the Association and the Comptroller of the Currency as to the increase of stock, and that he cannot now come forward and assert that, as to him, the increase as finally made is invalid. In the case of *Eaton vs. Bank*, 144 Mass., 260, the facts were different, for in that case the plaintiff refused to accept her certificate of stock, and demanded back her money.

Judgment for plaintiff.

Butler, Receiver, vs. Aspinwall, United States Circuit Court, D. Massachusetts, December 18, 1887.

ABSTRACT OF CASES.

CHECK ON BANK—EQUITABLE ASSIGNMENT—RIGHT OF DRAWER TO COUNTERMAND.

An order to pay a particular sum out of a special fund cannot be treated as an equitable assignment *pro tanto*, unless accompanied with such a relinquishment of control over the sum designated that the fund-holder can safely pay it, and be compelled to do so, though forbidden by the drawer. A general deposit in a bank is so much money to the depositor's credit. It is a debt to him by the bank, payable on demand to his order; not property capable of identification and specific appropriation. A check upon the bank in the usual form, not accepted or certified by its Cashier to be good, does not constitute a transfer of any money to the credit of the holder; it is simply an order which may be countermanded and payment forbidden by the drawer at any time before it is actually cashed. It creates no lien on the money which the holder can enforce against the bank. It does not, of itself, operate as an equitable assignment.

Per *Field, J.*, *Florence Mining Co. vs. Brown*, Supreme Court of the United States, January 28, 1888.

PROMISSORY NOTE—CERTAINTY AS TO FACT OF PAYMENT AN ESSENTIAL ELEMENT.

The instrument in suit was dated April 9, 1853, and signed by the defendant in the presence of an attesting witness, wherein the signer promised to pay the

plaintiff \$432.04 "due to Charles Bellows." No time of payment was specified in the instrument otherwise than by the following terms: "Now, if Hermon Wright shall pay the said Bellows, or cause to be paid, the above sum in three years from next January, then this note is to be given up; otherwise to remain in full force."

Held, The declaration alleges this instrument to be a promissory note. To constitute a promissory note the instrument must necessarily be certain as to the fact of payment, and not be dependent on a contingency. For such "paper is intended, if negotiable, to circulate in business as money; and this, on the ground that on a certain day it will become money." (1 Pars. Bills and Notes, 42.) No time of payment is specified in this instrument otherwise than by the provision that if Wright shall pay Bellows the amount in three years from the January following, the note to be given up; otherwise to remain in full force. This contingency as to payment destroys the quality of the instrument as a promissory note.

Chapman vs. Wright, Supreme Judicial Court of Maine, December 24, 1887.

ALTERATION OF INSTRUMENTS—ERASURE OF SIGNATURE AS SURETY WHEN IMMATERIAL.

A being indebted to B, gave his notes for the amount payable to the order of B. B, desiring to negotiate the notes at a bank, signed the notes "B, Security." The bank declining to discount them, B then erased his name as security on the notes and indorsed them to H. H sued A on the notes and the latter contended that the alteration of the notes by the striking out of the name of B as security was such an alteration as rendered them void.

Held, A being indebted to B on the notes, the striking by B of his name therefrom as security did not increase the liability of A, and was not a material alteration. B having signed the notes as security, intending to negotiate them, he had a right to so erase his name.

Judgment for plaintiff.

Lynch vs. Hicks, Supreme Court of Georgia, October 15, 1887.

PROMISSORY NOTE GIVEN TO ADULT DAUGHTER FOR SERVICES—SUFFICIENCY OF CONSIDERATION.

A promissory note given by a widow to her adult daughter for domestic service theretofore rendered by the daughter is evidence that the service was rendered upon an understanding that it should be paid for, and, in the absence of evidence to the contrary, such a note will be upheld as having sufficient consideration.

Petty vs. Young, Court of Errors and Appeals of New Jersey, February 4, 1888.

ACCOMMODATION INDORSER OF NEGOTIABLE PAPER—LIABILITY—RIGHT OF BONA FIDE HOLDER, FOR VALUE AND WITHOUT NOTICE.

An accommodation indorser of negotiable paper pledged by the maker for an antecedent debt cannot defend on the ground that his indorsement was without consideration, because that would defeat the purpose for which he loaned his credit; but he may successfully defend by proving to the satisfaction of the jury that his indorsement was fraudulently procured, or that, instead of being a general and unrestricted loan of credit, the indorsement was made for a specific purpose, and that, without his knowledge or consent, the note was fraudulently used for another and entirely different purpose, and the like; but as against a *bona fide* holder for value, without notice, no such defense is available.

Cozens vs. Middleton, Supreme Court of Pennsylvania, February 13, 1888.

PROMISSORY NOTE—LIABILITY OF THIRD PARTY INDORSING INSTRUMENT IN BLANK—JOINT MAKER OR SECOND INDORSER?

Where a promissory note is upon its face payable to the order of the payee at a chartered bank, though reading "we promise to pay," etc., and signed by one person only, the *prima facie* import of an indorsement thereon in blank by

a third person is that such indorser undertakes to be liable as a second indorser, and not as a joint maker. The true intent of the parties, however, in an action by the payee upon the instrument, is open to explanation by parol evidence. Code, Section 8,808.

Neal vs. Wilson, Supreme Court of Georgia, October 4, 1887.

ACTION ON NEGOTIABLE INSTRUMENT—LACK OF INDORSEMENT.

When J draws a draft payable to himself or order on C, which is accepted by C, an action thereon properly brought in the statutory form by J against C will be maintained, although the draft is not indorsed in any manner by J.

Cooper vs. Jones, Supreme Court of Georgia, January 28, 1888.

PROMISSORY NOTE—NEGOTIABILITY—PLACE OF PAYMENT—THE ALABAMA STATUTE.

The note in suit was in the ordinary form of a promissory note, except that it was payable "at Matthews, Ala." It was admitted that the place named "is a station on the Montgomery & Eufaula Railroad; that at said Matthews there are four store-houses where business is conducted, a railroad depot, a post-office and several dwelling-houses, and that one of said store-houses is the store-house of the defendants, who are engaged in business at Matthews. The statute in force at the time the note was given (Code 1876, Section 2,094) declared that "bills of exchange and promissory notes, payable in money, at a bank or private banking house, or a certain place of payment therein designated, are governed by the commercial law."

Held, That the note sued on is not commercial paper. It is not payable at a certain place of payment therein designated. Merely naming a city, town or village having many, or even several, places of business, is not a compliance with the statute, either in letter or spirit. The intention was that a *certain* place should be designated—a place at which debtor and creditor could meet, the one to pay and the other to receive payment. That is the sense of the provision, and that must be its interpretation. To hold otherwise would be to open a door, the breadth and dimensions of which we cannot foresee.

Haben vs. Lehman, Supreme Court of Alabama, January 13, 1888.

LAW NOTES AND COMMENTS.

