In his family relations he was a confiding and dutiful son, an ideal husband, and a generous, loving and tender father. The esteem in which he was held in the community where he lived is well expressed in the following, taken from the editorial columns of the "Kansas City Daily Journal" of February 28, 1893:

"The whole city was shocked yesterday at the announcement of the death of Frank N. Chick. It came with a suddenness that was startling, for few knew of his illness. Taken just at the threshold of an active business life, a man of greatest promise was removed from among us. While he was young in years, he had already attained a position in the financial world that was a place of honor. Among his friends he was known to be true to the core, and always ready with a helping hand for those in whom he placed his confidence.

His business ability was conceded to be of the highest order, and his honor and integrity were of that character that places men upon the topmost round of the ladder of success. With a clearness, acuteness and quickness in business perception and action, he was placed in one of the most responsible positions in Kansas City banking circles; with a ready hand for a friend, a congenial nature and a kind heart, he was beloved most by those who knew him best. Financially and socially the city has lost one of the men it can ill afford to lose."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

BANK OFFICER—WHEN BANK NOT CHARGED WITH HIS KNOWLEDGE.

Supreme Court of Missouri, Division No. 1, March 13, 1893.

MERCHANTS' NATIONAL BANK OF KANSAS CITY *vs.* LOVITT.

Where an officer of a bank is dealing with it in his individual interest, the bank is not chargeable with his uncommunicated knowledge of facts derogatory to his title to the paper which is the subject of the transaction.

Where the President acts for the bank in accepting for discount paper offered by another officer, the bank is not affected by any knowledge of the latter regarding such paper, since he is acting in the transaction in his own behalf.

The fact that the discount was calculated by the officer offering the paper would not be material in such case.

BLACK, *C. J.:* This is an action on a negotiable promissory note for $2,900, executed by the defendant, Lovitt, and payable to O. P. Dickinson in four months after date, with interest from date at the rate of 8 per cent. per annum, and by Dickinson indorsed and delivered to the plaintiff bank. The defense set up by Lovitt, the maker of the note, is a failure of consideration. The history of the transaction is this: On the 27th January, 1888, Dickinson, the payee of the note in suit, by an agreement in writing sold to Lovitt fifty-five shares of stock in a corporation then about to be formed, for which Lovitt gave his note of that date for $2,900, due in six months. It was understood between Lovitt and Dickinson before this note became due that it was to be renewed. On the 11th July, 1888, Lovitt executed the note sued upon, dating it the 27th of that month, and give it to Dickinson in renewal of the former one, and Dickinson indorsed it to the bank on the same day. Lovitt paid the interest accrued on the original note. For the purposes of the trial only it was agreed "that the note sued upon was given for a contract in which the payee of the note agreed to sell certain shares of stock which then had no existence, and deliver the same when the corporation was formed and the stock certificates issued; that the corporation never was formed, and the stock certificates never issued, and that there was a complete failure of consideration of the note; that said Dickinson, the payee of the note, having made the contract set forth in defendant's answer, at all times from and after the making of the same up to the present time knew of its existence and terms." W. B. Clark was President, Mr. McKnight Cashier, and Dickinson Vice-President, of the plaintiff bank when the bank acquired the note sued upon. They were all active officers, and Dickinson was also a director. Dickinson had a conversation with Clark, the President, in which he said he had or expected to get the note of Lovitt. He then asked Clark whether the bank would take it, and Clark agreed to discount the note. The evidence leaves it in doubt whether this conversation occurred after or a day or two before the note in suit was executed, but it clearly appears that Clark, as President, agreed to take the note. The note was executed on the 11th July, and on that day Dickinson indorsed and delivered it to the bank. He at the same time figured up the discount on a deposit slip, and handed the slip to the discount clerk, or to the Cashier, who passed it to the clerk. The discount clerk made the proper entries, placing the amount of the note, less $10.30, to the credit of Dickinson, who checked out and used the money. Lovitt was a well-known customer of the bank, and had a line of credit thereat. Dickinson, in his evidence, says he did not accept the note for the bank, but that Clark did. Clark testified that he agreed with Dickinson to take the note for the bank, but that he left the details of the arrangement to Dickinson; that is to say, to make the entries, receive the paper, and deduct the proper amount of interest for the bank. The $10.30 deducted represented interest from the 11th July to the 27th, the latter being the post date of the note. The officers of the bank, except Dickinson, knew nothing about the contract between Dickinson and defendant, and the bank had nothing whatever to do with the original note.

The defendant asked the Court to declare the law to be, that the knowledge of the Vice-President of the existence and nature of the agreement constituting the consideration of the note in suit, was the knowledge of the bank, which request the Court refused; and this presents the only question for our consideration. It is a general rule that notice of fact acquired by an agent, while transacting the business of his principal, is notice to the principal; and this rule applies to banking and other corporations as well as to individuals. It is the duty of the agent to communicate to the principal information thus acquired, which would affect the rights of the principal; and the presumption is that the agent has performed his duty in this behalf. If he has not, still the principal should be charged with notice of the existence of such facts thus coming to the knowledge of the agent, because he selects his own agent, and confides to him the particular business (Story Ag. § 140). But the reason of the rule ceases when the agent acts for himself, and not his principal; and the rule itself ought not to apply in such a case. Accordingly, it has been held by this Court, that knowledge of an unrecorded deed, acquired by officers of a corporation while acting for themselves and not for the corporation, will not be imputed to the corporation. (*Johnston* vs. *Shortridge*, 93 Mo. 227.) An officer of a banking corporation has a perfect right to transact his own business at the bank of which he is an officer, and in such a transaction his interest is adverse to the bank, and he represents himself, and not the bank. The law is well settled, that when an officer of a corporation is dealing with it in his individual interest, the corporation is not chargeable with his uncommunicated knowledge of facts derogatory to his title to the property which is the subject of the transaction. (Tayl. Corp. 2d Ed. § 210; 1 Wat. Corp. § 135; *Frenkel* vs. *Hudson*, 82 Ala. 158; *Wickersham* vs. *Zinc Co.*, 18 Kan. 481; *Barnes* vs. *Gas Light Co.*, 27 N. J. Eq. 33; *Innerarity* vs. *Bank*, 139 Mass. 332.) In the case last cited, the Court, after speaking of the general rule that knowledge of the agent will be imputed to the principal, says: "But this principle can have no application where the director of a bank is the party himself contracting with it. In such a case the position he assumes conflicts entirely with the idea that he represents the interest of the bank. * * * A director offering a note of which he is the owner for discount, or proposing for a loan of money on collateral security alleged to be his own property, stands as a stranger to it." Now, the facts set up to defeat a recovery here are the facts constituting the transaction between Dickinson and the defendant, in which Dickinson did not represent or profess to represent the bank, and with which the bank had nothing whatever to do. Again, Dickinson in offering the note to the bank for discount, represented his own personal interest, and Clark, the President, represented the bank. In this particular transaction, Dickinson occupied the position of any other customer, and not that of an officer or agent of the bank; and it must follow from the principles of law before stated, that the bank is not chargeable with his knowledge of uncommunicated facts affecting his title to the note. But it is said Dickinson fixed and figured out the discount, and hence he did, in point of fact, represent the bank. The note bore interest at the rate of eight per cent. per annum from date, and it appears Dickinson calculated interest at that rate from the 11th of July, the date of the transaction, to the 27th of that month, the date of the note, and deducted as discount $10.80; but it does not appear who designated the amount of discount to be paid. The broad fact remains that the President of the bank agreed to take the note, and that the bank accepted the discount as figured up by Dickinson; and the fact, if such it was, that he may have designated the rate of discount in the first instance, is wholly immaterial. He nevertheless represented his own interest in the entire transaction. The judgment is affirmed. All concur."

COLLECTION—TITLE TO—INSOLVENCY.

United States Supreme Court, March 6, 1893.

COMMERCIAL NATIONAL BANK *vs.* ARMSTRONG. ARMSTRONG *vs.* COMMERCIAL NATIONAL BANK.

Where paper indorsed "for collection" is sent by the collecting bank to a sub-agent, and the collecting bank fails before the sub-agent parts with the money, or credits the same upon an indebtedness of the collecting bank to itself, it should not pay over the money to the insolvent bank or its Receiver; and the latter has no right to claim such money as against the principal for whom the money was collected.

Where the arrangement is that the collecting bank is to make collections and remit at regular intervals, it will be deemed that moneys received by a sub-agent on account of such collections, and credited on an indebtedness due such sub-agent from the collecting bank, passed into the general funds of the latter, so that they cannot be recovered specifically by the bank owning the paper.

Appeals from the Circuit Court of the United States for the Southern District of Ohio.

On the 28d of November, 1887, the Commercial National Bank of Pennsylvania filed its bill of complaint in the Circuit Court of the United States for the Southern District of Ohio, against David Armstrong, Receiver of the Fidelity National Bank of Cincinnati, the purpose of which bill was to charge the defendant, as trustee of the plaintiff, for $17,460.32, certain funds in his possession. To this bill of complaint the defendant duly appeared and answered. After the taking of testimony, the case was submitted on pleadings and proofs, and on the 8th of June, 1889, a decree was entered in favor of the plaintiff, directing the defendant to pay to it the sum of $7,209.59, which he was adjudged to hold as trustee, and also whatever sums he might thereafter receive from the Receiver of the Fifth National Bank of St. Louis, Mo., as dividends upon the sum of $1,577.89, the amount of paper transmitted to that bank for collection. From this decree both parties appealed to this court.

The opinion of the circuit court was delivered by Jackson, Circuit Judge, and will be found in 39 Fed. Rep. 684.

The transactions between the two banks originated in the following letter, sent by the Fidelity National Bank to the plaintiff:—

"Cincinnati, 2, 12, 1887.

"*Com'l Nat. Bank, Philada., Pa.* Gentlemen:—Enclosed herewith we hand you our last statement, showing us to be the second bank in Ohio, in deposits, in the tenth month of our existence. We should be pleased to serve you, and trust you will find it to your advantage to accept one of the following propositions:

"No. 1. We will collect all items at par, and allow 2½ per cent. interest on daily balances, calculated monthly. We will remit any balance you have above $2,000 in New York draft, as you direct, or ship currency at your cost for expressage.

"No. 2. Will collect at par all points west of Pennsylvania, and remit the 1st, 11th, and 21st of each month.

"No. 3. We will collect at par Ohio, Indiana, and Kentucky items, and remit balance every Monday by draft on New York.

"We do not charge for exchange on propositions Nos. 1, 2, and 3.

"No. 4. Will collect Cincinnati items and remit daily at 40 cents per thousand, or 20 cents for $500 or less.

"National banks not in a reserve city can count all they have with us as reserve.

"Your early reply will oblige, respectfully yours, E. L. Harper, V. P."

To this letter the plaintiff replied on February 18th, accepting proposition No. 2; and thereafter, from time to time, forwarded paper for collection. The Fidelity Bank caused to be made and sent to the plaintiff a rubber stamp for use in indorsing paper thus forwarded. This stamp read as follows:

"Pay Fidelity National Bank of Cincinnati, O., or order, for collection for Commercial Bank of Philadelphia, Pa. E. P. Graham, Cashier."

Business was carried on between the two banks under this arrangement until June 20, 1887, when the Fidelity Bank failed, having in its hands, or in the hands of other banks to which the same had been sent by it for collection, proceeds of paper forwarded by plaintiff after June 4 amounting to $16,851.92. The only correspondence which took place during this time between the parties, which can be considered as throwing any light upon the arrangement between them, was a letter from the plaintiff of May 25, as follows: "We don't wish to complain, but would like to understand why your remittance to us of May 21 only included items sent you up to May 14, and received by you on the 16th. We have to explain these things to our depositors, and wish to act intelligently on the subject;" and a reply in these words: "We collect at par, and include in our remittances everything collected to date."

The conclusions of the Circuit Judge were that the relation between the two banks was that of principal and agent—a relation which continued, not only while the paper was held by the Fidelity Bank, but after the moneys had been collected thereon; but that, in order to enforce a trust in favor of the plaintiff as to any of the moneys so collected, they must be specifically traceable and that it was not sufficient to show that by collection they had passed into the general funds of the bank. This paper had substantially all passed into the hands of other banks, to whom it had been sent by the Fidelity Bank, as its sub-agents, and the Circuit Judge held that if the Fidelity was indebted to these local banks, sub-agents, and the collections, when made, were entered in their books as a credit to such indebtedness, they must be considered as reduced to possession, and as having passed into the general funds of the Fidelity; but that, on the other hand, if the Fidelity was not indebted to the sub-agent banks, and the collections remained in their hands to be subsequently remitted to the Fidelity, and in fact were paid to the Receiver after his appointment, they were specifically traceable, and were therefore subject to the trust created by the relationship between the two banks, and payment thereof could be enforced out of the funds in the hands of the Receiver.

Mr. Justice BREWER:

We agree with the Circuit Judge that the relation created between the banks as to uncollected paper was that of principal and agent, and that the mere fact that a sub-agent of the Fidelity Bank had collected the money due on such paper was not a mingling of those collections with the general funds of the Fidelity, and did not operate to relieve them from the trust obligation created by the agency of the Fidelity, or create any difficulty in specifically tracing them. As to such paper, the transaction may be described thus: The plaintiff handed it to the Fidelity. The Fidelity handed it to a sub-agent. The sub-agent collected it, and held the specific money in hand to be delivered to the Fidelity. Then the failure of the Fidelity came, and the specific money was handed to its Receiver. That money never became a part of the general funds of the Fidelity. It was not applied by the sub-agent in reducing the indebtedness of the Fidelity to it, but it was held as a sum collected, to be paid over to the Fidelity, or to whomsoever might be entitled to it. The Fidelity received the paper as agent, and the indorsement "for collection" was notice that its possession was that of agent, and not of owner. In *Sweeny* vs. *Easter* (1 Wall. 166, 173), in which there was an indorsement "for collection," Mr. Justice Miller says: "The words 'for collection' evidently had a meaning. That meaning was intended to limit the effect which would have been given to the indorsement without them, and warned the party that, contrary to the purpose of a general or blank indorsement, this was not intended to transfer the ownership of the note or its proceeds." And in *White* vs. *Bank* (102 U. S. 658, 661), where the indorsement was "for account," the same Justice, speaking of the indorsement, said: "It does not purport to transfer the title of the paper, or the ownership of the money when received." The plaintiff, then, as principal, could unquestionably have controlled the paper at any time before its payment, and this control extended to such time as the money was received by its agent, the Fidelity. (*Bank* vs. *Hubbell*, 117 N. Y. 384; *Manufacturers' Nat. Bank* vs. *Continental Bank*, 148 Mass. 553; *Freeman's Nat. Bank* vs. *National Tube Works*, 151 Mass. 413; *Armstrong* vs. *Bank* [Ky.], 14 S. W. Rep. 411; *First Nat. Bank of Crown Point* vs. *First Nat. Bank of Richmond*, 76 Ind. 561.) In those cases the suits were against sub-agent banks. It is true that in most of them the collection was made by the sub-agent after the avowed insolvency of the agent, but that fact we cannot think is decisive. If, before the sub-agent parts with the money, or credits it upon an indebtedness of the agent bank to it, the insolvency of the latter is disclosed, it ought not to place the funds which it has collected, and which it knows belong to a third party, in the hands of that insolvent agent or its assignee; and, on the other hand, such insolvent agent has no equity in claiming that this money, which it has not yet received, and which belongs to its principal, should be transferred to, and mixed with, its general funds in the hands of its assignee for the benefit of its general creditors, and to the exclusion of the principal for whom it was collected. Whether it be said that such funds are specifically traceable in the possession of the sub-agent, or that the agent has never reduced those funds to possession, or put itself in a position where it could rightfully claim that it has changed the relation of agent to that of debtor, the result is the same. The Fidelity received this paper as agent. At the time of its insolvency, when its right to continue in business ceased, it had not fully performed its duties as agent and collector. It had not received the moneys collected by its sub-agent. They were traceable as separate and specific funds, and therefore the plaintiff was entitled to have them paid out of the assets in the hands of the Receiver, for, when he collected them from these sub-agents, he was, in fact, collecting them as the agent of the principal. No mere bookkeeping between the Fidelity and its sub-agents could change the actual status of the parties, or destroy rights which arise out of the real facts of the transaction.

We also agree with the Circuit court, in its conclusions as to those moneys collected by sub-agents to whom the Fidelity was in debt, and which collections had been credited by the sub-agents upon the debts of the Fidelity to them before its insolvency was disclosed; for there the moneys had practically passed into the hands of the Fidelity. The collection had been fully completed. It was not a mere matter of bookkeeping between the Fidelity and its agents. It was the same as though the money had actually reached the vaults of the Fidelity. It was a completed transaction between it and its sub-agents, and nothing was left but the settlement between the Fidelity and the principal,—the plaintiff. The conclusions of the Circuit Court were based upon the idea that these collections could not be traced, because they had passed into the general fund of the bank. We think, however, a more satisfactory reason is found in the fact that by the terms of the arrangement between the plaintiff and the Fidelity the relation of debtor and creditor was created when the collections were fully made. The agreement was to collect at par, and remit the 1st, 11th, and 21st of each month. Collections intermediate those dates were, by the custom of banks, and the evident understanding of the parties, to be mingled with the general funds of the Fidelity, and used in its business. The fact that the intervals between the dates for remitting were brief is immaterial. The principle is the same as if the Fidelity was to remit only once every six months. It was the contemplation of the parties, and must be so adjudged, according to the ordinary custom of banking, that these collections were not to be placed on special deposit, and held until the day for remitting. The very fact that collections were to be made at par shows that the compensation for the trouble and expense of collection was understood to be the temporary deposit of the funds thus collected, and the temporary use thereof by the Fidelity. The case of *Marine Bank* vs. *Fulton Bank* (2 Wall, 252) is in point, though it may be conceded that the facts in that tending to show the relation of debtor and creditor are more significant than those here. In the spring of 1861, the Fulton Bank of New York sent two notes for collection to the Marine Bank of Chicago. There being some trouble about currency, the Fulton Bank requested the Marine Bank to hold the avails of the collection subject to order, and advise amount credited. Afterwards the Marine Bank sought to pay in the currency which it had received on the collection, then largely depreciated, but its claim in this respect was denied; Mr. Justice Miller, speaking for the Court, saying: "The truth, undoubtedly, is that both parties understood that, when the money was collected, plaintiff was to have credit with the defendant for the amount of the collection, and that defendant would use the money in its business. Thus the defendant was guilty of no wrong in using the money because it had become its own. It was used by the bank in the same manner that it used the money deposited with it that day by city customers, and the relation between the two banks was the same as that between the Chicago bank and its city depositors. It would be a waste of argument to attempt to prove that this was a debtor and creditor relation. All deposits made with bankers may be divided into two classes, namely, those in which the bank becomes bailee of the depositor, the title to the thing deposited remaining with the latter; and that other kind of deposit of money peculiar to banking business, in which the depositor, for his own convenience, parts with the title to his money, and loans it to the banker, and the latter, in consideration of the loan of the money, and the right to use it for his own profit, agrees to refund the same amount, or any part thereof on demand. The case before us is not of the former class. It must be of the latter."

That reasoning is applicable here. Bearing in mind the custom of banks, it cannot be that the parties understood that the collections made by the Fidelity during the intervals between the days of remitting were to be made special deposits, but, on the contrary, it is clear that they intended that the moneys thus received should pass into the general funds of the bank, and be used by it as other funds, and that, when the day for remitting came, the remittance should be made out of such general funds.

DISCOUNT—USURY—EFFECT OF STATUTE MAKING USURY A MISDEMEANOR.

Supreme Court of Alabama, May 4, 1892.

YOUNGBLOOD *vs.* BIRMINGHAM TRUST & SAVINGS COMPANY.

While the terms of statutes sometimes make a distinction between "discount" and "loans," in the absence of any element of this kind—whenever the words stand alone upon the signification accorded them in the general law—every loan upon evidences of debt, where the compensation for the use of money till the maturity of the debt is deducted from the principal and retained by the lender at the time of making the loan, is a discount.

he statute of Alabama making it a misdemeanor for any bank or banker to discount paper at a higher rate of interest than eight per cent. per annum, is constitutional and valid.

The effect of the statute is to invalidate any paper discounted at a higher rate, at least while such paper is in the hands of the banks.

This was an action on an accepted draft by the Birmingham Trust & Savings Company against William Youngblood. Plaintiff had judgement, and defendant appealed.

Swem & Thomas drew a draft on defendant in favor of plaintiff, payable thirty days after date. Defendant accepted the draft, and plaintiff discounted it, paying Swem & Thomas the amount thereof, less one per cent. of the face. Defendant failing to pay the draft at maturity, the present action was brought. Defendant set up by special plea that plaintiff was a banker, and discounted the draft sued on at a greater rate of interest than eight per cent., and therefore the draft was void, being a violation of section 4140 of the Code of Alabama. The Court sustained plaintiff's demurrer to this plea, and, upon the submission of the cause to him without the intervention of a jury, rendered judgment for the plaintiff. The present appeal is taken from said judgment, and the Court's rulings upon the pleadings and the judgment rendered are assigned as error.

McCLELLAN, *J.:* The terms "discount" and "loan" are employed in the books indiscriminately and synonymously in all cases where compensation for the use of money advanced is retained out of the gross sum at the time of the advancement. Thus it is said: "Discounting or loaning money, with a deduction of the interest in advance, is a part of the general business of banking," etc. (2 Amer. & Eng. Enc. Law, p. 92.) And a discount is thus defined: "By the language of the commercial world, and the settled practice of banks, a discount by a bank means, *ex vi termini*, a deduction or drawback made upon its advances or loans of money upon negotiable paper, or other evidences of debt, payable at a future day, which are transferred to the bank. The term 'discount,' as a substantive, means the interest reserved from the amount lent at the time of making the loan; as a verb, it is used to denote the act of giving money for a note or bill of exchange, deducting the interest." (5 Amer. & Eng. Enc. Law, 678, 679.) A distinction between "discount" and "loans" is sometimes enforced by the terms of statutes obtaining in the premises; but, in the absence of any element of this kind, —whenever the words stand alone upon the signification accorded them in the general law,—every loan upon evidences of debt, where the compensation for the use of money till the maturity of the debt is deducted from the principal and retained by the lender at the time of making the loan, is a discount. (*Fleckner* vs. *Bank*, 8 Wheat. 338; *Bank* vs. *Johnson*, 104 U. S. 276; *Saltmarsh* vs. *Bank*, 14 Ala. 677; *Loan Co.* vs. *Towner*, 13 Conn. 259; *Pape* vs. *Bank*, 20 Kan. 440; *Bank* vs. *Baker*, 15 Ohio St. 85; *Talmage* vs. *Pell*, 7 N. Y. 328; *Bank* vs. *Bruce*, 17 N. Y., 515; *Freeman* vs. *Brittin*, 17 N. J. Law, 206.) On these principles we entertain no doubt that the transaction in and by which plaintiff acquired the draft of Swem & Thomas which had been accepted by defendant for the accommodation of the drawers, by advancing to Swem & Thomas the face value thereof, less a certain per cent. thereon, which was retained by plaintiff for the use of the gross sum so advanced for the time of the paper, was a "discounting" of the draft within the usual sense of that term, and hence within the meaning of the word as employed in section 4140 of the Code, there being nothing in the context of that section importing a different significance. The section referred to is as follows: "Any banker who discounts any note, bill of exchange, or draft at a higher rate of interest than eight per cent. per annum, not including the difference of exchange, is guilty of a misdemeanor." It is admitted that the plaintiff discounted the draft in question at a higher rate of interest than 8 per cent. per annum, or rather, it is admitted that the plaintiff, which is a banking corporation, acquired the draft by paying or advancing thereon the sum nominated therein, less about 1 per cent., which was deducted and retained by it as compensation, for the use of the money till maturity of the paper, which was due and payable at 30 days. This, as we have seen, was a discounting of the draft, within the statute quoted; and, the rate of discount being equal to 12 per cent. per annum, the discount was violative of the statute, and involved a crime on the part of plaintiff, assuming the constitutionality of the enactment. This was section 4485 of the Code of 1876. It was then directed against individual bankers only. As it then stood, it was adjudged to be unconstitutional by this Court in *Carter* vs. *Coleman*, (84 Ala. 256). The ground of that decision is not expressly stated, but it was based on authorities, (*Smith* vs. *Railroad Co.*, 75 Ala. 449, and *Railroad Co.* vs. *Morris*, 65 Ala. 193), a reference to which leaves little doubt that the statute was held invalid because it did not apply also to corporations engaged in the business of banking; and this is made manifest by the further statement of the Court that "the statute has since been changed. (Code 1886, § 4140); with what effect we need not inquire." The change here referred to consists in the omission from its last codification of the word "individual," the effect being to make it applicable to corporate as well as individual bankers, and to obviate the infirmity pointed out in *Carter* vs. *Coleman*. We do not conceive that there could have been any other objection to the constitutionality of the original enactment; and, that objection having been eliminated by amendment, we are clear in the conviction that it is now a valid and efficacious exercise of legislative power. It is quite erroneous to say that it is class legislation, in a vitiating sense. It does apply to a class, of course, as do very many other statutes in our jurisprudence whose validity has never been, and cannot be, successfully questioned, as, for instance, statutes regulating railroads, physicians, lawyers, common carriers, warehousemen, etc., but, like all these, its application is to all of a number of persons, natural and artificial, whose occupation and business mark the lines of the class to which they belong, and as members of which they are, each and all, without individious distinction whatever, amenable to its terms solely because they pursue an avocation which the law making power conceives should be specially regulated.

The business of banking is well understood and defined. A chief part of it, in most instances, consists in the lending of money, and this is almost always done by discounting evidences of debt. The opportunities and temptations of persons engaged in it to evade or violate laws against usury are so much greater and more frequent than those of persons not so engaged as to raise up a necessity for the application of more stringent measures of repression than are necessary in respect of other businesses and persons engaged therein; and it is this consideration which differentiates the business of banking from all others in respect of usury, and furnishes a predicate for such legislation as is embodied in section 4140 for the regulation of banking and bankers, which does not exist as to any other occupation, just as the inherent dangers involved in the operation of a railroad differentiates that from other occupations, and necessitates legislation which would be entirely unnecessary and innocuous in respect of the business of farming, for instance. And upon this ground statutes of this character, when made to apply to all persons, whether individuals or corporations, regulating occupations, have been uniformly upheld. Judge Cooley, in this connection, says: "The Legislature may also deem it desirable to prescribe peculiar rules for the several occupations, and to establish distinctions in the rights, obligations, duties, and capacities of citizens. The business of common carriers, for instance, or of bankers, may require special statutory regulations for the general benefit, and it may be matter of public policy to give laborers in one business a specific lien for their wages, when it would be impracticable or impolitic to do the same for persons engaged in some other employments. If the law be otherwise unobjectionable, all that can be required in these cases is that they be general in their application to the class or locality to which they apply; and they are then public in character, and of their propriety and policy the Legislature must judge." Cooley, Const. Lim. pp. 480, 481. In a recent case, a statute of Kentucky, which gave a right of action against railroads to the representatives of persons, not in the service of the road, killed through the negligence of railroad employes, came before the supreme court of that State on the question of its constitutionality. The argument was that this was class legislation, in that it applied to railroads alone, and no liability was imposed upon other common carriers.

The Court, in holding this position to be unsound, among other things, said: "This statute does not single out a particular individual or corporation, and subject him or it to special burdens or peculiar rules. Nor does it do so as to some of those engaged in a particular business, as, for instance, the Chinese in the laundry business, and which the Supreme Court of the United States condemned in the case of *Soon Hing* vs. *Crowley* (113 U. S. 703), but it subjects all in a particular business to its provisions, just as a law relative to banks and the conduct of banking would subject all in that particular business to its terms. Legislation of like character is to be found upon the statute books of every State." (*Louisville Safety Vault & Trust Co.* vs. *Louisville & N. R. Co.*, 17 S. W. Rep. 567, 14 Lawy. Rep. Ann. 579, and notes), and to like effect in principle are the following cases therein cited: *Railway Co.* vs. *Mackey*, 127 U. S. 205; *Railway Co.* vs. *Beckwith*, 129 U. S. 27, and so, on the same principle, a statute fixing the rate of interest which may be charged by pawnbrokers is no violation of a constitutional provision for "uniform laws." (*Jackson* vs. *Shawl*, 29 Cal. 267.) And the general power of the Legislature to regulate occupations and businesses of all kinds, keeping within the principle that all members of a particular class proposed to be regulated must be equally amenable to the regulations made, has been time and again declared by this Court. (*Mayor* vs. *Yuille*, 3 Ala. 137; *Ex parte Marshall*, 64 Ala. 266; *Harrison* vs. *Jones*, 80 Ala. 412; *Railroad Co.* vs. *Baldwin*, 85 Ala. 619; *McDonald* vs. *State*, 81 Ala. 274.) Upon a consideration of the foregoing authorities, and the reasons which underlie them, we are, we repeat, without doubt in the conclusion that section 4140 of the Code of 1886 is a constitutional enactment.

It is equally free from doubt, in our opinion, that the effect of this statute on the transaction in and by which the plaintiff acquired the draft and acceptance sued on would vitiate it *in toto*, and avoid and defeat all right on the part of the plaintiff under that contract. The title upon which plaintiff relies is one which he acquired in confessed and palpable violation of a law which denounced his act in that regard as a crime. The doctrine is nowhere more firmly established than in Alabama, that no rights can spring from or be rested upon an act in the performance of which a criminal penalty is incurred, and that all contracts which are made in violation of a penal statute are as absolutely void as if the law had in so many words declared that they should be so. See *Moog* vs. *Espella* (Ala.), 9 South. Rep. 596, where our cases are collated. And the logical consequence of the doctrine in a case like the present one, involving the acquisition of a note, bill, or draft by criminal means is, that not only is the act of acquisition a crime, and invalid, but the paper itself—the supposed security for money advanced in contravention of the statute—is absolutely void, in the hands, at least, of him who comes by it through the commission of a penal offence. (*Pennington* vs. *Townsend*, 7 Wend. 276; *Bank* vs. *Owens*, 2 Pet. 527.) The rulings of the trial court on pleadings, and its finding and judgment on the facts, are opposed to these views. The judgment is reversed; and, the case having been tried without jury below, judgment will be here rendered for the defendant.

COLLECTIONS—WHAT CONSTITUTES PAYMENT.

Supreme Court of Tennessee, March 23, 1893.

HOWARD *et al. vs.* WALKER*

Where an item received for collection is directed by the drawee to be paid at his bank, and the item is charged up in the daily settlement of accounts between such bank and the collecting bank, this constitutes payment of the same.

Persons dealing with banks are presumed to know the custom of banks in regard to the settlement of balances.

The plaintiffs in error were defendants below in a suit brought by Walker, before a justice of the peace, for $140, the price of a mule. He obtained judgment before the justice, and on appeal in the circuit court, for the amount claimed; and Howard & Co. appealed in error. The facts were agreed upon, and were as follows: Howard & Co. authorized W. T. Boyd to buy mules for them in October, 1891, and to pay for such mules by drafts drawn on them. On October 5, 1891, Boyd bought a mule for them from Walker, and gave him a draft on Howard & Co. for its price, $140. Walker indorsed the draft, and deposited it in the First National Bank of Centreville, Tenn., on same day; and this bank immediately forwarded it to its regular correspondent at Columbia—the Columbia Banking Company—indorsed for collection. The Columbia Banking Company received the draft on the 7th, and on the 8th October presented the draft to Mr. Howard, of the firm of Howard & Co., who directed that it be taken to the Bank of Columbia for payment. On the 13th October the Columbia Banking Company presented the draft to the Bank of Columbia, where directed, and where Howard & Co had funds more than sufficient to pay it. The bank took the draft, and charged it to account of Howard & Co., canceled it, and delivered it afterwards to them, upon making up their pass-book, leaving still a balance to the credit of Howard & Co. in the Bank of Columbia. No money was actually paid out, but in the settlement between these banks on that day (which was the usual daily settlement, according to custom of these banks) the Bank of Columbia held checks and drafts against the Columbia Banking Company to the amount of $2,000 in excess of drafts and checks held by the Columbia Banking Company against the Bank of Columbia; and it therefore charged up, according to custom of these banks—and, as it is agreed, of all banks—this excess of $2,000 to the Columbia Banking Company, which gave a corresponding credit to the Bank of Columbia. The Columbia Banking Company never remitted to the Bank of Centreville, and that bank never received anything on the draft, or otherwise, through this collection. Both the Bank of Columbia and the Columbia Banking Company failed on the 17th of October. They were both insolvent from the 5th to the 17th, but their officers did not know it until October 17th, and there is no pretense of bad faith in their transactions with each other. They were according to the usual daily course of business between them. When the settlement referred to, of the 13th October, took place, in which the draft now in controversy was included, the Columbia Banking Company gave credit to the First National Bank of Centreville for the amount of the draft, but, as before stated, never actually remitted or otherwise paid it to that bank or plaintiff. When the Columbia Banking Company and the Bank of Columbia suspended business, on the 17th, the former was indebted to the latter several thousand dollars.

Snodgrass, *J.:* Upon these facts, with some others not material to be stated, the Circuit Judge held the draft had not been paid; that the transaction in which it was settled was not a collection, and was not binding on plaintiff; and that Howard & Co. were still liable to him for the original draft. In this we hold there was manifest error. The collection was, according to bank custom, as effectual as though the money had been handed over the counter by each bank to the other in satisfaction of this, as of the several other checks involved. It makes no difference, and makes it none the less a payment, that the indorsement by the Centreville Bank was restrictive—"for collection." It was expected that such draft would be collected in the usual way, and it is agreed that it was done according to custom of these and all banks, in daily transactions with each other, in which checks are not paid alternately back and forth, but settlement made upon the basis indicated. This is the usual, general custom, and is a reasonable one, and parties dealing with the banks adopting it are bound by it. (1 Morse, Banks (3d Ed.), pp. 28, 29, § 9, and notes; *Mills* vs. *Bank*, 11 Wheat 431; *Bank* vs. *Triplett*, 1 Pet. 25; *Sahlien* vs. *Bank*, 90 Tenn. 221.) The references on the subject in the foregoing cases cited establish conclusively the binding effect of reasonable customs of banks in general collections, as in other dealings, and cover, in principle, the case before us; but the exact question has been decided, and it is treated as settled. In his work on Commercial Paper, Mr. Randolph says: "If the holder of a bill directs that it be paid to a certain banker, procuring credit with such banker will amount to a payment of the bill. So, if the amount of a note is credited to a bank holding it for collection (according to the custom of dealings between the banks), it will be a payment, although the bank making the note and giving the credit failed on the day it was so credited." (Volume 3, §§ 1395, 1456. See, also, *Commercial Bank* vs. *Union Bank*, 11 N. Y. 213, 214; *Briggs* vs. *Bank*, 89 N. Y. 182; *Bank* vs. *McClung*, 7 Lea, 492) The doctrine has been extended, and collecting banks have been recognized as authorized to receive their own certificates of deposit in payment, and the debtor is discharged even though the bank fails before remitting. (1 Morse, Banks, § 305.)

These principles are not in contravention of that which permits an agent to receive only money in payment of his principal's debt. If the principal select a bank as his collecting agent, he is presumed to understand the business methods by which such transactions are effected through usages of banks. Actual ignorance of them is of no avail as an excuse; for, as said in the case cited by Mr. Morse on the last proposition herein stated, in respect to the transaction as a question of custom, ignorance of the plaintiff as to the existence of such usage was of no moment. Every business man must be held to know the method by which nearly all banks in the country transact business, by checks, drafts and certificates of deposit. (*Mortgage Co.* vs. *Tibballs*, 63 Iowa, 463.) These business transactions are understood to be, and are, in effect, the payment of money by one, and its receipt by the other, bank. It is impracticable, if not impossible, to go through the vain and empty formality of paying cash back and forth by each bank to every other on every separate check involved in the multiplicity of the transactions in which they are used

The banks must resort to a method of balancing accounts, and settling on basis of results; and no man sending a check or draft for collection has any reason to expect that his collection will be made otherwise than all are made in this way. It is a money settlement, and the receipt of money in payment, in the actual business sense that the law requires, under the reasonable custom adopted by banks as a necessity, and recognized as such throughout the world. It is the recognition and adoption of this view which has sustained that greatest of modern conveniences, the clearing-house system, which a contrary one would now overthrow. Neither authority nor policy requires an abandonment of it, but, on the contrary, the courts are impelled by both to uphold it. The judgment is therefore reversed, and judgment entered here for defendants.

BANK BOOK—WHEN ADMISSIBLE AS EVIDENCE.

Supreme Court of Wisconsin, March 21, 1893.

CAMERON GOFF *vs.* STOUGHTON STATE BANK.

In a controversy between a bank and its customer as to whether the bank at the time a draft was presented to it had paid the customer the amount thereof, his bank book is admissible to show that at such time he had an open account with the bank.

So, where the bank claimed that the amount was balanced on a certain day, the bank book is admissible to contradict such claim.

In an action to recover the purchase price of negotiable paper the burden of proving payment is on the purchaser as in the case of the purchase of any other kind of personal property.

This was an action for the purchase price of a negotiable check or draft, owned by the plaintiff, drawn by A. F. Davis & Co., upon a Chicago bank, for $38.50, to the order of one Walters, and indorsed in blank by Walters. The complaint also contained a count for money had and received, charging that the defendant had collected $38.50 upon the draft, and failed to pay the same to the plaintiff. The defense was payment at the time the draft was handed to the bank. It appeared that the plaintiff handed the draft over the counter of the bank to the Cashier, early in April, 1889, and that he was at that time a regular customer of the bank, having an open account and a bank book. Plaintiff claimed that he handed the draft through the wicket, in his bank book, and requested that his book be balanced. On the other hand, the Cashier claimed that plaintiff handed the draft to him without the book, and with a request for the cash thereon, and that he immediately gave plaintiff the money. The alleged payment was denied by the plaintiff. The plaintiff's bank book, which was introduced in evidence, showed no entry, either debt or credit, pertaining to the draft, nor did plaintiff's account on the books of the bank show any entry thereof. The draft was not indorsed by plaintiff. From verdict and judgment for plaintiff, defendant appealed.

WINSLOW, *J.:* Two questions are raised and argued: First, was the plaintiff's bank book admissible in evidence on plaintiff's behalf? Second, was the instruction requested by defendant, to the effect that the burden of proof was on the plaintiff to show that the draft was not paid for in cash when it was handed to the Cashier, properly refused?

As to the bank book. It was an account kept by defendant of the business transactions between it and plaintiff at and just prior to the time the check was handed in to the bank. The plaintiff contending that he handed in the draft in the book, thus indicating that he desired credit therefor upon his account, was certainly entitled to show that he then had an open account at the bank, and this fact the book certainly proved. Furthermore, there was a serious conflict in the evidence as to when this open account was balanced, the defense claiming and relying upon their own ledger account to show that it was balanced March 30, and the plaintiff claiming that such balance was struck in April. One item in the plaintiff's bank book tended to contradict defendant's claim, and show that the balance was not struck until April 1, at least. In this view, also, the book was properly admissible.

