RHODES'

JOURNAL OF BANKING.

Vol. XX. JANUARY, 1893. No. 1.

SECURITY for deposits has been the dream of several projectors. If the deposits of every bank in the country, as well as their circulation, were absolutely guaranteed and secured, what a fine business would be that of banking. There would be no competition whatever, as it would make little difference where the depositor placed his money. It would be equally safe in any bank. It seems very reasonable to argue that as the circulating notes of a bank are secured, so ought its deposits to be. But are bank-note holders and depositors on the same footing? The depositor makes his deposit voluntarily, with every chance of looking around and selecting his bank. Does the holder of a bank-note have the same privilege? The notes circulate as money and are paid from hand to hand, passing current, as the expression is. The custom of trade, to a certain extent, precludes any close examination into the affairs of the bank issuing the note offered in payment by a customer or a debtor. If one dealer does not take the note, his competitor will. There is a degree of force exercised on one who takes a bank note, to compel him to take it, that is not exercised upon a depositor, and to just the extent of this force, arising from the nature of the bank note and the nature of trade, the note holder is on a different footing than the depositor. Therefore, after an experience of several hundred years in banking, it has been found advisable for law and government to give a protection to the note holder that it does not as yet give to the depositor. Not but that there is a tendency to protect the depositor also, but it is in a different direction and not in the nature of a guaranty. Taking the National banking system for example, the note holder is protected by the absolute guaranty of the United States. The depositor is protected by a careful system of restrictions to legitimate banking methods enforced by a system of espionage. This protection of depositors, while not absolute, extends as far as is possible, without interfering with that natural competition among banks which depends for success on a reputation for fair, honorable, courteous dealing with their customers, and for solvency and honesty. If deposits were absolutely protected, the underlying motive, which has rendered some of the best banks in the country what they are would be removed. A large part of their ability to attract deposits would be taken away if the deposits of all banks were by any method rendered absolutely secure. Well-established banks, with a reputation enhanced by an honorable record, would be no more desirable depositories than the most flimsy institutions started by the most doubtful men. It is objected that a measure, which permited National banks to issue circulation without bonded security but made a first lien on the general assets, would diminish the security for deposits. That it would do so is not at all probable. Deposits would be protected as they are now, by careful periodical examinations. But even if it did to some extent diminish the security for deposits, this would have the effect of making the depositor more careful. He would not deposit in any but banks of the best reputations, and this would be for the greatest benefit of all well-established and reputable banks. It would enlarge the field of honorable competition. Whatever the financial disadvantages to the depositor, it would, even if real, be made up, even to him, by the additional power that the circulation privilege would give every bank.

THE CANADIAN SYSTEM OF BANKING, advocated by some as a model to be considered in amending the National banking system with a view to furnishing a safe and elastic currency, is an excellent system for a country like Canada, where privileged classes still maintain their pre-eminence. It would not do in the United States where all citizens are on an equality, and all distinctions of caste or class are, politically at least, unrecognized. The underlying principle of Canadian banking is the special charter granted by the Government, to particular individuals as directly opposed to free banking, as it is called, under which any individual who complies with certain easy conditions, can obtain a charter. The special charter creates a monopoly. Supposing only one such charter to be granted in any country for carrying on the business of banking, the incorporated persons having obtained this special charter, would have the lucrative and valuable business of banking in their own hands exclusively. They would have no competitors. They would establish their main office in the central financial city and place branch offices in all the smaller towns. Their profits would necessarily be immense.

In Canada there are only about thirty independent banks, as compared with over ten thousand independent banks in the United States. But these thirty banks have branch offices in the aggregate numbering about five hundred. If the banking business in the United States were conducted on the same principle, and with the same proportion of independent banks to branches, the whole banking business of the United States would be in the hands of about five hundred independent banks, each with eighteen or twenty branches. In other words, about three thousand people would manage, control, and derive the sole profit from the banking business of the United States. Of course the number of stockholders would be larger than this; but as the competition among the various banks would be reduced, the general public would have to pay higher for banking accommodations. No one could commence the business of banking on a small capital, and there would grow up in the country a banking aristocracy contrary to all American traditions. Moreover, systems of banking similar in principle to the Canadian system have already been tried in the United States and in many of the States, and found wanting. The first and second Banks of the United States were, each of them, upon the special charter system. They, each in their day, had the monopoly of the banking business as far as the United States Government could grant it. The outcry and indignation against these monopolies was so great that neither of these institutions could obtain a renewal of its charter after the term of existence first granted had elapsed. When a National system of banking was revived in 1863, it was for this reason virtually a free banking system from 1863 to 1875, when it was formally declared to be such. The States, too, have many of them tried the special charter system, and the same popular animosity was shown to the banks so privileged and organized. The special charters soon gave way to free banking systems in all the States. In fact, the history of banking in this country shows that the intense dislike prevailing among the people to any restrictions upon any citizen entering upon any kind of business for which he has the capital, will prevent the return of any system of banking based on special charters.

Free banking no doubt has its disadvantages, the great competition which is sure to prevail under it reduces profits to a point that tempts weak bankers to dishonest dealing. Hence the need of closer governmental supervision of banks under the free system than is perhaps necessary under a system of special charters sparingly granted. Still, the history of free banking under the National system in this country, will doubtless show that losses incurred by stockholders depositors and note holders, have not been greater in proportion to capital, than the losses to the same classes under the Canadian or any other special charter system. In this article, however, the endeavor of the writer is to show that a special charter system is not adapted to the political institutions of the United States, and not to consider the intrinsic merits of that system as compared with those of a free banking system. This consideration, as Rudyard Kipling says, is another story.

TO MAINTAIN THE PARITY OF GOLD AND SILVER DOLLARS in the United States—in other words, to maintain gold payments—it is asserted that the Secretary of the Treasury has authority under the Act of 1875 for the resumption of specie payments, to obtain such additional gold, as may be necessary for the purpose, by the sale of bonds. Admitting that this construction of law is correct, and also that it is most important to maintain gold payments, the question suggests itself, what would be the consequences of the sale of bonds, if carried to the extent it must be, to obtain and keep on hand the necessary gold? The bonds, no doubt, could be sold for gold. If sold in the United States, the gold would most probably be drawn from the Treasury stock, or they would be paid for with legal-tender notes or silver certificates, the equivalent of gold. If sold abroad, foreign gold might be obtained for them, but just as the stock of gold abroad is diminished, it will have to be replenished from some other source. The United States Treasury, with its law of 1890, pledging it to maintain the parity of the gold and silver dollars, is the easiest place to draw gold from. Every dollar of the paper currency, legal-tender notes of 1861, National bank notes, legal-tender notes of 1890, gold certificates and silver certificates, is redeemable, directly or indirectly, in gold coin. The first result, therefore, of an offer to sell bonds for gold abroad, would be to stimulate the redemption of the paper currency in gold. As much gold as shall come into the Treasury from foreign parts will be drawn out of the Treasury in redemption of the paper currency. More gold being then required to maintain the gold reserve, more bonds will have to be sold to procure it. The circulation of the gold having once begun, and the attention of the public having been directed to it, like all currents once started, it will be sure to gain in force. There must be a profit to the buyer or the bonds will not sell, and this, together with the confession that the Treasury is short of gold, and the further fact that it can be kept short of gold by constant demand for the redemption of the paper currency, will increase the sales and reduce the price of bonds. If the paper currency redeemed is re-issued there will be no end to gold purchases. To maintain the parity of the gold and silver dollars under such conditions will be the continued labor of Sisyphus. If the paper currency is cancelled as it is redeemed, the result will be an increase of National bank circulation to take its place. The bonds would be cheap and the banks could both afford to take them better than others, and could issue circulation profitably upon them. When the legal-tender notes and silver certificates have all been redeemed and cancelled, the United States Treasury will be left with no liabilities for paper money, with the exception that, if the purchase of silver bullion by the monthly issue of legal-tender Treasury notes is not discontinued, about fifty-four millions per year will be required to redeem these notes in gold. The interest-bearing debt will have been increased by the amount of bonds sold.

Probably the amount of bonds it would be necessary to sell would be in the neighborhood of ($1,200,000,000) one billion two hundred millions of dollars. After having redeemed all its paper currency in gold, the Treasury would find it unnecessary to keep a gold reserve. It would have on hand a large amount of silver, which it could gradually dispose of as prices were favorable, and apply the proceeds to the sinking fund to be maintained upon the bonds issued. The interest on these bonds would, at 4 per cent., be about $50,000,000 per annum, not more than is paid out in Treasury notes annually for silver.

The sale of bonds to obtain gold to maintain the parity of the gold and silver dollars, thus appears to us a very considerable undertaking, but at the same time a very satisfactory remedy for the present anomalous financial condition of the United States. It would at once restore confidence in all American securities, give the country for many years a safe and elastic National bank currency, and entirely do away with Government legal-tender notes. The silver question would be practically solved, and the stock of silver now in the hands of the Treasury could be gradually sold at the smallest possible loss, and perhaps at a profit. We do not, however, believe it would be necessary to sell any of these bonds abroad. At a rate of interest not greater than four per cent., and perhaps less, and with a period of thirty years to run, the National banks would take them all at par and pay for them in legal-tender notes and silver certificates—that is, if the notes presented in payment are cancelled. Any undue contraction of the currency could be prevented by the gradual sale of bonds for notes to be cancelled as the National bank currency based upon them was placed in circulation.

THE QUESTION of National and State banks of issue will have been discussed before the American Academy of Political and Social Science by Horace White of the "New York Evening Post"; W. L. Trenholm, ex-Comptroller of the Currency, and Hon. M. D. Harter, of the House of Representatives, before this goes to press. As the views of these gentleman are well known the position they will each take is no mystery. The main currency question at present is not, however, between State and National banks, but between a real bank currency and the present paper money issued by the United States Treasury, If this last stated controversy were settled, the way would be open to the establishment of a sound and elastic bank circulation which will meet the wants of the business community and do away in great measure with the irregularities of accumulation at the money centres prevailing at certain times of year. The legal-tender notes issued during the war formed the entering wedge of the present vicious system. When first authorized they were fundable into six per cent. bonds, and if this engagement with those who held them had not been broken they would have been redeemed at the close of the war. When the silver craze for the remonetization of the silver dollar commenced in 1876 and 1877, the public mind being familiar with the legal-tender quality attached to Government paper saw nothing strange in the issue of legal-tender silver certificates. If it had not been for these certificates for which the silver dollars were exchangeable, the public would have very soon become so tired of carrying cart-wheel dollars that a repeal of the law authorizing their coinage would no doubt have soon taken place. It is under the deceptive cloud created by the legal-tender silver certificates, and their successors the legal-tender Treasury notes of 1890, that the silver question has attained such direful eminence. It is this flood of paper based on silver and the credit of the Government that makes it so difficult to secure suitable legislation for the establishment of a safe and elastic bank currency. The experience of the country in banking has been so great, that there may be now in the possession of those who choose to seek for it the most ample proof of how to legislate to secure a banking system perfectly adapted to the needs of the country that cannot be called a monopoly, that will furnish a safe and elastic bank-note currency and will be an unqualified benefit to the public and private finances of the Nation. But all ideas based on war measures must be done away with first, especially the most pernicious one, that the United States Treasury must furnish the paper notes of the country.

THE SUBJECT OF BANK CIRCULATION is treated in a very interesting and instructive way in a pamphlet prepared by Mr. A. P. Hopkins, of Omaha, Neb. Inasmuch as the arguments in this brochure are to the same purport as those of the JOURNAL, but from a different standpoint, a brief abstract of them will be useful at this time of uncertainty as to the financial future.

Government notes represent debt, and, when a legal tender, are invariably a forced issue. They are not called out by the demands of trade, but only in relief of the necessities of the Government. Bank notes represent capital, either in the form of coin reserves in the bank vaults or in the shape of short-time notes, representing actual commodities in the hands of the people. They are called out by the discount of commercial bills to distribute products, and will be retired by the payment of these bills. Government notes are issued at money centres. Bank notes are issued at the points where business requires them. The payment of Government notes is not provided for in advance, except perhaps to the amount of a limited reserve. The payment of bank notes is provided for, dollar for dollar, as they are issued, not alone by capital and coin reserves of the issuing bank, but by the bills receivable, in the discount of which they are issued.

The evils which result from the use of a Government currency are: Accumulations of the notes at the money centres during dull seasons, to the encouragement of speculation; stringency when the crops have to be moved; low rates of interest at the money centres and high rates in the farming districts.

Ninety-two per cent. of the payments for business purposes are now made by checks and drafts furnished by the banks of the country. Why should not the banks be trusted to furnish the notes with which, in conjunction with coin, this vast and economical machinery is kept in motion? The laws governing the issue of notes by National banks are at present very imperfect. They cause the circulation issued by National banks to lack elasticity—to have no proper redemption, and to be dependent on the maintenance of a National debt. In another part of the JOURNAL will be found a form of bill which it is believed would furnish the country with a bank currency both safe and elastic. We should be pleased to receive opinions from the

JOURNAL'S readers on the plan for increasing National bank circulation as outlined in this issue. Concise letters on the subject will be published. The JOURNAL especially invites criticism of the proposed plan, together with suggestions as to how it can be improved.

A COMMUNICATION FROM WILLIAM B. BANKS, President of a National bank at West Superior, Wis., on the subject of an increase of National bank circulation, is published on another page. There are two main features in his proposition: one is that the Government shall issue a two per cent. bond to be purchased by the banks as a basis for circulation, and the other that there shall be a tax upon circulation graduated according to the amount issued, so that over a certain amount the circulation becomes unprofitable. The first idea is wholly impracticable. Congress will never consent to increase the National debt for the benefit of the National banks. The United States may again see the time when, to maintain the existence of the Nation, it may become necessary to issue bonds. With that bare possibility in view it will no doubt be wise to preserve the present provisions of the National banking law, permitting the issue of circulation upon a deposit of bonds. But this circulation based on bonds should be in addition to the circulation based on the general assets and a safety fund. The amendatory bill, printed on another page, provides for this latter class of circulation while not interfering with the circulation based on bonds. This last privilege being retained in connection with the circulation based on the general assets and a safety fund will in a much simpler manner have precisely the same effect as our Western banker's graduated tax. The profits on the circulation based on general assets will be such as to induce the banks to keep it in circulation and to re-issue it as fast as redeemed. The circulation on bonds being less profitable will only be issued in times when there is a great demand for money, and when redeemed it will not be re-issued till another stringency calls it forth. The graduated tax advocated by our Western banker would, no doubt, accomplish the same effect, but is a much more artificial, complicated method, the practical working of which would be very annoying to the banks. The circulation based on general assets, even if restricted to 75 per cent. of the capital of the bank, in connection with circulation based on bonds, would when the details of the plan are properly adjusted work automatically.

THE RE-ESTABLISHMENT of State banks as the best remedy for the faults of the present currency system is advocated in a communication by MR. William Ballard, published on another page in this issue. The JOURNAL has already taken safe ground upon this subject, while fully recognizing the value to the country of an elastic bank note circulation. It is necessary to understand, however, that while elasticity or adaptability to local business needs is a great quality, yet soundness or certainty of redemption when redemption is called for, is of still greater importance. If the country can have a system of bank issues in which neither one of these great and important qualities is used as a blind to disguise the absence of the other, it would be a great blessing. Under the State banking systems as they existed prior to the imposition of the ten per cent. tax, safety of redemption was too much neglected, and under the National banking system elasticity was made a secondary feature. The JOURNAL does not believe that the condition of the several States and Territories at the present time is so much superior to what it was before 1864, in regard to uniform experience in enacting and enforcing banking laws, that an unqualified repeal of the ten per cent. tax now prohibiting State banks from issuing notes, would be safe. There are relatively just as many new States and Territories where the ideas of the enactment and enforcement of law are primitive, as there were in 1864. It has been suggested that a qualified repeal of the tax would insure safety. Some conservative bankers and publicists believe this course would be practicable, if such a qualified repeal could pass Congress, but its enactment would perhaps be difficult on account of the appearance of discrimination between banks in one State and in another. After all, it makes very little difference to banking capital whether the circulation privilege be granted under one system or another. Enlarge the circulation privilege of the National banks until it becomes profitable and the capital now invested in State banks would pass to the National system—and vice versa. There is no doubt that an increase of safe and elastic bank note issues would benefit the country. It perhaps seems to most bankers an easier and more direct way and freer from legislative difficulties to do it under the National system than under a system of State banks. Mr. Ballard presents some interesting facts bearing on the subject of State bank circulation.

THE ANDREW NATIONAL BANK BILL is under the consideration of the Committee of the House of Representatives on Banking and Currency. The majority of the Committee, it is said, favor the increase of National bank circulation to the full par value of the bonds deposited and a reduction of the tax on circulation. They are supposed to be against the reduction of the bond deposit now required of National banks to a nominal amount, and not in favor of the entire abolition of the tax on circulation. The Chairman of the Committee is reported as favoring a provision requiring National banks to issue notes, and not to permit them to longer enjoy the privilege they now have of issuing them or not. As to the extension of the limit of circulation permitted on bonds to an amount equal to the par value of the bonds, the National banks may well say, "For this relief much thanks." It is late but good as far as it goes, and as a homoeopathic remedy is on a level with Secretary Richardson's resumption of specie payments by issues of five dollar sums in silver change. Unless there is to be some real extension of the circulation privilege to the banks, the tax on circulation ought most certainly to be abolished. It is ridiculous to collect a tax on that part of the circulation based on the minimum of bonds the banks are forced to keep on deposit and on which they suffer continual loss. The proposition of Mr Bacon, however, to compel the banks to issue circulation whether they wish to or not would destroy the National banking system, if he means to compel them to deposit bonds and issue circulation to the full per cent of their capital allowed by law. For one thing it could not be carried out without advancing U. S. bonds beyond any price yet reached. If Mr. Bacon desires a speculation in Government securities let him insist on this measure which it is said he favors.

THE ANNUAL REPORT OF THE COMPTROLLER OF THE CURRENCY gives the usual valuable statistics in reference to the National banks, the larger portion of which is published in this issue of the JOURNAL. The recommendations for new legislation are wise and conservative and, with slight exception, such as Congress should feel no hesitation in enacting into laws. The first recommendation to reduce the minimum of bonds deposited by each bank to the nominal figure of $1,000 for banks with $50,000 capital, and $5,000 for banks with a capital in excess of that amount, is in the line of justice to the banks, who should not be compelled to take out circulation at the present loss. The second, that banks be allowed to issue circulating notes to the par value of the bonds deposited, ought to have been a law long ago. The third is corollary of the first and necessary to prevent a too rapid withdrawal of bonds and contraction of the currency. The fourth is, that banks should only be assessed in an amount sufficient to defray the actual cost to the Government of providing circulation and maintaining supervision and that the reduced tax should be placed on capital as well as circulation. If there is to be no circulation issued by many of the banks, it is certainly unfair to impose the cost of Government supervision solely on the banks that do issue circulation. The burden will be both lightened and equalized by the Comptroller's proposition. The fifth recommendation that the limit of loans to persons, companies and corporations be extended to ten per cent. of capital and surplus in place of ten per cent. of capital only, is a most excellent suggestion, one in which the Comptroller is supported by the authority of his predecessors. The sixth recommendation, that Government bonds be issued having 20, 30 and 40 years to run at low rates of interest, to be used as a basis for National bank circulation, can only be objected to on the ground that it would increase the National debt. He contemplates having the proposed bonds issued in exchange for the four per cents and shows that on October 31, 1892, by making such exchange, the Government might have saved $67,151,551.

The seventh recommendation, that the Comptroller of the Currency, with the approval of the Secretary of the Treasury, be empowered to remove Directors of National banks for violations of law, is rather a radical one. The possession of this power might prevent some good men, fearing political influence, from accepting a place in the directory of a National bank. The recommendation requiring Bank Examiners to give bonds to the Comptroller and take an oath of office, is one that will strengthen the service, as will also that recommending the appointment of two supervising Examiners, who are to inspect the work of the district Examiners. The tenth recommendation seeks to secure safety to the banks from borrowing officers, the eleventh to better the collection of assessments upon the stockholders of failed National banks, and both are in the line of wise restriction. The twelfth brings up a point of law that has always been more or less a vexation to Receivers in winding up insolvent banks. The law, with the best intentions, threw the duty of conducting litigation started by the Receiver, upon the U. S. Attorneys for the districts where the bank happened to be located. It was intended that this work should be part of that for which the regular salary of the U. S. Attorney was paid. But, as the essence of the law is fees, and as lawyers require a refresher occasionally, the U. S. Attorneys turned what was intended as a task into a privilege, by charging the bank for their work. The banks are frequently so situated that the U. S. Attorney cannot very well attend to them, and another attorney has to be employed. But, notwithstanding this, the U. S. Attorney considers himself ex-officio entitled to a fee, and generally gets it, thus making the insolvent bank assets pay double legal expenses.

THE ATTENTION OF THE JOURNAL'S READERS is called to the discussion of loaning money on commercial paper printed on another page. The treatment of the general subject of bank loans by Mr. James G. Cannon, of the Fourth National Bank of this city, is thorough and interesting and indicates how much should be done before a bank officer can intelligently make these loans. The main proposition is, that "each bank should have a well organized and thoroughly-equipped credit department," which can give reliable information on each name furnished by the bank officers. Mr. Cannon's investigations through such a credit department show that of 1,598 mercantile houses and concerns desiring credit 798, over fifty per cent., were unsatisfactory. Surely there is need of some such department in every bank and Mr. Cannon's paper shows clearly how it may be organized. This need not as is justly observed in the paper, interfere with the usefulness of mercantile agencies as they now exist, but supplement and render them more useful. It is to be presumed that many well-organized banks have some such process of investigating credits as Mr. Cannon writes of, whether as systematic as he describes or not. To bring out the ideas of bankers on this important subject, the JOURNAL offers a prize of $100 for the best article on "*How to determine the Value of Paper offered for Discount.*" Particulars will be found on another page.

* ALONZO BARTON HEPBURN,

COMPTROLLER OF THE CURRENCY.

The present Comptroller of the Currency, Hon. ALONZO B. HEPBURN, was born in Colton, N. Y., July 24, 1846, and was forty-six years old just four days prior to his appointment.

Mr. Hepburn was prepared for college at St. Lawrence Academy, Potsdam, N. Y., and Falley Seminary, Fulton, N. Y., and entered Middlebury College, Middlebury, Vt., in the class of 1871, which institution he left in his sophomore year, owing to sickness. He afterwards became Professor of Mathematics in St. Lawrence Academy and was Principal of the Ogdensburgh Educational Institute in the year 1870. He was soon after admitted to the bar and commenced the practice of law at Colton, N. Y.

His first public office was that of School Commissioner of the Second District of St. Lawrence County, which position he held for three and one-half years, resigning to take his seat in the New York Assembly January 1, 1875. He represented the District in the Legislature for five successive years, during which period he served on the Committees on Railroads, Insurance, Judiciary. Ways and Means and other important committees, devoting his attention to commercial and financial interests, canals, railroads and insurance. As Chairman of the Insurance Committee he introduced, among other important measures, and secured the passage of the law making life-insurance policies non-forfeitable after the payment of three annual premiums, and requiring the companies upon application to issue paid-up insurance to an amount which the surrender value of the policy would purchase at regular rates.

He was Chairman of the Railroad Investigation Commission, created at the instance of the Chamber of Commerce of the City of New York, Board of Trade, Transportation and other commercial bodies of the State; took over six thousand pages of testimony, and reported to the Legislature several important measures which became laws—among them the Act creating the present Railroad Commission, an Act regulating the use of proxies, and an Act defining and regulating annual reports compelling a continuous balance sheet. Prior to this Act the railroad reports had been a source of confusion rather than of information to an investigator.

The Railroad Commission law, as amended by the Legislature, required one Commissioner to be appointed upon the designation of the Chamber of Commerce of the City of New York, the Board of Trade and Transportation of the City of New York and the anti-Monopoly League of the State of New York. Mr. Hepburn was indorsed by the Chamber of Commerce. The other two bodies, however, united upon another person who was designated.

In April, 1880, he was appointed by Governor A. B. Cornell, Superintendent of the Banking Department of the State of New York, a position which he held something over three years and until succeeded by Willis S. Paine under

* An excellent artotype portrait of Mr. Hepburn is presented in this number as a Title illustration. It is from a recent photograph reproduced by Bierstadt expressly for RHODES' JOURNAL OF BANKING.

Governor Cleveland's administration. Mr. Hepburn's management of the Banking Department was heartily commended by the banks and the public.

The savings banks, trust companies and State banks enjoyed a marked degree of prosperity during Mr. Hepburn's administration, evidenced by increase of resources, reserve and surplus profits and number of institutions reporting. There was no failure of any institution in New York city or Brooklyn, no trust company or savings bank and only two discount banks of minor importance.

In 1883 he was appointed Receiver and wound up the affairs of the Continental Life Insurance Company of the City of New York.

In June, 1889, he was appointed National Bank Examiner for the cities of New York and Brooklyn by Comptroller Lacey and the late Secretary Windom, from which position he was promoted by President Harrison, July 27, 1892, to be Comptroller of the Currency. As bank Examiner he was discreet as well as thorough.

His entire career indicates that Mr. Hepburn is a man of exceptional ability in handling legislative topics, particularly those relating to banking and finance. His recent report as Comptroller of the Currency is an able and exhaustive statement to Congress of the present condition of the National banking system—prosperous as a system of loan and deposit banks, but requiring additional legislation to maintain the circulation features of the National banking law. Mr. Hepburn is a worthy successor of the long line of able Comptrollers who have preceded him. The serious attempts that are continually made in Congress to secure the repeal of the ten per cent. tax on State bank circulation will meet in him a steady opponent, judging from the opinions expressed in his last report. The Bureau over which he presides is one that in emergencies calls, in its proper administration, for character and ability of the highest type. The men who are fitted by experience and good judgment for a proper performance of its duties are not very numerous. Judging from Mr. Hepburn's record as legislator, Bank Superintendent, National Bank Examiner in New York city, and his success since he has been Comptroller of the Currency, the President made a wise choice in his appointment.

The Comptroller's report, published in this issue of the JOURNAL, will command wide attention not only by the managers of National banks but by all others interested in banking and monetary affairs.

President Harrison on Finance.

In his recent message to Congress President Harrison in referring to the Nation's finances, says:

"The report of the Secretary of the Treasury will attract especial interest in view of the many misleading statements that have been made as to the state of the public revenues. Three preliminary facts should not only be stated, but emphasized, before looking into details: First, that the public debt has been reduced since March 4, 1889, $259,074,200, and the annual interest charge $11,684,469; second, that there have been paid out for pensions during this Administration up to November 1, 1892, $432,564,178.70, an excess of $114,466,386.09 over the sum expended during the period from March 1, 1885, to March 1, 1889; and, third, that under the existing tariff up to December 1 about $93,000,000 of revenue, which would have been collected upon imported sugars if the duty had been maintained, has gone into the pockets of the people and not into the pnblic Treasury, as before. If there are any who still think that the surplus should have been kept out of circulation by hoarding it in the Treasury, or deposited in favored banks without interest while the Government continued to pay to these very banks interest upon the bonds deposited as security for the deposits, or who think that the extended pension legislation was a public robbery, or that the duties upon sugar should have been maintained, I am content to leave the argument where it now rests, while we wait to see whether these criticisms will take the form of legislation."

A PLAN FOR INCREASING THE CIRCULATION OF NATIONAL BANKS.

The following bill is submitted as most likely to meet the approval of the majority of the bank men of the country. It will provide a safe and abundant currency. The bill should meet the approval of all who desire a paper currency issued by the banks in preference to a paper currency issued by the United States Treasury. One objection that has been made to the bill is that while it would give both safety and elasticity to the notes issued, it would, to some extent, impair the security of the deposits. This objection is more apparent than real. Under present law a certain portion of the assets of a National bank is invested in United States bonds and set apart from the other assets by being deposited with the United States Treasurer to secure circulating notes. The assets to secure deposits are left in the possession of the bank. Under the proposed bill all the assets would be left in possession of the bank except five thousand dollars in United States bonds, which, as before, are required to be deposited with the United States Treasurer. Therefore, it merely puts that portion of the security for circulation to be derived from assets on the same level as the assets held as security for deposits. It in no way impairs the security for deposits. But in addition to the security for circulation derived from the assets the one per cent tax on circulation which now goes to the United States Treasury is to be set aside as a safety fund under the proposed bill.

The bill herewith presented is in the nature of an outline; numerous details are not provided for in the draft here submitted.

A Bill Authorizing the Issue of National Bank Circulation.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

That each National bank, whatever its capital allowed by law, may commence or continue business upon a deposit with the Treasurer of the United States of interest-bearing United States bonds amounting to not less than five thousand dollars at the par value thereof. National banks having more than the minimum of five thousand dollars, in bonds, on deposit, may withdraw such excess, on retirement of notes secured thereby. Each National bank shall be authorized to issue circulating notes, other than those secured by bonds, equal in amount to one hundred per cent. of its paid-in capital, certified to and approved by the Comptroller of the Currency, without deposit of other United States bonds than the minimum named above. The circulating notes are to be a first lien upon all the assets of the bank, and are to be printed and issued to the banks under the direction of the Comptroller of the Currency in the same manner and under the same regulations and restrictions as notes secured by bonds are now issued to the banks.

An annual tax of one per cent. shall be collected upon the circulation provided for in this Act in the same manner as now provided by law for the collection of an annual tax of one per cent. upon circulation of National banks secured by bonds. The proceeds of this tax shall be set aside as a safety fund from which the notes of insolvent National banks shall be paid, when the amount realized from the assets of such banks is insufficient for the purpose.

Whenever a National bank shall become insolvent, or commit any act for which the Comptroller has authority to appoint a Receiver, the redemption of its outstanding notes shall at once be provided for from the safety fund. As the proceeds of its assets, including the personal liability of shareholders, if necessary, are paid into the Treasury by the Receiver, in the manner now directed by law, before any dividends shall be paid to depositors, or any other creditors of the bank, the safety fund shall be reimbursed in the sum set aside for the redemption of the outstanding circulation of such insolvent National bank, as far as the proceeds of such assets permit. If such proceeds are in excess of the amount required to redeem the circulation, such excess shall be divided among the depositors and other creditors in the manner now provided by law.

SOME PERTINENT FACTS.

The report of the Comptroller of the Currency for the year 1891 shows that from the beginning of the National Banking System in 1863 to November, 1891, one hundred and sixty-four National banks were placed in the hands of Receivers. The outstanding circulation of these banks amounted to $16,209,160. There was collected from their assets the net sum of $41,010,914. These figures indicate that, without a specific deposit of bonds, the collections from the assets would have paid the notes of these banks in full. Supposing that $16 209,160 of the $41,010,914 had been collected from bonds, the remaining $25,000,000 would have been amply sufficient to meet the circulating notes. But if the bonds had not been deposited with the Treasurer, it is fair to presume their equivalent would have been held in some form by the bank, and that the assets representing this equivalent would have produced the same proportion of net proceeds as other general assets. Therefore, at least $9,000,000 should be added to the $25,000,000.

The capital of the National banks to-day is about $550,000,000. If circulation to the amount of $500,000,000 were issued, the annual tax would amount to five millions of dollars. This would form a safety fund amply sufficient, in a few years, for all purposes, and then the tax could be gradually reduced.

Comptroller Flagg, in his report for 1846, compares the Safety Fund and Free Banking Systems, which had been in operation, side by side, in New York State for about ten years, as follows: "In the security of the public under each system, our experience in the failure of ten Safety Fund banks, and about three times as many of Free banks, proves that the contribution of one-half of one per cent. annually on the capital of the Safety Fund banks has thus far afforded as much protection as the deposits with the Comptroller, by the Free banks, of a sum nominally equal to all the bills issued by them. It will be seen, by reference to a statement under the head of insolvent Free banks, that the loss to bill-holders, on the supposition that all the securities had been stocks of this State and bonds and mortgages, would have been over sixteen per cent., while the actual loss has been nearly thirty-nine per cent."

Hon. John Jay Knox, in his history of the Safety Fund System of the State of New York, says: "If the Banking Fund Act of 1829 (Safety Fund Act) had provided only for the redemption of circulating notes, as is the case with the Act for free banking, all the notes of the Safety Fund banks which have failed would have been paid at par by the contributions made to the safety fund from 1841 to 1845. And if the present plan of registering notes (to prevent illegal issues) had also been in operation, the result would have been still more favorable, as fraudulent issues have been redeemed from the Safety Fund to the amount of $700,000."

THOUGHTS ON THE MONETARY CONFERENCE.

BY A NEW ENGLAND BANKER.

MR. GEORGE A. BUTLER, the veteran banker of New Haven, Connecticut, whose writings on the silver question and kindred topics have heretofore been read with interest by the JOURNAL'S readers, kindly submits his views on the Monetary Conference in a communication recently received at this office.

In substance, Mr. Butler believes that it was wise for the United States to invite other nations to meet with us in convention and consider the silver problem, because that would be a gain in the general consideration of the situation, although he has never believed the Conference would produce any practical results, or that there was any probability of other nations joining the United States in the free coinage of silver at a fixed ratio. For instance, France, the head of the Latin Union, has for many years manifested utter indifference to the silver question. Thus far, the delegates from the other nations have acted as if they thought there was no necessity for doing anything in the matter. Thus far, there has been no proposition before the Conference that required any serious consideration by this Government. Thus far, it has seemed as if the policy has been how not to do anything, or at least the other delegates appear to be trying to ascertain how small a part *they* may take in the use of silver or what is the least concession required of them by the United States, so that this country may be induced to continue in the suicidal course it has pursued for so many years.

It is not surprising, then, that the delegates from the other countries feel that they need not commit themselves to any material increase in the use of silver. Undoubtedly their Governments know the situation in this country and thoroughly understand the views of our delegates. From Mr. Butler's standpoint it is a matter of regret that the delegation from the United States contains an element so aggressive that it greatly weakens their power to accomplish that for which they were sent abroad. The delegate from this country most widely known has spent his life in mining silver, and his prominence is mainly due to the fact that he has gained great wealth through his silver mines. It is well known that he has been most active in his efforts to create a public sentiment in favor of free coinage and has done his best to commit the Government to it. He has desired that Congress should so legislate that the people of this country would be compelled to take and pay for the product of the mines, at a price above the cost of production and in excess of its real value as a money-producing commodity.

Again, it is to be regretted that the case of the United States was greatly weakened before the meeting of the Conference. It could not be expected that other countries would feel any great anxiety about the matter when one of the United States delegates announced, in advance of the meeting, that three-fourths of the people in this country were in favor of free coinage of silver It is believed that the Conference would have made more progress had not the delegate referred to shown such indiscretion.

France shows no desire that there should be an international agreement, although she has a large amount of silver which is maintained at a parity with gold by the limitation of silver coinage. So far as the Rothschild plan is concerned it does not appear that any of the Latin Union nations will give it serious consideration, neither should the United States entertain the proposition. It would be a good thing for England and India. Germany and other gold-using countries would also be benefited but at the expense of the United States and the Latin Union. All of these countries now have about all the silver they can maintain at a parity with gold. Any arrangement that would increase their stock of silver—except under universal free coinage—would end in placing them entirely in the power of other countries where gold is the dominant coin in use. England, Germany and Austria could withdraw and leave these nations to take care of themselves, when it is not improbable they would be found on a silver basis and possessing a fluctuating currency attended with all the evils that are always connected with it.

If any plan, to increase the use of silver in other countries by the withdrawal of small notes, is adopted, the same course should be pursued in this country. We should repeal our silver laws and use silver only to the extent which the withdrawal of small notes created a place for. Probably it would be found that we already had all the silver that could be used under such an arrangement.

It is not to be expected that any plan now before the Conference will operate to maintain the value of silver or furnish a solution of the vexed question. All such measures are merely makeshifts, wholly inadequate and perilous to any hope of the use of silver beyond that of subsidiary coinage. Silver must be coined as freely as gold and as generally used as a circulating medium and a measure of value, if it is to have any fixed ratio with gold; else, it must take its place in the markets of the world as a commodity, the value of which will be determined by the demand for arts and manufactures, together with its use for subsidiary coinage—each country deciding for itself how much it will use for that purpose.

In the event of free coinage it will doubtless be at a higher ratio than 1 to 15½. The decreased cost of production has changed the distance between the two metals. Therefore, if there is to be any stability to any arrangement, silver must be used more nearly at cost of production than is the old ratio.

Mr. Butler believes that the Conference will have one valuable result, that of showing the American people how baseless are all hopes that other nations will unite with us in the general use of silver as a circulating medium.

Post Office Savings Banks.

It is claimed that one person out of every seven in the United Kingdom is a depositor in the post office savings banks, which have nearly $360,000,000 deposits. To manage this business there is a headquarters staff of not far from 1,900 persons at the London Post Office Bank, of which every money order post office in Great Britain and Ireland is a branch. Every deposit made in any one of the post offices is forwarded to the London headquarters. The local postmaster simply takes the cash and sends it up to London, merely entering it on his accounts and on the depositor's book. The London office keeps an account against every one of the 10,000 branch offices. How great is the labor entailed will be realized when it is stated that in one day as many as 72,689 deposits have been made, that last year 992,000 accounts were opened and 701,000 closed. At the central office in London every post office in the Kingdom has its ledger account, and the ledgers would of themselves make a big library.

W. H. Rhawn.

President of the American Bankers' Association.

BRADFORD RHODES & CO., PHOTOTYPE.

*WILLIAM HENRY RHAWN.

PRESIDENT OF THE AMERICAN BANKERS' ASSOCIATION.

WILLIAM HENRY RHAWN, President of the National Bank of the Republic, of Philadelphia, who was unanimously elected President of the American Bankers' Association at its Convention held in San Francisco, September 8, 1892, was born in Philadelphia, September 12, 1832, where he attended both public and private schools, and took special courses in book-keeping for which he manifested a predilection and aptitude. His first business training was received in a country store in the suburban village of Fox Chase, which he left at the age of twenty-four, determined to obtain a position in a bank in the city. While seeking such a position he accepted a temporary situation, without pay, as entry clerk in the wholesale dry goods house of Smith, Murphy & Co. Shortly afterwards he became book-keeper and cashier for the American Baptist Publication Society, but without relinquishing his purpose to secure the coveted position in a bank.

In April, 1857, he attained the object of his ambition by securing a temporary appointment in the Philadelphia Bank, as summer clerk, to fill the places of clerks while absent upon their vacations. Before the season had passed, however, he was given a permanent clerkship, and obtained his first experience in banking during the great financial panic of that year. He served the bank nearly seven years in almost every capacity, and participated in the opening of the Philadelphia Clearing-House in January, 1858, making the first exchange, for the Philadelphia Bank. In 1863, when chief accountant, he organized the "Runners' Exchange," a supplementary daily exchange peculiar to the Philadelphia Clearing-House, which is still in active use.

In entering the Philadelphia Bank, it was with the expressed determination of becoming the Cashier of a bank within ten years, and it is said that he would have achieved his purpose in that bank within the time had he remained there. But with the passage of the National Bank Act, in 1863, he boldly struck out for himself by organizing the Second National Bank in the suburb of Frankford, and became its Cashier. He opened the first telegraph office in town, being the first bank officer of Philadelphia to introduce the electric wires behind his counters, and he has never since been without them. While here he took an active part in the organization of the Central National Bank in 1864, writing the articles of association and being chosen its first Cashier, a position which he relinquished on account of illness, but was re-elected in a year or so, when he resigned the Cashiership of the Second National Bank, of which, however, he remained a Director for several years.

In August, 1866, he retired from the Central Bank to assume the Presidency of the National Bank of the Republic, an office which he still holds. He had fitted himself for this position, and secured it within ten years from the time he left the village store, no small achievement for a young man of thirty-four in conservative Philadelphia. He at once invited to the Cashiership Mr.

* The portrait of Mr. Rhawn presented in this number is from a recent photograph by Gutekunst, reproduced especially for RHODES' JOURNAL OF BANKING.

Joseph P. Mumford, an old associate of the Philadelphia Bank, who still ably supports him. Almost immediately he was elected Secretary of the Clearing-House Association, and has retained that position continuously ever since.

He also became Vice-President of the National Exchange Bank, and consolidated it with the National Bank of the Republic in 1870; was for several years Vice-President of the Fame Fire Insurance Company; was chairman of the committee charged with the reorganization, without the aid of a receiver, of the Lake Superior and Mississippi Railroad Company, as the Saint Paul & Duluth Railroad Company, and Vice-President of the latter from 1877 to 1888; was the founder and first President of the Guarantee Trust and Safe Deposit Company in 1872, spending three or four years in securing its permanent location and in superintending the erection of its large building and extensive vaults. He has for over twenty years been a trustee of the Penn Mutual Life Insurance Company; was President of the Soldiers' Home from 1876 until its dissolution in 1889, and is a councilor of the Educational Home. He was a member of the Union League during his residence in the city, and for over ten years warden of the Church of St. Matthias, and, as chairman of its building committee, superintended the erection of its beautiful church edifice, completed in 1873, and raised a large part of the money to pay for it and its great organ; and is now a vestryman of Trinity Church, Oxford, one of the oldest Episcopal Churches of Philadelphia. He is a member of various learned societies, such as The Franklin Institute of Philadelphia, Historical Society of Pennsylvania, American Academy of Political and Social Science, American Society for the Extension of University Teaching, American Statistical Association, and also of the Indian Rights Association.

During his Presidency of the National Bank of the Republic, the bank has twice changed its location. From its opening in May, 1866, until December, 1874, it occupied the premises 809 and 811 Chestnut street, when, with the Fame Fire Insurance Company and the Guarantee Trust and Safe Deposit Company, it removed into the new building of the latter at 316, 318 and 320 Chestnut street, where it remained until December, 1884, when it removed into its own new banking-house at 313 Chestnut street, one of the most unique as well as beautiful and best arranged banking buildings in the city and built for the exclusive occupancy of the bank under the supervision of Mr. Rhawn.

He has also shown his taste for architecture in the erection of his own rural home, "Knowlton," near Fox Chase, from which he started out upon his career as a banker thirty-six years ago, and where he now resides throughout the year, finding the chief enjoyment of his leisure hours with his family and books, or in riding or driving through the beautiful country of the vicinity.

His rural life has caused him to become much interested in the improvement of country roads, and as chairman of the Kensington and Oxford Improvement Association, which he organized, he entered into a contest with the city authorities to secure better work upon the highways, in which he received the support of the press and the people and which resulted in the revision of the specifications for such work, making them more in accordance with the requirements of scientific road building. The correspondence in connection with this contest was published in a pamphlet, "A Plea for Better Roads."

Through this controversy, which lasted several years, Mr. Rhawn's attention was drawn to the bad condition of the roads of the country generally and the great necessity for their improvement, and he organized and became chairman of the Committee on Better Roads, composed of some of the most prominent citizens of Philadelphia, and after securing the co-operation of the University of Pennsylvania, the committee offered a series of prizes for the best essays upon road-making and maintenance. The essays which were accepted were published in a book entitled "A Move for Better Roads," and by reason of Mr. Rhawn's persistent and industrious work this book has had a large sale, and the dissemination of the principles of road-making through this and other means has resulted in a widespread interest in the subject, which has recently crystallized in the organization at Chicago during the Columbus celebration in October, of the National League for Good Roads, of which Mr. Rhawn was elected treasurer. His unceasing services in the cause of better roads have borne good results, which have served to make him more than ever confident of the ultimate adoption of this question as a national one.

He has been an active member of the American Bankers' Association from its organization in Philadelphia in 1876, a member of its Executive Council from 1878 and chairman in 1891–'92 until elected President. While a member of the Council he started a movement for the establishment of schools of finance and economy in connection with the universities and colleges of the country, for the special education and training of youth as business men, taking as a model the Wharton School of Finance and Economy of the University of Pennsylvania. The plan of this school and other literature on the subject were published in pamphlet form and sent to all the colleges and universities as well as the banks and bankers of the country, and through his efforts Professor Edmund J. James, the head of the Department of Finance and Administration of the Wharton School, was sent to Europe by the Association to investigate into such schools there, the result of which was given in an address before the Convention at San Francisco, and a more extensive report will shortly be published in book form.

Mr. Rhawn has exerted his influence in other directions for the promotion of financial education. Last winter, in conjuuction with other bankers, he instituted a course of University Extension lectures on Finance which were delivered before large audiences and will soon be published under the title of "The History and Theory of Money."

Mr. Rhawn has been a Republican since the organization of the party and has taken part in local political affairs, serving for a time as a member of the Committee of Fifty for a New Philadelphia, a non-partisan organization to promote better municipal government. He also takes an active interest in matters of a non-political nature, such as school-houses, elevated railroads, electric roads and public parks. He has never held any political position, although at one time spoken of in connection with the mayoralty of Philadelphia, but has contented himself with doing all that a private citizen could do in the special lines he has followed, in which he has been a frequent contributor to the press, and the results of his efforts have amply repaid him for the persevering energy which he has brought to bear on every enterprise he has undertaken.

LOANING THE BANK'S MONEY ON COMMERCIAL PAPER.

HOW TO DETERMINE VALUE OF PAPER OFFERED FOR DISCOUNT.

NOTE.—The substance of this paper is from an address delivered recently by Mr. JAMES G. CANNON, of New York, before the Bank Clerks' Association of Philadelphia. Mr. Cannon has added some new matter and revised the address especially for publication in RHODES' JOURNAL OF BANKING.

Attention is directed to the announcement on another page of a prize for the best article on "*How to determine the Value of Paper offered for Discount.*" Mr. Cannon's article will not be in the competition.—EDITOR.

It has been said that the most valuable part of a banker's education is to learn whom to trust, and the more I examine the system of bank credits, as it exists to-day, the more thoroughly I am convinced that it is extremely lax. Banks are constantly loaning their funds upon mere hearsay knowledge, without pursuing any careful system of investigating the credit or standing of those who borrow—indeed the bank officer often relies entirely upon his intuition, or upon some evidence of the record of the customer which is found among the musty archives of the institution. Recent bank failures testify to the careless and indifferent methods pursued in making loans. Every little while we are startled by a denouement showing that the money of depositors and stockholders has been loaned in the most reckless manner. There are many institutions which, either on account of the greed of their managers for business or of their incapability and lack of nerve, are loaning their money apparently without making any searching investigation as to the standing of the borrower or worth of the collateral.

Every bank should have a well-organized and thoroughly equipped credit department, in charge of some one who can be relied upon to investigate carefully all names referred to him by the officers. In the first nine months of this year, according to the mercantile agencies, there were 7,378 failures which were strictly mercantile or industrial in character, with an aggregate liability of $76,971,000, which fortunately was a large decrease over the liabilities of the previous year. There has never been any record kept of liabilities that are due to banks or other financial institutions; but one has only to consult the daily papers or notice the records of judgments entered up each day to see what an enormous percentage of the liabilities of failed concerns are due to banks. In a recent failure in New York I learned that thirty-seven banks were interested, and out of liabilities of nearly $500,000 almost three-fourths were due to banks; and in conversation some time since with a leading merchant in our city, he called my attention to the remarkable fact that in some of the recent failures about 75 per cent. of the liabilities were due to banks. In one failure that I have in mind, out of $140,000 of liabilities nearly $100,000 were due to banks, and this firm, to my knowledge, had five bank accounts, their discount line in each one of these institutions being made up almost exclusively of accommodation paper; but in trade circles the firm had been for some time in poor credit and dealers would only sell them for cash.

LIABILITIES OF FAILED CONCERNS.

Statistics on the subject of the liabilities of failed concerns due to banks are very hard to procure. I selected ten well-known failures in New York and sent to the County Clerk's office, and after laborious effort procured a copy of the schedules of their assets and liabilities. I found that these concerns failed with nominal assets of $11,863,502; their actual assets were $5,273,622; their liabilities were $9,469,833, and the amount due banks was $4,904,,426, which was 51.79 per cent. of their liabilities. There were 138 banks known to be interested in these failures, and the schedules filed showed that there was $840,000 of the liabilities due to unknown holders of notes, supposed to be banks, so that I am not far out of the way when I say that at the lowest estimate there were over 150 banks interested in these ten failures. I am aware that there is on the part of many borrowers a strong aversion to having their credit investigated. A man who wishes to borrow money from a bank should have the same feeling toward that institution as a merchant who goes to a wholesale dealer to buy goods. The latter has a commodity to sell, and before shipping it requires a statement of the purchaser's condition, together with any facts that will aid in determining the line of credit to be granted. The bank officer has a commodity to sell, money, and he should be doubly sure of the responsibility of the party to whom he is loaning or selling it, because the money does not belong to him. A banker has the right to expect the fullest confidence on the part of the borrower, and the borrower should furnish him with a complete and detailed statement of the condition of his affairs as well as any other facts which the banker may deem necessary in order to determine the propriety of making the loan.

There seems to be a disposition on the part of a large number of people who borrow from banks or sell their paper in open market, not to give the banks a full statement of their condition. To me this seems a false position for men to take, and I contend that no matter how sound a firm may be, when they desire to borrow from the institution where they keep their account, or to sell their single-name paper—which is merely a promise to pay a certain amount of money at a given time without collateral—they should be willing, without any hesitancy, to make a full and frank showing of their condition in writing over their signature; and when declining to do so, I believe that we should give no consideration to their application for discount. After gathering careful statistics on this subject, I have reached the conclusion that where a borrower refuses absolutely to give any information in this way, his credit is impaired, and it is only a question of time when misfortune will overtake him.

INVESTIGATION OF CREDITS.

To show the value of a careful investigation of credits, the credit department of a New York bank prepared for me a summary of their investigation on 1,598 names of mercantile houses and concerns desiring credit. Of these 798, or practically 50 per cent., were unsatisfactory and credit was refused them.

When one thinks of these figures and comprehends them they are simply startling, and I commend this thought to the gentlemen present; that 50 per cent. of the applications for discounts are unworthy, for various reasons, of such accommodations. Many of the names which were rejected were so treated only after the most careful, painstaking and rigid investigation.

SUMMARY OF FINANCIAL CONDITION.

This should be obtained from an itemized statement duly signed, giving in detail assets and liabilities. This statement should be given to the bank bearing the firm name, its location, its business and branches, if any. It should state that it is made for the purpose of procuring credit with the bank for its negotiable paper, and that it is a fair and accurate showing of the financial condition of the firm on a given day of the year.

The statement should also show a list of assets as to

Cash;

Bills receivable;

Good accounts receivable;

Merchandise (and especially how valued);

Whether any real estate;

Also, machinery and fixtures, if any.

And should specify any other assets, and whether any of the assets are pledged as collateral.

The statement should furthermore show the liabilities, as

Bills payable for merchandise;

Bills payable to banks;

Open accounts;

Loans or deposits;

Mortgages or liens on real estate.

It should also specify any of the liabilities which are secured by collateral, and, by deducting the liabilities thus stated from the assets, show the net worth.

If there are partners in the concern, the statement should also show:

The individual worth of the respective partners outside of the business;

The names of the general partners in full;

Names of special partners, with amounts contributed by each and until when;

Contingent liabilities, such as accommodation indorsements and indorsed bills receivable outstanding;

The connections of each partner in other business, if any;

Insurance carried on merchandise and on real estate;

The amount of sales preceding year;

Expense of conducting the business preceding year;

Time the present firm has been in business and whom it succeeded, giving the date of trial-balance proof and the regular time of balancing books.

This statement should be signed by the borrower and should show his financial condition based on his last inventory. It should also indicate whether the inventory was an actual one or an estimate; if an actual one, by whom taken; and if an estimate, by whom made. We should also consider the external circumstances of the borrower, such as the line of business in which he is engaged—whether it is extremely hazardous, or whether it is a one-season business, or a business in which long-time credits are given, or anything pertaining to this subject; also the locality where he resides and the situation of his store as to the general business of the city or town.

Let us now proceed to take up and analyze in the order given the information called for by this statement, considering first the assets. The first item to appear under this head is "cash," which of course needs no explanation, as it is money on hand, or deposited in bank

...y, what is his present financial condition?

BILLS RECEIVABLE.

The character of this asset is governed by the customs of settling in the trade. In many lines of business all the best customers pay cash and buy only such accommodations. Many of the names which were rejected were so treated only after the most careful, painstaking and rigid investigation.

[redacted]

his [redacted]

Let us now proceed to take up [redacted] given the information called for by this statement, considering first the assets. The first item to appear under this head is "cash," which of course needs no explanation, as it is money on hand, or deposited in bank.

In investigating credits I do not desire to cast any reflection upon the mercantile agencies of this country, but I feel that we, as bank officers, should not rely entirely upon them; we should simply use them as corroborative of the evidence that we have secured as to the credit and standing of the borrower. They are justly regarded with favor by the community, and are of great assistance to us all; but for bank credits they should be supplemented and added to by the investigation of the bank officer. The weak feature of the mercantile agency system is its dependence upon correspondents who are expected to give their time and services gratuitously, and we frequently have to contend with their inaccuracy and negligence on that account; but if all the banks in this country would co-operate, and, by a free exchange of views in regard to the value of commercial paper, keep each other informed on bank credits, such action would result in greater benefit to them than all the mercantile agencies put together. It is an old saying in business circles that "if you wish to know anything about a bank's customer, don't ask the bank," and a bank is looked upon as the last place at which to inquire about the standing and responsibility of its customers. We all know this from our own experience, but it should not be so.

The practical question now arises, upon what basis should bank credits be granted? In the first place, they should be granted to the customers of the bank, according to their balances and responsibility. The bank should decide for itself what proportion of its deposits are not likely to be borrowed, and how many times a customer's average balance it can afford to loan him in the way of discount. Banks should insist that customers who desire accommodation from them should keep a proportionate average balance, as in this way only can they make their business profitable. Of course, when it comes to purchasing commercial paper, that is another matter which I shall take up later.

In considering the responsibility of a borrower, it would seem that his total net worth should be first considered. If the amount of money which he has at the risk of the business is small, and he is likely to be a large borrower, his credit should be based proportionately.

We should next consider his record and standing in the community as a merchant. Has he ever failed? If so, what were the circumstances? What settlement did he make with his creditors? What are the habits of his private life? Is he extravagant—does he live beyond his means? Is he a gambler, a speculator, or is there anything which would lead him to spend more money than he can safely take from his business?

We should next consider his business record. Does he pay bills promptly, and how does he stand in the trade he represents? These points, it seems to me, should define the position occupied as to the line of credit granted.

We should also consider his claims to credit. What are the characteristics of the borrower? Has he ability? Has he a reputation for honesty? Does he show that his business is prosperous? Is he up and abreast with the modern methods of transacting business, or is his business on the down grade? And finally, what is his present financial condition?

BILLS RECEIVABLE.

The character of this asset is governed by the customs of settling in the trade. In many lines of business all the best customers pay cash and buy only on open account, and the bills receivable on hand are generally from long-winded patrons, being notes received instead of cash in settlement of maturing bills—virtually extended credits—and we should know what portion, if any, is overdue. Bills receivable in such trades, if put on the market, should not sell at a better rate than single-name paper, but where the general custom is give notes in settlement of all merchandise transactions, bills receivable, of course, are a much better class of paper than single-name. Many very small notes offered for discount as bills receivable may indicate a needy condition. In some investigations of houses floating paper of this kind I have found that they had the reputation of making special efforts to secure settlements from all their customers by notes, no matter how small the bills, in order to use them at their bank or in the open market.

The business methods observed throughout the trade also have a large influence upon the value of this asset. Some lines of business are handled on good business principles and some on bad business principles. In the jewelry trade, for instance, credits appear to be loose and notes are given largely in settlement of bills. I understood also that it is customary with small jewelers to meet their notes pretty much as they please, and I am informed that, as a general thing, they are in the habit of getting extensions and making partial payments. The piano business of late years has been conducted on a similar basis, as the manufacturers and dealers, because of extreme competition, have been obliged to make a great portion of their sales on monthly payments. Had I time, I might mention many other trades where the same conditions prevail.

ACCOUNTS RECEIVABLE.

A merchant's ability in judging of credits, and his strength of character in enforcing his own convictions will largely measure the value of this asset in his statement. With a capable credit man and an efficient collector it is a good asset. If a large portion of his assets consist *legitimately* of this item, the merchant is justified in borrowing upon his single-name paper. If this item in his statement is larger than the customs of the trade warrant, compared with the amount of business the firm is doing, it will indicate lax credits or poor collections. If a concern has the reputation of being liberal in credits, here will be found their weak point.

If this item needs deeper investigation, by taking the reference book of a good mercantile agency and comparing the ratings of the parties from whom the indebtedness is due and learning the amount of their liabilities to the concern, you can soon tell the value of this asset. If, for example, a firm is rated from $20,000 to $40,000, is in good credit, and it was found that they owed over $5,000 to the house under investigation, in a majority of cases this would be an indication that the account was one that was carried, as no good merchant nowadays will permit one concern to be indebted to him, except perhaps for a few days, in excess of 25 or 30 per cent. of its capital.

MERCHANDISE.

This is the most likely item for the gathering of deadwood. Old stock is the easiest thing to accumulate. Merchandise is a quick asset at the current market price only in those lines of trade in which the articles themselves are generally used as collateral, such as stocks and bonds, grain, cotton, bullion, etc. Therefore, of the concerns that come before us for our consideration in the granting of credit few of them have stocks of merchandise that can be turned into cash in twenty-four hours. The easy negotiable value of a stock of merchandise

[Form B.—Known as the complete Form of Statement for a Firm asking Credit.]

depends upon its character. In the staple lines, like groceries, a stock consisting largely of sugar, coffee, tea, rice, provisions, etc., can be converted into cash upon very short notice at a slight concession, say 5 per cent., from the current market quotations. Wool, iron, leather, raw silk and rubber belong to the same class, and where merchandise consists of such assets we can take them in the statement very close to the par value.

Such stocks of merchandise, however, as woolens, lumber, hardware, glass, carpets, boots and shoes, cigars and manufactured tobacco, dry goods (embracing muslins, calicoes, linens, dress goods and the principal assets of a dry goods jobbing house) we must estimate at a less percentage to the inventory value than the other articles referred to.

But these are all good staple assets if the stocks are kept clean and handled with ordinary intelligence. They cannot be turned into cash in twenty-four hours, but can be disposed of in a short time at some sacrifice from the ruling trade prices.

In other lines of business the merchandise is of a very fluctuating value. The manufacturing clothing business, while abstractly considered a very staple line, is one where, as we all know, the realizable value of a stock of goods. depends altogether upon how the merchant handles it.

The silk trade has always been affected largely by the fashions.

There are many other fancy lines, and it is well for us to remember the effect that fashions have upon the success or failure of many of the firms who are applicants for credit.

Tobacco is another product where the value is measurable by the expert knowledge and, we might almost say, the business instincts with which the goods are selected. No two lots or crops are alike.

In the fur trade a warm winter may deprive your fur merchant of his season's profit.

The liquidating value of "Accounts Receivable" and "Merchandise" in a statement in case of failure is very hard to determine, but one of the best informed men on this subject, Mr. D. T. Mallet, of New Haven, Conn., has furnished me with the following table, which, from my own experience, I should judge to be about right:

	Accounts Receivable. *Per Cent.*	Merchandise. *Per Cent.*
Hardware	72	80
Dry goods	67	70
Boots and shoes	80	65
Furniture	70	68
Groceries	40	95

These figures are based on the liquidating value, per dollar, for claimed assets where correctly rendered, and would show the probable amount which would be secured under proper management. The depreciation is the difference between what the owner *thinks* he is worth and the amount at which his paper would be acceptable to the bank.

MACHINERY AND FIXTURES.

Machinery and fixtures, as we all know, are not a bankable asset upon which to base credit. If this item appears for any considerable amount in a statement, we should find out whether it is the custom to charge off each year a certain amount from this item, and whether repairs and ordinary additions for a slight increase in business are charged to expense account or added from time to time to that account.

REAL ESTATE.

Real estate I do not regard as an easily realizable asset except according to special circumstances of location and adaptability to use.

If we have a definite knowledge of the character of this item in a statement and can put an estimate on its value we should, of course, take it into consideration; but as an asset, on general principles, with which to meet maturing obligations, I do not think it can be taken into general consideration.

Having considered the assets of the statement before us, let us now turn our attention to the liabilities, and the first to appear is—

BILLS PAYABLE FOR MERCHANDISE.

Before considering this item, it would be well to find out if it is the custom in that special line of trade to settle merchandise bills by note; if not, what are the special reasons for it in this case. Liabilities for merchandise have some flexibility as to their maturities, as it is customary in most any line of business to have some leniency toward customers, and it is not a difficult or extraordinary thing to get some indulgence in the payment of merchandise bills, if necessary, especially in the retail trade; but very few of the jobbers can continue to allow their bills to run over maturity and still maintain a good credit from the sources of their supply.

BILLS PAYABLE TO BANKS.

It is very important to know if any portion of this liability is to banks in which the firm has an account, or whether the item represents notes sold on the open market. At his own bank a merchant sometimes expects renewals and the continuation of his discounts, but from the public he is liable at any time to be entirely deprived of his accommodations in case of panics or even an ordinarily tight money market. For this reason many houses prefer to sell their own paper in the open market and keep their banks open for accommodations when they are unable to secure outside credit. If it is a case of buying paper and not a credit to a customer of a bank, it is important to know where the bank accounts are kept and if their banks grant them continuous lines of discount thoughout the whole year. Accommodations of this kind partake of the nature of capital furnished by banks. This practice, in my opinion, is not in accord with good banking principles, as it is mutually detrimental in its results to the bank and to the customer, for a bank is not organized for the purpose of furnishing fixed capital to any firm or corporation.

OPEN ACCOUNTS.

Open accounts need no special comment. They are merchandise liabilities, with more or less flexibility in the time for payment, according to the position of the firm and the custom of the trade. It is, however, a good idea, when practicable, to find out to whom the general liabilities are principally due, in order that one may know what kind of creditors the firm has to lean upon. In making a careful investigation of a house that is not strong, this is a point of great importance. We should know whose hands they are in besides our own and what facilities they have besides those accorded by us.

LOANS OR DEPOSITS.

If they are items of any consequence, the particulars should be inquired into closely; whether it is money of friends, family estate funds, deposits of employees, etc., and under what conditions of payment it is held. These items you can depend upon pretty surely as being preferred creditors in case of failure.

MORTGAGES OR LIENS.

Mortgages or liens on real estate should be included in liabilities. Many concerns make up their statements showing the equity in real estate only in their assets, with probably merely a memorandum of the mortgages. This is always for the purpose of making a better showing. But the more pleasing effect to the eye should not be allowed to carry the impression into the mind. Although it is customary to assume that the real estate in the assets will offset the mortgages or liens on it, and while this is true to a certain extent, mortgages are liabilities, and when they become due, if the sale of the real estate does not satisfy them, they remain a claim upon the general assets.

Another liability that should be shown in every statement is the amount of bills receivable outstanding that have been negotiated with the endorsement or guarantee of the firm. While the custom of merchants generally is to mark such notes off, ceasing to regard them as either liabilities or assets and so making up their statements, I think that conservative business methods should call for this item among the liabilities of a mercantile house just as much as with a National bank.

This completes the list of liabilities, which should be deducted from the total amount of assets to show the net worth of a concern. I also desire to bring to your attention some other important features of a statement.

I think it is always of value to have over a firm's signature the composition of the concern, giving the names of all the general partners and special partners, with the amounts of special capital and the time to run.

INFORMATION ABOUT PARTNERS.

Information regarding the financial affairs of the different partners is valuable in cases where the principal means rest with their individual worth outside of the business. We frequently come across firms whose credit rating is obtained on account of the outside wealth of some one partner when the capital in the business is small. It is also important to know whether the outside means of partners are in their own names and at the risk of the business, or whether they consist of property in their wives' names. Accommodation endorsements are growing less frequent and I think they are looked upon with less favor by merchants and bankers, and for that reason it is very important that we should satisfy ourselves with direct and positive information that the party to whom we give credit is not engaged in any such practice. Both merchants and bankers are inclined to give more liberal credits direct than they will on accommodation security, making it easy for any firm in reasonable circumstances to get along without this method of procuring credit.

When we are questioning a concern about themselves we should also inquire in how many different enterprises they or their partners are engaged. One of the most frequent causes of disaster in business is the attempt to do too much, and to do too many things at the same time is a still more aggravated form of the same evil. We none of us have to go far from home for plenty of such instances.

INSURANCE.

The insurance carried on both merchandise and real estate and the volume of business done, are other important questions we should not leave out of our catechism. The volume of business transacted, the capital employed and average time of credit granted, are the three factors whose proportion to each other would show whether a statement is well balanced or not. For instance, a large business on moderate capital, with long terms of credit, makes it necessary for a concern to owe a good deal of money, and we should not be surprised at large liabilities. A small business on short time, with a liberal capital for conducting it, should make a statement with very small liabilities.

Another very important point is the regular times for balancing books, and how often proofs are taken. I can recall numerous instances of failures directly attributable to this cause.

BUSINESS EXPENSES.

Other very important items, and vital ones are expenses of conducting business and the annual withdrawal of the partners. One firm that came under my notice submitted a statement showing withdrawals by the partners of nearly $100,000, with business expenses within a few thousand dollars of the same amount. It would be a remarkable business that could stand for any length of time a drain like this. One of our leading mercantile agencies made some special investigations in the matter of business expenses for me with the following result: Eleven concerns, not more than two in any one line of business doing an annual trade of $109,000,000, showed expenses of $6,925,000, or an average of about 6¼ per cent. The percentages in the different lines of trade were as follows:

	per cent.
Jobbing hardware, one house	15
Jewelry, one house	15
Steam pumps, one house	15
Railroad supplies and machinery, one house	10
Groceries (no liquor) two houses:	
one house	6
one house	6½
Groceries (with liquor) one house	8
Dry goods, jobbing, two houses:	
One with annual business of $40,000,000	5½
" " " " $10,000,000	6¼
Commission dry goods, one house with annual business of $10,000,000	1½
Commission woolens, one house	2½

I also had the same statistics made up from statements made direct from ten leading houses in representative lines of business with the following results:

Total annual business	$12,693,000
Total expenses	900,000

Percentage of expenses to annual business, a small fraction over 7 per cent. This distribution was as follows:

	per cent.
Retail dry goods, two houses, one	20
one	16.6
Wholesale groceries, two houses, one in New York	3.5
one in the West	5
Wholesale hardware, one house	9
Wholesale clothing, two houses, one	5.7
One (reputed close-fisted and economical people)	3.6
Wholesale tobacco, two houses, one	2.
one	4.
Manufacturing cigars, one house	4.9

It will thus be seen that the matter of annual expense on amount of sales is a very important item, and should be carefully looked after as it is likely to sap the resources of a firm before one realizes it. Another important question is, what disposition is made of bad and doubtful accounts each year. The answer will draw out your customer's characteristics in handling this side of his business. Find out, if possible, what proportion, if any, of accounts and bills receivable are past due, extended or renewed. The shape in which a statement is made up, I think is one of the best indications to be had from an outside view of the business methods in the office of your applicant for credit. Some statements come to hand clean, comprehensive and clear as day, others so mixed up and befogged that you feel that you know less about the maker's condition after you have examined his statement than you did before it was received. You may know less about his condition, but you know more about his characteristics. The books of a merchant are his guide, and if a transcript from his books fails to show you his position, it will also fail to show him.

I believe the effect of making statements to banks will produce better business methods among the firms who make such periodical reports of their condition. Their desire to make a good showing at the round up, will spur them on to better efforts in pushing their business and hold them back from venturesome operations that might extend their affairs beyond that which they know their bankers would like to see. From own personal experience I know that many officers of National banks are restrained from doing many things which they would have no hesitancy in doing if they did not have over them all the time, the fear of the Bank Examiner stepping in to look into their affairs; consequently, by asking for statements the banks produce a better condition of mercantile credit, to say nothing of protecting themselves from loss.

The commercial paper business enters largely into the calculation of our large New York banks. There are seasons of the year when the regular demand from customers is so moderate that the large surplus held by the banks cannot be properly invested, and at such times, as a rule, call loans in Wall Street are placed very low, and time loans yield but very little. It is then that a thorough knowledge of commercial paper becomes more valuable, and it is a well known fact that the most successful banks in New York have achieved great prosperity by reason of intelligent purchases of commercial paper. They aim to make these purchases fit closely into their maturities, and arrange at all times, if possible, to have a few of them extend beyond a four months' limit, making a selection of four months' purchases so as to have equal amounts for the various months within that space of time. The custom of issuing single-name paper has grown largely within the last ten years, and although it was adversely criticised in former days, it has proven to be a profitable source of investment for our banks. The first requisite, however, in purchasing single-name paper, is a systematic mode of procedure in the investigation of each name before buying as outlined in what I have already said on this subject. The assistance of the broker who handles commercial paper is a necessary and valuable aid to the purchasing bank, but no institution should rely entirely on the word of a note broker as to the value of paper, but the bank should make a careful investigation on its own account, and ascertain through its own agents the strength or weakness of every name. Yet I am told that fully seven-eighths of the paper sold in New York to-day is purchased upon the simple recommendation of the note broker. It would seem from this, that busines is done in such a haphazard way by many of our most substantial institutions that a discussion of "Bank Credits" is most opportune and should receive the careful consideration of us all.

Years ago, when it was the fashion to criticise single-name paper, it was assumed that raising money in this way was a kiting operation. Many things have brought about a change in public opinion, and to-day two-thirds of all the paper purchased by our New York banks, it is fair to say, is single-name.

Single-name paper makes no pretence to be any thing else but what it appears, a simple promise to pay, based on a statement of facts which every intelligent banker should try to obtain himself. Experience has taught that this simple "promise to pay" is much preferable to so called "double-name" paper, which frequently includes elements of great accommodation for both maker and endorser, and therefore cannot be probed to the bottom. Genuine double-name paper, consisting of bills receivable given for an actual sale of goods is, of course, a very satisfactory form of investment, but there are few trades, nowadays, in which transactions are arranged so as to require settlement by notes. The trades that have introduced this system of settlement by notes, and have retained it, are largely the tobacco trade, jewelry trade, cigar trade, rubber trade and trades which deal in staple products.

As stated before, the great bulk of business is done on open accounts, and the successful merchant in our day has nothing to show on his books but an open account which is dated ahead some sixty or ninety days from date of purchase, with the additional term of four months' time given for settlement. This very fact of long time makes it obligatory upon all classes of merchants, especially commission merchants and manufacturers, to issue their own paper, and to discount their purchases with its proceeds. This system puts in more compact form the notes which come upon the market, and simplifies very much the manner of doing business. If for each transaction the merchant gave his note, which he now discounts, there would be no uniformity in price of such note, and it would be handled in all possible directions and at all possible prices. With the present facilities, the merchant in New York obtains his money at the market rate, and discounts his purchases with the mill in the East or with the commission merchants in New York at whatever rate can be agreed upon, and the obligation by which he has secured this money is held by the large New York banks and throughout the country. I speak positively when I state that the experience of the last six years in one of the prominent note brokers' offices in New York indicates total sales of more than $200,000,000, and that the losses on that entire amount of sales to all the banks who have purchased have been infinitesimally small, which proves that the proper investigation and close watching of credits makes the purchasing of commercial paper one of the most profitable parts of our business.

A calculation made by the firm in question showed about the following results: Two hundred and fifty millions invested in paper at the average rate of 5 per cent. per annum, and all paper running about four months equals about 1 2-3 per cent. on the total amount, or a profit, in round figures, of $4,000,000. Deduct from this $4,000,000 the actual losses which were experienced by the banks during that period, in round figures $500,000 of this particular paper, and it will show a net result of $3,500,000 gained during this space of six years' time on the investment of $250,000,000, or, in other words, one brokerage firm has sold in six years, $250,000,000 of paper; the paper has averaged four months; the rate sold at averaged 5 per cent. The result has been that the banks purchasing this paper have received $4,000,000 of discount. The losses have been $500,000, the net return to the banks therefor $3,500,000. The average holdings of the banks at any one time on the above calculations have been $13,100,000, and the return to the banks the sixth part of $3,500,000 per annum on an average investment of $13,100,000.

In buying commercial paper, an element enters into your purchases which does not exist in loaning money to the bank's customers. In the latter case you have, as I have stated, your account to guage his accommodation by, but in buying paper on the open market you are obliged more than ever to guage the line of paper which you will purchase of any concern by the position the borrower occupies and his claims to credit of which I have spoken. You will also be called upon to consider the question whether the borrower is entitled to a monetary credit in the open market. Of course in buying all commercial paper, one of the great beauties of the system is that we expect to be paid when due, without being called upon to renew the notes. If through ease of money a small concern should place its paper upon the market and procure a monetary credit, in a tight money market such a concern would not be able get money to meet its notes; consequently, we must always bear in mind this question in regard to buying paper, and houses should never put out paper unless they can do it all the time. People in trade do not like concerns to be discounting when money is easy on account of being able to borrow the money in open market, and then when money is tight stop discounting, sometimes pay cash and at others give notes. Hence, a banker should not foster, but should frown upon the habit of small houses, who are not entitled to moneyed credit, of putting their paper on the market. J. G. C.

Statement Forms.—Attention is directed to the Forms, accompanying Mr. Cannon's article, to be used by firms and corporations asking credit. The Forms are such as used by a prominent New York city bank, with some improvements adapted to the article. Form A (facetiously called the "Shorter Catechism") is the one usually required of firms and individuals. Form B is used when a more complete report is required; and Form C will furnish an excellent report of a corporation asking credit.

Pennsylvania's Banking Department.

In his recent message to the Legislature, the Governor of Pennsylvania recommends the following suggestions, submitted by the Bank Examiner.

First.—"The passage of an act providing that no company be permitted to loan its money upon its capital stock."

Second.—"That loans beyond certain fixed per centum of the capital stock of a company should not be permitted to be made directly or indirectly to any officer, director, or employee of a company, except upon application to, and approval of, the board of directors."

Third.—"That no individual, firm, or unincorporated company be permitted to use in the conduct of their business any name, sign or device resembling in any respect that of a bank or any other financial corporation."

Fourth.—"That foreign corporations desiring to do a banking, trust, or saving fund business, or receiving deposits of money or valuables in this Commonwealth, shall first obtain consent from the State therefor, and be brought within the supervision of the Banking Department."

Fifth.—"That the Banking act of June 8, 1891, be so amended as to empower the Superintendent of Banking, or any examiner appointed by him, to administer oaths for any purpose arising in the performance of his duty, and to make any false statementthereon perjury, and to visit it with proper punishment upon conviction."

Sixth.—"That a sufficient per diem penalty be imposed upon any company in the jurisdiction of the Banking Department for neglect in complying with the call of the Superintendent of Banking for report of condition, or any other special report which he is empowered to require or publication thereof, within the time prescribed."

Seventh.—"That the Superintendent of Banking be empowered to appoint temporary receivers pending proceedings when necessity arises for the taking possession of any company within his jurisdiction, and their compensation be fixed by the Court before whom the proceedings shall be held."

STATE BANK CIRCULATION.

[Brief editorial comment on Mr. Ballard's article appears elsewhere in this issue. Readers of the JOURNAL are requested to furnish, for publication, concise opinions on the subject of State Bank Circulation. Criticism of Mr. B's deductions is also solicited. —Editor JOURNAL.]

The results of the Presidential election indicate that the country is ripe for some relief to our currency system. An important plank in the Democratic platform, the scope of which is well known to intelligent bankers, is that advocating the repeal of the 10 per cent. tax upon circulation of State banks. This recommendation does not, of course, dictate the method or the degree of the repeal, but it embodies a sentiment working strongly in the minds of the people for many years—viz.: that there has been something wrong with the currency system prevailing since the Civil War. The feeling has been strong and growing stronger, and has been the secret of the activity of the greenback and silver agitation. No one has had the courage until within a year or two to point out with definiteness what the remedy really is. One reason of this has been that ever since the inauguration of the National Banking System and the legal-tender note, especial stress has been laid in argument upon the defects of the State banking systems prevailing before the war.

To see how this style of argument commenced it is only necessary to remember that the State bank circulation existing in 1863 and 1864 had to be arbitrarily removed in order to make a place for the National bank currency and the legal-tender note. This State bank currency was then in excellent condition, and the arbitrary imposition of the ten per cent. tax for the purpose of suppressing it could only be justified on the ground of necessity. The constitutionality of this tax was only sustained on the rather doubtful ground that Congress had the right to strengthen their pet system at the expense of a power exercised by State banks without dispute for over fifty years. In order to give color to the argument of necessity, all the disasters, frauds and losses that had happened to State banks during the panics of 1814, 1819, 1837, 1840 and 1857 were raked up and dwelt on. No justice was done to the benefits conferred by the State banking systems.

The National banking law was drafted from the banking laws of the several States, and insured no better banking or no better service and safety to the public than did the banking laws of New York, Massachusetts, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, Louisiana and several of the other States. From 1814 to about 1850 State banking was largely experimental. Crude and imperfect laws in newly settled States, and the spirit of speculation attendant upon the development of new territory, permitted many banking frauds. By 1860, however, most of the defects had been remedied, the dangers to be guarded against were well known, and had not the National Banking System introduced by Secretary Chase swept away the right of circulating State bank notes, the country would to-day have doubtless had a most safe and effective system of State bank currency.

What is the radical defect in our present monetary system which causes the blind dissatisfaction, manifesting itself so frequently in the demand for fiat money and the demand for greater quantities of depreciated silver coin, for which a return to State bank note circulation is believed to be a remedy? The defect in the present system of currency is not in amount, for the per capita is constantly increasing, but it is in its natural lack of capability to adjust itself to the functions a currency should perform alike for the benefit of all classes of the people. Owing to defects in the way our currency is now issued, and in the way it is distributed, certain classes of citizens and certain localities receive greater benefit than others. These inequalities cause idle surplus to accumulate in some places, while there is complaint of dearth in others. As our laws now stand, all paper or credit money is issued by the United States Treasury. The National bank notes need not count, as they are gradually being withdrawn from circulation.

The only way in which paper money can leave the Treasury is by the payment of the debts or dues of the government. The only persons, therefore, to-day having the power of putting paper money in circulation are those to whom the Government owes something. The creditors of the Government and their assigns are now the real controllers of the currency. The Government pays largely by checks. These checks in process of collection accumulate at the financial centres, and these centres, therefore, have the first grip upon all the issues of paper money. The system for accumulating money at the financial centres is perfect, but the system of getting this money out into the highways and byways of trade and enterprise is not so complete. The financial centres lend only to those who have the highest credit. These again to those whom they know to be good, and so on until the man who needs the money in an outlying district is reached. This last man has finally to pay a high interest, made up of the profits of all the intermediate persons or corporations.

But this is not all. The money being first accumulated in the financial centres, it becomes so much cheaper there that all enterprise is attracted to those points. The improvement of any locality depends now on the power of that locality to get money from the financial centres. Naturally the great bankers who control these accumulations at the centres do their personal work in the line of the least trouble and risk, and thus regular lines for loans are established. The people who get into these runways are fortunate, others who do not or cannot growl. In other words, the present system of issuing and handling the currency of the country tends to create monopolies of credit and to deprive many citizens of the credit they could obtain under a less narrow system. The country grows rich under the present system, but the wealth is not distributed as fairly as it would be under a system where credit cannot so easily become the property of a class.

It is just this difficulty that a return to State bank circulation would remove. The freedom to start local banks to issue a currency for local use under such restrictions as the banking experience of the country has shown to be necessary to safety, would at once start up a very large number of local enterprises that cannot procure capital under the present system. Proper safeguards as to ample security back of the notes and counterfeiting must, of course, be provided, and no bank started under these precautions will be apt to loan money to unsound enterprises. It is very certain that under this new system the country would gain. Instead of depending on foreign credit for its currency, each locality could issue a currency on its own credit. This, it is plain, would be much cheaper. Another thing is probable, that the banks, at the money centres, would make more under the new system than they do under the present one. A class of institutions for the purpose of selling credit has grown up under existing conditions, trust companies, mortgage companies, etc. These have come very much into competition with the banks. They are really middlemen between the people and the banks who get the currency from the latter and furnish to the former. When under the State bank-currency system the people can in all cases go directly to the banks for the currency they need, then these middlemen will disappear. As for plans for making the circulation of the State banks safe, there will undoubtedly be no lack of good ones, even if the whole matter were relegated to the various State Legislatures.

The writer recognizes the great power exercised by the JOURNAL OF BANKING in molding public opinion on monetary affairs, and trusts that its readers will give unbiased consideration to the subject briefly outlined in this article.

WILLIAM BALLARD.

To Prevent National Bank Failures.

National bank officials are greatly interested in the report that will be made by Senator Chandler, Chairman of the Special Committee on Failed National Banks, which was appointed to inquire into the causes of the failure of several National banks, especially the Maverick National Bank, of Boston, and the Keystone and the Spring Garden National banks, of Philadelphia.

The investigations of the committee have shown that in the first place there is nothing wrong with the National bank system, but that the trouble has come from the officials of the banks themselves in making loans that ought not to have been made.

To a JOURNAL representative Senator Chandler recently said in substance as follows:

"The committee will probably report that in the Maverick, the Keystone and Spring Garden banks the trouble lay entirely with those who controlled them. In the Maverick Bank, for instance, the testimony shows that Asa P. Potter and other officers of the bank borrowed money way beyond the legal limit, and in that case, as well as in the cases of the Keystone and Spring Garden banks, of Philadelphia, the Bank Examiners were practically bribed to make false reports to the Comptroller so that the banks would be allowed to go on. We have found that large sums of money have been loaned to the Bank Examiners by the banks so that the Examiners could go into stock speculations. We have, in connection with the Maverick Bank, fac-similes of the bank's statements, with proofs of indebtedness dropped out by a line being drawn through them on the bank's statement. I do not know that the Examiners did anything for which they could be punished, but the evidence shows that they did not make correct reports. I know of no way in which a man can be punished for not finding out something that is hidden from him. The law can be changed, however, so as to prevent such failures as that of the Maverick Bank. There we found, as I said before, that the trouble was owing to the overloans that were made to the officers of the banks. I think that if the law was such that it absolutely prohibited National banks from making loans to the President, the Vice-President and the Cashier of these banks, and at the same time made exceedingly stringent regulations as to loans to stockholders and Directors, such failures could be prevented. The Solicitor of the Treasury has made such recommendations, based on the information that has been secured in connection with the failure of these banks, and the committee will probably report in favor of them."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

OVER-CERTIFICATION—LIABILITY OF NATIONAL BANKS.

Supreme Court of the United States, November, 1892.

JENNIE M. THOMPSON, *et al.*, *vs.* THE SAINT NICHOLAS NATIONAL BANK.

A National bank is liable upon a check certified by it, notwithstanding that such certification was made in violation of the provision of law forbidding a National bank to certify a check when it has not on deposit to the credit of the drawer the amount of the check.

In error to the Court of Appeals of the State of New York.

This was an action brought by John B. Thompson, in the Supreme Court of the State of New York, against the Saint Nicholas National Bank of New York, a National banking association. The complaint alleged that on the 18th of April, 1874, the plaintiff was the owner of 73 mortgage bonds, of $1,000 each, of the Jefferson, Madison and Indianapolis Railroad Company, and 20 mortgage bonds, of $1,000 each, of the Indianapolis, Bloomington and Western Railroad Company, of the value of $150,000; that on or about that date the defendant became wrongfully and illegally possessed of the bonds; and that, before the suit was brought, the plaintiff demanded from the defendant the possession of them, but the defendant refused to deliver up any portion thereof.

The answer of the defendant, set up that, at the time named in the complaint and for a long time before, Capron & Merriam, bankers and brokers in the City of New York, were customers of and regular depositors with the defendant, and kept a large account in its bank; that it was the custom of Capron & Merriam to procure call loans, advances and discounts from the defendant, for the benefit of themselves and also of their customers, and they pledged to the defendant, as collateral security for such loans, advances and discounts, various bonds, stocks and commercial paper, under an agreement on their part that in case they should be at any time indebted to the defendant for money lent or paid to them or for their use, in any sum, the defendant might then sell, in its discretion, at the brokers' board, public auction or private sale, without advertising and without notice, any and all collateral securities and property held by the defendant for securing the payment of such debt, and apply the proceeds to that object; that the bonds specified in the complaint were a part of the securities so pledged by Capron & Merriam to the defendant; that the defendant, at the time of such transactions, did not have any knowledge in respect to any person interested in such loans or in said securities, except Capron & Merriam, and the latter having failed to pay such loans on proper demand, the defendant proceeded to sell and dispose of said securities, pursuant to such agreement, and gave to Capron & Merriam credit for the net proceeds thereof, and that there still remained due to the defendant, on account of such loans and advances, after such credit, a large balance.

The plaintiff having died, and his executors having been substituted as plaintiffs, the case was tried at a Circuit of the Supreme Court before a jury, which, under the direction of the Court, found a verdict for the defendant. The exceptions of the plaintiffs, taken at the trial, were heard in the first instance at the General Term of the Supreme Court, on a case made by the plaintiffs, containing the exceptions. A motion for a new trial was made thereon before the General Term, and was denied, with an order that the defendant have judgment against the plaintiffs upon the verdict, with costs. The plaintiffs then appealed to the Court of Appeals, which affirmed the judgment and remitted its own judgment to the Supreme Court, where a final judgment was entered against the plaintiffs. The plaintiffs brought a writ of error.

The 93 bonds in question were all coupon bonds, payable to bearer. The testator of the plaintiffs delivered them to Capron & Merriam, who were his brokers, as margin for purchases of stock by them for his account. Capron & Merriam pledged the bonds to the defendant, they being its customers, as collateral security for the repayment of any indebtedness which might exist at any time to it on their part. That pledge was made under a written agreement, dated December 2, 1873, and signed by Capron & Merriam, which read as follows: "We hereby agree with the St. Nicholas National Bank of New York, in the City of New York, that in case we shall become or be at any time indebted to said bank for money lent or paid to us or for our account or use, or for any overdraft, in any sum or amount then due or payable, the said bank may, in its discretion, sell at the brokers' board or at public auction or private sale, without advertising the same, and without notice to us, all, any, and every collateral securities, things in action, and property held by said bank for securing the payment of such debt, and apply the proceeds to the payment of such indebtedness, the interest thereon, and the expenses of the sale, holding ourselves responsible and liable for the payment of any deficiency that shall remain unpaid after such application." Afterwards, the defendant paid and advanced for Capron & Merriam large sums of money on the faith of the bonds and of such other securities as it held for their account. They failed in business on April 20, 1874, owing the defendant $71,920.17, for checks certified by it and outstanding, and for money paid by it up to the close of business on April 18, 1874. On April 20, 1874, before the defendant heard of such failure, it paid $210 more, making a total debt of $72,130.17, which remained unpaid. No notice or claim as to ownership of the 93 bonds by the testator of the plaintiffs came to the defendant until May 5, 1874. The bonds came into the possession of the defendant before it made the certifications of checks for the account of Capron & Marriam, which were made on April 18, 1874: and the certifications were made on the faith of the deposit of the bonds and of the other securities which the defendant held for the account of Capron & Merriam. The defendant used its best efforts to procure as large a price as possible for all the securities which had been pledged to it by Capron & Merriam, including the 93 bonds; but, after crediting to Capron & Merriam the entire proceeds of sales, there was a deficiency on their debt to the defendant of about $1,800. No payment on account of such deficiency, and no tender or offer of any kind in respect to said bonds, was ever made to the defendant by the testator of the plaintiffs. This action was not commenced until April 18

1880; or, until a period of six years had elapsed after the bonds came into the possession of the defendant.

At the trial, the plaintiffs asked the Court to direct a verdict for them on the ground that the contract of certification of the checks by the defendant was void, because it was unlawful, being a certification of checks drawn by Capron & Merriam when they had no money on deposit to their credit with the defendant, and the defendant could not hold the 98 bonds as against such unlawful certification; and on the further ground that the defendant did not take the bonds in the ordinary course of business.

BLATCHFORD, *J.*: The Federal question thus involved is the only one which we can consider on this writ of error. It arises under the Act of March 3, 1869, ch. 135 (15 Stat., 335), which was the statute in force on April 18, 1874, and read as follows: "It shall be unlawful for any officer, clerk or agent of any National bank to certify any check drawn upon said bank, unless the person or company drawing said check shall have on deposit in said bank, at the time such check is certified, an amount of money equal to the amount specified in such check; and any check so certified by duly authorized officers shall be a good and valid obligation against such bank; and any officer, clerk or agent of any National bank violating the provisions of this Act shall subject such bank to the liabilities and proceedings on the part of the Comptroller as provided for in section 50 of the National Banking Law, approved June 3d, 1864," (13 Stat., 114, ch. 106). The provisions of that section 50 were that the Comptroller of the Currency might forwith appoint a Receiver to wind up the affairs of the banking association. The provisions of the Act of March 3, 1869, are now embodied in section 5208 of the Revised Statutes.

In repard to the Federal question involved, namely, the certification of checks by the defendant for Capron & Merriam without having on deposit an equivalent amount of money to meet them, and the contention that the defendant did not become a bona fide holder of the bonds in virtue of payments made in the pursuance of the agreement with that firm, the Court of Appeals remarked, in its opinion, given by RUGER, *Ch. J.*, that the statute of the United States affimed the validity of the contract of certification, and expressly provided the consequences which should follow its violation; that the penalty incurred was impliedly limited to a forfeiture of the bank's charter and the winding up of its affairs; that it was thus clearly implied that no other consequences were intended to follow a violation of the statute; and that it would defeat the very policy of an Act intended to promote the security and strength of the National banking system, if its provisions should be so construed as to inflict a loss upon the banks and a consequent impairment of their financial responsibility. The Court then cited, to support that view, *National Bank* vs. *Matthews* (98 U. S., 621), *National Bank* vs. *Whitney* (103 U. S. 99.) and *National Bank of Xenia* vs. *Stewart* (107 U. S., 676)

* * * * * * * * * * * * * * *

The agreement of December 2, 1873, between Capron & Merriam and the defendant, did not call for any act violating the statute. There was nothing illegal in providing that the securities which the bank might hold to secure the debt to it of Capron & Merriam should be available to make good such debt. The statute does not declare void a contract to secure a debt arising on the certifications which it prohibits.

In addition to that, the statute expressly provides that a check certified by a duly authorized officer of the bank, when the customer has not on deposit an amount of money equal to the amount specified in the check certified, shall nevertheless be a good and valid obligation against the bank; and there is nothing in the statute which, expressly or by implication, prohibits the bank from taking security for the protection of its stockholders against the debt thus created. There is no prohibition against a contract by the bank for security for a debt which the statute contemplates as likely to come into existence, although the unlawful act of the officer of the bank in certifying may aid in creating the debt. In order to adjudge a contract unlawful, as prohibited by a statute, the prohibition must be found in the statute. The subjection of the bank to the penalty prescribed by the statute for its violatton cannot operate to destroy the security for the debt created by the forbidden certification.

If the testator of the plaintiffs had pledged the bonds to the defendant, he could not, after receiving the defendant's money, have replevied the bonds; and after possession of the bonds had been given by him to Capron & Merriam, and after they had been subsequently taken by the defendant in good faith, neither he nor his executors can set up the statute to destroy the debt.

This construction of the statute in question is strengthened by the subsequent enactment, on July 12, 1882, of section 18, of the Act of that date, ch. 288 (22 Stat., 166), making it a criminal offense in an officer, clerk or agent of a National bank to violate the provisions of the Act of March 3, 1869. This shows that Congress only intended to impose, as penalties for over-certifying checks, a forfeiture of the franchises of the bank and a punishment of the delinquent officer or clerk, and did not intend to invalidate commercial transactions connected with forbidden certifications. As the defendant was bound to make good the checks to the holders of them, because the Act of 1869 declares that the checks shall be good and valid obligations against the defendant, it follows that Capron & Merriam were bound to make good the amounts to the defendant. It necessarily results that the defendant, on paying the checks, was as much entitled to resort to the securities which Capron & Merriam had put into its hands, as it would have been to apply money which they might have deposited to meet the checks.

Moreover, it has been held repeatedly by this Court that where the provisions of the National Banking Act prohibit certain acts by banks or their officers, without imposing any penalty or forfeiture applicable to particular transactions which have been executed, their validity can be questioned only by the United States, and not by private parties (*National Bank* vs. *Matthews*, 98 U. S., 621; *National Bank* vs. *Whitney*, 103 U. S , 99; *National Bank of Xenia* vs. *Stewart*, 107 U S., 676).

The bonds in question came into the possession of the defendant before it certified the checks. They were not pledged to it under any agreement or knowledge on its part, or in fact on the part of Capron & Merriam, that subsequent certification would be made. The certifications were made after the pledge, and created a debt of Capron & Merriam to the defendant, which arose after the pledge. The agreement of December 2, 1873, applied and became operative simultaneously with the certifications, but independently of them, as a legal proposition.

In *Logan County Bank* vs. *Townsend* (139 U. S., 67-77), decided in March, 1891, after the present case was decided by the Courl of Appeals of New York, this Court approved the decision in *National Bank* vs. *Whitney* (103 U.

S., 99), and said that a disregard by a National bank of the provisions of the Act of Congress forbidding it to take a mortgage to secure an indebtedness then existing, as well as future advances, could not be taken advantage of by the debtor, but "only laid the institution open to proceedings by the Government for exercising powers not conferred by law."

Judgment affirmed.

ASSIGNMENT OF DEPOSIT—CHECK—DEPOSIT SLIP—ORAL AGREEMENT.

Court of Appeals of New York, Second Division, October 1, 1892.

FIRST NATIONAL BANK OF UNION MILLS *vs.* JUDSON H. CLARK.

In the absence of assent by the bank, the giving of a check of a depositor does not operate as a transfer or assignment of the debt created by making the deposit.

Nor does the delivery of a deposit-slip have such effect.

An assignment of the debt due from the bank to the depositor may be made by oral agreement; and the delivery of a check does not preclude the payee from showing, aside from the check, an oral contract to transfer the debt itself.

In this case the evidence justified the jury in finding that there was no assignment.

This was an action on a check drawn by Sliney & Whelan on defendant, a banker, in favor of plaintiff. Judgment was entered in defendant's favor on the verdict of a jury. This judgment was affirmed at General Term, and plaintiff appealed.

PARKER, *J.:* John Sliney, of the firm of Sliney & Whelan, on December 5, 1882, gave to the plaintiff a deposit slip, of which the following is a copy: "Deposited by Sliney & Whelan with Judson H. Clark, banker, Scio, N. Y., December 5, 1882. Discount. $3,412.50. F. M. BABCOCK." Babcock was in the employ of Judson H. Clark, and acted as his Cashier. At the same time Sliney made and indorsed in the firm name, and delivered to the plaintiff, a check, which reads as follows: "Scio, N. Y., December 5, 1882. Judson H. Clark, banker: Ten days after date pay to the order of Sliney & Whelan three thousand four hundred and twelve and fifty one-hundredths dollars. $3,412.50. SLINEY & WHELAN." The plaintiff thereupon paid to Sliney the amount called for by the check, less 18 days' interest thereon and exchange. December 7th the plaintiff put the deposit slip and check together, and sent them by mail to the defendant, who on or immediately after December 15th, the day on which the check was made payable, returned the same to the plaintiff, with a letter advising that there were no funds to meet the check. Subsequently plaintiff demanded payment of the defendant, which was refused, and this action was thereupon begun.

The defendant's denial of liability was placed on two grounds: (1) That Sliney & Whelan did not have on deposit with him on December 5th, or at any time following, any sum of money whatever; (2) that Sliney & Whelan's pretended claim against the defendant was not assigned to the plaintiff. On the trial, testimony on the part of the plaintiff was presented, tending to show that on December 5th the defendant discounted a note for $3,500, made by Knox Bros., and indorsed by Sliney & Whelan, but with the understanding that the deposit should not be drawn against for ten days, and the deposit slip given to Sliney represented the amount of the note, less the discount agreed upon. Defendant testified that he told Sliney that he was not in a situation to discount the note then, and Babcock, his Cashier, testified that Sliney informed him that defendant, Clark, said he should leave the note there, as he might be able to discount it in the future, and to figure "the discount, and put it on a deposit slip," which was done. But we need not discuss the evidence in that regard, as the Court was not asked to direct a verdict in favor of the defendant, and the jury were instructed to determine whether the fact was as claimed by the plaintiff or as asserted by the defendant. To such submission no exception was taken, and necessarily it cannot now be urged that the jury should not have passed on the question. The Court instructed the jury that if they should find that the defendant did not discount, or agree to discount, the note for Sliney & Whelan, then their verdict should be for the defendant; but should they find for the plaintiff on that proposition, then they should go further, and consider whether that which took place between the plaintiff and Sliney amounted to an assignment of Sliney & Whelan's claim against the defendant, for, if it did not, the plaintiff could not recover. The plaintiff excepted to the charge in such respect, and also to the refusal of the Court to charge the following request: "That there was no dispute as to what took place between Sliney & Whelan and the plaintiff at plaintiff's bank at the time of the delivery of the papers, and that what took place there amounted to an assignment to the plaintiff." As the verdict may have been put on the ground that there was no assignment to the plaintiff, we are required to consider whether the exceptions to which reference has been made were well taken. We are thus conducted to an inquiry embracing all the details of the transaction which resulted in plaintiff's paying over to Sliney & Whelan the face of the check, less interest and exchange.

We will first consider whether the giving of the check by Sliney & Whelan to the plaintiff for the full amount of the deposit operated as an assignment of the debt. Assuming that Sliney & Whelan were depositors with the defendant, the money after deposit made belonged to the defendant. Sliney & Whelan's right was a chose in action. The implied engagement on the part of a banker to pay the checks of his depositor does not inure to the benefit of the holder of a check, so as to enable him to enforce payment thereon against the bank prior to its acceptance. In the absence of assent by the depositary, the giving of a check by a depositor does not operate as a transfer or assignment of the debt created by making a deposit. (*Harris* vs. *Clark*, 3 N. Y., 93; *Chapman* vs. *White*, 6 N. Y., 412; *Ætna Nat. Bank* vs. *Fourth Nat. Bank*, 46 N. Y., 87; *Duncan* vs. *Berlin*, 68 N. Y., 151; *Risley* vs. *Bank*, 83 N. Y., 318.) Here there was not an acceptance by the banker. On the contrary, he refused to accept it; and it follows that the check did not operate to transfer the debt. Neither did the delivery of the deposit slip have that effect. The appellant calls it a "certificate of deposit," but such designation is not accurate. It is in fact what the witnesses for both plaintiff and defendant assert it to be—a deposit slip or deposit check. The use of the deposit slip is well understood. It constitutes an acknowledgment that the amount of money named therein has been received. It is a receipt, and nothing more. No promise is made to pay the sum named on return of the paper, nor is it expected, either by the depositor or depositary, that it will ever be presented to the bank again, unless a dispute should arise as to the amount of deposit, in which event it would become important as evidence. It is not intended to furnish evidence that there remains money in the bank to the credit of a depositor, but to furnish evidence, as between depositor and depositary, that on a given date there was deposited the sum named. It may all, or nearly all, be checked out at the moment of making the deposit slip, but the depositor will not be refused it on that account, for long-established usage has fixed its *status* in banking as a mere receipt,—an acknowledgment that the depositor placed the amount named therein on deposit. It is not proof of liability, and it will not support an action against the bank. (*Hotchkiss* vs. *Mosher*, 48 N. Y., 482; 2 Daniel, Neg. Inst., § 1704.) Should a suit be brought on the debt, however, it would furnish evidence as to time of deposit and amount; but it has no other use, unless it be to assist in the settlement of a dispute out of Court. The delivery of the deposit slip, therefore, did not operate to assign the debt. There was no writing made or delivered to the plaintiff other than the check and deposit slip, both of which we have already considered. An assignment of a debt due may, of course, be made by oral agreement, and, if founded on a valuable consideration, vests in the assignee a right to proceed in his own name to collect it, (*Risley* vs. *Bank*, 83 N. Y., 318) and the delivery by a creditor of a check upon his debtor for the whole or a part of a debt does not preclude the payee from showing a parol contract, aside from the check, to transfer the debt itself. (*Throop Grain Cleaner Co.* vs. *Smith*, 110 N. Y., 83-88.) But in the conversation had between Sliney and the plaintiff's Cashier the debt was not in terms alluded to as intended to be assigned or transferred. The Cashier testified, in part, that Sliney "produced the deposit check, and told me he had that much money in Clark's bank; that it would not be available for ten days, as he had agreed to wait, and he wanted to use the money that day. He drew a check on Clark's bank, and wished to have us discount those papers, and let him have the money, which we did, and paid him the money." To assume that all of the evidence on that subject, considered together, would support a finding of fact that Sliney & Whelan intended to transfer, and the plaintiff intended to acquire, the debt, is to adopt a view of the evidence as favorable to the plaintiff as is authorized. That is precisely what the trial Court did, in submitting the question to the jury for their determination. The plaintiff, therefore, cannot complain of the action of the Court in that regard.

USURY—COMMISSION TO PRESIDENT—SUIT BY AN INSOLVENT NATIONAL BANK.

Supreme Court of Illinois, November 23, 1892.

CHICAGO FIRE-PROOFING CO. *et al.*, *vs.* PARK NATIONAL BANK.

If the President of a bank, in his individual capacity, enters into an agreement by which he receives a commission for making a loan from the bank, and the bank has nothing to do with the agreement and receives no part of the commission, the bank is not chargeable with usury.

Nor is it usury by the bank that the President, as a condition of making the loan, required the borrower to purchase certain worthless stock owned by him individually.

A suit on behalf of an insolvent National bank can be brought either in the name of the bank or the Receiver.

The Park National Bank entered judgment by confession against the Chicago Fire-Proofing Company and George A. Gindele. Defendants moved to have the judgment opened and for leave to plead. The motion was denied, and the judgment was affirmed by the appellate Court. Defendants appealed.

CRAIG, *J.* (Omitting part of the opinion.)

The second usurious transaction relied upon, as disclosed by the affidavit, is substantially as follows: In March, 1889, the defendant company, being indebted to the bank on two promissory notes of $1,300 and $2,000, and requiring an additional sum to enlarge its plant, applied to Parker, President of the bank, for an additional loan of $5,000; that, after some negotiations, Parker, as President of the bank, agreed to let affiant and said corporation have said sum of $5,000 if he or they would pay Parker or said bank the sum of $500 commission for making the loan in addition to the interest on the loan. It is then set up in the affidavit that affiant, as President of said defendant corporation and in his own individual capacity, executed a note, bearing date said 13th day of March, 1889, for the sum of $6,800 for which he received credit on his bank book, whereupon he immediately paid said bank the said note of $1,300, interest on said $6,800 for the period of 90 days at 8 per cent. per annum, and said commissions, amounting to $500, as aforesaid. It was also alleged in the affidavit that the note upon which judgment was entered is a renewal of a part of the $6,800 note. We do not regard the facts set up in this part of the affidavit sufficient to establish the fact that the bank contracted to receive or did receive a sum of money as interest in excess of the amount it was authorized by law to charge or receive. Whether the $500 commission was under the contract to be paid to Parker or the bank is left entirely to conjecture. The affidavit alleges that Parker, as President, agreed to make the loan if he or they (the corporation) would pay Parker or the bank. If Parker in his individual capacity entered into an agreement under which he was to receive a commission for procuring a loan, and the bank had nothing whatever to do with the agreement and received no part of the money, it could not be charged with usury. It nowhere appears that the bank received any portion of this commission, but, on the contrary, the affidavit discloses the fact that the corporation received in its bank book credit for the entire sum of $6,800, the full amount of the loan. Had there been nothing but the affidavit before the Court, usury was not established; but Parker in his affidavit distinctly states that the $500 transaction was a personal matter between himself and Gindele; that Gindele paid him the money to procure the purchase of certain stock; that the bank had nothing to do with the transaction, and received no benefit from it.

The third ground relied upon to establish usury, as disclosed by the affidavit, is to the following effect: That Parker on May 7, 1890, owned stock in defendant company of the par value of $1,000, but the stock had no real value, but was worthless; that Parker insisted that Gindele should purchase the stock for $500, which he did, giving his note therefor; that the real consideration for the note was not the stock, but the note was given to induce Parker to renew certain notes held by the bank against the defendant company. There is nothing in this transaction which can be regarded as usurious. The bank had no interest in the stock sold by Parker, nor did it receive any part of the $500 paid by Gindele, nor was this $500 included in any of the renewances. The transaction, when properly considered, amounted to nothing more than a sale and transfer of certain stock held by Parker to Gindele, for which the latter gave his promissory note, which he subsequently paid. Neither the bank nor the defendant corporation had anything to do with the transaction, and upon what ground usury can be predicated upon it is not apparent.

The second ground relied upon to reverse the judgment is that the judgment should have been entered in the name of the Receiver, and not in the name of the bank. After the appointment of a Receiver, he no doubt had the right to take possession of the assets of the bank, and collect the notes and other obligations due the bank. But a note payable to the bank might be sued in the name of the bank, or in the name of the Receiver, as he might elect. (*Kennedy* vs. *Gibson*, 8 Wall., 506; *Bank of Bethel* vs. *Pahquioque Bank*, 14 Wall., 385; *Bank* vs. *Kennedy*, 17 Wall, 19; Beach, Rec., §§ 472-477.) Or the action might be brought in the name of the bank for the use of the Receiver, but the fact that this course was not pursued does not affect the validity of the judgment.

INSOLVENT BANK—RECOVERING DEPOSITS MADE AFTER ITS INSOLVENCY.

Supreme Court of Nebraska, October 20, 1892.

WILSON *vs.* COBURN.

The fact that a bank is insolvent, within the knowledge of its officers, and receives the money of a depositor under circumstances which amount to a fraud upon him, is not of itself sufficient to entitle the latter to preference from the funds of the bank in the hands of an Assignee. He may follow his money while he can trace and distinguish it, or the proceeds thereof, but not after it has passed into the hands of the Assignee mingled with the other funds of the bank.

This was a petition by Henry Wilson against William Coburn, as Assignee of the Bank of Omaha, praying to be made a preferred creditor, and for an order for payment of his claim in full. A demurrer to the petition was sustained, and claimant brought error.

The plaintiff filed with the County Judge of Douglas County a claim against the Bank of Omaha, which had previously made an assignment for the benefit of its creditors to the defendant in error, Sheriff of said county. From this claim or petition it appeared that there was due to plaintiff in error the sum of $107.53, and interest, being a balance deposited in such bank prior to the assignment. It was further alleged that the bank was insolvent at the time it received the deposit, within the knowledge of all of its officers, and that the latter received said money with the intention of cheating and defrauding the plaintiff in error. He asked to be declared by the Court a preferred creditor, and for an order for payment in full out of any funds in the hands of the defendant in error, as Assignee of said bank. To this petition a demurrer was interposed, and sustained in the County Court on the ground that the Court had no jurisdiction of the subject of the action, and because the facts stated did not constitute a cause of action.

POST, *J.* (omitting part of the opinion):

Under the allegations of the petition, is the claimant entitled to preference over other creditors of the insolvent bank, or, in other words, does the petition state a cause of action? We think not. The rule on the subject is stated by Judge Story, thus: "The right to follow the trust fund ceases only when means of ascertainment fail, which, of course, is the case when the subject-matter is turned into money, and mixed and confounded in a general mass of property of the same description." (*Story Eq. Jur.*, § 1259.) That the foregoing rule is applicable to cases like this, where the funds in controversy are the assets of an insolvent bank, is well settled. In *Bank* vs. *Smith* (21 Blatchf., 275; 15 Fed. Rep., 858), Judge Wallace, after remarking that the property comes into the hands of the Receiver as a trust fund for the benefit of all of the creditors, proceeds as follows: "It would be a violation of law upon his part to set aside any part of these assets for the complainant, unless his portion is capable of identification, or being definitely traced and distinguished," etc. Counsel for plaintiff in error rely with confidence upon the case of *Cragie* vs. *Hadley* (99 N. Y., 181). We do not, however, regard that case as authority. That was an action against the defendants for the proceeds of a draft received for collection from an insolvent bank. The fund, therefore, was easily distinguishable from the other assets of the bank. It is evident, from subsequent cases in New York, that that case has never been regarded as an authority in cases like this, where the money of the claimant has been mingled with the other funds of the bank, and cannot be distinguished from other assets in the hands of the Assignee or Receiver. *In re North River Bank* (14 N. Y. Supp., 261) is a case directly in point. The Supreme Court therein, after showing that *Cragie* vs. *Hadley* was not authority, for the reason given above, hold that the petitioner was not entitled to preference, although he deposited his money on the forenoon of the day on which the bank closed it doors, on the assurance that it was solvent, upon the ground that it did not appear that the money had not gone into the general funds of the bank, and because he had failed to impress upon the funds in the hands of the Receiver the character of a trust. In *Atkinson* vs. *Printing Co.* (114 N. Y., 168) the same distinction is made, and the Court say: "The fact that the defendant became a creditor of the insolvent bank through the fraud of its officers, and the bank a trustee *ex maleficio*, gave the defendant no right to preference over the creditors unless it could trace and recover its property." And such is the law as recognized from the earliest history by the Courts of Chancery. (*Ryall* vs. *Rolle*, 1 Atk., 172; *Thompson's Appeal*, 22 Pa. St., 16; Perry, Trusts, § 128.) The judgment of the District Court is affirmed. The other Judges concur.

BILLS OF EXCHANGE—AGREEMENT TO PAY ATTORNEY'S FEE—NEGOTIABILITY.

U. S. Circuit Court of Appeals, Sixth Circuit. October 11, 1892,

FARMERS' NATIONAL BANK OF VALPARAISO *vs.* SUTTON MANUFACTURING COMPANY.

A stipulation in a bill of exchange to pay an attorney's fee after maturity does not destroy the negotiability of the instrument.

TAFT, *J.* (omitting part of the opinion):

The contract of acceptance is, by the face of the bill, to "pay * * * two thousand dollars, with interest at the rate of eight per cent. per annum after maturity and attorneys' fees, without any relief from valuation or appraisement laws." The stipulation as to interest expressly applies only in case the bill is not paid at maturity. The provision as to valuation and appraisement laws can, in view of the operation of such laws, have reference only to the execution of a judgment or attachment on suit brought, and is, therefore, also applicable only in case the bill is not paid at maturity. On the principle of *noscitur a sociis*, it clearly follows that the agreement to pay attorneys' fees could only become operative after the bill had been dishonored. Such would be the reasonable interpretation of the contract without the aid of the other stipulations, for it is not usual or necessary to employ attorneys to collect bills before they are due. In *Procter* vs. *Baldwin* (82 Ind., 377) it was held by the Supreme Court of Indiana that in a promissory note in which the maker agreed to pay an amount certain, "with ten per cent. interest and attorneys' fees," the condition was implied that only such attorneys' fees could be charged against the maker as were incurred after dishonor. That was a stronger case than this. In *Maxwell* vs. *Morehart* (66 Ind., 301) the words, "with interest at ten per cent. per annum after maturity and attorneys' fees," were similarly construed. See, also, *Garver* vs. *Pontious* (Id., 191.)

Lest it may be supposed to have escaped our attention, a statute of Indiana, which took effect March 10, 1875 (Section 5,518, Revised Statutes of Indiana, 1881) should be noticed in this connection. It reads as follows:

"*Attorneys' Fees.* Any and all agreements to pay attorneys' fees upon any condition therein set forth, and made a part of any bill of exchange, acceptance, draft, promissory note, or other written evidence of indebtedness, are hereby declared illegal and void: provided, that nothing in this section shall be construed as applying to contracts made previous to the taking effect of this act."

Our construction of the bill in suit is that the attorneys' fees therein provided are payable only on condition of non-payment of the bill at maturity, and this might seem to bring the stipulation within the inhibition of the section just quoted. That the section is not to be regarded as having such effect is authoritatively settled by the Supreme Court of the State in *Churchman* vs. *Martin* (54 Ind., 380), where it was held that a stipulation to pay the amount of the note "and five per cent attorneys' fees" was not void under the statute, although there was an implied condition that they should only be payable in case of dishonor, because the statute only forbade such stipulation when the condition was expressed in the instrument. As the condition is not expressed in the bill in suit, but is implied, the statute does not apply to it.

The law of bills of exchange, established as it has been by ancient usage, is frequently arbitrary, and not deducible from logical considerations. Upon the point at issue here, however, the authorities are in such hopeless conflict that we are able to select that view which seems to us most consistent with the general character of such instruments. The indispensable qualities of a bill of exchange are that it shall be payable in a sum certain, at a time certain, to a person certain. It is intended to be a circulating medium until maturity. For this purpose every purchaser must know exactly what will be, or ought to be, paid on it at maturity. It only has currency on the hypothesis that it is to be paid at that time. If the sum then to be paid is fixed and certain, we do not see why that is not sufficient. A stipulation as to what shall be done in case the bill is not paid does not affect its character as a financial medium before it is dishonored. As soon as the bill is dishonored, it loses its value as a negotiable instrument, for thereafter an indorsee gains no better title than his transferrer. It is unreasonable to hold that the negotiability of a bill is lost because of a provision having no effect while it remains negotiable.

As already intimated, it is impossible to reconcile the authorities. For the reasons given we prefer to follow those Courts which hold that the agreement to pay attorneys' fees after maturity does not destroy the negotiability of a bill of exchange. We are the more inclined to do so because we are considering an Indiana contract, and this view has been established as the law of that State in a series of decisions, beginning with *Stoneman* vs. *Pyle* (35 Ind., 103). The other cases are *Proctor* vs. *Baldwin* (82 Ind., 370); *Tuley* vs.

McClung (67 Ind., 10); *Maxwell* vs. *Morehart* (66 Ind., 301); *Smock* vs. *Ripley* (62 Ind., 81); *Hubbard* vs. *Harrison* (38 Ind., 323).

The Court of Appeals of Kentucky reached the same conclusion in *Gaar* vs. *Banking Co.* (11 Bush, 186); the Supreme Court of Iowa in *Sperry* vs. *Horr* (32 Iowa, 185); the Supreme Court of Kansas in *Seaton* vs. *Scovill* (18 Kan., 434); and the Supreme Court of Illinois in *Nickerson* vs. *Sheldon* (33 Ill., 372), and in *Houghton* vs. *Morrison* (29 Ill., 244). Judge PARDEE, of the Fifth Circuit, in *Adams* vs. *Addington* (16 Fed. Rep., 89), and Mr. Justice BREWER, while Circuit Judge, in *Hughitt* vs. *Johnson* (28 Fed. Rep., 865), expressed the same views. Other authorities to the same effect are *Trader* vs. *Chidester* (41 Ark., 242), *Heard* vs. *Bank* (8 Neb , 10), *Dietrich* vs. *Bayhi* (23 La. Ann., 767), *Howenstein* vs. *Barnes* (5 Dill., 482), *Bank* vs. *Fuvua* (Sup. Ct. Mont., 28 Pac. Rep., 291). See, also, *Towne* vs. *Rice* (122 Mass., 67), and *Arnold* vs. *Railroad* (5 Duer, 207). The contrary decisions in Dakota, Minnesota, Wisconsin, Missouri, South Carolina, North Carolina, California, Pennsylvania, Maryland, and Michigan, it would be useless to consider or to attempt to distinguish.*

* Some of the cases holding that a stipulation for an attorney's fee will render the instrument non-negotiable are *Woods* vs. *North* (84 Pa. St., 407); *First Nat. Bank* vs. *Gay* (63 Mo., 33); *Jones* vs. *Rodatz* (27 Minn., 240); *First Nat. Bank* vs. *Larsen* (60 Wis., 206); *First Nat. Bank* vs. *Bynum* (84 N. C., 24).

NOTICE TO BANK—KNOWLEDGE OF PRESIDENT.

Supreme Court of North Carolina, October 19, 1892.

LE DUC *vs.* MOORE, *et al.*

The discount committee of a bank consisted of the President and Cashier. They discounted a note on which the President was the payee and endorser: *Held*, that the bank had notice of the equities existing in favor of the maker at the time of such discount.

This was an action by W. G. Le Duc, as Receiver of an insolvent bank, against James I. Moore and E. F. Moore on a promissory note. From a judgment for plaintiff, defendants appealed.

SHEPHERD, *J.* James I. Moore executed a promissory note to E. F. Moore, who, for value and before maturity indorsed it, for his own benefit, to the plaintiff bank. The said E. F. Moore was the President of the bank, and he, together with the Cashier, by the custom of the bank, alone constituted its discount committee. The said Moore actually participated as a member of such committee in the discounting of the said note. The question presented is whether the bank is affected with notice of any defense existing in favor of the maker as against the payee at the time or before notice of the indorsement. In *Bank* vs. *Bergwyn* (110 N. C., 267) it was held that a bank was not affected with constructive notice by reason of the actual knowledge of its President, when the latter was dealing with it in his individual capacity, and not acting officially for the bank in any manner concerning the particular transaction. In the opinion of the Court it was stated that the principle upon which rests the doctrine of constructive notice in such cases is that agents are presumed to communicate all such information as they may acquire in the line of their duty to their principals, because it is their duty to do so, but that no such presumption can exist where the agent is dealing with the principal in his own behalf. "His interest is opposed to that of the corporation, and the presumption is, not that he will communicate his knowledge of any secret infirmity of the title to the corporation, but that he will conceal it." (*Barnes* vs. *Gas Light Co.*, 27 N. J. Eq., 33.) Whether the bank would have been affected with constructive notice had the President acted in his official capacity in discounting the paper in which he was knwon to be interested is a point we did not undertake to determine, though, upon a cursory examination, it seeemed to us that the authorities were in favor of the proposition.

A more careful investigation, however, of the subject discloses much conflict of judicial decision, with many very respectable authorities sustaining the opposite view. Upon so important a question involving the rights of other possible litigants, who have had no opportunity of being heard, we forbear the expression of an opinion at this time; for even admitting that, under ordinary circumstances, the latter doctrine is the correct one, and the bank would not be affected with notice, the reason of the principle would forbid its application to the facts of the present case. The principle is based upon the presumption that a majority of the members of the discount committee, being aware of the adverse interest of their associate, were in no way influenced by him in their action, and, as he was treated as a stranger to the bank in the particular transaction, it would be unfair to assume that he imparted his knowledge to its officials. In other words, the theory is that he cannot be considered, in such a case, as having acted influentially as an officer of the bank. Our case is quite different, as here the discount committee consisted of Moore and the Cashier alone, and it required the active official participation of the former in order to discount the paper. Here, then, we have as undisputed facts the active and essential participation of the President as a Director, and also his actual knowledge. This leaves no room for the operation of any presumption, and the bank cannot escape its liability for the misconduct of one whom it has placed in such a highly responsible position. If loss must ensue by reason of the bad faith of Moore, it would seem clear that it should be borne by the bank, which, by reason of its selection of an improper agent, has caused a loss "which would not have resulted if the instrument employed by it had come up to the standard of good faith which it is one of the great objects of the law to secure in commercial dealing." (Morse, Banks, 110). There must be a new trial.

PROMISSORY NOTE—STIPULATION FOR COLLECTION FEE.

Supreme Court of North Carolina, December 6, 1892.

TINSLEY *vs.* HOSKINS.

A stipulation in a promissory note for a collection fee is void as against public policy.*

This was an action by James G. Tinsley & Co. against Jesse F. Hoskins, originally brought in Justice's Court, to recover $15.22 paid by plaintiffs as attorneys' fees in an action against defendant on a promissory note, stipulating that, "in case this note is collected by legal process, the usual collection fee shall be due and payable therewith." From a judgment in defendant's favor, plaintiffs appealed.

SHEPHERD, *C. J.:* The defendant executed to the plaintiffs a promissory note for the sum of $146.35, payable on the 1st of July, 1889, "with legal interest from maturity," and it was stipulated therein "that, in case this note

---

* See *Farmers' National Bank of Valparaiso* vs. *Sutton Manufacturing Company* in this number of the JOURNAL.

is collected by legal process, the usual collection fee shall be due and payable therewith." The sole question presented for review is whether such a stipulation is valid and enforceable. The point has never been passed upon by this Court, and there is some conflict of judicial decisions upon the subject in other States. We think, however, that the ruling of his Honor is sustained by the better reasoning, as well as by a decided preponderance of authority. In *Bank* vs. *Sevier* (14 Fed Rep., 662) it is declared that "such a provision is a stipulation for a penalty or forfeiture, tends to the oppression of the debtor and to encourage litigation, is a cover for usury, is without any valid consideration to support it, contrary to public policy, and void." To the same effect are the cases of *Myer* vs. *Hart* (40 Mich., 517), *Toole* vs. *Stephen* (4 Leigh, 581), *Boozer* vs. *Anderson* (42 Ark., 167), *Shelton* vs. *Gill* (11 Ohio, 417), *Martin* vs. *Trustees* (13 Ohio, 250), *Dow* vs. *Updike* (11 Neb., 95). In *Bullock* vs. *Taylor* (39 Mich., 137), Justice Cooley uses the following very forcible language: "A stipulation for such a penalty, we think, must be held void. It is opposed to the policy of our laws concerning attorneys' fees, and it is susceptible of being made the instrument of the most grievous wrong and oppression. It would be idle to limit interest to a certain rate, if, under another name, forfeiture may be imposed to an amount without limit. The provision in those notes is as much void as it would have been had it called the sum unpaid by its true name of forfeiture or penalty." In *Witherspoon* vs. *Musselman* (14 Bush, 214) the agreement was to pay a reasonable attorney's fee in the event of the note being "collected by suit." The Court placed its refusal to enforce such contracts upon the ground that "they are not only in the nature of penalties, but that they are contrary to public policy, and tend to encourage litigation." A discriminating writer in the American Law Review (volume 16, p. 858) remarks: "It seems to us to be more consistent with public policy to consider all such agreements as absolutely void. They can readily be used to cover usurious agreements, and excessive exactions may be made under the guise of an attorney's fee." Mr. Daniel, in his work on Negotiable Instruments (volume 1, § 62*a*), expresses the opinion that, "unless there be some statute under which such stipulations are permissive, it certainly tends to the oppression of debtors to sanction their incorporation in commercial instruments; and they are therefore against the policy of the law, and void." In consideration of the foregoing authorities, and in view of the serious evils that may result from such an innovation, we are of the opinion that stipulations like the one now sued upon, when incorporated into obligations of this particular character, are against public policy, and therefore invalid. Judgment affirmed.

NATIONAL BANK—TAXATION OF.

Supreme Court of New Jersey, November 4, 1892.

STATE (DE BAUN, PROSECUTOR) *vs.* SMITH, COLLECTOR.

Shares of stock in a National bank cannot be taxed by any State, except that within which the bank is located.

Certiorari by the State on the relation of Christian A. De Baun against Andrew H. Smith, Collector of Washington township, to set aside certain assessments for taxes made in the township of Washington, Bergen County, where relator resided, among which was an assessment on stock in the National Bank of Commerce, located in the city of New York.

DIXON, *J.*: The Federal statute for the organization of banking associations permits shares in them to be taxed under authority of the State within which the bank is located, and expressly provides that shares owned by non-residents of the State may be taxed in the city or town where the bank is located, and not elsewhere. This statute, by fair construction, excludes all State taxation of the shares of stock, except such as it expressly permits, and this exclusion is constitutional and valid. (*Van Allen* vs. *Assessors*, 3 Wall., 573; *Bank* vs. *City of Newark*, 39 N. J. Law, 380.) Consequently, shares of stock in a National banking association cannot be taxed by any State except that within which the bank is located. They are withdrawn from taxation under the authority of other States. (*Tappan* vs. *Bank*, 19 Wall., 490.) The taxes complained of must be set aside, with costs.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: OSKOLOOSA, Kans., Dec. 31, 1892.

SIR:—The Jefferson County Bank issued a draft in the usual way on the National Bank of Commerce, of Kansas City, Mo., in favor of Mrs. L. Peterson of Lawrence, Kans., and placed the draft with letter of advice in a letter addressed to Mrs. L. Petterson, Lawrence, Kans. (her number was not known.) This letter and contents was received by another Mrs. L. Petterson, who had the draft cashed at the Watkins National Bank of Lawrence, Kans., and that bank forwarded the draft to the National Bank of Commerce, Kansas City, Mo., (our correspondent) and they charged the draft up to our account, we protesting against the payment on account of forgery. The draft had, as we suppose, been received and charged to our account before we had any notice. Who is responsible, and who should bring suit, and who should be made defendants? TERRY CRITCHFIELD, *President.*

Answer.—The indorsement being a forgery, the Kansas City bank has no right to charge the draft against the Jefferson County Bank (*Roberts* vs. *Tucker*, 16 Q. B., 500; *Morgan* vs. *Bank of the State of New York*, 11 N. Y., 404; *Welsh* vs. *German-American Bank*, 73 N. Y., 424; *Dodge* vs. *Nat. Exchange Bank*, 30 Ohio, St. 1.), unless there was neglect on the part of the latter to give due notice of the forgery. If this notice was given promptly, the right of the Jefferson County Bank to recover of its correspondent is perfectly clear. (*Leather Manufacturers' Nat. Bank* vs. *Morgan*, 117 U. S., 96; *Hardy* vs. *Chesapeake Bank*, 51 Md., 562; Pratt's Manual of Banking Law, 53.) Such bank, therefore, need not look beyond such correspondent. The latter, however, would probably have a right of action over against the bank which cashed the draft, and forwarded it; or could sue the person who got the money on it.

Editor Rhodes' Journal of Banking: CLEVELAND, N. Y., December 26, 1892.

SIR:—A firm of bankers receives a three days' draft, subject to protest, drawn on a company, the partners in which are twelve miles away. Should the draft be presented personally, in order to protest for non-acceptance? If notified and refused by mail, how then? L. A. FERRIS, *Asst. Cashier.*

Answer.—Whether the draft would require to be presented the drawees personally would depend upon its terms. If it was made payable at a particular place, then presentation at that place would be sufficient; but if not so drawn then it should be presented at the place of business of the drawer. (*Adams* vs. *Leland*, 30 N. Y., 309, 311; *Holtz* vs. *Boppe*, 37 N. Y., 634.) It is well settled that a declaration of a drawee or acceptor that he will not accept or pay will not dispense with presentment. (Byles on Bills, 216 ; *Bank* vs. *Spencer*, 5 Metc., 308 ; *Lang* vs. *Young*, 8 English, 401).

Editor Rhodes' Journal of Banking: KEARNEY, Neb., Nov. 25, 1892.

SIR:—In the following draft who is payee, and is the same person who draws the draft ever the payee?

> KEARNEY, Neb., Nov. 11, 1892.
> At sight, pay to the order of the City National Bank, Kearney, Neb., twenty-two and 37-100 dollars, with exchange, value received, and charge to account of
> *To Henthorn & West, Kearney, Neb.* BUTLER Bros.

Please answer in your Banking Journal. K. R. ANDREWS

Answer.—The payee of the draft is the City National Bank. It very frequently happen that the drawer of the draft is the payee. This is so in all cases where the drawer makes the instrument payable to his own order. In the case stated in the inquiry if the draft had been payable to the order of "ourselves" or to the order "Butler Bros.", which would have been perfectly proper, the drawers and payees would have been the same.

Editor Rhodes' Journal of Banking: VINCENNES, Ind., December 15, 1892.

SIR:—A National bank with a capital stock of one hundred thousand dollars, becomes insolvent. The liabilities exceed the collectible assets by fifty thousand dollars. Fifty thousand dollars of the stock is owned by solvent parties ; the other fifty thousand by insolvent parties. Are the solvent stockholders liable for the entire deficiency? SUBSCRIBER.

Answer.—It has been decided by the Supreme Court of the United States that the amount contributed by each stockholder should bear the same proportion to the whole amount of the deficit as his own stock bears to the whole amount of the capital stock at its par value, and that the solvent stockholders cannot be made to contribute more than their proportion to make good the deficiency caused by the insolvency of other stockholders (*United States* vs. *Knox*, 102 U. S., 422). In the case stated, therefore, the solvent stockholders could be required to contribute only $25,000, notwithstanding that the total deficit is $50,000.

Decline in the Interest Rate.

The decline in the rate of interest during the past decade, according to a recent census bulletin, is worthy of note. With the exception of the National bonded debt, the average interest rate has decreased over 80 per cent. The Government had no option on its 4½ and 4 per cent. bonds, or the interest could have easily been reduced by refunding to probably less than 3 per cent. From lack of such option a high rate of interest is also maintained in many of the States and municipalities. The city of New York sold in 1889 $12,931,638 long-time bonds at par or above, though bearing only 2½ per cent. interest.

It is believed, that could all the bonded indebtedness of the country have been refunded in 1890 at the best rates obtainable, in bonds worth par in the market, the average rates would have been little, if any, in excess of 3.75 per cent., or a reduction of at least 1.5 per cent. in the decade, an annual saving in interest on the debt, as it stood in 1880, of $42,406,480. The interest on every $1,000 of assessed valuation in 1880 was $8.76; in 1890 only $3.84, or over 56 per cent. less.

How to Determine the Value of Paper Offered for Discount.

LOANING THE BANK'S MONEY ON COMMERCIAL PAPER.

We hereby offer a cash **PRIZE OF $100** for the best descriptive article on the subject stated in the above heading.

Here are the conditions of the competition:

1. The article to be prepared by some one connected with a bank (or banking firm) either as an officer, director or clerk.
2. Space allotted, not over eight pages of the JOURNAL.
3. Every paper presenting new ideas on the subject, without regard to its length (short articles preferred) will be published in RHODES' JOURNAL OF BANKING, provided the terms of the competition are complied with. The Editor and Associate Editor will carefully examine each paper submitted before publication.
4. Each contestant to affix a sign word to his article, and send his real name to the Editor of the JOURNAL. No names will be given until the contest is decided.
5. When the series is completed we will ask the JOURNAL'S readers to indicate on a postal card the article entitled to the prize, each subscriber being entitled to one vote. The voting will be limited to four weeks after publication of the final paper, when the cards will be counted and the name of the successful contestant duly announced in the JOURNAL.

Attention is directed to the article in this number, page 26, although it will not be in the competition.

As a general proposition the methods and machinery of Loaning on Commercial Paper should be strictly adhered to. "How *to Determine the Value of Paper Offered for Discount*" is the general caption—and contestants should stick to the text.

BRADFORD RHODES & CO.

THIRTIETH ANNUAL REPORT OF THE COMPTROLLER OF THE CURRENCY.

A. B. HEPBURN, COMPTROLLER.

The year covered by this report ended October 31, 1892. The crop of 1891 was phenomenal in all the great staples produced by this country, and at the same time a partial failure of the cereal crop in Europe created an unusual demand for our food products. The total value of our merchandise exports for the fiscal year ended July 1, 1892, exceeded one billion dollars—$1,030,335,000.

	1891.	1892.
The merchandise balance of the United States (excess of exports over imports) for the fiscal year ended July 1	$39,565,000	$202,914,000
Excess of exports over imports, gold and silver	72,703,000	13,352,000
Trade balance	$112,268,000	$216,266,000

The remarkable feature is that we were compelled to add to an export merchandise balance of $242,000,000 over $86,000,000 in gold and silver.

Europe's short crop followed a serious financial crisis, which unsettled values, disturbed confidence, and entailed heavy losses. Instead of paying for our cereals from their surplus, they were obliged to draw upon their principal.

In a normal condition of affairs this large merchandise balance in our favor would have resulted in large gold imports; instead, they sent us our securities.

The interest upon American securities held abroad aggregates a large amount, and its payment forms a continuous factor in international balances. The return of any portion of our securities increases our wealth at home, and the retention of the earnings of such securities adds to our home prosperity. The absorption and assimilation of so large an amount in so short a period of time may have produced temporary disturbance, but the permanent effect is beneficial.

The financial needs of Russia, and the accumulations of gold by Austria-Hungary, with a view to the resumption of specie payments upon a gold basis, caused a premium to be paid for gold exports, and was an important cause of its outflow.

Distrust of our monetary legislation, and the fear on the part of Europe that we were drifting toward a silver basis, also had an important influence upon gold exports.

The National banks held on September 30, 1892, nearly $22,000,000 more gold than on September 25, 1891. This, coupled with the known fact that many State banks and trust companies have also fortified themselves with a gold reserve during the year, shows that the fear that we were drifting toward a silver basis was not confined to foreigners.

All periods of monetary stringency, which necessarily restrain and curtail business ventures, are followed by a plethora of money.