DEPOSIT OF COURT FUNDS AND MANNER OF PAYMENT BY BANK.—In our last number was published the decision of the Supreme Court of Illinois in the case of Reilly against the State National Bank, exonerating the bank from liability for an alleged misappropriation of Trust funds by reason of the manner in which it had paid out the funds deposited with it by the clerk of the District Court of the United States for the Southern District of Illinois. The clerk had deposited at different times the funds of various beneficiaries, with the bank (which, under the statute, was designated as a depository for such Court), each deposit being accompanied by the number of the case to which the funds deposited belonged, and the bank entering the deposit on its books, and in the deposit-book of the clerk, to the credit of the particular case or number. When the clerk drew out the funds, the checks always stated the case in, or the account for which they were drawn, but the bank treated the account as a unit and paid the checks as presented without reference to any such *memoranda* appearing upon them, until the fund was exhausted. The difficulty grew out of the fact that the clerk of the Court had been dishonest and had not deposited all the funds he had received, so that in the case of Reilly and others, it happened that funds which had been deposited to the credit of their particular cases had been paid out on checks drawn for dividends in other cases. This they claimed was a misappropriation by the bank of their Trust funds and entitled them to recover. In the case of Reilly, the Supreme Court of Illinois held that the bank was under no duty to the beneficiaries to keep a separate account with each case pending, but that the account was properly kept as a unit, and when the account was exhausted,

the bank's liability ended ; and further that the *memoranda* on the face of the checks imposed no obligation on the bank as to the manner of payment and did not make it its duty to treat the account other than an entirety. Two judges of the Court, Shope and Magruder, dissented from this decision. A similar case has just been decided by the Supreme Court of the United States, namely, the case of Dodge against the same bank, Blatchford, J., delivering the opinion of the Court. The opinion in this case did not come to us in time for insertion in the April number, otherwise it would have been more fitting to have placed it side by side with the Illinois decision. The Dodge action was brought against the bank in the Circuit Court of the United States for the Southern District of Illinois, and the question involved was similar to that in the Reilly case. Omitting a detailed account of the facts in the case, the circuit justice and the circuit judge before whom the case was tried, differed in opinion on the following questions of law which they embodied in a certificate of division to the Supreme Court.

First. Was it the duty of the bank to keep a separate account with each case in bankruptcy in which deposits were made in the bank ?

Second. Was it the duty of the bank to refuse any check drawn in the name of the Court, and countersigned by the judge thereof, unless such check specified the case in bankruptcy on account of which the same was drawn, and there were funds in the bank to the credit of such cause ?

Third. Did the failure of the bank to keep such separate accounts, or its action in paying out all the funds deposited to the credit of the Court on checks drawn generally, leaving no funds to meet the checks in controversy, render the bank liable in this action ?

Fourth. Did the fact that the bank paid out and exhausted all the funds placed to the credit of the Court on checks, some of which did not bear the number of any case from which funds had been derived, render the defendant liable on the checks in controversy, when, if separate accounts had been kept with each case or number, there would have been funds to the credit of case No. 2,105 sufficient to satisfy said checks ?

Fifth. Notwithstanding the fact that the defendant bank opened an account with "the United States District Court for the Southern District of Illinois," and credited the funds received in bankrupt cases generally to the credit of said Court "in the manner directed by the clerk" of said Court, and notwithstanding the further fact that from time to time, the bank settled said account with said Court as a general account, was it, nevertheless the duty of said bank to keep the funds received in each case of bankruptcy as a separate fund, to be applied only to the payment of such checks as were drawn in, and numbered in, the particular case from which such funds were derived ?

Sixth. Did the fact that the bank understood, when deposits were made, that the numbers on either side of the account, as 2,105 in this case, referred to the case in which the deposit in the first place was made, and in which the check in the second place was drawn, require the bank to keep the funds belonging to such case for the payment of checks drawn therein, notwithstanding the fact that the account was opened and kept as a general account with the Court, as directed by the Clerk of the Court, and had, from time to time, been settled with the Court as a general account ?

Seventh. Did the fact that the bank understood, when deposits were made, that the numbers on either side of the account, as 2,105 in this case, referred to the case in which the deposit in the first place was made, and in which the check in the second place was drawn, require the bank to keep the funds belonging to such case for the payment of checks drawn therein ?

Eighth. Was the fact that the bank understood, when deposits were made, that the numbers on either side of the account, as 2,105 in this case, in which the deposit in the first place was made, and in which the check in the second place was drawn, sufficient notice to the bank of the nature of such deposit to justify it in refusing to pay out any of the funds arising therefrom on checks drawn, as indicated therein in cases in which no deposits had been made by the Clerk ?

The Circuit Justice was of the opinion that each of the eight questions should be answered in the affirmative, and the Circuit Judge was of the opinion

that they should be answered in the negative. The Supreme Court of the United States answers all of these questions in the negative, and directs judgment in favor of the bank.

Mr. Justice Blatchford, in delivering the opinion, says that the Court is "unable to see anything in the transactions which implies any notice to or duty upon the bank to keep or deal with the deposits made under each number as a separate account." Speaking of the *memoranda* of numbers, etc., contained in the checks, he says that "the bank had a right to assume that these *memoranda* of numbers in the deposits and in the checks were merely for the convenience of the Court and its officers, and that it also had a right to presume that the Court and its officers were properly performing their duty in distributing its trust funds." (*Bank vs. Ins. Co.*, 104 U. S., 54, 64.)

In this, as in the Reilly case, the deposits were made to the credit of the Court in accordance with Section 995 of the United States Revised Statutes, which required that "all moneys paid into any Court of the United States, or received by the officers thereof, in any cause pending or adjudicated in such Court, shall be forthwith deposited with the Treasurer, an Assistant Treasurer, or a designated depository of the United States, in the name and to the credit of such Court;" and Section 996 provided that "no money deposited as aforesaid shall be withdrawn except by order of the Judge or Judges of said Courts respectively, in term or in vacation, to be signed by such Judge or Judges and to be entered and certified of record by the Clerk; and every such order shall state the cause in or on account of which it is drawn."

Referring to this statute, the Court says that "the deposits being, as required, in the name and to the credit of the Court, the bank was authorized and required to honor all checks drawn by the Court, and to pay them generally out of such deposits; and the order or check for withdrawing the money, in stating the cause in or on account of which it was drawn, was a memorandum imposing no duty upon the bank, but only operating for the convenience of the Court and its officers in keeping its account. The obvious purpose of the *memoranda* of numbers in the deposit book of the Court, and upon the checks, was to enable the Court and the Clerk to properly keep the account, and that the checks might operate as vouchers, showing the manner in which the moneys in any particular case were distributed, and to enable the Clerk to show to the Court that he had deposited the funds which he had received."

The Court also discusses Rule 28 in bankruptcy, quoted in the Reilly case, and says it appears "to have been plainly the sole purpose of the rule that each check, when drawn and paid, should remain in the hands of the Clerk, when returned to him by the bank, as evidence not only of the payment by the bank of the amount, but also that the Court had paid the amount to the particular creditor in the particular case. Thus the check would become a voucher, not only as between the Court and the bank, of the payment by the latter of so much money which had been on deposit in it to the credit of the Court, but a voucher as between the Court and the creditor who had received the money on account of what was due to him in a particular bankrupt case."

Speaking generally of the obligation of a bank to notice *memoranda*, etc., upon a check, the Court says: "No bank is bound to take notice of *memoranda* and figures upon the margin of a check which a depositor places there merely for his own convenience, to preserve information for his own benefit; and in such case, the *memoranda* and figures are not a notice to the bank that the particular check is to be paid only from a particular fund." And further, as to the bank's obligation to open a separate account with each bankrupt estate, the Court says: "So, too, a mark on a deposit ticket, if intended to require a particular deposit to be kept separate from all other deposits placed to the credit of the same depositor, must be in the shape of a plain direction, if such a duty is to be imposed on the bank;" and the Court stated that no facts existed in the present case which would impose such an obligation.