As to the burden of proof. If the plaintiff had sold any ordinary article of personal property to the defendant, the burden of proving payment therefor would certainly be upon the defendant. (*Rossiter* vs. *Schultz*, 62 Wis. 655.) Does this rule apply to the present case? We think it does. It is true that in an action upon a negotiable instrument against makers or indorsers the holder is presumed to be the owner for value before due. This rule is simply for the protection of negotiable paper as a medium of exchange by giving it a presumptive faith and credit. When it is purchased, the purchaser knows that, as against the parties thereto, he has this presumption in his favor, and thus negotiable paper is enabled to play so great a part in the business transactions of the world. Were the bank suing the drawer or indorser of the check on account of non-payment by the drawee, it would have this presumption in its favor. But there is no such case here. The action is not brought to recover upon commercial paper, nor is the integrity of the paper in any way involved. It is brought by one not in any way a party to a negotiable instrument, against a purchaser thereof, to recover the purchase price. We see no reason why there should be any presumption that it was paid for when sold, any more than in case of sale of any other chattel. Judgment affirmed.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general nterest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: SHENANDOAH, Iowa, April 19, 1893.

SIR: W issued his check on this bank for $50, payable to "T. H. Read or bearer," of date January 26, 1893. The check was lost either by maker or payee, and duplicate issued and paid for same. Afterwards, on the 30th of March, 1893, this check was presented to the Shenandoah National Bank, of this city, by a stranger, who received the money on it from that bank; and that bank stamped its pay-stamp on the back of the check, of date March 30, 1893, and collected the amount of the check from this bank on the 31st of March, and was by us duly charged in the account of W, and returned to him with his cancelled vouchers. The date of the check had been changed from January 26 to March 16, and the name of the payee from "T. H. Read" to "C. E. Crosby." On April 5, W discovered the erroneous charge to his account and returned the check to us, and demanded the return of the amount charged to his account on account of the check. The money was promptly refunded by us to W, and we at once offered to return the check to the Shenandoah National Bank, and demanded the return of the money paid said bank on it, on the ground that the change in the date and payee of the check made it a forgery. This was refused on the ground that we should have discovered the forgery sooner, and returned the check the same day it was paid, when they might have been able to find the stranger to whom they paid the check and saved loss, but that the payee bank could not now recover from them or endorsers on account of this delay in detecting the forgery, on our part. *Query:*—Does the change in date and payee of the check make it a forgery? and is the other bank responsible to us for money paid on this check on our offer to return the check and demand of repayment as soon as the forgery was known to us? T. H. READ, *President.*

Answer.—The fraudulent alteration in the name of the payee vitiated the instrument, and it was no longer a valid obligation of W's, and therefore the drawee bank could not charge his account with the same, and was right in refunding him the amount thereof when the fraud was discovered. In all cases of alteration of this sort the drawee bank can recover from the person to whom it paid the check as for money paid under a mistake of fact, where it gives notice of the fraud and makes demand for restitution within a reasonable time. What will be such reasonable time will depend on the circumstances of each case. If no negligence is attributable to the bank in failing to make the discovery, it will ordinarily be sufficient if notice is given to the holder as soon as the forgery is known. (*Pratt's Manual of Banking Law*, 63–65; *Daniel on Negotiable Instruments*, §§ 1371–1372.) In several cases recovery has been allowed where there was a delay of some weeks. (*Canal Bank* vs. *Bank of Albany*, 1 Hill, 287; *Third National Bank* vs. *Allen*, 39 Mo. 310) In the case first cited it was held that there could be a recovery, though the payment had been made by the Canal Bank on a forged indorsement on the 28th of March, and it was not until the 7th of the following June that the Bank of Albany was notified of the forgery and called upon to refund the money paid to it. The earlier English cases, which hold that there can be no recovery unless the payor gives notice on the very day of payment, and before any change of circumstances, have not been followed in this country. Our correspondent does not state when the pass-book and vouchers were given to W, but unless there was something very unusual in the case, he appears to have exercised reasonable diligence in making an examination of them and calling attention to the forgery. (*Leather Manufacturers' Nat. Bank* vs. *Morgan*, 117 U. S. 116; *Welsh* vs. *German-American Bank*, 73 N. Y. 424; *Hardy* vs. *Chesapeake Bank*, 51 Md. 526.) Unless, therefore, there are circumstances in the case favoring the Shenandoah National Bank of which we are not advised, we think such bank is bound to refund the money paid it on the check.

Editor Rhodes' Journal of Banking: STURGIS, Mich., March 30, 1893.

SIR:—Will you please give me the facts regarding the Mellen, Ward & Mower and State Bank and Merchants' Bank of Boston case, and to which the United States was a party. In these suits R. B. Curtis presented many facts bearing upon the signature powers of a Cashier. Refer me to the number of the case, etc. If not too much trouble please define the powers and scope of a Cashier's signature as relating to the indorsement of bills receivable re-discounted. Is authority from board necessary to enable the Cashier to attach his signature to the bank's bills receivable for the purpose of re-discount? H. A. CLAPP, *Cashier.*

Answer.—The case referred to by our correspondent is probably *Merchants' National Bank* vs. *State National Bank*, which will be found in 10 Wallace, 604. That case grew out of the failure of Mellen, Ward & Co., and B. R. Curtis was one of the counsel. One of the principal questions decided was as to the power of the Cashier of a National bank to certify checks. The record in the case may have contained a discussion of the Cashier's powers in other respects, and their powers may have been discussed in Mr. Curtis' brief; but such points are not covered by the decision of the Court. "The Cashier of a bank is its executive officer, and it is well settled that as incident to his office he has authority, implied from his official designation as Cashier, to borrow money for, and to bind the bank for its repayment." (*Coats* vs. *Donnell*, 94 N. Y. 168.) And having the power to borrow, he has necessarily the power to bind the bank for the repayment of the money, and to execute and deliver the necessary assurances or undertakings therefor in any form not forbidden by law. (*Borner* vs. *Ontario Bank*, 19 N. Y. 152; *Donnell* vs. *Lewis Co. Savings Bank*, 80 Mo. 165.) And as a re-discounting is but a borrowing for the bank, he has implied power to indorse the bills receivable of the bank for that purpose. (*West St. Louis, etc. Bank* vs. *Shawnee, etc. Bank*, 95 U. S. 557.)

Editor Rhodes' Journal of Banking: GORDONSVILLE, Tenn., April, 28, 1893.

SIR:—Bank A draws a draft on its correspondent Bank B in favor of Bank C, situated in the same city with B. While the draft is in the mail Bank B fails. Should Bank C protest the draft or return it without protest, the draft having no indorsement on it? WM. GWALTNEY, *Cashier.*

Answer.—There being no indorsers to charge protest is not strictly necessary, and failure to protest would not affect the right of bank C to recover of the drawer thereon. But as the notary's certificate affords *prima facie* evidence of the presentment of the draft, and the refusal of the drawee bank to pay the same, a protest in such case would not be improper.

Editor Rhodes' Journal of Banking: ABERDEEN, South Dakota, April 19, 1893.

SIR:-Referring to the April number of the JOURNAL, page 409, regarding "no protest" slips being attached to a draft, I would like to ask whether your answer would apply to a draft to which there was attached a slip similar to the following:

NO PROTEST.
Take this off before presenting.

Such slip being attached to the draft by perforations and not being large enough to sign. ROBERT MOODY, *President.*

Answer.—The use of a form with such a slip attached is clearly an instruction to the collecting bank not to protest, and it is not necessary that the slip should be signed. Such forms are in common use, and it is not usual to sign the slip.

Editor Rhodes' Journal of Banking: WELLS, Minn., April 1, 1893.

SIR:—We would like to have your opinion through the columns of the JOURNAL OF BANKING as to the operations of the usury law affecting National banks in a case like this: A and B give their joint note for $400, due six months after date, and pay the legal rate of interest in advance so the note draws interest after maturity at 10 per cent per annum. At the maturity of the note the makers desire five months' extension, which is granted upon payment of interest in advance, and a fee of $10, it being understood that the fee is for allowing further time in which to pay. The question is, can the bank charge any fee for the extension of a note without becoming liable to forfeiture of principal and interest in case makers bring action for recovery? A. O. OLESON, *Asst. Cashier.*

Answer.—It is well settled that the taking of a commission by the lender in addition to the highest rate of interest, will render the contract usurious (*Fowler* vs. *Equitable Trust Company*, 141 U. S. 411) and as ten per cent. is the highest rate allowed by the laws of Minnesota, the taking of the additional fee of ten dollars had this effect. But the laws of Minnesota which make the contract void for usury have no application in the case of a National bank. (*Farmers and Mechanics' National Bank* vs. *Dearing*. 91 U. S. 29.)

However, in a suit upon the instrument the bank could not recover any interest. (*Lucas* vs. *Government National Bank*, 78 Pa. St. 228; *National State Bank* vs. *Brainard*, 61 Hun, 439; *Kansas National Bank* vs. *Grimes* (Kans.), 30 Pac. Rep. 474.) And the borrower may recover of the bank in a suit brought for that purpose twice the amount of the interest so paid. (*Schuyler* vs. *Bullong*, 28 Neb. 684; *Barnet* vs. *Muncie National Bank*, 98 U. S. 855.)

Editor Rhodes' Journal of Banking: ST. PAUL, Minn., April 13, 1893.

SIR :- Does the tendering of payment by the maker of an interest-bearing demand note, on which there is an accommodation indorsement, before payment has been demanded by the payee, and the acceptance of such payment refused by the holder (payee) invalidate the note? (2) Does the tendering of such payment and interest, and the refusal thereof, discharge the liability of the indorser? (3) When does a demand note become outlawed? In case the payee is not legally bound to accept payment before demanding it, would the insertion of the words "on or before demand" be proper for the protection of the maker? EDMUND J. DEVITT.

Answer.—A tender of money in payment of a money debt, however formal and legal, will not extinguish the debt, though it will stop the running of interest, and protect the debtor from subsequent costs. (*Moffat* vs. *Parsons*, 5 Taunt. 307; *Woodruff* vs. *Trapnall*, 12 Ark. 640; *Haynes* vs. *Thom*, 28 N. H. 386; *Kartright* vs. *Cady*, 21 N. Y. 343.) As against the maker, therefore, the tender would not invalidate the note, though if the maker had the right to make such tender, it would stop the running of the interest. It would also discharge the indorser. (*Spurgeon* vs. *Smither*, 114 Ind. 253.) But as to whether the maker of the note would have the right to make the tender the law is not so clear. The decisions on the question as to the time for which a demand note may be allowed to run are very conflicting. We do not know of any case where the precise question presented here has been decided; but we think the rule would be that the tender of principal and interest by the maker of a demand note at any time and the refusal of the holder to receive the payment would discharge an accommodation indorser.

Price of Gold from 1862 to 1878.

In response to the request of a JOURNAL subscriber the following table has been compiled, showing the fluctuations in the price of gold for the period covering the suspension of specie payments. The widespread attention now being given to the gold question serves to make this table of especial interest:

YEAR.	*Highest.*	*Lowest.*	YEAR.	*Highest.*	*Lowest.*
1862	134	101⅛	1871	115⅜	108⅜
1863	172½	122⅛	1872	115⅝	108½
1864	285	151½	1873	119⅛	106⅛
1865	234⅜	128½	1874	114⅜	109
1866	167¾	125⅛	1875	117⅝	111¾
1867	146⅜	132⅛	1876	115	107
1868	150	132	1877	107⅞	102½
1869	162½	119½	1878	102⅜	100
1870	123¼	110			

On January 1, 1879, specie payments were resumed after a suspension of almost eighteen years.

CONDITION OF THE NATIONAL BANKS.

TREASURY DEPARTMENT, OFFICE OF COMPTROLLER OF THE CURRENCY,
Washington, April 19, 1893.

Abstract of reports made to the Comptroller of the Currency, showing the condition of the National banks in the United States at the close of business on Monday, March 6, 1893. Number of banks, 3806.

RESOURCES.

Loans and discounts		$2,138,319,807 41
Overdrafts		21,294,285 07

Deposits of United States disbursing officers		3,927,760 44
Due to other National banks		304,785,336 62
Due to State banks and bankers		166,901,064 78
Notes and bills rediscounted		14,021,596 43
Bills payable		18,180,228 71
Liabilities other than those above stated		2,913,047 88
Aggregate		$3,459,721,235 78

* The amount of circulation outstanding at the date named, as shown by the books of this office, was $175,517,371; which amount includes the notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under the Acts of June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

A. B. HEPBURN, *Comptroller.*

New York National Banks.—The general concern now manifested in monetary affairs gives especial significance to the following comparative statement of the New York associated banks for the past four years:

	April 15, 1893.	*April 16, 1892.*	*April 18, 1891.*	*April 19, 1890.*
Loans	$431,453,800	$493,629,400	$412,281,900	$403,820,500
Deposits	439,527,800	531,882,000	414,915,800	403,884,200
Circulation	5,785,600	5,613,400	3,491,700	3,681,200
Specie	71,483,000	102,969,800	74,099,800	79,196,100
Legal tenders	49,474,500	45,789,200	33,949,000	24,349,400
Reserve held	120,957,500	148,759,000	108,048,800	103,545,500
Reserve required	109,881,950	132,970,500	103,728,950	102,221,050
Surplus	11,075,550	15,788,500	4,319,850	1,324,450

NEW YORK STATE BANKS.

ANNUAL REPORT OF HON. CHARLES M. PRESTON, SUPERINTENDENT OF BANKS, TRANSMITTED TO THE LEGISLATURE JANUARY 3, 1893.

From the Annual Report of the Superintendent of Banks for the year ending September 30, 1892, statistical tables are herewith given containing a comparative statement of the principal items of Resources and Liabilities of the State banks for each period of ten years from 1872 to 1892; also an extended exhibit of Resources and Liabilities on September 22, 1892, and September 12, 1891.

A statement of the securities held in trust by the Superintendent forms an interesting feature of the Report, showing that the banks, trust companies, etc., had on deposit with the Banking Department, on October 1, 1892, $3,147,378.96.

NUMBER OF BANKS.

The number of banks and individual bankers in existence in this State at the close of the last fiscal year was 192, an increase of thirteen for the year.

During the past year no bank has failed and no individual bankers have been incorporated.

The figures contained under the several headings are as follows:

RESOURCES AND LIABILITIES.

Table showing the resources and liabilities of the banks of the State on the 22d day of September, 1892, together with a statement of the increase and decrease as compared with that of September 12, 1891:

RESOURCES.	*Condition on Sept. 22, 1892.*	*Condition on Sept. 12, 1891.*
Loans and discounts, less due from directors	$177,522,211	$157,991,868
Due from directors	6,811,769	6,753,079
Overdrafts	188,077	204,324
Due from trust companies, State, National and private banks and brokers	24,475,110	18,853,876
Real estate	5,826,638	5,292,064
Bonds and mortgages	2,007,293	1,356,407
Stocks and bonds	9,471,616	6,086,116
Specie	11,623,850	11,654,313
United States legal-tender notes and circulating notes of National banks	14,506,384	11,414,369
Cash items	24,540,069	38,520,254
Loss and expense account	648,518	622,981
Assets not included under any of the above heads	576,392	698,768
Add for cents	673	615
Total resources	$278,198,600	$258,944,034
LIABILITIES.		
Capital	$32,533,700	$31,645,700
Surplus fund	15,499,460	13,906,299
Undivided profits	10,370,131	9,497,065
Circulation	8,060	8,061
Due depositors on demand	195,342,017	182,802,322
Due to trust companies, State, National and private banks and brokers	20,997,850	16,182,216
Due individuals and corporations other than banks and depositors	1,553,394	1,484,241
Due Treasurer of the State of New York	773,878	1,729,613
Amount due not included under any of the above heads	1,119,815	1,736,241
Add for cents	295	276
Total liabilities	$278,198,600	$258,944,034

COMPARATIVE STATEMENT OF RESOURCES AND LIABILITIES.

Following will be found a table showing the principal items of liabilities and resources of the State banks for each period of ten years from September 21, 1872, to September 22, 1892:

DATE.	*Capital.*	*Due depositors on demand.*	*Loans and Discounts.*	*Profits and surplus.*	*Total Resources.*	*Number of banks.*
September 21, 1872...	$24,845,040	$75,491,383	$66,076,361	$8,624,172	$117,858,811	70
September 30, 1882...	18,805,700	82,050,980	80,248,514	9,657,702	122,563,466	76
September 22, 1892...	32,583,700	195,342,017	177,522,211	25,869,591	278,198,600	192

SECURITIES HELD IN TRUST.

The following table shows the securities deposited with the Superintendent, in trust, by the several banks, banking associations, individual bankers, trust companies and other corporations:

United States 2 per cent. bonds...	$17,000.00	Buffalo City 4½ per cent. bonds..	20,000.00
United States 3½ per cent. bonds.	50,000.00	Bonds and mortgages...........	204,500.00
United States 4 per cent. bonds...	919,000.00	Cash..........	5,878.98
United States 6 per cent. bonds...	106,000.00		
New York City 2½ per cent. bonds.	665,000.00	Total, October 1, 1892.....	$3,147,378.98
New York City 3 per cent bonds...	850,000.00	Total, October 1, 1891.....	2,972,878.98
Brooklyn City 3 per cent bonds...	310,000.00	Net increase........	$174,500.00

That portion of the Superintendent's report relating to the currency was published in full in the JOURNAL for March, page 289.

Secretary Carlisle's Statement.

The following outline of the Treasury policy in regard to gold payments was made public by Secretary Carlisle April 20: In the exercise of the discretionary power conferred upon the Secretary of the Treasury by the Act of July 14, 1890, he has been paying gold for the coin Treasury notes issued for the purchase of silver bullion, and he will continue to do so as long as he has gold lawfully available for that purpose. Under this process the Government has been and is now paying gold for silver bullion and storing the silver in its vaults, where it is as useless for any purpose of circulation or redemption as iron, lead, or any other commodity.

The Government, in the first place, issues a coin Treasury note in payment for silver bullion, and then the coin Treasury note is presented at a Sub-Treasury and the gold is paid out for it; so that the effect is precisely the same as if the gold were paid directly for the silver in the first instance. About $800,000 of the gold which was withdrawn from the Sub-Treasury last Tuesday for shipment abroad was paid out on these coin Treasury notes.

No order has been made to stop the payment of gold upon these notes, nor has any one been authorized to say that such an order would be issued. The purpose of the Government to preserve its own credit unimpaired and maintain the parity of the two metals by all lawful means will not be abandoned under any circumstances.

In view of the existing legislation, the only question for consideration is as to the measures that ought to be adopted to insure the accomplishment of these purposes, and upon this question there is, of course, room for wide differences of opinion. The total stock of gold coin and gold bullion now in this country, including what is held by the Treasury as well as what is held by the banks and individuals, amounts to about $740,000,000. When I came into the Treasury Department on March 7, the amount of free gold on hand had been reduced to $987,000, but by arrangements with Western banks it was increased until on April 1 it amounted to nearly $8,000,000. Then heavy shipments began to be made, and two days ago we had only about $40,000, but now it amounts to $885,000, after deducting what has been withdrawn from the Sub-Treasury to-day for shipment. Arrangements are now in progress by which more gold is to be procured from the West, and I hope that a sufficient quantity will be secured to keep the gold reserve intact.

There is gold enough in the country to meet all the requirements of the situation, and if all who are really interested in maintaining a sound and stable currency would assist the Secretary of the Treasury to the extent of their abilities, the existing difficulties would soon be removed.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

—The National Union Bank has effected an organization by the election of Joseph C. Hendrix for President; G. G. Haven for Vice-President; and the following Board of Directors: S. D. Babcock, John D. Crimmins, Frederick Cromwell, G. G. Haven, R. Somers Hayes, A. D. Juilliard, Luther Kountze, Richard A. McCurdy, Frederick P. Olcott, Oliver H. Payne, Joseph C. Hendrix, Henry H. Rogers. H. McK. Twombly and William C. Whitney. The bank will have a capital of $1,200,000, and will be opened for business on June 1st in the Mutual Life Insurance building in the offices now occupied by Kuhn, Loeb & Co. Joseph C. Hendrix, who will be at the head of the bank, is a resident of Brooklyn, and President of the Kings County Trust Company. All of the stock of the bank has been subscribed. No Cashier has yet been chosen. It is stated that the Mutual Life Insurance Company is backing the new bank.

— Hon. A. B. Hepburn, Ex-Comptroller of the Currency, has been elected President of the Third National Bank, succeeding Gen. John B. Woodward, who, during the past two years, has filled the position of temporary President of the bank in a manner most acceptable to the directors and stockholders and has actively co-operated in securing the new President, and will continue his connection with the bank in the newly-created office of Vice-President. A portrait of Mr. Hepburn together with a sketch of his life appeared in RHODES' JOURNAL OF BANKING for January, 1893. He is a man of wide and successful experience in banking, and will give additional prestige to the Third National Bank.

—On April 10 the Receiver of the North River Bank paid the third dividend to the depositors of the bank since its failure on November 12, 1890. The dividend was ten per cent. About $80,000 was paid out. The Receiver has $90,000 more to pay before this dividend is exhausted. The first dividend paid was thirty per cent. on February 5, 1891, and the second twenty per cent. on July 1, 1891. It is thought the total dividends will not exceed seventy-five per cent.

—The five indictments of grand larceny pending against William H. W. Sistare have been dismissed. District-Attorney Nicoll asked for their dismissal on the ground that there was little probability of securing a conviction, and in his judgment there was no intent to commit fraud.

—Messrs. Spencer Trask & Co. will open a branch office in London. Mr. George B. Moffat, of the firm, will have charge of the preliminary arrangements for the extension of the business. The business of the London house is expected to be chiefly of an investment character.

—Charles Gregory and Maturin Ballou have been reinstated as members of the Stock Exchange, having settled their liabilities. Their firm, Gregory, Ballou & Co., went down in the Baring panic in November, 1890.

—Charles J. De Baun, formerly Cashier of the National Park Bank, whose term was commuted by Gov. Flower, was released from Sing Sing Prison, May 1, after serving three years and ten months.

—To make room for its increasing business, and to provide more space for its safe deposit department, the National Park Bank has bought No. 159 Fulton street and No. 16 Ann street. The two lots adjoin the bank building, which is at 214 Broadway.

They cost $175,250. The bank will probably rebuild on its enlarged property, and may also erect a fireproof office building, with entrances on Broadway and on Ann and Fulton streets.

— Hartman K. Evans and E. J. Slattery were elected members of the Stock Exchange recently, taking the seats of E. E. Chase and the late William Robinson.

— The New York National Bank of Deposit has removed from 85 Liberty street to the Western Union building, corner of Broadway and Dey street.

— William M. Grinnell, formerly Third Assistant Secretary of State, entered the firm of Morton, Bliss & Co., May 1.

NEW ENGLAND STATES.

Boston, Mass.—At the annual meeting of the Boston Clearing-House Association April 10 the former officers were re-elected.

The exchanges of 53 banks, members of the Association, for the year ending March 31, were $5,095,024,910, an increase of $262,346,273 as compared with the year before. Balances were $563,359,752, an increase of $25,621,369.

There are 11 trust companies and 33 banks outside of Boston whose checks are cleared by the members of the Association. It was voted to close the banks at 12 m. on Saturdays during the months of July and August.

— More than two hundred bank Presidents, Cashiers and Clerks attended the Tenth Annual Dinner of the Bank Officers' Association of Boston at the Quincy House, April 17. George B. Ford, President of the Association, was in the chair, and on either hand of him sat Hon. M. P. Kennard, Assistant Treasurer of the United States Treasury; Hon. Halsey J. Boardman; Isaac P. Burr, President of the Bank of North America; Chester Guild, President of the Manufacturers' National Bank; Bank Examiner Alfred Ewer, and F. B. Sears, Vice-President of the Third National Bank.

After dinner Mr. Kennard read a paper on the silver question, in which he reviewed the present status of silver all over the world, claiming that it had sunk to the level of a commodity subject to the fluctuations of the market. It had lost its distinction as a precious metal, and hence could not be taken for a standard of value. Gold was the only permanent standard. Nothing could be hoped for a bimetallic system much before the arrival of the millennium. He deplored the illogical and useless talk on the silver question in Congress, which hoped to accomplish something by free coinage, and predicted disaster if such a course should be pursued. International bimetallism could never be expected, for the ratio between silver and gold was constantly changing.

— Antonio and Catalo Romani, who were recently charged with passing a counterfeit $10 bank note on Aaron Raphael, escaped punishment in a somewhat novel manner. The note purported to have been issued by the First National Bank of Poughkeepsie, New York. The Government could not prove, by legal evidence, that there was such an institution, and Justice Nelson, of the United States District Court, ordered the jury to return a verdict of not guilty. Assistant District-Attorney J. M. Marshall called one of the Sub-Treasury Clerks for the purpose of showing that there was such a bank, but Hon. O. A. Galvin, counsel for the accused, objected to this kind of proof. The Court excluded the evidence, and, as Mr. Marshall was not able to obtain an authenticated paper of the bank's incorporation—the proof required—the defendants were ordered discharged.

— Judge Holmes, of the Supreme Judicial Court, has recently issued an order of notice directing the Lombard Investment Company to show cause why an injuction should not issue, restraining it from doing business in this State. The order is issued upon information of J. Q. Reed, Commissioner of Foreign Mortgage Corporations. The information alleges that the company, in the opinion of the Commissioner, is transacting business in this Commonwealth and that its condition is such as to render its further proceedings hazardous to the public.

—Asa P. Potter, convicted of false certification of checks drawn upon the failed Maverick National Bank, of which he was President, was, on April 22, sentenced to sixty days' imprisonment in Cambridge jail and to pay a fine of $1,000. An appeal has been taken to the United States Supreme Court. Bail was fixed at $4,000, which Mr. Potter had no difficulty in securing.

Bath, Maine.—William R. Shaw, Cashier of the Lincoln National Bank, is a defaulter. Charles Patten, one of Shaw's bondsmen, was placed in charge of the bank, and a thorough examination is being made. A shortage of about $12,000 appears in the cash account, and it is supposed there is upward of $40,000 more covered up by changing sums to the credit of depositors. Mr. Shaw owns considerable real estate, which has been attached. He has been released on bail. President Charles Davenport, of the bank, said that the defalcation would not impair the stability of the bank, as its surplus will cover the loss.

Maine's Savings Banks.—An association of the Savings banks of Maine was organized at Portland, April 20. Its object is to promote the welfare of Savings banks. Fifty representatives of all the banks in the State were present. The following officers were chosen: President, E. A. Noyes of Portland; Vice-President, W. S. Badger of Augusta; Executive Council, Weston Thompson of Brunswick; A. G. Rogers of Portland; James Adam of Bangor; G. S. Woodman of Auburn; E. P. Burnham of Saco; and the President and Vice-President, ex-officio.

A Bank Teller's Misdoings.—A warrant was issued April 25 by the United States Commissioner for the arrest of Bank Teller Henry B. Palmer of the Fall River (Mass.) National Bank on the charge of embezzling $6,000. The warrant was on a complaint instigated by the American Surety Company of New York, which is the surety of Palmer's bond. Palmer in now in the custody of the State authorities, having given himself up.

The Oldest Bank Cashier.—Edward Gould, who is the oldest bank Cashier in the country, sent in his resignation as Cashier of the National Traders' Bank, of Portland, Maine, to take effect April 29, the sixtieth anniversary of his continuous service in that bank and in its predecessor, the old Farmers and Traders' Bank. He is universally honored, and is still in possession of all his faculties.

Massachusetts.—Edgar Swan, convicted in 1889 of embezzling $67,000 from the National City Bank of Lynn, and sentenced to five years' imprisonment in the Lawrence jail, has been pardoned by President Cleveland. Swan turned over to the bank a number of shares of various stocks of the market value of $34,000, leaving a deficit to the bank of about $35,000.

Providence, R. I.—Receiver Greene of the Franklin Institution for Savings, which failed twenty years ago, has announced a final dividend of 2 9-10 per cent. which will in the aggregate make the payments to depositors about 94 per cent. There were originally about 20,000 depositors, but a good many have died off and the books have been lost.

Ellsworth, Maine.—Hon. Andrew P. Wiswell, President of the First National Bank, who was recently appointed an Associate Justice of the Maine Supreme Court, was tendered a banquet on the 12th ult. Among those present were Chief Justice Appleton, of Bangor; Associate Justice Emery, and Chief Justice Peters.

St. Johnsbury, Vermont.—The Merchants National Bank whose building was burned Oct. 30, last, are laying foundations for their new building, which they expect to occupy within a year from the fire. The new block will be a substantial brick structure, the upper floors devoted to offices, etc.

Providence, R. I.—At the annual meeting of the Clearing-House Association, held March 1, 1893, the old officers were re-elected. Clearings for the past year were $299,839,500, a gain of $23,000,000 over the previous year.

Nashua, N. H.—Rumors caused a run on the Nashua Savings Bank, April 17, which lasted until noon, when its prompt payments restored confidence. The officers state that there was no reason for the run.

MIDDLE STATES.

An Old Game.—A stranger of very plausible manners recently made an unsuccessful attempt to swindle the First National Bank at West Chester, Pa., by depositing bogus checks and drawing against the deposit. He gave his name as "A. L. Gordon," and claimed to be from South Amboy, N. J. He is described as a man of about five feet ten inches in height, was attired neatly in a dark suit of clothing, with a derby hat, and wore a sandy moustache. His eyes were piercing and of a grayish color. He was apparently about 35 years of age, and his weight possibly 165 pounds.

Unadilla, N. Y.—Messrs North & Co., private bankers, have recently published a statement of the firm's condition showing cash capital of $25,000; surplus, $11,000;

deposits, $189,000. The bank was established in 1868 and has been in successful operation since that time. It makes a practice of publishing detailed statements at regular intervals, though New York laws do not impose such obligations on private banks.

Private bankers in other States should make a note of this fact. To publish a clear statement at regular intervals is due to the public and insures confidence. In addition to figures given in a balanced statement the personal liability of private bankers should also be considered.

Washington, D. C.—An index of the growth of the banking business at the National Capital may be gained from the following summary of statements for the year ending March 1, 1892, compared with those of March 6, 1893. National banks and loan and trust companies only are included in the report:

March 1, 1892—Deposits, $13,980,261; loans and discounts, $11,828,923; surplus and undivided profits, $1,682,783.

March 6, 1893—Deposits, $17,261,869; loans and discounts, $14,109,012; surplus and undivided profits, $2,023,883.

Troy, N. Y.—Samuel O. Gleason, for ten years Cashier of the Manufacturers' National Bank, has been elected to the important position of Treasurer of the Walter A. Wood Mowing & Reaping Machine Co., and will perform the duties of the office without altering his official relations with the bank.

Savings Bank Investments.—The Governor has signed the bill recently passed by the New York Legislature authorizing the Savings banks of the State to invest in the stocks or bonds of Boston and Worcester, Mass.; St. Louis, Cleveland, Detroit, Providence and New Haven.

Wilmington, Del.—Peter T. E. Smith, Paying Teller of the First National Bank, has been indicted by the United States Grand Jury on a charge of altering the books of the bank with intent to defraud. Smith confesses the embezzlement of $55,990.

Philadelphia, Pa.—The banking and brokerage firm of Laughlin & McManus, which failed in February last, announces that a settlement will be made upon a basis of forty per cent. No statement of assets and liabilities can be obtained.

Bank Teller Punished.—Paying Teller Arthur B. Whyte, of the Wallabout Bank, Brooklyn, N. Y., who admitted having embezzled about $15,000 from the bank, has been sent to the Elmira Reformatory.

Brooklyn, N. Y.—The National City Bank will put up a large stone building on the lot it has bought on the lower corner of Fulton street and Red Hook Lane.

New York.—The bill to abolish days of grace has been defeated in the Assembly.

SOUTHERN STATES.

Arkansas Bankers' Association.—The third annual Convention of the Arkansas Bankers' Association, met at Hot Springs, April 25. Nearly fifty of the banking institutions of the State were represented in the Convention. Little Rock was selected as the next place of meeting, and in future the meetings will be held on the third Thursday of April each year.

Charles N. Rix, Cashier of the Arkansas National Bank, Hot Springs, was elected President of the Association for the ensuing year, and the following were elected as Vice-Presidents: S. A. Warner, Jr., Cashier of the Bank of Jonesboro, First District; F. H. Head, Cashier Merchants and Planters' Bank of Pine Bluff, Second District; W. K. Ramsey, Cashier Quachita Valley Bank of Camden, Third District; Oscar Davis, German National Bank of Little Rock, Fourth District; W. M. Duncan, Citizens' Bank, Eureka Springs, Fifth District; R. M. Johnson, Bank of Newport, Sixth District. M. H. Johnson was elected Secretary and J. B. Carter, Treasurer.

Delegates to the Congress of Bankers and Financiers, to be held at Chicago, June 19, 1893—W. Y. Foster, T. E. Stanley, Logan H. Roots, Charles N. Rix and M. H. Johnson.

F. H. Head was appointed delegate to the meeting of the American Bankers' Association.

The Convention adopted a resolution commending Secretary Carlisle's fiscal policy, and pledging the members of the Association to exchange gold for Treasury Notes.

A resolution was also passed discouraging the establishment of private banks.

Tennessee State Currency.—An Act recently passed by the Legislature and approved by the Governor, gives authority to State banks to issue a circulating medium. The Act requires a deposit of United States, State of Tennessee or county bonds, and the currency will be issued for the bank on these securities not in excess of 90 per cent. of their market value. The Act limits the issue of State currency to $25,000,000. Periodical examinations of banks, redemption of currency and other features of the National bank law are adhered to. The banks must redeem their circulating notes on demand in gold or silver. No county bonds will be accepted where the indebtedness of the county exceeds five per cent. of the taxable property; and if the county on its interest has defaulted at any time, the circulating medium is to be signed by the President and Cashier of the bank and countersigned by the State Comptroller.

The Act will become operative when Congress removes the United States tax of ten per cent. on State bank circulation. It is generally believed that an effort will be made at the next session of Congress to repeal the tax.

Atlanta, Ga.—The money locked up in the Gate City Bank has been turned into circulation. Mr. Stone, examiner in charge, was directed by the Comptroller of the Currency to transfer the funds to the Atlanta National Bank. It has also been decided to liquidate. The bank will not go into the hands of a receiver if present plans can be carried out. Bank Examiner Stone thinks the bank will soon have enough money to pay all depositors as there is now on hand about $330,000 in cash and cash assets. When the bank closed it had about $38,000 in cash and $4,000 in checks. Paper which the Gate City Bank was carrying was of high class, as a rule, and there will be very little of it that cannot be collected. Every depositor will get dollar for dollar and stockholders will get par or very near for their stock. Reorganization, in the sense of reopening the bank, has been given up.

Southern Bank Reports.—Reports from Louisiana National banks outside of New Orleans to the Comptroller of the Currency up to March 6th show: Resources, $3,696,142; reserve held, 33.93 per cent. of the resources. Loans and discounts, $1,909,784; overdrafts, $542,275; United States bonds, $252,500; due from reserve agents, $373,777; specie, $227,719. Of the liabilities: capital stock paid in, $810,000; surplus fund, $260,600; undivided profits, $162,208; individual deposits, $2,072,330.

Mississippi National Banks—Resources, $4,486,156; reserve held, 27.62 per cent.

Arkansas National Banks—Resources, $4,015,860; reserve held, 26.92 per cent.

Nashville, Tenn.—The Comptroller of the Currency has appointed James W. Blackmore, receiver of the Commercial National Bank of Nashville. The report of the Examiner indicates that it will require an assessment of about 80 per cent. on the stockholders to pay the indebtedness. The assets are stated at $2,400,000; estimated losses, $850,000, leaving the value of assets $1,550,000; amount due depositors, $1,500,000. Total liabilities aside from capital stock, $1,900,000.

Counterfeit Nickels.—The JOURNAL is in receipt of a very crude counterfeit nickel, series of 1890, which was discovered among a quantity of small coins recently taken in by the Bank of Calhoun, Ga.

WESTERN STATES.

Kansas City, Mo.—Montgomery Lewis, formerly office auditor of the Lombard Investment Company, in this city, and who embezzled $11,150 from the company and in April, 1891, fled to Mexico, was brought here April 7 and placed in jail.

—The following-named Directors of the Lombard Investment Company were elected April 8. For three years, James L. Lombard, H. E. Mooney, E. R. Crutcher and S. B. Ladd; for two years, M. D. Whitney, of Westfield, Mass; for one year, D. T. B. Bullene. All are from Kansas City excepting Mr. Whitney, and all are Lombard men except Mr. Ladd.

Missouri Bankers' Association.—At a meeting of the Executive Committee, held at Jefferson City on March 16, it was decided to hold the next annual Convention of the Association on June 21, 22 and 23 at Excelsior Springs, Mo., a well-known Summer resort on the Chicago, Milwaukee & St. Paul Railroad, thirty miles from Kansas City. As the programme is now being arranged, it is desired that all bankers who contemplate making addresses will forward their names immediately to the Secretary, John Caro Russell, St. Louis, Mo.

Minnesota State Banks.—In accordance with Public Examiner Kenyon's call on the State banks for a statement of their condition at the close of business on March 6, returns have been received which show the following condition of affairs. The total number of banks is 130:

RESOURCES.		LIABILITIES.	
Loans and discounts	$31,437,525.88	Capital stock paid in	$9,593,000.00
Overdrafts	173,746.99	Surplus fund	978,722.91
United States bonds on hand	100.00	Other undivided profits	2,030,976.41
Other stocks and bonds	688,226.37	Dividends unpaid	7,223.75
Due from other banks	4,118,726.17	Due to depositors	26,951,915.67
Banking house, furniture and fixtures	1,300,942.00	Due to other banks	1,930,865.60
Other real estate	648,595.39	Notes and bills rediscounted	648,893.04
Expenses paid	210,427.53	Bills payable	648,600.00
Taxes paid	82,170.38	Other liabilities	3,017.30
Checks and cash items	228,349.68		
Exchanges for Clear'g-House	591,880.03		
Cash on hand	3,288,991.08		
Other resources	23,533.18		
Total resources	$42,793,214.68	Total liabilities	$42,793,214.68

Cincinnati, Ohio.—Receiver Armstrong, in his report of April 6th, gives the following in regard to the affairs of the Fidelity Bank: Assets on hand this date (bills receivable and other assets), good, $35,355.49; doubtful, $243,465.62; worthless, $1,960,651. Assessment of stockholders, good, $15,521.35; doubtful, $12,978.53; worthless, $648,358.68. Dividends paid aggregate fifty per cent.

— At a meeting of the Cincinnati Clearing-House Association, held on April 3, all the old officers were re-elected. Clearings for the year ended March 31, 1893, amount to $1,520,799,300 against $1,375,695,900 for the year ending March 31, 1892, showing a gain of $145,103,400 or an increase of 11 per cent.