On June 18, 1892, the total deposits in the associated banks of the city of New York were $543,663,100. The highest amount ever reached before was $455,306,300 on December 26, 1891. The same plethora of money existed in all money centers; the rate of interest for the year averaged, on demand loans, 1½ per cent. to 3 per cent., and time loans and commercial paper ranged about 2 per cent. higher.

The cholera at home and abroad, with attendant quarantine restrictions, has held trade in fetters, and, to some extent, impaired the business of the year. The vigorous measures adopted by our authorities reduced it to control and kept its baleful influence at a minimum.

With conditions in the United States favorable for a year of unusual prosperity, speculation has been held in check and business kept within conservative limits. The lessons taught by the monetary stringency of 1890—'91, which fell so heavily upon all whose business was too much extended, have not yet been forgotten. A hardening process has obtained, and yet the record of the year covered by the report characterizes it as one of growth and prosperity.

COMPARATIVE STATEMENT OF THE CONDITION OF THE NATIONAL BANKS WITH RESPECT TO CERTAIN ITEMS AT NEARLY CORRESPONDING DATES FOR THE YEARS 1891 AND 1892.

	1891.	1892.	Increase.	Decrease.
Number of banks in existence Oct. 31	3,694	3,788	94	....
Capital stock..........................	$684,755,865	$693,868,665	$9,112,800	....
Bonds deposited to secure circulation	152,950,350	164,883,000	11,932,650	....
Bank notes outstanding..............	172,184,558	172,432,146	247,588	....
Lawful money deposited with the Treasurer United States to redeem circulation outstanding............	35,430,721	25,191,083	....	$10,239,638
Surplus and undivided profits September 25 and 30, respectively..	330,861,159	340,524,179	9,663,020	....
Individual deposits September 25 and 30, respectively......	1,588,318,081	1,765,422,983	177,104,902	....
Bank deposits September 25 and 30, respectively.........................	430,594,774	5 0,653,202	100,058,428	....
Total resources September 25 and 30, respectively.........	3,213,080,271	3,510,094,897	297,014,626	....

The above table shows a large decrease in the lawful money deposit to redeem circulation. The net circulation outstanding has increased $10,487,226 during the year.

The following table shows the total cash held by National banks including 5 per cent. redemption fund, and mutilated currency in process of redemption for the years 1891 and 1892.

	1891.	1892.	Increase.	Decrease.
Bills of other National banks	$19,991,167.00	$19,557,474.00	....	$433,693.00
Fractional paper currency, nickels and cents..........	867,462.37	934,648.37	$67,186.00	....
Specie, viz:				
Gold coin...................	84,464,347.24	95,021,952.77	10,557,605.53	....
Gold Treasury certificates.	60,173,670.00	71,050,180.00	10,876,510.00	....
Gold clearing-house certificates..................	7,300,000.00	7,860,000.00	560,000.00	....
Silver dollars..............	6,348,573.00	6,785,084.00	436,511.00	....
Silver treasury certificates	20,409,735.00	22,993,451.00	2,583,716.00	....
Silver fractional coin......	4,818,750.67	5,405,710.92	586,960.25	....
Legal-tender notes	97,615,608.00	104,267,945 00	6,652,337.00	....
United States certificates of deposit for legal-tender notes.......................	15,720,000.00	13,995,000.00	....	1,725,000.00
Five per ct. redemption fund	6,536,931.51	7,138,564.69	602,633.18	....
Due from United States treasurer, mutilated currency..	1,457,807.85	1,106,987.93	....	350,819.92
Total...............	$325,704,052.64	$356,117,998.68	$32,923,458.96	$2,509,512.92
Net increase........	....	....	$30,413,946.04	....

CURRENCY.

The business of banking is exchanging a generally known value or credit for a local value or credit. This definition applies equally to the money changers of the temple and to the banks of to day. In the wonderful development of commerce and manufactures which has followed increased facilities for communication and transportation, banking, though hand in hand with trade, is ever in the lead; for credit, or money, is the motor which moves the wheels of progress, and all financial transactions, whether local, national or international, have become mainly a matter of book-keeping. Throughout the United States every locality has its bank, and most people, however limited their business transactions, have bank accounts, through which they pay their indebtedness. Bank accounts are generally used as the most convenient and most accurate method of keeping a cash account. This practice does not obtain in European countries in any such proportion. In this country, in the village having a single bank, the artisan pays the merchant by check, or vice versa, and the payment is usually consummated by a transfer of credit upon the books of the bank. Thus does the single bank become a clearing-house for the community, and the actual transfer of money is minimized.

The day's exchanges in our larger cities are adjusted through a clearing-house, where each bank is credited with the total demands it holds against all other banks, in the same place, and is debited with the total demands which the other banks hold against it, and either pays or receives the balance, simply, in money. The aggregate clearing-house transactions for the year ended October 31, 1892, in 57 clearing-house cities, were $61,017,839,067, the balances were (partly estimated) $4,881,777,289. Thus by a simple device of book-keeping, this immense volume of business was done by means of 8 per cent of actual money.

Our international banking and commercial transactions are settled upon a system of balances through a few leading banks and banking houses that deal in foreign exchange. When the exchange market affords no bill of exchange to be remitted, gold is shipped to settle the balance of trade existing against such nation, and when so shipped, whether bars or coin, it goes simply as commodity, at its market value, precisely like merchandise.

Thus it appears that the bulk of the world's business transactions is done upon credit, witnessed by book-keeping, and the percentage represented by actual money transfer is very small, in the United States less than 8 per cent.

A man goes to his bank with his note, a local credit, and procures its discount, receiving the proceeds in a generally known credit or value, namely, a bank draft, or certificate of deposit, or money—something available for the contemplated business. The bulk of all business transactions is adjusted by the contracting parties, whether banking or otherwise. It is the portion in which money passes that appeals to the Government for regulation. It is the recognized constitutional duty of government to furnish for its citizens a circulating medium adequate to their needs and convenient for their use. Gold and silver are the recognized money of the world, because they possess value in themselves, are conveniently coined, not easily counterfeited, exist in quantity sufficient to supply the demand, and are not so redundant as to unduly impair their value. Such money is adequate to the public want but not convenient for public use, except in small change transactions. Paper money is a business necessity. Paper money possesses no value, simply represents value.

A currency to serve the demands of business must be sound—no doubt of its redemption. It should be elastic, that it may expand and contract, as the tide of business ebbs and flows. If supplied by the Government, the expense is borne by the taxpayers. If supplied by the banks, it must possess an element of profit. It will readily issue so long as there is a profit. It may be made to contract by fixing a standard of issue and taxing the excess, so that the excessive issue would be retired with the cessation of the necessity which called into existence.

The amount of paper money in circulation October 31, 1892, was:

National bank notes	$172,432,146
United States notes (greenbacks)	332,080,234
Treasury notes	114,567,423
Gold certificates	120,255,349
Silver certificates	324,552,582
Currency certificates	10,550,000
Per cent of national-bank notes, 16.04.	1,074,437,684

The Government can not issue money gratuitously. It can only put it in circulation in exchange for some value or obligation. It can not pay its bonds in anything other than coin of standard value.

By the terms of the Act of February 28, 1878, the Secretary of the Treasury was directed to purchase and coin into silver dollars silver bullion not less in value than $2,000,000 and not more than $4,000,000 worth monthly. This Act was supplanted by the Act of July 14, 1890. While in force the Government purchased silver and coined 378,166,793 standard dollars, the seigniorage on which (that is, the difference between the price paid for the silver and the face value of the coinage) was $69,967,531.

Total coinage of silver dollars under Act of February 28, 1878	$378,166,793
Total cost of silver bullion used in such coinage	308,199,262
Seigniorage or apparent profit	69,967,531
Bullion value of such silver October 31, 1892	250,493,936
Difference between actual cost and market value October 31, 1892	57,705,326

This coinage accumulated in the Treasury vaults until the happy device was conceived of putting it in circulation by the use of paper substitute. As shown above, $324,552,532 are serving the people by proxy.

Under the Act of July 14, 1890, the Government purchases monthly 4,500,000 ounces of silver, and pays for the same in Treasury notes issued for that purpose and equal at par to the cost of such silver. Thus the currency of the country is arbitrarily increased monthly. Up to November 1, 1892, the total issue of such notes has been $116,611,233. The present market value of the silver purchased is $102,648,944, showing a depreciation in value of $14.134,646. This Act was a compromise measure, designed to prevent the unlimited coinage of a dollar of full debt-paying power containing less than a dollar's worth of silver. From its nature (arbitrarily adding a large amount to the currency monthly) it is evident that it was intended to be temporary. The severest commentary upon our silver coinage is the fact that it offers an inducement to the counterfeiter to coin a dollar exactly reproducing the genuine in quality and intrinsic worth, as well as form and design, the profit to the counterfeiter being represented by the difference between the market value of the silver contained in the coin and its face value, which was October 31, 1892, 33¼ cents.

In view of the above statistics, the silver currency furnished by the Government will hardly commend itself to the public on the score of economy. It is in sharp contrast with the National-bank currency, which has paid into the Treasury in taxes $72,670,412.30.

What the settled policy of Congress as to the future currency may be remains to be seen. If furnished by the Government, it will possess the quality of soundness, for nothing can be better than the Government under which we live; but it cannot possess elasticity. Elasticity means conformity to business wants, the supply quickly responding to the demand, and not conformity to fixed rules and statutory laws. The Government in the very nature of things cannot supply such currency as the public requires. The National banks, with proper legislation, would supply this want fully and completely. Large appreciation of the price of United States bonds, the basis for circulation, large depreciation of the rates of interest, and onerous taxation, have made circulation unprofitable, and the volume has fallen from $362,889,134, September 30, 1882,—the highest amount in circulation at any one time—to $172,426,610, at the close of the last fiscal year. The volume would have been much more contracted but for the fact that all National banks, whether they take out circulation or not, are obliged to own and assign to the Treasurer of the United States in trust interest-bearing bonds of the United States, and in case their capital is $150,000 or less, to the amount at par of one-fourth their capital stock. If the capital exceeds $150,000, they are required to have on deposit in the Treasury not less than $50,000 in bonds. Being obliged to own these bonds, to measureably lessen the cost of carrying such high-priced securities, they take out circulation.

The following carefully prepared tables show the profits upon circulation based upon a deposit of $100,000, bonds. June 30 was selected, as it marks the close of an interest period for Government bonds.

JUNE 30, 1892—2 PER CENTS.

$100,000 two's at par, interest		$2,000 00
Circulation, 90 per cent. on par value	$90,000 00	
Deduct 5 per cent. redemption fund	4,500 00	
Loanable circulation at 6 per cent.	$85,500 00	5,130 00
Gross receipts		$7,130 00
Deduct—		
1 per cent. tax on circulation	900 00	
Annual cost of redemption	137 48	
Express charges	3 00	
Cost of plates for circulation	7 50	
Agents' fees	7 50	
Examinations	43 00	1,098 48
Net receipts		$6,031 52
$100,000 loaned at 6 per cent		6,000 00
Profit on circulation		$31 52

Total profit on $21,837, bonds, $6,194.72.

Percentage on maximum circulation obtainable, 0.032 per cent.

JUNE 30, 1892—4 PER CENTS.

$100,000 four's at 116¾ premium, interest		4,000 00
Circulation, 90 per cent. on par value	$90,000 00	
Deduct 5 per cent. redemption fund	4,500 00	
Loanable circulation at 6 per cent	$85,500 00	5,130 00
Gross receipts		$9,130 00
Deduct—		
1 per cent tax on circulation	900 00	
Annual cost of redemption	137 48	
Express charges	3 00	
Cost of plates for circulation	7 50	
Agents' fees	7 50	
Examinations	43 00	
Sinking fund reinvested quarterly to liquidate premium	696 36	1,794 84
Net receipts		$7,335 16
$116,750 loaned at 6 per cent		7,005 00
Profit on circulation		$330 16

Total profit on $129,759,000 bonds, $385,571.09.
Percentage on maximum circulation obtainable, 0.330 per cent.

JUNE 30, 1892—6 PER CENTS.

$100,000 sixes at 114 premium, interest		6,000 00
Circulation, 90 per cent. on par value	$90,000 00	
Deduct 5 per cent. redemption fund	4,500 00	
Loanable circulation at 6 per cent	$85,500 00	5,130 00
Gross receipts		$11,130 00
Deduct—		
1 per cent. tax on circulation	$900 00	
Annual cost of redemption	137 48	
Express charges	3 00	
Cost of plates for circulation	7 50	
Agents' fees	7 50	
Examinations	43 00	
Sinking fund reinvested semi-annually to liquidate premium	1,972 94	
		3,071 42
Net receipts		$8,058 58
$114,000 loaned at 6 per cent		6,840 00
Profit on circulation		$1,218 58

Total profit on *$11,600,000 bonds, $127,219.75.
Percentage on maximum circulation obtainable, 1.218 per cent.

RECAPITULATION.

Profit on the three classes of bonds, maximum circulation 90 per cent.—

2 per cent. bonds, *$21,837,000—$19,653,300, maximum circulation at 0.03152 per cent., $6,194.72.

4 per cent. bonds, *$129,759,000—$116,783,100, maximum circulation at 0.33016 per cent., $385,571.06.

6 per cent. bonds, *$11,600,000—$10,440,000, maximum circulation at 1.21858 per cent., $127,219.75.

Total of bonds, $163,196,000—$146,876,400, maximum circulation at 0.353 per cent., $518,985 55.

* Total amount of each class of bonds held to secure circulation June 30, 1892.

It will be noted that by taking out circulation the banks realize in each case more than 6 per cent. on the money invested in bonds. The money invested in the purchase of bonds as a basis of circulation yields in the case of 2 per cent. bonds 6.032; in case of 4 per cent. bonds, 6.33; in case of 6 per cent. bonds, 7.218.

Since the 5 per cent. redemption fund counts as part of a bank's reserve as well in hands of the Treasury as in vaults of the banks, it would have been proper not to make the deduction above. This would add materially to the profit on circulation. The $43 average cost of examinations of banks with $100,000 capital is not wholly an incident of circulation.

In the above tables money is assumed to be worth 6 per cent. If the prevailing rate was less than 6 per cent. a bank could better afford to take out circulation. If the prevailing rate was more than 6 per cent. a bank could less afford to take out circulation. By allowing circulation to the par of bonds and removing the tax on circulation it would be possible for banks located in sections where rates of interest are high to take out circulation without loss.

Since the organization of the National banks $1,521,437,753 have been issued and redeemed without loss to any bill-holder. There can be no loss upon National-bank circulation. All the solicitude as to what shall serve as a basis for circulation when Government bonds cease to exist is premature. The 4½ per cent. bonds (Act July 14, 1870,) matured September 1, 1891; $25,364,500 were continued at the pleasure of the Government at 2 per cent. interest; interest upon the balance ceased; $24,520,900 have been redeemed and $983,800 remain outstanding; $3,617,700 have been redeemed since October 31, 1891. No bonds have been purchased by the Government during the past year, the interest-bearing debt has not been reduced, and with the diminished revenues, under the Act of October 1, 1890, and swelling volume of annual expenditure, there is likely to be no reduction in the immediate future. The trend of public opinion is decidedly in favor of limiting our revenues to the current needs of the Government. The currency sixes that begin to mature in 1896 are primarily obligations of the subsidized Pacific railroads. The railroads will hardly be prepared to pay these bonds at maturity, and they will likely be continued like the 4½ per cent. bonds, at the option of the Government, at a low rate of interest.

By relieving National-bank circulation, as above suggested, these bonds could be extended at a very low rate of interest—too low for investment purposes, yet available as a basis of circulation. Of the $25,364,500 of 2 per cent. bonds outstanding October 1, $22,050,350 were held by National banks to secure circulation. The 4 per cent. bonds do not mature until July 1, 1907. Since December 6, 1890, the Government has been out of the market as a purchaser of its own bonds, and the price then paid for 4 per cent. bonds ($123.356) has fallen to $114.625. The lower the price of the bonds the more available they become as a basis of profitable circulation. If happily the time arrives when the United States Government has no bonded debt, or not sufficient to be available as a basis for circulation, there will, of necessity, be other choice securities available for such purpose.

In my judgment the Government should issue 2 per cent. bonds, running twenty, thirty and forty years, and with the proceeds purchase the 4 per cent. bonds outstanding. This would result in a saving of interest to the Government, distribute the maturity of the bonds over a proper period, and furnish the best conceivable basis for circulation. The Government could hardly have floated a 2 per cent. bond but for the needs of the National banks, and with liberal yet conservative laws as to circulation, it is possible that a bond bearing a slightly lower rate than 2 per cent. could be placed at par.

A United States 4 per cent. bond of 1907, in order to yield interest at the rate of 2 per cent. per annum for the remaining period it has to run, must have been purchased October 1, 1892, for $125.492. In other words, the Government could have exchanged a 2 per cent. bond, at par, maturing July 1, 1907, for the 4 per cent. bond of 1907, at $125.492, without loss or gain. The exchange would have been equal. The 4 per cent. bonds on October 1, 1892, were worth 114⅝. The extended 2 per cent. bonds, payable at the pleasure of the Government, were worth, on the same date, 101. Could the Government have exchanged a 2 per cent. bond maturing July 1, 1907, for the outstanding issue of 4 per cent. bonds upon the basis of the quotations just given, it would have resulted in saving to the Government (that is, the taxpayers) the enormous sum of $67,161,551.47, as appears from the following computation:

Par value of outstanding 4s, October 1, 1892	$559,586,750 00
Market value of 4s at 114⅝, and of 2s at 101, October 1, 1892	641,426,312 18
Par value of 2s exchanged at 101 for 4s at 114⅝, October 1, 1892	635,075,556 62
Quarterly interest paid on 4s	$5,595,867 50
Quarterly interest that would be paid on 2s	3,175,377 78
Quarterly saving of interest	$2,420,489 72
Present value, as of October 1, 1892, of these savings of interest to maturity, money at 2 per cent., reinvested quarterly	$123,406,683 57
Present value, as of October 1, 1892, of $75,488,806.62, principal of 2s in excess of principal of 4s, money at 2 per cent., reinvested quarterly	56,245,132 10
Present value of net saving to the Government in accordance with the above statement	$67,161,551 47

While the principal of the indebtedness would be increased, the interest reduction would be so great for the remaining fifty-nine interest quarter periods, from October 1, 1892, to July 1, 1907, as to show a net saving of $67,161,551.47.

A 4 per cent. bond at 114⅝, on October 1, 1892, would pay an investor, interest at the rate of 2.793 per cent.

It is probable, from the above statistics, that investors would not exchange 4 per cent. bonds for 2 per cents, but the fact that banks own, for the purpose of securing circulation, nearly 87 per cent. of the continued 2 per cent. bonds in preference to the 4 per cents, shows that they prefer a bond at par, with a lower rate of interest, as a basis for circulation. A fixed period to run, and a long period would add to the value of the bond.

With so great a saving possible, the interests of economy, as well as all public and private interests that depend for prosperity upon a sound and elastic currency, emphasize the wisdom of settling this question of a proper basis for National-bank circulation by the issue of bonds having a long time to run, at a low rate of interest, with which to retire the outstanding issue of 4 per cent. bonds.

The National banks for a long series of years have demonstrated their ability to furnish the country with currency ample in amount, elastic in volume, sound beyond preadventure, and every dollar of which, every moment of its existence, was worth par throughout the length and breadth of the land. A change from such a currency to another less secure is certainly an unwise experiment. It is proposed to restore State bank circulation by removing the 10 per cent. tax imposed March 3, 1865. There is no fairer test of men or methods than the record they make for themselves. Every item of assets and liabilities, as shown by the trial balance of their general ledgers, of every National bank, for the whole period of their existence, has five times each year been published in the locality, reported to the Comptroller of the Currency, and become a matter of record. Additional tables resolve all composite items into detail. Additional statistical tables complete the history and workings of such banks. Special reports show the course of trade and exchange. In case of failure, equally explicit information is obtained from Receiver's reports, total claims, total assets, percentage paid, percentage of loss, items of expense, including Receiver's fees, and attorney's fees.

All this information is annually reported to Congress and spread before the country. The course of trade, the material condition, the prosperity or depression of the country, are truthfully reflected in the condition of its banks. And the publication of the above conditions, in the reports of these banks, has been of inestimable value to publicists and economists. This is the record of National banks under Federal authority and Federal supervision. To compare the present National banking system with the old State banking system is to compare order with confusion—perfect system, under central control, with imperfect system, under diversified control. The banking systems of the different States, during the period that they were banks of issue, differed essentially. Some had excellent banking laws; others had very crude laws. Some had effective supervision, and some had none, or worse than none. In no State was the aggregate or percentage of loss to note-holders of State banks reported, nor the losses to creditors or stockholders. The most careful research reveals only general statements, or estimates of loss, in the current financial literature of the time.

Congress, by resolution in 1832, directed the Secretary of the Treasury to procure and publish statistics relating to banks in the several States. Such publication was made more or less complete, with the exception of some years, until 1864*; then followed an interval until 1873, when the Comptroller of the Currency was directed to procure from official and other reliable sources and report to Congress information in relation to State banking institutions. The statistics in relation to State banks prior to 1864 have been the subject of much study and research on the part of my predecessors. The Comptroller's report for 1876 contains elaborate tables upon this subject. The question of restoring State bank circulation gives especial value to all information of this character, and I have therefore carefully studied and analyzed all the statistics attainable upon this subject, showing the condition of State banks prior to 1864, and publish in the appendix of this report, arranged in convenient form, tables presenting such information.

*When it is stated that the statistics relating to the period prior to 1864 are mainly unofficial, it will be understood that the information conveyed is only approximately correct. The principal sources of information in compiling these statistics have been the reports of the Secretary of the Treasury to Congress since 1832, Baker's work on Banks and Banking, Blodgett's Economica, Elliott's Funding System, the Banker's Magazine, Hodges' new Bank-note Safeguard, Consideration on the Currency and Banking Systems of the United States, by Albert Gallatin; History of Banking in the United States by John Jay Knox.

The most notable feature of the State-bank circulation was the violent expansion and contraction to which it was subject.

The charter of the United States Bank expired March 4, 1811. Mr. Gallatin makes the following estimate of the total circulation of the country, including notes of the Bank of the United States: In 1811, $28,100,000; in 1815, $45,500,000; in 1816, $68,000,000; and in 1820, $44,863,000.

In 1840, according to Knox, there were in Ohio thirty-seven banks, with $10,000,000 capital. January 1, 1845, there were but eight banks in operation, with a capital of $2,171,807. Up to and including 1856 thirty-six of the banks organized under the laws of that State had failed, their notes being wholly worthless, and eighteen more had failed, their notes being worth 50 to 75 cents on the dollar. From January 1, 1857, the circulation of the whole country shrank from $214,788,892 to $155,208,744 on January 1, 1858, a decrease of over $59,000,000 in one year (Report of the Secretary of the Treasury). The circulation of Illinois increased from $5,500,000 in 1857 to $12,300,000 in 1861. (Knox). Much of this circulation was secured by various forms of security, and its redemption provided for by State authority. Yet it was seldom that this security proved adequate. The "Bankers' Magazine" for February, 1858, advertised a list of twenty-eight suspended banks in Indiana whose notes would be redeemed by the auditor of that State at the following rates: ten at par, and the remainder at prices ranging from 97 down to 69. According to the same authority, in July, 1859, a convention of Wisconsin bankers, held at Milwaukee, fixed the discount on Illinois bank bills at 1 per cent. until September 20, and at 3 per cent. thereafter. This action was retaliatory, and simply established the same discount upon Illinois bills that Illinois had adopted as to Wisconsin. In April, 1859, the Indiana banks determined not to accept the notes of Illinois or Wisconsin. All bank notes of interior banks were at a discount in New York (many unsalable) from 50 per cent. down to the current exchange, which was charged against the notes of perfectly solvent banks.

The above instances illustrate the friction existing between different States.

The cost of exchange on commercial centers was greatly increased under State-bank circulation. Now a man in Montana deposits his money in his local bank and buys Chicago exchange. His money is as good in Chicago as Helena, and he simply pays the cost of transmittal. In fact, the competition for business is so intense and the indulgence of banks correspondingly great that frequently when an interior merchant goes to New York to buy goods he takes a letter of introduction from his home bank to their New York bank correspondent, draws checks for the amount of his purchases upon his home bank, which are paid by the New York correspondent and debited to the home bank. Thus the item of exchange disappears entirely.

DANGERS OF COUNTERFEITING.

The dangers of counterfeiting under the national banking system are at a minimum. The bills are printed by the Government upon carefully prepared paper made by the Government and never out of the Government's possession. If circulating notes were to be printed by the forty-four different States, the opportunities for counterfeiting would be multiplied. Under the old State-bank system counterfeiting was an established industry, and a description of the methods and devices possesses the qualities of a romance. From January 1 to April 1, 1859, there appeared 242 new counterfeits. Hon. John Jay Knox (whose long incumbency of the office of Comptroller of the Currency, as well as his qualities as a student of finance, entitles his judgment to highest consideration) estimates the average loss to note holders under the old State-bank system at 5 per cent. As before remarked, no estimate can be made of the loss to creditors and stockholders. By advertising for the redemption of circulating notes the statutory period and refusing all later presentations, it frequently happened that the stockholders reaped large profits where the note-holders met almost total loss.

I have given the above random illustrations as suggestive simply of the evils attendant upon the old State bank circulation. It is by no means exhaustive. I am aware that the present can hardly be compared to antebellum times, and that the changed conditions which now exist would necessarily obviate some and soften many of the evils attendant upon State bank circulation.

BANK FAILURES.

In order to furnish a modern standard of comparison between National banks and those other than National, Comptroller Knox reported statistics, showing the number of failures of State, Savings banks, and private bankers, for the three years ending January 1, 1879. The number of failures was 210; total claims, $88,440,028; amount paid and to be paid, $58,152,633; losses, $32,616,661; upon which he comments:

The average annual loss sustained by creditors during the past sixteen years by the insolvency of National banks throughout the United States has been $390,012, and that occasioned by the failures of banks other than National, as shown by the incomplete data obtained by the Comptroller, has for the last three years been not less than $10,872,220.

Hon. Edward S. Lacey, in his report as Comptroller for the year 1891, gave a list os failures in the United States of bankers, brokers, Trust Companies, and Savingf banks, for the year ended June 30, 1891. "These number, in all, 117 institutions, having liabilities estimated at $38,271,511, and assets valued at $20,794,092.

Through the courtesy of a reliable commercial agency I am able to report the failures of State, Savings, and private banks, and Loan and Trust Companies for the year ended June 30, 1892. The number is sixty-nine. Aggregate liabilities, $11,024,628. Estimated value of assets, $6,125,189. The percentage of assets to liabilities, 55.56.

The seventeen National banks that failed during the last report year had aggregate liabilities amounting to $12,538,448. Estimated value of assets, $10,750,347. Percentage of assets to liabilities, 85.74.

However recent the comparison the conclusion is in favor of the National bank system.

If the 44 States are to furnish the country's currency, then we will have a chain of sovereignties furnishing our circulating medium, each with varying laws and varying supervision, and, like all chains, the system as a whole would be no stronger than its weakest link. Disorganized finance in one State would affect all. Argentine financial troubles precipitated the Barings' failure at a time when this country was generally prosperous; and yet it produced a quasi panic in the United States and cast a cloud over the financial horizon of the whole world which has not yet fully disappeared. Banking is not a philanthropical business and banks will not issue circulating notes unless it is profitable. Manifestly issuing notes would be most profitable where greatest latitude was allowed or greatest laxity prevailed, and with the circulation of any State discredited or the particular banks of any State discredited, conservative bankers and conservative business men would have to discriminate against such bills.

We all know the practical machinery employed to enforce such discrimination. Our State boundaries and commercial centres would be policed with brokers' offices, and commerce would be compelled to pause at State lines and pay the exchange demanded in order to provide itself with money acceptable in the locality where proposed business was to be done. The bill of a perfectly solvent bank in Oregon would be worth just as much less than its face in Chicago or New York as it would cost to send such bill to Oregon for redemption and secure the proceeds in return—cost of transmission each way and interest for the time required—in short, exchange. It would be precisely on a par with the note of any equally reputable business firm. The only way this discount could be avoided would be to provide for the redemption of such notes in Chicago, New York, Boston and other money centres. Should interior and far Western banks make their bills worth par throughout the country by providing for their redemption at convenient money centres, it would compel them to keep an amount of idle reserve with their redemption agents that would seriously impair the profits on circulation. And the United States Government would not facilitate banking transactions then, as it does now, by receiving money at its subtreasuries and transporting the same to any part of the country for the meagre charge of 15 to 50 cents per $1,000.

A bank bill or note is a noninterest-bearing obligation payable to bearer upon demand, in lawful money, title to which passes by delivery. The value of such note depends upon the financial credit of the bank issuing the same, the special provision of law for its redemption, the security set apart for such purpose, the fidelity with which such laws are enforced, as to redemption, the character of supervision, and the degree of conservative banking thereby insured. The profit to a bank issuing such bills depends altogether upon the length of time they remain outstanding before being presented for redemption. With the facilities afforded by railway and express companies for presenting such notes for redemption, it is probable that they would speedily find their way back to the place of issue. This would seriously impair the profits and would necessitate more favorable conditions of issue in order to render the issuing of circulation profitable. No circulation will issue unless there is a profit in it. The fact of the probable and speedy return of this circulation to the locality of issue is made an argument in its favor, inferring therefrom that each locality would be abundantly supplied with money. A bad penny always returns, and the tinge of doubt that would attend this State bank circulation would doubtless give it a homeward impetus. But bear in mind that it would be worth no more at the place of ssue, though passing at par, than in Boston or New York. By just such a percentage as its purchasing power was diminished in our commercial centres, by just that percentage would the price of commodities be appreciated where it passed at par. This is an inevitable law attendant upon depreciated currency.

The stream that flows from the mountain to the sea obeys no more natural law than that which accumulates currency in commercial centers. If the water stood in pools on the mountain it would necessarily be pretty damp at the seaboard, and, if these localities that so loudly clamor for more money had all the currency they wanted, that same currency would be a drug in banking centers. There is money enough, and the range of interest for the past year has been phenomenally low, and, as before stated, any bank in any part of the country could have had any quantity of money transported to it at the moderate charge of 15 to 50 cents per $1,000. But such bank must have the equivalent of money; it must have securities, or receivables, or some form of credits, acceptable, in order to get the money. And right here is the trouble. This clamor for more money comes from the newer, less-developed sections of the country, and from people who have something to sell that no one wants to buy. The securities they offer do not commend themselves to investors. No amount of currency would correct this. They say, "Money is plenty while the crop is being moved, but we want it plenty at all times." When the crop is gone, what have they to represent money, with which to buy money? People can get money for their labor and for their produce. They can borrow upon good collaterals, real or personal. People with any equivalent of money can get it. This whole trouble is born of the heresy, which has a strangely-extended hold upon the public mind, that the Government can create wealth and that if there were more money people could, in some unexplained way, obtain it without rendering an equivalent.

REPEAL OF THE 10 PER CENT TAX.

A conditional repeal of the 10 per cent. tax is proposed, conditioned upon compliance by the State banks with certain regulations imposed by Congress, designed to secure circulation and protect note-holders against loss. Such State banks would then be National banks for the purpose of issuing circulating notes, and Congress must provide for their supervision and examination, to see that the laws are complied with. Can currency be better taken out by a bank organized under a State law than under an Act of Congress? Would Congress or the country gain anything by the proposed divided jurisdiction over these banks of issue? Would not division lead to conflict and confusion? All National banks make reports of condition to the Comptroller, on a past day, fixed by him, *in such form* as the Comptroller prescribes, and upon blanks furnished by him. These forms are very complete as to balance sheet and detail. In order to comply with these calls a bank's books must be so kept as to furnish the required information. These reports are of very great value to the banks themselves, in systematizing their bookkeeping and insuring good and uniform methods of business. The information reported, all on the same date, is of great value to the public. What would be gained by denationalizing our banks in all respects, except as to circulation? Can the various State legislatures be depended upon to provide better laws and better supervision than Congress?

It is argued that 92 per cent. of all business transactions consummated through banks are represented by credits—that is, exchanges and offsets—and that 8 per cent. only is represented by money. The Government does not assume to regulate the 92 per cent. Why should it the 8 per cent.? Why not as well allow State bank notes to circulate? Their acceptance is purely voluntary. That statement is theoretically true, but practically, it is wholly false. A banker, or large merchant or manufacturer, may be in a position, equipped with skilled men or expert information, to exercise discrimination between the strong and the weak banks. But what can the artisan, the day laborer, the miner or the farmer know of such a matter? From the nature of their calling they can exercise no discrimination. They know, and they can only know, that the Government allows such bills to circulate, in form and semblance of money, and they have the right to hold the Government responsible that it be worth 100 cents on the dollar, whether it comes from New York or New Mexico.

The Constitution of the United States prohibits the States from coining money or making anything except gold and silver legal tender. State-bank bills could not become a legal tender. Neither are National-bank bills. State-bank bills, when issued, add just so much to the liabilities of the bank. They would circulate freely in times of prosperity and confidence. In times of monetary stringency and general distrust they would return to the bank for redemption. They would have to be redeemed in legal-tender money provided by Congress. Congress must, under the Constitution, provide all the money that possesses a full debt-paying power. By every consideration of sound business principles it should provide all the money that the country requires. No public interest can be served by dividing this function with the forty-four States. Every period of financial depression in the past resulted in the suspension of specie payments, more or less general, by the banks; that is, resulted in the inability of the banks to redeem their notes. The same conditions would produce similar results in the future. If State-bank notes are allowed to circulate, their acceptance is not voluntary; it becomes a business necessity. Many mine owners, manufacturers and large employers of labor practiced paying their help in store orders, in order to control their trade and make the extra profit. Surely, under the law, the acceptance or rejection of such orders was purely voluntary, and yet their acceptance for fear of losing their employment was general.

So great did this abuse become that many States have enacted laws compelling corporations to pay their laborers, at regular intervals, in money. The wealthy class could provide themselves with the means of discriminating against the notes of weak banks, and if they found themselves possessed of any would proceed to work them off upon their less fortunate neighbors. That is the record of the past. It would be the experience of the future. To the average laboring man a bank-note reporter and detector would be as inexplicable as a binomial theorem. When a bank suspends, the fact that the note is secured and will be eventually paid is poor consolation to the laborer who needs his money for his daily use. The note of a failed National bank is as good as that of any bank in the system. The restoration of State-bank circulation portends disaster to that class of our citizens who most need and have most right to ask protection from the Government. State-bank circulation loses its money power in a crisis. It is a source of weakness and adds to the danger. Instead of paying debts it comes forward itself to be paid.

NEW NATIONAL BANKS.

The following table gives the number of National banks organized during the year ended October 31, 1892, in each State and Territory, with their aggregate capital:

States and Territories.	*No. of Banks.*	*Capital.*	*States and Territories.*	*No. of Banks.*	*Capital.*
Texas	22	$1,445,000	New York	2	$300,000
Iowa	13	725,000	California	2	150,000
Indiana	12	1,110,000	New Mexico	2	100,000
Ohio	11	2,000,000	Oklahoma	2	100,000
Pennsylvania	10	700,000	Wyoming	2	100,000
Illinois	9	2,500,000	Missouri	1	200,000
Minnesota	9	710,000	Virginia	1	200,000
Washington	8	700,000	Georgia	1	150,000
Massachusetts	7	650,000	North Carolina	1	125,000
Wisconsin	5	500,000	Arizona	1	100,000
West Virginia	5	350,000	Alabama	1	100,000
Colorado	4	260,000	Florida	1	100,000
Idaho	4	200,000	Kentucky	1	100,000
New Hampshire	3	250,000	Maryland	1	50,000
New Jersey	3	250,000	Michigan	1	50,000
Kansas	3	200,000	Nebraska	1	50,000
Montana	3	200,000	North Dakota	1	50,000
Tennessee	3	160,000	Utah	1	50,000
Maine	3	150,000			
Indian Territory	3	150,000	Total	163	$15,285,000

In point of numerical accessions to the system, Texas leads with twenty-two banks; Iowa, Indiana, Ohio and Pennsylvania following in the order named. Illinois, however, provided the largest amount of capital. It has been noticeable for several years that the large proportion of increase in the number of National banks is assignable to those States and Territories located West of the Mississippi River and in the Southern States. Of the one hundred and sixty-three banks organized during the past year, eighty-two are located in States and Territories west of the Mississippi, and thirty-six are located in the Southern States. Pennsylvania still has the greatest number of National banks in operation, Massachusetts the greatest aggregate capital, and New York the largest amount of deposits. As prosperity and population increase in the western portion of the country, extending from North to South, so the privileges of the National banking system are availed of in contrast with private banks and other financial corporations organized under State laws. During the past year the seventeen failures were widely distributed, there having been three in Kansas; in New Mexico and Texas two each, and in other States only one.

CLEAN MONEY.

Currency, as applied to the money of a country, has been defined as a "continuous succession of uses." A little reflection upon such continuous use, the journey from hand to hand, till to till, pocket to pocket, over the damp counter of the saloon, through the necessarily soiled hands of honest industry, treasured by the poor and carried in close proximity to the person, it is easy to realize that it becomes "filthy lucre." Soiled paper money is popularly believed to be a potent means of disseminating infectious and contagious diseases. The Bank of England never reissues a note.

The statute provides for the redemption of United States notes when they "are so mutilated or otherwise injured as to be *unfit for use*," and for the redemption of National-bank notes when they are "worn, defaced, mutilated or otherwise *unfit for circulation*." A note with the accumulated filth of continuous use is unfit for circulation and should be redeemed. Send in the old and let the people have new and clean money. My experience as examiner in the discount and savings banks of New York has impressed this matter upon me.

NUMBER OF BANKS ORGANIZED AND FAILED SINCE 1863.

Since 1863 there have been 4,811 National banks organized with an aggregate capital of $698,748,182. Of these 844 have closed or gone into voluntary liquidation and 181 were insolvent. Two banks were subsequently restored to solvency making the total number of going banks 3,788, on October 31, 1892.

AMENDMENTS TO THE LAWS.

The Comptroller of the Currency is required annually to report "any amendments to the laws relative to banking by which the system may be improved, and the security of the holders of its notes and other creditors may be increased."

(1) In my judgment the law should be amended so as to provide as follows: That the minimum deposit of Government bonds, required by National banks, be reduced to $1,000 in case of banks of $50,000 capital, and to $5,000 in cases of banks whose capital exceeds $50,000. Such deposit would be sufficient to guarantee the payment of all expenses and assessments imposed by law. Banks are no longer organized for the purpose of issuing circulation, and when organized to do business as banks of discount and deposit it is clearly a hardship to require them to purchase these high-priced Government bonds beyond the amount above suggested.

(2) That any National bank be allowed to issue notes equal to the par value of the United States bonds which it may purchase and assign to the Treasurer of the United States for the purpose of securing circulation.

(3) That the monthly withdrawal of bonds pledged to secure circulation shall not exceed four and one-half millions in the aggregate. Should withdrawals equal the amount named in any month (which is unlikely) such amount would be offset by the additional circulation issued under the second amendment suggested.

(4) That the tax on National-bank circulation be repealed. The banks have already paid into the Treasury $72,670,412.30 in taxes upon circulation. The banks should only be assessed an amount sufficient to defray the actual cost to the Government of providing circulation.

(5) That the limit of the amount which may be loaned to any person, company, corporation or firm, to 10 per cent. of the capital stock of the bank, be so amended as to read "capital and surplus." There should be an additional amendment making an exception in favor of temporary loans, secured by collateral, in our largest business centers.*

(6) That the Government issue bonds, with a long period to run and at a low rate

* Discussed elsewhere in this report.

of interest, with which to retire the present bonded debt of the United States, and which bonds may be used as a basis to secure National-bank circulation.*

(7) That the Comptroller of the Currency, with the approval of the Secretary of the Treasury, be empowered to remove officers and directors of a bank for violations of law, leaving the vacancy to be filled in the usual way; first giving such officers and directors an opportunity to be heard.

(8) That bank examiners be required to take an oath of office before entering upon the discharge of their duties, and to give a bond in such amount and with such sureties as the Comptroller of the Currency may require.

(9) That the Comptroller of the Currency be allowed to appoint two general examiners, of conspicuous ability and experience, to be paid out of the public funds, whose duty it shall be to visit, assist and supervise the various examiners in their several districts, in order to secure uniformity in method and greater efficiency in work.

(10) That the law be so amended as to prohibit officers or employees of a bank from borrowing its funds in any manner except upon application to and approval by the Board of Direction.

(11) In order to facilitate the collection of assessments upon shareholders in failed National banks, that the Receivers of such banks be required to file with the county clerk or register of each county where any shareholder may reside a statement showing the names of shareholders residing in such county and the amount of stock held by them respectively; the filing of such statement to constitute a lien upon the realty of such shareholders, which lien may be vacated, upon motion, by giving proper bond, and which shall be discharged, by the Receiver, upon payment of the assessment.

(12) Section 380, United States Revised Statutes, reads as follows:

All suits and proceedings arising out of the provisions of law governing National banking associations, in which the United States or any of its officers or agents shall be parties, shall be conducted by the District Attorneys of the several districts, under the direction and supervision of the Solicitor of the Treasury.

Under this section it is claimed that United States District Attorneys are *ex-officio* attorneys of the Receivers of all failed National banks located within their respective districts, and that all suits and proceedings must be instituted by or through them. It is difficult to believe that the Courts will finally sustain such a construction, that a simple action for debt, which can be maintained in a State Court as well as in the United States Court, and is not based upon any provision of the National Bank Act, falls within the provisions of said Act, or that a Receiver of a failed National bank is an "agent" of the United States within the meaning of said section.

It is difficult to believe that Congress has the power to impose the services of any attorney upon such a trust, where the assets are wholly private property, belonging to creditors and shareholders. Certain it is that had Congress intended that such a broad construction would be put upon this section it would have made some provision for exceptional cases. It is a physical impossibility for the various United States attorneys to act as attorney or counsel for the Receiver. In many instances they reside several hundred miles distant from the trust. In other instances there are so many trusts within a single district that the United States attorney cannot attend to all the business to be done. The result in such cases is that where United States attorneys insist upon being employed they become attorneys of record, nominally appearing in all actions or proceedings, while some resident attorney does the actual work. As a consequence the trust is obliged to pay double fees for having its work done.

If the United States attorney must be employed in accordance with the above section, then every time there is a change in such officer it would necessitate the substitution of his successor in office, thus bringing in an entirely new man, with no familiarity with the pending litigation. Under such circumstances the usual practice has been to retain the ex-District Attorney as counsel, thus producing a double charge for the services rendered.

Many United States attorneys make no claim to be employed. Others, when confronted with the situation, relinquish their claim, but still others insist upon being employed, and, when not employed, insist upon being paid a fee for every act that is done by the attorney in the regular administration of the affairs of the trust. The department has in its possession bills rendered by United States attorneys who have never performed any act for the benefit of the trust, have never been consulted by the Receiver, and never in any way had any connection with the affairs of the failed bank,

* Discussed elsewhere in this report.

except to ascertain from the record what suits and proceedings had been instituted and then have made such suits and proceedings a basis of claim for compensation.

DOMESTIC EXCHANGES.

One of the great values which the National-bank system possesses is the facility it affords for obtaining accurate statistical information as to the course and character of business. With nearly four thousand banks, representing nearly every locality and every business interest. under central supervision, it is within the power of the Comptroller of the Currency to obtain data showing exact conditions of business at stated time or times.

For the pupose of showing the course and magnitude of business of the banks, my predecessors have called for the exchanges drawn by the different banks upon each other and upon the reserve and central reserve cities for a certain year. These exchanges represent the settlement of balances between the different banks and correspond exactly with the cash balances paid or received by the different banks, in settlement of their exchanges in our clearing-house cities. My immediate predecessor, Mr. Lacey, called for such information for the year ended June 30, 1890, and June 30, 1891.

Thinking that the monetary stringency that prevailed in the fall of 1890 and the early part of the year 1891 might be thought to impair the value of statistics for these years, as a criterion, I have also obtained like information for the year ended June 30, 1892 Thus we have three successive years, covering what may be fairly termed a sample period, and the information set forth in the following table may be accepted as fairly reflecting the volume and character of the business of the banks for the periods covered; hence it will be unnecessary to call for similar information from the banks for some years to come.

Out of the 3,759 banks called upon, 3,647 complied with the Comptroller's request and furnished the data for the following table:

AMOUNT OF DRAFTS DRAWN BY NATIONAL-BANKING ASSOCIATIONS UPON NEW YORK, CHICAGO, ST. LOUIS, THE OTHER RESERVE CITIES, AND ON ALL OTHER LOCATIONS, THE NUMBER OF BANKS DRAWING UPON EACH CITY, AND THE PERCENTAGES OF DRAWINGS IN 1892.

Location of Banks Drawn Upon.	1892.		
	Number Drawing.	*Amount Drawn.*	*Per Cent.*
Central reserve cities:			
New York	3,427	$7,896,467,165	60.77
Chicago	1,178	1,428,828,063	11.00
St. Louis	577	260,649,996	2.01
Other reserve cities:*			
Boston	806	1,395,967,524	10.75
Albany	69	24,007,580	.18
Philadelphia	654	546.582,679	4.21
Pittsburg	189	111,444,735	.85
Baltimore	255	88,040,141	.68
Washington	72	6,363,874	.05
New Orleans	186	36,882,816	.28
Louisville	192	43,444.458	.33
Cincinnati	404	160,648,321	1.24
Cleveland	141	31.407,145	.24
Detroit	97	55,916,023	.43
Milwaukee	111	38,974,954	.30
Kansas City	335	104.336,804	.80
St. Joseph	42	9.301,148	.07
Omaha	217	135,557,812	1.04
Brooklyn,	4	736,111	.01
St. Paul	168	93,678,212	.72
Minneapolis	102	43,142,540	.33
San Francisco	241	99.946,228	.77
Des Moines	18	3,023,513	.02
All other localities	1,280	379,642,241	2.92
Total		$12,994,959,590	100.00

* The total amount of drafts drawn upon other reserve cities in 1892 is $3,029,372,125, and the percentage is 23.30.

In 1890 and 1891 the total amount of drafts drawn by National banking associations upon New York, Chicago, St. Louis, the other reserve cities, and on all other locations was, for 1890, $11,550,898,255 and for 1891, $12,782,212,495. The total amount of drafts drawn upon other reserve cities (not shown in detail in 1890) in 1891 was $3,101,005,735 and the percentage 24.25.

LOCATION OF BANKS IN RECEIVER'S HANDS.

A table is given showing the title and location of 71 National banks now in Receiver's hands and also the location of the United States attorney for that District. From this table clearly appears the inconvenience, if not impossibility, of these United States attorneys acting as attorneys for the various Receivers. Surely these attorneys ought not to be paid for what they cannot and do not do. These trusts should not be subjected to double fees, and Section 12 should be amended so as to provide that attorneys other than United States attorneys may be employed by Receivers of failed banks, whenever in the opinion of the Comptroller of the Currency such employment will be for the interest of a trust.

CLOSED NATIONAL BANKS.

A table is given showing the title, capital, circulation issued, redeemed and outstanding during the year ending October 31, 1892. The total number of such banks is 70, of which 53 went into voluntary liquidation and 17 into Receiver's hands. The amount of capital stock of these banks is $8,607,500; amount of circulation issued $2,031,851; amount redeemed $393,673, and amount outstanding $1,638,178.

The gross liabilities of the seventeen banks which failed during the year were $12,538,448. The estimated value of the assets is $10,750,347, or 85.74 per cent. of the liabilities.

Five of these banks failed prior to December 1, and their failure was the result of the quasi panic of 1890 and 1891, and a continuation of the bank failures which characterized the year immediately preceding.

The Maverick National Bank of Boston had liabilities of $8,727,833, or more than two-thirds of the total liabilities of the banks failing during the year. Aside from that institution the failures were inconsequential in amount, and, as noted above, the probable loss to creditors is less than the average for previous years.

No bank has failed since July 6, 1892.

AMOUNT OF DRAFTS DRAWN BY ALL REPORTING BANKS IN 1892, 1891, 1890.

According to a published table there were 629 banks in the reserve cities and 3,318 in all other cities, making a total of 3,647 banks, which drew exchange amounting to $15,994,959,590 for the year ending June 30, 1892, and for the corresponding period in 1891 and 1890 the totals were $12,782,212,495 and $11,550,898,255 respectively.

Continuing the same classification a table is introduced giving like information as to all banks outside of the reserve cities from which it appears that the grand total drawn on New York was $7,896,467,165; on Chicago, $1,428,828,063; on St. Louis, $260,648,996; on other reserve cities, $3,029,373,125; on all other localities, $379,642,241, or a grand total of $12,994,959,590.

In connection with these tables, showing the vast volume of business done by these banks, the question naturally suggests itself: What is the cost of this business to the public and what character of service is rendered to the public by these banks?

Answering this question the Comptroller, in 1890, obtained data from which he submitted a table showing the amount of premium charged on each $100 of exchange drawn, stated in cents, fractions thereof being omitted.

SUBSTITUTES FOR MONEY.

The subject of the currency of the country, always one of interest and importance, is especially so at the present time, because of the differences which obtain in the minds of the people in regard to what the currency should be and under what authority it should be created.

It will appear from the statistics given in this report to what extent the use of money is minimized by means of Clearing-house organizations in our principal cities, and, for the purpose of showing to what a limited extent actual money enters into the business transactions of the country, I have followed the precedent set by my predecessors in office in 1881 and 1890 and asked all the banks under the supervision of this Bureau to report all receipts for the 15th day of September, 1892, separately stated and classified.

My object in this report has been to furnish reliable data from which the public could see and realize how small a percentage of business transactions are represented by actual money, and how impossible it is for the Government to furnish a volume of currency sufficient to meet the wants of the people at all times--that is, in time of general distrust or quasi panic.

Over 90 per cent of all business transactions are done by means of credit. When the public lose confidence and credit is impaired and refused, over 90 per cent. of all business transactions are directly affected. It is easy to realize how impossible it is for the remaining 10 per cent. of money to carry on the business of the country without monetary stringency and financial distress.

The refusal to extend or continue credit, the demand for payment in money, leaves the actual money or currency of the country, be it $24 per capita or $50 per capita, utterly powerless to supply business needs.

Out of the 3,759 banks reporting their condition on July 12, reports of receipts were received from only 3,473 in time for insertion in this report. Those failing to report were the newer and less important institutions, hence the data received may be taken as fairly representing the business of the country.

The total receipts of the 3,473 banks on September 15, 1892, were $331,205,213. September 17, 1890, 3,474 banks reported total receipts of $327,278,251. The classification is the same and the percentage varies but slightly.

The following table shows the character, amount, and percentage of receipts of National banks on September 15, 1892:

Character of receipts.	SEPTEMBER 15, 1892.	
	3,473 banks.	Percentage of total receipts.
Gold coin	$2,907,017	.88
Silver coin	1,372,054	.41
Gold Treasury certificates	3,407,340	1.03
Silver Treasury certificates	6,537,015	1.97
Legal tenders	8,531,514	2.58
Treasury notes	2,675,269	.81
National bank-notes	3,454,483	1.04
United States certificates of deposit for legal-tenders	2,210,000	.67
Checks, etc	154,959,059	46.79
Clearing-house certificates	2,691,829	.81
Exchanges for clearing-house	141,873,266	42.83
Miscellaneous	586,367	.18
Total	$331,205,213	100.00

From the above table it appears thet 9.39 per cent. of the transactions were represented by actual cash, the balance by checks, drafts, exchanges, and other substitutes for money.

RATE OF EXCHANGE ON $100.

Rhode Island, 1 cent; New Hampshire, 1; Delaware, 4; Maryland, 4; District of Columbia, 4; Kentucky, 5; Massachusetts, 5; Connecticut, 6; Vermont, 7; New York, 7; New Jersey, 8; Ohio, 8; Missouri, 8; Maine, 9; Pennsylvania, 9; Kansas, 9; Nebraska, 9; Illinois, 9; Virginia, 10; Indiana, 10; Minnesota, 10; Utah, 11; Washington, 11; Wisconsin, 11; Iowa, 11; North Dakota, 11; South Dakota, 11; Michigan, 12; West Virginia, 12; California, 12; Montana, 12; Wyoming, 13; Colorado, 13; Idaho, 13; Louisiana, 14; South Carolina, 14; Mississippi, 15; Oregon, 15; Florida, 17; Tennessee, 17; Alabama, 18; Georgia, 18; North Carolina, 18; New Mexico, 18; Arkansas, 20; Arizona, 20; Nevada, 20; Texas, 21. The table shows an average of 8⅛ cents on each $100 of exchange drawn by all of these banks; that is, exchange drawn on each and every one of their correspondents with whom they may have had dealings during the year.

* *

The competition for bank accounts takes various forms. Interest is paid upon average balances, exceeding certain amounts, in many cases. But the usual method of rewarding depositors for keeping balances is taking their collection items and crediting the same as a cash deposit, and giving them the exchange required in course of business at par. The fact that the average commission received by the banks on each $100 of exchange sold is three-hundredths of 1 cent shows conclusively what an enormous amount of business is done by the banks gratuitously, or without direct charge. The number of banks reporting exchange drawn this year (3,647) is 10 greater than last year. The volume of exchange drawn is greater by $212,747,095. If to the $12,994,959,590 reported by the 3,647 banks we add for the remaining 112 National banks, and then take into consideration the exchange that must have been drawn by the 4,520 private bankers and State banking institutions other than Savings banks, whose general condition is set forth in a subsequent portion of this report, we shall have a grand total of exchange drawn by all the banks, approximating $17,500,000,000. A bank having a balance to settle with another bank does so by remitting a draft upon some bank where it has a balance, usually upon New York city. Drafts on New York are at a premium in most parts of the country, seldom at a discount in any place. Thus by a system of draft remittances the obligation of one interior bank to another drifts into our money centers for collection, goes into the volume of the exchanges, enjoys the economy of every possible offset, and this great volume of business is transacted and all balances adjusted by the actual shipment of a very small amount of money.

PERCENTAGE OF RECEIPTS OF NATIONAL BANKS IN RESERVE CITIES ON SEPTEMBER 15, 1892.

According to this table the percentage of gold coin received by 3,473 banks (including the central reserve cities, other reserve cities and the country banks) was .88; silver, .41; gold certificates, 1.03; silver certificates, 1.97; legal tenders, 2.58; Treasury notes, .81; National bank notes, 1.04; U. S. certificates of deposit, .67; checks, 46.79; Clearing-House certificates, .81; exchanges for Clearing-House, 42.83, and miscellaneous, .18. It appears also that the percentage of cash received was: In the City of New York, 7.64+; in Chicago, 5.48+; in St. Louis, 12.17+; in the other reserve cities, 7.64+, in the country banks, 15.09+; and the cash percentage of the total receipts, 9.39+.

Another table is given which shows the number of banks, total receipts and percentage of such total of checks, etc., received by National banks in each State and Territory, exclusive of reserve cities, on September 15, 1892, as follows: Maine, 80 banks, $1,708,985, 88.75 per cent.; New Hampshire, 50 banks, $1,162,227, 87.41 per cent.; Vermont, 48 banks, $821,225, 89.09 per cent.; Massachusetts, 213 banks, $7,068,468, 88.95 per cent.; Rhode Island, 58 banks, $3,063,485, 92.04 per cent.; Connecticut, 81 banks, $3,698,985, 92.30 per cent.; New York, 250 banks, $6,757,119, 88.01 per cent.; New Jersey, 94 banks, $5,214,420, 84.98 per cent.; Pennsylvania, 288 banks, $6,685,298, 85.87 per cent.; Delaware, 18 banks, $495,464, 87.41 per cent.; Maryland, 38 banks, $576,752, 86.03 per cent.; District of Columbia, 1 bank, $54,666, 54.75 per cent.; Virginia, 33 banks, $1,342,080, 90.04 per cent.; West Virginia, 22 banks, $456,027, 85.85 per cent.; North Carolina, 21 banks, $436,521, 79.87 per cent.; South Carolina, 13 banks, $660,649, 92.28 per cent.; Georgia, 28 banks, $758,226, 84.34 per cent.; Florida, 18 banks, $471,809, 84.02 per cent.; Alabama, 28 banks, $500,305, 78.03 per cent.; Mississippi, 13 banks, $138,550, 74.15 per cent.; Louisiana, 11 banks, $63,678, 60.85 per cent.; Texas, 188 banks, $3,562,658, 80.41 per cent.; Arkansas, 9 banks, $208,251, 79.95 per cent.; Kentucky, 58 banks, $1,025,622, 88.50 per cent.; Tennessee, 47 banks, $1,076,511, 83.17 per cent.; Missouri, 48 banks, $404,923, 78.82 per cent.; Ohio, 191 banks, $4,986,188, 79.45 per cent.; Indiana, 101 banks, $3,199,958, 80.09 per cent.; Illinois, 165 banks, $4,780,175, 85.17 per cent.; Michigan, 82 banks, $1,758,624, 83.74 per cent.; Wisconsin, 70 banks, $1,712,360, 82.92 per cent.; Iowa, 136 banks, $2,721,280, 78.95 per cent.; Minnesota, 55 banks, $1,679,606, 90.94 per cent.; Kansas, 142 banks, $2,143,404, 85.51 per cent.; Nebraska, 113 banks, $1,770,246, 80.48 per cent.; Nevada, 2 banks, $17,247, 61.55 per cent.; Oregon, 37 banks, $1,122,545, 62.44 per cent.; Colorado, 53 banks, $3,377,856, 92.11 per cent.; Utah, 14 banks, $472,014, 76.27 per cent.; Idaho, 11 banks, $141,476, 50.52 per cent.; Montana, 31 banks, $1,346,841, 84.47 per cent.; Wyoming, 12 banks, $167,212, 79.02 per cent.; New Mexico, 8 banks, $116,098, 67.32 per cent.; North Dakota, 29 banks, $329,830, 85.32 per cent.; South Dakota, 34 banks, $700,984, 83.17 per cent.; Washington, 63 banks, $1,214,474, 72.50 per cent.; Arizona, 4 banks, $136,699, 95.64 per cent.; California, 32 banks, $1,327,247, 79.77 per cent.; Oklahoma Territory, 3 banks, $50,771, 42.37 per cent.; Indian Territory, 5 banks, $32,942, 46.85 per cent. Total, 3,144 banks, $83,718,926, 84.91 per cent.

NUMBER OF BANKS, TOTAL RECEIPTS AND PERCENTAGE OF SUCH TOTAL OF CHECKS, ETC., RECEIVED IN NEW YORK AND 22 OF THE OTHER PRINCIPAL CITIES, SEPTEMBER 15, 1892.

This table shows that 48 National banks in New York city received on that date $130,976,963, of which 92.36 per cent. was in checks. The other cities referred to are as follows: Chicago, 21 banks, $25,078,114, 94.52 per cent.; St. Louis, 8 banks, $2,390,070, 87.83; Boston, 55 banks, $27,329,245, 93.11; Albany, 6 banks, $1,175,496, 95.33; Philadelphia, 41 banks, $23,369,882, 93.92; Pittsburgh, 26 banks, $4,102,424, 90.02; Baltimore, 22 banks, $4,836,972, 82.46; Washington, 12 banks, $940,470, 66.65; New Orleans, 9 banks, $1,498,735, 87.16; Louisville, 9 banks, $950,421, 91.86; Cincinnati, 12 banks, $6,137,507, 94.64; Cleveland, 8 banks, $1,835,908, 92.79; Detroit, 6 banks, $1,658,194, 91.82; Milwaukee, 3 banks, $684,552, 90.93; Kansas City, 9 banks, $4,168.021, 93.46; St. Joseph, 4 banks, $610,775, 91.63; Omaha, 9 banks, $3,190,258, 95.76; Brooklyn, 4 banks, $1,124,720, 81.55; St. Paul, 5 banks, $2,382,940, 97.00; Minneapolis, 7 banks, $2,195,787, 96.60; San Francisco, 2 banks, $510,393, 83.39; Des Moines, 3 banks, $333,440, 88.40. Total, 281 banks, $116,514,324, 92.74.

From the foregoing it appears that 74.72 per cent. of the total receipts are reported by the 329 city banks, showing an increase of over 2 per cent. by the country banks and a corresponding loss by the city banks, as compared with 1890, thus indicating a greater percentage of growth by the country banks.

By way of comparison a table is given comparing the data obtained for September 15, 1892, with both July 1 and September 17, 1890, showing the proportions of gold coin, silver coin, paper money and checks and drafts, including clearing-house certificates, to the total receipts in New York city, in other reserve cities, and in the banks elsewhere, separately, and also the proportions for the United States. On July 1, 1890, 3,364 banks received $421,824,726, of which .89 per cent. was in gold, .32 in silver, 6.29 in paper and 92.50 in checks, etc. On September 17, 1890, 3,474 banks received $327,278,251, of which 1.13 per cent. was in gold, .43 in silver, 7.40 in paper and 91.04 in checks, etc. On September 15, 1892, 3,473 banks received $331,205,218, of which .88 per cent. was in gold, .41 in silver, 8.10 in paper and 90.61 in checks, etc.

In order to further facilitate comparison, a series of tables has been prepared, the first of which shows the amounts received by banks located in the City of New York on five dates—June 30 and September 17, 1881; July 1 and September 17, 1890, and September 15, 1892—separately, stating gold coin, silver coin, paper currency and checks and drafts. On June 30, 1881, 48 banks received $167,437,759, of which .27 per cent. was in gold, .01 in silver, 1.02 in paper and 98.70 in checks, etc. On September 17, 1881, 48 banks received $165,193,347, of which .54 per cent. was in gold, .01 in silver, .65 in paper and 98.80 in checks, etc. On July 1, 1890, 47 banks received $165,923,382, of which .08 per cent. was in gold, .02 in silver, 3.86 in paper and 96.04 in checks, etc. On September 17, 1890, 47 banks received $120,451,472, of which .05 per cent. was in gold, .02 in silver, 4.29 in paper and 95.64 in checks, etc. On September 15, 1892, 48 banks received $130,976,963, of which .07 per cent. was in gold, .04 in silver, 7.53 in paper and 92.36 in checks, etc.

The changes indicate a marked increase in the amount of paper currency received, the extremes being represented by .65 per cent. on September 17, 1881, and 7.53 per cent. on September 15, 1892. The decrease in gold coin is more marked than the increase in silver.

The diminished proportion of receipts in checks and drafts is very remarkable, the average per cent. for the two days in 1881 being 2.91 per cent. greater than for the average of the two days in 1890; September 15, 1892, is 3.28 less than September 17, 1890.

Another fact which attracts attention is that the receipts of the forty-seven banks on July 1, 1890, are very nearly the same in the aggregate as those reported by forty-eight banks on September 17, 1881, and slightly less than for June 30, 1881. The receipts for September 17, 1890, show a very marked falling off in amount, but the percentages differ very slightly from those shown on July 1, 1890. The increase in paper currency (3.24) nearly equals the decrease in checks, as shown September 15, 1892.

RECEIPTS.

In order to exhibit the comparative importance of the transactions taking place in four principal cities, a table is given showing the total receipts by banks located in New York city, Boston, Philadelphia and Chicago, separately stated for the five days, to which is added like information in respect to the other reserve cities and all other banks, as follows: New York, June 30, 1881, $167,437,759; September 17, 1881, $165,193,347; July 1, 1890, $165,923,382; September 17, 1890, $120,451,472; September 15, 1892, $130,976,963. For Boston on the same dates the amounts received were as follows: $33,068,060; $24,094,061; $43,463,559; $26,531,841; $27,339,245. For Philadelphia on the same dates the amounts received were: $18,061,565; $17,830,648; $38,094,099; $23,273,886; $23,369,882. For Chicago on the same dates the amounts received were: $8,141,189; $13,026,835; $24,367,551; $22,654,923; $25,078,114. In all other reserve cities on those dates the amounts received were: $17,809,881; $22,970,703; $57,930,557; $48,198,214; $40,727,063.

PERCENTAGE OF TOTAL RECEIPTS BY ALL BANKS.

In New York on June 30, 1881, 58.81 per cent.; September 17, 1881, 55.95; July 1, 1890, 39.34; September 17, 1890, 36.80; September 15, 1892, 39.55. In Boston on same dates the percentage was 11.62, 8.16, 10.30, 8.11, 8.23. In Philadelphia on same dates, 6.34, 6.04, 9.03, 7.11, 7.07. In Chicago on same dates the percentage was 2.86, 4.41, 5.78, 6.92, 7.57 and in all other reserve cities, 6.26, 7.78, 13,73, 14.73, 12.90. The average of all the reserve cities on the dates named is 5.37, 5.15, 3.55, 3.35, 3.35, and of all other banks, 14.11, 17.66, 21.82, 26.33, 25.28.

The most conspicuous change to be noted in the foregoing is the increase in the percentage of country banks from 14.11, June 30, 1881, to 25.28 on September 15, 1892.

The variations in the percentage of the different kinds of money, checks, and drafts received, as shown in the statistics for September 15, 1892, do not essentially vary from those of 1890 and 1881. They fully confirm the general character of the banks' transactions. There has been a noted decrease in the amount of National bank notes received and a corresponding increase in silver certificates and Treasury notes, caused by the retirement of National bank circulation and its supplanting by money issued directly by the Government. The percentage of checks and drafts in New York in September, 1881, was 98.80; in September, 1890, 95.64, and in September, 1892, it was 92.36, showing a decrease for each of the three years reported, and a corresponding increase in the amount of cash received by the banks over their counters, which brings the cash receipts of the banks in the City of New York very near to the average of the whole country. The average percentage for all other reserve cities shows no material change.

IMPRUDENT METHODS.

The management of the National banks, as a whole is entitled to the highest commendation for efficiency and conservatism. Banks that were disastrously affected, by continual crop failures, in certain sections of the country, are realizing the benefit of last year's bountiful harvest, and when their patrons realize upon this year's crop it is confidently expected that their condition will be made satisfactory. The maxim that disaster usually overtakes any business when too much extended applies equally to banking, and syndicate banking illustrates this rule. Where the same parties organize a series of banks it usually transpires that they are not seeking investment for their own capital, but seeking the capital of others to invest. Such banks afford unusual facilities for "kiting," and it is with this class that much trouble is experienced. The competition for bank accounts among banks in reserve cities is so intense that "promoters" find it easy to establish a bank, open an account with their reserve-agent bank in some city, and the President or Cashier secures from such reserve-agent bank a loan upon his stock as collateral. By opening several such accounts the entire stock in some instances is used as collateral, and these "promoters" need but the 10 or 20 per cent. margin required (in other words, $5,000 or $10,000) in order to start a bank. The opening of such accounts and making of such loans are coincident in point of time, or so nearly so that the creditor bank must know that they are furnishing capital with which to float the new enterprise. This results in organizing many banks where they are not needed, and are too frequently attended by loss to all parties connected with the enterprise.

Another practice that is made possible only by the assent of creditor banks, is borrowing money on certificates of deposit. A country bank wants to borrow money, issues its certificate of deposit, either time or demand, in favor of the city correspondent, and sends the same forward, accompanied by bills receivable as collateral, and requests the loan, which is granted. As a result, the country bank adds to its liabilities by increasing the amount due depositors, and adds to its assets by increasing the amount due from banks, and its published report of condition shows no bills payable. In other words, does not show the true condition of the bank. It is perfectly legitimate and proper for a bank to rediscount its receivables or to borrow money, and all interior banks do at certain seasons of the year, when crops are being moved. for instance. Whatever the form of instrument used in borrowing money. it is a bill payable and should be so reported. Reserve banks can aid the cause of good banking by requiring notes instead of certificates of deposit. Happily this practice is rapidly diminishing.

DIRECTORS AND OFFICERS.

The statute provides that five or more persons may organize a National bank. When it is fully organized and all preliminary requirements have been complied with, the Comptroller issues his certificate of authorization to commence the business of banking. The management of the bank is vested in a board of direction, who act through their executive officers, President and Cashier. The common and statute law define their powers and prescribe the range and limits within which they may do business. Shareholders invest their money because of their faith in the efficiency of the management, their ability to acquire business and successfully and profitably to manage it. It is a business venture on the part of the shareholders, with which the Government has no more to do and no more solicitude than it has with the purchase of a farm or stock in a manufacturing enterprise. The shareholders elect the board of direction, and through such board manage their banks. Hence for them to claim protection, through Government control, would be to claim protection against their own acts. But these banks issue notes which circulate as money, and it being the duty of the Government to provide and regulate a circulating medium for the people, the Government examines and supervises these banks to see that all laws in respect to circulation are fully complied with.

This is apparently all that was originally contemplated as to National banks. But these banks furnish the instrumentality of exchange—the means of collection and payment of debts. They become large depositaries of the people's money ($1,765,422,983.68 at date of last report), by means of which their business is largely transacted. They are so intimately connected with business transactions and their sonndness so essential to business prosperity that govermental control has gone one step further and seeks to protect the public against loss—to protect a bank's creditors. To this end all shareholders in National banks are liable to an assessment for the purpose of paying creditors, to an amount equal to their stock holdings. Thus the entire capital stock, plus an assessment for an equal amount, becomes a guaranty of the faithfulness of the direction. The function of the Government is to restrain, to insure good banking, by enforcing the prohibitions against unsafe practices, which the law provides. The affirmative action of the banks in their competition for business is left to the enterprise of their managers, prompted by the desires of shareholders for dividends.

Directors give direction and control to the business of a bank, accept or reject credits, and should understand its general condition. The detailed workings of the banks must be intrusted to the officers and employees. We can have nothing better than men. Men make our laws and men enforce them. Men manage our banks. No matter how elaborate the system, how numerous the checks upon error or upon wrong-doing, or however perfect the machinery, the machinery must be set in motion and the system be enforced by men. There is in every system a point where good or ill results depend upon the character of the men in charge. If an engineer wants to ditch his train he can do so. If the President or Cashier of a bank wants to rob it, he can. Well devised systems may make it difficult. Efficient supervision may make it dangerous. The law may punish and risk thus be reduced to a minimum, but nothing can prevent a dishonest man in charge from mismanaging. Hence the chief and most important duty of directors is to select officers of character as well as experience and ability. They can best protect themselves and best serve the public by so doing. Our worst bank failures reveal criminal conduct on the part of the directors, or neglect of duty approximating criminality. Serious as this defect is, its correction by legislation involves a counter danger. Legislation aimed at a few banks affects all.

In our large cities it is very difficult to get the most desirable men to act as directors. The most actively engaged in business are the best judges of credit, can least afford to give attention to the duties of the office, and would most readily decline to serve. Legislation increasing the financial responsibility of directors for losses to creditors would depreciate the character of boards of direction and render the task of getting good, responsible men more difficult.

There is no reason why a director should not borrow money of his bank upon the same terms and conditions that other patrons are accommodated. There is every reason why he should not take advantage of his position to secure better rates or greater accommodations than his bank equities entitle him to. Officers of a bank should not be allowed to borrow money by overdrawing their accounts, by putting tickets in the cash, by discounting their own notes, or by discounting their business paper, or in any way except by application to the board of directors; and a law regulating such loans would be a wise enactment.

EXCESSIVE LOANS.

Section 5,200 United States Revised Statutes reads as follows:

The total liabilities to any association, of any person, or of any company, corporation, or firm for money borrowed, including, in the liabilities of a company or firm, the liabilities of several members thereof, shall at no time exceed one-tenth part of the amount of the capital stock of such association actually paid in. But the discount of bills of exchange drawn in good faith against actually existing values and the discount of commercial or business paper actually owned by the person negotiating the same shall not be considered as money borrowed.

As the volume of business has increased the magnitude of individual transactions has proportionately increased. In fact the concentration of capital under single management, by means of large corporations and by combinations, has been phenomenal. The natural economies attendant upon wholesale business, the lower rates of transportation and facilities of distribution, which location at metropolitan and railroad centers insures, is fast driving the small manufacturers out of business and concentrating business in metropolitan centers. All this increases the magnitude of separate transactions. Hence if 10 per cent. of the capital stock was a proper limit to individual loans in 1864, the percentage of limitation should now be increased in our larger cities.

There is another important reason for such an increase. In the "sixties" banks did business upon their capital, supplied the wants of their customers, and earned their dividends with the money which shareholders supplied. Now, capital is made just sufficient to command public confidence. Usually a large surplus is accumulated, but the business is done upon depositors' money. Every symmetrical and well-managed business has its flush season, when its bank account should show a good balance and its want season, when it legitimately calls upon its bank for funds. Thus the balances of certain industries supply the wants of others and large bank capital is not required. Surplus belongs to the shareholders, and, aside from statutory definition, is as much capital as the money originally paid in by shareholders. The section above quoted should at least be amended so as to read, "one-tenth of the capital and surplus." It should be noted that many banks, upon advice of counsel, insist that "surplus" is "capital" within the meaning of said section.

In addition to including surplus with capital, as noted above, an exception to the one-tenth limit should be made in favor of temporary loans, well secured with collateral, in our largest cities.

In my judgment, the limit to 10 per cent. of capital and surplus is none too small for rural and interior banks. The above section may be amended as to the large cities, so as to conform to the necessities of business and still be in strict accord with the requirements of conservative banking.

When so amended, there would be no more wholesome provision of the banking law, for, while there are instances where banks with well-distributed assets have failed, caused by repeated crop failures or extreme monetary stringency, or some cause affecting the whole community, the common history of bank failures reveals as the superinducing cause the concentration of the bank's funds in a few hands or in a few interests.

Experience has demonstrated that a strict compliance with the 10 per cent. limit is impracticable in our large cities, for the reason that it is contrary to the necessities of business. A bank with a million capital could loan but $100,000 to any individual, company, corporation or firm. Single business transactions involving a larger amount are of frequent occurrence, and to divide one transaction between two or more banks would prove troublesome and is not demanded by conservative banking. For instance, a draft may be made against one consignment of grain for $200,000, and the consignee needs to borrow $150,000 upon the bill of lading as security. The security cannot be divided; neither can the loan, in a practical sense.

Bank managers cannot always gauge the business wants of the day, and frequently find, late in the day, that they have more money than their required reserve. Rather than carry it over night in their vaults they make over-night loans as best they can. This necessarily results in loans in excess of the 10 per cent. limit. A lower rate of interest is usually realized on such loans than obtains earlier in the day, and the loan is expected to be, and usually is, paid the next day.

The penalty for the violation of this law—the commencement of an action by the Comptroller of the Currency, through the Attorney-General, to forfeit the bank's charter—is so severe as to render it nugatory. It was doubtless made severe to prevent vexatious interference with the affairs of the banks. It is difficult to fix a cast-iron rule, with inflexible penalties, without doing more harm than good. During the quasi panic of 1890 many perfectly solvent firms were embarrassed for want of money, and but for indulgences and aid upon the part of the banks must have failed. They already had their full complement of bank accommodation. The banks found upon investigation that they were solvent, and, taking security, gave them additional accommodations, thus protecting themselves, saving these concerns from failure, and relieving the public generally from loss and injury, which each successive failure at such a time entails. Like other business, banking has its emergencies, and when they arise, discretion should be allowed to act without incurring criminal liability.

Officers and directors are not apt to allow persons with whom they are not financially interested to abuse the bank. Where loans to directors or officers are well secured, there is no way of reaching such a case, as the law now exists, and, so far as safety is concerned, perhaps no need. In such case, if the loans are not well secured, and the examiner and Comptroller are not satisfied that they are good, the bank could be required to charge them off and make an assessment upon their shareholders to make good the impairment, if impairment existed, or appoint a Receiver, in case the capital was thus wiped out. The latter course would involve a question of credit and values sometimes difficult to determine, and it frequently happens that the shareholders need protection rather than punishment. The circumstances attending loans made in excess of the 10 per cent. limit are so various and diverse that they defy classification. It is difficult to frame a general rule that will correct the evil resulting therefrom and not itself be productive of bad results. Our country is so large and the contrast between city and country—between the immense volume and varied transactions of the one and the lesser volume and more uniform transactions of the other—so great, that a uniform law that can wisely be applied to both must of necessity possess wide latitude.

I think this whole difficulty, as well as others that arise, might be substantially reached if the Comptroller, with the approval of the Secretary of the Treasury, were given power, after a hearing, to remove bank officers and directors for violations of law, leaving the vacancy to be filled in the regular way. It is a power that would be seldom exercised. The existence of the power would deter many who now keep the letter, only to violate the spirit of the law.

There are in the employ of this Bureau forty-two examiners. The position is responsible and honorable, and calls for the exercise of energy, tact, discretion and firmness, as well as business experience and technical knowledge of banking. In order that he may discharge his duties with ease and confidence, familiarity with the mechanism of banking is indispensable. Our best examiners are those in the prime of life, who work with energy and fidelity, hoping to demonstrate their ability and worth, thereby securing for themselves a desirable and permanent position in some good bank. This incentive and this ambition insures the best work. As a body they are competent, conscientious, painstaking and fearless in the discharge of their duties. They enjoy the full confidence of the Comptroller, and constitute his main reliance in all matters of discipline, and hence it is the purpose of this office to insist upon the highest standard of efficiency.

A bank examiner may own property and have interests that require the usual banking facilities and be entitled to such accommodation as he would receive were he not an examiner. But unsecured loans to an examiner, which, but for his position, would likely be refused, are wrong and destroy confidence in his work. No relation should exist that would tend to restrain an examiner's freedom in making criticisms or impair the force of his criticism when made. But criticism does not necessarily mean pointing out wrongdoing. It means the comment which an expert business man would naturally make upon the business under review. An examiner's work is not espionage. The National banks are the backbone of the financial system of the country, the conservators of public credit, officered by men of the highest integrity, who are striving to earn dividends for their shareholders by fostering and building up the business of their clients as well as their banks. The exceptions to such honorable conduct only prove the rule. Examiners should work with the banks, with a disposition to aid in every proper way. They should get the confidence of bank officers by demonstrating their entire fitness for the work intrusted to them.

While this Bureau accepts any system of doing business which is accurate and proves, still examiners, with their facilities for observation, should note the best methods and be able to render valuable aid by suggesting improvements. While the subject of credits is to be delicately treated, the knowledge an examiner acquires will enable him to make valuable suggestions on this subject. The banks pay for the examiner's services and are entitled to his good offices. The best service an examiner can render a bank, as well as this Bureau, is by doing thorough and painstaking work. He should obtain possession of the bank's assets and retain the same until his work is completed. In the smaller banks the securities, loans and discounts should be placed in front of the examiner when he commences on the cash. In the larger banks, where more than one day is required to complete the work, he should obtain and keep possession of the assets by means of keys or seals. He should know that no change is made in the assets, except in the regular course of business. Nothing should be done on the installment plan. Instead of objecting to this, the better the bank the more acceptable will it prove.

It is a satisfaction to a bank to have a competent examiner in absolute possession of their assets until the same are proven and he is able to assure them that the items for which their books call are all there. An inventory is the foundation of all examinations. All the items of assets are aggregated under their appropriate bookkeeping heads to prove the asset side of the bank. This is but half the work. Every item of liability should be inventoried and aggregated to prove the liability side. Every individual and every bank balance should be taken off and every liability account proved. An examination that does not include this is imperfect. Experience shows that defalcations are oftenest hidden in the liability side of the bank.

Examiners are given detailed instructions, which, if fully complied with, would render their work very thorough and searching. The efficiency of the force is constantly improving, and it is alike for the interest of the banks and this Bureau to have it attain the highest standard of excellence. This office will be plased to have the co-operation of and receive suggestions from bank officers upon this subject.

COMPARATIVE STATEMENTS OF THE NATIONAL BANKS.

The resources and liabilities of the National banks for fourteen years, at nearly corresponding dates, from 1879 to 1892, inclusive, are as follows: October, 1879, 2,048 banks, $1,868,800,000; 1880, 2,090 banks, $2,105,800,000; 1881, 2,132 banks, $2,368,400,000; 1882, 2,269 banks, $$2,399,800,000; 1883, 2,501 banks, $2,372,700,000; 1884, 2,664 banks, $2,279,500,000; 1885, 2,714 banks, $2,432,900,000; 1886, 2,852 banks, $2,513,900,000; 1887, 3,049 banks, $2,620,200,000; 1888, 3,120 banks, $2,731,400,000; 1889, 3,290 banks, $2,998,300,000; 1890, 3,540 banks, $3,141,500,000; 1891, 3,677 banks, $3,213,100,000; 1892, 3,773 banks, $3,510,100,000.

It is noticeable that the resources of the system were increased nearly $300,000,000 during the past year notwithstanding the fact that seventy banks went into voluntary liquidation or became insolvent, such increase being strongly in contrast with that of any previous year covered by the statement. Proportional increase is common to nearly all the items, the principal decrease occurring in clearing-house exchanges.

TOTAL RESOURCES AND LIABILITIES OF THE NATIONAL BANKS.

The total resources and liabilities of the National banks in New York city, the three central reserve cities, the other reserve cities and the country banks on September 30, 1892, were as follows: New York city (48 banks), $601,860,851; central reserve cities (New York, Chicago, St. Louis—80 banks), $823,601,202; other reserve cities (263 banks), $865,392,190; country banks (3,430), $1,821,101,504; aggregate (3,773 banks), $3,510,094,897.

CIRCULATING NOTES.

The actual circulation outstanding on September 30, 1892, for which the banks were responsible was $147,191,593, this amount being exclusive of $25,595,167 also in circulation but represented by lawful money deposited by the banks for redemption of notes whenever presented to the Treasurer of the United States.

The minimum deposit of bonds required of the 3,773 National banks in operation September 30, 1892, was $107,064,207, upon which only $96,357,787 of National bank circulation could be issued. These banks held on September 30 $163,275,300 of bands, and were actually responsible for $50,589,283 of circulation more than the minimum. It is not imperative upon banks to take circulation, and a few do not avail themselves of the privilege.

Of the 3,773 banks 2,737 have a capital not exceeding $150,000 nor less than $50,000, which is the lowest amount any bank in the system may have, the aggregate capital amounting to $221,057,880. The remaining 1,036 have a capital of over $150,000 each, the aggregate amounting to $465,515,185. If an amount of bonds equal to the total capital were deposited to secure circulation the whole body of banks might have a circulation amounting to $617,915,714. or $521,557,927 more than the present minimum.

DECREASE OR INCREASE OF CIRCULATION FROM 1884 TO 1892, INCLUSIVE.

Year ending October 31, 1884, net decrease, $24,170.676.
Year ending October 31, 1885, net decrease, $15,545,461.
Year ending October 31, 1886, net decrease, $56,595,533.
Year ending October 31, 1887, net decrease, $50,494,589.
Year ending October 31, 1888, net decrease, $16,848,739.
Year ending October 31, 1889, net decrease, $22,159,043.
Year ending October 31, 1890, net decrease, $5,248,549.
Year ending October 31, 1891, net increase, $11,795,101.
Year ending October 31, 1892, net increase, $10,487,226.

The gross increase of circulation, including the notes of gold banks and those of failed and liquidating associations, was $247,588.

BANKS WITHOUT CIRCULATION.

A few National banks have never issued circulating notes. Some others have deposited lawful money and surrendered their circulation. A list of these banks, with capital and bonds, is as follows: Chemical National Bank, New York, N. Y., $300,000; $50,000. Mechanics' National Bank, New York, N. Y., $2,000,000; $50,000. Merchants' National Bank, New York, N. Y., $2,000,000; $50,000. National City Bank, New York, N. Y., $1,000,000; $50,000. National Park Bank, New York, N. Y., $2,000,000; $50,000. National Bank of Washington, Washington. D. C., $200,000; $50,000. Chestertown National Bank, Chestertown, Md., $60,000; $12,500. First National Bank, Butte, Mont., $100,000; $25,000. First National Bank, Houston, Tex., $100,000; $25,000. Citizens' National Bank, Englewood, N. J., $50,000; $12,500. National Bank of Cockeysville, Md., $50,000; $12,500.

SECURITY FOR CIRCULATING NOTES.

The security for circulating notes of National banks is limited to United States registered bonds bearing interest. The following shows the amount of such bonds held by the Treasurer of the United States as security on June 30 for several years, and the amount owned and held by the banks for other purposes, including those deposited with the Treasurer to secure public deposits:

Years.	*United States bonds held as security for circulation.*					*United States bonds held for other purposes at nearest date.*	*Grand Total.*
	6 per cent. bonds.	*5 per cent. bonds.*	*4½ per cent. bonds.*	*4 per cent. bonds.*	*Total.*		
1872.	$173,251,450	$207,189,250	....	....	$380,440,700	$31,868,200	$412,308,900
1877.	87,690,300	206,651,050	$44,372,250	....	338,713,600	47,315,050	386,028,650
	Continued at 3½ per cent.	*Continued at 3½ per cent.*					
1882.	$25,142,600	$202,487,650	32,752,650	$97,429,800	357,812,700	43,122,550	400,935,250
1887.	3,175,000	5,205,950	67,743,100	115,842,650	191,966,700	33,147,750	224,814,450
			Continued at 2 per cent.				
1892.	11,600,000	....	$21,825,350	129.764.700	163,190,050	20,301,600	183.491,650

CHANGES IN HOLDINGS OF BONDS.

As showing the changes which have occurred in the holdings of bonds a table is given from which it appears that in 1882, 2,301 banks held $33,754,650 4½ per cents, and $104,927,500 4 per cents, and in 1892, 3,788 banks held $21,897.850 continued 2 per cents and $131,133,150 4 per cents, or a grand total of $185,047,250 as against $400,069,400 in 1882.

FAILED BANKS.

Seventeen National banks, with an aggregate capital of $2,450,000, were placed in the hands of Receivers during the year, as shown bv the following statement. In one case creditors have received dividends amounting to principal and interest in full; in another case principal in full; in another, 85 per cent.; in another, 70 per cent.; in two cases, 50 per cent.; in five cases, 30 per cent.; in two cases, 25 per cent., and in one case, 20 per cent.

CAUSES OF FAILURE.

MAVERICK NATIONAL BANK, BOSTON.

The doors of the Maverick National Bank of Boston, Mass., were closed on the last day of the report year (October 31, 1891, too late to be included in the annual report) by the National-bank Examiner, acting under instructions from the Comptroller of the Currency. For some months the condition of the bank had been a source of anxiety to the Comptroller on account of excessive loans to certain of its directors. The aggravated character of these loans, however, was not revealed to the Comptroller, either through the reports of the examiner or the attested reports of condition. The bank had a large volume of business and did a large collection business throughout the country. Speculative banking and excessive loans to directors for speculative purposes were the causes of failure. Conservatively managed, its volume of business and good will would have possessed very great value. Its assets were easily convertible. The Receiver has paid to creditors 85 per cent., and expresses the opinion that an additional dividend will be paid, not exceeding 5 per cent, dependent upon the results of pending litigation and the amount realized from the assessment upon shareholders. An assessment of 100 per cent. has been levied by the Comptroller upon the shareholders of the bank.

CORRY NATIONAL BANK, PENNSYLVANIA.

The doors of the Corry National Bank of Corry, Pa., were closed to business November 7, 1891. The entire management of the bank had been practically confided to the President and Cashier, whom it appears were highly respected and enjoyed the full confidence of the community until their disastrous administration of affairs of the bank became known. A good many loans were made in excess of the 10 per cent. limitation. False debits were made to other banks, and a corresponding credit given to certain individuals for the purpose of making a showing which would justify the payment of dividends to shareholders. Large rates of interest were paid on certificates of deposit, and the expenses of the bank were extravagant. A large amount of paper of bad character had been kept alive by renewals, interest in many cases being included in the renewals. The discoveries of the examiner, indicating criminal violations of law, were promptly reported to the United States attorney.

An assessment of 100 per cent. has been levied by the Comptroller upon the shareholders of the bank.

Dividends amounting to 50 per cent. have been paid to creditors.

CALIFORNIA NATIONAL BANK, SAN DIEGO.

The doors of the California National Bank of San Diego, Cal., were not opened after close of business November 11, 1891. The failure was regarded as a great calamity by the local community, and considerable effort was made, in which many creditors joined, to accomplish a resumption of business. Under the peculiar circumstances and in view of repeated assertions in communications to the Comptroller from interested parties that a sufficient cash fund would be made immediately available to restore the impaired capital, as much time was given before the appointment of a Receiver as seemed to be consistent with the Comptroller's discretion under the law. When it became known, upon thorough examination, that the entire capital and surplus of the bank had been lost and all efforts to resume had proved futile, the President of the bank, who had personally exerted himself in the interests of resumption of business, committed suicide. The funds of the bank were used to promote local enterprises of a public character involving large sums of money, and during a period characterized by a marked increase in prices and unusual activity in business. Succinctly stated, the President of the bank, in conjunction with one or more directors, at the date of its organization inaugurated schemes or deals in the interest of themselves and the local community which involved large sums of money. The necessary loans were for a time obtained from the Eastern States, but as these matured and the demand for payment was made recourse was had to this bank. The local boom collapsed before any of these enterprises became paying investments. At length, the extreme danger to the bank became apparent to the management, and it appears that the President alone was forced to assume the attendant responsibility, and finally being unable to contend with the reduction in deposits and shrinkage in values suspension became inevitable.

An assessment of 100 per cent. has been levied by the Comptroller upon the shareholders of the bank.

Dividends amounting to 30 per cent. have been paid to creditors.

CHEYENNE NATIONAL BANK, WYOMING.

The Cheyenne National Bank of Cheyenne, Wyo., closed its doors to business November 13, 1891, a run having been caused by the suspension of the California National Bank of San Diego, Cal. A few days later the Cashier committed suicide. The President of the California National Bank of San Diego was likewise the President of the Cheyenne National Bank, and the character of management in both cases was almost identical. The personal presence of the President, his correct manner of life, and his energetic attention to business are said to have given him the entire confidence of the community and enabled him to consummate questionable transactions without suspicion. From the first, the funds of the bank were diverted to his use. One common method was to purchase stocks of little or no value, sell them to irresponsible persons, taking notes in payment, which notes he caused to be discounted by this bank. He borrowed money in the Eastern States with which to purchase a controlling interest in the stock of the bank, using this stock as collateral. When demand was made, he would pay the loans with funds belonging to the bank realized upon accommodation paper obtained from his immediate friends. The Cashier became a large and irresponsible debtor, and together these officers misappropriated an amount equal to the entire capital of the bank. Many bad loans were made, business was unduly extended, and the management was reckless and extravagant.

Dividends amounting to 25 per cent. have been paid to creditors.

FIRST NATIONAL BANK, WILMINGTON, N. C.

The doors of the First National Bank of Wilmington, N. C., were closed by order of the board of directors November 24, 1891. The reason given to the public was that the capital had been impaired by heavy losses incurred in previous years, from which the bank could not recover. No dividends had been paid since 1887. After a thorough investigation, the Receiver reported that the failure was due to bad loans extending over a number of years, and to peculation and robbery by the Cashier, a fugitive from justice. The Directors took no interest in the management, and the Cashier had been given complete control. A large part of the assets consisted of worthless bills receivable, which had been carried for a long time by renewal. Excessive loans had also been made. False entries were made upon the books to conceal the actual liability from the Examiner, and it was found that the Cashier had so manipulated the accounts as to successfully postpone the collapse for a considerable length of time. It now appears that the Directors were aware to a certain extent of the condition of the bank, but relied upon the hope that it would under most favorable circumstances recover. The class of assets relied upon as good at date of failure amounted to only about 25 per cent. of the whole and the Receiver up to date has been unable to collect more than 15 per cent. of the totat assets.

An assessment of 100 per cent. has been levied by the Comptroller upon shareholders of the bank.

Dividends amounting to 30 per cent. have been paid the creditors.

HURON NATIONAL BANK, HURON SO. DAK.

The doors of the Huron National Bank of Huron, S. Dak., were closed to business by the National bank Examiner December 18, 1891.

The Examiner found that for some time prior to that date the bank had been in a crippled condition, but thought, with careful and economical management, the affairs conld be placed upon a safe footing. The shareholders finally voted to go into voluntary liquidation, but upon the disclosure that a large indebtdness due from the officers and their friends was not collectible, the Comptroller was compelled under the law to appoint a Receiver. It appears that the local community lost confidence in the bank from the fact that the management was supposed to be pecuniarily interested in a very spirited controversy and rivalry that existed between several cities over the location of the capital of the State, and this with other causes tended to make the business of the bank unprofitable. The farming interests in the surrounding country were largely indebted to the bank, and the continued crop failures made the loans almost worthless. It did not appear that there had been criminal violations of law, but it did appear that the suspension was due to bad loans and unremunerative business, which had been unduly extended.

FIRST NATIONAL BANK, MUNCY, PA.

The doors of the First National Bank of Muncy, Pa., were closed to business January 11, 1892, by a National bank Examiner who had for some time been in attendance for the purpose of ascertaining the exact condition as to solvency. Criminal violations of law were apparent, and prompt communication was had with the United States Attorney. There appeared to be a large shortage in cash as represented by the books of the bank. On the day upon which the Examiner closed its doors, the want of public confidence was manifested by a slight run. The causes of failure may be stated as reckless management, incorrect bookkeeping, declaration of dividends that had not been earned, failure to charge off bad debts, and a persistent practice of allowing overdrafts in large amounts.

Had the management of the bank been good and efficient, the appointment ,of a Receiver would have been unnecessary and the bank might have been put in a sound condition by levying an assessment to make good the impairment of capital.

No assessment was levied upon the shareholders as the assets of the bank were sufficient to pay creditors in full. The remaining assets have been turned over to an agent selected by the shareholders and the trust closed, principal and interest having been paid in full on all proved claims.

FIRST NATIONAL BANK, DOWNS, KANS.

The doors of the First National Bank of Downs, Kans., were closed January 23, 1892, by the National bank Examiner, upon discovering that the bank was insolvent. Bad management, frequent irregularities and indications of collusion to violate the law were apparent. and the information was promptly reported to the United States Attorney for that district. On or about the date of organization the assets of another bank were purchased, a considerable portion of which proved to be worthless; accommodation notes were taken to cover up large loans to certain individuals, the paper representing the actual loans being held as collateral. The management was extravagant and the Cashier was reckless, his personal reputation being such as not to inspire confidence. Before the doors were closed an effort was made by some of the shareholders to change the management and restore the capital by voluntary assessment, but a large part of the stock being held by non-residents the attempt was unsuccessful and suspension became inevitable.

A dividend of 25 per cent. has been declared to creditors.

BELL COUNTY NATIONAL BANK, TEMPLE, TEX.

The Bell County National Bank of Temple, Tex., was closed by the National bank Examiner January 30, 1892. The causes necessitating this action were numerous; bad and excessive loans, violations of correct business principles, and the indifference of the directors, permitting the President and Cashier to dominate the board, made it comparatively easy to wreck the bank. These officers permitted no interference and would not allow a duly appointed finance committee to perform its duty. Many of the shareholders were non-residents and gave their proxies to the President and Cashier, who were thus able to elect such directors as they chose. By means of this power the board was reduced in number in order to dispose of a few directors who insisted upon a knowledge of the condition of the bank or were desirous of performing their whole duty. The personal extravagance indulged in by the officers resulted in the discounting of worthless paper prepared for the purpose, the borrowing of money from other banks at high rates of interest, the general welfare of the bank being wholly disregarded. Soon after the Receiver took charge, these officers were arrested for violations of law and bound over for trial. The most culpable management was apparent, false entries in the books had been made to conceal misappropriations, and forgery had been resorted to.

Dividends amounting to 30 per cent. have been paid to creditors.

FIRST NATIONAL BANKS, DEMING AND SILVER CITY, N. M.

The doors of the First National Bank of Silver City and the First National Bank of Deming, N. Mex., were closed to business on February 4, 1892. The same person was President of both banks and represented the entire management, the boards of directors practically exercising no control. For several years he had borrowed the funds of the banks on notes of his own and worthless accommodation paper made by relatives, friends, and clerks, until more than the combined capital of the banks had been obtained for investment in speculative enterprises, such as wild lands, cattle ranches, prospective railroad construction, etc. Fraudulent entries were made on the books and dividends not earned regularly paid to the shareholders, who being mostly non-residents took no other interest in the management. Charges of embezzlement and misappropriation of funds were promptly placed in the hands of the United States Attorney.

An assessment of 82 per cent. has been levied upon the shareholders of the First National Bank of Deming. Dividends of 25 per cent. have been paid to the creditors of that bank, and 20 per cent. to the creditors of the First National Bank of Silver City.

LIMA NATIONAL BANK, LIMA, OHIO.

The doors of the Lima National Bank of Lima, Ohio, were closed to business March 1, 1892. From the date of its organization the management of the bank continuously provoked criticism by the Comptroller of the Currency for apparent violations of the restrictive provisions of the law. The President, possessing considerable wealth and business sagacity, was the principal promoter of a number of local and foreign enterprises, and diverted the funds of the bank to his individual uses. At times he would crowd paper, based on these outside schemes, into the bank to the almost entire exclusion of other and legitimate loans. Accommodation notes of clerks and other employees were resorted to, until the President's methods became a matter of public notoriety. The depositors necessarily lost confidence, and deposits were withdrawn to such an extent as to force the bank to re-discount all its good paper. When this crisis was reached an attempt was made to place the bank in voluntary liquidation, but failed because it was impossible at the time to realize from the assets the necessary funds for the prompt payment of creditors. A sharp run, which exhausted nearly all the cash on hand, precipitated its closing.

Dividends amounting to 50 per cent. have been paid to creditors.

CHERRYVALE NATIONAL BANK, CHERRYVALE, KANS.

The doors of the Cherryvale National Bank of Cherryvale, Kans., were closed June 10, 1892, by a National bank Examiner acting under instructions from the Comptroller of the Currency. For some time the management of the bank had subjected it to criticism, and upon an examination made in December, 1891. its condition was unsatisfactory and the capital was found to have become impaired. An assessment was ordered by the Comptroller, the management taking exception, insisting that there was no impairment and requesting a re-examination. The request was granted, but the result still showing an impaired capital, the Comptroller insisted upon the payment of the assessment, and shortly after the Cashier made oath that it had been fully paid. A subsequent examination disclosed the fact that the assessment had not, in fact, been paid, whereupon the Examiner was instructed to take charge. The condition of the bank was mainly due to the reckless management of the President, who for his own use discounted worthless accommodation notes. A strenuous effort was made to prevent a Receivership by inducing creditors to accept obligations other than cash for their claims. Inasmuch as the assets of the bank were not sufficient to even permit of voluntary liquidation, no proposition other than immediate payment of creditors in full could be entertained. The President and Cashier were afterward arrested for embezzlement, perjury and false entries in the books, and held for trial.

FIRST NATIONAL BANK, ROCKWALL, TEX.

The doors of the First National Bank of Rockwall, Tex., were closed by the National bank Examiner June 11, 1892. A former President of the bank, who was the original promoter, was engaged in wild speculations during his incumbency, and through loans to men of straw, for his own use, absorbed the capital and earnings of the bank. Having accomplished this result, he sought other fields of operation, leaving the bank in such a condition that a new management found it impossible to place it on a solvent footing. The amount of deposits had become insignificant, being at date of closing only $6,000, so that current business could not support the bank.

NATIONAL BANK OF GUTHRIE, OKLAHOMA.

The doors of the National Bank of Guthrie, Territory of Oklahoma, were closed by its officers June 13, 1892. Certain information having come to the knowledge of the Comptroller, a National bank Examiner had been directed to make an examination. He arrived on the day the bank suspended business, and found that a Receiver had been appointed by a Territorial Court. It was claimed that creditors had been paid in full, and therefore the Comptroller had no jurisdiction. It appeared that a Receiver had been appointed by the Court upon a petition presented in the supposed interest of some of the shareholders who were friendly to the management. The Comptroller appointed a Receiver, and a demand for possession of the records and assets of the bank was made and refused. The Court maintained that it had jurisdiction in the matter, and up to this time the Comptroller has been unable to place a Receiver in charge.

FIRST NATIONAL BANK, ERIE, KANS.

The doors of the First National Bank of Erie, Kans., were closed to business June 25, 1892. The failure was due to the payment of exorbitant rates of interest on deposits, and the injudicious manner in which funds of the bank were loaned to officers and directors, who were large borrowers at a lower rate interest than the bank itself paid for rediscounts. The immediate cause of failure was the large loss on these loans which had been made without proper security. It was developed that the stock held by the officers had been purchased with borrowed money, the stock being pledged as collateral, and that their financial resources had always been very limited.

VINCENNES NATIONAL BANK, VINCENNES, IND.

On July 5, 1892, the President of the Vincennes National Bank of Vincennes, Ind., committed suicide. The bank had become insolvent. A National-bank Examiner was immediately directed to take charge of affairs and closed the bank on the morning of July 7. For some years prior to insolvency a former President and large shareholder of the bank was connected with firms engaged in grain speculations, and it appears that his successor, the late President, was connected with him in similar speculation. Correspondence was found which connected the President with heavy losses, and it would appear that the cause of failure was his connection with the board of trade speculations. Various means were resorted to in using bank funds and considerable ingenuity was exercised in covering up shortages. Successful attempts were made to deceive the National-bank Examiner. and it is stated to the Comptroller that there was a systematic misappropriation of funds, which was acquiesced in or known to some extent by other officers and employees of the bank. In addition to this, large loans were made without proper security and in violation of law. The bank at one time purchased a large block of its own stock, paying a high premium therefor. An administrator was promptly appointed for the estate of the late President, who immediately offered restitution to the fullest possible extent, it being his desire to make as full a settlement as practicable, without reserve and without litigation. A dividend amounting to 30 per cent. has been paid to creditors.

A GOOD RECORD.

Out of 4,811 National banks organized since February, 1863, 181, or about 3.76 per cent. have been placed in the hands of Receivers. This includes 9 which had previously been placed in liquidation by the shareholders, but upon their failing to pay depositors the Comptroller appointed Receivers to wind up their affairs. Of the 181 failed banks 38 have paid creditors in full, principal and interest; 6 have paid principal and a part of the interest, and 13 have paid the principal only. The affairs of 110 of the 181 banks are closed, leaving 70 in process of settlement, of which 16 are virtually closed, with the exception of pending litigation, leaving 54 receiverships in active operation. In one case the Receiver was withdrawn and the bank permitted to resume.

The total amount so far paid to creditors of insolvent National banks has been $48,052,938 upon proved claims, amounting to $70,830,866. The amount paid during the year has been $8,103,498, besides $1,320,317 paid for dividends declared prior to November 1, 1892, on claims proved since that date. Assessments amounting to $17,925,850 have been made upon shareholders of insolvent National banks under section 5,151 of the Revised Statutes of the United States. From this source the gross collections amount to $7,623,760, of which there has been received during the past year $1,002,351. Suits are pending in some cases.

The total number of National banks organized since February 25, 1863, is 4,811, of which 3,788 are now in operation, 1,023 having passed out of the system, as follows:

Passed into voluntary liquidation to wind up their affairs	671
Less number afterward placed in the hands of Receivers	9
	662
Passed into liquidation for purpose of reorganization	80
Passed into liquidation upon expiration of corporate existence*	102
Placed in hands of Receivers	181
	1,025
Less number restored to solvency and resumed business	2
Total passed out of system	1,023

*Sixty of these have been reorganized.

STATE, SAVINGS, PRIVATE BANKS, LOAN AND TRUST COMPANIES.

Conforming to that provision of law that devolves upon the Comptroller of the Currency, the duty of obtaining and publishing in his annual report to Congress statements showing the condition of banks and banking institutions incorporated under State authority, the desired information has been procured, through the courtesy of public officials, in all but nineteen States and Territories. Of the States from which no official returns have been received two are located in the Middle, eight in the Southern, and nine in the Pacific and Territorial geographical divisions. To statements received from official sources have been added like information received directly by this Bureau from incorporated and private banks and bankers, located in States in which there are no provisions of law requiring such information to be reported to the State authorities. Over 6,000 such banks and bankers have been called upon to furnish statements for this report.

The number of incorporated banks in existence on June 30, 1892, was 4,668. The number of banks, statements of whose condition have been received by this Bureau, either directly or by means of their official reports to their respective State governments, showing their condition on or about the close of the fiscal year ended June 30, last, is 4,418, or over 94 per cent of all engaged in business at that time. The increase this year over last in number of reporting banks is 664, the material increase being accounted for, partially, by the fact that in one State (Nebraska) the banking department, in its abstract, included private with incorporated banks.

Statements showing the condition of 5,579 incorporated and private banks have been received, the aggregate resources amounting to $3,751,649,173. The principal items of assets are $828,739,486 loans on real estate; $388,749,959 loans on collateral security other than real estate; $984,274,847 other loans and discounts; $154,025,395 United States bonds; $403,224,457 State, county and municipal bonds; $379,077,437 railroad, bank and other stocks and bonds; $261,278,559 due from banks and bankers; $97,070,359 real estate, etc., $197,789,384 cash and cash items. The aggregate capital employed amounts to $386,394,845; surplus and undivided profits, $323,715,176; deposits, $2,911,594,571. Of the 5,579 reports 3,191 are made by the State banks having an aggregate capital of $233,751,171; surplus and undivided profits $90,358,180; deposits, $648,513,809. The resources of 168 reporting loan and trust companies are $600,244,908; the capital $80,645,972; surplus and undivided profits $61,768,148, and deposits $411,659,996.

The condition of the savings banks of the country is of special interest owing to the enormous volume of funds in their custody, and to the further fact that these funds are largely the savings of people of limited means. Reports have been received from 1,059 savings institutions, including 416 stock savings banks, which associations do both a commercial and savings business. Of this number 643 are conducted, presumedly, in the sole interest of the depositors, and are classified as mutual savings banks. The resources of the latter class amount to $1,605,415,679, being nearly 82 per cent. of the total assets of both classes. An examination of the abstracts of the reports of these banks shows that of this class 450 are located in the Eastern, 181 in the Middle, 1 in the Southern, and 11 in the Western geographical divisions.

A noticeable feature in this connection is the approximately uniform average deposit, in these banks, in the Eastern, Middle and Western divisions, being $356.87 $352.28 and $376.58 respectively, and the average in all such banks being $356.65. It is also noteworthy that while the entire deposits in mutual institutions are savings accounts, but 82 per cent. of the deposits in stock savings banks, as shown by the reports, are of that class, and the actual percentage is undoubtedly much less, for the reason that in a number of States, notably Vermont, Iowa and California, no classification of deposits is made, although accounts of a commercial nature are taken. The average rate of interest paid or credited to depositors in mutual savings banks appears to be about 4 per cent.; similar information is not at command, in respect to stock savings associations, to enable even an estimate to be made, although it would seem that the rate is slightly in excess of that paid by the former class. Stock savings banks, with the exception of 15 in the Eastern and 15 in the Middle States, are located in the Southern, Western and Pacific States and Territories.

The aggregate resources of all Savings banks amount to $1,964,044,861, of which loans on real estate amount to $714,832,576; loans on collateral security other than real estate, $79,173,174 and other loans and discounts, $229,711,725. The following figures represent their investments in bonds, stocks, etc.: In United States bonds, $132,344,199; State County and municipal bonds, $303,190,240; in all other bonds and stocks, $246,001,306. The amount invested in real estate is $33,097,998 and the funds deposited in other banks and cash on hand, $81,576,253 and $33,208,271 respectively. Of the liabilities of these 1,059 institutions, $37,407,475 represents their capital, $182,880,724 surplus, $27,448,960 other undivided profits, $1,712,769,026 savings deposits and $45,560,592 other deposits.

Of the 5,579 reports of condition received by this Bureau 1,161 were from private banks and bankers having an aggregate capital of $34,590,227; surplus and undivided profits $11,259,164; deposits $98,091,148.

The following tables present summaries of this information:

AGGREGATE RESOURCES AND LIABILITIES OF ALL STATE BANKS, LOAN AND TRUST CONPANIES, SAVINGS AND PRIVATE BANKS, 1891-'92.

RESOURCES.	State banks.	Loan and trust companies.	Savings banks.	Private banks.	Total.

CONCLUSION.

Prior to the passage of the Free Banking Act a deep-rooted prejudice obtained against National bank as monopolies. They were believed to possess special privileges inimical to the interests of the general public. The Act of January 14, 1875, removed all restrictions and extended the powers and privileges of a National bank to any five reputable men who might choose to organize such an institution, thus removing all proper ground of criticism.

All prejudices are long-lived, but the one against National banks has possessed unusual vitality. There are many strong and excellently well-managed State banks. Some of our States have good banking laws, well enforced, with competent and effective supervision. It is undeniable, however, that, away from its immediate locality, a National bank enjoys greater prestige than a State institution. The system lends a credit and standing to its individual members. The actual advantage which National banks possess have won favor, and the prejudice, once so strong, has yielded and is fast disappearing before the commercial advantages which the system affords. The large percentage of increase in National banks formed is found in sections where the prejudice was once strongest. It is very gratifying to note this. There is no possible conflict of interests between the National system and State systems of banking. National banks do a purely commercial business. The various other banking functions are performed by State institutions, and the different Boards of direction are so interwoven as to indicate the utmost harmony between State and National institutions.

More liberal provisions of law as to circulation or a reduction of the amount of United States bonds which National banks are compelled to own, would result in largely increasing the number of banks. As it is, each year marks a steady growth in number and in public confidence in the system. They have given the country the best currency and the best commercial service it has ever had, and the good solid business sense of the country can be relied upon to protect and preserve the system.

THE CURRENCY BUREAU.

The work of the Bureau of the Currency is well systematized and is performed by a thoroughly competent and well-equipped force of employees.

This force consists of ninety employees, the number having diminished from one hundred and twenty-five in 1876 to ninety at the present time, notwithstanding the fact that the large increase in the number of Associations, under the supervision of the Bureau, has necessarily increased the amount of labor to be performed.

I have found all subordinates competent, courteous and faithful in the discharge of their duties, and it is with pleasure that I acknowledge the valuable aid rendered by those charged with the labor of preparing the statistical matter which appears in this report.

National Banks in Liquidation.

California—San Luis Obispo.—First National Bank; resolution dated August 27, 1892.

Iowa—Sioux City.—Commercial National Bank; by resolution to take effect December 1, 1892.

Kansas—Clyde.—First National Bank; resolution dated November 15, 1892.

Salina.—First National Bank; resolution dated July 5, 1892.

Missouri—Kansas City.—Continental Nat'l Bank; resolution dated November 11, 1892.

Nebraska—Dorchester.—First National Bank.

Lincoln.—State National Bank; resolution dated December 3, 1892.

South Sioux City.—First National Bank; by resolution dated October 27, 1892.

Ohio—Batesville.—First National Bank; by resolution to take effect December 1, 1892.

Sandusky.—Third National Bank; charter expired by limitation September 18, 1892.

Urbana.—Third National Bank; chartered expired by limitation October 15, 1892.

South Dakota—De Smet.—First National Bank; resolution dated Aug. 31st to take effect September 14, 1892.

Tennessee—Chattanooga.—Merchants' National Bank; resolution dated September 24, 1892.

Washington—Tacoma.—National Bank of the Republic; resolution dated October 1, 1892.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

A New State Bank.—The Yorkville Bank has been incorporated for the purpose of carrying on a discount and deposit business in this city. The capital is $100,000, divided into one hundred-dollar shares. The stockholders are Adolph Kuttroff, Emil Unger, John Marsching, Henry Diedel, Carl Hutter, Charles E. Runk, Reinhold Van Der Emde, and Henry F. Poggenburg, each fifty shares; Herman Ridder, 40 shares; Oswald Ottendorfer, 100 shares; Randolph Guggenheimer, 150 shares; Bernard Amend, 10 shares.

Bank of New York National Banking Association.—On the 6th of December last, Charles Olney was elected Cashier of this institution succeeding Ebenezer S. Mason, who became President after the death of the late Charles M. Fry. Mr. Olney had been connected with the bank for twenty-seven years, and for eleven years was Assistant Cashier. Edward T. Hulst has been made Assistant Cashier, and George P. Hall, the transfer clerk, will succeed Mr. Hulst as second Assistant Cashier.

According to a Circular recently issued, of the stocks of 31 National banks in this city, only 10 are quoted below their book value. The shares of the Chemical National, for instance, have a book value of only $2,427, yet the last sale was at $4,450, and $4,900 is now asked for the stock.

The National Park Bank has recently purchased the "New York Herald" building so that it can extend its present building to the corner of Ann Street. The new portion will be fitted up with all the modern improvements, including restaurant, and a ladies' reception room.

John Jacob Astor has been elected a Director of the National Park Bank in place of Wilson G. Hunt, recently deceased.

NEW ENGLAND STATES.

It is stated that one of the best located banks in Boston, Mass., is the Traders' National. The "Traders'" stepped quietly into a part of the splendidly appointed quarters which the Maverick National Bank had prepared at great expense, and has been quietly but enegetically building up an excellent business there.

New Hampshire.—The Assignee of the Newmarket Saving Bank, will shortly pay a dividend of 25 cents to the depositors. From present indications the depositors will receive from 75 to 80 cents on the dollar.

MIDDLE STATES.

New York—City Bank of Buffalo.—This is the title of a new State bank that will soon open for business, with a capital, fully paid, of $300,000, and a surplus, the amount of which has not yet been decided upon. The officers so far selected are: President, William C. Cornwell; Vice-President, P. H. Griffin. Mr. Cornwell has been for the past twenty years identified with the Bank of Buffalo, and for the past fifteen years has become well known to the business population of Buffalo as the Cashier of that institution. Probably there is no man in Buffalo more widely known in the banking world. In November, 1891, at the Convention of the American Bankers' Association, held in New Orleans, he read a paper on "The Currency" which attracted the attention of bankers all over the United States and Canada.

Mr. P. H. Griffin, President of the Griffin Car Wheel Works, and President of the

Niagara Bank at Black Rock, will be prominently identified with the new enterprise, and will take a leading part in its affairs as the Vice-President.

The location of the bank is one of the most important things connected with its organization. In this particular the City Bank will be especially favored. A site in the very heart of the city has been selected for it, namely, the John C. Jewett building at No. 319 Main Street. This property has been purchased by interested persons for the use of the bank. It is situated at the head of Niagara, Church and Erie Streets, opposite the Erie County Savings Bank Building; is a new building, and with a few changes will become one of the finest banking offices in the city. It is understood the price paid for the property was about $125,000.

The bank will open for business as soon as the alterations to the building can be made, vaults put in, etc., which will probably take three months.

The directors will be active business men connected with the city's industries, and in addition to the directors, it is proposed to have a stockholders' committee of about 25 business men, representing more widely than is possible in a board of directors each branch of business in Buffalo—a committee with which the directors and officers can confer as to new business, new comers to the city, credits, and similar subjects. The business community of Buffalo is to be congratulated on the establishment of a new banking institution under such competent management.

Condition of Pittsburgh banks.—The JOURNAL is indebted to R. J. Stoney, Jr., for the following compilation showing the condition of the State banks and trust companies as reported to the Superintendent of banking at the close of business November 30, 1892:

RESOURCES.		LIABILITIES.		
Cash on hand and in bank	$15,630,785	Capital		$5,011,067
Investment securities	15,040,542	Surplus fund	$2,345,461	
Loans and discounts	16,547,534	Undivided profits	1,020,694	
Real estate and fixtures	1,907,899			3,366,155
Bonds and mortgages	6,062,354	Individual deposits	$24,085,980	
Overdrafts	12,171	Special deposits	12,811,543

		Dividends unpaid		25,852
	$45,684,938			$45,684,938

As compared with the statement of September 8th, 1892, the following changes appear: surplus and undivided profits, increase $212,000; investment securities, increase $1,457,600; deposits, decrease $72,650; cash on hand, decrease $948,300; discounts and loans on mortgages, decrease $268,700.

Philadelphia.—Nelson F. Evans, formerly a Director in the Spring Garden National Bank, was convicted of conspiracy to defraud the depositors, and sentenced to the Eastern Penitentiary for five years.

George H. Earle, Jr., succeeded George W. Blabon as President of the Finance Company of Pennsylvania. The new President's recommendation that $2,000,000 of preferred stock be issued was approved by the Board of Directors.

The Philadelphia Bank Clerks' Beneficial Association has a membership of 443. The following are the officers: President, B. F. Dennisson; Vice-President, John C. Garland; Treasurer, Robert E. Wright; Recording Secretary, G. A. H. Rose; Corresponding Secretary, G. De Silver Getz.

The Bank Clerks' Athletic Association is giving a weekly series of athletic entertainments at its club room.

The statements of the National banks for December 9, as compared with the September statements, show no change in the capital stocks, the aggregate amount being $22,465,000. The aggregate surplus of the banks is $14,066,303, an increase of $255,000, made up as follows: Fourth St., $75,000; Merchants', $50,000; Penn, $50,000; Manufacturers', $10,000; Corn Exchange, $10,000; Chestnut St., $10,000; Ninth, $10,000; Second, $10,000; Northwestern, $10,000; Northern, $10,000; Tenth, $5,000; and Third, $5,000. There are now eight of the National banks that have a surplus larger than their respective capitals—the Bank of North America, Girard, Central, Northern Liberties, City, Consolidation, Eighth, and Germantown National, and three banks with a surplus equal to their capital—the Tradesmens', Sixth National, and Kensington National.

William McConnell died recently aged eighty-two years. He was Cashier of the Kensington National Bank, at the time it was robbed in 1871, by burglars in the garb of policemen.

Pennsylvania.—The State Banking Department now has supervision of 84 banks and 16 savings institutions and 73 trust companies, making a total of 173. These institutions are represented by a capital of $44,938,224.14; surplus, $19,326,743,01; undivided profits, $11,874,112.41; deposits, $200,065,235.68—a total of $275,704,315.28.

Heavy Insurance.—The executors of the late Joseph Walton, President of the Farmers' Deposit National Bank, of Pittsburgh, Pa., have received $182,292 from the New York Life Insurance Company and $100,000 from the Equitable for insurance on Mr. Walton's life.

Niagara Falls, N. Y.—A number of Buffalo and local capitalists, will soon start a new bank with $100,000 capital. The bank will be located in the Gluck building, and it is reported that Henry Durk, for many years connected with the Cataract Bank, will be the Cashier.

New Jersey.—The Receiver of the defunct People's Bank, of Sea Isle City, will soon make another payment of 10 per cent. to the depositors The bank failed on May 25, and since then two payments of 40 per cent. each have been made.

White Plains, N. Y.—A State bank with $50,000 capital is being organized here. David Cromwell, former County Treasurer of Westchester County is one of the prime movers in the enterprise, and will be President.

Pennsylvania.—According to the records of the State Bank Examiner's Department there are at present in Pennsylvania 84 State banks, 75 trust companies and 16 savings fund associations—a total of 175.

A new Bank is organizing and will soon open for business at Gloucester City, N. J. The promoters and principal stockholders are Wm. J. Thompson, August Muller and John F. Betz.

The Security Trust Company, of Rochester, N. Y., has been designated as one of the depositaries for the lawful money reserve of State banks.

Kinderhook, N. Y.—It is reported that a State bank with $50,000 capital is soon to be opened here.

SOUTHERN STATES.

San Antonio, Texas.—On November 30, 1892, that well-known banking house of Thornton, Wright & Co., retired from the banking business and transferred all accounts to T. C. Frost. Thornton, Wright & Co. succeeded the Traders' National Bank, which went into voluntary liquidation several years ago. Merging their business into the bank of T. C. Frost, makes the latter one of the largest private banking firms in Texas.

Covington, Ky.—The stockholders of the Covington City National Bank will meet on January 4, to vote on the question of voluntary liquidation of the bank and its consolidation with the First National Bank of that city. The stockholders of the latter bank will meet on the same date to vote on the reduction of the capital stock to $300,000 and then to increase it to $600,000.

Jacksonville, Fla.—The Equitable Investment Company has recently opened for business with an authorized capital of $500,000, and $150,000 paid up. It makes a specialty of buying or selling lands and investing money, and also does a general banking business, receiving deposits from five cents upwards.

Maryland.—A National bank, having also a Savings department, has been organized and will soon open in Crisfield.

Paducah, Ky.—The corporate existence of the City National Bank has been extended to January 14, 1913.

A bank with $50,000 capital will be opened about April 1, in Erwin, Tenn.

Sheffield, Ala.—Philadelphia capitalists think of establishing a bank here.

Albany, Ga.—Another bank is organizing, and will open in the near future.

Alabama.—The well-known private banking firm of Isbell & Co., at Talladega, have reorganized as the Isbell National Bank, with $50,000 capital and $50,000 surplus. The officers are: W. P. Armstrong, President; R. L. Ivey, Cashier; W. H. Boynton, Assistant Cashier. The firm has been established since 1850, and has done a large and successful business.

WESTERN STATES.

Security Bank of Minnesota.—On Christmas last each employee of this bank (35 in all) received a card of which the following is a copy:

The Security Bank of Minnesota, in token of its appreciation of your good and faithful work during the past year, herewith makes you a sharer in its prosperity, and greets you with all good wishes of the season and for the future.

Accompanying this card was a check for an extra month's salary, a custom which has been observed by this bank for the past three years. The experience of the officers is that sharing the profits in this way causes no heartburning, but *does* contribute to a great extent to the general good-will of all toward the bank and to the cheerfulness with which the hard and constant work is undertaken. It takes a considerable sum from the annual profits to carry out this plan but every officer of the bank approves of it and considers that they receive it all back in the improved *esprit de corps* among the employees.

According to a statement at the close of business December 9, 1892, the Security Bank had surplus and net undivided profits of $564,627, deposits of $6,625,227 and total liabilities of $8,394,298.

Union National Bank of Chicago, Ill.—In a communication signed by Mr. George Wilson of Lexington Mo., published in a recent issue of the JOURNAL, it was stated in referring to failures of National banks with the word "Union" in the title that "in the panic of 1873 the first two banks that went down were the Union National of St. Louis and the Union National of Chicago." The fact is, that W. F. Coolbaugh who was then President of the Union National of Chicago, deemed it wise, during the height of the panic of that year, to suspend for about ten days, in view of the disturbed condition of public affairs. The bank never failed and any such statement is entirely erroneous. The bank justly ranks to-day as one of the strongest and best managed institutions in the Country.

Chicago—Chemical National Bank.—C. E. Braden, former Cashier of the Metropolitan Bank of Minneapolis, Minn., has been elected Cashier of the Chemical National Bank of Chicago, and will assume his active duties in that institution on January 1, 1893. Mr. Braden began his career as a banker in a subordinate position in the old Hennepin County Savings Bank of Minneapolis, remaining there three years. Next he was teller of the Northwestern National Bank for four years; then Assistant Cashier of the Nicollet National for five years, and since he has been Cashier and Manager of the Metropolitan Bank, which he organized about three and one-half years ago. In every one of these places he has been a success.

Minneapolis, Minnesota.—The Flour City National Bank has recently declared its regular semi-annual dividend of three per cent., and carried $5,000 to surplus fund, which now amounts to $130,000.

PACIFIC SLOPE.

Arizona National Bank of Tucson.—It was incorrectly stated recently in several Western newspapers, that R. E. Graves, who has been convicted of irregularities in connection with the failure of the Commercial National Bank of Dubuque, Iowa, was the head of the Arizona National bank. The error probably grew out of a confusion of names; Mr. Graves' son, E. W. Graves, being a Director and Assistant Cashier of the Consolidated National Bank of Tuscon, and with which R. E. Graves was at one time connected.

Tacoma, Washington.—The Scandinavian-American Bank has recently opened for business with a capital of $100,000 and the following officers: President, A. E. Johnson; Vice-President, E. Steinbach; Cashier, H. E. Knatvold; Assistant Cashier, Julius O. Searle.

San Francisco, Cal.—The Security Savings Bank has declared a dividend of 5 per cent. per annum on term deposits and 4 1-6 per cent. per annum on ordinary deposits, payable January 3d.

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

PLAN FOR A SAFE AND ELASTIC CURRENCY SYSTEM.

Editor Rhodes' Journal of Banking:

SIR:—Assuming that the result of the election, to a certain extent, is due to the fact that the country is dissatisfied with the present currency system, is it not a good time for bankers throughout the United States to advance and study suggestions as to the best method for the issuance of a currency which would be absolutely safe and equal to a Government note from one end of the country to the other, in every State of the Union, and in our intercourse with foreign countries? It is fair to assume that if the people are dissatisfied with the present currency system, they are practically advocating a larger circulation of currency than at present, and one which will be elastic, or can be expanded or contracted to adapt itself to the needs of communities.

In my opinion, to bring about the desired result, we must first bear in mind the main feature of such a currency to the end that it will be a circulating medium at par everywhere. This can only be effected by having it practically underwritten by the United States Government, or, in other words, having it secured by Government bonds. A currency not secured is no currency at all (except it be issued by the Government), and the floating of such a currency is an outrage to those who by any reason have to take it, and can simply end in a depreciated value; even if secured, unless by Government bonds, depreciation will follow sooner or later, for I doubt whether a circulation secured by even State bonds would pass as a par currency all over the United States. Again, a currency issued by a bank should be absolutely secured by the collateral deposited as security, and such currency should not in any way be a prior claim on the assets of the bank if it becomes insolvent. In fact, the security should be so good that no recourse should ever be necessary on the assets of an insolvent bank to meet its circulation, other than on the security itself. I do not believe, either, that any tax should be levied on the circulation of banks for the purpose of liquidating the notes of insolvent banks; the notes and the security thereto should rest on their own bottom.

In thinking over the matter of a more extended circulation of currency, it seems to me that if Congress would pass a law practically covering the following points, that it would meet the necessities of a more elastic currency than at present. Although this plan is in the interest of National banks, I am sure my brothers in the State banking system will give the subject sufficient thought to judge the matter correctly, knowing that if I am sound in my ideas, that they can take advantage of it by joining the National system.

First—Repeal all existing laws, as to the compulsory deposit of bonds by National banks, the compulsory deposit of the five per cent. redemption fund, the arbritrary tax of one per cent on circulation and the entire expenses to National banks for their currency except the cost of the plate used in the engraving of the notes.

Second—Provide for an issue of Government bonds at a rate of interest which would warrant National banks holding them in reserve when not neded for the purposes of circulation. As banks carry more or less surplus money in their vaults at all times, and more or less money in reserve during flush times on deposit or otherwise, at two per cent., I think that a two per cent. bond would serve the purpose.

The issue of bonds to be limited to an amount sufficient to cover an increased circulation adequate to the needs of the country during the most critical times, and to be issued to National banks only.

The Government to become the immediate purchaser of all bonds owned by insolvent banks and act as a medium of sale between National banks if called upon; or, perhaps, become the purchaser of bonds offered for sale to a certain limit, providing that all purchases shall be at par and accrued interest.

Third—Provide that a National bank can issue its circulating notes, on these bonds as security, to the par value thereof. That it can reduce its circulation at any time it sees fit, by returning its notes for cancellation or depositing cash with the Government to meet such reduction, receiving from the Government in return a surrender of an equal amount of bonds, providing that all transactions shall be in multiples of $5,000.00; the same privilege to be given it to reissue by making subsequent deposits of bonds.

Fourth—Provide a rising scale of tax on circulation, a proportion of such tax to be applied to the Government expenses (by reason of the circulation) and the express charges covering the cost of sending or returning the bonds or currency, in the first place or at any subsequent time, to Washington or the bank; the balance of the tax to be held by the Government as a special funp to take the place of the present redemption fund, for temporary redemption or renewal of bank notes, this fund to be built up until it shall be sufficient for the purpose, after which time the balance of the tax to be credited by the Government to the interest account on the bonds.

Suppose this rising scale of tax be as follows:

One-half of 1 per cent. on the first $25,000;

1 per cent. on the second $25,000;

1½ per cent. on the third $25,000;

2 per cent. on the fourth $25,000

and all amounts over; the tax to be paid on the circulation outstanding less any amount retired by the bank, that is, the tax to cease the day any part of the circulation is retired or payment of same provided for.

On this plan, presuming the bond will bear 2 per cent., there will be a decreasing profit on circulation up to $75,000, while on all amounts over that there would be no profit, except in the fact that a bank could keep its surplus reserve out at 2 per cent. in Government bonds, which at any moment could become the security for a currency without having to dispose of them. This circulation being retired on an easy money market in multiples of $5,000, would immediately put the bank on an income of 2 per cent. on its surplus.

Fifth—Provide that bonds (when held by a bank in its vault, or the receipt of the Treasurer of the United States that he holds certain bonds for such bank, not hypothecated in any way and deliverable to such bank or its order on surrender of the receipt) together with all National bank notes, except a bank's own notes, shall be applicable as legal reserve. To this end, any National bank at its option shall have the right to deposit with the Treasurer of the United States its surplus bonds, taking his receipt therefor, which receipt shall be transferable to any other National bank by endorsement, but shall be surrendered if circulation is taken out thereon, or such bonds returned to the owner.

To further facilitate a bank taking out its circulation without delay, it shall have the power to deliver the bonds, or the receipt properly endorsed, to the nearest Assistant Treasurer of the United States who shall immediately telegraph the Treasurer that this has been done, and request the latter to ship to the bank the circulation it would be entitled to on such bonds or receipt, at the same time forwarding to the Treasurer the bonds or receipt.

The plan as outlined would mean an immediate expansion in the currency without an immediate increase in National bank notes, for it would let loose a large proportion of the enormous hoards of money, kept idle, in vaults of National banks, particularly in reserve cities, all over the country, as they would have the privilege to invest that idle reserve in interest-bearing bonds, counting such bonds as legal reserve, and knowing that at short notice such bonds could become a basis for their currency to meet unexpected demands, or could be disposed of for cash in case of extreme emergency by calling on some other National bank to take them. This plan would also do away with a great part of the enormous risk of large sums of money lying idle in the vaults of banks, as the bonds or receipt would not be negotiable until properly assigned. Such a currency would also be elastic and would adapt itself to the requirements of different localities.

Provision should also be made to guard against the money paid for the bonds being tied up by the Government, which of course would have a contracting effect. This could be arranged by purchases of outstanding bonds and the retiremnt of the extended 2 per cent.

It seems to me, unless my power of reasoning is entirely wrong, that the foregoing plan would give the country a perfect and ample currency, although as two heads are better than one, valuable suggestions from other bankers, if embodied in it, would bring the plan to perfection and warrant asking Congress to pass a bill accordingly. WM. B. BANKS.

WEST SUPERIOR, Wis., December 22, 1892.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Radford, Va.—The Finance Committee of the Common Council offer for sale $100,000 6 per cent. gold bonds, to run for 30 years, interest payable January and July in New York city.

Waterbury, Conn.—This city will shortly borrow $20,000.

Boston, Mass., is about to bring out an issue of $2,500,000 30-year 4 per cent. certificates of indebtedness. the proceeds to be applied to the extension of the water supply of the city.

Montgomery, Ala.—The committee on finance has recommended that the City Council petition the General Assembly for authority to issue $250,000 of bonds for sewers, schools, paving, etc.

Sumter, S. C.—A bill authorizing the city to issue bonds for erecting a City Hall has been introduced in the State Legislature.

Princess Anne, Md.—The county commissioners of Somerset county, under the authority of an Act of the last legislature, have determined to issue 100 bonds, each for the sum of $500 and payable in forty years and bearing interest at the rate of 4 per cent. per annum, payable semi-annually, and bearing date on the 1st day of April, 1893. The purpose of the loan is to improve the public roads.

San Antonio, Tex.—The stockholders of the San Antonio & Aransas Pass Railway held a called meeting on December 15, and the consolidated 4 per cent. bonds of the $17,100,000 were authorized. This will cover all the indebtedness of the company in former bonds. The proposition to increase the capital stock was rejected. A large majority—$4,100,000—of the stock was represented. After this meeting the directors of the road had a meeting and confirmed the action of the stockholders.

Atlanta, Ga.—The City Comptroller announces that on January 1, the city will issue $182,000 of water bonds of the denomination of $1,000 each, to mature thirty years after date, bearing interest at 4 per cent., principal and interest payable in gold. The total bonded indebtedness of Atlanta is $2,776,000, and there are no other debts owed by the city. The assessed value of property in 1892 was $50,907,950 and actual value $100,000,000. The population is 100,000.

Baltimore, Md.—The Central Railway Co. has made application to the Baltimore Stock Exchange to list $700,000 of 5 per cent. consolidated mortgage bonds.