It will thus be seen that the decision of the National Court and of the Supreme Court of Illinois, in two cases involving substantially the same points, concur in the conclusion that the State National Bank of Springfield was not liable by reason of the payment of deposited funds in the manner stated. Both concur that the bank may disregard *memoranda* on the check. In the

Illinois decision the conclusion that the bank is not liable is based principally on the ground that the account was kept properly as a unit *in conformity with the Act of Congress and Rule 28 in bankruptcy*, and that it was properly withdrawn on checks, *drawn as directed by the statute and the same rule for the benefit of beneficiaries*, and consequently there was no misappropriation by the bank of such funds, and no liability on its part therefor. In the decision by the United States Supreme Court, while the statute and rule are referred to, and it is stated that thereunder the bank was "authorized and required to honor all checks drawn by the Court, and to pay them *generally* out of such deposits," the right of the bank to treat the account as a unit and to pay the checks in the manner stated is established, irrespective of any statute which might authorize it so to do.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.
A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

BEAVER DAM, Wis., April 18, 1888.

SIR:—We wish to ask if a bank is obliged to pay a demand certificate of deposit, when the holder claims he has lost the certificate, unless he gives the bank a bond of indemnity.

J. H. BARRETT, Cashier.

Answer.—The bank has a right to require a bond of indemnity.

Editor Rhodes' Journal of Banking:

CORTLAND, N. Y., April 2, 1888.

SIR:—Will you kindly answer the following question: When does a note fall due dated November 30, 1887, drawn for four months?

E. KEATOR, Cashier.

Answer.—April 2, 1888.

Editor Rhodes' Journal of Banking:

KANSAS CITY, Mo., March 27, 1888.

SIR:—A makes a note payable in ninety days to the B Bank, payable at that bank. C writes his name on the back of it. Is C a maker or indorser under the Missouri law? If an indorser, and the Notary protests the note when due and sends both notices to A, and so states in his protest, will it hold C? Your early reply will much oblige

SUBSCRIBER.

Answer.—Under the law of Missouri, a party who writes his name on the back of a note, of which he is neither the payee nor the indorsee, is, *in the absence of extrinsic evidence*, to be considered a joint maker.

Seymour vs. Farrell, 51 Mo., 96 (1872.)

Mammon vs. Hartman, 51 Mo., 168 (1872.)

Cohn vs. Dutton, 60 Mo., 222 (1875.)

Butler vs. Gamba, 1 Mo. App., 466 (1876.)

Chaffee vs. Memphis, etc., Co., 64 Mo., 193 (1876.)

Bosbyshell vs. Ehninger, 3 Mo. App., 574 (1877.)

Semple vs. Turner, 66 Mo., 696 (1877.)

Boyer vs. Boogher, 11 Mo. App., 180 (1881.)

And the burden of proof is on such party to show that he signed as indorser.

Cohn vs. Dutton, supra.

But parol evidence is admissible to show that he did not sign his name as maker, but as indorser.

Mammon vs. Hartman, supra.

To make his liability to the payee that of an indorser, however, he must show a contract or understanding with him to that effect.

Boyer vs. Boogher, supra.

And that the holder had notice before or at the time of the transfer of the note to him that it was agreed between the original parties that his liability should be that of indorser only.

Chaffee vs. Memphis, etc., Co., supra.

From the foregoing citation of Missouri authorities, it will be seen that in the absence of any understanding or agreement to the contrary on the part of

the B Bank, C would be regarded as a joint maker, and would be liable without notice of protest. But in case of any agreement that he should be liable as indorser only, sending the notice of protest to A, the maker, would not preserve the liability of C as indorser.

Further, if C wrote his name upon the back of the note *after delivery* to the bank, his liability in that event would be neither as joint maker or indorser, but as *guarantor*.

Stagg vs. Linnenfeller, 59 Mo., 336 (1875.)

Howard vs. Jones, 13 Mo. App., 596 (1883.)

Editor Rhodes' Journal of Banking:

PAW PAW, Mich., April 7, 1888.

SIR:—Will you please give us a reply to the following question in your next JOURNAL OF BANKING?

In December last we sent to correspondent in Chicago for collection and credit a note made by A, payable to B, and indorsed by B in blank, due January 12, 1888, payable at M., in Kansas. We make usual indorsement on note, "Pay — Cashier or order for collection and credit," etc. The Chicago bank send it to M., making their usual indorsement for collection, and on night of note's arrival at M., it was stolen from the Post Office.

The first indorsement made this note payable to bearer. We indorsed it to the order of Chicago bank, and they indorsed it to a Kansas bank for collection.

Question.—Cannot a felonious holder fill blank indorsement payable to himself, strike out the subsequent restrictive indorsements, and then negotiate to a *bona fide* holder and he recover?

SUBSCRIBER.

Answer.—Yes, the party to whom the wrongdoer has negotiated it may recover in such a case, provided he has taken it *bona fide* for a valuable consideration, before its maturity, and without notice of the fraud or theft. The mere striking out of the subsequent indorsement, without more, would be insufficient to charge him with knowledge of the fraud.

Editor Rhodes' Journal of Banking:

NEW BRUNSWICK, N. J., March 29, 1888.

SIR:—Is a note drawn as below payable with interest:

<p>Three months after date I promise to pay to the order of John Jones one hundred dollars at the National Bank of Pumptown. Value received. Payable with interest at — per cent.</p>	<p>PUMPTOWN, March 28, 1888. of John Jones one Value received. Payable JOHN SMITH.</p>
---	--

Does not the blank, for rate of per cent., require filling up to perfect the contract to pay interest? If not filled up, is it not merely a blank form printed in for convenience in case of need? A reply through your JOURNAL will oblige. CASHIER.

Answer.—We think the note is to be construed as payable "with interest," and that the omission to designate a rate is not sufficient to nullify the whole clause with reference to the interest.

Editor Rhodes' Journal of Banking:

WILLIAMSPORT, Pa., March 29, 1888.

SIR:—According to the laws of the State of Pennsylvania, on what day must a paper that is due on Good Friday be protested, so as to hold indorsers? BANKER.

Answer.—Good Friday is not a legal holiday in Pennsylvania, and paper falling due and being dishonored on that day should be treated in exactly the same way as if it fell due on any other day.

Editor Rhodes' Journal of Banking:

ST. JOSEPH, Mo., March 31, 1888.

SIR:—I would respectfully request to be informed if it is necessary, in case of a re-election of bank Directors in a State bank in Missouri, to swear them in again after such re-election for their new duties? Also, if any certain form of law is provided for such certificates of election other than that for National banks.

MAX AUDRIANOX, Teller Merchants' Bank

Answer.—Where an oath of office is required from bank Directors in the first instance, it is equally necessary in case of their re-election. The Revised

Statutes of Missouri provide what qualifications a party must have in order to become a Director in a bank, and regulate the number of Directors and the time and manner of their election; but the statute contains no provision for the taking of an oath of office by the Directors before entering upon their duties. Banking corporations, however, have power to make by-laws not inconsistent with existing law for the regulation of their affairs, and these may require an oath from the Directors and prescribe its form. The statute provides no form for the certificate of election of Directors.

Editor Rhodes' Journal of Banking:

BESSEMER, Mich., April 16, 1888.