Minnesota.—Among the laws passed at the last session of the Minnesota Legislature, was one to provide for the incorporation of clearing-house associations. Any number of banking corporations not less than three may incorporate for the purpose of establishing and conducting clearing-house associations for the purpose of effecting at one place the speedy and systematic daily exchanges, settlements and adjustments between banks and banking associations.

Denver, Colo.—A. E. Garrison, Cashier of the Capital Bank, of Denver, is missing. His home is in Colorado Springs, and it has been his custom to go there every Saturday and remain until Monday. On April 1 he left the bank at the usual hour, but failed to reach Colorado Springs. The accounts of Mr. Garrison at the bank have been examined and found correct. His friends fear that he must have been lured from the train, robbed and murdered.

Winfield, Kan.—A correspondent of the JOURNAL reports the wheat crop in good condition in Southwestern Kansas, having been much benefited by recent rains. Winfield is now the third city in the State in point of wheat receipts, and extensive building operations are reported. The live stock interests are creating an active demand for money. Banks are now paying 4 per cent. interest on time deposits.

Louisville, Ky.—Through the forgery of whiskey warehouse receipts by A. R. Sutton several of the banks of Louisville and Cincinnati have suffered heavy losses. The extent of the forgeries is variously estimated at from $100,000 to $350,000. It is hoped that the losses sustained by the banks will not be serious enough to in any way impair their stability.

West Superior, Wis.—A. A. Cadwallader, once President of the National Bank of West Superior, charged with embezzling from $40,000 to $100,000 of the bank's funds, and who fled to Brazil, has been brought back and turned over to the authorities here.

Manitowoc, Wis.—The T. C. Shove Banking Company, which failed about a year ago, has paid its creditors their second dividend. The creditors have now received one-quarter of their original deposits, which is in all probability all they will get.

Michigan.—The Union Trust and Savings Bank, of Flint, will open for business July 1, with $100,000 paid-up capital. C. T. Bridgman will be President and Ex-National Bank Examiner Ira H. Wilder, Cashier.

Omaha, Neb.—Bank clearings for twelve months aggregate $310,790,383, an increase of $83,018,721 in one year.

PACIFIC SLOPE.

Washington's New Banking Law.—Following is the text of House bill No. 193, approved by the Governor:

SECTION 1.—If any President, Director, Manager, Cashier or other officer of any banking institution, who shall receive or assent to the reception of deposits after he shall have knowledge of the fact that such banking institution is insolvent or in failing circumstances, shall be deemed guilty of felony and punishable as hereinafter provided.

SEC. 2.—Any person violating the provisions of section 1 of this Act, upon conviction thereof, shall be punished by imprisonment in the penitentiary for a period of not less than two years nor more than twenty years.

Washington.—A recent issue of the Seattle "Post-Intelligencer" contains a comparative statement of the National banks of Seattle and Tacoma, based on the reports of March 6, which makes a creditable showing for both cities.

Seattle National banks have a capitalization of $1,700,000; surplus and undivided profits, $489,992.21; deposits, $3,803,939.52; loans and discounts, $4,150,323.43; cash assets, $1,231,092.20.

Tacoma's National banks have $1,355,800 capital; surplus and undivided profits, $401,159.18; deposits, $2,828,555.17; loans and discounts, $3,310,161.73; and cash assets of $624,665.38.

San Francisco, Cal.—James W. Flood, who was forced to resign a short time ago as Cashier of the Donohue-Kelly Banking Co. because of irregularities in his accounts, has been arrested on the charge of embezzling $164,000 of the bank's funds. When Flood was first retired his friends said he could make good his shortage, which would amount to over $20,000, caused by overdrafts by one of his assistants. Flood transferred his real estate to the bank; but since then it has been found his shortage was heavy. He was twenty-seven years with the bank, and his employers had so much confidence in him that they never had experts examine his books.

Washington.—An agreement has been signed by the banks on Bellingham Bay by which Canadian money is to be discounted 20 per cent. on silver and 5 per cent. on paper. The step has been made necessary by the action of the Canadian banks in discounting American money.

CANADA.

Stratford, Ontario.—The managers of the banks have decided to exact a discount of twenty per cent. on all American silver that passes over their counters after May 1.

FOREIGN BANKING NEWS.

MEXICO.—Mexico's first Stock Exchange is soon to be incorporated. It will make a specialty of mining shares.

— The most important act of the recent Mexican Agricultural Congress was the recommendation of a scheme for special banks and loan companies to aid farmers who are paying a tremendous rate of interest. Some members of the Argricultural Congress advocated allowing these new banks to have the right to issue notes based on land values and cash in reserve, but it is not likely that this will be granted.

— It is suggested that the Government place a small export duty on gold to prevent its leaving the country, and coin gold at new rates of 20 to 1, thus inducing holders to keep it here for circulation. The entire annual production of gold is calculated at $5,000,000. Twenty years ago gold was freely employed here as a money metal, but it is now never seen, the country being on a pure silver basis.

— Ignacio Galvan, a Spaniard who went to Mexico from New Orleans, has been arrested and imprisoned on a charge of swindling. He had realized a profit of several thousand dollars. He brought with him a large quantity of Confederate bills which he found no difficulty in palming off as American currency, and received the change in Mexican coin.

— A sensation has been created by the arrest and imprisonment of Felipe Osante, a prominent and wealthy merchant of Guanajuato, on the charge of being connected with the recent defalcation in the Guanajuato branch of the National Bank of Mexico. The amount of shortage is placed at $400,000.

VENEZUELA.—A charter has been issued by the Government for the establishment of a bank which appears to resemble the Sub-Treasury scheme recently agitated in the United States. The charter was issued to M. de Eshiso, and authorizes him to establish in Europe the National Agricultural and Commercial Bank of Venezuela. Its capital stock is fixed at 50,000,000 bolivars, equivalent to $6,250,000 in United States money, and the bank shall have the right to issue notes to the amount of double its capital stock, the Government of Venezuela guaranteeing 6 per cent. interest upon the amount used in hypothetical operations. The bank may begin operations with 20,000,000 bolivars, and shall establish branches at Maracaibo, Valencia, Ciudad Bolivar, Porto Cabello and Barquisemento. The institution is intended for the benefit of the agricultural element of the country, accommodation being extended to them at the rate of 7 per cent. The Government guaranty is to be secured by the deposit of a portion of the "fomento" (interior) income reserved in the distribution of special incomes of the States, the accounts to be balanced at the end of the year and the surplus to remain at the disposal of the Government.

AUSTRALIA.—The trials of officials of the Anglo-Australian Bank, of Melbourne, which failed in 1892, have resulted in Staples, who was Chairman of the bank, being sentenced to penal servitude for five years; Norwood, the Auditor, to penal servitude for two years, and Haroldson, the Accountant, to six months' imprisonment.

— The Commercial Bank of Australia, the failure of which was reported from Melbourne under date of April 4, will probably resume business under new management and a reorganization effected with a capital of £6,000,000.

FRANCE.—The funds deposited in the Savings banks of France, municipal and national, in 1891, amounted to $720,000,000.

ITALY.—The shareholders of the three issue banks of Rome have sanctioned the consolidation of the three institutions under the name of the Bank of Italy. The combined capital will be 300,000,000 lire ($60,000,000), of which 200,000,000 lire is paid up. Of the new capital, 66,000,000 lire will be held by the shareholders of the Banca Nationale. It is hoped that the combined concern will be strong enough to take over the whole of the Banca Romana's liabilities, involving a loss roughly estimated at 50,000,000 lire.

— As shown by recent official reports, the Bank of Sicily has exceeded its legal note issue by 10,000,000 lire. The bank's acceptances amounted to 33,000,000 lire, consisting mostly of accommodation bills. Its overdue bills reached a total of 12,600,000 lire. The capital of the bank has been reduced from 23,000,000 lire to 15,400,000 lire.

— The cash deficit of the Banca Romana is 28,600,000 lire. The illegal excess of its note issue since 1883 reaches 64,600,000 lire. Over four-fifths of the bills held by the bank have not been paid, and the institution holds no security for them. An investigating committee has recommended that this bank cease business.

— An examining magistrate has learned that in 1889 the Bank of Rome distributed 1,020,000 lire among Deputies and other politicians to secure the passage of the Bank bill, and that under similar circumstances in 1891 the same institution paid 1,300,000 lire for the support of men of the same class.

— Investigation of the affairs of the Banca Romana, at Rome, has revealed numerous and serious irregularities. Bills to the amount of 1,000,000 lire are said to have been discounted without being recorded on the bank's books.

— The National Italian Bank holds overdue bills amounting to 20,900,000 lire, on which a loss is expected of 7,100,000 lire. The note circulation of this bank was 101,500,000 lire below the legal limit.

ENGLAND.—At the half-yearly general meeting of the proprietors of the Bank of England the net profits for the half-year ending February 28th last were stated at £680,739, making the amount of the "rest" on that day £3,698,718; and, after providing a dividend of 4¾ per cent., the "rest" would be £3,700,451. The Governor stated, in regard to the Baring liquidation, that the liabilities, which on the 31st of August last stood at £5,113,613, had been reduced on the 28th of February last to £4,588,813, while the assets had been reduced during the same period from £8,391,261 to £7,424,231, these being calculated at the prices in November, 1890. An estimate has lately been made of the securities at the current prices, and it appeared that the assets showed a surplus over liabilities of £350,000.

— The failure of the English, Scottish and Australian Chartered Bank is reported from London, with liabilities believed to be £8,000,000 ($40,000,000). The only reason given for the failure is that there has been for several weeks a steadily increasing withdrawal of deposits. The suspended bank has branches at Sydney, Adelaide, Brisbane and Melbourne, and other towns in the colonies of New South Wales, Victoria and South Australia. It transacted banking and exchange business between Great Britain and the Australian colonies, and had large deposits. The official notice of the suspension states that the bank was perfectly sound when the run began, and that the apprehensions of the depositors were groundless.

— The annual meeting of the Anglo-California Bank (Limited) has just been held in London. The statement presented to the shareholders, after making provision for bad debts, and allowing for all charges both at the local agency and London, shows the net profit for the year was £35,110 10s. 6d. This sum, added to £8,844 10s. 9d. carried forward last year, left £43,955 1s. 2d. available for appropriation. The Directors declared an interim dividend of 9s. per share, which with the interim dividend of 7s. paid in September last made 8 per cent per annum, free of income tax. The sum of £5,000 was placed to the reserve fund, making it now £125,000, leaving £9,947 13s. 7d. to carry to profit and loss account.

— The London Russo-Jewish Committee has sent to every Jewish banker, bank director, bank manager, stock broker and financiel agent in Europe an appeal to combine in boycotting Russian loans and the trade in Russian securities. The Russian Government has issued a ukase providing for an internal loan, and Russian bankers are endeavoring to extend their relations with outside money centres. It is expected that the appeal, if complied with, will virtually drive Russian securities of all kinds out of the money markets. The appeal is in retaliation for the continued severity of the Czar in dealing with the Jews.

— Charles Webb, an expert swindler, has been brought from France and arraigned in a London court under twelve charges of fraud aggregating £45,000. His most successful plan was to get large sums of money from people of means to push mythical patent rights. He claimed to have a system by which he broke the bank at Monte Carlo.

— It is stated by Sir William Harcourt, Chancellor of the Exchequer, that the British delegates to the Brussels Monetary Conference will be instructed to oppose every scheme the bimetallists may propose.

ARGENTINA.—The Directors of the National Mortgage Bank, of Buenos Ayres, have resolved to issue $15,000,000 in new cedulas. It is expected that the Government will approve of the issue of these securities.

New Counterfeit $5 National Bank Note.—The Secret Service Division is under obligations to Mr. D. P. Jefferies, Cashier of the Lagonda National Bank, Springfield, Ohio, for the first information of and a sample photographic counterfeit $5 note on the Lagonda National Bank, of Springfield, Ohio. The note is of the 1875 Series; Check Letter B; Charter number 2098; Bank No. 2334; Treasury No. Z946067; John Allison, Register of the Treasury; John C. New, Treasurer of the United States. The note is signed J. Warren Keifer, President, and D. P. Jefferies, Cashier. The numbers have been first photographed and afterwards touched up with a brush and are all of a dark maroon color. The seal is what is known as the scolloped seal and is colored by the brush and is a very poor imitation. No attempt has been made to imitate the parallel silk threads nor the localized fibre paper now in use by the Government; the paper is brittle and stiff, tears very easily. At a glance the face of the note has a good appearance, but a very slight examination of it shows its defects clearly; by moistening the thumb and rubbing the seal or numbers the coloring runs. The back of the note seen, is printed up side down; of course this may be corrected in the next one made; the Vignette—"Landing of Columbus"—is very fairly executed but will not bear close inspection; the lettering is good excepting some few words near the lower edge of note. The green border is a trifle darker than in the genuine and is produced by the aid of the brush, but taking the note all in all, it is a dangerous note in the ordinary acceptation of the word, and all notes on this bank should be closely scrutinized. So far the note has appeared in circulation only in Ohio.

A Prompt Guarantee Company.—On April 1 the Wallabout Bank of Brooklyn forwarded to the Guarantee Co. of North America proofs of the Bank's claim for $10,000, being the amount of the Company's indemnity bond on B. A. Whyte, defaulting Teller of the Bank. The full amount was promptly paid by the Company on the 7th of April, and the officials of the Wallabout Bank have expressed appreciation of the straightforward and courteous action of the Guarantee Company.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Griffin, Ga.—The city contemplates issuing $50,000 of city hall bonds.

Camden, S. C.—The city has voted to issue $10,000 of school funds.

Lewisburg, Tenn.—Marshall County issued $115,000 of bonds to aid the Duck River Valley Railroad. About $40,000 of these bonds have, it is stated, been paid, and the remainder are due in July. It is contemplated to retire these outstanding bonds with a new issue to run as follows: $10,000 payable in five years, $20,000 in ten years and the balance in twenty years.

Centralia, Ill.—The City Council has arranged to issue city bonds to the amount of $30,000, to be divided in two series—$15,000 payable in five and twenty years and $15,000 payable in ten and twenty years—to bear 4½ per cent. interest, payable semi-annually. These bonds are to be used in the construction of water works, and will be held by home capitalists.

Centralia, Wash.—An issue of $23,000 bonds is proposed to fund outstanding indebtedness. At a special election held recently to validate the excess of indebtedness of the city over the 1½ per cent. limit, amounting to $8,000, under the Act passed by the last Legislature, and to permit the further issue of $5,000 in warrants for strictly municipal purposes, both propositions carried.

Tacoma, Wash.—The city has voted to issue $2,150,000 in bonds to purchase the water and electric light plant of the Tacoma Light & Water Co., and an issue of $120,750 for the construction of a bridge across the Puyallup river.

Duluth, Minn.—An issue of $200,000 of bonds by the Duluth school district for new school buildings has recently been voted.

Colbert County, Ala.—An issue of $100,000 in bonds has been authorized for road improvement.

Montgomery County, Ohio.—A bill has been passed by the Legislature providing for the issue of $25,000 bonds to repair county buildings.

CORPORATIONS SEEKING CAPITAL.

United States Leather Co.—$6,000,000 6 per cent. sinking fund gold debentures, part of an authorized issue of $10,000,000, principal and interest payable in gold coin.

Texas and New Orleans R. R.—$500,000 additional first mortgage 6 per cent. gold bonds on its Saline division.

U. S. Rubber Co.—$510,000 additional common stock and $457,600 preferred stock.

Edison Electric Illuminating Co.—$3,250,000 additional capital stock.

Louisville, New Albany & Chicago R. R.—This Company proposes to issue $4,000,000 preferred stock to provide funds for construction and equipment, and $8,000,000 preferred stock to be exchanged for outstanding common stock.

Baltimore Traction Co.—This corporation has agreed to increase the capital stock from $5,000,000 to $10,000,000. Only $750,000 of the stock will be issued at present; $850,000 of the amount will be used to pay for the Baltimore and Curtis Bay Railroad, recently acquired; the remaining $350,000 are to be used to pay for improvements and additional equipment on electrical lines.

Rock Island Railroad.—$317,000 additional first mortgage extension and collateral 5 per cent. bonds.

SECURITIES SOLD.

Nashville, Tenn.—W. J. Hayes & Co., of Cleveland, Ohio, has purchased $400,000 of 4½ per cent. 30-year sewer bonds. Davidson county has sold $200,000 of county asylum 5 per cent. bonds to N. W. Harris & Co., of Chicago, Ill. They run 10, 15 and 20 years.

Corvallis, Oregon.—The sale of $50,000 6 per cent. water bonds is reported. Bids will be received till May 22 for $12,000 city hall bonds.

FAILURES AND SUSPENSIONS.

Iowa—SIBLEY.—State Bank Examiner Miller has given out the following figures on the condition of the defunct Northwestern State Bank at Sibley: Liabilities, $167,000; good paper, $106,000 out of $175,000 bills receivable; real estate, $9,900; leaving a shortage of $50,000, except $8,000, which resident shareholders must make up.

Idaho—WARDNER AND WALLACE.—The Cœur d'Alene Bank, of Wallace, and the Miners' Exchange Bank, of Wardner, closed April 8. The Cœur d'Alene Bank suspended on the advice of the bank's attorney owing to a disagreement between the owners, Delashmutt & McAulay, who will dissolve partnership. The liabilities of the Cœur d'Alene Bank are $70,000. The assets are said to be ample to pay all claims. The Miners' Exchange Bank, at Wardner, has liabilities of $66,000 and assets of $88,000. A receiver is to be appointed and the affairs of both banks wound up.

Massachusetts—BOSTON.—The suspension of F. V. Parker & Co. was due to their interest in the Union Stock Yards of San Francisco. The firm could not pay $10 per share called upon their interest in this property, and Mr. Parker desired that his creditors get the full advantage of his holdings.

Tennessee.—The Mechanics' Savings Bank at Nashville suspended April 17. This failure was partly due to previous financial disturbances; but the immediate cause of the suspension was the shortage of Cashier John Schardt, amounting to $40,000. On the same day of the collapse of the bank Schardt died, leaving insurance policies on his life aggregating $81,000, which have been turned over to the bank. The Guarantee Company of North America was surety to the bank on the Cashier's indemnity bond for $20,000. Assets of the bank are estimated at $200,000 and the liabilities at $150,000. Under the assignment the bank conveys all of its property and assets of every kind to the assignee for the benefit of its creditors, without distinction. The assignee is given two years in which to execute the trust. The depositors number about 1,000. The schedule of assets shows that there was only $19.40 on hand outside of deposits made on the Saturday afternoon preceding the failure, and which were never entered, and will be paid in full. Notes due the bank to the amount of $27,808.41 are given, most of them for small amounts. The demand loans foot up $27,538.28. The overdrafts by various parties amount to $12,514.84. The assets, all told, excluding the value of the real estate, life insurance policies, notes, etc., conveyed by Cashier Schardt, amount to $161,244.97. In this sum is included many notes put up as collateral for loans. The assets will go to satisfy all creditors, including the American National Bank, to which institution is due five promissory notes for $10,000 each, secured by notes and collateral in the hands of A. W. Harris, trustee, and which amount in round numbers to $86,000. On these notes is a credit of $5,512. The American National Bank is also a creditor to the additional amount of $10,374.37 overdrawn, but is amply secured by personal guarantee. The total liabilities, excluding that due depositors, amount to $56,362.37.

South Dakota—MILBANK.—The Bank of Milbank, a private bank owned by W. M. Sargent, assigned April 22. Liabilities, $150,000; assets not yet known. Sargent was also President of the Bank of Wilmot (South Dak.), which closed April 24. It is said depositors of the latter bank will be paid in full, 75 per cent. of the deposits now being available in cash.

Australia.—A London dispatch of the 20th ult. announces the failure of the Australian Joint Stock Bank with liabilities of £13,000,000. The deposits amounted to nearly £11,000,000. The bank was incorporated in 1853. Its paid-up capital was stated as £704,394, there being 78,266 shares issued and paid up to £9 per share. The reserve fund has been stated this year at £500,000, and the further liability of shareholders as £860,928. The bank has 200 branches in Australia. The failure was due to the heavy withdrawal of deposits. The last week in April was marked by the failure of two other prominent Australian banks—The Standard Bank and National Bank of Australia. The general uneasiness caused by the many failures of Australian banks has added greatly to the excitement in banking and commercial circles, and has prompted the Colonial Government to issue a proclamation ordering a five days' bank holiday with the object of allowing time for the banks still doing business to adopt measures of self-protection. In nearly every case where Australian banks have failed within the past two years the trouble is attributed to the withdrawal of deposits.

Michigan—LANSING.—A recent failure was that of the Central Michigan Savings Bank, which was affected by the difficulties of the Lansing Lumber Co. and Lansing Engine Works. The bank has a capital of $100,000 and surplus of $35,000, and deposits of half a million. It is claimed that funds are ample to satisfy all demands.

Australian Bank Failures.—The suspension is announced of the London Chartered Bank of Australia, with a paid-up capital of £1,000,000 and a reserve fund of £320,000. The London office is No. 2 Old Board Street, E. C. It has many branches in Victoria, N. S. W., and Queensland. In referring to the causes of the numerous Australian bank failures, a recent London dispatch says: "The twenty Australian banks doing business at the end of the past year, with capital and reserves amounting to about £24,000,000, had deposited with them over £150,000,000, of which about £100,000,000 were time deposits, bearing interest. These time deposits are accepted in Great Britain for periods running from one to five years, and interest is allowed at rates ranging from 3 to 4½ per cent. on one-year deposits and from 3½ to 5 per cent. on deposits to remain for longer periods up to five years. Money so received was lent, at higher rates, in Australia, and the business was so profitable that dividends of from 10 to 25 per cent. were paid by the larger banks. The deposits, as they became payable, were renewed, and the totals increased from year to year. The smash-up of a large number of building and kindred societies last year in Australia, and the discovery that many banks had locked up large sums in unproductive or overvalued real estate, caused some withdrawals of deposits as they fell due, and checked new opening of deposit accounts. The failure of two banks last year added uneasiness. This has developed into a panic, bringing down three other banks this year, and which may result in further failures."

Iowa.—SIOUX CITY.—The Union Loan and Trust Company, capital $1,000,000, one of the foremost financial institutions of Sioux City, made an assignment April 25. Statement of Liabilities is: Due to banke, $14,339; debenture bonds and interest, $233,-352: due on deposits, $497,883; total, $746,574; The assets aggregate $2,000,000; E. R. Smith, treasurer and secretary, says that the assignment was necessary to protect the interests of both creditors and stockholders. As a sequel to the above failure, the Leeds Stove Company made an assignment on the same day to the Union Loan and Trust Company, giving a mortgage on property to secure $175,000, and a chattel mortgage on stock. A deed of D. T. Hedges to the Union Loan and Trust Company conveys 8,000 acres of farm land to secure $375,000.

Chicago State Banks.—Following is a summary of the condition of the twenty-four Illinois State banks located in Chicago, as shown by their reports to the Auditor of Public Accounts, Hon. David Gore, April 10, 1893:

RESOURCES.		LIABILITIES.		
Loans and discounts	$63,691,821	Capital stock		$12,827,000
Overdrafts	49,553	Surplus fund		4,416,500
United States bonds	50,985	Undivided profits		2,541,602
Other bonds and stocks	8,639,623	Dividends unpaid		8,491
Cash on hand	7,317,676	Total Deposits—		
Due from other banks	10,985,211	Savings deposits	$22,120,195	
Real estate	165,104	Industrial deposits	38,476,868	
Furniture and fixtures	68,240	Demand certificates	2,244,775	
Current expenses	66,617	Time certificates	4,318,245	
Checks and other cash items	1,671,880	Certified checks	549,652	
Collections	155,950	Cashiers checks unpaid	344,218	
		Bills payable	63,438

		Due to other banks	4,838,999	-72,892,950
Total	$92,857,560	Total		$92,857,560

The last statement, made January 2, 1893, showed loans and discounts of $62,469,450; cash on hand, $7,127,067; furniture and fixtures, $140,067; checks and other cash items, $326,986; total resources, $91,192,236; surplus, $4,409,000; dividends unpaid, $209,000; savings deposits, $21,124,745; total deposits, $71,485,557.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

DEFINITIONS OF "MONEY."—The question "What is money?", though not so old as the question "What is truth?", is more largely before the financial world, and it begins to look as though it would not be downed without answer from the 20th or 21st century. Argument is often useful as bringing together, in condensed form, the views of preceding debaters, and the 28-column speech of Senator Jones before the Brussels conference, sustaining his argument for bimetallism, made copious references to the so-called money "authorities", and from them we make the following abstracts, showing 13 authorities on money, which may be useful for reflection, if not for argument, in these dull financial days, the dulness of which, the bankers say, is largely due to the uncertainties of the "money", "precious metal", or "currency" situation. Aristotle says: Money by itself has value only by law and not by nature. John Locke says: Mankind having agreed to put an imaginary value upon gold and silver have made them common pledges to exchange for merchandise. The intrinsic value of those metals is only that given to the merchandise they purchase. Baudeau, the most eminent of the early French economists, says: Coined money is nothing but a title to obtain useful things. It is a bill of exchange or order payable at the will of the bearer. Adam Smith says: A guinea may be considered a bill for a certain quantity of necessaries from tradesmen. Prof. Jevons says: Those who use coins in ordinary business need never inquire how much metal they contain. Henry Thornton says: Money of every kind is an order for goods. John Stuart Mill says: The coins a person receives are a sort of ticket or order which he can present for payment at any shop he pleases. McLeod in his "Elements of Banking" says: People take a piece of money because they believe they can exchange it for commodities they require. Professor F. A. Walker in "Money, Trade, etc.," page 25, says: Feathers, shells, etc., were good money, because they were desired by the general community. Men took them knowing that they were exchangeable for their needs, in the shape of the labor of others. Bonamy Price the goldite says: Gold must never be regarded as valuable, except for the work it performs. It is a mere tool until exchanged for an article of consumption. Bishop Berkley in 1710 asked: Are not gold and silver tickets or counters for reckoning? By retaining the denominations, although the bullion were gone, things might be bought and sold and commerce obtained. Dugald Stewart said: When gold is converted into coin its possessor never thinks of anything but its exchangeable value. Why then should we suppose that, if the intrinsic value of gold and silver were completely annihilated, they might not still perform the uses of money? Sir Archibald Allison says: The coinage of gold and silver by the civilized nations, affixes to them by authority of law one definite and permanent value.—*Boston News Bureau Bulletin.*

THE FAILED BANKS.—The report of the Senate Committee to investigate the affairs of certain failed National banks, among them the Maverick of Boston and the Keystone and Spring Garden of Philadelphia, is interesting because of the unvarying monotony of causes of disaster. The officers of the failed banks are almost without exception charged with gross neglect or incompetency, and in some of the notorious cases with dishonesty. Nearly every wrecked National bank owes its failure to the misapplication of funds by the officers. Yet with all that has been done crookedly the loss to creditors of National banks annually for thirty years has been only one-twelfth of one per cent. Note holders have, of course, lost nothing.

This is a favorable showing as regards annual loss to depositors. The consequential loss—loss of confidence—cannot so easily be estimated, but we all know that it has been great. The committee submits the outlines of a bill for the correction of abuses. The main features of the bill are: limitation of the total liabilities to any bank, corporation, firm, or person to one-tenth of the capital stock and surplus of the association; no loan greater than $1,000 at any one time to stockholders or officers of a bank to be made except on the authority of the President and three-fourths of the directors in writing duly signed, or by a majority vote of the directors at a legal meeting. The liabilities of stockholders and officers to be recorded in a book kept for that sole purpose, and false entries in such book is made a crime. It further provides for two general examiners to supervise the local examiners. The law as it stands is otherwise amended in the direction of greater safety.

The report finds the local examiners of the Boston and Philadelphia banks derelict in duty. They are charged with gross neglect or corrupt motives in not promptly reporting the condition of the broken banks of the Comptroller of the Currency. The fact that some of the examiners were indebted to the failed banks is cited as illustrating the condition of affairs in certain cases. Ex-Assistant Secretary Nettleton is censured for his recommendation of Nelson F. Evans as a receiver of the Keystone Bank, of which he was a large borrower. While the report does not furnish any new facts, it does propose legislation to give greater security to creditors of National banks, and it severely criticises the methods resorted to by the failed banks to push the fortunes of their stockholders and officers.

The report brings us face to face with the fact that with the honest administration of the affairs of a National bank within the law, failure is as nearly an impossible happening as may be in mundane affairs. The system needs emendation, but even as it stands, honest and intelligent methods will secure creditors from loss. The legislation needed is restriction. It is needed to prevent manipulation of the funds of a bank in the special interest of stockholders and officers. The capital, the surplus, and the deposits of a bank are in the nature of a trust, and they should be used for the beneficiaries and not for the particular benefit of the trustees. The trustees will always find their own interests best subserved by defending the interests of creditors. —*Philadelphia North American.*

THE CURRENCY LUNATIC AN OLD FIGURE—In 1819, in the presidency of James Monroe, a great commercial crisis occurred which prostrated all the industries of the country for four or five years. At this time currency theorists arose to anticipate all the wisdom of later days, and to try to prove that the people of the United States could not get out of the continent an abundance of food, clothing, shelter and fuel because "they had not enough bits of paper stamped one dollar at their disposal." The same currency quack appeared in the land-speculation days of Jackson's administration, and during the crash of 1837, under President Van Buren, that followed the collapse of the Western land boom, the same kind of cranks were heard then that to-day vex the air with the cry that it is the business of the Government to support the people instead of the people supporting the Government. The land loan scheme of Senator Stanford and the Sub-Treasury scheme of the People's party are all old straw and were the subjects of pamphlet writers in New York city as early as 1840-42. There is nothing new in all these crazy currency cries; they are always heard from that class of natural-born financial lunatics who go up and down the world all their days trying to devise some scheme by which they can get something for nothing. They know that there is unquestionably honey in clover, but they forget that it takes a bee to get it out. They are not willing to work like a bee to get honey out of clover and lay it up in the hive; they prefer to brood over the visionary project of getting sunbeams out of cucumbers. The bee knows better than to waste his time on the solution of this problem, but the quack prefers to spend his days setting cucumber traps to catch sunbeams rather than to work man-fashion to get money even as the bee does to get honey.—*Post-Intelligencer, Seattle, Wash.*

How to Conduct a Bank.—Bright bankers are always on the lookout for new ideas. No banker is too wise to learn something about the business. The following note from Mr. F. T. BARBER, Cashier of the First National Bank of Morris, New York, illustrates the point: "I learned very much from reading Mr. C. B. PATTEN's articles on Practical Banking in your JOURNAL several years ago, and now I want them in book form. The enclosed check, $8, is to pay subscription to the JOURNAL for 1893 and one copy of PATTEN's book, which please send at once."

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4879—Warren National Bank, Warren, Pennsylvania. Capital, $150,000.

DAVENPORT—Big Bend National Bank; A. F. Lambert, Assistant Cashier.
KELSO—Kelso State Bank; capital, $15,000.
OLYMPIA—First National Bank; F. M. Gowey, 2d Assistant Cashier.
SEATTLE—Merchants' National Bank; John B. Agew, Vice-President in place of Abram Barker; Harry F. Meserve, Assistant Cashier.——Puget Sound National Bank; Bailey Gatzert, President, deceased April 20.
SHELTON—State Bank of Shelton; capital, $25,000; Thomas O'Neill, President; J. D. Riley, Cashier; J. F. Riley, Assistant Cashier.
TACOMA—Tacoma National Bank; John Snyder, Vice-President.
WALLA WALLA—Baker-Boyer National Bank; W. W. Baker, Assistant Cashier in place of F. D. Boyer.

WEST VIRGINIA.

BUCKHANNON—Traders' National Bank; P. M. Boggess, Cashier in place of P. M. Robinson.
ELKINS—Elkins National Bank; H. G. Davis, Vice-President.
HUNTINGTON—First National Bank; Geo. F. Miller, Vice-President in place of Geo. F. Miller, Jr.
PIEDMONT—Davis National Bank; no President in place of H. G. Davis.

WISCONSIN.

BARABOO—Alfred Gattiker, President in place of T. M. Warren.
DARLINGTON—Citizens' National Bank; Geo. F. West, President in place of James Judge; John O'Brien, Cashier in place of Geo. F. West; no Assistant Cashier in place of John O'Brien.
HURLEY—First National Bank; Jas. A. Latta, Cashier in place of W. A. Burt, deceased; T. H. Jackson, Assistant Cashier.
KENOSHA—First National Bank; Frederick Robinson, Vice-President, deceased.
MARINETTE—First National Bank; no Assistant Cashier in place of R. H. Hackett.
OCONTO—Oconto National Bank; W. H. Young, Vice-President.

WYOMING.

BUFFALO—First National Bank; W. B. T. Keyser, Vice-President in place of W. R. Stebbins.
CHEYENNE—Stock Growers' National Bank; I. C. Whipple, Vice-President.

CANADA.

NEW BRUNSWICK.

MONCTON—Bank of Montreal; F. J. Hunter, Manager in place of A. H. Beddome, removed to Montreal.

NOVA SCOTIA.

MAITLAND—Merchants' Bank of Halifax; Duncan Cameron, Manager in place of G. H. Dalziel.

ONTARIO.

CHESTERVILLE—Union Bank of Canada; title previously incorrectly reported as Union Banking Co.; S. L. Forrest, Manager.
KINGSTON—Ontario Bank; Thos. Greet, Manager, deceased.
LONDON—Bank of Montreal; A. H. Beddome, Manager in place of Joseph Hogg.
OTTAWA—Bank Nationale; A. A. Taillon, Manager in place of P. I. Bazin.
OWEN SOUND—Molsons Bank; L. E. Tate, Manager, reported resigned to accept position of Manager of Molsons Bank at St. Thomas.
ST. THOMAS—Molsons Bank; L. E. Tate, Manager in place of H. T. Lockwood, resigned.
TRENTON—Molsons Bank; E. W. Waud, Agent in place of H. B. Wilson.

BANKS REPORTED CLOSED OR IN LIQUIDATION.

ARKANSAS.

FORT SMITH—German Bank; reported discontinued.
FREMONT—(Cripple Creek); Bank of Cripple Creek.

GEORGIA.

AMERICUS—Bank of Americus; reported suspended.

IDAHO.

WALLACE—Coeur d'Alene Bank; suspended.
WARDNER—Miners' Exchange Bank; suspended.

ILLINOIS.

EUREKA—Bank of Eureka.
LEXINGTON—First National Bank; in liquidation, April 1.

INDIANA.

GALVESTON—Farmers' Bank.

IOWA.

HARTLEY—Security State Bank.

MICHIGAN.

BANCROFT—I. M. Strong & Son; reported closed and in hands of sheriff.
GAYLORD—Exchange Bank.
LANSING—Central Michigan Savings Bank; closed April 18.

NEBRASKA.

ATKINSON—Citizens' Bank.
GREELEY—Citizens' State Bank.
PONCA—First National Bank; closed April 27.

NEW YORK.

NEW YORK City—Hewson & White; discontinued May 1; no successors. —— Henry Allen & Co.; suspended May 4. —— B. L. Smyth & Co.; failed May 4. —— Schuyler Walden; failed May 4. —— Gould, Bruns & Bouldin; dissolved by mutual consent, May 1. —— A. H. Wheeler, suspended May 3.

OHIO.

NEW STRAITSVILLE—Bank of New Straitsville; assigned April 21.

OREGON.

NORTH YAMHILL—Farmers & Traders' Bank; reported closed, April 17.

SOUTH DAKOTA.

MILBANK—Bank of Milbank; assigned April 23.
SALEM—Bank of Salem; reported failed, April 30.
WILMOT—Bank of Wilmot; assigned April 24.

TENNESSEE.

COLUMBIA—Second National Bank; closed April 28.
DAYTON—Rhea County Bank; reported closed.
NASHVILLE—Mechanics' Savings Bank; closed April 17.

TEXAS.

JACKSONVILLE—D. W. Bagley; assigned April 17.

CANADA.

QUEBEC.

ST. HYACINTHE—Molsons Bank—branch; reported discontinued.
SOREL—A. A. Taillon; removed to Ottawa; now Manager La Banque Nationale.

ONTARIO.

LUCKNOW—Geo. Mair & Co.; discontinued; Geo. Mair appointed Manager Traders' Bank at Windsor.

The Gold Current.—The following table shows the drift of the gold current the past two years:

Name of Bank.	*April 1, 1891.*	*April 1, 1893.*	*Changes.*	
Austro-Hungarian Bank	$26,209,000	$52,100,000	Inc.,	$25,891,000
Bank of France	235,055,000	332,015,000	Inc.,	96,960,000
Bank of England	111,940,000	131,170,000	Inc.,	19,230,000
Bank of Netherlands	20,458,000	15,915,000	Dec.,	4,543,000
Bank of Germany	151,336,500	173,645,000	Inc.,	22,308,500
Bank of Spain	29,239,000	38,565,000	Inc.,	9,326,000
Totals	574,236,500	743,410,000	Inc.,	169,174,000
U. S. treasury coin and bullion	292,435,000	218,378,000	Dec.,	74,057,000
N. Y. banks, specie	77,140,000	71,623,000	Dec.,	5,517,000

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, May 4, 1893.

THE FINANCIAL SITUATION DURING the past month was one of dependence upon the movement of gold and upon the policy of the Government with reference to the maintenance of gold payments. The exports of gold, which were suspended for a time in March, were renewed early in April and on nearly every steamer day during the month a considerable amount of gold was sent abroad, some $15,000,000 of the precious metal going from New York during the month. As the net exports of gold from the United States in the first three months of the year amounted to $26,500,000, the additional exports in April mean a loss to the country of more than a year's production of its gold mines.

The renewal of exports of gold quickly disarranged the plans of the Government for maintaining the Treasury reserve of gold in excess of $100,000,000, and on April 15 the reserve fell so close to that figure that the Secretary of the Treasury found it necessary, in accordance with the Act of July 12, 1882, to issue an order suspending the issue of gold certificates. Uncertainty as to what the Secretary would next do, coupled with a report that he had decided to redeem the Treasury notes of 1890 in silver only, caused an uneasy feeling, which was not relieved by the statement made for publication by Mr. Carlisle, on April 20, in which he said he would continue to redeem the notes in gold, "as long as he has gold lawfully available for that purpose." The construction put upon this statement was that it meant that the notes would be redeemed in gold only as long as there was more than $100,000,000 gold in the Treasury. This view caused very general apprehension, to relieve which, President Cleveland, on April 23, announced that the redemption of any kind of Treasury notes in anything except gold had not been contemplated.

A more easy feeling followed the announcement by the President, and the subsequent falling off in gold exports helped to relieve the situation, although the gold reserve in the Treasury fell several millions below the $100,000,000 figure. The Boston Clearing-House banks offered one-half of their gold reserve, about $5,000,000, to the Government, and many offers of aid of a similar nature were sent to Washington from various parts of the country. Secretary Carlisle while on a visit to New York met a number of leading bankers of the city, and an interchange of views was had, resulting in an understanding that the New York banks stood ready to aid the Government whenever the necessity should arise.