Washington, D. C.—The Washington & Georgetown Railroad Co. will issue $500,000 of additional bonds to complete the work of cabling its lines. This will make a total issue of $3,000,000 of bonds for that purpose.

El Paso, Tex.—A special election will be held January 17, to vote on the question of issuing $205,000 bonds.

CORPORATIONS SEEKING CAPITAL.

Goldsboro, N. C.—The North State Lumber Co. has executed a mortgage to the Baltimore Trust & Guarantee Co. to secure an issue of $100,000 of bonds.

Huntsville, Ala.—The West Huntsville Cotton Mills Co. is offering for sale at the Farmers and Merchants' National Bank $50,000 of its first mortgage gold bonds, bearing 6 per cent. interest and payable semi-annually.

Wheeling, W. Va.—The Wheeling Iron & Steel Co., has filed a deed of trust to secure an issuance of $600,000 of bonds.

Chicago, Ill.—The Calumet Electric Street Railway Company, W. V. Jacobs, President, has executed a trust deed to the Title Guarantee and Trust Company to secure an issue of 6 per cent. semi-annual gold 20-year loan of $1,000,000, to be expended in extensions, betterments, etc.

Birmingham, Ala.—The stockholders of the Sloss Iron & Steel Co. have voted to fund the consolidated income mortgage bonds at the rate of 4½ per cent.; to authorize the issue of negotiable bonds not exceeding $2,000,000 for that purpose, and to secure the same by a mortgage on the property. It was also voted to issue $300,000 of stock heretofore ordered to be cancelled.

SECURITIES SOLD.

Lowell, Mass.—The 4 per cent. semi-annual 10-year loan to amount of $100,000, went to the Lowell Institution for Savings at a premium of $1,000, and the 4 per cent. loan for City Hall and Crematory to amount of $73,000 was bought in by the Sinking Fund Commissioners.

South Omaha, Neb.—Spitzer & Co., Toledo, O., were the purchasers of the 7 per cent grading and paving bonds to amount of $26,350, paying a premium of $300.

Jersey City, N. J.—F. Kloeckner, of New York city, was the highest bidder for the 5 per cent. semi-annual 30-year water bonds to amount of $200,000, paying $104.54.

Indianapolis, Ind.—The State Bank of Indiana secured the first instalment of $50,000 of the $125,000 loan recently authorized at par at a rate of interest of 3 9-10.

Mount Vernon, N. Y.—Coffin & Stanton, of New York city, were purchasers of the 5 per cent. Tax Relief bonds to amount of $9,000, and the 5 per cent. Assessment bonds to amount of $7,500.

Whitestone, N. Y.—D. A. Moran & Co. of New York city, purchased the 4½ per cent. 30-year water bonds to amount of $22,000, paying a premium for the whole of $118.64. Net bonded debt, $75,000.00. Assessed valuation, $850,000.00. Tax rate per $1,000, $5.00. Population 1890, 5,400.

Chillicothe, Ohio.—The 4 per cent. semi-annual refunding bonds to amount of $100,000 were sold as follows: $75,000 to the Baltimore and Ohio Southwestern Railroad Co.—par and accrued interest; $25,000 to William Poland and other local investors—par and accrued interest.

Phoenix, Ariz.—The Territorial Treasurer has sold to Chicago parties the 5 per cent. semi-annual 20-50-year Territorial refunding bonds to amount of $1,500,000. The price is not stated.

Wyoming, Ohio.—The total of the special assessment 6 per cent. sidewalk bonds reported for sale to the amount of $9,726.60 were awarded one-half to John R. Sayler at 104, and the balance to the Cincinnati Savings Society at 103.61.

Port Huron, Mich.—Farson, Leach & Co., of Chicago, were the highest bidders for the 5 per cent. semi-annual school bonds to amount of $30,000.

Portland, Oreg.—E. H. Rollins & Sons were the successful bidders for the last issue of the Port of Portland bonds to amount of $50,000, paying a larger premium than was received for any of the previous issues.

ITEMS.

Oswego, N. Y.—The Board of Supervisors of Oswego County have passed resolutions addressed to the Joint Committee of the Legislature of New York, now investigating the operations of the State Tax laws, urging the committee to report in favor of raising all State taxes by levies on the bonded indebtedness of corporations and on inheritances. There is a general agitation in this direction outside New York, Kings and Erie Counties.

Covington, Ky.—There is a bill pending in the Kentucky Legislature requiring consumers of water in cities of the first, second, third, fourth and fifth classes to use meters, to be supplied at the expense of the cities. The City Council of Covington has passed resolutions in opposition, stating that it would cost the city $185,000, which "it could not stand at present," and which would bankrupt such places as Hilldale, Ludlow and West Covington, suburbs of this city.

Alma, Kans.—In 1889 this city issued General Improvement bonds to the amount of $25,000, which were sold to Messrs. Scott & Brier, Topeka, and by them to the Guaranty Savings Bank of Manchester, N. H., for $26,750. No payment of interest was ever made, and the issue was repudiated on the ground that they were intended to be used by Mayor John F. Limerick, of Alma, to develop a supposed anthracite coal mine near the town; but that Limerick had spent the money for other purposes and had never accounted to the city. Judge Riner, of the United States Circuit Court, has instructed a jury that the city made no defense to the suit of the Savings Bank, and directed it to bring in a verdict for the full amount of $35,000 claimed by the bank as due it.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4822—Citizens' National Bank, Miamisburg, Ohio. Capital, $100,000.
4823—National Bank of Corry, Corry, Pennsylvania. Capital, $50,000.
4824—First National Bank, Sanborn, Iowa. Capital, $50,000.
4825—First National Bank, Gas City, Indiana. Capital, $50,000.
4826—First National Bank, Monticello, Illinois. Capital, $100,000.
4827—Idaho National Bank, Pocatello, Idaho. Capital, $50,000.
4828—National Bank of Davis, Davis, West Virginia. Capital, $50,000.
4829—First National Bank, Bement, Illinois. Capital, $50,000.
4830—First National Bank, El Reno, Oklahoma Territory. Capital, $50,000.
4831—First National Bank, Appleton, Minnesota. Capital, $50,000.
4832—Philipsburg National Bank, Philipsburg, Pennsylvania. Capital, $50,000.

NEW BANKS, BANKERS, ETC.

ALABAMA.

CAMDEN—Wilcox County Bank: capital $100,000. Will open about April 1.
TALLADEGA—Isbell National Bank; capital, $50,000; surplus, $50,000; President, W. P. Armstrong; Cashier, R. L. Ivey; Assistant Cashier, W. H. Boynton.

ARKANSAS.

FAYETTEVILLE—McIlroy Banking Company; President, W. R. McIlroy; Vice-President, W. H. Whitlow; Cashier & Treasurer, J. L. Dickson.
HOPE—Bank of Hope; capital stock, $100,000; President, J. T. West; Vice-President, W. Y. Foster; Cashier, S. R. Oglesby.

CALIFORNIA.

OAKLAND—Farmers & Merchants' Savings Bank; capital, $500,000.
SAN LUIS OBISPO—County Bank; capital, $150,000; President, J. P. Andrews; Cashier, R. E. Jack.
SUSANVILLE—Bank of Lassen County; capital, $50,000; President, C. G. Linington; Vice-President, Fred Hines; Cashier, M. H. Linington.

COLORADO.

DENVER—Miners Loan, Trust & Safe Deposit Company; capital, $250,000.

FLORIDA.

JACKSONVILLE—Equitable Investment Company; capital $150,000; President, E. W. Agnew; Vice-President, C. D. Mills; Secretary and Treasurer, L. R. Benjamin.
ORLANDO—Fruit Growers' Bank; capital $50,000; Manager, Cecil G. Butt.
PENSACOLA—Citizens' National Bank; capital $100,000; President, L. Hilton Green; Vice-President, William Fisher.
UMATILLA—John Clark & Co., bankers.

GEORGIA.

ATLANTA—Fidelity Banking and Trust Company; President, Samuel Young; Vice-President, M. C. Kiser; Cashier, Charles Runnette; capital $200,000.
AUGUSTA—Georgia Railroad Bank: capital, $200,000; President, Chas. H. Phinizy; Vice-President, Hamilton H. Hickman; Cashier, Charles G. Goodrich.
BUFORD—Bank of Buford; President, Wm. S. Witham; Cashier, John F. Espy.
MACON—Arnold & Stewart, bankers; capital $50,000.

IDAHO.

POCATELLO—Idaho National Bank; capital $50,000; President, John M. Bennett; Cashier, Arthur L. Kempland.

ILLINOIS.

BEMENT—First National Bank; capital, $50,000; President, William M. Camp; Cashier, Harry S. Bower.
FARM RIDGE—Farmers' State Bank; capital, $30,000; President, A. M. Mills; Cashier, B. V. Gordon.
MONTICELLO—First National Bank; capital, $100,000; President, William Noecker; Vice-President, John N. Dighton; Cashier, O. W. Moore.
ROGERS PARK—Security Bank; capital, $25,000; President, Wallis K. Cook.

INDIANA.

BLOOMINGTON—Monroe County State Bank; capital, $25,000; President, Hiram E. Wells; Cashier, S. C. Dodds.

INDIANA, Continued.

GAS CITY—First National Bank; capital, $50,000; President, M. B. Wilson; Cashier, C. E. Pritchard.

WISCONSIN.

MERRILL—Geo. Haywood & Sons, bankers; reported out of business.
MILWAUKEE—Houghton Bros. & Co., bankers; succeeded by Central National Bank.

Important for State Banks.—An important bill has just been introduced into our Legislature pending the repeal of the 10 per cent. tax on State banks if Congress should repeal this law. Georgia will lose no time in taking advantage of the privileges if this repeal is made. While the bill is not in all respects as it should be, it would no doubt be made perfect by the Banking Committee and our honorable body of legislators. This is a step in the right direction, and on which all eyes in financial circles are turned, not only in the State, but all over the South. With the necessary amendments this will give the Georgia banks enlarged facilities in a safely-guarded elastic and circulating medium. The bill was introduced by Mr. Calvin, of Richmond County, and is entitled, "An Act to authorize and provide for the preparation and issuance to the banks and banking associations of this State of circulating notes; to fully protect the same, and for other purposes."—*Financial Index, Atlanta, Ga.*

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, January 3, 1893.

AT THE OPENING OF THE YEAR 1893 the prevailing sentiment throughout the country is hopeful, although it is well to remember that all the pleasing anticipations that were entertained and treasured one year ago have not been realized. As a rule, the people are contented and the financial conditions are healthy. The general business of the country the past year was larger in volume than ever before, and yet prices of the leading commodities have been unusually low. Notwithstanding the exports of wheat have been large (although not as great as during the previous year or as expected) the price of that grain never has ruled so low, in this country and Europe as well, and the supply on hand at the close of the year is reported in excess of anything ever before known. The exports of all kinds of merchandise in 1892 were never before equalled, and the imports exceeded the imports. In most respects it was the banner year. Bank clearances were the largest ever recorded, and the same is true of railroad tonnage. When the complete financial statistics of the past year have been written up, they will not only create surprise, but furnish abundant food for reflection as well as a basis for confidence and credit throughout the entire year 1893. With general business active and prospects of a clearer financial sky, there is apparently no reason why the coming year should not be productive of good results.

The total amount of gold exported during the past year was about $75,000,000 and the imports about $15,000,000. Silver sold at the lowest price ever known (82⅛ cents per ounce), notwithstanding the Treasury bought 54 million ounces. The year opened with an easy money market, call money ranging from 2 to 5 per cent., soon dropping to 1½ and 2 per cent., at which quotation it stood (with the exception of a slight flurry about August 1) until the first week in September. During the last three months the average was higher, at times touching 10 per cent. Should Congress repeal the Sherman Act of 1890, which, together with the large gold exports, has had much to do with unsettling values, it must have the effect of inspiring greater confidence in future financial stability. The immediate future may be influenced somewhat by the course of sterling exchange, as well as the action of Congress regarding the repeal of the silver-purchase bill; but as the year advances, barring unforeseen contingencies, a steady and sustained upward movement in values should be witnessed as the legitimate result of the forces which are now active.

While there is, in some quarters, a disposition to exaggerate the disturbance and anxiety in financial circles caused by the late heavy gold shipments, it is perhaps well to look at the matter squarely in the light of increased purchases of silver and the continued issue of depreciated certificates. While there have been no new developments to justify in the slightest degree the unsettled feeling indicated, there can be no doubt it is the inevitable effect of the cause referred to. Every day that the operations of the silver law continue, the difficulties of the currency situation increase; and every shipment of gold only serves to call public attention to the anomalous condition of the currency and causes additional distrust. Just at the present time, with somewhat lower rates for exchange and no gold withdrawals of any amount, the situation is more encouraging.

But does any one believe this condition of things will continue long? The present calm is simply the lull before the storm that is likely to break at any time. It simply means that the urgent need for the metal has been temporarily satisfied. A glance at the rates of sterling exchange for the past four years furnishes food for reflection and figures that it will do well to heed.

For instance: At the end of 1889 the nominal rate for exchange was $4.80 for long; $4.84 for short. At the end of 1890, $4.80½ for long; $4.84½ for short. At the end of 1891, $4.83 for long; $4.85½ for short. On December 30, 1892, the rates were $4.86½ for long; $4.88½ for short. As an object lesson, showing the declining value of our currency each year, nothing could be more significant. There is but one remedy, to repeal the law that is responsible for the mischief. There is not much doubt that influences in favor of such action are gathering strength with each new development in the financial situation at home and abroad.

Monetary affairs in Europe have been somewhat disturbed by the troubles in France, culminating in the formation of a new Ministry. Although there was great excitement and a panic on the Paris Bourse, and the overthrow of the Republic predicted, discount rates, outside of Paris, were not materially affected. At the close of the month the situation had quieted down somewhat.

The Monetary Conference in Brussels has adjourned until May next. What it did and did not do is referred to in another part of the JOURNAL.

It is announced from Vienna that all the 5 per cent. stock of the Hungarian State debt will be converted about the middle of January.

A sensation was caused in Hamburg by the suspension of a firm of stock brokers, with liabilities of 7,000,000 marks.

In London, the open market rate for 60 to 90 day bills is 1½ to 1⅝ per cent., as against 2⅜ per cent at the end of November and 2½ per cent. in October. In Paris, the open market rate is 2½ per cent. as against 2¼ in November; in Berlin, 3½ per cent., and Frankfort 3¼ per cent., as against 2¼ and 2⅜ respectively at the end of November. During the last week in December the Bank of England lost £171,000 in bullion, holding at the close £24,897,928. The Bank of France gained £169,000 in gold and the Bank of Germany has lost £382,000 of that metal since last return.

The total amount of specie exported from New York city to all points during the month of December was $14,640,000, as compared with $2,271,000 in November, and making a total for the year 1892 of $92,049,000. The imports for the month were $901,000, as against $1,021,000 in November, and a total for the year 1892 of $15,330,000.

The United States Treasury statement for December shows an increase in the total public debt for the month of $518,284. There was a decrease of $718,146 in the non-interest bearing debt and an increase of $100 in the interest-bearing debt, but on the other hand a decrease of $1,236,330 in the surplus or net cash balance. The total cash in the Treasury is $769,780,988, of which $238,359,801 is in gold coin and bullion; $462,369,518 in standard dollars, silver bullion and subsidiary coin; $52,989,744 in gold and silver certificates, legal tenders and National bank notes and $16,061,919 in National bank depositaries and disbursing officers' hands. The amount at present in National bank depositaries is $11,108,392. The bonded debt on December 31, 1892 was $585,033,080; the total public debt $965,212,799. Net available cash balance in the Treasury, including deposits in National banks, is $29,092,588.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $103,612 retired circulation of National gold banks—was on December 31, $174,800,812. This shows an increase for the month of December of $789,984 as compared with an increase of $1,183,634 in November, and an increase in total circulation since December 31, 1891 of $1,336,989. During the month of December there was issued to new banks $191,260, and to old banks increasing circulation $1,470,200. There has been surrendered and destroyed since November, $871,476. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $23,774,161, showing a decrease in that class of circulation during the month of $726,429.

MINT COINAGE.—The coinage executed at the United States Mints during the month of December was as follows: Double eagles, eagles and half eagles, 200,616; standard dollars, half dollars, quarter dollars, dimes, 3,259,614; five cents and one cents, 5,762,700, or a total of 9,232,930 pieces, valued at $4,486,484. The large increase over last month is due in part to the coinage of the Columbian half-dollar.

The following table shows the amount of gold and silver coins and certificates, United States notes and National bank notes in circulation Jan. 1, 1893.

	General Stock, Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold coin	$569,633,412	$156,662,452	$412,970,960
Standard silver dollars	417,876,985	355,054,049	62,822,936
Subsidiary silver	77,898,748	10,571,481	67,327,267
Gold certificates	141,347,889	24,254,750	117,093,139
Silver certificates	325,783,504	3,748,493	322,035,011
United States notes	479,016,639	18,943,443	460,073,196
National bank notes	174,404,424	6,043,059	168,361,365
Totals	$2,185,961,601	$575,277,727	$1,610,683,874

Population of the United States, January 1, 1893, estimated at 66,230,000; circulation per capita, $24.82.

FOREIGN EXCHANGE.—During the early part of the month the sterling exchange market was quiet but firm at about previous rates, the supply being light and demand sufficient to absorb all offerings. The latter part of the month the market became more active at slightly lower rates, closing at the end of December dull with light inquiry and rates below the gold-exporting point. For the week ending December 3, the market for sterling exchange was strong under good demand and moderate supply of commercial bills offering. Posted rates at the close were $4.85½ for long; $4.88 for demand and $4.88¼ for cables. During the week ending December 10, the sterling exchange market was a trifle easier at the opening, but afterward advanced on the small supply of bankers' and commercial bills offering. Posted rates at the close were $4.85¾ for long; $4 87¾ for short and $4.88 for cables. For the week ending December 17, the market was strong for Continental bills, closing with posted rates at $4.86 for long; $4.88 for demand, and $4.88¼ for cables. During the week ending December 24 the market was weaker, on account of the higher local rates for money and a larger supply of sterling loan bills, together with purchases of stocks for London account. At the close posted rates were $4 85¾ for long; $4.87¾ for short, and $4.88¼ for cables. During the week ending December 31 the market was dull and weaker on account of the holiday season causing an absence of immediate demand. Posted rates at the close were $4.85½ for long, $4.87½ for demand and $4.87¾ for cables. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, $4.86@$4.86½; Bankers' sterling, sight, nominal, $4.88½; Bankers' sterling, 60 days, actual, $4.85½@$4.85¾; Bankers' sterling, sight, actual, $4.87½@$4.87¾; Cable transfers, $4.87¾@$4 88; Prime commercial sterling, long, $4.85@$4.85¼; Documentary sterling, 60 days, $4.84½$4.84¾; Paris cable transfers, $5.15 @$5.14⅜; Paris bankers', 60 days, $5.17½@$5 16⅞; Paris bankers', sight, $5 15⅝@$5.15; Paris commercial, 60 days, $5.18¾@$5.18⅛; Paris commercial, sight, $5.16⅞@$5.16¼; Antwerp commercial, 60 days, $5.19⅜@ $5.18¾; Brussels bankers', sight, $5.16¼@$5.15⅝; Swiss bankers', 60 days, $5.18½@$5.17½; Swiss bankers', sight, $5 15@$5 14⅜; Reichmarks (4), bankers', 60 days, 95¼@95⅜; Reichmarks (4), bankers', sight, 95⅞@96; Reichmarks (4), commercial, 60 days, 95@95⅛; Reichmarks (4), sight, 95½@ 95⅝; Guilders, bankers', 60 days, 40 3 16@40¼; Guilders, bankers', sight, 40⅜@40 7-16; Guilders, commercial, 60 days, 40 1-16@40⅛; Guilders, commercial, sight, 40¼@40 5-16; Kronors, bankers', 60 days, 26 13-16@26⅞; Kronors, bankers', sight, 27 1-16@27⅛; Lisbon, sight, per milreis, 88½@89.

HOME MONEY MARKET.—The month of December has been more erratic, financially speaking, and witnessed a wider range in rates for call loans than for many months past. The predictions of higher rates were fully verified, and the money-lenders have made the most of it. The principal factor in the market was the unexpectedly large gold exports, added to the senseless rumor that the Secretary of the Treasury was about to offer one hundred millions of bonds in order to replenish the gold surplus which was being so rapidly reduced. As a consequence, the rate for call loans was forced up to 40 per cent. on the 20th; but it was a short-lived flurry; at the close of the month the market was easier, with a tendency toward lower rates. As stated, the range was from 3 to 40 per cent., the average being about 5½ per cent. From the end of November to the end of December the reserve of the banks has decreased about $2,000,000. The statement of the associated banks for the last week in December shows an increase in reserve of $663,000. The banks now hold a total reserve of $117,986,900, which is $6,839,000 above legal requirements. At the corresponding date last year the banks showed a surplus reserve of $17,000,000 as against $1,756,000 in 1890 and $7,833,000 in 1889. There is a fair demand for time-money, but at lower rates than lenders are inclined to accept. There is, however, a good supply from other sources than the banks and trust companies. The rates for all periods are at 6 per cent. for good Stock Exchange collateral, but on good, dividend-paying properties loans are made at 5½ per cent. for thirty to sixty days Commercial paper is dull and but little offering, but a good supply is expected after the beginning of the year and business revives, as the lines have been materially reduced. Rates at the close are at 6 per cent. for the best names, with some business at 7 per cent. for paper not so well known. For the week ending December 3, the open market rate for call loans on stock and bond collaterals ranged from 4 to 6 per cent., with 4½ per cent. as the average. Prime commercial paper quoted at 5 to 6 per cent. For the week ending December 10, the open market rate for call loans on prime collaterals ranged from 4 to 5½ per cent., the average being 4¾ per cent. Commercial paper 5 to 5½ per cent. During the week ending December 17, the open market rate for call loans on stock and bond collaterals ranged from 4 to 25 per cent., the average being 7 per cent. Commercial paper unchanged at 5 to 5½ per cent. For the week ending December 24, the open market rate for call loans on stock and bond collaterals ranged from 3 to 40 per cent., the average being 10 per cent. Commercial paper quoted at 6 to 7 per cent. For the week ending December 31, the open market rate for call loans on prime collaterals ranged from 4 to 10 per cent., the average being 5½ per cent. Prime commercial paper quoted at 6 per cent.

NEW YORK CITY BANKS.—The following reflects the condition of the local banks each week during the month of December: For the week ending December 3, the New York city banks received gold and currency from the interior amounting to $5,695,000 and shipped $3,911,000 During the same time by Sub-Treasury operations they lost $1,900 000, making a net loss for the week of $116,000. During the week ending December 10, the local banks received gold and currency from the interior amounting to $5,641,000 and shipped $3,210,000. By Sub-Treasury operations for the same time they lost $1,900,000, making a net gain for the week of $531,000. During the week ending December 17, the New York city banks received in gold and currency from the interior $5,707,000 and shipped $2,611,000. By Sub-Treasury operations during the same time they lost $3,150,000, making a net loss for the week of $54,000. For the week ending December 24, the New York city banks received gold and currency from the interior amounting to $4,569,000 and shipped $3,605,000. During the same time by Sub-Treasury operations they lost $2,200,000, making a net loss for the week of $1,236 000. During the week ending December 31, the New York city banks received gold and currency from the interior amounting to $4,966 000 and shipped $3,338,000. By Sub-Treasury operations for the same time they lost $1,100,000, making a net gain of $558,000. From November 26 to December 31, the New York city banks lost gold and currency amounting to $317,000 as compared with a gain of $1,787,000 in November and a loss of $9,874,000 in October.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surp. Res.*	
Dec. 3	$444,628,000	$79,100,000	$41,109,000	$454,862,000	$5,617,000	$233,000	dec.
" 10..	442,561,000	77,715,000	40,557,000	451,047,000	5,536,000	984,000	dec.

	3,769,124		1,350,639		674,440		279.348

leaving 1,030,862 shares to represent the dealings in the remaining 162 stocks. In addition 394 different issues of railroad bonds were dealt in, to the amount of $32,673,500 also $212,000 State bonds and $147,600 Government bonds. (Compared with December, 1891, there is an increase of 660,104 shares in stocks; a decrease of $25,028,300 in railroad bonds; a derease of $442,000 in State bonds; an increase of $63,600 in Government bonds, and a decrease of 326,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $29,000; stocks, 1,206,414 shares, of which 827,462 were American Sugar Refiners' common stock and 20,580 preferred; mining stocks, 23,590 shares. American Cotton Oil Certificates, 54,923 shares of common and 7,817 shares of preferred; Pipe Line Certificates, 45,000 barrels. Of National Lead common 296,972 shares, preferred 17,698 shares; of silver bullion certificates, 1,875,000 ounces, extremes being 85¾ and 82¼, closing at 83. The listed stocks show an increase of 2,090,817 shares as compared with the amount sold in November. Transactions in railroad bonds show an increase of $5,288,250 during the same period, a decrease of $10,800 in State bonds, and a decrease of $135,400 in Government bonds. In unlisted bonds a decrease of $44,000; in unlisted stocks an increase of 402,320 shares; in mining stocks an increase of 11,320 shares; a decrease of 8,023 shares in Cotton Oil Certificates common, a decrease of 9,302 shares in preferred; a decrease of 25,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 774,000 ounces.

Dealings in stocks at the New York Stock Exchange during 1892 amounted to 86,726,410 shares; an increase of 22,202,609 shares as compared with 1891. Of this, 66,282,558 shares represent sales in the following 20 stocks:

leaving 20,443,852 shares for the remaining 205 stocks dealt in. Transactions in Railroad and State bonds during 1892 amounted to $500,845,200, and in Government bonds to $1,662,400; unlisted stocks 7,683,750 shares; silver bullion certificates 10,984,000 ounces, a decrease of 31,683,000 ounces. During 1892, $324,919,000 of bonds and $228,392,000 of stocks were added to the lists for dealings; and $138,802,000 of bonds and $43,823,000 of stocks were dropped from the lists.

At the Consolidated Stock and Petroleum Exchange during the month of December were sold: 2,872,816 shares of railroad and other stocks representing dealings in 81 properties. Of this amount 2,357,880 shares are transactions in the following 12 stocks:

Dis & C. F. Co.	531,790	N. Y. & N. E..	223,870	A. T. & S. Fe..	134,460	W. U. Tel. ...	85,810

	1,292,470		524,020		334,470		206,920

leaving 514,936 shares to represent the transactions in the remaining 69 stocks, of which American Sugar Refinery Common furnished 259,090 shares. Transactions in railroad bonds during the same period amounted to $2,017,500; in mining stocks 117,990 shares, 96,000 barrels in Pipe Line Certificates and 105,000 ounces in silver bullion certificates, extremes being 85⅛ and 82⅝, closing at 83⅛ on December 15.

Transactions in railroad and other stocks at the above Board show an increase of 974,279 shares as compared with the month of November; an increase of $48,500 in railroad bonds; an increase of 22,510 shares in mining stocks; a decrease of 176,700 barrels in Pipe Line Certificates; an increase of 93,000 ounces in silver bullion certificates.

As compared with Dec, 1891, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks increased 263,107 shares; bonds decreased $478,100; mining stocks increased 9,032 shares, and Pipe Line Certificates decreased 708,700 barrels. Silver certificates decreased 399,000 ounces.

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

QUOTATIONS AT THE NEW YORK STOCK EXCHANGE.

Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock.
† Interest payable if earned and not to be accumulative. L. B. stands for last bid.
Highest and lowest sales are given for past month. L. A. last asking price.
A ‡ indicates no quotation for past month, the last previous quotation being given.
NOTE.—The railroads enclosed in a brace are leased to Company first named.

The Law of Bank Checks.

"The Law of Bank Checks" is the title of a work recently published by Henry C. Van Schaack, a member of the Denver bar. The author states that his aim is "to present a concise and simple statement of the law in the United States, pertaining to bank checks, embodied in as condensed a compass as is compatible with clearness and accuracy." The work is carefully prepared and is abundantly fortified by references to the leading authorities not only in this country but England.

The increasing use of bank checks renders the analysis given the subject by the author of great value not only to bankers but business men generally.

The book contains 290 pages, and is substantially bound in sheep. Price $3.50 a copy. Will be sent (postage paid), on receipt of the price, by BRADFORD RHODES & Co., 78 William St., N. Y.

BANKERS' OBITUARY RECORD.

Allen.—James H. Allen died suddenly at De Leon Springs, Fla., November 23, 1892. He was President of the Commercial Bank of Eau Claire, Wisconsin.

Carpenter.—J. E. Carpenter died at his residence in Victoria, Tex., December 5, in the fifty second year of his age. He came to Victoria in 187-, took a position as book-keeper with the banking firm of Brownson & Sibley, with whom he remained until that firm was merged into the First National Bank, when he was elected head book-keeper of that institution, which office he held until the day of his death.

Cassard.—Thomas Cassard, Vice-President of the Citizens' National Bank of Baltimore, Md., died December 13, in the seventieth year of his age.

Collin.—Henry A. Collin, the well-known private banker of Mount Vernon, Iowa, died recently aged seventy-five years.

Fiske.—Josiah M. Fiske died suddenly in New York city, December 23, 1892, seventy years of age. He retired from active business about ten years ago. At his decease he was a Director of the American Exchange National Bank, of the Central Trust Company and of the New York Guarantee & Indemnity Company.

Fuller.—George W. Fuller died at his residence in New York city, December 21, sixty-one years of age. In early life he was associated with Moeller & Co., sugar merchants, and in 1868 became a partner in the banking firm of Cammann & Co., with which firm he remained until he retired from business six years ago. He was a member of several business and social clubs, and of the New York Stock Exchange.

Holt.—George B. Holt died December 17, thirty-eight years of age, at his residence in New York city. He became a member of the New York Stock Exchange in 1886, and was a member of the firm of Bisland & Holt at his decease.

Humphrey.—Albert Humphrey, President of the Union National Bank of Weymouth, Mass., died November 22, 1892. He was well-known in Boston banking circles.

Johnson.—Geo. L. Johnson, died suddenly at Athol, Mass., December 7, seventy years of age. He was Vice-President of the Athol Savings Bank, besides holding other positions of trust.

Kingsbury.—Lewis H. Kingsbury, a prominent citizen of Dedham, Mass., died December 9, aged seventy-nine years. He came to Dedham when quite young, and worked successively in the local printing office, the register of deeds office and as clerk in the Dedham house of correction. In September, 1844, he entered the Dedham Bank as a clerk, and held that position until December 18, 1846, when he was elected as Cashier. February 7, 1865, the bank was reorganized as a National bank, and he was elected as its President, being the first after its reorganization and the fourth in line of succession, holding that office at his decease.

Knight.—John T. Knight, a prominent citizen of Easton, Pa., died December 15, 1892, seventy years of age. He was President of the Edison Illuminating Company of Easton, President of the Easton Trust Company and a Director of the First National Bank at his decease.

Maxwell.—William Dunlap Maxwell died recently in New York city, aged sixty-two years. He was President of the Stuyvesant Safe Deposit Company for a number of years and also a Trustee of the Metropolitan Savings Bank.

McGourkey.—George J. McGourkey died, at his residence in New York city, December 15th, fifty-nine years of age. He came to New York when about sixteen years old and secured employment with Wesley & Co., brokers, in Wall Street. He afterwards entered the Metropolitan Bank, starting as an assistant note-teller, and was promoted until he became Cashier. He was Cashier when the bank suspended payment in 1884, but retained his place until long after payments were resumed.

Phelan.—James D. Phelan, a well-known capitalist, died in San Francisco, Cal., December 23, 1892, seventy-one years of age. He was born in Ireland and went to California in 1849. He was one of the organizers of the First National Bank of San Francisco and a Director at his decease.

Walton.—Captain Joseph Walton, the well-known coal operator and President of the Farmers' Deposit National Bank of Pittsburgh, Pa., died suddenly December 5, 1892, in the sixty-seventh year of his age. He was a man of sterling character and held in high esteem by all who knew him. He left a fortune estimated at $3,000,000.

Woodbridge.—George N. Woodbridge, a well-known citizen of Richmond, Va., and Cashier of the Savings Bank of Richmond, died suddenly December 12, 1892.

RHODES'

JOURNAL OF BANKING.

Vol. XX. FEBRUARY, 1893. No. 2.

SEVERAL of the State banks of New York city have, it is said, been seriously considering whether it would not be to their advantage to convert their institutions into National banks. This movement appears to be the result of the recently enacted law of the State of New York requiring banks organized under its banking statutes to keep on hand a reserve equal to a certain fixed percentage of deposits. In the August number of the JOURNAL this new reserve law was commented upon as a measure of doubtful wisdom. The State banks of New York had previously possessed the privilege of regulating the amount of their reserves, and their managers had, as a rule, most wisely exercised the privilege. The National banks in New York city did not possess this privilege but were required to keep at all times not less than a fixed percentage of their deposits. As a compensation for this, however, these last named banks were legally the depositories of the reserves of a large number of National banks outside of New York, throughout the United States. The State banks could not participate in this privilege, because the Comptroller of the Currency refused to approve any of them as reserve agents for the outside National banks. They could not even retain all the State banks outside of New York city as their correspondents, because these banks were apt to make their selections of city correspondents very impartially among the National banks as well as among the State institutions. The New York reserve law referred to above offered, as a compensation to the State banks for being compelled to submit to the new reserve restriction, the privilege of being selected exclusively as the city correspondents of the State banks in New York State outside of New York city. In other words the Superintendent of the Banking Department of New York State, had under the new law the same power to refuse to approve National banks in New York city, as depositories of the reserves of New York State banks, as the Comptroller of the Currency has always exercised in refusing to approve State banks in New York city as depositories of the reserves of outside National banks. The privileges to be derived from being the exclusive depositories of the reserves of the New York State banks outside of New York, do not appear to be considered by the City State banks as sufficient inducement to reconcile them to the reserve provision. They naturally reason, if we become National banks the reserve we will be obliged to keep will be no greater and we can at once compete for the business of nearly four thousand National banks outside of New York city, a business from which we are now practically debarred.

It has been something of a wonder that the larger State banks of New York city have not become National banks long ago. The absence from the State laws of certain restrictions on business methods which were contained in the Federal law is doubtless accountable for this, and the new reserve law seems to have been the straw which has turned the scale in favor of the National system of banking. The desire for profit will necessarily subdue the pride of tradition of the State banks of ancient fame, that find outside correspondents profitable especially as the change to National banks does not compel them to give up valuable State charters. The latter can be resumed if banking under them shall again become more profitable. It cannot be very expensive to change from the State to the National System or vice versa.

THE PROPOSITION THAT THE ACKOWLEDGED DISADVANTAGES of the present currency system of the United States are due to the virtual abrogation of the note-issuing function of the banks, is receiving general assent. The JOURNAL has endeavored to impress this proposition for two years past upon its readers, but while we have steadily advocated elastic bank note issues, regulations that shall insure beyond a peradventure the safety of such issues have at the same time been insisted on. In the June, 1892 number, the following may be found: "The return to a currency composed of State bank notes has recently been seriously proposed as a remedy for the evils of a currency consisting wholly of paper issued by the United States Government. It has been proposed, in view of the fact that it seems to be impossible to obtain any legislation that will enable the National banks to again supply the currency of the country." After some consideration of the former experience with the unrestricted issue of State bank notes, the same article continued: "The Act that restores the note issuing privilege to the State banks must be as carefully considered and guarded as was the National Currency Act of 1863." Since these utterances of the JOURNAL, much has been printed from very respectable sources in favor of repealing the ten per cent. tax on State bank circulation. The "Journal of Commerce" and the "Evening Post," of this city, have considered that this tax might be repealed with safety, although the first-named paper was much more sanguine than the last. The first-named paper has advocated an almost unconditional repeal, while the last insisted upon rigid restrictions to insure safety to the note holder. Mr. Edward Atkinson also has urged the repeal of the tax on State bank notes issued by banks willing to submit to conditions for the safety of the note holder imposed by Congressional action.

The latest expression of opinion on the subject is that of Professor Van Buren Denslow, who has hitherto attracted some attention by his propositions for a great Federal bank to issue the circulating medium of this country after the manner of the old Bank of the United States and the Banks of England and France. In his latest paper, entitled "American Banking as affected by the Recent Election," he advocates the removal of the restrictions now imposed by law upon banks loaning their credit without a deposit of government bonds by the issue of circulating notes. It appears that he means to remove these restrictions from both State and National banks by simply repealing the ten per cent. tax, but he adds that if this tax should be repealed without any provision for restraining wild-cat banking it would come upon us with horrors greater than those of the Johnstown flood. The question of an improved bank note currency is a large one, and both Mr. Atkinson and Professor Denslow seem to approach it from too narrow a standpoint. Attention has been attracted to it because of the failure of the paper money now issued by the United States Government to adjust itself to the wants of the business of the country in every locality. This defect in Government money being admitted, the mind naturally reverts to a bank note currency as a substitute. Many at once ask why the National banks do not supply the want. The National system has been a great success as a system of banks of loan and deposit, and with some slight modifications of the law could supply a safe and elastic currency. The system has not and cannot supply such a currency under the present law. Because they have not done what the law prevents them from doing, the National banks have become very unpopular, and this unpopularity has deterred Congress from legislating so as to make them beneficial to the country. Thinking it impossible to secure open legislation giving the National banks power to furnish a safe and elastic currency, but, recognizing that any bank currency is better than Treasury notes, many have blindly advocated the unconditional repeal of the tax on State bank circulation. At this point come in Mr. Atkinson and Professor Denslow and call a halt, insisting that such repeal must be under conditions. But now, having arrived so far, the whole force of the argument appeals for the necessary legislation to enable National banks to issue the currency. If conditions are to be imposed, how can they be imposed better than by Congress? And if Congress can make State bank circulation issued without bond deposits safe, much more can Congress make National bank circulation so issued still safer. The addition of two or three sections to the National banking laws would enable the National banks to issue a safe and elastic and homogeneous currency. How many sections would be required to impose the necessary conditions of safety on the issues of banks in fifty different States and Territories? One point cannot be too much insisted upon, that whether circulation privileges be granted to State banks to the exclusion of National banks, or *vice versa*, there would be no invidious distinction in this, because the banking capital of the country would flow in the direction of the greatest profit that is, if State banks secure the circulation privilege, National banks will become State banks; if National banks obtain the privilege, State banks will become National banks.

CONTRACTS FOR PAYMENTS IN GOLD have become common in view of the apprehension that under the operations of existing law the present gold standard is in danger of being superseded by a silver standard. It is a very grave question whether, under the decisions of the Supreme Court of the United States, any contract for payment in gold can be made so that payment in any money declared a full legal-tender by Congress would not constitute a full satisfaction of the debt. The history of legal-tender, both before and since the adoption of the Constitution, does not convince the careful examiner that a contract in gold dollars gives security for payment in such dollars as long as there is obtainable cheaper legal-tender money of paper or silver. As long as the silver or the paper dollar is of equal market value with the gold dollar, a gold contract will probably be paid in gold, but no longer. The sense of the Convention that drew up the Constitution was against constituting anything but gold or silver coin a legal-tender, and from 1789 to 1862 no atttempt was made in Congress to make any change. The legal-tender Act of February, 1862, was passed under the fancied feeling of necessity induced by the stress of the civil war. It was a temporary remedy for a greater evil. In consenting to this measure, Senator Sumner said, "The medicine of the Constitution must not become its daily bread." But what Sumner deprecated has, through decisions of the Supreme Court, come to pass. These decisions are not now to be criticised. They represent the supreme judicial interpretation of the power of Congress to interfere with private contracts by means of legal-tender enactments. The object of making a contract for payments in gold dollars is to avoid the danger of the depreciation, in the future, of other existing dollars, silver and paper, each of which other dollars is a full legal-tender.

The efficacy of the gold contract is presumed to rest in the vague notion that Congress has no constitutional power to interfere with private contracts. It will be interesting to note just what the Supreme Court has said on this point in considering the legal tender Acts which have already, and may again, interfere most decidedly with private contracts. Justice Gray, in the Juilliard case, refers to the fact that when the clause now in the Constitution, forbidding the States to pass any law impairing the obligation of contracts, was under debate in the Federal Convention, and Mr. Gerry endeavored to have Congress laid under a like prohibition, he was not even seconded. Again, in the same decision, the Judge says, "The power of making the notes of the United States a legal-tender in payment of private debts * * * is not defeated or restricted by the fact that its exercise may affect the value of private contracts." He also quotes the words of Justice Strong, in a previous case: "Every contract for the payment of money, simply, is necessarily subject to the Constitutional power of the Government over the currency, whatever that power may be" In the Constitution itself there is contained no specific prohibition against Congress impairing the obligation of contracts, as there is a specific prohibition in regard to similar acts on the part of the States. The quotations given above show that the highest judicial authorities recognize no implied prohibition that interferes with the right of Congress to isssue notes, and make them a legal-tender in payment of private debts. Much less do they find any implied prohibition interfering with making silver dollars of less intrinsic value than gold dollars a full legal tender. In view of the exceedingly liberal views taken by the Supreme Court of the power of Congress to interfere with private contracts by legal-tender Acts, it may be somewhat uncertain if through continued purchases of silver the silver dollar should becom the standard at its bullion value, whether the payor of a contract calling for payment in gold dollars might not insist in paying in those of silver, and whether he might not be sustained in so doing by the courts. The silver dollars are legal-tender dollars, equal under the Constitution to gold dollars—at least they are so by the letter of the Constitution. It is not hard to conceive that great popular pressure might be brought to bear on Congress to have a future law passed by which the legal-tender power of silver or paper dollars might be rendered sufficiently great to make them receivable in payment of contracts specifically payable in gold coin. Perhaps, if the contracts were made for the payment of a specific number of portions of gold, each portion weighing so many grains of a given fineness, the contract might be proof against future Congressional action, but this form of contract would be subject to many inconveniences impossible to foresee. If gold dollars are the specific coins in which payments are to be made by the terms of the contract, there will be always danger in the event of the silver or paper legal-tender dollars departing from the gold-dollar standard, that even the most carefully-drawn agreements may become legally payable in the cheaper coin. If the Constitution had originally contained a clause prohibiting Congress, as it did the States, from enacting any measure impairing the obligations of contracts, it is highly probable that no legal-tender law would ever have been passed.

SINCE 1862 THE TREASURY OF THE UNITED STATES has had the benefit accruing from the loss and destruction of the paper money issued by it; legal-tender notes, silver certificates, gold certificates, treasury notes, fractional currency, etc. The Treasury has also had the benefit accruing from the loss and destruction of National bank notes. There have been from the first, large sums in paper money destroyed by the

Treasury itself after regular redemption, but these destructions of worn out money are not what are meant. The benefit mentioned is derived from the accidental destruction of paper notes, forever preventing them from being presented to the maker for payment. All notes unpresented for redemption are not necessarily destroyed. Some may be temporarily lost, others so lost, that while still in existence they are practically unobtainable by the hand of man. The amount of the profit derived by the country from this source cannot be exactly determined as long as paper money issues are continued and as long as the credit of the Treasury remains good. It varies in the case of each denomination of the notes, because while there is no reason that accidents causing destruction should not happen to large notes as small, yet the latter are issued in greater numbers, are less carefully handled, and are guarded less rigorously.

Although it may not be possible to give an absolutely accurate statement of the Government issues of paper money, that have been destroyed, and that will never be presented, yet it seems to be high time that some steps were taken by the officers of the proper departments in this direction. There is a government document that shows pretty correctly the unpresented paper issues of the Treasury including bonds, prior to the war period, and which also gives some data of the earlier issues of that period. The reports of the Comptrollers of the Currency, furnish some data as to the rate of loss of bank notes, issued by State banks prior to 1863, and also of those issued by some of the National banks. A Treasury Commission inquired some years ago into the fate of the unredeemed fractional currency and made a report thereon, but there has been no comprehensive examination of the whole field. This seems to be a particularly important matter at this time when it has been proposed to enlarge the bank note issues of the country and at the same time to throw new safeguards around such issues, in place of the old ones which have become impracticable. For instance, it has been proposed to use the tax on this new circulation as a safety fund ; but if it could be shown from the experience of the Treasury with paper money, that a fund large enough for all safety fund purposes naturally accumulates from the accidental destruction of paper money there would be no necessity of imposing a tax for the purpose. So long as the approximate value of this increment to the resources of the Treasury is not determined scientifically, there is a wide but indefinite margin with which unscrupulous officials can tolerate overissues. This should be the subject of inquiry by a Congressional committee.

THE LONDON "ECONOMIST" sums up the International Monetary Conference in a well considered and exhaustive article, which is presented to the JOURNAL'S readers on another page. It reviews the action of the Conference and the various plans submitted by delegates from the participating nations. Statistics are given, showing the increased production of silver, and the persistent downfall in the price of that metal, notwithstanding the Bland-purchase Act of 1878 and the Treasury note-purchase Act of 1890 is dwelt upon. The effect of the latter Act upon the finances of the United States, and the gradual weakening of the power of the Treasury to maintain the parity of gold and silver is referred to, and the significant fact is adduced showing the reduction of the proportion of gold held by the Treasury to notes outstanding from 56.8 per cent. in 1890 to 27.1 per cent. in 1892. The article closes with some remarks upon the great increase of the annual production of gold owing to the recent discovery of gold mines in various parts of the world.

In connection with the weakened power of the Treasury to maintain gold payments, there is another fact not mentioned in the article in the "Economist," viz.: the constantly diminishing proportion of gold received by the Government of the United States in payment of revenue. A few years ago the amount of gold so received was about 55 per cent., while now it is not above 20 per cent. of the total receipts.

THE HOUSE COMMITTEE ON BANKING AND CURRENCY on January 9th reported a bill for the repeal of the silver-bullion-purchase law of July, 1890. The bill has four sections. Section 1 provides that National banks, upon deposit of interest-bearing United States bonds, shall be entitled to receive circulating notes to the full par value of the bonds deposited. This gives ten per cent. additional circulation upon the bonds now deposited. Section 2 reduces the tax on National bank circulation from one per cent. to one-half of one per cent. per annum. Section 3 repeals the Sherman silver-bullion-purchase law. Section 4 is the amendment of Mr. William H. Cate, of Arkansas, and is to the effect that the Secretary of the Treasury shall coin into standard silver dollars so much of the silver bullion purchased as may be necessary to provide for the redemption of the Treasury notes, and shall also coin into standard silver dollars the remainder of the silver bullion as it may be required by the demands upon the Treasury. The effect of the National bank provisions in the bill have heretofore been commented upon. The repeal of the silver-purchase law has been advocated as necessary to relieve an overburdened Treasury. The Cate Amendment is a safe and wise provision for the disposition of the silver bullion already purchased. It should receive the support of the advocates of silver, because it will at once withdraw from the market the immense stock now in the hands of the Government, and keep it in a form where it is not likely to flow back to those markets. If the Cate Amendment becomes a law the price of silver bullion should begin to rise to a moderate extent at least. The amendment need not be refused the support of those who favor the gold standard, because the experience of the past two years has shown that the amount of silver now on hand and used as money, either in the form of coin or paper, can be sustained at par in gold without too much taxing the strength of the Treasury. The load is not yet too great, and if no addition is made to the burden it can be sustained. In fact, it will grow lighter with the growing wealth of the country, as did the late National debt. Moreover, with the immense amount of silver coin which will be the result of this coinage added to the silver dollars already on hand, it will not be in the mouths of the advocates of silver to say that the United States discriminates against that metal. Foreign nations cannot but be benefited by the example.

IN DISCUSSING THE PRESENT CONDITION of the laws of the States and Territories relative to the issue of notes by banks organized under the laws of any State in the December JOURNAL, the following language was used. "Out of forty-nine States and Territories not including Alaska, of only twenty may it be said that there are no laws (other than National banking laws) permitting banks to issue notes. Among these twenty, including all the Territories, there are many States where there are no laws or constitutional provisions forbidding the issue of bank notes." This statement has been ill-naturedly criticized as incorrect, the last sentence only of it having been quoted to give more effect to this impression. The statement criticized was intended to enforce the fact that if the ten per cent. tax on State bank circulation were unconditionally repealed, banks in twenty-nine States could at once without additional enactments issue notes, and further, that in many of the *States* included in the twenty, not the Territories, there is no law forbidding the issue of notes by State banks. Another statement criticized is: "The Territories in which to day no banks but National banks may be organized, would from the very absence of law, be favorite places for locating banks for the issue of circulation were the Federal ten per cent. tax law repealed unconditionally." The reference was solely to banks of issue, and National banks are to day the only banks of issue that can be organized in the Territories. The remark that the Territories in the absence of law would be favorite places for locating banks for the issue of circulation, referred to what would be likely to happen in the future were the ten per cent. tax repealed, and not to present conditions. While there is a general Federal law preventing banks chartered by the Territories from issuing notes, it will not prevent taking out charters in other States and opening banking offices under them in distant localities, in the Territories for instance, where there are no laws regulating foreign corporations. This was often done in the days of wild-cat banking and would certainly be done again. Banks are not the only corporations that would take advantage of the repeal of the ten per cent. tax on notes circulated as money. The history of the past shows that railroad, canal and insurance companies have issued notes as well as banks. One of the most celebrated banks in New York city grew out of a water company, and an equally celebrated one in Wisconsin out of an insurance company. The latter issued circulating notes by an evasion of a direct prohibition of the Territorial law.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

The article of Mr. James G. Cannon on the same line as this subject is of prime importance. It should be printed in book form and found in the hands of every bank manager. Essays under the above title must supplement the article named and be read in connection with it.

As the majority, in number, of the readers of RHODES' JOURNAL OF BANKING are, like the writer, employed outside of the large cities, the following remarks will apply only to those who are without the great advantages and the great risks appertaining to the larger banks of the Nation. Country bankers have a more intimate acquaintance with their clients, yet may be deceived more because of that intimacy. Here are two illustrative occurrences.

We knew well the course of business and the spotless reputation of one of our borrowers for twenty years, and lately it came out that he had been insolvent for the whole period and carrying the dreadful load until it broke him down. One of our directors asked why a man of such small capital should have so much credit; we sought for a statement in a critical way and found that the borrower could not satisfy us promptly. We immediately followed our rule to withdraw loans from any person who could not, or would not, furnish as good a showing as is required of a National bank. The result was we escaped a large loss but suffered a small penalty for our too great confidence in human nature.

Another customer made his statement in writing, and it was deemed satisfactory until one of the commercial agents called to ask about him, saying that the man had refused to give him definite figures but had sent permission to copy from ours. We immediately ruled that the merchant must make his statement direct, and that if we communicated our information it would pass with our implied approval, and that when we later required from the commercial agency points upon this person we would not wish to get the echo of our own records. The agent saw the justice of the matter, and went among the man's creditors gathering their figures, until in two weeks the party was proven insolvent and his statement to us shown to be a piece of the effrontery which for years had kept him afloat. In this case the slight warning saved us from a loss.

In discounting unsecured paper all possible evidence must be secured, directly and indirectly, and in addition the trend of probabilities must be considered. Obtain facts and opinions from all having knowledge; weigh their truth; count in one class all items that emanate from one source; then imagine that you have in hand one thousand loans exactly like the one in question, and estimate whether you would make or lose on the lot.

In our bank we keep a big scrap-book, such as druggists use for filing prescriptions, and into that we paste memoranda of all kinds relating to our borrowers. As the years roll around we acquire a history of the rise and fall of each man's affairs that is most instructive.

We seek information from all sources, and especially from the tax-roll. In this State there is a homestead exemption of $5,000. So we put upon our list only those who are assessed for $3,000 or more.

Mortgages are taxed against the lender, and the deduction is entered to the mortgagor. So that appears on the list also.

We question every borrower, first explaining to him that we submit our bank to an examination and that we publish five reports yearly and that naturally we wish others to do to us what we do to all.

Then we ask the man to tell us his largest creditor and the sum owing and then the smaller sums of debt; to the total we add $1,000 or $2,000, and ask if his entire liabilities exceed the final summation. Usually his answer is prompt and clear, that it does or does not.

We then ask him to sign a printed statement at the bottom of the page asserting that on the day stated his entire indebtedness "does not exceed the sum of ———— thousands of dollars." He willingly signs and we have a declaration of facts which can only be obtained from the man himself. Any willful misstatement on this side of the account and especially as to the total of it is inexcusable and could receive full attention in Court.

We then turn over the sheet and tell him that on that side shall be placed an unsigned list of his assets and that we shall not criticise his figures openly, for a man has a right to think well of his belongings; that we shall form our own conservative opinion and from outside sources. At the heading of the simple blank is a space for partners names or items as to corporations.

Our process is short and easy; with farmers and small capitalists who keep imperfect books this method is applicable, and it admits of use with larger houses. The whole affair is done frankly and face to face, giving use for more skill than can be employed in the finest game of chance.

A man who has been trusting us with his money for years unexpectedly appears as a borrower; we suddenly feel that we really know nothing of his real situation. In the face of losses of money and broken pledges of honor heretofore experienced we must keep lending, and it is almost as much of an evil to refuse the right man as it is to advance to the wrong man. Give men full justice, much kindness, and firmness as the occasion demands, and you can handle them; when you do not have your own way it is because you have not risen to the occasion in these things.

There is a maxim "goods well bought are half sold," and there should be another like it, "money well loaned is half collected"; for any delay in getting in a loan should immediately reflect on the manner in which it was created. A frank avowal of this idea to a borrower who is not quite up to standard will often send him away grateful that he has not easily gotten the money; anyhow the banker is often reproached as helping men on a losing road by loans although he is morally blameless.

Some day the writer will have a bank (about the time of the millennium) which will charge no interest on overdrafts and past-due loans; so these nuisances will not be tolerated. It will take deposits and allow interest on them; it will charge ten cents or twenty cents for each check paid by selling its check-books at that rate. It will make no loans direct, but will only buy notes through the brokers; where collateral is used, that will be held by guarantee companies who shall endorse. It thus will be able to stop lending on any name without reflecting on the party's credit. The borrowers will soon fall into the scheme of issuing notes only after they have been noted by a semi-public registrar. The Millennium Bank will thrive only in the Millennium City, and there the golden harps will never be used as collateral.

It seems as if the expenses of small banks were made chiefly by accounts which carry small balances in proportion to number of checks drawn. The English axiom will explain the idea; an account should show a balance through the year of £1 for each check paid.

The profit in banking appears to be made from the inactive accounts. Still, it is the average of deposits which tells in the long run, and this is greatly built up by the quality and average of the loans. So we return finally to the self-evident proposition that loans must adapt themselves to some extent to the locality, and the banker must make his coat according to his cloth. He must be secure, and yet, in some places, he must lose a little money each year, to show his willingness to stand by good men on occasion. He must not lose too much, or he will awaken the fears of his depositors.

There are some localities, like mining camps, where the banker cannot find good loans, and he should place most of his investments elsewhere or go out of the usual forms of the business. MILLENNIUM.

CALIFORNIA.

Opposes Repeal of the Sherman Law.

Editor Rhodes' Journal of Banking:

SIR:—I like the JOURNAL, but do not at all agree with your views on silver. The Democratic platform is right in calling the Sherman law "a cowardly makeshift"; but, as it is all that now stands in the way of an absolute single gold standard for the United States, it ought not to be repealed, except by the enactment of a Free Coinage law. If Mr. Sherman and the other Eastern financiers would only adopt Horace Greeley's maxim, "*The way to resume is* TO RESUME," and apply it to the coinage question, most of the difficulties in the way of restoring the coinage of the Constitution would vanish. France kept the metal at a parity for seventy years, and the United States is certainly big enough to do the same thing now; and the South and West will not let the question rest until it is settled on the line of true Bimetallism—not the using of one metal to buy the other with, as under present arrangements. J. M. COPELAND.

GEORGETOWN, Col.

Reply:—The continued purchases of silver under the Sherman law of 1890 will in the opinion of financiers of note both in this country and Europe, inevitably bring about the silver standard in the United States. This is, we believe, also the opinion of Mr. Francis G. Newlands and Senator Stewart, both staunch supporters of the coinage of the Constitution. Inasmuch as the excessive use of silver will deprive the country of the use of gold, and so defeat bimetallism, we cannot understand how our valued correspondent can disagree with our advocacy of the repeal of the Sherman law. If it be true, as stated by our correspondent, that France kept gold and silver at a parity for seventy years, it is highly probable she could not have done it with such a law in force as the Act of July 14, 1890. As to the free coinage of silver, it will become legal whenever a majority of the people of the United States elect representatives in favor of it. In the meantime, we think it better to repeal a law that will certainly bring us to a mono-metallic silver basis. It will be easy to get along with the gold and silver coinage we have until it can be seen whether the people will approve the free coinage of both metals.—ED.

GOLD, SILVER AND MINOR COINAGE OF THE UNITED STATES.

Gold pieces of the United States were for the first time coined under an Act of Congress of April 2, 1792. They were the eagle, half-eagle, and quarter-eagle, or the ten-dollar, five dollar, and two-and-one-half dollar pieces. They weighed: the eagle, 270; the half-eagle, 135, and the quarter-eagle, 67.5 grains Troy. They consisted of 916⅔ equal parts of fine or pure gold in 1,000 parts, while the remaining 83⅓ parts were alloy. In other words, there were eleven parts of pure gold and one part of alloy. By an act of Congress of June 28, 1834, changing the legal ratio between gold and silver, as monetary metals, in this country, the weight of the gold pieces named, for coinage thenceforth, was reduced to 258, 129, and 64.5 grains Troy, respectively, and their gold to 899.225 parts of pure gold in 1,000 parts, the rest being alloy. Finally, by an act of Congress of January 18, 1837, the gold, for their coinage thenceforward, was changed to 900 parts of pure gold and 100 parts of alloy in 1,000 parts,—being the present standard gold at the American mints, exclusively used there for coining purposes,—while their weight, being also their present weight, remained the same. This latter change gave them slightly more pure gold and less alloy, which, by law, formerly consisted of silver and copper combined, but now consists only of copper, at the coinage of the gold pieces of the United States. The alloy is added to the gold to make the coin hard enough. The coinage in this country of the double eagle, or twenty-dollar gold piece, weighing 516, and of the one-dollar gold piece, weighing 25.8 grains Troy of standard gold,—the latter containing 23.22 grains Troy of pure gold and 2.58 grains of alloy,—was authorized by an Act of Congress of March 3, 1849. The coinage of the three-dollar gold piece, weighing 77.4 grains Troy of standard gold, was authorized by an Act of Congress of February 21, 1853. By an Act of Congress of September 26, 1890, the coinage both of the three-dollar and the one-dollar gold pieces was discontinued. As to gold, there exists by law free and unlimited coinage in this country. In other words, any owner of gold bullion can deposit the same for coinage on his own account at the mints of the United States. He has to pay there the expenses for the parting and refining of his metal and for the alloy, while the coining itself of his gold pieces is done for him free of charge.

The silver of the present, or standard silver dollar of the United States has, like standard gold, a fineness of 900, consisting of 900 parts of fine or pure silver, and 100 parts of alloy in 1,000 parts. This metal is called "standard silver," only silver of this fineness being coined nowadays at the mints of this country. It gives the dollar its name. This dollar contains 412½ grains Troy of such silver, or 371¼ grains of pure silver, and 41¼ grains of alloy copper. The copper is also added to the silver to make the coin hard enough. The silver dollar of this country, also first coined, under the Act of April 2, 1792, has invariably contained the same amount of pure silver, namely that stated. It, in reality, is the old Spanish milled dollar, containing that amount of pure silver, that has been adopted by this country. The American silver dollar originally weighed 416 grains Troy, when its pure silver formed only 892.4 parts in 1,000 parts, while the rest was alloy. This was changed by the Act of January 18, 1837, when, to give its silver a fineness of 900 the dollar was reduced to its present weight, which reduction involved only a diminution of the alloy. The coinage of the standard silver dollar had been discontinued by an Act of Congress of February 12, 1873, but was revived by the Act of February 28, 1878, and continued by another such Act of July 14, 1890, being the present law on the subject. By the Act of February 12, 1873, the coinage of a trade dollar, consisting of 420 grains Troy of standard silver, had been authorized in this country, which dollar was coined on the account of private owners of silver. It was a limited legal tender, in payment of debts up to the sum of five dollars, but this, its legal-tender quality, was repealed by a joint resolution of Congress, of July 22, 1876. Its coinage was afterwards discontinued and the dollar itself, by an Act of Congress of March 3, 1887, was redeemed by the government of this country.

The Constitution of the United States, by saying: "No State shall * * * make anything but gold and silver coin a tender in payment of debts," recognizes both gold and silver coin as the real money of this country, and makes either kind of coin a legal tender in payment of debts. Standard silver dollars, therefore, may in the Union be just as well used for the payment of public and private debts, of every size, as gold coin, provided payment in the latter is not expressly stipulated by contract. The fractional silver pieces of this country are subsidiary coin, not having an unlimited legal-tender power.

As to silver, unlimited coinage of dollar pieces, on the account of private owners of the metal, existed, by law, in this country from the Act of April 2, 1782, to that of February 12, 1873. The legal ratio of this country between gold and silver, as monetary metals, had been 1 to 15,—one ounce of pure gold equal in value to fifteen ounces of pure silver,—from the Act of April 2, 1792, up to that of June 28, 1834, and 1 to 16—one ounce of pure gold equal in value to sixteen ounces of pure silver—from the latter Act up to that of January 18,1837, while it was 1 to 15.988 from the last named Act up to that of February 12, 1873, abolishing the coinage of the standard silver dollar altogether. The legal ratio established by the Act of January 18, 1837, was resumed for the compulsory coinage of standard silver dollars, exclusively on the account of the government of the United States, which coinage was inaugurated by the Act of February 28, 1878, and continued by that of July 14, 1890.

The fractional or subsidiary silver pieces of the United States—half-dollars, quarter-dollars and dimes (ten-cent pieces)—are, as stated before, not full legal-tender money. The government coins them, on its own account, from metal derived at present from worn and uncurrent silver coin, mostly subsidiary pieces, and distributes them, on demand among the people, in exchange for lawful money of higher denominations. A dollar in the present subsidiary silver pieces of this country, which also consist of standard silver, weighs less and consequently contains less pure silver—only 347.22 grains Troy—than the standard silver dollar piece. Under the Act of February 12, 1873 the present law on the subject, these subsidiary coins weigh: the half-dollar 192-9, the quarter-dollar 96.45, and the dime 38.58 grains Troy. The legal (coining) ratio between gold and silver as to the subsidiary coins is 1 to 14.95. The subsidiary silver pieces of this country, too, those named and the half-dime (five-cent silver piece), were first coined under the Act of April 2, 1792. They were originally full legal-tender money, each denomination of them containing the same proportionate amount of pure silver, as the silver dollar piece, and they were coined only on the account of the owners of silver bullion. The Act of Feburary 21, 1853, reduced the amount of pure silver, to be contained in their different denominations at their coinage, to 345.6 grains Troy in one dollar's worth of such subsidiary coins (involving a legal [coining] ratio, as to them, between gold and silver, of 1 to 14.88,) which reduction was slightly changed, by an increase of their weight, by the Act of February 12, 1873. In pursuance of the Act of February 21, 1853, these silver pieces, since that time have been coined on government account and have been a limited legal tender in payment of debts. The cause of the reduction stated was the fact, that at the time, when it was enacted by Congress, American silver coin, in consequence of the Acts of June 28, 1834, and January 18, 1837 (changing the legal ratio between gold and silver, as monetary metals, in this country,) had in Europe, where in the bi-metallic and silver mono-metallic countries unlimited coinage of silver existed at that time, a bullion value three per cent. higher than American gold coin of the same nominal value and that for this reason, to the great inconvenience of the American people in their domestic trade, the subsidiary silver pieces of this country—only comparatively few standard silver dollars being then coined—were extensively exported to Europe.

In addition to the subsidiary silver pieces named, by an Act of Congress of March 3, 1851, a three-cent piece, and by an Act of March 3, 1875, a twenty-cent piece were authorized to be coined. The coinage of both of them and that of the half-dime has been discontinued by law.

According to the last annual report of the Director of the Mint of the United States, at the several mints of this country, from their organization in 1793—under the Act of April 2, 1792,—to the 30th day of June, 1892, inclusive, gold to the total amount of $1,582,367,235.50 and silver to the total amount of $657,368,387.10 were coined, while "minor coins,"—nickel, bronze, and copper pieces,—to the total amount of $24,445,095.17 were struck there. Of these minor coins—of which, as far as officially recorded, the amount of $1,840,712.11 had been remelted on the day last mentioned—only five-cent nickel and one-cent bronze pieces are struck now, while the coinage of three-cent nickel, two-cent bronze, one-cent copper, one-cent nickel, and half-cent copper pieces has been discontinued by law. The total amount, therefore, of the coin struck at the American mints during the period stated was $2,264,180,717.77. Of this sum, minor coins omitted, according to the report stated, the following estimated stock of coin,—the estimation being based upon an official calculation made on June 30, 1872,—was left in this country, at the close of the fiscal year ending June 30, 1892, $589,179,550 gold coin and $491,510,213 silver coin, total $1,080,689,763, while the rest, more than one-half, had been lost by melting for recoinage, by melting for use in the arts and industries, and by export to foreign countries.

The Treasury Department of the United States publishes monthly a statement (based upon calculations made since 1860), showing the circulation of American money, minor coins excepted, among the American people. At this writing, the latest statement of the kind of January 1, 1893, estimates the population of this country at 66,230,000, and gives the circulation of money among them as $24.32 per capita. The statement shows that the total amount of money of this country, minor coins, that is, nickel and bronze pieces excepted, on that day, was $2,185,961,601, consisting of $569,633,412 gold coins; $417,876,285 standard silver dollars; $77,898,748 subsidiary silver pieces; $141,347,889 gold certificates; $325,783,504 silver certificates; $124,745,623 Treasury notes, Act July 14, 1890; $346,681,016 United States notes; $7,590,000 currency certificates, Act June 8, 1872; and $174,404,424 National bank notes. Of the total amount of money stated of this country, on January 1, 1893, there were $575,277,727, consisting of $522,287,982 in coin, and of $52,989,745 in paper currency in the United States Treasury, while $1,610,683,874, consisting of $543,121,163 in coin, and of $1,067,562,711 in paper currency were in circulation. Thus it will be seen that, on the day stated, the amount of paper currency in circulation in this country was nearly twice as large, as the amount of coin in circulation among the people.

Profits on National Bank Circulation.

Profits on National Bank Circulation are frequent topics of discussion and different computers with the best intentions appear to arrive at greatly varying results. There are, in truth, many ways in which to look at the problem. The only way, however, that is absolutely free from error is to base the calculation upon the history of the bank from its organization to the expiration of its charter, considering the price of bonds, deposited to secure circulation, when they were purchased, and again when they are redeemed and sold. The profits of a bank thus taking out circulation under the National banking law, should be compared with the profits of a bank with equal capital that has not bought bonds or taken out circulation. If it can be shown that the profits of the last named bank are the greater, then it is proved that there is a loss to a capitalist in investing his capital in a National bank. It is easy enough to prove that some profits do accrue to a National bank upon its circulation, but if these profits are smaller than would accrue if circulation were not taken out, the loss in taking out circulation at once appears. This is the reason so many National banks have reduced their circulation to that allowed upon the minimum amount of bonds they are obliged to keep by law. The profit derived from deposits, secured by the public confidence in National banking, enables a National association to endure the loss it undergoes in being obliged to keep on deposit the minimum amount of bonds.

Bank Manager's Responsibility.

The most important duty of the bank manager is to keep track of the credit of the bank's debtors. In a large bank this is a tremendous responsibility and task, which few bank managers, even among the best, are equal to. Directors could not do this work; they are not expected to trot all over town to learn by direct evidence what one officer alone is commonly appointed to do; too many such inquiries would break any bank by driving away custom. It is one of the most delicate businesses in the world to learn of the actual standing of some bank borrowers, which means that bank Directors must take their chosen officer's word for any particulars he cares to give them.

Why Some Banks Fail.

Banks will fail, but the number of failures would be far less if bankers gave more attention to causes and fortified themselves against disaster.

The failure of banks is generally traceable to error in judgment on the part of the management—leading to bad investments, to discounting worthless paper, or to some other action which has sooner or later brought ruin.

To fortify against error in judgment a banker must make a study of men and keep abreast of the times. The former calls simply for the exercise of one's faculties for observation, while the latter requires that one take time for reading, but in this busy, bustling country the question is how to find time.

THE MONETARY CONFERENCE.

From the London Bankers' Magazine.

Since the Latin Union broke down, twenty years ago, many international conferences have been convoked. Repeatedly, bimetallism has been proposed and always rejected. The *Revue des Deux Mondes* reviews some of them thus: In April, 1881, an International Monetary Conference was taken part in by delegates from fourteen governments. It was held at Paris, and M. Magnin was president. His personal opinions were expressed as follows: "In order that the white metal should get back to its former value, it is indispensable that it should be coined freely without charge by the mints; and as no State alone would care to resume the coinage of silver on these conditions, it is certain that the present difficulties will not be surmounted until a bimetallic and international convention shall be concluded. We hope that the discussions which are to take place in this assembly will spread light. We hope that it will be demonstrated both by statistics and theory, as well as by experience, that international bimetallism is the only system which could possibly restore regularity in the monetary system of the world." Baron von Thielmann, the German delegate, said: "We acknowledge that a rehabilitation of silver is desirable, and that by the restoration of free coinage of silver in a certain number of States we might arrive at this result. Nevertheless, Germany, whose monetary reform is already so far advanced, and whose general position does not invite a change of system to so great an extent, is not able to conceive on her part the free coinage of silver." Sir Louis Malet expressed astonishment that the abstention of England should be alleged as the obstacle between other countries in the way of a bimetallic union. He thought that they must not lose sight of the fact that the British Government while preserving its monometallic system in England and its monometallic silver system in India, really gives important support to the bimetallic *regime*. The Conference, however, adjourned on the 19th July, 1881, with what was practically a *non possumus*. The Monetary Conference held in 1889, on the occasion of the French Exhibition, did not realize the hopes formed about it. The scientific men who came from the various countries, to whom invitations had been addressed, had in no sense an official character, like those who met at the Conference of 1881. The French Minister of Finance, M. Rouvier, gave it clearly to be understood that he could not open the Congress. He said in his letter, "the French Government, at different times, had occasions of making its ideas on monetary questions known. Since the events of these later years do not seem of a nature to modify our general disposition, we shall follow with much interest the exchange of opinion which is to take place. On this occasion there is only a question of a purely scientific debate, and the opinions expressed will be merely those of the speakers." The thing was wholly academical, and to that extent unpractical.

Of the Monetary Conference of 1892, it is said that "it is neither scientific nor practical." It assembled at Brussels on the 22d November, and was about to end, after a few days' exchange of irreconcilable ideas, when Mr. Alfred de

ALFRED DE ROTHSCHILD.

ALFRED DE ROTHSCHILD.

Rothschild announced that he had a plan which, being based on concessions by the various countries, would stand a chance of general acceptance. He very ably and shortly "smashed" the bimetallic theory, and then went on to propound something more practical, but as bad, scientifically considered—viz., an international agreement for purchasing silver, of which Europe has enough, on condition that America should go on buying what it has too much of. He is thus reported:

The question which has brought us together here is one which was seriously discussed not very long ago. I felt very strongly on the subject then, and have no reason whatsoever to regret in any shape, or to modify in the slightest degree, the views which I ventured to express at the time. In fact, gentlemen, quite the contrary. I felt then that a gold standard for England was the only possible one, and if we consider that the whole of her commerce and a great part of that of other countries is carried on by bills of exchange on London, which are naturally payable in gold, I think it must be admitted that the world in general transacts its business on a gold basis, and that in reality such a thing as a double standard, except in a very modified form, does not exist, even in those countries who profess to pay in either of the two metals. It is now proposed to revert to a great extent to the old state of things which existed until 1873, namely, to open all or part of the mints of Europe to the free coinage of silver, and to discuss a ratio to be fixed. Well, gentlemen, have the bimetallists for a single moment thought what the result would be if such a measure were introduced? Why, clearly, from that very moment a Bank of England note would cease to represent sovereigns, and would be payable in a depreciated currency, because the Bank of England could never pay its notes in gold, and at the same time be purchasers of an unlimited amount of silver, for within a very short period the twenty-five millions of gold which the bank now holds in its vaults would, in my opinion, have disappeared, and have become replaced by silver. In the final adjustment of international balances I cannot help thinking, whatever arrangement might be made on the principles of bimetallism, and whatever ratio might be established, gold, and gold alone, will always be chosen as the favorite, if not the only possible medium of settling a large debt or of making a large remittance. For some cause or other, we, that is to say, our firm, have on several occasions been obliged to send a million sterling in sovereigns or in bar gold abroad, which million, when packed up, amounts to a weight of about ten tons. Even if desirable, would it be feasible and practical, supposing a ratio of twenty to one were established, to send 200 tons of metal at one and the same time? It seems to me that the operation would be impossible, and the sender would therefore naturally elect, or rather be compelled, to send gold, even if it had to be bought at a premium. The causes of the fall in silver, gentlemen, are so well-known to all of you that I feel I should not be justified in taking up your time by recapitulating the same, but, in addition to the action taken by Germany in 1873, when she demonetized her silver, the action of three of the great European powers and several of the minor powers has materially tended to further accentuate the downfall in the price and value of that metal. Italy some years ago bought large amounts of gold, and, whilst it is doubtful how much still remains there, the Russian Government have amassed some very large amounts of the metal, and the Austrian Government, who have recently introduced laws in connection with their currency, have also commenced making their purchases. I think, gentlemen, that this is a conclusive proof of the appreciation on the part of all the great countries of Europe of the single standard, or at least of the advantage of a gold standard. We are then asked suddenly to go back to what took place before 1873, and to forget the enormous progress which civilization has made in facilitating the financial operations of the world. England, no doubt, owes a great part of her enormous wealth to the confidence which her monetary system has inspired both at home and abroad. This confidence is based on the fact that our bank-note represents sovereigns, and that a bill drawn upon England from any part of the world will, at maturity, be payable in the same metal. As regards the internal resources of the country, I think that it is perfectly clear that we have ample bullion and ample notes to carry on the enormous transactions of the day. In fact, so perfect is the system of the Bankers' Clearing-House, and so great are the facilities afforded by all the large joint stock banks and private bankers to their customers, that neither bullion nor notes are required to any very great extent; and if we consider the hundreds of millions sterling on deposit, and that the weekly accounts of the Bankers' Clearing-House show average transactions of over £100,000,000, I think we may fairly say that our banking system is as near perfection as possible, although the word perfection is a great one to apply to anything or anyone. Under this condition of things the commerce and the trade of the country have flourished, and it would be a dangerous and possibly a suicidal experiment to try and introduce any innovation into our system of currency. Advocates of bimetallism maintain that the fall in the price of silver has brought about a corresponding fall in the prices of various commodities. This may or may not be the case, but, supposing the former hypothesis to be correct, I am not prepared to say that it would be a misfortune for England or the world in general, nor do I share the opinion of certain distinguished exponents of that theory, who deplore the fact of the Indian exporter being able to send wheat remuneratively to England, thus interfering seriously with the interests of the British farmer; but I hold that wheat at thirty shillings a quarter, instead of forty-five shillings, is rather a blessing than otherwise. But, gentlemen, the question as to whether the fall in silver is really the cause of the fall in the value of certain commodities is a very big one, and I should not be justified in taking up your time by dwelling too long on the subject; but I think the fall in the prices of commodities is due to over-production, owing in great part to the development of new regions in all parts of the world, and to the increased facilities of communication which have enabled these products to be placed at low prices in the European markets. Apart from other considerations, it seems to me impossible to come to a universal arrangement in respect to a general currency question, as no two countries are alike as regards their individual wealth, resources, and expenditure. We have large payments to make ourselves, and large payments to receive from others. We must be perfectly satisfied in our own minds that obligations to us will be equally faithfully fulfilled, and to admit the principle of a theory which would cast any doubt on the subject, since it would leave the debtor the option of paying in whatever currency suited him best, would, in my opinion, render it impossible for the trade of the world to be carried on on a sound and stable basis.

But, gentlemen, although I venture to hope I have conclusively shown that bimetallism for England is an absolute impossibility, still the question arises whether it is not possible to extend the use of silver generally, and thereby stop a further fall, the disastrous consequences of which no one can foresee. I therefore take the liberty of respectfully submitting a proposal for your kind consideration. It would be presumptuous on my part to imagine that I could suggest an absolute and lasting remedy, but I think a palliative might be found in the following form: The American Government are purchasers of silver to the extent of 54 millions of ounces yearly, and I would suggest that, on condition that these purchases were continued, the different European powers should combine to make yearly purchases, say to the extent of about £5,000,000 sterling annually, which purchases to be continued over a period of five years, at a price not exceeding 43 pence per ounce (standard), but if silver should rise above that price, the purchases for the time being to be immediately suspended; the details of such a scheme to form the subject of an international agreement to be discussed by representatives of the different powers. It is for you, gentlemen, if you should approve of my plan, to supplement it in any way which you may think fit and proper before submitting it to the examination of your respective governments; and should the expression on the part of the Conference be unanimous, I cannot help thinking that it will have great weight and influence in the ultimate decision respecting this important question. I think that an arrangement of this sort might give general satisfaction, and I venture to hope and believe that our American friends would find it acceptable. I can see no objection either to silver being made a legal tender in England up to £5, instead of £2 as it is at present. It seems to me that the European powers, holding as they do large amounts of coined and uncoined silver, cannot be indifferent to the market price of that metal; and as to England, we have no right to look at one side of the question only and to ignore the complaints of a powerful minority. As regards India, I believe the proposal would be very well received. The bulk of the population would recognize that no material alteration, if any, had been suggested, while the merchants and bankers would know that the exchanges had been a stability which could not be disturbed for a period of five years; for, if I am not misinformed, it is the instability in the exchange which is the principal factor in the complaints from India, rather than the depreciation in the value of the rupee itself. In addition, the gold market would be relieved, in so far as no appeal would probably be made to it except from Europe for some time to come, and, as South Africa is increasing her output of gold yearly, an arrangement such as I have suggested would enable Russia and Austria to complete their purchases without unduly interfering with the money market in general. Gentlemen, I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this Conference were to break up without arriving at any definite result, there would be a depreciation in the value of that commodity which it would be frightful to contemplate, and out of which a monetary panic would ensue, the far-spreading effects of which it would be impossible to foretell. If I have alluded to India, it is because it is that country which, from its enormous size and population, is able yearly to find use for a very large amount of silver, not only for currency, but likewise for ornamental and other purposes; and if suddenly, from some cause or other, a demand from that quarter should cease, or through some specific legislation the actual value of the silver rupee should materially decline, I have no hesitation in saying that I for one should very much indeed regret such an issue, which would not only affect the value of the savings of hundreds of millions in India, but which would also materially affect the value of a commodity which, although it has at the present moment materially depreciated, still represents a gigantic sum. I therefore sincerely hope, gentlemen, that the humble plan I have ventured to lay before you will be found worthy of your consideration, and, I need not say, I hope ultimate approval. It may be urged that it is expecting certain sacrifices on the part of other countries not so immediately interested as England and India. I cannot help thinking, however, that what is right and best for the world in general must eventually prove to be the best for individual interest.

The plan finally came before the Committee in the following form:

A.—PURCHASES OF SILVER.

(1) It is proposed that 30,000,000 ounces shall be purchased yearly if the United States continue their purchases, and if the liberty of unlimited coinage is maintained in Mexico and India.

(2) The amount of each country's purchase shall be fixed by agreement.

(3) The purchases shall be effected in the form preferred by each government.

(4) The silver purchased shall be coined according to the law of each country, the metal to be coined or serve as reserve against notes issued.

(5) The arrangements shall last for five years, the purchases to be suspended as soon as the quotation to be agreed upon shall have been reached, whereupon a new limit of quotation could be fixed and the purchases resumed as soon as the quotation became lower than the first limit.

B.—EXTENSION OF THE EMPLOYMENT OF SILVER.

On this subject, said a telegram to the "Times," the Committee examined M.

Moritz Levy's scheme. The objections made to the withdrawal of small gold coins were—(1) The cost of melting down the existing coins; (2) the unpopularity of a withdrawal of small gold pieces in certain countries; (3) the difficulties of such withdrawal in other countries. The Committee, by a large majority, made the following proposals:

(1) The withdrawal from circulation within a fixed period of gold money of less than 5 grammes, 806 milligrammes, or 20 francs.

(2) The exclusion of notes for sums below 20 francs, or their equivalent, excepting always notes representing silver deposits.

The telegram went on: Upon the question whether they could individually recommend to their governments the plans suggested, the delegates voted by seven to six against Mr. de Rothschild's scheme, and adopted that of M. Levy by a large majority. When M. Levy's plan was put to the vote, Sir Charles Fremantle stated that he personally could not advise his government to accept the demonetization of small gold coin, except concurrently with the adoption of Mr. de Rothschild's proposals, or some other plan having the same compensatory bearing. M. Montefiore-Levi, who is a monometallist, abstained from voting, so that Belgium should not cast two votes. The Committee then formally recommended the discussion of the proposals A and B.

We are thus left to "face the music." No palliatives will be accepted. Silver has come to the end of its tether. The mines have produced too much, and nobody wants the surplus. A crisis is therefore at hand. But its form? Maybe trouble in America. Only there will be no surprise, and probably no panic, even if gold dollars and greenbacks, which are redeemable out of a special gold fund in the United States Treasury, go to a premium.

The one solution having any practical guise having been rejected, the Conference went into academical discussions, and among the speeches made that of Mr. B. W. Currie is of special interest It runs thus:

As I think it is the duty of every delegate to show his respect for the Conference by contributing his mite to their proceedings, I shall ask leave to say a very few words, though I fear that my opinions will fail to commend themselves to the majority of my honorable colleagues.

I am not one of those who believe that great evils are impending upon the world from the disuse of silver as a standard of value. This disuse has, I think, gradually arisen in obedience to the natural law of selection, by which progressive societies choose for themselves the methods best suited for their development. Any artificial attempt to arrest this process seems to me doomed to failure. We have witnessed the heroic labors of the United States in this direction. The fable of Sisyphus has been repeated for our edification, and although for a moment silver was by gigantic efforts forced up to a certain height, it soon came tumbling down again.

He must be a sanguine person who believes that such a costly experiment is likely to find imitators.

What, may I ask, are the supposed evils that we are called upon to remedy? As far as can be ascertained we are met here to endeavor to raise the price of commodities. Such an object is entirely opposed to the economic doctrines which are accepted in the country from which I come. Cheap goods and not dear goods, plenty and not scarcity, have always been held to be conditions of profitable trade. That the general fall in prices has been brought about by a scarcity of gold has never been proved, and such a theory is, in my humble opinion, at variance with the facts which are within our knowledge.

To the question, What, then, is the remedy? What should be the monetary system of the future? I venture to reply, "A gold standard, even without a gold currency." Such a system is already at work in several countries, and apparently it performs its functions to the satisfaction of the communities which have adopted it.

Theoretically, a gold currency like that of England may be the best; but it is a costly luxury, involving an outlay which may perhaps be avoided.

I do not deny that exchange may sometimes be unfavorable to nations who do not possess an effective gold currency, but unless the credit of the nation sank very low, the fall in exchange could hardly be so disastrous as the fluctuations to which silver-using countries such as India have been exposed.

In conclusion, I would venture to submit that the wealth of a nation does not depend upon the quantity of gold and silver which it possesses. The contrary, indeed, is much nearer to the truth, and it might be argued that the more prosperous and civilized a nation becomes, the less occasion has it to use the precious metals and the smaller is the stock which is required for its transactions.

The real *desideratum* for a nation is to maintain a surplus of revenue over expenditure, and thereby to establish and extend its credit. When that has been accomplished, it may command as much gold as it can profitably use, and, failing such credit, its monetary system can never rest upon a safe foundation.

M. Tirard afterwards stated the French view—that nothing is practicable unless other nations imitate France and take fifty francs a head into circulation.

Afterwards, M. de Foville proposed the creation of international money, based on bars of silver. That is to say, the Conference ended in the clouds.

What a government does when it coins standard money is to declare, "This is a certain weight of fine gold," or silver, as the case may be. An English sovereign, for example, bears the attestation of her Majesty's mint that it contains a certain quantity—rather more than ¼ of an ounce of fine gold. Neither Her Majesty nor the mint gives it greater intrinsic value than it had before the gold was coined, apart from the slight cost of labor done in the minting. The mintage practically does not give the coin value; it only guarantees its weight and fineness. To try to determine value is outside the function of the mint.

A Government can only give value to a currency, be it of coins or paper, if it maintain a monopoly of production. The Russian government gives value to its own issues of paper by limiting their amount. Russian people need paper roubles as we need shillings and sovereigns, and there is a wide and constant demand for them. That being the case, their government have only to limit the supply to regulate the value of these otherwise valueless pieces of paper. But this regulation is something like the supposed ruling of the waves by Britannia. Waves in value are uncontrollable.

Thus we have two principles on either of which a country's money may depend; First, a mere declaration of weight and quality without attempt to state value; and, secondly, a statement of value which can be only roughly regulated by the restriction of supply. Russia, notwithstanding the government monopoly of the issue of currency, has not succeeded in "regulating" the value of the rouble, and we cannot think it a proper function of a government to attempt anything of the kind. The government of Argentina, for example—a government which has to do the will of an impulsive and uninstructed people—ought never to attempt to regulate value. It is too vast a political undertaking.

Were the government of India to "regulate" the value of the minted rupee, the political consequences would have to be gravely considered. They

might be of the most serious kind. Natives governed by aliens are always suspicious. A manipulated rupee might induce the natives to get rid of their silver ornaments and hoards, taking gold instead. Again, it might not. But nobody knows. Like bimetallism (or alter metallism, meaning an alternative standard, as it is more reasonably called) it would be a leap in the dark. All we know is that it would somehow end badly, as the importation of fiction into business always ends.

The Crisis in Silver.

We reiterate the statement that the greatest question before the civilized world is that which relates to the restoration of silver to its normal place as the most useful money metal to the masses of mankind. It overshadows and completely dwarfs every other problem, because it is one which affects all interests of all nations. The late preliminary conference in the city of Brussels was watched with deeper attention by the commercial, manufacturing, and laboring classes of Europe, India, and Asia than any other Congress that has ever assembled to consider the welfare of the human race. While in its discussions led by Alfred de Rothschild, only the moneyed class was considered, the subject had so wide a bearing upon every other class as to finally lead to an exposition of the rottenness of the present financial system, and point out the very defects which the money-lenders desired and strove most earnestly to cover up and conceal. Therefore, through the published accounts of the debates and reports, the world has been advised to a broader extent than ever before of the true status of the causes which have led to universal discontent among the producers of the world.

Henry Hucks Gibbs published an article in the January "Forum" on "The Crisis in Silver," that has created a very great sensation in the United States, because of its clear and comprehensive analysis of the subject treated, and by reason of the eminence of the writer thereof as a learned student of finance. Mr. Gibbs takes up the question at its foundation, dissects it from the beginning through all its stages down to the present time, showing the effect of the use of silver in common with gold by the different governments, then proceeds to deal with the present arguments of monometallists in England and the United States that the adoption of free coinage will drive out gold and reduce them to a silver basis, and enquires, "under what circumstances does specie leave a country? Certainly it does not go of itself. Broadly speaking, nothing," he argues "will take money metal from a country but the balance of trade," which every man acquainted with the laws of trade knows to be absolutely true.

Again, as to independent action of the United States in the adoption of free coinage, and the fears expressed that it would cause all gold to be exported out of the country which would leave it on a "silver basis," he says, "the only possible way in which the United States could really pass to a silver basis would be by demonetizing gold, and become by law a silver-using country like Mexico and China." This fear, like all others of like nature expressed in New York and London, he pronounces chimerical. Nothing of the kind would happen. If the United States were to pass free coinage either by itself or in conjunction with India or France, there is no doubt whatever she could maintain it and ultimately force all other commercial nations to adopt the policy. So long as the balance of the trade is so largely in our favor, nothing can prevent us from getting all the gold we want for our needs. The address, which is made to the people of the United States and England alike, concludes by warning the statesmen of both countries that if they "refuse to learn new lessons from new phenomena they will find that they must learn them by the revolutionary force of events."

Taken altogether, it is by far the most powerful and convincing argument for free coinage, not only by the commercial powers, but for independent action by the United States, by dispelling the fears which have been set up as reasons against it that has yet been published in the literature of our time. It has created a vast sensation in monetary circles here and abroad, and no doubt will have the effect of converting many thoughtful men to the same line of reasoning. It supports the positions assumed by Stewart, Teller, Morgan and other noted advocates of free coinage in Congress, and may lead to a decided change of sentiment when the vote in the appeal of the Sherman law is taken.—*Mining and Scientific Review.*

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

SET OFF—UNMATURED NOTE.

Supreme Court of the United States, December 12, 1892.

SCOTT, *et al.*, *vs.* ARMSTRONG, RECEIVER; FARMERS & MERCHANTS' STATE BANK *et al.*, *vs.* ARMSTRONG, RECEIVER.

A depositor in an insolvent National bank may set off the amount of his deposit against the claim of the Receiver on a note of his held by the bank, though such note had not matured when the bank was closed and the Receiver appointed.

In error to the Circuit Court of the United States for the Southern District of Ohio. On a certificate from the United States Court of Appeals for the Sixth Circuit.

These cases arose upon a promissory note for $10,000, dated at Cincinnati, June 6, 1887, payable ninety days after date at the Fidelity National Bank of Cincinnati, with interest after maturity at the rate of 8 per cent. per annum, signed by Levi Scott, and indorsed by the Farmers' Bank to the order of the Fidelity Bank.

The defendant Scott was the Cashier of the Farmers' Bank, and pleaded that he signed the note for the accommodation of the banks under an agreement that he should not be looked to for payment. The Farmers' Bank made the same averment as to Scott, and pleaded a set-off to the amount of $8,809.94 as arising on certain facts in substance as follows: That the Fidelity Bank lent the Farmers' Bank the $10,000 at a discount at the rate of 8 per cent. per annum, for ninety days, under an agreement that the money so borrowed, less the discount, should be placed to the credit of the Farmers' Bank on the books of the Fidelity Bank; that the note in suit was executed accordingly, dated and discounted on June 6, 1887, and the proceeds, $9,819.17, were placed to the credit of the Farmers' Bank upon the books of the Fidelity Bank, to meet any checks or drafts of the Farmers' Bank, and to pay the note when it became due; that afterwards, and before June 20, the Farmers' Bank drew against the deposit the sum of $1,009.23, and the balance, $8,809.94, remained to the credit of the defendant to meet the note, and was so to its credit at the time the Receiver was appointed; that upon the maturity of the note, and before suit was brought, defendant tendered to the Receiver the sum of $1,190.06, the balance due on the note; and that the tender had since that time been kept good, and the money was now brought into Court. One of the questions certified to the Supreme Court, and decided by that Court, was: Where a National bank becomes insolvent, and its assets pass into the hands of a Receiver appointed by the Comptroller of the Currency, can a debtor of the bank set off against his indebtedness the amount of a claim he holds against the bank, supposing the debt due from the bank to have been payable at the time of its suspension, but that due to it to have been payable at a time subsequent thereto ?

FULLER, *C. J.:* The Fidelity National Bank was closed by ord·r of the Bank Examiner, June 20th, the Receiver was appointed June 27th, and the charter of the bank was forfeited and the bank dissolved by the decree of the Circuit Court, July 12, 1887. Title to its assets was necessarily thereby transferred to the Receiver. (*Bank* vs. *Colby*, 21 Wall., 609.)

The note in controversy did not mature until September 7, 1887, but the deposit to the credit of the Farmers' Bank was due for the purposes of suit upon the closing of the Fidelity Bank, as under such circumstances no demand was necessary. The Receiver took the assets of the Fidelity Bank as a mere trustee for creditors, and not for value and without notice, and, in the absence of statute to the contrary, subject to all claims and defenses that might have been interposed as against the insolvent corporation before the liens of the United States and of the general creditors attached.

The right to assert set-off at law is of statutory creation, but Courts of Equity from a very early day were accustomed to grant relief in that regard independently as well as in aid of statutes upon the subject.

In Equity, relief was usually accorded, says Mr. Justice Story (Eq. Jur., § 1435), "where, although there are mutual and independent debts, yet there is a mutual credit between the parties, founded at the time upon the existence of some debts due by the crediting party to the other. By 'mutual credit,' in the sense in which the terms are here used, we are to understand a knowledge on both sides of an existing debt due to one party, and a credit by the other party, founded on and trusting to such debt, as a means of discharging it."

This definition is hardly broad enough to cover all the cases where, as the learned commentator concedes, there being a "connection between the demands, equity acts upon it, and allows a set-off under particular circumstances." (Section 1434.) Courts of Equity frequently deviate from the strict rule of mutuality when the justice of the particular case requires it, and the ordinary rule is that, where the mutual obligations have grown out of the same transaction, insolvency on the one hand justifies the set-off of the debt due upon the other. (*Blount* vs. *Windley*, 95 U. S., 173, 177.)

In *Carr* vs. *Hamilton* (129 U. S., 252, 262), it was decided that, when a life insurance company becomes insolvent and goes into liquidation, the amount due on an endowment policy, payable in any event at a fixed time, may, in settling the company's affairs, be set off against the amount due on the mortgage deed from the holder of the policy to the company by way of compensation; and Mr. Justice Bradley, delivering the opinion of the Court, said: "We are inclined to the view that where the holder of a life insurance policy borrows money of his insurer, it will be presumed, prima facie, that he does so on the faith of the insurance and in the expectation of possibly meeting his own obligation to the company by that of the company to him, and that the case is one of mutual credits, and entitled to the privilege of compensation or set-off whenever the mutual liquidation of the demands is judicially decreed on the insolvency of the company." And the case of *Scammon* vs. *Kimball* (92 U. S., 362) was referred to, where it was held that a bank, having insurance in a company which was rendered insolvent by the

Chicago fire of 1871, had a right to set off the amount of his insurance on property consumed against money of the company in his hands on deposit, although the insurance was not a debt due at the time of the insolvency.

Indeed, natural justice would seem to require that where the transaction is such as to raise the presumption of an agreement for a set-off, it should be held that the equity that this should be done is superior to any subsequent equity not arising out of a purchase for value without notice.

In the case at bar the credits between the banks were reciprocal, and were parts of the same transaction, in which each gave credit to the other on the faith of the simultaneous credit, and the principle applicable to mutual credits applied. It was, therefore, the balance upon an adjustment of the accounts which was the debt, and the Farmers' Bank had the right, as against the Receiver of the Fidelity Bank, although the note matured after the suspension of that bank, to set off the balance due upon its deposit account, unless the provisions of the National Banking Law were to the contrary. Whether this was so or not is the question on which the opinion of the District judge turned, and which was chiefly urged in argument upon our attention.

Sections 5234, 5236 and 5242 are the sections relied on. Section 5234 provides for the appointment of a Receiver by the Comptroller of the Currency, and defines his duties as follows:

"Such Receiver, under the direction of the Comptroller, shall take possession of the books, records and assets of every description of such association, collect all debts, dues and claims belonging to it, and, upon the order of a court of record of competent jurisdiction, may sell or compound all bad or doubtful debts, and, on a like order, may sell all the real and personal property of such association, on such terms as the Court shall direct; and may, if necessary to pay the debts of such association, enforce the individual liability of the stockholders. Such Receiver shall pay over all money so made to the Treasurer of the United States, subject to the order of the Comptroller, and also make report to the Comptroller of all his acts and proceedings."

Section 5236 provides:

"From time to time, after full provision has been first made for refunding to the United States any deficiency in redeeming the notes of such association, the Comptroller shall make a ratable dividend of the money so paid over to him by such Receiver on all such claims as may have been proved to his satisfaction or adjudicated in a Court of competent jurisdiction, and, as the proceeds of the assets of such association are paid over to him, shall make further dividends on all claims previously proved or adjudicated; and the remainder of the proceeds, if any, shall be paid over to the shareholders of such association, or their legal representatives, in proportion to the stock by them respectively held."

Section 5242 reads:

"All transfers of the notes, bonds, bills of exchange, or other evidences of debt owing to any National banking association, or of deposits to its credit; all assignments of mortgages, sureties on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing for its use, or for the use of any of its shareholders or creditors; and all payments of money to either, made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets in the manner prescribed by this chapter, or with a view to the preference of one creditor to another, except in payment of its circulating notes,—shall be utterly null and void; and no attachment, injunction or execution shall be issued against such association or its property before final judgment in an suit, action or proceeding in any State, county, or municipal court."

The argument is that these sections by implication forbid this set-off, because they require that after the redemption of the circulating notes has been fully provided for, the assets shall be ratably distributed among the creditors, and that no preferences given or suffered, in contemplation of or after committing the act of insolvency, shall stand. And it is insisted that the assets of the bank existing at the time of the act of insolvency include all its property, without regard to any existing liens thereon or set-offs thereto.

We do not regard this position as tenable. Undoubtedly any disposition by a National bank, being insolvent or in contemplation of insolvency, of its choses in action, securities, or other assets, made to prevent their application to the payment of its circulating notes, or to prefer one creditor to another, is forbidden; but liens, equities, or rights arising by express agreement, or implied from the nature of the dealings between the parties, or by operation of law, prior to insolvency and not in contemplation thereof, are not invalidated. The provisions of the Act are not directed against all liens, securities, pledges, or equities, whereby one creditor may obtain a greater payment than another, but against those given or arising after or in contemplation of insolvency. Where a set-off is otherwise valid, it is not perceived how its allowance can be considered a preference, and it is clear that it is only the balance, if any, after the set-off is deducted, which can justly be held to form part of the assets of the insolvent. The requirement as to ratable dividends is to make them from what belongs to the bank, and that which at the time of the insolvency belongs of right to the debtor does not belong to the bank.

There is nothing new in this view of ratable distribution. As pointed out by counsel, the Bankruptcy Act of 13 Eliz., c. 7, contained no provision in any way directing a set-off or the striking of a balance, and by its second section commissioners in bankruptcy were to seize and appraise the lands, goods, money and chattels of the bankrupt, to sell the lands and chattels, "or otherwise to order the same for true satisfaction and payment of the said creditors; that is to say, to every of the said creditors a portion, rate and rate alike, according to the quantity of his or their debts." 4 Statutes of the Realm, pt. 1, 539. Yet, in the earliest reported decisions upon set-off, it was allowed under this statute. (*Anonymous*, 1 Modern, 215, *Curson* vs. *African Co.*, 1 Vern., 121; *Chapman* vs. *Derby*, 2 Vern., 117.)

The succeeding statutes were but in recognition, in bankruptcy and otherwise, of the practice in Chancery in the settlement of estates, and it may be said that in the distribution of the assets of insolvents under voluntary or statutory trusts for creditors the set-off of debts due has been universally conceded. The equity of equality among creditors is either found inapplicable to such set-offs or yields to their superior equity.

We are dealing in this case with an equitable set-off, but if on June 20th the note had matured, and each party had a cause of action capable of enforcement by suit at once, upon the argument for the Receiver the legal set-off would be destroyed just as effectually as it is contended the equitable set-off is.

We cannot believe Congress intended such a result, or to destroy by implication any right vested at the time of the suspension of a National bank.

The state of case where the claim sought to be offset is acquired after the act of insolvency is far otherwise, for the rights of the parties become fixed as of that time, and to sustain such a transfer would defeat the object of these provisions. The transaction must necessarily be held to have been entered into with the intention to produce its natural result, the preventing of the application of the insolvent's assets in the manner prescribed. (*Bank* vs. *Taylor*, 56 Pa. St., 14; *Colt* vs. *Brown*, 12 Gray, 283.)

Our conclusion is that this set-off should have been allowed, and this has heretofore been so held in well-considered cases. (*Snyder Sons' Co.* vs. *Armstrong*, 37 Fed. Rep., 18; *Yardley* vs. *Clothier*, 49 Fed. Rep., 337; *Armstrong* vs. *Warner*, 21 Wkly. Cin. Law Bul., 136; 27 Wkly. Cin. Law Bul., 100.)

CERTIFICATE OF DEPOSIT—CONFLICTING CLAIMS TO INABILITY OF PAYEE TO SURRENDER CERTIFICATE.

Court of Appeals of the State of New York, January 16th, 1893.

JOHN J. P. READ *vs.* MARINE BANK OF BUFFALO.

The payee of commercial paper (in this case a certificate of deposit) who has not the possession of it, and who confesses his inability to surrender it on payment, cannot recover thereon against the maker, when it appears by his own showing that the paper is not lost, but is in the hands of another, although wrongfully, who produces it at the trial, but refuses to surrender it, and claims title to it in hostility to the payee.

This was an action to recover the amount of a certificate for $4,000, issued by defendant to the order of the plaintiff. This certificate was in the usual form, payable on the return thereof properly indorsed. At the time the certificate was issued, plaintiff was living with his sister, a Mrs. Rockwell. Afterwards family differences occurred, and they separated, she taking the certificate with her. Mrs. Rockwell died before this action was commenced. The defense of the bank was that the plaintiff could not recover until he returned, or offered to return, the certificate properly indorsed; that his remedy was to replevy the certificate from the estate of Mrs. Rockwell. A similar certificate had been issued by the Bank of Attica on which the plaintiff had recovered in an action against that bank.

MAYNARD, *J.:* The certificates, which the plaintiff received from the defendant, when he deposited the moneys, which he seeks to recover in this action, possessed the attributes of negotiable paper, and were transferable in the same manner. Construing the defendant's contract according to the rules of commercial law, it was not bound to pay the deposit, except upon the production and surrender of the certificates properly indorsed. When the action was brought and tried, the plaintiff was unable to comply with the implied stipulation in his contract with the defendant, which required a tender of the certificates before payment could be exacted. But performance of an impossible thing was not demanded, and the law imported into the contract an exception, that if the paper had been actually lost, and he did not know, and could not reasonably be expected to ascertain where it was, or, if knowing of its existence, it was beyond his power to reclaim it by any lawful method of procedure, the defendant would not be discharged from liability, but a recovery could be had by making substantial indemnity at the trial. The plaintiff's embarrassment is due to his inability to establish his status as the owner of lost negotiable paper. It appears from the undisputed evidence that the certificates are not lost in the legal signification of the term. They were received by the plaintiff at a time, when his sister was living with him, and it is alleged in the answer, and some proof was offered and excluded to show that they then held their property in common, and that she had an interest in the moneys deposited. Upon a subsequent separation growing out of family differences she took the certificates away with her, and claimed, that in making the deposit her brother had acted as her agent, and that they rightfully belonged to her. Whether this claim was meritorious or fabricated was of no concern to the defendant, and cannot affect the determination of its rights. They may have, in fact, been abstracted from the custody of the plaintiff by the commission of a larceny, and if he knew where they were, and by the exercise of superior diligence could have recovered their possession, he can not impose upon the maker the risk of a litigation with a stranger. involving the question of ownership, in which the possession of the certificates would be some evidence to support a claim of title.

The plaintiff appears to have taken this view of the obligation of the parties, for in 1885 he brought an action against the sister to recover the possession of the certificates, upon the trial of which she produced them before the Referee, but no decision had been reached when the action abated by her death. Her will was probated after a contest, and letters testamentary issued to her husband, and the certificates passed into his possession, and he claimed to hold them as the representative of her estate, and gave the defendant notice of his claim. The decree of probate was reversed upon appeal and the authority of the executor suspended, and a new trial at the Circuit ordered which had not occurred when this action was brought. Upon these facts the case is not distinguishable from *Van Alstyne* vs. *Commercial Bank* (4 Abb. Ct. App. Dec., 449). The suit there was to recover the amount of a draft alleged to have been lost, but shown upon the trial to be in the possession of a bank in West Virginia, who had obtained it by means of the forged indorsement of the payee, who refused to deliver it to the plaintiff. A recovery was denied, although it appeared that the paper was beyond the jurisdiction of the Courts of this State; and it was held that the plaintiff was bound to resort to the Courts of the foreign jurisdiction, or to the Federal tribunals, which were open to him, to recover possession of the instrument, if it was wrongfully withheld, and place himself in a position where he could surrender it to the bank before he could compel it to part with the money represented by the absent draft. It is there stated that exhaustive research has failed to find any reported case, or any statement in any treatise on the subject, which sustains the proposition that payment can be required under such circumstances.

There were no insuperable difficulties in the way of the plaintiff's recovery of these certificates. His action for that purpose against the sister could have been revived and continued after her death by the substitution of the executor as the defendant, or, if his authority was suspended during the contest over the will, a temporary administrator could have been appointed and made the party defendant. A still more direct and effective remedy was within the plaintiff's reach. He might have brought an action against the sister and the bank, joining them as parties defendant in the same action, and demanding judgment that she be required to surrender the certificates to the bank, and that upon such surrender the latter be required to pay the amount of them to the plaintiff. Such an action is proper when the surrender of the instrument is a condition of the right to enforce payment, and the paper is in possession of a wrongdoer, who refuses to deliver it to the payee, and the maker admits his liability to pay upon receipt of the evidence of his obligation. (*Thomas* vs. *Thomas*, 13 N. Y., 208.) In such a controversy the defendant bank could have stood indifferent, and could have protected itself, even against a liability for costs, by paying the money into Court, and abiding its decision as to the lawful ownership of it. Even granting that the plaintiff's right to bring or prosecute an action in either form was held in abeyance during the pendency of the contest over the will, it would not afford a sufficient reason for the maintenance of an action meanwhile against the bank alone. The inconvenience, if any, resulting from the situation, must be borne by the plaintiff, and cannot be cast upon the defendant, who was in no wise responsible for the safe-keeping of the certificates by the plaintiff.

The provisions of the Code (§ 1917) authorizing a recovery upon lost negotiable paper, if indemnity is given, do relieve the plaintiff of his difficulty. A bond is not required or authorized as a condition precedent to the right to bring suit, but if it appears upon the trial that the instrument is lost, the plaintiff may still recover upon executing the required undertaking to be approved by the trial judge. Here the loss of the paper was not shown at the trial, but the contrary affirmatively appeared, for the certificates were present in court, having been produced by the executor under a subpœna *duces*. The action of the Court in summarily depriving the witness of the custody of the certificates, and impounding them pursuant to its direction, can not affect the legal rights of the parties. They are still constructively in the possession of the executor, and the order of the Court requiring him to deposit them with the clerk cannot be made to perform the functions of a judgment and execution in an action of replevin.

This appeal was twice argued at the General Term. Upon the first argument, the judgment was reversed for substantially the same reasons we have here given. Subsequently the plaintiff's case against the Bank of Attica depending upon a certificate like those here involved, and taken from him by his sister under similar circumstances, was decided in his favor by the Court in the Second Division (124 N. Y., 671). A reargument was thereupon ordered by the General Term, because it was claimed that the decision in that case was controlling. Upon the second argument it was held that the *Bank of Attica* case conclusively established plaintiff's right to recover, and the judgment at the Circuit was affirmed. A careful examination of the record in *Read* vs. *Bank of Attica* fails to show that it is in any respect decisive of the important question presented upon this appeal. There were but two exceptions taken in the course of the trial, one to the exclusion of evidence, which was inadmissible under the pleadings, and the other to the direction of a verdict for the plaintiff. The latter exception was not well founded, for upon the proofs the plaintiff was entitled to recover. The defendant conceded that there was no question of fact for the jury, and it did not ask for the direction of a verdict in its own favor. All the material testimony was given by the plaintiff himself, who, it seems, had the certificate in his possession when upon the witness stand, although it had been brought into court by the executor under a subpœna. The plaintiff testified to the deposit of the money, and the issue of the certificate which was then read in evidence. Its non-payment was not disputed.

The plaintiff's case was then fully established and he was entitled to the direction of a verdict.

It is true that it also appeared from the plaintiff's testimony that the certificate had been taken by his sister, and that she had promised to return it, which was a recognition of his title, and the production of the certificate by the executor in court, and the delivery of it to the plaintiff, were facts from which the inference might be drawn that his possession was in subordination to the plaintiff's title, and not in hostility to it, in the absence of evidence of a claim of title on his part. We have here an entirely different record. The plaintiff called the executor as a witness, who testified that he had the certificates in his possession, but declined to produce them, unless directed to do so by the Court, which direction was given, but it was entered upon the minutes that he did not produce them as the property of the plaintiff. The certificates were then offered in evidence and objected to on the ground that plaintiff was not in possession of them, and could not surrender them upon their payment The objection was overruled and an exception taken.

The executor further testified, that he had been in possession of the certificates since June, 1887; that he received them from his wife; that she produced them before the Referee in 1886, in the action brought by plaintiff against her, who then made copies of them; that she took them away, and upon her death they came into his hands as her executor; that he had held them ever since and was not willing to surrender them to the defendant, if payment should be made to the plaintiff. The plaintiff testified that he had never sold or transferred the certificates to anybody; that they were taken away by his sister without his knowledge or consent; that he had requested her to bring them back and she had not done so; that he had commenced an action against her to recover their possession, which was undetermined; that he had never presented them or either of them for payment, and that they were not in his possession.

The defendant moved for a nonsuit upon the grounds that the certificates had never been presented to the bank indorsed for payment; that it affirmatively appeared that they were not in plaintiff's hands or in his possession; that they are negotiable paper, and an action cannot be maintained on such paper, unless the plaintiff has the power and is able to bring the paper into Court and surrender it; that they appear to be held by parties claiming under an adverse title to the plaintiff, and that the plaintiff had not established a cause of action. The motion was denied and an exception taken. The features of the case were not changed by the defendant's testimony, and at the conclusion of the evidence the Court was asked to direct a verdict for the defendants upon the grounds specified in the motion for a nonsuit, which was refused, and an exception noted, and the Court directed a verdict for the plaintiff, which was also excepted to.

The question was thus sharply presented upon this trial, which is not in the record in the *Bank of Attica* case, whether the payee of commercial paper, who has not the possession of it, and who confesses his inability to surrender it, on payment can recover against the maker, when it appears by his own showing that the paper is not lost, but is in the hands of another, although wrongfully, who produces it at the trial, but refuses to surrender it, and claims title to it in hostility to the payee. We do not think a recovery can be had under such circumstances. To hold otherwise would require us to overrule the decision of this Court in *Van Alstyne* vs. *Bank*, and to establish a dangerous precedent in the administration of the law merchant. This question is not discussed in the opinion of the General Term in the *Bank of Attica* case, and the Second Division merely declared its assent to the views of the Court below, with the exception of the allowance of interest, and we are, therefore not concluded by the decision there made.

The order and judgment must be reversed, and a new trial granted with costs to abide the event. All concur.

INSOLVENT NATIONAL BANK—PAYMENT IN CONTEMPLATION OF INSOLVENCY.

Court of Appeals of New York, December 23, 1892.

HAYES *vs.* BEARDSLEY.

In order to uphold an action by a Receiver of an insolvent National bank to recover money paid on the ground that the payment was in violation of Section 5242 Rev. Stat. U. S., it should appear that the money was paid in contemplation of insolvency, for the purpose of giving a preference, and with a view to preventing the application of the assets to the claims of creditors generally.

The fact that the bank was known to be insolvent at the time by the officer making payment does not make the payment illegal, where the person receiving payment was treated like any other creditor, and the object was not to give a preference over others.

If the person receiving payment was entirely ignorant of the insolvency of the bank, and acted in good faith, the fact that he was at the time a Director does not make the payment illegal.

This was an action by Frank M. Hayes, as Receiver of the First National Bank of Auburn, against Nelson Beardsley, a Director, to recover the amount paid by the bank on three certificates of deposit.

EARL, *C. J.:* In December, 1883, the defendant deposited in the First National Bank of Auburn $15,000, and took two certificates of deposit for the same, payable with 6 per cent. interest; and in January, 1884, he made another deposit, of $10,000, and took a similar certificate. On the 23d day of March, 1887, the bank, through its Cashier, paid and took up the first two certificates, by transferring to the defendant negotiable paper running a short time, and paying to him in cash the sum of $506.60, the difference between the value of the negotiable paper and the two certificates. The defendant did not request the payment of the certificates, but payment was voluntarily made by the Cashier, for the reason assigned by him to the defendant, "that his directors did not like his paying so large a rate of interest." The third and last certificate was paid on the 3d day of December, 1887, to the Cayuga County National Bank of Auburn, which then held it. Beardsley had indorsed and transferred it to that bank, and the amount thereof was by it credited to him in his account. It was, without his procurement, on the same day, presented by that bank to the First National Bank for payment, and was paid by the paying teller thereof in the settlement of exchanges between the banks in the usual course of business. At the time of these payments the First National Bank was in fact insolvent, and had been so for some years; but its insolvency was known only to its Cashier, was unknown to its directors and others officers, and the bank was in good credit with the public, and continued to do business in the ordinary way, without any suspicion as to its insolvency on the part of the persons dealing with it, until the 21st day of January, 1888. On that day, which was Saturday, it continued to do business until it was closed at the usual hour, when the Cashier and one of the book-keepers absconded, and the financial condition of the bank first became public. Thereafter the plaintiff was appointed Receiver of the bank, and he brought this action to recover the amount of the deposits thus paid to the defendant, on the ground that the payments were void under Section 5242 of the Revised Statutes of the United States, which provides as follows: "All transfers of the notes, bonds, bills of exchange, or other evidences of debt owing to any National banking association, or of deposits to its credit; all assignments of mortgages, sureties on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing, for its use, or for the use of any of its shareholders or creditors; and all payments of money to either,—made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets in the manner prescribed by this chapter, or with a view to the preference of one creditor to another, except in payment of its circulating notes, shall be utterly null and void." The action was brought to trial at a special term of the Supreme Court, and upon the findings of fact and law there made the complaint was dismissed, and the judgment then rendered, having been affirmed by the general term, is now brought under review here.

We have carefully read the findings of fact, and the evidence upon which they are based, and we cannot say that the findings have not a sufficient support in the evidence. The essential facts which it was necessary for the plaintiff to establish under the section quoted, in order to recover in this action, were found against him. The bank had not committed any act of insolvency, as it met all its obligations as they became due or were demanded during more than six weeks after the last certificate was paid. While its cashier knew that the bank was insolvent, and must have expected that it would ultimately fail to meet its obligations and be obliged to go into liquidation, yet it cannot be said to have been an undisputed fact in the case that the financial collapse of the bank was impending or imminent; and there is little, if any, ground for saying that these payments were made in contemplation of insolvency. The Cashier paid these certificates, as he did all other demands upon the bank, as they were from time to time presented by its numerous customers. The first two certificates were paid, as we must assume, for the reason assigned by the Cashier at the time,—because they were bearing interest at a larger rate than the directors of the bank were willing longer to pay; and the last certificate was paid to the Cayuga County National Bank in the ordinary course of business, in the settlement of exchanges between the two banks. There was no satisfactory evidence that these payments were made by the bank to prevent the application of its assets in the manner prescribed in the National Banking Act, or with a view to a preference of the defendant over the other creditors of the bank. The circumstances under which the payments were made, and the condition and credit of the bank at the time, forbid the inference that the payments were made for such a purpose. The defendant was not selected as a favored creditor. During all the years of the insolvency of the bank, all creditors were treated alike, and there was no preference of one over another. All its demands were met at maturity.

There does not appear, from the facts found, to be any better ground for claiming that these payments made to the defendant were void than there is for making the same claim in reference to the numerous payments made in the regular course of business by this bank to its customers during many months prior to the closing of its doors. In order to uphold a recovery in an action like this, there should be some satisfactory evidence that the Cashier or other officer actually paid the money of the bank in contemplation of insolvency, for the purpose of giving preference to the payee, and with a view to prevent the application of the assets of the bank to the creditors generally, as provided in the National Banking Act. We think all the circumstances surrounding these deposits and payments forbid such an inference. The facts of this case, as found by the trial judge, fail to bring it within any of the authorities cited by the learned counsel for the appellant. The insolvency of this bank seems to have been covered up and concealed by the Cashier with great skill and ingenuity. It was not even discovered by the bank examiners in making their examination of the bank, and no one of the directors had the least suspicion of it. The fact that the defendant, entirely ignorant of the insolvency of the bank, was a director, does not, under such circumstances, as matter of law, charge him with liability for the payments made to him. In the trial of the case, and in weighing and balancing the evidence, that fact might have weight—in some cases controlling weight—with the Trial Court. But when, after the evidence is given, it is found that the director acted in good faith, was ignorant of any wrong doing or of the insolvency of the bank, then a payment made to him must be tested under Section 5242, like payments made to any other creditor of the bank. We have not deemed it important to review the evidence, for the purpose of showing that it was sufficient to sustain the findings of fact, for that was sufficiently done by the General Term. The judgment should be affirmed, with costs. All concur.

PROMISSORY NOTE—NEGOTIABILITY—STIPULATION FOR INTEREST.

Supreme Court of Missouri, Division No. 1, November, 1892.

HOPE *vs.* BARKER.

A clause in a promissory note to the effect that the instrument shall not bear interest if paid at maturity, and, if not paid at maturity, interest from date, does not render it non-negotiable.

This was an action against the defendant as indorser upon a note in the following form: "$194.25-100. Lee's Summit, Dec. 14th, 1887. One year after date I promise to pay to order of Dell Barker, agent, one hundred and ninety-four and 25-100 dollars, without interest if paid at maturity. If not paid at maturity, to bear 10 per cent. interest from date. For value received. Negotiable and payable at the Bank of Belton, Belton, Mo. John E. Watson."

BLACK, *J.:* The claim of the defendant is that the words, "without interest thereon if paid at maturity; if not paid at maturity, to bear 10 per cent. interest from date," render the note uncertain as to the amount to be paid, and for this reason it is not a negotiable promissory note. It is everywhere agreed that one of the rules in regard to negotiable paper is that the amount to be paid must be certain, and not made to depend on a contingency. There is, however, some difference of opinion in the application of the rule. In *Bank* vs. *Gay* (63 Mo., 33), the note, besides a promise to pay a certain sum at a specified date, with interest from maturity at a given rate, contained these words: "And if not paid at maturity, and the same is placed in the hands of an attorney for collection, we agree and promise to pay an additional sum of 10 per cent. as attorneys' fees." This promise to pay an attorney's fee was held to destroy the negotiable character of the note, because the payment of a part was uncertain, and made to depend upon a contingency. That ruling has been followed in subsequent cases, and is now the settled law of this State, whatever may be the rule in such cases elsewhere. (*Samstag* vs. *Conley*, 64 Mo., 476; *Bank* vs. *Marlow*, 71 Mo., 618; *Bank* vs. *Jacobs*, 73 Mo., 35.) To load down negotiable paper with such contingent collateral contracts can have no other effect than to destroy the simplicity of such paper, and we do not depart in the least from the rule declared in these cases. The rule as to the degree of certainty required in the statement of the amount to be paid may be illustrated by other well-known examples. Thus it is held that the negotiable character of a note or bill is destroyed by adding to the promise to pay a specified sum such words as these: "All other sums which may be due;" "all fines according to rule;" "the demands of the sick club at; etc., in part of interest." (1 Pars. Notes & B., 37.)

But it seems to us it ought to be conceded without argument that the cases before cited, and the illustrations just given, are entirely unlike the case now in hand. Tiedeman says: "It is also somewhat common in notes that are payable in installments to provide that, if the maker shall fail to pay any one of the installments, the whole sum shall become due and payable. Such a note is held to be negotiable." He cites *Carlon* vs. *Kennely*, (12 Mees. & W., 139.) which sustains the text. He goes on to say: "It is also sometimes provided in notes that, if any installment of interest should not be paid, the whole debt, principal and interest, shall then become due and payable. Such a note would undoubtedly be recognized as negotiable, there being no difference in principle between it and the note which is made to fall due upon the failure to pay an installment of the principal." (Tied. Com. Paper, § 25*d*.) In *Towne* vs. *Rice*, (122 Mass. 67,) it is said: "An additional rate of interest is provided for if the note shall not be met at maturity; but, as the sum to be paid is still definite and payable absolutely, this cannot affect the negotiability." And in *Riker* vs. *Manufacturing Co.*, (14 R. I., 402,) it is held that the reservation in a note of the right to pay the same before maturity, in installments of not less than 5 per cent. of the principal, does not render the note uncertain as to the amount or terms of payment. It is held in Pennsylvania, as by this Court, that these conditional "collection fee" contracts destroy the negotiability of a note, and in the discussion of such a case it was said: "Interest and costs of protest after non payment at maturity are necessary legal incidents of the contract, and the insertion of them in the body of the note would not affect its negotiability. * * * But a collateral agreement, as here, depending, too, as it does, upon its reasonableness, to be determined by the verdict of a jury, is entirely different." (*Woods* vs. *North*, 84 Pa. St., 407). Interest is but an incident to the debt, and it is a thing as to which it is usual and customary to contract even in negotiable paper. Surely it cannot be maintained that a note ceases to be negotiable because of the addition of such words as, "with interest from maturity at the rate of 8 per cent. per annum." This is but another way of expressing an agreement that, if the note is not paid at maturity, it shall from that time bear interest at the rate of 8 per cent. per annum. The only difference in the case just supposed and the one in hand is that here the principal is to bear interest from the date of the note, if not paid at maturity, instead of bearing interest from and after maturity. In both cases the amount to be paid is fixed, definite and certain. The judgment of the Kansas City Court of Appeals is therefore affirmed, that Court having affirmed the judgment of the Circuit Court.

NATIONAL BANKS—PREFERENCES—RENEWAL NOTES.

Supreme Court of Alabama, November 3, 1893.

FIRST NATIONAL BANK OF DECATUR *vs.* JOHNSTON.

Notes given in renewal of other notes held by a National bank, the original notes not being returned to the maker, are not "evidences of debt," or "assets," within Rev. St. U. S., § 5242, declaring void all transfers of "evidences of debt" owing to any National bank made after insolvency, or in contemplation thereof, to prevent the application of the assets to the bank, as required by law, or with a view to prefer creditors.

This was a suit on two notes. Judgment below was for defendant, and plaintiff appealed.

Appellee, being indebted to the First National Bank of Sheffield, on the 15th day of November, 1889, sent to said bank his two promissory notes of that date for $1,500 each, payable at 90 days one of said notes being payable to appellee's own order, and indorsed by him, and the other having the name of the payee in blank, but was indorsed by appellee. The two papers were given in renewal and extension of other paper of appellee held by the bank, and which appellee expected to be surrendered in consideration of the two notes above described. At the time appellee forwarded to the Sheffield bank the two renewal notes, the original notes, in lieu of which they were given, were in New York in the possession of the Merchants' National Bank, the same having been discounted with that bank by the Sheffield bank in the usual course of trade, and the Cashier of the Sheffield bank negotiated the renewal notes to the Decatur bank, as above stated, without taking up and returning the original notes to appellee.

THORNINGTON, *J.*, (omitting part of the opinion):

Section 5242, Rev. St. U. S., so far as material to this case, declares that "all transfers of the notes, bonds, bills of exchange, or other evidences of debt owing to any National banking association, or of deposits to its credit, * * * or other valuable thing for its use, or for the use of any of its shareholders or creditors, * * * made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets in the manner prescribed by this chapter, or with the view to a preference of one creditor to another, except in payment of its circulating notes, shall be utterly null and void," etc. The object of this statute, manifestly, is to secure the preservation, and distribution among all its creditors, of the assets belonging to the bank, fairly and without preferences. By its terms it operates only upon notes, and other evidences of debt, owing to any National bank, and which are assets of such bank. Preferential transfers of such notes, only, are avoided by this statute. Transfers by the bank of notes and other evidences of debt in its possession, which are not part of its assets, but the property of another, are not within the letter or influence of this statute, and the validity of such transfers must be determined independently of its provisions. (*Bank* vs. *Blye*, 101 N. Y., 303.) The notes sued on in this action were never evidences of debt owing to the Sheffield National Bank, nor any parts of its assets, within the meaning of the statute. They were executed by appellee for a specific purpose only, viz., in renewal and extension of two original notes which were to have been delivered up; and when they were sent by appellee to the Sheffield National Bank for that purpose they could only have become assets of that bank, and owing to it, by taking the place of the original notes evidencing the debt the new notes were intended to renew or extend. Until they were so applied, the position of the Sheffield bank in respect of said notes was nothing more than that of a bailee.

The original notes having, prior to that time, been transferred by the Sheffield bank to the bank in New York, and being held and owned by the latter, the condition upon which the new notes were to become assets of and owing to the Sheffield bank was impossible of performance, and has never been performed. Had the new notes been in the possession of the Sheffield bank when it failed, and gone into the hands of the Receiver, they could not have been collected or distributed as assets of the bank, but would have been the property of and surrendered to appellee. The transfer of these notes by the Sheffield bank to the Decatur bank did not, therefore, diminish or affect the assets of the former bank, and for that reason its creditors were in no wise injured or defrauded by the transaction, and it was not a preference or transfer upon which the statute operates.

TAXATION OF DEPOSITS.

Court of Civil Appeals of Texas, December 15, 1892.

CAMPBELL *vs.* WIGGINS, TAX COLLECTOR.

Although a bank deposit is usually held to be nothing but a debt due from the bank, it is regarded by the tax laws of Texas as cash, and as such is not subject to be set off by the liabilities of the taxpayer.

The fact that the bank may not have on hand the entire amount of money so assessed does not relieve the depositor from taxation on such amount.

This was a suit by T. M. Campbell, Receiver of the International & Great Northern Railroad Company, against Ed. B. Wiggins, Collector of Taxes of Smith County, to enjoin the collection of certain taxes. From a judgment in favor of defendant, plaintiff appealed. The assessment was against money deposited by the Receiver of said railroad with Bonner & Bonner, bankers, in the City of Tyler.

GARRETT, *C. J.*, (omitting part of the opinion): Appellant contends that the assessment should be reduced because * * * the amount of the assessment was not in the hands of Bonner & Bonner in actual cash, although the deposit account showed more than that amount to the credit of the Receiver. Facts were also stated showing that the Commissioners' Court, sitting as a Board of Equalization, had fixed the amount of the assessment. Although a deposit subject to the sight check of the depositor is usually held to be nothing more than a debt against the bank, still it is regarded by the law of this State providing for the rendition of property for taxation as cash, and as such it is not subject to be set off by the liabilities of the taxpayer. Rev. St., arts. 4672, 4692 (6). This cannot be disproved by showing that, as a matter of fact, the bank did not have so much money in its vaults at the time, because sufficient funds of the bank may be on deposit in other banks to meet its draft for the entire amount; and under well-known banking rules a percentage of the deposits is usually loaned to customers. Still, whenever the sight check of the depositor is presented, it must be paid, and, in ordinary business affairs, such deposits are treated as money; and the statute defines money as including "every deposit which any person owning the same or holding in trust, and residing in this State, is entitled to withdraw in money on demand."

REPLIES TO LAW AND BANKING QUESTIONS.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: ——, COLORADO, January 20, 1893.

SIR:—A drew a check on B's bank, payable to the order of C., who indorsed it in blank. It was presented over the counter to B by D, who indorsed it under the words "without recourse on me." B refused payment of the check because of the qualified indorsement, it being a rule of the bank to pay no checks except they bear the unqualified indorsement of the party presenting the same for payment. C is a depositor in B's bank, and his signature as indorser was not questioned by B. CASHIER.

Answer.—When the check was indorsed in blank by C, it became payable to bearer, and no further indorsement was necessary to make the authority of B to pay the same complete. For B's protection it was only necessary that the indorsement of C should be genuine. By presenting the check, D warranted this to be the fact (Byles on Bills, 161; *Barton* vs. *Trenton*, 3 Head, 167; *Flynn* vs. *Allen*, 57 Pa. St., 482; *Wynn* vs. *Poynter*, 3 Bush, 54), and his indorsement "without recourse" was likewise an implied warranty to that effect. It was certainly, then, all that B had the right to require.

Editor Rhodes' Journal of Banking: GREENWOOD, Neb., Jan. 23, 1893.

SIR:—A owns $5,000 of the capital stock of a National bank. He borrows $5,000 of B, giving as security his certificate of stock, indorsed in blank. He also borrows $5,000 of C, without security, and a like sum from the bank in which he owns the stock. The notes all bear the same date. C becomes alarmed, and at maturity brings suit, procures judgment, and levies upon A's stock, it standing in his name on the books of the bank. The question is, Would the bank, under the law, have any prior lien upon its own stock for obligations which the shareholders might owe it that would protect it against loss by the levying of the execution? What would be B's position, having the assigned certificate. N. H. MEEKER, *Cashier.*

Answer.—The bank could not assert a prior lien, or any lien whatever, upon the stock; for a National bank cannot acquire a lien on its own stock; and if it has a by-law giving any such lien, such by-law is void. (*Bullard* vs. *National Bank*, 18 Wallace, 589; *Bank* vs. *Lainer*, 11 Wallace, 369; *Conklin* vs. *The Second National Bank*, 45 N. Y., 655,) The bank might attach the stock, and sell it on execution. (*Hagar* vs. *Union National Bank*, 63 Me., 509), and in such case would be entitled to the same priorities, as any other attaching or judgment creditor. In the case above stated, however, C has acquired priority over the bank by the levy of his execution. But under such execution only A's interest in the stock can be sold, and B's interest therein as pledgee will be protected, even though the transfer to him was not entered on the books of the bank. (*Continental National Bank* vs. *Eliot National Bank*, 5 Fed. Rep. 369; *Scott* vs. *Pequonnock National Bank.*, 15 Fed. Rep., 494; *Sibley* vs. *Quinsigamond National Bank*, 133 Mass., 515.)

Editor Rhodes' Journal of Banking: —— Mich., January 21, 1893.

SIR:—Many of our depositors who take certificates of deposit are woodsmen, who, after depositing their money, leave the certificate of deposit with us for safe keeping, taking a receipt for the same in the following form: "—— Bank. Deposited by John Smith, c-d. Nos. 14608, 11,416 for safe keeping, owner's risk. —— Cashier." The other day we received through another bank one of these receipts indorsed as follows: "——, Cashier. Please pay amount of within certificate to ——, Cashier or order and oblige John Smith." Were we right in refusing to pay the amount to the Cashier named in such indorsement? We are aware, or think, that the Supreme Court would protect us if we had paid, but this would have thrown the burden of proof on us.

CASHIER.

Answer.—The bank had a perfect right to refuse to pay on such an order, though we think it could have been fully protected had it seen fit to make the payment.

Editor Rhodes' Journal of Banking: JACKSONVILLE, FLA., January 3, 1893.

SIR:—A customer gives a note, say in payment of a bill of goods, and makes it payable at his bank. On the day of maturity it is presented by a bank "runner," and he is requested to present it at the office of the maker, he preferring to give check rather than have the note charged directly to his account. The maker being out of town, is it not the duty of the bank holding the paper to have it officially presented by a notary before it can be legally protested for non-payment? If it is not incumbent on the bank holding the item to have its notary present the item, what would be the result should the maker of the note, subsequent to the hour of first presentation by the "runner," make his account good for the amount and the item still be protested? Would he not have a good case for damages against the holder of the paper?

THOS. P. DENHAM, *Assistant Cashier.*

Answer.—In order that the protest should be effectual it must be made by the notary himself or by his clerk (Chitty on Bills, 10 Ed., 355; *Commercial Bank of Kentucky* vs. *Varnum*, 49 N. Y., 269, 277), and a protest based upon a presentment made by a runner of the bank, unless, perhaps, he was the clerk of the notary, would not be a good protest. But though the protest would be ineffectual for the purpose for which it was made, viz.: to charge the prior parties on the instrument, and afford evidence of the dishonor thereof, it would not follow that the maker could recover damages for an improper protest. The failure of the bank to pay the note when presented by the runner dishonored it, and except for the purposes of the evidence furnished by a formal protest no further presentment was necessary. It would be difficult to see, therefore, on what theory the maker could claim damages.

Editor Rhodes' Journal of Banking: CHARLOTTE, Mich., Jan. 3, 1893.

SIR:—Suppose A desires to open an account in the names of A and B, and a book is issued to them. Has B, in case of the death of A, any right to check against the account? Would the fact of B being A's wife make a difference? Can two persons make a joint deposit so in case of death of one of them the survivor can obtain immediate possession?