SIR:—Does the plain indorsement of John Smith on the back of the inclosed check answer the same purpose as a receipt in full?

\$100.	THE BESSEMER BANK OF JOSEPH BELLWOOD & CO. BESSEMER, Mich., April 16, 1888.
Pay to John Smith one hundred dollars in full of account to date.	
No. —.	_____

Indorsed: "John Smith."

An answer through the JOURNAL will oblige GEORGE H. STRONG, Cashier.

Answer.—In the hands of the drawer after payment by the bank, the check with such an indorsement would operate as a receipt in full.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on April 30, 1888, showing the amount of National Bank notes outstanding, the amount of lawful money on deposit with the Treasurer of the United States to redeem National Bank notes, and the kinds and amounts of United States bonds on deposit to secure circulation and public deposits:

NATIONAL BANK NOTES.		
Total amount outstanding March 31, 1888.....		\$250,954,980
Additional circulation issued during the intervening month:		
To new banks.....	\$188,170	
To banks increasing circulation.....	2,826,796	
Total.....	\$3,000,966	
Surrendered and destroyed during the intervening month.....	4,562,678	
Decrease in total circulation during the month.....		1,562,712

* Circulation of National Gold Banks not included in the above.....	\$211,777	

W. L. TRENHOLM, Comptroller of the Currency.

A FORGER'S RAID.

HISTORY OF BROCKWAY'S GANG IN BALTIMORE IN 1880 (Concluded).

A new impediment to the progress of the case was encountered when the Deputy Marshal went to New York with the requisite documents to take Bell from the Tombs. The forger had engaged counsel through friends and was an applicant for a writ of *habeas corpus*. The right of the prisoner to a full hearing on the technicalities he wished to present was recognized by Judge Beach, of the New York Supreme Court. For three weary weeks the conflict went on, with intervals of adjournment, until on August 18th the Court, after having heard the testimony of Major Thomas, Teller Morris and Deputy Marshal Frey, the arguments of counsel for the defence, Messrs. E. E. Price and James Oliver, and for the prosecution as conducted by Hon. A. S. Sullivan, who was retained by the Merchants' National Bank, ruled that the prisoner be remanded to the custody of the Baltimore authorities. It was a bitter pill for Bell to swallow. On August 19th, after a handcuffed journey from New York with Deputy Marshal Frey, he was behind a Yale lock in the Central Police Station in Baltimore, the ward of Captain John Lannan, then in charge of that precinct. Nor was the fight to end here. In anticipation of such a procedure W. Hollingsworth Whyte, Esq., appeared in the Circuit Court and asked an injunction to restrain the police from taking Bell's photograph. The appeal fell flat, and its usefulness, if it had any, was annihilated by the statement of Deputy Marshal Frey, that all the likenesses of Bell the Baltimore police wanted had been obtained from another city.

The trial of Bell before Judge Pinkney in the Criminal Court was a memorable one. Mr. Whyte, a nephew of the presiding Magistrate, again represented Bell, while Hon. A. Leo Knott, engaged by Major Thomas, assisted the State. The question of identity was once more the main point, and in so confused a condition did it reach the jury because of the rulings of the Judge, that the twelve men empanelled failed to agree after a night's deliberation. The Court was highly displeased with one juror, Mr. C. Edwin Stine, on hearing after the case had been abandoned by the State, that he of all the jury had stood alone for conviction. To add to the irate feelings of the Judge, prisoner's counsel, Mr. Whyte, stated in open Court it was rumored that the complaint of sickness advanced by Mr. Stine, which led to the discharge of the jury, was feigned. Swollen with anger, Judge Pinkney referred the case of Mr. Stine to the Grand Jury. A careful investigation showed that Mr. Stine had really been ill, and he was exonerated. A second trial resulted in an acquittal for Bell on one charge. By this time the merchants and bankers of the city were highly indignant at the form things assumed. Danger lay ahead that the forger would escape his merited punishment on the second charge; but a single way was at hand to avert it; to have the case removed on the grounds that the State could not obtain the fullest justice in the Criminal Court of Baltimore. Judge Brown, in the Circuit Court, accepted this reasoning of State's Attorney Kerr, and ordered a change of venue to the Circuit Court of Howard County.

Where were Brockway and the others all the while? They were in prison, too, with the exception of Farren. Funds were so low they could not much longer continue the legal sympathy they owed Bell unless they forged for lawyers' fees. A better place than Providence, R. I., the remnant knew not, hence it was they "braced" two of its banks after their Baltimore style, and got themselves, the very day Bell was in the Central Station in this city, into a similar lock-up in Providence. Brockway went to the Penitentiary for eight years, Ogle for four years, Hamill for three years, and "Al" Wilson escaped from the police. His hurry was so great, let it be remarked, that he never stopped short of Boston. The situation was not congenial in the cultured centre; Canada was more to his fancy. Even there he fared badly, and was locked up for a misdemeanor, which punishment begat in him a feeling of homesickness that drove him back to New York on October 18, 1881. The lynx-eyed thief-takers of Inspector Byrnes were at his heels, and nabbed him in a few days. Philosophically he took his arrest, and to be accommodating as possible, consented to

go to Baltimore without a requisition. He knew he would be convicted if he stood trial, so he pleaded guilty to the charges against him, and was sentenced for four years. At the trial of Bell in the Court House at Ellicott City, Howard County, Judges Miller, Hayden and Hammond on the bench, on the second charge against him, Wilson was present in his convict's garb and shorn head, a striking contrast to his elegantly robed accomplice, in seal-trimmed overcoat, handsome black suit, and the sealskin cap, at that period highly fashionable. For two days hundreds of men from Baltimore and the country surrounding listened to the evidence. Fifteen minutes was all the time the country jury were out before they returned a verdict of "guilty!" Bell did not move a muscle, but sat upright, as he had done all along, with a serene expression of countenance. A low bow to the Judges, and he started for the county jail to await sentence, which was not passed on him until July 9, 1881. On that day he was brought before Judge Miller. When asked if he had anything to say why sentence should not be passed upon him, Bell accepted the invitation, arose in the dock and said to the Court: "I was unfortunate at my trial in not establishing my innocence, as I confidently expected to, but the parties who were implicated refused to testify. I expect in a short time to prove my entire innocence. I have nothing to say against the rulings of this Court or the verdict of the jury. I only say now I am not guilty of the charge, and appeal to the mercy of the Court."

"Yours has been one of the most aggravated cases against the law," replied Judge Miller, "that has ever occurred in Maryland. I will have to pronounce on you the sentence agreed upon by my colleagues and myself—ten years imprisonment in the Maryland Penitentiary, the extreme penalty of the law in such cases as yours."

A visitor to the prison of this State the day following the expression of the sentence could barely recognize gentlemanly George Bell in the tall fellow with a big black barred suit and his penitentiary cropped hair as he engineered a lathe for burnishing the heels of ladies' shoes. As for "Al" Wilson, a steadier mechanic, impromptu, if you please, never sprung a bobbin in a carpet shop than he. Juvenal, wise old student of human nature, knew whereof he spoke when he created the truism: "First appearances deceive many; the mind seldom perceives what has been carefully hidden."