The effort of the U. S. Treasury to maintain a fixed reserve without resorting to the issue of bonds, is handicapped by the excess of ordinary expenditures over revenues, the latter in April amounting to $28,500,000 against expenditures of $33,700,000, a deficit of $5,200,000. For the ten months of the current fiscal year the revenues were $324,500,000 and the expenditures $332,300,000, making a deficit of $7,800,000. The payments on account of pensions are $24,000,000 larger for the ten months of this year than for the corresponding period of last year, which are nearly offset by an increase of more than $23,000,000 in customs receipts. The Government has been depending upon the extraordinary imports of merchandise to supply it with necessary revenues. In March the imports of merchandise were in excess of $92,500,000, the largest amount ever recorded. For April the movement has been smaller but still considerably in excess of last year's figures. The exports fell below the imports in March $26,000,000, and a very large balance of net imports will be shown for April when the complete returns are aggregated.

The reports from abroad have been of fresh disaster to investors, the scene of the trouble being laid in Australia. Early in the month the suspension of the Commercial Bank of Australia with deposits of more than £12,000,000, was announced. Then came the failure of the English, Scottish & Australian Bank with liabilities of £8,000,000; then the Australian Joint Stock Bank with liabilities of £13,000,000, and finally the National Bank of Australasia with deposits of £9,000,000. All these institutions had numerous branches and their suspension has had a widespread influence. The first five days of May have been declared "grace days" by the Government in order to afford time for the excitement to subside. Germany successfully placed its new Imperial loan of 152,000,000 marks, the amount being subscribed several times over. A revolutionary movement in Belgium forced from Parliament the giving of the right of suffrage. The Bank of England has adhered to its 2½ per cent. rate of discount, and gains during the month £561,000 gold on balance. The open market rate in London for 60 to 90-day bills is 2⅛ per cent. as against 1⅜@1½ per cent. at the close of March and 1½ per cent. in February. In Paris the open market rate is 2⅜ per cent. as against 2¼ per cent. in March; in Berlin 2⅜ per cent. and Frankfort 2½ per cent., the same for each as at the end of March. During the last week in April the Bank of England lost £366,742 in bullion, holding at the close £25,309,048. The Bank of France reports an increase of £182,000 in gold, while the Bank of Germany has gained £487,000 since last report.

In answer to the call of the Comptroller of the Currency the National banks of the country, numbering 3806, have reported their condition as of March 6, 1893. From the abstracts of the reports made to the Comptroller during the past year, the following principal items are taken:

	Capital.	*Surplus.*	*Individual Deposits.*	*Gold.*	*Silver.*	*Legal-tenders*
March 1, 1892.	$679,970,110	$234,069,984	$1,702,240,958	$194,333,849	$35,814,618	$123,525,735
May 17, 1892..	682,232,158	235,192,005	1,743,787,545	200,290,974	38,753,184	134,386,402
July 12, 1892..	684,678,203	238,239,970	1,753,339,679	190,751,183	38,569,297	137,080,016
Sept. 30, 1892.	686,573,015	238,871,425	1,765,422,984	173,962,183	35,184,246	118,262,945
Dec. 9, 1892...	689,698,017	239,931,982	1,764,456,177	174,104,733	35,748,436	108,746,335
March 6, 1893.	688,642,876	245,478,363	1,751,439,374	173,995,025	34,346,791	105,610,774

The total amount of specie exported from New York city to all points during the month of April was $19,003,270 as compared with $15,113,000 in March, making a total for the year of $60,222,270. The imports for the month were $718,301, as compared with $5,348,000 in March, making a total for the year of $6,729,301.

DOMESTIC EXCHANGE.—Following are the closing prices for New York exchange at the places named: St. Louis, 90c premium. Chicago, 50c premium. Charleston—Buying, par; selling, ⅛ premium. Savannah—Buying, par; selling, ⅛c premium. San Francisco—Sight, 10c premium; telegraphic, 15c premium. New Orleans—Commercial, 75c premium; bank 150, premium.

The United States Treasury statement for April shows an increase of $2,315,899 in the net public debt. There was a decrease in the non-interest bearing debt of $421,005, an increase in the interest bearing debt of $550, and a decrease of cash in the Treasury of $4,147,824. The total cash in the Treasury is $756,544,116, of which $202,283,359 is in gold coin and in bullion, $481,788,691 in standard dollars, silver bullion and subsidiary coin, $56,376,960 in gold and silver certificates, legal tenders and National bank notes, and $15,365,528 in National bank depositories and disbursing officers' hands. The amount at present in National bank depositories is $11,270,697. The bonded debt on April 30 was $585,084,810, and total public debt exclusive of certificates and Treasury notes offset by an equal amount of cash in the Treasury, $962,407,764. Net available cash balance in the Treasury, including deposits in National banks and gold reserve of $97,011,330, is $121,482,908.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $100,317 circulation of National gold banks—was on April 29, $176,755,297. This shows an increase for the month of April of $761,575, as compared with an increase of $672,866 in March, and an increase in total circulation since April 30, 1892, of $4,388,904. During the month of April there was issued to new banks $446,190, and to old banks increasing circulation $1,014,140. There has been surrendered and destroyed since March 31, $698,755. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $21,622.979, showing a decrease in that class of circulation during the month of $510,327.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	Total Supply.			Net Gold in United States Treasury.	Gold in Circulation.
	Gold Coin.	*Gold Bullion.*	*Total Gold.*		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099
February 1.........	559,063,122	81,452,478	640,515,600	108,181,713	532,333,887
March 1....	547,655,038	79,835,048	627,490,086	103,284,219	524,205,867
April 1...............	546,674,424	79,503,760	626,178,184	106,893,224	519,284,960
May 1	532,513,105	80,529,774	613,042,879	97,011,330	516,031,549

The following table shows the amount of gold and silver coins and certificates, United States notes and National bank notes in circulation May 1, 1893:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold Coin............................	$532,513,105	$121,753,585	$410,759,520
Standard silver dollars..............	419,195,305	360,359,922	58,835,383
Subsidiary silver......................	77,370,715	11,113,573	66,257,142
Gold certificates	114,160,339	8,888,310	105,272,029
Silver certificates	326,806,504	5,098,778	321,707,726
United States notes.......... ..	501,730,794	37,304,574	464,426,220
National bank notes..................	176,855,614	5,085,299	171,770,315
Totals......	$2,148,632,376	$549,604,041	$1,599,028,335

Population of the United States, May 1, 1893, estimated at 66,706,000; circulation per capita, $23.97.

Mint Coinage.—The coinage executed at the United States Mints, during the month of April, was 10,136,500 pieces, valued at $2,403,100. In March the coinage was 10,188,022 pieces, valued at $3,422,795.

Foreign Exchange.—The scarcity of commercial bills kept up the rates for sterling exchange, which would have ruled higher but for the very light demand. The market was very narrow during the greater part of the month, but fears concerning the policy of the Government with reference to the redemption of Treasury notes in silver caused something of a gold scare, and in the latter half of the month there was a sharp advance in rates. Toward the close of the month the market became easier and rates declined, the final quotations being those of a month ago. For the week ended April 8 rates for sterling exchange were firm on a light supply of bills, closing with posted rates at $4.86 for long, $4.87¾ for demand and $4.88 for cables. For the week ended April 15 the market was dull but rates advanced slightly closing at $4.86½ for long, $4.88¼ for demand and $4.88½ for cables. In the week ended April 22, there was a considerable advance in rates accompanied by large exports of gold closing at $4.87½ for long, $4.89¼ for demand and $4.89¼ for cables. In the week ended April 29 rates declined, the supply of bankers bills having increased largely on account of the gold shipments, but closed firm at $4.86 for long, $4.88 for demand and $4.88½ for cables.

The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, $4.86@$4.87; Bankers' sterling, sight, nominal, $4.89@$4.89½; Bankers' sterling, 60 days, actual, $4.85¾@$4.86; Bankers' sterling, sight, actual, $4.88@$4.88¼; Cable transfers, $4.88½@$4.88¾; Prime commercial sterling, long, $4.84¾@$4.85; Documentary sterling, 60 days, $4.84½@$4 84¾; Paris cable transfers, $5.14⅜@$5.13¾; Paris bankers', 60 days, $5.17½@$5.16⅞; Paris bankers', sight, $5.15@$5.14⅜; Paris commercial, 60 days, $5.18¾$5.18⅛; Paris commercial, sight, $5.16⅞@$5.16¼; Antwerp commercial, 60 days, $5.19⅜@$5.18¾;

Brussels bankers', sight, \$5.15⅝@\$5.15; Swiss bankers', 60 days, \$5.18⅛@\$5.17⅛; Swiss bankers', sight, \$5.15⅝@\$5.15; Reichmarks (4), bankers', 60 days, 95¼@95⅜; Reichmarks (4), bankers', sight, 95⅝@95¾; Reichmarks (4), commercial, 60 days, 96@95⅛; Reichmarks (4), sight, 95¼@95⅜; Guilders, bankers', 60 days, 40 ⅛@40 3-16; Guilders, bankers', sight, 40 5-16@40⅜; Guilders, commercial, 60 days, 39 15-16@40; Guilders, commercial, sight, 40 3-16;@40¼; Kronors, bankers', 60 days, 26¾@26⅞; Kronors, bankers', sight, 27@27⅛; Lisbon, sight, per milreis, 88@88¼; Italian lire, sight, 5.33¾@5.32½; Paris dispatches quote exchange on London at 25f.13½c.

HOME MONEY MARKET.—The money situation during the past month has been such that the lenders on call have been able to get good rates, rarely less than 6 per cent., and to insist upon the pick of collateral. Very careful discrimination was made against some of the securities which have been more or less prominent in recent active movements at the New York Stock Exchange. The range for call money has been 3 to 15 per cent. Time contracts have been in smaller supply for the reason that lenders are insisting upon gold notes, and the uncertainty as to the immediate future as regards the currency has caused borrowers to be somewhat timid about promising to pay in something which might soon be at a premium. Many borrowers prefer taking their chances with call loans until the financial clouds have rolled away. The banks have had to stand a further drain upon their deposits, the aggregate being \$7,000,000 smaller on April 29 than on the first of the month, making a decrease of \$63,000,000 since the beginning of February. But little change has occurred in the reserves of the banks, the total being \$120,200,000, or about \$300,000 less than at the beginning of the month. At the close, quotations on first-class Stock Exchange collateral are 6 per cent. for all dates. Commercial paper is dull although the supply is good, but the local banks are simply taking care of their customers, while the outside banks are afraid to handle much paper because of recent failures. Rates are 6 per cent. for the best names, running up to 9 per cent. for less desirable. For the week ending April 8, the open market rate for call loans on stock and bond collaterals ranged from 3 to 7 per cent., the average being 5 per cent. Commercial paper, 5½ to 7 per cent. For the week ending April 15, the open market rate for call loans on prime collaterals ranged from 3 to 5 per cent., with 4½ per cent. as the average. Commercial paper quoted 6 to 8 per cent. For the week ending April 22, the open market rate for call loans ranged from 3 to 15 per cent., the average being 5 per cent. Commercial paper quoted 6 to 9 per cent. During the week ending April 29, the open market rate on call loans ranged from 3 to 12 per cent., the average being 5 per cent. Commercial paper quoted 6 to 9 %.

NEW YORK CITY BANKS.—There has been a steady movement of funds from interior points into the local banks all the month, but the gain was almost exclusively in currency, while the Sub-Treasury drew funds from the banks. The interior movement is estimated to have resulted in a gain for the New York banks in the week ended April 7 of \$4,809,000, a gain in the week ended April 14 of \$4,332,000, a gain in the week ended April 21 of \$4,161,000, and a gain in the week ended April 28 of \$2,055,000, making a total gain for the four weeks of \$15,357,000. From Sub-Treasury operations and gold exports the banks gained \$1,600,000 in the week ended April 7, lost \$3,700,000 in the week ended April 14, lost \$2,000,000 in the week ended April 21, and lost \$7,350,000 in the week ended April 28, making a total net loss of \$11,450,000 for the month. The banks have maintained a surplus reserve of fair proportions throughout the month ranging from \$9,212,950 on April 8th to \$14,783,200 on April 22, and standing at \$12,156,150 at close of the month, a gain for the month of \$1,493,075. Loans were contracted, \$7,500,000 however, and a few banks hold the larger proportion of the surplus reserve.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
April 1..	\$433,525,000	\$71,623,000	\$48,873,000	\$439,330,000	\$5,621,000	\$1,420,000 inc.
" 8..	434,204,800	71,546,500	47,341,100	438,698,600	5,651,300	1,450,125 dec.
" 15..	431,453,800	71,490,000	49,474,500	439,527,800	5,606,500	1,859,600 inc.
" 22..	428,998,900	72,254,100	52,727,700	440,794,400	5,659,200	3,710,650 inc.
" 29..	425,990,800	70,702,400	49,509,900	432,224,600	5,623,700	2,627,050 dec.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of February, 1893, and the highest and lowest since January 1, 1893, by dates:

	Year 1892.		Since January 1, 1893.		April, 1893.		
	High.	Low.	Highest.	Lowest.	High.	Low.	Closing.

	2,058,091		1,147,946		580,516		346,981

leaving 1,086,103 shares to represent the dealings in the remaining 155 stocks. In addition 410 different issues of railroad bonds were dealt in, to the amount of $24,651,100 also $183,500 State bonds and $99,300 Government bonds. (Compared with April, 1892, there is a decrease of 1,354,790 shares in stocks; a decrease of $17,692,700 in railroad bonds; an increase of $31,000 in State bonds; a decrease of $58,000 in Government bonds, and a decrease of 1,160,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $13,500; stocks, 1,008,063 shares, of which 822,695 were American Sugar Refiners' common stock and 7,120 preferred; mining stocks, 36,425 shares. American Cotton Oil Certificates, 140,632 shares of common and 7,847 shares of preferred; Pipe Line Certificates, 36,000 barrels. Of National Lead common 149,847 shares, preferred 12,586 shares; of silver bullion certificates, 65,000 ounces, extremes being 83¼ and 82⅝, closing at 83¼. The listed stocks show a decrease of 528,254 shares as compared with the amount sold in March. Transactions in railroad bonds show a decrease of $7,851,900 during the same period, a decrease of $244,500 in State bonds, and an increase of $57,300 in Government bonds. In unlisted bonds a decrease of $20,000; in unlisted stocks a decrease of 613,952 shares; in mining stocks an increase of 20,075 shares; a decrease of 6,663 shares in Cotton Oil Certificates common, an increase of 1,621 shares in preferred; a decrease of 89,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 109,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of April were sold: 2,083,007 shares of railroad and other stocks representing dealings in 77 properties. Of this amount 1,387,180 shares are transactions in the following 12 stocks:

C. M. & St. P..	281,000	N.Y. & N. E..	190,790	C. R. I. & Pac....	69,704	N. Pac. pfd....	39,630

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Edgerton.—Erastus S. Edgerton, President of the Second National Bank, of St. Paul, Minn., died April 16.

Finch.—Anderson Finch, Cashier of the banking firm of Mitchell, Finch & Co., of Maysville, Ky., died at Thomasville, Ga., March 10.

Floyd.—David Gelston Floyd, who was for several years President of the First National Bank, of Greenport, N. Y., and a Director of the People's National Bank, died April 10, aged fifty-five years.

Gardner.—Thaddeus H. Gardner, banker, of Hollidaysburg, Pa., died April 12, aged fifty-four years.

Gatzert.—Bailey Gatzert, President of the Puget Sound National Bank, and People's Savings Bank, Seattle Wash., died March 19, aged sixty-four years.

Kern.—William H. Kern, President of the People's Bank, Philadelphia, died suddenly on April 8. Mr. Kern was one of the original incorporators of the People's Bank, and had been its President since 1883.

Lefferts.—John Lefferts, a Director of the Brooklyn Bank, and of the Long Island Safe Deposit Co., Brooklyn, N. Y., died April 18, aged sixty-seven years.

Lewis.—Weston Lewis, President of the Manufacturers' National Bank, Boston, Mass., died April 6, aged fifty-nine.

Oldham.—George B. Oldham, Cashier of the People's Bank of Salisbury, Mo., died March 18, aged 46.

Powell.—Leander T. Powell, a Director of the National City Bank of Brooklyn, N. Y., and of the Washington Trust Co. of New York, died at his home in the former city March 4, aged forty-eight years.

Saxe.—Charles G .Saxe,a Director in the National Commercial Bank of Albany,N.Y. and a man of considerable wealth, died in New York city March 23.

Seney.—George I. Seney, the well-known philanthropist, died April 7 at the Grand Hotel, New York. Mr. Seney was born in Astoria, L. I., May 12, 1826. He was well known in banking circles on Wall street, and was also a successful railroad financier. Mr. Seney was descended from the Seneys of Maryland. Among his ancestors were members of the Continental Congress of 1787 and the United Congress of 1789–'92. The Seneys also figure as Presidential electors, naval commanders and Senators. Mr. Seney attended Wesleyan University and later the University of New York and graduated in 1847. From college he entered the banking business in Brooklyn, N. Y., and later was connected with the Gallatin Bank, the Bank of North America and the Metropolitan Bank. When the crash came in 1884 during the bank panic, Mr. Seney resigned as President of the Metropolitan Bank and turned over to the creditors his personal property, including $1,000,000 worth of paintings. At the time of the bank panic Mr. Seney was rated at $5,000,000. After the panic of 1880 he removed to Bernardsville, N. J., where he paid considerable attention to the raising of blooded stock. Since 1884 Mr. Seney has devoted only a portion of his time to active business, but much of his fortune is said to have been retrieved.

Sharpe.—Thomas H. Sharpe, of the once famous banking firm of Fletcher & Sharpe, Indianapolis, Ind., died February 12, aged eighty-four.

Simpson.—George E. Simpson, a capitalist, of Kansas City, Mo., formerly of the banking firm of Donnell, Lawson & Simpson, New York, died April 11.

Scott.—Lucien Scott, a banker and capitalist of Leavenworth, Kansas, died in New York city April 6. He was reputed to be the richest man in Kansas, and was quoted at $25,000,000. Deceased was in his 59th year.

Speer.—D. N. Speer, formerly State Treasurer of Georgia, and prominently identified with the banking affairs in his State, died April 4.

Sprague.—Joseph Sprague, President of the Hingham Institution for Savings, at Hingham, Mass., died April 1.

Street.—William C. Street, at one time President of the Norwalk (Conn.) Savings Society, and Director of the Fairfield National Bank, died April 7.

Swain.—Henry Clay Swain, Cashier of the Second National Bank, Washington, D. C., was recently burned to death while endeavoring to control a meadow fire, which threatened the home of his sisters at Sea Isle, N. J., where he was visiting.

Taft.—Moses Taft, President of the Uxbridge (Mass.) National Bank from the time of its incorporation, died April 2. Mr. Taft had reached the ripe age of 81 years, but continued his official connection with the bank until the time of his death.

Terwilliger.—James S. Terwilliger, Cashier of the First National Bank of Belvidere, Ill., since its organization, died April 22.

Webster.—Col. Edward H. Webster, President of the Harford National Bank, Bel Air, Md., died April 24. Col. Webster was four times a member of Congress, and was Collector of the Port of Baltimore during the administration of President Lincoln.

Young.—Edwin Young, President of the First National Bank, Rondout, N. Y., died April 21.

RHODES'

JOURNAL OF BANKING.

Vol. XX. JUNE, 1893. No. 6.

THE report of the Select Committee on Failed Banks, made to the Senate of the United States, being an alleged investigation of the causes of the failure of the Maverick National Bank, of Boston, Mass., and the Keystone and Spring Garden National Banks, of Philadelphia, has come to hand.

The Committee was appointed to inquire whether there was adequate law to protect depositors and stockholders of failed National banks, and to look into the circumstances of recent failures. What the Committee discovered in regard to the three banks mentioned can be briefly summarized. The Maverick National Bank had been in existence twenty years when, in April, 1884, it applied for a renewal of its charter. The Comptroller, John Jay Knox, cited to the directors in a letter of April 10 that the loans in violation of law were so great that the charter could not be renewed unless the law was complied with. In December, 1884, the charter was renewed, a sworn statement being made to Mr. Knox's successor showing loans as required by law. From 1881 J. W. Magruder had been Bank Examiner at Boston. In every report made annually to the Comptroller he had reported these excessive loans. They must have been well known to every Comptroller for many years. If it is the business of a Bank Examiner to make reports from which the condition of a bank can be understood, Magruder certainly made such reports. In the course of the investigation it was found that Magruder had received some profits from a speculation carried on by an outside party, who had borrowed money at the Maverick Bank to carry on the deal. The loan had been paid, and the bank lost nothing. The party who borrowed the money was not connected with the bank. And from this circumstance, notwithstanding the detailed reports made to the Comptroller showing violations of law, the Senate Committee's report attempts to make Magruder the scapegoat—to throw on him the responsibility of the final failure of the Maverick National Bank. Magruder never had or could have a hearing. He was dead. The Maverick Bank was virtually owned by its five directors; its President, Potter, was a man highly esteemed and of great reputation as a banker, "the best judge of commercial paper in Boston." These unlawful loans were made to the directors, the owners of the capital and surplus of the bank; they were secured by collateral. The Comptrollers, who had before them the information contained in Magruder's reports, might well hesitate about closing a bank, apparently solvent, for a technical violation of law that did not necessarily affect its solvency. The real insolvency was ingeniously concealed behind the high personal credit of the five directors, and a system of shifting collaterals impossible for any Examiner not a mind-reader to follow. The secrets of this insolvency before the failure were locked in the breasts of the five directors and their subordinate confidential clerks and dependents. The immediate cause of the failure was very peculiar. A certified check of the Maverick was refused by one of the associated banks. The indignation shown by some of the New York banks when the news of this reached that city indicates how high Mr. Potter stood. The President of the bank throwing out the check had gained some insight into the affairs of the Maverick through the misfortunes of his brother, who had been associated in speculations with Potter. It was a guess on his part that the Maverick was insolvent, and bitter feeling on account of the treatment of his brother made him apply the test. If this had not been done, the bank might no doubt be solvent again to-day, for there are probably times when any bank forcibly closed would not make a good showing.

The policy of the Comptroller's office has always been to avoid unnecessary alarms. This, like any other policy, has its weak points ; but it is probably a better policy, and permits fewer failures, than a more rigid one would permit or cause. One amusing feature of the investigation was the Committee's failure to examine the contents of a certain black trunk said to contain papers belonging to Mr. Potter. The Court took charge of this trunk pending the decision as to ownership. The Chairman of the Committee got very excited, and inserts a voluminous correspondence, with all the authorities ; but he did not get to see the inside of the trunk.

The Keystone and Spring Garden investigations reveal the same disposition to load all blame on the Bank Examiners, although it is very evident that they truly reported the condition of the banks, their only fault apparently being that they left the Comptroller to exercise his judgment about closing the institutions. The policy of nursing weak institutions, if it be in the long run unwise, was alone the reason that the banks were not previously closed. These Examiners had borrowed money; but they are not singular in this ; there would be no banks if there were not borrowers ; but it does not appear that they neglected to report the condition of the banks.

The Committee recommended a number of rigid enactments in consequence of their investigation, becoming harder on the Examiners than anyone else. Congress has not adopted their crude suggestions, and ought not to. The Comptroller has ample power now to close up a bank when circumstances warrant. But circumstances will seldom or never warrant such a procedure in the case of a solvent bank. If insolvent it can't pay its debts. Then Congress investigates, and blames the Comptroller for not closing sooner. But how can he close a solvent bank? So the thing goes round and round. A bank is like a man who still lives and can be the subject of hope until he is dead. Wrong treatment will kill a bank when right treatment will sometimes save it. But neither banks nor men, under any treatment, will live forever.

THE LATEST NAPOLEON OF FINANCE is Zimri Dwiggins. Zimri means "celebrated in song;" Dwiggins, perhaps, means celebrated in the newspapers. He was the originator of a system of banks called, as distinguished from the National banking system, the Dwiggins system. It seems to have consisted in starting, with the capital sufficient for one bank, a dozen or more institutions in various places having no apparent connection with each other. It is an improvement on the system of a bank with branches, because the connection between the parent bank and its offshoots is always known, and the proportion of capital to the risks assumed can be seen more readily. In the Dwiggins system little banks are established at a number of points to take in deposits. The capital is common to all, and the money necessary is sent to each one as it is needed. The head of the system, if it has a head, is a large central city. Apart from the small amount of capital required, there is the economy of doing all the business under one roof, as it were, and saving the discounts and commissions paid to others. Besides, the public, not knowing of the real connection between the banks, thinks each stands on its own capital, and the Bank Examiner always finds everything solid on his approach; for the moneys gathered from the different banks are arranged like drilled battalions, ready to march to the spot where they should show up. Some of the banks in the system may be National banks; others under State laws. Mr. Dwiggins says that his system has been approved by Senator John Sherman. A great many things have been laid upon Mr. Sherman's shoulders, but this seems to be the unkindest cut of all, not because it is untrue, but because the plan was only attributed to the distinguished Senator after the system had come to grief. The system may be all right as a system; the fault may have been with the man who managed it. The Columbia National Bank was the figure-head of Mr. Dwiggins' coterie of banks; it has failed. And yet distinguished financiers have spoken highly of the National banking system.

It seems likely that the plan was to gather the funds collected from the scattering country banks into the Columbia National at Chicago. The loans were probably too much concentrated in city securities; and, in the meantime, the demands of the country depositors diminishing the ready cash, the pressure became too great for the king pin of the aggregation. It evidently had denuded itself to help the country banks from which it drew its funds; and, when he got down to his city investments, the ambitious country banker could not realize on his assets fast enough to keep things running. Doubtless the other city banks did not go into mourning or exert themselves unnecessarily to save one who might very well be looked upon as a dangerous innovator.

There are enough ways now for money from the country to reach the cities without the ambitious country banker using the money of his depositors to start a city bank, simply to satisfy his financial vanity. After all, the system may be a very good one, and it may still be dangerous for an inexperienced man to run it.

FOR SOME YEARS JUDGE R. M. WIDNEY, of Los Angeles, Cal., has been engaged in the Herculean task of reforming the monetary system of the United States. His plan has been several times adverted to in the JOURNAL, and two years ago was referred to the Judiciary Committee of the House of Representatives. This Committee, evidently more or less consciously under the control of the money power, has rejected the plan of the distinguished California financier, including the proposed constitutional amendment upon which the plan mainly hinged. This latter feature was referred to a sub-Committee, of which Hon. Thomas R. Stockdale was Chairman, and this eminent jurist has made a lucid and interesting minority report favorable to the amendment.

When the financial history of the close of the nineteenth century comes to be written, the chronicler will review with admiration the struggles of Judge Widney with the money power, whose practices are revealed in all their odious proportions in Mr. Stockdale's report, from which we quote: "The volume of money being too small to transact the business of the country, and being accumulated by aid of legislation into the hands of a few brainy, ambitious and not over conscientious men (*sic*), affording to them—nay, creating for them—opportunities to accumulate fortunes speedily, they have, with the seeming sanction of the Government, strained to the utmost the great schemes to absorb the wealth of the country to be used to override the will and the rights of the citizens." Judge Widney's plan would put an end to this sort of thing by so increasing the value of money that one citizen, whether brainy or not, could accumulate a colossal fortune as easily as another. Want of space forbids an elaboration of this plan; suffice it to say that, if put in operation, it would put abundance of money within the reach of all; and this easily explains the opposition of the money power.

This Machiavellian combination is not by any means to be confused with the banks and bankers of the country. These last are, no doubt, often the unconscious instruments of the money power, just as money itself is, but they do not necessarily belong to it, and ofttimes loathe it. Judge Widney himself is a banker. He is a member of the American

Bankers' Association, and has several times acceptably addressed their conventions. His speeches are printed in the regular reports. He holds a high rank among California bankers, and is a member of the California Bankers' Association, who listen with respect to his remarks.

The unit of the money power, as described by Mr. Stockdale, is the wary financier—wakeful, astute—who goes through the complicated framework of the financial system of the country, in advance of each new Act of Congress, in stocking feet, with a dark lantern, noting where he may put in a line or word to advance his own interest and squeeze the people. This noxious creature, intimates Mr. Stockdale, has been the author of the panics, the crises, the squeezes, the demonetizations, that have so devitalized the people. In Judge Widney, who is justly eulogized in the report as "a banker of wide reputation, and a writer known in Europe and America, and perhaps the most learned man in America on these subjects," this dark-lantern, stocking-footed fly-by-night recognizes his enemy. In a letter dated June 22, 1891, Senator John Sherman expresses his gratification that the financial question has attracted Judge Widney's attention—a gentleman so well able to discuss it. The report is an able review of the financial status, and should be carefully studied by all desiring to understand the situation.

THERE IS NO SUBJECT SO LIABLE TO BE MISUNDERSTOOD as that of reserve. It is easy to trace the growth of misapprehension on the part of the public in regard to the $100,000,000 gold reserve for legal-tender notes held by the United States Treasury. When the Act for the resumption of specie payments was enacted, January 14, 1875, there was no legal-tender United States coin authorized by law except gold coin, and the resumption of specie payments meant resumption of gold payments. This Act also contemplated the reduction of the outstanding legal-tender notes to $300,000,000 during the four years between January, 1875, and January, 1879. To procure the coin necessary, in addition to such as might be obtained from the surplus revenues of the Government, to effect the redemption of the legal-tender notes when presented, the law permitted the Secretary of the Treasury to sell bonds. The amount of bonds to be sold, and the amount of gold accumulated, or rather to be held ready, was limited in any direction by the necessity of the case only. In other words, the Secretary was given power to obtain the gold necessary to effect the resumption of specie payments. Between 1875 and 1879, however, as it turned out, was one of the most exciting periods in the financial history of the United States—a period of financial distress that attracted men's minds to financial legislation and secured attention for almost any scheme, sane or otherwise, that promised relief. It was the golden age of the financial crank who, with bitter and arrogant hauteur and high contempt of ordinary opinion, stalked triumphant and gloomy, like the beast in Revelation, with seven heads and ten horns, prophesying failure and disaster. The most desperate attempts were made to repeal the Resumption Act. In the 45th Congress (1877-79) two bills were presented in the Senate and fourteen in the House for the repeal of the Act. A fifteenth bill passed the House in 1878, but did not get through the Senate. The war for and against resumption in the newspapers, in pamphlets and on the stump, was bitter and without pause up to the very day of resumption. The discovery of the demonetization of the Silver dollar caused a howl of rage among the advocates of cheap money when silver became cheap in the market. This was in 1875-76 ; and the struggle for the restoration of the "dollar of the daddies" was contemporaneous with that for the repeal of the Resumption Act. Each of the two branches of the cheap-money party achieved some success, which had its effect in utterly changing the position from what it had been in 1875, when the Resumption Act was passed. The silver wing secured the passage, on February 14, 1878, of the Bland Act for the coinage of the silver dollar and the issue of silver certificates ; and the greenback wing the passage of the Act of May 31, 1878, forbidding the cancellation and retirement of legal-tender notes below the amount then outstanding, or $346,681,016.

The effect of the silver dollar law was to muddle the meaning of the word "coin" in the Resumption Act, and of the second law to prevent any real resumption of the legal-tender notes.

Contrary to the solemn prophesies and imprecations of the cranks against coming disaster, resumption took place, and the gold was not drawn out. Prosperous times followed; and in the midst of them, in 1882, was passed the Act of July 12, 1882, for the extension of National bank charters, containing a clause forbidding the issue of gold certificates when the gold coin reserved in the Treasury for the redemption of United States notes falls below $100,000,000. There is no doubt that this clause was inserted for the purpose of strengthening the original Resumption Act, weakened, as it had been, by the Silver Dollar Act of February, 1878, and the Reissue Act of May 31, 1878 ; but the advocates of silver and the remnants of the greenbackers were so zealous that it could not be made more definite. It is really in the nature of dictum by the Court merely expressing an opinion that there was a reserve of gold coin kept in the Treasury for the redemption of legal-tender notes, which reserve might be unduly reduced by too liberal issues of gold certificates. The gold party, of course, affected to give the very greatest weight to this dictum, and to believe that the meaning was that a reserve of gold coin amounting to $100,000,000 should always be maintained. While this construction would be most desirable, it could not be maintained upon any serious investigation of the whole question.

The public, however, were very much impressed by this view of the case, and still more impressed by the further strenuously maintained argument that not only did Congress decree that a reserve of

$100,000,000 in gold coin should be always maintained, but also that its maintenance intact was the indispensable corner-stone of the financial system. The idea that a reserve might maintain itself while being used did not enter into the heads of many. The popular idea of the gold reserve has, therefore, been more or less founded upon reasoning not in accordance with sound construction of law or with the true purposes of a reserve. The latter has been invested with too much sanctity. But, nevertheless, it will not do to laugh at the fears upon which this public sensitiveness is founded. Because the gold reserve has been touched, and things have not altogether gone to the dogs ; because lightning has not destroyed the scoffers, does not show that the public apprehension is unfounded in reason, although the reasons given may be incorrect. The same causes which have reduced the gold reserve, or, say the free gold in the Treasury, from 160 millions to $100,000,000 in five years or less are still at work, and if not stopped will proportionately reduce the free gold remaining during the next five years.

Because disaster does not come at a given point is no proof that it will not come when the disaster point is reached. It is the last straw that breaks the camel's back ; but some camels carry surprising loads and disconcert the prophets. The strength of a nation like this is an unknown quantity ; but it should not be made to bear unnecessary burdens. Even unreasoning apprehension is of value when it springs from an instinct of thrift that is always averse to the waste of resources, however inexhaustible they may appear to be.

SECRETARY CARLISLE'S PROPOSAL to the New York banks to issue five per cent. ten-year bonds authorized by the Act of 1870, as security for a loan of $50,000,000 in gold, in order to obtain the supply of gold necessary to maintain the parity of the gold and silver dollar (although declined by the New York banks) indicates, first, that the Administration believes it has authority to sell bonds, and also that in selling them it can adjust the higher rates allowed in the Act of 1870 to the present borrowing power of the Government. In the March number of the JOURNAL, in speaking of the responsibility of the Secretary under the Act of 1870 authorizing the sale of bonds, it was said: "It is true the interest specified in the law of 1870 was at the rates of five, four and a half and four per cent., and the periods of the bonds to be issued were also fixed; and the Secretary, authorized to issue bonds at four per cent., to continue thirty years, would incur no censure if he issued bonds for a shorter period at a lesser rate of interest." In offering fives to run ten years on a basis of three per cent. the Secretary has followed the directions pointed out by the JOURNAL. A five per cent. bond to run ten years certain should, to be equivalent to a *three per cent.* rate, be sold for $1.1733, or nearly 117¼. But, if the principle that the greater authority includes the less be once admitted, why not at once issue the bonds at three per cent. redeemable after five years?

What investors want is certainty, and experience has shown that when the Government has a surplus it becomes easy to save interest by the purchase of bonds in the market, by watching the proper opportunities. A five per cent. bond redeemable at the option of the Government, assuming it to remain unpaid for one year, would be worth on a three per cent. basis about 1.02. But if any quantity were issued it is certain they would not be redeemed, the revenues of the Government continuing as they are, in less than an average of five years. The price of a five per cent. bond, continuing five years on a three per cent. basis, should be 1.09¼. The profits to banks on taking out circulation upon these fives on a three per cent. basis, having ten years to run at 1.1733, would be about one per cent. If they have five years to run, the premium being smaller, the profits on circulation would be larger, a little over one per cent., and a calculation will show that circulation based on the optional bond would bring a still larger profit. But there is no knowing in advance that a five per cent. bond for any term of years could be sold upon a three per cent. basis. The credit of the United States is not as good as it was, and the desire to sell will reduce the borrowing power of the Government. There are easier ways of maintaining the parity of the two metals, and much less expensive than selling bonds.

FOR NEARLY TWENTY YEARS THE PROCEEDINGS of the American Bankers' Association, at its annual Conventions, have been without an index; but at length, under the direction of its energetic President, Mr. William H. Rhawn, an index has been provided. The eminent Mr. Thomas Carlyle, in searching for material for his History of the French Revolution, once used some such language as the following: "Those dreary old records: they were compiled at first by human insight in part, and in great part by human stupidity withal; but, then, it was by stupidity in a laudable, diligent state, and doing its best, which was something. And, alas! they have been now elaborated, by human stupidity, in the idle or wooden state. The sound of it is not a voice; it is a widespread, inarticulate mumblement issuing as if from the lake of eternal sleep."

It is in these words the distinguished author describes the development of records of the past from their inception to their index. Alas! as he would say, too severe; for how can contemporary chronicles of events be useful to posterity without an index? Another has said: "There never was a good index; but some are not so bad as others." This particular one was needed, and it appears to be complete as far as it goes. There is but one serious omission, which, no doubt, can be remedied when this edition is exhausted. The proceedings of the Association have always contained a list of the bankers who each year attended the Conventions. It will be quite easy to add an alphabetical list of these delegates, with the dates of the Conventions attended by each one. This will afford many a pleasant reminiscence to the older members of the Association.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

I.

LOANING THE BANK'S MONEY ON COMMERCIAL PAPER.

"When you doubt, abstain!"—Zoroaster.

It needs but little argument to show that the success of a bank is more largely dependent upon the good judgment of its officers in extending credits than upon any other single factor—leaving out of consideration that of absolute fraud. Good management in other branches of the business will undoubtedly have an influence upon the general result, but the largest source of a bank's income is that derived from interest and discount, while its heaviest losses are almost invariably those resulting from injudicious or unfortunate loans. How to loan the bank's money safely and advantageously is therefore the most vital question confronting its officers; and, speaking broadly, success in this direction can be attained only by the exercise of *good judgment* based upon *sufficient information.*

As to the former (the possession of a sufficient degree of natural aptitude being presupposed), it is the result of, and is developed by, experience and study.

While it is, no doubt, comparatively easy, in the light of long and varied experience, to frame a salutary code of rules to be observed in loaning money, yet it is practically impossible to invariably enforce them, and perhaps nowhere are the tact and good judgment of a banker more severly tested than in determining when and to what extent the enforcement of such rules may be safely relaxed. If these invaluable mental qualities could always be exerted in connection with full and accurate data, losses from loans on commercial paper would indeed be rare.

Few business failures have ever taken place that did not give some premonitory symptoms of approach, which, if heeded, would have prevented much loss. The careful study of the lessons which such events bring with them is of the utmost value in determining those sound principles upon which good judgment must rest.