H. K. JENNINGS, *Cashier.*

Answer.—The general rule in this country now is that where two or more have an interest in the same property, they are *prima facie* deemed to be tenants in common, and not joint tenants, and the presumption is against the right of survivorship. But joint tenancies are not forbidden, and if it is expressly agreed that the parties shall hold the property jointly, the law will give effect to such intention, and there is no reason why a joint tenancy may not exist in a bank deposit as well as in any other kind of property. To insure to the survivor the right to obtain immediate possession, it would only be necessary to file with the bank a written declaration of the parties that they made the deposit as joint tenants. Where, however, the parties are husband and wife, the question would have to be decided by the statutes applicable to married women, and these differ in nearly every State.

ANNUAL REPORT OF THE SECRETARY OF THE TREASURY.

CHARLES FOSTER, SECRETARY.

The revenues of the Government from all sources for the fiscal year ending June 30, 1892, were $425,868,260. The expenditures for the same period were $415,953,806, leaving a surplus at that date of $9,914,453.

To this sum was added $16,232,721, deposited in the Treasury under the Act of July 14, 1890, for the redemption of National bank notes; $4,910 received for 4 per cent. bonds issued for interest accrued on refunding certificates converted during the year, and $14,418,383.32 taken from the cash balance in the Treasury, making a total surplus of $40,570,467.98.

As compared with the fiscal year 1891, the receipts for 1892 have fallen off $32,675,972.81, while there was a decrease of $10,349,354 in the ordinary expenditures.

For the present fiscal year the total revenues are estimated at $463,336,350 and total expenditures at $461,346,350, leaving an estimated surplus for the year of $2,000,000.

It is further estimated that the revenues of the Government for the fiscal year of 1894 will be $490,121,365 and the total estimated appropriations, exclusive of sinking fund, $457,261,335, making an estimated available balance of $58,852,407.

No account is made in the foregoing of the requirements of the sinking fund for 1894, amounting to $48,600,000 beyond the redemption of the past due bonds, fractional currency, and National bank notes estimated at $5,000,000.

The estimated receipts are based upon conditions prevailing prior to the late election. Public opinion having decreed a change of policy, particularly in the tariff laws, the altered conditions resulting therefrom render it impossible at the present time to estimate the annual income with any marked degree of accuracy, and it is impossible to predict the effect that such proposed radical changes would have upon the future revenues of the Government.

SINKING FUND.

The Act of February 25, 1862, Section 5 (12 Stat., 346), provides that all duties on imported goods shall be paid in coin, and that the coin so paid shall be set apart as a special fund and applied, first, to the payment of interest on bonds and notes of the United States; and second, "to the purchase or payment of one per centum of the entire debt of the United States, to be made within each fiscal year after the first day of July, eighteen hundred and sixty-two, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct."

The total requirements of the fund to June 30, 1892, as shown by the appended table, aggregate $924,394,426.34. The bonds and other securities annually applied to the fund, including interest paid thereon, aggregate $935,337,061.20, and the total redemption of the debt, including amounts applied to the fund since August 31, 1865, when the debt attained its highest point, aggregated $1,914,905,107.83, or $990,510,681.49 more than was required to be paid by the terms of the Sinking Fund Act. It is hardly probable that more than about $7,000,000 can be credited to the fund during the present fiscal year as against a legal requirement exceeding $48,000,000, and further applications to the fund during succeeding years must necessarily be limited to such small sums as may from time to time be paid for past due bonds, fractional currency, and National bank notes redeemed under the Act of July 14, 1890.

The Act of March 3, 1881 (21 Stat., 457), provides that the Secretary of the Treasury may at any time apply the surplus money in the Treasury not otherwise appropriated to the purchase or redemption of United States bonds. In view of this provision and of the very large decrease of the debt already effected in excess of the legal requirements of the Act, coupled with the probable future condition of the National finances, I would strongly urge its repeal. Sound policy seems to dictate this course. The conditions which called for its enactment have long since passed away, and no reason for its continuance any longer exists. I therefore recommend its unconditional repeal.

One of the embarrassments to the Treasury, in the opinion of the Secretary, is the inability, with the limited amount of cash on hand above the one-hundred-million reserve, to keep up a sufficient gold supply. When the demand comes for the exportation of gold the Treasury is called upon to furnish it. If this demand should prove to be as large the coming year as it has been for the past two years, gold in the Treasury would be diminished to or below the reserve line.

The status of this reserve and its amount have recently been subjects of discussion. In the Bank Act of 1882 Congress gave expression to its belief that $100,000,000 in gold was a suitable reserve; by providing that whenever the amount of gold in the Treasury should fall below that sum the issue of gold certificates should cease. In 1885 the then Secretary of the Treasury adopted the practice of reporting $100,000,000 of the gold in the Treasury as a "reserve for the redemption of United States notes," and recently the majority of the Judiciary Committee of the present House of Representatives expressed the opinion that under existing law the maintenance of this reserve is obligatory.

But if $100,000,000 in gold was a suitable or necessary reserve in 1882 and in 1885, it would seem clear that a greater reserve is necessary now. It should be remembered that since 1882 we have added to our silver circulation the sum of $259,016 182 in standard silver dollars coined under the old Silver Act of 1878. These dollars are nearly all outstanding, and largely represented by silver certificates. We have also increased the legal tender paper circulation by issuing about $120,000,000 of the Treasury notes, authorized by the Act of July 14, 1890, and to this we are adding about four millions each month in payment of silver bullion purchased.

It is true that silver certificates are not redeemable in gold, and that the Treasury notes of 1890 are redeemable in coin; but since it has been declared to be the established policy of the United States to maintain the two metals, silver and gold, on a parity with each other, it is obvious that this large addition to our circulation has increased the possible charge upon our gold reserve.

In view, therefore, of these increased and increasing liabilities, the reserve in the Treasury for the redemption of the Government obligations should, in my opinion, be increased to the extent of at least 20 per cent. of the amount of Treasury notes issued and to be issued under the Act of July 14, 1890.

As will be seen by the estimates submitted, the receipts of the current and the next fiscal year are not likely, if present conditions continue, to fall below expenditures. Yet, in view of the fact that the surplus for this year will be small, upon the basis stated, with the probability of a falling off in receipts for causes mentioned, I think the revenues should be so increased as to enable the Treasury Department to maintain a gold reserve of not less than $125,000,000—to maintain a comfortable working balance in the Treasury cash. As a general revision of our customs laws is now probable, I do not feel like suggesting any special method for increasing the revenue, though I should otherwise think that an additional tax on whisky, which could be collected without additional cost, would furnish an easy method.

PUBLIC MONEYS.

The monetary transactions of the Government have been conducted through the Treasurer of the United States, 9 sub-treasury officers and 202 National bank depositaries. The number of such depositaries on November 1, 1892, was 159, and the amount of public moneys held by them on that date, including those to credit of the Treasurer's general account and United States disbursing officers, was $15,862,414.81, a reduction, since November 1, 1891, in number of depositaries of 24 and in amount of holdings of $4,515,688.87.

LOANS AND CURRENCY.

Since March 1, 1889, there have been purchased and cancelled United States bonds of the face value of $233,729,150, for which there was expended the sum of $270,952,431.20. Of the bonds so purchased $121,615,950 were four per cents and $112,113,200 four and one-half per cents. The expenditure was $55,352,493.51 less than the sum which would be required to redeem the bonds and pay interest thereon to the date of their maturity.

During the same period there were redeemed at par $25,504,700 four and one half per cent. bonds, and a further amount of $25,364,500 of the same loan has been continued during the pleasure of the Government, to bear interest at the rate of 2 per cent. per annum. The annual interest charge March 1, 1889, was $34,578,459.80; it is now $22,893,990.80. The increase in notes of $20 was $31,864,500, and there was a decrease in notes of denominations of $50 and above of $10,376,325. The volume of money in circulation has increased during the twelve months ended November 1, 1892, as shown by the following table:

	Nov. 1, 1891.	*Nov. 1, 1892.*
Gold coin	$406,770,367	$411,252,197
Standard silver dollars	62,135,461	61,672,455
Subsidiary silver	62,105,136	65,985,408
Gold certificates	136,100,319	120,255,349
Silver certificates	321,142,642	324,552,532
Treasury notes, 1890	66,473,484	114,567,423
United States notes	332, 53,989	332,080,234
Currency certificates, June 8, 1872	10,765,000	10,550,000
National bank notes	166,445,763	165,224,137
	$1,564,492,261	$1,606,139,735

The principal changes are in gold certificates and Treasury notes of the Act of July 14, 1890. Of the former there is a decrease of $15,844,970, and of the latter an increase of $48,093,939.

PRECIOUS METALS.

The value of the gold deposited at the mints and assay offices during the fiscal year of 1892 was $66,476,975.98, of which $61,131,460.04 were original deposits, and $5,345,515.94 were re-deposits.

Of the original deposits, $31,961,546.11 were the product of our own mines; $24,775,342.39 foreign gold coin and bullion; $537,967.86 light weight domestic gold coin; and $3,836,603.68 old material.

The deposits and purchases of silver aggregated 72,121,268.03 standard ounces, of the coining value of $83,922,930 01, including 640,461.19 standard ounces, of the coining value of $745,281.92 re-deposits.

Of the silver received, 63,130,608.86 standard ounces, of the coining value of $73,461,072.08, were the product of our own mines; 2,118,077.89 standard ounces, of the coining value of $2,464,672.45, were foreign silver bullion and coin; 5,593,907.71 standard ounces, of the coining value of $6,509,274.43, were uncurrent domestic coins; 1,921.58 standard ounces, of the value of $2,235.96, were trade dollars; and 636,290.85 standard ounces, of the coining value of $740,411.17, consisted of old plate, jewelry, etc.

COINAGE.

The coinage of the mints during the last fiscal year aggregated 113,556,124 pieces, valued as follows:

Gold	$35,506,987 50
Silver	8,329,467 00
Subsidiary silver	6,659,811 60
Minor coins	1,296,710 42
Total	$51,792,976 52

The number of silver dollars coined during the fiscal year from bullion purchased under the Act of July 14, 1890, was 3,450,995, and from trade dollar bulllion 4,878,472, a total of 8,329,467 silver dollars upon which the seigniorage or profit was $930,487.11.

The total coinage of silver dollars from March 1, 1878, to November 1, 1892, has been as follows:

Act of February 28, 1878	$378,166,793
Act of July 14, 1890	33,167,570
Act of March 3, 1891 (trade dollar bullion)	5,078,472
Total	$416,412,835

The net profit on the coinage of silver during the fourteen years ended June 30, 1892, including the balances in the coinage mints on July 1, 1878, has aggregated $72,736,065.

WORLD'S COINAGE.

The coinage of gold and silver by the various countries of the world aggregate for the calendar year 1891, so far as reports have been received:

Gold	$119,183,735
Silver	135,008,142

PURCHASES OF SILVER.

The purchases of silver during the last year were made under the provisions of the

Act of July 14, 1890, requiring the purchase of 4,500,000 ounces in each month. The total amount purchased was 54,335,748 fine ounces, costing $51,106,608, the average cost being 94 cents per ounce.

The total amount of silver purchased under the Act of July 14, 1890, from August 13, 1890, to November 1, 1892, has been 120,479,981 fine ounces, costing $116,783,590, an average cost of $0,969 per ounce.

PRICE OF SILVER.

The price of silver fluctuated during the last fiscal year from $1.02 to $0.855 per fine ounce, a variation of 16½ cents an ounce.

Since July 1, 1892, the price still further declined until, on August 11, 1892, it reached 83 cents a fine ounce, the lowest price on record.

The price November 1, 1892, was 86 cents per fine ounce.

The average price of silver during the year, based upon London quotations, was $0.937 a fine ounce.

MONETARY CONFERENCE.

As early as the month of April, 1891, investigation was begun by this Department to ascertain the state of public sentiment in Europe regarding the propriety of an agreement to hold a Monetary Conference of representatives of the leading nations on the subject of the money uses of silver.

Upon the ascertainment that the leading nations were favorably disposed to the holding of such a Conference, the United States addressed an invitation, through the State Department, to the Governments of Europe, of Mexico and Turkey.

All of the countries to which this invitation was addressed accepted.

By conference with them, after considerable delay, occasioned by a variety of causes, Brussels, Belgium, was agreed upon as the place, and November 22, 1892, as the time, for the Conference to assemble.

For this country five Commissioners were appointed, as follows: Hon. John P. Jones, of Nevada; Hon. Wm. B. Allison, of Iowa; Hon. James B. McCreary, of Kentucky; Mr. Henry W. Cannon, of New York, and E. Benjamin Andrews, of Rhode Island.

By usage the American Minister, Mr. Terrill, was added.

Whatever may be the outcome of the Conference, it is safe to predict that a clearer idea will be had of the views and purposes of the countries represented.

NATIONAL BANKS.

The report of the Comptroller of the Currency gives complete and detailed information as to the organization, condition and management of all active and failed National banks during the year ended October 31, 1892.

[The full text of the Comptroller's report is published in this issue of the JOURNAL.]

CUSTOMS ADMINISTRATION.

The benefits accruing from the operation of the Act of June 10, 1890, known as the "Administrative Act," have been so decided as to have demonstrated the wisdom of its enactment. The reports that have reached this Department show that both the importers and customs officers have obtained relief from many evils which it was intended to remedy, and undervaluations have been decreased. Special attention is invited to the Annual Report of the General Appraisers as showing the valuable service they are rendering and emphasizing the wisdom of the establishment of this tribunal. Certain minor features of this Act, however, in my opinion should be amended, especially Sections 7, 8, 15 and 19, to which I invited the attention of Congress in my last Annual Report. I renew the recommendation I then made—that Section 7 be so modified as to limit the additional duty to not more than 100 per cent.; that Section 8 be repealed, as experience has shown that it is impossible of practical administration; that Section 15 be so amended as to authorize the taking of testimony on appeal from the decision of the Board of General Appraisers, by Commissioners appointed by the Court for that purpose, as well as by one of the General Appraisers; and that Section 19, which imposes additional duties on unusual coverings, be modified so that such coverings shall pay but a single duty, at the rate to which they would be subject if imported separately, not less than that imposed upon their contents. In this connection, I renew the recommendations of my predecessors and myself as to certain other amendments of the customs laws. Among such recommendations I invite especial attention to the following, which I deem of urgent importance:

First.—The abolition of all fees, commissions, emoluments and perquisites now authorized or allowed to Collectors or Surveyors of Customs, and the compensation of these officers by fixed salaries.

Second.—The consolidation of the customs districts demanded alike for reasons of economy and the changed condition of commerce and transportation. This might be accomplished by authorizing the Secretary of the Treasury to change the boundaries of customs districts, and to abolish districts when the expenditures exceed the receipts therein. The Secretary of the Treasury should also have authority to designate or discontinue minor ports within collection districts.

Third.—The revision and codification of the customs and navigation laws, which I especially urge, with such modification and new provisions as practice and experience have demonstrated are required for the efficiency of the service. The original legislation on these subjects dates from the foundation of the Government; subsequent partial and fragmentary legislation has introduced confusion and doubt as to the true intent of the law, and consequent embarrassment in its administration. The result has been litigation and loss to business interests that would be in a great measure obviated by the action I recommend.

FOREIGN COMMERCE.

The value of our foreign commerce (imports and exports of merchandise) during the last fiscal year was greater than for any previous year. It amounted to $1,857,680,610, as against $1,729,397,006 during the year 1891, an increase of $128,283,604.

The value of imports of merchandise during the last fiscal year amounted to $827,402,462, as against $844,916,196 during the fiscal year 1891, a decrease of $17,513,734.

The value of exports of merchandise during the last fiscal year was the largest in the history of our commerce, amounting to $1,030,278,148, as against $884,480,810 during the fiscal year 1891, an increase of $145,797,338.

The value of the exports of merchandise exceeded the value of imports of merchandise $202,875,686.

INTERNAL REVENUE.

The receipts from the several objects of taxation under the internal revenue laws for the fiscal years ended June 30, 1891 and 1892, are as follows:

Objects of taxation.	*Fiscal year ending June 30—*		*Increase.*	*Decrease.*
	1891.	*1892.*		
Distilled spirits	$83,335,963 64	$91,309,983 65	$7,974,020 01	
Manufactured tobacco	32,796,270 97	31,000,493 07		$1,795,777 90
Fermented liquors	28,565,129 92	30,037,452 77	1,472,322 85	
Oleomargarine	1,077,924 14	1,266,326 00	188,401 86	
Miscellaneous collections	260,127 30	243,288 86		16,838 44
Total	$146,035,415 97	$153,857,544 35	$7,822,128 38	

The receipts from all sources of internal revenue for the fiscal year ending June 30, 1892, were	$153,857,544 85
The receipts from the same sources for fiscal year ended June 30, 1891, were	146,035,415 97
Making an increase in the receipts for the fiscal year just ended of	$7,822,128 33
The total cost of collection for the fiscal year ended June 30, 1892, was	$4,315,046 26
The total cost of collection for the fiscal year ended June 30, 1891, was	4,205,655 49
Increased cost of collection for the fiscal year ended June 30, 1892	$109,390 77

It is estimated that the receipts from all sources of internal revenue for the fiscal year ending June 30, 1893, will aggregate $165,000,000.

The percentage of cost of collection for the fiscal year ended June 30, 1892, was 2.80 per cent., as against 2.88 for the fiscal year ended June 30, 1891, the increase of collection resulting in a decrease in the percentage of cost of collection, even with the extraordinary expenditures above referred to.

Counterfeit Silver Coin in Europe.—An interesting piece of information brought out during the session of the Brussels Monetary Conference is the fact that there are at present not less than $100,000,000 of counterfeit silver money in circulation in France, Belgium, Switzerland, Italy, Spain and Portugal.

FLORIDA.

CONVENTION OF THE STATE BANKERS' ASSOCIATION.

The fifth annual Convention of the Florida Bankers' Association met at the rooms of the Board of Trade in Jacksonville, January 19.

F. W. Hoyt, of Fernandina, President of the Association, called the Convention to order.

Rev. W. H. Dodge opened the session with prayer, after which Hon. J. E. Hartridge delivered an address of welcome.

W. L. Palmer, President of the Citizens' National Bank of Orlando, responded on behalf of the Association.

The President announced that at a meeting of the Executive Committee a programme of procedure was decided upon, which the Secretary read.

A call of the roll showed delegates present from nearly one-half the banks in the State.

President Hoyt then delivered his annual address, in the course of which he said:

"The number of members the Association now has is an indication of an active interest by the bankers of the State in the organization. The practical benefit of such an institution as this cannot be over-estimated. By meeting as we have here to-day we are enabled to become better acquainted with each other personally; to learn by consultation the needs of our profession in the different parts of the State, and to act together in an effort to secure beneficial legislation; by an exchange of views to formulate new methods for the every-day transactions of the office, and, above all, to cultivate a spirit of fellowship and friendship, which can result only in harmony of action and an elimination of unnecessary rivalries and jealousies, if such have existed."

Several amendments to the Constitution were suggested and recommendations in regard to legislation affecting banks made, among others, that of abolishing days of grace in the State.

On this subject the President said: "The drift of opinion of bankers' associations appears to be in this direction. There seems to be hardly any good reason for continuing the practice of allowing grace on notes, drafts, etc.; but the difficulty of obtaining uniform legislation in the several States on the subject will, of course, make progress in establishing a different custom very slow. Our State can afford, however, to be early to act in the movement that seems destined in time to become general in this country."

The Association was also recommended to petition Congress to make an appropriation to defray the expense of transporting to Washington soiled and mutilated currency for redemption.

The President concluded as follows: "I did not have the pleasure of being present at your last annual meeting when you chose me President of the Association; and I now desire to express to you my appreciation of the honor which was then so undeservedly conferred upon me. Accepting with reluctance the responsibilities of the office, I have had in the discharge of its duties the cordial and constant aid of your other officials—without which little of credit or benefit to the Association would have been accomplished. We are engaged in a pursuit in which we not only invest and care for our own funds, but we are the trustees for thousands of stockholders and depositors in our several institutions, and it is due to them at least that we should omit nothing that may enable us to discharge that trust more creditably and satisfactorily. The duty which we owe to the entire business community of our commonwealth of successful management of the great interests committed to our care, is alone of sufficient magnitude to call us together in consultation in a united effort to better understand and discharge that duty.

If at this meeting we shall come into a closer personal relationship; if we shall be awakened anew to an appreciation of the grave responsibilities that rest upon us; if we shall develop but one new idea that shall tend in the direction of safer and better banking, then may we certainly feel that the little time we have devoted to this meeting has been well and profitably spent."

T. W. Conrad, Secretary and Treasurer, read his annual report, which was also received and ordered spread on the minutes.

A Commitee to act on the suggestions of the President and Secretary, consisting of H. T. Baya, W. Tyler and J. L. Giles, was appointed.

Letters were read by the Secretary from the Treasurer and Comptroller of Florida, the Secretary of the Treasury of the United States, the Comptroller of the Currency of the United States, and from a number of presidents of State bankers' associations, all regretting their inability to be present at the Convention, and expressing the best wishes for the success of the Florida Bankers' association.

J. M. Schumacher, President of the First National Bank of Florida, at Jacksonville, offered a resolution deploring the growing tendency of banks all over the country to fail to write instructions regarding non-protestable paper. He went on to explain what serious complications might arise from such neglect.

The resolution was then referred to the committee on resolutions, which consists of W. L. Palmer, J. N. C. Stockton and G. C. Stapylton.

The Convention then adjourned to 2 o'clock p.m.

AFTERNOON SESSION.

G. C. Stapylton, President of the Leesburgh & County State Bank, Leesburgh, read and interesting and lengthy paper on "Country Banking," especially in South Florida.

By request of the President, Mr. Stapylton read a paper on "Bank Taxation," prepared by C. H. Newell, Cashier of the Bank of Tavares.

The Committee to which was referred the reports of the President and Secretary and Treasurer reported favorably on most of the recommendations made in them.

On motion of Nat Poyntz, Cashier of the First National Bank of Orlando, by-law No. 1 was amended so as to read "The annual meetings of this Association shall be held on the third Thursday in January in each year at Jacksonville, unless otherwise ordered by the Executive Committee."

The Committee appointed to nominate officers for the ensuing year reported the following: President, F. W. Hoyt, President First National Bank, Fernandina; Secretary & Treasurer, Thos. W. Conrad, Assistant Cashier Merchants' National Bank, Jacksonville; first Vice-President, F. P. Forster, Cashier First National Bank, Sanford; second Vice-President, T. C. Taliaferro, Cashier First National Bank, Tampa; third Vice-President, Warren Tyler, Cashier Polk County National Bank, Bartow.

Executive Committee: Bion H. Barnett, Cashier National Bank of Jacksonville; Henry G. Aird, Cashier State Bank of Florida, Jacksonville; G. C. Stapylton, President Leesburgh & County State Bank, Leesburgh.

On motion the Secretary was directed to cast the ballot of the Association for the nominees, which he did, and they were declared elected.

After the adoption of resolutions of thanks the Convention adjourned *sine die*.

More Money Not Needed.—We know of no other delusion shared by as many people as the idea that the country needs more money. It is founded on two other delusions: first, that the amount of money which a country requires in circulation must be directly proportioned to the extent of its business and the number of its population; and, second, that if there were more money issued, each individual would, in some unknown way, get a share of it. If we could get the truth understood on these wo points, we should probably hear very much less in future of schemes for currency inflation. As to the second of them, we have been adding to the volume of our currency year by year at an enormous rate, and are putting out from $50,000,000 to $60,000,000 of silver notes every year. Does any man find it easier to get a dollar than it was before? Is he able to secure his share, or any share, of this increased currency except by giving for it labor or service of some kind, precisely as he did before the currency was inflated? What prospect is there, then, that it will be any easier for the individual to get more money than it is now if the volume of currency be indefinitely expanded? For instance, there was in circulation on the first day of the present year about $1,588,781,729 of all sorts of currency, estimated at $24.56 per capita; while in 1879 the money in the hands of the people amounted to but $816,266,722, or about $16.27 per capita. Yet we were more prosperous then than now. The New York banks have at this moment upwards of $37,000,000 over their regular reserves lying idle, waiting for some sort of investment. What good does it do the multitude? Yet that is what always becomes of an excessive issue of money, and would even if it were issued direct to farmers, on the Sub-Treasury plan. With the certainty that follows the operation of the law of gravitation, it tends to collect at the great monetary centres and lie there useless, provoking speculation, disturbance and loss; refusing to come out and assist industry when it is most needed, piling up when and where it will be least used, and becoming a more disturbing factor in business in direct proportion to the quantity of it. The one thing that we do not need is more money of the kind now issued and in circulation.—*St. Paul Pioneer Press.*

ANNUAL REPORT OF THE DIRECTOR OF THE MINT.

EDWARD O. LEECH, DIRECTOR.

Following is a report of the operations of the mints and assay offices of the Unitde States for the fiscal year ended June 30, 1892, being the twentieth annual report of the Director of the Mint and the fourth of the same series signed by the present incumbent:

DEPOSITS AND PURCHASES OF GOLD AND SILVER.

GOLD.

The gold deposits at the mints and assay offices of the United States during the fiscal year ended June 30, 1892, including gold contained in silver deposits and purchases, aggregated 3,573,137.461 standard ounces, of the value of $66,476,975,98, against $59,635,678.08 in the preceding fiscal year, an increase of $6,851,297.90.

Of the gold deposited, 3,285,815.979 standard ounces, of the value of $61,131,460.04, were original deposits, and 287,321.482 standard ounces, of the value of $5.345,515.94, were redeposits.

Of the redeposits $1,085,820.30 consisted of fine bars bearing the stamp of the United States assay office at New York, being large gold bars redeposited for small, and $4,259,465.39 were uuparted bars, representing the deposits at the minor assay offices shipped to the mint at Philadelphia for refining and coinage.

Of the gold bullion, received at Government institutions during the fiscal year, $31,961,546.11 was the product of our own mines, against $31,555,116.85 of the same class of bullion deposited in the preceding fiscal year, an increase of $406,429.26.

Of the domestic gold bullion received at Government institutions during the year, $17,944,737.53 were fine bars bearing the stamp of private refineries and $14,016,808.58 were unrefined domestic bullion.

SILVER.

The deposits and the purchases of silver, including silver contained in gold deposits, aggregated during the last fiscal year 72,121,268.08 standard ounces, of the coining value ($1.16 4-11 per standard ounce, or $1.2929 per fine ounce) of $83.922,930.01, against $83,630,154.31 in the preceding year, and increase of $292,775.70. Of the silver received at Government institutions during the year 640,461.19 standard ounces, of the coining value of $745,263.92, were redeposits, so that the original deposits of silver aggregated 71,480,806 84 standard ounces, of the coining value of $83,177,666.09.

Of the silver received, 69,513,166.79 standard ounces, of the coining value of $69,251,694.98, consisted of fine bars bearing the stamp of private refineries in the United States. All such bars are classified at Government institutions as of domestic production. As a matter of fact, such bars contain foreign as well as domestic silver, since nearly all the silver imported into the United States in the form of base bars or contained in miscellaneous ores is reduced at private works in conjunction with domestic ores and no distinction is made in the resulting product.

Of the domestic silver bullion deposited at the mints during the year, 3,617,442.07 standard ounces. of the coining value of $4,209,387.10 were unrefined silver from the mines of the United States.

COINAGE.

The coinage executed at the four coinage mints of the United States, located at Philadelphia, San Francisco, Carson City, and New Orleans, aggregated during the last fiscal year 113,556,124 pieces, of the nominal value of $51,792,976.52.

The gold coinage consisted of 2,954,185 pieces, of the value of $35,506,987.50, of which $21,725,600 were in double eagles, $8,921,530 in eagles, $4,840,955 in half eagles, and $18,902.50 in quarter eagles.

The silver coinage consisted of 8,329,467 silver dollars and $971,016.50 in half dollars, $3,028,331 in quarter dollars, and $2,665,464.10 in dimes,

The minor coinage executed at the mint at Philadelphia aggregated 61,582,474 pieces, of the nominal value of $1,296,710.42, of which 17,022,142 pieces of the nomina value of $851,107.10, consisted of nickel five-cent pieces, and 44,560,332 pieces, of the nominal value of $445,603 32, of one-cent bronze pieces.

The coinage of the mints during the last fiscal year is recapitulated in the following:

Gold	2,954,185	$35,506,987.50
Silver dollars	8,329,467	8,329,467.00
Subsidiary silver coins	40,689,998	6,659,811.60
Minor coins	61,582,474	1,296,710 42
Total	113,556,124	$51,792,976.52

BARS.

In addition to the coinage, gold bars were manufactured during the fiscal year of the value of $36,125,552 and silver bars of the value of $7,130,270, a total of $43,255,822.

PURCHASES OF SILVER.

The purchases of silver by the Government during the fiscal year ended June 30, 1892, were all made under the mandatory provisions of the Act of July 14, 1890, requiring the purchase of 4,500,000 ounces in each month.

The amount purchased by the Treasury Department on telegraphic offers in lots of over 10,000 ounces was 49,112,327.39 fine ounces, costing $46,254,520.73.

The purchases of silver at the coinage mints in lots of less than 10,000 ounces aggregated 4,912,414.04 fine ounces, costing $4,662,203.89. Silver contained in gold deposits and in bar charges, including fractional remnants of trade-dollar bullion of less value than $1, was bought, aggregating 200,995.71 fine ounces, costing $189,883.36.

The total amount purchased during the last fiscal year under the provisions of the Act of July 14, 1890, as above enumerated, aggregated 54,355,748.10 fine ounces, at a cost of $51,106,608.01.

The average cost of the silver purchased during the year was $0.94 per fine ounce.

The amount of silver offered for sale to the Government during the fiscal year aggregated 97,803,300 fine ounces.

The mandatory coinage of 2,000,000 ounces of silver, purchased under the Act of July 14, 1890, into silver dollars, ceased at the close of the fiscal year ended June 30, 1891, and during the past fiscal year only a limited coinage of dollars was executed from such bullion.

The quantity and cost of silver used in this coinage was 2,669,128.95 fine ounces, costing $2,577,838.19, while 18,497.48 fine ounces, costing $18,073.24 were wasted and sold in sweeps, leaving a balance of uncoined silver purchased under the Act of July 14, 1890, on hand at the coinage mints June 30, 1892, of 78,927,665.42 fine ounces, costing $76,314,868.17.

Prior to 1879 the greater part of the silver required by the Government was purchased in the markets of the Pacific coast, but this was changed by the large falling off in the silver product of Nevada and the large increase in the silver product of States and Territories penetrated by railroads from the East, and the consequent facilities with which ores could be shipped to the eastern smelting and refining works for reduction. Moreover, in recent years the demand for silver upon the part of China and other oriental countries has fallen off very largely, and in consequence the silver product of the country seeks the most available outlet, which is through the New York market, where it is either sold to the Government or shipped to London.

Of the silver purchased under the Act of July 14, 1890, from August 13, 1890, to November 1, 1892, 103,047,180 fine ounces out of a total amount purchased of 120,479,981 were delivered at eastern mints, the principal portion at the Philadelphia mint.

The aggregate amount of silver bullion purchased under the Act of July 14, 1890, from August 13, 1890, to November 1, 1892, was 120,479,981 fine ounces, costing $116,783,590, an average cost of 0.969 per fine ounce.

In addition to the silver dollars coined under the Act of July 14, 1890, there were coined from the balance of trade-dollar bullion on hand June 30, in accordance with the provisions of the Act of March 3, 1891, 4,878,472 silver dollars.

The total coinage of silver dollars from March 1, 1878, to November 1, 1892, is as follows: Act of February 28, 1878, $378,166,793; July 14, 1890, $33,167,570; March 3, 1891, (trade-dollar bullion) $5,078,472, or a total of $416,412,835.

COURSE OF SILVER.

The fluctuations in the price of silver during the last fiscal year, while not covering so wide a range as in some previous years, were considerable, with a continued downward tendency. There were occasional rallies in the price caused by temporary improvements in the rate of Indian exchanges or continental demands for silver. As soon as these demands were supplied the price immediately declined, in many cases below the point of previous advance.

At the commencement of the fiscal year July 1, 1891, silver was quoted in the London market at 46⅝ pence (0.925 fine, British standard), equivalent at the par of exchange to $1.0165 per fine ounce. The price in New York at the same date was $1.02¾.

The opening quotations were the highest in either market during the year.

From the 1st to the 13th of July the price steadily declined until it reached 45⅞ pence, equivalent to $1.00549 per fine ounce. From this date there was a sharp rally to 46¼ pence, due to a demand for silver for Spain and Portugal. Large sales of silver were immediately made upon the advance by sellers to realize.

The price again declined, until on the 21st it had reached 45⅝ pence, equal to $1 per fine ounce.

On the 22d the price suddenly arose to 46⅛, equal to $1.0111, and closed on the 31st of the month at 46 pence, equal to $1.00837.

During the month of August the price declined from the opening rate, 46 1-16 pence, equal to $1 00974 per fine ounce, to 45 1-16 pence, equal to $0.98784 per fine ounce, being a decline of over 2 cents per ounce.

In September the price rallied, and closed at 45⅞ pence, equal to $1.00563.

In October, however, the price declined to 44 1-16 pence, equal to $0.9659 per fine ounce.

After this date the price steadily declined, until on the 28th of March, 1892, it had reached 39 pence, equal to $0.8549 per fine ounce, the lowest price on record up to that date. From this time forward the price gradually improved, closing May 31 at 40 5-16, equal to $0.8833 per fine ounce.

The highest price of silver during the fiscal year was $1.0165 per fine ounce, at which rate the value of the silver contained in the silver dollar was $0.786; at the lowest price ($0.855), per ounce fine, it was $0.66; at the average ($0.937), $0.724.

The value of the silver contained in a silver dollar at the lowest price of silver since the close of the fiscal year was $0.642.

At the present writing, November 1, the value is $0.6 5.

SUBSIDIARY SILVER COINAGE.

The coinage of subsidiary silver during the last fiscal year aggregated 40,889,998 pieces, of the nominal value of $6,659,811.60, consisting of $971,016.50 in half dollars, $3 023 331 in quarter dollars, and $2,665,464.10 in dimes. Of this coinage $1,058.25 were manufactured from purchased bullion and $6,658,753.35 from worn and uncurrent silver coin transferred from the Treasury for recoinage.

During the fiscal year ended June 30, 1892, worn and uncurrent silver coin of the nominal value of $7,118,602.78 was transferred from the Treasury to the mints for recoinage. Upon melting, these coins produced 5,018,693.31 ounces of fine silver, the coining value of the same in subsidiary silver coins being $6,937,886.02, showing a loss of $180,716.76, which sum was reimbursed the Treasury from the appropriation for loss on recoinage of worn and uncurrent silver coin.

TRADE DOLLAR RECOINAGE.

The number of trade dollars redeemed under the Act of March 3, 1887, was 7,689,036, containing 6,687,690.61 ounces of standard silver of the coining value of $7,782,040 in silver dollars, from which there were coined, up to the close of the fiscal year 1891, $2,889,011 in subsidiary silver coins, containing 2,322,042.62 standard ounces, costing $2,668,654.88.

In addition there was transferred from trade dollars remelted at the San Francisco mint to the silver bullion account 16.97 standard ounces, costing $19.51, making a total amount disposed of up to June 1, 1891, 2,322,059.59 standard ounces, costing $2,668,674.39, leaving on hand June 1, 1891, 4,365,661.12 standard ounces, costing $5,020,361.

The Act of March 3, 1891, directed that, "the Secretary of the Treasury shall, as soon as practicable, coin into standard silver dollars the trade-dollar bullion and trade dollars now in the Treasury, the expense thereof to be charged to the silver-profit fund."

Of the balance of trade-dollar bullion on hand June 1, 1891, 4,364,311.87 standard ounces, costing $5,018.844.11, were consumed in the coinage of 5,078,472 silver dollars, while there were sold in sweeps, 1,318.89 standard ounces, cosing $1,517.06, leaving on hand December 31, 1890, when this coinage was completed, a fractional balance of .36 of an ounce, costing $.042, which was transferred to the account of silver bullion purchased under the Act of July 14, 1890.

SEIGNIORAGE ON SILVER.

The balance of silver profits on hand at the coinage mints at the commencement of the fiscal year 1892 was $152,815.35.

The seigniorage on the coinage of silver dollars during the year aggregated $930,487.41, and on subsidiary silver coins $143,49, a total seigniorage for the year of $930,630.90.

From the gross seigniorage there was paid for the transportation of silver coin the sum of $28,694, for reimbursements of silver wastage and loss on sale of silver in sweeps sold $9,548.98, and on account of expenses incurred in the recoinage of trade-dollar bullion (as provided by the Act of March 3, 1891) $108,715.42, a total expenditure of $146,955.40, leaving a net seigniorage for the year of $788,675.50.

The total amount of silver profits covered into the Treasury during the last fiscal year aggregated $865,026 60, leaving on hand in the four coinage mints at the close of the fiscal year $70,964.25.

The net profit on the coinage of silver during the fourteen years ended June 30, 1892, including the balance in the coinage mints on July 1, 1878, aggregated $72,736,065.75.

MINOR COINAGE.

During the last fiscal year 61,285,474 minor coin pieces were struck at the mint at Philadelphia of the face value of $1,296,710.42, as follows: Five-cent nickels, 17,022,142 pieces of the value of $851,107.10 and 44,560,332 one-cent bronze pieces of the value of $445,603.32, or a total of 61,582,474 pieces of the value of $1,296,710.42.

The demand for minor coins during the year was large, frequently taxing the the utmost capacity of the mint at Philadelphia to meet the same, but no delay occurred upon the part of the mint in supplying such coins.

MOVEMENT OF GOLD FROM THE UNITED STATES.

In the report of this Bureau for the fiscal year 1889, attention was directed to the heavy export of gold from the United States commencing in May, 1888, and continuing, with some interruption, to the end of July, 1889, aggregating $61,435,959.

In the summer of 1890 another movement of gold from this country commenced, which, while by no means as serious in amount as its predecessor, was somewhat remarkable as a monetary transaction, considering the low rate of sterling exchange which obtained during most of the period of shipments. This movement aggregated in a period of less than two months the sum of $15,672,982.

In February, 1891, still another movement of gold to Europe commenced, which did not cease until the close of July, causing by far the most serious loss of gold which this country has sustained for many years. The total amount exported from the port of New York during these six months was $70,223,494.

In the reports of this Bureau for the fiscal years 1890 and 1891, detailed statements of the shipments. the names of the shipper, the destination of the specie, and prevailing rates of sterling exchange were presented, together with the causès which were believed to have occasioned these large movements.

IMPORTS AND EXPORTS OF THE PRECIOUS METALS.

Gold.—The value of the foreign gold bullion imported into the United States during the fiscal year 1892 was $11,358,518, of which $4,820,117 came from France, $3,251,707 from England, $1,336,593 from Mexico, and the remainder principally from the countries of Central and South America.

Gold was contained in imported silver-lead ores of the value of $214,121.

Foreign gold ores of the invoiced value of $249,304 were imported into the United States for reduction, all except a small amount coming from Mexico.

Foreign gold coins were imported of the value of $22,908,493, of which $8,222,724 came from Australia, $5,538,725 from France, $4,266,314 from England, $2,392,310 from Germany, $1,405,964 from Cuba, $542,499 from Mexico, and the remainder from various countries.

United States gold coins were returned to the United States of the value of $15,432,443, of which $5,486,975 came from France, $5,272,315 from England, $1,529,590 from the British possessions in North America, $1,105,015 from Germany, and the remainder from various countries, principally of Central and South America.

The total imports of gold into the United States during the fiscal year may be summed up as follows: Foreign bullion, $11,358,518; foreign coin, $22,908,493; foreign ores, $249,304; foreign gold in silver-lead ores, $214,121; total foreign, $34,780,436. United State coin, $15,432,443; total imports, $50,162,879.

Silver.—The commercial value of foreign silver bullion imported into the United States during the last fiscal year, as registered at the custom-houses, was $5,115,808, of which $4,431,920 consisted of commercial bars from Mexico, $451,676 from Colombia, and the remainder consisted of desultory amounts from various countries of this continent.

In addition to the importations of silver bars, silver ores were imported of the invoiced value of $9,656,761.

As usual, the bulk of these ores—$9,508,321—came from Mexico, and the remainder from British North America.

These ores were principally silver-lead ores, containing, in addition to the silver contents, large quantities of metallic lead and some gold and copper.

The imports of silver into the United States during the fiscal year are summarized as follows: Foreign bullion (commercial value), $5,115,808; silver in foreign ores (commercial value), $8,809,648; foreign silver coin, $14,679,709; total foreign, $28,605,165. United States silver coin, $159,569; total silver imports, $28,764,734.

STOCK OF MONEY IN THE UNITED STATES.

In continuation of previous tabulations, commenced in 1873 by the Bureau of the Mint, the following official table is presented as exhibiting the stock of coin in the United States July 1, 1892:

ITEMS.	*Gold.*	*Silver.*	*Total.*
Estimated stock of coin July 1, 1891	$585,140,050	$483,507,968	$1,068,648,018
Coinage, fiscal year, 1892	35,506,988	14,989,279	50,496,267
Net imports of United States coin, fiscal year, 1892	....	32,887	32,887
Total	620,647,038	498,530,134	1,119,177,172
Loss.			
Net exports of United States coin for fiscal year 1892	27,409,520	....	27,409,520
United States coin melted for recoinage fiscal year 1892	557,968	6,819,921	7,377,889
United States coin used in the arts, fiscal year 1892	3,500,000	200,000	3,700,000
Total	31,467,488	7,019,921	38,487,409
Estimated stock of coin July 1, 1892	589,179,550	491,510,213	1,080,689,763

It may be proper to repeat here that the basis of the annual tabulations of the stock of gold coin in the United States was the actual amount of gold coin in the Treasury and in National banks on June 30, 1872, with an addition of $20,000,000 as an estimate of the minimum amount of gold coin in circulation in the States of the Pacific Slope.

No allowance was made in the initial estimate for any stock of gold outside of the Treasury and National banks or for any gold in circulation in the States east of the Rocky Mountains.

Since that date the official estimates presented from year to year have been compiled by adding to the actual visible stock June 30, 1872, the coinage of the mints (less recoinage of our own coins) and the gain (or loss) by import and export of our own coin as registered at the custom houses, with an annual allowance for melting of United States coin for use in the industrial arts based upon three censuses taken by the Bureau of the Mint of the jewelry trade.

In the case of silver the stock of silver dollars is estimated to be the coinage since March 1, 1878, and the stock of subsidiary silver coin the coinage since 1873, with an estimate of the amount in the country at that date of $5,000,000, and the annual gain or loss by coinage and import and an annual allowance for melting in the industrial arts, as in the case of gold.

From the table above presented it will be seen that the estimated stock of our own coins in the country on July 1, 1892, aggregated: Gold, $589,179,550; silver, $491,510,213, of which $413,988,735 were silver dollars and $77,521,478 subsidiary silver coins; making a total coin stock of $1,080,689,763.

GOLD AND SILVER USED IN THE INDUSTRIAL ARTS.

As in previous years inquiries have been made for the purpose of ascertaining approximately the amount of gold and silver used in the United States in the industrial arts and manufactures.

These inquiries have been confined to ascertaining from Government institutions and from private refineries the amount and value of the bars of gold and silver sold to jewelers and manufacturers for industrial uses during the last calendar year, and as nearly as possible the material used in the manufacture of such bars.

Comparing the results for two years, it is seen that the amount of both gold and silver used in this country for industrial purposes is *enormous*, and has largely increased.

The value of the gold bars reported as furnished for industrial use during the calendar year 1891 was $16,644,953, against $14,605,901 in 1890, an increase of $2,039,052; and of silver, $9,631,746 in 1891, against $9,031,178 in 1890, an increase of $600,568.

The amount of gold coin reported as used in the composition of bars manufactured for industrial uses was only $458,037, against an estimated melting down annually of $3,500,000 of our own gold coin for industrial uses, based upon four censuses taken by this Bureau for different years as to the direct employment of the precious metals by goldsmiths and others in the manufacture of watches, jewelry, etc.

The melting of coin for industrial uses is principally upon the part of small jewelers, and not by works manufacturing bars.

If there has been no falling off in the amount of coin melted annually for use in repairs and jewelry, the total value of the precious metals used in the industrial arts and manufactures in the United States during the calendar year 1891 was, approximately: Gold, $19,700,000, and silver, $9,630,000, a total of $29,330,000, of which $10,697,679 gold and $7,289,073 silver consisted of new bullion.

WORLD'S COINAGE.

The coinage of gold and silver by the various countries of the world revised from the latest information received at the Bureau during 1889, 1890, and 1891 is as follows:

CALENDAR YEARS.	*Gold.*	*Silver.*
1889	$168,901,519	$139,242,595
1890	149,095,865	151,032,820
1891	119,310,014	135,508,083

It is believed that the above figures represent substantially the total value of the gold and silver coinages executed in the world during the years named.

It must be borne in mind, however, that the total of these coinages does not even approximately represent the amount of new gold and new silver made into coins during the year, for the reason that the coinages as reported include the value of domestic and foreign coins melted for recoinage as well as old material, plate, etc., used in coinage.

In the circular letter of information prepared at this Bureau and sent to foreign Governments through the Department of State, asking for information on these subjects, it was especially requested that each country report the amount of such recoinages. This has been done in many instances, but not in all.

WORK OF THE LABORATORY OF THE BUREAU OF THE MINT.

During the calendar year 1891 there were tested in the laboratory of this bureau, 283 gold coins and 954 silver coins, all of which were found to be within the legal requirements in regard to weight, fineness, and mechanical perfection.

Of the gold coins examined 41 per cent. were found to be of exact standard fineness, while the pieces deviating most were .900.5 and .899,4 fine, with an average .899,9 fine, the legal limit of tolerance being .001.

Of the silver coins examined 28.30 per cent. were standard, while a single piece assayed was .902,5 fine and one piece as low as .896,3 fine. The average was .899,98 fine, the legal limit of tolerance being .003.

Considering the difficulties arising from segregation in silver alloys, these results bear witness to the degree of skill with which coinage is conducted at the mints of the United States.

Special examinations have been made of samples of bullion received by the Philadelphia Mint from the various assay offices of the United States, where the difference in assays of the two institutions was unusual.

Examinations were also made during the year of a number of dangerous counterfeit coins, the most noteworthy of which was an alloy of copper, silver, and platinum, having very nearly the specific gravity of standard gold.

SUMMARY OF OPERATIONS OF MINTS AND ASSAY OFFICES.

The precious metals received at the mints and assay offices during the fiscal year 1892 were valued at $150,399,906, against $143,255,832 received in the previous year—an increase of $7,144,074.

The value of the precious metals deposited only partially represents the operations necessary for their metallurgical and mechanical treatment.

The following table is intended to exhibit, as nearly as possible, the value of the precious metals treated in the operations of the mints and assay offices during the last fiscal year:

Metals.	*Standard ounces.*	*Coining value.*
Gold	9,128,757	$169,837,345
Silver	65,823,934	75,595,121
Total	74,952,691	$245,432,466

In quantity the precious metals operated upon in the different departments of the mints and assay offices during the last fiscal year exceeded 313 tons of gold and 2,257 tons of silver.

The value of the precious metals wasted in the metallurgical and mechanical operations was $13,794.95.

In addition to operative wastage, a loss of $12,651.41 was incurred from the sale of sweeps, equivalent to the difference between the value of the precious metals contained in sweeps recovered and the amount realized from the sale of sweeps too base to be treated advantageously in Government refineries.

There was a similar loss of $114.03 by the sale of leady melts.

These wastages and losses aggregated $26,560.39.

Deducting the value of the total operative wastage and loss on sale of sweeps from the value of the incidental gains of bullion, there was a *net* gain in the operations of the mints during the year of $13,058.07.

It is exceedingly gratifying to report that the cost per piece of coinage executed was reduced during the last fiscal year from an average of nearly one cent to an average of eight-tenths of one cent, while the cost per piece, exclusive of minor coins struck, was reduced from about two cents in 1891 to one and eight-tenths cents in 1892.

The economy, however, is more marked when the cost of coinage is compared with the year 1890, when the average cost of coinage executed exceeded one cent per piece, or, excluding minor coins, two and one-half cents a piece.

Must Have the Journal.—From Geo. R. Slocum, Cashier First National Bank, Primghar, Iowa, January 27: "Enclosed find $5 to pay our subscription for 1893. *We could not get along without the* JOURNAL."

NEBRASKA.

CONVENTION OF THE STATE BANKERS' ASSOCIATION.

The second Convention of the Nebraska Bankers' Association, which was organized at Omaha in January, 1890, was held in the Lansing Theatre at Lincoln on Tuesday and Wednesday, December 20 and 21, 1892. One hundred and fifty delegates, representing nearly every section of the State, were in attendance.

At 3 o'clock in the afternoon the meeting was called to order by President A. L. Clarke, President of the First National Bank of Hastings. Rev. John Hewitt offered prayer, after which Mayor Weir welcomed the visiting bankers to the city in a brief but happily-worded address.

President Clarke responded, thanking the Mayor and people for their kindness and open-handed hospitality. He knew of no better compliment to pass upon the city than to say that it was the chosen capital of this great commonwealth.

Mr. Clarke then introduced Chancellor Canfield of the Nebraska State University, who made the principal addres of the afternoon. Among other things he said:

Many people think of a bank as a place of deposit only, and fail to realize what it has to do with the vast system of credits upon which business is transacted. How many people know when they go to banks with deposits that they are not making deposits, but purchases. Of what? Credits. A banker is simply a dealer in credits. The banker is simply a middleman, What is credit? Suspicion asleep. When it wakes, you know what there is to pay, and no pitch hot. If this be true that you deal in credits, you are an endorser for all creditors. You are trustees. You are middlemen between small depositors and the men who want large sums. When you loan to these large borrowers you become the endorser to every depositor.

The Chancellor then considered the dangers besetting the banker and the development of the caution needed to ward them off, his conclusion being that the banker must be a man among men in intelligence, perception and the power to judge his fellows. He found that 98 per cent. of the business failures of the country are caused by ignorant competitors driving other men to the wall. He then plunged into an elaborate and intensely interesting discussion of the means of improving the efficiency and strength of the bankers themselves and the intelligence of business men and the general public. It was not a plea for any particular kind of education or for any particular institution, but a powerful showing of the service a great university may do to every branch of business, and particularly banking, by lifting the level of general intelligence and in preparing young men for special business careers.

Mr. A. U. Wyman of Omaha, Vice-President of the American Bankers' Association, submitted a request of the American Bankers' Association to memorialize the Legislature to abolish days of grace. A bill for that purpose accompanied the request.

C. E. Bentley of Grand Island said there was a matter of more importance than days of grace, although that system was a relic of bygone days and ought to be abolished, still it was well understood and was simply a matter of convenience or inconvenience. The matter he referred to was a decision of the Supreme Court which made paper payable the day after Sunday when Sunday happens to be the last day of grace. It had generally been understood that protest should be made on Saturday in such cases. At present there are doubts concerning the proper day of protest, and the bankers are liable to difficulty, suits and loss. He believed a law to abolish days of grace and also fix the proper day of protest ought to be enacted in one bill. The subject was referred to a committee to memorialize the Legislature.

On motion of Mr. Yates a committee was selected, consisting of one member from each Congressional district and one at large, to make nominations for officers for the ensuing year and submit the nominations to the Convention for action.

The Convention then adjourned until 9 a. m. Wednesday.

THE BANQUET.

In the evening the bankers and their friends gathered at the Lindell Hotel for the social part of their meeting, the banquet tendered them by the Clearing-House Association of Lincoln. There were, including the visiting delegates, about two hundred and fifty persons present.

THE TOAST LIST.

It was 1.15 A.M. before the after-dinner speechmaking began. Toastmaster N. S. Harwood, with a brief and happy speech announced that "a few draughts from the vaults spiritual" would be partaken of, and that in view of the lateness of the hour he would ask that it be not "too long between drinks."

With a humorous allusion to Tom Cooke's "wild cat currency," he introduced A. B. Hopkins, President of the Commercial National Bank of Omaha, to respond to the toast "The Currency Question."

Mr. Hopkins was greeted with applause, and departed from the usual apologetic introduction by saying he had carefully prepared a speech, but was not going to deliver it.

He said that he thought the financial troubles of the country are chiefly due to the Government note issues. He thought until we are rid of such issues, there will be all sorts of wild schemes to remedy present evils. He said that brokers or business men should study questions and try to arrive at satisfactory solutions. He favored the Government retiring from the banking business and devoting itself more strictly to furnishing a money supply of a different character.

SECOND DAY.

After reading the minutes of the previous day's session the Legislative Committee reported as follows.

DAYS OF GRACE.

Report of the Committee appointed to consider the questions of abolition of days of grace, and fixing date for presenting paper due on Sundays and holidays:

We recommend that the association favor legislation which will abolish days of grace on all paper, except bills payable at sight with no expressed stipulation to the contrary.

We also recommend that the Legislature be petitioned to amend Section 2975 of Consolidated Statutes, refering to maturity of bills and public holidays in such a manner that the law may be clearly expressed, fixing the day of payment for bills and notes maturing on Sundays and public holidays upon the next following business day.

The report was adopted, the Committee discharged and the matter left in the hands of the Executive Council for proper action. A bill covering the abolition of days of grace will be brought before the Nebraska Legislature, and an effort made to have both points acted upon in a satisfactory manner.

ELECTION OF OFFICERS.

The Committee on Nominations recommended the election of the following officers:

President, C. F. Bentley, Grand Island; *First Vice-President*, A. E. Cady, St. Paul.

Executive Council—H. W. Yates, of Omaha; N. S. Harwood, of Lincoln; A. R. Graham, of Wisner; C. H. Morrill, of Lincoln; W. L. Wilson, of Nebraska City; L. D. Richards, of Fremont; A. L. Clarke, of Hastings; G. W. Post, of York; Edward Updike, of Harvard; F. Y. Robertson, of Kearney.

Vice-Presidents—O. H. Horne, of Syracuse; G. W. Holland, of Falls City; C. W. Mosher, of Lincoln; F. H. Davis, of Omaha; A. P. Brink, of South Omaha; William Wallace, of Omaha; William Steuffer, of West Point; W. H. Bucholz, of Norfolk; E. F. Folda, of Schuyler; S. C. Smith, of Beatrice; E. E. Leonard, of David City; Charles Perky, of Wahoo; A. R. Cruzen, of Curtis; C. M. Kincaide, of Beaver City; A. D. King, of Culbertson; L. H. Jewett, of Broken Bow; Job Hathaway, of Hemmingford; C. R. Glover, of Long Pine.

The report was unanimously adopted.

Henry F. Wyman, Cashier of the American National Bank, of Omaha, was elected Treasurer, and George R. Voss, of Wood River, re-elected Secretary.

Hon. J. Sterling Morton was to have addressed the Convention on "Tools of Exchange," but was unable to be present. The Secretary read a letter from him, containing the following paragraph in addition to his regrets:

"There are two words so commonly used and so little appreciated by the men and women who utter them, Health and Wealth, when they may be truthfully said to represent the possessions of an individual, convey to the mind all that is desirable in this world as to mental, moral, and physical symmetry. Great words, and differing only in the first letter, how beautifully they flow together, and worthless, Wealth without Health all the wide world over, but having Health one may amass Wealth. Human effort creates Wealth, but the majesty of Nature alone creates Health, and that all the bankers, who honorably minister to facilitating the exchanges of the people, may be blessed with both, is my wish."

After disposing of regular programme business, the members indulged in free discussions of several matters, among which was the following:

"*Resolved*, That the Bankers' Association of Nebraska recommends to Congress the immediate repeal of the Sherman Silver bill of 1890."

After about an hour's discussion, the following substitute was adopted:

"*Resolved*, That Congress be petitioned to suspend the purchase of silver bullion under the Sherman Act until such time as the ratio of silver shall be so fixed by international agreement that the silver legal-tender dollar, or its paper representative, shall have an equal purchasing quality with the gold dollar."

The following was also adopted:

"*Resolved*, That it is the sense of this Convention that the National Bank Act be so amended as to restore to the banks one of their proper functions, namely, the furnishing under proper Government supervision, such additional instruments in excess of coin necessary to meet the demands of trade."

The Convention then adjourned *sine die*.

National Banks in Liquidation.

California—San Luis Obispo.—First National Bank; resolution dated August 27, 1892.

Iowa—Sioux City.—Commercial National Bank; by resolution to take effect December 1, 1892.

Kansas—Clyde.—First National Bank; resolution dated November 15, 1892.

Salina.—First National Bank; resolution dated July 5, 1892.

Massachusetts—Lawrence.—National Pemberton Bank; in voluntary liquidation; resolution dated January 10, 1893.

Michigan—Pontiac.—First National Bank; in voluntary liquidation; resolution dated December 31, 1892.

Missouri—Kansas City.—Continental National Bank; by resolution dated November 11, 1892.

Montana—Castle.—First National Bank; in voluntary liquidation; resolution dated January 4, 1893.

Nebraska—Dorchester.—First National Bank.

Lincoln.—State National Bank; resolution dated December 3, 1892.

South Sioux City.—First National Bank; by resolution dated October 27, 1892.

Ohio—Batesville.—First National Bank; by resolution to take effect December 1, 1892.

Sandusky.—Third National Bank; charter expired by limitation Sept. 18, 1892.

Urbana.—Third National Bank; chartered expired by limitation Oct. 15, 1892.

Oregon—Eugene City.—Eugene National Bank; in voluntary liquidation; resolution dated November 26, 1892.

South Dakota—De Smet.—First National Bank; resolution dated Aug. 31st to take effect September 14, 1892.

Tennessee—Chattanooga.—Merchants' National Bank; resolution dated Sept. 24, 1892.

Washington - Tacoma.—National Bank of the Republic; resolution dated Oct. 1, 1892.

NATIONAL BANKS IN THE HANDS OF RECEIVERS.

Colorado—Del Norte.—First National Bank; A. A. Abry appointed Receiver Jan. 14, 1893.

Kansas—Newton.—Newton National Bank; John Watts appointed Receiver Jan. 16, 1893.

SECRET SERVICE DIVISION.

TWENTY-SEVENTH ANNUAL REPORT.

The twenty-seventh annual report of A. L. DRUMMOND, Chief of the Secret Service Division of the United States Treasury Department, just published, contains a summary of the work accomplished during the fiscal year ending June 30, 1892. The report is submitted to the Secretary of the Treasury and dated November 21.

The arrests by operatives and other duly qualified officers, the latter receiving gratuities of money from the funds of the division for meritorious service, number 524.

The judicial disposition of these cases was as follows: Convicted and sentenced, 101; convicted, sentence suspended, 2; pleaded guilty and sentenced, 85; pleaded guilty, awaiting sentence, 2; pleaded guilty, sentence suspended, 4; pleaded *nolo contendere* and sentenced, 1; indicted, awaiting trial, 50; not indicted, 34; awaiting action of United States Grand Jury, 85; awaiting preliminary examination, 12; acquitted, 42; nolle prosequied, 12; discharged by United States attorney, 12; discharged on personal recognizance, 5; discharged by judge—faulty indictment, 1; died before preliminary examination, 1; died before action of United States grand jury, 1; fugitives from justice, 9; discharged by United States commissioner, 65.

FINES IMPOSED.

The fines imposed by the Court amount to $29,538. The sentences aggregate three hundred and seventy-seven years, six months, and twenty-seven days.

Sixty-one cases were disposed of during the past fiscal year which were undetermined at the close of the year preceding, to wit: Sentenced, 4; convicted and sentenced, 18; pleaded guilty and sentenced, 17; acquitted, 14; discharged by United States attorney, 2; discharged on personal recognizance, 1; bills ignored by United States grand jury, 2; nolle prosequied, 3; total, 61.

The fines imposed by the court amount to $2,[illegible]37.

The sentences aggregate one hundred and two years four months and eleven days.

Of those arrested during the past fiscal year 27 had been previously arrested for offenses similar to those herein charged against them.

CHARACTER OF COUNTERFEIT NOTES AND COINS.

The following table shows the character and amount (representative value) of altered and counterfeit notes, also counterfeit coins and imitation money captured and secured by secret service agents during the past fiscal year:

United States Treasury notes		$14,224 00
United States silver certificates		1,271 00
United States gold certificates		40 00
National bank notes		10,679 00
Altered notes		500 00
Stolen notes		50 00
Foreign notes		177 00
Fractional currency		250 40
		27,191 40
Spurious corporation bonds		2,250 00
Imitations and fac similes of notes		2,067,608 87
Gold coin	$1,919 00	
Silver coin	5,396 10	
Nickel coin	355 03	
Copper coin	6 02	
		7,676 15
Imitations and fac similes of coins (toy money, etc.)		108 10
Total		2,124,829 52

This division has, also, during the past fiscal year investigated for the Second Auditor of the United States Treasury, ninety-two claims for pay and bounty made on behalf of the alleged heirs of deceased soldiers, by which a large saving was made to the Treasury, the exact amount of which cannot be stated herein.

NEW COUNTERFEITS OF PAPER MONEY.

Although new counterfeits of paper money have been numerous the past fiscal year, few of them were skillfully executed, nor have they been extensively circulated. They are as follows:

In September, 1891, a photograph of the $5 issues of the First National Bank of Bay City, Mich., appeared. Not more than six notes were put in circulation when the maker was located and arrested.

In October of same year a counterfeit $5 silver certificate, series 1886, check letter C, Rosecrans, Register; Huston, Treasurer, was found in circulation on the Pacific coast. It was a very crude affair, supposed to have been the joint production of the camera and wood engraving. Few were put in circulation, and these were confined to that section of country. The maker of these counterfeits is now in custody and under indictment.

In the same month and year appeared a counterfeit $10 United States Treasury note, series 1880, check letter C, Rosecrans, Register; Huston, Treasurer, evidently made by the same hands and the same process as the $5 silver certificate above described; workmanship very poor; circulation confined to the Pacific Coast, and not more than half a dozen of them seen.

In November, 1891, a photograph counterfeit $20 gold certificate, check letter A, Bruce, Register; Gilfillan, Treasurer, was discovered. It was a finely executed photograph, and would have worked mischief had not its author been quickly detected and arrested; as it was only two of these were put in circulation. These were made by the same person who produced the $5 National bank note first mentioned.

In December, 1891, a counterfeit $10 United States Treasury note, series 1890, check letter B, Rosecrans, Register; Huston, Treasurer, was discovered, of the same quality and style and process as the two Pacific Coast notes herein described, and not more than three were ever found in circulation.

In the same month and year was detected a counterfeit $10 United States Treasury note, series 1880, check letter C, Rosecrans Register; Hyatt, Treasurer, a counterpart in every respect to that which appeared on the Pacific Coast in October, 1891, with the exception of name of Treasurer. Only two notes discovered.

In February, 1892, a counterfeit $5 silver certificate, series 1886, check letter C, Rosecrans, Register; Huston, Treasurer, was put in circulation. This is an excellent counterfeit, except that the portrait of General Grant is very poorly engraved, and there are no silk threads in the paper. It is a dangerous note, but few have been seen. They are not in the hands of dealers.

In May, 1892, a new counterfeit $50 United States Treasury note, series 1880, check letter A. Rosecrans, Register; Huston, Treasurer, appeared. It is, however a hand production with pen and ink, and most excellently executed; only one of these counterfeits has been seen to date.

As already stated, this service has during the past fiscal year detected and arrested the makers of two very fine photographic counterfeit notes, one on the $5 issue of the First National Bank of Bay City, Mich., and the other United States issue of $20 gold certificate. It also detected three persons in Cincinnati, Ohio, in the act of making counterfeit plates for printing fraudulent issues of United States silver certificates of the denomination of $5 and $10. Two of the counterfeiters were subsequently convicted, sentenced, and are now serving their respective terms of imprisonment for said offence.

Great success has also attended our efforts the past year in the capture of the manufacturers and passers of counterfeit coin, also the passers of counterfeit paper money, but (with possibly two exceptions) the bad quality of the counterfeit money floated on our communities should not fail of detection where ordinary care is used.

To further protect all classes of our people from the raids of the counterfeiter, I renew with greater earnestness, if possible, my plea of last year for an appropriation by Congress to cover the expense of transmission of badly soiled and tattered United States notes to Washington, D. C., and the reissue of new ones in their stead.

The counterfeiter fully understands the value of dirt and tatters and stains to him in the pursuit of his plan of deceit, and he rumples and tears and soils his notes, the better to hide the blemishes and inferior workmanship of his false money, and, from 1863 to date, the economic policy of the Government in refusing such free transmission of worn-out notes for exchange has unwittingly aided the fraud of the counterfeiter.

I again place on record the recommendation of the Treasurer of the United States, as made in his annual report for 1890, and sincerely hope you may, by the powerful influence of your judgment and position, see fit to emphasize his suggestion:

> It is believed that an appropriation for the carriage of paper currency unfit for circulation to Washington would be a benefit to both the public and the Treasury. * * * The Treasury could so keep the people supplied, free of cost to them, with a good, clean and fresh paper currency, thus greatly lessening the chance of counterfeiting. Worn notes would be sent in from every part of the country to Washington for redemption, instead of being kept in circulation till they reach the large cities. The labor of assorting them would be assumed largely by the banks instead of falling upon the Sub-Treasuries as now.

Among much incidental work done for the Treasurer and other officers of the Department I may mention the discovery and frustration of a scheme for the looting of the United States sub-treasury. While it may have been impossible of accomplishment the discovery has resulted in making those places for the storage of public moneys more secure and the watchman in charge more alert.

CONTROL OF COUNTERFEIT MONEY.

The operation of section 4 of Public Act No. 71, which gives the Secretary of the Treasury custody and control of all counterfeit money found in the United States, is working a wondrous and gratifying change, which inures to the pecuniary benefit of all honest people.

It sets aside the fallacy of any person or corporation having the right of property in counterfeit money. Under its provisions the United States Government is made the sole custodian of spurious money, and only such officers as the Secretary of the Treasury may designate and authorize can receive the same from persons in whose hands it may chance to fall. The wisdom of this enactment is almost universally recognized, and the officers of this service who are authorized for the collection of the base money have little difficulty in the discharge of this special duty.

A very gratifying instance of this it is my pleasure to record. In September, 1866, the Hon. Hugh McCulloch being Secretary of the Treasury, permission was given by him to Laban Heath, Esq., to have printed at his own expense (by certain bank-note companies in the city of New York who were then printing under contract the notes and bonds of the Government), subject to stated restrictions, certain designs used on National-bank notes, United States legal-tender notes, etc. The application was made in good faith by an honest man to an officer of the Government, discreet, wise and obliging within the limits of the law.

The work was done and paid for, the sheets were put in book form and circulated largely in banking and other commercial circles. Said books, in a variety of editions, contained imitations of backs and fronts of United States fractional-currency notes, legal-tender notes and bonds, also National-bank notes, and the counterfeiting fraternity very quickly demonstrated that an act fraught with best intentions in the doing, may become an instrument of serious wrong in the hands of evil-disposed persons.

The book had not been issued a year when there were put on the market false notes and bonds of large denominations, skillfully prepared by reducing the thickness of the paper on which the same were printed and pasting backs and fronts together, making a very presentable bond or note, printed by order of the Government from plates owned by it, and these notes have been turning up to plague and cause loss to the public ever since.

During the past fiscal year this office learned where a large quantity of this property was stored in sheets yet unbound, also in book form. The stock was inspected by me, and after a friendly conference with the parties claiming ownership therein they willingly surrendered the property to the Department that originally permitted it to be called into existence.

The importance of the Government having control over these imitations of its issues can not be overestimated. Its face value represents hundreds of millions of dollars.

The full force and effect of the law, however, is hindered by officers of National banks failing to comply with the provisions of section 5 of "An Act authorizing the appointment of Receivers of National banks and for other purposes," which requires them to stamp or write the words "counterfeit," "altered," or "worthless" on all fraudulent notes presented at their places of business.

"GREEN GOODS."

Before closing this report I earnestly desire to refer somewhat in detail to one of the most outrageous and successful systems of fraud ever perpetrated upon weak and credulous persons to their utter destitution and that of their innocent dependents. I refer to what is known as the "green goods swindle." My purpose in so doing is that I may urge the more forcibly such character of legislation as shall effectually suppress the fraud.

There have been several attempts to accomplish this result by Congressional legislation, but the shrewd villains by a sudden change of tactics have measurably rendered the efforts of post-office inspectors and others under the law ineffective, so that it very seldom happens that one of these plausible rascals is convicted.

The "green goods swindle" of to-day is composed of many ingenious devices which are manipulated by experts of many years' experience, whose lightning changes, adaptations, and elaborate plans always work out for them successful results (when the dupe visits them prepared to purchase their alleged goods), even though threats of or actual violence may become necessary.

Their professed business is to sell counterfeit United States notes of the denominations of $1, $2, $5, $10, and $20 printed, so an alleged "newspaper clipping" states, from plates stolen from the Bureau of Engraving and Printing. According to their prospectus $6,000 of counterfeit money can be bought for $500, and $20,000 for $1,000.

They inclose a printed slip, alleged to have been cut from a newspaper, showing how easy their counterfeit notes are taken as genuine; they send references (bankers) as to their honesty; they "will refund expenses of a visit to New York, if a party is not satisfied with purchase," "he must not reply by letter or the correspondence ends, but by telegraph," and the message he is to send is already prepared on a telegraph blank and accompanies the circular. A variety of these circulars are used by them to suit tastes and conditions from lawyer to stableman, from burned-out merchant to bankrupt manufacturer, showing how each can make a fortune or retrieve one.

The facts are, these rascals do not dare to have counterfeit money to show or sell; no plates have ever been stolen from the Bureau of Engraving or Printing, and the printed slip they inclose was not cut from a newspaper but prepared by them giving details of an extraordinary trial of a counterfeiter that never occurred but intended to tole on their correspondent by commending the quality of their alleged counterfeit notes. Their references do not exist except on paper; their promise to refund expenses of trip are delusive, and their insistence on correspondence by telegraph is the only genuine point in their circular, and this because several of their rogues' guild have fallen in consequence of receiving letters by mail.

How they obtain the address of persons is no longer a surprise, since it is known that each chief of a gang, and there are many in the city of New York, is a subscriber to some one of the mercantile agencies. In addition postmasters are importuned, on the promise of bribes, to furnish their correspondent with the address of each well-to-do citizen whose mail is received at their respective offices.

The nefarious business finds employment for many persons of both sexes; writers of ability are engaged in the preparation of manuscript, enormous quantities of letters, telegraph blanks, circulars, slips, etc., are printed and written, folded, enveloped, sealed, addressed and stamped, ready for mailing.

The accidental discovery and seizure recently of 100,000 of such letters in the City of New York while being delivered in one batch at that post-office, emphasizes the truth of the above statement. The carman who brought them, claiming that he loaded them up from the sidewalk in front of a well-known and reputable business house, was thereupon released from custody. Existing law is quite inadequate for the suppression of the evil, and honest effort wearies by repeated failures, and the victim, who should be an ally in prosecuting the criminals, when he discovers he is subject to like penalties for his criminal attempt to obtain counterfeit money, hides himself or is dumb. A law to be effective must have provisions which will take hold of the evil in its early stages of development and cut out its roots. It should be made a misdemeanor to prepare or aid in the preparation of any paper, written or printed, or produced by any process, in which is stated or can be plainly inferred that counterfeit or false money under any name or title in any manner can be obtained. The wrong is so vigorous, extensive and intrenched by its wealth, that its extermination will involve expensive finesse, but one year's campaign, at an expense of $50,000, should wipe out this most villainous fraud, and I respectfully urge, with all the force the foregoing explanation this gigantic swindle suggests, an appropriation of that sum by Congress.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

To indorse Checks with Stamps.—Many of the larger banks in this city having extensive dealings with the Sub-Treasury have been desirous for some time of securing permission to use stamps for the final indorsement of the checks which they send to the new York branch of Uncle Sam's financial department. The Clearing-House Committee communicated with Assistant Treasurer Roberts on the subject and the Secretary of the Treasury asked him for an opinion on the point at issue. As the result a letter was received on January 26 by the manager of the Clearing-House granting the request of the banks to be allowed to use stamps in place of signatures for the final indorsement of disbursing officers' checks. The amount of the business makes the indorsing of checks a considerable task on merely physical grounds. Checks received by the Sub-Treasury have recently run above 47,000 in a day, and one bank has sent in as many as 10,000 checks in that time. Some of the big banks keep four clerks busy at the work.

The privilege of the use of stamps for final indorsements in transactions with the Sub-Treasury will be confined exclusively to disbursing officers' checks presented through the New York Clearing-House. A stamp will be at once adopted for the indorsement of the Assistant Treasurer of the United States at New York, for use only on checks presented by him through the New York Clearing-House. Compliance with these reasonable and necessary conditions, it is believed, will render the practice proposed a great convenience to all concerned and will facilitate business without sacrifice of a single element of safety.

Fourth National Bank.—Some idea of the enormous business transacted by this bank may be gathered from a recently published statement showing its operations for the past year. Probably its mail department furnishes a good illustration, as it is the New York correspondent of banks situated in nearly every section of the country. According to the published figures the bank received during the year 232,360 letters and 47,659 postal cards, and sent out 125,223 letters and 115,863 postal cards, representing cash and time items to the amount of $167,056,000. The total business transacted by the bank in 1892 amounts to $4,996,672,000. When it is remembered that the entire business of the New York Clearing-House for 1892 was $36,662,469,000, and that this one bank furnished 5.95 per cent. of that business, its position as a leading bank is an assured fact. Among the most instructive items showing the ability of the management are those that show its daily reserve, which consisted of an average excess cash balance of $472,000. The average of legal-tender notes carried during the year amounted to $1,701,000, specie averaging $4,658,000.

The Indictment dismissed.—Charles H. Pinkham, Jr., ex-President of the Bank of Harlem, was indicted some time since for taking two promissory notes from that bank, which has since been merged in the Hamilton Bank. The District Attorney has found that the evidence was not such as to warrant the presenting of the case to a jury. One of the notes was for $7,000 and the other for $7,500, and both were payable at the Harlem Bank. The notes were signed by Allen H. Wood and indorsed by Louis Bressler, a retired fur dealer. Wood was then interested in a scheme to build a theatre in Harlem. Mr. Pinkham became fearful that the bank would lose the money and secured mortgages on Bressler's property and on Wood's watch and diamonds. Then he took the notes and gave his personal check for the amounts to the bank. The matter has been straightened out so that the bank does not lose anything. Mr. Pinkham is now a general agent for the Equitable Life Insurance Company.

The Federal Bank, a new State institution, opened for business January 11, at Third avenue and Thirty-fourth street, with Albert H. Leszynski, President, and W. H. Bayles, Cashier. The directors are: John G. McCullough, Vice-President Erie Railroad Company; Charles R. Flint; Jas. H. Parker, President United States National Bank; Willard Brown, of Brown & Wells; August Roesler, of Wm. Wicke & Co.; Clarence H. Wildes, 84 Wall street; Charles E. Hauselt, merchant; George G. Haven, Jr., Treasurer, New York and Northern Railroad Company, and A. H. Leszynski. Among the stockholders are Charles F. Havemeyer, Ferdinand Sulzberger, W. C. Humstone, Thomas E. Crimmins, Theo. W. Myers, Morris K. Jesup, Thomas F. Clark, Vice-President Western Union Telegraph Company; B. O. Chisolm, Leonard Lewisohn, Geo P. Cammann, John J. Riker, Andrew Saks, John B. Kerr and Dr. Charles H. Knight.

The United States Mortgage Company has recently opened for business at 59 Cedar street, with a paid-up capital of $2,000,000 and $500,000 surplus. The company has all the trust powers conferred by the banking laws of this State, together with special charter privileges. Its business will be to loan money on bond and mortgage, to issue debenture bonds, receive deposits subject to check, allowing interest on daily balances, to issue certificates of deposit, to act as trustee, registrar, transfer agent, and to pay coupons; also to execute trusts. The officers are Charles R. Henderson, President; Luther Kountze, Vice-President; George W. Young, second Vice-President & Treasurer; Arthur Turnbull, Assistant Treasurer; William P. Elliott, Secretary. The Board of Directors is composed of a number of representative business men.

New Bank in Wall Street.—It is reported that a National bank with $1,000,000 capital will soon be started in the vicinity of Wall Street, in which ex-Secretary Whitney is to be a leading stockholder and probably will be the President. Other parties interested in the project are said to be Oliver H. Payne, A. D. Juilliard, George G. Haven, S. D. Babcock, Richard McCurdy, and several Philadelphia capitalists. Nearly all the gentlemen named in connection with the undertaking are interested in the New York Guaranty & Indemnity Company and the United States Mortgage Company.

State Bankers' Association.—At a reception recently given in honor of Mr. William C. Cornwell, formerly Cashier of the Bank of Buffalo, N. Y., by Mr. James G. Cannon, Vice-President of the Fourth National Bank of this city, among other things Mr. Cornwell stated that the bankers of Buffalo were anxious that a State Bankers' Association should be organized, and they hoped some action in that direction would soon be taken by the bankers of New York city.

National Bank of Deposit.—Hopkins J. Hanford, formerly Chief Clerk in the office of the Comptroller of the Currency, has been appointed Cashier in place of H. L. Gilbert, resigned. Mr. Hanford is an active young man, who has been connected with the Comptroller's office for three years. He is the eleventh man who has been taken from that office and placed in an important financial position in this city.

American Bankers' Association.—At the meeting of the Executive Council held at the office of the Association January 18, Mr. Henry W. Ford was elected Secretary, *vice* Wm. B. Greene, resigned. Mr. Ford was at one time President of the National Bank of the Republic of this city. It was also decided to hold the next annual convention at Chicago, September 6th and 7th.

Chatham National Bank.—The officers of this bank are seeking for information regarding a package of $50 and $100 bills, amounting to $5,000, which was lost January 25 when being carried from the bank to the United States Express Company. H. P. Doremus, the Cashier, declines to give the name of the messenger or the messenger's version of the loss of the package.

Large Forgery.—A young man named Woodward forged a check for $80,000 purporting to have been drawn by the Royal Fire Insurance Company on the Merchants' National Bank of this city. He made an unsuccessful attempt to get an advance on the check in Albany, and was subsequently arrested and locked up.

A New Bank Building.—Plans have been filed for the erection of a handsome new twelve-story office building by the National Shoe & Leather Bank. The new building will be erected on the old site at Broadway and Chambers street, and will cost $240,000.

The net debt of this city on January 1, was $98,995,651, an increase during the past year of $1,116,399. Public improvements to the extent of $9,689,919.30 have been prosecuted during the year, for which bonds have been issued.

The Bank Deposits have increased since January 1, $35,147,000, a larger amount than for the same time last year. At the same rate the increase ought to be about $50,000,000 by the end of February.

Charles E. Bothwell, a prominent member of the Stock Exchange, died recently in Washington, D. C. His remains were taken to his former home in Dubuque, Iowa, for interment.

National Park Bank.—At the annual election for officers, Mr. Ebenezer K. Wright was unanimously re-elected President, and Mr. Arthur Leary, Vice-President.

NEW ENGLAND STATES.

Vermont—Burlington Savings Bank.—A statement at the close of business December 31, 1892, shows 9.844 depositors and $3,600,421 deposits, besides a surplus of $204,484. On June 30, 1891, there were $7,962 depositors, $2.748,566 deposits, and $186,612 surplus. The increase is not only marked, but speaks well for the management. The bank was organized in 1847. The rate of interest paid depends on the earnings. For the last seven years it has been 4½ per cent. per annum.

Boston.—The bank stock having the highest quotation at present is the First National which sold recently at $240 per share. The lowest is the Shoe and Leather National, quoted at $94.50.

N. B. Goodnow, of the firm of N. B. Goodnow & Co., bankers, has been elected a Director of the Natick National Bank.

The Oldest Bank Officer.—Edward H. Payson, who has been Cashier of the First National Bank of Salem, Mass., for more than sixty-eight years, (formerly the Commercial Bank) has resigned. Before this he served a couple of years or so as clerk. Mr. Payson is thought to be the oldest bank officer in age (he is in his 90th year) and length of service in the United States.

How Money Grows.—A deposit book lately examined and made up at the Provident Institution for Savings in Boston, illustrates the ancient proverb concerning the acorn and the oak. The deposits were $30.00 in September, 1824, and $10,00 in January, 1848. These have grown by dividends to $1,395.31. Roughly figured, this is over fifty per cent. a year.

Maverick National Bank, Boston.—It is stated, on what is considered good authority, that a final dividend of 7 per cent. will soon be paid, making 92 per cent. in all on claims proved.

Haverhill, Mass.—Elbridge G. Wood, who for thirty years has been Cashier of the First National Bank, resigned recently, on account of other business requiring his attention.

Maine.—The Mechanics' Savings Bank of Auburn, is reported in an insolvent condition, and the Trustees have filed a petition asking for an examination of its affairs.

MIDDLE STATES.

Philadelphia.—According to the fortieth annual statement of the Beneficial Saving Fund, the total value of the assets is $5,748,094. The amount of deposits has increased to $5,046,907, and the total surplus is $718,634.

After twenty years devoted and faithful service, Mr. Lindley Smyth has retired from the Presidency of the Pennsylvania Company for Insurance on Lives and Granting Annuities. His successor is Henry N. Paul, formerly Vice-President. The year just closed is said to have been the most prosperous in the history of the company.

The following well-deserved tribute appeared in the "Commercial List and Price Current" of January 7:

Richard H. Rushton, the Cashier of the Fourth St. National Bank, who has recently been elected a Director of that institution, is known as one of the ablest financiers in this city. Although a young man, his record in commercial circles during the past twenty years fully entitles him to rank with those who have been regarded as high in banking circles for a much longer period. Mr. Rushton was born in Dalton, Ga., June 8, 1851, he was educated at the academy of that place, and in 1869 came to this city, where he received a year's training in a commercial college. In May, 1870, he secured a position in the Commercial National Bank. He rapidly advanced through different posts until, in 1878, he was elected Assistant Cashier. For seven years he filled this office, and in the latter part of 1885 he resigned to assist in the organization of the Tenth National Bank. After serving as Cashier of this institution for six months, a number of gentlemen who were forming the Fourth St. National Bank prevailed upon him to accept the Cashiership of the institution in which they were interested. What success has attended Mr. Rushton's administration of this office is well known to all who are acquainted with the history of banking in Philadelphia.

The Penn National Bank recently received a conscience deposit. The letter accompanying it was addressed to the "Bank of Penn Township, Sixth and Vine, Philadelphia," and postmarked Omaha. It enclosed seven dollars in currency and the following letter:

"I picked up a check on the street in Philadelphia in 1847, 48 or 49 on your bank in favor of some preacher for six or seven dollars, got the money—been sorry for it ever since and now return it—God forgive me!"

The House Committee on Banking and Currency has closed the taking of testimony and discharged itself from further investigation of the Keystone and Spring Garden National Bank failures. The Senate has taken hold of the matter, through Senator Chandler's committee.

The Quaker City National Bank has passed to the credit of surplus $15,000, making that fund $60,000.

The "deal" between the Finance Co. of Pennsylvania and the Investment Co. of Philadelphia has been officially declared off.

To Abolish Days of Grace in New York.—Following is a copy of the bill introduced in the New York Legislature abolishing Days of Grace:

Section 1. All notes, drafts, checks, acceptances, bills of exchange, bonds or other evidence of indebtedness, whereby he, they or it shall promise to pay to any person, corporation or order, or the bearer, any sum of money as therein mentioned, and in which there is no expressed stipulation to the contrary, no grace, according to the custom of merchants, shall be allowed, but the same shall be due and payable, as therein expressed, on the day and date named, without grace.

2. All Acts and parts of Acts inconsistent with the provisions of this Act are hereby repealed.

4. This Act shall take effect and be in force on the first day of January, eighteen hundred and ninety-five.

Pennsylvania—Lebanon National Bank.—At the recent annual meeting the old officers and Directors were re-elected. The annual statement submitted to the board showed that the average deposits for the year exceeded $600,000, and that nearly three-quarters of a million dollars of loans were earning 6 per cent. interest for the bank. On account of the increased profits the semi-annual dividend was increased from $8,000 to $10,000 and $25,000 added to the surplus fund. This remarkable showing reflects great credit upon the officers and Directors of this model banking institution. Established as a State bank in 1831, or more than a half century ago, it received its National charter in 1864, and has since enjoyed a degree of prosperity seldom equaled by similar financial institutions in cities of the same size.

New York—New Deputy Bank Superintendent.—William F. Creed has been appointed Deputy Superintendent of Banking, to succeed Lawrence F. Cahill, who resigned in September, 1892. Mr. Creed has been acting for some time past as State Bank Examiner in New York city and Brooklyn. He is thoroughly equipped, having been connected with banks and banking for over twenty years, serving for many years as Cashier of the Farmers' National Bank of Malone. At one time he was Auditor of the Custom House in New York city.

Pennsylvania.—The Cashier of the First National Bank of Conshohocken has published an article defending the National Banking System, in which he says:

"I hold that the currency of all kinds and nature must be under the control of the National Government. That the States have no more right to issue State circulation than they have to make coin or to run independent State mail lines. The reason of this is plain upon the very surface. We are a traveling people. We grasp a hand satchel and are off to Boston, St. Paul or San Francisco. We put money into our clothes that will carry us across the Continent. That is the kind of currency we have now."

Bank of White Plains, N. Y.—This bank is now fully organized, the Directors having elected David Cromwell, President, and Charles Prophet, Cashier. Mr. Prophet has had many years' experience in banking in New York city, and is at present a Teller in the Bank of the Metropolis. It is expected the bank will commence business about March 1.

New Banks in Brooklyn, N. Y.—It is reported that a bank will soon be opened in the Eastern District in the vicinity of Broadway and Gates avenue. The capital is $200,000, the greater portion of which has been subscribed.

Another bank, the title of which has not been annnounced is to be established at Third avenue and Fifty-second street, for the convenience of residents in that part of the city, and also Bay Ridge.

Mr. Charles A. Tawney, for a number of years connected with the First National Bank of McKeesport, Pa., has been elected Cashier of the new Citizens' National Bank of that city. He has a wide acquaintance, and is well qualified for the position.

Clearfield, Pa.—The Comptroller of the Currency has declared a third dividend, 25 per cent., in favor of the creditors of the First National Bank, making in all 75 per cent. on claims proved, amounting to $149,699.22.

Wilkes-Barre, Pa.—The People's Bank and the Anthracite Savings Bank have recently moved into their own buildings. The Anthracite Savings Bank is said to have the best arranged and lighted banking room in the city.

The Superintendent of the New York State Banking Department has recently appointed Salon L. Slade as clerk and Examiner for the department.

Another bank, to be called the Merchants' National Bank, is to be established in Glens Falls, N. Y.

SOUTHERN STATES.

President and Cashier arrested.—The former President and Cashier of the defunct Bell County National Bank of Temple, Tex., have been arrested and placed under $8,000 bonds each. They are charged with embezzling $19,000 of the bank's funds, making false entries on the bank's books and with making false reports to the Comptroller of the Currency.

Alabama.—It is stated that N. S. Witham of Anniston, is President of fourteen different banks. His plan is to furnish country towns with banking facilities. Any town with five hundred inhabitants can now have a good bank by co-operating with the Country Bank Stock Security Company, of which Mr. Witham is President.

Saved the money.—One night recently, W. T. Ward was passing the First National Bank building of Greenville, Tex., and discovered two burglars in the act of robbing the safe. He shot at them six times and they escaped with only $780. He was severely wounded, but he saved the bank $160,000.

Georgia.—The South Georgia Bank was opened about three years ago, and at the close of business, December 31, 1892, after paying an eight per cent. dividend, increased surplus to $15,000 besides undivided profits $2,300. This bank is the designated depository for four counties.

Glasgow, Va.—It is reported that the stockholders of the Commercial Bank have decided to discontinue the bank as a bank of discount and deposit.

High Point, N. C.—W. H. Ragan and J. H. Millis are organizing a loan and trust company which, later on, will be turned into a bank.

Tennessee.—It is claimed that the creditors of the Bank of Jasper which failed recently will be paid in full.

A National Bank is being organized in Beeville, Tex., by L. B. Creath and others.

Manassas, Va.—Efforts are being made to organize a National bank.

Florida.—A bank with $50,000 capital is organizing in Apalachicola.

High Point, N. C.—A. H. Coffin and others are organizing a bank.

Another National Bank is being organized in Hot Springs, Ark.

Winston, N. C.—A new bank is being talked up here.

A Bank is being organized in Arlington, Tex.

WESTERN STATES.

Minneapolis, Minnesota—A Model Bank Building.—A bank building is soon to be erected for the Nicollet National Bank, which will, architecturally, embody all the safeguards and conveniences that the improved method of modern banking require. It will be a model of its kind and will be exclusively occupied by the bank. In substantial construction and fixtures for its purpose it will not be excelled by any building west of New York. It is to be only one story in height, with a frontage of 48 feet on the street and a depth of 78 feet, and will be absolutely burglar and fire-proof. The light comes from above and the view in the interior will be unobstructed by posts or pillars, thus making one of the most cheerful and perfect banking rooms in the United States. A public room amply and commodiously fitted for writing and consultation will be at the service of customers and visitors. The street entrance will embody a novel feature which is an original idea conceived by the President, Mr. J. F. R. Foss. A heavy iron gate is to be placed at the main entrance and when open it is suspended above the passage way. This gate is to be connected by electric wire with the desks of each clerk and bank officer, and by pressing a button at any of the desks it can be closed and locked instantly, thus preventing the escape of a thief who might succeed in snatching a package of money in spite of the usual safeguards. Such schemes have been successfully operated in the larger cities several times within the past few years. The vaults for money, books and other receptacles, are of the most improved pattern. The building is an investment of gentlemen connected with the Nicollet National Bank and was planned throughout by the President who has been actively engaged in the banking business for many years. The bank has leased the building for a long term.

Metropolitan Trust Company, Minneapolis.—This Company opened for business July 20, 1892, and already ranks as one of the strongest financial institutions in the North-West. It is incorporated under the stringent banking laws of Minnesota, and subject to semi-annual examinations of the State Bank Examiner.

Under the laws of Minnesota, Trust Companies are required to deposit with the State Auditor 25 per cent. of their capital as a guaranty fund for security for the faithful execution of their trusts. The present paid capital is $1,000,000 soon to be increased to $1,250,000 which will then be the largest in the State. This Company owns the Lumber Exchange Building one of the most complete office b ildings in the North-West, valued at $1,100,000. Besides transacting a regular Trust Company business, they buy and sell high grade commercial paper, negotiate the sale of municipal and corporation bonds and other first-class securities. The officers of the company are men of many years' experience in financial matters.

The directors and officers include such well-known men as Geo. A. Pillsbury, Pres. Northwestern National Bank of Minneapolis; T. B. Walker, Pres. Flour City National Bank; H. C. Akeley, Vice-Pres. Flour City National Bank; S. G. Cook, of S. G. Cook & Co., Lumber Dealers, Minneapolis; C. C. Bowen of D. M. Ferry & Co., Detroit, Mich., and others equally as prominent.

The liability of the stockholders is the same as National banks. There is no reasonable doubt of a brilliant future for the Metropolitan Trust Company.

Preston National Bank, Detroit, Mich.—At the recent annual meeting of stockholders of this bank the following changes were made in the official staff: F. W. Hayes, President in place of Thomas W. Palmer; A. E. F. White, Vice-President in place of F. W. Hayes. The change in the office of President was made at the written request of Mr. Palmer, whose duties as President of the World's Columbian Commission will necessitate his absence during the greater part of the present year. According to a statement at the close of business January 9, the bank has capital, surplus and profits of $1,078,003, and deposits of $3,441,712.

Nebraska.—The Fremont National Bank is having an addition two stories high, built of brick, on the north side of the main building. It will contain a new steel-lined vault, burglar proof, new furniture and large plate glass front; will be heated by steam, and will cost $12,000.

A bank with $10,000 capital is organizing at Murray, Cass County.

The deposits of the National banks in Lincoln increased 41 per cent. during the year 1892.

Southern Michigan National Bank, Coldwater.—At the recent annual election of officers the following changes were made: President, Lester E. Rose; Vice-President, C. D. Randall; Cashier, A. S. Upson. Mr. Randall retired from the Presidency on ccount of too many other business cares, and ex-Governor Luce declined the position of Vice-President, which he has held ever since the bank was organized. The new President was formerly Cashier, and ranks as one of the best bankers in the State. The former Assistant, Mr. Upson, was promoted to the Cashiership.

Cincinnati Fifth National Bank.—As previously intimated in the JOURNAL, the changes in the official staff of this institution have been made. At a meeting of the Directors, held on January 21, Deputy Comptroller of the Currency, R. M. Nixon, was elected President in place of J. M. Kirtley, resigned. The only remaining change made was the election of T. J. Davis, Assistant Cashier.

Mr. Nixon is on the sunny side of middle life; he is of Pennsylvania parentage, but is a native of Indiana. He used to be a paymaster's clerk in the army, and after that was engaged in merchandising in Newcastle, Ind., in association with his father. He was Cashier of the First National Bank of Newcastle for eleven years, and then, upon the death of his father, returned to the State and took charge of it. Three years ago he was appointed Deputy Comptroller of the Currency, an office in which he has served most acceptably, and from which he has derived much financial education.

Michigan—Wayne County Savings Bank of Detroit.—The forty-second semi-annual statement of the condition of this bank at the close of business January 7, shows capital, surplus and reserve of $450,000, undivided profits $149,000 and savings deposits $5,741,400. Total resources are now $6,340,274. As compared with the statement on July 12, 1892, undivided profits have increased about $25,000, deposits about $300,000 and total resources about $340,000. In proportion to capital, surplus and undivided profits, this bank now stands about fifth of all the banks in the United States.

The first semi-annual report of the bank issued January 1, 1872, is a curiosity in itself. It shows capital, $30,000; due depositors, $129,988; loans, $100,755; furniture, fixtures, etc., $2,913; cash on hand, $47,319, and total resources of $150,988. As compared with the last statement of January, 1893, the figures present an interesting object lesson in growth and development.

Minnesota—Report of Public Examiner.—The fifth biennial report of Public Examiner Kenyon has just been published. In it he makes several valuable suggestions. The report states that there has been a large increase in the number of banks organized under the State law during the last two years. On July 31, 1890, there were 76, and on July 31, 1892, 117, an increase of 41.

Speaking of his own department, the Examiner concludes by saying: "The present deputy and clerk are becoming very proficient and expert in their work, and with an additional assistant the entire work of the department can be promptly handled and with corresponding benefit to the public and the institutions affected."

Bank of Dawson, Minnesota.—In a recent issue of a Commercial Agency's weekly sheet of changes it was reported that the Bank of Dawson, located at Dawson, Minn., had been closed by the Public Examiner. The statement was entirely without foundation, and the JOURNAL is authorized to deny it. The Bank of Dawson is an associate of the Lac qui Parle County Bank at Madison, and is in good condition and doing a larger business than at any time since its organization. A late report of its condition shows deposits of about $100,000; profits, $8,000; loans and discounts, $128,000, and total resources, $156,000.

Kansas City, Mo.—The Union Trust Company of Sioux City, Iowa, has established a branch here, and opened an office on the first of January in the American National Bank building, under the management of E. M. Donaldson. The company has a capital of $600,000 and surplus of $150,000, and deals in defaulted mortgages, bank stocks and other securities. It is thought probable that after six months the headquarters of the company will be permanently transferred to Kansas City.

In **Stanberry, Mo.**, all the banks have been provided with electric alarm bells with connections to adjoining business houses, and are so arranged that the Cashier may promptly throw up his hands when demanded by the robber and at the same time press the button with his foot, relying upon the citizens to do the rest.

Kansas—Newton National Bank.—On the 16th of December last this institution was closed and put in charge of the bank Examiner. About two years ago the bank became embarrassed and was reorganized with a claimed paid-up capital of $100,000. The liabilities at that time were placed at $500,000.

Kansas—Bank of Moundridge.—At the annual meeting held on January 2, Philip Hoffman was elected President in place of E. L. Parris, and J. W. Krehbiel

Vice-President. The officers and directors are responsible business men of the community and the stock is nearly all owned by persons living in the vicinity. The past year has been one of prosperity for the bank, and the citizens may well be proud of having an institution in their midst so well managed.

Omaha, Neb.—The German Savings Bank is still forging ahead. Its growth has been remarkable, when it is considered that it is the last bank of twenty organized in this city. The last published statement shows that it has passed twelve of the older-established banks in deposits.

Lincoln, Neb.—The U. S. grand jury has returned five indictments against C. W. Mosher, President of the defunct Capital National Bank. He is now under arrest. He says that he was alone to blame for the condition of the bank's affairs.

Elwood, Ind.—It is reported that the Elwood National Bank, recently organized by Colonel Conger, of Ohio, will consolidate with the First National Bank of Elwood. The combined institutions will have a working capital of $200,000.

Lincoln, Nebraska.—It is stated that the Capital National Bank, which recently suspended, will probably pay the depositors in full. In order to do this, however, the stockholders will very likely be assessed from 25 to 50 per cent.

A second dividend of 10 per cent. has been declared by the Comptroller of the Currency in favor of the creditors of the Vincennes National Bank of Vincennes, Ind., making 40 per cent. in all on claims amounting to $224,322.

PACIFIC SLOPE.

Wyoming—Annual Reportof State Auditor.—From the annual report of State Auditor Charles W. Burdick for the year ending September 30, 1892, the following statistics of the banking associations of the State are taken:

Number of National banks, 13; capital, $1,210,000; surplus, $199,896; undivided profits, $79,740; individual deposits, $1,325,708; due to banks, $134,294; total resources, $4,717,332.

Number of State banks, 5; capital, $74,500; surplus, $3,927; undivided profits, $8,837; individual deposits, $106,684; due to banks, $13,673; total resources, $317,739.

Number of private banks, 8; capital, $247.348; surplus, $11,265; undivided profits, $20,716; individual deposits, $295,894; due to banks, $10,507; total resources, $1,011,248.

Besides the above there are 10 Building and Loan Associations organized in other States and doing business in Wyoming which loaned $61,505 during the year.

The Washington Bankers' Association has agreed to defray the expenses of the Cashier of the National Bank of Commerce of Tacoma in going to Mobile, Ala., to appear before draft-forger Wolf, who was arrested there recently with Mrs. Annie Murphy, of Tacoma, while attempting to pass a forged National Bank of Commerce draft. Wolf's trial has been set for February, while the trial of Mrs. Murphy will not occur until May. The association proposes to make an example of the draft forgers and put a stop to it.

Will Re-open.—The Black Hills National Bank, which suspended a few weeks since, will probably soon re-open. The Bank Examiner is still in charge and expects soon to have matters adjusted. The sudden and unexpected demands for cash on several large certificates was the immediate cause for suspension. Chairman C. J. Buell of the Board of Directors states that as soon as large collections due the institution can be made the doors will be opened.

Washington.—The Pacific County Bank of South Bend has gone into voluntary liquidation. It is claimed that all creditors will be paid in full and that the bank will soon reorganize and resume under a new name.

San Francisco, Cal.—William B. Weightman has been appointed by the Comptroller of the Currency National Bank Examiner for the States of Nevada and California.

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

PROFIT OR LOSS IN NATIONAL BANK CIRCULATION?

Editor Rhodes' Journal of Banking:

SIR: The two articles that have recently appeared in the JOURNAL OF BANKING on the subject of the profit or loss, in taking out National bank circulation, have a practical interest to bankers in this section of the country, as they must all carry their circulation at a loss, though many perhaps have never taken the time to calculate the amount of loss.

Comparing your table in the October number of the JOURNAL, with that of Mr. Kistler in the December number, one is surprised at the great difference in the results attained; but on a closer examination of Mr. Kistler's table it will be found that by the method he pursues, the profits as shown in the result are augmented by compounding annually, 6 per cent. interest on all the gross profits, which seems a very good way to make a large showing of profits, for on the first year's earnings the interest alone amounts to $807.00, on the second $725.09, on the third $647.82 and so on By your method of calculation, there is no chance for compound interest to show what it can do in the way of earning profits.

Mr. Kistler's method of calculation may perhaps be more correct, theoretically, than yours, as you seem to make no allowance for the reduction of the total investment made each year by charging off 1-15 of the amount of premium. But, inasmuch as the premium, as shown by the market quotations, will actually melt away at about the rate of 1-15 per year, and remembering that the Comptroller of the Currency will compel the bank to charge off each year at least enough of the premium to bring it down to the market quotations, it seems to me that the correct way to solve the problem would be to make such tables as yours, one for each year, reducing in each succeeding table the amount on which you calculate the earnings that might have been made, had the money been invested otherwise than in bonds to secure circulation. The second table, in such a series, following the one you have given, would, in the 6 per cent. column, read as follows:

(1) Interest on $50,000 bonds at 4 per cent		$2,000
(2) Interest on $45,000 of circulation, less $2,250 for the Redemption Fund, leaving $42,750 at 6 per cent		2,565
Total income for second year		4,565
Deduct:		
(1) Annual loss, in premium on the bonds, 1-15 of $8,000 original premium	$533 33	
(2) Tax on circulation	450 00	
(3) Other expenses	25.00	1,008.33
Leaves net income second year		$3,556.67
Now, $533.33 of the original premium has been charged off, out of the profits of the first year, so the amount invested in bonds this second year is $57,466.67, on which, if otherwise invested, the bank would have earned		3,448.00
Leaving a net profit on the circulation for the second year of		$108.67

The table for the third year at the same rate of interest would show a profit on the circulation of $140.67 and so on, each year the amount of net profit being increased by 6 per cent. of the amount of premium charged off the previous year.

Turning again to Mr. Kistler's table, I cannot see that the calculations shown by his table give him any ground for the assertion he makes, that the bank has made the amount of profit therein shown, "besides having had an average 6 per cent. investment for 15 years of $9,988.00."

His table shows $7,396.61, net profit at the end of 15 years, while 11 per cent, of the actual investment (average $9,988.00), which he claims the bank to have made would be $16,480.20, and his total gross profits, as shown by the table, amount to but $14,896.72, which is less than 10 per cent. for 15 years on $9,988.00. I am unable to see by what method of reasoning he arrives at the conclusion that besides the $7,396.61 profit shown by the table the bank has made 6 per cent. on an average investment of $9,988.00 for 15 years. But without questioning Mr. Kistler's method of calculation, or the deductions made from his table, he has not proven that the complaint of the Texas banker is without cause, for let him substitute in his calculation,8 per cent., 10 per cent., or 12 per cent., for the 6 per cent. he has used, and the results will be somewhat different. At 8 per cent. the premium will not be paid off until the 14th year and the total net profits for the 15 years will be but $1,867.39. At 10 per cent. there will remain at the end of the 15th year $5,911.32, of the premium to be charged off, while at 12 per cent. the end of the 15th year will show a loss of $16,631,00. E. E. NOLD.

SOCORRO, New Mexico, December 17, 1892.

Editor Rhodes' Journal of Banking:

SIR:—In the issue of your JOURNAL OF BANKING for December last, I notice an article under head of "National Bank Circulation," by J. S. Kistler. According to Mr. Kistler's own figures, the circulation feature is a losing investment. He failed to charge off the $7,500 premium paid on the bonds. This would make a loss of $103.39, as per his figures. Here in the West, where interest is much higher, the loss is greater. N. G. HOLLISTER, *Cashier.*

HUTCHINSON, Kans., December 19, 1892.

CLEAN MONEY.

Editor Rhodes' Journal of Banking:

SIR:—In looking over the last Report of the Comptroller of the Currency, I notice on page 16 a short paragraph on "Clean Money."

Now this is certainly a matter well worth the consideration of all banks and bankers and I am glad to see some space devoted to its consideration in an official report from such a high source.

We cannot have the clean currency that Great Britain must have by reason of the Bank of England never allowing a note to be issued a second time, but we can have our currency much improved, I think, by a concerted action among all banks in holding all "unfit" currency and having it redeemed.

In this bank (the First National) we have had a plan in operation for some time about as follows: In paying out currency, all mutilated, defaced, stained or filthy bills are thrown aside until a sufficient amount accumulates to forward for redemption. In making up statements and reports this currency is counted under "Bills of other banks" to which the Examiner makes no objection.

It is evident that if all our banks adopted some such simple plan the effect would soon be apparent in the condition of our currency and our circulation would be somewhat less worthy the title "Filthy Lucre."

Hoping you can find space in your valuable columns for this short letter,

DELTA, Pa., Jan. 30, 1893. L. K. STUBBS, *Cashier.*

"A Necessary Adjunct."—From Tootle, Lemon & Co., bankers, St. Joseph, Mo., under date of January 25: "Enclosed we hand you draft for subscription to RHODES' JOURNAL OF BANKING for one year. We consider it *a necessary adjunct* to every well-regulated bank."

The Universal Opinion.—Joseph M. Smith, Cashier of the Bank of River Falls, Wis., under date of December 15, 1892, writes as follows: "Herewith find draft for $5 to renew subscription to the JOURNAL OF BANKING for 1893. *Cannot do without it.*"

Good Testimony.—From the Philadelphia "Commercial List and Price Current" of January 7: "The December number of RHODES JOURNAL OF BANKING contained a good portrait of the late Stephen M. Clement, President of the Marine Bank of Buffalo, N. Y., and a sketch of his life. Valuable articles on the 'Paper Currency of the United States' and the 'International Monetary Conference' appear, in addition to the regular fund of important information."

Oklahoma.—The JOURNAL was in error in stating in the January number that the recently organized First National Bank of El Reno succeeded the Bank of El Reno. It is entirely new, and has no connection whatever with the defunct Bank of El Reno.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Augusta, Ga.—The Mayor will receive sealed bids for the whole or any part of $98,000 30-year 4½ per cent. city redemption bonds.

Birmingham, Ala.—The city will offer $150,000 bonds to pay off floating debts.

Freeport, N. Y.—Union Free School, District Number 9, will soon issue about $30,000 bonds for the purpose of building a new school house.

Waco, Texas.—The San Antonio & Aransas Pass Railway Co. has entered for record at Waco the indenture of a mortgage to the Central Trust Co. of New York, made to secure an issue of $18,000,000 in first mortgage bonds.

West Point, Ga.—This city will hold a special election in February to decide upon issuing improvement bonds.

Fort Worth, Tex.—The city will receive bids for the purchase of $158,000 of 5 per cent. gold bonds, dated May 1, 1893, interest payable semi-annually.

Galveston, Tex.—Sealed bids are invited for 100 $1,000 Galveston county 5 per cent. bridge bonds.

CORPORATIONS SEEKING CAPITAL.

Philadelphia & Reading Railroad has listed $3,981,000 additional general mortgage 4 per cent. coupon gold bonds and registered bonds, into which they may be converted, making the amount of coupon bonds $42,653,000, and of registered bonds (original) $1,700,000, a total of $44,353,000.

Louisville & Nashville Railroad offers $1,072,000 additional unified 50-year 4 per cent. gold bonds and registered bonds, into which they may be converted, making the total amount listed to date $9,822,000.

New York City—Edison Electric Illuminating Company are offering $150,000 additional first mortgage 5 per cent. convertible gold bonds, making the total listed to date $3,250,000. Also, to be added on February 3, $400,000 additional capital stock, making the total listed to date $6,500,000.

Maine Central R. R.—The directors have voted to issue 5,000 shares of stock to provide for double tracking and other improvements. The stock will be offered to shareholders of record on February 10.

SECURITIES SOLD.

Asheville, N. C.—Blair & Co., of New York, have purchased $100,000 worth of city improvement bonds at ninety cents.

Rochester, N. Y.—Vermilye & Co., of New York city, have purchased $500,000 of the 5 per cent. M. & N., twenty-year, First Consolidated Mortgage gold bonds of the Rochester Gas and Electric Company. This is the consolidation reported of the Edison Electric Illuminating Co., Rochester Electric Light Co., Brush Electric Light Co., and the Rochester Gas Co.; one of many like consolidations of electric light and of electric railway companies in which the most conservative of capitalists are investing largely. Vermilye & Co. are offering them at 102½ and accrued interest at which they will yield 4.80 per cent.

Seattle, Wash.—N. W. Harris & Co., of Chicago, have purchased $30,000 6 per cent. semi-annual 20-year bonds at a large premium—amount not stated.

Far Rockaway, N. Y.—$7,000 5 per cent. semi annual 20-year bonds were sold to Isaac W. Sherrill, of Poughkeepsie, for a premium of $115.27.

La Crosse, Wis.—Bonds of the city to amount of $25,000 were recently sold to the Sinking Fund and State Bank of La Crosse at a total premium of $1,354.70.

Chester, Pa.—$50,000 20-year 5 per cent. J. & J. gold first mortgage bonds of the Union Railway Company were sold to E. C. Jones & Co., of New York city. This road controls all the lines of Chester, and owns 16 miles.

ITEMS.

Indiana.—There is pending in the Indiana Legislature a bill requiring all insurance companies to keep a balance of $50,000 on deposit in the State.

Columbia, S. C.—Governor Tillman has entered into an agreement with the Baltimore Trust and Guarantee Company to purchase $2,000,000 of the 4½ per cent. State bonds at par. The inducement offered is $130,000, the amount of the semi-annual interest on the stock, which is to bear interest from January 1, 1893, to July 1, 1893. The Supreme Court has decided that the Governor had the right to pay the six months' interest as a bonus.

Brooklyn, N. Y.—The purchase of the Prospect Park & Coney Island R. R. by the Long Island Railroad has been confirmed. The purchase price is not given. All that is known is that the Long Island Company guarantees four and one-half per cent. on the bonds held by Culver and Washington. By the arrangement the Long Island Company will pay interest on about $1,000,000 of Prospect Park bonds, and gets a controlling interest in the stock for nothing.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

THE INTERNATIONAL MONETARY CONFERENCE.—The International Monetary Conference has not taken long to dispose of bi-metallism. As soon as the United States delegates tabled their proposal for the re-establishment and maintenance of a fixed parity between gold and silver by means of an international bi-metallic agreement, the representatives of Germany and Austria intimated that they had been instructed by their respective Governments to say that they could not agree to any modification of their existing monetary legislation. And this practically settled the matter, since it involves the non-participation of France, who will certainly not reopen her mints to the free coinage of silver so long as those of Germany and Austria remain closed. It has already been determined, therefore, that the idea of international bi-metallism must be abandoned, and, as that was bound to have been the decision in the end, it is better that it should have been arrived at without waste of time.

What the Conference has now to consider is, whether any other or more acceptable method of increasing the use of silver for currency purposes can be devised, and during the latter part of this week a special committee has been considering a scheme for the attainment of this end, which has been formulated by Mr. Alfred de Rothschild, who is one of the British delegates. Briefly, Mr. Rothschild's suggestion is that, provided the Government of the United States shall agree to continue buying silver at the rate of 54,000,000 ounces per annum, the European powers shall bind themselves to buy annually £5,000,000 worth of the metal, unless the price of silver should rise above 43 pence per ounce, in which case their purchases would be temporarily suspended. This agreement he proposes shall be entered into for a term of five years, and he further suggests—although that appears to lie outside of his main proposal—that we shall raise our legal-tender limit for silver from £2 to £5. Such an arrangement, he thinks, would satisfy India, because it would steady the price of silver and the exchange, and it would, in his view, be productive of other benefits, which are perhaps best set forth in his own words: "In addition," he says, "the gold market would be relieved, in so far as no appeal would probably be made to it except from Europe for some time to come; and as South Africa is increasing her output of gold yearly, the arrangement I have suggested would enable Russia and Austria to complete their purchases without unduly interfering with the money market in general."

Such is the scheme, and in some quarters it has met with a good deal of favor. For our part, however, we cannot regard it as either sound or practicable. It is in its essence merely an extension of the policy which has latterly been pursued by the United States, and which experience has proved to be vicious and injurious. We all know how it was predicted of the Bland Act, which imposed upon the United States Treasury the obligation to purchase and coin silver to the amount of not less than £400,000 a month, that it would maintain the price of the metal, and how speedily those predictions were falsified. Similarly, when the Sherman Act, which increased the compulsory purchases of the Treasury to 54,000,000 ounces per annum, was passed, great things were prophesied as to its steadying and sustaining influence upon the silver market, and we see now how inoperative the Act has been for its intended purpose, and how completely all the hopes that were based upon it have been disappointed. And what those two measures so utterly failed to accomplish is not, it seems to us, to be obtained by a mere further increase of compulsory purchases to the extent of some 28,000,000 ounces a year. Look how the production of silver has been increasing. The figures for the past five years are:

Year.	*Fine Ounces.*	*Year.*	*Fine Ounces.*
1891	143,994,000	1888	108,827,000
1890	134,380,000	1887	96,124,000
1889	125,420,000		

At this rate of growth the increase in the compulsory purchases would be covered in about two years by the increase in production, and as regards supply and demand, we should be brought back to the same relative position as that in which we now stand, except that in the interval such a stimulus would have been given to production that the potentialities of supply would be much greater than they are now. Mr. de Rothschild does not claim for his plan anything more than that it is a temporary expedient and palliative; but its effect, it seems to us, would be far more evanescent than he appears to think; and while any relief it might afford would be of brief duration, that would have to be purchased at the cost of a subsequent intensification of present difficulties.

Such a plan, moreover, does not relieve, but rather aggravates, the monetary difficulty which the Government of the United States has to contend against. That difficulty is this: The issue of the notes with which the Treasury pays for its purchases of silver has a twofold effect. In the United States, as here, there is a regular ebb and flow of the internal circulation. At certain periods of the year it contracts and at others expands. But equally during the period when the requirements of the country are small as well as when they are great, the Treasury keeps pumping into the channels of circulation its monthly addition of from £800,000 to £900 000 to the paper currency. Consequently, except during the the busy autumn months, the tendency is for gold, which is the only portion of the currency that has a value abroad equal to what it has at home, to flow out of the country. And, broadly speaking, when there is this efflux, it is the stock in the Treasury that is drawn upon. In consequence of this the Treasury has, ever since the Sherman Act went into operation, experienced great difficulty in preventing its gold reserve from being drained away, and has not been able to prevent it from being much reduced. That is one result of the silver legislation, and the other is, that while the gold reserve of the Treasury has dwindled, its gold obligations have greatly increased. It has undertaken to redeem in gold on demand the notes issued in payment of the silver bought. There is no legal obligation to do this, as it has the option of paying them in silver, but it it is the only way in which the parity of the gold and silver dollar can be maintained, and that parity the Government is pledged to maintain. And what the effect of this twofold process has been will be seen from the following statement:

	Gold owned by Treasury.	*Amount of legal-tender notes and currency certificates.*	*Proportion of gold to notes.*
June 30, 1892	£22,868,000	£87,939,000	27.1%
" 1891	23,534,000	77,109,000	30.5%
" 1890	38,016,000	66,975,000	56.8%

There are those who contend that the Treasury is under a legal obligation to hold £20,000,000 in gold against the greenbacks which have been issued to the extent of £69,000,000, and of which about £65,000,000 are usually in circulation. If that view of its legal position be right, then on June 30th last it had less than £3,000,000 in gold, against outstanding obligations to the amount of about £22,000,000. But in any case, the proportion of total gold to notes of all kinds outstanding, which in the middle of 1890 was 56.8 per cent., had, because of increased note issues and a concurrent loss of gold, been reduced at the 30th June last to 27.1 per cent. And under the Rothschild plan this movement would go on. The gold liabilities would continue to be heaped up at the rate of £10,000,000 a year, while because of the redundancy caused in quiet times by the monthly issue of notes, gold would continue to be driven out of the country. Of this the inevitable result would be that the apprehension already felt lest the Treasury should be unable to fulfill its promise to pay gold for its notes on demand, and which causes every efflux of gold to be viewed with serious concern would deepen into alarm, and long before the expiry of the proposed term of four years the Treasury would be compelled in self defense either to stop its silver purchases or to obtain, by an issue of bonds, gold with which to strengthen itself.

And if the silver difficulty in the States is to remain and to become intensified no confidence in the future of silver will be felt anywhere. It will be seen from the beginning that the new attempt to bolster up the price of the metal must fail in the same way as former attempts, with the result that it will become more discredited than ever. For these reasons, we think the plan is so radically faulty that it has no chance of ultimate acceptance. It is not, therefore, necessary to consider whether Germany and Austria, who have more silver than they want, and who have intimated that they intend to adhere to the gold standard, would consent to spend money in buying a further supply of the white metal. Nor need anything be said at present as to the suggestion that we should increase our legal-tender limit for silver to £5, save that if room is to be made in our currency for more silver, it is better done by some such permanent provision than by a mere temporary makeshift. If the limit were to be altered, we should rather have it fixed at £4 than at £5, because we do not wish to see any question raised as to the absolute convertibility of the Bank of England note into gold. The fact that the note represents gold gives it a currency abroad which it might not retain if there were any chance that the holder might be compelled to accept payment in silver. We are inclined to think, too, that more room would be made for silver by abolishing the half sovereign than by extending the legal tender limit. These are all points, however, which may be left for future discussion, and in conclusion, we would only point out that a more stable ratio between gold and silver is more likely to be obtained by leaving the two metals to find their natural level than by artificial arrangements of such a character as that which Mr. de Rothschild has proposed. We show elsewhere how steadily the production of gold has of late years been increasing, and how it is likely now to increase much more rapidly. And just as Africa is augmenting our gold supplies, so she is likely to offer an outlet for silver. Already our silver currency has been introduced into the territory north of the Zambesi, where Mr. R. H. Johnston hopes it will take the place of the miscellaneous coins, mainly of Portuguese origin, that circulate there. From our West African possessions, too, there is a demand for silver currency, more especially from Lagos, where, we learn from the last report of the Deputy-Master of the Mint, "it is largely used by merchants in their trade with the interior;" and it is added, "correspondence which has recently passed in regard to that trade makes it clear that the Imperial silver currency serves as an important instrument for encouraging commercial relations with the natives." Seeing, then, that a lower price of silver would restrict production, that a new field for the employment of silver currency is being gradually opened up, although as yet only a small beginning has been made, and that the production of gold is increasing, the probability is that the silver difficulty will gradually right itself if the process of readjustment is not thwarted, as it has been by unwise legislation, such as that of the United States.—*London Economist, Dec. 3, 1892.*

Failures and Suspensions.

Arkansas—LITTLE ROCK.—The First National Bank closed its doors February 2. About ten days prior to that date the bank was reported in trouble, but a reorganizawas effected and it was considered to be perfectly solvent. According to the Bank Examiner, who is in charge, the bank's affairs are in a very bad shape, and the bank will have to be placed in the hands of a Receiver. As far back as January 19, the Bank Examiner was sent to examine into the affairs of the bank, and he reported then that the books showed $400,000 losses. He recommended an assessment of 60 per cent. upon the stockholders to make up for the impaired capital. The Examiner also states that the President of the bank had borrowed large sums, how much he could not say, on his own individual paper. The Comptroller of the Currency states that under the reorganization, a few weeks ago, it was hoped that the bank would survive, but it was flooded with paper issued by its former President, and the only thing to do was to shut its doors that an account might be taken of its stock. The assets and liabilities are not given although it is known there are $450,000 of the bank's money loaned on paper that is believed to be worthless.

Nebraska—LINCOLN.-The Capital National Bank failed January 23, and is in the Bank Examiner's hands. The failure is considered a very bad one. Liabilities are stated to be over $350,000, and it is claimed the assets are of about an equal amount. The bank was organized from the ruins of the old Marsh Bank, which expired of dry rot about eight years ago, and it was supposed, until recently, that the President and Cashier were able to carry the bank through any crisis that might occur out of their own funds. It is now believed that they are in such a cramped condition they can furnish no assistance, even if so disposed. It is said that the failure was caused from outside speculations by the President and other officials.

New York City.—The title of the new bank elsewhere reported as organizing is the National Union Bank, and the capital is fixed at $1,200,000. The Organization Committee, of which Mr. Walter A. Pease is Secretary, announce that the bank will open for business May 1.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4833—Merchants' National Bank, Haverhill, Massachusetts. Capital, $100,000.
4834—Farmers' National Bank, Malvern, Iowa. Capital, $50,000.
4835—Alexandria National Bank, Alexandria, Indiana. Capital, $50,000.
4836—Clearfield National Bank, Clearfield, Pennsylvania. Capital, $100,000.
4837—Citizens' National Bank, Pensacola, Florida. Capital, $100,000.
4838—Isbell National Bank, Talladega, Alabama. Capital, $50,000.
4839—First National Bank, Arcanum, Ohio. Capital. $50,000.
4840—National Lumberman's Bank, Muskegon, Michigan. Capital, $100,000.
4841—Indiana National Bank, Elkhart, Indiana. Capital, $100,000.

NEW BANKS, BANKERS, ETC.

ARKANSAS.

BRINKLEY—People's Saving's Bank. Capital, $25,000. President, Parker C. Evan; Vice-President, J. J. McNally; Secretary and Treasurer, C. B. La Belle.

CALIFORNIA.

PALO ALTO—Bank of Palo Alto; President, B. Parkinson; Cashier, Geo. R. Parkinson.

CONNECTICUT.

BRIDGEPORT—Bridgeport Banking & Trust Company; capital, $150,000.—Dime Savings Bank; reported organizing.

FLORIDA.

ORLANDO—Fruit Growers' Bank; capital, $30,000.
PALM BEACH—Dade County State Bank; capital, $15,000; President, J. H. Brelsford; Vice-President, E. N. Dimick; Cashier, George L. Branning.

GEORGIA.

ALBANY—Exchange Bank; capital stock, $50,000; President, S. B. Brown; Cashier, A. P. Coles.
BUFORD—Bank of Buford; President, W. S. Witham; Cashier, John F. Espey.
ELBERTON—Elberton Bank; capital, $25,000; President, W. S. Witham; Vice-President, M. Arnold.
LEXINGTON—Arnold & Stewart, bankers.
MILLEN—Bank of Millen; President, William S. Witham; Vice-President, J. H. Daniels, Sr.; capital, $25,000.

ILLINIOS.

BLUE ISLAND—Blue Island State Bank; capital, $25,000.
TOULON—Farmers' State Bank; capital, $25,000.

INDIANA.

ALEXANDRIA—Alexandria National National Bank; capital, $50,000; President, Samuel E. Young; Cashier, C. F. Heritage.
ELKHART—Indiana National Bank; capital, $100,000; President, J. L. Brodrick; Cashier, W. L. Collins.
ELWOOD—Elwood National Bank, organizing; capital, $100,000; President, A. L. Conger.

IOWA.

ALEXANDER—Bank of Alexander.
MALVERN—Farmers' National Bank; capital, $50,000; President, John C. Taylor; Cashier, Wm. M. Evans.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, February 4, 1893.

THE MONTH OF FEBRUARY OPENS with a financial situation almost unparalleled in the history of the country. Business is unusually large for the season of the year, bank deposits and reserves are swelled to large proportions and the business failures reported are few and comparatively unimportant. It is seldom that a combination of circumstances exists which seems more promising for future results than at the present. Yet there is a cloud which, although at first no larger than a man's hand, bids fair soon to overcast the financial sky. Gold exports which began in a small way last November have now assumed such proportions as to threaten serious disturbance, and this, notwithstanding the fact that the excess of merchandise exports over imports is still large. The reason of this remarkable outgo of gold has been discussed generally, and, it seems, without arriving at any satisfactory conclusion. About all that has been deduced so far is, that the movement is altogether abnormal and is possibly the result of temporary causes which may or may not cease at any time. But another fact must not be overlooked in considering the situation and that is, that the time is near at hand when gold is almost invariably exported in large quantities in payment for imports—and this year is not likely to be an exception—while the gold reserve in the Treasury ($113,000,000) is much lower than usual. This may be rather a gloomy view to take of the situation but it seems warranted by the facts.

On the other hand, there are those who have implicit faith that the Government has every resource, without additional legislation, to command the gold of the world as occasion may require. There is undoubtedly much to learn in the way of financial education, and this international ferment over gold and silver may yet teach a valuable lesson; but who will teach and who are to be taught cannot now be determined.

Some also believe that much of the gold which has gone abroad has, in Street parlance, a "string attachment," that is, it is to be held only for appearance' sake, and subject to be called back whenever really needed. Be that as it may, bankers find much difficulty in selling bills to cover shipments, and this fact may render gold exports more difficult at the time when they are naturally to be expected—from February to July. There are still others who believe that the steady outflow of the precious metal is more the work of those foreign bankers, who are endeavoring to reconstruct Austria's finances, than it is the result of any lack of confidence in the financial stability of this country. When the loss of prestige is considered which England has suffered—not only commercially but financially—the past two years or since the Baring trouble, the reason why European bankers turn to this country as the source from which to satisfy the world's demand for bullion becomes more apparent. Altogether the situation is a remarkable one, not only for the difference of opinion as to the actual monetary position of this country and the gigantic railroad and industrial combinations that are in progress, but chiefly remarkable for the enormous transactions which are being conducted on both sides of the account.

Notwithstanding all this there is a great supply of money and, at this writing, there are no indications of approaching monetary stringency anywhere. Collections are reported as a little slow, chiefly on account of the bad weather in certain sections. The fact that money is pouring into this centre in unprecedented amounts is a certain indication that other and smaller centres are amply supplied and anticipate no pressure in the near future. Manufacturers generally report a condition as satisfactory as at any time in many years, although prices, in the iron and steel business for many products, are the lowest ever known. However, it appears that many are willing to sell at the prices, and the natural inference is that there is some profit in doing so. In other industries there is seen no falling off in prices, but on the other hand, a production almost beyond precedent appears to be met by an eager and ample demand. The result is clearly reflected in the payments through the Clearing-Houses outside of this city for January, which were about 11.8 per cent. larger than in the same month a year ago, and also in the increased receipts of the railway companies, which denote a corresponding expansion in traffic.

In Europe the monetary situation is rather unsettled on account of the bank failures in Italy and the further developments in the Panama Canal scandal. The influence of the disclosures, however, does not appear to have extended outside of their immediate localities, although the latest developments would seem to implicate several persons who are or have been high in authority. The action of the Bank of France in paying out gold caused some comment, until it was learned it was done for the reason that the limit of lawful note-issue had been reached, and also because of recent large withdrawals of notes by banks for the purpose of increasing their reserves. At the same time the Bank stopped paying a premium on gold shipments, having, it is claimed, $300,000,000 of that metal in its vaults.

The situation in London is decidedly better. Money there is a drug. The returns on it are not over 1⅛ per cent., and the outlook is for a continuance of easy rates. On January 26, the Bank of England reduced its discount rate to 2½ per cent., the lowest point it has touched in January since 1880, at least. One year ago it was 3 per cent., and the ruling rate in recent years has been from 4 to 6 per cent. The open market rate for 60 to 90-day bills is 1 to 1⅛ per cent. as against 1⅝ per cent. in December and 2⅜ per cent. at the end of November. In Paris, the open market rate is 2¼ per cent. as against 2½ per cent. in December; in Berlin, 1⅝ per cent, and Frankfort, 1⅞ per cent. as against 3⅛ and 3¼, respectively, at the end of December. During the last week in January the Bank of England gained £418,388 in bullion (chiefly from the interior), holding at the close £25,783,866. The Bank of France lost £1,787,400 in gold, and the Bank of Germany reports a gain of about £900,000 of that metal since last return.

The total amount of specie exported from New York city to all points during the month of January was $9,568,000 as compared with $14,640,000 in December, 1892. The imports for the month were $126,000 as against $901,000 in December, 1892.

The United States Treasury statement for January, shows an increase in the total public debt for the month of $3,105 800 There was a decrease of $722,299 in the non-interest bearing debt, an increase of $580 in the interest bearing debt, and a decrease in the surplus or net cash balance in the Treasury of $3,827.520. The total cash in the Treasury is $772,881,229, of which $228,827,054 is in gold coin and bullion; $468,040,081 in standard dollars, silver bullion and subsidiary coin; $60,037,805 in gold and silver certificates, legal-tenders and National bank notes and $15,975,810 in National bank depositories and disbursing officers' hands. The amount at present in National bank depositories is $11,098,454. The bonded debt on January 31, was $585,033,080 and total public debt $964,524,703. Net available cash balance in the Treasury, including deposits in National banks, is $25,265,068.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $102,632 retired circulation of National gold banks—was on January 31, $173,092,694. This shows a decrease for the month of January of $1,208,118, as compared with an increase of $789,984 in December, and an increase in total circulation since January 31, 1892, of $1,195,927. During the month of January there was issued to new banks $157,500, and to old banks increasing circulation $741,740. There has been surrendered and destroyed since January 31, $911,431. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $23,091,400, showing a decrease in that class of circulation during the month of $682,761.

MINT COINAGE.—The coinage executed at the United States Mints during the month of January was as follows: Double eagles, 155,000; half eagles, 16,000; standard dollars, 730,000; half dollars, 14,000; Columbian half dollars, 864,000: quarter dollars, 356,000; dimes, 60,000; five cents, 832,000; one cents, 4,630,000, or a total of 7,657,000 pieces valued at $4,531,900. In December the coinage was 9,232,930 pieces valued at $4,486,484.

The following table shows the amount of gold and silver coins and certificates, United States notes and National bank notes in circulation February 1, 1893:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold coin	$559,063,122	$147,375,054	$411,688,068
Standard silver dollars	418,606,985	357,400,597	61,196,388
Subsidiary silver	77,887,460	11,346,523	66,540,937
Gold certificates	136,375,589	15,729,770	120,645,819
Silver certificates	328,146,504	4,953,844	323,192,660
United States notes	489,657,505	31,586,021	458,071,484
National bank notes	174,391,253	7,768,170	166,623,083
Totals	$2,184,128,418	$576,169,979	$1,607,958,439

Population of the United States, February 1, 1893, estimated at 66,349,000; circulation per capita, $24.23.

Foreign Exchange.—The sterling exchange market during the month of January has been without special feature, being quiet but firm most of the time, with a little easier feeling at the end of the month, caused by large offerings of bills under gold exports. Commercial bills are still scarce, while the effect of the reduction of the Bank of England's rate was to weaken sight bills and cable transfers a trifle, but 60-day bills closed rather firmer. For the week ending January 7, the market for sterling exchange was firm, especially for 60-day bills which were relatively higher on account of easier rates for money in London. Closing rates were at $4.86 for long; $4.87½ for demand, and $4.87¾ for cables. For the week ending January 14, the market for exchange was still firm on a greatly diminished amount of business, with an advancing tendency, closing with posted rates at $4.86 for long, $4.88 for short and $4.88¼ for cables. During the week ending January 21 sterling bills were strong, owing to a scarcity of both bankers' and commercial bills, closing with posted rates at $4.86¼ for long, $4.87½ for short and $4.88 for cables. For the week ending January 28, the market for sterling exchange was quite firm at the opening but became easier closing with posted rates at $4.86 for long; $4.87¼ for short and $4.87½ for cables. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, $4.86½@$4.86¾; Bankers' sterling, sight, nominal, $4.87@$4.87¼; Bankers' sterling, 60 days, actual, $4.86 @$4.86¼; Bankers' sterling, sight, actual, $4.87¼@$4.87½; Cable transfers, $4.87¼@ $4.87½; Prime commercial sterling, long, $4.86@$4 86½; Documentary sterling, 60 days, $4.84¾ @$4.85; Paris cable transfers, $5.15@$5 14⅜; Paris bankers', 60 days, $5.17⅛ @$5.16⅞; Paris bankers', sight, $5.15⅝@$5.15; Paris commercial, 60 days, $5.18¾@$5.18⅛; Paris commercial, sight, $5.16⅞@$5.15⅝; Antwerp commercial, 60 days, $5.15⅝@$5.15; Brussels bankers' sight, $5.15⅝@$5.15; Swiss bankers' 60 days, $5.17½@$5.16⅞; Swiss bankers', sight, $5.15⅝ @$5.15; Reichmarks (4), bankers', 60 days, 95⅜@95½; Reichmarks (4), bankers', sight, 95⅝@95¾; Reichmarks (4), commercial, 60 days, 96⅛@95¼; Reichmarks (4), sight, 95 3-16@95 9-16; Guilders, bankers', 60 days, 40 3-16 @40¼; Guilders, bankers', sight, 40⅜ @40 ½; Guilders, commercial, 60 days, 40 1-16@40⅛, Guilders, commercial, sight, 40¼@40 5-16; Kronors, bankers' 60 days, 26⅝@26⅞; Kronors, bankers', sight, 27 1-16@27⅛; Lisbon, sight, per milreis, 88½@88¾; Italian lire, sight, $5.32½@$5.31¼. Paris dispatches quote exchange on London 25f. 11½c.