But hold! the curtain drops not here, for Cleary is not yet in the Maryland Penitentiary, and Major Thomas believed he should be, and so he will be, for the unflinching Cashier will not abate a jot his vigilance. He knows that on November 23, 1882, the sentence of Cleary will expire at Clinton Prison. Long before that is he in communication with Governor Cornell, who agrees to yield up the culprit on the proper day. Its arrival finds Deputy Marshal Frey outside the gates of the institution, a requisition in his hand and a pair of handcuffs in his pocket. They are for the released prisoner who steps from technical liberty to practical imprisonment. Two months in the jail of Baltimore city the forger rests prior to his arraignment in the same pen once ornamented by his incarcerated brethren. Fatigue had broken him down to such an extent that jail physician Dr. D. P. Hoffman certified that he was suffering from consumption. The counsel for the prisoner, Col. Charles Marshall, announced that his client desired to plead guilty. Judge Phelps, on January 18, 1883, sentenced him to five years of penal servitude.

* * * * *

In the evening of October 1, 1886, Marshal Frey received a dispatch from Washington informing him that two well-dressed men had that morning robbed a gentleman in the National Metropolitan Bank of that city of a considerable sum of money, by means of the old "grab game." The gentleman was counting some bills on a desk when one of the men approached him and told him that he had dropped some money. The gentleman stooped and picked up four one dollar bills. When he finished counting his money he found that he was \$71 short. The two well-dressed men had disappeared. The Washington police being notified succeeded in tracking the thieves to the Pennsylvania Railway Depot, where it was found that they had boarded a local train for Baltimore. These facts were telegraphed to Marshal Frey. While nothing pointed to an organized raid in this section by a "mob" of sneaks, the Marshal's caution and foresight led him to send word the following morning to all the banks, warning them that sneaks might be in town. If they should make their appearance in any of the banks the following message was to be immediately telephoned to the Marshal's office: "Marshal Frey is needed at once."

Shortly after noon the telephone bell in the Marshal's office rang. Mr. Frey stepped over and put his ear to the transmitter. The message came from the Merchants' National Bank, corner of Gay and Second streets. It was short and pointed:

"Marshal Frey is needed at once!"

Two detectives were instantly dispatched to the Merchants' Bank, but the thieves were already in the custody of policeman Tress of the Central Station. They had been caught in the act of trying to rob Mr. George W. Parks, a brick manufacturer of No. 13 Nanticoke street. Mr. Parks was at a desk counting the proceeds of a check for \$200, which he had just drawn, when one of the men, who wore a long gray ulster with a flowing cape attached to it, stepped up to him and politely informed him that he had dropped several bills on the floor. Mr. Parks thanked the polite stranger and stooped to pick up the money. As he did so he saw the man reach over toward the pile of bills on the desk. Grasping the situation instantly, Mr. Parks made an effort to detain the fellow, but the latter broke away. He was just disappearing through the door when the President of the bank, Mr. D. H. Thomas, a gentleman of athletic physique, having heard the hubbub, dashed out of his private office and leaped down the steps after him. Mr. Thomas caught the fellow after a short chase.

In the meantime the thief's accomplice was arrested in the bank. While the man in the ulster was trying to rob Mr. Parks, the accomplice engaged the attention of the Teller by asking him to change a twenty dollar bill. Both prisoners were locked up in the Central Station. They gave their names as Andrew L. Hand and John Burke. Hand was the one who attempted to rob Mr. Parks. The two men claimed to be entire strangers to each other. Burke said he lived at the Eutaw House. The clerk at the hotel said that the man arrived the evening before, and on registering had inquired for telegrams addressed to either "Cummings" or "Hand."

The police were informed that "Cummings" had arrived later and that he was then asleep in his room. He was awakened by Sergeant Reinhardt, and was found to be very drunk. When brought to the Marshal's office he turned out to be the notorious George Carson, whose picture, indexed "Bank Thief," has adorned the rogues' gallery at headquarters for over five years. Intoxication prevented his taking part in the attempted robbery, and he was released and sent out of the city.

Hand and Burke were arrested on October 2, 1886, convicted October 12th, and each sentenced October 18th to ten years and six months' imprisonment in the Maryland Penitentiary.

THE NEW YORK SUB-TREASURY COUNT.

The official count at the Sub-Treasury has been in progress since February 29th, and will not terminate until about the 10th day of May, when the enormous sum of \$155,000,000 of gold, silver and securities will have been carefully counted and formally handed over to the care of the new Sub-Treasurer, Alexander E. McCue, who will thereupon pass his receipt for the same to the outgoing official, Mr. C. J. Canda. Already the quick-fingered and active-brained experts detailed by the Department at Washington for this special work have succeeded in counting \$48,000,000, of the \$90,000,000 of gold coin on deposit, together with \$30,000,000 of notes and bills, both of which grades of money are stored in large iron vaults on the main floor.

This part of the work being successfully completed, the force of special accountants, together with a corps of eighteen laborers, have turned their attention to the huge silver vaults located in the massive basements of the building where a veritable mountain of silver, \$40,000,000 in all, awaits the exercise of their professional energies. Already \$6,000,000 of this immense pile has been successfully handled and put behind the busy workers, but the monster mass of metal still remains seemingly intact, showing no visible diminution in volume through the loss of the substantial \$6,000,000 slice noted above. The method employed in the storing of the silver coins is particularly interesting in its many details, from the fact of the large bulk involved and the extensive quarters and complicated manipulation necessary for its proper accommodation and ready handling. The large space or vault devoted to the purpose is partitioned off into twelve distinct compartments, which contain in the aggregate, as before stated, the enormous sum of \$40,000,000 in silver coins, varying in size from \$1 to ten-cent pieces, although largely composed of the first denomination, of which the official ledger called for \$29,597,000 on the opening day of the count. The appearance

of the silver vaults with their valuable contents is regularly personified. The coins, carefully packed in strongly made canvas bags, \$1,000 to the bag, irrespective of size of pieces contained, and weighing a fraction less than sixty pounds each, are piled up from the sides of each compartment, converging in form of pyramid towards the centre, where the topmost bags touch the ceiling.

The compartments are not all alike in dimensions, but all are full to the very limit of utmost capacity, holding within their massive sides \$40,000,000 of silver all told, broken up into 40,000 bags, and representing a weight volume of 1,200 tons. The method employed in this silver count involves nicety of weighing balance, careful watching, and severe manual labor, and can only be conducted at what must appear to the uninitiated to be a slow rate of progress; all of which may be readily inferred from the fact that the silver vaults were entered over one week ago, and at the present writing only one-seventh of the task of counting \$40,000,000 is completed. The necessary appliances for the count, both clerical and mechanical, are as follows: A perfectly balanced coin scale, regulated to the fraction of an ounce; eighteen sturdy laborers to perform the heavy handling, two weighers, three tallymen and a score of watchers. To facilitate the labor of recounting, an outer vault is always left unoccupied, at which point the work commences, the scale being placed in the narrow passageway between the vacant vault and full apartment next in range. At this point, midway between the two compartments, the bags of coin are weighed "in transitu," so to speak, being dragged from their old resting place to the scales and off again to a position in the vacant room, which now becomes a permanent vault until the next count, whenever that may be; so on through the entire range of vaults until the work is completed.