By far the greater part of losses incurred by banks on commercial paper could have been avoided had their officers been possessed of sufficient information regarding the applicants at the time the loan was asked for; and, as far as mere rules go, one of the most highly important that can be laid down is that under no circumstances should credit be extended by a banker unless he is in possession of information sufficient in extent, definiteness and probable accuracy to reasonably justify the step. Unless this can be obtained it is far better to occasionally lose what might have turned out to be desirable business than to risk making a loss regarding which harsh criticism would not be underserved. Of course even the most carefully gathered information will sometimes be misleading, and in the course of time losses may and probably will occur, but these will largely lose their sting if they have been incurred only in spite of the exercise of every precaution which prudence could have dictated.

CREDIT DEPARTMENT.

In every bank the establishing of a Credit Department is advisable, and in institutions of considerable size it is really indispensable, otherwise the business of making loans is more or less haphazard, and items of information incidentally obtained, which would be of great future value if systematically recorded, are lost to memory. Other things being equal, it is the bank officer who is best informed in regard to applicants for credit, who will be most successful in loaning the bank's money.

I will here outline a plan for compiling and preserving information regarding those whose paper the bank either already holds or is likely to hold, which has been successfully tested, and which from its simplicity, elasticity, and susceptibility to any desirable modification, will be found admirably adapted to its purpose, whether it be used in a small bank, with regard to a few hundred names, or in an institution where the number of references will run up into the tens of thousands.

The fundamental idea is, that upon a piece of stiff card-board certain headings are printed which are then filled up after the manner shown in accompanying illustration, which is slightly reduced in size, while statements of assets and liabilities, commercial agency reports, newspaper clippings, detailed memoranda, or any similar papers having a bearing upon the subject, can be attached to the back of the card by two rubber bands. The face of this "Information Card" thus gives at almost a *single glance*, a condensed summary of what is known by the bank regarding the personal and business standing of the person or persons in question, while the larger part of the details will generally be found in the various papers usually attached to the card. These cards are then arranged alphabetically, either in "compressor files," or in boxes or drawers, and to facilitate finding any desired card almost instantly, it will be found desirable to intersperse at the needed intervals, pieces of *colored* card-board of the same width as the information cards themselves, but about one-quarter of an inch higher, on the projecting tips of which can then be marked the desired subdivisions (somewhat on the plan of the indexed margins of a "Graves" index) for example, "Bi to Bl,"—"Bo to Br," etc. Modifications of this plan suitable for almost any conceivable volume of business, will readily suggest themselves. For example, the interior of a light fire-proof safe, of the necessary dimensions, can easily be fitted with either drawers, or compressor files. Especially if used with the latter, a convenient size for such cards is about 4¼x9 inches. If intended to be placed in drawers, it would probably be better to have the head line (giving the name) placed on the side instead of the top.

Should any card become completely filled with memoranda, it can either be torn up and a new one substituted giving the latest facts, or, if it be desired to keep a history of the changes which have taken place (and a perusal of such history in the light of later events is often very instructive), the new card can simply be slipped over the old one and held in place by the two rubber bands. Cards referring to names no longer in use can of course be removed in an instant, while new ones can be inserted in the proper places just as readily.

If this system is perfected so that cards are on file containing all obtainable essential information regarding the standing of all depositors in a bank (any of

whom may at any moment apply for a credit); of all outside parties whose paper is held by it—and, furthermore, as far as practicable, of those whose paper is likely to be offered, the bank officers will then have at their command an aid in promptly and correctly deciding upon applications for loans which is simply invaluable.

MERCANTILE AGENCY REPORTS.

In the larger cities and towns banks should avail themselves of the advantages of these reports, by becoming subscribers to at least one reliable mercantile agency. This service has become very much perfected of late years, and after making all due allowance for the inherent defects of the system, it is still a useful adjunct to a banker when loaning money, and much valuable information is obtained from this source. And the practical benefit to be derived from reports so obtained will be much enhanced by having them filed so as to be available for instant reference, either by the method hereinbefore indicated or in some similar way.

STATEMENTS OF ASSETS AND LIABILITIES.

Under this caption I will not attempt to say much in supplement to the full and exhaustive treatment which the subject has received at the hands of Mr. J. G. Cannon, in the admirable paper published in the JOURNAL of last January. His suggestions with regard to the analysis of such statements cannot fail to be of profit to any banker who peruses them. It would hardly be possible to improve on the several "Forms of Statement" therein presented; and, if it were always and everywhere feasible to exact from applicants for loans such statements duly filled up and signed, the difficulties in the way of accurately determining the value of negotiable paper offered to a bank, would be greatly diminished, and a long stride would be taken towards making banking one of the exact sciences. But, while thoroughly believing that everything possible should be done that will tend to expedite such a desirable consummation, and while endorsing most heartily all that Mr. Cannon states in regard to the abstract right of a bank to demand such complete and accurate statements, yet I would submit with all due deference, that, dealing as we must with conditions as they actually exist, and having to contend with keen competition and with long established local customs and predjudices, it is at present impossible in many sections of this country to always obtain such full reports, and any attempt to invariably exact them would result in making it impossible for the bank to find adequate employment for its surplus funds. One of the problems therefore which the prudent banker is called upon to face, is to avoid alike the Scylla of loaning on vague and insufficient information, and the Charybdis of losing desirable business by inflexibly insisting upon exhaustive statements. The most difficult concerns to handle in this respect are those of long establishment, high reputation, and reputed wealth, who are in all probability perfectly good, whose business is valuable and would be eagerly sought after by competing banks, and whose feeling of independence is naturally heightened by a knowledge of these facts. But, even in these and similar cases, the exercise of good judgment and tact will generally bring about a satisfactory result.

Where a statement of the applicant's financial condition has been obtained, or other sufficient data are at hand, the banker's best mental qualities will be tested in weighing and analyzing the information at his command. Few applications are presented in which a careful scrutiny will not reveal some undesirable features, some elements of risk; but if all such were at once rejected a bank would not secure enough business to enable it to exist, and hence the necessity for cool judgment in determining the relative value of the various conflicting considerations.

In analyzing a statement of assets and liabilities, it should be mentally "boiled down" by making the reductions and allowances which a knowledge of human nature in general, and of the personal characteristics and line of business of the applicant in particular, would suggest should properly be made in determining his actual net capital. And in this "boiling down" process (which, by the way, need not be applied to the liabilities, for they *never* shrink away, but, like the poor, we have them always with us), the convertibility and realizable value of the assets in case of failure, cuts a most important figure. In the paper above alluded to, Mr. Cannon quotes a table in which the liquidating values of book accounts and of merchandise are given in five prominent lines of trade, the results ranging from 40 to 80 per cent. (and averaging about 66 per cent.) in the former category, and from 65 to 95 per cent. (and averaging about 76 per cent.) in the latter. These figures are probably based upon results in a specially favored community but I cannot help thinking that the results of the average forced sales throughout the country, with their heavy incidental expenses and usually wasteful management, would fall considerably below those above quoted.

In taking such "boiled down" net worth as a basis for intended credit, it must not be lost sight of that the proportion which it bears to the volume of business carried on, is a most important factor. A considerable percentage of commercial disasters will be found to be directly traceable to the very prevalent fault of "spreading out" and attempting to do too much business for the capital at command.

The ratio between the average monthly sales and the amount of accounts receivable should be noted, for it will generally give an indication of whether the applicant is lax or otherwise in the matter of extending credits and making collections.

LOANS TO CORPORATIONS.

In view of the great increase which has taken place in the number of corporations during the past few years, it may not be inappropriate to draw attention to some points connected with them. It must be constantly borne in mind, especially in extending long credits, that the personal responsibility of stockholders is not a reliable factor to use as a basis for granting accomodation, and that the wealthy and perfectly responsible stockholders of to-day, may to-morrow sell out their holdings to men of a very different calibre. This is particularly true in the case of new and untried concerns. It is the actual paid-up capital and surplus, if these be unimpaired, that should be mainly looked at in connection with the nature, extent and prospects of the business engaged in, unless as, is often advisable and even necessary, the direct personal indorsement or guaranty of some of the wealthier stockholders be secured.

It is also of primary importance to know, when making a loan to a corporation, that the latter is unquestionably bound. Examples are not wanting where, at the instance of some dissatisfied stockholder, corporations have availed themselves of the most hair-splitting technicalities in order to avoid a liability. In a recent California case an apparently trifling informality in the calling of a meeting was considered sufficient to vitiate the entire proceedings, and as such meeting had been convened for the purpose of empowering certain officers to execute the corporation's note, it was held that such power had not been properly delegated and that the corporation was not bound by such note.

LAW OF COMMERCIAL PAPER.

It is eminently desirable, and in fact essential, that the principal officers of a bank should be familiar with at least the salient points of the law of negotiable instruments and especially with the statutes of their own State relating to this subject. The laws in regard to some particular point may be in some States diametrically opposed to those on the same subject in another State. In some, a note containing a clause providing for an attorney's fee, is a negotiable instrument; in others it is not. In some, the giving of a check operates as an assignment of funds, in others it does not; while in still others the question has not yet been adjudicated.

Questions of more or less intricacy and importance are constantly arising with regard to the acquisition of commercial paper, the liability of indorsers thereon, the rights and obligations of holders of bills of lading, the treatment of collaterals in general, etc., which must be decided, instantly, and it is not alsways possible to have the bank's attorney at one's elbow. It may be incidentally remarked that the excellent banking journals of the day are of the highest value to bankers in this respect, inasmuch as they furnish prompt reports, from all parts of the Union, of court decisions involving points of interest in banking, while discussions on practical questions of law arising in the business are being constantly carried on in their columns.

LOANS ON COLLATERALS.

In almost every banking community there are certain bonds and stocks which are largely used for purposes of collateral security, and a competent bank officer, therefore, will keep himself advised as to the actual and prospective value of such securities.

It goes almost without saying, too, that he should be well informed in regard to the prices and peculiarities of such leading staples as are handled in his particular community, not only because he will probably be asked to loan directly upon them, but also because the prosperity of those whose paper he holds or is likely to have offered him, will be largely influenced by the general condition and tendency of the market for those articles principally dealt in by them. Our immense products of grain, cotton, hops, wool, fruit, lumber, etc., are marketed to a great extent through the intervention of banks, and that the buying of paper secured by these commodities may be a safe and profitable branch of a bank's business, necessitates, on the part of the officers of the latter, a considerable degree of familiarity with the articles upon which advances are being made, as well as the possession of such accurate knowledge in regard to warehouse receipts, insurance covering notes and policies, shipping documents attached to documentary bills of exchange etc., as would lead to the timely detection of any defects or irregularities which might impair or even vitiate the value of such papers as collaterals.

Whenever practicable, direct loans against collateral security should be made only upon note forms carefully prepared by a competent attorney, as it is frequently of the greatest importance, in the course of events, that the conditions embodied in the note providing for applying the articles pledged to the securing of other indebtedness, for making good any possible deterioration, for selling in case of need without awaiting the slow procedure usually required by law, etc., should all be so drawn as to afford the utmost possible security to the bank.

MISCELLANEOUS SUGGESTIONS.

No prudent bank will omit the precaution of at once converting a blank indorsement on paper purchased by it, into a special indorsement to itself, so as to guard against the fraudulent negotiation of such paper in case of its loss by theft or otherwise.

Instances are unfortunately coming to light occasionally, where, after a more or less long continued course of apparently straight dealing with a bank, persons have abused the confidence thus gained, and have negotiated fraudulent paper or collaterals. In making loans, therefore, the danger of forgery is one that should not be lost sight of, and if it be thus borne in mind, there will usually be no difficulty in determining whether or not this danger actually exists in any particular case.

It should be made an invariable rule to periodically "look up" (say once a year) those leading direct and indirect borrowers whose dealings with a bank extend over a considerable time. It sometimes happens that the affairs of a concern will be very carefully investigated and found to be satisfactory, when it first commences its transactions with a bank, and that upon the strength of the standing thus established such concern will enjoy credit or discount accomodation for years, until some day the lightning strikes, and an examination then shows that a slow process of "dry rot" has been going on, which proper vigilance would have discovered long before. Even if nothing more can be done, it is at least easy (especially with the information card system hereinbefore described) to compare from year to year the commercial agency ratings of leading borrowers, to note the changes, and, when these indicate retrogression, to searchingly investigate the cause. So, too, a critical examination of collaterals on hand should frequently be made for obvious reasons.

It should be easy for a bank to definitely ascertain whether or not an applicant for credit is already a borrower at some other bank or banks in the same community, and in this respect banks should be more frank with each other than is usually the case. Many examples are on record where the sudden collapse of a concern has revealed an extent of indebtedness at different banks that was certainly utterly unsuspected by those institutions before the crash came. It would seem, therefore, that it ought to be feasible to formulate some plan by which the banks of any one city would furnish reciprocal information as to the indebtedness to them of any party inquired about. With such a system in force, any attempt on the part of a borrower to obtain an undue amount of accomodation at different banks would be effectually frustrated, to the extreme benefit of all concerned. A somewhat similar plan has long been in operation in several wholesale trades in the Eastern States and has been found very efficacious in detecting misrepresentations and in repressing attempts to obtain excessive credits.

CONCLUSION.

In the limits of space and of scope assigned to this paper it is manifestly impossible to even casually discuss many interesting cognate branches of the subject—such as the best methods of caring for loans and collaterals while in the bank's custody, the prevention of errors in maturity dates, the best forms of Registers, Ticklers, Collateral Records, and other auxiliary books, the importance of and advantages to be derived from the employment of a system that will show at a glance the extent of any given borrower's liability as principal or as indorser—and many other allied topics. But enough has been said, I trust, to be of service to some of the younger members of the profession and to emphasize the importance of the principle that the bank's money should never be loaned except upon such a knowledge of the applicant's standing and of the circumstances surrounding the loan, as would thoroughly warrant the procedure even in the light of subsequent searching critisism. The strict observance of this rule may not bring about a complete immunity from losses, but he who firmly adheres to it can hardly fail to achieve success, and will be buoyed up amidst the cares and responsibilities which fall to his lot by the comforting reflection that he has conscientiously done his duty.

II.

NEGOTIABILITY—CHARACTER.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

In determining the value of paper offered for discount it is necessary that two primary matters should be thoroughly ascertained: first, the negotiability of the paper offered; and, second, the character of the party offering it.

By paper it shall be understood to embrace bills of exchange, drafts, promissory notes, or any instrument of credit unaccompanied by collaterals of any character; for the value of collateral paper is determined almost wholly by the value of the collateral itself; and the value of the collateral is ascertained, with few exceptions, by the market reports, which are public records.

The instrument itself should be thoroughly examined when the credit is under consideration. It is of prime importance that the assets of a bank are bankable assets—that is freely negotiable. More especially will this have reference to bills payable in different States with diverse laws; for the law governing the paper is the law of the place of its payment. As a precautionary measure the genuineness of the signatures appearing on the paper should be proven. A very good method is to notify the parties at once that such a piece of paper has been presented with their names as maker, endorser, etc., soliciting an acknowledgment. This measure would apply more particularly to paper purchased from others than dealers with the bank. Again, in some States, a sealed instrument is not negotiable by mere delivery; in such cases its value as a bankable asset is greatly impaired. Further, the instrument may be issued by a corporation or limited partnership and it is essential that the paper should be executed by the persons who are legally empowered to create it. The importance of the negotiability of the paper must not be slighted, for that paper which is not freely negotiable (irrespective of the security back of it) is not a desirable item in the assets of the bank and should be rejected. That class of paper can be better cared for by Trust companies or other financial institutions.

APPLICANT'S CHARACTER MUST BE CONSIDERED.

The negotiability of the paper having been satisfactorily ascertained, the second proposition becomes paramount. The character of the parties to the paper is the absolutely needful matter to be ascertained, for all other considerations concerning the persons are subsidiary. The man or firm may have abundant wealth and resources to discharge their respective obligations but unless they also possess a character for integrity and truthfulness their paper should never find its way into the resources of a bank striving for the greatest prosperity. The elements of danger are too pronounced for a successful banker to disregard. Nothing is clearer than the course which the bank officer should adopt.

To determine the character of the party or parties to the paper is the *onus* that rests on every banker in determining the value of the paper. The correct character having been ascertained the *quantity* of paper may then be regulated by the subsidiary matters of capital, net worth, ability, character of business, etc. Further, the correct character having been established to the satisfaction of the banker, single-name paper differs only from double-name paper in the ratio of paper liability to capital or net worth. For instance: A and B have equally good characters for probity and ability: the banker may be perfectly correct in accepting A's single-name paper for $20,000 and refusing B's double-name paper for more than $10,000 and at the same time refuse C's paper for $1,000, or any amount, though the latter may have several times the net worth of either A or B, but whose character for integrity was very faulty or whose reputation accredited him with paying nothing that he would not be forced to pay. The rule which each banker should fix in his business is "ascertain his character then regulate the amount or extent of his credit." Would a correct banker have faith in the balance sheet of a merchant whose character was unsound?

How this character shall be determined now becomes vital. To a prudent banker with the average shrewdness nothing will supersede a personal acquaintance with the customer; a knowledge of his antecedents and family; a knowledge of his habits, his manners; in a word, a view of his private life. This personal acquaintance should be supplemented with the confidential opinions of his friends, business associates in other lines, and his business competitors. These opinions could be obtained by means of blank forms stating pertinent questions which will suggest themselves to all bankers. The replies should be taken in conjunction with the recorded opinion of the banker and filed for future reference. Providing no material disparity exists a very fair and correct gauge of the character of the applicant should be deduced.

PERSONAL PREDILECTIONS TO BE CAST ASIDE.

Purely personal prejudice should not permit a banker to underestimate, nor personal friendship overestimate, a credit rating. Of course nothing lower than a good character should be further considered, but having been established then the statements of resources and liabilities should be investigated, and the value of the separate items estimated to determine the limit of his line of discount. It may be argued that a personal acquaintance cannot be had with all the customers of a bank seeking discount. In the larger cities it may be impossible. Then this knowledge must be obtained from those who have it, capped of course with a personal introduction. In this latter case the subsidiary matters above stated assume more importance, but never equaling a knowledge of character either first hand or second hand.

No harm, but possible good, may come from a thorough verification of the statements furnished by the applicant of acceptable character, but no amount of verified statements should compensate for a doubtful character.

III.

GOOD INTENTIONS NOT A SUFFICIENT COLLATERAL.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

Every banker who is properly interested in his business is familiar with the blanks used by our commercial agencies to indicate to their correspondents the line of inquiry to be pursued. All practical business men, whether bankers or not, can readily see the importance of such questions as those contained in the blank forms submitted by Mr. Cannon with his article in the January JOURNAL OF BANKING. These forms, modified to suit the various opinions of different men, are used by most of our city banks and by many large mercantile houses. There is little, therefore, to be said about the particular questions which should be asked or the relative value of such questions when answered.

What amount of capital is invested, of what does it consist, by whom furnished and whether any of it is borrowed by the party so furnishing it, are questions so manifestly important that even the careless could hardly omit them. But there are collateral questions which are often of more importance than these direct ones. If the firm is a new one, we should learn whether its members made their own money or received it by gift or devise; whether there appears to be an opening for the particular business (not necessarily our individual opinion as to whether there are already a sufficient number engaged in that business, but whether the business itself is one likely to be profitable in that locality); what are the special qualifications of the managers. Whether experienced in this particular line or beginners, and if beginners, their general qualifications for business.

These collateral questions and apparently remote bearings should be carefully studied in order to determine the probable success of the business. Successful men pay their debts because they are more successful by it; unsuccessful men evade the payment of their debts because *they* are more successful by failing to pay. Very much more depends on success than on individual opinions of honesty. I would not be understood, however, as discounting well-earned reputations for honesty and uprightness, but desire merely to impress the oft-attested fact that honesty, however sincere, cannot pay debts from a depleted treasury.

IMPORTANCE OF COMPARATIVE STATEMENTS.

If the firm has been in the same business at the same place for a number of years, comparative statements are important. They show not only the growth or decadence of the business but also the comparative amounts due to the firm and owing by it, and by a little investigation, what debts in the first statement remain unpaid in the second. If the firm or its leading spirits were engaged in business elsewhere, their success or failure in the former location is important, as well as the probable effect the change of environments will have. The business views and natural dispositions of men are not to be despised. The writer has been a farmer, school teacher, merchant, lawyer and banker, and was never a conspicuous success nor a dismal failure in any of these positions. The reason is clear: he never took the initiative in any radical departure from well-known business principles and policies.

There are two extremely dangerous kinds of loans: the one made on opinions of honesty in the borrowers, and the other on accommodation paper. Your customer may be perfectly good for his own paper and yet be ruined in the midst of prosperity by accommodation indorsements. You are pleased with the success and promptness of the firm doing business with you, but know nothing, perhaps, of the condition or methods of business of the one for which your customer indorses. It is well to have either an explicit promise not to give or exchange endorsements or insist on knowing for whom your customer endorses. There should be a mutuality of interest between banks having customers who endorse for each other, and such a confidential relation regarding their accounts and the extent of accommodations afforded them as would tend to the mutual protection of both banks. Many good and otherwise solvent firms have been forced down by this blighting curse, and banks have lost more money on this class of paper than perhaps on all others combined, excepting, possibly, its twin sister—loans made on friendship's conceptions of honesty unsupported by assets.

RELATIVE VALUE OF SECURITIES.

Real estate as an asset is regarded with little favor by banks because of the slow process necessary to convert it into money; but many a bank has been saved from disastrous losses by having some of old *terra firma* as an underlying security, and in cases of State and private banks, where other assets of the borrower are not quite satisfactory but you nevertheless desire to extend accommodations, a lien on good real estate, as a mud-sill to support the lighter fabric of commercial credits, might prove quite valuable to you in case of failure, or a great blessing to a deserving business in its honest struggle for a solid financial footing.

It is hardly necessary for me to say that notes taken by a retailer for goods sold and consumed by his customers are a very unsatisfactory character of paper. And yet in some portions of our country, where crops are not diversified and there is a system of tenantry wherein the landlord furnishes the supplies and retains a lien on the crops, this paper, if judiciously selected, is reasonably secure. This leads us to notice that a class of paper not at all satisfactory in one section may, under dissimilar conditions, be fairly good in other localities. Much, then, depends on the customs of particular communities and the peculiar circumstances and economic conditions which produced such customs.

CREDIT DEPARTMENT OF CLEARING-HOUSES.

In small towns the banker, as a rule, is personally acquainted with all his customers; their antecedents, characters, ability, methods of business, and even their domestic life, and is in very good condition, barring the bias of personal friendship, to determine where to extend accommodations. In our larger cities conditions are different. In addition to such information as may be gathered through commercial agencies, brokerage firms and the usual investigations of the individual bank into the financial condition, character, habits and ability of customers, I should suggest a thoroughly competent credit agent whose duty should be to superintend a credit department of the clearing-house association. An indexed credit book should be opened and kept at the clearing-house containing detailed information, as accurate and full as possible, of each customer of all members of the association and any other firms who sell their paper in the open market. For the purpose of readily obtaining this material, each member of the association should furnish the credit agent all the information he has regarding its various customers which seems at all pertinent to the inquiry.

What particular banks individual firms patronize, not being material, will not appear on the credit book.

Having gotten under way and all present customers registered, each member of the association should be required to furnish detailed statements of new customers as they open accounts; and for this purpose a uniform blank should be used with space for such additional statements as seem pertinent in individual cases but which are not covered by the general list of questions.

The agent should be vigilant in keeping his credit book properly revised, and to this end all changes of firms or relative conditions should be reported to him at once by that bank whose customer such firm is. He should also make personal investigations when requested so to do by any member of the association.

With the answers of a firm to all the questions which the ingenuity of man can invent for eliciting information from another, and the investigation of the bank, supplemented by the reports of commercial agencies, and the brokers offering the paper, and the special inquiry of the association's credit agent, it seems that every avenue of investigation would be exhausted, and that the paper of any firm whose standing was satisfactorily sustained before such searching inquiry would surely be as safe as anything can be which is not an immutable verity.

TACT AND INTUITION REQUISITE.

It sometimes happens that you wish a special investigation into the habits, success and present financial condition of an old customer without disclosing your solicitude to him. You are not willing to accept the meagre information you are able to obtain from the commercial agencies, but will find the clearing-house agent the very best means of relieving the embarrassment and furnishing exactly the knowledge you desire.

I deem it unnecessary to consume the space of the JOURNAL or the time of its readers in discussing the questions that should be asked of customers or the value of their answers. The questions to be propounded depend upon conditions that are not uniform, and the value of answers depends upon the men giving them and varying facts of a collateral nature which the writer cannot know. Aside from the formal statements to be signed by the customer, and which are familiar to all reading bankers, the nature of the inquiries and the value of answers must be left to the tact and intuition of the inquirer. KATYDID.

KENTUCKY.

REPEAL OF THE SHERMAN LAW.—At a meeting of the New York Chamber of Commerce June 1, J. Edward Simmons, President of the Fourth National Bank, introduced this resolution :

"Resolved, That it is the opinion of this Chamber that the Sherman Silver law should be repealed by Congress at the earliest possible date. That it is apparent to all that under the operations of said law great injury is being done to the financial and commercial interests of our whole country, and that confidence will not be restored until said law is repealed."

Mr. Simmons made a speech in support of the resolution, and the adoption of it was then voted unanimously, with instructions that copies be sent to President Cleveland and Secretary Carlisle.

POLITENESS AMONG BANKERS.

The last man hung in England for forgery was Henry Fauntleroy, the banker, probably not the ancestor of little Lord Fauntleroy. He was the trustee of an estate, and forged the names of his co-trustees to the power of attorney necessary to enable him to sell the consols belonging to the estate. He finally, in this way, defrauded the Bank of England of £360,000, or over a million and a half of dollars. His own claim was that he used the proceeds of his forgeries to sustain the credit of the banking firm, in which he was a partner. It is highly probable, however, that a taste for entertaining on a large scale had much to do with the difficulties into which he fell. His acquaintances were of the kind who profit by the extravagance of others, who believe in the adage that "fools give dinners and wise men eat them;" but who show little compassion for their entertainers when circumstances alter. It seems that at the elegant dinners given by Fauntleroy, some very choice curaçoa was always a feature. At Newgate, the night before his execution, three of his quondam friends visited the cell of the condemned man. They were retiring, when one turned back, and with great apparent earnestness and solemnity said: "Fauntleroy, you stand on the verge of the grave. Remember the text, my dear man, that we brought nothing into this world, and it is certain we can take nothing out." Then, after a pause: "Tell me, as a friend, I beseech you, where did you get that curaçoa?"

In connection with Fauntleroy's failure, a most curious adventure happened to a well-known eccentric character in London—Ex-Sheriff Parkins. He had deposited £20,000 in exchequer bills with Fauntleroy's banking house, and a few days before the discovery of the forgeries, and consequent failure, he dreamt that he called for his money and that he could not obtain it. The next morning, much worked on by the vision, he went to the bank and demanded his deposits. Fauntleroy confirmed the ex-sheriff's suspicions by evasive words and actions, seeking to retain the deposits; but finally, seeing the depositor inexorable, turned over to him a bundle of exchequer bills amounting to £20,000. He proceeded to deposit them at another bank, and there it was found that the bills bore different numbers from those that had been deposited at first with Fauntleroy. The ex-sheriff was exceedingly tickled at what he considered strong evidence of his sagacity in detecting the probable embarrassment of his former banker, and began also to abuse Fauntleroy in a characteristic manner.

The proprietor of the bank where he was re-depositing the bills then remarked that although happy to receive the deposit, they could not listen to any calumnious remarks against any other firm. The ex-sheriff, as was not unusual with him, got into a towering rage, and said they couldn't have his money, unless they listened to his story. Apparently, he did not find any other banker willing to listen to him, for thereafter he carried the bills in his pocket for some time. Soon after he presented himself as a candidate to represent a borough in Parliament, and when his opponent asked him who he was and who introduced him, he replied with great violence of action: "I'll show you who I am, and what are my recommendations." He struggled to pull out his twenty-thousand pounds to astonish the natives, when suddenly his jaw dropped, he stood as one transfixed—the pocket was empty. After a good deal of hard swearing and vengeance vowed on the townspeople, if the money was not returned, the package of bills was found on the ground near the platform on which the ex-sheriff had been exerting himself. This led him to again seek a banker, and he had at length the good fortune to deposit them with one who soon after failed, and the money was finally lost. This time the gods apparently deserted Mr. Ex-Sheriff Parkins and sent him no warning vision. The moral of this tale if there be one—is, you must not abuse one banker to another.

National Bank Statements.

We desire to interest the readers of the JOURNAL in a general examination and criticism of National bank statements. We submit for that purpose the statement of a National bank supposed to be located in a city where the National banks are required to carry a reserve of twenty-five per cent., one-half of which may be carried with an approved reserve agent. Criticism is asked on two separate points :

First. As to the form of National bank statements generally. In what way can the present published form be improved? What are its defects, and what are its good features?

Second. What can be gathered from the published statement as to the condition of the bank under consideration? What does the statement show, and what does it leave untold? We should particularly like to have our subscribers calculate the percentage of reserve shown by this statement. It may be that the method of arriving at this percentage is differently understood by different bankers. It will be noted that the column for cents is purposely left blank in order to facilitate calculations :

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

NATIONAL BANK—LIQUIDATION—APPOINTMENT OF RECEIVER.

Supreme Court of Kansas, April 8, 1893.

WATKINS *vs.* NATIONAL BANK OF LAWRENCE *et al.*

A National bank may go into liquidation, and be closed, by a vote of its shareholders owning two-thirds of its stock; and this right may be exercised although it may be contrary to the wishes, and against the interests, of the owners of the minority of the stock.

A party who, with full knowledge of all the steps taken in placing a bank in liquidation, receives and retains a dividend paid by the officers in control of the liquidating bank, will not be heard to deny the validity of the liquidation.

The appointment of a Receiver rests largely within the discretion of the Court, and before it will take the property and business of a liquidating bank from the control of the directors, into its own hands, upon the application of a stockholder, it must appear that the danger of loss or injury to the rights of the plaintiff is clearly proved, and the necessity and right for the appointment of a Receiver free from reasonable doubt.

The Court found upon testimony, somewhat conflicting, that the directors of the liquidating bank were acting with reasonable diligence and economy in closing the business of the bank, and declined to appoint a Receiver. *Held*, upon an examination of the testimony, that the finding and judgment would not be disturbed.

Proceedings by J. B. Watkins against the National Bank of Lawrence and others to appoint a Receiver for the bank, and close up its affairs. There was judgment refusing to appoint a Receiver, and plaintiff brought error.

JOHNSTON, *J.:* This proceeding brings up for review a ruling of the district court of Douglas county, refusing to appoint a Receiver for the National Bank of Lawrence, which was in process of voluntary liquidation. The appointment of a Receiver to wind up the business of the corporation seems to have been the sole purpose of the action. It was brought by J. B. Watkins, a stockholder of the bank, on November 15, 1889, against the board of directors, who were duly elected in May, 1889, and who had been in control of the bank since that time. In his petition he says that the bank was organized in 1866 with a capital stock of 1,000 shares, of the par value of $100 each, and that, for several years prior to the commencement of the action, he was the owner of 261 shares of the stock. He further alleges that on June 17, 1889, at a meeting of the stockholders, a resolution was adopted, by the necessary two-thirds of the capital stock, to place the bank in the process of voluntary liquidation, to take effect on the 29th day of June, 1889. He adds that the directors are not acting in good faith, nor endeavoring, with due diligence, to wind up the affairs of the bank for the benefit of the stockholders, and that his interest as a stockholder will suffer great loss and injury if the assets of the bank are left in the possession and under the control of the board of directors. In his petition are allegations that the directors were formerly interested in another bank, and that they had purchased the controlling interest in the defendant bank in order to obtain possession of its business and good will, and to deprive the plaintiff and other minor stock holders of the value of their stock in the defendant bank; that, while the purchase of the stock was in the names of individuals, it was really intended to be for the rival bank, and for its benefit and advantage; but that they were not the owners of the stock when the bank was placed in liquidation, and therefore it is argued that they had no lawful right or authority to act as the directors of the bank or otherwise. The defendants denied the charges of bad faith, and alleged that they were fairly and honestly administering the affairs of the bank, and were closing up its business with diligence, discretion, and honesty. A large volume of testimony was taken with reference to their conduct, in which there is considerable conflict, and upon which the Court declined to take the property from the management of the directors, and place it in the hands of a Receiver.

There is some testimony, and the arguments of counsel are largely directed to the claim, that the placing of the bank in liquidation was without authority, because the persons voting for the resolution were not the owners of the stocks voted; that the stocks so voted belonged to the rival bank, called the "Douglas County National Bank;" that the defendant directors, in whose name the stock was taken, really purchased the same in the interest of the Douglas County National Bank; and that as the stock was owned by the bank, and not by the directors, they were ineligible to the office of directors of the defendant bank; and that all their acts in relation to the defendant bank and its business were unlawful and void. These questions were not in issue in the court below, and are not open for consideration now. In his petition the plaintiff distinctly avers that the defendants were duly elected as directors, and "are still the duly-qualified and acting directors of said National bank." The truth of these averments is admitted in the answer, and hence the legality and qualification of these directors were not subjects for investigation in the district court, and cannot be inquired into here. Nor is the action of the stockholders, in voting to place the bank in liquidation, open to attack by the plaintiff. It is alleged in the petition and answer that the bank is in process of liquidation, and the plaintiff states that the resolution was adopted by the vote of persons "then holding in their names the necessary two-thirds of the capital stock of said bank." It appears that notice of this meeting had been given and the plaintiff participated in the meeting, and his stock was voted in opposition to the resolution. It was the right of these stockholders to place the bank in voluntary liquidation. The Act of Congress provides that any State bank may become a National association when the necessary two-thirds of the capital stock authorize the change to be made; and it further provides that "any association may go into liquidation, and be closed, by the vote of its shareholders owning two-thirds of its stock." (Rev. St. U. S. § 5220.) Parties who purchase stock in a National bank take it knowing that two-thirds of the stock of the bank may at any time vote it into liquidation. This right may be exercised although it may be contrary to the wishes, and against the interests, of the owners of the minority of the stock.

Besides this right of the majority to place the bank in liquidation, and the concession of the pleadings that it had been accomplished, there is another reason why plaintiff is precluded from questioning the right of the defendants in voting the bank into liquidation, or the validity of their action. It appears that since the liquidation began the directors in control have reduced some of the assets to money, and paid a dividend of 25 per cent. to each stockholder, upon the stock held by him, and that the plaintiff, with full knowledge of all the facts relating to the putting of the bank into liquidation, and to the acts of the defendants in its management and control since that time, accepted the dividend. By the receipt and the retention of the dividend, under these circumstances, the plaintiff recognized the validity of the liquidation, and the competency of the officers declaring it. He cannot be permitted to occupy the inconsistent position of repudiating the liquidation, and at the same time accepting the fruits of it.

The liquidation not being open to inquiry, there remains the inquiry whether the defendant directors were acting in good faith, and with reasonable care and diligence, in administering the assets and winding up the business of the bank. The court below, after a full inquiry, and upon some conflicting testimony, determined this question in the affirmative; and, upon an examination of the testimony, we see no good reason to disturb its findings and judgment. The appointment of a Receiver rests largely within the discretion of the court, and in a case of this kind the mismanagement of the defendants, and the danger of loss or injury to the rights of the plaintiff, should be clearly proved, in order to warrant the appointment. It is a power which should never be doubtingly exercised, and the court should hesitate to take the property and business of a corporation from the control of the directors, into its own hands, unless the danger of loss or injury is clear, and the right and necessity for appointment free from reasonable doubt. (Beach, Rec. § 5.)

Testimony has been offered tending to show that the defendants were conducting the business in such a way as to obtain the business for the Douglas County National Bank, which was formerly transacted by the defendant bank. The name of the Douglas County National Bank was changed to the Lawrence National Bank, and that bank removed its place of business to that which was formerly occupied by the defendant bank. On the other hand, it is shown that the change of name was made in April, long prior to the liquidation of the defendant bank; and, further, that they were paying the full rental value of the premises which they occupied. It is shown that the defendants offered plaintiff $150 per share for the stock, which had cost him $70 a share. The liquidation was begun on the 29th day of June, 1889, and it had only proceeded about four months when this and other actions were begun by plaintiff, which to some extent have interrupted the process, and delayed the completion of the adjustment. During the time that the directors have been administering the assets of the bank, they have declared a dividend of twenty-five per cent. on the capital stock. There is proof that they are acting with diligence and economy in winding up the affairs of the bank. Expenses of the management were reduced, unnecessary help was dispensed with, and, so far as appears, the full value of the assets disposed of, including the Government bonds formerly owned by the bank, has been realized. There is nothing substantial with reference to the change of name. This was permitted by the Comptroller, and can hardly be considered as a matter of consequence.

Much is said that the defendants permitted the other bank to appropriate the good will of the defendant bank without compensation, but there is little that is substantial in the good will of a liquidating bank. The plaintiff has a right to complain if, by any unlawful combination, the assets were not sold for their fair market value; but if the defendants were honestly administering the estate, and had obtained the fair value of the assets disposed of, including the rental of the building occupied by the defendant bank, the plaintiff has no reason to complain. After the bank is put into liquidation the duty of the officers in charge consists in the collection, and reduction to money, of the assets of the bank, and the equal and ratable payment of this money among the creditors and stockholders as their rights may appear. When it went into liquidation, it ceased to exist as a banking institution, and could no longer continue the ordinary banking business. It had no good will to transfer to another bank, beyond the benefits which might result from the leasing of the premises which it formerly occupied, and in which its business was being closed up. This might enhance the rental value of the building leased to the Lawrence National Bank, but manifestly the court below has found that $100 per month, the rent received, was a fair charge for the use of the building. (*Bank* vs. *Marshall*, 26 Ill. App. 440.) Plaintiff made an offer for the bank building, but it was coupled with a condition which made it unavailable. He proposed to give $55,000 for the building, and complains that it was not accepted. His offer contemplated the giving of immediate possession, but existing contracts with parties who were occupying portions of the building precluded an acceptance. The defendants endeavored to sell the building to the plaintiff, and to arrange the terms of sale so as to protect the rights of parties under these contracts, but plaintiff declined to accede to the conditions proposed. The charge of mismanagement will hardly lie against the defendants for their action in respect to either the sale or lease of the building, nor in their refusal to accept any of the propositions of the plaintiff. Neither can we say that after a review of all the evidence, that a case was made out which required the appointment of a Receiver. The judgment of the Court will therefore be affirmed. All the justices concurring.

PROMISSORY NOTE—STIPULATION FOR ATTORNEY'S FEE.

Supreme Court of Oregon, April 10, 1893.

CHARLES E. BERM *vs.* G. KUTZSCHAN.

The negotiability of a promissory note is in no way affected by a stipulation for a reasonable attorney's fee.

The indorser of a note containing such a stipulation becomes liable for such fee.