Home Money Market.—The principal feature of the local money market during the month of January was the remarkable inflow of money from the interior, the aggregate amount of deposits having increased from $444,000,000 to 489,000,000, the most of it having been gained by seventeen banks. As a result, the rate for call loans has been steadily declining, until at the end of the month it stood at the lowest point. There has not been a time in many years when the banks have accumulated money so rapidly, and that, too, in the face of unusual gold exports. Of course the Treasury has contributed considerable of this, but the principal part has come from the four points of the compass. The range for call loans throughout the month has been from 1 to 7 per cent., with 4 per cent. as about the average. From the end of December to the end of January the reserve of the banks has increased about $17,000,000. The banks now hold a total reserve of $145,338,000, which is $23,140,000 above legal requirements. At the corresponding date last year the banks held a surplus reserve of $24,000,000, while the increase in loans was only one half the amount reported this year, and the actual gain in money was but one and a quarter million dollars. Time money is a little firmer than at the close of last month, influenced chiefly by the gold exports, although there is no perceptible change in quotations. There is a disposition on the part of lenders not to accept "industrials," although they are freely offered. At the close, quotations on good Stock Exchange collaterals are 3½ per cent. for 30 days; 4 per cent. for 60 days to four months, and 4½ per cent. for contracts running five to six months. Commercial paper is in good demand both from city and out-of-town customers, and good paper is readily taken. Rates are quoted at 4½ per cent. for sixty to ninety-day endorsed bills receivable; 4¾ to 5½ per cent. for four months' commission house names and 5½ to 6 per cent. for good single names running four to six months. For the week ending January 7, the open market rate for call loans on stock and bond collaterals ranged from 4 to 7 per cent., with 5 per cent. as the average. Prime commercial paper quoted at 5½ to 6 per cent. During the week ending January 14, the open market rate for call loans on prime collateral ranged from 2½ to 6 per cent., the average being about 4½ per cent. Commercial paper unchanged at 5½ to 6 per cent. During the week ending January 21, the open market rate for call loans on stock and bond collaterals ranged from 2½ to 5 per cent., 3½ per cent. being the average. Commercial paper quoted at 4¾ to 5½ per cent. For the week ending January 28, the open market rate for call loans on stock and bond collaterals ranged from 1 to 4 per cent., the average being 3 per cent. Prime commercial paper quoted 4½ to 5½ per cent.

NEW YORK CITY BANKS.—The following reflects the condition of the local banks each week during the month of January: For the week ending January 8, the New York city banks received gold and currency from the interior amounting to $5.895,000 and shipped $2,846,000. During the same time by Sub-Treasury operations they gained $2,000,000, making a total net gain for the week of $5,049.000. During the week ending January 14, the New York city banks received gold and currency from the interior amounting to $7.893,000 and shipped $2,005,000. By Sub-Treasury operations for the same time they lost $800,000, making a net gain for the week of $5,088.000. The week ending January 21, the New York city banks received from the interior gold and currency amounting to $8,901,000 and shipped $2,455,000. During the same time by Sub-Treasury operations they gained $2,000,000, making a total net gain for the week of $8,446,000. During the week ending January 28, the New York city banks received gold and currency from the interior amounting to $8,011 000 and shipped $1,981,000. During the same time by Sub Treasury operations they lost $4,175,000 making a total net gain for the week of $1,852,000. From December 31 to January 28, the New York city banks gained gold and currency amounting to $20 435,000, as compared with a loss of $317,000 in December and a gain of $1,787,000 in November.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surp. Res.*	
Jan. 7 ...	$441,284,000	$76,627,000	$46,158,000	$455,368,000	$5,585,000	$2,103,000	inc.
" 14... ...	439,875,000	79,948,000	51,380,000	462,870,000	5,623,000	6,668,000	inc.
" 21	447,074,000	84,628,000	57,893,000	479,964,000	5,647,000	6,919.000	inc.
" 28... ...	455,180.000	85,280.000	60,058,000	488,780,000	5,586.000	614.000	inc.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of January, 1893, and the highest and lowest since January 1, 1893, by dates:

	YEAR 1892.		SINCE JANUARY 1, 1893.		JANUARY, 1893.

Chic. Gas	357,540	Man. Consl.	195,203	Mo. Pacific	99,765	Col. & H. Coal.	78,049
	4,752,142		1,237,802		738,378		443,200

leaving 1,483,327 shares to represent the dealings in the remaining 179 stocks. In addition 451 different issues of railroad bonds were dealt in, to the amount of $48,615,500 also $160,800 State bonds and $123,200 Government bonds. (Compared with January, 1892, there is a decrease of 827,362 shares in stocks; a decrease of $20,077,500 in railroad bonds; a derease of $258,400 in State bonds; a decrease of $151,900 in Government bonds, and a decrease of 1,501,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $92,000; stocks, 1,906,952 shares, of which 1,428,723 were American Sugar Refiners' common stock and 46,421 preferred; mining stocks, 12,187 shares. American Cotton Oil Certificates, 77,827 shares of common and 8,053 shares of preferred; Pipe Line Certificates, 48,000 barrels. Of National Lead common 166,083 shares, preferred 15,322 shares; of silver bullion certificates, 395,000 ounces, extremes being 84⅛ and 83, closing at 84⅛. The listed stocks show an increase of 1,550,436 shares as compared with the amount sold in December. Transactions in railroad bonds show an increase of $15,942,000 during the same period, a decrease of $51,200 in State bonds, and a decrease of $24,400 in Government bonds. In unlisted bonds an increase of $63,000; in unlisted stocks an increase of 700,528 shares; in mining stocks a decrease of 11,403 shares; an increase of 22,904 shares in Cotton Oil Certificates common, an increase of 238 shares in preferred; an increase of 3,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 980,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of January were sold: 3,178,181 shares of railroad and other stocks representing dealings in 86 properties. Of this amount 2,346,075 shares are transactions in the following 12 stocks:

Dis & C. F. Co.	638,980	N. Y. & N. E.	252,060	N. Pac. pfd.	92,570	A. T. & S. Fe.	41,710
Phil. & Read.	587,580	Chic. Gas	107,7 6	C. B. & Q	63,510	Lou. & Nash.	39,489
C. M. & St. P.	322,400	Union Pac.	103,410	C. R. I. & Pac.	58,250	W. U. Tel.	38,410
	1,548,960		463,176		214,330		119,6 9

leaving 832,007 shares to represent the transactions in the remaining 74 stocks, of which American Sugar Refinery Common furnished 546,740 shares. Transactions in railroad bonds during the same period amounted to $2,197,000; in mining stocks 113,945 shares. 115,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show an increase of 305,266 shares as compared with the month of December; an increase of $79,500 in railroad bonds; a decrease of 4,045 shares in mining stocks; an increase of 17,000 barrels in Pipe Line Certificates.

As compared with Jan, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks decreased 881,798 shares; bonds decreased $2,046,000; mining stocks decreased 129,795 shares, and Pipe Line Certificates decreased 693,000 barrels.

The gross earnings of 136 roads for the month of December, 1892, were $47,113,634 being an increase of $1,094,280 or about 2.40 per cent. over December, 1891. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Barrows.—Theron Barrows, Vice-President of the Home National Bank of Elgin, Ill., died recently, aged seventy-nine years.

Drake.—Franklin D. Drake, President of the First National Bank of Corning, N. Y., died December 28, 1892. He was one of the wealthiest and most prominent citizens of Corning.

Hutchinson.—Gardiner Spring Hutchinson, a prominent citizen of Brooklyn, N. Y., died January 9, aged sixty-one years. For many years he had been President of the Brooklyn Dime Savings Bank, and at his decease was also a Director of the Central National Bank of Norwalk, Conn.

Johnson.—Albert A. Johnson, who died in New York city January 16, had been for thirty years Cashier of the securities department of Brown Brothers & Co., bankers. He was in the forty-eighth year of his age.

Joslin.—Charles L. Joslin died January 2, at his residence in Leominster, Mass. He was President of the Leominster Savings Bank, a director of the Leominster National Bank and President of the Gas Company.

Keedy.—Henry H. Keedy, a well-known lawyer, died at his residence in Hagerstown, Md., January 22, aged fifty-one years. At his decease he was President of the Second National Bank of Hagerstown.

Ladd.—William S. Ladd, a pioneer banker and one of the wealthiest capitalists on the Pacific coast, died January 6, at his residence in Portland, Oregon. He was senior member of the private banking firm of Ladd & Tilton. His estate is estimated at $20,000,000.

Low.—Abiel Abbott Low, one of the best known and most highly respected merchants of New York city, died at his residence in Brooklyn, January 7, about eighty-two years of age. He was born in Salem, Mass., but came to New York at an early age and engaged in the tea business, eventually founding the leading American house engaged in the China trade. At his decease he was Vice-President of the National Bank of Commerce and a director of the Central Trust Company of New York city, and of the Brooklyn and Franklin Trust Companies of Brooklyn. He was also connected with several insurance and railroad companies.

Mills.—Edgar Mills died in San Francisco, Cal., January 10, in the sixty-sixth year of his age. He was born in Westchester County, N. Y., and went to California in 1848. He was first engaged in the mercantile business, and afterwards became a banker. At his decease he was President of the National Bank of D. O. Mills & Co., of Sacramento.

Norton.—Eckstein Norton, a banker in New York city, died suddenly at his residence in Staten Island, N. Y., January 14, in the sixty-second year of his age. Mr. Norton was a native of Kentucky. In 1864 he came to New York and became a member of the banking firm of Norton, Slaughter & Co. Later he engaged in the banking business on his own account under the style of "Ex. Norton & Co.," he being the sole member. He was for many years identified with the Louisville & Nashville and other Southern railroads. At his decease he was a Director of the Mechanics' National Bank and Bank of the State of New York of New York city, and also of the First National Bank of Staten Island.

Parker.—W. T. Parker died recently in Boston, Mass., seventy-eight years of age. He was one of the founders of the Lincoln National Bank, of which he was a director since its organization. About fifteen years ago he became identified with the International Trust Company, was its President for a time and a director at his decease.

Robinson.—John L. Robinson, President of the First National Bank of Wellsborough, Pa., died January 11, eighty years of age.

Scougal.—George R. Scougal, formerly senior member of the private banking firm of George R. Scougal & Co., of Yankton, South Dakota, died January 14.

Smith.—Horace Smith died suddenly at Springfield, Mass., January 15, eighty-four years of age. At his decease he was President of the Chicopee National Bank, besides being connected with other institutions. He was also largely interested in Western land investments.

Van Zile.—Oscar E. Van Zile, Cashier of the Troy City National Bank, Troy, N. Y. died December 19, last.

Whelen.—Wm. N. Whelen, member of the banking firm of Townsend Whelen & Co., Philadelphia, Pa., died January 22. He had been a member of the Philadelphia Stock Exchange for over twenty-five years.

Wisner.—George H. Wisner, a wealthy business man of Central Iowa, died January 11, at Eldora, aged twenty-eight years. He was President of the Hardin County Bank.

RHODES'
JOURNAL OF BANKING.

Vol. XX. MARCH, 1893. No. 3.

THE repeal of the compromise Act of 1890, usually known as the Sherman Silver Purchase Act, seems, notwithstanding the agitation of the subject, or perhaps in consequence of it, as far off as ever. It has been asserted repeatedly of late that the incoming administration desire its repeal by the present Congress, so that they may be relieved of the danger to which the continued purchase of silver exposes the Treasury. It will be remembered that in 1885, a few months after Cleveland's first inauguration, the drain of gold became so great that the Treasury was obliged to borrow gold of the banks to maintain gold payments. It looks very much as if the same danger will have to be encountered during the coming summer unless the operation of the Silver Purchase Act can be suspended. There is, however, one good feature of that Act that renders the situation much better at present than it was in 1885, viz., the provision requiring the Secretary of the Treasury to maintain the parity of the gold and silver legal-tender coins of the United States. There was no such pledge or command in 1885, that like this, it would appear, legally commits the United States to pay all holders of its paper money, when payment is demanded, in gold coin or in silver coin kept exchangeable for gold. This is a maintenance of a double standard by the credit of the United States. While it would doubtless much relieve the burden now resting on the Treasury to repeal the provision requiring monthly purchase of silver bullion, it would be disastrous to repeal that portion of the law which, as long as our mints continue to issue legal tender coins of both gold and silver, pledges the Government to keep the value of the coined gold dollar equal to the value of the coined silver dollar. How is this to be done? By continuing to do as the Treasury has been doing—to pay gold coin whenever demanded and silver coin whenever demanded. Just now there is a demand for gold coin greater than usual, having a tendency to deplete the stock of gold on hand. If this demand continues, it may become necessary to fulfil the mandate of the Act of July 14, 1890, to take means to secure more gold. Does any one think the credit of the Government will not secure the additional gold if a determined attempt is made to obtain it; such as the Act of 1890 would require to be made; if the parity of the gold and the silver dollar were threatened. If there were no provisions for the sale of bonds to maintain specie payments in the resumption Act of 1875, or for maintaining a gold reserve in the Act of 1882, the command of the Act of 1890 to maintain the parity of the gold and the silver dollar would be ample authority to sell bonds to secure the necessary gold coin or silver coin to maintain that parity. With this provision in view the little quibble that neither the resumption Act or the Act of 1870, authorizing the sale of bonds, provides that the bonds shall be sold for *gold* coin, but merely for *coin*, becomes still more insignificant. In maintaining the parity, the bonds must be sold for the coin most necessary at the time. Let the parity of the two metals be maintained at all hazards.

THE AMERICAN BIMETALLIC LEAGUE has been in session in Washington, and on the second day unanimously passed a series of resolutions denouncing the demonetization Act of 1873, demanding the free and unlimited coinage of silver at the ratio of sixteen to one, denouncing legislation discriminating between gold and silver as money metals, all and any consultation with foreign nations as to what the money or currency of the United States should be, the attempt to repeal the silver purchase act, the additional issue of bonds, and finally declaring that the struggle will be continued until justice is secured. Senator Jones who was a delegate to the Brussel's International Conference, just denounced in the resolutions, then addressed the League. The demonetization law of 1873 is denounced as *the great moral and financial crime of* the nineteenth century on the part of the Congress of the United States acting under the influence of British persuasion, and British interest. The story of the passage of the Act of 1873 has been told so many times that it is hardly worth while to go into much detail about it again. It has been thoroughly sifted in many a controversy by the late John Jay Knox who drafted the original bill, and who announced that it demonetized the silver dollar, in his letter accompanying the draft. Suffice it to say that the bill had careful consideration during at least two sessions of Congress, was printed and read a large number times, was fully debated, and was finally voted for by Senator Stewart, who as much as he may now regret that vote does not deny it. The truth is the silver question did not exist in 1873, the silver dollar had fallen into desuetude, and as the Congressmen and officials of that day were no more gifted seers than are the Congressmen and officials of this, they thought they were doing an act that would recommend them to posterity by dropping what was considered an obsolete and expensive coin from the statutes. They retained what was then the cheapest dollar and had no ulterior intentions whatever.

It is fair to presume that there were in the Congress in 1873, as many men burning to distinguish themselves as there are now; and if one of them could have foreseen that within the next few years the price of silver would fall so as to make it possible to pay the National debt with silver dollars cheaper than gold dollars, he would have at once made a noise about it. Was a whole Congress influenced by British persuasion or bought by British gold that no one gave away the fact that silver would be cheap after 1878. The truth is that when the price of silver did fall, then and not till then a great many wanted to kick themselves because they had not foreseen it. And as there is not much pleasure in kicking one's self, they looked around for some one else to kick. Mr. Knox and the poor Congress of 1873, have ever since been compelled to listen to the reiterated charge that they were corrupted by British influence. England doesn't lose anything by having other nations do business on a silver standard. It would have been money in her pocket, if the United States had retained the free coinage of the silver dollar. Nobody loses anything by the mistakes of a rival in trade. England does not put India on a gold standard, which could be done if she chose without much difficulty, nor, does she seek to corrupt China or the South American countries and persuade them to adopt the gold standard. The British influence story can be distinctly traced as follows: On April 1, 1878, the Banking and Currency Committee of the House commenced taking testimony in regard to the propriety of repealing the Act for the resumption of specie payments. Mr. Wm. H. Winder of New York, was among those who appeared before the Committee. He said: "The sun at noonday was not a more indisputable fact than the impracticability of the resumption of specie payments." "Mr. Sherman's whole exposition of the plan was a conglomeration of ifs, ands and buts and contingencies that no one would want specie." "England was whispering with a serpent's tongue into the ear of our Secretary." "*An English gentleman came to this country with* $500,000 *to obtain the demonetization of silver.*" "*He had no occasion to use it. The Committee in Congress received him as their Gamaliel.*" This is the origin of the British corrupt influence story on which the charge of the greatest moral crime of the nineteenth century is founded. Mr. Winder may be alive or he may be dead but this yarn of his is still very much alive. It has been reiterated from platform to platform from that day to this, and will doubtless roll with everlasting vigor reverberating down the ages. When Mephistopheles reckons up his jewels, this Winderian-British gentleman-Gamaliel-$500,000 not used-prevarication will be conspicuous in its heavy silver mounted splendor among the choicest of the campaign mendacities of the nineteenth century.

THE AGITATION ABOUT THE GOLD RESERVE has called out all sorts of opinions during the past month. There seems to be quite a large number of persons who take the view that, no matter which standard is theoretically preferable, gold or silver, it would be well to have the question settled one way or the other. If the purchases of silver bullion by the Treasury are not to be stopped, and gold is to go to a premium, then the sooner the agony is over the better. Let it be settled that the standard silver dollar is to be the standard. then times, it is said, will be better, for every one will know how to direct his course and just what to expect. In the present state of uncertainty many fear to act, and this has a very bad effect upon enterprises and investments of all kinds. If the standard of value in the United States is in consonance with the wishes of those who desire free coinage, is shortly to be the silver dollar, it is true, as has been urged by some, that there would be just as much actual property in the country, after the change from the gold to the silver standard is made as before. In the aggregate there would be no loss. The gold, being no longer used as money, would not be held as a reserve, and would no doubt go out of the country; but property of some kind would come into the country in exchange for it. All evidences of indebtedness based on contracts not specially payable in gold coin would be payable in the silver dollars at their nominal value. There would be a sudden change in prices—that is, in the nominal cents and dollars used in price quotations. Any sudden derangement caused by a change of prices is injurious. While it no ways changes the amount of property, there is just as much land, just as many buildings, roads, railways, canals, as much live stock, grain, provisions, dry goods, metal, etc., as before; thus there is an unjust transference of wealth from one part of the community to another. When the standard of the dollar diminishes in value, all mortgages and money contracts, extending over a long time must, diminish correspondingly. The creditors will suffer and the debtors will gain. The debtors who own land and other property can fix their price in accordance with the diminished value of the dollar; but the creditor must accept the stated sum of dollars named in his bond. The owner of a farm or house may say: "I cannot afford to sell unless I get a larger nnmber of these silver dollars, because they are worth less than the gold dollars." The premium on the gold dollars teaches him how much to increase the price in silver dollars. But the owner of a mortgage cannot add one cent to what he can claim when the mortgage becomes due. The premium on the gold dollar only teaches him how much he has lost by being compelled to take silver dollars in payment. There is a large speculative class who care very little about the matter. They rely on making an advantageous turn somehow. Those who live from day to day on their wages will suffer from the increase of prices, but they will gradually gain from an increase of wages. There is, therefore, a very large number of persons who are comparatively indifferent. But although there may not be any reason to believe that the reduction of the value of the dollar from 23.22 grains of gold to 371.25 grains of silver will utterly destroy the country, it is well understood that the maintenance of a uniform standard without fluctuation conduces to the greatest progress of the countny as a whole, and to the greatest advantage of the largest number of citizens, both in their dealings with each other and with foreigners. The indifference which can see the country drift from a better to a worse financial policy indicates an entire absence of public spirit.

THE INTERVIEW OF THE SECRETARY OF THE TREASURY with the Ways and Means Committee of the House of Representatives is interesting in many ways. Since the reduction of the revenues consequent on the McKinley bill, it was naturally to be expected that the surplus in the Treasury, so much complained of a few years ago, would be reduced, but it is now evident that the reduction of the revenues, accompanied by an increase of expenditures greater than could be expected, has rendered the task of meeting all payments promptly more difficult. It is this difficulty that has given rise to the rather partisan charges heard occasionally that the Treasury is bankrupt or in danger of bankruptcy. On this point we hear that Mr. Foster said, "the situation is one demanding serious consideration * * * once in a while when large requisitions have come in on top of each other, and I did not want to pay them because we would have to put out gold, which might be rather low at the time we would potter along for a day or two." This makes it plain that it is not so much the deficiency of revenue, as the necessity of maintaining the gold reserve, in order to maintain the parity of the gold and silver moneys of the United States that causes the difficulty. Mr. Foster also said that there was no difficulty in obtaining plenty of gold if he had plenty of money. That is, if the expenditures did not so constantly keep pace with the revenue, he could with whatever form of money came in procure gold. He is thus between the devil and the deep sea. Whenever for a few days the expenditures reduce his funds faster than the revenues supply them, he is tempted to use his gold and deplete his reserve. If he does not do this, he has to potter along, but if he does then he is in danger of trenching on the gold reserve and risks the parity of the two metals. He suggests that $50,000,000 should be added to the general balance of cash. Of this $25,000,000 would afford the necessary leeway when revenues were temporarily less than expenditures, and the remainder would raise the gold reserve to $125,000,000, giving $25,000,000 of free gold. In other words, to maintain the present laws and traditions of the department, there should be two reserves, one to equalize the irregularities of receipts and payments, and the other to protect the untouchable gold fund of $100,000,000.

The irregularity of receipts and payments when revenues and expenditures are nearly equal is well known by all governments. It may be provided for in various ways, but unless there is a deficit it is a most unwise way to obviate it by issuing a bond running for a long period. This Government in the past has several times been embarrassed, when the revenues were estimated to be ample, because these revenues could not be collected as fast as the appropriations made by Congress required expenditures. On a number of occasions resort has been had to an interest-bearing Treasury note, not a legal-tender, payable in one year or less from the date of its issue. These notes were similiar in principle to the exchequer notes issued by the English Treasury, and were mere borrowings until the revenues could be collected. They may bear interest according to the state of the money market from one-half per cent. to six per cent. per annum, and run for any length of time from one day to one year. If issues of such notes discretionary with the Secretary of the Treasury as to their rate of interest and other terms were authorized by Congress, the Government could take advantage of the money market and borrow most advantageously whenever the revenues were temporarily deficient. The money borrowed could be either in currency of any description or in gold, according as it was needed to meet ordinary expenditures or to increase the free gold in the Treasury.

THE UNITED STATES COURTS HAVE DECIDED that the National banks at Calais, Me., must pay the ten per cent. tax upon the notes of Canadian banks received by them in course of business and again pay out by them. This question has been in abeyance for the last three years. Whether or not the Act of Congress imposing the tax contemplated the notes of corporations outside of the United States, is doubtful, but it would be in contravention of all ideas of public and national policy to permit the notes of the corporations of a foreign country to enjoy privileges in the United States not granted to those of the State banks here. Apart from this reason however, it is plain that the circulation of Canadian bank notes in those parts of the United States lying close to the frontiers of Canada has been a great convenience to the business of those locaties. This circulating medium is issued by banks organized under the provisions of a most excellent banking law with every precaution taken for its redemption. The notes are practically as good as those of our national banks and answered all the purposes of local payments. The fact that they could find a footing and pursue a career of usefulness under the very noses of our national banks, and that the latter found them answer a valuable purpose, indicates the truth of what has often been said by the JOURNAL heretofore that under our present laws and the condition of the bond market the national banks do not furnish all the local currency that is required, and that the paper money of the United States Treasury, while in the aggregate amply abundant, is so badly distributed that it does not reach distant points in sufficient quantities. While the decision is right in principle, there is not the slightest doubt that before the question was raised, the circulation of Canadian bank notes on the frontier of the United States, away from the money centres, added largely to the business prosperity of the localities, and that the enforcement of the tax law prohibiting their use has tended to depression.

THE ADDITION BY SENATOR SHERMAN to the Sundry Civil Service bill of an amendment providing for the issue of bonds at three per cent., payable in five years, to procure gold to keep good the gold reserve, is either a confession of weakness on the part of one who has been supposed to hold that the law as it stands gives the Secretary of the Treasury sufficient authority for the purpose, or it is intended to bolster up the courage of the Secretary of the Treasury. The Senator, in the latter case, appears to think that the retiring administration should seize the opportunity to obtain the credit for action in behalf of sound money. It cannot, however, be properly said that the amendment is necessary if the Secretary already had power to issue bonds under the law of 1870 and the specie payment resumption act of 1875. It is true the interest specified in the law of 1870 was at the rates of five, four and a half and four per cent., and the periods of the bonds to be issued were also to be fixed; but the greater always includes the less, and the Secretary, authorized to issue bonds at four per cent. to continue thirty years, would incur no censure if he issued bonds for a shorter period at a lesser rate of interest. The amendment is not only unnecessary—it is injurious—in that a fair deduction to be drawn from its discussion by Congress is that there existed doubt in the minds of many of the legislators as to the present authority of the Secretary to issue bonds. If the amendment passes it will seriously cripple the hands of the incoming Secretary should he find it desirable to issue bonds.

THE ANNUAL REPORT OF HON. CHARLES M. PRESTON, Superintendent of Banks of the State of New York, printed elsewhere, contains an interesting and original suggestion which want of space will prevent our fully considering in this number. In view of the diversity of the present laws in the several States the Superintendent considers the repeal of the ten per cent. tax on State bank circulation impracticable. He suggests, therefore, that the supervision and examination of the National banks should be left to the State authorities, while the Comptroller of the Currency should have the sole duty of supplying circulation. In addition to United States bonds, Mr. Preston thinks bonds of certain States and cities might be used. He does not elaborate his plan, but presumptively means, that Congress should provide, that, whenever the States adopt laws, as to organization and business of banks substantially the same as the National banking laws, without the bond deposit and circulation provisions, the Comptroller should be authorized to receive certain specified securities from the banks organized under these State laws, and issue circulation to them. The present National banks could at once become State banks. Examinations would then be conducted by State authority, the circulation issued by Federal authority giving a uniform security and appearance to all the notes.

BI-METALLISM IN ENGLAND had a hearing recently in the House of Commons. As in other countries, there are in England, even in the midst of general prosperity, some classes of people whose business affairs do not go right. Just now the agriculturists and some of the manufacturing interests find prices too low for them. One of the representatives of the first-named class moved in the House of Commons that the British Government should use its influence to bring about the reassembling of the International Monetary Conference, with the object of finding a remedy for the evils attendant upon the divergence of values between gold and silver. Mr. Gladstone replied that the Monetary Conference met at the invitation of the United States, and it would place the English Government in a ridiculous position to take the initiative from the hands of that country. He defended monometallism. and referred to the fact that the United States had not indicated what step they proposed to take to restore bi-metallism. The recent action of the American Bi-metallic League at Washington, denouncing any conference with any foreign nation as to what the money of the United States should be, and the failure of Congress to repeal the Silver-Purchase Act, or to pass an act for the free coinage of silver, prove the truth of Mr. Gladstone's statement, in substance, that the United States does not know what it wants. The situation is such in this country that all provident citizens and corporations are now hoarding gold in anticipation of an approaching change of standard, to be followed by a profitable premium on that metal.

THE WORLD'S CONGRESS AUXILIARY of the World's Columbian Exposition are earnestly engaged in securing the success of a congress of the financial authorities and officers and directors and trustees of the banks and monetary institutions of the countries of the world. This congress, as well as other congresses, under the auspices of the World's Congress Auxiliary, will be held, beginning June 17, in the World's Congress Art Palace, now erecting on the Lake Front Park of Chicago, which will be provided with twenty-four audience rooms. A circular has been directed to all authorities on finance, bank officers, etc., desiring suggestions of the names of prominent persons in the financial world, and of prominent authorities upon financial topics, with the subjects upon which they are most fitted to prepare papers and addresses. The Committee have deferred the preparation of a programme until suggestions of the kind desired have been received. Three questions are propounded as follows: "What general themes do you think it would be useful to consider in the Bankers' Congress?" "What eminent financiers will you recommend as best qualified to present such themes?" "What general modes of proceeding would you recommend as likely to secure the most useful and satisfactory results?" The request is made that communications be addressed to Mr. Lyman J. Gage, Chairman of the Committee on Congress of Bankers and Financiers. To indicate the magnitude of the work of the World's Congress Auxiliary, of which Mr. C. C. Bonney is President, it is necessary to say that the Department of Commerce and Finance, with six divisions, is only one of seventeen general departments at least equal in magnitude to itself.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

SECURITY AND PROFIT TO BE CONSIDERED.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

Before entering upon a general discussion of this subject it may, perhaps, be wise to refer to two attributes, which I think any banker should possess, before he can inherently become a thoroughly good judge of paper offered for discount.

In the first place, he must be quite imbued with the *absolute necessity* in every instance of placing *security first and profit afterwards*. All bankers will make some bad debts in spite of every care, but the man who consistently and persistently regards first the degree of security afforded by the paper offered, and then the rate of interest, is much more likely to reduce his losses to a minimum, than he who regards the rate first and then the security. If this latter proceeding is indulged in it insensibly becomes a habit before long, and this habit superinduces laxity in "digging into" the surroundings and position of the various names coming before him.

In the next, no one can constantly lend money on paper unless he is most thoroughly impressed with the *tremendous responsibility* resting upon him in the handling and loaning of other people's money. This responsibility must be ever present, coupled with a horror of "bad debts;" if it is not he will gradually and insensibly begin to regard the function of lender as a personal one, forgetting altogether his trusteeship. He may either be dealing with the balances of commercial accounts left from day to day by merchants, or with the hard-earned savings of the less wealthy classes; in any case he is a trustee, the only difference being as to the class of paper it may be wise to take. For the purpose of clear discussion, I will divide paper offered for discount into four classes:

1st. Paper purchased upon the open market—mostly through brokers and being, as a rule, single-named;

2d. Accommodation paper offered directly by a regular customer;

3d. The bills receivable of a merchant offered to his bank for discount;

4th. Paper secured by collaterals.

In dealing with the first class (paper purchased on the street), it must be apparent that while in the aggregate a large amount of information may be obtained concerning the names offered by careful, persistent and diligent inquiry, yet one can hardly ascertain the *definite* position so well as he can that of a customer doing business directly with, and confining his borrowings to, his own banker. Far better, even with idle money on hand, allow investments to pass or refuse advances than grant them without *first* making careful inquiry. Many lossess are made, very often exceedingly heavy ones, owing to injudicious advances granted by bankers to firms simply because they are *supposed* to be "up in the millions" and generally presumed unquestioned.

One of the first things which should suggest itself to the banker when paper is offered for purchase would naturally be: "Is this concern entitled to sell its single-name paper at all?—Is it in a position to meet this paper under any circumstances?" because no renewals are bargained for, and the banker looks upon it as so much cash to be paid without fail, to assist him in meeting his own obligations at a future date; and if there is the smallest doubt in the banker's mind of ability to pay, primarily from the concern's own resources, or, secondarily, any question of ability to command a loan elsewhere even when money is close, then he had better, without any shadow of a doubt, decline the transaction, leaving it to some one else, if he will, to take the chance.

The next most important question for consideration is: "Can the total amount (even approximately) which this concern is in the habit of floating be ascertained, and are they ever compelled to pay a higher rate for money than they should?"

Firms or corporate bodies, borrowing by selling their paper, do so through various sources, often to banks situated in cities widely apart. I should never advise any banker to take a *continuous* line of paper from a concern, where he *absolutely failed* to ascertain approximately the *total amount* they were in the habit of borrowing. If he can do so by cautious inquiry systematically pursued, he may arrive at a fairly safe conclusion by careful consideration of the *character* of the banks from which the money is borrowed. Are the majority of the lenders, or are they all, conservative institutions? Are they banks generally regarded as looking at security first? Are they banks which will not be tempted by 7 per cent., when they refuse at 5 per cent.? If they are, it is a point in favor of the paper, but if held to any extent by bankers supposed to look at *quantity* before quality, then he better decline.

Again, if the banker finds that any concern, having due regard to the course of the money market at the time, has been compelled to pay a rate of interest, high for the position the firm is supposed to occupy, it should be the occasion of inquiry, sufficient at least to call a halt before taking the paper, and if an immediate reply is demanded, decline. It is also of importance to ascertain whether the firm is in the *habit* of taking up paper at one bank by floating a loan in another, or whether their resources are sufficient to enable them to meet their obligations generally in cash.

In the purchasing of commercial paper other things need watching; for instance, the *frequency* with which any particular line of paper is offered. This naturally would suggest the thought, why do they borrow so often? What is their business? And is this the period of the year when the business in question demands that those engaged in it should, as a rule, be borrowing? If this is not, you may reasonably conclude the paper is being floated to take up loans maturing elsewhere, and judge accordingly. In any event, to the careful banker such incidents suggest further investigation.

It seems to me hardly necessary to suggest that in dealing with this class of paper every banker, of necessity, should have a thoroughly well-equipped system of investigation and reports. He may take the commercial agencies as a basis, but he must go far beyond them if he proposes to reach anything like safety or perfection in this department.

In concluding my remarks on purchased paper, I might refer to the fact that grave deliberation is necessary, and additional caution should be observed when the paper of any great trust or combine, with ramifications all over the country, is offered; or when the paper offered is that of a concern depending on, or which has been favored by, special legislation. Unless the corporate body can be considered as beyond all question, it is a good rule to ask for the individual indorsement of directors or stockholders. If this be refused—that is, if *they* decline to take any risk upon a concern, about which they are naturally supposed to know everything—how can they expect a careful banker to invest his customer's money in their paper? In other words—why should he do that which they are afraid to? In fact, bankers, to be perfectly competent judges of the various kinds of paper offered for purchase, must themselves be fairly well acquainted with the different trades represented by such paper. If not, they will be unable to reach intelligent conclusions as to the desirability of the notes, or the real soundness of the principles upon which the borrowers may be conducting their business.

The next two classes of paper, viz.:

Accommodation paper offered directly by a regular customer; and

The bills receivable of a merchant endorsed and offered to his bank for discount, may be considered together.

One of the first things every careful banker should do when application is made for a line of credit is to courteously demand a full, intelligent statement of the applicant's affairs; a complete balance sheet, verified, if possible, from the books of the firm. Much in the first instance may be gleaned from the manner in which the statement is gotten up. Is it intelligent, clear, concise, and (apparently at least) does it convey at a glance the true position of the firm supplying it? If it does, the banker may reasonably conclude that the applicants for credit ascertain definately and truly from time to time their position, and guide themselves accordingly. If it does not, then the banker may infer that the firm cannot intelligently say what their precise position is, and if they do not, how can he? Hence, at the start the statement itself offered may furnish the grounds for rejection of a line of credit.

Assuring, however, the statement as to form being fairly satisfactory, the next thing is to ascertain the basis upon which the assets are put in:

(a) Is the capital sufficient, and has it been contributed in cash; if not, what does it represent?

(b) Who constitute the firm, and do the partners understand the business.

(c) Has the stock been taken in at a fair figure, and has due allowance been made for depreciation? This is very neccessary to ascertain in large manufacturing concerns.

(d) What about accounts and bills receivable? Has due allowance been made for doubtful credits, and have *all* bad debts been either written off or provided for?

(e) The liabilities of the firm should be carefully examined; are they heavy; are they *continuously* large; to whom and what for?

These are some of the leading questions which naturally present themselves, but in addition a banker should ascertain:

The habits of the partners—are they careful borrowers? Do they borrow for legitimate purposes only, and in what proportion? What is their style of living, extravagant or otherwise? Have they been carefully increasing the amount at risk of the business, or have they been withdrawing largely for other purposes, thus keeping up the necessity for borrowing?

Remember that assets are generally susceptible of reduction, and in case of insolvency rarely realize in full, while liabilities never scale down.

That when an account is sought to be transferred from one bank to another, it is always well for the officers of the institution to which it is offered, to ascertain *definitely* why it leaves the other bank.

And that banks do not exist for *supplying permanent capital.*

In the case of endorsed "bills receivable" being offered, a careful scrutiny of the names is invariably desirable, not only in the interests of the bank itself, but in those of the customer. It is sometimes difficult, but always necessary to trace *renewals*. The devices for hiding such are many and devious, still they can be traced and when traced should be immediately brought under the notice of the endorser; if repeated frequently better decline them. Courteously warn your customer that "locks up" (only another word for frequent renewals) as a rule ultimately mean "bad debts."

There is one class of paper very often included in "bills receivable," which is of a most undesirable nature, and which in a very large proportion of cases ultimately ends in loss to the merchant. I refer particularly to "supply accounts." Houses practically owned by the parent concern, and being in their power, really have no independent choice of goods; they must buy from that one concern, and they have to give their notes for the goods shipped, often at unremunerative prices, hence how can success be looked for? Would it not be better to take the paper of the parent house direct, and warn them if they desired to continue their line of credit, to gradually close out such undesirable customers as "supply accounts."

The last item to be considered, I only include for the purpose of making a few brief remarks, viz.: Paper secured by collaterals.

The facilities for ascertaining the worth of collaterals, at least in most cases, are now so abundant that there is really little excuse for taking anything "shaky." Speculative securities, like friendship, should have no place in a bank, where one handles exclusively other people's money. When the transactions offered depend entirely on the value of the collaterals (the borrower being worth but little) every banker should remember that the stability of a bank depends, not upon the hard and fast line of his cash reserve, but most essentially upon the general, reasonably-quick convertibility of the entire assets.

In the foregoing remarks, I have necessarily been limited as to time and space, but I have endeavored clearly and concisely to bring prominently out, the most important points of "How to determine the value of paper offered for discount." SIGMA.

MICHIGAN.

REAL MONEY.—Real money must always be some substance which is the result of human labor. It must of necessity be some article which, in its crude state, is the product of Nature, but which has had added to it human work. A promissory note which should promise to pay one ton of steel rails would be worth just as much as the rails themselves, providing the maker was responsible for that amount and never failed to produce the rails on demand.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

CHARACTER OF VITAL IMPORTANCE.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

The basis of success, if it can be stated in any one word, is *character*. Shrewdness and design may often achieve temporary advantages, and a bold speculator may win wealth by one brilliant maneuver; but true success, that which means more than the clinking of dollars, is not won by mere smartness, or by the chances of speculation.

Many a man has won place and fortune in the commercial world by great business ability. He has been counted as successful, but unless his ability has been coupled with high moral qualities his success has been but partial, his claims for credit have not been thoroughly grounded, and he has not been a complete man. He has lacked some of those elements which make up character. The need for a thorough knowledge of the character of the men whose names appear upon commercial paper is urgent, and how to obtain this knowledge is the theme of this article.

First, I should say: Have a personal acquaintance, if possible, with every man whose name is in your portfolio, either as principal or endorser.

In cases where the paper is offered to the bank direct by the maker or endorser, it will ordinarily be possible to have a good general knowledge of the local standing of the party offering the note. This should always be sought, and no paper should be accepted until such information is obtained. Should the general repute of the claimant for credit be poor or doubtful, the application should be at once rejected. No encouragement in the way of discounting paper should be given to those whose repute in the business world is unsavory, nor should the endorsment of a wealthy man carry too great weight on such paper. It were better to discount notes which are out and out one-name paper, than to be a party to any business operation where one of the names involved is unworthy the extension of any credit if it stood alone. If the paper is offered by a broker, and if the parties making it are remote from your locality, a personal acquaintance is generally impossible. Then we have to rely almost entirely upon whatever information we can glean from outside sources. Here the banker finds himself at a disadvantage, and at times the most intelligent and experienced men in the profession are baffled by the shrewdness and duplicity of those who, while possessing large means, are lacking in good character. In business as well as in the social world, there is but one element that can survive all setbacks, that can enable a man in time of financial storm to face his creditors frankly, to endure losses patiently, to build up his broken fortunes manfully, to reduce his obligations perseveringly, and finally to stand before the world with indebtedness entirely discharged. This element is *character*. If it can be truly said of a borrower, "He is a man of upright character!" he has already that which forms the safest basis for

commercial credit. On the other hand if he is lacking in sound moral character, no reputation for large wealth can make his name stand for what is best and most valuable in the fabric of business credit. The men whose names we want upon our bills discounted are the "upright, downright, perpendicular" kind of men who, should misfortune overtake them and their business collapse, do not emerge from the failure with enlarged personal means, but who protect the interests of all their creditors though at great personal sacrifice. How shall we determine whether the character of the borrower is such as to command our confidence or not?

Hardly too much importance can be placed upon the advisability of obtaining a statement of assets and liabilities from the man himself over his own signature. He then stands committed, and will perhaps be more accurate in his statements than if the matter is one of oral conversation. I would suggest that in every such blank there be inserted some such statement as this: "If anything occurs to materially lessen my (or our) responsibility, I (or we) hereby agree to give immediate notice thereof." The age of the individual, or in case of a firm, of each partner should be given. Also, there should be indicated the "season of smallest indebtedness................. and amount $.................." It is desirable to know if the nature of the business and the management of the borrower are such that he is ever out of debt. Is there one season of the year when his sales are especially large and his indebtedness entirely paid? Does this occur twice or three times possibly? Or is he in a chronic state of debt? Also any form to be signed by the borrower should contain an agreement on his part to keep good the amount for which his merchandise and real estate are insured. It should also state the amount of life insurance if any, in whose favor it is and what kind of a policy. Make these additions to the form of statement in use by one of the principal banks of New York City, called Form B, and described in RHODES' JOURNAL OF BANKING for January, 1893, and you will have a blank statement that can hardly be improved upon.

These statements should be filled out and signed by the applicant for credit, without any demurring on his part, for if his claims for credit are well grounded he has nothing to fear from a complete expose of his business affairs. To quote the words of an Indiana bank Cashier: "The man who is not willing to hold confidential relations with his banker I always watch." The borrowing public should become accustomed to this submitting of statements, and though it will take some time to establish it as a common practice, it is a very good safeguard that should be insisted on by the banks.

Taking it for granted that this most important step has been followed out, what further can be done to pre-determine the value of commercial paper? Statements of assets and liabilities are useful and necessary, but they do not and cannot cover the entire ground. The moral elements which enter into the make up of man are not to be tabulated in dollars and cents, nor could we properly expect a man to furnish us with much valuable information in this line, when describing his own condition. At times it has been shown that complete reliance cannot always be placed upon the statements of the borrower himself. Even though he is not intentionally dishonest, still he estimates his assets at a high figure, his liabilities on a much lower scale. All his bills receivable are good, his other assets sound, and his prospects are bright. He gives himself the benefit of the doubt in every uncertain case.

We have recourse to the various commercial agencies in this exigency. They are usually able to give us some points of value, but even their reports, exhaustive as they often are, do not thoroughly satisfy us. We must personally investigate and inform ourselves in regard to the moral plane of thought and action on which the man lives. We will interview his business and social acquaintances, we will study his antecedents, we will note his actions, we will mark his companions.

Some of the elements that bear upon the character of a man are honesty, knowledge of and attention to business, speculation, economy, prudence, sagacity, punctuality, personal habits. We should endeavor to know to what degree each one of these qualities is possessed by the borrower. Is his honesty unquestioned or is it of doubtful quality? Is his knowledge of business thorough or only fair, or is it absolutely deficient? Is he diligent in business or does he give it moderate attention, or is he neglectful of it? Does he speculate? Is he economical or extravagant? Is he a cautious man? Is he prompt or tardy in meeting his obligations?

I believe that such pertinent questions as these may more than justify the use of a statement form which will classify and systematize these items. Such a chart accompanies this article (see form on page 254), and I would advocate its use as a means of obtaining information which may have a direct bearing upon the business risk involved in accepting commercial paper offered for discount at the bank. I should advocate the use of this chart as a form for keeping credit records, as a convenience for use in interviews, and as affording a set of questions desirable to have answered by correspondents at a distance from the locality of the questioner. To be specific. Suppose A desires to have a bank discount his paper. You request him to fill out and sign the statement form (as suggested by Mr. J. G. Cannon) which shows his assets and liabilities. At the same time you send to one or more persons having a good knowledge of the man, a blank-credit chart such as I have described, accompanied by a request to carefully fill out and return the same. Or still better you interview these men in person and obtain from them the needed information, using the credit chart as a pocket memorandum book. With the information thus obtained and A's own statement before you, you have the basis for a more intelligent opinion than could be formed by the use of A's statement merely, or from the opinion of his business acquaintances alone.

If this method is followed out I think it may result in a better knowledge of the character and reliability of the signers and endorsers of commercial paper.

In a word, I would sum it up thus: Study the character of the borrower.

Do not rely implicitly on any form to furnish sure and safe guidance! As the successful physician must be a good diagnostican, so the successful banker must be able to make a sound financial diagnosis of the character of the men with whom he deals. No fact relating to their financial health should be ignored; any one fact *may* prove important.

As to making an absolute determination of the value of commercial paper there can be but one way: "Wait until maturity of the paper, then if it is paid, it is worth par at the place of payment." CREDO.

CONNECTICUT.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

Any one in preparing an article on "How to Determine the Value of Commercial Paper," expecting to fully explain all of the difficulties and perplexities that are bound to be encountered by the bank officers in performing the responsible duties of passing on paper offered for discount, or of establishing credit relations with the bank's patrons—whether it be in small banks in country towns or the large institutions in the cities, where this function of the bank is expeditiously performed by committees for the purpose, having their appointed sittings—is presumptuous and idle in its import. I believe, however, if more study and consideration were given to a question of so vital importance to bankers as the one forming the topic of consideration in this article, many of the losses annually sustained by banks might undoubtedly be prevented.

It is not the purpose of this contribution to point out separate and individual sources of loss to banks, believing it to be wholly unnecessary, in that all bankers are familiar with them, and if a minute description of the sources of loss to banks were entered upon here, as far as past experience would guide, it would only consume space that I would rather devote to the points I consider as fundamental to fulfilling the real object of the article. I shall single out only one line of discount or avenue for loaning the bank's funds, and its amplification is intended only to indicate a line of conduct and investigation, which I shall hereafter specify, and which I consider the chief resort in lessening the bank's risk in loaning funds upon commercial paper, and of determining its value.

I take this to be the fundamental basis of discussion and demonstration: "In the event of presentation of paper of any kind for discount or of direct application for loan or credit accommodations, both by new or established customers, or by loaning the bank's funds in any way, what ought the bank officer to do in order to assure, to the highest degree possible, its return at maturity, together with its hire."

Observation of past losses sustain the assertion that the chief source of loss to banks is through loans made to commercial business houses based on their business capacity. I have selected this line of loans as being fitting to demonstrate the course to pursue in determining the value of commercial paper. Study the conditions of any number of failing commercial business houses and it will at once be seen that a large per cent. of the liabilities shown by such failing institutions will be found on the bank's loan files. Hence, I consider it of paramount interest that this avenue for loaning the bank's funds be hedged about by every precaution lessening the risk of loss, and whatever remedy is applicable here will also apply to other lines.

The first thing necessary in consideration of this class of applications for favors is to get a statement of his business, taken from his books as he keeps them.

The procuring of this statement is essential and important, but insignificant compared with its *proper* study and investigation.

First, the general appearance and make-up of the statement must be suggestive regarding the conduct of his business and his business habits. If such statement is properly made it can be, and at once should be determined what is the "net worth" of his business. It will not suffice to cease investigation here, for the peculiar make up of the assets and liabilities may be such as to make an advantageous showing as to net worth, and still be far from being the safe basis upon which to rest credit accommodations. For instance; if the amount as shown due houses for goods in stock, due and coming due, be an abnormally large per cent. of the amount of stock invoice shown in the assets, and on the other side a sufficient amount of inconvertible assets, such as real estate, bills receivable—good and bad—personal property, small bank balances, and little or no ready cash, thereby making a considerable showing as to totals and net worth be l rge, yet it can readily observed that this merchant's working capital invested is small, may be dangerously small, for a proper and safe conduct of his business or to establish a basis upon which his banker is to rest his security for accommodations. The banker in this instance makes loans, the circumstances fully assuring, if based upon his business showing, of having to protect him from the pressure and importunity of every jobber he is owing extensively and, on that account, is not worthy of the accommodations the merchant is whose "net worth," though smaller, is the difference between the assets and liabilities, made up of a clean stock of goods, an active bank account, and every evidence of a thriving business.

In the further study of the statement, make it a point in every instance to inquire if the statement submitted is a full and complete one, by calling his attention to possible liabilities, contingent or otherwise, that may have been overlooked by him or purposely left out.

He may have contingent liabilities through having sold large amounts of paper, guaranteeing unconditionally, its payment at maturity, or have accommodation paper outstanding, making it an important factor in the study of the statement, though unfortunately, these items are seldom if ever shown by a statement, and must be drawn out by direct conference with the applicant.

The nature of such contingent liabilities, when coming due, what might be expected from the parties holding them, as to promptly forcing collection, and particularly inquire as to the capability of the makers of such obligations to meet them when due, thereby reducing or increasing the applicant's risk from a contingent to a real liability by just the extent the principals are or are not capable of meeting the obligations at maturity, upon which the applicant is contingently liable.

This is especially important in dealing with firms doing a large credit business, and making it a practice of speedy settlement of accounts by note and discounting them at their banks, guaranteeing unconditionally their payment at maturity. Study and inquire into the remaining items of liability shown by statement. In the first place, as to whom he is indebted. He is indebted for merchandise, when the bills come due, whether he deals with few or many firms in obtaining the merchandise to supply his stock; for it is not the best showing when a merchant deals with several dozen firms in the same line of business, when one-half dozen or less would do as well. It savors decidedly of limitation of credit with any one firm in that direction. The nature of his bills payable as well as the amount must be considered, when they come due, whether they are held principally by banks, and whether by banks with which he keeps an account; and if not by such banks, it can be seen that he is subject to the will and convenience of such banks regarding favors of extension or renewal, through not having reciprocal relations. So much in brief as to the liabilities.

Now comes the consideration of the other side of the statement, the assets. They will bear fully as careful and close investigation and scrutiny as the liabilities, if not more so, for in them may be the hidden source of grave loss to a bank for basing its favors extended on their apparent good showing.

It is fundamental in the consideration of the assets to learn what their *cash* value is, irrespective of their amount or showing. It is upon this element of their make up, and upon no other, that accommodations resting on business showing are to be based.

It may be taken for granted that no statement will contain an item of liability that is not owing, or that any item of assets of any particular value has been omitted, though it may prove necessary to probe deep to unearth liabilities not shown. It will be necessary then for the examiner to thoroughly satisfy himself as to the *genuineness* of the assets as well as to determine all possible liabilities. In this manner his *true* net worth is obtained, and even that valuable item, as a guide, is modified to operate either for or against the applicant by consideration of those other numerous circumstances and conditions incident to every individual.

Another important factor in the consideration of the statement is the relation his running expenses bear to his sales or gross profits. This is vital in that it is the life upon which the debtor must base his calculations, and to the creditor it is the chief source of reliance, especially where the discounted paper is unsecured by collateral or otherwise. Should the expense be large and profits or sales small, comparatively, it is to be considered with care. It may indicate mismanagement, or that competition in that line is severe, requiring large sales for moderate profits. Either conclusion is a destructive factor to a firm's chances of meeting obligations dependent upon the activity of his business. There are many other items of importance entering in for consideration such as his habits, both as a business man and as a private citizen, insurance carried, location of business, concerning which it is not my purpose to particularize.

Should a merchant refuse to make a statement upon endeavoring to establish relations with a bank with the view of obtaining credit, that fact is to be looked upon with distrust and suspicion, not barring the fact that it may be occasioned by a sense of business privacy. It indicates a narrowness of nature that cannot help being transmitted to the conduct of his business, and operates, when known, as a damaging factor in the establishment of that confidence with banks so necessary to the enjoyment of the highest privileges consistent with the tone, circumstances and conditions of his business.

Upon those other numerous and important lines of loaning the funds of a bank I will not attempt to amplify. I consider so far as the real object of this article is concerned, that it is wholly unnecessary to do so.

The business of banking is one of dealing in risk, lessened or intensified by just the extent the bank does or does not make a practice to delve, by the best possible means of investigation into the circumstances and conditions surrounding every individual application for favors. The cardinal sin, if I may use the expression, in every severe loss sustained by a bank is one of *neglect*. The bank officer has relied too much upon his intuitive ability which is beyond doubt a precious aid in the proper study and understanding of the circumstances in the case, to judge of the value of the paper, which, if a careful and systematic investigation had been made, the ill-fated loan might never have been included in the bank's assets at all, or at any rate would have been so modified as to bring it within the limit of absolute safety, so far as anything is absolutely safe in the banking business.

I consider the banking business a business conducted, or should be, on a higher plane than other lines of business, for it deals with that delicate and sensitive fabric, trust and confidence in mankind to so marked a degree, and to it is intrusted, in almost every instance, where any degree of business prosperity is enjoyed, property many times its own; yet so often do bankers in their endeavors to meet competition and extend their business, fling, seemingly, discretion to the four winds of heaven, and lower the standard of the banking business, by plunging into all kinds of enterprises and grasping every opportunity to place funds, not stopping, in every instance, to inquire by calm, sober judgment, and investigation as to the value and safety of the loan, or extension of accommodations. In place of this headlong strife, the banking business ought to be the exponent of conservatism and carefulness.

In summing up the thought of this article, it can be seen that it is *caution*, *investigation* in every instance. I believe no amount of theories will determine the *value* of commercial paper, provided they have not the essential feature of being reduced to minute practice. Pre-eminently, then, the method to pursue in determining the value of commercial paper is to devise the best possible means of obtaining the needed *information* that must be the crucial test as to its worth.

Acting on this conclusion, I submit this as the means of obtaining the information, viz.: Every bank—and particularly city banks—should have a well-kept bureau of investigation whose duty it would be to keep thoroughly posted on the business standing of the patrons of the bank, promptly noting any change in business. Obtain the information as far as possible from the business men themselves. In fact, establish a Commercial Agency within its own office, which, in point of true worth to the bank, would eclipse any general agency existing, for its information would be more reliable, having been obtained in a better manner and for a more definite purpose than the information obtained by gratuitous contribution to the so-called general agencies. By this means the very essence of all that is essential to the safe determination of the value of commercial paper could be obtained, and upon this information and systematic investigation will depend largely the safety of the loan.

IOWA. FELIX.

CHECKS.—The use of checks in making payments economizes cash, but it lays an increased weight of responsibility upon the bank. The reserve law fixes a certain proportion of lawful money to hold against the deposits. When the deposits come in in the shape of cash, the portion intended for reserve is easily laid aside. But suppose the bulk of the receipts is in checks and drafts? The situation which then confronts the careful bank manager will be appreciated by all.

AMERICAN INDEPENDENCE AIDED BY COUNT DE BEAUMARCHAIS, AUTHOR OF "FIGARO."

FRENCH SUBSIDIES TO THE UNITED COLONIES—AN INTERESTING BIT OF HISTORY.

Caron de Beaumarchais is well-known as the author of "Figaro;" but it is not so well-known that he played a great part in securing the independence of the thirteen colonies, by securing from the French government the first foreign aid extended to the struggling Continental Congress. Through him were procured the arms, ammunition and uniforms with which the old Continentals were equipped and fought their battles, Beaumarchais himself having designed the uniforms worn by our belligerent forefathers; the style of them, we are told, being fantastical enough. In 1763, at the close of the seven years' war, so disgraceful and disastrous to France, the treaty of Paris between that country and England was signed; by which Louis XV. yielded to the latter country, Nova Scotia, Cape Breton, Canada and his other possessions in North America. It was not without a secret pleasure, therefore, that the French government watched the growth of the troubles between the colonists and King George, culminating in the battle of Lexington and the Declaration of Independence. The writings of Rosseau had, a few years before, struck the popular ear in France, his "Contrat Social" was greedily devoured by all, high and low. It was a revelation of a new code of politics, in which he boldly affirmed the sovereignty of the people and the equality of all men; all being born free. There is no doubt that Jefferson was imbued with the ideas of Rosseau when he was called upon to draft the Declaration of Independence. The colonists had the strong intellectual sympathy of the educated classes in France, and the moral support of the French government was freely added, on account of the hereditary hatred for England. But while this was the case, France was in no condition at that time to declare open war with Great Britain. The Count de Vergennes, Minister of Exterior Relations, determined, however, to secretly assist the colonists with money and munitions of war. This determination, early in 1776, was the result of the active suggestions of Beaumarchais, and probably of him alone.

As Rosseau was the son of a clockmaker, Beaumarchais was the son of a watchmaker, named Caron. His original name was Pierre Augustin Caron, and he was brought up in the trade of his father. At the age of twenty-one he invented an improvement in watches which was pirated by a rival maker. Young Caron published his grievance in the newspapers, and had the matter referred to the Academy of Sciences, who decided in his favor. This attracted the notice of the Court to him, and the King called him to examine the watch of Madame de Pompadour. He at once called himself watchmaker to the King, and began to advance himself in Court circles. He had a handsome figure and plenty of assurance, and soon effected an advantageous marriage with the widow of a Court official, whose office he also managed to succeed to. From this time he was known as de Beaumarchais, and subsequently by purchasing the office of Secretary to the King he obtained a title of nobility.

He was a skillful musician, and was engaged by the King's sisters, the princesses, whom their well beloved brother used to call by the pet names of *Graille, Chiffe, Coche, Loque,* (Rag, Snip, Pig, Dud), to teach them the Harp. Through their friendship he was able to confer a favor on the great banker Paris-Duverney, who gave him opportunities to speculate, resulting in quite a handsome fortune. On the death of Duverney, Beaumarchais produced a paper purporting to be a settlement between them, by which a debt to Beaumarchais of 16,000 francs was acknowledged. Duverney's executor would not acknowledge the debt, denying its validity, though not calling it a forgery. When the cause came to trial Beaumarchais won. An appeal was taken to the Parliament. It was referred by that body to a certain M. Goezman, for a report, as was customary, on which the decision was to be rendered. Of what followed Macaulay says : "It was hinted to Beaumarchais that Madame Goezman might be propitiated by a present. He accordingly offered certain rouleaus of Louis-d'or to the lady who received them graciously. There can be no doubt that if the decision had been favorable to him, these things would never have been known to the world. But he lost his cause. Almost the whole sum which he had expended in bribery was immediately refunded, and those who had disappointed him probably thought that he would not, for the mere gratification of his malevolence, make public a transaction which was discreditable to himself as well as to them. They knew little of him. He soon taught them to curse the day in which they had dared to trifle with a man of so revengeful and turbulent a spirit, of such dauntless effrontery, and such eminent talents for controversy and satire. He compelled the Parliament to put a degrading stigma on Goezman. He drove Madame Goezman to a convent." The battle was fought chiefly through the *memoires*, or reports drawn up by the opposing parties. All his best qualities were drawn out by the struggle ; his wit, energy and cheerfulness seemed to be doubled, and for vivacity of style, fire satire and broad humor his *memoires* have never been surpassed. Although triumphant over the Goezmans, he did not escape punishment himself. For his attempt to corrupt the judge he was condemned by the Parliament to civic degradation. Notwithstanding this, or perhaps on account of it, he was employed by King Louis XV. to suppress scurrilous pamphlets which were about to be published about this malodorous monarch and his mistress, Madame du Barry. On these sublime duties he often visited England, and in that country he learned to take a deep interest in the impending struggle between the American Colonies and the mother country.

During this time, also, he wrote the Barber of Seville, and the Marriage of Figaro. The latter comedy had unprecedented success from the start, but the former, on its first representation, was overloaded with the facts in his own contest with the Goezmans and Parliament, and it was not until he had greatly cut it down that it became acceptable to the public on its second representation. These plays are known to the English public chiefly through their adaptations in the grand operas of Mozart and Rossini. The author remained under the ban of civil degradation for two years only, when he secured its removal by Parliament, and at the last he was successful in extracting the 16,000 livres originally claimed from the executor of the estate of Paris-Duvernay. In the meantime the struggle had lost him his fortune, and he was deeply in debt. Carlyle characteristically describes him in this fight with Parliament: "Inspired by the indignation which makes, if not nurses, satirical law papers, this lean but tough, indomitable man takes up his lost cause in spite of the world, fights for it, against reporters, Parliaments and principalities, with light banter, with clear logic; adroitly, with an inexhaustible toughness and resource, like the skilfullest fencer; on whom so skillful is he, the whole world looks. Two long years it lasts, with wavering fortune. In fine, after labors comparable to the twelve of Hercules, our unconquerable Caron triumphs, and as to Parliaments of all kinds and French justice generally, gives rise to endless reflections in the minds of men. Thus has Beaumarchais, like a lean French Hercules, ventured down driven by destiny, into the nether kingdoms and victoriously tamed hell dogs there."

Such was Beaumarchais when in September, 1775, he addressed a memorial to the King, Louis XVI—Louis XV having died in May, 1774—in which he pleaded the cause of the American Colonies, with all the vigor of his pen, and following it up with others addressed both to the King and Count de Vergennes. He argued that if the Colonies received assistance it would be impossible for England to subdue them, and that if they were subdued they would greatly add to the strength of England in any war with France. He recognized that France was not prepared for war. "We must prepare ourselves, encourage the contest, and for that purpose send secret assistance in a prudent manner to the Americans." These memorials decided Count de Vergennes, early in 1776, to give the assistance and to employ their author as secret agent of France.

In 1775, the only agent of the United Colonies in England was Arthur Lee, born in Virginia in 1740. He was the brother of the celebrated Richard Henry Lee. He was educated in England at Eton, and took the degree of M. D. at Edinburgh. When he returned to America, being drawn into politics, he resolved to study law, and went to London for that purpose, and was admitted to the bar in 1770. It was well for the colonies that they had so thoroughly-equipped a citizen in England when the troubles broke out. By purchasing the freedom of the City of London he had a vote in municipal elections, and for his acquirements he had been made a fellow of the Royal Society. He took an active part in the newspaper controversies of the day on American affairs, writing over the signature of Junius Americanus. When Benjamin Franklin was agent of the Colony of Massachusetts he rendered him great assistance.

The first Continental Congress met in Philadelphia on September 5, 1774, of which Richard Henry Lee was a member. They drew up a declaration of rights and addresses to the people of England and to the King, and these papers were presented by Arthur Lee to the British Ministry. He at this time also received a commission to act as the secret agent of Congress in London and Paris, which he held until September, 1776. Beaumarchais met him in London in 1775–76, and informed him that the French Government wished to send 200,000 louis-d'or (equal to $816,750) in arms, ammunition and specie, for the assistance of the Americans, but in a secret manner, and that what they wanted to know was through what channels it was best to transmit these succors. He requested Mr. Lee to give the earliest intelligence of this to Congress, and to request that a small quantity of tobacco or some other production of America might be returned to give it the appearance of a mercantile transaction.

Silas Deane was the next accredited agent who appeared in Europe. In answer to Lee's communication of the important news conveyed by Beaumarchais, Congress, in September, 1776, appointed three commissioners, viz., Dr. Franklin, Silas Deane and Arthur Lee. Deane appears to have been selected to carry on the secret correspondence relative to the conveyance of the promised supplies, as he went to France in advance of Dr. Franklin, Lee being already in England. All of the details of this secret loan appear to have been arranged by Deane and Beaumarchais, without the personal knowledge of Lee or Franklin, and the transactions afterward were on this account looked on with suspicion, of which both Deane and Beaumarchais were the victims. Franklin likewise was near being involved in some difficulty on account of the manner in which the accounts were kept and the business carried on.

Deane was born in Connecticut and had graduated at Yale College. He was a member of the first Congress and purchased the first vessel for the American navy. On account of his diplomatic and business ability, he was selected as a member of the commission and went to Paris in advance in the disguise of a merchant. In January, 1777, he was joined by Lee and Franklin, and with them assumed the open function of commissioners to France to ask the King to recognize American independence. He arrived in Paris about the first of July, 1776, and there met Beaumarchais.

Deane's instructions were to obtain, if possible, one hundred cannon with ammunition, and arms and uniforms for twenty-five thousand men. Beaumarchais contracted to furnish these from the arsenals of France, and added a large amount of other articles thought necessary and useful in the colonies. In return it was agreed that the United Colonies should pay for these supplies by remittances of American produce, the business to be transacted as if it were carried on by the Spanish firm of Roderigue, Hortales & Co. The contract was in form perfectly regular, a simple commercial document, dated July 24, 1776, under which the United Colonies were to receive certain supplies and pay for the same within one year by shipments of produce to Roderigue, Hortales & Co. This firm was of course the versatile Beaumarchais in person; there was in reality a mask within a mask, the firm name being the first cover, Beaumarchais the second, and the government of France secretly aiding the rebellious Colonies of England, the real party of the first part. Deane wrote as follows to the Congress on August 15th, twenty-two days after the contract was signed: "I find Beaumarchais, as I before hinted, possesses the entire confidence of the ministry; he is a man of wit and genius, and a considerable writer on comic and political subjects. All my supplies came through his hands, which at first greatly discouraged my friends, knowing him to be a man of no interest with the merchants, but had I been as doubtful as they I could not have stepped aside from the path so cordially marked out for me by those I depend on. * * * Everything he says, writes or does is in reality the action of the ministry, for that a man but a few months ago should confine himself from his creditors, and now on this occasion be able to advance half a million, is so extraordinary that it ceases to be a mystery."

From this letter it may be inferred that Deane thought the supplies were to be paid for by the Colonies and that Beaumarchais was the agent through whom the money was to be paid to the French Government; that the debt was to the latter. Beaumarchais knew that the French ministry had determined to subsidize the Americans and at the time he signed the contract he already had in his hands a million of livres drawn from the French Treasury. It was a fine situation for a man of his character, who delighted in a mystification that added to his own importance and was constantly gratifying to his vivid sense of humor. He was acting his own "Figaro" on a large scale. There was the satisfying sense of his benevolent intentions and of the power he was secretly exercising in pulling the strings—moving so many important puppets. The injured and indignant Colonies took the part of the hero. King George was the heavy villain, the King of France the rich uncle, the French ministers and the American commissioners acted the minor parts, while the firm of Roderigue, Hortales & Co. was the ghost. All of the characters, as on the stage, though in plain sight of each other, appeared densely ignorant of each others' presence and motives. The ingenious Beaumarchais sat grinning behing the scenes and gave the cue to each actor. Well might Deane intimate that he was a man of no interest among the merchants. The latter were surprised and jealous of these extensive mercantile transactions in which they could obtain no share. For a man who a few months before was obliged to hide from his creditors to be set up in business with a million livres in hand, and more to come, was certainly a remarkable transformation scene. He was greater than Monte Christo, who merely took possession of wealth given him by his fellow prisoner. Beaumarchais obtained his by a just appreciation of the relations between France and England and between England and her Colonies.

The full amount placed in the hands of Beaumarchais by the French Government, as a gift to the American Colonies, was three millions of livres. One million was paid to him by the French Treasury, for which he gave his receipt on June 10, 1776. Another million was received by him on August 11, 1776. This came from the Spanish Treasury, at the request of the French minister, and during 1777 he received another million in installments. These payments for the benefit of the Colonies were as far as possible kept a secret from the American Congress and Commissioners, so that the accounts with Beaumarchais became involved in great confusion, and were the subject of controversies between himself and his heirs and the United States Government after the Revolution.

Beaumarchais took the money and started out as a great merchant, not only to supply the Colonies, but to trade in all parts of the world, after the manner of that time. He is said to have had forty ships on the sea, some of them composing a private navy which he had fitted out "to cruise across the ocean to convoy, attack, burn or take private vessels. One of his ships was a three-decker carrying sixty guns. His intentions appear to have been to supply the Colonies with merchandise and munitions of war to the extent they required, to make the three-million subsidy go as far as possible on their behalf, and for any excess furnished to take pay in Colonial produce or money. He delivered to the United States supplies valued by himself at 6,274,844 livres, and besides this advanced money in specie to French officers he sent over. He received from the United States, including the 3,000,000 livres paid to him on their account by France, 7,701,631 livres, or an apparent overpayment of 1,426,787 livres.

The sums advanced by him to the officers, many of whom did good service in the Revolutionary war, may never have been repaid to him, and, at least, in part offset this overpayment. His motives were good, but he was carried away by his vanity in these large transactions, and while there was no intentional dishonesty therein, the high value he put on his services made his claims seem exorbitant. He committed France, as probably no other man could have done,,to the Revolutionary cause, enabled Washington to keep the field, and without his instrumentality the Colonies must, to all appearance, have succumbed for want of arms and munitions during the first two years of the war. Through his want of exactitude in recording all his disbursements, it was at all times impossible to make up a correct statement of account between Beaumarchais and our forefathers, but if the figures given were accurate and the apparent overpayments to him of 1,426,787 livres were absolutely correct, it would be but a small money compensation for his services. He conducted the business he undertook most energetically and successfully. Despite the facts that ships and sailors were scarce and the ocean swarmed with British cruisers to intercept all supplies for America, the strict blockade of the American coast and the remonstrances of Lord Stormont, the British Ambassador at the Court of France, he succeeded in loading and dispatching a very large amount of supplies, cannon, ammunition and arms, most of which reached their destination.

To compare his situation with that of the English sympathizers with the Confederacy in the Civil War. who undertook to furnish ships and supplies to the South in exchange for cotton, it must be admitted that he was very successful. He is said to have shipped uniforms for six divisions of five thousand men each, and he not only purchased the cloth but he designed the style of the uniforms. It would not have done to have sent French uniforms, for France was at peace with England, and had not as yet recognized the independence of the colonies, and to have dressed the Continentals in French uniforms would have been a declaration of war. The Secret Committee of Congress ordered him to purchase uniforms of blue with facings of different colors for the different arms of the service. Beaumarchais disregarded this instruction, and had the uniforms of each division of a different color—one blue, the others respectively, brown, green, red, gray and light blue. The uniforms of the revolutionary soldiers, illustrated in the school-books, are perhaps derived from the instructions of the Secret Committee, but it is probable the Continentals wore out those furnished by Beaumarchais. His operatic taste saw beauties in a variegated army, but we have no reason to think the Continentals fought any less bravely for their motley appearance. Very likely it made them more terrible to the enemy. His dealings with the Congress of the Colonies was only a small part of his business, as from October 1, 1776, to September 30, 1783, his total receipts, according to his own accounts, were 21,092,515 livres and his disbursements 21,044,191 livres, showing a balance of 48,324 livres. His dealings with Congress were chiefly within the period before France recognized the independence of the Colonies in 1778, immediately upon learning of the surrender of Burgoyne's army at Saratoga. In addition to the subsidy of three millions paid through Beaumarchais, France and Spain gave direct to the Commissioners eight millions of livres as a free gift. None of the eleven millions so given was ever repaid.

The mystery that surrounded the advance of the first million to Beaumarchais was so great that it involved the American Commissioners in much perplextiy. It was considered a State secret, and the receipt given by him was studiously kept from sight by the keepers of the French archives. The two following millions were deposited and drawn by Beaumarchais through M. Grand, the banker of the United Colonies in Paris, but the first million never went through the banker's hands. In 1785 Franklin, then Minister to France, discovered that a million had been advanced from the royal treasury that did not appear in M. Grand's accounts. He determined to have the matter explained, if possible, so that, "it may stand clear before I die, lest some enemy should afterward accuse me of having received a million not accounted for." But he was not able to obtain any definite statement from the French authorities at that time, although morally certain that it had been lodged in the hands of M. Beaumarchais. In 1794, however, Gouverneur Morris obtained from the Republican Government, after the fall of the Monarchy, a copy of Beaumarchais' original receipt given June 10, 1776.

Beaumarchais died in 1799 five years after this discovery, and two payments of 434,685 and 810,000 livres respectively were made to his heirs in 1806 and 1835, so that the mystery about this million does not seem to reflect at all upon him, in the settlement of his accounts. On the whole it appears, that Beaumarchais is entitled to the very great credit of securing the aid of France for the colonies at the time of their greatest need, and that his energetic action not only furnished the colonies with supplies absolutely necessary to carry on the war, but had much to do with the recognition of the independence of the colonies by France in 1778 and her important armed assistance, that virtually decided the struggle. All of of his undertakings were not so successful. He was a great admirer of Voltaire, and in the year 1779, he engaged in the tremendous undertaking of publishing all his works. These works were forbidden in France, and the clergy had sufficient influence to prevent Beaumarchais from publishing them there. He therefore rented an old castle at Kehl, from the Margrave of Baden, in Germany and founded there an enormous printing establishment. He imported from England the best types that could be obtained, manufactured paper especially for the work and after years of labor carried the undertaking to completion. Voltaires writings comprised seventy octavo volumes—and he printed 15,000 sets or 1,050,000 octavo volumes. The French revolution then broke out and no one thought of reading. He had sold 2,000 sets only, and had 910,000 volumes still on hand. He stored these in the Fauburg St. Antoine in Paris, and the mobs frequently visited his storehouses thinking he had grain concealed. The volumes were probably mostly used for gun cartridges during the wars of Napoleon. Probably the ideas of Voltaire gave greater force to the French bullets. So much for Figaro.

W. B. GREENE.

ABOUT THE BANK OF ENGLAND.—This bank literally smells of money. It is the embodiment of bullion and solid luxury. For instance, you are told that the carpet you have just been treading on in one of the directors' rooms has cost £400. There are many very real curiosities to be seen. There is the wonderful draft for £20 drawn some time in the sixteen hundreds, but not presented for payment till early in the present century, when it was 200 years old, and by compound interest had swollen into £3,000. Then they show you the bank-notes for £100, perforated in ten parts, so that holders could tear off a £10 note as they would tear off a penny stamp. This idea had to be dropped. The outside men found them more profitable than did the bank. In the bank are many secret chambers and strongholds of bullion. But there are places in it that not twenty Londoners have seen and yet have been accessible to visitors from the country, fortified with special influence.

NATIONAL BANK REPORTS.

AN IMPROVED FORM OF REPORT BLANK.

The Comptroller of the Currency has changed the form of blank used for reports of condition of the National banks, in order that they may show more completely than heretofore the liabilities of officers and directors to their own banks, the amount of unsecured overdrafts, and borrowed money as distinguished from regular deposits.

The Comptroller recognizes the right of officers and directors to use the facilities afforded by their own banks in a proper manner, also the propriety of allowing overdrafts when suitably secured, and moreover the right to borrow money and re-discount paper, when the real necessity of the community or the bank's customers require it.

The new form of report is intended to distinguish the proper use of these business methods from their abuse. The new items on the forms will also be of much value to bank directors and enable them to judge much more easily than from the forms heretofore used, the condition of the bank, when they are called upon to attest it by oath—five times a year. In order that the banks might be prepared in advance to make their reports on the new forms, the Comptroller sent out a circular on February 1, explaining the differences. In this circular it was not explained that the new items need not be separately published in the publication of the reports of condition required by law, and there appears to have been some excitement among the banks as a result, which the Comptroller has endeavored to allay by a supplementary circular of February 13th. An exact reproduction of the official blank appears on the inset facing this article.

While desiring to acknowledge the ability of the Comptroller and his zeal for the public service, a fair criticism of his action necessarily suggests itself. Section 5211 R. S. requires the report of condition to be published "*in the same form in which it is made to the Comptroller.*" Is it legal to permit the publication in a different or condensed form? This point will be considered at more length hereafter.

The present Comptroller of the Currency, Hon. A. B. Hepburn, of New York, has been at the head of the Currency Bureau of the Treasury Department since July 27, 1892, prior to which time (since June, 1889) he had been National Bank Examiner for the cities of New York and Brooklyn. He has proven a worthy successor of McCullough, Knox, Cannon, Trenholm and Lacey, his constant aim being to improve the supervision of the National banks, and thus make them even more stable than ever before. His administration of the office has been acceptable to the business public as well as to the banks.

May the time soon come when the mutations of politics will not render it necessary to change the heads of departments under the Secretary of the Treasury except for cause, political reasons not to be included in the exception.

NOTICE.—The new form of Report Blank for National Banks, referred to on page 268, will be furnished in the April number of the JOURNAL. We were unable to get it ready for publication in this issue. It will be a *fac-simile* reproduction of the official blank.

Ed. RHODES' JOURNAL OF BANKING.

THE CURRENCY CRISIS IN AMERICA.

From the London Bankers' Magazine.

Events have been moving with some rapidity in the matter of American currency. In these pages reference has often been made to the undeniable fact that the creation of silver currency at the rate of 4½ million ounces a month in the United States was excessive. In December, 1892, and January, 1893, the practical proof that it was excessive has been given in the shape of gold exports from America to Europe. According to the Gresham law, if there are two currencies in circulation side by side, the better will be taken for payment of debts abroad, and the worse will be retained for the satisfaction of debts in legal, if doubtful or depreciated, currency at home. The export of gold has apparently not aroused alarm among the people in the United States, and the alarm has been chiefly outside the country. The following extract from a New York paper, dated some months ago, shows what the

NOTICE.—The new form of Report Blank for National Banks, referred to on page 268, will be furnished in the April number of the JOURNAL. We were unable to get it ready for publication in this issue. It will be a *fac-simile* reproduction of the official blank.

Ed. RHODES' JOURNAL OF BANKING.

But quite recently the responsible heads of parties in the United States have seen that the continued creation of silver currency at the rate provided by the Sherman Act will not do. Mr. Sherman himself has been active in trying to obtain the repeal of the law which goes by his name. The Secretary (Republican) of the United States Treasury reported on December 5th, 1892, in favor of an increase in the statutory reserve to be held in the Treasury. His remarks run thus: "If $100,000,000 in gold was a suitable or necessary reserve in 1882 and in 1885, it would seem clear that a greater reserve is necessary now. It should be remembered that, since 1882, we have added to our silver circulation the sum of $259,016,182 in standard silver dollars, coined under the old Silver Act of 1878. These dollars are nearly all outstanding, and largely represented by silver certificates. We have also increased the legal-tender paper circulation by issuing about $120,000,000 of the Treasury notes, authorized by the Act of July 14, 1890, and to this we are adding about four millions each month in payment of silver bullion purchased. It is true that silver certificates are not redeemable in gold, and that the Treasury notes of 1890 are redeemable in coin; but since it has been declared to be the established policy of the United States to maintain the two metals, silver and gold, on a parity with each other, it is obvious that this large addition to our circulation has increased the possible charge upon our gold reserve. In view, therefore, of these increased and increasing liabilities, the reserve in the Treasury for the redemption of the Government obligations should, in my opinion, be increased to the extent of at least 20 per cent. of the amount of Treasury notes issued, and to be issued, under the Act of July 14, 1890. As will be seen by the estimates submitted, the receipts of the current and the next fiscal year are not likely, if present conditions continue, to fall below expenditures. Yet in view of the fact that the surplus of this year will be small, upon the basis stated, with the probability of a falling off in receipts from causes mentioned, I think the revenues should be so increased as to enable the Treasury Department to maintain a gold reserve of not less than $125,000,000 to maintain a working balance in the Treasury cash."

The real remedy, of course, is not the provision of an extra gold reserve in the Treasury; because that reserve to be effective, would have to be paid out, and leaders of both parties are understood to have come together with the notion of securing the repeal of the mischievous Sherman Act, and to prevent an excess of silver currency which would drive out gold, the metal into which silver is exchangeable dollar for dollar. With too much silver currency in circulation, without a sufficient stock of gold, silver would fall to its bullion value, which is about 35 per cent. below the nominal value of the dollar. The upsetting of all standards of value would be too tremendous for any party to be responsible for, and so it is that the incoming Democratic President is anxious to cure the currency evil before he takes the reins of power in March next. The Republicans, on their side, knowing that a currency crash would discredit them as much as their opponents, and probably more, seem disposed to make an agreement. They know that the next Presidential election will not take place for four years, and there will be new "platforms" and new "tickets" by that time. Thus, it is hoped the currency muddle will have been arranged in the year 1893, and the threatened crisis forgotten in 1894.

World's Stock of Gold and Silver.

The following is furnished by the Acting Assistant Treasurer of the United States Sub-Treasury in New York city and is the first reliable information from Government sources that has been published in several years.

Roughly speaking the stock of gold and silver coin in the world in use for monetary purposes at the beginning of 1893 is placed at 8,000 millions of dollars, equally divided between the two metals. The available gold is probable somewhat less than this amount ($4,000,000,000) although the production has perceptibly increased in late years, thus affording a large addition to the monetary stock notwithstanding the increased industrial use. A conservative estimate permits the statement that $3,900,000,000 of each metal are in use.

Considerable change has taken place in the distribution of the stock of gold in the past four years. France, Germany, Russia and Austria have materially increased their holdings. Among these France has made the largest gains, and now has rather more than one-fourth of the entire stock. The locations of the principal stocks are:

	Gold.	*Silver.*
France	$1,000,000,000	$700,000,000
United States	650,000,000	590,000,000
Germany	530,000,000	145,000,000
Great Britain	510,000,000	110,000,000
Russia	280,000,000	60,000,000
Italy	120,000,000	60,000,000
Spain	100,000,000	125,000,000
Austria	75,000,000	100,000,000
India and China	....	1,700,000,000
Total of above	3,265,000,000	3,590,000,000
Other countries	635,000,000	310,000,000
Aggregate	$3,900,000,000	$3,900,000,000

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

CHECKS—INDORSEMENT OF—AUTHORITY OF AGENT.

Supreme Court of Tennessee, January 5, 1893.

JACKSON, *et al.*, *vs.* NATIONAL BANK OF McMINNVILLE.

The acceptance of a check and promise to pay it in accordance with its directions will be inferred when the drawee bank receives and retains the check, and charges it to the account of the drawer, who had sufficient funds on deposit to meet it, and subsequently lifted the check on settlement with the bank, although the check may have been presented to the bank by, and the money paid on it to, an unauthorized person; and an action may be maintained against the bank by the payee.

A drummer or commercial traveler, employed to sell and take orders for goods, to collect accounts, and receive money and checks payable to the order of his principal, is not by implication authorized to indorse his principal's name to such checks; and unless other authority can be shown, a bank paying a check, on such an indorsement will be held liable.

This was an action by Jackson, Matthews & Harris against the National Bank of McMinnville to recover the amount of a check payable to plaintiff, which defendant cashed on the indorsement of a commercial traveler employed by plaintiff. From a decree in favor of defendant, plaintiff appealed.

The complainants were wholesale grocery merchants in the city of Nashville, and had in their employ as a traveling salesman or drummer one Gibson. Gibson's duty, under his employment, was to travel through the country, take orders from retail merchants for goods, and collect the bills as they became due. For complainants Gibson sold a bill of goods amounting to $228.90 to J. J. Meadows of Warren County. On October 12, 1891, before Meadows bill became due, and while Gibson was still in the service of complainants, he proposed to Meadows that, if he would then pay the bill, he would be allowed a discount of 2 per cent. To this Meadows agreed, and gave to Gibson his check on the defendants for $224.39, payable to the order or Jackson, Matthews & Harris. On the face of the check was inserted the statement that it was "in full of acct. to date." Upon the back of the check Gibson indorsed the names of complainants, "Jackson, Matthews & Harris, by Gibson," and presented it to the defendant bank, where it was paid to him by the Cashier, and charged against the deposit account of Meadows. Gibson failed to pay over or account to complainants for this money. Complainants having learned that Gibson had collected other money due them, and failed to account for it, order him in, and discharged him. Gibson absconded. Subsequently complainants sent to J. J. Meadows a statement of his account, requesting payment. Meadows replied that he had paid the account to Gibson by giving him a check on the defendant bank, and had settled with the bank, and taken up the check. Complainants demanded of defendant payment to them of the check, which was refused. Complainants filed their bill to hold the bank liable, and to recover the amount of the check, alleging that Gibson had no right to indorse complainants' name, and that the payment of the check to him was unauthorized. The defendant answered, stating in substance, that Gibson was authorized to indorse complainants' name to checks and receive the money thereon; that, if not expressly empowered, he was by implication authorized to do so; that Gibson, while in complainants' service, had frequently received checks payable to complainants, indorsed complainants' name, and received the money thereon, and that these acts of Gibson were known to and had been ratified by the complainants; that they were estopped from denying his authority, and that it was inequitable for complainants to undertake to visit the consequences of their own negligence and misplaced confidence upon respondent. The Chancellor being of opinion that it would be inequitable to visit the loss of the Meadows' check upon the defendant, as to it he dismissed the bill.

HOLMAN, *J.:* In the brief of counsel for the defendant it is insisted that there is no such privity between the complainants and the defendant as will authorize the bringing of this suit; that, where a check is made payable to the order of one person, and upon the faith of a forged indorsement the bank pays to another, this is not such an acceptance by the bank as will make it liable to the payee, because the bank did not accept the check for the payee, nor promise him to pay it, but on the contrary refused to do so. To sustain this proposition, the case of *Bank* vs. *Whitman* (94 U. S., 343) is referred to. It is true that the court in that case held that a payment to a stranger upon an unauthorized indorsement does not operate as an acceptance of the check so as to authorize an action by the real owner to recover its amount as upon an accepted check. But the case of *Bank* vs. *Whitman*, on this point, has been expressly dissented from by this court, and we do not now regard this as an open question in this State. In the case of *Pickle* vs. *Muse* (88 Tenn., 380), it was decided in the opinion of the majority of the court, that acceptance of a bank check, and promise to pay it in accordance with its directions, will be inferred when the drawee bank receives and retains the check, and charges it to the account of the drawer, who had sufficient funds on deposit to meet it, and subsequently lifted the check on settlement with the bank, although the check may have been presented to the bank by, and the money paid on it to, an unauthorized person. All the members of complainants' firm testify that Gibson had not been empowered to indorse the firm's name on checks received in payment of goods. Several drummers were examined as witnesses for defendant to prove, and a majority of them say with some qualification, that it is the usage and custom of traveling salesmen and drummers, who are empowered to collect and receipt bills and accounts, to indorse the names of their principals to checks received in payment for goods; and it is insisted that by implication Gibson was authorized to indorse complainants' name to the check, and receive the money. We do not think the usage or custom sufficiently proven, nor do we intimate an opinion that such a power can be inferred from usage or by implication. A person cannot by proof establish a usage or custom which, in his own interest, contravenes the established commercial law. (*Vermilye* vs. *Express Co.*, 21 Wall., 139). No authority will be implied from an express authority. Whatever powers are strictly necessary to the effectual exercise of the express powers will be conceded to the agent by implication. In order, therefore, that the authority to make or draw, accept and indorse commercial paper as the agent of another may be implied from some other express authority, it must be shown to be strictly necessary to the complete execution of the express power. The rule is strictly enforced that the authority to execute and indorse bills and notes as agent will not be implied from an express authority to transact some other business, unless it is absolutely necessary to the exercise of express authority. (*Tied. Com. Paper*, § 77) Possession of a check payable to order, by one claiming to be agent of the payee, is not *prima facie* proof of authority to demand payment in the name of the true owner. (*Id.* § 312.) A bank is obliged by custom to honor checks payable to order, and pays them at its peril to any other than the person to whose order they are made payable. (*Id.* § 431.) It must see that the check is paid to the payee therein named upon his genuine indorsement, or it will remain responsible. (*Pickle* vs. *Muse*, 88 Tenn, 380.) An authority to receive checks in lieu of cash in payment of bills placed in the hands of an agent for collection does not authorize the agent to indorse and collect the check. (*Graham* vs. *Institution*, 46 Mo., 186; 1 Wait, Act. & Def. p. 284; 1 Daniel, Neg. Inst. § 294.) The indorsement of the check was not a necessary incident to the collection of accounts. (*Graham* vs. *Institution*, 46 Mo., 186.) It follows that a drummer or commercial traveler, employed to sell and take orders for goods, to collect accounts, and receive money and checks payable to the order of his principal, is not by implication authorized to indorse such principal's name to such checks. No equitable considerations can be invoked to soften seeming hardships in the enforcement of the laws and rules fixing liability on persons handling commercial paper. These laws are the growth of ages, and the result of experience, having their origin in necessity. The inflexibility of these rules may occasionally seem to make them seem severe, but in them is found general security. The decree of the Chancellor is reversed, and a decree in favor of complainants against the defendant will be entered here for the amount of the Meadows' check, with interest from date of filing the bill, and costs.

NATIONAL BANK—LIABILITY OF STOCKHOLDERS—COMPOUNDING LIABILITY.

United States District Court, Southern District of California, November 28, 1892.

IN RE CERTAIN STOCKHOLDERS OF THE CALIFORNIA NATIONAL BANK OF SAN DIEGO.

It is doubtful whether the Court has power to authorize the compounding of the statutory liabilility of a stockholder in a National bank.

But even if it has the power, the Court will refuse to compound such liability where it appears that some of the stockholders have conveyed away their property for the purpose of avoiding their liability, though it appear that in this way more money would be realized for the creditors.

This is an application for an order of the Court authorizing the Receiver of the California National Bank of San Diego to compound the statutory liability of certain of its stockholders. The petition for the order set forth the insolvency of the bank, the appointment of the Receiver by the Comptroller of the Currency, the qualification of the Receiver, and his entry upon the duties of his office. It further set forth that, at the time of the suspension of the bank, 781 shares of the capital stock of the association were owned by certain named persons, in certain stated shares, residing in the States of Maryland and Pennsylvania; that subsequently, it being made to appear to the Comptroller of the Currency that the assets of the bank were not sufficient to pay its liabilities, the Comptroller, on the 5th day of May, 1892, levied an assessment of $100 per share upon each and every share of the stock of the bank, and directed the petitioning Receiver to take the necessary proceedings to enforce to that extent the individual liability of the shareholders. The petitioner stated, upon information and belief, that many of the owners of the 781 shares are insolvent; that not more than 40 per cent. of the amount of the assessment against those shares could be collected by process of law, and that such collection would be at great cost and expense; that among other information furnished the petitioning Receiver was that contained in the petition to the Comptroller, signed by H. H. Haines, David M. Taylor and S. R. Dickey (holders of a portion of the 781 shares of stock), a copy of which was attached to the petition of the Receiver; that the holders of the 781 shares, being 41 persons in number, have proposed to the Receiver to pay a gross sum of $30,000 in satisfaction and discharge of their liability as such shareholders; that the proposition to accept that sum of money, and compound and settle the liability of the stockholders, has been submitted to the Comptroller of the Currency, who has directed the Receiver to petition the Court for an order authorizing the settlement, a copy of which instructions is annexed to the petition; that the Comptroller, however, required that all claims which any of the holders of the 781 shares may have against the trust, whether proven or unproven, should be assigned to the Receiver for the benefit of the trust. The petitioner further represents that, in his opinion, it is for the best interests of the trust that the offer of the $30,000 in cash from the holders of the 781 shares of stock, in addition to the assignment and transfer of all their claims against the trust, be accepted in full of their statutory liability.

The petition of Haines, Taylor and Dickey, addressed to the Comptroller of the Currency, represented, among other things, that the 781 shares of stock of the insolvent association are held by persons residing in the immediate vicinity of their residence; that of the 781 shares a large number are held by persons who are wholly insolvent, others by persons of very limited means, from whom nothing could be collected by execution, and others by persons who would resist the assessment by litigation and otherwise; that they (Haines, Taylor and Dickey) have carefully computed the amount which could probably be realized by the trust through adverse proceedings from these 781 shares, the holders of all of which are personally known to them, as well as their responsibility, and in their judgment it would be less than 20 per cent.; that they (Haines, Taylor and Dickey) have interviewed the holders of the 781 shares with a view of inducing them to join with the petitioners (Haines, Taylor and Dickey) in making an offer of compromise, and through their efforts they have induced the insolvent stockholders to consent to make partial payment, which, added to the sum to be contributed by the remaining stockholders, will make a sum largely in excess of any sum that could be collected from them all by adverse proceedings; that the acceptance of the offer of compromise would result in immediate payment to the trust of a large sum of money, and would be a saving of time, trouble and expense of litigation, which in some cases might be determined in favor of the stockholders; that this litigation would result in long delay, and, even if successful, in the meantime those who are now thought to be solvent may become insolvent, or otherwise unable to pay any judgment that ultimately may be recovered against them; that the petitioners (Haines, Taylor and Dickey) were authorized, on behalf of the 41 stockholders of the 781 shares whom they represent to pay the sum of $30,000 in cash.

Ross, *District Judge:*

Assuming that the Court is authorized to grant the order asked for, it is unhesitatingly refused. To sanction proceedings by which a stockholder in a national banking association fraudulently puts away his property for the purpose of avoiding his just and legal obligations as such stockholder, and is then permitted to compromise his liability by the payment of a less sum than is due, is to place a premium upon fraud. With such conduct there should be no compromise. Laws are made to be observed and enforced, and every one should be made to know that, in respect to every contract made pursuant to their provisions, the Government will accord and exact fair dealing and the utmost good faith. It is far better that the entire amount of the obligations of the stockholders in question should be lost to the trust fund than that the slightest judicial countenance should be given the proposed proceedings. The liability of the stockholders of the insolvent bank is several and not joint. (*Kennedy* vs. *Gibson*, 8 Wall, 505.) And there is no reason why the property of every one who has conveyed or may convey it for the fraudulent purpose of avoiding his just and legal obligations arising under the law should not be followed, and every reason why it should be.

What has been said is sufficient to dispose of the petition. It is, however, to say the least, extremely doubtful whether the Court has the power to authorize the compounding of the statutory liability of a stockholder in a National bank. The provision of the statute upon the subject is found in section 5234 of the Revised Statutes. By that section it is declared:

"Such Receiver, under the direction of the Comptroller, shall take possession of the books, records, and assets of every description of such association, collect all debts due and claims belonging to it, and upon the order of a Court of record of competent jurisdiction, may sell or compound all bad or doubtful debts, and, on a like order, may sell all the real and personal property of such association on such terms as the Court shall direct, and may, if necessary to pay the debts of such association, enforce the individual liability of the stockholders."

It is by no means clear that the statutory liability of the stockholders is a debt, within the meaning of the clause authorizing the Court to sanction the compounding of all bad or doubtful debts. In the view I have taken of the case, however, it is not necessary to decide this point. Petition denied.

NOTE PAYABLE TO CASHIER—SUIT BY BANK ON.

Supreme Court of Alabama, January 3, 1893.

DARBY *vs.* BERNEY NATIONAL BANK.

A bank may sue a payee on a note payable to its Cashier, alleging either that the promise was made to the Cashier for it, or that the Cashier's name was used by adoption for that of the bank.

This was an action by the Berney National Bank on a promissory note executed by S. J. Darby, the defendant, and one, Westbrook, who is not sued. The complaint alleged that said note was "payable * * * to the plaintiff by the name and style of 'J. B. Cobbs, Cashier,' and that the said

J. B. Cobbs was at the time of making said note Cashier of the plaintiff bank, and that the plaintiff was intended to be designated as payee by the use of the words 'J. B. Cobbs, Cashier.'" There was no indorsement of the paper by Cobbs: and the point was taken by demurrer that the complaint showed the legal title to the note to be in Cobbs, and hence that plaintiff was without right to maintain this action.

McCLELLAN, *J.:* The authorities are opposed to this position, and the law may be said to be well settled that in a case like this the legal title is in the bank, and it may sue in its own name, averring either that the promise was made to its agent for it, or that the agent's name was used by adoption for that of the principal. The demurrer was properly overruled. (2 Daniel, Neg. Inst. §§ 1187-1189; 1 Rand. Com. Paper, § 157; 2 Rand Com. Paper, 1657; Tied. Com. Paper, § 88; *Alston* vs. *Heartman*, 2 Ala. 699; *Hazard* vs. *Bank*, 4 Ala. 299.)

TAXATION OF NATIONAL BANK STOCK.

Supreme Court of the United States, January 3, 1893.

THE ALBUQUERQUE NATIONAL BANK *vs.* PEREA.

The mere fact that other property happens to be assessed lower than National bank shares, when this does not come from any design or systematic effort on the part of the assessing officer, and when the bank has had a hearing as to the correct valuation, on appeal before the Board of Equalization, the proper tribunal for review, does not authorize the bank to come into a Court of Equity for an injunction, or have that decision reviewed in such collateral way.

Where a National bank seeks an injunction to restrain the collection of a tax on the ground of excessive valuation the sum admitted to be due must be first paid or tendered.

Appeal from the Supreme Court of New Mexico.

In equity. Suit by the Albuquerque National Bank against Jose L. Perea, sheriff and ex-officio collector of the County of Bernalillo, N. M., and Clifford L. Jackson, district attorney of said County, brought in the District Court of said County, to restrain defendants from collecting certain taxes. The bill was dismissed, and the judgment thereon was affirmed by the Supreme Court of the Territory. Complainant appealed.

On November 8, 1888, appellant, as plaintiff, filed its bill in the District Court of the Second Judicial District of the Territory of New Mexico to restrain the defendant, sheriff and ex-officio collector of Bernalillo County, from the collection of the regular territorial, county, and city taxes assessed and levied upon its property for the year 1888. The ground upon which the injunction was sought was, generally speaking, inequality and discrimination in the assessment. The bill alleged that the plaintiff made a return of its property for taxation to the assessor, protesting at the time that its property should not be assessed at any greater rate than other property; that, disregarding the protest, the assessor assessed the property at its par and full value; that thereupon it appealed to the Board of Equalization, which reduced the assessment to 85 per cent.; "that all other property in the County and Territory is not assessed at near so high a valuation upon its actual value;" and that the average valuation of such other property does not exceed 70 per cent. of its actual value. At first there were also allegations to the effect that the assessor and Board of Equalization systematically discriminated in the valuation and assessment of complainant's property and other property in the Territory, but they were voluntarily stricken out by the plaintiff. It further alleged "that the amount of its taxes upon the assessment as made by the Board of Equalization is the sum of $2,189, and that the amount of the assessment which your orator should justly pay for its said property, if lawfully, equitably and justly assessed, would be the sum of $1,532.80, which said sum your orator brings into Court, and hereby tenders and offers to pay to the said defendant, Jose L. Perea, ex-officio collector of said County of Bernalillo."

"Subsequently, and on November 29, 1889, it filed a supplemental bill, the purpose of which was to restrain the collection of the taxes for the year 1889. That bill, on its face, failed to allege the amount of taxes levied upon the property of the plaintiff for that year; though by reference to one of the exhibits attached—the assessment roll for the County—it appears that it was $3 713.76. There was an allegation that the amount admitted in the original bill to be justly due for the taxes of 1888 had been paid; and then follow these averments, which are all there are, in respect to an admission of an amount due, payment or tender:

"And your orator further alleges that, having paid all the taxes for which it was liable for the year 1888, it now comes into Court and offers to pay all the taxes which can justly and lawfully be assessed against it, and for which it may be justly and lawfully liable for the year 1889, and now tenders the same into Court. * * *

"And your orator further alleges that the said assessment and said tax roll roll are so made out that it is impossible to separate the property upon which your orator is justly and lawfully taxed, and the taxes upon which are justly and lawfully levied, from the balance of the taxes assessed against your orator; but whatever sum may be ascertained by the Court to be so justly due from your orator on account of taxes for the year 1889 your orator is ready and willing to bring the same into Court and is ready to pay the same."

The demurrer to these bills, original and supplemental, was sustained by the District Court, and the bills dismissed, and on appeal to the Supreme Court of this Territory this decree was affirmed. From the decision of the Supreme Court of the Territory, complainant has brought this appeal.

Mr. Justice Brewer, after stating the facts in the foregoing language, delivered the opinion of the Court.

The decree dismissing the original and supplemental bills must be sustained. As to the tax of 1888, the case stands upon the allegation that plaintiff's property was originally assessed at his full value, while other property was assessed 70 per cent. thereof; that it appealed to the board of equalization for a reduction; and that such tribunal reduced the valuation, but only to 85 instead of 70 per cent. It would seem that the mere statement of this was sufficient. The law of New Mexico requires property to be assessed at its cash value. Confessedly, this plaintiff's property was assessed at 15 per cent. below that value. Surely, upon the mere fact that other property happened to be assessed at 30 per cent. below the value when this did not come from any design or systematic effort on the part of the county officials, and when the plaintiff has had a hearing as to the correct valuation, on appeal before the Board of Equalization, the proper tribunal for review, it cannot be that it can come into a court of equity for an injunction, or have that decision of the board of equalization reviewed in this collateral way. (*Stanley* vs. *Supervisors*, 121 U. S. 535, 7 Sup. Ct. Rep., 1234.)

With respect to the taxes of 1889, there was no payment or tender of payment of any amount. Plaintiff seeks to avoid the necessity therefor by alleging that it is impossible to separate the legal from the illegal portions of the taxes—an allegation which is manifestly untrue, in view of the fact that it had no difficulty in making the separation in the taxes of 1888, the assessment for which was made in a similar way, and in view of the further fact that it must have known what property it had which was subject to taxation as well as its value, and, therefore, the rate of taxation being fixed by law, it could, of course, have known what amount was undoubtedly due. The rule in respect to this matter is perfectly well settled in this Court. In State Railroad Tax Cases, 92 U. S. 575,616, it was fully considered. In that case it was said by Mr. JUSTICE MILLER, speaking for the Court: "It is a profitable thing for corporations or individuals whose taxes are very large to obtain a preliminary injunction as to all their taxes, contest the case through several years' litigation, and, when in the end it is found that but a small part of the tax should be permanently enjoined, submit to pay the balance. This is not equity. It is in direct violation of the first principles of equity jurisdiction. It is not sufficient to say in the bill that they are ready and willing to pay whatever may be found due. They must first pay what is conceded to be due, or what can be seen to be due on the face of the bill, or be shown by affidavits, whether conceded or not, before the preliminary injunction should be granted. The State is not to be thus tied up as to that of which there is no contest, by lumping it with that which is really contested. If the proper officer refuses to receive a part of the tax, it must be tendered, and tendered without the condition annexed of a receipt in full of all the taxes assessed." Many other cases to like effect might be cited.

The decree will be affirmed.

COLLECTIONS—TITLE TO MONEY—ASSIGNMENT.

Supreme Court of Nebraska, January 3, 1893.

ANHEUSER-BUSCH BREWING ASSOCIATION *vs.* ASSIGNED ESTATE OF THE FARMERS & MERCHANTS' BANK OF HUMBOLDT.

Where a bank collects money for another it holds the same as trustee of the owner, and on the making of an assignment by the bank for the benefit of its creditors the trust character still adheres to the fund in the hands of the assignee, and the owner is entitled to have his claim allowed as a preferred claim.

Appeal by plaintiffs from a judgment for defendant.

On July 1, 1889, the Farmers & Merchants' Bank of Humboldt, made an assignment for the benefit of its creditors. Subsequently Creighton Marrin was elected by the creditors of the bank as assignee of the assigned estate and qualified as such. The appellant filed its claim for $827.88 for moneys collected by the bank for appellant, and not remitted, which was allowed by the County Court as an ordinary claim, no preference being given. The appellant appealed to the District Court, where the decision of the County Court was affirmed. Appellant then took this appeal.

NORVAL, *J.*, (omitting part of the opinion):

It is argued by appellant, in effect, that the money collected for it by the bank was a trust fund in the hands of the latter, and that the making of the assignment did not divest the money of its trust character. There can be no doubt of the soundness of the proposition stated. This money collected by the bank did not belong to it, but to appellant, and it did not pass by the assignment to the assignee as a part of the assets of the bank. The assignee took the money subject to the trust in favor of the owner, and appellant was entitled, under the provisions of the assignment law, to have the same paid as a preferred claim against the estate, unless he has waived his right to such preference. The decisions cited in the brief of appellant fully sustain this conclusion, and we have been unable to find any conflict therewith. (*McLeod* vs. *Evans*, (Wis.) 28 N. W. Rep., 173; *Bank* vs. *King*, 57 Pa. St., 202; *Peak* vs. *Ellicott*, 30 Kan., 156; *People* vs. *Bank of Rochester*, 96 N. Y., 32; *Craigie* vs. *Hadley*, 99 N. Y., 131; *Central Nat. Bank of Baltimore* vs. *Connecticut Mut. Ins. Co.*, 104 U. S., 54.) The decision in *Wilson* vs. *Coburn* (Neb.) 53 N. W. Rep., 466), is clearly distinguishable from the case at bar. There an insolvent bank received a deposit of a sum of money from one Henry Wilson, and soon thereafter the bank made an assignment for the benefit of its creditors. The depositor filed with the county judge his claim, and a petition praying that he be adjudged a preferred creditor, and for an order for the payment of his claim in full. It was ruled that the fact that the bank, within the knowledge of its officers, received the depositor's money under circumstances which amounted to a fraud upon him, was not of itself sufficient to entitle him to a preference over other creditors from the funds of the bank in the hands of the assignee. The depositing of the money with the bank under the circumstances stated created the relation of debtor and creditor, and, as the sum deposited has gone into and was mingled with the general funds of the bank, so as not to be capable of identification, or of being distinguished from the other assets of the bank in the assignee's hands, the depositor had no right to preference. In the case before us the transaction between appellant and the assignor did not create the relation of debtor and creditor, but the money collected constituted a trust fund in the hands of the bank for the benefit of the owner, and the assignment did not have the effect to divest it of such trust. The assignee stands in the place of the bank, and by the assignment he acquired no greater right to the money than the bank possessed.

USURY—BONUS TO AGENT.

United States Circuit Court, Western District of Arkansas. November 1, 1892.

DREYFUS *vs.* BURNES.

Where an agent in a loan transaction is agent of the borrower, and not of the lender, the fact that he receives a bonus from the borrower is immaterial to the plea of usury, for what the borrower pays to his own agent for procuring a loan is no part of the sum paid for the loan or forbearance of money.

If an agent in a loan transaction is agent of the lender, unless the proof shows that the lender gave express authority to the agent to exact for his benefit more than the lawful rate of interest, or he had knowledge, express or implied, that the agent had such a purpose, usury cannot be asserted to defeat the remedy.

An authority to loan money at a legal rate of interest does not include by implication the authority to loan at an illegal rate. An authority to violate the law will never be presumed.

This was a bill in equity by Charles J. Dreyfus against Charles Burnes and Catharine Burnes to foreclose a mortgage.

PARKER, *District Judge:* This is a suit to foreclose a mortgage given to secure a loan of $8,000 at 10 per cent. interest. The defendants pleaded usury. The facts produced in evidence show that the money of plaintiff was received by Burnes and wife from plaintiff through Patterson & Parker, loan and real estate agents. By the contract, plaintiff was to have 10 per cent.

interest on the loan. On agreement with Burnes and wife with Patterson & Parker they were to have 2 per cent. for negotiating the loan, for securing the money for them. Whose agents were they? I find from the proof offered in the case that they were the agents of Burnes and wife alone. This being true, it would make no difference that they received a bonus of $100 from the borrowers. This doctrine is clearly sustained by *Vahlberg* vs. *Keaton* (51 Ark., 544), in which case the Supreme Court, speaking of a condition where the agent acted as such af the borrower alone, says:

"Whether he received or did not receive a bonus is immaterial to the plea of usury. What the borrower paid to his own agent for procuring a loan is no part of the sum paid for the loan or forbearance of money."

If it could be held from the facts that Patterson & Parker were the agents of plaintiff in this loan transaction, it could not be held from the proof that plaintiff had given Patterson & Parker any authority to exact for his benefit any more than the lawful rate of interest; nor that he had any knowledge, actual or constructive, of any such purpose. Then, upon this ground, under the doctrine declared in the case of *Call* vs. *Palmer* (116 U. S., 98), usury could not be asserted to defeat the remedy in this case, as, under such circumstances, the loan is not thereby rendered usurious. In *Call* vs. *Palmer*, this language is used:

"It is settled that when an agent, who is authorized by his principal to lend money for lawful interest, exacts for his own benefit more than the lawful rate, without authority or knowledge of his principal, the loan is not thereby rendered usurious."

Again, said case declares:

"An authority to loan money at a legal rate of interest does not include by implication the authority to loan at an illegal rate. An authority to violate the law will never be presumed."

From the proof in the case, and the law applicable thereto, it becomes manifest that the plea of usury has not been sustained. That leaves the case without any defense, and the decree must therefore go for plaintiff, and it is so adjudged.

REVOCATION OF ACCEPTANCE.

Court of Errors and Appeals of New Jersey, Nov. 25, 1892.

TRENT TILE COMPANY *vs.* FORT DEARBORN NATIONAL BANK OF CHICAGO.

A bill of exchange, drawn on defendant, was sent by plaintiff to a bank for collection, and on presentation to defendant was accepted by its treasurer, and redelivered to the bank. On the same day defendant's treasurer learned that the drawer of the bill had failed two days before. On the next day defendant's treasurer applied to the bank's Cashier for leave to revoke the acceptance, and erase the indorsement, which the Cashier declined to do, and notice was thereupon given the bank to refuse payment of the bill. At the time of the acceptance the drawer had no funds in defendant's hands, but was indebted to it. No fraud was shown on plaintiff's part. *Held*, that the defendant was bound by its acceptance.

This was an action by the Ft. Dearborn National Bank of Chicago against the Trent Tile Company on a bill of exchange. Judgment for plaintiff. Defendant brought error.

WERTS, *J.*: The question raised and presented in this case on the trial at the Mercer Circuit and in the Supreme Court was "whether the drawee of a bill of exchange can, after an indorsement of acceptance and redelivery of the acceptance to the agent of the holder, on discovering the insolvency of the drawer, revoke such acceptance, the drawee having no funds of the drawer in his hands." (See case reported 54 N. J. Law, 33). Other questions than that above stated were first raised and presented on the argument in this Court. No exception was taken at the trial covering the new points raised, nor was there any assignment of error specifically covering them. "It is the well settled rule that a party shall not be heard in an Appellate Court upon a point not taken or a matter not raised and considered in the Court below. The point specifically made was properly decided." (*Railroad Co.* vs *Dailey*, 37 N. J. Law, 528; *Railroad Co.* vs. *Page*, 41 N. J. Law, 183). The judgment is affirmed for the reasons given in the Supreme Court.

LIEN OF BANK UPON SHAREHOLDER'S STOCK.

Supreme Court of Iowa, January 19, 1893.

FARMERS & TRADERS' BANK OF BONAPARTE *vs.* HANEY, *et al.*

Where a bank has a by-law providing that no transfer shall be made without the consent of the Board of Directors by any stockholder who shall be liable as principal debtor or otherwise, and the certificate of stock contains a provision to this effect, such by-law and certificate constitute a contract between the bank and the stockholder, by which the bank has an equitable lien upon the stock for any and all liabilities from the stockholder to the bank.*

Such lien is valid against any other creditor of defendant who may attach the stock, at least when such creditor has notice of the lien.

This was an action upon certain promissory notes, and for the foreclosure of a mortgage on certain real estate given to secure the payment of the notes. The notes and mortgage were executed by the defendant Dennis Haney to secure quite a large amount of indebtedness to the bank. Haney was a stockholder in the bank, and the plaintiff claims that by virtue of the provisions contained in his stock certificate, and certain by-laws of the banking association, the plaintiff has a lien upon the stock for any indebtedness of Haney to the bank. There was a hearing on the merits in the District Court, which resulted in a full decree for the plaintiff. Defendants appealed.

ROTHROCK, *J.*, (Omitting part of the opinion):

The remaining question in the case relates to the priority of the claims of the parties upon the bank stock held by Haney. The stock certificate issued to Haney was in these words: "No. 14. Farmers & Traders' Bank of Bonaparte, Iowa. 15 shares. This is to certify that Dennis Haney is entitled to 15 shares of the stock in the Farmers & Traders' Bank, on which $50.00 per share has been paid. Transferable only on the books of said bank, in person or by attorney, on the surrender of this certificate and payment of all liabilities. Bonaparte, Iowa, June 15, 1882. B. R. Vale, President. Thomas Christie, Cashier." This certificate was issued in pursuance of by-laws duly adopted by the stockholders, which by-laws, so far as pertinent to the question under consideration, are as follows: "The stock of this bank shall be assignable and transferable only on the books of this bank, subject to the restrictions and provisions of the banking laws, and a transfer book shall be provided, in which all assignments and transfers of stock shall be made. No transfer of stock shall be made without the consent of the board of directors, by any stockholder who shall be liable as principal debtor or otherwise. Certificate of stock signed by the President and Cashier shall be issued to stockholders, and the certificate shall state, upon the face thereon, that the stock

* But a National bank cannot acquire a lien on its own stock, and if it has a by-law giving any such lien, such by-law is void. (*Bullard* vs. *National Bank*, 18 Wallace, 589; *Bank* vs. *Lanier*, 11 Wallace, 369.)

is transferable only on the books of the bank, and that the stock of any stockholder liable to the bank, as principal debtor or otherwise, will not be transferred without the consent of the board of directors." It appears to us that there should not be any question that the certificate and the by-laws constitute a contract between the bank and the stockholder, by which the bank has an equitable lien upon the stock for any and all liabilities from Haney to the bank. If we understand the arguments of counsel for appellant, they do not seriously dispute the proposition that the contract was valid between Haney and the bank, but it is claimed that it is void as to the creditors of Haney, because it is contrary to law, and against public policy. We have examined the arguments of counsel, and we do not think their position can be maintained. Appellant caused an attachment to be levied on the stock some days after the mortgage was executed and delivered. It is a general rule that the lien by attachment is valid upon such legal interest as the defendant in attachment has in the property attached, and it may be that in the absence of notice that another lien exists, or that there are others who have liens or interest therein, an attaching creditor will have the right to maintain his attachment against the property. But there is a clear preponderance of evidence in this case that the attorney of appellant and the sheriff were distinctly notified, before any levy was made, that the bank had a lien on the stock. This being the fact, it should not be held that appellant has any more right to subject the stock to its claim than Haney would have had to sell his stock without payment of his liabilities to the bank.

It does not appear to us to be necessary to further elaborate the case. The decree of the District Court is affirmed.

PURCHASE OF NOTES BY NATIONAL BANK—ACTION ON BY BANK.

Supreme Judicial Court of Massachusetts, January 4, 1893.

PRESCOTT NATIONAL BANK OF LOWELL *vs.* BENJAMIN F. BUTLER.

In an action by a National bank upon a promissory note it cannot be pleaded by an indorser as a defence that the bank acquired the note by *purchase*; for even if such purchase is in excess of the power of the bank, this can be availed of only in proceedings by the government to forfeit the franchises of the bank.

Even if a National bank does not get the legal title to a promissory note bought in the market, it may maintain a suit as the holder thereof.

This was an action by the plaintiff against the defendant as indorser of a promissory note. The court found for the plaintiff and defendant excepted.

KNOWLTON, *J.*, (Omitting part of the opinion):

The defendant contends that the plaintiff cannot recover—*First*, because it has no title to the note. It is argued that under the statutes of the United States National banks cannot buy or sell promissory notes, and that, inasmuch as the plaintiff obtained the note by purchase, it has no right to hold or collect it. On the question whether a National bank can buy promissory notes in the market as a natural person can, there is a conflict of authority. Its power to do so, if it has any, is conferred by the United States statute of 1864 (chapter 106, § 8), which authorizes National banks "to discount and negotiate promissory notes, drafts, bills of exchange, and other evidences of debt," etc. It has sometimes been held that the right to "discount and negotiate notes," etc., goes no further than to authorize the taking of them in return for a loan of money made on the strength of the promises contained in them. (*Lazear* vs.

Bank, 52 Md , 124; *Bank* vs. *Baldwin*, 23 Minn , 198; *Bank* vs. *Pierson*, 24 Minn., 140; *Bank* vs. *Baker*, 15 Ohio St., 69.) By other courts it has been held the right to "discount and negotiate" includes the right to buy. (*Smith* vs. *Bank*, 26 Ohio St., 141; *Pape* vs. *Bank*, 20 Kans., 440. See, also, *Bank* vs. *Harris*, 108 Mass., 514. 516; *Bank* vs. *Porter*, 125 Mass., 333; *Bank* vs. *Savery*, 127 Mass., 75, 77.) If we assume, in favor of the defendant, that National banks are not authorized, under the law, to go into the market and buy promissory notes from those who are selling them only as a commodity, there are several reasons why this defense cannot prevail.

In the *first* place, if such a purchase is *ultra vires*, it is an ordinary contract. It is not made penal, nor expressly forbidden, and the maker or endorser cannot defend on the ground that the bank has obtained no title. The violation of law can be availed of only in proceedings against a National bank, in the interest of the public, to deprive it of its charter. This has been decided by the Supreme Court of the United States. (*Bank* vs. *Matthews*, 98 U. S., 621, and cases cited; *Bank* vs. *Whitney*, 103 U. S., 99; *Bank* vs. *Hanson*, 33 Minn., 40; *Woollen Co.* vs. *Lamb*, 143 Mass., 420.)

Secondly, the evidence in this case would well warrant, if not require, a finding by the Court that the transaction was a discounting of the note for the defendant, within the meaning of the statute. The note was in the hands of the indorser's agent, who consulted the indorser about the rate of interest before giving the note to the plaintiff. The plaintiff's money was paid to the indorser, less the agent's commission. The transaction would have been no different, in substance, if the defendant, who held the note as indorser, had carried it to the plaintiff's bank, and had there made in person the contract which he made through the agent. If he had done that, the transaction clearly would have been a negotiation of a loan, and a discounting of a promissory note. (*Lazear* vs. *Bank*, 52 Md., 124; *Bank* vs. *Baldwin*, 23 Minn., 198; *Bank* vs. *Pierson*, 24 Minn., 140.)

Thirdly, it has been held in this Commonwealth, in analogy with the above-cited decisions of the Supreme Court of the United States, but on somewhat different grounds, that, even if a National bank does not get legal title to a promissory note bought in the market, it may maintain a suit as the holder, and the maker and indorsers cannot be relieved from their contracts to pay the holder the amount promised in the writing. (*Bank* vs. *Savery*, 127 Mass., 75, 77; *Bank* vs. *Porter*, 125 Mass., 333.)

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: SPENCER, Iowa, January 31, 1893.

SIR:—I read with a great deal of interest and profit your replies to Law and Banking questions, and would like your decision upon the proper manner of handling the following collection, sent us from a distance, which consisted of eight notes, all in the same form, but maturing at different times. The first of these notes was as follows:

SPENCER, Iowa, February 20, 1891.

$100—On or before the 20th day of February, 1893, for value received, I promise to pay "John Doe" or order, the sum of One Hundred Dollars, with interest at the rate of eight per cent. per annum, *payable annually*. If any of the interest remains unpaid for a period of thirty days after due it shall cause the *whole note* to become *due and* *collectible at once.* Principal and interest payable at the office of "Brown," Spencer, Iowa. "RICHARD ROE."

Indorsed "Pay Smith or order, John Doe,'' and no other indorsement.

The indorsements were the same on all the notes. We were instructed to collect the first note with two years' interest accrued, and two years' interest accrued on the others not yet matured. The maker calls on the day of maturity and tenders the amount of note with interest on it *for one year* and *one year's interest* on others as *full payment*, and refuses to pay further, but exhibits a receipt from "Brown," who obtained the loan for him, and in whose office it is made payable, dated February 20, 1892, for the amount of interest then due on all these notes. *Should the note be protested?* According to the tenor of the note was it not due thirty days after February 20, 1892, and protest of no value? DAVID PAINTER, *Cashier.*

Answer—We think our correspondent is correct in the view that the note was due according to its tenor thirty days after February 20, 1892, if the interest was not then paid. The language employed is not the usual stipulation that upon failure to pay the interest when due the note shall become due *at the option* of the payee or holder, or that he *may treat it* as due; but the terms are absolute that "if any of the interest remains unpaid, the whole note to become due and collectible at once." If, therefore, the note was indorsed over to Smith prior to thirty days after February 20, 1892, the indorser was discharged by failure to protest the note when it became due by reason of the failure to pay interest (if this was the fact), and a protest subsequently would have been unavailing to charge him with liability; and if the transfer was made after such time, he became immediately liable as indorser, and action could have been brought against him at once as such, and nothing further was needed to fix his liability. In either event, therefore, protest was not necessary.

Editor Rhodes' Journal of Banking: MT. STERLING, KY., February 18, 1893.

SIR:—Below is a copy of a bond which, with some twenty-eight of its fellows, was protested for non-payment on January 4, 1893:

No. 75. UNITED STATES OF AMERICA, $1,000.

COUNTY OF MONTGOMERY, STATE OF KENTUCKY.

The County of Montgomery, in the State of Kentucky, acknowledges itself indebted to John Smith or bearer, in the sum of One Thousand Dollars, payable at the Farmers' National Bank in the City of Mount Sterling and State of Kentucky, ten years from the date hereof, upon the presentation and delivery of this bond bearing interest at six per cent. per annum, payable semi-annually at said Bank upon the presentation and delivery of the proper coupon attached, signed by the clerk of the county court of said county. This bond is issued by order of the Montgomery County Court, authorized by an Act passed and approved by the General Assembly of the Commonwealth of Kentucky, the 8th of April, 1880, entitled an "Act to authorize and empower the Montgomery "County Court to issue bonds for the purpose of refunding and paying the out- "standing and unpaid bonds of the Lexington and Big Sandy Railroad Com- "pany against Montgomery County," amounting to $120,000, and which unpaid bonds are to become due and payable on the 15th day of April, 1883. This bond under said refunding "Act" to be placed upon the market and sold or disposed of by said County Court or its authorized agents, for the aforesaid purpose, provided, that it shall not be sold for less than its par value.

SEAL. Witness the seal of the County Court of said County of Montgomery and the signature of the Presiding Judge of said Court and the counter-signature of the Clerk thereof this first day of January, one thousand, eight hundred and eighty-three.

J. H. HAZELRIGG, *Presiding Judge of Montgomery County Court.*

T. W. PRIEST, *Clerk of Montgomery County Court.*

The attorneys of the different banks here claim: some that it is commercial, negotiable paper, and that the protest is legal; others that the protest was illegal and unnecessary, as the bonds passed on delivery and endorsements on bonds were unnecessary. Some bonds were endorsed and others were not. You would greatly oblige an old subcriber by setting our doubts at rest. CHARLES M. GRUBBS, *Cashier.*

Answer.—Under the decisions of the Supreme Court of the United States and the great weight of authority in this country, these bonds would be regarded as negotiable instruments (*Commissioners, etc.*, vs. *Clark*, 94 U. S., 278;

Mercer vs. *Hacket*, 1 Wallace, 88; Daniel on Negotiable Instruments, §§ 1500-1501a). The bonds being payable to bearer no indorsement was necessary to pass the title; but the holder having put his name on them, he became liable as an indorser (*Bates* vs. *Butler*, 46 Me., 387; *Smith* vs. *Rawson*, 61 Ga., 208; *Brush* vs. *Reeves*, 3 Johns.; *Gilbert* vs. *Nantucket Bank*, 5 Mass., 97.) Such of the bonds, therefore, as were indorsed were properly protested in order to hold the indorsers. We think also that it was *proper*, though not strictly *necessary*, to protest the bonds not indorsed, because a notary's certificate is *prima facie* evidence of presentment for payment, and affords the most convenient mode of proving a demand, in case such proof should become necessary or desirable in an action on the bonds.

Editor Rhodes' Journal of Banking: PRIMGHAR, IOWA., Jan. 27, 1893.

SIR:—A note dated March 14, 1892, made by John W. Smith to Andrew Byers is presented to us for discount. The President of the bank buys the note, and places our indorsement on the back, and asks Byers to indorse the note. Byers says he cannot write. The President writes his name and Byers makes his mark, and the President signs as witness. When the note comes due the maker has left the country. The bank notifies Byers that he will have the note to pay. Byers comes in and swears he did not make his mark on the back of the note. The President swears he did. There are no other witnesses to the transaction. How would you proceed to establish the genuineness of the mark? Also, is the officer of the bank a legal witness?

C. H. SLOCUM, *Cashier.*

Answer.—The officer is a *competent* witness; his interest in the matter goes only to the *weight* of his evidence. There being no other witnesses to the transaction, the signature must be proved by the testimony of the President; and if the other party denies the signature, it is simply a question of veracity between witnesses. Ordinarily, in such case, the bank would have a decided advantage in that there could scarcely be any motive for the President to make a false statement; and it would be contrary to the usual course of business for the bank to have taken the note unless Byers did indorse it. But this would be a question for the jury, and our correspondent is, no doubt, familiar with the old saying that no man knows whom a woman will marry, or what a petit jury will decide. As above stated, an officer of a bank is a competent witness for the bank; but it is always better to secure witnesses who are wholly disinterested; and under statutes which prevail in many of the States, the officer might not be a competent witness after the death of the other party.

Editor Rhodes' Journal of Banking: QUINCY, ILL., February 14, 1893.

SIR:—Is it necessary that parties to whom a note is made payable, and who guarantee the payment of the note, should indorse such note further than placing their names below such guarantee? In other words, is it necessary that they indorse such note as if the guarantee was not made, and do the parties signing such guarantee, and to whose order the note is made payable relinquish their rights in the note?

HENRY F. J. RICKER, *Cashier.*

Answer.—It is much the safer course to have the payee sign as indorser, and also as guarantor, for in most cases it is held that a guaranty is not a negotiation of the note as understood by the law merchant (*Trust Company* vs. *National Bank*, 101 U. S., 68, 70; *Lamourieux* vs. *Hewitt*, 5 Wend., N.Y., 308; *Miller* vs. *Gorton*, 2 Hill, N. Y., 307), though there are cases which hold that such transferer combines the liability of indorser and guarantor; that he transfers the instrument and indorses it, by which he becomes liable as indorser by due demand and notice, and he superadds a guaranty which renders him liable without demand or notice upon default of the principal (*Partridge* vs. *Davis*, 20 Vt., 500; *Robinson* vs. *Lain*, 81 Iowa, 9; Daniel on Negotiable Instruments, § 1781.) As to the liabilities, rights, etc., of guarantors, see JOURNAL for December, 1892, pp. 1357-1358.

Editor Rhodes' Journal of Banking: LOUISVILLE, Ky., February 8, 1893.

SIR: -A executes to B his note, of which the following is a copy:

> One year after date I promise to pay B one thousand dollars with interest from date. Second payment on hand this February 6, 1892 A.

B in turn immediately takes this note to bank C and discounts it. Bank C at once notifies A that it has discounted his note due in twelve months. About the time this note matures B becomes insolvent. In the meantime A becomes owner of a claim against B for $1,000. Now, can A plead an offset against the note which bank C holds to make good the amount which B owes him? The note not being a negotiable instrument he claims he has a right to do so. SUBSCRIBER.

Answer.—The rule is universal that in order that a set-off or counter-claim may be pleaded against an assignee, the right or demand on which it is based must have been acquired before the defendant had notice of the assignment. This was the rule in equity, and it is now embodied in the statutes of nearly all of the States. (See Pomeroy on Remedies, § 452 et seq., and cases there cited.) As, therefore, A had notice of the assignment of the note to the bank before he acquired the claim against B, he cannot plead that claim as a set-off or counter-claim against the bank.

Editor Rhodes' Journal of Banking: HELENA, Montana, February 24, 1893.

SIR:—A gives a mortgage to B on some property, same reading, payable in New York, at B's place of business, as do also the interest coupons. As the interest becomes due B sends the coupons to a bank at A's place for collection and return. Can the bank make A pay the exchange or cost of remitting the money to New York, or would B have to pay same? COLLECTOR.

Answer.—B should pay the exchange. A bank receiving an item for collection has no right to demand anything more than the amount called for by the paper itself. Where the paper provides for exchange then the bank should collect exchange, but not otherwise. Besides, in this case the coupons were payable in New York, and A had the right to select his own mode of making the remittance, or he might have had funds in New York.

LOST MONEY ORDERS.—According to a recent statement there is on deposit to-day in the Sub-treasury in New York city more than $3,000,000 representing outstanding money orders, and of this amount more than $2,000,000 represents money orders which are overdue, and which may never be presented for payment. Ten years ago, in a spasm of virtue, Congress appropriated the money to pay the salaries of ten clerks, who should check up the books of the money order office and prepare a list of the money orders which had not been presented for payment. It was estimated then that if this list was prepared, the owners of two-thirds of this money could be traced, and the money be restored to them. To-day one solitary clerk sits in a little office on the top floor of the postoffice department annex checking up the unpaid money orders. He is working now on orders issued in 1871, at this rate he will not catch up with his work in twenty years, and by that time most of the owners of the money will be dead and their heirs or executors will be hard to find. It seems strange, under the precautionary system now used by the postoffice department, that such an enormous amount of money should have accumulated to the credit of unpaid money orders; but the chief accumulation was under the original rules of the office, which were much more conservative than those now in force.

NEW YORK STATE.

ENLARGING SCOPE OF SAVINGS BANK INVESTMENTS.

In May, 1892, a meeting of representatives of the various Savings banks in the State of New York was held at the Chamber of Commerce, in New York city, for the purpose of considering the question of enlarging the list of securities in which Savings banks might safely invest.* Fifty-two Savings banks were represented and reports favorable to such action were received from upwards of eighty banks. After a full discussion of the subject the following Executive Committee was appointed to bring the matter in proper form before the Legislature: JOHN HARSEN RHOADES, Chairman, President of Greenwich Savings Bank; WM. C. STURGES, President Seaman's Bank for Savings; JAMES M. MAHON, President Emigrant Industrial Savings Bank; HENRY P. MORGAN, President Brooklyn Savings Bank; J. HOWARD KING, President Albany Savings Bank; ADDISON C. MILLER, Treasurer Savings Bank of Utica; ANDREW MILLS, ex-President Dry Dock Savings Institution.

A bill has been introduced in the Legislature by Senator Joseph Mullin, of the Twenty-first District, which is practically the same as the one originally introduced by Mr. Bradford Rhodes, editor of the JOURNAL OF BANKING, while a member of the Assembly in 1888, and 1889, and 1890, of which the following is a copy:

AN ACT TO AMEND CHAPTER SIX HUNDRED AND EIGHTY-NINE OF THE LAWS OF EIGHTEEN HUNDRED AND NINETY-TWO, ENTITLED "AN ACT IN RELATION TO BANKING CORPORATIONS."

PRESENT LAWS.

The People of the State of New York, represented in Senate and Assembly do enact as follows:

SECTION 1. Section one hundred and sixteen of chapter six hundred and eighty-nine of the laws of eighteen hundred and ninety-two, entitled "An Act in relation to Banking Corporations," is hereby amended so as to read as follows:

§ 116. *In what securities deposits may be invested.*—The trustees of any Savings bank may invest the moneys deposited therein and the income derived therefrom only as follows:

1. In the stocks or bonds, or interest-bearing notes, or obligations of the United States, or those for which the faith of the United States is pledged to provide for the payment of the interest and principal, including the bonds of the District of Columbia.

2. In the stocks or bonds, or interest-bearing obligations of this State issued pursuant to the authority of any law of the State.

3. In the stocks or bonds, or interest-bearing obligations of any State of the United States which has not within ten years previous to making such investment by such corporation defaulted in the payment of any part of either principal or interest of any debt authorized by the Legislature of any such State to be contracted.

4. In the stocks or bonds of any city, county, town or village, school district bonds, and union free school district bonds, issued for school purposes, or in the interest-bearing obligations of any city or county of this State, issued pursuant to the authority of any law of the State, for the payment of which the faith and credit of the municipality issuing them are pledged.

5. In bonds and mortgages on unincumbered real property situated in this State, worth at least twice the amount loaned thereon. Not more than sixty-five per cent. of the whole amount of deposits shall be so loaned or invested. If the loan is on unimproved and unproductive real property, the amount loaned thereon shall not be more than forty per cent. of its actual value. No investment in any bond and mortgage shall be made by any Savings bank, except upon the report of a committee of its trustees, charged with the duty of investigating the same, who shall certify to the value of the premises mortgaged or to be mortgaged, according to their best judg-

* For full proceedings of the meeting see July, 1892, JOURNAL, page 798.

ment, and such report shall be filed and preserved among the records of the corporation.

6. In real property subject to the provisions of the next section.

PROPOSED AMENDMENT.