The count is made by weight - a bag containing only perfect coins being used as the standard: and when for any reason a bag falls short of this test balance, it is set aside and counted over piece by piece. Slight shortage, necessitating a special count of the coins themselves, is a matter of frequent occurrence, as the result of burst bagging sufficient in extent to admit of the slipping out of a few coins. Upon the complete emptying of any one compartment, all these loose coins are carefully collected, weighed and added to the tally list. This form of breakage is frequent and materially retards the progress of the count. The above brief outline of the main features of the silver count can give but little idea of the extent of the work and the many elements of difficulty and hardship surrounding its performance. The daily labor begins at 8:30 o'clock A. M., and is continued under almost stifling atmospheric conditions and by the dim light of three gas jets until 5 o'clock in the afternoon, when the longshoremen employed for the purpose of handling emerge from the scene of their labors for the first time after their response to the morning roll call. The handling of \$2,000,000 of silver coin represents a day's work which is seldom accomplished by even a larger force of laborers than is now on duty at the Sub-Treasury.

Mr. Melne, representing the Treasury Department, is in active supervision of the work; and recognizing the fact that an error involving a single dollar might necessitate a laborious recount, no precaution that long experience can suggest is neglected to ward against the danger of mistake and ensure the speedy termination of an absolutely perfect count. Cashier Sherer, whose experience as an *attache* of the Sub-Treasury extends back over a score of years, and includes an intimate knowledge of ten counts previous to the one now in progress, expresses great satisfaction at the rapidity and thoroughness of the work, and rates it as challenging comparison with any prior and similar service performed at the Sub-Treasury. The deposits are balancing nicely, with slight shortage in some places made up by slight overplus in others, and all the indications surrounding the count argue its successful termination slightly prior to the middle of May. The "blizzard" only retarded the work but a single day, and served only to give a needed rest to the "handlers," whose labors have been more than arduous, owing to limited space, close atmosphere and sustained effort. When the work started on the last day of February, \$155,000,000, all told, was on deposit; but owing to recent customs collections, the total now stands at \$181,000,000. Under the circumstances, it can be safely relied upon that Uncle Sam's millions are being skilfully handled and will be accurately accounted for down to the last penny.

First Bank of Burwell, Neb.—"I am well pleased with your publication. The 'Banking Law Department' strikes me exactly."—W. E. MITCHELL, *Asst. Cashier*.

"NEVER BEFORE ADVERTISED."

The following *fac simile* of a letter from A. B. Smith, Cashier of one of the leading banks in Texas, speaks volumes for the esteem in which the JOURNAL is held in that section. Incidentally it may be mentioned that this bank now has a paid-up capital of \$500,000, and the Cashier's signature is unique enough to have a place in our "Queer Signature" gallery.

The Merchants National Bank.

Ft. Worth, Texas, APRIL 14, 1888.

MESS. BRADFORD RHODES & CO,

NEW YORK CITY,

GENTLEMEN:-

WE HAD THE PLEASURE OF A CALL FROM YOUR REPRESENTATIVE A FEW DAYS AGO, AND WE GAVE HIM A CARD TO BE PUT ON THE FRONT LEAF OF YOUR BOOK, AS WELL AS TWO OTHER CARDS TO BE INSERTED AMONG THE TEXAS BANKS. I HAVE NEVER BEFORE ADVERTISED IN A JOURNAL, BUT WE SO HIGHLY APPRECIATE AND VALUE YOUR BOOK, THAT WE READILY CONSENTED TO PUT IT IN. WE HOPE THAT YOU WILL MAKE NOTICE OF CARD IN SOME CONSPICUOUS PLACE IN YOUR NEXT ISSUE.

VERY RESPECTFULLY,

The above letter is only one among many others of a like nature which we are constantly receiving from parties who have never advertised before. With a circulation *more than double* that of any other similar publication, and rates of advertising proportionately low, the value of the JOURNAL as a medium for advertisers is daily becoming more apparent to all.

CONDITION OF NATIONAL BANKS ON FEBRUARY 14, 1888.—The following is an abstract of reports made to the Comptroller of the Currency, showing the condition of the 3,077 National Banks in the United States at the close of business on Tuesday, the 14th day of February, 1888; and, for comparison, an abstract of the reports of October 5, 1887. [Cents omitted.]

* The amount of circulation outstanding at the date named, as shown by the books of the Comptroller's office, was \$272,387,176, which amount includes the notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under the Acts of June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

FINANCIAL MATTERS IN CONGRESS.

BILLS RELATING TO BANKING AND FINANCIAL MATTERS, INTRODUCED IN THE FIFTIETH CONGRESS.

Senate.

No. 5,034, H. R.—As anticipated in the last number of the JOURNAL, Mr. Beck succeeded in attaching his silver coinage amendment to this bill. At the end of last month Senator Stewart's amendment was pending. Senator Palmer, on April 3d, moved to recommit the bill to the Finance Committee, which motion was lost by a vote of 31 to 20. Senator Spooner then offered the following substitute for the whole bill, which was agreed to without division:

"That Section 2 of the Act making appropriations for the sundry civil expenses of the Government for the year ending June 30, 1882, in these words, 'That the Secretary of the Treasury may at any time apply the surplus money in the Treasury, not otherwise appropriated (or so much thereof as he may consider proper), for the purchase or redemption of United States bonds, provided that the bonds so purchased shall constitute no part of the sinking fund, but shall be cancelled,' was intended to be a permanent provision of law, and the same is hereby declared to have been, since its enactment, and to be now in full force and effect."

On April 4th, however, Mr. Beck offered his amendment as an amendment to the substitute of Mr. Spooner. This gave him a parliamentary advantage, as it was not in order to make any change in its language. The success of Mr. Beck was due to a combination among the Senators favoring an increased coinage of silver. As finally submitted, the text of the amendment was as follows:

"That whenever the circulation or any portion thereof of any National bank not in liquidation shall be surrendered by the deposit of United States notes in the Treasury or otherwise, and the same or an equivalent amount is not taken by other National banks within thirty days thereafter, the Secretary of the Treasury is hereby authorized and directed to purchase, at the market price thereof, an equivalent amount in silver bullion in excess of the minimum of \$2,000,000 worth per month for coinage purposes, which shall be coined and used as provided in the Act passed February 28, 1878, entitled 'An Act to authorize the coinage of the standard silver dollar and restore its legal-tender character,' provided that nothing in this Act shall alter or repeal said Act of February 28, 1878."

Mr. Teller spoke in favor of the amendment, stating that there was nothing in the financial experience of the world that would justify the statement that even if \$250,000,000 of silver coin were put in circulation, it would depreciate the silver dollar as compared with the gold dollar. He denied the intrinsic value of money, whether gold, silver or paper. While silver would not now buy as much gold as it once did, yet it would buy as much of all other commodities. The vote was then taken on Mr. Beck's amendment standing—37 yeas to 13 nays.

Senator Sherman spoke on the main question, and criticised the Administration for not having used the power given by the Act of March 3, 1861, to use the surplus in the purchase of bonds. This failure, together with the continued refusal of the party in power to enact a measure giving additional circulation to National banks, worked a double contraction. He characterized the measure with the silver amendment attached as an insidious attack on the National Banking system. The bill finally passed the Senate with the Beck amendment as above given.

House of Representatives.