This was an action brought against the indorser of a promissory note. The note was in the following form: "$347.00. Portland, Or., May 19, 1892. Ninety days after date, without grace, I promise to pay to the order of J. C. McCaffrey, three hundred and forty-seven, no 100 dollars, in U. S. gold coin, at Portland, Or., with interest thereon in like gold coin at the rate of ten per cent. per annum, from maturity until paid, for value received; interest to be paid after maturity, and if not so paid the whole sum of both principal and interest to become immediately due and collectible, at the option of the holder of this note; and in case suit is instituted to collect this note, or any portion thereof, I promise and agree to pay in addition to the costs and disbursements provided by statute, such sum as the Court may adjudge reasonable and just, in like gold coin, for attorney's fees in said suit or action. [Signed.]

"M. F. MILBURN, 489 Starr street, Albina."

BEAN, *J.:* There are but two questions presented upon this appeal: First, does a stipulation in a promissory note for the payment of a reasonable attorneys' fee in case of suit or action destroy the negotiability of the instrument? and, second, if not, can such stipulation be enforced against an endorser? Upon these questions the authorities are in hopeless and irreconcilable conflict. There is one line of cases which sustains the validity of the stipulation and the negotiable character of the note; another, which denies the validity of the stipulation, thereby affirming the negotiability of the note; and still another, which seems to sustain the stipulation, but denies the negotiability of the instrument. In *Peyser* vs. *Cole* (11 Or. 39), it was held by this Court that such a sipulation is valid, and will be enforced, and this has become the settled law of this State, so that the only remaining question open for inquiry is whether we shall follow the authorities sustaining such stipulation and the negotiability of the note; or the other class, which, while sustaining the stipulation, denies the negotiability of the instrument. The authorities on both of these questions will be found fully collated and discussed in 1 Daniel on Negotiable Instruments (4th Ed. § 62, and note), and 16 Amer. Law Rev. 849, to which reference may be had by those desiring to investigate the subject. It has been so often and so ably treated in all its various aspects that nothing original remains to be said thereon, and we shall attempt no extended citation or review of the authorities. A careful examination has satisfied us that the weight of authority, and especially of the more recent decisions, is strongly in favor of the doctrine that the negotiability of a promissory note is in no way affected by a stipulation for a reasonable attorney's fee. This is the doctrine in the states of Arkansas, Dakota, Illinois, Indiana, Iowa, Kansas, Louisiana, Montana, Nebraska and Texas, and also in the general trend of the decisions of the Federal courts. (*Trader* vs. *Chichester*, 41 Ark. 242; *Bank* vs. *Rasmussen*, 1 Dak. 60; *Nickerson* vs. *Sheldon*, 33 Ill. 373; *Smith* vs. *Bank*, 29 Ind. 158; *Stoneman* vs. *Pyle*, 35 Ind. 103; *Sperry* vs. *Horr*, 32 Iowa, 184; *Seaton* vs. *Scovill*, 18 Kan. 433; *Dietrich* vs. *Bayhi*, 23 La. Ann. 767; *Bank* vs. *Fuqua*, 11 Mont. 285; *Heard* vs. *Bank*, 8 Neb. 10; *Washington* vs. *Bank*, 64 Tex. 4; *Sewing Machine Co.* vs. *Moreno*, 6 Sawy. 35, 7 Fed. Rep. 806; *Adams* vs *Addington*, 16 Fed. Rep. 89; *Mortgage Co.* vs. *Downing*, 17 Fed. Rep. 660; *Hughitt* vs. *Johnson*, 28 Fed. Rep. 865; *Farmers' Nat. Bank* vs. *Sutton Manufacturing Co.*, 52 Fed. Rep. 191, 3 C. C. A. 1; *Howenstein* vs. *Barnes*, 5 Dill. 482; *Schlesinger* vs. *Arline*, 31 Fed. Rep. 648.) The contrary decisions in Missouri, Minnesota, North Carolina and Pennsylvania it would be useless to consider or attempt to distinguish. From the position that a stipulation for a reasonable attorney's fee in no way impairs the negotiability of a note, it would seem logically and necessarily to follow that the indorser of such a note is just as liable for the attorney's fee as for the principal of the note. An indorser, by his contract of indorsement, promises, among other things, that he will discharge the note according to its tenor, upon due presentment and notice. "It is a fresh, substantial contract," says Mr. Daniel, "embodying all the terms of the instrument indorsed in itself." (1 Daniel, Neg. Inst. § 669.) And in *Van Vleet* vs. *Sledge* (45 Fed. Rep. 753), Mr. Justice Jackson, now of the Supreme Court of the United States, says: "The legal undertaking of the indorser is that he will pay the note if the maker fails to do so at maturity, upon proper demand made, and notice of such failure given, when not waived. When he passes the title to the paper to an indorsee for value with this undertaking, the sounder view seems to be that the indorser renders himself liable for the face of the note or bill." Again, in *Bank* vs. *Ellis* (2 Fed. Rep. 44), in discussing the question now before us, Mr. Justice Deady uses the following language: "While there is a conflict in the authorities upon the question of whether an instrument, otherwise negotiable, that contains a stipulation for the payment of an attorney's fee, is thus negotiable or not, no case has been cited which holds that such stipulation does not pass with the instrument in case the same is deemed negotiable. * * * The maker of these notes having agreed to pay an attorney's fee to the holder thereof, if the same were not paid without action, in my judgment, each subsequent party thereto assumed a like responsibility to such holders, and therefore the plaintiff is entitled to recover such fee from the defendants in this case." It follows from these conclusions that the judgment of the court below must be reversed, and the cause remanded for further proceedings not inconsistent with this opinion.

CASHIER—LIABILITY OF FOR NEGLIGENCE—ACTIONS AGAINST—STATUTES OF LIMITATION.

Supreme Court of Tennessee, March 4, 1893.

VANCE *vs.* MOTTLEY.

Where the Cashier of a bank conceals the defalcation of another officer, the statute of limitations will not begin to run in favor of such Cashier or his estate until such defalcation is disclosed to the directors or stockholders.

A Cashier is bound to exercise reasonable skill, care and diligence in the discharge of his duties; and if he fails so to do, and the bank suffer damage in consequence, he is liable therefor.

He is liable for loss on loans made by him through want of care, diligence and reasonable skill.

Though the act of the Cashier which occasions the loss is a tort, the tort may be waived, and an action for value maintained against him or his estate.

This was a bill by E. L. Vance, administrator of the estate of S. T. Mottley, deceased, against Foster Mottley and others, and cross bill by one Sanders and another, trustees of the National Bank of Lebanon and the Bank of Middle Tennessee. From the decree entered, the administrator and the trustees appealed.

In January, 1866, the National Bank of Lebanon was chartered, under the National banking act. Its charter expired January, 1886. There were five stockholders of this bank, who were its directors. The capital stock was $50,000.—S. T. Mottley owning $38,000, who was also Cashier; Maj. Vick owning $1,000; W. R. Shoon, $1,000; R. P. McClain, $1,000; and Judge Green, $9,000, as trustee, etc. Maj. Vick was the teller. Mottley, the largest stockholder and Cashier of this bank, managed and controlled it. Mottley placed in the bank his nephew Anderson as clerk, etc., without salary from the bank, but under the employment of Mottley, his uncle, who personally paid his salary. On March 31, 1881, the teller, Vick, discovered that there was a defalcation of $29,143.15, and he told the Cashier, Mottley, of same, who order him not to let any one know of this shortage, but to keep same a secret, which Vick did until 1890, when he told R. P. McClain of it. Mottley nor Vick ever disclosed this shortage or default to the other directors, but covered up this fraud, and made fraudulent balance sheets; made false and fradulent publications of the condition of the bank, from time to time; made false and fraudulent statements in regard to the condition of the bank to the bank examiner. This shortage or defalcation was alleged to be due to Anderson, Mottley's clerk. Mottley knew of it, promised, or rather told, Vick that he would make it good, but failed to do so.

In 1886 the charter of this bank expired, and the stockholders chartered and organized the Bank of Middle Tennessee. The capital stock of this bank was $25,000, of which S. T. Mottley owned $13,000; Vick, Shoon, and McClain, $1,000 each; and Judge Green, $9,000. Mottley was made Cashier of this bank. Upon the organization of this bank, the stockholders and directors being the same as in the National bank, it was agreed that the new bank (the Bank of Middle Tennessee) was to take all the assets of the old bank, the National bank, and assume all the liabilities of the old bank, pay its debts, etc., which was done; the said Green, McClain, and Shoon still not knowing of the fraud being practiced upon them by Mottley and Vick, all the time believing that the old bank was entirely solvent, and having no knowledge of the defalcation or loss of said $29,143.15,—they still having the most implicit confidence in Mottley and Vick. Mottley being by far the largest stockholder, and reputed wealthy, and of good character, no suspicion rested upon him nor upon Vick. Mottley managed the bank to suit himself, consulting none of the other directors.

In the spring of 1890, Mottley died, and thereupon R. P. McClain was elected Cashier, and accepted the position, wholly ignorant of the true condition of the bank, and, while in the discharge of his duties as a faithful officer, seeking out the assets of the bank, when Vick, who was still teller of the bank, disclosed the shortage to McClain, who at once notified the other directors; and the bank closed, and made the assignment to Sanders and McKenzie. Mottley and Vick knew of this loss of the $29,143.15 as early as March, 1881; by agreement, kept this information from the other directors; by false and fraudulent schemes, devices, and false entries upon the books of the bank, by false reports and sworn statements, fraudulently concealed this shortage from the other directors. The other directors, nor, indeed, any one, could, except by a thorough and minute examination of the books of the bank, discover this loss.

BRIGHT, *Special Judge* (omitting part of the opinion):

The proof in the record abundantly establishes the fact that this money was lost by the gross negligence of Mottley; that he fraudulently concealed this loss, and took no steps to recover it. He continued this fraud and concealment, and perpetrated a gross fraud upon the new bank, when, by express agreement, it was to take the assets of the old bank, and assume its liabilities. The new bank did this believing that the assets and liabilities were as represented by Mottley.

It is insisted that the statute of limitations began to run in favor of Mottley on 31st March, 1881, when the loss was first discovered by Vick, and was completed before the cross bill was filed. We hold that the statute did not begin to run in favor of Mottley until the loss or defalcation of the $29,143.15 was disclosed to the stockholders, and discovered by them, in 1890, after Mottley's death. The fraud practiced on the new bank was in the concealment of the liability and true condition of the old bank, to the extent of the $29,143.15. The fraudulent concealment by Vick and Mottley of the condition of the accounts of the old bank, done by agreement between them, prevented actual notice, and took the case out of the rule of constructive notice to the other directors. (*Wallace* vs. *Bank*, 89 Tenn. 630.) A Cashier is bound to exercise reasonable skill, care and diligence in the discharge of his duties. If he fails in such skill, or omits such care, and the bank suffers damage as a consequence, he is liable. (*Id.*) The record abundantly shows that it was through the want of the exercise of reasonable skill, care and diligence in the discharge of the duties imposed upon Cashier Mottley, and his failure to properly discharge his duties as such, that the bank was damaged, and suffered the loss of the $29,148.15, and he should be held liable for same.

It is insisted that Mottley, if guilty of occasioning this loss, is guilty of a tort, and only liable for a tort; and, as he is dead, the tort died with him, and that there can be no recovery had against him. The tort may be waived, and action for value maintained against the wrongdoer or his representative.

It is assigned as error that Mottley's estate was charged with being liable for the loans made by him as Cashier, to wit: four notes of Waters & Co., aggregating $11,862.79; also various notes on Anderson & Co.; also with the Wood note for $1,000. These loans were made by Mottley to insolvent parties without security, thereby entailing a loss to the bank. It was through want of care and diligence and reasonable skill upon the part of the Cashier, Mottley, that the loans were made, and the loss sustained. The Chancellor confirmed the finding of the Master upon these claims, and their finding will not be disturbed. (*Brown* vs. *Dailey*, 85 Tenn. 218.)

USURY—RENEWAL NOTES.

Court of Appeals of Kentucky, March 30, 1893.

T. J. SNYDER *et al.* *vs.* THE MOUNT STERLING NATIONAL BANK.

Where a National bank loans money at a usurious rate, and the interest is carried into renewal notes, the bank in a suit upon the last of such renewals can recover only the principal sum originally advanced.

Any payments made upon any of such notes will be applied to the principal.

The facts are stated in the opinion.

BENNETT, *C. J.:* The appellee is doing a banking business in this State under the United States banking law. As such banking institution, it loaned the appellants' money, and took their note therefor, charging them a usurious rate of intesest, and adding the same in the note; and at the maturity of the note it was renewed, and usurious interest again charged, and included in the new note. Renewals were in like manner made, and usurious interest added therein, until it resulted in the present note, when it was sued on. The appellants pleaded the foregoing facts in regard to the usury embraced in the several renewal notes, and asked that the interest be forfeited in consequence of the usury embraced in these several renewals, and that only the principal be recovered. The National banking law provides: "The taking, receiving, reserving, or charging a rate of interest greater than is allowed by the preceding section, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon." There is no doubt that each renewal note contained usury therein, and that it was "knowingly done."

The question to be decided is whether the entire interest that the several renewal notes bore can be eliminated from said notes in an action on the last note so that nothing shall be recovered thereon except the principal. Upon that subject the following cases seem conclusive. In the case of *Bank* vs. *Hoagland* (7 Fed. Rep. 161) the Court says: "By the terms of the Act of Congress the charging of such rates of interest worked a forfeiture of the entire interest which the several notes carry with them. Now, such forfeiture was not waived by the giving of the subsequent notes, although, as respects them, the agreed rate of interest was a legal rate. They were mere renewals, and given without any new consideration. Nor did the new notes operate as payment of the debts for which they were given. In so far, then, as the notes in suit embrace the forfeited interest, they are without consideration. Moreover, it is an established principle that, if there be usury in the original transaction, it affects all consecutive securities, however remote, growing out of it; and neither the renewal of an old nor the substitution of a new security between the same parties can efface the usury. The bank incorporated in the new notes usurious interest previously charged, as a part of the new principal, and this illegal consideration pervaded the whole subsequent series of notes. Upon fresh renewal interest was charged upon usurious interest, which had entered into the prior notes as principal."

The case of *Bank* vs. *Miller* (73 Mo. No. 187) decides the same question the same way. The case of *Alves* vs. *Bank* (89 Ky. 126) directly decides the same principle. The leading idea in these decisions is that the new notes are mere renewals,—new evidences of old debts,—and given without any new consideration; nor do the new notes operate as a payment of the debts for which they were given; and, as the usury embraced in the old notes taints the entire interest, and renders it vicious and void, the agreement to pay it is without any lawful consideration. Consequently the unlawful consideration may be eliminated from each renewal note, for such note is but the evidence of the old debt, which may be traced to the new note and eliminated. We now construe *Brown* vs. *Bank*, includes the vice and unlawful consideration, which, as between the same parties, (Ky.) 18 S. W. Rep. 685, to be in harmony with the foregoing views. The judgment does not eliminate the entire interest from the several notes, but only the usury. This is error. The entire interest on all the notes should be eliminated, and judgment rendered for the principal alone, and the partial payments should be applied to the principal. The judgment is reversed, and cause remanded, etc.

RECEIVER—RIGHT TO SUE IN FEDERAL COURT.

United States Circuit Court, W. D. of Pennsylvania, December 17, 1892.

FISHER *vs.* YODER.

The Receiver of an insolvent National bank may bring suit in a Federal court to collect assets of the bank regardless of the citizenship of the parties.

This was an action by B. F. Fisher, Receiver of the Spring Garden National Bank of Philadelphia, against L. T. Yoder, to recover assets alleged to belong to the bank. There was verdict and judgment for plaintiff, and defendant moved for a new trial, and in arrest of judgment.

BUFFINGTON, *District Judge* (omitting part of the opinion): This is a motion for a new trial. Fisher, the plaintiff, is the Receiver of the insolvent Spring Garden National Bank of Philadelphia, and both he and Yoder, the defendant, are citizens of Pennsylvania. It is urged that, by reason of their citizenship, this suit will not lie. That Fisher, the Receiver of the National bank, is an officer of the United States, and as such is entitled to bring the present suit to collect assets of the bank, there is no doubt. His right to do so is fully sustained in the cases following. The thoroughness with which the question is there discussed renders further opinion needless. (*Platt* vs. *Beach*, 2 Ben. 303; *Stanton* vs. *Wilkeson*, 8 Ben. 357; *Stephens* vs. *Bernays*, 41 Fed. Rep. 401; 44 Fed. Rep. 643; *Price* vs. *Abbott*, 17 Fed. Rep. 506; *Hendee* vs. *Railroad Co.*, 26 Fed. Rep. 677; *Armstrong* vs. *Trautman*, 36 Fed. Rep. 275; *Yardley* vs. *Dickson*, 47 Fed. Rep. 835.)

NATIONAL BANK OFFICERS—FALSE ENTRIES—JURISDICTION OF UNITED STATES COURTS.

United States Circuit Court, S. D. of New York, March 27, 1893.

In Re ENO.

The State Courts have no jurisdiction of the crime of false entries made by an officer of a National bank in the books of the bank.*

This was a *habeas corpus* proceeding by John C. Eno, detained by the warden of the city prisons of New York, under an indictment in the court of General Sessions of the city of New York, for making false entries in the books of the Second National Bank of the city of New York.

WALLACE, *J.* (omitting part of the opinion): National banking associations are the creatures of the legislation of the United States, and it cannot be doubted that the power resides exclusively in Congress to prescribe what acts may or may not be done by their officers in conducting their operations, and what shall be lawful and what unlawful, and, having prescribed what acts shall be unlawful, to declare what penalties and punishments therefor shall be visited upon the offender. The laws of Congress, over the subjects legitimately within the sphere of their authority, by the Constitution are the paramount law of the land, and are necessarily exclusive of all State legislation inconsistent with them. Upon this principle it was adjudged in *Bank* vs. *Dearing* (91 U. S. 29) that, Congress having prescribed a forfeiture for the taking of unlawful interest by a National bank, no other penalty created by the usury laws of a State could be enforced.

The question has frequently arisen whether in the case of an offense not exclusively cognizable by the Federal courts, but punishable by the laws of Congress, which is also an offense at common law, the State courts can exercise a concurrent jurisdiction with the courts of the United States; and it is well settled that they can. On the other hand, it is settled by a great preponderance of authority, that when the offense is created by the laws of Congress, and jurisdiction over it is expressly, or by necessary implication, vested exclusively in the courts of the United States, the State laws and State courts cannot touch it, although it may also be an offense against the State.

* * * * *

Not only are the acts for which the petitioner is under indictment in the State court created offenses by the laws of Congress, and their punishment defined thereby, but they are offenses exclusively cognizable by the courts of the United States, by force of section 711 of the Revised Statutes of 1874. That section provides that the jurisdiction vested in the courts of the United States, "of all crimes and offenses cognizable under the laws of the United States, shall be exclusive of the courts of the several States." By section 5328, a large class of offenses cognizable by the courts of the United States are withdrawn from the operation of section 711; but offenses arising under the laws relative to National banking associations are not enumerated as within the exception.

The conclusion seems inevitable that the offenses for which the petitioner has been indicted are exclusively cognizable by the courts of the United States. It is proper to say that if any serious doubt were entertained as to the want of jurisdiction of the court of General Sessions of the city of New York, and its consequent want of authority to retain the petitioner in custody, such a disposition of the present proceeding would be made as would permit that question to be raised, in the event of a conviction upon the indictment, after a trial. As it is, however, the petitioner is entitled to be discharged from custody.

*In *People* vs. *Fonda*, 62 Mich. 401, it was held by the Supreme Court of Michigan that the State courts had no jurisdiction of the crime of embezzlement or larceny by a clerk of a National bank, for the reason that such offense is covered by section 5209 of the Revised Statutes of the United States, and jurisdiction of it is conferred upon courts of the United States by section 711 of those statutes. In *Com.* vs. *Felton* (101 Mass. 204), the Supreme Court of Massachusetts held that a person charged with being an accessory to an embezzlement by an officer of a National bank could not be convicted, because the provisions of the National banking act covered the crime imputed to the principal offender, and the courts of the United States were vested with the exclusive cognizance of that crime. In *Cross* vs. *North Carolina* (132 U. S. 131), the Supreme Court affirmed the validity of the conviction in a State court of a person indicted for forging a promissory note made payable at a National bank, placing the decision upon the ground that the forging of such a note was not an offense under the National banking laws.

RELATIONS BETWEEN BANK AND DEPOSITOR — CHECK NOT AN ASSIGNMENT—SET-OFF.

Supreme Court of Ohio, April 7, 1893.

Money received by a bank on general deposit becomes the property of the bank, and its relation to the depositor is that of a debtor, and not of bailee or trustee of the money.

The check of such depositor for part of the sum due to him is not an assignment *pro tanto*, without acceptance by the bank.

Where, at the time such check is drawn, or when it is presented, the drawer is indebted to the bank on past-due paper, it may treat the cross-demand existing between them as compensated, so far as they equal each other, and credit the demands accordingly; and, if there is not then sufficient balance standing to the credit of the drawer, payment of the check may be refused for want of funds.

This was an action on a check by the Windisch-Mulhauser Brewing Company against the Bank of Marysville. Plaintiff had judgment, which was affirmed at circuit, and defendant brought error.

WILLIAMS, *J.*: The Windisch-Muhlhauser Brewing Company brought its action against the Bank of Marysville in the Court of Common Pleas of Union county, upon a check drawn on the bank by George Schlegel, October 16, 1888, for the sum of $368.20, payable to the order of the plaintiff. The petition alleges, in substance, that on the 19th day of October, 1888, the check, duly indorsed, was presented at the bank for payment, at which time Schlegel had sufficient funds on deposit in the bank to pay it, but payment was refused because, before the presentation of the check, the whole of the amount standing to the credit of Schlegel, on his deposit account, had been applied by the bank towards the payment of a note held by it, on which there was then due from Schlegel to the bank a sum greater than the amount of his deposit, which application, it is averred, was made without the plaintiff's knowledge or consent. The petition avers that Schlegel was insolvent when the check was presented for payment, and when it was drawn; and it also contains an allegation of the amount due on the check, for which, with interest, the plaintiff asks judgment. A general demurrer to the petition was overruled, and the defendant answered, alleging that, at the time the check was drawn, Schlegel was indebted to the bank in the sum of $1,050 on a promissory note given to it by him, for money advanced and other indebtedness contracted in the course of their business; and that on the 17th of October, 1888, before the presentation of the check, and without any knowledge of its existence, the bank credited the note, which was then long past due, with the amount then owing to Schlegel on his deposit account, which was $378.41; and therefore, when the check was presented, there were no funds with which to pay it. The answer also alleges that the deposit was not made for any particular purpose, nor under any special agreement or direction, but was a general deposit merely, and that the defendant had no means of securing or satisfying Schlegel's indebtedness to it except by applying thereon the balance due on the deposit, as was done. A general demurrer to the anwer was sustained, and judgment rendered for the plaintiff, which was affirmed by the Circuit Court.

The bank here contends that both judgments should be reversed, because, it is claimed, the bank had a lien on Sehlegel's deposit as a security for his indebtedness, which gave it the right to apply the former to the payment of the latter, or, if it had not such a lien, it was entitled to set off Schlegel's indebtedness to it against the amount due him on his deposit account. The position taken by counsel for the defendant in error is that Schlegel did not part with the ownership and control of his money by depositing it in bank, and his check constituted an assignment and appropriation of that amount of the specific fund on which it was drawn, to the plaintiff, after which the bank could not, without the plaintiff's consent, apply the fund in payment of Schlegel's past-due note, or set off the one against the other. That view of the law appears to have been adopted by the courts below, and no other is advanced here in support of the judgments there rendered.

There are cases in which it is held that a bank check for a part of the sum standing to credit of the drawer is an equitable assignment *pro tanto;* and expressions of that purport may be found in opinions of judges, in cases where the question was not involved. Counsel for defendant in error relies chiefly on *Stewart* vs. *Smith* (17 Ohio St. 82-85) where it is said: "Such a check is an appropriation of a specific sum in the hands of the drawee to the absolute use and control of the holder;" and it is argued that, being such an appropriation, the title to the fund at once vests in the payee of the check, and cannot be defeated or affected by any subsequent act of the drawee. The question in that case was whether the drawer of the check was discharged by reason of delay in its presentation for payment; and the sentence above quoted from the opinion of the learned judge occurs in the discussion of the difference, in its legal effect, of a person presenting bills of exchange and bank checks for acceptance and payment. In the recent case of *Covert* vs. *Rhodes* (48 Ohio St. 66) it was held, after full consideration, that such a check, before acceptance, does not constitute an assignment, so as to vest the title to the fund or credit against which it was drawn, or any part of it, in the payee or holder. Some of the authorities which maintain that doctrine are collected in that case, to which many more might be added.

The rule results from the legal relation of the bank to its general depositors. The former is not a bailee or trustee, in any sense, of the money of the latter. The bank does not contract to keep on hand the particular money deposited, or pay the depositor's checks out of it, nor is it expected to do so. The money of such depositor is commingled with other moneys of the bank, the amount deposited carried to the customer's credit in account with the bank, and payments made on his checks are charged to his account. Unless there is some agreement to the contrary, deposits received by the bank become its property. They belong to it, and can be loaned or otherwise disposed of by it as any other money belonging to the bank. If the money be stolen or destroyed, the loss must be borne by the bank, though it be free from negligence or fault. It is accountable as a debtor, and the relation between it and the general depositor is essentially that of debtor and creditor. In legal effect the deposit is a loan to the bank. Hence a check of such a customer is not drawn upon a specific fund, but is an order drawn by a creditor on his debtor, requesting him to pay part of what is due the creditor to the payee or holder. It no doubt evidences an intention of the drawer to have the sum specified paid to the holder, but does not transfer the title to any fund, or part of it, or the bank's liability to the drawer. If it effected such a transfer, upon the failure of the bank before the check could be presented, in the exercise of due diligence, the loss would fall on the holder, as between him and the drawer; and, whether presented or not, the former could pursue the deposit in the hands of an assignee or other representative of the bank. But, as the check does not operate as a transfer of the title to any fund, neither of these consequences results.

The liability of the bank to Schlegel being that of a debtor only, it does not seem of much practical importance in the disposition of the case whether the effect of the check was to assign that much of his claim to the plaintiff or not. The case made by the pleadings is this: The bank owed Schlegel, on his deposit account, when he gave the brewing company his check, more than the amount for which it was drawn. At the same time, Schlegel owed the bank, on his note, a sum greater than the bank's indebtedness to him. These mutual debts existed between the parties in the same relation, were both past due, and each was founded on contract. Our statute secures the right of set-off between parties sustaining the relation of debtor and creditor, between whom there are such demands, and those existing between banks and their customers are not excepted from its operation; so that if Schlegel, when the check was drawn, had brought an action on his claim against the bank, the latter could have set off against it the debt which Schlegel owed the bank. And it is clear the right of set-off was not defeated or impaired by the check, even if it be treated as an assignment. The statute plainly protects the right of set-off, when it existed between the parties, notwithstanding the assignment by either of his demand. Its language is: "When cross-demands have existed between persons, under such circumstances that if one had brought an action against the other a counterclaim or set-off could have been set up, neither can be deprived of the benefit thereof by assignment by the other; but the two demands must be deemed compensated, so far as they equal each other." Rev. St. § 5077. By force of the statute the indebtedness of the bank to Schlegel was paid by a corresponding amount of the indebtedness of Schlegel to the bank; and crediting Schlegel's note with the amount due on his deposit account, as was done by the bank, was but giving effect to the provisions of the statute.

It is said to be a well settled rule of the law merchant that a bank has a general lien on all the funds of a depositor in its possession for any balance due on general account, or other indebtedness contracted in the course of their dealings, and may appropriate the funds to the payment of such indebtedness. The right to make such appropriation, it is held, grows out of the relation of the parties, as debtor and creditor, and rests upon the principle that, "as the depositor is indebted to the bank upon a demand which is due, the funds in its possession may properly and justly be applied in payment of such debt, and it has therefore a right to retain such funds until payment is actually made." *Falkland* vs. *Bank*, 84 N. Y. 145.

Though this right is called a "lien," strictly it is not, when applied to a general deposit, for a person cannot have a lien upon his own property, but only on that of another; and, as we have seen, the funds of general deposit in a bank are the property of the bank. Properly speaking, the right, in such case, is that of set-off, arising from the existence of mutual demands. The practical effect, however, is the same. The cross-demands are satisfied, so far as they are equal, leaving whatever balance may be due on either as the true amount of indebtedness from the one party to the other.

Aside, then, from any question as to whether the plaintiff could maintain its action on the check without acceptance of it by the bank, the petition fails to make a case against the defendant. True, the petition does not allege that the deposit made by Schlegel in the defendant bank was a general one, but it is presumed to be such unless it otherwise appear; and there is nothing in the petition from which it may be inferred that the deposit was special, or made under any particular agreement or direction. It is also true the petition avers that when the plaintiff presented the check for payment the drawer had sufficient funds in the bank for its payment; but it is alleged that the bank held the past due paper of Schlegel for an amount exceeding his deposit, and had applied the whole amount due him in payment of the paper before the presentation of the check. It is not important that the application was made without the plaintiff's consent. Such consent was not necessary to give validity to the application, and, if it were, the want of it would not entitle the plaintiff to recover, for the right to have the claims set off would still exist. The judgments of the Circuit Court and the Court of Common Pleas are reversed, and cause remanded, with instructions to sustain the demurrer to the petition, and for further proceedings.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: MONROE, LA., May 10, 1893.

SIR:—On May 1 we received for collection two checks, as follows:

MONROE, LA., April 20th, 1893.
On May 10th, after date, pay to the order of John Smith & Co., one hundred dollars. JOHN JONES.
To Monroe National Bank, Monroe, La.

MONROE, LA., May 10th, 8193.
Pay to the order of John Smith & Co. one hundred dollars.
To Monroe National Bank, Monroe, La. JOHN JONES.

The only difference between these two pieces of paper is that one is made payable in the body thereof on May 10, while the other is dated as of that date, and both came into our hands on May 1. Is either one of these checks entitled to grace, or should they both be protested by us on May 10 if the drawer has no funds to his credit on that date? Had these pieces of paper been drawn on individuals, I think they would certainly have grace in both cases. If we should protest both of them on May 10, and afterwards, say on the 12th, the drawer should deposit the money to cover, would we be liable to any damages? T. E. FLOURNOY, *Cashier*.

Answer.—As regards the first of these checks, the law is different in different States. In some States, as in New York, it is provided by statute that checks, drafts, and bills of exchange drawn on banks or bankers, payable on a specified day or any number of days after date or sight, are payable on the day mentioned without days of grace. But in Louisiana there appears to be no such statute, and the question must therefore be decided in that State according to the general law. The decisions on the subject are in conflict. In Massachusetts (*Way* vs. *Towle*, 29 N. E. Rep. 506; RHODES' JOURNAL OF BANKING, March, 1892, p. 261); Rhode Island (*Bank* vs. *Wheaton*, 4 R. I. 30); and Pennsylvania (*Champion* vs. *Gordon*, 70 Pa. St. 474), it has been held that an instrument in such form is a check and therefore not entitled to grace, and the same was held by Justice Story *In Re Brown* (2 Story, 502). But in Minnesota, Missouri, Ohio, California and Georgia the contrary has been decided. (*Harrison* vs. *Nicollet Nat. Bank*, 41 Minn. 488; *Ivory* vs. *Bank of the State*, 36 Mo. 475; *Morrison* vs. *Bailey*, 5 Ohio St. 13; *Minturn* vs. *Fisher*, 4 Cal. 36; *Henderson* vs. *Pope*, 39 Ga. 361; *Georgia Nat. Bank* vs. *Henderson*, 46 Ga. 496.) And in Daniel on Negotiable Instruments it is said: "Every draft upon a bank or banker which is not payable immediately, possesses, as we think, all the qualities of a bill of exchange; and the preponderance of authority sustains this view, whether the instrument be payable on a precise day named or at so many days after date or sight." As regards the second check above mentioned, it is simply a post-dated check, and is clearly not entitled to grace. The rule on this subject is thus stated in Daniel on Negotiable Instruments: "The drawing of post-dated checks is an every-day occurence in the commercial cities, and the uniform understanding of parties is that when the check is post dated—say as of the 14th of January, when actually drawn on the 1st—that it is payable on the day it purports to be, without any days of grace, though negotiated beforehand."

Editor Rhodes' Journal of Banking: CHARLOTTE, N. C., May 15, 1893.

SIR:—Having noticed two or three times your opinion that "no protest" tickets attached to drafts should be sufficient to authorize the collecting bank to waive protest, I beg to ask if this is not contrary to the universal practice of banks? Do not banks require explicit instructions contained in the letter of transmittal before they will waive protest? The principle on which we and many others require this is, that any dishonest person could deny that there was such a ticket attached and hold the collecting bank for failure to protest, and how difficult it might be to prove that there was a "no protest" ticket accompanying the paper, when they are required to be detached before presenting the draft, and are so easily misplaced. Why should not the transmitting bank be required to give instructions in the letter when a waiver of protest is desired? We admit that tickets are useful to put remittance clerks on their guard when forwarding the paper, but have never considered them sufficient as a waiver. Please give your views on this aspect of the subject. A. G. BRENIZER, *Cashier*.

Answer.—If it could be shown that it is the common practice of banks to disregard "no protest" slips, and protest the paper unless instructions to do otherwise are contained in the letter of transmittal, then our views heretofore expressed are wrong. But we are not aware of any such general custom, and we do not believe it could be proved; and in the absence of such a custom we know of no reason why the courts should hold that the instructions contained in the slip itself would not be sufficient. It must be assumed that these slips are intended to answer some purpose, or they would not be in such common use. It would be perfectly competent to show what this purpose is by proving a uniform custom in regard to them; but if no such custom is shown, the purpose must be inferred from the language used and the fact that they are attached to the paper. If the sender intended the paper to be protested, why should he attach such a slip? His act in such a case would be purposeless. The courts try to give effect to all the acts of the parties, and they would not assume that the officers of a bank intended to do an idle and meaningless thing. We cannot see that there is anything in the objection that the protest slip might not afford convenient evidence of the instructions of the transmitting bank. The testimony of the officers and employees of the receiving bank would be entirely competent to show that such a protest slip was attached to the paper; and, moreover, it is no excuse for an agent to disregard the instructions of his principal that such instructions are not given in a form which the agent could most conveniently prove. The evidence of the instructions of the transmitting bank could be easily preserved by having the clerk in charge of the paper make an entry that a no protest slip was attached, and if any dispute should arise he could testify from such entry, or if he did not recall the facts, or should die, the entry itself would be admissible in evidence.

Editor Rhodes' Journal of Banking: NEW CASTLE, KY., May 29, 1898.

SIR:—What gives National banks the right to take holidays on Decoration Day, the Fourth of July, Christmas, etc.? Have State banks the same legal right?

JOHN W. MATHEWS, *Cashier*.

Answer.—In the matter of holidays National and State banks are both alike governed entirely by State statutes on the subject. A National bank could not any more than a State bank close on a day not made a holiday by State laws. The law on the subject is a branch of the law of commercial paper, and is peculiarly a matter of State control. If the day is a holidayso far as regards commercial paper, then banks of all kinds, whether State, National or private banks, may close; but if it is not a holiday in this regard, they must keep open.

Editor Rhodes' Journal of Banking: UMATILLA, Fla., May 20, 1898.

SIR:—A draws his check on this bank for $100 in favor of B. B deposits the check in a bank in another place, which bank delivers it to an express company for collection. The express company presents the check to us, and demands in addition to the amount thereof the cost of collection. We offer to pay the face of the cheek, but this offer is refused, and the check is protested. Who is liable for the protest fees? Is the drawer of the check liable to any of the parties for such fee? J. C. PACE, *Manager*.

Answer.—A check, like any other negotiable instrument, is to be paid strictly according to its tenor. A bank has no authority to pay anything more than the amount specified in the instrument. If the check itself specifies that exchange is to be paid, then the rate of exchange is to be added; but if it contains no such directions, then the bank is without authority to pay exchange, and the holder cannot demand the same. In the case stated by our correspondent the check appears to have been in the ordinary form, without any provisions in regard to exchange. When, therefore, the bankers on whom it was drawn offered to pay the amount specified in the instrument, this was an offer to pay all that the instrument called for, and all the holder was entitled to demand. Hence, the protest was improper; and if the express company acted without instructions, it cannot recover the notary's fees from any of the parties; and if it received such instructions, they were improper instructions, and the party giving them must pay the fees. So far as the drawer of the check is concerned, instead of being liable for the protest fees, he would, on the contrary, if he could prove any damages, have an action against the other parties for improperly protesting his check.

The Cincinnati National Banks.

CONDITION OF THE CINCINNATI NATIONAL BANKS, MAY 4, 1893, COMPILED FROM STATEMENTS MADE TO THE COMPTROLLER OF THE CURRENCY.

Loans are less by $1,017,391 than they were at the preceding statement of March 6, and by $1,217,806 than a year ago. There is a decrease of $286,665 in total reserve since the statement of March 6, and it is $2,742,283 lower than a year ago. Deposits show a loss of $1,277,967 and $5,424,992 from those dates respectively. The proportion of reserve, however, which is 3.90 per cent. below that of a year ago, is somewhat greater than shown by the statement of March 6.

The failure of two National banks (Columbia and Chemical) has caused a falling off in several items, as compared with March 6th statement. There has been a decrease of $6,940,000 in amount due banks and bankers, showing withdrawals of country deposits. City deposits have increased nearly $6,000,000. The loans are $3,500,000 less than in March. The total deposits have lessened only $570,000. In the matter of stocks and bonds there is a falling off of $324,000. The cash funds appear to be $2,000,000 larger, while Eastern balances show but little change. The surplus reserve of all the banks March 6 was $3,500,000; it has increased until now it is $5,700,000.

The Baltimore National Banks.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— Judge Benedict, in the United States Circuit Court, criminal branch, handed down a decision May 16 quashing the indictment against John C. Eno who, as President of the Second National Bank, was charged with the embezzlement of $2,000,000 of the funds of that institution. The indictment was found on June 17, 1884. In his opinion Judge Benedict says that the indictment consists of several counts, but as the first count is similar to the others, excepting only that it differs in the amount of money alleged to have been misappropriated and the name of the payee, his decision in that instance will apply in the rest. The Court quotes the indictment, which specifies that "the defendant was the President of the Second National Bank, and that the defendant unlawfully and wilfully, and with intent to injure and defraud the said association, for the use, benefit and advantage of himself, the said John C. Eno, did misapply certain of the money and funds of the said association, to wit, the sum of $100,000, which said sum of money he, the said John C. Eno, then and there, with the intent aforesaid, paid and caused to be paid from the moneys and funds of said association to Arthur Dyett and Abraham R. L. Norton, who then and there carried on business under the firm name of A. Dyett & Co." Judge Benedict says that the indictment fails to show that Eno derived any benefit from this or the other transactions; in fact, that there is nothing to show that A. Dyett & Co. had not $100,000 on deposit with the bank and that they were entitled to the amount. He therefore ordered the dismissal of the indictment.