7. In the legally authorized stocks or bonds of any city incorporated under the laws of the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Illinois, Wisconsin, Michigan or Missouri, provided that such city has at the time of the investment more than fifty thousand inhabitants, as shown by the last Federal or State census next preceding the investment, and provided further that the total indebtedness of any such city, including the issue of stocks or bonds in which the investment is made shall not exceed seven per cent. of the valuation of the taxable property therein, as shown by the valuation thereof made for the assessment of taxes next preceding the investment. In estimating such indebtedness of any such city there shall not be included stocks or bonds or other evidences of indebtedness commonly known as water bonds, stocks or indebtedness and issued in payment for water works or extensions of the same, owned exclusively by the city and for the payment of which the city is directly liable, or for refunding any such indebtedness for such water works, or extensions of the same. There shall also be deducted from the amount of such total indebtedness the amounts of any sinking funds available for the payment of such indebtedness or any part thereof. No such investment shall be made in the stocks or bonds of any such city, if it or the State in which it is situated, has defaulted in the payment of any part of the principal or interest of any stocks or bonds within the ten years next preceding such investment. No Savings bank shall invest more than twenty-five per cent. of its assets in the stocks or bonds of cities situated out of this State, or more than five per cent. of its assets in the stocks or bonds of any one of such cities, or invest in more than ten per cent. of all the stocks and bonds issued by any one of such cities, or invest in the stocks or bonds of any city situated out of this State which have been or shall be issued to aid in the construction of any railroad.

The Committee has sent a copy of the foregoing to every Savings bank President in the State, accompanied by a circular letter, from which the following is extracted:

It is of the utmost importance that each member of the House and Senate should be seen and informed of the character of the bill and the great need for the relief sought. This Committee, who represent the standing Committee appointed at the meeting of Savings bank officers held last May, therefore request that you will confer at once with the Senator and Representative for the district in which your bank is located and promptly advise the Chairman of this Committee of the result of such interview. There is every prospect of passing the bill this winter, but each bank must do its share of work if we are to succeed.

Poor's Handbook of Investment Securities.—The third number of this work has been issued, and it shows a marked increase in size and comprehensiveness over previous volumes. The principal feature of the book is its series of articles upon the finances and resources of the United States and of the different States, supplemented by detailed statements of the financial condition of every important city, town and county throughout the Union. Besides, there are statements showing the time and place of payment of coupons on all existing bonds of railroads, States, municipalities, counties, cities and private corporations, also showing the rate of dividends paid by the railroad companies of the country from 1884 to 1892, inclusive, and furthermore showing the mileage owned and operated, capital accounts, passenger and freight statistics, earning and income accounts of the leading railroads in the United States for ten years, 1883-92, inclusive. It is the most complete work of the kind published in this country, and to the investor and business man as well, is simply invaluable.

A Valuable Adjunct.—From C. S. Morey, Cashier of the Farmers & Merchants' Bank, Scandia, Kans., February 21: "Enclosed find draft in payment for RHODES' JOURNAL OF BANKING for 1893. We have taken the JOURNAL for about 12 years, and consider it *a valuable adjunct* to our library."

"The 'Journal' of Great Value to All Classes."—From W. R. Payne, Secretary of the University of Nashville, Tenn., under date of February 19: "The January and February numbers of RHODES' JOURNAL OF BANKING have been received, and I have read them both with a great deal of interest and profit. The JOURNAL must be of great value to all classes of business and professional men, and I think its subscribers *should not be confined to bankers and bank employees.*"

THE CURRENCY QUESTION.

SUGGESTIONS OF THE NEW YORK STATE BANK SUPERINTENDEMT.

[Below is the concluding part of the annual report of the Bank Superintendent of the State of New York, which is commented upon elsewhere in the JOURNAL. The statistical part of the report will be published in a subsequent number.—EDITOR.]

CURRENCY.

The question of the currency being prominently before the public, and of absorbing interest at this time, I beg consideration of the following suggestions.

According to the Comptroller of the Currency of the United States the paper money in circulation October 31, 1892, was $1,074,437,684; of which sum only $172,432,146, about sixteen per cent. of the whole, was National bank notes, and $25,240,533 of this latter sum had become a liability of the treasury on "surrender of circulation" by deposits of lawful money for their redemption.

Such surrenders of circulation in the past have effected a contraction of the currency between the maximum of December 26, 1873, of $341,320,256, and the minimum of October 2, 1890, of $122,928,084. Subsequent to this latter date there has been a slow but irregular increase of circulation due in part to the increase of the number of National banks and the requirement of National charter, and in some few instances to a calculation of a moderate profit on the issue by the banks. The amount of National bank notes outstanding September 30, 1892, for which the banks were directly liable, was $147,191,593. There is no evidence, however, that this increase in the volume of the National bank notes will continue to any important extent or, in fact, at all beyond the minimum charter requirement of newly organized banks, the calculation as to the circulation showing but meager profit in the operation and the only really available United States bonds being the four per cents., which are maturing in 1907.

With these facts in view and with an evident disposition in influential quarters to forestall and if possible prohibit an undue expansion of the currency issued directly by the United States, it has been proposed to repeal the tax of ten per cent. on the note issues of State banks, and an effort in the House of Representative was made in June last to accomplish this, but the repeal was defeated by a vote of 116 to 84.

But difficulties exist by way of objections to note issues by State banks—one being opportunities for counterfeiting arising from the lack of uniformity in the kinds and descriptions of paper money issued under the separate authorizations of forty-four different States. And there is no uniformity of sentiment throughout these States regarding what constitutes the best of currency, the laws therefor being as diverse as the laws of marriage and divorce. The statutes of some of the States seem intended to stimulate conservative banking, while others appear to intrench on conservatism in the liberality of their laws. At present only sixteen out of the forty-four States in the Union provide explicitly by statute for the issue of circulating bank notes, to-wit: Louisiana, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, Kentucky, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, West Virginia and Wisconsin. The States of Connecticut, Delaware, Georgia, Indiana, Iowa, Kansas, Missouri, Montana, Nebraska, New Mexico, North Carolina, South Carolina, North Dakota, South Dakota, and Virginia are without provision of law for bank note issues, although neither their constitutions nor statutes prohibit such issues. On the other hand the constitution of each of the States of Arkansas, California, Mississippi, Nevada, Oregon, Texas and Washington expressly forbid the issue of circulating notes by the banks or bankers of the State, and in Alabama, Colorado, Florida, Idaho, Illinois and Michigan circulation is prohibited by statute.

The proposed repeal by Congress of the ten per cent. tax on State bank circulation would find twenty-eight of the forty-four States of the Union not fully prepared, and sixteen of these very imperfectly equipped to avail themselves of the relief. The State of New York has carefully preserved, by re-enactment and revision, its laws for the issue of circulating notes by banks and bankers, and, in effect, they provide:

NEW YORK LAWS.

They provide that any bank or individual banker may deposit with and transfer to the Superintendent of Banks any interest-bearing stocks or bonds of the United States or of the State of New York, or of any county or incorporated city of this State authorized to be issued by the Legislature, or bonds and mortgages on improved, unincumbered real property of the State of New York worth seventy-five per cent. more than the amount thereon loaned, but no such stocks or bonds shall be received by the Superintendent at a rate above their par value or above their current market value. The Superintendent may thereupon issue to such bank circulating notes in the similitude of bank notes in blank, engraved and printed in the best manner, to guard against counterfeiting, in denominations of one, two, five, ten, twenty, fifty, one hundred, five hundred and one thousand dollars, which shall be countersigned, numbered and registered in the proper books to be provided and kept for that purpose in the office of the Superintendent under his direction, by such person as he shall appoint for that purpose, so that each denomination of such circulating notes shall bear the uniform signature of such register, or one of such registers. Such notes shall also have stamped on their face, "secured by pledge of public stocks."

The aggregate amount of notes thus issued to any bank or individual banker shall not exceed ninety per cent. of the market value, and in no case ninety per cent. of the par value of the stocks and bonds or other securities so deposited with or transferred to the Superintendent by such bank or bankers.

Every bank or banker issuing circulating notes, except those whose place of business is in the city of New York, Albany, Brooklyn or Troy, and who have not already made such an appointment, shall forthwith appoint in writing an agent who shall keep an office in the city of New York, Albany or Troy, for the redemption of all circulating notes issued by it or him which shall be presented to such agent for payment or redemption.

Any bank or individual banker, or other person, may be such agent, and in case of the neglect or omission of any such bank or banker to appoint such agent the Superintendent shall appoint him, and if the agent of any bank or banker shall neglect or refuse to redeem its notes on demand, such bank or banker shall pay to the person making such demand interest on such notes at the rate of twenty per cent. per annum, and if such redemption and payment is not made within twenty days from the time when first demanded, such bank or individual banker may be proceeded against by the Superintendent of Banks in the same manner and with the like effect as though insolvent. And the Superintendent may also give notice in a State paper that all the circulating notes issued by such bank or banker will be redeemed out of the trust funds in his hands for that purpose, and he is authorized to apply such funds to the payment *pro rata* of all circulating notes put in circulation by said bank or banker.

That the foregoing ought in some particulars to be amended may be conceded, and amendments will suggest themselves in practice if the opportunity for the practice occur. It is at least questionable whether mortgages on real estate should be included among the securities pledged for the issue of circulating notes. It is also to be questioned whether safety demands a greater security for the note-holder than the par value of readily marketable personal securities.

The old "Safety Fund Law of New York" is frequently alluded to and has been deemed the basis of the suggestion of the National Bank Act. Its provisions and operation seem therefore worthy of presentation briefly, and the record may be valuable for future consideration, as follows:

OLD SAFETY FUND LAW OF NEW YORK.

In 1829 the Legislature of this State passed an Act entitled, "An Act to create a fund for the benefit of certain moneyed corporations and for other purposes," popularly known as the Safety Fund Act. The Act provided that every moneyed corporation having banking powers thereafter to be created, whose charters were renewed or extended, should pay to the Treasurer of the State of New York annually one-half of one per cent. upon its capital stock, until the fund in his hands, created by this Act should be equal to three per cent. of the aggregate capital of all the banks of the State. This fund was to be known as the Bank Fund, and was to be appropriated and applied only to the payment of such portion of the debts, exclusive of the capital stock of any of the said corporations which should become insolvent as remained after applying the property and effects of such insolvent corporations; and whenever, by reason of failures, the sum so applied should fall below the required three per cent., the banks should again pay at the rate of one-half of one per cent. annually until the fund became intact or again equaled three per cent. At that time banks were chartered only by the Legislature, and all the banks of the State were subject to the provisions of this Bank Fund Act.

In May, 1837, a panic ensued which caused a suspension of specie payments in New York city and resulted in the failure of a number of the banks of the State, and the Safety Fund became bankrupt. Prior to 1848 the amount contributed to this fund was but a trifle more than seventy-five per cent. of the debts of eleven banks which had failed, belonging to the Safety Fund system, and the deficiency was made good by the issue of six per cent. stock by the State, it being agreed that the State should be paid by the then existing banks.

Comptroller Flagg, in his report to the Legislature in January, 1846 (he being the State officer to whom the banks at that time reported), stated that "If the Bank Fund Act of 1829 had provided only for the redemption of circulating notes, as is the case with the Act of free banking, all the notes of the Safety Fund Banks, which have failed, would have been paid at par by the contributions made to the Safety Fund from 1831 to 1845, and if the present plan of registering notes had also been in operation, the result would have been still more favorable, as fraudulent issues have been redeemed from the Safety Fund to the amount of several hundred thousand dollars."

Possibly by the adoption by Congress of a system of a "Safety Fund" similar to that formerly operating in this State, the assurance of redemption for the notes of insolvent banks might be made to rest upon a small percentage of the aggregate capital of all the National banks; so that as the capital of National banks increased from time to time the "Safety Fund" would increase in like proportion. Financiers thought to be well informed have pronounced this proposal as worthy of careful consideration. We would not be understood as suggesting that it is perfect, or vouch for it as in every respect acceptable. But we think it merits a fair consideration in connection with suggestions for the future.

Owing to the stress of Civil War the market for the Government bonds had to be enlarged, and the National Banking System was inaugurated. This system provided for the issuing of circulating notes upon the hypothecation of Government bonds with the treasurer of the United States. These bonds were obtainable at a price on which the net income was a yield of a liberal rate of interest. The issue of notes at ninety per cent. of the face of the bonds purchased and hypothecated was a profitable operation even after the payment of the tax on the notes outstanding; but now, after thirty years, with a high premium in the market for the single remaining description of bonds applicable to such issue, and these bonds, maturing in 1907, the system of note issues is becoming only barely profitable and is necessarily about to vanish with the extinguishment of the public debt.

There is a popular impression that because National banks are of Governmental origin and are supervised by a central power under a law uniform throughout the whole country, greater safety and solidity are thereby insured, but the Comptroller of the Currency, in his last annual report to Congress in making a comparative statement of the percentage of failures between National and State banks, seems to be unable to make the result favorable to the National banks without including under the head of State banks, also Savings banks, private banks and bankers, loan and trust companies. It is a well-known fact that private banks and bankers, and in many of the States loan and trust companies, including mortgage and investment companies which are classified under the head of loan and trust companies, are under no supervision. The comparison, therefore, should be disregarded as unfair and unjust.

From some knowledge of the subject I venture to say that if a comparison is made between the National banks and the incorporated State banks only of the various States of the Union, the showing will not be unfavorable to the State banks.

Suppose Congress should so amend the National Banking Act as to leave the supervision and examination of the National banks to their respective States and continue the Bureau of the Comptroller of the Currency simply for the purpose of issuing circulating notes to any bank, upon its depositing with the Comptroller of the bonds of the United States or of any State of the Union which has not defaulted in the payment of its obligations within ten years, or the bonds of any city of any State of the United States (which shall not have defaulted as aforesaid) having 50,000 inhabitants or over, and whose bonded indebtedness does not exceed seven per cent. of its assessed valuation, and providing that notes should be issued to the par value of these bonds, would our banking system for practical purposes be less secure, and would it not be more elastic and much better suited to the needs of the people at the present?

MASSACHUSETTS.

SEVENTEENTH ANNUAL REPORT OF THE COMMISSIONERS OF SAVINGS BANKS.

The Board of Commissioners of Savings Banks in accordance with the statutes of the Commonwealth, have the honor to present herewith Part I. of their Seventeenth Annual Report relating to Savings Banks, Institutions for Savings, and Safe Deposit, Loan and Trust Companies.

Part II., relating to co-operative banks, collateral loan companies and mortgage loan and investment companies will be submitted later in the session.

Part I., herewith presented, includes the following institutions: 184 Savings banks and institutions for savings, with assets of $415,898,159.44; 20 safe deposit, loan and trust companies, with assets of $95,343,442.15; 1 trust company in the hands of a Receiver, with assets of $212,563.15; 1 savings bank in the hands of a Receiver, with assets of $166,314.20.

Part II. includes: 115 co-operative banks, with assets of $14,620,275.73; 2 collateral loan companies, with assets of $364,033.75; 2 mortgage loan companies, with assets of $1,939,287.91.

Making a total of 325 institutions under the supervision of the board, with assets of $528,544,076.33,—an increase in institutions of 13, and in assets of $41,490,530.07.

INCREASE IN INSTITUTIONS.

During the year four Savings Banks, two Safe deposit and Trust companies and eight Co-operative banks have commenced business, viz.: Millis Savings Bank, Millis; Washington Institute for Savings, Lowell; Wildey Savings Bank, Boston; Williamstown Savings Bank, Williamstown; Gloucester Safe Deposit & Trust Company, Gloucester; Mattapan Deposit & Trust Company, South Boston; Attleborough Co-operative Bank, Attleborough; Columbian Co-operative Bank, Cambridge; Danvers Co operative Bank, Danvers; Lynn Co-operative Bank, Lynn; Merrimac Co-operative Bank, Lawrence; Needham Co-operative Bank, Needham; Palmer Co-operative Bank, Palmer; West Newton Co-operative Bank, West Newton. The Franklin Co-operative Bank discontinued business during the year.

RATES OF DIVIDENDS, SHOWING COMPARISONS WITH OCTOBER 31, 1891.

Ordinary Dividends paid during the year ending Oct. 31. 1892.	*Increase.*	*Decrease.*
7 savings banks or institutions for savings paid 5 per cent....	2	—
3 " " " " " 4¾ "	1	—
19 " " " " " 4½ "	—	2
5 " " " " " 4¼ "	1	—
146 " " " " " 4 "	No change.	
4 savings banks paid no dividends.*		
184		

* The Millis Savings Bank, Washington Savings Institution of Lowell, Wildey Savings Bank of Boston and the Williamstown Savings Bank, all of which commenced business during the year.

Total amount of ordinary dividends for the year, $14,603,122.63; total amount of extra dividends for the year, $18,671.94; average rate of ordinary dividends for the year, 411+per cent.

It will be seen by the following table that there has been an increase in the deposits over 1891, of $23,493,476.54. This increase is the largest for any year in the history of Savings banks, except the years 1870 and 1871, when the increase was respectively $23,626,080.90 and $27,958,980.00. As the falling off in deposits was justly attributed last year to the bond investment and endowment orders, which diverted deposits from Savings banks, so the increase is largely due to the fact that many of these organizations have gone into the hands of Receivers, and the remainder of them are eking out an unprofitable existence. It is a fair inference, then, that the exposure of the methods of these orders by Receivers has influenced depositors to return to the Savings banks.

AGGREGATE STATEMENT OF LIABILITIES AND ASSETS, SHOWING INCREASE OR DECREASE AS COMPARED WITH YEAR ENDING OCTOBER 31, 1891.

Liabilities.	*Amount Oct. 31. 1892.*	*Increase.*	*Percentage of Increase.*
Deposits	$393,019,862 08	$23,493,476 54	6.36
Guaranty fund	14,545,654 63	1,271,971 64	9.58

Loans on railroad bonds	700,650 00	—	464,200 00	.17
Loans on railroad stock	1,598,765 00	—	129,167 00	.38
Railroad notes	3,360,000 00	—	590,000 00	.81
Real estate for banking purposes	3,229,553 72	372,815 89	—	.78
Real estate by foreclosure	1,305,309 86	—	7,199 97	.31
Loans on real estate	165,854,636 38	12,127,471 47	—	39.88
Loans on personal security	94,144,157 91	1,426,170 21	—	22.64
Loans to counties, cities or towns (notes)	9,405,957 38	508,311 07	—	2.26
Loans on depositors' books	50,119 00	10,488 84	—	.01
Sundry assets	606,530 30	38,750 23	—	.15
Cash on hand:—				
In banks, on interest.....$12,479,091 54				
In banks, not on interest 521,488 48				
In office.......... 955,131 91	13,955,711 93	1,985,807 84	—	3.35
	$415,898,159 44	—	—	—

The number of open accounts is 1,189,936, an increase of 58,733 over 1891, giving an average deposit of $330.37 to each account.

The increase in the number of deposits is 206,545, and in the amount deposited $9,130,099.07, while the increase in the number of withdrawals is only 14,941, and in the amount withdrawn $2,485,302.89.

The number of deposits made during the year is 1,175,195 and the amount deposited $82,535,534.15, an average of $70.23; while the number of withdrawals for the same period is 820,138, and the amount withdrawn $73,658,237 93, making an average of $89.81.

A comparison of these averages seems to indicate, as stated above, that the small depositor, who was temporarily deverted from the Savings bank to patronize the endowment and bond orders, is returning his money to the Savings institutions. This result is very gratifying, for there is no institution that can care for the savings of the poor man with greater safety, with more intelligence and so little expense, and at the same time earn a greater return on the deposit consistent with safety, than our own Savings institutions. And it is worthy of note, in this connection, that, though the assets of our Savings banks are $415,898,159.44, the expense of investing and caring for this vast sum is only $986,829.59, or less than one-quarter of one per cent.

The increase in the assets of the banks during the year is $25,332,192.34, of which the increase in the amount invested in public funds and loans on real estate form the larger part, being respectively $7,497,285.71 and $12,127,471.47, an aggregate of $19,624,757.18.

The increase in the amount of bank stocks held by the banks is the largest in ten years, being $636,910.41. A large part of this increase may be attributed to the increase in the capital stock of the National Bank of the Commonwealth and of the Lincoln National Bank, both of Boston, the stock of which banks was held by Savings banks at the close of October 31, 1891, to the extent of $277.362.25. At the close of business October 31, 1892, Savings banks held stock of these two banks to the amount of $589,953.50, showing an increase of $312,591.25 The remainder of the increase would then be $324,319.16, an amount less than the average for the preceding ten years.

Personal loans with collateral have increased $1,895,878.51. Personal loans without collateral have decreased $469,708.30. The loans on personal security have increased $1,426,170.21. These figures indicate that in the item of loans on personal security the banks are requiring that notes be backed with collateral.

ANALYTICAL STATEMENT.

Deposits, Withdrawals, etc.	*Oct. 31, 1892.*	*Increase.*	*Decrease.*
Number of open accounts	1,189,936	58,733	—
Average amount to the credit of each account	$330 87	$3 70	—
Number of deposits	1,175,295	206,545	—
Number of withdrawals	820 138	14,941	—

* Averaging $2,701.30 each.

SAVINGS BANKS IN THE HANDS OF RECEIVERS.

LANCASTER SAVINGS BANK.—The final decree of the court in this case was passed July 8, 1892, ordering the Receivers to pay into the treasury of the Commonwealth dividends unpaid to the amount of $2,732.78. The order has been complied with, and a copy of the statement filed with the State Auditor. The books and papers of the bank have been deposited with this Board. Total dividends declared, 60 13-30 per cent.

READING SAVINGS BANK.—All the books and papers relating to the affairs of this bank have been deposited with the Commissioners. Dividends to the amount of 50⅛ per cent. have been declared, of which none remain unpaid.

STOCKBRIDGE SAVINGS BANK.—This bank was placed in the hands of a Receiver April 10, 1891, with assets of $285,274.49 and amount due depositors of $303,158.61. A dividend of 33⅓ per cent. was ordered by the Supreme Judicial Court, July 28, 1891, of which $283.43 remains unpaid December 20, 1892. A second dividend of 16⅔ per cent. was ordered January 15, 1892, of which $1,066.81 remains unpaid December 20, 1892.

The character of the loans both upon real setate and personal security remaining in the hands of the Receiver is such that it is difficult to realize their full value, and forced sales would result in considerable loss. Many loans have been disposed of during the year at fair values, and all of them have been examined with a view to settlement or sales. An action upon the bond of the late Treasurer has been commenced, and something will be realized from this, but how much cannot at present be estimated.

The Receiver will soon be prepared to make his application to the Court for the payment of a further dividend of not less than 12½ per cent.

VERIFICATION OF DEPOSITORS' PASS BOOKS.

During the year the Savings banks have been called upon to make an examination and verification of their depositors' pass books. This is the second examination under the law of 1888. The value of this examination depends upon the method adopted and the completeness with which it is carried out. As the Commissioners in their examinations cannot call in the depositors' books and compare them with the depositors' ledgers, and as committees of the trustees do not do so, it would be well for trustees to consider if it is wise to allow the same clerk or officer, who receives the deposits and enters it on the books of the bank, to make the verification. It seems to the Board, as it has been stated and recommended before in its reports, that the only proper way for the banks to accomplish the intent of the law is to secure the services of some person not regularly employed by the bank. This is especially required when one person only is employed. Frequent opportunities occur for such an official to appropriate a portion of deposits and enter a smaller amount on the books of the bank, and the possibilities of detection are small. Unless some person other than such official is employed to compare the books of he depositor with books of the banks, years may elapse before peculations are discovered. Instances have occurred where dishonest officials have pursued this method, and the irregularities have been brought to light only by accident. However great confidence trustees may have in the integrity of their officials, it is no excuse for neglect fully to comply with the intent of the law; and they should seriously consider whether, with the present law on the statute book, they may not be justly charged with a breach of their trust should any extensive peculations hereafter occur in this way.

UNCLAIMED DEPOSITS.

By the provisions of chapter 319, Acts of 1887, the Savings banks have made their second report of those deposits, no portion of which has been withdrawn, and to which nothing has been added for a period of twenty years preceding. A special report of such deposits will be submitted later in the session.

TRUST COMPANIES.

The following table shows a list of Trust companies chartered by the Commonwealth which had not commenced business at the time of this report, Oct. 31, 1892:

Name of Company.	*Date of Incorporation.*	*Date of Acceptance of Charter.*
Beacon Trust Company, Boston	June 14, 1892.	
Cambridge Safe Deposit and Trust Co., Cambridge	May 8, 1890.	Apr. 29, 1892.
Chelsea Safe Deposit and Trust Company, Chelsea	May 29, 1888.	*
Columbia Trust Company, Boston	June 14, 1892.	
Essex County Safe Deposit and Trust Co., Salem	June 14, 1892.	
Fall River Loan and Trust Company, Fall River	Mar. 7, 1891.	
Hampden Loan and Trust Company, Springfield	June 1, 1887.	Dec. 29, 1888.
Lawyers' Loan and Trust Company, Boston	June 3, 1890.	
Manufacturers' Loan and Trust Company, Holyoke	Apr. 28, 1887.	Apr. 16, 1889.
Middlesex Safe Deposit and Trust Company, Lowell	May 29, 1888.	May 28, 1890.
North Essex Trust Company, Newburyport	Apr. 9, 1891.	
Plymouth Co. Safe Deposit and Trust Co., Brockton	June 14, 1892.	
Roxbury Trust Company, Boston	June 14, 1892.	Sept. 24, 1892.
Somerville Trust Company, Somerville	May 14, 1891.	
Union Loan and Trust Company, Boston	May 29, 1888.	Apr. 30, 1890.
United States Safe Deposit and Trust Co., Boston	Apr. 15, 1887.	Jan. 21, 1888.
West Lynn Trust Company, Lynn	June 14, 1892.	July 24, 1892.
Winthrop Loan and Trust Company, Boston	Mar. 17, 1891.	

* Charter expired by limitation.

In the last report attention was called to the fact that no power was vested in this Board to enforce the liability of stockholders of a trust company when its capital stock had become impaired. The only way in which such liability could be enforced was through the method provided by sections 62-71 inclusive of chapter 106 of the Public Statutes. This requires that a creditor shall first obtain judgment against the company, and, after levy of execution and return of the same unsatisfied, may bring a bill in equity for the enforcement of the stockholders' liability. Under this statute delay was inevitable. Acting upon the suggestion contained in the report, the Legislature enacted chapter 327 of the Acts of the year 1892, which will be found in full in the Appendix. This statute gives the Commissioners power, when in their opinion the capital stock of a trust company is impaired and should be restored, to require such company to pay the deficiency by assessment pro rata upon its stockholders. This power is analogous to that given the Comptroller of the Currency over National banks, and under some circumstances may avert disaster to the company.

The law regulating the business of trust companies the Board believes should be amended so as to provide that the minimum capital of any company hereafter incorporated shall be $500,000, and it be prohibited from doing business as a Savings bank. The legitimate business of a trust company, involving as it does the receipt and investment of trusts under wills and other instruments, and the custody of funds held under orders of the courts, would seem to require not only the safeguard of separate and prescribed investment of such trust funds, but the additional security of a paid-up capital in excess of the present requirements.

Should the bill relating to bank and banking suggested by the Board in its report under the provisions of chapter 72 of the Resolves of 1892 be adopted and become a law, it would seem to provide all the privileges required to do the business now being done by many of our smaller Trust companies, without giving the authority to act as a fiduciary; and, as this authority seems only to be required at certain central points now fully covered by existing companies, it is the opinion of this Board that, except under very exceptional circumstances, no more Trust companies should be incorporated. Much time of the Legislature has during the past few years been occupied in considering petitions for the incorporation and regulation of the business, of Trust Co.'s; this would be avoided in the future if this bill be enacted, and parties desirous of transacting a banking business be refused incorporation as a Trust Co. and required to organize as a State bank under this law, for which an application to the general court is not requisite.

LIST OF SAFE DEPOSIT, LOAN AND TRUST COMPANIES CHARTERED BY THIS COMMONWEALTH, AND NOW TRANSACTING BUSINESS, GIVING THE AMOUNT OF CAPITAL, SURPLUS, DEPOSITS, TRUST FUNDS, ETC., OCT. 31, 1892.

Suffolk Trust Company.—The assets of this company, as delivered to the Receiver, differ materially from the balance sheet, as published in the report of 1891. A comparison of the two shows a difference of $82,297.00. The items of expense account, taxes paid and insurance account which appear in the balance sheet, amounting to $40,247.86, disappear from the Receiver's assets, because they are items paid by the company and not charged off from its books; so too, certain mortgage, time and demand notes, amounting to $40,370.82, which were pledged by the company for a loan, were never delivered to the Receiver. The differences in the remaining items are probably due to errors in bookkeeping.

Many legal questions have arisen upon claims disallowed and claims recommended for a hearing, which must be decided by the Court before the full amount entitled to a dividend can be determined, and how large a dividend can be declared. A large part of the assets remaining in the hands of the Receiver are of uncertain value, and the character of them is such that a speedy settlement of the company's affairs cannot be hoped for. No estimate can be made at the present time of the amount of dividend which will finally be paid. The question depends upon the amount realized by the Receiver upon the assets, and upon the amount of claims ultimately allowed by the Court.

RECOMMENDATIONS FOR LEGISLATION.

In the report of the Board for 1891, the attention of the Legislature was called to certain dangers which, in the opinion of the Board, menaced the Savings banks system of the Commonwealth; viz.:

First, From National banks opening a Savings department; and

Second, By trust companies entering upon a similar business.

The objections to allowing this class of business to continue were set forth at length in that report; and we desire again emphatically to enter our protest against its further continuance.

No financial institution is more completely under the protection of the Commonwealth than our Savings banks. And they are wisely so; for the class of people who deposit in the Savings bank have not the financial experience necessary successfully to invest and care for their earnings, and if they had, the small amount at their command would preclude the possibility of placing it to advantage.

And because many intelligent, honorable and very successful men ofttimes err in financial matters, the State has established a policy for Savings banks, broad in its scope, careful in the details of investments, and strong in an intelligent supervision. The foremost principle of this policy is, first, the safety of the moneys which form the principal of investments, and then as large returns as are consistent with that safety. The wisdom which erected this system is the wisdom of experience acquired in disaster; and the success of the system is attested by its four hundred and fifteen millions of assets, and its yearly earnings of over fourteen millions of dollars. When it is considered that this vast sum of money has been accumulated gradually by bringing together the savings of people of small means and in moderate circumstances of life, it is justly a source of pride and congratulation. At the same time it is a reason for increased watchfulness and care, that nothing be allowed to injure or impair the efficiency of the system. It is therefore a cause for apprehension when it is found that some National banks and trust companies are soliciting this class of deposits.

The interests of a public policy thus established require that our people who invest their earnings in savings institutions be protected from all attempts to obtain their deposits by institutions less guarded and restricted than our Savings banks, and whose whole structure and mode of business is radically different from them. The danger of allowing National banks and trust companies to receive deposits of these people is not more the investments which they make and which are peculiar to them, as it is in the fact that to allow such investments is a blow to a wise and beneficent public policy. If the motive of the National bank and trust company in receiving these funds were a benevolent one, there might be some excuse for the desire to receive them; but, as they desire to receive such funds simply for the purpose of enlarging their earning capacity and paying larger dividends on the capital stock invested, it would seem doubly unwise to allow it. Our objections, then, to allowing such an institution to do business as a Savings bank are, that it is detrimental to the interests of a large clas of a large class of our citizens, and thus subversive of a wise public policy; that it will in time subject our savings institutions, which are wisely restricted in the kind and method of business which they do, to the ruinous competition with other institutions not so restricted and limited; and, finally, that it has an element of selfishness in it, which is dangerous in itself and is sure to grow as the business increases in volume. We desire, therefore, again to enter our emphatic protest against the further continuance of any institutions other than Savings banks taking deposits without being governed by the same restrictions and subject to the same limitations. We therefore recommend the enactment first of a law prohibiting safe deposit and trust companies from doing business in the manner of a Savings bank; and, secondly, of a law forbidding individuals, associations and corporations from putting forth a sign as a Savings bank, and from soliciting and receiving deposits as a Savings bank. We earnestly recommend this subject to your most careful and considerate attention, to the end that all attacks on our Savings-bank system may be repulsed, and that a great system of public policy may be conserved.

WILLIAM D. T. TREFRY, STARKES WHITON, WARREN E. LOCKE,
Board of Commissioners of Savings Banks.

How to Make Collecting Pay.

A leading question among bankers is and always has been—"How shall we make our collection department pay?" The experience of most bankers is that the collection "bureau" of the bank is run at a loss. The fact is that the bankers of the country are imposed upon by the public. As a rule, wholesale dealers do not draw on their O. K. customers, but when they have a customer who is "slow pay" they are sure to draw on *him*, and if he does not honor the draft (which is the case eight times out of ten) they will draw again and continue that process until either he pays or the bank refuses to present the draft again unless accompanied by a collection fee.

Owing to this state of things the banks in Antigo, Wis., have entered into an agreement and adopted a set of rules, a copy of which is printed below. The plan seems to be feasible, and if the banks generally would adopt it, it might in time be brought to a point where it would work to perfection.

THE JOURNAL would be glad to have an expression of opinion from its readers as to the plan suggested by L. E. Bucknam, Cashier of the Bank of Antigo, Wis., as follows:

NOTICE.

A large proportion of the drafts received for collection at this bank are drawn "with exchange and collection charges," and the parties on whom these drafts are drawn almost invariably refuse to pay these charges. It has been our experience that at least three-fourths of all drafts received by us have been returned unpaid and at our expense. For the above reasons the collection department of this bank has been run at a loss. Believing that we should have just compensation for our services, we have adopted the following rules on collections, which will hereafter be strictly adhered to:

Remitting for Checks on us.

	$15.00 or under	10 cents.
Over	$15.00 to $100.00	15 "
"	$100.00 to $150.00	20 "
"	$150.00 to $250.00	25 "
	$250.00, one-tenth of 1 per cent.	

Remitting for Drafts drawn without Exchange,

	$25.00 or under	15 cents.
Over	$25.00 to $50.00	20 "
"	$50.00 to $200.00	25 "
"	$200 00 to $400.00	⅛ of 1 per cent.
	$400.00 to $500.00	50 cents.
	$500 00, one-tenth of 1 per cent.	

ACCEPTANCES payable at this bank classed as checks on us.

RULE I.—All items drawn "with exchange" or "with exchange or collection charges," when same is positively refused payment will be accepted and collection charges in accordance with the above schedule will be made and deducted from the remittance.

RULE II.—On items returned unpaid from any cause whatever, a charge of 15 cents will be made to cover costs of recording, presenting, postage, etc.

RULE III.—Items sent for acceptance and return must be accompanied by a fee of 25 cents to cover services, stationery, postage, etc.

Respectfully, ———, Cashier.

WISCONSIN.

BIENNIAL REPORT OF JOHN HUNNER, STATE TREASURER.

In obedience to the requirements of law, the State Treasurer submits the following report, exhibiting the condition of the Banking Department for the fiscal years ending September 30, 1891, and September 30, 1892:

Whole number of State banks organized under the banking law doing business July 4, 1892, was 110, with an aggregate capital of.........	$6,286,900 00
Whole number of State banks doing business July 7, 1890, was eighty (80), with an aggregate capital of......................................	4,509,300 00
Increase of capital..	$1,177,600 00

NEW BANKS ORGANIZED.

The following banks have been organized since last report: American Exchange, West Superior, capital $50,000; State Bank of Medford, $25,000; State Bank of Plymouth, $25,000; Shell Lake Savings Bank, $30,000; International Bank, West Superior, $100,000; State Bank of Florence, $30,000; State Bank of Fox Lake, $25,000; State Bank of Chilton, $25,000; Bank of Menasha, $50,000; Bank of Viroqua, $25,000; Bank of Mondovi, $25,000; Bank of South Superior, $50,000; Prescott State Savings Bank, $30,000; German-American Bank, Marshfield, $25,700; Markesan State Bank, $30,000; Greenwood State Bank, $25,000; People's Bank, Mazomanie, $25,000; Security Savings Bank, Ashland, $40,0o0; State Bank of Manitowoc, $50,000; State Bank of Richland Center, $50,000; State Bank of Sturgeon Bay, $25,000; State Bank of Milton Junction, $40,000; Cole Savings Band, Fond-du-lac, $25,000; Bank of Burlington, $50,000; Montford State Bank, $30,000; State Bank of Kewaunee, $30,000; Citizens' Bank of Reedsburg, $30,000; State Trust and Savings Bank, Superior, $25,000; Farmers and Merchants' State Bank, River Falls, $25,000; State Bank of Boscobel, $25,000; South Side Exchange Bank, Oshkosh, $50,000; Meyer-Showalter State Bank, Lancaster, $25,000; People's Bank, Milton Junction, $25,000. Total capital of new banks, $1,140,700.

INCREASE OF CAPITAL.

South Side Savings Bank, Milwaukee, $25,000; Bank of St. Croix Falls, $5,000; Citizens' Bank, Monroe, $1,900; Bank of Commerce, West Superior, $210,000; Commercial Bank, Milwaukee, $150,000; State Bank of Wisconsin, West Superior, $240,000; Bank of Viroqua, $25,000; Merchants' Exchange Bank, Milwaukee, $150,000; Bank of River Falls, $5,000. Total, $811,900.

CHANGED TO NATIONAL BANKS—German-American Savings Bank, Wausau, $75,000.
CHANGED to PRIVATE BANKS—W. H. & J. W. Bradley Bank, Tomahawk, $50,000.
FAILURES.—T. C. Shove Banking Company, Manitowoc, $50,000. Total, $175,000.

Net increase of capital as above, $1,777,600.

BANK REDEMPTION.

No business has been transacted during the fiscal years ending September 30, 1891 and September 30, 1892, the balance remaining the same, viz., $5,238.

The balance consists of the following items: Hudson City Bank, outstanding circulation, $512; La Crosse Bank, $93; Merchants' Bank, Milwaukee, $140; Milwaukee County Bank, $235; Wisconsin Pinery Bank, Steven's Point, $369; Union Bank, Milwaukee, $87; Germania Bank, Milwaukee, $23; Batavian Bank, La Crosse, $223.

There is a surplus due the Bank of Columbus of $1,384, and the Exchange Bank of Darling & Co., Fond du Lac, of $2,172, making the total balance as above $5,238.

PRIVATE BANKS.

On July 4, 1892, there were one hundred and nine (109) private banks in this State, all of which reported. The principal items are as follows: Loans and discounts, $6,373,691; call loans, $245,956; U. S. and other bonds, $222,223; real estate and fixtures, $780,042; due from banks, $1,615,103; specie and cash items, $469,071; total resources, $10,396,713. Under the head of liabilities: Capital, $1,346,086; surplus and profit account, $898,700; due depositors, $7,989,241; due others, $162,684; total liabilities, $10,396,713.

SUMMARY.

Of the items of capital, deposits, specie, cash items and United States currency, on the morning of July 4, 1892, and for comparison with the report of July 7, 1890:

Items.	*July 7, 1890.*	*July 4, 1892.*
Capital	$4,509,300.00	$6,286,900.00
Deposits	30,648,161.78	41,659,713.00
Specie	817,243.79	1,675,513.64
Cash Items	798,515.39	900,989.14
U. S. Currency	2,090,719.03	1,866,820.34

CALIFORNIA BANKS.

SEMI-ANNUAL REPORT OF THE BANK COMMISSIONERS.

Following is the report of the California Bank Commissioners on January 1, 1893, and a comparative statement of the condition of the banks on July 1, 1892:

LIVE SAVINGS BANKS.

RESOURCES.	*Jan. 1, 1893.*	*July 1, 1892.*	*Increase or Decrease.*	
Bank premises	$2,639,651.81	$2,443,414.75	Inc.,	$196,237.06
Real estate by foreclosure	996,159.18	904,678.20	Inc.,	91,480.98
Invested in stocks, bonds and warrants	19,599,675.82	19,568,228.23	Inc.,	31,447.59
Loans on real estate	104,238,656.33	98,505,070.95	Inc.,	5,733,585.38
Loans on stocks, bonds and warrants	12,322,307.93	11,961,875.52	Inc.,	360,432.41
Loans on other securities	587,788.55	295,850.16	Inc.,	291,938.39
Loans on personal security	1,063,206.16	498,711.32	Inc.,	564,494.84
Money on hand	3,816,603.28	3,836,980.69	Inc.,	449,622.59
Money in other banks	4,183,400.96	3,217,540.94	Inc.,	965,860.02
Other assets	387,598.29	299,723.07	Inc.,	87,875.22
LIABILITIES.

PENNSYLVANIA.

FIRST ANNUAL REPORT OF THE SUPERINTENDENT OF BANKING.

Hon. C. H. Krumbhaar, Superintendent of Banking of the Commonwealth of Pennsylvania, transmitted to the Legislature on January 17, the first report of his department for the fiscal year ending November 30, 1892.

The report is as follows:

The first successful attempt in the legislation of this Commonwealth for the formation of a separate department for the supervision of banks, trust companies, saving funds and every other corporation having the power of receiving money on deposit, incorporated under the laws of this State, was accomplished by the Legislature at its last session in the passage of an Act creating a Banking department.

Prior to that time, the Auditor General's department was charged with the supervision of banks and saving funds; the examinations of trust companies being left more particularly to the care of our Courts. They were not called upon to make periodical reports, as were the other institutions, and examination of their condition were infrequent and unsystematical, except in certain sections of the State, where more attention has been paid to the same.

It does not appear that any one of our Auditors General has ever been afforded proper assistance for the discharge of his duties relating to banks and saving funds. In fact, beyond receiving and publishing the quarterly reports of those institutions which were made to the Auditor-General, and occasional appointments of special examiners, further supervision does not seem to have been expected of them.

The following language, in speaking of banks and saving funds in one of their reports, indicates their helplessness:

"This department (Auditor-General's), has no knowledge of the security given the depositors for their money, and in many cases the depositors themselves are in no better condition."

They were, however, always ready to act in case of trouble overtaking an institution, and have rendered service in discontinuing the business of weak institutions which were endangering the community.

Time and again they have called particular attention to the necessity of a closer State supervision of banks. Had some of their recommendations been adopted and put in proper shape upon our statute books, especially those of the Hon. Jerome B. Niles, some of the unfortunate and disreputable failures that have recently occurred would have been halted at a time to prevent so serious a damage as has happened, and so disgraceful a stain placed upon our banking annals—both State and National.

It is, therefore, to be hoped, after the experience just passed through, that the subject will now challenge most earnest attention, and proper amendments be made to our banking laws, whereby the same may be put in a clearer, succinct and effective form, and the department charged with their execution fully equipped with power to enforce them.

It is a pleasant commentary upon the integrity of management and success of our financial institutions throughout the State that so many years should have passed by without a well-disciplined State supervision, that the number of failures and losses which have occurred have been so small, compared with the great bulk of business transacted.

Their rapid increase and the change in the manner of transacting business has together with the wonderful growth of industrial and other enterprises, not only in this Commonwealth but throughout the whole country, called greater attention to the examination of their condition, and no subject has made more rapid strides in improvement than both the public and private examination of banks. It is engaging the attention of the best talent of the country, and by degrees is being perfected, and loss, through laxity of management and speculation, reduced to the minimum. Provision against these two dangers, to a great extent, heads off one other source of difficulty which no legislation can prevent, that of dishonesty in officials, which seldom is the first step, but one that frequently too rapidly follows the others.

A study of the disasters that have happened to our banks, whether they be those enjoying the charter of the State, or organized under our National system, will readily convince anyone that injudicious and easy-going management on the part of a few persons entrusted with the business of a bank is a temptation to speculation, leading to inevitable ruin.

Recognizing the responsibilities and difficulties confronting me, which were not lessened by the fact that an appropriation to meet the employment of proper assistance and payment of necessary expenses had been omitted in the rush of adjournment, after the passage of the Banking Act, I could but expect to prepare the way for organization and active work by this department, when the Legislature should again meet and supply the needed means.

I at once set about the careful preparation of forms for reports and schedules for collecting, from the various institutions, information in detail which would exhibit the true condition of their affairs and further the adoption of regulations and practices for the accomplishment of the objects of the Act.

The prompt response and the universal desire shown by the different companies to accommodate themselves to the new law was remarkable. Notwithstanding it was the first time many of them had ever been called upon by any State official to make report, certainly not in such detail, which necessarily involved much labor and trouble upon their part, it was met by all with a willingness and business promptness indicating, in a great degree, the existence of a sentiment which bid those interested in financial institutions to hope only for success, when men of irreproachable standing and experience, known to the community, were placed in command—a worth greater even than capital.

Publication in the daily papers was made and the condition of every financial institution in the State reported was made known to the locality of their existence. The value of such publication cannot be over-estimated, and is an important feature in the modern system of supervising banks.

Critical examination was made of each report as it came in, and resources and liabilities carefully analyzed, from which was gathered an insight of the character of the business of each institution, and its manner of conduct, together with the character of securities, both as to investment of their capital and those upon which loans had been made, enabling me, under the law, to make numerous requirements and suggestions, through which greater safety and a closer observance of our statutes relating to banking has been had.

While I recognize the efficacy of periodical reports, and the publication of a sufficient portion of the same to acquaint the public with the condition of our different institutions, and the names of those responsible for the management, experience has shown that no department can be safely run by entire dependence upon reports. Many matters of management and objectionable practices may be readily omitted therefrom, which would be most apparent upon a personal visit of an efficient and trustworthy examiner.

It is, therefore, to be regretted that under the situation of this department during the past year, it was unable, to any great extent, to have such examinations made.

NUMBER OF INCORPORATED BANKS AND SAVINGS INSTITUTIONS.

The number of incorporated banks and saving institutions certified to this department by the Hon. Thomas McCamant, Auditor-General, in handing over their supervision under the Act of June 8, 1891, was ninety-one. Their titles were confusing and misleading, but it was afterward ascertained they consisted of:

Banks	80
Savings Institutions	11
Total	91

It was found, of the above number, that, prior to that time, two banks had gone out of existence by reason of expiration of charters, and were in liquidation or winding up. Also, that two savings institutions had not commenced business, and their charters lapsed under the law. Thus leaving under our supervision, December 1, 1892:

Banks	78
Savings Institutions	9
Or a total of	87

The following banks were chartered during the year:	
Dubois Deposit Bank, Dubois	1
Farmers' Bank, Lebanon	1
People's Bank, Hanover	1
Total	3
The Hazleton Savings Bank, in liquidation, that had been dropped by Auditor-General in 1891, is now taken up under a change of name, to "Markle Banking and Trust Company."	1
Two existing chartered banks had not previously made report to the Auditor-General for publication; they are now included	2
Total	6
Making total number of banks, December 1, 1892	84
The following savings institutions were chartered during the year:	
Industrial Savings Bank, Royersford	1
Dime Savings Institution, Washington	1
Total	2
Five chartered savings banks had not previously made report to the Auditor General for publication	5
Total	7
Making total number of savings institutions, December 1, 1892	16

SUMMARY.

Banks	84
Savings Institutions	16
Total	100

It would be proper to note, as to two of the eighty-four banks, that the charter of one, viz.: The Mount Carmel Savings Bank, Mount Carmel, has recently expired, and they preferred liquidation to renewing the same. Also that another solvent bank has advised me that they have ceased receiving deposits, and are contemplating winding up their business.

The number of trust companies accertained to be transacting business under the supervision of this department on December 1, 1891, and which did not formerly make report of condition for purpose of supervision, were	76
Chartered during the year as follows:	
People's Trust, Savings and Deposit Company, Lancaster; Tacony Savings Fund, Safe Deposit, Title and Trust Company, Philadelphia	2
Total	78
There were five companies that have discontinued receiving deposits and ceased transacting a banking business, and one in the hands of a Receiver	6
Leaving trust companies on December 1, 1892	72

GENERAL SUMMARY, DECEMBER 1, 1892.

Banks	84
Savings Institutions	16
Trust Companies	72
Agregate number doing business	172

The following banks have been re-chartered during the year: Manufacturers' Bank, Pittsburgh; Iron and Glass Dollar Savings Bank of Birmingham, Pittsburgh; Miner's Deposit Bank, Lykens; Germania Savings Bank, Pittsburgh; Myerstown Bank, Myerstown.

Converted from a State to a National Bank: Bank of McKeesport, McKeesport.

CAPITAL, SURPLUS, ETC.

The following exhibits the capital, surplus, undivided profits and aggregate deposits of banks, savings institutions and trust companies, under each head, as per report to this department of November 30, 1892:

	Capital.	*Surplus.*	*Undivided Profits.*	*Deposits.*
Banks	$8,799,697 50	$4,115,408 91	$1,492,239 22	$45,502,923 17
Savings institutions	111,200 00	6,005,127 97	2,293,119 54	66,417,794 40
Trust companies	35,878,744 18	9,265,759 64	9,092,238 89	89,530,104 96
Total	$44,789,641 68	$19,386,296 52	$12,877,597 65	$201,450,822 53

TRUST COMPANIES.

Statement of trust funds held by trust companies at last report of Banking department on November 30, 1892:

Amount invested	$15,700,539 25
Amount uninvested	1,256,432 96
Total	$16,956,972 21

Sixteen Co.'s failed to report amount of trust funds, for reasons hereinafter stated.

LOANS TO DIRECTORS BY BANKS.

First report, February 29, 1892	$3,655,791 72
Fourth report, November 30, 1892	2,186,794 85
Showing reduction, in compliance with notice therefor	$1,468,996 87

OVERDRAFTS, BANKS.

First report, February 29, 1892	$215,029 61
Fourth report, November 30, 1892	114,923 72
Showing a reduction, in compliance with notice therefor	$100,105 89

This being the first report of the Banking department, and the reports called for differing materially in form from those formerly made to the Auditor-General, attempt has not been made to furnish comparative tables or statements. Another year will remedy this and enable exact and useful statistical information to be readily given.

A large proportion of our banking institutions have been created by special acts of assembly, with powers and restrictions greatly varying, and with titles that do not indicate the character (which also applies to a number of corporations chartered under general Act) of the business conducted by them; banks of discount being indiscrimately confused with savings banks, and savings banks mixed up with banks without powers of discount, and both further confused by the addition to their corporate name of the title "Trust Company."

The first report afforded an opportunity for a separation and classification of those corporations, whereby it was made possible at subsequent calls to frame a report better fitted to their respective use, and to more clearly set forth the transactions of each class.

Some of their charters have been laid by for so long a period, that naturally old managements have passed away, and new practices arisen with the change and demands of the times, without thought or occasion to refer to their chartered rights. Many charters have received consideration, and, where illegal or unsafe customs had by time or accident crept in, notification has been given and invariably respected, through which directors have been awakened to a closer attention to the affairs of their corporation.

The variance in charters of our different classes of institutions, as banks, saving funds and trust companies, and their multiplicity of specialties and accumulation of securities, makes examination of their condition and report far more laborious and tedious than that of banks created under our National system, where general rules apply to all.

Relief could be given in this respect by amendment of our banking laws, when by degrees, as re-charters are asked, it would be possible to apply a better and more general system.

Necessarily a large proportion of the work of a department dealing with such sensitive matters, for obvious reasons, must remain without individual comment, but it is with great satisfaction that I am able to state that in all instances, save a few, the evils receiving the attention of this department have arisen from other than improper design.

It will suffice at this time merely to state that the limit under the law of loans to directors of banks was in many cases exceeded to a large amount, which have, by conservatism, been paid off and greatly reduced. Recent reports indicate a reduction of nearly one million and a half dollars.

Very large overdrafts, carried as ledger accounts, have either been paid or placed, as they should have been in the first instance, upon loan. The reduction, in compliance with notice from this department, reaching one hundred thousand dollars.

Large amount of debts, long overdue, have been put in the course of collection and a fairer state of condition made to appear by charging off those acknowledged to be bad.

Withdrawal of capital by loans on the capital stock of a company, the carrying of doubtful items as cash, discounting where lack of right existed, and interests were endangered, prevented.

The system of keeping accounts has, upon recommendation, been improved, and additional and required force for the safer transaction of business been employed.

Much attention has been given to enforce required capital to be paid in, and impairment thereof, arising from various causes, to be made good. The requirements by this department of different companies have been promptly met, and the matter in each instance generally dealt with in a conservative spirit, to the betterment of the companies and to the greater security of their depositors.

Surplus has, when necessary, been gradually reduced by the charging off of assets, carried in the delusive hope of realization in the long future, giving the public a more correct impression of the real strength of the company. Observation of the provision of the law in crediting the per centum of profit to surplus before dividends declared, has been required, and many other matters and practices, simple in effect now, but which might prove disastrous in a day of trouble, if continued, have been corrected.

Notice has been called to renewal of expired charters and to confining the business of corporations to the powers conferred.

The policy of the Commonwealth has been that of leniency, and not to disturb capital or wrest away franchises where the evil sought to be corrected could be accomplished without so severe a visitation.

NECESSITY OF SUPERVISION.

The most notable instance of the necessity of closer supervision of banks, and the extension of power for further strengthening the hands of a Superintendent of the Banking Department, to enable quick action to protect the public, was furnished in the closing by my order of the Mutual Banking, Surety, Trust and Safe Deposit Company of Philadelphia, and the subsequent action taken by the Attorney-General.

The examinations and testimony which followed afforded suggestive illustrations of a complete disregard of all established rules for the guidance of a financial institution, and practical example of how readily examination, or even report, would have placed an effectual check upon their practices at their very start, for it was through the carefully prepared form of first report, furnished by this department to this bank, to make known its condition that exhibition of insolvency was unavoidable.

By reason of the State not having theretofore made proper provision to look after such matters, certain individuals were enabled to obtain possession of wide and valuable franchises, and, with little or no capital, open and operate a corporation to beguile the needy and inexperienced to its support and their own advantage.

The great danger of the same set of men managing and intimately connecting the business of two financial institutions, the temptation and easy opportunity of thereupon founding other speculative enterprises, was fully emphasized.

Subsequent examinations exposed the fact that funds of a large and powerful beneficial order, extending throughout different States of this country, amounting possibly to a quarter of a million dollars, had fallen an easy prey to a reckless double-management.

The record of our proceedings here alone assisted the civil courts of Indiana and of this State to promptly act for protection of the unfortunate contributors to the beneficial order, and finally caused, both there and here, certain of the suspected ones to be placed under bail, to answer to criminal courts for the palpable deceit practiced upon our court in supplying, from the treasury of the Iron Hall, the very large sum of $170,000, to make good an ascertained impairment to the capital of the bank after I had declined to receive the same, for reason that the source from whence it came was declined to be given, and for other transactions connected with both companies, caused some to seek places of hiding. It also secured the appointment of receivers in possibly half a score of States for the care of the remaining funds in various branches of the order.

Should this department have accomplished no other good, in its short existence and partly organized state, than to check, in its wild career, the heedless management of the bank, and thus afford the means of exposing the advantage that was being practiced by some of the individuals entrusted with the affairs of the Order of Iron Hall upon the inexperience and credulity of deserving people, throughout the whole country, it would have conferred a benefit which alone would compensate for the passage of the recent Banking Act and all the labor that has been expended in the whole matter.

MORE POWER NEEDED.

One great want was made manifest throughout the long attention paid to the case of the Mutual Banking, Surety, Trust and Safe Deposit Company, that of want of power in the Superintendent of Banking in certain emergencies.

Under the Banking Act, whenever he shall have reason to conclude a corporation to be in an unsound and unsafe condition, he is expected to forthwith take possession of its property and business, and retain it pending proceedings to be instituted by the Attorney-General.

He should, in some way, be permitted to appoint a temporary receiver, or representative, to act until the matter can be presented to the court; unless it should be determined to follow the example of the United States laws, by omitting the application to our courts entirely, and place the whole responsibility and discretion of the matter upon the Superintendent of Banking, as it is upon the Comptroller of the Currency.

No complaint has ever been heard of his acting harshly or unjustly, and it certainly would relieve our courts, the Attorney-General and this department of much trouble in the preparation and hearing of cases, ofttimes hard to establish legal proof, but where the official is confident unsoundness exists.

In the case referred to, experience proved that had the Superintendent of Banking been able to act upon his moral conviction of proof that existed beyond his jurisdiction, consequently beyond his control, matters could have been greatly simplified and quicker and more satisfactory action taken for protection of assets.

IMPORTANT SUGGESTION.

A summary of the state and condition of every corporation from which reports have been received during the past year, which, after careful research, it is safe to remark, includes every corporation in this Commonwealth which falls within the jurisdiction of this department is given in the appendix, which shows their condition as of November 30th ult. Preceding the same with the foregoing information, which may be useful in showing need of amendment of our laws relating to the same, by which the security of creditors and depositors may be improved and increased, and, having given a statement of those corporations whose business has been closed during the year, I beg to make the following suggestions:

First.—I would recommend that the subject of perfecting and systematizing the laws of this Commonwealth relating to banks, banking companies, trust companies, saving and provident institutions, and every corporation having power to receive mone yon deposits, whether now incorporated or hereafter to be, under the laws of this State or of any other State, and who shall transact such business within our borders, be referred to the proper committee of the Legislature for consideration and report.

By that course, the whole question can be taken up and considered by men of experience and skill in financial matters, who know the wants of our community, as they exist, under the diversified interests and wealth of this great Commonwealth. Our statutes relating to banking are now incomplete, ambiguous and difficult of interpretation.

Second.—Pending the deliberation and report of such committee, and to supply present wants, I would further recommend the immediate passage of an Act providing that no company be permitted to loan upon itt own capital stock.

Third.—That loans beyond certain fixed per centum of the capital of a company should not be permitted to be made, directly or indirectly, to any officer, director or employee of a company, except as recently recommended by the Hon. A. B. Hepburn, the Comptroller of the Currency, in his annual report, upon application to and approval of the board of directors.

Fourth.—That no individual, firm or unincorpated company be permitted to use, in the conduct of banking business, any name, sign or device resembling, in any respect, that of a bank or other financial corporation.

Fifth.—That foreign corporations desiring to do a banking, trust, or saving fund business, or receiving deposits of money or valuables in this Commonwealth, shall first obtain consent from the State therefor, and be brought within the supervision of the Banking Department.

Sixth.—That the banking Act of June 8, 1891, be so amended as to empower the

Superintendent of Banking, or any examiner appointed by him, to administer oaths for any purpose arising in the performance of his duty, and to make any false statement thereon perjury, and visit it with proper punishment upon conviction.

Seventh.—That a sufficient per diem penalty be imposed upon any company, within the jurisdiction of the Banking Department, for neglect in complying with the call of the Superintendent of Banking for report of condition or any other special report which he is empowered to require, or publication thereof within the time prescribed.

Eighth.—That the Superintendent of Banking be empowered to appoint temporary receivers, pending proceedings, when necessity arises, for the taking possession of any company within his jurisdiction, and that their compensation be fixed by the court before whom the proceeding shall be held.

Ninth.—That the Superintendent of Banking be empowered to appoint, according to the requirements of the work of the department, additional clerks, and that the salary of the deputy superintendent be increased.

Tenth.—That the method of payment of the services of special examiners shall be altered and increased in order to employ examiners of high repute and experience.

Eleventh.—That the Superintendent be authorized, in his discretion, whenever he discovers that stocks, or other securities upon which loans have been made by any corporation within his jurisdiction have depreciated in value, threatening impairment of capital, or serious reduction of surplus or undivided profits, to cause said company to require an immediate payment of such loan made by them thereon or obtain additional security therefor; and provision made that no loan shall be made without an agreement from the borrower that the same shall be subject to the conditions of payment, or of additional security, as above required.

Twelfth.—I would, lastly, recommend that this department be given broader powers in those periods of unreasoning fear, called, "panics."

So great have the deposits of our State institutions grown in certain localities, that many of them have singly a larger line of deposits than the whole excess above legal requirements of the combined reserves of all the National banks in the locality.

It is manifest that should malicious intention or groundless fear cause a run in times of panic, that great harm might result to every interest of the public. In the first place, no matter how solvent the institution, it might have to throw large blocks of securities on the market, when the markets were already overburdened, and so not only injure the stockholders, whose property was being sacrificed, but add to the general depression.

In the second place, it would tend to constantly increase public unrest, to have the run continued, and might result in financially closing even the best and strongest institution, and so start more general fears as to all others.

There should somewhere be lodged power to prevent such possibilities. It would, therefore, be wise in such cases to authorize the Superintendent of Banking to notify the depositors that he would direct the company's officials not to depress the general market and sacrifice the company's securities, held for the protection of all, and also not to borrow from the needed reserves of other institutions, but, on the contrary, to notify the demoralized depositors that should the run not cease, he would, as an act of the State, and for the general welfare, notify and compel the institution to cease paying depositors until they had opportunity of recovering their reason.

Such a course, unlike a refusal by the company to sacrifice its own and general interest, to prevent closing, would not injure the company's credit, and it is believed that the mere existence of the power would never make its use necessary beyond giving the first notice. Should it be necessary to go further, can it be doubted that it would be most fortunate that the power existed to do so?

In any view, it would only conserve what assets there were from useless sacrifice to the better security of depositors, besides protect the general public, whose vital interest is that foolish panic should be promtly and vigorously checked.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

The Corn Exchange Bank will occupy quarters in the Morris Building, corner of Broad and Beaver streets while its new banking house is being erected. The plans show a handsome building of Romanesque design, eleven stories in height, with a slated roof. The first story, which will be occupied by the bank, will be of unusual height, measuring twenty feet in the clear. The ten floors above the bank quarters will be fitted for offices, containing about 200 handsomely finished suites. The inside finish will be in oak or other hard wood. The building will be of granite to the third floor, and of stone above that point. It was intended to use Colorado stone, but this has been abandoned and some other stone will be used. Special arrangements for heating, lighting, and ventilation will be introduced, a private electric plant being operated. The work of removing the old buildings will begin at once and the new building is to be completed by May 1, 1894.

New Building of the Bowery Savings Bank.—At a recent meeting of the Trustees of this institution, the revised plans for the bank's new building were accepted. The proposed edifice will be one of the handsomest bank buildings in the country, and will be erected at a cost of over $500,000. Five of the leading architects in the city were invited to compete for the plans. The new building will cover six city lots, and the work of tearing down the old houses on the lots in Elizabeth and Grand streets will be begun early in May. The general design of the proposed bank building is on the style of the Bank of England.

Loans on Real Estate.—Out of the total of more than $68,000,000 loaned on bond and mortgage in this city last year, only about one-thirtieth was loaned at 4 and 4¼ per cent. The rate for more than half of this total was 5 per cent. while about one-fourth was loaned at 4½ per cent. and one-fifth at 6 per cent. The largest single loan reported was that made by the Equitable Life Assurance Association of $1,325,000 on the King model houses in Harlem. The rate on this loan was six per cent., but as the property belongs to the lenders, this item is less valuable than it might be under other circumstances.

The National City Bank was recently a creditor to the Clearing-House Association to the amount of $5,418,000. This unusual amount suggested the theory that the bank might be preparing for a demand upon the Sub-Treasury for gold. It has been credited with pursuing an ultra-conservative policy with regard to the financial situation, and the anxiety felt in banking circles over the outcome of the silver question.

Federal Bank.—Mr. Irving C. Gaylord has succeeded Mr. A. H. Leszynsky as President of this new institution. Mr. Gaylord is well known in banking circles as Cashier of the Hamilton Bank which position he has filled with signal ability, and there is little doubt that under his management the "Federal" will take a leading position among the banks of this city.

The Stock Exchange firm of Alfred De Cordova & Co. has dissolved by mutual consent on account of the illness of Mr. John B. Dunham. The business will be conducted under the same firm name with the substition of Mr. Eustace De Cordova.

Mr. George G. Williams, President of the Chemical National Bank, who recently broke his leg by slipping on the icy sidewalk at Fifth avenue and Eighteenth street, is resting as comfortably as is possible after such an accident. His leg was broken a few inches above the ankle.

The Ninth National Bank has been designated by the Superintendent of Banks of New York State as a depository of the lawful money reserve of State banks.

The National Bank of Deposit will soon remove its banking rooms to the Western Union Building, corner Broadway and Dey street.

NEW ENGLAND STATES.

The New Hampshire Bankers' Association was recently organized at Manchester with over thirty members. The officers are: President, George Byron Chandler, Manchester. Vice-Presidents, V. C. Gilman, of Nashua; H. M. Plummer, of Rochester; F. D. Hutchins, of Lancaster; F. T. Sawyer, of Milford; George H. Adams, of Plymouth; O. W. Tebbetts, of Laconia; George W. Farwell, of Claremont; Samuel B. Lewis, of Newport; George A. Litchfield, of Keene; M. L. Morrison, of Peterborough. Secretary, A. H. Hale, Manchester. Treasurer, William P. Fiske, Concord. Executive Committee, W. F. Thayer, of Concord; Harry Abbott, of Winchester; O. C. Hatch, of Littleton.

The Clearings of the Providence (R. I.) banks for the month of February were among the largest for any month since the Clearing-House was established, although February is generally one of the most quiet months of the twelve, and this season four Sundays and one holiday brough it to 23 days of business. The clearings footed $30,110,900, of which amount $10,120,000 was the total for the week of February 11. This remarkable increase in the clearings was due, not to general commercial activity, but to the sale of the Union Railroad, and the stock market was the distributing channel.

Massachusetts—New Savings Bank Commissioner.—Samuel O. Lamb has been appointed a Savings Bank Commissioner in place of Warren E. Locke, resigned. He was born in Vermont in 1821, and his father was a clergyman. His early education was obtained at Charlemont, but nearly all his life has been passed at Greenfield in the practice of law. For nineteen years he has been President of the Franklin Savings Institution of Greenfield, having $3,000,000 deposits, and for seventeen years a director of the First National Bank. For twenty-five years he was Treasurer of the local gas company. In his profession he has won substantial success.

Rhode Island.—On February 13, the Master in Chancery made his report to the depositors of the Franklin Institution for Savings, in Providence, one of the banks brought down by the Sprague failure. Up to that time the depositors had received 86 cents on the dollar. The Master decides that they should have a final dividend of 2 9-10 per cent., amounting, in the aggregate, to $77,224. The uncalled-for dividends, amounting to $18,017, will go to the General Treasurer of the State, to be held by him subject to the drafts of absent depositors.

The Jury in the case of Asa. P. Potter, ex-President of the bankrupt Maverick National Bank of Boston, Mass., who was charged with the false certification of checks, rendered a verdict of guilty. The case will now go to the Supreme Court. The minimum sentence for the crime alleged is a fine, and the maximum twenty-five years' imprisonment.

MIDDLE STATES.

Philadelphia.—The stock of the Pennsylvania Company for Insurance on Lives, etc., recently advanced from $500.25 to $510 per share.

Daniel Lancaster Drew, the former Secretary & Treasurer of the Central Savings Fund and Trust Co., accused of the larceny and embezzlement of $13,000 belonging to the company, is now in jail.

John S. Hopkins, Cashier of the People's Bank, has been appointed Receiver for the recently-failed firm of Laughlin & McManus, stock-brokers. A disagreement has arisen between the partners. Customers of the firm, it is said, have failed to make good their speculating accounts, which forced their suspension. The firm had no outstanding contracts on the Stock Exchange.

The Commonwealth Title Insurance, Trust and Safe Deposit Company has been appointed Receiver for the Order of Vesta, and gave bond in the sum of $100,000.

The depositors of the defunct Penn Safe Deposit and Trust Company are disgusted, as nearly two years have elapsed since it closed its doors, and there has been no apparent progress toward a settlement of the case, or a return of their dollars deposited there. Legal technicalities, ambiguities and professional etiquette have blocked every step.

The Finance Company of Pennsylvania is now located in its own building at 431 Chestnut Street.

Delaware—A Paying Teller's Large Defalcation.—The paying teller of the First National Bank of Wilmington is a self-confessed embezzler to the amount of $55,900. J. P. Winchester, who became President of the bank in November last, had been trying for a long time to have the Teller make a balance sheet, but he kept postponing the work. Recently two other clerks were directed to make the sheet, which they did, reporting the shortage. Then Smith, who had left the bank sick, sent for the President and confessed his crime. He then delivered himself to the United States Marshal. His method was to take cancelled checks from the safe, put them on a spindle through the old cancellation holes, and pocket the amount of the check, the last payment not being charged against the depositors. The bank has a capital of $500,000 and a surplus of $127,000, Smith being also bonded for $150,000 in a security company. The National Bank Examiner says the bank is solid and fully able to pay depositors every cent, over half the surplus remaining intact.

New York's State Banks.—The annual report of Charles M. Preston, State Superintendent of Banks, for the fiscal year ended September 30, 1892, shows an increase of thirteen banks and individual bankers during the year, making the total number 192. There were no failures during the year. The total resources of the banks on September 22 last were $278,198,600, while on September 12, 1891, they were $258,944,034. The total surplus on September 22 last amounted to $15,499,460, against $13,108,299 on September 12, 1891. The total amount due depositors on September 22 last was $195,342,017, and on September 12, 1891, $182,802,322. The total amount of securities held in trust by the banking Superintendent aggregates $3,147,378. The report will be published in full in the April JOURNAL.

New National Bank in Pittsburgh, Pa.—At a recent meeting of the Directors of the Masonic Bank (organized under a State charter which will soon expire), a resolution was unanimously passed recommending to the stockholders a reorganization under the National Banking Law. In case it is adopted by a large majority, application will be made at once to the Comptroller of the Currency for a charter under the name of the Lincoln National Bank. The Masonic has a full-paid capital of $200,000, a surplus fund of $100,000 and $28,000 undivided profits.

Heavy Sentence.—William McCredie, ex-teller of the National Savings Bank of Buffalo, N. Y., which institution Cashier Dann wrecked, was arraigned recently in the Superior Court, charged with forgery and grand larceny of the funds of the bank. He pleaded guilty and was sentenced to serve five years in the Erie county penitentiary. Armstrong, the bookkeeper of the bank, who is also indicted for being connected with its wrecking, was acquitted on one bill, and it is said there is little hope of convicting him on the others.

American Exchange Bank, Buffalo, N. Y.—Owing to an unfortunate blunder of the compiler the surplus of this bank is reported in the January edition of the BANKERS' DIRECTORY AND COLLECTION GUIDE at $200,000. It should have been *$100,000*. While the JOURNAL hopes soon to be able to record that sum as the *actual* surplus of this staunch institution, it certainly had no intention of publishing figures which, however flattering they appear, might be construed as misleading.

New York State.—The first National Bank of Salem has reduced its capital stock from $100,000 to $50,000, paying to shareholders the amount of the reduction. This bank began business in May, 1885. Since that date it has paid in regular semi-annual dividends $52,000 together with all taxes assessed, and had besides, on January 1, of this year, surplus and undivided profits of $44,500.

Captured at Last.—Fourteen years ago, F. W. Grennell, who was a Teller in the Honesdale (Pa.) National Bank, embezzled $3,000 and fled. After traveling about the country for a while he finally settled down in Grand Rapids, Mich. February 5, he returned to his old home, was at once recognized and arrested for embezzlement.

Brooklyn, N. Y.—The organization of the new Union Bank has been perfected by the election of Stephen M. Griswold, President, and James T. Ashley, Cashier. It will have a capital and surplus of $150,000, and be located on the corner of Fifth Avenue and Union Street. It opened for business March 1.

Another bank, styled the People's Bank, began business February 17. It is located on Gates Avenue. The officers are: President, James Gascoigne; Vice-President, Frank Hyde. The capital is $100,000.

The Eighth Ward Bank has also been organized and will commence business March 4, with $100,000 capital.

New Jersey.—The Haddonfield National Bank will soon erect a new bank building on Main street, opposite Tanner.

The First National Bank of Woodbury has purchased a property on Broad street, opposite the Court House, for a new bank building.

The Eastern Pennsylvania Banking Association recently held an important meeting in Reading. Matters of interest were discussed, including the establishment of a National reserve and clearing bank to be located in Philadelphia. Without taking action the association adjourned to meet next May.

Bank in Babylon, N. Y.—D. S. S. Sammis and others are about to start a bank at this place with a capital of $50,000. W. F. Norton is to be the President. Thirty thousand dollars have already been subscribed. It is expected that the bank will be ready for business on April 1.

Pennsylvania.—The estimated assets and liabilities of the failed bank of F. V. Rockafellow & Co., of Wilkesbarre, as filed by the appraisers are said to be: Assets $73,341.08, and liabilities $439,955.53. Of the liabilities $359,390.07 are due 857 depositors.

A New Financial Institution is organizing in Pittsburgh, Pa., to be called the Pittsburgh Trust Company. An application for a charter will be made March 10 by J. J. Vandergrift, Joshua Rhodes, C. L. Magee, T. H. Given and C. B. McVay.

The Savings Banks, insurance and trust companies of New York city and Brooklyn loaned nearly $70,000,000 on bond and mortgage in the two cities during the first eleven months of 1892. One trust company alone placed $15,856,000.

A Bill has passed the Pennsylvania Legislature to abolish days of grace on bills of exchange, drafts, promissory notes and other negotiable instruments.

The National Banks of Pennsylvania report $71,234,190 capital.

SOUTHERN STATES.

Georgia—Gate City National Bank of Atlanta.—The closing of this bank on account of the defalcation of the Assistant Cashier caused a sensation. It appears from all the facts made public that the official named has embezzled about $70,000. He has been arrested but refuses to make any disclosures. A strange feature of the affair is the suicide of Thomas Cobb Jackson, who it alleged, owed the bank a large sum of money which he was unable to pay, Just before he shot himself he declared that Redwine had been made the scapegoat for the crimes of others. As the bank has a capital of $250,000 and over $70,000 surplus and profit, it is thought the suspension will be only temporary.

No need of Receivers.—The Comptroller of the Currency is reported to have recently stated that as far as he was advised, there would be no need of the appointment of Receivers for the Gate City National Bank, of Atlanta, Ga., or for the First National Bank, of Wilmington, Del., both of which recently suffered losses through employees. Bank Examiner Stone is in Atlanta to assist Bank Examiner Campbell in straightening the affairs of the Gate City Bank.

Denison, Tex.—The corporate existence of the First National Bank has been extended to January 31, 1913.

Abbeville, La.—A bank with $50,000 capital is being organized by Little Rock (Ark.) capitalists.

Pecos, Tex.—It is reported that a bank with $150,000 capital has been recently organized.

Dublin, Tex.—R. W. Higginbotham and others are organizing a National bank.

Bellevue, Ky.—A private bank will soon be opened here.

Atlanta, Ga.—A recent report of the Capital City State Bank shows surplus of

$100,000, and undivided profits increased to $20,000. Among the Board of Directors appears the name of Hoke Smith, the newly appointed Secretary of the Interior.

WESTERN STATES.

Minneapolis, Minnesota.—At a meeting of the Directors of the Flour City National Bank of Minneapolis, held January 27, the resignation of Mr. Geo. E. Maxwell as Cashier was accepted. The following officers have been elected for the ensuing year: President, T. B. Walker; Vice-President, H. C. Akeley; 2nd Vice-President, C. H. Ross; Cashier, A. A. Crane.

Mr. C. H. Ross comes to the bank from New Ulm, Minn., where he was Cashier of the Brown County Bank for many years and is a man of large experience and ability. He brings to the bank much new and profitable business.

Mr. A. A. Crane has been associated with the bank since its organization in 1887—for some time as general Book-keeper. In January, 1892, he was elected Assistant Cashier and now Cashier. Mr. Crane is among the youngest men of this country holding positions of such large responsibility. His advancement has come, however, as the result of close application to business and in recognition of his ability, integrity and conservatism.

The bank has a capital of $1,000,000, surplus and profits of $140,000, and a large and rapidly increasing business. Its management is conservative, but withal as liberal to consistent with sound banking, and the Flour City National stands in the front rank with the largest and best financial institutions of the northwest.

Minneapolis has another new banking institution—the Standard Bank—which opened for business February 1, 1893. The officers are as follows: President, C. M. Hertig; Vice-President, D. Getchell; Cashier, W. Hertig. The bank is located in North town.

The past year has been a very successful one for the Minneapolis banks. With but two exceptions all have paid regular dividends and carried additional profits to surplus. The clearings for 1892 show an increase of over 70 million over clearings for 1891, and the outlook for the coming year is most bright.

Run on an Ohio Bank.—On February 21 there was a run on the Citizens' Bank Company of Yellow Springs, Ohio, which at one time threatened to be disastrous. The bank was chartered in 1888 as a private bank and in October last was incorporated under State law with a paid-up capital of $25,000. The run was caused by the filing of a suit against the Hominy Flake Company for $14,000, and it was feared the bank had been bolstering up the concern with the depositors' money. Late information is that the run has ceased, that the suit against the Hominy Company is an individual matter, and that it owes the bank but a small amount, not yet due.

A committee of stockholders was appointed who made a careful examination of the bank's affairs and reported on February 18. The concluding portion of the report is as follows:

From the information furnished by this examination and from the assurances of the Cashier as to the availibility of the bank's assets, the stockholders need have no fear of the wild rumors in regard to a run on the bank. The orderly manner in which we find everything in the bank is a good indication that the Cashier will look after the interests of the same, and the foolish rumors in circulation in regard to it are no doubt of malicious intent, for the purpose of injuring our business.

Iowa—New Bank in Des Moines.—A new banking and trust institution is being organized with ex-Speaker Head as President, the capital stock to be $1,000,000, to be subscribed by 100 banks of the State with the view of keeping much of the money in Iowa which has heretofore been held in deposit in Chicago and New York. Senator Garlock, George F. Fairburn, George L. Brower and other prominent capitalists, are associated with Captain Head in this new enterprise.

Personal.—Mr. L. A. Trowbridge, who was at one time Cashier of the Third National Bank of Rockford, Ill., and who subsequently removed to Chicago, is about to engage in the banking business in the latter city. Mr. Trowbridge has been an appreciative reader of the JOURNAL for many years, and we extend best wishes for success in his new undertaking.

Tootle, Lemon & Co., St. Joseph, Missouri.—The JOURNAL takes pleasure in referring to a recent statement showing the present condition of this firm. It is a partnership consisting of five members, with a capital of $100,000 authorized, $50,000 actually paid—the balance being subject to call whenever needed. The firm has an individual responsibility of $3,000,000, and justly ranks among the strongest and most conservatively conducted private banking institutions in the Southwest.

In the January edition of the BANKERS' DIRECTORY and COLLECTION GUIDE, owing to a typographical error, this firm's responsibility is incorrectly reported. The foregoing correction is cheerfully made believing it to be fully justified by the facts.

Ohio—Commutation of Sentence.—The President has commuted the sentence of Edward L. Harper, ex-President of the Fidelity National Bank of Cincinnati, who was convicted of a violation of the Federal banking laws and sentenced December 1, 1887, to ten years' imprisonment in the Ohio penitentiary at Columbus. The commutation provides for Harper's release on May 1, 1893. Harper's health is so poor that he was not likely to survive his full term.

An Austrian Bank in Chicago.—A representative of the Imperial Bank of Austria recently passed through New York city *en route* to Chicago for the purpose of establishing a branch of the Austrian bank there. He says that arrangements will at once be made for opening the bank. The bank will be opened for the convenience of Austrian people who are already making arrangements to go to the Exposition in large numbers.

A Fugitive President Arrested.—A cablegram recently received at the State Department announces the arrest of President Cadwallader, of the Superior National Bank, of West Superior, Wis., at Rio Janeiro, Brazil. Cadwallader was indicted for embezzling $63,000 of the bank's funds and was released on $10,000 bail, which he forfeited and fled.

Cincinnati, Ohio.—The Directors of the Central Safe Deposit & Trust Company have declared a quarterly dividend of 1¼ per cent. It is the first dividend of the new company, and there is much rejoicing thereat. From indications the company is now on a fair way to prosperity in the way of profit-making.

Wisconsin Marine and Fire Insurance Company Bank, Milwaukee.--Hon. John L. Mitchell, President of this bank, has been elected United States Senator from Wisconsin. As this bank is an old-time subscriber and patron, the JOURNAL can hardly do less than extend hearty congratulaions.

PACIFIC SLOPE.

Denver Banks Not Hoarding Gold.—On March 2, the Denver Clearing-House Association adopted the following preamble and resolutions:

Whereas, Reliable information has been received that a report has gained circulation in the East that the Colorado banks, and especially the Denver banks, are hoarding gold, and as such reports are untrue, and in our opinion are circulated for the purpose of injuring the cause of silver; therefore, be it

Resolved, That the Denver Clearing-House Association hereby pledges itself to exchange with the Secretary of the Treasury of the United States $1,000,000 in gold coin for a like amount of legal-tender notes, the legal-tender notes to be delivered in Denver at the time of such transfer.

That the Secretary of the Denver Clearing-House Association be instructed to send a telegram to the Hon. Senators Henry A. Teller, and E. O. Wolcott, in the name of the Denver Clearing-House Association to the following effect:

"You are authorized to offer on behalf of the National banks of Denver, to the Secretary of the Treasury, $1,000,000 in gold coin in exchange for a like amount of legal-tender notes, the exchange and delivery to be made in Denver, this offer to stand good for one week from this date."

A Famous Financier Shot.—On February 24, John W. Mackay, the famous mining man and financier, was shot through the back in San Francisco, Cal., by a man giving the name of W. C. Rippey, and narrowly escaped death. Rippey, after firing one shot at Mackay, shot himself through the left breast. The self-inflicted wound was serious, but as long as Rippey could walk he followed Mackay up, trying to fire at him again, but he was so weak that he could not pull the trigger. He then threw up his hands exclaiming, "My God, I am satisfied!" He was taken to the City Hospital. Mackay was placed in a buggy and was taken to the Palace Hotel. Soon after 2 o'clock the physician extracted the bullet. Both men are reported out of danger and will probably recover. Mr. Mackay is a Director of the Nevada Bank of San Francisco, and has long been identified with financial interests of the Pacific Coast.

New Bank in San Francisco.—A new bank has recently been organized which will be known as the Union Trust and Savings Bank. The old Hibernia Bank building on the corner of Market and Montgomery Streets has been purchased at a cost of $330,000 and will be immediately refitted for the new occupant. All the furnishings and interior decorations will be of the finest style and finish.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

INVESTMENT OF SAVINGS.—The officers and trustees of the Savings banks of this city, if not those of the whole State, seem to be practically unanimous in desiring the passage of the bill introduced by Senator Mullen extending the scope of investment for the deposits of Savings banks. We hardly see why a delegation of these men should present their arguments in support of the bill before Mayor Gilroy and ask his aid in securing its passage. He has no official relation with the Legislature or with the Savings banks, and, while it is proper enough for him to favor or oppose measures affecting the administration of this city, it would hardly be becoming for him to interfere in a matter of this kind. It can only be asked on the supposition that he would use political influence in behalf of legislation that has no connection with politics or even with public administration. There should be no occasion to resort to political or official influence in this matter. It should be dealt with entirely upon its merits, and if it can be shown that the proposed legislation is for the actual benefit of Savings banks and their depositors, there should be no difficulty in convincing the Legislature of that fact and securing the passage of the bill.

Efforts have been made for several years to secure to the managers of Savings banks in this State the privilege of extending the scope of their investments. The main reason has been that under the present restrictions it is growing more and more difficult to keep their funds employed in such manner as to afford a moderate return upon the aggregate amount. It is not desired to have them profitably employed where any risk is involved, and safety is the highest, in fact the one essential, consideration. The great stress that has been laid upon safety rather than income is what has thus far prevented the legislation asked for, but the time seems to have come when something can be done for the relief of the Savings banks quite consistent with safety.

Besides their investments in bonds secured by mortgage upon real estate they are now permitted to hold United States bonds, the bonds of any State which has not defaulted in payment of interest or principal on any of its obligations within ten years, and in any of the interest-bearing securities of the cities, counties, towns, villages, or school districts of the State. One purpose of the full liberty given of investing in the stocks and bonds of cities, towns and villages in the State was to give to these securities a ready market at a moderate rate of interest. But the time has come when these means of investing the funds of Savings banks are insufficient, and their managers are embarrassed by the narrow limits within which they must work. The amount they have to deal with is constantly increasing, while the volume of National and State bonds in the market has been diminishing.

What is now proposed is to allow them to invest in the municipal bonds of cities of 50,000 inhabitants or more in the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Illinois, Wisconsin, Michigan or Missouri, under certain rather strict limitations. The total indebtedness of any such city must not exceed 7 per cent. of the valuation of the taxable property therein, not including what is generally known as "water bonds," and deducting the amount of sinking funds. The investment cannot be made in the bonds of a city if it or the State in which it is situated has defaulted upon any of its obligations within ten years. No Savings bank would be permitted to invest more than 25 per cent, of its assets in the bonds of cities outside of this State, or more than 5 per cent. in those of any one such city, or to take more than 10 per cent. of the bonds of any such city, or to invest in bonds issued to aid in the construction of any railroad.

With these restrictions as high a degree of safety would be insured as can be counted upon in any investment. These bonds would doubtless be as safe as some of those of States and of communities within this State in which investment is now allowed. In all cases the Trustees of the banks would have the exercise of discretion and would avoid any chance of risk. In our opinion the time has come for withdrawing opposition to the change in the law as now proposed.—*New York Times.*

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

BANKING BEFORE THE WAR.

Editor Rhodes' Journal of Banking:

SIR: Wild-cat banks are frequently mentioned, in discussions on the bank question, as institutions peculiar to the West. This was not the case. There were such banks in Pennsylvania and even in staid New England. I remember one at East Greenwich, Rhode Island. It was not merely a wild-cat, but a regular panther, for when it came to grief in 1856 or 1857, the papers reported its assets as seven dollars and eighty cents, and its liabilities for its issues of notes as seven hundred thousand dollars, and yet its notes were quoted in the New York papers at only one-half per cent. discount up to the time of its failure.

Notwithstanding instances of this kind, it is true that the great majority of banks of issue of that period, though not based on deposit of bonds, were perfectly solvent. There were two State banks in Virginia established in 1805; the mother banks were at Richmond, and they had branches in various other towns where needed, and furnished a very convenient and perfectly solvent currency. They suspended specie payments for a short time in the great panic of 1857, but there was little inconvenience caused by this. Of course they came to grief in the civil war, when they were forced to deal with Confederate currency. There were other banks of issue in Virginia, and I do not remember any serious loss to the people by their issue of currency. They were required to have one-third specie against the amount of circulating notes. There was some inconvenience from the usual small discount in New York, but the accumulation and congestion of currency in New York city was largely prevented, and currency was sufficiently abundant where most needed. A. G. G.

RICHMOND, Va., March 1, 1893.

INCREASING CIRCULATION OF NATIONAL BANKS.

Editor Rhodes' Journal of Banking:

SIR:—The bill, outlined in the JOURNAL OF BANKING for January, intended to increase the circulation of bank notes, would be an excellent remedy for the present inelastic and iron-clad system of bank note issue, if it were possible to place such a law upon the statute books of our country. It cannot be forgotten, however, that the National bank, as an institution, speaking of it in a collective sense, has had to bear the burden of a strong current of adverse opinion and criticism, though undeservedly so, on the grounds of favoritism, notwithstanding the fact that in reality the present *minimum*, rather than the *maximum* issue of National bank circulation is chargeable to the lack of any such favoritism and by virtue of needless restrictions. Although the feature of the bill providing for a general sinking fund, collected from a tax levied upon the bank's circulation, practically assures entire safety, so far as the redemption of the notes is concerned, yet, in view of the fact that National banks in the past have been assailed as pet and favored institutions, the sentiment of the country to-day has not changed in that particular, and the very low amount of bonds required and the extremely high per cent. of circulation compared with the capital, is quite likely to provoke bitter opposition to the plan.

The foundation upon which the present system of bank-note issue, viz.; a bonded National indebtedness is based, must in a short time be abandoned and comparing the time yet to run, with the tenure of existence a policy that is to form the basis of a Nation's bank-note issue ought to have, the time is indeed short. Right here, in that proposed bill which, so far as I can judge, is based on the very conditions that the present system of issue is, *i. e.* the bonded indebtedness of the present time, is it wise not to incorporate within it some feature to provide for its continuance beyond the date of the expiration of the bonds? It seems short sighted in wishing it to become a law for the few unexpired years the bonds run, and establish a currency both in respect to kind and volume upon which all enterprise would be based and conducted, and this condition threatened by a sudden reversal or dangerous contraction of the volume of our circulating medium, due to a probable failure to enact some measure to sustain the circulation as it then exists. Just what this failure should be I am not prepared to state, but this may be predicted that the people of the United States, will hardly again consent to create a bonded indebtedness in order to furnish a means of issuing a bank circulation.

I consider it no objection to the plan that apprehension may exist as to the security of depositors. The plan does not lessen the security of depositors over present system.

No measure has ever yet been devised that guaranteed safety to depositors, nor can such a measure be devised without burdening banks with restrictions that would destroy free banking.

Depositors enjoy the right of selection as to what bank they will entrust their deposits, which is denied the function of a bank note when expected to form part of our circulating medium and on that account demand special pledges of security as compared with the liability of deposits. Granting the possibility of its becoming a law, the admirable feature of the plan outside of the objection of its short tenure of existence, is its embodiment of the power of an elastic expansion of our volume of currency the lack of which is the bane of our present system. W. J. LIFFRING.

HAWARDEN, Iowa, Feb. 1, 1893.

IS THERE PROFIT IN NATIONAL BANK CIRCULATION?

Editor Rhodes' Journal of Banking:

SIR:—In your last month's JOURNAL OF BANKING, Mr. Hollister, of Hutchinson, Kansas, says that my table does not take off the premiums paid for United States bonds, and therefore shows a loss. He is wrong, as the table will show just what it pretends to, and he will so find it after carefully re-reading and doing a little figuring.

Mr. Nold, of New Mexico, does not understand how I claim 11 per cent. for average investment for the whole period (fifteen years). Let me explain to him that as I took off 6 per cent. for all money invested in the transaction and still have a surplus left at the end of fifteen years of over $7,000, which is an additional 5 per cent. on my money invested, (as 6 per cent. +5 per cent. =11 per cent. on the money invested.) Besides, I claim the very best security (viz., Government bonds) for this money invested for this fifteen years, which is quite an item for some banks at least. Of course if you have good home paper that will net you 11 per cent. for fifteen years, and can not afford to spare about $9,000 to invest at this rate, why, better stay out.

The only objection that I see is that you must go in a fifteen-year contract to realize for certain the results I claim. It matters not whether bonds drop only 1-15 yearly, or if you take all the premium off the first year, as the result will be the same. But should the Government issue a better and lower rate bond at par, you might have made more by not taking the bonds; or should they increase the taxes, it might eventually prove to be a loss. However, the chances are for more things in its favor than against it. I do not claim that it is as good as it ought to be for the bank, but I do claim that my 6 per cent. table will show results more what they actually are than what the former table represented.

Lastly, Mr. Nold, of New Mexico, asks what the results would be at 8, 10 or 12 per cent., and seems to think the bank would lose a great deal more than what the actual tests will show, viz.: up to 10 per cent. you are even—you don't make or lose. After that 11 per cent., you lose by taking circulation in proportion as your home paper is good and the rate above 11 per cent., and the chances for keeping it invested at that rate for at least fifteen years.

Now, Mr. Editor, I *think* I am right, and it will take stronger proof to change my opinion about this matter than what has been presented yet.

SHENANDOAH, Pa., February 20, 1893. J. S. KISTLER, *President.*

National Banks in Liquidation.

Kentucky—Covington.—Covington City Nat'l Bank; resolution to take effect Feb. 1.

Kansas—Yates Center.—Woodson National Bank; resolution dated December 5, 1892.

Georgia—Macon.—Merchants' National Bank; resolution dated February 14.

NATIONAL BANKS IN THE HANDS OF RECEIVERS.

Nebraska—Lincoln.—Capital Nat'l Bank; J. D. Macfarland appointed Receiver Feb. 6.

Arkansas—Little Rock.—First Nat'l Bank; Logan H. Roots appointed Receiver Feb. 6.

Texas—Dallas.—Bankers & Merchants' National Bank; Hawley S. Hepburn appointed Receiver February 6.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Bristol, Tenn.—Holstein National Building and Loan Association have adopted a resolution authorizing the issue of $100,000 seven-year bonds.

Jacksonville, Fla.—The Florida Central & Peninsular R. R. Co. has filed a mortgage to the New York Guarantee & Indemnity Company for $7,800,000.

Memphis, Tenn.—A bill authorizing the city to issue $60,000 in bonds for erecting a market house has been introduced in the Legislature, and also a bill authorizing the city to issue $3,000,000 in bonds to refund its bonded debt.

Spartanburg, S. C.—The city will hold an election on March 1 to consider issuing $40,000 of school bonds.

Elberton, Ga.—A special election will soon be held to consider the issuing of $40,000 bonds for Courthouse and jail.

Huntington, W. Va.—The Cabell County Court will hold an election in May to consider issuing $100,000 courthouse bonds.

Troy, Ala.—The city will soon offer for sale $40,000 of water bonds.

Raleigh, N. C.—The city will soon issue $50,000 of improvement bonds.

Cullman, Ala.—A bill has been introduced in the Legislature to authorize the issuing of water-works bonds.

Decatur, Ala.—Morgan County will shortly issue $30,000 improvement bonds.

Morehead City, N. C., wants to issue $10,000 bonds for town improvements.

Union Springs, Ala.—A bill has been passed authorizing the city to issue bonds, amount not stated.

CORPORATIONS SEEKING CAPITAL.

Chicago, Ill.—The Chicago & South Side Rapid Transit (elevated) are about to issue $5,000,000 bonds. They will be a first mortgage on the extensions and a general mortgage on lines already completed.

The Chicago Gas Light & Coke Co. offer $540,000 additional first mortgage 5 per cent. guaranteed gold bonds, making a total to date of $9,448,000.

Brooklyn. N. Y.—The stockholders of the Brooklyn Traction Company have voted to increase the capital stock by issuing $3,000,000 of preferred stock in addition to the present capital of $6,000,000 common stock.

The Diamond Match Company are offering $7,500,000 capital stock.

Palisades Railroad (N. J.)—It is expected this road will be completed sometime during this year if $300,000 capital can be secured.

SECURITIES SOLD.

Anniston, Ala.—The Equitable Mortgage Company of New York has purchased a number of Anniston City bonds at $104.06.

New York City.—Bids for the sale of $250,000 3 per cent. additional water stock, payable in October, 1912, and $550,000 3 per cent. dock bonds, payable Nov. 1, 1933, have been awarded by Comptroller Myers. All the bids were at par. The South Brooklyn Savings Institute asked for $50,000 in dock bonds. Andrew H. Green, trustee for $15,000 in bonds, the Bowery Savings Bank for $150,000 in dock bonds and $100,000 in additional water stock. The Greenwich Savings Bank asked for $50,000 of either, and the Tilden Trust for $100,000 of either. Altogether $465,000 worth was asked for, and the applicants will receive the bonds and stock as requested. The remainder of the bonds—$335,000—will be taken by the Sinking Fund Commissioners.

Syracuse, N. Y.—The $500,000 3½ per cent. semi-annual, 27-year water bonds of this city brought the highest prices ever paid for issues by this municipality. The sales were as follows: Onondaga County Savings Bank, $30.000, at 104 10; Onondaga County Savings Bank, $100,000, at 104 55; Onondaga County Savings Bank,

$150,000, at 105 05; Onondaga County Savings Bank, $150,000, at 105 55; Auburn Savings Bank, $50,000, at 104 47; Albany Savings Bank, $20,000, at 105 46. The total premium on the sale was $24,507.

Saginaw, Mich.—Brewster, Cobb & Estabrook, Boston, were the successful bidders for the bridge bonds and Genesee Avenue bonds to amount of $185,000, paying a very large pemium. An injunction to restrain delivery of the bridge bonds was granted, gnd the city authorities stipulated to wait decision on the application.

Lafayette, Col.—S. A. Kean, of Chicago, was the purchaser at 90 of the water bonds of this place, to amount of $15,000.

Tuscaloosa, Ala.—Wilson, Colston & Co., Baltimore, were the purchasers of the six per cent. semi-annual thirty-year gold bonds to amount of $48,000, principal and interest payable in New York. Of the total, $28,000 was issued as refunders of eight per cent. bonds; the remainder, $20,000, is for the completion of the city hall, and adds that amount to the bonded debt.

ITEMS.

Leavenworth, Kas.—This city issued in 1874-75 installment bonds bearing ten per cent. interest. The City Council has passed a resolution stating that Nos. 315, 361, 362, 616, 617, 618, 619, 620, 621, 631, 632, 633, 634, 635, 636, 637, 638, 700, 701, 702, 703, 704, 705, 706, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764 and 765, long since past due, have not been presented for payment, and the City Clerk, Miss Carrie Shepherd, has been instructed to strike them from the city debt.

Hackensack, N. J.—The Hackensack Water Company has mortgaged its entire plant to the directors of the Hudson Trust & Savings Institution of Hoboken for $3,000,000.

Failures and Surpensions.

Pennsylvania—HARRISBURG.—The Farmers' Bank closed its doors February 20, pending an investigation by the Bank Superintendent. The failure is not considered a disastrous one and depositors will probably be paid in full, although stockholders may lose about 40 per cent. It is understood that the stockholders are disposed to reorganize as a National bank, and a meeting will soon be held to consider this.

Pennsylvania—WILKES-BARRE.—On February 8 the announcement was made that the private bank of F. V. Rockafellow & Co. had failed. A rush was at once made for Rockafellow's home. The banker received all cordially, but he said he was not prepared to make a statement. He would do so in a day or two. The bank was a private concern, but confidence in Rockafellow was general. He had no vices, and during his thirty-seven years in the banking business never took a vacation. His depositors were mostly business men, and some of them are heavy losers. It is estimated that the bank had on deposit when it closed its doors $300,000. Failure is due to the withdrawal of Rockafellow's partners from the business.

Rockafellow is Treasurer of the city of Wilkes-Barre, but the city will lose nothing, as the bondsmen will cover all loss. The other banks in the city offered to come to Rockafellow's rescue if he would give them a statement of his assets. This he declined to do.

According to the published statement of the assignee, the assets are about $70,000 and liabilities $450,000. It is thought creditors will not receive more than 5 per cent. The very latest developments show the failure to be one of the worst of the kind that has ever occurred in the United States. Rockafellow, with absolutely no property behind him, managed to get his customers to put nearly $1,000,000 in his bank. He kept his accounts very loosely.

Among the assets of the defunct concern were found fifty-seven horse shoes, which has given rise to the opinion that the owner of the bank was a strong believer in "horse-shoe luck." The sequel to that kind of banking which is far too prevalent in many sections may be found in the following despatch, dated February 24:

> Ex-Banker Rockafellow was arrested to-day on the warrants sworn out last night by a number of creditors of the broken bank. He gave bail through his attorney for his appearance in court.

Virginia—RADFORD.—The Exchange Bank of Radford, Va., closed its doors February 27. The bank was organized in 1890 with an authorized capital of $200,000, of which $50,000 was paid in. There are no particulars as to cause of supension further than that the Cashier is said to have left town.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

VIRGINIA.

RADFORD—Exchange Bank; reported closed February 27.

CANADA.

ONTARIO.

AILSA CRAIG—James G. Shipley & Co., bankers; suspended February 19.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, March 4, 1893.

THE PRINCIPAL EVENTS in the financial world during the past month were: (1) The slow but sure reduction of the gold balance in the Treasury; (2) the remarkable speculation and liquidation in Reading Railroad stock, culminating in the appointment of a Receiver; (3) the refusal of Congress to repeal the Silver-Purchase Act and (4) the defeat of the Anti-Option Bill.

The month of March opens with the Treasury in a weaker condition, from a gold standpoint, than at any time since the resumption of specie payments fourteen years ago. At no time since 1879 has the net gold in the Treasury been at so low a figure as on the last day of the month just closed; and the outlook for the new administration would seem to be a resort to the only alternative left, to wit: the issuing of new bonds with which to buy gold and in that way keep the $100,000,000 reserve intact for a little longer period. The situation is specially interesting to those who are insisting upon further purchases of silver bullion and issuing notes in payment therefor payable in coin. The sale of $50,000,000 bonds will only afford a temporary relief, is in fact only putting off the day of settlement. The remedy is simple and it is to be hoped the new Congress will at once set itself to work to erase from the statute book the law which is at the root of the trouble.

There has grown up a strong feeling in the minds of nearly all the people, especially those who value National credit as above all things else and something to be maintained, no matter what the cost—that the legal-tender reserve fund must not be touched or in any way impaired. Once let down the bars by making the slightest inroad upon that fund and it is feared there might be such a rush to obtain gold from the Treasury that the stock on hand would be insufficient to maintain that public confidence which is so necessary in the maintenance of public credit. There is no doubt that the credit of the Government, as reflected by the current price of its bonds, has steadily improved during the past few years. It is also very likely that any bonds that might be offered by the Treasury could and would be readily sold, either in this country or in Europe, if both principal and interest were payable in gold. In fact it is well understood that the recent advances of gold made by the New York banks to the United States Treasury were upon the implied promise that such bonds would be issued in payment for the loan. What the policy of the new administration will be in regard to such an issue is, as yet, an unknown quantity. It is a fact, however, generally overlooked, that the bonds authorized under the Act providing for resumption of specie payments, were in express terms made payable in coin (understood then to mean gold); and while that policy has so far been pursued by subsequent Secretaries of the Treasury, it is extremely doubtful if such a pledge could be given at this time, in view of the wide-spread feeling regarding free silver coinage.

While there is no reason for the foolish statement made in some quarters that the Treasury is in danger of bankruptcy, the situation is more or less strained, and for some little time to come is likely to be one of surprises. The markets are likely to be erratic until uncertainties resolve themselves into certainties, but no sensible, thinking person believes, for one moment, that the Government is in any danger of insolvency. The worst phase of the financial situation is now generally known, and the better class of American capitalists are striving energetically to remedy whatever ills may exist. There is already a glut of gold in European money centres, and it must soon begin to flow in this direction simply on the ground that it can not be profitably invested at home. There never was more money in this country than at present, and the opportunities for money getting are greater than at any previous period in the world's history. Notwithstanding all the adverse circumstances, the markets generally show a remarkable undertone of strength. Securities are held by strong parties who are confident the outlook for all well-managed corporate enterprises justifies the faith they have in their future. All that is needed is confidence in the stability of the Government's finances.

About the only feature of moment in European financial centres is the announcement of Mr. Gladstone, in the British House of Commons, that England will adhere to its monometallic policy. The complications in Hawaii have had no influence either at home or abroad, except to cause a slight advance in Hawaiian bonds in London, in view of the possible annexation to the United States. The Bank of England's minimum rate remains unchanged at 2½ per cent. The open market rate in London for 60 to 90 day bills is 1½ per cent., as against 1⅛ per cent. at close of January and 1⅝ per cent. in December. In Paris the open market rate is 1⅞ per cent. as against 2¼ per cent. in January; in Berlin, 1½ per cent. and Frankfort 1⅝ per cent. as against 1⅝ and 1⅞ per cent. respectively, at the end of January. During the last week in February the Bank of England lost £203,478 in bullion, holding at the close £27,034,031. The Bank of France reports an increase of £983,000 in gold, while the Bank of Germany has lost a small amount since last report.

The total amount of specie exported from New York city to all points during the month of February was $16,538,000 as compared with $9,568.000 in January, and making a total for the year of $26,106,000. The imports for the month were $537,000 as compared with $126,000 in January, and making a total for the year of $663.000.

The United States Treasury statement for February shows a slight increase ($615,699) in the public debt. There was a decrease in the non-interest bearing debt of $521,881; an increase of $600 in the interest-bearing debt and a decrease of cash in the Treasury of $1.136,980. The total cash in the Treasury is $764,822,266, of which $217,672,947 is in gold coin and bullion; $472,420,542 in standard dollars silver bullion and subsidiary coin; $58,547,273 in gold and silver certificates, legal tenders and National bank notes and $15,681,503 in National bank depositories and disbursing officers' hands. The amount at present in National bank depositories is $11,163,629. The bonded debt on February 28 was $585,034,260 and total public debt, $963,281,752. Net available cash balance in the Treasury, including deposits in National banks, is $24,128.087.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $101.532 retired circulation of National gold banks—was on February 28, $175,320,856. This shows an increase for the month of February of $1,032,235, as compared with a decrease of $1.208,118 in January, and an increase in total circulation since February 29, 1892, of $2.810,843. During the month of February there was issued to new banks $191,270, and to old banks increasing circulation $1,789,070. There has been surrendered and destroyed since January 31, $948,105. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $22.433,895, showing a decrease in that class of circulation during the month of $658.005.

NEW YORK CITY BANKS.—The following reflects the condition of the local banks each week during the month of February: For the week ending February 4, the New York city banks received gold and currency from the interior amounting to $8,909.000 and shipped $2.415,000. During the same time by Sub-Treasury operations they lost $4,500,000, making a net gain for the week of $1,844,000. During the week ending February 11, the New York city banks received from the interior gold and currency amounting to $5,091,000 and shipped $2,600.000. By Sub-Treasury operations for the same time they lost $4,300,000, making a net loss for the week of $1,809,000. For the week ending February 18, the local banks received gold and currency from the interior amounting to $4,101,000 and shipped $3.846,000. By Sub-Treasury operations for the same time they lost $3,750,000, making a net loss for the week of $3,495,000. For the week ending February 25, the New York city banks received from the interior gold and currency amounting to $4,019,000 and shipped $6,405,000. During the same time by Sub-Treasury operations they lost $2,800,000, making a net loss for the week of $5,186,000. From January 28 to February 25 the New York city banks lost gold and currency amounting to $8,646,000, as compared with a gain of $20,435,000 in January and a loss of $317,000 in December.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surp. Res.*
Feb. 4	$464,910,000	$83,362,000	$59,161,000	$495,476,000	$5,526,000	$4,489,000 dec.
" 11.......	464,284,000	79,944,000	60,233,000	491,748,000	5,575,000	1,413,000 dec.
" 18........	462,519,000	75,700,000	58,809,000	483,613,000	5,519,000	3,635,000 dec.
" 25... ...	458,571,000	72,959,000	54,606,000	472,708,000	5,572,000	4,221,000 dec.

MINT COINAGE.—The coinage executed at the United States Mints, during the month of February, was as follows: Double eagles, 131,500; eagles, 5,000; half-eagles, 44,000; standard dollars, 300,000; Columbian half-dollars, 1,126,000; quarter-dollars, 40,000; dimes, 410,000: five cents, 886,000; one cents, 4,230,000, or a total of 7,175,000 pieees, valued at $3,960,600. In January the coinage was 7,657,000 pieces, valued at $4,531,900.

COMPARATIVE CONDITION OF PUBLIC DEBT AND TREASURY.—A comparison of the condition of the public debt and of the National Treasury on the 1st of March, 1889, and on the 1st of March, 1893, based upon the form of the monthly statement issued at present, makes the following showing:

	March 1, 1893.	*March 1, 1889.*
Interest bearing debt	$585,034,260.00	$858,106,220.00
Debt on which interest has ceased since maturity...	2,335,305.25	2,047,245.26
Debt bearing no interest (legal tenders, fractional currency, etc.)........................	375,912,187.37	442,440,521.12
Totals..	$963,281,750.63	$1,302,593,986.38
Certificates and Treasury notes, offset by an equal amount of cash in the Treasury	601,828,346.00	423,560,381.00
Totals..	$1,565,110,098.63	$1,726,154,367.38
Cash in the Treasury..............................	764,322,266.78	723,666,555.56
Demand liabilities (including $100,000,000 greenback gold reserve)........................	740,194,178.90	650,669,127.03
Cash balance or surplus...........................	24,128,087.88	72,997,428.53

The coin and bullion in the Treasury at the two dates aside from the minor coin were as follows:

	March 1, 1893.	*March 1, 1889.*
Gold	$217,672,947.91	$326,456,697.81
Silver	472,420,542.08	298,992,565.29

FOREIGN EXCHANGE.—During the month of February the sterling exchange market has been somewhat unsettled, opening easier and with a declining tendency but closing steadier and firm at an advance. The early weakness was due to liberal purchases of American securities for London account, while the later strength was probably owing to the absorption of arbitrage bills and selling of stocks for European account, together with dearer discounts in London. The last quotations, however, showed but little variation from those at the opening of the month. The following shows the weekly fluctuations in prices: For the week ending February 4, the market for sterling exchange was easier on account of a better supply of bankers' bills, closing with posted rates at $4.85½ for long; $4.87 for demand and $4.87¼ for cables. During the week ending February 11, the market was quiet but showed a strengthening tendency, owing to the action of Congress on the Silver-purchase bill, closing with posted rates at $4.86¼ for long; $4.87¾ for demand and $4.88 for cables. For the week ending February

18, the sterling exchange market ruled strong until the end when it became easier closing lower Posted rates were $4.86½ for long, $4.88¼ for demand and $4.88½ for cables. During the week ending February 25, the market was easier at the opening but closed very firm, with posted rates at $4.86¼ for long, $4.88¼ for demand and $4.88½ for cables. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, $4.86½; Bankers' sterling, sight, nominal, $4.88½; Bankers' sterling, sixty days, actual, $4.85½ @$4.85¾; Bankers' sterling, sight, actual, $4.87¼ @$4.87½; Cable transfers, $4.87½@$4.87¾; Prime commercial sterling, long, $4.84¾@$4.85; Documentary sterling, 60 days, $4.84½$4.84¾; Paris cable transfers, $5.15⅝@$5 15; Paris bankers', 60 days, $5.18⅛@$5.17½; Paris bankers', sight, $5.16¼@$5.15⅝; Paris commercial, 60 days, $5.19⅜@$5.18¾; Paris commercial, sight, $5.17½@$5.16⅞; Antwerp commercial, 60 days, $5.20 @$5.19⅜; Brussels bankers', sight, $5.16⅞@$5.16¼; Swiss bankers', 60 days, $5.18¾@$5.18⅛; Swiss bankers', sight, $5.16⅞@$5 16¼; Reichmarks (4), bankers', 60 days, 95⅛@95¼; Reichmarks (4), bankers', sight, 95⅜@95½; Reichmarks (4), commercial, 60 days, 94⅞@95; Reichmarks (4), sight, 95⅛@95¼: Guilders, bankers', 60 days, 40 3-16@40¼; Guilders, bankers', sight, 40⅜@40 7-16; Guilders, commercial, 60 days, 40 1-16@40⅛; Guilders, commercial, sight, 40¼@40 5-16; Kronors, bankers', 60 days, 26¾@26⅞; Kronors, bankers', sight, 27 1-16@27⅛; Lisbon, sight, per milreis, 88½@88¾; Italian lire, sight, $5.32½@$5.31¼. Paris dispatches quote exchange on London 25f. 18c.

DOMESTIC EXCHANGE.—The following are closing prices for New York exchange at the places named: St. Louis, 50 cents discount. Chicago, 80c discount. Charleston—Buying par@1-16; selling ⅛@¼ prem. Savannah—Buying par; selling ⅛ prem. San Francisco—Sight, 22½ premium; telegraphic, 27½ premium. New Orleans—Commercial, 75 premium; bank, 100 premium.

HOME MONEY MARKET.—Notwithstanding the continuous gold exports and the large outflow of money to the interior, the market for money ruled easy until the last week in February when, on account of the extraordinary call for gold from Western centres (presumably for hoarding) the rates hardened considerably and closed strong at the highest point. As an offset to this, however, the higher rates for money have tended to some extent to check the gold export, and to that extent may be looked upon as a blessing in disguise. In striking contrast to the previous month the aggregate amount of deposits in the Clearing-House banks has decreased $17,000,000 as compared with an increase of $45,000,000 in January. The range for call loans throughout the month has been from 1 to 12 per cent., the average being about 4 per cent. From the end of January to the end of February the reserve of the banks has decreased about $18,000,000. The banks now hold a total reserve of $127,562,000, whichi s $9,300,000 above legal requirements. At the corresponding date last year the banks held a surplus reserve of $30,857,000. Time money is in better demand with a fair supply, but there seems to be a closer scrutiny of securities and some discrimination against the "trusts." At the close, quotations on good Stock Exchange collateral are 3 per cent. for 30 to 60 days; 3½ per cent. for 90 days to four months and 6 per cent. for longer dates. Commercial paper is dull and slow of sale. The local banks are practically out of the business, and there is only a moderate out-of-town inquiry. Rates are quoted at 6 per cent. for first-class paper, and some names sell for a slightly higher figure. For the week ending February 4, the open market rate for call loans on stock and bond collaterals ranged from 1 to 3 per cent. the average being 2 per cent. Commercial paper 4¼ to 5¼ per cent. For the week ending February 11, the open market rate for call loans on prime collaterals ranged from 1½ to 5 per cent., with 2½ per cent. as the average. Commercial paper quoted 5 to 5½ per cent. For the week ending February 18, the open market rate for call loans ranged from 2 to 6 per cent., the average being 3½ per cent. During the week ending February 25, the open market rate on call loans ranged from 2½ to 12 per cent., a fair average being 4 per cent. Prime commercial paper quoted 6 per cent.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of February, 1893, and the highest and lowest since January 1, 1893, by dates:

	5.849,186		1,128,858		598.655		422,561

leaving 1,185,992 shares to represent the dealings in the remaining 164 stocks. In addition 419 different issues of railroad bonds were dealt in, to the amount of $48,200,000 also $279,200 State bonds and $10,000 Government bonds. (Compared with February, 1892, there is a decrease of 2,144,081 shares in stocks; a decrease of $33,621,200 in railroad bonds; a derease of $77,100 in State bonds; a decrease of $517,650 in Government bonds, and a decrease of 956,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $112,000; stocks, 1,664,644 shares, of which 1,384,629 were American Sugar Refiners' common stock and 14,641 preferred; mining stocks, 29,050 shares. American Cotton Oil Certificates, 202,091 shares of common and 8,380 shares of preferred; Pipe Line Certificates, 182,000 barrels. Of National Lead common 150,997 shares, preferred 17,346 shares; of silver bullion certificates, 108,000 ounces, extremes being 84¼ and 83⅝, closing at 83⅞. The listed stocks show an increase of 530,398 shares as compared with the amount sold in January. Transactions in railroad bonds show a decrease of $415,500 during the same period, an increase of $118,400 in State bonds, and a decrease of $113,200 in Government bonds. In unlisted bonds an increase of $20,000; in unlisted stocks a decrease of 242,308 shares; in mining stocks an increase of 16,863 shares; an increase of 124,264 shares in Cotton Oil Certificates common, an increase of 327 shares in preferred; an increase of 13,400 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 262,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of February were sold: 3,015,350 shares of railroad and other stocks representing dealings in 77 properties. Of this amount 2,164,016 shares are transactions in the following 12 stocks:

Phil. & Read.	619,140	C. M. & St. P.	316,720	C. R. I. & Pac...	96,880	Nat'l Cordge...	27,990
N. Y. & N. E..	369,460	C. B. & Q	147,180	Chic. Gas.......	51,040	R.&W. P.Term.	25,060
Dis & C. F. Co.	323,001	N. Pac. pfd...	123,685	Union Pac....	41,720	Nat'l Lead.....	22,140
	1,311,601		587,585		189.640		75,190

leaving 851,334 shares to represent the transactions in the remaining 65 stocks, of which American Sugar Refinery Common furnished 692,089 shares. Transactions in railroad bonds during the same period amounted to $3,734,000; in mining stocks 110,185 shares. 930,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show a decrease of 162,831 shares as compared with the month of January; an increase of $1,537,600 in railroad bonds; a decrease of 3,760 shares in mining stocks; an increase of 815,000 barrels in Pipe Line Certificates.

As compared with February, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks decreased 1,581,874 shares; bonds decreased $2,610,100; mining stocks decreased 64,991 shares, and Pipe Line Certificates increased 490,000 barrels.

The gross earnings of 138 roads for the month of January, 1893, were $39,215,791 being an increase of $1,896,508 or about 4.83 per cent. over January, 1892. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

A Practical Treatise on the Business of Banking and Commercial Credits, by J. B. Duryea, Lecturer, Etc., in Highland Park College, Des Moines, Iowa.

There is at the present time a great demand for practical information upon all economic subjects. A few years ago the commercial colleges taught penmanship and bookkeeping as the complete curriculum of a finished business man. The young men of the country are becoming alive to the fact that more is needed to fit themselves for taking prominent positions in business life, and hence the demand that brings out practical works on finance, banking, commercial law, and other kindred topics. The business of banking is especially attracting the attention of young men. The treatise of Professor Duryea is a work offered at a moderate price, that gives in a form easily studied and remembered, the more important practical points relative to banking and commercial credits. The professor does not pretend to be original. He gives full credit to the sources from which he has culled his information, but he certainly deserves praise for the arrangement of his book. By far the most valuable part of the contents relating to the business of banking are taken from "Methods and Machinery of Practical Banking," by Claudius B. Patten, published by Bradford Rhodes & Co. This portion makes up more than one-half the book. The chapters devoted to commercial credits give information of much value to the banker. The American Bankers' Association would do well to recommend this work and Patten's "Practical Banking" as text-books in their proposed schools of Finance and Economy.

An octavo volume of 435 pages, bound in cloth. Price, $2.50 a copy. Will be sent postpaid on receipt of price by Bradford Rhodes & Co., 78 William street, New York.

The Economy of Capital, or Gold and Trade, by R. H. Patterson, Author of The New Revolution, or the Napoleonic Policy in Europe; Essays in History and Art, Etc., Amended Edition. William Blackwood & Sons, Edinburgh and London, MDCCCLXV.

Mr. Patterson and his writings are not popularly known in this country, though his wide range of information, his force of logical deduction and his clear and entertaining style have made a deep impression on the few who have read his works on financial and economical subjects. In his own country he has long been appreciated as a writer of depth and brilliancy, of great penetration and range of information, and one who treats his subjects with a consciousness of strength that is altogether free from presumption and dogmatism. The present volume is worthy of the most careful study, at the present time when the very foundations of our financial conditions are being shaken by new theories based very largely on the self-interest of classes. The opening chapters, "Thoughts on Gold," "What is money," "Effects of Gold discoveries on the World," "Economy of Capital," afford to the student of finance and economy, in a succinct and simple form the basis on which all the practice of monetary science must start. The author's wide range of knowledge, his very accurate and definite historical information particularly fitted him for elucidating the various phases of modern finance and banking, which is only mysterious because it involves so many spheres of business activity, both in the present and the past, that the observer does not usually perceive but a portion of the field, and that portion moreover, which he fancies concerns his own interests. Mr. Patterson is not the advocate of any school; he is neither for the gold standard, for the silver standard, nor for the double standard. He views the objects, purposes, and the nature of money; the substances of which it is composed and the conditions under which it comes into being, from a broad philosophic standpoint. The purveyors of half truths in every part of the field may each find something to sustain his particular theory of finance. The book was written soon after the great gold discoveries in Australia and California and before the immense increase in the production of silver that has astonished the world since 1878.

Writing before the closing of the mints of the Latin Union and the United States to the freecoinage of silver, he indicates unmistakably, in his remarks about what would ensue if a demonetization of gold were to take place, what has actually followed the demonetization of silver.

On page 22 he says: "Demonetize gold and what would follow? Probably two-thirds of all the gold in use among mankind is employed as money; and if the Western world were for the sake of uniformity, to adopt the currency of the East and resolve that gold should not be received as money any longer, would not the value of gold fall immensely? The moment the news reached California and Australia would not the mines be abandoned? * * * Silver would be immensely increased in value and gold would descend from its high estate to the rank of an ordinary metal." This statement about gold describes exactly what has happened to silver since its demonetization. But the author is not bound hard and fast to the belief that money must either consist or be founded on the precious metals. He intimates that their places could be supplied by cheaper material but leaves the solution of this to posterity. Civilization is dependent on the invention of money. The adoption of gold and silver as the material for it, thereby rendering them precious metals, may have been more expensive than would have been the selection of a material more easily procured, but the price paid, though high, has been warranted by the results. To be more or less universally accepted by agreement is the sole necessary property of money.

Before this was understood the selection of material having the largest acceptance was necessary, even if these materials have proved costly. Since this has become understood the tendency has been in the direction of using the precious metals less and less and cheaper materials more and more. The machinery of banks and credit, has economized the use of the expensive counters of gold and silver.

If any criticism were to be made of the theories of the author, it is perhaps, that he does not take into consideration the necessity that constantly presses upon the commercial world to guard against breaches of agreement. In trade either between individuals or between nations, advantage is sought to be taken of one by the other so far as it can be without resulting in non-intercourse. Honesty is the best policy because without it there can be no trade, and where there is an absolute fulfillment of engagements, trade will thrive most. Without some advantage, or supposed advantage there would be no exchange. But the most successful individual is the one who with true foresight gives the greatest advantage to the one he deals with, compatible with a proper gain to himself. There is, notwithstanding this well-known truth, a large modicum of fradulent inclination that has to be constantly combatted, and it is this combat that causes many of the expenses pertaining to the economic system. If all men or even governments were absolutely honest, or if the honesty of either could be absolutely enforced by law, without still greater expense, it would be very possible to adopt wood or paper by a grand agreement among mankind, as the material for money and to get rid of the expense of maintaining counters of silver and gold. We do not think the author recognizes this principle sufficiently, and is therefore rather inclined to dwell in the region of that pure reason which may be the sole guide of the inhabitants of a philosophic Utopia, but does not yet control the conduct of the average man or nations. We beg our readers who are interested in economics to read this book, as nowhere are the underlying truths of the so-called "dismal science" made so clear and interesting.

An octavo volume of 456 pages. Price, $3.50 a copy. For sale by Bradford Rhodes & Co., 78 William street, New York.

Banking in Mexico.—Banking is in the first days of its infancy in Mexico. The insecurity of the country in the days of the revolutions and until about twelve years ago was such that the people buried their money instead of depositing it, and there are to-day millions upon millions of dollars in the hands of the rich haciendados which are buried in the ground or hidden away under the walls of their homes. These men have for years been making money and hoarding. They don't know what interest means, and they sell their crops and work their mines year after year and pile away the surplus. It is the same with many of the poorer classes. Some of these are richer than they look, and in the coffee districts men die who were supposed to have nothing and from $50,000 to $100,000 are discovered about their mud huts. This represented the accumulations of years, and the secret of its existence was communicated from father to son. Every old Spanish family has its strong box, and American merchants and drummers say that appearances are very deceitful and that it is difficult to tell how rich one of these rough looking farmers is by his clothes.

BANKERS' OBITUARY RECORD.

Bennett.—Robert G. Bennett died at Beverly, Mass., February 27, aged seventy years. He was Treasurer of the Beverly Savings Bank at his decease.

Bishop.—Thomas Bishop. Receiving Teller of the National Bank of the Republic of New York city, died February 8, seventy-one years of age. He had been connected with the bank for thirty-eight years.

Blake.—Arthur Welland Blake, senior member of the firm of Blake Bros. & Co., bankers and brokers, died at his residence in Brookline Mass., February 28, fifty-two years of age. He owned one of the most beautiful estates in Brookline, and was one of its wealthiest citizens. He was a member of the Boston Stock Exchange, and the Union Athletic, St. Botolph, Eastern Yacht and Country clubs, and of the Union Club of New York. When twenty-one years old he went into business with his father, who had established the firm of Blake Brothers & Co.. and remained in that business up to the time of his death. Mr. Blake had been an invalid for the last two or three years, during which time he did not take any active part in his business.

Burt.—William A. Burt, Cashier of the First National Bank of Hurley, Wis.. died suddenly January 16.

Chapman.—Eustace C. Chapman, President of the Rockville (Conn.) National Bank, died January 24, after a brief illness, fifty-one years of age. He was made Cashier of the bank in 1872 holding the position until 1891, when he was elected President.

Cofrode.—Daniel R. Cofrode died at his home in Pottstown, Pa., February 3, aged fifty-two years. He was a member of the firm of Cofrode & Evans, contractors and engineers of Philadelphia, Pa., and also President of the Citizens' National Bank of Pottstown from the date of its organization.

Conkright.—Hon. Wm. H. Conkright, ex-member of the Legislature and a leading citizen of Richwood, Ohio, died February 11th. He was President of the Deposit Bank.

Dunn.—John F. Dunn, a prominent citizen of Ocala, Fla., died February 12th. At his decease he was President of the Merchants' National Bank.

French.—Francis Ormond French, ex-President of the Manhattan Trust Company of N. Y. city, died February 25th, aged fifty-five years. In 1865 he entered the banking firm of Samuel A. Way of Boston, and later that of Foote & French. In October, 1870, he came to New York to enter the firms of Jay Cooke & Co., and Jay Cooke, McCullough & Co. After the Cooke failure Mr. French represented the London firm of McCullough & Co. and Melville, Evans & Co. in New York. In 1874 he, with others, secured control of the First National Bank of New York, and engineered the funding operations of United States loans. In 1880 he retired from business, but in 1888 accepted the presidency of the Manhattan Trust Company.

Hatch.—Rufus Hatch, formerly a prominent Wall street operator and member of the New York Stock Exchange, died February 23, sixty-one years of age.

Hemenway.—Charles P. Hemenway, member of the firm of Hemenway & Browne, engaged in the South American trade in Boston, Mass., died January 26, seventy-four years of age. He was Vice-President of the Massachusetts Hospital Life Insurance Company and a Director of the Phenix National Bank of New York city.

Leary.—Arthur Leary, a well-known citizen of New York city, died February 22d, in the sixty-third year of his age. For many years he was engaged in the shipping business, amassing a large fortune. About twenty years ago he became Vice-President of the National Park Bank of New York, holding that position at his decease. He was also President of the Mutual Gaslight Company, a Director in the Illinois Central Railroad Company, the Pacific Mail Steamship Company, the Manhattan Life Insurance Company, and a Trustee of the Emigrant Industrial Savings Bank.

Lord.—George C. Lord, a leading Boston (Mass.) capitalist, died February 23, aged seventy years. He was prominently identified with railroad interests and for many years was President of the Boston and Maine Railroad. At his decease he was a Director of the Second National Bank of Boston, the Boston Safe Deposit and Trust Company, the American Loan and Trust Company and the John Hancock Fire Insurance Company.

Stickney.—John N. Stickney, a leading citizen of Rockville, Conn., died March 1st, seventy-five years of age. At his decease he was Treasurer of the Rockville Gas Company and Vice-President of the Rockville National Bank.

Taylor.—William J. Taylor, Cashier of the Farmers' National Bank of Amsterdam, N. Y., died Suddenly January 30, fifty-nine years of age.

Titcomb.—General William H. Titcomb died at Rockland, Me., January, 16, aged seventy-three years. He became Cashier of the Rockland Bank, at the time of its organization in 1851, but left the position for one in the Rockland Savings Bank with which institution he has ever since been connected.

Vanderbeek.—Isaac I. Vanderbeek died in Jersey City, N. J., February 8, eighty-four years of age. He was a member of one of the largest lumber firms in the country. On the death of the late David Smith he was elected President of the Provident Institution for Savings and held the position at his decease. He was also Treasurer of the Board of Education and a member of the Board of Finance and Taxation for several years.

RHODES'

JOURNAL OF BANKING.

Vol. XX. APRIL, 1893. No. 4.

THE National banks have frequently been charged with creating a panic by retiring their circulation and withdrawing their bonds in 1881. The action of the banks complained of, was caused by their fears that they would be forced to exchange six per cent. bonds for threes; and they had good cause to complain. This old charge of being the cause of an unneccessary and dangerous panic has been recently revived. A financial writer after describing loosely the proposed legislation of 1881, remarks: "During all this time" (about two months) "the bill had attracted no special attention and excited no alarm, and the prospect was good that it would quietly become a law." * * * "Suddenly a little country bank president took it into his head that the bill if it became a law would compel the National banks to surrender at once their 4 and 4½ per cent. bonds deposited as security for circlation, and accept the proposed new three per cents in their place. He communicated his fears to other bank presidents, the panic among them spread, and on February 23, the next day after Washington's birthday, a considerable number of them began depositing legal tenders in the Treasury and withdrawing their bonds." The consequence of the withdrawal was the wildest excitement on the New York Stock Exchange, etc., etc. This panic lasted two or three days, and was relieved by the Secretary of the Treasury buying bonds for the sinking fund; and finally, although the bill was passed, everything was quieted by the veto of the bill on March 2, by President Hayes. The only thing to be criticized in the foregoing quotation is the unreasonable attempt to lay the blame of the panic on the banks. It is rather curious to find a financial writer of ability and reputation imbued with a blind dislike for banks, worthy of Weaver, of Iowa, or some other backwoods statesman. A short resume of the circumstances will plainly show that the banks were absolutely goaded by Congress into taking the action they did; and Congress, and not the banks, should bear the blame. The object of the legislation of February, 1881, was to provide for the 5 per cent. and 6 per cent. bonds falling due in May and July of that year. The bill provided for the issue of 3 per cent. bonds. All but the fifth section was unobjectionable to the banks. This section provided that after July 1, 1881, no other bonds except the new 3 per cents should be received as security either for circulation or for public deposits from the National banks. It also gave the banks the right to deposit other bonds in exchange for such of their deposited 5 and 6 per cents as were called for redemption or purchase by the Secretary. So far the fifth section did not do much harm. The trouble came with the proviso attached which prevented the banks from carrying out the previous requirements of the section. This proviso repealed the law permitting them to deposit legal-tender notes and withdraw their bonds, and compelled them before they could regain their bonds to gather up and restore their own circulation scattered in all directions in the hands of the public. The banks held over forty-nine millions of sixes and over one hundred and six millions of fives. Under the bill they could not reduce the amount of their bonds until they had performed the tedious task of gathering up their own circulation.

The banks holding $210,000,000 of bonds about to be called were thus forced to purchase threes and substitute them for fives and sixes, or else be placed in the hands of receivers to wind up their affairs. The fours and four and a halfs were not involved in the matter at all, as the quotation asserts. Neither was there any such scare on the part of the banks, as is asserted, when only eighteen millions in legal-tender notes were deposited to withdraw twenty millions of bonds. If there had been any real scare or concerted action, nearly two hundred millions of legal-tender notes would not have served to withdraw the sixes and fives on deposit. The four days' panic of 1881 might well, if the bill had become a law, have lasted all summer, the banks being compelled to borrow money to buy threes to replace their sixes and fives.

The whole trouble grew out of the attempt of Congress to mete out to the banks in refunding operations a different treatment from that accorded to the rest of the public. The banks did what they thought best to save themselves from loss. The self interest of each bank impelled it to act at once, and this with the shortness of the time gave an appearance of concerted action when there was none.

PROFESSOR H. S. FOXWELL, of the London University, on February 22, appeared before a meeting of Members of Parliament interested in the silver question, and made a most interesting speech, in which he adduced in an orderly and scientific manner the arguments in favor of the double standard, of both silver and gold, as against the single gold standard. His argument was of a very different character from those usually heard on the side of silver, which, though pretending to support the double standard, in reality tend to sustain the doctrine of a standard of the cheaper metal, whichever it may be at any time. It was a most able presentation of the facts sustaining the necessity and possibility of a wider metallic money basis than that afforded by the single gold standard. The Professor claimed that the teachers in the English Schools of Political Economy were agreed that the theory of bimetallism was correct, but that the policy and necessity and justice of the reform was not for them to decide. This decision must be made by public opinion.

A consequence of the demonetization of silver since 1873 by the Western nations, has, said Mr. Foxwell, been a most serious fall in prices, unprecedented in the world's history, being equal to 35 per cent. and this represents a corresponding rise of 50 per cent. in the purchasing power of gold. This appreciation of the standard has been unfavorable to debtors, but it is a mistake to suppose that it has been for this reason favorable to creditors. On the contrary, the latter have lost by failures and repudiations more than they have gained from the appreciation of the standard. The remedy was a return to the old joint standard of the two metals at a fixed ratio to each other to be fixed by international agreement. This would again give the debtor permission to pay in whichever metal he might choose, at the ratio fixed, and, with the enormous mass of fixed debts and obligations, the demand of debtors for the metal temporarily more plentiful would always maintain the ratio. He also remarked that all that bars the road to reform is the attitude of England. He thought it incumbent on the Government to send delegates to the Brussels Conference in May to endeavor to arrive at an agreement.