No. 5,034, H. R.—After its modification and amendment in the Senate, this bill went to the House with a request for a conference. It was soon learned that the President would not sign the bill with the silver coinage feature attached, and when, on April 6th, the Speaker laid the bill before the House it was referred to the Committee of Ways and Means and virtually shelved. In order to effect the main purpose of the measure and remove the objections of the Executive, Mr. Wilkins, on April 16th, introduced the following resolution:

Resolved, by the House of Representatives. That it is the sense of this House that Section 2 of the Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1882, and for other purposes approved March

8, 1881, which was as follows: "That the Secretary of the Treasury may at any time apply the surplus money in the Treasury not otherwise appropriated, or so much thereof as he may consider proper to the purchase or redemption of United States bonds: Provided, that the bonds so purchased or redeemed shall constitute no part of the sinking fund but shall be redeemed and canceled" was intended to be a permanent provision of law; and the same is hereby declared to have been since its enactment and to be now, in the opinion of the House in full force and effect.

This resolution was rather a surprise to those who favored the silver amendment attached to the bond purchase bill by the Senate. Mr. Weaver opposed its adoption as did also Messrs. Brumm and Bland. The point urged was not in opposition to the resolution itself but to the manner in which it was introduced—that being regarded as a trick to prevent a debate on the silver question. The resolution passed by a vote of 138 to 64. Not voting, 123.

This disposition of the matter confirms the right of the Secretary of the Treasury to purchase United States bonds with the surplus. It was, however, disappointing to those who desire an increase in the circulation of silver either in the form of coin or certificates, and it has been intimated that the opportunity will be taken to tack the Beck or some similar amendment to any financial measure which may come up in either the House or the Senate. It may, therefore, be safely prophesied that in view of the strong vote in favor of the Beck amendment in the Senate, and the probabilities of similar strength being shown by the supporters of silver in the House that their opponents will be very reluctant to permit any financial measure to come up.

No. 9,051, H. R.—This is the Mills Tariff Bill and is now being debated, having come up for consideration on April 17th. This is not, strictly speaking, a banking or financial measure, and yet it is proper to refer to it here inasmuch as all financial and banking legislation will be very reluctantly considered by the House until the tariff question has been settled. If this bill were passed, with or without modification, or dropped, there will be a better basis on which to judge of financial measures proper.

NEW YORK HOLIDAY LAW.

THE PROPOSED MODIFICATION.

The so-called holiday law enacted by the New York Legislature last year having proved a menace to the business interests of the State, the Legislature of the present year has sought to remedy the evil. Early in the session a bill was introduced by Hon. BRADFORD RHODES, providing for whole Saturday holidays in the hot months of June, July and August, in place of the Saturday afternoons of the entire year as at present. A bill of the same character was introduced in the Senate by Senator WALKER and reported favorably from the Judiciary Committee to which it was referred. When the Senate bill came up for consideration it was discussed at considerable length and then referred back to the Committee for a hearing. The representatives of a number of labor organizations appeared before the Committee, claiming that the law in its present shape was a great boon to the working people of the State. The bill was then again reported from said Committee providing for half holiday Saturdays in June, July, August and September—four months—and passed the Senate. When the bill came into the Assembly, owing to the lateness of the session, it was substituted for Mr. Rhodes' bill. Although the author did not approve of the modification he deemed it better to accede to it rather than get no relief this year. The bill passed the Assembly on the 24th ult., and is, at this writing, in the hands of the Governor. Following is an official copy:

AN ACT

To further amend chapter twenty-seven of the laws of eighteen hundred and seventy-five, entitled, as amended by chapter thirty of the laws of eighteen hundred and eighty-one, "An Act to designate the holidays to be observed in the acceptance and payment of bills of exchange, bank checks and promissory notes, and relating to the closing of public offices," and to repeal chapter four hundred and sixty-one of the laws of eighteen hundred and eighty-seven.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of chapter twenty-seven of the laws of eighteen hundred and seventy-five, entitled, as amended by chapter thirty of the laws of eighteen hundred and eighty-one, "An Act to designate the holidays to be observed in the acceptance and payment of bills of exchange, bank checks, and promissory notes, and

relating to the closing of public offices," as amended by chapter two hundred and eighty-nine, of the laws of eighteen hundred and eighty-seven, is hereby further amended so as to read as follows:

§ 1. The following days and half-days, namely: The first day of January, commonly called New Year's Day; the twenty-second day of February, known as Washington's birthday; the thirtieth day of May, known as Memorial day; the fourth day of July, called Independence day; the first Monday of September, known as Labor day; the twenty-fifth day of December, known as Christmas day; any general election day in this State; every Saturday in the months of June, July, August and September, from twelve o'clock at noon until twelve o'clock at midnight, which is hereby designated a half-holiday; and any day appointed or recommended by the Governor of this State, or the President of the United States, as a day of thanksgiving, or fasting and prayer, or other religious observance, shall for all purposes whatever as regards the presenting for payment or acceptance, and of the protesting and giving notice of the dishonor of bills of exchange or drafts, checks and promissory notes, made on and after the day this Act shall take effect, be treated and considered as the first day of the week commonly called Sunday, and as public holidays or half-holidays; and all such bills, drafts, checks and notes otherwise presentable for acceptance or payment, or for protesting and giving notice of dishonor on any of the said whole holidays, shall be deemed to be payable and to be presentable for acceptance or payment or protesting and giving notice of dishonor on the next whole secular or business day succeeding such holiday; all bills of exchange, drafts, checks and promissory notes made after May twenty-fifth, eighteen hundred and eighty-seven, except those payable at sight or on demand, which would otherwise than by reason of the provisions of this Act be payable on any half-holiday Saturday, shall be deemed to be and shall be payable on the next succeeding secular or business day; but for all other purposes every Saturday in the months of June, July, August and September, unless a whole holiday as aforesaid, shall until twelve o'clock at noon be deemed a secular or business day. And the holidays and half-holidays aforesaid shall be considered as the first day of the week, commonly called Sunday, and as public holidays or half holidays, for all purposes whatsoever as regards the transaction of business in the public offices of this State or in the public offices of the counties of this State. On all other days or half-days, excepting Sundays, such offices shall be kept open for the transaction of business. Courts shall not be deemed public offices within the meaning of this Act, and nothing in this Act shall prevent the collection of canal statistics or the holding of Courts on any of said holidays or half-holidays.

§ 2. Section two of said chapter twenty-seven of the laws of eighteen hundred and seventy-five, as amended by chapter two hundred and eighty-nine of the laws of eighteen hundred and eighty-seven, is hereby further amended to read as follows:

§ 2. All bills of exchange, checks and promissory notes made after May twenty-fifth, eighteen hundred and eighty-seven, which by the terms thereof shall be payable on the first day of the week, commonly called Sunday, shall be deemed to be and shall be payable on the next succeeding secular or business day. Whenever the first day of January, the twenty-second day of February, the thirtieth day of May, the fourth day of July, or the twenty-fifth day of December shall fall upon Sunday, the Monday next following shall be deemed a public holiday for all or any of the purposes aforesaid; provided, however, that in such cases all bills of exchange, drafts, checks and promissory notes made on or after the day this Act shall take effect, which would otherwise be presentable for acceptance or payment on the said Monday shall be deemed to be presentable for acceptance or payment, or protesting and giving notice of dishonor on the secular or business day next succeeding such Monday.

§ 3. Chapter four hundred and sixty-one of the laws of eighteen hundred and eighty-seven, is hereby repealed.

§ 4. This Act shall take effect on Monday, July second, eighteen hundred and eighty-eight.