— The abstract of the reports made to the Comptroller of the Currency of the condition of National banks in New York City on May 4 last shows among the items: Reserves, $307,080,931; stock, securities, &c., $28,813,211; due from other National banks, $30,571,378; furniture and fixtures, $11,365,822; exchanges for clearing-house, $74,391,728; gold and gold certificates, $257,553,055. Among the items of liability are: Capital stock paid in, $49,810,000; surplus fund, $41,272,839; undivided profits, $18,675,929; individual deposits, $286,985,300; due to other National banks, $114,634,512; due to State banks, $53,849,193. The reserve held is stated at 28.52 per cent.

— De Witt C. Hays has resigned the presidency of the Manhattan Banking Company, of No. 40 Wall Street, an office which he has held for the last nine years. He will be succeeded by Stephen Baker, the Vice-President. Mr. Hays came to the Manhattan Bank from the late Union National Bank at 34 Wall Street, of which he was President for fifteen years. Prior to his connection with the Union National he was a stockbroker. Mr. Hays was recently elected for the twenty-ninth consecutive time Treasurer of the New York Stock Exchange. He resigned the presidency of the Manhattan Bank because of his health and the infirmities of age.

— The Grand Jury has made the following presentment in regard to the proceedings taken against the manager of a news agency, for falsely announcing the failure of the firm of H. B. Hollins & Co.: "After a careful consideration of all the evidence, we have come to the conclusion that, while there are circumstances tending to indicate the direction where the responsibiltiy lies, we are not justified, in view of the unsatisfactory nature of the great mass of the testimony, in finding an indictment against any of the parties. A conspiracy to circulate false rumors is in no case a trivial offense; and where the object is to destroy public confidence in responsible business concerns, and thus to create a feeling of general distrust and apprehension in financial and banking circles, in order that the conspirators may take advantage of the resulting injury and profit by the misfortunes of others, the offense becomes doubly grave and merits the severest condemnation. Not only did the conspirators in this instance have the services of the gossips, but they succeeded in securing the actual publication of their rumors in the press, especially in the so-called financial reports, thus making them the instruments of furthering their fraud. While we have not found indictments in this case, we have made this presentment that it may serve as a warning to others and a service to the public."

— The Twelfth Ward Bank, on One Hundred and Twenty-fifth street, near Third avenue, is about to build a handsome new home on the north-east corner of One Hundred and Twenty-fifth street and Lexington avenue. The building will cost $100,000, and will be six stories high, with a brown-stone front. It will have a frontage of sixty feet and a depth of one hundred feet. The ground floor will be occupied by two stores. The first floor, which will be twelve feet above the street, will be occupied as offices of the bank. The second, third and fourth floors will contain business offices.

— Mr. Edward O. Leech, formerly Director of the Mint, has assumed his duties as Second Vice-President and Cashier of the new National Union Bank, which is now open for business in the Mutual Life Insurance Company's building. The bank is closely allied to the Insurance Company, and starts off with good prospects of doing a large business. Its Board of Directors include some of the best known capitalists of the city.

— George H. Pell, who was indicted in the United States Circuit Court on April 17, 1890, for being concerned with Peter J. Claassen in wrecking the Sixth National Bank, has renewed his bail bond for $7,500. Pell served a term in State Prison and was pardoned by Governor Flower. The indictment in the United States Court is still pending.

— The JOURNAL is in receipt of the twenty-sixth Report of the Yokohama Specie Bank, Limited, for the six months ending December 31, 1892. The dividend for the year is 14 per cent.

— The State Bank, of Grand Street, of which Mr. O. L. Richard is President, has just been designated a depository of New York State funds.

NEW ENGLAND STATES.

Unique Swindling Game.—The President of the Barton (Vt.) National Bank reports that he recently received a letter purporting to come from Emery and Goodsell, importers of fruits and nuts, of Commercial street, Boston, and containing the following statement: "We have mailed to our travelling salesman, Levi Metzger, a check for $85. Mr. Metzger will be in Barton this week. The enclosed is his signature." Soon after the letter had been received Mr. Metzger called at the bank to have the check cashed, and identified himself by indorsing his name on the check in the same handwriting as that of the signature that had been forwarded to the bank. As the man was well dressed the bank paid him the amount of the check without hesitation. The following day the check was sent to a Boston bank, which quickly sent it back to Barton, with the information that it was worthless. No such firm as Emery and Goodsell, or such person as Metzger can be found.

A Nashua Bank Closed.—An injunction was served upon the Mechanics Savings Bank of Nashua, N. H., May 5, restraining it from doing further business. The action was taken at the instance of the Bank Commissioners, who were prompted to it by the large holdings that the bank had in the Union Loan and Trust Company of Sioux City, having $53,000 of the stock. It had also about $10,000 of the Union Stock Yards Company's stock. At the last statement the bank had $94,000 surplus, but it has a large amount of its assets in Western paper, which it is doubtful if it could fully realize upon if forced to market at once. Receivers will probably be appointed and the affairs of the bank wound up.

Boston.—Mr. J. T. Bailey has completed his twenty-fifth year of service as President of the Boylston National Bank. Mr. Bailey has been a director of the bank since October, 1861.

— Hon. John Cummings has been President of the Shawmut National Bank for twenty-six years.

Bank Teller's Alleged Theft.—Edwin T. Swift, teller in the Birmingham (Ct.) National Bank, has been lodged in jail in New Haven on a charge of having embezzled $10,000. The money is said to have been lost on the races.

MIDDLE STATES.

Brooklyn, N. Y.—The Dime Savings Bank of Brooklyn is one of the oldest and best known institutions of the city, and anything affecting its interests is of superlative importance in the regard of its fifty-five thousand and more depositors. They may be congratulated, therefore, upon the fact that the Board of Trustees at its meeting recently called to the Presidency of the bank Mr. B. H. Huntington, long and favorably known as its efficient Secretary. Mr. Huntington has served the bank in his former capacity for the past fifteen years and it is in no small degree due to the careful and judicious exercise of his functions that the present prosperous condition of the institution has been reached. He is in the prime of life and comes of good old Long Island stock, his grandfather having been the late Abel Huntington of East Hampton, a prominent surgeon of his day and twice representative of his district in the Congress of the United States and also in the State Senate; and his father, the late Dr. George L. Huntington, was also a well-known physician in Suffolk County. His early education was received at Clinton Academy, East Hampton, and in the schools of Brooklyn; and his business training, during a connection of twenty-five years with the trade of India, China and Japan, in New York. Mr. Huntington will be succeeded in the Secretaryship by Mr. J. L. Marcellus, favorably known as a lawyer and citizen of Brooklyn.

— The People's Bank of Brooklyn began its business life in the Post Office Building in Williamsburg (Brooklyn, E. D.), May 1, and in the evening the event was celebrated by a dinner in Arion Hall. The bank was organized in January. It starts with a surplus of $50,000. Its officers are: President, James Gascoine; First Vice-President, Frank Hyde; Second Vice-President, Henry Roth; Cashier, H. Bernard Coombe.

— At the annual election of the trustees of the Brooklyn Trust Company May 1 the following were elected trustees to serve three years: Samuel W. Boocock, Cornelius D. Wood, William H. Male, Christian T. Christensen, Henry W. Maxwell, Henry K. Sheldon, John J. Pierrepont.

Philadelphia, Pa.—The Northern National Bank has made progress during the three years it has been in business. It has a capital stock of $200,000 full paid; surplus $40,000, and a line of deposits amounting to over $750,000. It recently acquired, for $13,500, the property bounded by Dauphin, Seventh street, and Germantown avenue, and has awarded the contract for a building to be occupied solely by the bank.

— Ephraim Young, formerly a director of the Spring Garden National Bank, who was convicted of misapplying its funds, etc., has been refused a new trial.

— Receiver Yardley, of the defunct Keystone National Bank, has on hand the funds for the payment of another ten per cent. dividend, but the announcement will not be made until after all claims under the first dividend have been proven. It is possible that there may be still another dividend of five per cent.

Maryland Bank Reports.—The Comptroller of the Currency has received the reports of the forty-four national banks in the State of Maryland, outside of Baltimore, showing their condition at the close of business on May 4. The total assets are $17,113,154. The loans and discounts aggregate $10,506,273; United States bonds to secure circulation and deposits $1,611,000; stocks and securities $1,505,356. The banks hold over total liabilities a reserve 21.67 per cent. The capital stock paid in amounts to $3,611,700; surplus fund, $1,345,771; national bank notes outstanding, $1,323,900; individual deposits, $9,623,598.

Baltimore.—By a rule of the Baltimore Clearing-House all State banks belonging to the Association are required to publish statements of their condition in the same manner and form and of the same dates as may be designated by the Comptroller of the Currency for National banks. But State banks are excused from publishing statements under this rule for thirty days immediately preceding and following the dates of the semi-annual statements furnished by the State banks to the Treasurer of the State of Maryland.

An Offender Pardoned.—President Cleveland has pardoned Ellis Bard, ex-Cashier of the Lincoln (Pa.) National Bank, who was serving a sentence of five years in the Penitentiary for embezzling $39,000 from his institution. Bard was inveigled into the steal by F. W. Hull, of Ephrata, who got all the money, and is now serving a sentence for the part he took in the affair.

Plucky Cashiers Get Medals.—The board of directors of the Allentown (N. J.) Farmers' National Bank has presented gold medals to Cashier H. M. Smith and

Assistant Cashier H. M. Hutchinson for their bravery when the institution was robbed a few months ago. The men were "held up" by two burglars, but, after their release, they ran the robbers down and caused their arrest. The thieves were sentenced to State prison for a long term of years.

Rockafellow's Bank Dividend.—William Stoddard, assignee of the Rockafellow Bank, Wilkes-Barre, Pa., which failed on February 8 last, has announced a dividend of $25,000, and each creditor will receive about two and one-third cents on the dollar. Although this is the first and a partial dividend, it will form the main payment, as the remaining assets amount to little more than $10,000, and the assignee's expenses have to be deducted.

New Jersey Savings Banks.—The report of George S. Duryee, Commissioner of Banking and Insurance, states that there are twenty-five Savings banks in the State. The resources on January 1, 1893, were $39,776,787, while the amount due depositors was $36,488,246; other liabilities, $133,202. The surplus was $3,155,330. The deposits increased about $3,000,000 during 1892. The number of depositors on January 1, 1893, was 140,772.

Requested to Resign.—The directors of the Summit (N. J.) Bank have requested the resignation of Cashier E. A. Chapman, to take effect July 1. It is charged that he exacted a bonus, in addition to the regular discount, for discounting notes. Mr. Chapman was formerly principal of the public schools, and resigned to accept the position of Cashier.

Co-operative Banks.—The Senate of Pennsylvania has finally passed the bill authorizing the formation of co-operative banking associations.

SOUTHERN STATES.

Nashville Bank Statements.—The statement of the condition of the National banks of Nashville, Tenn., made to the Comptroller of the Currency May 4, shows but little change compared to those of March 6. National banks remaining are now Fourth, First and American National, and their reports show total resources and liabilities of $9,577,939.74 on May 4, and $9,228,893.65 March 6. The changes in the two months are not great except in the matter of individual deposits, which have increased $273,000 in that time. The loans and discounts have increased $200,000 and the overdrafts have been cut down $80,000. The gold and silver certificates in the hands of the banks have increased $23,000; and they report an increase of $149,000 in legal-tender notes. The notes and bills rediscounted show a total of $292,000, as against $30,000 two months ago.

Ex-Bank Officials Indicted.—The United States Grand Jury has filed the report of its investigation of the affairs of the First National Bank of Little Rock, Ark., returning five true bills, as follows: H. G. Allis, President of the bank, is indicted for making a false entry in the books of the bank on December 16, 1892; for making a false statement to the Comptroller, and for misapplying funds by drawing a draft on the First National Bank of New York, in favor of the Continental Bank of St. Louis, without the First National Bank of Little Rock receiving any consideration therefor. Creed T. Walker, Cashier of the bank in 1890, is indicted twice for making false returns to the Comptroller. In the indictments against Allis there are thirteen counts charging him with misappropriation of the bank's funds.

Gate City National Bank.—Lewis Redwine stands alone responsible for the looting of the Gate City National Bank, of Atlanta, Georgia. The United States grand jury virtually decided that when it reported indictments against Redwine and nobody else. There has, since Redwine fled, been a general belief that others were implicated with Redwine, and that the robbery of the bank was the result of a conspiracy. In this connection the names of some of the bank officials and some of Redwine's personal friends have been more or less directly used, and the court officers have most of the time worked on the conspiracy theory, but it did not pan out. The last act of the grand jury was to return another indictment. This contains three counts, and places the amount embezzled by Redwine at $108,148.78.

New Receiver Appointed.—Logan H. Roots, who has been in charge of the affairs of the First National Bank of Little Rock, Ark., for some time, has resigned upon a telegraphic request from Washington. Colonel Roots was one of the largest stockholders of the bank. David Armstrong, of Cincinnati, Ohio, who was Receiver of the Fidelity National Bank of that place, has been appointed as Colonel Roots' successor. The Comptroller of the Currency compliments Colonel Roots highly, and states that the removal does not in any way reflect on him personally.

NOTE.—Since this item was put in type Col. Logan H. Roots has died. A sketch of his life will be found elsewhere in this issue of the JOURNAL.

A Nashville Bank in Liquidation.—The Capital City Bank went into voluntary liquidation May 6. Deposits have been transferred to the Fourth National Bank, which will pay all checks on demand. and depositors will lose nothing. The loss to stockholders is estimated at thirty cents on the dollar. For some time the bank has been doing an unprofitable business, and rather than continue on such an unsatisfactory basis, the directors decided to liquidate.

Banker Kills a Cattleman.—H. C. Jones, Cashier of the People's National Bank of Ennis, Texas, shot and killed A. E. McCarty, a prominent stockman and speculator, May 3. The difficulty grew out of a money transaction. The men met at the post office, and after a few words McCarty knocked Jones down. As Jones arose to his feet he fired on McCarty, inflicting a mortal wound. Both were married men with families.

Searcy, Arkansas.—H. P. Gorman, Cashier of the People's Bank, informs the JOURNAL that one O. R. Wells recently induced a customer of this bank to endorse a draft drawn by himself on the St. Louis Carriage Mfg. Co., which was promptly protested. The firm claims that it is not indebted to Wells, and declares its intention to prosecute him. Similar drafts have frequently been drawn through other banks.

Bank Officers Accused of Fraud.—Stockholders of the Merchants' National Bank, of Fort Worth, Texas, have drawn up a petition, asking for a Receiver for the bank, and an injunction to prevent the officers from acting longer. The petition alleges bribery and conspiracy to wreck the bank.

Will Pay Twenty Cents.—The trustees of the Franklin Bank, Clarksville, Tenn., which failed here over two years ago, have paid the depositors $75,000, a ten per cent. pro rata. The bank will finally pay $150,000, about twenty per cent. of its liabilities.

WESTERN STATES.

Missouri State Banks.—The last official statement of the condition of the State banks of Missouri shows:

RESOURCES.		LIABILITIES.	
Loans and discounts undoubtedly good on personal or collateral security.	$67,320,050	Capital stock paid in	$20,188,345
Loans and discounts undoubtedly good on real estate security	7,475,574	Surplus funds on hand	8,867,428
Overdrafts by solvent customers	1,673,401	Deposits subject to draft at sight by banks and bankers	3,118,408
United States bonds on hand	124,896	Deposits subject to draft at sight by individuals and others	57,667,761
Other bonds and stocks at their present cash market price	5,860,830	Deposits subject to draft at given dates	16,222,083
Real estate at present cash market value	2,938,422	Bills payable and bills re-discounted	1,789,887
Furniture and fixtures	742,865		
Due from other banks, good on sight draft	11,123,049		
Checks and other cash items	2,055,271		
National Bank notes, legal tender United States notes and gold and silver certificates	6,306,749		
Gold coin	1,627,823		
Silver coin	500,976		
Total	$107,748,910	Total	$107,748,910

Kansas City, Mo.—By means of raising small certified checks, a clever forger has swindled three local banks out of $4,600. The victims are said to be the Metropolitan National Bank, the Citizens' National Bank and the Midland National Bank. The forger gave his name as George B. Norton, but his identity is not known and no trace of him has been discovered.

— Recently the Kansas City Clearing-House Association formulated a new set of rules, one of which is as follows: "On all items received from country correspondents, bearing the indorsement of St. Louis or any point east of the Mississippi River, a charge shall be made of not less than 10c. per $100."

— The case against Montgomery Lewis, who is charged with embezzling from the Lombard Investment Company, has been postponed until the September term of the criminal court.

— State Treasurer Stephens, of Missouri, has received notice from the Kansas City Bond and Investment Company that it would be unable to comply with the recent Act of the Legislature requiring a deposit of $100,000 with the State Treasurer, and would, therefore, go out of business. Of the nine similar companies doing business in the State, only three, up to date, have intimated to the Treasurer that they expected to make a deposit within the time required by the Act.

Missouri Bankers' Association.—The next Convention of the Missouri Bankers' Association will be held at Excelsior Springs on Wednesday, Thursday and Friday, July 5, 6 and 7, having been postponed to that time from the dates originally fixed, June 21, 22 and 23. The Secretary of the Association, Mr. Jno. Caro Russell, of St. Louis, reports that a great deal of interest is being taken in the coming Convention. A large list of subjects will be presented by some of the best bankers, and some important questions will be considered, and it is thought that the present financial situation and conditions can be discussed with interest and profit to all.

By authority of the Executive Committee a reward of $100 is offered by the Association for the arrest and conviction of the party or parties who, on April 19 or 28, 1893, raised checks on St. Louis and Kansas City banks; said checks being purchased at Springfield, Mo., for small amounts, from different banks, on their various correspondents. This reward is good for one year, from May 25, 1893, to May 25. 1894.

Cincinnati, Ohio.—The Ohio Valley National Bank recently accepted the resignation of Hon. Robert B. Bowler as a director. The directors, in accepting the resignation, had recorded on the Secretary's books an expression of general regret at the losing of the services of Mr. Bowler, who resigned to accept the office of First Comptroller of the Treasury. The Ohio Valley managers expressed great satisfaction with Mr. Bowler's connection with the bank, but are pleased that he has been called higher, as he is well equipped for his new duties. Thomas P. Egan succeeds Mr. Bowler in the directory.

— The new City Hall Bank has chosen a board of directors and the following officers: President, W. F. Doepke; Vice-President, J. W. Baldridge; Cashier, Claude Ashbrooke.

Dwiggins' Methods Investigated.—The Grand Jury which has been investigating the affairs of the wrecked Paris-Dwiggins bank at Greentown (Ind.) separated without making a report.

Cashier Walden testified that the organizers had no money invested in the concern, and drew out all money as fast as deposited, putting worthless paper in its place, chiefly stock in the Chicago Gold Mining Company and a mythical trust company.

It was also in evidence that Paris and Dwiggins employed ex-Gov. Chase, a short time before the failure, to go out among the farmers and solicit them to make deposits and to take stock in the bank. The ex-Gov. testified that he had no financial interest in the bank, being employed on a salary, which has not yet been received.

It is regarded as certain that Paris, Dwiggins and Walden will be indicted, and it is said the chances are that ex-Gov. Chase will also be indicted.

Protecting Bank Depositors.—Public Examiner Myers, of South Dakota, has signalized his entrance into office by making some improvements in the rules governing the banks of the State. He has strengthened and lengthened the oath required of the bank officers, and has made it exceedingly dangerous for them to falsify the returns. He will hereafter require all directors to comply with the law prescribing that they personally examine the accounts, a practice which is said to be decidedly uncommon. In addition to the usual questions asked at the regular examinations he will present a new set, not intended to be published with the statement, but designed to give the examiner a full view of the inside workings of the banks.

Absconding Bankers Caught.—Information was received by the Mayor of Chrisman, Ill., on May 19, that John E. and Alexander B. Standford were in custody in Keokuk, Ia., and were awaiting identification. About a year ago the Standfords were prosperous bankers doing business in the town of Chrisman. This bank was was made the depository of the wealth of farmers residing adjacent to the town, and was considered a safe and flourishing institution. One morning the bank failed to open, and it was discovered that the brothers had fled the previous night, taking with them nearly $200,000 in cash. A reward of $2,000 was offered for their capture.

Bank Run Ended.—The run on the People's Savings Bank of Denver, which recently created some excitement among the smaller depositors, is over, and the bank's creit is better than ever. Besides being backed by the Clearing-House Association, the bank received heavy deposits from many of the principal business firms of the city, whose confidence was at no time affected by the run made by persons who had been misled by unfounded rumors.

Kansas Delegates.—The President of the Kansas Bankers' Association has designated the following as delegates to the Congress of Bankers and Financiers, to be held in Chicago, June 19: J. H. Mulvane and P. I. Bonebrake, of Topeka; Calvin Hood and C. S. Cross, of Emporia; C. W. Trickett, Kansas City; W. C. Robinson, Winfield; W. E. Atchison, Conway Springs; Walter Chenault, Fort Scott; Louis Walton, Harper; and J. A. Swanson, Lindsborg.

National Bank Examiner.—The Comptroller of the Currency has appointed George B. Caldwell, of Lansing, Examiner of National Banks for the State of Michigan, in place of Ira H. Wilder, resigned. Mr. Caldwell was Cashier in a Lansing bank for four years, and has lately been serving in the State Auditor's office as an expert accountant.

Ironwood, Michigan.—The People's Savings Bank, with a capital stock of $50,000, opened for business May 23. It is the only Savings bank in the county, and will also supply a lack of banking facilities heretofore existing in several other towns in that locality. Ex-Deputy State Treasurer A. D. Garner is Cashier of the new bank.

New Clearing-House.—A clearing-house was established by the banks of Sedalia, Mo., May 18. J. C. Thompson, Cashier of the First National Bank, was elected President; R. H. Moses, Cashier of the Third National Bank, Vice-President; and F. W. Schultz, Cashier of the Sedalia National Bank, Secretary.

Violates the Anti-Trust Law.—Attorney-General Little, of Kansas, has decided that the agreement entered into by bank members of the clearing-houses of the various towns and cities of Kansas, fixing charges for the collection of drafts and checks, is a violation of the State Anti-Trust law!!

Receiver Appointed.—George W. Stone, of Lansing, Mich., has been appointed Receiver of the Michigan Central Savings Bank. Bonds were fixed at $100,000. An account of the failure of this bank was published in the May JOURNAL.

New Minneapolis Bank.—The new Germania Bank opened for business May 11, with a capital stock of $50,000. Otto E. Naegele is President; Loren Fletcher, Vice-President; and Eugene W. Naegele, Assistant Cashier.

New Bank Examiner.—The Comptroller of the Currency has appointed James S. Escott of Louisville, Ky., an Examiner of National Banks for the State of Kentucky, vice Jacob M. McKnight, resigned.

St. Louis, Mo.—The banks of St. Louis contributed about $2,000,000 of gold to the Treasury during the late heavy demands for foreign exportation of the yellow metal.

Cashier Under Arrest.—Lewis D. Walden, Cashier of the defunct Greentown Bank, is under arrest in Kokomo, Ind., on the charge of embezzlement.

Chicago.—Controller Eckels has appointed Mr. William C. Niblack Receiver of the Columbia National Bank.

PACIFIC SLOPE.

San Francisco.—The Bank Commissioners have issued a license to the Columbus Savings and Loan Society. The authorized capital is $300,000; subscribed capital $280,000, of which 25 per cent. has been paid up. This bank was recently organized by some Italian merchants. J. F. Fugasi is the President and F. N. Belgrano is Cashier and Secretary. The bank opened on the 1st of April. It is the first Italian bank ever organized in San Francisco, and while its patronage will not be confined to that class, it is believed the Italians will deposit considerable money with the bank. This makes eleven Savings banks in operation in this city. The Columbus is the only addition in this line for three years. In the meantime, however, the California Safe Deposit and Trust Company has incorporated a Savings Bank Department to its business, and the new Union Trust Company will also have such a department.

There has been a change in the management of the London-Paris-American bank. Eugene Meyer, who has been manager for years, goes to New York to take charge of the affairs of Lazard Freres. Sigmund Greenbaum, the well known auctioneer, has assumed charge of the bank.

—The jury in the case of Wesley C. Rippey, charged with assault with intent to kill John W. Mackay, failed to agree. A second trial will occur in June.

Floating National Bank.—Col. N. E. Linstey, an old man and capitalist of the Northwest, has originated a novel scheme. It is a floating National bank. He is now constructing a large barge on Kootenai Lake, Idaho, on which is a large cabin weather-boarded with iron. On the inside is an immense vault. None of the mining towns on the shores of the lake are large enough to support a bank, yet they badly need such an institution, hence Col. Linstey's scheme will prove a profitable one. A charter for a National bank has been applied for, and as soon as it is granted Col. Linstey will make a round trip of the lake weekly, visiting one town each day.

Opposed to the Sherman Law.—On the question of the repeal of the Sherman silver Act, a canvass of the banks and bankers of the State has been made by the Tacoma (Wash.) clearing-house, and, to the surprise of silver men, 85 per cent. favor the repeal of the Act, while nearly all of those opposing the repeal are contiguous to or rely for their support upon silver mines. Many of the pro-Sherman banks are near the Idaho line, but there are said to be few of them in Western Washington.

Cheyenne National's Dividend.—A third dividend has been declared by the Receiver of the Cheyenne National Bank, it being the total of payment up to 50c. on the dollar, and the creditors confidently expect to get 25c. more. The bank failed for $30,000 eighteen months ago, going down with the California National, of San Diego, Cal. J. W. Collins was President of both.

Montana Bank Assessments.—At a recent meeting of the State Board of Equalization, held at the office of the State Treasurer, the following resolution was adopted:

That in assessing the shares of any bank or banking association the Assessor will add to the total par value of such stock the whole amount of its surplus or reserved fund, and after deducting therefrom the amount of investments in real estate, will assess such shares at their full cash value.

Carson City Mint Closed.—Owing to the small amount of gold bullion deposited, about $100,000 per month, and the heavy expense of coinage at the United States Mint at Carson City, Nev., Secretary Carlisle directed the suspension of coinage operations at that mint, dating from June 1.

Fugitive Banker Caught.—Benjamin F. Schwartz, formerly a banker at Port Angeles, Washington, convicted of embezzlement, and sentenced to eighteen months' imprisonment, but who escaped, has been captured in St. Louis, and will be returned to Washington to serve out his sentence.

California Savings Deposits.—The average amount to the credit of depositors in the Savings banks of California—$800—is claimed to be a greater sum than shown by any other State in the Union.

CANADA.

Toronto, Ont.—George Pyke is wanted in Toronto for embezzling $100,000 from the Imperial Bank of Canada. For eight months Pike had been living the life of a hermit in Kansas City, but fled a few hours before the chief of the provincial detective service arrived with extradition papers.

FOREIGN BANKING NEWS.

ENGLAND.—Hallet & Co., navy agents and bankers, have suspended. The failure has caused a sensation in military and naval circles at the West End, as many officers are depositors with the company; but commercially the failure is of slight importance.

FRANCE.—The Comptoir des Fonds National, Paris, has failed with £1,000,000 liabilities and three absconding directors.

RUSSIA.—The Russian postal authorities have given notice that on and after June 13 bonds of the Russian Government will be liable to customs duties, both when imported into, or exported from Russia; also, that if discovered in the mails in that country, the amount of 25 per cent. of their value will be retained as a penalty. Packages addressed to Russia which are known to contain such bonds, will consequently be refused when offered for mailing at the post office, either as registered or ordinary matter.

AUSTRALIA.—The Government at Victoria has announced its decision to amalgamate all the Savings banks now conducted independently of the Government with the postal Savings banks, the Government of the colony to have full control and guarantee deposits.

— The directors and other officials of the Mercantile Bank of Australia, which recently failed, and who were under accusation of criminal management in connection with the affairs of the bank, have all been discharged from prosecution, with the exception of the Hon. Sir H. M. Davies, who was the leading director, and Frederick Millidge, who was General Manager of the institution.

— The failure is announced May 16 of the City of Melbourne Bank, Limited. The London manager of the concern is Edmund Rouse and its offices are at No. 117 Bishopsgate street Within, E. C.

— The Bank of Victoria, Limited, has suspended. According to the balance sheet of last December the deposits amounted to over £7,000,000. The failure is of great importance. The bank had several branches, and its London office was at 28 Clement's Lane, E. C. The subscribed capital of the Bank of Victoria is £1,200,000. The liabilities are about double that amount.

— The Bank of Victoria is the sixth Australian bank to suspend since April 1 last. The first to go under was the Commercial Bank of Australia, from which more than £2,000,000 had been withdrawn in the previous twelve months. The final collapse was caused by the withdrawal of £150,000.

The second bank to fail was the English, Scottish, and Australian Charter Bank, which closed its doors April 11 with liabilities amounting to £8,000,000. This institution was one of the oldest in the colonies, and claimed to have a paid-up capital of £900,000 and a reserve fund of £310,000. The last balance sheet made public, in September, 1892, showed deposits of almost £6,000,000.

The third institution to suspend was the Australian Joint Stock Bank, which failed April 19 with liabilities of £13,000,000. The deposits amounted to £11,000,000. The paid up capital of this bank was claimed to be £704,394, the reserve fund £500,000, and the further liability of its shareholders £860,926.

The fourth to close its doors, which it did April 24, was the London Chartered Bank of Australia. It had a paid-up capital of £1,000,000, a reserve fund of £320,000, and its total deposits reached nearly £7,000,000.

The fifth of the failures was that of the National Bank of Australasia, which suspended April 29. Its authorized capital was £2,000,000, its subscribed capital £1,250,000, its paid-up capital £1,000,000, its reserve fund £670,000, and the reserve liability of its shareholders £1,500,000. Its assets were estimated at £10,000,000 and its liabilities in the colonies alone at £7,500,000. Between April 10 and 29 more than £6,500,000 was withdrawn in deposits. The total deposits of the bank reached nearly £9,000,000, of which about 15 per cent, belonged in England. The total deposits of the Bank of Victoria were £6.518,294, of which nearly 17 per cent. belongs in Great Britain.

This crisis in the affairs of the banks of Australia has been brought about by speculation in unproductive land and overtrading. All the colonial governments have in the last five years borrowed immense sums of money for internal improvements, but since the the Baring failure, two years ago, money has been hard to get, and shrewd investors have for a long time been looking forward to the present crash. The debts of the colonies are the greatest, per capita, in the world.

— Closely following on the numerous other financial crashes in the antipodes, comes the announcement of three other suspensions on the 15th ultimo. These were the Bank of North Queensland and the Queensland National Bank, both at Brisbane; and the Commercial Banking Company of Sydney, one of the four largest concerns doing business in Australia, with £800,000 paid-up capital and over £11,000,000 deposits. This failure is the most serious of all the Australian series.

The deposits in the Queensland National Bank last December amounted to £8,300,-000, and the subscribed capital £1,600,000, of which one-half is paid up. The bank has claimed a reserve fund of £485,000. The bank has a branch in Sydney, New South Wales, and various other places in Australia.

— An article published a short time since in the London "Statist" says that the increase in the number of Australian banks has been disproportionate to the commercial growth of the country, and says that while the value of the export trade of the colonies rose from £30,750,000 in 1890 to not quite £44,000,000 in 1891, an increase of 43 per cent, the banking business increased in the same period from £50,000,000 to £142,000,000, or an increase of 143 per cent. The conclusion drawn by the writer is that Australia has been overbanked, and largely through the facility with which money has been borrowed in England. Victoria appears to have been the greatest sinner in this respect, but the statistics of New South Wales and Queensland do not compare satisfactorily. The figures relating to South Australia and New Zealand disclose a much more healthy state of affairs.

General Foreign Intelligence.—Official information has been received by the Bureau of the American Republics that the Government of Nicaragua has authorized the establishment, at Managua, of a a new bank, to be called "Credito de Managua," with a capital stock of $150,000, in shares of $5,000 each.

President Diaz of Mexico, according to information received by the Bureau, recently informed a committee at the Agricultural Congress that he would take the subject of an agricultural bank into consideration and promote it in every way in his power.

The Consular Agent of our Government, at Bloemfontein, in the Orange Free States, reports to the State Department that the Orange Free State is well provided with banks, and institutions of that character are established in nearly every town He says that the revenue of the Orange Free State amounts yearly to $1,500,000, and the annual expenditure reaches about $1,250,000.

United States Consul Nickeus, at Baranquilla, in the Republic of Colombia, in a recent report to the State Department, assigns as the singular reason for the increase of products in that Republic the fact that the issue of paper money having driven all gold and silver from circulation, the people who earn a surplus of this paper money do not now hoard it as they did before with silver and gold, but invest it in coffee and rice plantations, believing the latter better things to hold than paper money worth fifty cents in gold to the dollar.

A translated copy of the message of the President of Uruguay, to the General Assembly, now in session in that country, states that "an economic evolution" has being going on in Uruguay; "a slow, but ascending evolution towards the solution of the crises which for twenty months have paralyzed the commercial movement, and suffocated the expansion of the productive forces of the nation." The message adds that popular applause might have been won, by decreeing "a regimen of paper money and forced currency." But it was preferred to bear transient supplanting rather than err through weakness. The President recommends the establishment of one or more commercial or agricultural banks, "the opening of which would mark the precise instance of the definite solution of the crisis."

United States Consul Waller at Tamatave, in a recent report to the State Department, directs the attention of American bankers to the fact that there is now a splendid opportunity to establish a bank in Madagascar. Mr. Waller says that since the failure of the New Oriental Banking Company, Limited, of London, England, which had a branch in Madagascar, there is a great demand for the establishment of a good non-partisan bank in Madagascar. He says: "Investigation will show that the Madagascar branch of the New Oriental was making money, and that it was in a very prosperous condition at the time of the suspension of its source in London. In support of this statement, I respectfully suggest the careful perusal of my report on gold, herewith submitted, which show an increase on bills in favor of Madagascar, to the amount of £18,443 or $67,215 in 1890 over 1889.

"I must add after mature consideration I have arrived at the conclusion that the establishment of an American bank, the principal branch of which should be at Tananarivoo, and the other at Tamatave, would immensely contribute to cement the good relations now existing between the two nations. Such a bank would be encouraged by the Government of Madagascar."

United States Consul T. M. Newson, at Malaga, writes the State Department that the finances of Spain are in "a very disordered and deplorable condition, and appear to be growing worse." The national debt of Spain is over $1,299,500,000 and there is now a deficit of $20,000,000. The Consul says that exchange on London has been 20 per cent. and upward, although it is now lower. New taxes have been levied upon women and others who sell vegetables, and the results have been riots and bloodshed, both in Madrid, and near Almeria, and in other parts. The fact is, say the Consul, "it is hard to see how the people can bear any further taxation. The minister of finance seems to be aware of this fact, as he now talks of a loan of $150,000,000.

The Bureau of American Republics has received the following as the published figures of expenditures in the Argentine Budget for the current year:

	Paper.	*Gold.*	*Bonds.*
Congress	$ 1,454,828	....	....
Interior	16,684,225	$2,400,000	....
Foreign Affairs	308,920	263,880	....
Finance	5,441,945	11,071,943	$14,299,966
Justice	8,645,046	....	....
War	18,496,200	....	....
Marine	6,751,050	....	....
Total	$52,731,214	$13,735,823	$14,299,966

Information has reached the State Department to the effect that the Government of Argentina has resolved to destroy $1,000,000 worth of paper currency each month in order to reduce the paper currency circulation, and that a protocol has been signed at Santiago by the representatives appointed by Chili and Argentina respectively for the settlement of the differences between the two countries regarding the international boundary. It enacts that Chili shall claim no territory east of the Andes, and that Argentina shall have no claim to any port on the Pacific coast.

MEXICO.—The annual meeting of the shareholders of the National Bank of Mexico was held recently. The bank earned on its capital of $8,100,000, last year, $1,839,418 net, and paid a fourteen-per-cent. dividend to shareholders, and $85,000 to the Council of Administration, besides adding $433,941 to its reserve fund, making the present total reserve $3,560,554.

The directors say in their report that the business outlook is in general encouraging. Mexico has given unmistakable evidence of her vitality by successfully withstanding the exceedingly difficult conditions created by the simultaneous failure of her staple crops and the unprecedented depreciation of her chief product, silver, on the foreign markets. The crops of the present year promise fairly, and, with better harvests, the situation of the people at large and the mercantile community may be expected to evince substantial improvement.

—Senor Jose Ives Limantour has been appointed Secretary of the Treasury of Mexico. The appointment was made on May 9 by President Diaz, and is, it is said, looked upon favorably by the financial world of the neighboring Republic.

BANKING AND FINANCIAL MISCELLANY.

EDWARD O. LEECH, Director of the Mint, resigned May 12.

THE Bank of New York and the Bank of Massachusetts were both founded in 1784.

DANIEL N. MORGAN succeeded E. H. Nebeker as Treasurer of the United States, June 1.

THE amount of savings deposits in Austria is $613,000,000; in France, $550,000,000; in Great Britain, $536,000,000; in Prussia, $720,000,000; in Italy, $346,000,000; in Sweden and Norway, $220,000,000; in Switzerland, $118,000,000.

THE English Black Friday was May 11, 1866, the height of the commercial panic of that year; the American Black Friday was September 24, 1869, when a group of speculators in New York suddenly advanced the price of gold and produced a disastrous panic.

AN apparently incredible story of fabulous gold discoveries comes from the Grand Summit Mine on Palmer Mountains, in the Okanogan mining district, Washington. It is said that an almost solid body of pure gold was found at a depth of 290 feet. A seven pound piece of ore assayed produced two pounds of pure gold, which is equal in value to $175,000 to the ton. The gold is of fine quality and can be seen with the naked eye.

THE most disastrous European panics were those of 1793, on account of the great French war; of 1797, because of the Irish rebellion, when the 3-per-cents went down to 44; of 1825, when 770 banks failed in Great Britain alone; of 1847, through the railroad mania; of 1857, through the American failures; of 1859, from fear of a general war in Europe; of 1866, through over speculation in limited liability companies, and of 1870, at the beginning of the Franco-Prussian war.

Texas Bankers Oppose Free Coinage.—At the ninth annual Convention of the Texas Bankers' Association held at San Antonio, May 16, 17 and 18, the following resolution was adopted: "Resolved, That the Texas Bankers' Association in convention assembled, hereby declares in favor of the repeal of the so-called Sherman Purchase Act, and against the free and unlimited coinage of silver."

Co-operative Banks.—Pennsylvania has recently enacted a law authorizing the formation of co-operative banking associations, where the profits derived from the business, after paying all legitimate expenses, shall accrue to the depositors and borrowers of the association in proportion to their deposits or loans, to each class one-half of the net profits, and a dividend not to exceed six per cent. per annum on original subscribed stock may be considered legitimate expenses.

Each title of the banks organized under the provisions of this law must end with the words "Co-operative Banking Association," the use of "Society" or "Company" being prohibited. The term of existence of such organizations is limited to twenty years, and the shares are not to exceed $10 each. The character and financial responsibility of the original stockholders must be passed on and approved by the Superintendent of the Banking Department before permission is given to begin business.