The foregoing is the bimetallic argument in brief, as stated by one of its ablest advocates. It exhibits a very different attitude from that shown by the American Bimetallic League, which denounced "all and any consultation with foreign nations, as to what the money or currency of the United States should be." Mr. Foxwell recognizes the fact that the dislocation is now so great that it can only be settled by an international agreement, and that the international agreement is not dependent immediately upon the correctness of the bimetallic theory, but upon the policy, necessity and justice of a reform to be determined by public opinion. It may be added that the arguments for the correctness of the theory of bimetallism are not by any means regarded as conclusive by thoughtful gold standard advocates; but they are worthy of the deepest consideration, and not to be confused with the childish argument of the American Bimetallic League—that the United States is a great country and should declare independence in financial matters of the laws of nature, as the Colonies did of the rule of King George.

PRESIDENT CLEVELAND'S INAUGURAL ADDRESS contains the following sentence: "It cannot be doubted that our stupendous achievements as a people, and our country's robust strength have given rise to a heedlessness of those laws governing our National health, which we can no more evade than human life can escape the laws of God and nature." Then the President took up the subject of the currency. The JOURNAL has several times within the last two years had occasion to speak of those optimists who affect to despise the necessity for a choice of methods in finance; who virtually reply in regard to any animadversion upon the present laws governing the finances of the United States, "this is a great country." These men point to the panics of 1817, 1837, 1844, 1857, most of them aggravated, if not wholly caused, by the condition of the currency due to unwise financial legislation, and triumphantly show how the nation has risen superior to them all, like Atlas from the mother earth, with renewed strength. And now the followers of this school, affect to see nothing serious in the continued operation of the Silver-Purchase Act, nothing serious in the reduction of the Gold Reserve of the Treasury. They say let the silver standard come, let gold leave the country, the nation will not only survive but continue to thrive. To carry out the President's figure, it may be agreed that the body politic is strong and robust, that it has the vigor and vitality of youth, and has, up to this time, surmounted the greatest dissipations by reason of an excellent constitution. Would it not, however, have been still stronger now, less full of symptoms of concealed weakness, if there had in the past been a more careful conservation of its health, a wiser development of its resources. Even if it be admitted that it would have been almost impossible to have heretofore carried on the affairs of the country in a way different than they have been managed, it is no reason that bad methods, adopted under the plea of necessity, should continue to be used when the same necessity no longer exists. If the country is so rich and powerful that it can withstand the influence of bad methods of finance, this is much more a reason why it should be able to afford the very best methods. Individuals and corporations recognize the value of employing the best tools and the most approved inventions; why should not this plan be followed in the management of the finances of the country? Most certainly no wise individual or corporation would say: "I am strong and vigorous; it therefore makes no difference whether I waste or save." Since 1837 the gold dollar has been the standard of metallic money upon which the business credits of the country have been founded. For the seventeen years from the suspension of specie payments in 1862, until their resumption in 1879, the gold dollar was the dollar to which all the fluctuations of the paper currency during that period have been referred. The immense industrial interests built up in the United States during the last thirty years, have issued their credit obligations on the gold dollar. Most of the outstanding bonds of the United States and of most of the States have been issued under laws enacted when there was no other coin dollar than the gold dollar, or under laws specifically requiring payment in gold dollars. The immense mass of capital now invested in bonds, if not all that in stocks, would be shaken to its foundations by the substitution of the silver for the gold dollar—to say nothing of the unsettling of the nominal values of all other species of property. The gold standard is the standard upon which the wealthy and enlightened nations do business. Their unanimous action in this direction springs from the advantages they derive from the use of this standard. To prove therefore that the United States can manage to exist or even to thrive to some extent on an inferior monetary system, does not convince that the United States should give up a good system for a worse. It is to be hoped that the advice of the President not to strain or abuse the resources of the country will have the effect so well-timed and weighty an utterance deserves.

THE HON. CHARLES M. PRESTON, Superintendent of banks of the State of New York, has, as was mentioned last month, suggested a plan for reconciling the advantages of State banking systems with those of the National system. Each State is to enact its own laws relative to the organization of banks and to the business of discounting notes, receiving deposits, and to all other powers exercised by them, also in regard to bank examinations and liquidations and receiverships, in fact, in reference to the whole operation of the banking business, except those relating to the issue of circulating notes. These general banking laws of the States are to conform generally to the principles of banking as educed from experience, although not necessarily uniform in all particulars. To banks in any State organized under such a law, approved by Congress, the Comptroller of the Currency is to issue circulation, upon the deposit of satisfactory security, either United States bonds or State bonds, or approved city or municipal securities. As the World's Congress of Bankers and Financiers is to be held in Chicago, beginning June 19 and extending over several days, the JOURNAL suggests that the officials having charge of the enforcement of the present banking laws of each State should meet on that occasion and have a day set apart for the expression of their views on the relations between State and Federal Banking and suggestions as to the issue of circulation by banks.

Later in the year the American Bankers' Association will also meet at Chicago, and we beg to suggest this subject as one which its members might discuss, to the very general interest of the banking community and the public. It is hoped that both of these meetings will be productive of practical results. By thorough organization the bankers of the country would be able to mould the financial policy of the country, and we hope they will be able to do so. Cranks and wild theorists should have no part in this great work.

MR. RODERICK H. SMITH, in a pamphlet entitled "The Silver Question Settled," proposes a bill of twenty-four sections to be enacted into the law of the land. Inasmuch as the very gist of this measure is contained in the first section, which provides that 23.22 grains of pure gold shall continue to be the unit of value of the United States and shall be termed a dollar, it does not appear that it will settle the silver question at all. All the rest of the bill is devoted to keeping certain notes, of certain denominations in dollars, based on deposits of silver bullion, equal to the same number of gold dollars that their denominations call for. This is effected by making the notes always redeemable in an amount of silver bullion equal at the market price for silver to the same number of gold dollars in the denomination of the note. It need not be denied that the machinery of the bill would accomplish this. In this respect, however, the measure only effects, in a way perhaps more economical to the Government, what is already effected under present law, that is, the maintenance of the gold standard in a manner consistent with the use of considerable silver. A real settlement of the silver question in the minds of those who keep this question alive, can only be accomplished by some law that will permit the free coinage of silver bullion for private parties into legal-tender coins in the same manner as the law now permits the coinage of gold bullion into legal-tender coins, regardless of the market value relation between the two metals. Under such a law it would, it is held, be impossible to maintain the parity of the present silver dollar and the present gold dollar. The advocates of silver are unwilling to let gold measure silver; they desire what is called the double standard, but in reality what would always be the standard of the cheaper metal, which, at present, is silver.

Mr. Smith's plan would, were sufficient storage-room found, apply as well to notes based on deposits of wheat, or lead, or copper, or any other product not too perishable. A simpler form of carrying out the same idea would be to have the Government buy the silver from producers at the market price and pay for it gold notes—selling the silver, as it could, for gold, to anybody wanting it, and pocketing the gain or loss which might accrue. The Government could do this, not only with silver, but with wheat, or cotton, or other products of the country, thus realizing the ideas of Mr. Bellamy.

THE ADDRESS OF PROFESSOR EDMUND J. JAMES, Ph.D., before the convention of the American Bankers' Association, at San Francisco, has been published in a pamphlet entitled "Education of Business Men, No. III." Prof. James was sent abroad by the Association to collect statistics as to Schools of Finance and Economy in England, France, Germany, and other foreign countries, with the object of comparing the methods pursued with those of the Wharton School of Finance and Economy of the University of Pennsylvania. The results of Professor James' journey are given in this pamphlet. The energies of the Association have been turned in this useful educational direction mainly through the instrumentality of Mr. William H. Rhawn, its honored President. This gentleman having, in the early portion of his career, felt the lack of a thorough business education, is evidently in earnest in his desire that the youth of the present day shall not be in want of every facility. Finding the Association, in the abeyance of live banking questions, losing the interest of its members, he has infused new energy into its work by this educational propaganda, which is looked upon by the banks of the country as a means of furnishing them in the future with officers and employees, much superior to those who now manage their affairs. The pamphlet will be sent to the colleges and high schools of the United States, as an incitement to the introduction of departments of higher business education. This work has already been begun in many of the schools and colleges of the country, and, if wisely carried out, cannot fail, within a few years, to greatly modify the crude ideas of finance that now do so much harm when they find voice in the Legislatures of the States and in the halls of Congress.

THE STATE OF NORTH CAROLINA BY ITS GENERAL ASSEMBLY has passed a very exhaustive banking law, which requires to be ratified, as to two of its most important provisions, at an election to be held ninety days after the repeal by Congress of the ten per cent. tax on the issues of State banks. The whole Act goes into effect upon this ratification. The two provisions requiring the vote of the people under the State Constitution are, first, the issue of coupon bonds, to run fifty years at four per cent. interest, and second, the State guarantee of the bank notes authorized by the Act.

The law is modelled upon the National banking law, with certain modifications to remedy the real or fancied defects of the latter. It restrains all banking, other than that provided for, within the State, except National banking, and extends to individual bankers the same privileges and restrictions as to corporate banks.

A Comptroller of banks executes the law. Examinations are provided for, the salaries of the examiners being paid by the State, and traveling and incidental expenses by the bank. The examiners' reports are, like reports made to the Comptroller by the National banks, to be published. The Comptroller possesses power, as in the National Bank Act, to close a bank for irregularities, but creditors or stockholders having an interest of $500, can also appeal to the courts for an examination. This feature is no doubt introduced to obviate the criticism that the National Bank Act does not protect stockholders sufficiently. Loans are restricted to five per cent. of capital. The circulation is to be issued to the extent of the paid-in capital, based on State of North Carolina or United States bonds, or upon mortgages on land in the State of North Carolina, the mortgages not to exceed one-half of the assessed value of the land. Circulation may be equal to one hundred per cent. of the securities deposited, and is issued under restrictions as to printing and signing the notes analogous to those of the National banking laws. The expenses of the office of the Comptroller, including examinations of banks, are to be paid from a safety fund accumulated from a tax of one per cent. annual tax on circulation. This safety fund also is to be used to redeem the notes of insolvent banks, the payment of which the State guarantees. The notes are made a legal-tender to this extent, that if tendered by a debtor, the refusal to accept entitles the debtor to a stay of two years on the judgment thereafter obtained. This feature looks unconstitutional. The banks must take each other's notes, and the latter are receivable for all debts and demands, taxes, etc., due the State.

In commenting on this law it seems improbable that the United States law, taxing State bank circulation, will be repealed except on condition, as suggested by Superintendent Preston of New York, that the States each and all adopt some uniform banking law under which a uniformly secured and guaranteed circulation shall be issued by the Federal Government. This North Carolina law, while excellent in most particulars, is too local in some of its provisions to be adopted by all the States. The mortgage security for circulation, although restricted to one-third of the whole issue, is unsafe, because it tempts an undue creation of mortgage, tending to render such security unsalable in times of emergency. And even if safe in North Carolina such a provision would not be safe in all the States and Territories. The law is an indication of the general soundness of the banking views in the State. If a banking measure could be passed in each State and Territory, for tentative purposes only, these bills would be an excellent index of the state of banking culture throughout the United States. The North Carolina law errs rather in too much security than too little. It provides for a safety fund, which of itself would be amply sufficient for circulation under a law so well guaranteed in other respects, and in addition requires the deposit of bonded security. The State is thus well protected in giving the guarantee which supplements the other two layers of safety.

THE FREE GOLD IN THE TREASURY has been the object of much solicitude during the past month. Great importance has been attached to the amounts of gold furnished to the Secretary by banks in different cities where there are United States Mints or Sub treasuries. This timely relief afforded by the banks was due to the revival of the Spring business of the country, occasioning a large demand for notes of small denominations. The people of the United States are well aware of the superior convenience of paper money, and notes, when they are well secured, will for the purposes of business be taken in preference to coin, whether of gold or silver. When business increases therefore there is an increased demand for notes of ten dollars and under, and it was much to the advantage of the banks requiring these notes to meet the wants of their customers to place gold in the Government Mints and Sub-treasuries. and receive small notes free of express charges in return These supplies of gold were received by the Treasury from banks in New York city, Denver, Chicago, New Orleans, St. Louis and Cincinnati. The Secretary declined offers of gold where it could not be delivered without expense at the Mints or Sub-treasuries. Otherwise the Government would have been paying a marked premium for the gold. As it was the Government paid the expense of the shipment of small notes to the various Sub-treasuries and Mints. This gave a business advantage to the banks which otherwise would have had to obtain the notes from their correspondents in New York or Philadelphia.

THE SOLICITOR-GENERAL OF THE UNITED STATES, it appears, prepared an opinion at the request of the Attorney-General, in regard to the so-called gold reserve of $100,000,000, first mentioned in the Act of July 12, 1882. The Solicitor General held that there is no requirement of law, if United States bonds are issued to maintain specie payments, that they shall be redeemed in gold solely. He held they might be redeemed either in gold or silver legal-tender coin. He also held that legal-tender notes are redeemable in either gold or silver coin, and that there is no positive provision of law requiring the $100,000,000 gold reserve to be kept intact. This opinion was never delivered. Why it was asked for at all, and the exact date when, have never transpired, though it looks very much as if it was a part of the plan to placate the silver States before the election, and that it was not delivered and given out because the International Monetary Conference appeared to be the better expedient. The opinion is evidently that of a man entirely new to the history and traditions of the financial legislation of the country. It is a crude and ill-considered first-glance reading of the surface of the laws.

The Act for the specie redemption of legal-tender notes, known as the Act for the resumption of specie payments, was approved January 14, 1875. There was at this date no full legal-tender standard silver dollar among the coins of the United States. The only legal-tender coin was gold coin. On February 28, 1878, was approved the Act authorizing the coinage of the full legal-tender silver dollar of 412½ grains nine tenths fine. These coins were to be a full legal tender for all debts public and private, except where otherwise expressly stated in the contract. Inasmuch as there was no other United States legal-tender coin in existence in 1875 but gold coin, the engagement then made to redeem the legal-tender notes in coin on and after January 1, 1879, was an express contract to redeem them in gold coin. The credit of the legal-tender note from that time on was based on that engagement. And this view was acted upon by Secretary Sherman when he sold bonds for gold coin with which to carry out this contract. And the gold thus procured, with other gold accruing from customs, was held in the Treasury as a reserve for the purpose. The contract of 1875 and the holding of the gold reserve to carry it out is affirmed by the Act of July 12, 1882, twelfth section. This section authorizes the reception of gold coin on deposit by the Secretary of the Treasury, and the issue of gold certificates therefor, with this proviso: "That the

Secretary of the Treasury shall suspend the issue of such gold certificates whenever the *amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes* falls below one hundred millions of dollars."

What is the meaning of this section? The holders of United States notes, who desired to procure gold for them, were enabled by means of gold certificates to leave their gold in a safe place of deposit. The gold reserve or free gold had always been much in excess of one hundred millions of dollars. This last sum was fixed as the point at which the transfer of gold to private parties by means of the convenient gold certificates should cease, and a check put upon the presentation of legal-tender notes for redemption by compelling the inconvenient gold to be taken for them. In other words, in 1882, after the Act authorizing a silver dollar was passed, Congress recognized the fact that legal-tender notes were redeemable in gold coin, took means to prevent too great a diminution of gold coin, by saying that the brakes should be put on when the gold coin and gold bullion in the Treasury *reserved for the redemption of United States notes* fell below one hundred millions of dollars.

A fair reading of the resumption Act of 1875, the silver dollar Act of 1878, and of Section 12 of the Act of 1882, warrants the conclusion that legal-tender notes must be redeemed in gold coin, and that one hundred millions of gold coin and gold bullion should always be held as a reserve. This does not mean that should an emergency arise the reserve may not be reduced below one hundred millions, but that when it is reduced it should be restored to that amount. If bonds are sold for coin, and gold coin is expressly stipulated in the contract, there is no reason why the holders of them should fear that they would be paid in silver coin, unless they believe the United States will deliberately repudiate its contracts.

THE SAVINGS BANK COMMISSIONERS of the State of Massachusetts, in response to a resolution of the Legislature, dated May 17, 1892, have reported a bill to enable National banks doing business in the State to reorganize as State banks, to the Committee on Banks and Bankers. The hearing before the Committee brought out the stock objections to bank legislation of any kind. The cranks were on hand. "Wildcat currency," "in the interest of the greatest of monopolies—the money interest," "legalized robbery," "bank men, bunco men and hogs," and such like amenities were showered on the bill. Its main feature was to issue circulation under State control, to the extent of 90 per cent. of the market value, but not to exceed 90 per cent. of the par value of securities deposited. This feature of the bill, if enacted, could not, of course, go into operation until the repeal of the ten per cent. tax on circulation. While this bill is not satisfactory, some bank legislation is necessary. Want of space will postpone further consideration of this legislation until next month.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

THREE ARTICLES ON THE SUBJECT DESIGNATED BY ABOVE TITLE.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

I.

PRACTICAL COMMON SENSE NECESSARY.

In looking over bank statements from time to time, my thoughts have often taken this turn: They show up well; good capital; good surplus; large line of deposits; good cash reserve; I wonder if they can realize a hundred cents on that line of loans and discounts? Now I do not claim any originality whatever for these thoughts. The question that has occurred to me has undoubtedly occurred to thousands and will occur to thousands more. Why? Because if there is any weakness in the true condition of a bank, it will generally be found in that item of loans and discounts. This is the item in which "lame ducks" are carried, and if there is any rascality connected with a bank it is usually concealed in this same item. The question therefore of the value of the paper that makes up this item is a most important one.

I have read with much interest Mr. Cannon's able article on Loaning the Bank's Money on Commercial Paper, which seems to very fully answer the question, How to Determine the Value of Paper Offered for Discount; but as we have on good authority that "in a multitude of counsellors there is safety," some other suggestions along the same line, and supplementary to it, may not be inappropriate. I think that no one can read the article referred to at all carefully, without being impressed with the great responsibility that falls upon a Discount Committee, especially in one of our large city banks.

Let us consider first *by whom* the value of paper offered for discount should be determined. In answer I should say by the coolest, clearest-headed, most practical, and the most common-sense business men on the Board of Directors. I think this is the rule now, not the exception, but in my judgment, if a bank needs such men anywhere it is on the Discount Committee. There is naturally in every bank a dominant spirit. He may be such because he owns fifty-one per cent of its capital, elects such Directors as suit him who in turn elect him to such office as may tickle his fancy. He may be fitted for it, or it may be he could drive a coal cart with more acceptance to every one else concerned, but he is *the* man. On the other hand this dominant spirit may be such by right of long years of faithful service, taking the lead because he knows how to take it and because he has the confidence and respect of every one with whom he has business relations,—quick, energetic, always obliging when at all consistent with the best interests of his bank, courteous, a man among men. When a bank is so fortunate as to have just such a man on its staff, is it not, however, too much the custom to leave the question of discounts to a great extent to his judgment alone, although his may be considered the best on the Board? I think this is more true perhaps of the smaller country banks than of the larger city institutions. As it is probably almost universal that the Discount Committee is composed nominally of more than one man, so let it be really. Let there be no dummies on it. As to its *personnel:* As safe men say that the best burglar-proof safe is none to good, so I think that the best talent a Board of Directors is blessed with is none to good for its Discount Committee, and while I believe that many such committees are doing all that in their power lies to arrive at the true worth of paper offered for discount, I also believe, with many others, that their bank's exemption from serious loss in consequence of poor paper is more the result of good luck than of good management.

With our Committee made up of two or more men, as the size of the bank and its particular needs may require, we come directly to the main question. I would advise that all parties applying to a bank for credit for the purpose of negotiating their paper be required to make a *written* application on a form approved by the bank. In making up the form which I herewith submit (see form A) I have used as a basis Form "B" in connection with the article by Mr. Cannon before referred to, making such changes as have suggested themselves to me. I think it better that one general form be used by all applicants for credit, though it may be urged that the form given goes too much into detail for general use and may contain some questions to which a would-be borrower might return for an answer "None of your business;" yet I see no reason why a house which intends doing a straight, legitimate business should refuse to answer any of the questions contained in it, it being understood of course that the information given is in confidence and only for the purpose of showing its financial condition for the purpose of obtaining credit. My reasons for one general form are, 1st: That *all* parties applying for discounts may be treated alike—that the bank officer may be able to say, "We use this blank for *all* applications." 2nd: Many nominally private firms are corporations and many nominal corporations are in reality private firms. It might be a question to the bank whether the applicant was a corporation or otherwise. One blank suitable to both conditions, therefore, seems to me desirable.

In my opinion a Trial Balance of the books of the would-be borrower should invariably form a part of his application. Many valuable hints as to his real condition might thus present themselves to the Discount Committee which would fail to appear in any statements less complete. The purpose for which the loan is wanted ought to be given without hesitation. Some applicant might perhaps resent the question, but if looked at fairly it is one which in my opinion a lender is entitled to ask and have promptly and willingly answered.

I think that all applications, those rejected as well as those accepted, should be placed on file readily accessible to the Committee at any time, for should future applications be made by the same parties the Committee could have the experience of its former investigations, and comparisons between the old and new applications might be of much value in determining whether or not to grant the later one. Of course I do not mean that a record be kept of the applications that begin with, "Say, can you fellers loan me fifteen dollars for thirty days?" but I *do* mean that a record be kept of those which the Committee has taken the trouble to investigate, and those rejected should have endorsed thereon the reasons for such rejections.

Supposing that all the answers to the questions on the application blank have been thoroughly digested by the Discount Committee, we suppose, too, that they have looked up, or will at once look up, the credit rating of the firm or company in question, in one or more Mercantile Agency books. If their own investigations agree, generally speaking, with the ordinarily very accurate Mercantile Agency reports they can presume at least that they have arrived

... collateral as in such cases it is generally the value of the collateral itself, not the standing of the firm, that determines whether or not the loan is made.

I have said that the agency Manager should not give the names of the banks holding paper about which he has an inquiry. There are times of course when it would be very desirable that a bank, holding paper of a firm about whose standing there was some question, should know who were its companions in misery. In such cases the Manager would act as a go-between and, if the other creditors among the members so desired, their names would be given, city institutions. As it is probably almost universal that the Discount Committee is composed nominally of more than one man, so let it be really. Let there be no dummies on it. As to its *personnel:* As safe men say that the best burglar-proof safe is none to good, so I think that the best talent a Board of

[illegible] whether [illegible] grant the later one. Of course I do not mean that a record be kept of the applications that begin with, "Say, can you fellers loan me fifteen dollars for thirty days?" but I *do* mean that a record be kept of those which the Committee has taken the trouble to investigate, and those rejected should have endorsed thereon the reasons for such rejections.

Supposing that all the answers to the questions on the application blank have been thoroughly digested by the Discount Committee, we suppose, too, that they have looked up, or will at once look up, the credit rating of the firm or company in question, in one or more Mercantile Agency books. If their own investigations agree, generally speaking, with the ordinarily very accurate Mercantile Agency reports they can presume at least that they have arrived pretty nearly at the truth.

There is a further step, however, that I would recommend for the larger cities at least, and that is what I will call a Bankers' Credit Agency, the object of which would be the mutual protection of the banks composing it. It might be connected with or be a part of the Clearing-House, or it might be a separate organization. Its operations would be about as follows: Brown, Smith & Jones apply to the Manhattan National Bank of New York for a loan of $20,000 on their paper. The bank is satisfied that their paper is good and makes the loan. It then reports to the Manager of the Bankers' Credit Agency that ti has made a loan of $20,000 to Brown, Smith & Jones. B. S. & J. in a few days think they can use $15,000 more to advantage and apply to the Bank of Gotham for that amount. This bank after making investigations, being also a member of the Bankers' Credit Agency, inquires of its Manager if the firm in question is reported as having any outstanding paper. He replies that there is a loan of $20,000 against it, not giving, however, the name of the bank that had reported the loan. The Bank of Gotham thinking that B. S. & J.'s credit is good for $35,000 grants the application, the amount of which it also reports to the agency. Before the maturity of their first note B. S. & J. think they have "just got to have" $10,000 to tide over a certain matter. Not wishing to give the impression to either the Manhattan National or the Bank of Gotham that they are pressed for money, they apply to the Hawaii National Bank, a new institution just opened for business, for that amount. The Hawaii investigates, thinks that B. S. & J. are abundantly good for $10,000, but having just been enrolled as a member in good standing of the B. C. A. asks its Manager if the firm of B. S. & J. are reported as having any outstanding paper and is told that there appears to be $35,000 against them. The Hawaii thinking that $45,000 would be excessive, declines the application and perhaps saves its money. If Brown, Smith & Jones should use an application blank similar to the one shown herewith (See form A), and *should fill it out correctly*, there would be no necessity of a Bankers' Credit Agency, but sometimes some firms with as good a credit as B. S. & J. have forgotten to state *all* of their liabilities, and in such cases the B. C. A. would have its value.

I think the foregoing explains the idea I have in mind. To make the plan a success, every member of the agency should send to its Manager every morning a list of the loans made by it during the day preceding, together with a list of its loans paid during that time, to be by him entered in a book prepared by proper rulings especially for that purpose. I would not include in the above, however, loans made on collateral as in such cases it is generally the value of the collateral itself, not the standing of the firm, that determines whether or not the loan is made.

I have said that the agency Manager should not give the names of the banks holding paper about which he has an inquiry. There are times of course when it would be very desirable that a bank, holding paper of a firm about whose standing there was some question, should know who were its companions in misery. In such cases the Manager would act as a go-between and, if the other creditors among the members so desired, their names would be given, which would naturally lead to a conference which might prove mutually beneficial.

The benefits of this plan could be readily extended beyond the city in which a bank may be located. A large cotton mill in Massachusetts, for instance, applies to the Manhattan National Bank in New York for a discount in a large amount which would not be excessive, however, if the Co. had no other outstanding paper. The bank learns from the Bankers' Credit Agency of New York that the Co. has no liabilities to any member of that agency. By request of the bank the Manager of the agency at New York wires the Managers of the agencies at Boston and Providence asking the amount of liabilities of that Co. to their members, respectively, and in an hour or less the replies are received, and the New York bank knows the amount owing by that Company to the banks in three cities. The plan could be extended indefinitely, but I think enough has been said to give its more important features.

The management of such an agency should be placed in the hands of a careful, prudent man, and one in whom its members had the utmost confidence, for of necessity many facts would come to his knowledge which should be treated confidentially. The expenses necessary to carry on the work of the agency, divided among the several banks, would not be a heavy tax to any one of them.

In presenting the Credit Agency plan I have had in mind, as I have already stated, more especially the banks located in our large cities, but some of its features perhaps could be used successfully in our smaller cities and large villages. The blank suggested for use by applicants for credit may be too comprehensive for general use by our country banks, but as it is but suggestive, it can perhaps be modified to suit the requirements of the smallest bank.

As I have stated, determining the value of paper needs practical common sense to begin with; the necessary investigations through whatever channels they may run also need practical common sense; and after they are completed and found satisfactory, it still needs practical common sense to say for *how much* the loan shall be, whether the application shall be granted in full or only in part. To sum up therefore and to answer the quesion at the head of this article, so that it shall be applicable to every bank, I would say: Use practical, hard common sense together with the very best information obtainable.

NEW YORK. LOANS AND DISCOUNTS.

II.

DILIGENT INVESTIGATION REQUIRED.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

When paper is presented at the bank for discount, it would be well to bear in mind, among other things, that a note is an evidence of debt. The note reads, that a certain time after date, the maker promises to pay "for value received."

He has a financial liability for goods or merchandise and pledges his note in payment, which he either sends to the firm of whom he bought the goods, or else he takes the note and gets some one of good credit to endorse it, and then he goes to the bank and gets it discounted and draws his check in payment of the goods. At any rate he is in debt, and if he has his own note discounted at the bank, the bank thereupon becomes his creditor.

But before the bank discounts that note, it wants to find out the value of the note. Is it a good note? Will it surely be paid when due? Is it a safe investment for our money? Is there any risk in discounting it? What is its value? Such questions as these the bank people ask themselves, and they will do nothing with it until they are answered to their own satisfaction.

Now what do we understand by "value"? What is the actual value of a note offered for discount. Is it the profit the bank will realize by discounting it? Is it the high rate of interest which he is willing to pay that determines its value? Certainly not; on the contrary a valuable note sells low and any individual or company of high credit is favored with a lower rate of interest than those whose credit is not as good.

Gilt-edge bonds for instance sell at a low rate and not only that but they sell at a high premium, which, of course, reduces the profit to the purchaser.

But what is the value of a note? That is the very important thing which we ought to know.

I should say that the value of a note depends upon the amount of risk taken, or it is the margin between the face of the note and the par value or selling price of the collateral pledged as security for the payment of the note. And to put the answer in another sense, I mean to say that the value of a note offered for discount depends upon the ways and means which we can resort to, to get back our money which we have loaned in case of the non-payment of the note. Let me explain my ideas of the value of a note, which are obtained from considerable experience with notes in banking. By risk I mean the chances which the maker has of paying. Suppose two men want to go into the ice business and each will give a note and endorse each other's note and promise to reduce the notes from the profits of the business, and are willing to give a mortgage on the ice house. They have but little money between them. Just look at the risk. If the winter is mild and but little ice can be obtained, how about reducing the principal from the profits? When will they pay the note? What is its value?

Let us suppose now that a note for one thousand dollars is presented for discount, with collateral of twenty shares of bank stock of the par value of one hundred dollars per share. Of course we will examine the stock, and finding the bank in good condition and the stock selling at a good premium we gladly discount the note because the margin is very great. The risk at the least consideration is two to one in favor of the bank.

Now another man asks for discount and his note is endorsed by one of good credit. The financial worth and standing of the maker and endorser are looked into and the investigation shows that both are considerably mortgaged and the remainder of their possessions are in their wives' names. Had the bank better discount this note? What is its value? If the maker becomes insolvent and fails, to rob his creditors, he has things so nicely fixed in his wife's name that he is all right, but his creditors will have to whistle for their money. Now these are not uncommon examples but are such as occur every day at the discount counter in every banking institution.

Having considered the value of paper, we must know how to determine the value of it.

One method used by the bank with which I am connected is a good one, I think, and I do not hesitate to suggest it because it is simple and right to the point.

When paper is offered for discount and we are not posted on the credit of the party offering the same, we ask him kindly if he will appear at the Directors' meeting and give an account of the liabilities and assets of the business. We tell him that all he submits will be in confidence and the result of this interview is generally satisfactory. If the party should feel diffident and does not wish to meet the Board, then the best thing to do is to have him fill out and sign the blank statement given him for that purpose. If he does not fill it out or if he makes false statements, I think we should have sufficient cause to disregard his application by refusing to discount his paper. In my judgment, the value of his paper is suggested by his actions. No person with common sense will refuse to inform the bank just how he stands, when asked to do so.

Having filled out the statement, we should compare it in detail with any other information we can obtain. Look in the tax book (if he is a local resident) and see what he is taxed for. Look in the commercial agencies and see what his capital is and how his credit is rated. But we had better not rely on that alone; it would be better to write the agency for a special rating. Now we should diligently investigate his statement.

The first question in the statement should be in regard to the amount of capital in the business; then how many partners and the amount contributed by each, and for how long a time? What is the estimated worth of each partner outside of the business, and is their property in their own names or in any way hypothecated ? This information is of the utmost importance for many reasons. It may be that most of their capital is borrowed on notes, or else they have mortgaged their property, and probably both, to start in the business. And on the other hand, if the amount paid in by each one is their own money and they have other money outside of the business, then so much the better.

Then the next question in order should be the amount of open accounts and bills receivable. What proportion, if any, ought to be deducted as worthless accounts, which cannot be collected?

These questions, also, are important to ask because it is necessary to find out if they are attending to business by having a diligent collector to look out for those who are delinquent in paying; also, is it the custom to accept notes in payment instead of urging a payment in cash? Next should be asked, when was the last inventory of stock taken? What is the approximate value of the stock on hand; also furniture, fixtures and machinery? Is there any real estate? What is it taxed for? What should it sell for? Is it unincumbered? Mention any other asset and state if any are collateral for any note or debt?

The correct answers to these questions ought to give sufficient light into the assets of any merchant or firm doing a wholesale or retail business.

Now to find out his liabilities, we should ask the amount of bills payable for merchandise or stock and the amount of open accounts on the books. Also, amount payable to banks and any other notes or loans. If there is any mortgage on any real estate, furniture, or machinery, it should be classed among the liabilities, for it is an indebtedness.

Having now obtained a statement of assets and liabilities of the firm or company we can estimate the net worth by subtracting the liabilities from the assets and then we are in a position to judge the value of a note of that firm or company. After we have ascertained the net worth, we should see that there was sufficient insurance upon everything.

If a railroad company or any large manufacturing company should apply for a large loan, I think it would be necessary to investigate the condition of the financial affairs more fully and the statement should be more complicated. But for the average business man or company, I think a statement comprising the questions mentioned will be sufficient.

There is still more information which we ought to know. Suppose it was a grocer's note, that we were discounting, we should want to know if he was a temperate, christian man, and if he understood his business. Does he manage it economically? Has he ever failed? Does he pay all his obligations promptly? And then there is another matter which we ought not to pass over as being of slight importance, and that is, his liability outside of the business. Has he endorsed notes for the accommodation of his friends? This fact is important to know because he might be obliged to pay the note himself and hence from that fact his liabilities are increased and the bank's risk is that much greater when discounting his note, because the ways and means are less in collecting the note in case of inability to meet the note at maturity. We ought to consider this well. I might mention in this connection the financial embarrassment of our distinguished and famous political friend in Ohio, which was caused by endorsing for a friend.

We can draw many valuable lessons from this sad state of affairs; and these and other like questions we should think over because they are important in determining the value of his paper.

In discounting any kind of paper we must consider the kind of business and the kind of men. Is it a one-season business the same as the ice business? Is his business governed by the fashion, and is there anything which will make it unsteady. What are the expenses of the business? Are they legitimate and necessary for the proper transaction of the business? What are his domestic expenses? Are they beyond his means and more than the profits of his business will allow? All of these thoughts should be considered as an important function in determining the value of his paper offered for discount.

If we are to discount the note of an incorporated company we should exercise all due care in obtaining a substantial statement which we ought to investigate diligently. Besides finding out the net worth of the corporation we should ascertain if this note, as well as other notes and bonds, were of legal issue, if they were sanctioned by the Board of Directors. What is their surplus? Have they ever passed any dividends? When are dividends payable and what is the present rate? Do they establish a sinking fund to meet their maturing obligations? What are the salaries and expenses? All of this matter should be sought out and considered.

In fact, to cut the story short, I know of no other way to determine the value of paper offered for discount, than to diligently investigate it. We hear every day of losses and failures of large concerns and the banks and individuals carrying their accommodation paper not suspecting but that the company was all right. If they had investigated and examined the condition of affairs they surely would not have taken the paper.

The custom of discounting paper because it is that of a friend or because public opinion thinks that the maker or endorser is wealthy, is dying away.

I think it is high time that National banks should stop the ruinous custom of discounting "straw paper." We should only discount paper when we find the maker and endorser both worthy of it.

The recent failure of one of the largest, if not the largest, banks in New England reveals the fact that it had discounted notes upon the endorser's name only and many times the maker was not known. A well-known friend of the bank could fill out a note and have his office boy sign it, then endorse and get it discounted. It is to our sorrow when we rely on hearsay credit.

There are exceptions when a rigid examination would not be strictly necessary. For instance: a depositor in the bank wants his note discounted for a moderate sum and short time. The Cashier knows well enough that the man's account is a good one, that he keeps a fair balance on the average, that he gives but few notes and has but few drafts drawn upon him and meets his obligations promptly. From these facts, he might have his application granted because the amount is not large and there would be but comparatively a small risk, but if he kept his account elswhere then it would be wise to look into the matter. It would be prudent to write to the bank where he deposits and find out if they had refused to discount his note, if he had many notes out to their knowledge, and if he paid promptly.

With this note, as with all others, we should look before we leap. In nearly every case, we ought to make it a rule to investigate the credit and character of the paper offered, and ever bear in mind that "all is not gold that glitters." We can only find out its value by testing it.

Every banker who wants to keep up with the times, and be perfected in the science of his business, should read the instructive paper by Mr. James G. Cannon of New York in the January number of RHODES' JOURNAL OF BANKING, and many other very valuable writings which appear in that magazine from time to time. We are in a progressive age; we are out of the old school, and we should try to keep pace with the world's advanced thinkers. We should acquaint ourselves with the modern methods of conducting every department of the banking business.

Learn whom to trust, and teach them to trust us.

INVESTIGATOR.

RHODE ISLAND.

III.

LOANING THE BANK'S MONEY ON COMMERCIAL PAPER.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

From the caption of this article two separate and distinct essays might be written, for there is a distinct difference between determining the value of paper offered for discount and the loaning of a bank's money on commercial paper. Many bankers of first-class reputation consider loaning a bank's money on commercial paper, which apparently is considered to be in your description of it, one-named paper, entirely distinct from discounting commercial or trade paper for customers, and this it really is. Writing as I am in a foreign country I am under a certain disability, not knowing the practice and policy of the National banks throughout your great country, but after all, the general principles of business, whether in the United States, Canada or Great Britain, are very much alike.

In the bank in which I have been trained, we are disposed to draw a very sharp distinction between what we call accommodation paper and trade paper, the former being much the less acceptable of the two, and requiring a much fuller investigation and care in handling than the latter; for when we are asked to lend upon it we have to consider many facts in connection with the purpose for which it is required, by whom it is required, and from what source payments are to be expected. On the other hand the discounting of commercial or trade paper is considerd a very simple matter, inasmuch as when offered by a well-known and respectable firm dealing with the bank, and when it is made to represent the value of goods sold and delivered, so long as the amounts are not excessive and the standing of the parties making it fairly good, very little criticism of the transaction is required.

As to the determination of the value of accommodation paper, or one-named paper, such as is offered freely by brokers to the banks in New York, my opinion is that bankers are at a very great disadvantage in placing any value upon it, or obtaining any information which will enable them to do so. Firms who emit this class of paper and place it in the hands of brokers for sale are generally secretive. The mere fact of their issuing paper in this way is an indication of it. A banker, in the first place, can have no idea of the amount of any one firm's paper in existence. He has no means of ascertaining, nor has the broker for that matter, who offers it, and I am pretty certain that no information on this point would be given by nine-tenths of the firms whose paper is offered. A banker can, in a general way, obtain information regarding a firm from the Commercial Agencies, but bankers have had a sad experience in relying upon such information; for it is a well-known fact that many firms which have failed of late years in the United States, have, up to the very last day, enjoyed the highest rating and the highest report which the various commercial agencies could give them. This information, therefore, cannot at all be relied upon, for the reason that large firms will not give statements of their affairs to Commercial Agencies, nor to banks either, if it can be avoided (*i. e.*, sell their paper without doing so) and there is no possible way by which reliable information can be obtained except from themselves.

As I have said, many of these firms are in good credit and standing until a day before their failure, or to the day of their failure, but when a failure takes place their high standing is found to be a mere shell, covering a thoroughly rotten concern. I will mention one glaring instance of this—that of Baring Bros.,—probably the largest firm of bankers in the world, and whose paper until the very day of their failure was regarded as good as that of the Bank of England itself, and whose acceptances would have been discounted without hesitation by any bank in the universe, and was discounted by a great many of them. Although they were called bankers they were largely in commerce as well; and in citing their case I am not going beyond the bounds of this article in speaking of commercial paper, but I am giving them as an illustration of how utterly unable bankers are to form any reliable estimate of the value of such paper when offered to them. The firm's existence was a long one, their standing very high, and their credit unquestioned. I venture to say the same qualities would characterize a great deal of the one-name paper offered to banks in New York city at the present time. In the case of the Barings it was not until the crisis which would have shaken the world's commerce to its very foundation had been averted that we had any knowledge of the rottenness of the firm, and bankers are in exactly the same position with respect to the vast majority of firms who offer their paper for sale through brokers. I hold, therefore, that no banker can determine the value of this paper, and the only test he can apply to it is, what risk he can afford to take in discounting it; whether he can afford to lose $10,000 or $100,000; would it affect his stability? If he can take these risks, and has money lying idle, he is justified in discounting the paper, otherwise I can hardly conceive that he is. At the same time, it seems to me that the tendency for issuing this class of paper, that is single-named paper, is increasing, and the reasons for it are very plain. So long as a firm can borrow without giving any statements of its position, and without the least trouble more than signing the paper and placing it in a broker's hands, and at a low rate of discount, he will do so. It is an extremely easy manner of financing, and he is enabled to obtain a much higher reputation for wealth than he is often entitled to. He is enabled to carry his clients' accounts in the shape of book debts instead of asking them to settle by notes in the terms of their purchases, thus giving them an idea that he is in a very easy position financially.

How to determine the value of business paper, that is paper for goods sold and delivered, is a comparatively easy matter, and a much safer class of paper for a bank than what I have already mentioned, for the reason that such paper represents commercial transactions, and we suppose that any reputable wholesale or manufacturing firm in selling its goods takes the trouble to ascertain whether the party to whom they are sold is worthy of credit, and when they offer paper to a bank for discount they guarantee not only its genuineness, but that they will make it good in case the various promisors do not. All a banker has to do, therefore, is to consider the responsibility and respectability of the customer and whether or not he is offered an extraordinarily large amount of paper upon the name of any one of his clients.

The Commercial Agencies' books are of use here. They are largely mere directories, and by reference to them a banker can tell whether the firm which made the paper is in existence and whether their standing and reputation as business men is good. The wholesale firm having dealt with them for, say, several years knows their promptness in payment and so on. If the Commercial Agencies report them in good credit and standing, there is very little risk in discounting their paper, in fact it is the best kind of paper that can be taken by a banker. A recent writer in the JOURNAL OF BANKING has made the statement that many firms are abandoning this style of doing business, that is, settling their accounts by notes. I think this must be largely a misapprehension, as I cannot conceive well-ordered business houses abandoning such a comparatively safe and very satisfactory course for one which leaves many opportunities for delaying payment and disputing the correctness of their contracts, as carrying their debts in open accounts leaves them open to.

What I have written so far is assuming that a banker to whom either single-named or commercial paper is offered for discount is not dealing exclusively with the party who offers it. Such business is risky and unsatisfactory in any event, for a banker has no idea in either case what obligations of parties are held by other banks. The banking system of the United States is to some extent faulty, I think, in this respect, that banks there are usually of very small capital, and the law is such that they cannot legally lend more than ten per cent. of their capital to any single borrower. In the country from which I am writing such a state of affairs does not exist. We have large banks with large capital and practically no restriction as to the amount we shall lend beyond what prudence suggests. We are, therefore, enabled to carry accounts of great magnitude, and are safe in knowing that our customer has no obligations of which we are not aware, to one or more banks in our city or town. This the United States National banks cannot be, for the very nature of the National Banking Law. We are frequently called upon in this country to lend to our customers on both classes of paper at certain seasons of the year. Our customers require accommodation for the purpose of getting their product ready for the market, which accommodation later on is retired by the discount of the proceeds of their sale, the one class of business dove tailing into the other in a very satisfactory and profitable manner for banks. The question then as to how to lend the bank's money to these people, or to determine the value of the paper offered for discount, has some difficulties surrounding it, but is more simple than where we are called upon, as in the instance under discussion, by people of whose affairs we have no knowledge.

We have this difficulty. We are approached by a firm which is just beginning business. The question then is, are they going to establish themselves in our confidence? for if we have confidence in a firm our dealings with them are usually plain sailing. We ask ourselves, when such a firm applies to us, what their capital is, in what shape is it, what experience they have had in the business in which they purpose to engage, what the prospects are of the business in the locality; and is their business likely to be profitable; and have the parties the ability and energy to carry it on successfully; then what security they can offer for our advances. If we are satisfied upon these points, we have no hesitancy in opening an account, and take such paper as is offered to us with perfect safety.

We are frequently called upon, however, to deal with another class of account, such as that coming from another bank, and this class is sometimes more dangerous than that of people starting a new venture, as some banks have no hesitation in unloading a bad debt on another, if they can. The first question, therefore, in such a case as this, is what reason a party has for transferring his account to our bank. This requires very careful investigation and considerable reading between the lines. When we are satisfied upon the point that the reason for changing the account is a legitimate one, very much the same test as that applied to the opening of accounts of new business has to be made, and if the various points raised are answered to our satisfaction, and the business stands the test of our judgment and experience, we are in this case, also, tolerably safe in either discounting accommodation paper or trade paper, for the firm, to the full extent for which the volume of their business calls. But in the case of every customer or every commercial account, the business should be brought under review at least once a year, when the firm's balance sheet is produced and the various items of assets scrutinized, and comparisons made with former periods, and, as it were, a new judgment formed on each occasion with respect to their business.

I have said very little so far regarding balance sheets of firms, for the reason that I have not the implicit confidence in balance sheets which some bankers appear to have. To my mind there is too much reliance placed upon balance sheets, and I believe that a clever accountant, or a clever merchant, who desired to deceive his bankers in this respect can do so with the utmost facility, not only when one balance sheet is presented, but on every other occasion, and it is a known fact that it has been done many times. My own ideas are that the true test to apply to a customer's account to determine the safety of advancing the bank's money upon it, is whether the party is doing well, that is prospering in his business. It is, of course, impossible for a banker to know this, unless a firm's whole business is done with him, but when he has the whole account his own observation and knowledge will tell him much more truthfully than the customer himself whether the business is succeeding. He can tell whether it is working satisfactorily by its fluctuations. One season of the year most accounts should be high, and at another low; at some seasons certain names should disappear altogether and at others be very large. A banker can tell whether his customer is renewing his sales paper or enforcing payment of it. If renewals are frequent then he knows that his customer is doing an unsafe business with parties who are not able to pay their obligations at maturity. A banker can tell pretty well from contact with his customer whether he is an able business man, and whether he is attentive and economical in the conduct of his business. He can tell, too, whether his customer in his private life is extravagant or economical, whether he is spending more than the profits of his business justify, or whether he is accumulating his capital, and he can do this notwithstanding any balance sheet which is offered to him, and if on these points he is not satisfied, then he may be sure that he is running more risk with his bank's money than he is justified in doing; for if any commercial firm is not adding to its capital year by year the bank may be positively certain that they are retrograding, and it is only a matter of time when they will fail, and somebody will lose money by them.

As I do not put very much faith in balance sheets there is very little use in making any remarks upon the assets of a customer so far as their value to a bank is concerned, but I would say that open acccounts are much more dangerous assets for a bank to rely upon than bills receivable. That machinery of any kind, especially fixed machinery, patterns, tools, etc., should not be regarded as an asset, at all, that is so far as a bank is concerned, and the same thing would apply to real estate, especially mill and manufacturing property; and where real estate is encumbered by a first mortgage it is utter folly for a bank to consider it at all as an asset. It has been demonstrated over and over again that when banks hold property it depreciates in value immensely in their hands, and that a realization upon it in nineteen cases out of twenty does not more than cover the first mortgage.

I have noticed in many balance sheets recently an item put in as an asset which is utterly unreliable as such—that is, life insurance premiums paid. Of late years life insurance has been worked up to such a pitch and so many persistent and clever agents employed by the companies that many business men are induced to take very large lines of insurance on their lives, very often for the benefit of their wives. The premiums on these are very heavy, and in order to show a large profit they are carried as an asset, and are most delusive. In the first place the profits of the business are largely absorbed in paying the premiums, and in the next place the insurance is of no value whatever to a bank, for various reasons which I need not discuss.

Household furniture is another asset which is sometimes put on a balance sheet for the purpose of showing a larger surplus, but it should not be considered at all by a bank, for the reason that household furniture realizes comparatively little under a forced sale, and in many cases a bank gets into bad odor for, it is often said, "turning a man's family into the street."

On the whole it has been well said, "eternal vigilance is necessary to success." This is true in banking especially, and it is only with the utmost vigilance, the uniform practice of sound judgment and discernment, the closest observation and a thorough knowledge of human nature that a banker can lend his bank's money safely. Even with all these qualifications a banker is often deceived, but if he applies them persistently and discreetly he will be enabled to determine the value of the paper offered for discount and the most prudent way of loaning the bank's money on commercial paper as far as our finite minds can do so. In my opinion no fixed rule can be laid down for either. Every individual account and every casual transaction must be weighed and judged by the circumstances surrounding it.

A trained, clearheaded and competent banker should be able in most cases to determine both questions in practice. No rule can be laid down whereby one not so qualified can do so. NEMO.

CANADA.

The Bloodgood Investment Bill.

The New York State Senate on March 21st passed what is known as the Bloodgood Investment bill, amending the law to permit Trustees of Savings banks to invest deposits in the stocks or bonds of certain cities. The bill names the following cities in which such investments may be made: Boston and Worcester, Mass.; St. Louis, Mo.; Cleveland, Ohio; Detroit, Mich.; Providence, R. I., and New Haven, Conn. If at any time the indebtedness of any of said cities, less water debt or sinking fund, shall exceed 7 per centum of its valuation for purposes of taxation, its bonds and stocks shall thereafter cease to be an authorized investment for the moneys of Savings banks, but the Superintendent of the Banking Department may, in his discretion, require any Savings bank to sell or retain such bonds or stocks of said city as may have been purchased prior to said increase of debt.

The measure wholly fails to meet the necessity which caused an appeal to the Legislature for relief, and the sentiment of New York Savings bank officials is opposed to its becoming a law. The original bill to permit Savings banks to broaden their field of investment within safe limits was introduced by Mr. Bradford Rhodes, while a member of the Legislature and Chairman of the Committee on Banks, in 1889. Mr. Rhodes presented the bill again in 1890, but in each year it was opposed by strong moneyed corporations who feared the competition of Savings banks in the investment held. Then officials of various cities, counties and towns opposed the measure because they feared that the rate of interest on their local securities might be forced upward should the Savings banks be relieved from the necessity of investing in them. In spite of the opposition the bill lacked only a few votes of passing in 1890, but since that time has never come as near to so favorable a result. The Bloodgood bill is only an emasculated measure commanding no support from bankers and having little prospect of becoming a law.

INTERNATIONAL BI-METALLISM AND THE RESULTS OF THE BRUSSELS CONFERENCE.

An address delivered by HENRY W. CANNON, President of the CHASE NATIONAL BANK of New York, before the COMMERCIAL CLUB of Providence, R. I., March 18, 1893.

The money or circulating medium of a country usually consists of gold and silver coin and paper currency. The great bulk of business is conducted on credit. Transactions are made by debits and credits on books of account, by promissory notes, bills of exchange on time and demand, bank checks, etc. As a rule, only balances or differences between debit and credit transactions are settled in money; and international settlements are usually made in gold or silver. In other words, by common consent, gold and silver are considered equivalent for all other property at such prices as may be agreed upon between the parties who make the transactions. It is, therefore, absolutely necessary that the circulating medium used be redeemable in gold or silver, and interchangeable at par, in order to conduct business upon a stable and proper basis.

Our enormous agricultural, manufacturing and commercial interests employ the great majority of our people and they need an annually increasing amount of money to properly transact their business and conduct their enterprises, therefore, the people of the United States are in favor of bimetallism—the joint use of both gold and silver money—believing that the use of both metals affords a more natural and healthy increase of currency for their wants than the use of either exclusively, and the American people believe that what is true of them is also true as regards the people of other nations. They believe that the toiling millions of Europe, busy with their various affairs, need both metals as money and that it is not equitable nor desirable to limit the use and functions of money to one metal alone, thereby increasing its value and adding to the burdens of the labor and debtor classes. From the foundation of our government gold and silver have been the money of the people of the United States—except during the period of our Civil War when we had to resort, temporarily, to a paper currency. There is to-day in the United States over $600,000,000 in gold and $400,000,000 in silver, coined at a ratio of one to sixteen, performing the functions of money side by side. We have maintained, and will continue to maintain, our gold and silver money on an interchangeable basis. Nevertheless, the people of the United States view the increase in the value of gold and the decrease in the value of silver as a serious and disturbing factor in all trade relations.

It is not my intention to rehearse the history of the fall in the gold value of silver during the past twenty years, with which you are all familiar, further than to say that, starting with the demonetization of silver by Germany, growing out of the legislation of 1871-1878, the mints of Europe have been closed, one after another, against silver coinage until, at this time, not a silver coin of full debt-paying power is struck for individuals on the Continent of Europe. For nearly a century, prior to 1873, the relative value of silver to gold in purchasing power in the commerce of the world remained practically constant at about 15½ to 1. During this period the mints of most of the countries of Europe were open to the free mintage of silver coin of full debt-paying power. Since 1873, in the brief period of nineteen years, with the mints of Europe closed to the coinage of silver, its commercial value, as measured by gold, has depreciated over 37 per cent. in spite of the efforts of the United States (acting in monetary isolation among the great commercial nations) to use silver as a money metal.

The more important evils which have resulted from the depreciation of the gold value of silver may be stated briefly as follows:—

(1) The general fall in the gold price of leading commodities or, stating it more accurately, the increased purchasing power of gold.

(2) Instability in rates of exchange between gold and silver-using countries.

(3) Increased demand for gold in Europe consequent upon the disuse of silver as currency.

The increased demand for gold in Europe consequent upon the distrust of silver as currency is, in my judgment, a most serious matter. That the demand for gold upon the part of European countries has increased enormously during the past few years is so apparent that it need only be stated to be accepted as a fact. The great empire of Austro-Hungary has recently adopted a gold standard and it is seriously proposed that British India should adopt a gold standard. The Argentine Republic and other South American countries are seeking gold and it will tax the ingenuity of European capitalists to supply their wants. In all Europe silver is dishonored and gold is fast becoming the only money of full debt-paying power. For more than two years large quantities of gold have been shipped from the United States to Europe at periods when rates of exchange did not justify such shipments, and it is generally admitted that Europe has been paying a premium for American gold. Transfers of gold from one country to another are already attended with disturbance in the money market.

If this process continues, and gold is to be the sole money of the civilized world, and if silver is to be abandoned as a money metal, what will be the value of the immense stock of silver in India and the East and the silver coins now in circulation and held in the great banks of Europe as a basis for the redemption of notes outstanding?

All bimetallists agree that gold and silver are commodities and, as such, are subject to the laws of trade and that their values are determined by the same law which fixes the value of other commodities, to wit: the law of supply and demand. It is not claimed that legislation alone can restore value or give it to gold and silver but it is claimed that the value of the precious metals is largely dependent upon the monetary use that is made of them, and that the largest demand for the precious metals comes from their use as money; and the only means of maintaining a stable relation between gold and silver is a monetary agreement by which the nations of Europe and America, on an equal footing, will agree to fix a common ratio between the two metals and to open their mints to silver coinage. The interests of Europe in the re-establishment of bimetallism are identical with those of the United States, only greater in degree.

No international discussion of the monetary situation had taken place since the conference of 1881, and the United States Government, believing that monetary evils existed throughout the world and that they were largely occasioned by the demonetization of silver in 1873, which prevented a natural increase of metal money from time to time as the business and population of the world increased, asked the nations of Europe to meet in international conference in November last to ascertain what measures, if any, could be taken to increase the use of silver in the currency systems of nations. Inasmuch as in the three previous similar conferences England had insisted upon gold monometallism, it was considered doubtful if the conference could be held, based upon a discussion of the relative ratio of gold to silver, or upon strictly bimetallic lines. For this reason the wording of the invitation from the United States was of such a character as to permit the discussions of the conference to take a wider range than heretofore. The invitation of our Government was accepted by all of the most important States and, at the first meeting, held on November 22, 1892, at Brussels, delegates from twenty governments were present and participated in the nine sessions that were held. It was quite generally admitted by the delegates present that monetary evils existed and various propositions and plans were presented to the conference looking to an increased monetary use of silver. The proposals generally suggested the purchase of silver and issuance of notes against the same. The suggestion, therefore, to a certain extent, followed the present American plan of using silver as a basis for circulation. The plan, however, is not new as the Bank of England issues its notes against gold bullion as well as against the security of British consols, and although the bank has never availed itself of the authority conferred by law, it is also permitted to issue notes to the extent of one quarter of its metallic reserve against silver bullion.

The monetary systems of many of the nations are so complicated by the issuance of paper money, and because of old established banks through which the governments do their business, that it was difficult to consider a scheme suitable for all which did not involve a considerable change in existing statutes.

The proposition of Mr. Alfred de Rothschild (one of the English delegates), as amended before the committee of experts, had certain reasonable features in it but involved a disproportionate purchase of silver by the United States, and other plans presented involved disproportionate sacrifices on the part of the governments represented. It is possible that if a proper and equitable arrangement could be made for England to use a certain amount of silver and for its dependency, India (which is the largest holder of silver in the world) to use an additional amount of silver, together with France and the Latin Union (which are, next to India, the largest holders), the immense mass of silver now in existence as money throughout the world would be appreciated or, at least, its present value maintained and this, of course, would favorably affect our holding of silver. Silver purchases and issuance of notes against bullion, however, should only be the means to an end, that end being:—Re-establishment by International Agreement of the ratio between gold and silver—and if some of the European nations would agree to purchase silver bullion and issue paper money against it, in conjunction with the United States, we should be exceedingly cautious in making a compromise of this sort, and if such a proposal is considered the interests of the United States should be most carefully guarded.

While the declarations and statements made by the different delegates to the conference from the several countries represented, are of the greatest importance and value to the people of the United States in their consideration of the silver question, nothing definite was accomplished, and we are forced to the conclusion, from what transpired, that an international bimetallic union cannot be formed nor an international bimetallic agreement fixing the ratio between gold and silver entered into unless a great change occurs in the public sentiment of Great Britain, whose position in the conference is indicated by a statement of Sir Rivers Wilson, who declared:

"Our faith is that of the school of monometallism pure and simple."

"We do not admit that any other system than a single gold standard would be applicable to our country."

This statement has recently been confirmed by the utterances of Mr. Gladstone in Parliament.

Upon the action of England apparently depends the action of the majority of other countries.

M. Tirard, delegate from France, who has since become the Minister of Finance of that country, declared himself opposed to any bimetallic agreement unless it included Great Britain, Germany, Austria and Russia.

Belgium, Italy and Greece announced that they were of the same mind. Germany, Denmark, Sweden, Norway and Switzerland declared that they proposed to remain on a gold basis, and Austro-Hungary also stated their intention to abide by the gold standard—which they are in the course of adopting. The Netherlands, Spain and Mexico were ready to join a bimetallic union provided Great Britain would unite. No declaration of policy was made by Russia or the Roumanian Government (although intimating that they did not consider bimetallism a practical policy), and Turkey and Portugal expressed no opinion.

Under these circumstances it is evident that unless our Executive and the principal members of our National legislature are willing to agree to some proposal or policy looking to the purchase of silver bullion and the issue of notes against the same by the other nations, in conjunction with our own country, nothing can be accomplished at the adjourned meeting of the international conference on May 30th next. As heretofore stated, it is evident that no agreement fixing a ratio between gold and silver can possibly be arrived at at the present time, and it is useless to continue to discuss bimetallism.

As it is impossible for the United States alone to fix and maintain the ratio between gold and silver for all the world, it seems clear that we should repeal the Act which provides for the purchase of 4,500,000 ounces per month and the issuing of Treasury notes against the same; and that we should increase and maintain a sufficient gold reserve, so that there can be no question in the minds of our people as to the ultimate redemption of any currency obligation of our government in gold whenever desired. If this course be pursued there is very little doubt but that the other nations, whose people are using large amounts of silver as currency, will be brought to a realizing sense of the condition of monetary affairs, and the place of silver as a money metal throughout the world will be settled within a reasonable time. It is to be regretted that there is not a more unanimous feeling throughout our country in regard to this matter, and if it be true, as has been stated, that it will be very difficult to repeal the present silver purchase Act, no one can predict what may occur so far as maintaining gold payments are concerned.

It seems clear that from 20 per cent. to 25 per cent. of reserve in gold against outstanding currency obligations of the government should be kept in the Treasury at all times, and, if we continue to increase our circulation based upon silver, it may be difficult for us to keep a sufficient gold reserve to maintain our money at a parity. The government, however, is pledged to maintain all of our money on a gold basis, and extraordinary efforts should be made to this end, and some action must be taken to remove the feeling of distrust and discomfort which prevails now in regard to our currency.

Notwithstanding the feeling referred to, and while I should deplore any change in our currency basis, I am convinced that whether the people of the United States do business on a gold basis or on a silver basis we shall continue to be the most enlightened, progressive and prosperous nation on the face of the earth. Our prosperity and commercial greatness are founded upon the principles of government established by our forefathers, and our greatness is built upon energy, enterprise and the integrity of our people. Our accumulated capital is not only in gold and silver, but in the productiveness of our soil, the sinews of our workmen, the skill of our artisans and in the knowledge and wisdom of our citizens, who, under our enlightened government, are the most progressive people in the world.

IN THE PAST TWELVE MONTHS $50,000,000 of the silver notes issued under the law of 1890 have been added to the circulation, while the gold certificates in circulation have decreased $44,000,000 and the gross gold holdings of the Treasury have fallen off $65,000,000 in the same time. We are virtually paying out gold for silver right along. No other big nation in the world in the present century has been guilty of such financial follies as we have been committing in recent years.

THE BULLION VALUE of the silver dollar has fallen in twenty years from an average of $1.004 in 1873 to an average of about sixty-five cents for the last six months. The fall in the price of silver is due to the demonetization of silver by the continental nations of Europe and to the enormously increased production of silver. The production of silver for the world for the past year was about 143,000,000 ounces. The price of silver is depressed by the continued attempt of the United States to keep up its price by large monthly purchases. This silver stock of the United States must sooner or later be dumped on the market when our "corner" on silver breaks wide open, as it will some day.

FOR COMPTROLLER OF THE CURRENCY.—On April 3, President Cleveland nominated JAMES H. ECKELS, of Ottawa, Illinois, for the office of Comptroller of the Currency. Mr. Eckels is a lawyer, thirty-five years of age, and stands well in the estimation of the people of Illinois where he is best known. He has had no banking experience whatever. His appointment was urged by Congressman B. T. Cable, and it is also said to be due to a personal acquaintance of several years' standing with the President himself. It is stated that Mr. Eckels has written a great deal on the subject of tariff reform. He is rated as a capable young man, and his friends say that he will make a good officer.

Referring to Mr. Eckels' inexperience in financial affairs, a correspondent of the New York *Evening Post* says in substance: A man who has been a banker himself is likely to sympathize with the banks when their concerns and those of the Government clash. Practically, every Comptroller has proceeded on the theory that a bank which is given time can usually get out of its trouble without publicity, and that to give its affairs to the world will only insure its downfall and probably precipitate a crash in other quarters. The Eckels appointment is attributed to the President's desire to inaugurate a new era in Government bank supervision by appointing a Comptroller whose personal sympathies are not necessarily with the banks, and who will perform his duties without special solicitude for any other interests than the Government's own.

CRITICISMS ON THE PLAN FOR INCREASING THE CIRCULATION OF NATIONAL BANKS.

In an address delivered by him on National and State banks, before the American Academy of Political and Social Science, at Philadelphia, on January 12, Mr. Horace White, one of the most eminent authorities on the history and theory of banking, proposed a method of preserving the National banking system almost precisely the same as that proposed in the January number of the JOURNAL. After arriving at the conclusion that banking on securities cannot long survive, he says: "Although note issuing is not a necessary part of the business of banking, it is a vastly desirable part. * * * I think the National bank note can be preserved and even improved, without bond security, by a slight change in the present law, viz.: Out of the present tax on bank notes, constitute a safety fund to be lodged in the Treasury, the amount of it to be computed by actuaries, taking the National bank mortality of the past twenty-five years as a basis. After this sum is reached let the tax go into the Treasury, as it does now, as a part of the National revenue. Let the Government continue, as now, to be responsible for the notes, and let it retain, as now, a first lien on the assets of failed banks and on the liability of shareholders." All the present requirements and restrictions of the banking law are, Mr. White premises, to be retained, except those requiring the deposit of bonds to secure circulation.

The bill proposed in the January JOURNAL set aside the tax as a safety fund to protect the notes of such National banks as might fail, on precisely the same principle, except the JOURNAL plan proposes to reduce the tax when the safety fund shall have become sufficiently large. This difference is a mere question of policy in making the bill acceptable. The JOURNAL plan, moreover, proposed for the same reason to retain a bond deposit of small amount for a time, and chiefly for the reason that if in the future the United States should ever incur a large bonded debt, the National banks could again use it as a basis for circulation. In favor of his proposition Mr. White pursued the same line of argument as that in the JOURNAL.

One correspondent from Montana criticises the bill because, in his opinion, it reduces the security for deposits, inasmuch as in case of failure now, the Government uses the margin on the bonds deposited to secure circulation to increase the amount of assets from which the depositors are paid; and he uses the figures given in the JOURNAL's argument for the bill to prove his position. His position, as far as those figures are concerned, is correct. If the National banks failing between 1863 and 1891 had held no bonds, their circulating notes, amounting to $16,209,160, might have been paid from the $24,700,954 collected from their general assets. This would have left $8,491,794 to be paid to depositors, or only about 33 per cent. of what actually was available for that purpose. But in lieu of the bonds the banks would have held other assets to an equal amount, and it was fair to presume that these assets would have produced the same proportionate net proceeds as the other general assets. Adding $9,000,000 on this account, we obtain $17,491,794, instead of

$24,700,954. The depositors would have received a little over seven million less than they did receive. This, however, does not affect the principle of the bill. In the first place, it has never been considered necessary to throw any special safeguards around depositors other than those secured by strict laws of management and Government enforcement of such laws by careful supervision.

But if the principle be admitted that the Government should protect depositors also, there could be no better plan than the safety fund plan to accomplish even this. It does not appear that our correspondent goes to the length of thinking that the Government should secure deposits absolutely, as it does circulation, but only that the present security to National bank depositors should not be reduced. A little comparison will show how this is. Take a National bank with $100,000 capital, $100,000 in bonds and $90,000 in circulation, under the present law. It fails with deposits to the amount of $100,000 and resources besides bonds $190,000. The bonds sell for 14 per cent. premium, or $114,000. Out of this $90,000 circulation is paid, leaving $24,000 for depositors. The other resources produce 25 per cent.,—purposely put low,—or $47,500. Add the $24,000 margin on bonds, and we have $71,500, or, not saying anything about expenses of liquidation, 71.5 per cent. to each depositor. Under the bill as given in the Journal the same bank would have had at its failure $100,000 in circulation and $100,000 in deposits and $300,000 in nominal resources. Twenty-five per cent. of the latter would be $75,000, not enough to pay the circulation. Assuming 50 per cent. recovered, the bank with bonds would after paying circulation have $119,000 for depositors, the bank without bonds $50,000 only. The foregoing assumption shows the National bank with bonded security to afford much more protection to depositors than under the bill. But if it be admitted that the depositors under any bank bill should be as well protected as under the law requiring a deposit of bonds, it is easy enough to secure it by extending the operation of the safety fund. If it were agreed that the circulation should all be paid from the safety fund without reimbursement, *all* that was recovered from the assets would go to depositors. Then in the case of the bank without bonds, assumed above, if 25 per cent. of assets was recovered, the depositors would be paid in full, as against 71.5 per cent. to depositors of the bank with bonds. To make the safety fund as exactly, and no more, protective to depositors of banks failing under it as the National banking law has been to depositors of banks becoming insolvent under it during the last thirty years, it will be necessary to have actuaries, as Mr. White proposes, decide in regard to the amount of the safety fund the exact average proportion of recovered assets that should be paid into the safety fund, and the exact average proportion that should be reserved to depositors, at various rates of recovery upon assets, from nothing to 100 per cent.

The bill has also been criticised because it contains a provision for retaining the minimum bond deposit feature. This was retained, as before stated, so that as long as there are United States bonds, the good faith of those organizing small National banks may be proved to this extent. There will be bonds for a good many years yet, even if no new issues should be made, and this provision in the bill is a safeguard thrown around the organization of new banks—4,000 banks would only require $20,000,000 in bonds.

THE PROFITS OF DEPOSITORS AND STOCKHOLDERS COMPARED.

A correspondent in Manitoba has raised the very interesting question, whether it is more profitable to be a depositor than a stockholder in a bank. He writes, "Take our Canadian bank return for November 30, 1892, wherein the deposits by the public payable on a day fixed or after notice were $102,240,061, and the paid-up capital was $61,995,378, and we have two leading factors. Now if the average dividend on the bank stock is, at present market prices of the stock, about 4.5 per cent., and the average rate paid depositors be about 3.5 per cent., and it be premised that, as seems to be likely from the plethora of money for investment, the rate to stockholders will continue to diminish, a converging point begins to appear at which depositors and stockholders will receive practically equal percentages. One per cent. on $102,240,061, is $1,022,400 and even ¼ of one per cent. is $255,600. If bank stock has a market value above par at an average rate of 4.5, what would it have if the rates on deposits were one per cent., or even one quarter per cent., less?"

In other words, even so slight a reduction as one quarter of one per cent. taken from deposits, and the sum added to the dividends to stockholders, since the deposits are nearly double the amount of the capital, would increase dividends from 4¾ to 5 1-5 per cent. That the market value of the stock would be increased no one can doubt. What these figures show is that by a general agreement among banks to diminish the interest paid on deposits, their dividends would be greatly increased, and that the market value of their stock would rise even more considerably. There seems to be no doubt that the great increase of competition for accounts among banks both in Canada and in the United States has a tendency to augment the rates paid for deposits and consequently to decrease the rates to stockholders. It is very questionable whether any agreement can be made among the banks, and kept, to adopt a fixed and uniform rate of interest on deposits. One would suppose that it would be for the interests of the banks in the United States even more than those in Canada to make and adhere to some lesser uniform rate of interest on deposits. It would seem easier to secure some such agreement among the Canadian banks, than among those of the United States, because the Canadian banks are chartered institutions having a virtual monopoly of the business. It is not easy for a new banking institution to obtain a charter. In the United States, new banks are started every day, often with the avowed object of getting as large a share as possible of the deposits held by earlier organized banks. These new banks resort to all devices to attract deposits. They advertise largely, and they offer extra inducements to depositors both in the way of conveniences in business, and in larger returns for running accounts. Who can deny that this spirit of enterprise and competition has been of great benefit to he general public? In this way it has increased the material wealth, and this increase in the general wealth has indirectly aided the banks. The decrease of dividends on stock has not been due altogether, as some think, to the practice of allowing interest on deposits. It is due to the gradual lowering of the interest rate which always follows the growth of the aggregate mass of accumulated capital. The payment of interest on deposits has undoubtedly drawn into the banks, and so made available for the use of the public, an immense amount of money previously hoarded. Doubtless the visible stock of gold and silver coin has been much increased by this practice, and there are many other benefits which have arisen from it. On the other hand, if it were possible to secure concert of action among the banks, as to interest paid, a distribution of profits between depositors and stockholders more just than that now existing could be attained, leaving all the benefits of the practice of allowing interest on deposits and yet rectifying the abuses. In the United States it is too much to expect a cast-iron agreement, in the face of the free competition allowed by the banking laws, but a discussion of the subject at the next meeting of the American Bankers' Association and at the Congress of Bankers from all parts of the world, at the Chicago World's Fair, would no doubt impress the expediency of gradually reducing the interest on deposits so forcibly on the minds of established bankers, that a general though independent movement in this direction might perhaps follow with great benefit to Banking interests.

Improved form of Report Blanks for the National Banks.

In this issue of the Journal appears a *fac-simile* reproduction of the improved form of blanks used by the National banks in making their reports to the Comptroller of the Currency. The blanks are exact reproductions of those furnished by the Treasury Department, and have been prepared at considerable expense.

The object of publishing the blanks is not so much to inform the National bank officials, who are readers of the Journal, as to call the attention of State bank officers and State officials to the excellent features of this form of report, and to suggest to them the wisdom of following the same form in the State bank system of the various States. The present form used by the National banks is the result of evolution, and seems now to be as nearly perfect as it is possible to get it. The principal change made in the new form lies in the reporting in detail and by schedule the liabilities of officers and Directors. The name of the officer or Director borrowing, his liability as "payer," or an "indorser or guarantor," or on "overdrafts," and the number of shares of stock of the bank which he owns must be stated. The information conveyed to the Comptroller of the Currency, it is evident, must be very valuable in any case where there is a questionable employment of a bank's funds for the benefit of its Directors or officers. As the schedule is a part of the sworn report, the safeguard is as substantial as it well could be made. Further reference to the revised report blank appears in the Journal for March, page 268.

With the detailed reports made five times a year on these blanks and a thorough dissection of them by trained officials in the Comptroller's bureau, it is reasonable to suppose that accurate knowledge of a bank's affairs is known to the proper authorities. Of course the real value of the loans and discounts cannot be revealed by any statement of condition, and even the expert bank examiner on the spot, who spends several days in making a careful examination, does not pretend to pass on the security of the loans and discounts except in a very general way, but in other particulars the machinery of the Comptroller's office, if wisely administered, furnishes ample safeguards for the protection of the banks and the public. As the banks increase in number more examiners should be employed, and they should be selected on account of fitness solely. A first-class bank examiner should be kept in the service without regard to politics.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

CHECK-PAYMENT TO AGENT.

Supreme Court of Alabama, November 22, 1892.

KANSAS CITY M. & B. R. CO. *vs.* IVY LEAF COAL CO.

The local Cashier of a railroad company, who only had authority to indorse checks for deposit and collection, indorsed a number simply: "J., Agent. By S., Cashier," and deposited them, and they were paid through the clearing-house by the bank on which they were drawn. The latter bank had no notice of the limited authority of the Cashier, and afterwards paid him the money on one of defendant's checks, given in payment of a freight bill, and similarly indorsed. *Held*, that the bank was warranted in paying the check, and that it constituted payment as between the maker and payee.

This was an action of assumpsit by the Kansas City, Memphis & Birmingham Railroad Company against the Ivy Leaf Coal Company for freight charges for transportation of coal. The indebtedness alleged in the complaint was not disputed, but defendant set up the defense of payment. There was judgment for defendant, and plaintiff appealed.

STONE, *C. J.*: An able and elaborate argument has been submitted for appellant in this case, but we think the true merit of the controversy may be reduced to a single simple principle. Each of the parties is a private corporation. The appellant railroad company had a claim against the appellee for freight transported. The former did its banking business in Birmingham through the First National Bank of that place; the latter through the Alabama National Bank of the same place. A custom or usage and agreement had grown up by which the coal company made weekly payments of its indebtedness for freight—transportation—and it made them in checks on the Alabama National Bank. These checks were made payable to S. Jacobs, agent. S. Jacobs was the local agent of the railroad company at Birmingham, and Stephenson was with him in the office, and was Cashier in that office. He (Stephenson) was authorized to collect freight bills, to receive the money, and to give receipts; and both he and Jacobs were authorized to pay out money collected by them in proper disbursements relating to the road. When money was deposited in the First National Bank to the credit of the railroad company, neither Jacobs nor Stephenson had authority to check upon it, or draw it out. Only Keeler, the general Cashier of the railroad company, had that right. His office was in Memphis, Tenn. There was another regulation which prevailed in the railroad office at Birmingham. While Stephenson had authority to collect freight bills and give receipts, to collect checks which had been given for freight, and, to that end, to indorse them in the name of Jacobs, to whom they were made payable, he had no authority to indorse or transfer them for any other purpose. He could only indorse for purpose of collection, or collection and deposit. The Alabama National Bank had neither notice nor knowledge of this limited nature of his authority. Smith, the Paying Teller and Assistant Cashier of the First National Bank, gave the following testimony, and there was nothing to contradict it: "I am Paying Teller and Assistant Cashier of the First National Bank, and was such at the time the check was shown me, which is Exhibit A to the bill of exceptions, was given. At that time the plaintiff kept its account with the First National Bank. It was in the name of plaintiff, but subject to the check of Charles Keeler, Cashier at Memphis, only. Stephenson and Jacobs had no right to check on it. The authority of Stephenson and Jacobs, as to indorsing checks, was given to the bank by a letter of instruction from the auditor of the plaintiff. Stephenson had authority to indorse checks in Jacobs' name for deposit, and that was the extent of his authority to indorse. He had no authority to indorse checks and get the money on them. * * * We never paid any checks to Stephenson, on his indorsement of Jacobs' name on them. We received them for deposit on such indorsement, credited them to the account of the plaintiff, and they then became subject to the check of Keeler only. The checks shown me, and which are marked Exhibits 'B' to '——,' inclusive, were deposited and indorsed by Stephenson at the First National Bank, and credited to the account of the clearing-house from the Alabama National Bank." The present suit was instituted for the recovery of a freight bill, and the defense was payment. The alleged payment was through a check dated February 28, 1891, drawn by the coal company on the Alabama National Bank, and is in the following words: "Alabama National Bank: Pay to the order of S. Jacobs, Agt., three hundred and eighty-two and 70-100. Ivy Leaf Coal & Rwy. Co. By Walter Moore, Pt. [Indorsed:] S. Jacobs, Agt. By W. Stephenson, Cash." The proof was that Stephenson presented this check at the Alabama National Bank on the day of its date; that he indorsed it as shown above; and that then and there the Teller of the bank paid him in money the amount shown in the face of the check. Stephenson then absconded, and has never accounted to the railroad company for the money. It is not pretended that the Alabama National Bank did not cash and take up this check. Part of the defense relied on by the coal company was presented as follows: Commencing in August, 1890, and extending to February 17, 1891, defendant, the coal company, had settled and paid many freight bills to the plaintiff railroad company, and in every instance the payment was made through the coal company's check on the Alabama National Bank. Each of said checks, nine in number, was a precise copy of the one in which defense of payment was attempted in this case (copied above), except one dated September 9, 1890. That one is payable "to the order of K. C., M. & B., Agt." Each of said nine checks was indorsed in the identical language,—"S. Jacobs, Agt By W. Stephenson, Cash." Each of these nine checks was received by the First National Bank, on the indorsement stated, and received, not for money paid out, but for "collection and deposit," to the credit of the railroad company; and each was met by the Alabama National Bank, and paid through the clearing-house to the First National Bank, and the proceeds placed by it to the credit of the railroad company. We are not informed that the Alabama National Bank was ever notified that Stephenson's authority to indorse checks payable to Jacobs, agent, was a limited authority,—"for collection and deposit." It is not claimed it was so notified. Upon what principle can it be contended that after paying nine checks, and rightfully paying them, on the indorsement: "S. Jacobs, Agt. By W. Stephenson, Cash,"—the Alabama National Bank wrongfully paid the tenth one, having upon it identically the same indorsement? The Alabama National Bank certainly did no wrong, for it simply cashed the check of its customer, paying it to one rightfully authorized to indorse it. The present case presents no question of a forged indorsement. All the testimony shows that Stephenson had authority to indorse the check, and to indorse it in the name of Jacobs, the agent. When he took a further step, and demanded and received the money the check called for, from the bank drawn on, he simply transcended his authority; but the Alabama National Bank had no knowledge or notice of the limit on Stephenson's authority to indorse. There is nothing in what we have said that in the least antagonizes the doctrine that the mere giving of a check does not *per se* extinguish the debt it is intended to pay. (*Bank* vs. *Whitman*, 94 U. S. 343; *Bank* vs. *Miller*, 77 Ala. 168.) In this case there was not only a check given, but that check was collected by the person authorized to indorse it. The bad faith and treachery were the act of the railroad's agent, and cannot be visited on either the drawer of the check or the bank drawn on. We need not consider the correctness of the Court's ruling on the introduction of evidence. That question could not affect the result of the case. Affirmed.

CERTIFICATION OF CHECK—FICTITIOUS PAYEE.

Appellate Court of Indiana, February 1, 1893.

MERIDIAN NATIONAL BANK OF INDIANAPOLIS *vs.* FIRST NATIONAL BANK OF SHELBYVILLE.

As a general rule the certification of a check in the hands of the payee, the body of which is unaltered, releases the drawer from further liability, and creates a direct liability from the bank to the payee, while as between the bank and the drawer it operates as a payment, to that extent, on his account; and although prior to its being certified, the check may be countermanded by the drawer, after its certification, it has passed beyond his control, and he no longer has power to countermand its payment.

The indorsement of a check by the person to whom it was actually issued, and by whom the drawer intended the money should be received, is an effectual indorsement to pass title to the check to a bank cashing the same; and the indorsement is not, as to such bank, invalidated by reason of the payee acting under an assumed and fictitious name, when he was not impersonating any other individual.

A bank cashing in good faith a check so drawn and indorsed may collect the amount thereof of the bank which has certified the same.

This was an action by the First National Bank of Shelbyville against the Meridian National Bank of Indianapolis, to recover the amount of a check cashed by plaintiff, which check had been certified by defendant. From a judgment for plaintiff, reversing a judgment of the lower court in favor of defendant, defendant appealed.

One William C. Milburn had stolen two steers and sold them to Stockton, Gillespie & Co. He told the purchasers his name was W. C. Smith, and they gave him a check payable to the order of "W. C. Smith" for $68.15, on the Meridian National Bank. Milburn presented the check to such bank for payment, but payment was refused, unless he should be identified. The bank, however, certified the check. The check so certified was afterwards cashed by the First National Bank of Shelbyville, Milburn having first indorsed thereon the name, "W. C. Smith." In the meantime the drawers having learned that the steers had been stolen by Milburn stopped payment of the check, and when the same was presented through the clearing-house, payment was refused.

GAVIN, *J.*:

It seems to be well established that as a general rule the certification of a check in the hands of a payee, the body of which is unaltered, releases the drawer from further liability, and creates a direct liability from the bank to the payee, while as between the bank and the drawer it operates as a payment, to that extent, on his account; and although, prior to its being certified, the check may be countermanded by the drawer, after its certification it has passed beyond his control, and he no longer has power to countermand its payment. (Daniel, Neg. Inst. §§ 5, 1601–1603; Morse, Banks, § 414; Van Schaack, Bank Checks, 91, 92.) Whether or not the liability of the certifying bank may, under certain circumstances, extend even further, we need not now determine. It is said in *Born* vs. *Bank* (123 Ind. 78) "that the drawer of a check is released if the holder, instead of presenting it for payment himself, procures it to be certified by the bank upon which it is drawn. If the holder elects to procure the certification of the check it becomes in his hands subtantially a certificate of deposit. By his own hand he makes the bank his debtor, and releases the drawer of the check."

The principal question upon which the rights of the parties in this case depend is whether or not the indorsement of the check by Milburn under the assumed name of Smith, and without identification, was such an indorsement as was effectual to pass to the appellee the title to the check. If it was, it will then be unnecessary for this Court to determine a number of the propositions advanced by counsel on each side. The position of counsel for the appellant may best be stated in their own language: "In other words, the Shelbyville Bank's contention is that the acceptance of an unindorsed check implies three things: (1) That the signature of the maker is genuine; (2) that the maker has money to his credit which the bank will retain until the check is presented for payment; (3) that the holder is the payee, and is entitled to received the money,—while the contention of the Meridian Bank is that the certification of the check, unindorsed, does not waive, but is subject to, identification and legal endorsement, (Daniel, Neg. Inst. § 1607a,) and that as the check was given for stolen cattle, and was not made payable to the real person, William C. Milburn, but to no person, without its knowledge and for a fraudulent purpose, the endorsement was invalid, and the same, in law, as if it had been passed over the counter of the Shelbyville Bank unindorsed, in which case the transferee takes it subject to all equities and defenses." Under the view which we have taken of this case, it is not required of appellee, in order to sustain the judgment of the court below, that he should maintain the proposition No. 3, as stated by appellant's counsel. Neither is it necessary that we should determine whether or not it would be permissible to the bank, on the ground of want of consideration or fraud, as between the payee and the drawer, to defend against a check certified by it after it has passed into the hands of an innocent holder, even though unindorsed. It is settled law that the *bona fide* assignee by indorsement for value takes such paper freed from any equities existing between the original parties. (Daniel, Neg. Inst., §§ 1608–1652; Morse, Banks, § 419; Van Schaack, Bank Checks, 63–89). Under the facts of this case, we think that the indorsement of the check by the man to whom it was actually issued, and by whom the drawer intended that the money should be received, was an effectual indorsement to pass to the Shelbyville Bank the title to the check, and the indorsement was not, as to it, invalidated by reason of the payee acting under an assumed and fictitious name, when he was not really impersonating any other individual. The check was intended for a person, not a name. Names possess neither personality nor existence. They but serve to identify individuals. The check was received by the identical person or individual to whom its drawer intended to deliver it, and was by that person indorsed in the name in which it was issued to him. Even the drawer did not have in mind, as the payee, any other or different individual, whom he erroneously believed the person to whom he delivered the check to be. That it is the identity of the person, and not of the name, which controls the right to the check, is shown by some of the cases cited by counsel,—those of *Graves* vs. *Bank* (17 N. Y. 205), and *Bank* vs. *Holtsclaw* (98 Ind. 85), where a check or draft was drawn and intended to be sent to one man, but by some mistake was received by another, of the same name, who transferred it; but his transfer was held to pass no right to the paper, even in hands of an innocent holder, because, although the names were the same, the persons for whom the paper was intended were different. An action may be maintained upon an instrument, although executed to the party by a name other than his right one, if it was really intended to be executed to him. (*Wooster* vs. *Lyons*, 5 Blackf. 60; *Leaphardt* vs. *Sloan*, Id. 278; *Rhyan* vs. *Dunnigan*, 76 Ind. 178; *Hasselman* vs. *Development Co.* (Ind. App.), 27 N. E. Rep. 318).

In support of their proposition that the indorsement of this check was a mere forgery, and therefore invalid and ineffectual, counsel rely largely upon the case of *Armstrong* vs. *Bank* (46 Ohio St. 512), as affording, to use their own expression, "a full discussion of the point under consideration." There one Grimes fraudulently represented himself to be the agent of one Brown, a fictitious person, and by false representations obtained from Armstrong a check payable to his supposed principal, Brown. Grimes indorsed the fictitious name, "William Brown," on that check, and presented it to the bank, who paid it. It was held, giving to the case the construction most favorable appellant, that the charge against Armstrong on account of the check should be cancelled, regarding the indorsement as a forgery. There is between that case and this one in hand a marked distinction, in this: that there Armstrong, the drawer of the check, did not intend to make the check payable to the man to whom she delivered it, and who afterwards indorsed it, but to another and a different person, whom she supposed to exist, although he really had no existence. There the drawer did not intend, by the name used as that of the payee, to designate the man to whom she delivered the check, and who afterwards negotiated it. There it was not intended by the drawer of the check that the person to whom she delivered it, and who negotiated it, should receive the proceeds of the check. Here it was plainly intended that the man to whom the drawers delivered the check should be the beneficiary of it. The case of *Dodge* vs. *Bank* (30 Ohio St. 1, 5), upon which the Armstrong Case is largely founded, recognizing the principle by which we govern this case, says that the bank paying the check on the forged indorsement "had the right to show, if it could, that the person to whom the check was delivered was in fact the person whom the drawer intended to designate by the name of Frederic B. Dodge." Counsel for appellant have cited no case which comes any nearer to the question in hand than the Armstrong Case, nor have we been able to find any favorable to them. Several general statements are taken from the text-books, to the effect that to sign the name of a fictitious or nonexisting person is a forgery, citing Byles, Bills, 333; Daniel, Neg. Inst. §§ 136, 1345; 1 Bish. Crim. Law, 432; Chit. Bills, 182 (158). We do not think that any of these statements are really intended to meet such a case as we have here. On the contrary, it is said in one of the sections of Daniel, referred to (section 136): "For this reason bills and notes payable to fictitious payees are not tolerated, and will never be enforced, save when in the hands of a *bona fide* holder, who received them without knowledge of their true character." At section 138 Daniel expressly states his view that an innocent holder is entitled to enforce the paper although a fictitious indorsement may intervene. In Chitty on Bills (pages 181, [158]), the language is used immediately preceding that relied upon by counsel: "Where a bill is drawn in the name of a fictitious person, payable to the order of the drawer, the acceptor is considered as undertaking to pay to the order of the person who signed as drawer: and therefore a *bona fide* indorsee may bring evidence that the signatures of the supposed drawer to the bill and to the first indorsement are in the same handwriting." An examination of the cases cited in support of the texts where these statements are made will show that none of them are of the same character as this. In the main they are cases where the paper was the creation of the party assuming the fictitious name, and was then by him indorsed to others, where quite a different rule might well govern from this, in which the paper set afloat is the creation of another, by whom it was intended to accomplish the very results which it did produce; that is, to pay so much money to the man to whom the check was delivered. It may also be noticed that the cases supporting these text-book citations are mostly old English cases, found in Russell & Ryan's English Crown Cases, and Leach's English Crown Cases, and they do not seem to be followed, to the extent of counsel's application, at least, by even the English courts. In *Queen* vs. *Martin*, Cockburn, *C. J.*, quotes with approval from Dunn's Case, 1 Leach, 58: "That, if a person give a note entirely as his own, subscribing it by a fictitious name will not make it a forgery; the credit there being given to himself, without any regard to the name, or without any relation to a third person." (21 Alb. Law J. 91.) In *Com.* vs. *Baldwin*, (11 Gray, 197,) it is held that signing a promissory note in the name of a fictitious firm, of which the writer claimed to be a member, was not forgery.

Whether, however, the offense of Milburn, in this transaction, be termed a technical forgery or not, both sound reasoning, as it appears to us, and the authorities, recognize the right of the Shelbyville Bank to enforce its title to this check through this indorsement in controversy. In *Phillips* vs. *Im Thurn*, (114 E. C. L. 694) in an action by the indorsee of a bill against the acceptor, it was held that the acceptor could not defend on the ground that the bill was payable to, and indorsed by a fictitious payee, of which fact the acceptor had no knowledge. It was urged there, as here, that the indorsement was a fiction and a nullity, and therefore could not convey title. *Merchants' Loan, etc., Co.* vs. *Bank of the Metropolis*, (7 Daly, 137,) resembles this case in many of its details. One Stearns, representing himself to be F. W. Frothingham, bought a piano of the Steinways, gave in payment a raised check payable to F. W. Frothingham, and received back the balance of the check above the purchase price, Steinway's check, payable to himself by this assumed name of Frothingham. This check he procured to be certified, payment being refused for want of identification, and then transferred it to the Merchants' Bank for value. The Court held the endorsees obtained a valid title to the check, and could enforce it. The supreme court of Massachusetts, while recognizing the general rule that a forgery may be committed by the use of a fictitious name. (*Com.* vs. *Costello*, 120 Mass. 358), recognize also the principle that an indorsement in an assumed name may be effectual to convey title to the check, *Robertson* vs. *Coleman*. In that case a man stole a team, sold it and received in payment a check payable to Charles Barney, —his assumed, but not his real name. This check he indorsed to an innocent holder without any real identification. Payment was refused, and the holder brought suit against the drawer. The Court says: "The name of a person is the verbal designation by which he is known, but the visible presence of the person affords surer means of identifying him than his name. The defendants, for a valuable consideration, gave the check to a person who said his name was Charles Barney, and they made it payable to the order of Charles Barney, intending thereby the person to whom they gave the check," etc. The Court further says it is clear "the person they dealt with was the man intended by them as the payee of the check, designated by the name he was called in the transaction, and that his indorsement of it was the indorsement of the payee of the check by that name." This case is approved and followed in *Bank* vs. *Shotwell* (35 Kan. 360) the Court saying: "So, in this case, Shotwell, for the notes and mortgages received by him, sent the draft to a person who said his name was Daniel Guernsey, and whose name Shotwell believed to be Daniel Guernsey, intending thereby the person to whom he sent sent the draft. The National Bank of Emporia received this draft for a valuable consideration, in good faith, from the same person whom the bank believed to be Daniel Guernsey, and who indorsed the draft by that name. * * * Shotwell and Lobdell dealt with the false Daniel Guernsey as though he were the real Daniel Guernsey. Such person, it is true, obtained the draft from Shotwell by fraudulent letters and representations, but the National Bank is not responsible for the letters and representations of the false Daniel Guernsey. * * * The National Bank of Emporia paid the draft to the person to whom it was sent by Shotwell, and such person received the money from the bank thereon." These cases go further than it is necessary for us to go in this case. In Bolles, Banks, § 283, the rule is thus laid down: "A bank is also liable to the *bona fide* holder of a certified check, though obtained from the drawer by fraud, and drawn to the order of a fictitious person, if indorsed to the holder by the person to whom the drawer intended that payment should be made." The principle which governs in this case is approved in *Metzger* vs. *Bank*, (119 Ind. 359.) In that case one Lord owned certain land. Hornaday falsely pretended to be Lord, opened communication with Metzger, and offered to sell him the land. Metzger, believing he was Lord, prepared a deed, and caused it to be sent to the Franklin Bank, with instructions to have it signed by Lord, and pay the purchase price. The deed was executed by the false Lord, returned to Metzger, who accepted it, supposing it to be genuine, and reported back to the bank that it was all right, and the bank paid Hornaday the money. The fraud was afterwards discovered by Metzger. The Court says: "But did not the appellee transact the business intrusted to it in accordanee with the instructions received, and pay the money to the person that the appellant intended should receive it? We are of the opinion that it did." As is held in Bank *vs.* Shotwell, *supra*, we do not deem the failure of the Shelbyville Bank to require identification to be an important factor in this case, for the reason that the money was undoubtedly paid by it to the identical man designated as the payee by the drawer. There being no mistake as to the identity in fact, it is immaterial whether the identity was properly shown to the bank or not.

Our conclusion, then, from all the cases, is that the loss on this check should fall on the bank which certified it, and through it upon its drawers, who first set it afloat. As they dealt with the payee of the check as Smith, and had no intention, when executing the check, of delivering it to any person other than the man who actually received it, the Shelbyville Bank was justified in accepting his indorsement, and can hold the certifier of the check for it. The judgment of the superior court in general term is affirmed with costs.

USURY—SUIT TO RECOVER—LIMITATIONS.

Supreme Court of Nebraska, February 1, 1893.

FIRST NATIONAL BANK OF DORCHESTER. *vs.* SMITH.

The limitation of two years, within which suit may be brought against a National bank, under Section 5198 of the Revised Statutes of the United States, for taking usurious interest, begins to run from the time when the usurious interest is paid.

This was an action by Benjamin A. Smith against the First National Bank of Dorchester, to recover the sum of $294.66, as a penalty, under Section 5198 of the Revised Statutes of the United States, for knowingly taking and receiving usurious interest. The bank answered by a general denial. There was a trial by the court, which resulted in a judgment in favor of the plaintiff for $207.64. Each party filed a motion for a new trial. The motions were denied, and both parties prosecuted error to the Supreme Court.

NORVAL, *J.*, (omitting part of the opinion):

The plaintiff below insists that the judgment should have been for a much larger sum. The evidence discloses that usurious interest to the amount of $103.86 was paid by him to the bank within two years before the commencement of the suit. The recovery was for double said sum. It is also established that the further sum of $88 was paid upon another and distinct loan of money, as illegal interest, more than two years prior to the inception of the action, but that the loan upon which said usurious interest was received was not fully paid until May 27, 1887, which was within two years preceding the bringing of the suit. The bank takes the position that the statute of limitations has run against the recovery of the penalty for the taking of the usurious sum of $88, while the plaintiff below contends that the limitation of two years within which suit may be brought against a National bank for taking usurious interest begins to run from the payment of the note on which such interest is reserved. The question presented involves the true interpretation of the proviso clause of Section 5198 of the Revised Statutes of the United States. The Section declares "that the taking, receiving, or reserving or charging a rate of interest greater than is allowed by the preceding section, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid, or his legal representative, may recover back, in an action in the nature of an action of debt, twice the amount of the interest thus paid, from the association taking or receiving the same; provided such action is commenced within two years from the time the usurious transaction occurred.

What is meant by the phrase, "from the time the usurious transaction occurred," in the connection in which it is used in the section? Clearly, it does not refer to the time the usurious contract is entered into, for the section gives the borrower no right of action to recover a penalty where unlawful interest is stipulated for, and not paid, but in such case the loaner merely forfeits the entire interest. Nor is it the payment of the principal sum borrowed which gives the right to sue for the penalty. The actual receipt of the illegal interest is the foundation of the borrower's right to recover the penalty, and the actual payment of interest in excess of the legal rate is the "usurious transaction" referred to in the section. The period of limitation begins to run from the time the cause of action accrues. If the interpretation for which plaintiff contends should be adopted, then it would follow that a suit to recover the penalty for taking usurious interest by a National bank cannot be maintained until the loan is fully paid off. Stated differently, one who has paid large sums of money as illegal interest on a loan, and is unable to pay the entire debt, is not entitled to the benefit of the section. Such was not the intention of Congress, nor is it the fair and reasonable import of the language of the section. The right to maintain an action to recover the penalty prescribed by said section 5198 accrues as soon as any unlawful interest is paid, and the two-years' limitation begins to run from the time such payment is made. The following cases support the doctrine: *Shinkle* vs. *Bank*, 22 Ohio St. 516; *Hintermister* vs. *Bank*, 64 N. Y. 212; *Stephens* vs. *Bank*, 88 Pa. St. 157; *Brown* vs. *Bank*, 72 Pa. St. 209; *Lynch* vs. *Bank*, 22 W. Va. 554; *Bank* vs. *Carpenter*, 52 N. J. Law 165; *Stout* vs. *Bank*, (Tex. Sup.) 8 S. W. Rep. 808; *Bank* vs. *Alves*, (Ky.) 15 S. W. Rep. 132.

In *Lynch* vs. *Bank* (*supra*) the Court, in considering the identical question herein involved, after citing and quoting from numerous decisions from the courts of different states, in the opinion say: "If these cases do not expressly decide that the right of action for the prescribed penalty accrues at the instant any excessive interest is paid, whether it be on the original discount or at any subsequent renewal, and that each payment is in itself a cause of action, against which the limitation commences to run, they so clearly indicate that such is the proper construction of the statute as to leave no doubt on the question. I have been unable to find any authority or precedent to the contrary; and as the construction indicated, if not established, by these cases, is in consonance with the letter and the spirit of the statute, as well as in accord with the evident reason and policy of Congress in enacting it, I feel no hesitation in adopting it. Each payment of illegal interest must be regarded as a 'transaction,' within the intent of the statute, and, when such payment is actually made or occurs, the two-years' limitation commences to run, as to that payment, from that time, and so on for each successive payment on renewals of the same loan; and if, when the action is commenced for the penalty, any one or more of such payments of illegal interest occurred more than two years prior thereto, no recovery can be had for it, although the original loan be then unpaid." Both upon reason and authority, we are satisfied that the action to recover the penalty for receiving the $88 illegal interest is barred, since the same was taken more than two years before this suit was brought. Doubtless the limitation does not commence to run until the usurious loan is paid off, in a case where payments are made to a National bank on such a loan, and there is no agreement or understanding that the same is to be applied in discharge of usurious interest agreed to be paid for the use of the money; for in such a case the law will apply the payments on the principal, and not on the usurious interest. Hence there would be no usurious transaction until the sum borrowed had been repaid. The judgment is affirmed. The other judges concur.

COLLECTION—DUE DILIGENCE.

Court of Appeals of New York, February 28, 1893.

CRAUSE *vs.* FIRST NATIONAL BANK OF PENN YAN.

Plaintiff drew a draft "without protest" on his debtor, payable at sight, and inclosed it to defendant bank for collection, without instructions as to presentment. The drawee lived in the country, some distance from the bank, which on the day of the receipt of the draft notified him by mail, as was the custom of banks in the place, unless specifically instructed. A week later the drawee called at the bank, said he would pay the draft the next week, and accepted it. On the same day plaintiff was notified by letter that the draft was payable the following week, and later he sent his clerk to inquire about it. No further instructions were given, and a few days afterwards plaintiff wrote, asking if the drawee had made arrangements for payment, thus recognizing what the bank had done. About two weeks after accepting the draft, the drawee made an assignment for the benefit of creditors. *Held*, that defendant was not guilty of negligence in presenting the draft for payment, or in failing to make proper efforts to collect it after acceptance.

The draft was a mode adopted by plaintiff of collecting a debt due from the drawee, and defendant bank was his agent for the mere purpose of collection; and in such case the strict rules usually enforced with respect to commercial paper in matters of presentment, demand, and notice, do not apply.

Appeal from supreme court, general term, fourth department.

Action by Charles E. Crouse, survivor, etc., against the First National Bank of Penn Yan, to recover damages for alleged negligence in presenting and collecting a draft. From a judgment of the general term (15 N. Y. Supp. 408) reversing a judgment in favor of plaintiff, entered on the report of a Referee, plaintiff appealed. The other facts fully appear in the following statement by GRAY, *J.:*

Dinehart being indebted to the firm of Crouse & Walrath in the sum of $800, for goods sold, the firm made a draft in the following form, viz.: "Syracuse, N. Y., Feb. 14, 1886. At sight (protest waived) pay to order of G. H. Lapham, Esq., Cashier, four hundred dollars. Value received. (Signed) Crouse & Walrath. To Peter M. Dinehart, Esq., Friend, N. Y." On the day of its date, this draft was mailed to the defendant, a bank at Penn Yan, N. Y., for collection. Dinehart lived in the country, at some distance from Penn Yan. Lapham testified that upon the receipt of the draft, on February 15th, he notified Dinehart by mail. On February 21st, Dinehart came into the bank, and, the draft being presented to him, he said he would pay it next week; and he accepted it across its face, making it payable at the defendant bank. On the same day Lapham wrote Crouse & Walrath, acknowledging their letter and the draft, and stating it was "payable some time next week. Says this is the best he can do." Subsequently a clerk was sent by the firm to the bank, who inquired about the draft. He said he was told that "it was all right," but could not remember being told of Dinehart's acceptance. Lapham, the Cashier, however, testifies that he told him of the acceptance, and of Dinehart's promise to pay it the next week. On March 6th Dinehart made an assignment of his property for the benefit of his creditors. On March 3d Crouse & Walrath wrote to the bank and asked if Dinehart had made arrangements to pay his draft. On March 6th the bank answered, informing them of Dinehart's assignment, and as to the assets and liabilities. On March 7th the draft was returned to the firm, and in September following the present action was commenced to recover damages, measured by the value of the draft, upon the ground of the bank's negligence in the matter of its collection. The Referee, before whom the trial of the action was had, reported in favor of the plaintiff, finding the defendant guilty of negligence in failing to present the draft for acceptance in due time, or to make proper efforts to collect it after acceptance, and that by reason of its negligence the drawers were deprived of the opportunity to collect the draft before the drawee's assignment. He found that the drawers had sustained damages to the amount of the draft with interest, and directed judgment accordingly. Upon appeal to the general term that court reversed the judgment, and ordered a new trial, and from that order the plaintiff has appealed to this court, with the usual stipulation for judgment absolute.

GRAY, *J.*, (after stating the facts): We think the reversal of the judgment was right. The facts disclosed by the evidence did not make out a case of negligence, nor did they show that the plaintiff's firm had suffered any damage by reason of anything on the part of the bank. The evidence was wholly insufficient to support the Referee's findings in those respects. As we read this record, no inference was permissible from the evidence that the bank had failed in any duty towards the plaintiff's firm. The draft in question was merely a convenient mode adopted by the firm of Crouse & Walrath to collect a portion of a debt due them from Dinehart, and the defendant bank was made their agent for the mere purpose of collection. Dinehart lived in the country, at some distance from Penn Yan; and, as it was testified to without objection, the custom of the banks in that place, where they held drafts upon parties residing in the country, was to notify them by mail, unless especial instructions were given to present the paper, in which case a notary would be employed. Here the plaintiff's firm had expressly waived protest of the draft, and there was no requirement for presentment by a notary, or for any extraordinary course with respect to it. There was no question in the case of holding other parties, and there was nothing in the relations of plaintiff's firm with the defendant which made it incumbent upon the bank to exercise other than that usual and ordinary diligence in the performance of the duty of the assumed agency which the circumstances called for. The plaintiff's firm were notified by letter of the draft being payable in the following week, as the best that Dinehart could do about it. Their clerk was sent to inquire about it, and the draft was not only left with the bank with no further instructions about it, but on March 3d they wrote, asking if Dinehart had made arrangements to pay the draft; thus recognizing, and tacitly ratifying, what the bank had done. Not only was the bank not bound to do more than it had done, but it was difficult to see what more it could have done. It was without especial instructions, and the plaintiff's firm were sufficiently apprised of the situation to make it incumbent upon them to further instruct the bank, if they desired it to do more. Knowing of the non-payment of the draft, it behooved them to act in the matter for their own interests. The strict rules which usually are applied with respect to commercial paper in matters of presentment, demand, and notice do not apply to such a case as this, as the general term very correctly observe in their opinion. The defendant acted as the plaintiff's agent to collect a part of a debt, and in view of the circumstances, and with the knowledge chargeable to the principal as to its conduct of the matter, it could not be inferred from the evidence that it was guilty of any negligence in the discharge of its duty. It may be added that there was an utter lack of evidence to afford a presumption of damage to the plaintiff's firm from the conduct of the defendant. No inference was possible from the evidence that there was a reasonable probability that the debt would have been paid if Dinehart had been pressed for payment from the time when the draft was presented until he assigned. The order appealed from should be affirmed, and judgment absolute ordered for the defendant on the stipulation with costs in all the courts. All concur.

INSOLVENCY—RIGHTS OF CREDITORS.

Supreme Court of Mississippi, Oct. 17, 1893.

ROMANSKI *vs.* THOMPSON.

A check was forwarded by a collecting bank to the bank on which it was drawn, with directions to collect, and apply the proceeds to a debt owing to the drawee bank by the collecting bank. *Held*, that, where the drawee bank failed on the day it received the check, and before it had assented to the direction of the collecting bank, the refusal to accept and pay the check out of the funds of the drawer then to his credit gives only a right of action against the drawee bank on the check, and does not enable the drawer, who subsequently paid the check, either to sue the collecting bank, or entitle him to priority over the other creditors of the drawee bank.

This was a petition in chancery by J. & S. Romanski against G. D. Thompson, Receiver of the Bank of Greenville, and the Capital State Bank, praying that said Receiver be required to pay petitioners the amount of a check drawn by them on said bank. From an order sustaining the separate demurrers of the Receiver and the Capital State Bank, petitioners appeal.

December 9, 1891, J. & S. Romanski were indebted to W. R. McKey & Co., of Boston, Mass., in the sum of $185 05. They forwarded to said McKey & Co. their check upon the Bank of Greenville for said amount. This check came into the hands of the Capital State Bank for collection. The Capital State Bank, being then indebted to the Bank of Greenville in a larger sum than the amount of said check, forwarded it to the Bank of Greenville to be collected, and the proceeds credited to the debt which the said Capital State Bank owed the Bank of Greenville. The Bank of Greenville suspended business, but received the check prior to its suspension; and, when it was received, appellants had to their credit in said bank a larger sum than the amount of the check. After the Bank of Greenville suspended business, W. A. Pollock, who was then Receiver of said bank, returned said check to said Capital State

Bank, and the same was returned to McKey & Co. Appellants paid McKey & Co., taking from them an assignment of all their rights against the Capital State Bank and against the Receiver of said Bank of Greenville. Since the suspension of business by the Bank of Greenville, and the appointment of a Receiver, said Receiver has collected from the Capital State Bank the amount owed by it. After the suspension of business by the Bank of Greenville the check was protested.

COOPER, *J.*: If the Bank of Greenville had accepted the check of appellants when forwarded to it by the Capital State Bank, the rights of all parties would have been fixed; and it would not have been competent for the Receiver thereafter appointed for the Bank of Greenville, nor for him and the Capital State Bank, to change the *status* thus fixed. If it had retained the check through the day of its receipt, continuing in business through the day, and had failed to return the check by the first mail leaving the town thereafter, it may be that the effect would have been the same, *i. e.*, such conduct may, and probably would, have been conclusive evidence of its acceptance. But the pleadings must be construed most strongly against the party pleading; and, upon complainants' bill it may be true that on the day the Bank of Greenville received the check, and before it had assented to the direction of the Capital State Bank in reference to its dealing with the check, the bank ceased to do business, and passed into the Receiver's hands. Under such circumstances, the refusal to accept and pay the check would give only a right of action against it on the instrument. The decree is affirmed.

REPORTS TO COMPTROLLER—FALSE ENTRIES IN.

United States District Court, N. D. Iowa, December 17, 1892.

UNITED STATES *vs.* GROVES.

To constitute a false entry within the meaning of Rev. Stat. U. S., § 5209, the entry must be known to the maker to be untrue and false, and by him intentionally entered while knowing its false and untrue nature. A mere mistake, made inadvertently, or even through negligence, though in fact false, if believed by the officer making it to be true, would not constitute the offense.

The intent will be inferred from the character of the act, and if a Director of a National bank, in a report to the Comptroller of the Currency, of the condition of his bank, makes an entry which is false, with regard to a material matter, and such Director, at the time he made such false entry knew it was false and calculated to deceive, and that it did not give a true and correct statement of the bank's condition at the time with respect to such entry, the law will not permit him to say that he made such false entry with innocent intent, and not expecting to deceive any one thereby.

The statute does not require that any person should have been in fact defrauded or actually deceived by the false entry in order to make the crime complete; and so it is not necessary, in order to complete the proof of a violation of this section, that it shall be shown that any officer of the bank, or any agent appointed to examine into the condition of the bank, has in fact been deceived by a false entry in the report, nor that in fact any company, corporation, or individual person has been defrauded by the false entry. If there was any attempt to deceive, if the false entry was knowingly entered, and was a false entry which was naturally and necessarily calculated to mislead, this would be sufficient, in the absence of contravening proof, to authorize the finding that the person making it made such false entry with intent to deceive.

This was an indictment of Rufus Groves, under Rev. Statutes, United States, § 5209, for making false entries in reports to the Comptroller of the Currency, of the condition of a National bank of which he was President and

Director. The District Judge in charging the jury laid down, as above given, the rules as to what constitutes such a false entry.

TAXATION—RETURN—MISTAKES.

Supreme Court of Kansas, January 7, 1893.

BANK OF SANTA FE *vs.* BUSTER, SHERIFF.

When the Cashier of a banking corporation organized under the laws of Kansas makes and delivers in May to the assessor a personal property statement of the taxable property of the bank, and "through a mistake of law and of fact" gives an amount exceeding the amount for which the bank as a bank is liable to be taxed, but does not give any list of the names of the stockholders or the amount of the undivided profits or surplus, as required by law, and this is never done by any agent or officer of the bank, and no proper steps are ever taken to correct the "mistake of law and of fact" made by the Cashier, and taxes are afterwards levied upon the amount given in the personal property statement made by the Cashier, and it does not appear that the stockholders are ever assessed or taxed, or that the taxes against the bank are more than it and its stockholders should pay, and in January afterwards, the treasurer and sheriff are proceeding to collect the taxes against the bank, *held*, that the bank does not then have any action to enjoin such treasurer and sheriff from so collecting the same.

This was an action by the Bank of Santa Fe, a corporation, against John G. Michaels, county treasurer, and the board of county commissioners of Haskell county, Kan., to enjoin defendants from enforcing certain taxes against plaintiff. A decree granting a temporary injunction was reversed by the District Court, and plaintiff brought error. Affirmed.

TAXATION—EXEMPTION.

U. S. Circuit Court W. D. Tennessee.

STATE OF TENNESSEE *vs.* BANK OF COMMERCE.

A provision in a bank charter that the bank "shall pay to the State an annual tax of one-half of one per cent. on each share of capital stock, which shall be in lieu of all other taxes," is an exemption of the property of the bank as well as the shares from taxation.

This exemption extends also to an increase of capital stock.

This was a bill by the State of Tennessee and others against the Bank of Commerce and others, filed in the chancery court of the State, to collect taxes assessed on the capital stock of the bank.

The charter of the defendant bank contains this clause:

"Said institution shall have a lien on the stock for debts due it by the stockholders before and in preference to other creditors, except the State for taxes, and shall pay to the State an annual tax of one-half of one per cent. on each share of capital stock, which shall be in lieu of all other taxes."

This bill is filed to collect taxes for the years 1887 to 1891, inclusive, amounting in the aggregate to $46,068.75. The taxes are assessed under acts of the Legislature, which provide, among other things, as follows:

"And in cases in which, by the terms or legal effect of the charter, the shares of stock in any corporation are wholly or partially exempt from taxation, or in which a rate of taxation on the shares of stock is fixed and prescribed and declared to be in lieu of all other taxes, taxes for State, county, and municipal purposes shall be assessed and levied at a rate uniform with the rate levied upon other taxable property upon the capital stock of said corporation, the value of which capital stock shall be fixed and returned by the assessor as being equal to the aggregate market value of all the shares of stock in said corporation, including the net surplus."

The bill set out historically the legislation concerning the taxation of the bank, previous attempts to collect taxes thereunder, certain litigation arising concerning those attempts, and generally so states the facts that by the demurrer which the defendant filed the question was presented whether or not the assessment sought to be enforced was valid in relation to the claim made by the bank that the legislation violated the obligation of the charter contract, and was void under the Constitution of the United States. A Federal question being thus at issue, the case was removed to the U. S. Circuit Court from the State Chancery Court, wherein the bill was originally filed. The points decided are as stated in the syllabus.

NATIONAL BANKS—PROOF OF CORPORATE EXISTENCE.

Court of Appeals of Colorado, November 14, 1893.

HUMMEL *vs.* FIRST NATIONAL BANK OF CENTRAL CITY.

A National bank doing business within the limits of the State, and organized there, is not a foreign corporation, within the principle which requires proof of its corporate existence under a general denial, and the issue which that plea raises.

This was an action by the First National Bank of Central City, Colorado, against John C. Hummel, as administrator of F. E. Everett, deceased, and John S. Risdon, to recover a fund deposited with Everett for plaintiff's benefit.

Bissell, *J.*, (omitting part of the opinion):

The present suit was brought by the First National Bank of Central City against the administrator. A denial was interposed to the various allegations of the complaint, and it is insisted that this put in issue the corporate character of the plaintiff because it is a National bank doing business, under the Federal statutes, within the limits of this State. The point was not raised in argument, nor does much reliance seem to be placed on it in the brief. These banks doing business within the limits of the State, and organized there, are not believed to be foreign corporations, within the principle which requires proof of their corporate existence under a general denial, and the issue which that plea raises in this State.

NATIONAL BANK—LOAN ON MORTGAGE—FORECLOSURE.

Supreme Court of Louisiana, December 19, 1892.

STATE NATIONAL BANK *vs.* FLATHERS.

The objection that a National bank has loaned money on real estate, in violation of the prohibition of the National banking laws, does not lie in the mouth of the delinquent debtor of such loan, and does not disable the bank from enforcing the same by foreclosing the mortgage. The United States alone can complain of such violation.

This was an action by the State National Bank against John Flathers to enforce by executory process a mortgage securing notes assigned to plaintiff. From a judgment sustaining exceptions to defendant's petition for injunction, defendant appealed.

Fenner, *J.*, (omitting part of the opinion):

The other ground of injunction, based on the prohibition of the National banking law, is insufficient in law, because negatived by repeated decisions of the supreme court of the United States, which, while conceding that the law does, by clear implication, prohibit National banks to make loans on real estate, hold, nevertheless, that the risk of ouster and dissolution was the only penalty contemplated by Congress for violating the prohibition, which penalty could be invoked by the United States alone, and the bank was not disabled from enforcing such loans by judicial process at the plea of the debtor. (*Bank* vs. *Matthews*, 98 U. S. 621; *Bank* vs. *Whitney*, 103 U. S. 99; *Fortier* vs. *Bank*, 112 U. S. 439.)

ATTACHMENT OF STOCK.

Supreme Court of Louisiana, January, 1893.

KERN *vs.* DAY.

The attaching creditor of one who appears on the books of a bank as registered owner of shares of its stock cannot hold the stock against the true equitable owner, who holds the certificates of stock duly endorsed by the debtor.

No estoppel arises to prevent the true owner from asserting his title. His permitting the debtor to appear as holder on the books of the bank did not invest the latter with such *indicia* of title as could prejudice third persons, because he could not sell or dispose of the stock without producing the certificate.

As a general rule, attachment gives the creditor no better right to the property attached than the debtor had at the time of the levy; it takes effect only on the debtor's interest, and does not amplify his title.

Whether the equitable owner, being a corporation, had a right to own stock in another corporation, is dependent on its charter, which is not produced, or upon the circumstances under which the ownership was acquired, which are not in evidence; and, at all events, the attaching creditor has no right or interest to raise such question.

The alleged violation of its charter by the bank in electing the debtor as a Director when he did not own in his own right twenty-five shares of stock has no pertinence in this case, because the garnishee (equitable owner) is not shown to have been privy thereto, and, if it had been, that would not forfeit its ownership of the stock in favor of third persons not connected with either corporation.

This was a proceeding by a judgment creditor to reach certain shares of stock in the Citizens' Bank standing in the name of the judgment debtor, but which had been regularly assigned to the Sun Mutual Insurance Company by certificates indorsed with the usual power of attorney, but which the Insurance Company had never had transferred on the books of the bank. The Court decided in favor of the Insurance Co. upon the principle stated in the syllabus.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: BOWLING GREEN, Ky., March 22, 1893.

SIR: A. who lives in one city, issues a check, say for $500, in favor of B. who lives in another city. The check was deposited with the bank with which B did business, with the following endorsement: "For deposit to the credit of B, per J. S.;" and then the bank with which the deposit was made guarantees the endorsement and forwards same to a bank for collection. The bank receiving the item for collection presented same to the bank on which A had drawn the check for payment, though the bank on which the check was drawn refused to pay it unless the bank presenting same for payment would guarantee the endorsement also. Please let me know whether or not they had the right to make such demands, and, also, whether or not the bank presenting the check for payment would have the right to decline to give a second guarantee and protest the check and return. SUBSCRIBER.

Answer.—A bank paying a check on which the payee's indorsement has been made by an agent, has the right to insist upon proper proof of the authority of the agent to indorse, just as any other person would have the right to demand evidence of authority where demand of payment is made by an agent.

Ordinarily, however, payment is made in such cases upon the guarantee of the indorsement by the bank making presentment. But there is no rule of law which would require the drawee bank to accept such guarantee. It would still have the right to insist upon proof of the authority of the agent; and where such proof is not offered it has the right to say what guarantee it will accept in lieu thereof. In this case the drawee bank could not be compelled to accept in lieu of such proof the guarantee of the bank in another city; but if it saw fit, could demand the additional guarantee of the local bank. As a mere agent for collection, however, the presenting bank was under no obligation to give such guarantee, and when payment was refused could have treated the check as dishonored.

Editor Rhodes' Journal of Banking: PORT JEFFERSON, N. Y., March 20, 1893.

SIR:—We receive through the mail from one of our bank correspondents, a check purporting to have been made at New York, but not dated. What in your opinion would have been the best to do? Return for date, or protest it? Is there any law for protesting paper undated? This may be a very simple question, but not being able to find anything covering this point, I take the liberty of addressing you for the desired information. R. B. DAYTON, *Asst. Cashier.*

Answer.—A date is not in general essential to the validity of the instrument; and where there is no date it will be considered as dated at the time it was made. (Byler on Bills, 77; *Michigan Inv. Co.* vs. *Leavenworth*, 30 Vt. II; *Richardson* vs. *Ellett*, 10 Texas, 190; *Seldonridge* vs. *Conable*, 32 Indiana, 375; Randolph on Commercial Paper § 75.) It has, indeed, been suggested by Justice Story, in his work on bills, that a drawee might refuse to pay an undated bill; but this has never been so decided; and at all events, it is clear that where the drawee pays such a bill, the drawer cannot dispute the payment.

Editor Rhodes' Journal of Banking: DULUTH, Minn., March 22, 1893.

SIR:—A bank sends a collection to another with "no protest" slip attached, but which is not signed. Nothing is said about protest in the letter of transmittal. Should the bank receiving such collection protest the same in case of non-payment? G. F. MACKENZIE.

Answer.—The attaching of the no protest slip would indicate that protest was not desired. The omission to sign the slip was probably an oversight, and the bank receiving the collection would have the right to consider it such. We think, therefore, that the bank receiving the item would be deemed to have acted properly in not protesting the same.

Editor Rhodes' Journal of Banking: MUNCY, Pa., March 6, 1893.

SIR:—A promissory note is given by John Smith to James Brown, it differing from a common bank note only in being payable at Smith's office. It is indorsed by Brown in these words: "I guarantee payment of within. Jas. Brown." It passed into the hands of third party, and at maturity was presented to maker and payment refused. Is there any law in this State that would render protest unnecessary to hold Brown liable?

It is claimed by maker that the note is not protestable and fees could not be collected from him. CASHIER.

Answer.—The general rule is that the person giving such a guarantee as that above stated is not entitled to have formal demand made of the maker, and to notice of dishonor. (Byler on Bills, 208; Randolph on Commercial Paper, § 1072. See also JOURNAL for December, 1892, pp. 1357–1358.) But while protest is not strictly necessary in order to hold the guarantor, it is a prudent step to take, because it avoids the raising of any question in regard to want of notice to the guarantor. We believe, also, that it is the usual course of banks to protest such paper when not paid.

The Pittsburgh National Banks.

COMPLETE REPORT OF THEIR CONDITION AT THE CLOSE OF BUSINESS ON MARCH 6, 1893.

BANKS.	RESOURCES.										
	Loans and discounts.	Over-drafts.	U. S. bonds for circulat'n.	U. S. bonds for deposits.	U. S. bonds on hand.	Other stock and bonds.	Premiu's paid.	Real estate and office fixtures.	Exchanges for Clearing-house.	Due from banks and agents.	Cash and Treasury credits.

TOTALS, MARCH 6, 1893.	$23,300,000	$13,929,731.73	$1,055,510	$62,821,120.98	$5,968,548.54	$1,065,603.55	$1,353,592.26	$56,397,256.88	$299,726.10	$127,905,848.32

A careful examination of the tabulated statements of the Chicago National Banks, for March 6, reveals a closer condition of monetary affairs than has heretofore been shown, and in a great degree justifies the demand for more money and the higher rates for loans.

The deposits are $2,000,000 less than three months ago, and $10,000,000 less than five months ago. The loss of late is wholly in the City of Chicago, as the balances of country banks stand $3,500,000 higher. In loans and discounts there is a gain of $2,500,000 since December 9. A decrease of $3,000,000 appears in the surplus reserve since December 9, and of $9,000,000 since October 2, the total now being $3,500,000. The cash has fallen off $2,200,000 since December. The extent to which Chicago has been drawing on the East is shown by a decrease of $1,500,000 in the amounts due from Banks. The deposits of the government are still less than $300,000.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

The statement for quarter ending March 18, 1893, of the State banks of the city of New York shows:

Resources—Loans and discounts, $109,021,900; stocks and bonds and mortgages, $5,286,200; real estate, etc., $4,074,000; due from banks, $9,694,000; cash items and bank notes, $676,500; specie, $9,457,600; legal tenders, $9,356,100; overdrafts, $45,300; total resources, $147,561,600.

Liabilities—Capital stock, $17,672,700; net profits, $15,526,900; circulation, $2,600; due banks, $12,748,700; due depositors, $101,569,400; unpaid dividends, $41,300; total liabilities, $147,561,600, against $150,298,300 for quarter ended December 15, 1892.

In the U. S. Circuit Court, March 27, Judge Wallace rendered an opinion by which John C. Eno, former President of the Second National Bank, against whom there are five indictments for forgery, in the second and third degrees, was discharged from the custody of this State. The Judge holds that the offences were against the United States laws, which being paramount, are exclusive of State legislation. Eno is under $10,000 bail in the United States Circuit Court on indictments found against him charging him with the misappropriation of over $2,000,000, and his trial on these indictments is now on the calendar of the Court.

The new Franklin National Bank opened its doors March 27 in the brown stone building at Greenwich and Dey streets, so long the home of the Old North River Bank. President Ellis H. Roberts' term as Assistant U. S. Treasurer does not expire until April 1. There is said to be nothing in the law to prevent him serving both the bank and the Government in the meantime.

The National Union Bank will be opened in May next, in offices in the Mutual Life Insurance Building. The capital is $1,200,000, and the stock is all taken. The Board of Directors has not yet been made up. The Committee in charge of organization consists of Messrs. George G. Haven, W. C. Whitney, Frederick Cromwell, O. H. Payne and R. A. McCurdy.

At a recent meeting of the Directors of the National Park Bank, Messrs. Stuyvesant Fish and Edward E. Poor were elected Vice-Presidents. Mr. George S. Hickok, Cashier, was elected a Director in place of Mr. Arthur Leary, deceased. The promotion of Mr. Hickok is deservedly earned by his thirty years of service to the bank in various capacities.

J. S. Bache & Co., recently charged with splitting commissions, were acquitted by the Board of Governors of the Stock Exchange, after a searching inquiry.

The total transactions of the New York Clearing-House during the year 1892 amounted to $36,662,469,000. A single bank, the Fourth National, handled $4,996,672,000.

The younger members of the New York Stock Exchange purpose putting up a ticket at the annual election in May, in opposition to the older members.

A statement issued by Comptroller Myers shows that the total funded debt amounts to $165,918,148.90, of which $867,283.92 exists in revenue bonds.

William M. Grinnell has tendered his resignation of the office of Third Assistant Secretary of State, to enter the banking house of Morton, Bliss & Co.

New Bank Building.—Work will be at once commenced on a twelve-story banking building to be erected for Messrs. Kuhn, Loeb & Co., at 27 and 29 Pine street, to be ready for occupancy by February 1, 1894, at a cost of $800,000.

John A. Chrystie, of Messrs. Chrystie & Janney, was seriously burned, recently, in attempting to put out a fire at his residence.

Judge Cowing has dismissed the indictments against the ex-financier Ferdinand Ward, by direction of the District Attorney.

Messrs. Robert W. De Forrest and Walter Jennings have been elected trustees of the Continental Trust Company.

Alexander Reiss, claiming to be a stock-broker, has been arrested, charged with fraud.

The Ninth National Bank has realized on the old Vyse place $542,000 in cash.

NEW ENGLAND STATES.

Massachusetts.—The Savings Bank Commissioners' report relating to co-operative banks deals with 115 banks, with assets of $14,620,276. A comparison of the assets of those of 1891 shows the largest increase yet reported in any year, namely, $2,745,746; of this increase $2,302,233 is in loans on real estate and $78,321 in loans on shares. Out of 54,484 members, the present number belonging to co-operative banks, 11,514 are borrowers, making an average of about one in five. The number of real estate loans is 9,807, and the amount invested in mortgages of real estate $13,098,402, an average of $1,335 to each loan.

This statement shows an increase of 45.8 per cent. during the year of real estate held by foreclosure, or $30,924 to the total of $96,487. It also shows that real estate by foreclosure has very nearly doubled in two years. It is a cause of great regret that the proportion of the same to total assets is two-thirds of one per cent.

The Commissioners say: "The fact that so large a proportion of foreclosed property is added year by year to the assets of these banks indicates that too little judgment is exercised in the valuation of property offered as security for loans; and the risk of over valuation is increased when a bank seeks loans on real estate situated at a distance from the place of its organization. The practice is strongly to be condemned. If the material for the formation of a co-operative bank does not exist in a community it ought not to be formed."

Thirteen foreign mortgage companies, whose returns were published last year as doing business in Massachusetts, have withdrawn, and four new ones have entered. Fifty-six companies in all have been under the supervision of the Foreign Mortgage Corporation Commission.

New Hampshire.—In the House recently, the special assignment, the bill reducing the tax on general deposits in Savings banks from one to ¾ of one per cent., was called for. Mr. Lyford, of Concord, who is one of the State Bank Commissioners, urged the passage of the bill, saying the present tax is higher than in any of the other Eastern States. The deposits aggregate $75,000,000, an increase of $36,000,000 during the past decade, and before the end of the century they will amount to $100,000,000. There are deposits to the amount of $10,000,000 belonging to non-residents, whose money is here on account of the dividends paid. Unless the tax is reduced, dividends must be cut down to 3½ per cent., and the deposits of non-residents will be withdrawn. During the past year thirty-one of the sixty-two Savings banks have been obliged to draw from their prior earnings to pay dividends and expenses. The bill was refused a third reading on roll call, 74 to 202.

Connecticut.—The Putnam Savings Bank loses its suit against Receiver Beal of the Maverick National Bank, Judge Colt having rendered a decision adverse to the plaintiff. The Putnam Bank asked the Court to order the Receiver to deliver over to it $6,500 in City of Duluth bonds, which was a part of a batch of $25,000, which it had bought of the Maverick and paid for. The Court says that the words "6,500 due Putnam" on a slip of paper attached to a package of miscellaneous bonds found in the Maverick vault after the failure does not constitute an equitable assignment of them to the Putnam Institution. The demurrer of the Receiver to the complainant's bill in equity is sustained.

Massachusetts—Another Maverick Dividend Coming.—Comptroller of the Currency Hepburn says there are enough funds in sight for another dividend of three per cent. to the Maverick Bank creditors, and that in a year or two there would, he believed, be enough for still another dividend of two per cent. There is some hotel property in the bank's assets that will have to be disposed of to good advantage, and some Western bonds, which are undoubtedly of value, but for which there is no market now, will have to be held for a time. The bank has already paid dividends of 85 per cent., and in the end would pay 90 per cent.

Boston, Mass.—Hon. Warren E. Locke, who has just resigned as Savings Bank Commissioner of Massachusetts, has been elected Treasurer of the United States Postage Stamp Delivery Company of Boston. S. O. Lamb has been appointed and confirmed as Mr. Locke's successor.

On March 27, Mr. J. R. Reed, the Commissioner of Foreign Mortgage Corporations, requested the Attorney-General to bring a bill in equity asking that the Lombard Investment Co. be enjoined from transacting further business in this State. To prevent meantime the possibility of further loss to the public, the officers of the Company agreed that no sales or negotiations of their securities should be made by them while the question was privately pending. The grounds upon which the Commissioner has acted will appear at the hearing. He, however, authorizes the statement that these grounds are matters of personal mismanagement on the part of the Co.'s officials.

Ex-Cashier Joseph W. Work of the failed Maverick National Bank, under indictment for making false reports to the Comptroller of the Currency and false certification of checks, gave bail March 27, in the United States Circuit Court in $25,000. Colonel Jonas H. French, an ex-director, charged with aiding and abetting Cashier Work, gave bail in $10,000.

Massachusetts.—A new National bank, to be known as the Merchants' National Bank, is being organized at Worcester, with a capital of $200,000 and a surplus of $200,000. It is reported that L. E. Moore, now President of the Palmer National Bank, will be President of the new bank.

A bill has been reported to the Massachusetts Senate by the Banking Committee which forbids any city or town to deposit in any bank or trust company an amount exceeding 60 per cent of the capital of such institution without satisfactory security above said 60 per cent.

H. B. Palmer, Assistant Teller of the Fall River National Bank, Fall River, is reported short in his accounts $6,000. His whereabouts is unknown. The bank is secured by bonds of a surety company.

The Bunker Hill National Bank of Charlestown will shortly make extensive improvements on the block of which they occupy a part.

The Arlington Five Cents Savings Bank will be extensively remodelled, at a cost of $10,000.

A bill abolishing days of grace has been introduced in the State Legislature.

Maine.—Two reports have been presented to the Legislature on Savings bank taxes. The majority report favors a discriminating tax between future home and foreign investments, 5/8 of one per cent. on the former, 3/4 of one per cent on the latter. The minority report favors taxing Savings banks on the reserve fund and individual profits when such exceed two per cent. of the deposits.

The Senate passed the Savings Bank bill in concurrence with the House. This is the bill which makes discrimination in taxation in favor of investments in Maine securities. The bill as passed includes an amendment, including investments in New Hampshire real estate in the favored class. This was done because some banks located near the border invest in real estate in both States.

Maine, Dexter.—A new sensation in the matter of the reward offered by the Dexter Savings Bank trustees for the discovery of the Barron murderers, is a suit just begun by C. F. Stain against Job Abbott and A. F. Bradbury, the surviving trustees, to recover it.

At the March meeting and dinner of the Boston bank Presidents, Hon. Henry W. Cannon, President of the Chase National Bank of New York, was the principal guest, and read an interesting paper on the coinage question.

Springfield, Mass.—A movement is on foot here for the organization of a new bank. It has been thirteen years since a bank was established, although the bank clearings are larger than those of any city outside of Boston.

Maine.—In the House, the bill relating to trust and banking companies' reserve funds, which is similar to the Massachusetts law, was passed.

MIDDLE STATES.

Washington, D. C.—The Washington Loan and Trust Co. by report to the Comptroller of the Currency under date of December 9, last, show capital of $100,000 and surplus of $47,629.88.