Drafts Stolen!—On Saturday, April 28th, from our counter, the following described Drafts, each payable to and endorsed by C. E. Carter, all drawn on the Metropolitan National Bank, of Chicago, and dated April 24th, 1888: No. 93,184, for \$500. No. 93,185, for \$500. No. 93,186, for \$500. All parties are hereby warned against purchasing or trading for any of the above described drafts. We issued the drafts. Notify the undersigned if negotiation of the drafts should be attempted.—

S. O. McDOWELL, Cashier, First National Bank, Fairbury, Ill.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Gold in Africa.—The total gold from Natal for 1887 was 40,067 ounces, of a value of £143,551; while for the same year the gold exported from the Cape was 25,798 ounces, of a value of £79,936; whereas the value in 1885 from the two Colonies was, from Natal £52,222, and from the Cape £17,321. During the three years the largest quantity exported from Natal in any one month was 25,258 ounces in September, 1886, while December, 1887, comes next with 23,655 ounces.

Hong Kong Bank.—The net profits of the Hong Kong and Shanghai Banking Corporation for six months ending December 31, 1887, including \$3,228.50 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to \$606,908.51, of which, taking out remuneration to directors, there remains for appropriation \$566,908.51. From this sum the directors recommended the payment of a dividend of £1 10s. per share, which will absorb \$400,000.

Confederate Bonds.—Englishmen who invested in Confederate bonds have not given up hope that the United States will pay them some time. The *London Weekly Bulletin* says: "The American lawyers employed by the committee hold the United States Government answerable for the whole Confederate debt, because they prevent the South from treating with the creditors about its settlement. In any case it is worth the while to raise these questions before the Courts of law in the United States in order to get them settled one way or another. An opportunity now occurs, and the London committee is determined to seize it by moving for an injunction."

March Blizzard and Government Receipts.—Until the day of the blizzard the customs revenue had been regularly in excess of the receipts for the corresponding dates last year. The blizzard entirely cut off returns to Washington for several days, and after communication was restored the daily returns indicated a decrease from last year's figures, which gradually became less marked, although still continuing. The receipts to March 24th from all sources were less than \$22,000,000. The customs receipts were less by \$2,000,000, and the total revenue by \$3,000,000, than for the corresponding period of March, 1887. The Treasury officials attributed the falling off entirely to the blizzard.

Sub-Treasury Count.—The Sub-Treasury count, which was commenced on February 29th, has been completed, and resulted in establishing the absolute accuracy of the deposit account. The various divisions of the count, together with volume of deposit, were as follows: Gold coin, \$90,346,413; silver dollars, \$29,607,709; fractional silver, \$9,271,314.88; gold certificates, \$15,848,080; silver certificates, \$1,347,302; United States notes, \$12,148,000; National bank notes, \$1,001; small coin (nickels and pennies), \$3,582.50; total actual cash on hand, \$158,573,411.93. The count was a remarkably rapid and successful one, and was conducted under the immediate supervision of Assistant Cashier Meline, of Washington, who brought on with him a force of sixteen skilled accountants to assist in the work.

Sub-Treasury Courtesies.—When Mr. Charles J. Canda retired from the office of Assistant-Treasurer of the United States in this city, the clerks in the Sub-Treasury unanimously passed a resolution of regret, which was handsomely engrossed and framed and presented to Mr. Canda, who replied in the following graceful letter of thanks:

Gentlemen—With feelings of sincere appreciation, I acknowledge the receipt of your very cordial letter, expressive of your sentiments in connection with my administration of the Sub-Treasury here. Your testimonial will recall many pleasing

incidents of two of the happiest years of my life, to which I shall always look back with pleasure. It is most gratifying to me to thus receive the assurances of your individual good will, conveyed in such heartfelt terms. Nor am I unmindful that the success attained in the administration of the office was largely due to your efficient and hearty co-operation and fidelity. With sentiments of regard and esteem, I am yours truly,
C. J. CANDA.

Russia's Finances.—The Paris correspondent of the London *Statist* says: "The news from St. Petersburg continues to be very gloomy; many large firms try to settle their debts by arrangement, and one of the biggest banking houses of St. Petersburg has not yet succeeded in negotiating a settlement of its large losses. London is interested in this firm; but it is affirmed that a settlement will be arrived at. It was officially announced that the Russian Government has put one million sterling at the disposal of the Russian Bank in London to protect its acceptances, and the argument from this as to general position was very bad. The official figures of the Russian Government for the last eleven months of 1887 contrast as under with those of 1886 and 1885:

	1887.	1886.	1885.
Receipts, Roubles	679,321,946	638,619,375	652,159,213
Increase over 1886, 40,701,571 roubles, or 6.30 per cent.			
Expenses, Roubles.....	641,473,612	657,367,428	622,303,013
Decrease against 1886, 15,893,816 roubles, or 2.40 per cent.			

"At the first glance they seem to indicate marked prosperity, but in sifting the different items one finds under receipts:

Land tax decrease, 27,968,081 roubles, or 46 per cent.
Customs decrease, 21,047,869 roubles, or 23 per cent.

"The former proves an agrarian crisis, and the latter very bad trade. Berlin is very nervous about the state of Russian finance, and bankers there recognize more and more that it will be folly to attempt to stem the decline of all Russian values, which has been very large since the 4th of November, 1887, the famous edict of the German Reichsbank refusing to advance money on Russian securities."

Codification of National Banking Laws.—Representative Dingley, of Maine, has been the most active and effective supporter in the Banking Committee of the Trenholm codification of banking laws, and it is in great measure due to his efforts that a practically unanimous agreement was brought about. Mr. Dingley says that he is convinced that the codification will be accepted by the House if the necessary time can be secured for its consideration. The measure, as reported, does not, in his judgment, contain any provisions that would justify or invite the opposition of the faction avowedly hostile to the banks. Apart from the provision reducing the amount of the compulsory deposit of bonds for circulation, he believes that the bill contains nothing which can be construed as changing the existing law *with a view to benefiting the banks*. At the same time he believes the codification to be of the utmost value as a simplification of the banking laws. Innumerable difficulties of administration are removed, complications and confusion corrected, sources of annoyance and friction obviated, and, in his judgment, the whole tendency of the compilation is beneficial alike to the interests of the Government and the banks, and to all concerned in the capacity of Federal or bank officers, or of depositors, or others transacting business with the banks. In his judgment, the Committee has excluded from the codification any change of law which could have a disturbing and injurious effect.

The members of the Committee do not express an expectation of final action at the present session, but claim that important progress has been made toward a beneficial revision and simplification of the banking laws, and in a way that should not provoke opposition.

Mr. Goschen's Scheme for Reducing the Rate.—Mr. Goschen's scheme for reducing the interest on the British National debt, which proposes that the interest rate on new consols shall be $2\frac{1}{4}$ per cent. for fourteen years and $2\frac{1}{4}$ per cent. thereafter, promises to be successful on account of the co-operation of the Rothschilds, the Barings, and the other leading bankers of London. When Mr. Childers proposed a somewhat similar scheme while he was Gladstone's Chancellor of the Exchequer, some years ago, it collapsed because of the refusal of the bankers to lend a helping hand. The capitalists of the British metropolis are not only Tories, but they are beneficiaries of Tory rule, and they have stretched a point now to make the Salisbury Administration successful. But though the Goschen plan will save immediately to the British taxpayer some \$7,000,000 per annum, and at the end of the fourteen years \$14,000,000 per annum, it is doubtful whether it will strengthen the Tories in the constituencies