An interesting fact in regard to Trust Companies in the District of Columbia, not generally known, is that they are organized under law of Congress which renders them subject to the supervision and inspection of the Comptroller of the Currency, like National banks.

New York.—The Ahearn bill, providing that Savings bank deposits unclaimed for twenty-two years shall be paid over to the State Treasury, and may be recovered within twenty years thereafter, brought a distinguished gathering of bankers before the Senate Committee on Banks. The general argument against the bill was that a transfer of deposits to the State was a violation of a contract and unconstitutional. The committee will grant another hearing on the bill.

Pennsylvania–Catawissa.—The First National Bank was attacked by burglars recently. Their designs on the $60,000 in its vaults were frustrated by a squeaking pig, whose owner's pursuit caused the burglars' flight. To make their escape sure in case their working alarmed the neighborhood, the burglars had wired all the doors of the houses near the bank building so that the occupants would have to come through the windows in case of a pursuit.

The New United States Mint.—The Jury appointed by the United States Circuit Court on the condemnation of property at Philadelphia, for use as a site for the new Mint, awards the property owners $930,100 and to tenants $27,945. The claims of property owners approximated $1,300,000 and of tenants about $251,000. The government's estimate of the cost of the site was $800,000 and the total appropriation for building and sight is $2,000,000.

Pennsylvania—Philadelphia.—The officials of the Commercial National Bank were recently startled by the repayment, with interest, of an over-payment of five dollars, made thirty-seven years ago, by a mistake of the Teller. The total amount returned to the bank by its customer, who had not been in Philadelphia since the over-payment was made to him, was sixteen dollars and ten cents.

Pittsburgh, Pa.—The compilation of March 9 statements of the National banks of Pittsburgh made by Mr. R. J. Stoney, Jr., shows an increase in reserve over December 9, reports, of over $1,000,000, and a surplus one-fifth as large as that held by the banks of New York city. The banks hold $1,368,899 in excess of the 25 per cent. required by law, or 28.55 per cent, of net deposits.

City Bank of Buffalo, N. Y., the organization of which was fully reported in January JOURNAL, opened for business March 20, the extensive repairs to building having been completed. The illustrations of their home show that they have neglected nothing to please their patrons or which will conduce to the speedy and economical transaction of their business.

Dunkirk, N. Y.—A run was started on the Merchants' National Bank here March 23. The officials say the run was maliciously started with intent to injure the bank, and claim they are prepared to pay every dollar and have $100,000 remaining.

New York—Brooklyn.—Bryce A. White, Assistant Cashier of the Wallabout Bank, pleaded guilty to charge of embezzlement and has been held for the Grand Jury. The bank is protected from loss by bond of a guarantee company.

Wilkes-Barre, Pa.—Charles Vogt, Assistant Cashier of the Wilkes-Barre Safe Deposit & Banking Co., was recently convicted of embezzling $4,000 of the Bank's funds, and sentenced to fifteen months' imprisonment.

The Bank of North America, of Philadelphia, organized 112 years ago, has leased temporary quarters pending the erection of a new edifice on its old site.

Pennsylvania.—The title of the new National bank at Pittsburgh will be the Columbian National Bank. F. A. Griffin is mentioned as probable Cashier.

Robert M. Janney and John C. Johnson have been re-elected respectively President and Secretary and Treasurer of the Philadelphia Stock Exchange.

New York—Springville.—Lee Multer, Teller of the Farmers' Bank, has absconded, and is $3,000 short in his accounts. Multer was an exceedingly popular young man and apparently attended strictly to his bank duties and was implicitly trusted. His bondsmen have made good the amount of his defalcation.

Pennsylvania.—An alert watchman frustrated a recent attempt of burglars to rob the National Bank of So. Penna., at Hyndman.

SOUTHERN STATES.

Nashville, Tenn.—In addition to the failure of the First Commercial Bank on Saturday, two more banks closed their doors, March 27. They are the Mechanics' Savings Bank, with a capital of $500,000, and the Bank of Commerce, with a capital of $250,000. The greatest uneasiness prevails in financial circles, and the failure of two other banks is expected. Over $3,000,000 are involved in the failure of the three banks mentioned above, and at least a dozen small banks in adjacent towns are in temporary financial straits.

Later reports state that the Mechanics' Savings Bank has not closed, but claims the privilege of sixty days' from time depositors before funds are withdrawn.

The assignment of the Bank of Commerce was precipitated by the general apprehension of a run on the bank, which the officers believed would be made. John T. Lelyett is named as assignee. The deposits were not large, aggregating only about $50,000, $15,000 of which was small deposits, ranging from $5 upward, in the savings department. The President of the bank, Mr. J. H. Yarbrough, is not in the city. Mr. J. N. Brooks, the Cashier, said the suspension was due mainly to the failure of certain parties who are largely indebted to the bank to meet their obligations.

Georgia.—Gate City National Bank. As a result of the Bank Examiners' report, Comptroller Hepburn says that efforts to reopen the bank ought certainly to prove successful. A true bill has been found against L. Redwine, late Assistant Cashier, for the embezzlement of $103,148.

Nashville, Tenn.—The four National banks of this city, under date of March 6, report a total of resources and liabilities of $11,683,975.47, with deposits of $4,800,000; paid-up capital, $3,500,000; surplus fund, $486,000; undivided profits, $377,000; loans and discounts, $8,300,000.

Radford, Va.—George E. Cassel, President of the Exchange Bank of Radford, the affairs of which were complicated by the disappearance of the Cashier, writes that the bank is solvent and depositors have already been paid.

Atlanta, Ga.—The Banking House of J. H. & A. L. James, the oldest bank in the city, has a capital of $200,000, which should have been reported in the BANKERS' DIRECTORY for January.

South Carolina.—The Farmers' Loan and Savings Banks of Edgefield recently declared a dividend of 8 per cent. and voted to increase the capital stock from $50,883 to $100,000.

Rock Mart, Georgia.—The citizens of this town are taking steps to secure the organization of a bank here.

WESTERN STATES.

Nebraska.—The State Banking Board recently decided to compel foreign building and loan associations to comply strictly with the Nebraska law or cease soliciting business in the State. A list of such companies made application, but were refused, on the ground that associations formed under laws of other States do not afford as ample protection as is afforded to members by those incorporated under the laws of Nebraska.

The Nebraska law provides among other things that if laws governing a foreign loan and building association afford as ample protection to its members as is afforded by the laws of Nebraska a certificate may be issued.

Missouri.—The House has passed a Senate bill which, it seems, will prevent the incorporation in the future of bond investment companies. It amends section 2771, defining what associations may be incorporated, by adding the following:

> Nothing in this section shall be construed to authorize the incorporation of a bond nvestment company or association to issue bonds or debentures based upon payments upon the installment plan, nor any company which savors of the character of a trust company, bank, saving fund, building and loan or fiduciary company.

Iowa Bankers.—The Executive Council of the Iowa Bankers' Association recently met at Council Bluffs, Iowa, Feb. 14, and prepared a full programme for the seventh annual meeting of this Association, to be held at Council Bluffs May 23 and 24 next, the time chosen being an early date, in order that the meeting may not interfere in any way with any arrangements the Iowa bankers may be making for themselves or employees to attend the World's Fair at Chicago. The programme will be one of great interest and profit to those who may hear it.

Minneapolis, Minn.—A new bank is being organized to open about July 1. A. C. Haugan, the present Treasurer, and John G. Field, both of the Washington Bank, are prominent movers in the project. Others interested are Senator Frank McMillan, Joseph E. Ware and W. F. Decker. A name has not been selected. It will start with a capital of $50,000.

The Germania Bank is a new institution, with a capital of $50,000; Otto Naegele formerly Cashier of the State Bank, will be Cashier, and the stockholders will include many prominent capitalists. May 1 was the date set for opening.

Nebraska.—John Wesley Wilson, Cashier of the Farmers & Merchants' Bank, of Stromsburgh, has been committed to a private asylum in Iowa. His insanity is the result of mortification over a successful swindle to the amount of $1,000 perpetrated on the bank.

The total number of State banks is now 518, with 2 in process of organization. 13 new banks have commenced business since November 5, and 8 have been discontinued.

The jury in the case of the State against John Barnd of the old Commercial & Savings Bank, Kearney, returned a verdict of acquittal.

Montana, Helena.—The First National Bank, organized March 17, 1866, celebrated its twenty-seventh anniversary on St. Patrick's Day. Each succeeding St. Patrick's Day has found this big banking institution increasing in prosperity, and the shamrock always has a prominent place around the solid building where the bank transacts its business. As on every St. Patrick's Day, the three little leaves on the lapel of the coat of each officer and clerk of the bank showed that another anniversary had rolled around.

Missouri.—A bill of considerable importance in relation to investment companies was recently passed by the House. It provides that every corporation doing business in the State as a bond investment company, or company to place or sell bonds, certificates or debentures, on the partial payment or installment plan, shall deposit with the State Treasurer, in cash or securities approved by the State Treasurer, $100,000 for the protection of the investors in such bonds, certificates or debentures.

Elmer Williams, ex-President of the defunct Continental National Bank, Kansas City, Mo., charged with obtaining money by fraud, discharged by Justice Worthen, because the Grand Jury, after an investigation of the case, failed to return an indictment. The charge against the young financier, who at once gave himself up, was that Williams obtained $5,000 for stock in the Continental National Bank on the strength of false representation.

Augustus Theophilus Kerr, once general bookkeeper of the Jarvis-Conklin Mortgage and Trust Co., Kansas City, has been found guilty of grand larceny from the company, and his punishment fixed at imprisonment for two years and six months in the penitentary.

The Citizens' Savings Bank of St. Louis has recently removed to Fourth and Locust streets, in larger and improved quarters.

Kansas.—A bank robbery partaking of the daring shown at the famous Coffeyville affair last October, was enacted at Caney, Kan., March 27. The bandits got $4,000 from the Caney Valley Bank and having a good start on their pursuers, will perhaps never be captured.

The Governor has appointed John W. Breidenthal to be State Bank Commissioner, in place of Charles G. Johnson.

South Dakota.—Mrs. George R. Scougal, of Yankton, wife of the deceased banker whose bank failed January 28, has recently turned over to the bank depositors $10,000 of her husband's life insurance money. This, together with the assets, will leave 35 per cent. for the creditors. In consideration of this gift of $10,000 it is understood that criminal proceedings instituted against W. S. Scougal will be dropped.

Butte, Mon.—Gilded Nickels.—Deputy United States Marshal Alex. Scott recently arrested George Perkins, a West Park dry goods merchant, and George Swanson, one of his clerks, for passing gilded nickels on customers for $5 gold pieces. It is claimed that the prosecution has evidence to prove that the counterfeits were passed intentionally and knowingly.

Oklahoma.—The people of this territory anticipate that money will be as plentiful as water. The Legislature having enacted a law exempting all mortgages and mortgage notes from taxation, they believe this, with the law allowing the mortgaging of everything, will cause money lenders and loan companies to flock there by the hundreds.

World's Fair Credits.—All the banks in Chicago doing a foreign exchange business are surprised at the amount of World's Fair credits already being presented, exceeding in amount, as they do, their most liberal calculations. The aggregate bids fair to be larger than the most sanguine anticipations.

Omaha, Neb.—The Omaha Clearing-House Association has a rule that banks shall charge one-tenth of one per cent. for all collections east of the Mississippi. Its operation is to give business to the strong banks and take it away from the smaller ones, and the latter are now agitating for its repeal.

Illinois.—William C. Williams, of Wm. C. Williams & Co., proprietors of the Chicago Savings Bank, Englewood, and Bank of Grand Crossing, which closed its doors February 16, has been arrested. At the time of the failure the liabilities amounted to $56,000 and the assets were only about $10,000.

Ohio.—There was a run recently on the Sandusky Savings Bank, about $50,000 being drawn by small depositors. The National banks and business men stood by the threatened bank and the excitement was quickly ended. The bank is perfectly sound.

Chicago Stock Exchange is to have a fine new building at the corner of La Salle and Washington streets, on ground now occupied by the Atlas National Bank, and to cost $1,250,000, and be 100x180 feet in size, thirteen stories high.

To Abolish Gold Mortgages in Minnesota.—In the Senate a bill has been introduced to prohibit the preference of one precious metal over another in the making ot contracts, the intention being to abolish gold mortgages.

Kansas City, Mo.—M. H. Lewis, who embezzled $12,000 from the Lombard Investment Co. and fled to Mexico is still confined in the military barracks at Nueva Laredo, Mexico, pending adjustment of some legal technicalities.

Wisconsin, Waupaca.—E. Coolidge, formerly a banker here, has been found guilty of receiving deposits when he knew his bank was insolvent, and fined $1,000 and costs. An appeal will be taken.

Kansas City, Kan.—The Bank of Kansas City, capital $50,000, is a new organization, numbering among its promoters: W. G. Porter, Jno. D. Fife, W. B. McCrary and W. C. Connelly.

Minnesota.—Public Examiner Kenyon has issued a call to all State banks to report upon the condition of their accounts and finances at the close of business Monday, March 6.

American Exchange Bank, St. Louis, Mo.—This bank's statement of March 13 shows capital, $500,000; surplus and undivided profits, $355,783.40; deposits, $2,013,963.37.

Chicago, Ill.—Mr. A. Hansl, of Dallas, Texas, has taken charge, as general manager, of the investment department of the firm of Kopperl & Co., of Chicago.

Wisconsin.—Mr. C. W. Davis, President of the German-American Bank of Oshkosh, was recently injured in a collision of street and steam cars in that city.

Montana.—Miss Leila Tucker, sister of J. M. Tucker, Cashier of the Montana Savings' Bank, with which she was at one time connected, died March 6.

Illinois.—H. C. Fox, a collector for the First National Bank, of Chicago, was robbed of $1,200 on one of the stairways of the Court House recently.

South Dakota.—George C. Favorite, President of the newly opened First National Bank, is also Mayor of the city.

Indiana.—An assessment of $75 per share has been levied on all stockholders of the defunct Vincennes National Bank.

Utah's Mineral Product.—The following official report of the gold and silver output of Utah for the year 1892 has been completed: Total gold output for 1891,

$31,644; for 1892, $31,926, showing an increase of $282; silver output for 1891, 8,750,352 ounces; for 1892, 7,762,257, showing a decrease of 988,095 ounces.

Missouri.—The Farmers & Traders' Bank of Montgomery City was burglarized to the extent of $3,500 on March 15.

Illinois, Yellow Creek.—Application has been made to Secretary of State for change of name to Pearl City.

Nebraska.—The Comptroller of the Currency has issued an order designating Lincoln as a reserve city.

PACIFIC SLOPE.

San Francisco Savings Banks.—All the banks except one have made gains in deposit accounts during the past year, as follows:

California Savings	$38,126 20
French	90,969 05
German	3,189,029 28
Hibernia	1,481,513 99
Mutual	663,983 09
People's Home	322,787 39
San Francisco Savings Union	2,841,188 39
Savings and Loan	554,879 56
Security	492,210 79
Gain in nine banks	$9,674,637 74
Decrease in Humboldt	50,920 68
Net gain	$9,623,717 06

The phrase, "To him that hath shall be given," is exemplified in the above exhibit. The largest banks show the largest gains for the year. The reason why the Hibernia did not increase its deposits in proportion to the German and Savings Union is probably due to the lower rate of interest paid by the Hibernia. For many years the Hibernia Savings and Loan Society has held the leading position among the Savings banks of this city, and for that matter all banks of all kinds this side of Chicago. The German Savings and Loan Society for the past six months has been at the top, where it is likely to remain for some time.

Washington.—This State is to have a banking department, with a Superintendent at an annual salary of $2,400, and two assistants at $1,200 each.

Legal Rate of Interest 8 Per Cent.—Following is the text of Senate bill No. 66, signed by the Governor, fixing the legal rate of interest:

SECTION 1. The legal rate of interest shall be 8 per cent. per annum.

SEC. 2. All state, county, city or school warrants, or other warrants drawn on public funds shall bear interest at a rate not exceeding the legal rate.

SEC. 3. Judgments shall bear the legal rate of interest from date of the entry thereof.

SEC. 4. All acts or parts of acts in conflict herewith are hereby repealed.

Oregon.—The Legislature at its recent session passed a law abolishing days of grace, to take effect May 19. It is held by eminent counsel that after the Act takes effect the payer of paper drawn prior to May 19, will not be entitled to grace.

The law as to legal holidays is now as follows:

"The following days shall be and are hereby declared to be legal holidays in this State, to wit: Every Sunday, the first day of January, the twenty-second day of February, the thirtieth day of May, the fourth day of July, the first Monday in September, the twenty-fifth day of December, and every day on which an election is held throughout the State, and every day appointed by the President of the United States, or by the Governor of this State, as a day of public fasting, thanksgiving or holiday. Whenever any legal holiday other than a Sunday falls upon Sunday, the Monday following shall be and be observed as such holiday.

Negotiable instruments falling due on any legal holiday shall be due and payable on the next succeeding business day."

Portland, Ore.—A monthly paper under the name of *Pacific Banker and Investor* recently made its first appearance. Its editor is Lionel Stagge, who is well known as a financial writer. It will be devoted to the publication of the financial news of the Pacific coast, and will contain monthly banking statistics and general financial information.

Utah.—The six-story Utah Loan and Trust Company's building at Ogden, the finest in the city, was gutted by fire recently. The building originally cost $200,000. Estimated loss, $125,000; insurance, $55,000.

San Francisco—Sather Banking Co.—At the annual meeting of the Sather

Banking Company, the old Directors were re-elected. The Board subsequently organized by the re-election of the old officers. The bank pays regular quarterly dividends at the rate of 6 per cent. per annum.

Goldendale, Wash.—The First National Bank reports a surplus of $10,000. O. D. Sturgess is the Cashier, in place of Frederick W. Patterson, resigned.

Madera, Cal.—John Brown, Cashier of the Fresno County Bank, has been acquitted of the charge of complicity in the bank forgeries.

Washington, Tacoma.—It is estimated that at least $20,000 in bad silver dollars have been recently floated here, even banks being taken in.

Los Angeles, Cal.—The residence of A. D. Childress, President of the City Bank, was destroyed by fire recently. Loss, $50,000.

Modesto, Cal.—The Modesto Bank is about to erect a new three-story building.

CANADA.

Ontario—Windsor.—Zebulon Laplant, charged with the robbery of $2,500 from the Merchants' Bank while its caretaker, has been acquitted. It is now stated that Laplant intends to sue the bank for $5,000, and Manager Durand for $2,000, for malicious arrest and false imprisonment.

Canada—Manitoba.—The Bankers' Association of Winnipeg decide that American silver would be received by the banks at the following rates of discount after April 1 next: Silver dollar, 80c.; half-dollar, 40c.; quarter, 20c.; dimes, 5c.

A New Invention for Banks and Bankers.—Of the many devices that have appeared for systematizing the details of a banking business, and which are designed to economize time and minimize labor and errors, perhaps none have met with greater success than the new hand numbering machine recently perfected by the Bates Manufacturing Company, whose offices are located in the Edison Building, New York.

National and State Banks, Bankers and Trust Companies doing a general banking business, find it especially desirable for consecutively numbering drafts received for collection and notes for discount. Not infrequently it is found to be good policy to number up the checks and stubs of a check book for some depositor whom it is desirable to please. With a "Bates" machine, a boy can do the work in five minutes. Savings Banks find them indispensable for printing in the numbers of accounts in new ledgers and consecutively numbering Mortgages, Certificates, Applications, and sometimes the Register and Pass Books. They can also be used advantageously in compiling interest sheets.

The "Bates" machine is capable of numbering consecutively, in duplicate, or will continuously repeat a number. These various changes are effected by merely moving a pointer upon a dial, as shown in the illustration in the Company's advertisement in this issue of the JOURNAL. It is the only device of the kind which is completely automatic, self-changing every wheel from "1" to the full capacity of the machine, those made with four wheels numbering up to 9,999 and those with seven wheels to 9,999,999. The figures are cut in *steel* wheels and all wearing parts are made of steel. The impressions are fully equal to the best printing press work, and each machine is guaranteed in every respect. It is essentially a high class machine, but the prices are very reasonable, those made with four wheels costing only $14. It is evident that the manufacturers have entire confidence in their machines as they make the exceedingly fair offer to deliver them to banking institutions, subject to acceptance, after ten days' trial.

World's Fair Albums, given away by the C. H. & D., "The World's Fair Route" from Cincinnati. A magnificent album of World's Fair views has been published by the C. H. & D. which will be sent to any address on receipt of 10 cents in stamps. The Cincinnati, Hamilton and Dayton, in connection with the Monon Route, is the only line running Pullman perfected safety vestibule trains with dining cars from Cincinnati to Chicago. The "Velvet" trains of the C. H. & D, are admittedly the "Finest on Earth," and the line is a representative "World's Fair Route." For tickets, rates, etc., address any C. H. & D. agent. To get an album send your address with 10 cents in stamps to E. O. McCormick, G. P. & T. Agt., Cincinnati, O.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

FAITHFUL BANK CLERKS.—Occasionally the public is startled by the defalcation of a bank clerk, and a good deal is made of the circumstance in the press and in social circles. Usually the one who has gone wrong stood well in the community, was respectably connected, with family ties, a member of some orthodox church, a leader of the choir or Superintendent of a Sunday school. People wonder how one with such environment could go astray. The fact that so many of those who do wander in these forbidden paths sustained such respectable affiliations is no reflection on these conditions, but rather confirms the view of their necessity in order to gain access to places of trust and responsibility. The superficial observer at once condemns the whole system of ethics and morals as a safeguard to wrong-doing, but those who stop to take the second sober thought do not lay the blame for the evil course upon the standard of right living so generally conceded and so generally demanded as necessary to the securement of these places of opportunity. They trace the cause to its proper source, namely, the failure to live up to the standard by which the position was secured.

After all, the number of bank clerks who go astray, compared with the number who do not, is an infinitesimal percentage of the number employed in these positions, all of whom have the same temptations and the same opportunities to appropriate funds not their own as the few who do that sort of thing. Take the savings banks of this State as a limited illustration in this particular. There are now fifty-seven of these institutions in active operation here. They are the custodians of many millions of dollars. Each bank employs from two to twenty clerks. There are probably 500 of these employees in these banks. All do not have the same access to the money on hand. The Tellers handle all that comes in or goes out. In 1892, over $200,000 000 in money went over the counters of these banks in the form of deposits or withdrawals. That was the largest sum ever handled by these institutions So far as the public knows, every cent of that vast sum was faithfully accounted for. What is true of the clerks in the Savings banks is equally true of the clerks in the commercial banks of the State, where the amount of money handled last year was much larger.—*San Fran. Bulletin.*

NOTE.—It is undoubtedly true that no class of men in commercial pursuits are so uniformly honest and trustworthy as bank clerks. This can be accounted for by the fact that they are, as a rule, well-bred, educated, and possessed of gentlemanly instincts. In the JOURNAL's opinion the wrong-doing of the few bank clerks who fail can in a majority of cases, be traced to poor pay and to extraordinary temptations when under pressure. Pay the bank clerk a fair salary, and under proper safeguards peculation will rarely be heard of.—Editor JOURNAL.

NO STATE BANK NOTES.—A few days ago the announcement was made, with some show of authority, that the 17th session of the American Academy of Political and Social Science would be made the vehicle of a "sensation"; that certain friends of Mr. Cleveland would present the views of the President-elect in favor of a State bank note issue. The "sensation has failed to develop. Mr. Harter was on hand with his unconstitutional measure for Government control of State banks, indeed; but the alleged "spokesmen of Mr. Cleveland" were anything but kind in their attitude towards that measure, and in fact urged the retention of National banks as banks of issue. The "State bank" plank of the Chicago platform is already generally discredited, and will probably die of cold treatment in the near future.—*Exchange.*

Can an Officer of a National Bank Be An Examiner?—In reply to query from a subscriber to this effect the Comptroller advises us that Hugh Young is President of the Wellsboro' National Bank, at Wellsboro', Pa., and is also Examiner for the Pittsburgh District. It would seem, therefore, that there is no provision of law prohibiting the appointment of a National bank officer as a National Bank Examiner in a district other that in which his bank is located

FAILURES AND SUSPENSIONS.

Alabama.—The Alabama National Bank, at Mobile, closed March 14, and was taken charge of by the Comptroller of the Currency. The bank had outstanding about $90,000 indebtedness, has available $35,000, and approved paper shortly due that will fully cover the whole amount, so no one but the stockholders will lose anything.

Illinois.—William C. Williams, a private banker, of Englewood and Grand Crossing, has assigned. Liabilities and assets, $15,000. Williams, in connection with his banks, conducted a scheme for small iron banks at houses, collections to be made once a month. The first collection had not yet been made from the 6,000 holders.

Kansas.—The Kansas Trust and Banking Company, of Atchison, has failed, with liabilities of about $800,000. It is claimed by the officers that the assets are sufficient to meet all demands. R. M. Manley, Vice-President, loses $250,000. Large sums had been loaned on real estate, and the heavy depreciation in values caused the crash.

Missouri.—On March 10, the Ætna National Bank, of Kansas City, went into voluntary liquidation, the reason assigned being that the bank was not doing a profitable business. Depositors will lose nothing, and all liabilities will be promptly met. The bank was organized March 15, 1890, and had a capital of $250,000.

Nebraska.—The State Banking Board has taken charge of the Farmers & Merchants' Bank at Elk Creek, whose affairs are in bad shape; deposits are not large. Holmes, the Cashier, is reported to be under arrest.

Tennessee.—Nashville has recently experienced a severe financial shock caused by the failure of the Commercial National Bank on March 25, followed by the failure of the Bank of Commerce, March 27, while the Mechanics' Savings Bank announced that it would require sixty days' notice from time depositors before withdrawal of funds. The Commercial National was heavily involved by the failure of Dobbins & Dazey, who had been speculating extensively with the bank's money. The capital stock is $500,000, and surplus and profits $190,000; depositors will lose nothing.

The Bank of Commerce was chartered in 1887, and claimed a paid-up capital of $60,000, but is now placed at $29,000. The bank was a small one, its assets and liabilities being approximately as follows: Assets—Notes discounted, $76,000; real estate and cash, $21,700; total, $97,700. Liabilities—Capital stock paid in, $27,500; deposits, savings accounts, $14,000; deposits, special account, $15,000; general deposits, $19,000; profit and loss, $22,000; total, $97,700.

In connection with the recent failure of the Commercial National Bank, the following will be of interest: George F. Dazey, of the cotton firm of Dobbins & Dazey, which suspended some days ago, was arrested April 1 upon a United States warrant sworn out by Bank Examiner McKnight, in charge of the suspended Commercial National Bank of this city. The charge in the warrant is "conspiring with Frank Porterfield to embezzle from the Commercial National Bank." Dazey waived examination and gave bond to appear at the next term of the Federal Court. Porterfield was Cashier of the defunct bank.

Virginia.—Jacob L. Moon, a banker at Scottsville, has assigned. He succeeded the Scottsville Savings Bank in 1870, and was the "Co." of J. S. Martin & Co., dealers in dry goods, who failed recently at Bluefield, W. Va.

Washington.—A Receiver has been appointed for the Oakland Loan & Trust Co. of Tacoma, on the petition of W. H. Nichol, who claims that the concern is insolvent.

Chihuahua, Mexico.—The failure of McManus & Sons, the bankers, of this city, is announced. The firm has been established here for many years, and is widely known throughout Mexico and Texas. The liabilities are placed at $1,200,000, but may amount to considerably more than that sum, no public statement having been made. It is believed that the assets are more than $1,000,000.

McManus and Sons have speculated heavily in mines, and have been very unfortunate in their investments. The Government has ordered that a strict investigation be conducted into the cause of the failure and the present condition of the institution.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Sewickley, Penna.—The borough of Sewickley will refund its $60,000 8 per cent. water bonds, maturing 1903, at 5 per cent.

Tennessee.—$1,000,000 of the State debt will be refunded at a rate to be determined on later.

San Antonio, Tex.—The City Council has voted for the issuance of $60,000 of improvement bonds.

Alliance, Ohio.—Recently voted in favor of an issue of $30,000 in bonds for sewers.

Andover, Mass.—Issue of $10,000 in bonds has been authorized.

Arizona.—Wm. Christy, Territorial Treasurer, will receive bids for 5 % redemption bonds of the Territory to the amount of $500,000, of the denomination of $1,000 each.

Brockton, Mass.—It is reported that a loan of $285,000 has been authorized, to run thirty years, with interest at 4 per cent., for sewerage purposes.

Fulton County, Ga.—An election will be held April 13 to vote on a proposition authorizing the issue of $600,000 in bonds for improvement purposes.

Grand Rapids, Mich.—Bids will be received until June 1, 1893, for $400,000 of 5 per cent. street improvement bonds, maturing at the rate of $100,000 yearly from May 1, 1894, to May 1, 1897, inclusive.

Harrison County, Ohio.—Bonds to the amount of $100,000 will be issued for a new court house.

Hartford, Conn.—An issue of $100,000 in bonds is proposed for a new police building, and $1,000,000 for municipal improvements.

Milledgeville, Ga.—An issue of $10,000 in bonds has been authorized.

San Diego, Cal.—The question of issuing $650,000 water-works bonds will be determined by an election to be held April 11.

CORPORATIONS SEEKING CAPITAL.

Ulster & Delaware Railroad.—$1,794,600 capital stock.

Third Avenue Railroad Co., New York city, $1,000,000 additional capital stock.

East River Gas Co., L. I. City, (N. Y.)—Offering $555,000 gold bonds of 1942.

New York Central & Hudson River.—At the annual meeting of the directors, to be held April 19, a proposition will be voted on to increase the capital stock from $89,428,300 to $100,000,000, for the purpose of extensions and improvements.

Sunday Creek Coal Co.—Issue of $400,000, 6 per cent. gold bonds. The property of the Company is located in Perry and Athens Counties, Ohio.

SECURITIES SOLD.

Camilla, Ga.—A sale of $5,000 6 per cent. school bonds is reported.

Greenville, Tenn.—The purchase of $12,000 of school bonds by Harris & Co., of New York, is reported.

Toledo, Ohio.—The following is a list of the prices received for the bonds which were offered for sale recently:

	Bid.
Improvement bonds, $13,608, due 1893 to 1903	100.271
Improvement bonds, $2,788, due 1893 to 1898	100.122
Improvement bonds, $2,935, due 1893 to 1898	100.119
Street and sewer bonds, $20,000, due January 15, 1913	102.19

The Improvement bonds due from 1893 to 1903 were awarded to Messrs. Seasongood & Mayer, of Cincinnati; those due from 1893 to 1898 to the Second National Bank; and the street and sewer bonds to Messrs. Blair & Co. of New York. The bonds all bear interest at the rate of 5 per cent., with the exception of the street and sewer bonds, which bear 4½ per cent. interest.

Upper Sandusky, Ohio.—The city has sold $8,000 of securities at 108.32.

Everett, Wash.—$35,000 6 per cent. 20-year school bonds were recently sold.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4855—Franklin National, New York City. Capital, $200,000.
4867—First National Bank, Hicksville, Ohio. Capital, $50,000.
4872—First National Bank, Princeton, New Jersey. Capital, $50,000.
4873—Needles National Bank, Needles, California. Capital, $50,000.
4874—First National Bank, Spearfish, South Dakota. Capital, $50,000.
4858—Citizens' National Bank, Port Henry, New York. Capital, $50,000.
4882—First National Bank, Noblesville, Indiana. Capital, $50,000.
4886—Merchants' National Bank, San Diego, California. Capital, $100,000.
4887—Reading National Bank, Reading, Pennsylvania. Capital, $200,000.
4864—First National Bank, Belmont, Ohio. Capital, $50,000.
4876—Citizens' National Bank, McKeesport, Pennsylvania. Capital, $100,000.
4880—First National Bank, Hempstead, New York. Capital, $50,000.
4881—First National Bank, Hartley, Iowa. Capital, $50,000.
4890—First National Bank, Gothenburg, Nebraska. Capital, $50,000.
4869—First National Bank, Tonawanda, New York. Capital, $100,000.
4870—First National Bank, Morris, New York. Capital, $50,000.
4883—Lincoln National Bank, Pittsburgh, Pennsylvania. Capital, $200,000.
4889—Nirst National Bank, Forest City, Iowa. Capital, $50,000.
4892—Farmers & Merchants' Nat. Bank, Mount Pleasant, Penn. Capital, $50,000.
4893—South Milwaukee National Bank, South Milwaukee, Wisconsin. Capital, $50,000.
4865—Dublin National Bank, Dublin, Texas. Capital, $50,000.

NEW BANKS, BANKERS, ETC.

ALABAMA.

ANNISTON—W. J. Stevens Banking Co., reported organizing.

CALIFORNIA.

ALAMEDA—Encinal Bank reported not yet ready for business; President, Charles S. Neal; Vice-President, J. F. Forderer; Cashier, John F. Ward.
NEEDLES—Needles National Bank; capital, $50,000; President, Walter F. Crosby; Cashier, Frank W. Gove.
PLEASANTON—Bank of Pleasanton; capital, $50,000; President, P. N. Lilienthal; Cashier, E. L. Benedict.
SAN DIEGO—Merchants' National Bank; capital, $100,000; President, M. A. Weir; Cashier not reported.
SAN FRANCISCO—Columbian Banking Co., organizing; capital, $1,000,000.
SAN LEANDRO—Bank of San Leandro, organizing.
VALLEY FORD Dairymens' Bank, organizing; capital, $100,000.
WOODLAND—Farmers & Merchants' Bank, organizing.

COLORADO.

DENVER—Mercantile Bank, organizing; capital, $100,000.
EATON—State Bank of Eaton; capital, $16,800; President, G. H. Denio; Vice-President, Edw. K. Packard; Cashier, F. N. Thomas.
TRINIDAD—Trinidad Savings Bank; capital, $25,000; President, L. H. Turner; Cashier, W. H. Robinson.

CONNECTICUT.

BRIDGEPORT—Barr & Knapp.

GEORGIA.

ATLANTA—Weyman & Connors; capital, $25,000; surplus, $5,000.
GAINESVILLE—S. H Hunt, banker; capital, $12,000.
THOMASVILLE—Thomasville Exchange & Banking Co.; President, D. I. McIntyre; Vice-President, T. C. Mitchell.

ILLINOIS.

ARCOLA—Arcola State Bank, organizing; capital, $30,000.
CHICAGO—People's Bank, organizing.—Citizens' Loan & Trust Co.; capital, $500,000; President, Geo. E. Wilson; Vice-President, Wm. S. Wharton; Cashier, H. H. Sherwood.—Bradford & Church, successors to Bradford Brothers.—American Trust & Safety Vault Co., organizing; capital, $600,000.
CHICAGO HEIGHTS—Bank of Chicago Heights; capital, $25,000; President, W. J. McEldowney; Cashier, David Wallace.
EDELSTEIN—R. L. Houghton.
JOY—Bank of Joy (Holmes & Bean).
MANTENO—Citizens' State Bank, organizing; capital, $25,000.

ILLINOIS, Continued.

MATTOON—Mattoon State Savings Bank; capital, $50,000; President, James H. Clark; Cashier, J. A. Montague.
MILAN—Milan Bank; owners, Caldwell & Henry; Cashier, Andrew Allen.
MOUNT MORRIS—Citizens' Bank; President, Isaac Rice; Cashier, J. H. Rice.
MOWEAQUA—Commercial Bank; Owens, Miller, Brown & Co.
PERRY—Perry State Bank, organizing; capital, $25,000.
RAVENSWOOD—Floyd & Co., bankers; capital, $6,000.
TOLUCA—First National Bank; capital, $100,000; President, Charles J. Devlin; Cashier, D. M. Wood.

INDIANA.

CONVERSE—Citizens' Bank; President, Geo. W. Ober; Cashier, M. J. Gottschalk.
NOBLESVILLE—First National Bank; capital, $50,000; President, Marion Aldred; Cashier, Geo. S. Christian.
NORTH JUDSON—Citizens' Bank; President, F. P. Whitson; Vice-President, Lewis Keller; Cashier, Isaac Templin.
ELWOOD—Elwood National Bank, organizing.

IOWA.

BUFFALO CENTER—Buffalo Center Savings Bank; capital, $12,000; President, John Law; Cashier, E. E. Secor.
CLEGHORN—CLEGHORN State Bank, organizing; capital, $25,000.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, April 4, 1893.

THE IMPORTANT EVENT of last month was the change in the administration of the government at Washington, the retirement of Mr. Harrison, and the installation of Mr. Cleveland, the abandonment of a republican policy and the establishment of a democratic one. It is yet early to look for results from the change, and after all they may not be so patent or so far reaching as political prejudice may fear or partisan bias expect. So far, since March 4th the commercial and financial situation has been much as it was before that date. The problems then to be solved are yet to be solved, and the difficulties then to be surmounted are still obstacles in the path of progress. The repeal of the Silver Act of 1890, for which it was thought an extra session of Congress would be called by President Cleveland, is not now imminent. The President will not convene Congress at this time, and it is doubtful whether a repeal of the Act would follow should Congress meet. The complexion of the new Finance Committee of the Senate—six for silver and five against—suggests the position which the Senate may take in any silver controversy, while the next House is said to be more favorable to silver than was the last. Under the circumstances the refusal to call Congress in extra session appears to be dictated by wisdom.

It is understood that President Cleveland has decided to invite the foreign governments to reconvene the Monetary Conference in May. While no practical result is expected to be attained, and the announcement has already been made in the House of Commons, by the Chancellor of the Exchequer, that the British delegates to the conference would be instructed to oppose every bimetallic proposition, the President thinks it only a matter of courtesy to the other nations represented, that the United States should not be the first to withdraw from a conference held originally at its solicitation.

The government has met with unexpected success in maintaining the integrity of its gold reserve. For a time there was quite a rivalry between the banks of Western cities in tendering gold to the government in exchange for legal-tender notes. The Denver Banks offered $1,000,000, Cincinnati $600,000, and Chicago $500,000, and other amounts were tendered by various cities, until the Secretary of the Treasury was compelled to cry out: "Hold! Enough," and an offer of $1,000,000 from San Francisco was refused. The reserve in the Treasury has been increasing quite steadily until it now approximates $107,000,000. There has as yet been no official declaration by the new Secretary, Mr. Carlisle, as to the policy which he will pursue with reference to the $100,000,000 gold reserve held against the legal-tender notes. An opinion by Solicitor-General Aldrich, given at the request of the former Secretary of the Treasury shortly before his retirement, was made public last month. In it the view was presented that there is no legal requirement for maintaining a reserve of $100,000,000, also that the Secretary of the Treasury has power to issue bonds to redeem the old legal-tender notes (greenbacks). The present Secretary has endeavored to maintain the $100,000,000 reserve, without indicating whether he would permit it to be reduced rather than sell bonds or *vice versa*. Offers have been made to take any bonds that might be issued, and report had it that Mr. J. P. Morgan, the New York banker, had gone to Europe to negotiate the sale of $50,000,000 government bonds. The report was denied, however, by officials in Washington.

The Treasury has found relief in the very large revenues from customs, these amounting to about $20,000,000 for the month, against $16,400,000 in March, 1891. But the source of those revenues, the extraordinary imports of merchandise, has been the cause of considerable anxiety concerning the exportation of gold. There was almost a complete suspension of gold exports during the month, but the extraordinary advance in the loaning rates for money early in the month, and the somewhat liberal buying of American securities for foreign account, prevented the shipment of gold even while our imports largely exceeded our exports of merchandise. The complete returns of our foreign trade for February show net imports of about $19,700,000 this year, against net exports of about $21,300 000 last year, a change of $41,000,-000. There has been a decrease of $10,000,000 in the exports of wheat and corn alone, and of $11,000,000 more in cotton. The strikes in the British cotton mills have come to an end, and there may be some increase in the exports of cotton, but any large gain is not anticipated. An adverse balance of trade with possible gold exports may ordinarily be expected until July 1st, or even beyond that date, and it must necessarily be some time before the position of the Treasury with reference to its gold reserves will be absolutely assured.

There has been nothing of a startling nature developed in financial circles in Europe during the past month. After the conviction and sentence of certain of the Panama Canal offenders, Paris quieted down in a measure, although soon after the French ministry resigned in consequence of the Chamber of Deputies opposing the wishes of the government relative to the liquor law amendment incorporated in the budget. The Bank of England, at its annual meeting, announced that the Baring liabilities were reduced to £4,500,000 with an apparent surplus of £350,000. Bar silver in London, on March 22, touched 37 9-16 pence per ounce, the lowest price ever recorded. The Bank of England has made no change in its rate of discount which has been 2½ per cent. since January 26. The open market rate in London for 60 to 90-day bills is 1⅜@1½ per cent. as against 1½ per cent. at the close of February and 1⅛ per cent. in January. In Paris the open market rate is 2¼ per cent. as against 1⅞ per cent. in February; in Berlin 2⅜ per cent. and Frankfort 2½ per cent. as against 1½ and 1⅝ per cent. respectively at the end of February. During the last week in March the Bank of England lost £838,000 in bullion, holding at the close £26,234,886. The Bank of France reports a decrease of £75,000 in gold, while the Bank of Germany has lost £84,000 since last report.

The total amount of specie exported from New York city to all points during the month of March was $15,113,000 as compared with $16,538,000 in February, making a total for the year of $41,219,000. The imports for the month were $5,348,000, as compared with $537,000 in February, making a total for the year of $6,011,000.

The United States Treasury statement for March shows a decrease of $1,956,123 in the public debt. There was a decrease in the non-interest bearing debt of $453,533, no change in the interest bearing debt and an increase of cash in the Treasury of $1,502,640. The total cash in the Treasury is $762,768,427, of which $218,378,232 is in gold coin and bullion, $477,864,391 in standard dollars, silver bullion and subsidiary coin, $55,071,163 in gold and silver certificates, legal tenders and National Bank notes, and $11,954,641 in National bank depositories and disbursing officers' hands. The amount at present in National bank depositories is $11,369,515. The bonded debt on March 31 was $585,034,260, and total public debt $962,828,219. Net available cash balance in the Treasury, including deposits in National banks, is $25,630,728.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $100,802 retired circulation of National gold banks—was on March 31, $175,993,722. This shows an increase for the month of March of $672,866, as compared with an increase of $1,032,235 in February, and an increase in total circulation since March 31, 1892, of $3,575,603. During the month of March there was issued to new banks $249,220, and to old banks increasing circulation $1,045,770. There has been surrendered and destroyed since February 28, $622,124. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $22,133,306, showing a decrease in that class of circulation during the month of $300,089.

NEW YORK CITY BANKS.—The following reflects the condition of the local banks each week during the month of March. For the week ending

March 4 the New York city banks received gold and currency from the interior amounting to $4,115,000 and shipped $7,194,000. During the same time by Sub-Treasury operations they lost $3,900,000, making a net loss for the week of $6,979,000 During the week ending March 11 the New York city banks received from the interior gold and currency amounting to $4,399,000 and shipped $6,905,000. By Sub-Treasury operations for the same time they lost $3,000,000, making a net loss for the week of $5,506,000. For the week ending March 18 the local banks received gold and currency from the interior amounting to $5,116,000 and shipped $4,605,000. By Sub-Treasury operations for the same time they lost $1,600,000, making a net loss for the week of $1,089,000. For the week ending March 25 the New York city banks received from the interior gold and currency amounting to $5,511,000 and shipped $3,182,000. During the same time by Sub-Treasury operations they lost $1,100,000, making a net gain for the week of $1,279,000. For the week ending April 1 the New York city banks received from the interior gold and currency amounting to $5,092,000 and shipped $4,314,000. During the same time by Sub-Treasury operations they lost $800,000, making a net loss for the week of $22,000. From February 25 to April 1 (5 weeks), the New York city banks lost gold and currency amounting to $12,817,000 as compared with a loss of $8,646,000 in February and a gain of $20,435,000 in January.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surp. Res.*	
Mar. 4	$452,917,000	$72,354,000	$49,651,000	$462,004,000	$5,040,000	$2,882,000	dec.
" 11.......	444,776,000	72,350,000	44,096,000	447,209,000	5,601,000	1,860,000	dec.
" 18.......	439,304,000	72,140,000	44,390,000	441,961,000	5,634,000	1,396,000	inc.
" 25... ...	434,468,300	71,624,000	47,496,000	439,504,000	5,619,000	3,204,000	inc.
Apl. 1	433,525,000	71,623,000	48,873,000	439,330,000	5,624,000	1,420,000	inc.

MINT COINAGE.—The coinage executed at the United States Mints, during the month of March, was as follows: Double eagles, 57,518; eagles, 30,022; half-eagles, 107,027; quarter-eagles, 30; standard dollars, 140,320; Columbian half-dollars, 2,062,105; half-dollars, 320; quarter-dollars, 304,320; dimes, 560,320; five cents, 1,615,020; one cents, 5,261,020, or a total of 10,138,022 pieces, valued at $3,422,795. In February the coinage was 7,175,000 pieces, valued at $3,960,600.

The following table shows the amount of gold and silver coins and certificates, United States notes and National bank notes in circulation April 1, 1893:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold Coin..........	$546,674,424	$138,874,473	$407,799,951
Standard silver dollars..............	419,047,305	359,490,115	59,557,190
Subsidiary silver.....................	77,197,330	11,165,155	66,032,175
Gold certificates.....................	116,620,430	5,135,430	111,485,009
Silver certificates	328,226,504	5,267,551	322,958,953
United States notes.......... ..	499,261,164	36,841,069	462,420,095
National bank notes................	176,094,544	3,827,111	172,267,433
Totals......	$2,163,121,710	$560,600,904	$1,602,520,806

Population of the United States, April 1, 1893, estimated at 66,587,000; circulation per capita, $24.07.

FOREIGN EXCHANGE.—The market for sterling exchange during the month of March has been largely governed by the high rates prevailing for call money. There has been a notable scarcity of both bankers' and commercial bills, but the stringency in the money market, in the first half of the month, weakened rates for exchange. Later in the month there was an advance which left the final quotations about the same as at the beginning of the month. For the week ending March 4, rates for sterling exchange were firmer than at the close of February, on the very limited supply of bills, closing with posted rates at $4.86 for long, $4.87¾ for demand, and $4.88 for cables. During the week ending March 11, sterling exchange became demoralized by the extraordinary advance in rates for call money, closing with posted rates at $4.85 for long, $4.87 for demand, and $4.87⅛ for cables. In the week ending March 18, high rates for money restricted business in foreign exchange, although the latter became firmer as money became easier, closing at $4.84¾ for long, $4.86¾ for demand, and $4.87 for cables. In the week ending March 25, sterling exchange became very strong, the scarcity of bills threatening a renewal of gold exports. The posted rates at the close were $4 86 for long, $4.87¾ for demand, and $4.88 for cables. In the week ended April 1, the sterling market was very dull, but rates remained firm with the supply of bills still scarce. Posted rates remained at the close $4.86 for long, $4.87¾ for demand, and $4.88 for cables.

The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, $4.87; Bankers' sterling, sight, nominal, $4.89; Bankers' sterling, sixty days, actual, $4.86@$4.86¼; Bankers' sterling, sight, actual, $4.87¾@$4.88; Cable transfers, $4.88@$4.88¼; Prime commercial sterling, long, $4.85¼ @$4.85½; Documentary sterling, 60 days, $4.85 @ $4.85¼; Paris cabletransfers, $5.15@$5 15⅜; Paris bankers', 60 days, $5.18⅛ @$5 17½; Paris bankers', sight, $5.15⅝@$5.15; Paris commercial, 60 days, $5.19⅜@$5.18¾; Paris commercial, sight, $5.17½@$5.16⅞; Antwerp commercial, 60 days, $5.20 @$5.19⅜; Brussels bankers', sight, $5.16¼@$5.15⅝; Swiss bankers', 60 days, $5.18¾@$5.18⅛; Swiss bankers', sight, $5 16¼@ $5.15⅝; Reichmarks (4), bankers', 60 days, 95@95⅛; Reichmarks (4), bankers', sight, 95½@95⅝; Reichmarks (4), commercial, 60 days, 94¾@94⅞; Reichmarks (4), sight, 95⅛@95¼; Guilders, bankers', 60 days, 40 1-16@40⅛; Guilders, bankers', sight, 40¼@40 5-16; Guilders, commercial, 60 days, 39⅞@39 15-16; Guilders, commercial, sight, 40⅛@40 3-16; Kronors, bankers', 60 days, 26¾@26⅞; Kronors, bankers', sight, 27@27⅛; Lisbon, sight, per milreis, 88@88¼; Italian lire, sight, $5.35@$5.33¾. Paris dispatches quote exchange on London 25f. 14½c.

HOME MONEY MARKET.—The extraordinary accumulation of funds in the New York banks in January was more than offset by the drain, which, beginning early in February, continued until the close of March. During most of the past month money has been stringent and rates very high, touching 60 per cent. on March 6, and 25 per cent. again on March 30 In the meantime call money fell to as low as 1½ per cent., making the extreme range for the month 1½ to 60 per cent. with the average about 8 per cent. The minimum rate for commercial paper has been 6 per cent. with very little demand. The banks lost $38,000,000 of deposit between February 25 and April 1, making $56.000.000 since the beginning of February. The reserves of the banks were reduced $11,000,000 in the first half of the month, but have increased $4.000,000 since, making a net decrease for the month of $7,000,000. The reserves on April 1 were $120,495,000, or $10,663,000 above the legal requirements. At the corresponding date last year, the banks held a surplus of $18,017,950. Time money is in good supply and the demand is fair, but high-grade collateral is demanded. At the close quotations on good Stock Exchange collateral are 5½ per cent. for thirty to ninety days, and 6 per cent. for longer dates. Commercial paper is in increasing supply and the demand good from out of town banks. The local banks are not in a position to buy paper. Rates are 6 per cent. for the best names, running up to 9 per cent. for less desirable. For the week ending March 4, the open market rate for call loans on stock and bond collaterals ranged from 3 to 12 per cent., the average being 6 per cent. Commercial paper, 5½ to 6 per cent. For the week ending March 14, the open market rate for call loans on prime collaterals ranged from 2 to 60 per cent., with 15 per cent. as the average. Commercial paper quoted 6 to 8 per cent. For the week ending March 18, the open market rate for call loans ranged from 1½ to 20 per cent., the average being 9 per cent. Commercial paper quoted 6 per cent. During the week ending March 25, the open market rate on call loans ranged from 1½ to 7 per cent., the average being 4 per cent. Commercial paper quoted 6 per cent. For the week ending April 1. the open market rate on call loans ranged from 3 to 25 per cent., the average being 7 per cent. Commercial paper, 6 per cent.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of February, 1893, and the highest and lowest since January 1, 1893, by dates:

	Year 1892.		Since January 1, 1893.		March, 1893.

N. Y. & N. E...	312,826	Mo. Pacific ...	176,874	C. R. I. & Pac..	88,706	Tenn., C. & I..	54,465
	2,543,249		1,177,511		635,482		348,410

leaving 1,043,239 shares to represent the dealings in the remaining 160 stocks. In addition 398 different issues of railroad bonds were dealt in, to the amount of $32,503,000 also $428,000 State bonds and $42,000 Government bonds. (Compared with March, 1892, there is a decrease of 2,581,142 shares in stocks; a decrease of $11,985,100 in railroad bonds; an increase of $294,000 in State bonds; a decrease of $66,000 in Government bonds, and a decrease of 641,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $83,500; stocks, 1,622,015 shares, of which 1,449,167 were American Sugar Refiners' common stock and 16,999 preferred; mining stocks, 16,350 shares. American Cotton Oil Certificates, 147,295 shares of common and 6,226 shares of preferred; Pipe Line Certificates, 125,000 barrels. Of National Lead common 172,843 shares, preferred 43,238 shares; of silver bullion certificates, 174,000 ounces, extremes being 83⅝ and 82⅛, closing at 82⅝. The listed stocks show a decrease of 3,437,356 shares as compared with the amount sold in February. Transactions in railroad bonds show a decrease of $15,697,000 during the same period, an increase of $148,800 in State bonds, and an increase of $32,000 in Government bonds. In unlisted bonds a decrease of $78,500; in unlisted stocks a decrease of 42,629 shares; in mining stocks a decrease of 12,700 shares; a decrease of 54,796 shares in Cotton Oil Certificates common, a decrease of 2,104 shares in preferred; a decrease of 57,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 71,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of March were sold: 3,006,430 shares of railroad and other stocks representing dealings in 72 properties. Of this amount 1,881,100 shares are transactions in the following 12 stocks:

Phil. & Read.	468,870	Dis & C. F. Co.	193,140	Del., L. & W...	83,440	Chic. Gas.......	62,330
N. Y. & N. E..	320,590	C. B. & Q	160,630	C. R. I. & Pac...	77,530	Mo. Pacific	45,380
C. M. & St. P.	253,750	N. Pac. pfd...	116,170	Nat'l Lead.....	69,110	A., T. & S. Fe..	30,160
	1,043,210		469,940		230.060		137,870

leaving 1,125,330 shares to represent the transactions in the remaining 60 stocks, of which American Sugar Refinery Common furnished 991,030 shares. Transactions in railroad bonds during the same period amounted to $2,872,000; in mining stocks 82,120 shares, 621,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show a decrease of 8,900 shares as compared with the month of February; a decrease of $862,600 in railroad bonds; a decrease of 28,065 shares in mining stocks; a decrease of 309,000 barrels in Pipe Line Certificates.

As compared with March, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks decreased 392,445 shares; bonds decreased $893,000; mining stocks decreased 83,124 shares, and Pipe Line Certificates decreased 425,000 barrels.

The gross earnings of 131 roads for the month of February, 1893, were $36,727,557 being a decrease of $1,322,271 over February, 1892. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange*.

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

UNIVERSITY EXTENSION—THE HISTORY AND THEORY OF MONEY. BY SIDNEY SHERWOOD, PH. D., WHARTON SCHOOL OF FINANCE AND ECONOMY, UNIVERSITY OF PENNSYLVANIA. BEING A SPECIAL COURSE OF TWELVE LECTURES IN FINANCE, WITH SYLLABUS AND ATTENDANT DISCUSSION, DELIVERED UNDER THE AUSPICES OF THE ASSOCIATION LOCAL CENTRE OF THE AMERICAN SOCIETY FOR THE EXTENSION OF UNIVERSITY TEACHING, AND THE PATRONAGE OF THE BANKERS OF PHILADELPHIA. WITH ADDRESSES BY DR. WILLIAM PEPPER, PROVOST OF THE UNIVERSITY OF PENNSYLVANIA; HON. WILLIAM L. TRENHOLM, LATE COMPTROLLER OF THE CURRENCY; HON. EDWARD S. LACEY, COMPTROLLER OF THE CURRENCY; JOSEPH WHARTON, FOUNDER OF THE WHARTON SCHOOL; PROF. EDMUND J. JAMES, PH. D., WHARTON SCHOOL, AND PRESIDENT OF THE AMERICAN SOCIETY FOR THE EXTENSION OF UNIVERSITY TEACHING, AND CHAS. HERMON THOMAS, M.D., CHAIRMAN ASSOCIATION LOCAL CENTRE; AND AN INTRODUCTION BY WILLIAM H. RHAWN, CHAIRMAN OF COMMITTEE OF BANKERS. PHILADELPHIA: J. B. LIPPINCOTT COMPANY; 1893.

The foregoing is a very long title-page, though perhaps necessary to enable readers to understand how Mr. Sherwood's lectures came to be delivered and printed. Some of it might as well, perhaps, have been learned from the introduction where the same matter is repeated. Another criticism is the doubtful use of the word "late" in describing Mr. Trenholm, which might give the impression to many that the ex-Comptroller of the Currency is no longer alive. The initiative of the lectures is also again described and dwelt on in the address of Prof. Edmund J. James (page 349). Prof. James said, "The really effective element in the arrangement of this whole course was Mr. Rhawn himself. * * * We owe much to the interest which the bankers of Philadelphia have shown, but in the first instance the whole initiative enterprise connected with it belongs to Mr. Rhawn."

Inasmuch as the twelve lectures comprising this course undertake to cover the whole ground of the History and Theory of money, a thorough criticism, within the usual space allotted to book reviews, will be an impossibility. The necessity of the course, as felt by those under whose auspices the lectures were delivered, is the general one of the more thorough education of business men, in the science of that mysterious entity, money, which in the present age underlies all their operations. There has always been a contest between practical and theoretical education. The advocates of the first insist that a young lad just from the common school, with an average English education, placed in a bank, would find therein the best university to complete his education as a competent or even as a great banker. The advocates of the second theory would train the youth in a university where everything pertaining to the business of banking is imparted to him theoretically, before he attempts the business in actual practice, and hold that this preliminary training will give him an advantage over one trained in practical experience alone. There is more apparent than real difference between the two schools. No one attains eminence in any line except by thorough training of the mind and body in that line. Whether this training is received by study or by practice, makes no difference. But if it can be obtained in practical work, there is a gain in time and expense, over the same training derived solely from study. Thus, admitting that a graduate of a school of finance and economy, could acquire the knowledge in say, three years, to fill the office of Paying Teller in a bank, and could perform the duties as well from the very first day as the man who had already occupied the place in the bank three years, the university trained man would have lost the three years' salary of the practically trained man, and be no better fitted as a Paying Teller. Mere knowledge is, after all, not the most important thing. It is the strengthening of the mind that is paramount, so that it knows what it wants to learn in order to accomplish its purposes and how to use this knowledge when acquired. The object of those who have initiated these lectures, however, appears to be not so much to advance the theoretical education of those who intend to become bankers, as to counteract the narrowing effect, a strictly special and practical education is apt to have. While a man who has devoted the years to theoretical study of the business, that another has devoted to the business itself, will have difficulty in obtaining opportunity to apply his broader learning, the practical man may have very crude and erroneous ideas when he attempts to understand the relations of his business to municipal and national questions, or his own relations to social life.

These lectures on money and finance, historically and theoretically considered, are intended to excite interest and study on the part of bankers and business men, which will enable them to exert a more wholesome influence upon educational, legislative and social movements, and at the same time give their own minds a larger field for healthful exercise.

The first six lectures cover the history of money, its connection with civilization; coins and coinage, production of precious metals, substitutes for money, banks generally, and the history of American Currency. The last six lectures cover the theory of money, history of theories, value and distribution of money, paper money, banks and government, money standard, monetary panics. The lectures were delivered extemporaneously and were taken down in shorthand, and this perhaps accounts for a certain lack of definiteness there is about them. The attitude of the lecturer is that of one who does not care to dogmatize, and who speaks in a manner not final, but to excite interest and discussion. There are some signs of, and also confessions of, haste in preparation on many points. The general position of the lecturer on subjects where he takes a stand at all, appears to be sound and in accordance with the most received authorities. The lack of definiteness is chiefly where the relations of money with social economics are touched upon. In other words, Mr. Sherwood evidently does not entirely accept the commercial idea of progress as the only possible progress, nor does he appear to look upon a civilization founded on commercial prosperity as the highest possible form of civilization, nor does he seem to believe the present social state will last forever. Each lecture was followed by a discussion ostensibly of the subject of the lecture, but the questions asked usually took a wider range. The interchanges are between Mr. Sherwood and the auditors, and also between the latter. The questions take a very practical form, and are such as bankers might be expected to ask, about the theoretical bearing of current questions—the effect of banking laws and the financial theories that agitate legislation. While the lectures possess great value as giving a comprehensive view of the field, they seem too theoretical for the purpose for which they were intended. It appears from the nature of the questions asked that the audiences would have been better satisfied if Mr. Sherwood had worked from subjects of current interest, such as the National Banking law, State Banking, International Monetary Conference, back to the principles of which these live financial questions are living signs. Universal knowledge or knowledge for its own sake, is opposed to specific knowledge, learned for a purpose. To interest a specifically trained man, he must be led from the facts he knows, and shown how other facts shed new light upon them. Much labor has been expended on the Appendix and Index of this volume. To show how hard it is to make an Index complete, Edward Atkinson's name is not mentioned in this one, although his opinions are frequently referred to in the lectures.

THE PEOPLE'S MONEY, BY W. L. TRENHOLM, NEW YORK. CHAS. SCRIBNER'S SONS, 1893.

In this book Mr. Trenholm has presented the principles of the science of money and finance in a popular form for the benefit, as is stated in the introduction, of the large number of plain people who desire to get some practical ideas on the subject. But while making no pretensions to doing more than this, the author has in reality produced a very exhaustive treatise on the mysterious subject of money, written in a most pleasant and lucid style. The arrangement of the book is excellent, beginning with a chapter on industry, commerce, finance and the people. The basis of the use of money is thus laid among the common facts of life patent to all. Next cash and credit are distinguished, and then money in its widest sense is described. The natural and industrial origin of money is then considered, and the necessity and effect of law in its regulation, the results of confidence and the essential qualities of money follow in order. Other chapters are devoted to the monetary unit, legal tender, materials of and forms and kinds of money, Government notes, bank notes, balance of trade and volume of money, value, standards of value, etc. All of the illustrations are cle r and appropriate. The book should be read by all who desire to secure a foundation for sound financial knowledge. It would make an excellent text-book in schools and colleges.

The book is for sale at the publishers' price, $1.50, by Bradford Rhodes & Co., 78 William street, New York.

BANKERS' OBITUARY RECORD.

Allen.—Caleb C. Allen, of Cambridgeport, Mass., died March 4, aged seventy-four. He was associated with many financial enterprises, and at the time of his decease was a Director of the National City Bank.

Armstrong.—George D. Armstrong, for twenty-five years Cashier of the First National Bank of Wilmington, Delaware, died at his home March 8.

Baker.—Theophilus L. Baker, Cashier of the Milwaukee, Wis., National Bank for twenty-five years, and who was identified with that institution since its organization, died at his home January 28, aged seventy-one years. Mr. Baker was Manager of the Milwaukee Clearing-House Association, and had also served several years as Treasurer of the Wisconsin Bankers' Association and Vice-President of the Northwestern National Bankers' Association.

Bates.—E. C. Bates, a member of the New York Stock Exchange, died recently.

Bond.—Edward P. Bond, Secretary of the Boston Safe Deposit and Trust Co., died February 10.

Chick.—Frank N. Chick, Second Vice-President of the National Bank of Kansas City, Mo., died at Excelsior Springs, Mo., February 27.

Cockey.—John G. Cockey, President of the Towson National Bank of Towson, Md., died at his residence in Lutherville, Md., March 20.

Diefenthaler.—John V. Diefenthaler, a Director of the Franklin Savings Institution, Newark, N. J., died March 11.

Farris.—Russell D. Farris, one of the leading business men of South Yarmouth, Mass., and for many years Vice-President of the Bass River Savings Bank, died March 2, at the age of seventy-four.

Glendinning.—Robert Glendinning, of Robert Glendinning & Co., Philadelphia, Pa., died March 5, aged fifty-five years.

Green.—Spencer K. Green, one of the old dry goods merchants of New York city, and for many years President of the Third Avenue Savings Bank, which failed some years ago, died March 12 at his residence. Mr. Green was a Director in the Murray Hill Bank at the time of his death.

Groos.—Charles Groos, of the banking house of F. Groos & Co., San Antonio, Tex., died February 24, at the age of sixty-three.

Hart.—E. K. Hart, President of the Orleans County National Bank of Albion, N. Y., died February 18.

Holmes.—Joseph A. Holmes, President of the Cambridgeport Savings Bank of Cambridge, Mass., died March 3, at the age of nearly eighty-one years.

Johnson.—Benjamin S. Johnson, Treasurer of the Haydenville (Mass.) Savings Bank, died recently, aged seventy-nine years.

Jones.—Stephen Warren Jones, President of the New York Savings Bank, died recently.

Kearny.—Joseph R. Kearny, Secretary of the New York Life Insurance and Trust Co., died February 20. Mr. Kearny was born in Wall street seventy-two years ago.

King.—Charles P. King, President of the Peoria, Ill., National Bank, died recently at Los Angeles, Cal.

Kirkham.—James B. Kirkham, President of the First National Bank, Springfield, Mass., died February 8. Mr. Kirkham was born in 1821, and was one of the best-known financiers in Western Massachusetts.

Lucas.—I. E. Lucas, a banker of Charlesville, Iowa, died February 12.

Meadowcroft.—Robert Meadowcroft, of Meadowcroft Brothers, Chicago, Ill., died recently.

Miller.—Andrew Miller, President of the Odd Fellows' Savings Bank, Allegheny, Pa., died February 4.

Northrop.—Hiram L. Northrop, a prominent financier of Kansas City, Kans., died March 22, aged seventy-three. He was President of the Northrop Banking Co.

Powell.—John Powell, President of the Merchants' Bank of Grenada, Miss., and a member of the firm of Chaffe, Powell & West, of New Orleans, died at his home in Grenada March 22.

Rodgers.—William B. Rodgers, Cashier of the Western Saving Fund of Philadelphia, died March 15 in Germantown, Pa., at the age of fifty-five.

Sherman.—Col. Augustus Peckham Sherman, a Director in the National Bank of Rhode Island, Newport, R. I., died March 25, aged sixty-seven years. In the death of Col. Sherman, Newport has lost one of its best-known citizens, who has filled many positions of public and private trust.

Torrey.—James W. Torrey, Cashier of the Philadelphia National Bank, died at his home at Welwood, N. J., March 14, aged fifty-seven.

Waterman.—Judge John A. Waterman, of Gorham, Me., died March 6. He had been Treasurer of the Gorham Savings Bank from its organization, and was a prominent figure in the politics of his State.

Woods.—John L. Woods, President of the Euclid Avenue National Bank of Cleveland, Ohio, died recently at Augusta, Ga.

RHODES'
JOURNAL OF BANKING.

Vol. XX. MAY, 1893. No. 5.

TO sell bonds, or not to sell bonds, to maintain gold payments is a question the Treasury of the United States appears to have not yet decided. In the January number of the JOURNAL it was pointed out that, under the present laws of the United States, the sale of bonds, once entered upon, could not very well be stopped until the last dollar of United States notes, whether old legal-tender notes, Treasury notes of 1890, or silver certificates, had been redeemed. That the sale of bonds persevered in meant the substitution of National bank notes for Government paper. That this was a result devoutly to be wished for, but that there was little hope so sensible a course could, for political reasons, be taken by any administration. Of course it was assumed that the United States would sell the bonds for gold coin alone. If, as is claimed by some, the bonds, if sold, may be legally paid for in silver, there would be little use in selling any.

The present laws of the United States in regard to its finances are most of them so drawn, either through the intention or through the carelessness of Congress, that, like the oracles of Delphi, they can be construed in favor of almost any financial theory. Difficult questions have been thrown by Congress (unwilling or unable to take responsibility) upon the Secretary of the Treasury. When that officer comes to a practical difficulty he delays to act in all cases where anything is left to his responsibility and not clearly defined by Congress. Thus the finances of the country are bandied between the Capitol and the Treasury like a shuttlecock. Apart from the dread on the part of the Secretary to assume responsibility there are some considerations against action under the Acts of 1870 and 1875, for the sale of bonds to secure the resumption of specie payments. First—When both of these Acts were passed there was no other United States legal-tender coin than gold coin in circulation anywhere. Second—The Resumption Act itself contemplated the reduction of outstanding legal-tender notes to $300,000,000 before redemption should begin on January 1, 1879; and, further, the Resumption Act, although not clear on this point, contemplated the redemption in coin of the legal-tender notes outstanding on the last mentioned date, *without reissue.* Third—In February, 1878, a new legal-tender coin, viz.: the standard silver dollar, and its paper double or ghost, the silver certificate, was authorized. Fourth—In May, 1878, the redemption of legal-tender notes then outstanding, *without reissue*, was forbidden. Fifth—The Act of July 12, 1882, again indefinitely, or rather, inefficiently, attempted the preservation of a gold reserve. Sixth—The Act of July, 1890, authorizing a bastard kind of legal tender note redeemable in gold or silver coin, with the vague statement that it is the policy of the United States to maintain the two metals on a parity with each other, upon the present legal ratio or such ratio as may be provided by law. These various Acts, it must be confessed, very seriously impair the right, so readily understood when the Acts of 1870 and 1875 were passed, to sell bonds for gold coin to maintain specie payments. There was no other coin than gold coin and no other notes to redeem but some $372,000,000 of legal-tender notes. Now, there are over 130 millions of Treasury notes of 1890, besides 346 millions of legal-tender notes to redeem, as well as nearly 500 millions of silver certificates to keep at par in gold. While, on the other hand, "coin" now means not only gold coin but standard silver dollars as well.

If there ever was need of an authoritative codification and interpretation of laws, there is that need in the case of the laws governing the finances of the United States. The action of the Secretary of the Treasury for years has been tentative and, Micawber-like, hoping for something to turn up. This opportunism has been forced upon the Secretary by the fact that if he takes serious action under one law he is sure to afford plausible ground for the statement that he is violating another; or, if he construes a law in the spirit in which Congress acted when enacting it, he will be attacked for not construing it in the spirit shown by Congress in enacting a subsequent law.

When the Abbess of Andouillets and her novice attempted to reason with their balky mules they were betrayed into using, in vain, some expressions they had heard their absent muleteer shout, with due measure of success, at the brutes. "They do not understand us!" cried Margareta. "But the Devil does!" said the Abbess. So, though our laws are not very well understood in this country, foreign financiers are well acquainted with the advantages offered to them.

IF THE SALE OF BONDS TO MAINTAIN GOLD PAYMENTS is begun by the Administration, when will it cease? There are now outstanding $346,000,000 in legal-tender notes and one hundred and thirty millions of Treasury notes of 1890. These notes are redeemable in gold on presentation when gold coin is demanded for them. When redeemed they are not cancelled, but reissued. If, therefore, the whole 476 millions were redeemed in gold they would still be in circulation to be redeemed again. In addition Treasury notes outstanding are increasing at the rate of nearly four millions per month. If the gold reserve is constantly maintained by the sale of bonds, and constantly depleted by the redemption of these notes, when is the sale of bonds to cease?

The only answer is, it cannot cease as long as there is a demand for gold. Bonds sold abroad for gold will be paid for in gold procured in this country. In other words, the United States will simply fund its notes into bonds instead of redeeming them in gold; and, as it continues to issue the notes, there will be no end to the funding. If, on the contrary, legal-tender notes and Treasury notes could be cancelled when once redeemed, there would be a prospect that maximum bond issues would not exceed the four hundred and seventy-six millions of these notes outstanding.

It was just said that while the notes are reissued they will be presented again and again for redemption as long as the demand for gold lasts. It is therefore of some interest to know what causes this demand. There is, first, an adverse balance of trade; but this itself is the effect of the unequal distribution of the currency and its accumulation in the Eastern money markets and importing cities. Second, there is the manifest determination of the European Nations to unload their silver on the United States in exchange for gold. This process will only cease with the exhaustion of the silver stock of Europe, or the exhaustion of the purchaser. The United States encourages the continuance of it by offering an exorbitant price in gold, which these Nations want, for silver which they desire to get rid of. Until the International Monetary Conference there was some doubt as to how the Nations of Europe stood on bimetallism. Since, there is none. They are all in favor of the gold standard, and intend to have it as soon as possible; and they are all now scrambling for the gold of the United States. They will probably get all they want, for there is absolutely nothing the Administration can do to maintain the gold standard except to sell bonds as long as the demand continues. If there was a law to stop the reissue of notes when once redeemed, or a law to stop the purchase of silver and the issue of Treasury notes, the position would be simplified. But, even if an extra session of Congress be called, it is doubtful if the monetary fanatics in that body will permit useful enactments.

Strong action upon the part of the Treasury is necessary to maintain the parity of the two metals as required by the Act of July 14, 1890. All notes redeemed for gold should be held to await the action of Congress when it meets, not reissued as at present. If bonds are sold they should be sold to the National banks for gold or gold notes, legal-tender and Treasury notes, the banks to issue circulation upon them to take the place of the legal-tender notes held. Bonds should not be sold abroad if possible to avoid it.

When Congress meets it should be asked to permit the cancellation of the notes redeemed in gold and to stop the purchase of silver.

SINCE THE ENGLISH PARLIAMENT, by a vote of 229 to 148, defeated the motion to use the influence of the British Government to bring about the reassembling of the International Monetary Congress, the chances of any practical results from another meeting of this body are problematical. It is evident that the trend of financial opinion in Europe is in the direction of the single gold standard. What may not be so clear to many, but is nevertheless equally true, is that the United States more than any country in the world has contributed to this result by its extremely unwise silver legislation. This legislation has offered a magnificent opportunity to foreign countries to exchange their silver for gold at a price far beyond what would otherwise have been the result of the supply and the cost of production. If the United States had not offered this tempting opportunity it is highly improbable that so many countries would have declared in favor of the gold standard. But, when the best system of finance can be had cheaply, why not have it, has been the very natural reasoning of the experienced financiers of Europe.

It is the action of the United States that has enabled Denmark, Sweden, Norway, Switzerland and Austro-Hungary to change to the gold standard, while Russia and Roumania are in the process of doing so. The Nations still doubtful, although none of them will declare in favor of bimetallism unless Great Britain will do so, are France, Belgium, Italy, Greece and the Netherlands. These last-named countries are not really doubtful; they would be perfectly willing to get on a gold standard if they were not loaded down with a stock of silver legal-tender coin upon which they desire to make the loss as light as possible.

The Nations which have recently adopted the gold standard, viz., Denmark, Norway and Sweden, Switzerland and Austro-Hungary, and those now seeking to do so, viz., Russia and Roumania, never had much silver to get rid of; but what they had, thanks to the United States, they have sold at a very advantageous price. If France, Belgium, Italy, Greece and the Netherlands could get the present market price for their silver, in excess of what they need for a token coinage, they would do so, oh! so gladly. But their stocks are so large that even to intimate any intention of disposing of them would swamp the market. But they are secretly getting rid of what they can at present prices.

It is a perfectly fair estimate that the price of silver would not be much over fifty cents an ounce if the United States stopped purchasing and other Nations took no action to sustain the price. Therefore the United States is taxing its people to raise money to purchase a commodity at thirty-five cents per ounce more than it is worth. The amount of this commodity produced within its own territory is about sixty-four millions of ounces. If the gold which the Treasury now pays for silver bullion at about eighty-five cents in gold per ounce was paid to Americans for American silver it would remain in the country. But it is rather evident that most of the silver purchased by the Government is silver owned by foreigners desirous of getting gold to establish the gold standard in Europe. As long as the United States is willing to act the philanthropist and pay the freight on the transportation of gold standard scales to all the suffering Nations of Europe, it would be the height of folly on the part of those Nations to put a stop to it. Therefore they will not indulge in any monetary agreements which might result in making them pay a portion of the freight.

The composite and curious financial laws of this country and the political influences by which they are controlled are well understood abroad. They are confident there that no administration is likely to have a financial policy that will offend any section of the country. They may be disappointed in this. It is certain that their attitude of indifference on the the silver question would be turned to one of great apprehension, especially on the part of the Nations cited who are loaded with silver, if the United States should quietly cease its purchases and let the silver market take care of itself; or, still better, if it should from a bull become a bear and offer its silver bullion, at lowered prices, perhaps France, Belgium and Italy would not then care so much whether England acted or not.

England, Germany and the other nations that have kept clear of the silver question are quite right in continuing to keep clear of it.

If you haven't any silver to speak of why buy any now?

THE BANKING BILL drawn up by the Savings Bank Commissioners of Massachusetts was briefly commented upon in the April number of the JOURNAL. It was there stated that the bill was not satisfactory, and that the reasons for this opinion would be given this month. This bill in its circulation-issuing features is merely an imitation of the National banking laws; in other words, it provides for the setting apart and investment of a large part, or the whole, of a bank's capital in Government (United States and State) stocks and bonds, to be deposited with the State as security for notes to be issued by the banks. It is not probable that where more than one class of Government securities is used as the basis of a system of bank circulation issued by a number of distinct banks, that there would be any uniformity of value to the circulation. The notes of a bank secured by the bonds of a State in low credit would not be as good as the circulating notes of a bank secured by the bonds of a State in good credit. To use State, city and municipal securities to bank on would, if generally legalized in the several States, cause a use of that kind of credit unprecedented in the history of the country, and a diversity as well as expansion of bank notes that could not fail to be most disastrous. If there are to be State bank issues, as of yore, do not let the banks mix up their credit with that of political corporations. The United States Government is the only one strong and constant enough to warrant the use of its securities as a basis of a banking circulation for the whole country. The history of the National banking system has shown that circulation based on bonds worthy of being used for the purpose is in its nature short-lived, cannot be permanent, for the Nation with the high and impregnable credit necessary to the issue of such bonds is sure to pay them off or so reduce their interest that banking upon them becomes unprofitable. On the other hand, bonds of States or cities in poor credit are the most profitable basis for circulation, because they are low in price and pretty sure to be a permanent investment. If, therefore, *carte blanche* is given to issue circulation upon State, city and municipal bonds, the banks will put in the cheapest and poorest that will be accepted. The privilege of using bonds for circulation purposes will frequently induce market quotations for the purpose of deceiving or cajoling the State authorities.

But, were all securities in the United States as good as United States fours, the system of issuing circulation on such securities is radically wrong in principle. A bank is supposed to be a machine for economizing the use of money in the community where it is located. Its stockholders put in their money as capital, and its depositors add their money to the general fund. The bank, by its machinery, loans to those who want it the money of those who do not, becoming responsible for any losses. After it is started the money paid in each day will, if certain well-known rules are observed, about balance what is paid out. A certain reserve of cash adjusts all differences. For every dollar paid out a well-managed bank takes in an evidence of debt from some holder of value. If to a borrower it takes a note secured on property of some kind directly or indirectly ; if to a depositor it takes an offset against his credit in the bank. Any bank that is well managed will secure a credit in addition to its capital equal, at least, to its capital. This is just as certain as the law governing the equality of daily payments and receipts. If it can directly loan this credit in its own locality, or so much as is needed there, so much the better for that locality in a business sense.

Under any system of issuing notes requiring the deposit of security with the State, the local effect of the credit of the bank is much reduced, to the detriment of the community in which it is situated. Not only this, but its very capital is reduced.

Thus the stockholders of a National bank pay in $100,000 in money. If they decide to issue circulation they buy, say fifty thousand dollars in bonds costing (4's) $56,750; on these they receive $45,000 in circulation. Instead of having $100,000 cash to loan, as the bank did before going into this bond and circulation transaction, they now have $43,260 and $45,000—$88,250—to loan at home; or, $11,750 less. To be sure, they have loaned $50,000 to the Government, and on their bond investment, if they keep the bonds until 1907, they will realize just 2.84 per cent. per annum. What good does this loan to the Government at 2.84 per cent. do their customers, who are willing to pay at least six per cent. for the money? The circulation helps the bank to increase the low rate of interest on the Government bonds, but it does not restore to the community the $11,750 that might otherwise be loaned there.

The old Massachusetts banking law authorized a bank to issue notes to the amount of its capital and twenty-five per cent. more; that is, if the stockholders paid in $100,000 in cash, the bank could issue $125,000 in notes upon the security of its assets without being compelled to buy bonds of any kind. The bank thus had $225,000 to loan to its customers instead of $88,250 as in the case of a National bank with similar capital.

The Massachusetts system of banking, prevailing as late as 1863, has been regarded by able authorities as one of the best banking laws ever produced. The difference of advantage to the place in which the bank is located, between a National bank and one under the old Massachusetts law, is $136,750 in favor of the Massachusetts law, with equal security derived, not from bonds deposited, but from strict business methods enforced by the State Bank Commissioners.

If the ten per cent. tax on State bank circulation is to be repealed by Congress, Massachusetts cannot do better than readopt her old law.

THE "JOURNAL" LAST MONTH indicated that the effect and intention of the $100,000,000 gold reserve provision of the Act of July 12, 1892, was to check somewhat the demand for the redemption of the legal-tender note in gold, by the refusal to continue the issue of gold certificates. Within a day or two after the issue of the April JOURNAL, the Secretary of the Treasury, alarmed by the continued depletion of the so-called "free gold," that is, the amount on hand in excess of one hundred million dollars, did suspend the issue of the gold certificates. Not content with this restriction, which would no doubt prove insufficient in the face of a strong demand for gold for export, it was rumored that the Treasury department had decided to redeem in silver alone the Treasury notes of 1890, hitherto redeemable in gold and silver.

Since last July, according to a report made to the last Senate and House of Representatives, these notes have been redeemed in gold at the rate of $4,000,000 per month. This Treasury note feature of the Act of 1890, viz.: the issue of these notes to pay for the 4,500,000 ounces of silver bullion purchased each month by the Government, has been hailed as a proper and ingenious method of the expansion of the currency needed by the growing business of the country. The average price of silver bullion has been about eighty-five cents per ounce, and, at this rate, $3,825,000 Treasury notes have been issued each month. If 4,000,000 of them have been redeemed in gold to be sent, most of it, out of the country, this is an exact verification of the prediction of the lamented Windom in regard to the proposed free coinage of silver, that it would drive gold from the United States and cause contraction instead of expansion. A large part of the silver sold to the Government is foreign silver, presented to the Treasury under various disguises. The purchase law is not benefitting American producers of silver, but those abroad, who are secretly taking advantage of its provisions to turn their silver into gold. The reason the American silver advocates and producers do not object, is because they hope and believe that the continuance of the law will bring gold to a premium and force the silver standard. To meet this foreign importation of silver and stop it, it might seem a feasible method to stop redeeming the Treasury notes of 1890 in gold; but if this course had been decided upon and adopted, it would amount to an ignoring of that portion of the law requiring the Secretary to maintain the parity of gold and silver dollars. If part of the law is to be ignored, why not ignore or suspend the whole law?

Undoubtedly the drain of gold from the United States is caused by the law of 1890. All of the talk about the exceptional foreign demand is much exaggerated. Foreign countries have, it is true, come to the conclusion that they had rather have gold than silver, and they are becoming more and more fixed in this conclusion because of the temptation offered by the laws of this country exchanging gold for silver. The United States, by its action, keeps up the price of silver to about eighty-five cents an ounce, and will exchange gold for it at this price. when, if it were not for this action, the price of silver would sink to fifty cents an ounce. The early discoverers of Japan thought the Japanese very foolish because they would exchange gold for silver, taking four ounces of the latter for one of the former. The Nations of Europe think the United States a "soft mark," because it will exchange gold for silver at eighty-five cents an ounce.

If gold payments on Treasury notes of 1890 had been stopped, gold could still have been obtained by the presentation of legal-tender notes for redemption. Instead of presenting Treasury notes, the holders who wanted gold would have turned them into legal-tender notes. This would either have sent legal-tender notes with gold to a premium, or it would have compelled the Secretary to redeem the legal-tender notes also solely in silver coin. If the stoppage of gold payments were the only way to rescue the United States from the dismal course of useless expenditure of revenue entailed by the Act of 1890, what would then become of the requirement of that Act to maintain the parity of the two metals?

THE ANNUAL DINNER OF THE NEW YORK BOARD OF TRADE on April 8, was the scene of two interesting speeches, by Governor Stone, of Missouri, and Ex-Secretary Fairchild, of New York; the former voicing the Western and the latter the Eastern side of the currency argument. The difference of opinion is more apparent than real, and is not, properly speaking, sectional, although West and East are convenient enough terms to aid in describing it. It amounts really to the diverse views as to the utility and proper function of money sure to exist between the class having everything to develop and acquire, and the class who have already developed and acquired, and want to keep and enjoy. As the West is the newer part of the country the former class preponderates there, and the latter class in the East. To the active class full of new enterprises, comparatively lacking in settled securities, plenty of money means a facility in obtaining it to further enterprises that cannot get support if the money market is tight. To this class the character and essential value of the money is of little importance so long as it will pass. The man whose only use for money is to take it in with one hand and pay it out with the other, to effect changes in property and commodities, cares little whether the money is rags or gold, so long as it does not remain in his hands, but simply passes through. When he finally realizes on his enterprises he wants something better, but then he joins the other class who merely seek to keep and derive an income from investments. What the enterprising man wants is money in such plenty that it freely offers itself to him when he can, or thinks he can, use it profitably.

The poorer the money in intrinsic value, the less certain is its ultimate security, and the quicker it will pass from hand to hand. Poor money thus stimulates doubtful enterprises, while a scarcity of good money represses enterprise of any kind. Taking standard coin as the basic type of good money, experience has shown that in new countries, not favored by mines of the precious metals, it is usually scarce, and has to be supplemented by the machinery of credit or paper money.

Much of the West was rich in silver mines, and if the status of silver as a precious metal had not been shaken by the adverse action of commercial Nations, the West would have furnished itself with a satisfactory silver currency. If the country west of the Mississippi had not been dominated by the Nation, it would, like Mexico, have furnished itself with an abundance of silver coin. Of course this same country would then have lacked the benefits of the National bond, but the local business man loses sight of this, and only sees that, with the great opportunities around him, which he never would have had the chance of seeing if it had not been for the National bond, he is prevented by laws made at Washington from utilizing many of these opportunities, by coining the silver at his doors. This feeling is natural, and it is a just feeling, too, only it is incorrect in its reasoning as to the real fault of the position. Congress, recognizing the fact that the West belongs to the United States, has, for the good of all, determined to follow the example of other enlightened Nations, and retain gold alone as the standard of values, thus preventing the West from utilizing their silver except as a commodity. In this the East—that is, all those who believe that the experience of the human race, in its highest development, has taught anything—think Congress has done right. But Congress has been wrong in not giving the West something in exchange for the right taken away—something to serve as well for local currency as the silver, if not demonetized, would have served.

What, then, has Congress done? First, it has given the National banking system. This, in many respects all that could be wished, has proved utterly inadequate as a furnisher of currency. The complaints against it and its unpopularity with the West, or the class of people meant thereby, while not always reasonably voiced, show that something else is needed. The legal-tender notes, silver certificates, etc., have been furnished by Congress. These, also, do not meet the needs of the West. Why? Because a bank of issue established in Washington, with no branches to speak of, cannot be expected to meet the necessity for a currency-issuing bank in Colorado, or Montana. These notes have no traveling capacity of their own, no elasticity. They have to be dragged through a dozen hands, to the place where they are wanted. What, then, has Congress left undone? It should give the West, that is the whole country, a banking system issuing an abundant currency, either by repealing the ten per cent. tax on State bank circulation, under proper safeguards, or by permitting National banks to increase their issues to a useful amount. All of these issues should be redeemable in gold. As to security of the notes about which so many stick, it is a mere detail. There are many ways of obtaining it, vouched for by that best of authorities—experience.

This was the point of agreement between Governor Stone and Ex-Secretary Fairchild, the West and the East The former said: "We want good money and plenty of it—far more, we think, than we have, money enough to answer our business requirements." Said Ex-Secretary Fairchild: "Remove Government trammels (in this I agree with the Governor of Missouri) from our currency, and the people of the United States will supply themselves with a circulating medium which will be safe, sound and sufficient."

THE EXPORTATION OF GOLD is not likely to cease soon under present conditions. The principal Nations of Europe are inclined to make gold the sole monetary standard and to obtain as much as possible. The easiest way to do this is to obtain it from the United States in exchange for silver money discarded in Europe. There are no laws in this country restricting the exports of gold coin. England, Germany, France, all have some methods of repressing gold exports. The United States laws on the contrary encourage such exportation. The silver purchase Act of 1890 requires the monthly purchase of 4,500,000 ounces of silver bullion at the market price, to be paid for in gold or silver coin at the discretion of the Secretary of the Treasury. The market price is fixed in London, and foreign holders, anxious to exchange their silver for gold, send it to this country disguised by melting into bars, so that it may be offered for sale to the Government. The foreign holders as a rule underbid the American producers, and have their lots taken in preference. The business is done through American banks and bankers, but investigation would show that the source of most of the silver taken by the Government during the past year is Europe, for about four millions of dollars in Treasury notes, received for the silver, are each month turned into gold for exportation. The American advocates of silver do not care, apparently, because of the continuance of this condition of things; as, in their opinion, it forces the country upon a silver basis, when they hope to have every thing their own way.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

I.

VARIOUS SOURCES OF INFORMATION NECESSARY.

The determination of the value of paper offered for discount calls for the exercise of the highest ability which the banker may possess. He who could lay down infallible rules for guidance in this matter might well congratulate himself that he had at last found the philosopher's stone which, it was fabled, could turn everything to gold. At the best one can but hope to offer a few suggestions or to consider the subject in a new light. The first point to be considered is the genuineness of the paper itself. The writer remembers an instance where a considerable amount of paper was discounted by the banks of a certain city on the strength of the endorser. When the paper finally went to protest and suit was brought against the endorser he promptly and emphatically pronounced the endorsement a forgery and flatly refused to pay. The suit was pressed and the matter finally wound up in a highly unsatisfactory manner. Forged notes do not turn up very often but they do occur with sufficient frequency to make it well worth while to be always on the watch against loss from this cause. It has been suggested that banks should send notices to all endorsers on discounted notes at the time the notes are discounted and to the makers where the note is discounted for an endorser. Much may be said in favor of such a plan, provided it would be generally adopted. A fraud which has been successfully effected is to obtain on some pretext a genuine note all properly drawn up but blank as to the amount. The payee fraudulently filled up the blank with a much larger amount than originally intended and succeded in getting the note discounted, and by successive renewals managed to stave off discovery for a considerable time. Notes presented to a board of Directors for discount should be passed from hand to hand and carefully scrutinized by each Director.

The genuineness of the instrument having been determined the next point to be considered is its legal sufficiency. The general principles of the law merchant governing promissory notes may be learned by a careful study of the accepted text-writers. A careful reading of the more noteworthy cases as they are reported from time to time in the banking periodicals will keep one fairly well informed as to the trend of current legal opinion. But all this, even when diligently and conscientiously pursued, does not make one a lawyer and, therefore, the layman must be very, very careful to distinguish between the little that he may be fortunate enough to know of the law and the very great deal that he does not know. A little learning is not only not a dangerous thing but is oftentimes a very useful thing provided we know the limits of our own acquirements. An important point in this regard, and one not always easy to decide is whether or no a note is negotiable. In some of the States, for example, a note to be negotiable must be made payable at a bank or banker's.

For example, there is great diversity of opinion as to the effect on the negotiability of a note of a provision that the maker will pay "reasonable attorney's fees" or "costs of collection" in case the note is not paid at maturity. Numerous examples might be cited to illustrate the varied phases of the law governing promissory notes but enough has been said to show the extreme importance of a careful study of this branch of the subject.

The genuineness of the note and its legal sufficiency having been satisfactorily determined we come to the main question: Will the note be paid at maturity? If it is not paid at maturity is it properly secured by endorsement, by collateral security or otherwise. There are two elements which go to make up a correct decision of these questions, namely, the necessary information, the business principles applicable to the case in hand and the exercise of judgment in making the final decision. The sources of information are numerous and varied. Among others may be enumerated the mercantile agency reports, statements more or less formal, of the person desiring the loan, the bank's private record, special inquiries, personal knowledge of the borrower and last, but by no means least, the indefinable rumors that float, as it were, in the air and go under the general name of gossip or, as it is often called, the talk of the street. Mercantile agency reports are valuable in giving a foundation on which to build. They are specially serviceable in giving an accurate outline of the financial history of the person, firm or corporation inquired about. The report gives names and dates and often indicates sources of information which may be worked up to considerable advantage. The perusal of the agency report sometimes serves to refresh the memory as to transactions long gone by. The agency report, then, is a very useful help in making up the required fund of information.

The statements of the borrower as to his financial condition are often of great use especially in large cities and usually serve to give a tolerably fair idea of the borrower's standing. Yet, no matter how elaborately drawn up, they must, after all, be taken with considerable allowance for it is not to be supposed that a man is willingly going to make a written statement unfavorable to himself. Where an unfavorable statement is submitted it is most likely because the borrower does not clearly understand what an analysis of his statement will show. It is really expecting too much of human nature to ask a would-be borrower to accompany his application with a statement an examination of which would inevitably cause his application to be refused. Indeed a statement though erroneous, need not be intentionally so; for, while a fine book-keeper may make a very good showing for a very poor business, on the other hand, an incompetent or half-taught book-keeper may make a poor showing for the very best business. Upon reflection it would seem to be a point of policy to receive a man's testimony about himself with a fair degree of caution. Sometimes it is quite impossible to get a formal statement from the borrower, particularly in small towns and in country neighborhoods. Banking business is not transacted in villages and rural communities in exactly the same way as in large cities.

A private credit book kept by the bank for its own convenience forms an admirable record as to regular customers. Useful in any bank, such a book must be invaluable in a large city institution. Instead of a bound blank book it might be found more convenient and more flexible to write up each customer on sheets of paper and file these away to be referred to when wanted. The great advantage of a systematic record is that it furnishes correct and definite information instead of hazy and imperfect recollections.

It sometimes becomes necessary to supplement by special inquiry the information obtained in the ways already mentioned. In such a case neither expense nor trouble should be spared to make the inquiry searching and complete. The work should be compared to that of a lawyer searching the title to a piece of real estate and it should be done in the same painstaking and thorough way. It is astonishing how much can be found out about a borrower's financial standing if one goes about it in the right way.

The element of personal knowledge is an important factor in forming an opinion of the value of paper offered for discount. If one has lived long in the same place there is gradually acquired a remarkable fund of information about persons and things, information which a stranger cannot acquire by the most painstaking inquiries. It is indeed a most interesting study to go over in one's mind a list of the bank's depositors and to trace out the various ways in which they are allied among themselves and with other financial interests in the same city. A marriage, a strong personal friendship, inter-connected business relations, all these go oftentimes to explain circumstances which are otherwise quite incomprehensible.

Intimate personal knowledge of the bank's customers and their various alliances and antagonisms is worth more than all the mercantile agency reports that ever were written. Such knowledge is not to be gained in a day. It is necessary to be always on the alert to catch up every little bit of information that may chance to come along. It is seldom indeed that a mercantile house fails without first giving to the keen, observant eye some faint indications of the approaching downfall. True, there are times when the most skillful are deceived, for no man is infallible; but it may be doubted if ever a house failed yet without there being some few who, in one way or another, were warned in time. One failure often brings on another and it is just in circumstances of that sort that intimate personal knowledge comes into play.

General rumor or the talk of the street is a mine of information if skillfully worked. This is a sort of knowledge that does not get into reports or statements. It can only be had by keeping oneself in constant communication with those who are in a position to know the exact state of affairs. Early and private information is worth twice as much as that which everyone may have for the asking. The mercantile agency report, the bank credit book, the borrower's statement, all form a foundation on which to build but, by themselves, are no firm ground on which to base a sure opinion. The actual worth of borrowers changes all the time and in order to be thoroughly informed it is necessary to keep in touch with everything and everybody in the world of business. There are some men who are always well-informed and whose opinion is well worth having; there are others, dear gossiping souls, who make it their chief business in life to find out everything and to tell all they know to anyone who will have the patience to listen to them. To know the exact state of affairs the ear must be quick to catch the indefinable rumor and the mind must be ever able to tell false news from true.

It is impossible to reduce money-lending to a science, or to state in exact terms the principles upon which it should be conducted. It is essentially an art, and one that is taught in no school save the school of experience. It requires extraordinary care, skill, and great circumspection. There is a recklessness that comes to grief, and there is an extreme caution that dries up all sources of profit. The borrowers are many, and often clamorous, and it is hard to distinguish the good from the false. It may be that there is scant time to form an opinion.

When there is a sudden demand for money, and valuable customers are seeking to strengthen themselves, it will not do to stop for long-winded inquiries and analyses of intricate statements. The depositors who have stood by the bank in easy times want to know at once whether the bank will stand by them in the hour of need. The bank that does not rise to the level of such an occasion will find, when the storm has passed, that their most valuable customers have gone over to institutions that understood practical rather than theoretical banking.

To be a good judge of the value of paper offered for discount it is necessary to be up and doing. There is small room in the banking business for fine-spun theories.

It is impossible to ever understand the art of judging paper without seeing it practically demonstrated day by day in the bank itself. The final conclusion not seldom seems to be reached by intuition instead of by calm, deliberate judgment. There may be a general feeling in a Board of Directors that such and such paper is no longer safe, and yet not one man at the table would be able to give a clear-cut, logical reason for the opinion in which all agree.

MARYLAND. DISCOUNT.

II.

INTUITION ALONE NOT A SAFE CRITERION.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

In considering the subject to which our attention is invited, a much broader field is exposed to the mind's view than the casual observer would think. The proper solution of the query, "How to determine the value of Commercial Paper," if it could be so solved as to apply to all sections, unlike though they be in products and resources, would throw such a safeguard around our banking institutions as has never been known to exist. I repeat that, if the bank official could know of some common law through which to determine just how to select the paper which he is daily called upon to discount, then there would be such a feeling among investors and men of even smaller means as to make manifest the fact that bank stocks and time certificates are the safest investments and bank vaults the only sure guardian of the poor-man's well-earned but paltry savings.

But how are we to determine what class of paper offered for discount is unfit to take its place in the bank's maturity file? That is the question, and one not likely to be so answered as to apply to our many climes, where the conditions are entirely diffierent when compared the one with the other. That which will suit a banker in Kalamazoo will not find favor in the Florida banker's eye; and that which will be acceptable to the San Francisco bank official will meet with still less favor when scrutinized by the careful banker of New York. The class of securities to be offered are so dissimilar in the several States that we can settle on no certain class upon which to loan our funds. For example: In the City of New York gilt-edged bonds and unquestionable stocks and names far beyond reproach are more sought after than other securities, while in Mississippi the collateral most generally offered is real estate, and this for the most part farm lands. There seems to be an absence in that locality of those diversified securities to be found in other States; and I am informed that to this fact is attributed the organization of so few National banks within the State.

Now let us consider how we shall lend our money. Shall we lend it on what we term "hearsay knowledge"? I say "No!" for this would at once bespeak imprudence. Upon intuition? Again "No!" for men's minds even at best are apt to err and intuition more apt to cause us loss. Shall we place our funds out upon the worth of stocks, and the like, at the time the application is made? If so what margin shall we reserve, and how shall we determine just what stocks or bonds to accept; for every bank officer is aware of the large number of watered stocks and unmarketable bonds floating idly around.

REAL ESTATE SECURITIES NOT APPROVED.

What of Real Estate as a bank security? Doubtless there are not a few of my readers who make almost daily loans upon such security, and which are perhaps well secured; but, I ask if it is a proper security for a *bank* to take. Is it a prudent step for a banker to adopt the policy of loaning his own funds on such security when he is the custodian of the money of the masses; and is it not even more unwise when he goes to the extreme and places his own capital and the funds of his depositors out on Real-Estate security? The risk on account of inflated values and the possibility of "tying up" his creditors' resources should deter him from loaning largely on this security, regardless of any profitable returns.

Have we not all too often seen where this or that bank was forced to the wall on account of "*owning* too much real estate" which, on account of the condition of the money market or for other reasons, was unconvertible. Such startling suspensions are more frequently located in our Southern and Western "boom towns" where reckless investments in corner lots or railroad fronts are indulged in, than elsewhere.

This proposition of banks lending on Real Estate admits of no argument; the mere fact that National banks, the greatest and safest financial institutions of the age, are forbidden to make loans on real estate security is too ponderous to permit a counter argument to rise.

ACCOMMODATION ENDORSEMENTS.

Every banker is called upon to make loans to "outside" parties, *i. e.*, to those who do no business with the bank to which appplication is made.

In this locality a double-named paper is usually required; and when this requirement is made known to the borrower an endorser is generally offered.

But is this *accommodation* endorsement not a curse to banking rather than a security? Does it not keep not only your bank, my reader, but all similar institutions in your city, in the dark as to the amount of outstanding liabilities your customer may have? You might say, "we'll get several responsible persons, or if necessary well-to-do firms, to endorse to make the loan surely loss-proof; but I contend that even this is not an absolute safeguard, for I recall an incident which occured many years ago in which a prosperous and seemingly prudent banker of this State was asked to loan the small sum of seven hundred dollars to an individual upon his single-named paper. This the banker refused, informing his friend at the same time that it was the custom of the bank to require in all cases at least two names on paper discounted. This somewhat irritated the applicant, who thought his name sufficient (a common occurrence); and, as a retort, left the banker, returning within an hour with his note endorsed by SEVEN business houses first in finances in the city. The note was approved, the proceeds paid over and interest credited up, the note being carefully filed away to mature twelve months hence. The yellow-fever epidemic of 1878 came on shortly after, and before the note so well (?) secured reached the date of maturity, to the surprise of the banker the seven mercantile houses had succumbed to the cold hand of the financial panic of that year, leaving the maker of the note solely able to protect the paper.

As we all know, banks must necessarily take risks in order to bring in to their stockholders the expected semi-annual returns. But is there a way to determine just what limit to place on these risks?

EXPERIENCE THE BEST GUIDE.

Hearsay knowledge and intuition, as I have shown, are unreliable; so what shall we appeal to guide us over the rocky roads through which even the best of us sometimes travel. I say *Experience* is our best and truest guide, for through it we find something stronger than instinct, whose very body-guard seems to be caution; we find in it something that applies to all conditions of men and localities; we find in it a remembrance of some past event, as it were, which forewarns us that this or that paper is attended with unusual risks.

The most important time for a banker to look carefully to his paper in order to determine its *true* value is when money is plentiful and demands but few—in other words, be cautious, and not permit an urgent desire to get his money out to override prudence.

I hold that a prudent banker will always make a personal investigation of both the financial and moral standing of all parties applying for loans. After this first step it is in order to carefully investigate the security offered.

In my institution we have a Board of Directors most carefully selected from among the best merchants (wholesale and retail), brokers, lawyers, capitalists, and last, but not least, bankers who are interested in other institutions of various kinds. From this board we have a well-selected Finance Committee to whom we refer all paper offered for discount. This committee, supplemented by the other members of the board, form a private Commercial Agency, which has been invaluable to us in the determination of the value of paper offered for discount.

The bank official is wise who avoids those parties who withhold from him vital points in making a statement of their financial standing.

It is well to ascertain before loaning to firms or individuals the nature of the business in which they are engaged; whether hazardous; whether requiring borrowed capital year in and year out, or only for a few months in the year when business is dull and credits extended. The competition of the particular business is ofttimes of importance: whether competitors are of sufficient capital to injure your customer's trade; whether they are inclined to cut prices, thus compelling your borrower to sell at little or no profit.

It is of importance to know if your customer is an extravagant liver or speculative in business. If so this should suggest greater caution in advancing to his firm.

It is of as much importance to bankers to learn what relation have the yearly profits to the expenses of the firm; whether the business is economically administered and what disposition is made of the profits—whether withdrawn periodically by the several members of the firm or left to increase the working capital in the business; if the latter it is a true manifestation of confidence on the part of the individual firm members in their business, and a desire on their part to borrow less money for their business. If the profits are withdrawn to any degree, ascertain, if possible, what disposition is made of them; whether invested in A1 securities or in realty and placed in the names of the wives of the individual members of the firm. It is often a bad omen when this latter is the case.

It is well, also, to inquire as to whether your applicant for a loan constantly carries insurance to fully cover his stock.

DOUBLE-NAME PAPER.

One of the best classes of paper to accept for discount is one firm's or individual's paper accepted by some other firm; that is, discount the firm's customers' paper endorsed by firm applying for the accommodation, but first satisfy yourself that the paper represents *value received* and is not an *accommodation* paper. Before discounting this double-named paper it is important to assure yourself that the members of either firm are not interested in the other firm, or that the members of both firms are not jointly interested in some third enterprise. Ascertain whether any paper similar to that offered is being held past due and unpaid; always endeavor to find out for what given and how secured. Exercise caution in loaning to firms too liberal in credits, ever willing to take on a liability in order to sell goods.

So much for firms and individuals, and as to corporations, it is wise never to grant them accommodations until your attorney has thoroughly investigated the by-laws and established the powers vested in the different officials. Never make a loan entirely on the information obtained through any mercantile agency; they are no doubt a valuable assistant, but too unreliable to be solely depended upon.

In conclusion, after weighing the subject hurriedly as to the different classes of paper usually offered for discount, I am of the opinion that the *best* paper to accept is that offered by firms or individuals who are in the habit of carrying balances with their bank from whom the accommodation should be obtained. There appears to me *no* better means to determine the amount of risk a bank incurs than by regulating its loans according to the average balance carried. This shows strength, and indicates a prosperous business on the part of the borrower, and enables the bank to continually know how its own affairs are. This custom, as I previously said, cannot apply to all cases—for example, in paying for cotton, grain, iron, etc., where receipts and bills of lading are required; but toe the mark as near as you can, and consult with those of your Finance Committee, observing the laws of your Credit Department, which all banks should have, and you will hardly suffer. SAFEGUARD.

ALABAMA.

GOLD EXPORTS.—A bulletin recently issued by the Boston News Bureau says: "It is remarkable that, while our trade balances for the past nine months have been swinging against us by more than $250,000,000, the gold balances have been turned against us by only $78,000,000. The export of gold is, therefore, perfectly natural, and more ought to go, and the Government ought to be prepared to assist in very large exports of gold and still maintain the parity of all its moneys."

2

PROFITS ON NATIONAL BANK CIRCULATION.

Frequent inquiries received by the JOURNAL in regard to the profit obtained from the issue of circulation by National banks indicate that, with the decrease of premium on the United States bonds, the banks are thinking of taking out more circulation. There have also been several calculations presented in the JOURNAL by correspondents showing a diversity of results. This diversity is due to different ways of looking at the matter. One correspondent, who insists that there is a large profit to National banks upon their notes, evidently considers the whole profit on the business of the bank, rather than the particular profit peculiar to a National bank as distinct from a State or private bank, because it takes out circulation. The whole profits of a National bank from every source, compared with the whole profits of a State bank from every source, is one comparison, but it is not of any value to show the profit on circulation. The National bank may have the advantage of better credit, shown by larger deposits. What is meant by profit on circulation is the extra profit a National bank obtains from taking out circulation, over what the same bank with the same capital and credit would obtain if it was not obliged to deposit bonds and did not take out circulation.

The JOURNAL has received the following computations from the Comptroller of the Currency, dated January 1, 1893, showing the profits on circulation in this sense, based upon two per cent., four per cent., and six per cent. United States bonds, the latter being Pacific Railroad sixes, payable in 1898:

TWO PER CENTS.

$100,000 twos at par interest		$2,000 00
Circulation, 90 per cent. on par value	$90.000 00	
Which, loaned at 6 per cent., will produce		5,400 00
Gross receipts		$7,400 00
Deduct: 1 per cent. tax on circulation	$900 00	
" Annual cost of redemption	137 48	
" Express charges	3 00	
" Cost of plates for circulation	7 50	
" Agents' fees	7 50	1,055 48
Net receipts		$6,344 52
$100,000 loaned at 6 per cent		6,000 00
Profit on circulation		$344 42
Percentage on maximum circulation obtainable, 0.344 per cent.		

FOUR PER CENTS.

$100,000 fours at 113.5 premium, interest		$4,000 00
Circulation, 90 per cent. on par value,		
Which, loaned at 6 per cent., will produce		5,400 00
Gross receipts		$9,400 00
Deduct: 1 per cent tax on circulation	$900 00	
" Annual cost of redemption	137 48	
" Express charges	3 00	
" Cost of plates for circulation	7 50	
" Agents' fees	7 50	
" Sinking fund invested quarterly to liquidate premium	590 58	1,646 06
Net receipts		$7,753 94
$113,500 loaned at 6 per cent		6,810 00
Profit on circulation		$943 94
Percentage on maximum circulation obtainable, 0.944 per rent.		

SIX PER CENTS.

$100,000 sixes, series 1898, at 112½ premium, interest		$6,000 00
Circulation, 90 per cent. on par value	$90,000 00	
Which, loaned at 6 per cent., will produce		5,400 00
Gross receipts		$11,400 00
Deduct: 1 per cent. tax on circulation	$900 00	
" Annual cost of redemption	137 48	
" Express charges	3 00	
" Cost of plates for circulation	7 50	
" Agents' fees	7 50	
" Sinking fund reinvested semi-annually to liquidate premium	1,951 95	3,007 43
Net receipts		$8,392 57
$112,500 loaned at 6 per cent		6,750 00
Profit on circulation		$1,642 57

Percentage on maximum circulation obtainable, 1.643 per cent.

These computations are all based on the assumption that a bank makes an average rate of six per cent. by loaning its money. Not that it pays dividends of six per cent., because it may pay greater rates than this, upon capital solely, derived, however, from receiving six per cent. on such portions of capital and deposits as are kept loaned. Thus, the legal rate in a given locality may be six per cent. One bank having $100,000 capital and $200,000 deposits, and loaning the whole $300,000 at six per cent., would receive $18,000 per annum, or eighteen per cent. on its capital. Allowing one-third for expenses, etc., and this bank could easily pay 12 per cent. annual dividends. Another bank, with $100,000 capital, loaning it at six per cent., and only $50,000 deposits, loaned at the same rate, would only have an income of $9,000. Deducting one-third for expenses, and it could only declare an annual dividend of six per cent. The dividend rate is, therefore, a different thing from the loaning rate used in these computations, but it is somewhat of a criterion to enable us to judge whether the Comptroller has not assumed too high a loaning rate. In other words, if National banks throughout the country obtained on an average six per cent. gross on money handled by them, would they not pay higher dividends than they do?

The annual dividends of the National banks during the year 1891 for the whole United States averaged only 6.80 per cent. on capital, and only 5.76 per cent. on capital and surplus. Their total net earnings on capital and surplus were 8.6 per cent. The capital and surplus were one billion in round numbers, and the deposits one billion seven hundred thousand. If upon this large sum of 2,700 millions of dollars handled, the banks had obtained six per cent. gross, the whole earnings would have been 162 millions of dollars. Their actual gross earnings were, however, only $151,334,870, or $10,665,630 less than this sum. Their expenses, including losses, premiums charged off and taxes, were $75,570,766, and their net earnings were $75,763,513.

It is plain, therefore, that, throughout the United States, the banks do not average six per cent. on the money they handle; and that, taking every thing, capital and accumulated profits, deposits and money borrowed to loan again, and comparing the sum with the gross earnings of the banks, they do not obtain over five and a half per cent. on the money they handle. And it is much less than this at the money centres, and greater in the newer portions of the country. Taking New York city as a specimen of the money centres, we find money handled by the National banks of that city in 1891, including capital, surplus, profits and deposits, amounted to about $550,000,000, and the gross earnings to $19,794,764—an average of 3.6 per cent. only. On the other hand, in some of the newer States, the average may be seven or eight per cent.

In order to show the true value of circulation to any bank, therefore, it is necessary to know the usual average rate of interest it obtains on all the money it handles. The Comptroller has assumed six per cent., which, we think, the statistics in his own office will show to be larger than the average rate obtained by National banks in the United States. But whatever the National banks obtain must indicate the rate the State banks also obtain, and what the National banks would earn if they became State banks. This rate of interest is the key to the whole subject, for the larger it is, the less profit on circulation, as will now be shown by tables computed in the same manner as those of the Comptroller of the Currency for the same date and rate of premium, assuming rates of interest at 3.6 per cent. for New York city, 5.6 per cent. for the whole country, and 4, 5, 6, 7, 8 and 10 per cent. for further illustration.

It will be seen that on four per cent. bonds there is a slight profit on circulation until eleven per cent. is reached, and upon sixes much longer. Upon twos there is no profit when a bank can get about nine per cent. upon the money it handles. The table also gives the amounts necessary to charge to sinking funds, obtained by the usual formula for different rates of interest. It must also be remembered that these results will be changed with every increase or decrease of premium and change of date of purchase of bonds.

Rate of Interest, assumed.	*Profit on 4 per cent. U. S. bonds, purchased at 113.5, on January 1, 1893.*	*Profit on 6 per cent. U. S. bonds of 1898, purchased at 112.5, on January 1, 1893.*	*Profit on 2's, at par.*	*Sinking fund to retire premium on 4's.*	*Sinking fund to retire premium on 6's.*
3.6 per cent.	$1,385 36	$2,062 20	$584 52	$713 16	$2,172 32
4 per cent.	1,313 00	1,990 07	544 52	691 50	2,054 45
5 per cent.	1,129 93	1,821 48	444 52	639 53	1,998 04
5.6 per cent.	1,018 73	1,712 42	384 52	609 79	1,972 10
6 per cent.	943 94	1,642 57	344 52	590 58	1,951 95
7 per cent.	754 93	1,467 21	244 52	544 59	1,902 31
8 per cent.	663 05	1,290 79	144 52	501 47	1,858 73
10 per cent.	172 00	984 80	— 55 48	423 48	1,759 72
11 per cent.	— 28 89	....	....	388 41	....

The amounts in the foregoing table are computed for $100,000 in bonds upon which the full amount of circulation—$90,000—is taken out. The per cent. these computed profits bear to $113,500 in the case of fours, $112,500 in the case of sixes, and $100,000 in the case of twos, is the percentage that accrues on the premium price of any amount of the same class of bonds held, upon which 90 per cent. of circulation is taken out. There are few localities in the United States where the amount realized on all money handled by any bank for the year exceeds 8 per cent., as shown by the Comptroller's reports.

In the computations from the Comptroller's office the percentage of profits to the par value of the bonds purchased is given as the true percentage of profit, alike in the case of circulation based on fours, sixes and twos. This appears to be incorrect, inasmuch as the profits from circulation based on fours are derived from an investment of $113,500; the profits from circulation based on sixes are derived from an investment of $112,500. Only in the case of twos are the percentages computed on the right basis in the Comptroller's table. Any one can make the correction by finding the percentage of the profit to the premium price of the bonds.

WORLD'S CONGRESS OF BANKERS AND FINANCIERS.

TO BE HELD IN CHICAGO FROM JUNE 19 TO 25, 1893.

The World's Congress of Bankers and Financiers is one of the conventions which will be held under the auspices of the World's Congress Auxiliary of the World's Columbian Exposition. This Congress is intended to be a meeting place for bankers from all over the World, and also for all who are either practically or theoretically interested in financial subjects. The details of the programme, although well advanced, are not yet ready for publication, as there are a large number of foreign delegates who have not yet signified the character of their addresses. It will, however, cover a wide range, and include papers and addresses by experts on banking and financial subjects from all parts of the earth. Such a collection can only be expected after great intervals of time when so interesting and unique an occasion as the World's Columbian Exposition draws the intelligence of the globe together. The Congress is to be held in the World's Congress Art Palace now finishing in the Lake Front Park, Chicago. There will be twenty-four audience rooms at the disposal of the various Congresses, some of them capable of seating three thousand people.

The American Bankers' Association also holds its annual Convention in Chicago this year, in September, and this fact will doubtless attract many visitors who will come to the Congress and remain to the session of the Bankers' Association. The programme of the latter will in no wise interfere with that of the Congress, which, being not only for bankers, but for experts in all other branches of finance, will cover a much broader field, as will be seen from the following outline.

Mr. Lyman J. Gage, President of the First National Bank, of Chicago, Treasurer of the World's Congress Auxiliary and Chairman of the Committee of the World's Congress of Bankers and Financiers, will preside.

The address of welcome to foreign delegates at the opening of the Congress will, it is expected, be made by the Hon. John Sherman, who will be followed by an eminent banker of the United States with a general address of welcome. Then will follow the introduction to the Congress of delegates from foreign countries—England, France, Germany, Austria, Russia, Italy, Belgium, Holland, Japan and China, and other Nations.

Each delegate will, it is expected, take the opportunity to enlighten the Congress upon the banking systems, methods, resources and finances of his own land. These will be followed by other papers and addresses upon general monetary and financial topics. Each topic will be introduced by an address by some distinguished expert; and if a subject of much controversy, by more than one address, showing the two or more lights in which the subject may be viewed.

After the introductory addresses there will be an interval for discussion either by prepared papers and addresses or extemporaneous remarks.

All the papers, addresses and discussions will be presented and conducted by experts well known in this and other countries. The general topics selected are as follows:

1. The History, Nature and Distinguishing Characteristics of Money.
2. The Essential Elements of a Monetary System.
3. Considerations on Value and Price, Including Intrinsic Value.
4. Paper Representatives of Money, Including Individual, Bank and Government Notes—Checks, Drafts and Certificates of Deposit.
5. Law and Legal Tender.
6. Paper Representatives of Property—Bills of Lading, Express Receipts, Warehouse Receipts, Negotiable Instruments, Payable in Specified Property at Market Price, at Time and Place of Payment.
7. Interest, Discount, Exchange.
8. Quantity and Supply of Money; Per Capita Supply of Money and its Representatives Among Leading Nations. How Affected by Volume of business, Distance of Transportation and Time Required to Effect Complete Exchange of Products.
9. Practicability of Separating the Business of Exchanging Products from the Settlement of the Final Balances of Transactions; using Representatives of Money (Checks, etc.) for the Former, and Coin or Coin Paper for the Latter.
10. Bimetallism and International Bimetallism.
11. International Uniformity of Coin, Currency and Commercial Paper. Possibility and Desirability of Securing it.
12. Functions of Banks.
13. Relation of Great City Banks to the Farmers' Credit.
14. Monetary Panics—Cause and Mitigation of.
15. National Debts and Banking thereon.
16. Safety Fund System of Banking.

During the progress of the Congress there will be several conferences of experts in particular branches of banking and finance:

1st. A Conference of delegates appointed by the Governors of the several States and Territories and Canada to compare banking systems, methods of business, banking resources and general investments peculiar to each.

2d. A Conference of delegates from Bankers' Associations in the United States and Canada, and also from Bankers' Clubs. A delegate from the London Institute of Bankers is expected. Each Bankers' Association will send not more than five delegates. The discussions will be upon the purposes of association among banks and the possibility of closer union.

3d. There will be a Conference of delegates from Clearing-Houses in the United States, Canada and England to consult on Clearing-House methods, and to formulate, if possible, some plan of union among Clearing-Houses.

4th. There will be a Conference of Bank Examiners and Accountants from all parts of the World, and of Superintendents of Banking Departments under the several State Governments.

These Conferences will be held in separate rooms during the progress of the Congress, if necessary.

To facilitate acquaintance and to avoid confusion a registry room will be established in the World's Congress Art Palace, where all bankers and others interested in these discussions and Conferences, who may be attending the

World's Fair, are invited to register. Places of rendezvous for the participants in the discussions and conferences will there be provided and pointed out.

Many reports have been afloat relative to lack of accommodation in Chicago during the Fair. All who desire to provide comfortable quarters for themselves at reasonable prices can obtain the necessary information by addressing Mr. Clarence E. Young, Secretary of the World's Congress Auxiliary, Chicago.

Those who desire to present papers at the Congress of Bankers and Financiers during the week from June 19th to 25th inclusive, or who are entitled to take part in any of the Conferences mentioned above as forming part of the Congress, will address William Bull Greene, Secretary, 603 North Broad Street, Elizabeth, N. J. The Congress will be held during the pleasantest season of the year in Chicago, and those who attend will find themselves in that city during the height of the Fair. They will avoid the extreme heat of the later Summer and early Fall.

Invitations have been sent out in several languages, as required, to banks and bankers and authorities in practical and theoretical finance throughout the World. The number of acceptances already received assures a large assemblage of American and foreign bankers and financiers.

BANQUET TO COMPTROLLER ECKELS.—Hon. James H. Eckels, the new Comptroller of the Currency, was recently the recipient of a pleasing testimonial of esteem from his friends at his home, Ottawa, Ill., the expression of regard being in the form of a public reception and dinner. In a speech replying to the criticism that a practising lawyer, rather than a skilled financier, has been placed at the head of a bureau so distinctively a financial one, Mr. Eckels declared that no impairment to any system can be brought about by an honest and rigid enforcement of the law which governs it, and those most strenuous in their criticism must not complain if the National Bank Act, as it stands upon the statute book, be the rule and guide of the Comptroller. The danger to the public, Mr. Eckels thinks, has always been the indifference of bank officials to keeping within the restrictions of the law. The new Comptroller further states that he will strive always that the law shall be enforced, that business and moral integrity shall characterize those connected with the bureau, and that in no instance shall the public interests be sacrificed to political expediency. This brief outline of the Comptroller's policy bears the impress of sincerity and a due appreciation of official responsibility.

LAWRENCE B. KEMP, NATIONAL BANK EXAMINER.—The appointment of Mr. Lawrence B. Kemp to be National Bank Examiner for the district comprising Maryland and the District of Columbia, is a fitting recognition of his sterling qualities and aptitude for grasping the details of practical banking, as shown in all positions he has hitherto filled. His selection for this office was at the request of the Baltimore Clearing-House Association, which gave him its unanimous indorsement, which was also supplemented with the approval of three-fourths of the banks throughout the State. Mr. Kemp was born in Baltimore, educated in Frederick, Md., at the Frederick College, and spent his boyhood at the home of his grandfather, Major Lawrence J. Brengle, first President and organizer of the First National Bank in Frederick. He kept his first set of books, and acted as a substitute during vacation, in this bank. Upon the death of his grandfather he went to Baltimore and entered the importing and jobbing coffee house of Eugene Levering & Co., in the cashier's department, remaining with them eight years in different capacities, traveling at times through West and South on credits, and thus obtaining a large acquaintance with merchants and bankers throughout the United States. For the past four years he has been with the Merchants' National Bank, Baltimore. Mr. Kemp is a young man about 35. His wife was the only daughter of the late Samuel McD. Richardson, President of the Savings Bank of Baltimore. Mr. Kemp's home is at Dixon's Park, Mount Washington, a suburb of Baltimore.

AN ENGLISH SAVINGS BANK IDEA.

[The following was written by the late C. B. Patten, author of "Methods and Machinery of Practical Banking," after one of his tours through England.]

The Postal Savings Bank system, invented by the late eminent economist, Henry Fawcett, is worthy of careful study by all interested in teaching the people how to save money. It may be styled putting money in the post office.

One of the first notices that attracted my attention, as I wandered about rural England, was the little sign above every post office, no matter how small might be the village or hamlet where the post office was located, of "Postal Savings Bank." Here is a matter that must be looked into for the JOURNAL, and as I am, when on my usual stamping ground, amidst the whirling wheels of the machinery of banking, it did not, of course, take me many minutes to find out all about the machinery of England's postal system of savings, which had come out of the brain of that blind wonder, Postmaster-General Fawcett, and which has had such success that there is on deposit under this scheme over forty million sterling, or one pound for every man, woman and child in the kingdom.

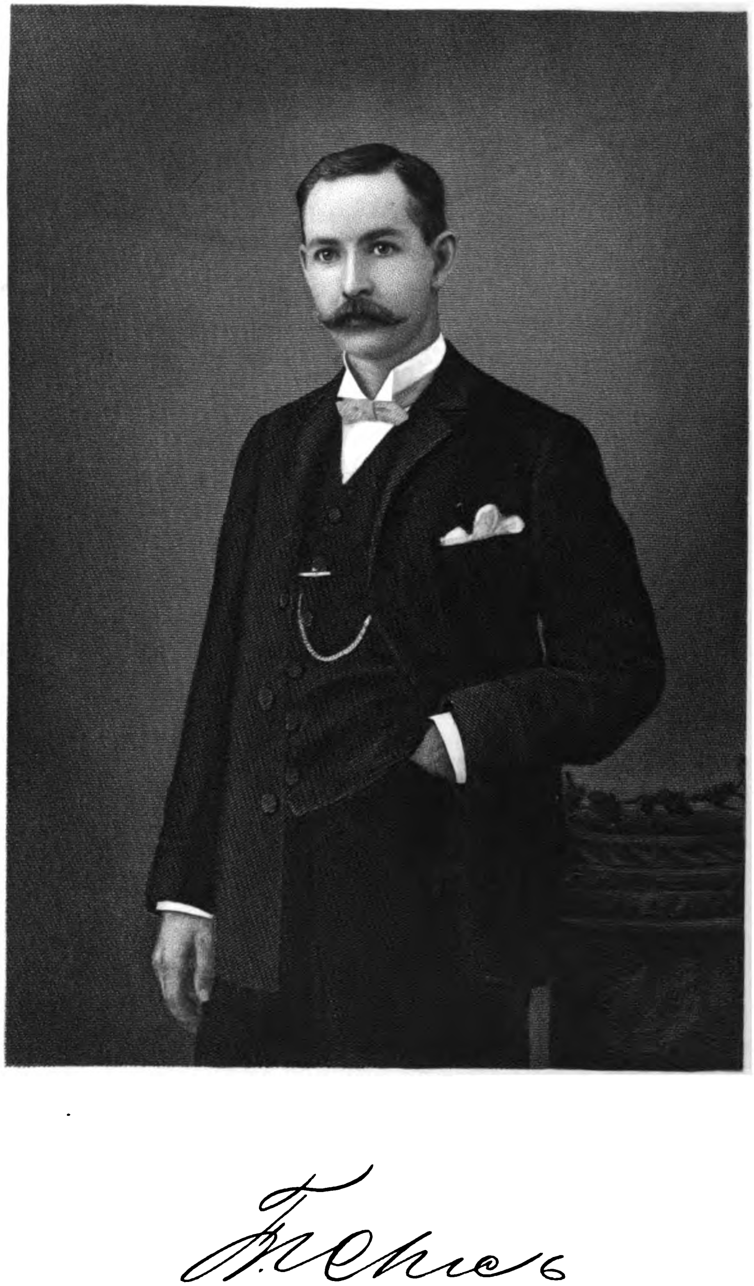
"Money breeds money," says the poet Crabbe, and though the interest rate on this vast sum is small, it will give the humble depositors of it forty million six-pences a year. The Duke of Wellington, who had a habit of uttering short pithy sayings, is the man who is reported to have first said "large interest means bad security." The humble patrons of England's postal Savings banks know that their small interest means the best security in the world, as they hold a note, signed by England, for every penny they deposit.

And England makes a good thing out of the borrowing, for while she pays on these notes 6d a pound sterling a year or at the rate of 2½ per cent., she gets credit for it at 3 per cent., since she uses every shilling of it in the reduction of a debt upon which she is paying 3 per cent.

The workings of this postal savings system are so simple that a child can understand all about it, and so simple that I can explain it in a moment. And here is what a child can do with the postal Savings bank of Great Britain.

He can go with his penny saved to the post office in his hamlet, and buy a penny stamp, which he can affix to a savings card, which the postmaster will hand him, and which has places for putting on twelve penny stamps. When he has filled his card he will have laid by a shilling; and then his card will be forwarded by his postmaster to the post office department in London, which will send him back a book, showing that he has credit for the shilling with the government; when he has reached a deposit of twenty shillings, or a pound. the pound will begin to draw interest at the rate of 2½ per cent. per annum.

As these postal banks are intended for the humble classes, not more than thirty pounds will be received from one person in a year; and as it is the wish that every accommodation be extended to these unpretentious savers, it has been arranged so that they can, in case of need, draw their money out of any one of the 6,000 post offices in the United Kingdom, after having given due notice of intended withdrawals.



* FRANK N. CHICK,

LATE VICE-PRESIDENT OF THE NATIONAL BANK OF KANSAS CITY.

FRANK NORTHRUP CHICK was born in Kansas City, Missouri, Dec. 3, 1860. His father, Jose[illegible] then the partner [illegible] M. Northrup in the bank[illegible] of Northrup & Chick. [illegible] Northrup & Chick rem[illegible] back to New York City, where they continued in business unt[illegible] Northrup then returned to the West, and opened a bank in the [illegible] Kansas, of which he remained President until his recent [illegible] 22d inst. [illegible] Joseph S. Chick at the same time went to K[illegible] his family and organized a bank which grew into the Nation[illegible] Kansas City, of which Mr. Chick has always been President.

Upon his return to his nativ[illegible] of this sketch attended the public schools for some years. [illegible] years attending the Kansas City High School he, of his own [illegible] spent his vacation working in his father's bank. Through this experience he became so much interested in business that, at the age of eighteen years, he abandoned [illegible] pursuit of his studies and embarked in business with that energy [illegible] activity which characterized his brief but brilliant career.

His close application and attention to his duties, with his exceptional habits and surpassing traits of character, occasioned his rapid promotion from his first position of bank collector through the various offices until in 1890 he was elected to the office of Second Vice-President of the National Bank of Kansas City, which office he held at the date of his death, February 27, 1893.

In 1882 he married Miss Mary Chouteau, a daughter of one of the most distinguished pioneer families of Kansas City. She, with an only child, a girl of eight years, survives him.

During the few years of his active business life he was prominent in many commercial and financial enterprises, and was ever foremost in all movements looking to the advancement of the interest of the community. His business experience was unusually large for one of his age; and the great problems of commerce and finance were treated by him with the judgment and skill of one of maturer years. He held many positions of trust, and in all these his rectitude was as conspicuous as his judgment. All matters placed in his charge were held and treated as a sacred trust.

Inflexible honesty was his most prominent trait. Truth was his most conspicuous virtue. His respect and admiration for right and justice, his integrity and high sense of honor, and the purity of his Christian character, gained for him the utmost confidence of his fellow-men.

He was, in the most practical sense, a charitable man. The poorer classes loved him for his kind-hearted sympathy and generous help. Suffering and distress never appealed to him in vain.

His kindly treatment of domestic animals, and the horror with which he

* A portrait of Mr. Chick, engraved expressly for RHODES' JOURNAL OF BANKING, is presented in this number.

* FRANK N. CHICK,

LATE VICE-PRESIDENT OF THE NATIONAL BANK OF KANSAS CITY.

FRANK NORTHRUP CHICK was born in Kansas City, Missouri, December 3, 1860. His father, Joseph S. Chick, was then the partner of the late Hiram M. Northrup in the banking firm of Northrup & Chick. In 1862 Messrs. Northrup & Chick removed their bank to New York city, where they continued in business until 1874. Mr. Northrup then returned to the West, and opened a bank in the city of Wyandotte, Kansas, of which he remained President until his recent death on March 22d last. Mr. Joseph S. Chick at the same time went to Kansas City with his family and organized a bank which grew into the National Bank of Kansas City, and of which Mr. Chick has always been President.

Upon his return to his native city the subject of this sketch attended the public schools for some years. During the years he attended the Kansas City High School he, of his own volition, spent his vacation working in his father's bank. Through this experience he became so much interested in business that, at the age of eighteen years, he abandoned the further pursuit of his studies and embarked in business with that energy, vim and activity which characterized his brief but brilliant career.

His close application and attention to his duties, with his exceptional habits and surpassing traits of character, occasioned his rapid promotion from his first position of bank collector through the various offices until, in 1890, he was elected to the office of Second Vice-President of the National Bank of Kansas City, which office he held at the date of his death, February 27, 1893.

In 1882 he married Miss Mary Chouteau, a daughter of one of the most distinguished pioneer families of Kansas City. She, with an only child, a girl of eight years, survives him.

During the few years of his active business life he was prominent in many commercial and financial enterprises, and was ever foremost in all movements looking to the advancement of the interest of the community. His business experience was unusually large for one of his age; and the great problems of commerce and finance were treated by him with the judgment and skill of one of maturer years. He held many positions of trust, and in all these his rectitude was as conspicuous as his judgment. All matters placed in his charge were held and treated as a sacred trust.

Inflexible honesty was his most prominent trait. Truth was his most conspicuous virtue. His respect and admiration for right and justice, his integrity and high sense of honor, and the purity of his Christrian character, gained for him the utmost confidence of his fellow-men.

He was, in the most practical sense, a charitable man. The poorer classes loved him for his kind-hearted sympathy and generous help. Suffering and distress never appealed to him in vain.

His kindly treatment of domestic animals, and the horror with which he

* A portrait of Mr. Chick, engraved expressly for RHODES' JOURNAL OF BANKING, is presented in this number.

looked upon their suffering, made it clearly manifest that his was a most humane disposition.

The interest he took in young men and the assistance he gave those who gained his confidence, served to advance many worthy young men to positions of profit and honor. While his life was an unusually busy and crowded one, he seldom failed to find time to say a good word or do a kind act to help those who needed and were worthy of his assistance and influence.

In his personality he was especially attractive, and his success was due in a large measure to his genial and pleasing manner. Under all circumstances he was the embodiment of courtesy. No one who came in contact with him can fail to remember his kindly manner, uniform politeness, and delicate regard for the rights and opinions of others.

His social qualities were such that he endeared himself to all who made his acquaintance. He had the faculty of making friends at home and abroad to a degree possessed by but few.