Stockholders will not be entitled to receive any profits until the total amount of stock shall be fully paid in cash or earned from the net profits of the association.

No loan shall be made to any individual, firm or company, either singly or collectively, in excess of ten per cent. of the deposits of the association at the time of making such loan. The liability of members is limited to twice the amount of their subscribed or earned capital stock.

The new law is said to be a concession to the demands of the farmers, and is doubtless a modification of the various schemes for co-operatives banks devised by the Farmers' Alliance in the West.

The weak point in these institutions has heretofore been the facility offered stockholders for obtaining loans on indifferent securities, but with this defect eliminated there is no reason why the Pennsylvania plan of co-operative banking should not afford a fair basis of experiment—the success of co-operation in any business not having been yet fully demonstrated.

Several charters will be applied for immediately under the new law, and its efficacy at once put to a test.

President Cleveland's Financial Views.—In reply to a direct question President Cleveland stated, on June 5, that he intended to call an extra session of Congress not earlier than the 1st nor later than the 15th of September, unless unexpected contingencies should make an earlier meeting necessary.

The President further said: "While there has been no mystery nor secrecy in regard to my intention in this matter, I think it not amiss that our people should be informed authoritatively that the time is at hand when their representatives in Congress will be called upon to deal with a financial condition which is the only menace to the country's welfare and prosperity. It is well for the people to take up the subject for themselves and arrive at their own conclusions as to the merits of a financial policy which obliges us to purchase idle silver bullion with gold taken from our reserve. One does not need the eye of a financier to see that this gold thus subtracted from the Government's stock is eagerly seized by other nations for the purpose of strengthening their credit at our expense.

"It does not need the art of statesmanship to detect the danger that awaits upon the continuance of this operation. Already the timidity of capital is painfully apparent, and none of us can fail to see that fear and apprehension in monetary circles will ultimately bring suffering to every humble home in our land.

"I think that between now and the meeting of Congress much depends upon the action of those engaged in financial operations and business enterprises. Our vast National resources and credit are abundantly sufficient to justify them in the utmost faith and confidence. If instead of being frightened, they are conservative, and if instead of gloomily anticipating immediate disaster they contribute their share of hope and steadiness, they will perform a patriotic duty, and at the same time protect their own interest. The things just now needed are coolness and calmness in financial circles, and study and reflection among our people."

NATIONAL BANK CIRCULATION.—Statement of the Comptroller of the Currency showing amount of National bank notes outstanding, amount of lawful money on deposit with the Treasurer of the United States to redeem National bank notes, and the kinds and amounts of United States bonds on deposit to secure circulation and public deposits, on April 30, 1893, with the changes during the preceding year and the preceding month:

NATIONAL BANK NOTES—TOTAL CIRCULATION.

	April 30, 1892.	*March 31, 1893.*
Total amount outstanding at the dates named	$172,366,393	$175,993,722
Additional circulation issued during the intervals:		
To New Banks	2,984,320	446,190
To Banks increasing circulation	11,400,439	1,014,140
Aggregate	186,751,152	177,454,052
Surrendered and destroyed during the intervals	9,995,855	698,755
Total amount outstanding*	176,755,297	176,755,297
Increase in total circulation since April 30, 1892	4,388,904	
Increase in total circulation since March 31, 1893	....	761,575

CIRCULATION BASED ON U. S. BONDS.

	April 30, 1892.	*March 31, 1893.*
Amount outstanding at the dates named	143,954,506	153,860,416
Additional issued during the intervals as above	14,384,759	1,460,330
Aggregate	158,339,265	155,320,746
Retired during the intervals:		
By Insolvent Banks	874,970	149,000
By Liquidating Banks	1,288,632	12,600
By Reducing Banks	1,043,345	28,828
Total retired during the intervals	3,206,947	188,428
Outstanding against Bonds April 30, 1893	155,132,318	155,132,318
Increase in circulation since April 30, 1892	11,177,812	
Increase in circulation since March 31, 1893	....	1,271,902

CIRCULATION SECURED BY LAWFUL MONEY.

	April 30, 1892.	*March 31, 1893.*
Amount of outstanding circulation represented by lawful money on deposit with the Treasurer of the United States to redeem notes:		
Of Insolvent National Banks	791,961	1,119,955
Of Liquidating National Banks	5,156,022	4,879,175
Of National Banks reducing circulation under Section 4 of the Act of June 20, 1874	5,076,196	1,531,886
Of National Banks retiring circulation under Section 6 of the Act of July 12, 1882	17,387,708	14,091,963
Total lawful money on deposit	28,411,887	21,622,979
Lawful money deposited April, 1893	....	184,575
National Bank Notes redeemed in April, 1893	....	694,902
Decrease in aggregate deposit since April 30, 1892	6,788,908	
Decrease in aggregate deposit since March 31, 1893	....	510,327

U. S. REGISTERED BONDS ON DEPOSIT.

	To Secure Circulating Notes.	*To Secure Public Deposits.*
Pacific Railroad Bonds, 6 per cents	12,078,000	1,191,000
Funded Loan of 1891, 4½ per cents, continued at 2 per cent	21,779,350	1,538,000
Funded Loan of 1907, 4 per cents	139,301,450	12,523,000
Funded Loan of 1882, 3 per cents	....	....
Total on deposit April 30, 1893	173,258,800	15,252,000

*Circulation of National Gold Banks, not included in the above, $100,317.

JAMES H. ECKELS, *Comptroller of the Currency.*

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

REVISION OF U. S. POSTAL MONEY ORDER SYSTEM.

Editor Rhodes' Journal of Banking:

Ex-Postmaster-General Wanamaker has made several improvements in most of the postal departments of the Government, but it would seem that there is no department under this official which of late years has been changed so little and one which needs so thorough an overhauling as the Postal Money Order system. The present system in regard to the payment of money orders, at any rate should be revised considerably. There are several thousand money order post offices in the great West which are constantly drawing money orders on small offices, and these orders are at times of a considerable amount. Now, the trouble is that the smaller offices, and there are thousands of them, are in a great many cases unable to meet the payment of money orders drawn on them, for the reason that they are required to remit to the postmasters in the larger cities, all the money order funds on hand above the amount of advices that they receive. Say, for instance: the postmaster at Jonesville at the close of business on March 10 has a balance of $425 in his money order fund, and no advices on hand. That night he must remit to the postmaster at some large city, probably 500 miles or more away, all this $425. The next day he is liable to receive advice of orders drawn on his office amounting to several hundred dollars, and of course if the money orders are presented very soon he is obliged to refuse payment, on account of having no funds. If the office is a small one, it may be weeks before its receipts are enough to take up the orders which have been presented and refused many times. It is true that the postmaster has a couple of remedies which he can use, but in this Western country they are worth but little. He may transfer his stamp and box rent funds to the money order account and he may make requisition to the Postmaser-General for a draft to pay the outstanding orders, but in the first place there are few small post offices that have more than a few dollars in the stamp and box rent fund at any time, and in case the postmaster has to apply to Washington for a draft, it would be a week, provided he lived west of the Missouri River, before he could get it, and in these times of rapid business a few days' delay might mean bankruptcy.

It would seem that inasmuch as the postmasters at the smaller towns are constantly remitting their surplus funds to the offices in the larger places that some arrangement might be made whereby all post office money orders could be made payable at the larger offices, or at least in the offices at the principal cities, such as New York, Chicago, Boston, and other noted banking centers. In this event they could be used as exchange and forwarded by banks and business houses to the eastern cities to be received the same as treasury and bank drafts. Another plan would be to furnish the post offices with drafts which they could use in case of emergency to draw on the larger offices or the postmaster at New York, and the amount which postmasters under light bonds could draw could be limited. Of course certain objections can be offered to the above suggestions, but I think the department could arrange something similar to them, and thus overcome some of the present objections offered to the Government money order system. ARTHUR E. FLYNN, *Cashier, First Nat'l Bank.*

MANDAN, N. DAK., June, 1893.

Bank Statements.—It is often desirable to compare the statements of a national bank for a year or, sometimes, for a longer period. Such a comparison, when carefully and intelligently made, cannot fail to impart a clear idea of the general management of the bank and of its average condition. Ordinarily such a series of statements would be quite inaccessible. The publishers of the JOURNAL have compiled for the Bankers' Agency (a department of their business) a statement of every National bank for a considerable time past. Copies of these statements, with such additional information as they have, will be furnished to REFERENCE BOOK subscribers. A digest of statements, prepared by an experienced accountant in charge of the department, will also be furnished from time to time.

GENERAL INVESTMENT NEWS.

SECURITIES SOLD.

Clark, South Dakota.—The $7,000 Clark county bonds, issued for the purpose of establishing a poor farm, were taken by the First National Bank of Clark at $230 premium.

Albany, Oregon.—The board of directors of the Albany school district at a meeting recently negotiated $20,000 of bonds at 5 per cent and 3 per cent commission, for the purpose of erecting a new school building. E. H. Rollins & Sons were the successful bidders for the bonds.

Great Falls, Montana.—W. J. Hayes & Son, of Cleveland, O., were the successful bidders for the $80,000 worth of school bonds sold May 22. They purchased them at a premium of $2,570. Other bidders were H. B. Palmer, of Helena, who offered $1,800, and N. W. Harris & Co., of Chicago, par. The bonds bear six per cent interest, redeemable in ten or twenty years.

Minneapolis, Minn.—The finance committee of the court house and city hall commission has made a deal for the sale of the $500,000 of the bonds which have been on the market for some weeks. The committee determined to let the bonds go to Blair & Co., of New York, at par and accrued interest, delivery to be made as follows: $200,000 on June 1, $100,000 on July 1, $100,000 on August 1, and $100,000 on September 1.

PROPOSED INVESTMENTS.

Cherokee Nation.—Chief Harris of the Cherokee Nation, has published a notice asking bids for the sale of $6,640,000 of the bonds authorized to be issued under Act of Congress of March 3, 1893. The bonds bear 4 per cent. interest from March 4, 1893, payable annually, the principal payable in four equal annual installments, beginning March 4, 1896. These bonds must be sold for not less than par and interest. They are guaranteed, principal and interest, by the United States, and principal and interest are payable at the Treasury Department.

El Paso, Texas.—The city council will sell $25,000 worth of bonds to pay for the construction of an artesian well.

Covington, Ky.—The city of Covington will sell $148,218.90 worth of 5 per cent. bonds for street paving purposes.

Montgomery. Ala.—The city council will issue $125,000 of street paving bonds.

Piedmont, W. Va.—An issue of $45,000 of water-works bonds has been voted.

Newnan, Ga.—The city of Newnan will sell $50,000 worth of 6 per cent. water-works bonds.

Newport, Ky.—The city will sell $42,000 worth of 5 per cent. funding bonds.

CORPORATIONS SEEKING CAPITAL.

Raleigh, N. C.—The Caraleigh Mills Co. has issued $100,000 of 6 per cent. first mortgage bonds.

Equitable Gas Light Co.—The Equitable Gas Light Co., of New York city, will issue $270,000 additional first consolidated mortgage five per cent. gold bonds of 1923.

Pullman Palace Car Co.—$6,000,000 additional capital stock.

Salt Lake City Railroad.—$297,000 first mortgage 6 per cent. gold bonds of 1913.

Charleston & Savannah Railway.—$1,500,000 first mortgage 7 per cent. gold bonds of 1923.

U. S. Rubber Co.—An issue of $5,851,400 preferred stock, and the same amount of common stock.

Wheeling & Lake Erie Railway.—$500,000 additional consolidated 4 per cent. gold bonds.

ITEMS.

Richmond Terminal.—The leading feature of the plan for reorganizing the Richmond Terminal properties is the large amount of cash it raises—$23,250,000, of which only $6,800,000 comes from the sale of bonds; the balance is to be raised by stock assessments and the sale of new common stock.

Staten Island Railway.—The stockholders have approved the increase of the face value of the capital stock from $15 to $75 per share, and of the issue of $1,000,000 4½ per cent bonds.

Brooklyn Elevated.—The net earnings of this corporation for the quarter ending March 31, 1893, were $205,951, as compared with $200,644 for the same period in 1892.

Warning Against a Swindler.—Bankers are warned to be on their guard against a bold and successful swindler, who has already victimized a number of banks. His method is to employ a lawyer to advise him in some pretended business enterprise, and, through the lawyer, obtain an introduction at a bank, where he deposits worthless checks. On these he draws, obtaining, if possible, the endorsement of the lawyer. He is described as about thirty years old, nearly six feet tall, not heavy in figure, light complexion, bristly reddish moustache and hair; eyes blue and gray, and neatly dressed. He is a smooth talker and has been known to dictate, in a lawyer's office, letters purporting to direct large business transactions. From February 20 to April 5 he was, at various times, in the following places: Bay Shore, L. I.; Freehold, Bordentown, Paterson, Somerville and Salem, N. J.; Wilmington, Delaware; Hudson, N. Y. He has in his possession check books on banks in some of these towns. He has also appeared at West Chester, Pa., and Havre de Grace, Md. For some time he was inactive, but has recently drawn on the First National Bank of Somerville, N. J., from both West Virginia and Ohio. The American Bankers' Association offers, through the South Side Bank, Bay Shore, N. Y., a reward of $200 for his arrest and conviction, together with the proof that he is the same person who defrauded the South Side Bank, Bay Shore, N. Y., on February 20, 1893.

Condition of National Banks in New York.—Following is an abstract of reports made to the Comptroller of the Currency, showing the condition of the 49 National banks in New York city at the close of business on Thursday, the 4th day of May, 1893, (cents omitted):

RESOURCES.		
Loans and discounts		$307,080,931
Overdrafts		291,310
U. S. bonds to secure circulation		7,220,000
U. S. bonds to secure deposits		1,100,000
U. S. bonds on hand		721,850
Stocks, securities, etc		28,813,211
Due from approved reserve agents		....
Due from other National banks		30,571,378
Due from State banks and bankers		5,543,318
Banking house, furniture, and fixtures		11,365,822
Other real estate and mortgages owned		717,280
Current expenses and taxes paid		1,211,479
Premiums on U. S. bonds		547,718
Checks and other cash items		2,929,291
Exchanges for clearing house		74,391,728
Bills of other National banks		1,224,785
Fractional paper currency, nickels and cents		45,536
SPECIE, viz.:		
Gold coin	$13,948,415	
Gold Treas'y certificates	43,604,640	
Gold clearing-house certificates		
Silver dollars	125,979	
Silver Treas'y certificates	5,504,655	
Silver, fractional coin	386,804 —	63,570,493
Legal tender notes		29,336,199
U. S. certificates of deposit for legal tender notes		5,180,000
Five per cent. redemption fund		313,650
Due from U. S. Treasurer		582,224
Total		$572,758,212

LIABILITIES.		
Capital stock paid in		$49,810,000
Surplus fund		41,272,839
Undivided profits		18,675,919

Total		$572,758,212

FAILURES AND SUSPENSIONS.

Illinois.—The Chemical National Bank, of Chicago, closed its doors May 8. The cause of the failure is said to be the large amount of bad paper which it held and could not realize on. The March statement showed loans and discounts, $2,034,164; capital stock, $1,000,000; profits, $55,000; national bank notes outstanding, $45,000; deposits, $1,626,302. The bank was given the privilege of opening a branch on the World's Fair ground, and it had been in operation for several weeks. This branch was protected in such a way that the failure of the parent concern would not affect it; and in addition to this, a guarantee fund was raised by subscription, and all deposits have been paid. The latest indications are that the Chemical National Bank will soon be able to resume business.

— One of the most disastrous of recent failures was that of the Columbia National Bank, of Chicago, on the 11th ult., involving between thirty and forty small banks in Illinois, Indiana and Michigan. There were wheels within wheels in the management of the business. One of the wheels was the United States Loan and Trust Company, an organization created by Dwiggins, Starbuck and others, of the Columbia National. In fact, it has been run in connection with the Columbia National, and has been useful to the bank in many ways. Its dealings were, in the majority of cases, with the country banks, and it looked after that branch of the Columbia National's business. One part of the business of President Dwiggins was the organization of country banks, and this was where he had made a great deal of money. These banks would start with a small capital borrowed from the Columbia National, and after a short time the loans would be repaid and the banks operated on the deposits received. The United States Loan and Trust Company, of which Dwiggins was President, would inform a country bank that it would loan it—say $10,000 at six per cent., providing it would make the Columbia National its Chicago correspondent, constitute it its reserve agent and deposit the entire amount of the note with the National bank, taking therefor a certificate of deposit bearing four per cent. interest. The country bank saw an opportunity of creating a reserve with much ease and the expenditure of only two per cent. The National bank was able to swell its deposit and loan account, and between the National bank and the trust company there was two per cent. on the $10,000 to divide. The failed bank had a capital of $1,000,000, but was not a member of the Clearing-House Association. W. E. Niblack has been appointed Receiver.

— The Evanston National Bank closed its doors May 18, at the suggestion of National Bank Examiner George B. Caldwell. The capital stock of the bank is $100,000. It did business with the Chemical National, of Chicago.

— Cheverton, Martin & Co., private bankers, of Chicago, doing business under the name of the West Chicago Bank, closed June 2, on account of disturbances in monetary affairs. Assets are scheduled at $100,000, and liabilities at $70,000.

Indiana.—The Capital National Bank of Indianapolis suspended May 11. The closing was made necessary by the failure of the Chemical National Bank of Chicago, which institution owed the Capital about $80,000. The bank also carried a large amount of Premier Steel Works paper. The latter concern was placed in the hands of a Receiver recently. The Capital was not a member of the Clearing-House Association, and has been at war with it. When the other banks were asked for assistance, they met and declined to render any. The actual liabilities are about $1,050,000. The paid-up capital stock is $300,000. State Bank Examiner Packard says that his examination, with United States Bank Examiner Young, into the condition of the bank, showed that it is in better shape than the report of President Wilson made out just prior to the suspension when aid was sought. On June 1 the Comptroller of the Currency authorized the Capital National Bank to resume business.

— The Worley Bank, of Ellettsville, Ind., a private institution, has failed. Liabilities about $35,000; assets $50,000. It is believed that the bank will pay all obligations.

Minnesota.—The Farmers and Merchants' State Bank of Minneapolis suspended payment May 15. The bank is a small one, its paid-up capital being but $60,000 and its surplus about $7,000. It was looked on as weak for some time, and no surprise was caused by the suspension.

— The Northwestern Guaranty Loan Co., of Minneapolis, was placed in the hands of the Minneapolis Trust Co., as Receiver, May 20. The company is said to hold about $3,000,000 worth of commercial paper, and the stringency in the money market made it impossible to get enough ready money with which to meet the mortgage notes coming due. The Northwestern Guaranty Loan was organized in 1884 by Louis F. Menage and several local capitalists and has had a rapid growth. It started with $200,000 capital, but this was afterward increased to $1,250,000. The company placed its notes, bonds, etc., in New York and New England. The company guaranteed its paper as well as giving other securities. In addition to its capital, the latest obtainable statement claimed a guarantee fund, $150,000; profits and surplus, $175,000. Officers, L. F. Menage, President; Thomas Lowry, W. S. Streeter and S. M. Houghton, Vice-Presidents; P. J. Percival, Secretary; H. K. Cole, Treasurer; F. R. Chase, Cashier. Directors, W. D. Washburn, Charles Robinson, W. H. Clark, G. A. Pillsbury, Loren Fletcher, M. C.; C. H. Pettit, J. Maddeman, Mayor W. H. Eustis, W. G. Crocker, J. H. Carpenter and Thomas Lowry. Mr. Pillsbury, it is now said, withdrew some time ago.

The company was not required to make reports to any State official, though under a decision of the Attorney-General of Minnesota it was examined by the Superintendent of Banks about a year ago. It is generally believed, however, that the banking law of the State does not include supervision of companies of this class.

Delaware.—The old-established banking house of R. R. Robinson & Co., at Fourth and Market streets, failed May 11, when confessed judgments aggregating $93,900 were entered. The liabilities are placed at $326,000, and the assets at $204,000. Failure was caused by collapse in Reading Railroad securities.

South Carolina.—The doors of the Bank of the Carolinas, with home office at Florence, closed May 16 with a notice of temporary suspension. The capital stock of the bank is about $60,000. It had branches at Kingstree, Conway, Williston and Varnville in South Carolina, and several towns in North Carolina. Stringency of the money market and consequent inability to realize on securities caused the failure. The bank was started by J. P. Coffin two years ago, and has done a good business and successfully withstood considerable pressure at different times. Little doubt is entertained of the bank's paying dollar for dollar, and Coffin has executed a deed of trust for all his town lots and personal property in Florence to secure any possible deficiency.

Georgia.—The First National Bank and the Oglethorpe National Bank of Brunswick closed May 18, and M. Ulman, President of the latter, committed suicide. These banks have been looked upon as shaky for some time, and their failure created no surprise.

— The Brunswick State Bank was also reported closed May 29. It was incorporated in 1889, and had a capital of $50,000.

Tennessee.—The Citizens' Bank, a private institution at Johnson City, suspended May 20, with liabilities of $38,000, and assets on paper stated to be $78,000.

Iowa.—The Sioux City failures prove to be far more disastrous than originally supposed. E. H. Hubbard, assignee of the Union Loan and Trust Company, the Hedges Trust Company, and B. T. Hedges, has filed his estimate of the value of the assets scheduled in the three assignments. The Union Loan and Trust Company's assets are placed at $1,151,574, as against an original estimate of $1,468,030. The company's liabilities are placed at $7,000,000. The assets of D. T. Hedges, originally placed at $2,247,000, are cut down to $3,557,577. The discrepancies in both cases lie between the face value of the securities and the assignee's estimate of their value.

— The Sioux City Investment Company, with a capital of $300,000, also went down in the crash. These failures are estimated to have involved so large a sum as $55,000,000. Much of this money was lent by Eastern capitalists, who are now learning that most of the securities covering the loans are worthless. The number of banks, business houses, and other financial institutions involved is said to be more than 500, besides about 2,000 individuals.

— The First National Bank of Cedar Falls suspended May 16, being involved by the assignment of William M. Field & Bro., who control a majority of the stock. The liabilities of the bank are estimated at $100,000 to $150,000, while the personal liabilities of the Fields will be fully as much more. The resources consist of 125 imported draft and coach horses, and large tracts of land in Iowa, the Dakotas and Kansas. At this writing the bank is in the hands of Comptroller of the Currency. It is believed that the assets with careful handling will pay claims in full. The creditors are mostly farmers from the surrounding country. The Bank Examiner in charge has made a report to the Comptroller of the Currency showing that the bank is solvent, and will be able to pay creditors in full.

— Wells & Garretson, private bankers at Fairfield, Ia., have suspended payment to await result of collections. Their total liabilities are $50,000, and assets over $80,000.

New York.—The National Bank of Deposit, doing business in the Western Union Building, Broadway and Dey street, New York city, suspended May 22. The immediate cause of the failure was the refusal of the Seaboard National Bank to continue to clear for the National Bank of Deposit. Owing to withdrawals by country banks the deposits had fallen off about $400,000 in the three weeks prior to the suspension. A director of the bank was said to be connected with the Dwiggins scheme of financiering, and a knowledge of this fact precipitated the crash. The capital of the bank was $300,000; it had a surplus fund of $60,000, and undivided profits of $15,000. An effort is being made to pay creditors and depositors without the intervention of a Receiver. President Ransom holds 2,017 of the bank's 3,000 shares of stock.

— The Elmira National Bank closed May 23. The failure is the result of the recent financial troubles of Colonel D. C. Robinson. The President of the bank says that depositors will positively be paid in full. The deposits amount to about $200,000. The paid-up capital is $200,000; surplus, $17,300; undivided profits, $5,000; and the average deposits have been $300,000. Charles Davis, of Binghamton, N. Y., has been appointed Receiver.

— The banking house of Neher & Carpenter at Troy suspended May 15, on account of the embarrassment of the Northwestern Guaranty Loan Co., Minneapolis, Minn., for which Messrs. Neher & Carpenter were local agents. Liabilities, $235,223; nominal assets, $237,852; actual assets, $131,671.

Vermont.—The Vermont Investment and Guarantee Company, of Orwell, Vt., has suspended. It was chartered in 1884, with a capital of $50,000, which was afterward increased to $300,000. Debenture bonds for $1,300,000 were also issued, secured by real estate mortgages, the company making loans principally on Western farm property. It claimed resources of $2,000,000. C. E. Bush, the Treasurer, was also President of the First National Bank of Orwell, and the head of the firm of Hammond, Bush & Co., negotiators of loans. The latter firm has suspended. T. A. Hammond, the senior partner, died in June, 1887, since which time the business has been continued by the other partners, Mr. Bush and W. J. Wright. The latter was also Vice-President of the Vermont Investment and Guarantee Company.

Ohio.—The banking house of Foster & Co., of which ex-Secretary of the Treasury Charles Foster was the head, suspended on the 26th ult., owing to the assignment of ex-Secretary Foster, who had become heavily involved by extensive indorsements of the paper of local industrial concerns in which he was interested. His liabilities are placed at about $600,000, with paper assets somewhat above that sum. Deposits of the bank were about $175,000. A settlement of the claims has been proposed at 50 cents on the dollar, and it is believed that this amount can be met with the assets on hand.

California.—The Bank of Santa Clara County, at Santa Clara, closed May 10. The action was brought about by the discovery that a shortage of from $150,000 to $200,000 existed. C. C. Haywoods, the Cashier of the bank, died recently, and H. M. Leonard, the Vice-President and manager, has informed the directors that irregularities existed in the books. Leonard filed a petition in insolvency, placing the liabilities at $190,000 and the assets at $144,000. Leonard's schedule showed that he had borrowed $137,000 from the bank. Most of the notes are not secured. Later reports state that the bank has decided to resume at an early date with increased capital.

South Dakota.—The definite amount of either liabilities or assets of the defunct Salem bank is not yet fully known. The liabilities are estimated at about $70,000. School and civil township treasurers are the heaviest losers. J. H. and Pickering Brown, the President and Secretary, say they can pay up every dollar of liabilities within a short time if the business is handled properly. The creditors have requested that W. M. Shepard, of Sioux City, formerly of the Citizens' Bank of Salem, be appointed Receiver to close up the bank's affairs.

— The Bank of Beresford, a private concern, at the head of which was A. A. Ames, has failed. It is believed depositors will be heavy losers.

Colorado.—William B. Mygatt, a private banker at Denver, has assigned. Assets, consisting chiefly of real estate, placed at $591.860, and liabilities, $507,889.

Wisconsin.—The Plankinton Bank of Milwaukee closed its doors June 1. The bank opened as usual at 10 o'clock, and did very little business. At 10:05 o'clock William Plankinton, the Vice-President, appeared on the scene, and almost simultaneously the following notice of suspension was posted up:

" Owing to the failure of efforts to reorganize the bank and the continual withdrawal of deposits, we have thought it best for the interests of all depositors and stockholders to close the bank. (Signed), PLANKINTON BANK."

There has been no regular run on the bank of late. Since the scare of two weeks ago, however, the large depositors who did not take part in the run that occurred at that time had been steadily withdrawing their accounts from the Plankinton and transferring them to other banks.

The suspension is largely due to the failure of F. A. Lappen & Co. and the Lappen Furniture Company two weeks ago, with liabilities that will probably amount to three-quarters of a million when the worst is known. The Lappen firms, so far as claims have been recorded, owe the Plankinton Bank $219,000, and the sum is due on Lappen's personal notes, which are considered to be practically valueless. Ahead of the Plankinton Bank's claims are others amounting to over $100,000. The outlook for the Plankinton is therefore not favorable.

How Lappen succeeded in placing the Plankinton Bank in the position it finds itself is a mystery. He secured a loan of $10,000 from the bank after common rumor said Lappen was not wholly sound.

Washington.—The Merchants' National Bank, of Tacoma, the oldest banking institution in the city, suspended payment June 1. The action was taken on account of stringency of the money market and inability to make collections. The bank has a paid-up capital of $250,000. The Clearing-House Association will protect depositors if necessary.

Florida.—Comptroller Eckels has been informed of the failure of the Gulf National Bank of Tampa, Fla. The capital was $50,000 and the individual deposits $123,-346. The stock and management changed hands on May 4. Bank Examiner McDonald has been ordered to take charge.

North Dakota.—The National Bank of North Dakota at Fargo, N. D., and the First National Bank of Lakota, of Lakota, N. D., are closed on orders issued by the Comptroller of the Currency. Both of these banks were organized by E. Ashley Mears, whose extensive and somewhat novel methods of financiering have been made the subject of frequent inquiry and comment. Mr. Mears' plans are said to have borne some resemblance to those of Zimri Dwiggins, the Chicago financier. Mears was President of about twenty small banks at various places in North Dakota.

Bank Examiner R. E. Wallace, of North Dakota, in his report last October, declared that so long as the stockholders in Mears' institutions were content the examiner did not deem it his duty to interfere.

Mears was defendant in a suit in the District Court in Minneapolis, Minn., in April last to set aside a $5,000 bond on which he was surety. He declared he was worth $200,000, but on cross-examination it appeared that the larger part of this sum consisted of shares in his own institutions. Judge O'Connell refused to accept Mears' bond on the ground that if Mears, as an officer of the bank, was unable to pay the certificate of deposit his security on the bond would be no better.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

GOLD OR BILLS.—It is just as well to get rid of gold coins as quickly as possible," says one who has tried it "and to do all one's little hoarding in bills. It may be true that there is going to be a gold scarcity, but even if there is, the possession of $100 or $200 in gold will not cut a very material figure. On the other hand, any one who carries around much gold runs the risk of having to pay a pretty heavy fine for light weight. Quite recently I cashed a check at a bank and the teller insisted in giving me gold, saying he had too much of it on hand. I had to make a payment at the custom house with money, and, after using considerable bad language in consequence of the weight and inconvenience of the package, I had to pay over $4 penalty because it was short-weight. My complaint at the bank was received with the utmost courtesy, but although I was referred from one officer to another, no substantial result followed, and I was exactly the amount out of pocket that I have named. One gentleman in the bank seemed inclined to congratulate me on my loss not being greater, and he told me an anecdote of a man who drew $20,000 in gold from a New York bank, and had to lose $1,000, because when he tendered it in payment of custom duties it was that amount short in weight. I appreciated the kindness of the anecdote teller, but did not quite see how it lessened my loss."—*Correspondent St. Louis Globe-Democrat.*

MASSACHUSETTS STATE BANKS.—The late Secretary of the Treasury Foster sent to the Senate an important letter several months ago, in response to a resolution relative to banking statistics of State banks, banking institutions, Savings banks, and National banks. Under the head of Massachusetts interesting facts are stated, even to those well informed as to the history of banking in this State. The first local bank established in the State was the Massachusetts Bank, which received its charter Feb. 7, 1784, and when it began business on July 5 of that year, had a cash capital of $253,500. The outside limit of its capital was $300,000. During the ninety-two years which have elapsed since this bank was established, it has passed only two dividends, one at the close of the war of 1812, and the other during the financial crisis of 1836.

When the bank became a National association it made up for these omissions by declaring an extra dividend of ten per cent. Up to June 1, 1874, the ratio of its losses to the amount loaned was but four-hundredths of one per cent. During its eighty years' existence as a State institution it issued circulating notes to the amount of $4,674,177, of which the amount lost or not presented for redemption was not quite one-half of one per cent. The Union Bank was organized in 1792 with a specie capital of $1,200,000, and a State subscription of $400,000. The third bank, Nantucket, with a capital of $40,000, was incorporated in 1795, and the same year the Merrimac, at Newburyport, came into being. Up to 1799 but five banks had been incorporated. The returns made in June, 1805, exhibited a total of sixteen banks, having a paid-up capital of $5,460,000. Many New England banks failed in 1808-9, but those of Massachusetts, resting on a firmer basis, by a sudden contraction of their issues, mainly escaped. The discount in Boston on New England bank notes ranged in 1809 from 10 to 60 per cent., and in Philadelphia many of them were at a discount of 50 per cent. or more. In most of the charters granted subsequent to 1798 provision was made for State subscription, so that in 1812, the Commonwealth owned nearly $1,000,000 in bank stock—one-eighth of the whole capital. In 1813 the bills of banks in other States were at a discount of 3 to 5 per cent., and the notes of Boston banks had nearly disappeared. In 1813 the New England bank was organized with a capital of $1,000,000. This bank initiated the system of redemption, afterwards known as the Suffolk Bank system, by which New England banks were compelled to redeem their notes at par in Boston. On January 1, 1837, there had been organized in all, 138 banks, with an authorized capital of $40,830,000. Of this number 4 had never gone into operation, while of the remaining 134 no less than 32 had either failed, or had forfeited or surrendered their charters, in consequence of the financial panic of that year. The nominal capital of the banks that failed was $5,500,000; their liabilities were $11,283,960, of which $3,133,129 was for circulation and $1,577,738 for deposits. The loss to their shareholders was estimated at $2,500,000, and to the public at three-quarters of a million more, making a total loss of about $3,125,000 or nearly thirty per cent. of their entire indebtedness.

The first bank that availed itself of the privilege of becoming a National institution was the Safety Fund Bank of Boston in 1863. In 1865 only a single bank remained doing business under a State charter. Of the 183 State banks which existed in 1863, four had been discontinued and 178 had been transformed into National institutions. After paying the State tax of one per cent. on bank capital, the banks, as State institutions, paid from 1808 to 1831 inclusive, an annual dividend of about six per cent., according to a computation made by a writer in "Hunt's Merchants' Magazine." The average annual ratio of dividends to capital of the National banks of Massachusetts from 1870 to 1876 was 9.6 per cent., and the rate of dividends to capital and surplus was 7.6 per cent.

A New Counterfeit $5 U. S. Silver Certificate.—The JOURNAL has received from Mr. A. L. Drummond, chief of the Secret Service Division of the Treasury department, the following description of a new counterfeit $5 silver certificates: It is of Series 1886, check letter 13B, W. S. Rosecrans, Register; E. H. Nebeker, Treasurer, and has the small scalloped seal. The note in its general appearance bears a marked resemblance to the previous counterfeit of the same issue bearing check letter D20111 which made its appearance in 1888. The portrait of General Grant is very poorly engraved, having a scratchy appearance; the etched lines surrounding the same only run perpendicularly, while on the genuine they run both perpendicularly and horizontally, thus forming small blocks. The words "Register of the United States" are irregular; the "i" is not dotted nor the "t" crossed in "Register." The seal is excellent both in color and execution. The numbers are good in color but irregular in formation. There has been no attempt to imitate the parallel silk threads of the genuine in the note at hand.

Excessive Cash Reserves.—The excess of cash held by banks in the money centers, while indicating strength in the institutions holding it, shows at the same time a useless strength, and a state of the money market not at all favorable. It may safely be said that as the reserves, for instance of the New York city banks, increase beyond the legal requirement of twenty-five per cent. that the rate for call loans must fall, other things being equal, and as the interest rates fall the higher the prices of securities and the greater the opportunity for foreign holders, distrusting American credit on account of the unsettled silver question, to sell out advantageously and to get gold for exportation.

Cheap money in the centers means anxiety to the United States Treasury, while dear money means anxiety to business men and banks that are too much extended. Whether there are many such in the United States remains to be seen, but it is highly probable that the coming season will be one of alternating high and low rates.

The strength of the banks, shown by excessive reserves, is a thing to be deplored rather than to be made a subject of congratulation. The fault of the currency system fostered by the present laws of the country is its want of elasticity. There is no system of redemption by which the notes in excess of the demands of legitimate and healthy business can be retired, until the expansion of business again requires their issue. In the meantime the superabundant paper accumulates in the money centres where it is conveniently situated to be manipulated in behalf of every scheme by which advantage can be taken of the low rates of interest. One of the easiest ways to make a little is to present the notes, legal tenders and Treasury notes of 1890, for gold, and export the same to those countries of Europe that take advantage of our markets to strengthen their gold reserves, or turn their silver into gold by paying a slight premium.

If a private man in his business dealings with others were to follow principles similar to those which the laws of the United States compel the Treasury to follow, he would be set down as a lunatic. Trading new lamps for old does not express the folly of the United States Government when pursuing the policy of buying silver at nearly one-third more than it is worth, with notes which it engages to pay on demand in gold. The sly dervish who traded new lamps for old had a sinister object in view, but the United States Treasury appears to be carrying on the trade with an honest simplicity worthy of the famous purchaser of the gross of green spectacles.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4878—North Western National Bank, West Superior, Wisconsin. Capital, $300,000.
4910—Columbia National Bank, Pittsburgh, Pennsylvania. Capital, $300,000.
4862—State National Bank, Oklahoma City, Territory of Oklahoma. Capital, $50,000.
4884—First National Bank, Girard, Ohio. Capital, $50,000.
4847—Citizens' National Bank, Austin, Minnesota. Capital, $50,000.
4907—Springfield National Bank, Springfield, Massachusetts. Capital, $200,000.
4877—First National Bank, Verona, Pennsylvania. Capital, $50,000.
4909—Mercer County National Bank, Mercer, Pennsylvania. Capital, $50,000.
4902—First National Bank, Blanchard, Iowa. Capital, $50,000.
4885—Farmers' National Bank, Osage, Iowa. Capital, $50,000.
4904—First National Bank, Carbondale, Illinois. Capital, $50,000.
4908—First National Bank, Reynoldsville, Pennsylvania. Capital, $50,000.
4915—Farmers' National Bank, Athens, Pennsylvania. Capital, $50,000.
4917—First National Bank, Newport, Pennsylvania. Capital, $50,000.
4921—First National Bank, Waukon, Iowa. Capital, $50,000.
4922—First National Bank, Atlanta, Texas. Capital, $50,000.
4897—First National Bank, Cresco, Iowa. Capital, $50,000.

NEW BANKS, BANKERS, ETC.

ALABAMA.

DOTHEN—Malone, Collins & Co.

CALIFORNIA.

ALAMEDA—Encinal Savings Bank; capital paid up, $14,000; officers same as Encinal Bank, previously reported.

EUREKA—Pacific Coast Savings Society—branch of San Francisco; capital, $125,000; President, Stephen Hill; Vice-President, W. H. Wallace; Cashier, J. S. Murray.

MADERA—Commercial Bank; capital paid up, $100,000; President, Return Roberts; Cashier, E. W. Cox.

MONROVIA—Granite Bank; President, C. W. Brown; Cashier, H. C. Brown.

MORGAN HILL—Bank of Morgan Hill, organizing.

SAN FRANCISCO—Columbus Savings & Loan Society; capital stock, authorized, $200,000; subscribed, $280,000; paid-up, $60,000; President, J. F. Fugazi; Cashier, F. N. Belgrano. —— Columbian Banking Co.; capital, $16,000; President, I. J. Truman; Cashier, C. O. Perry.

SANTA MONICA—Bank of Santa Monica; successor to First National Bank; capital, $50,000; President and Cashier, Robert F. Jones; Vice-President, H. W. Keller.

FLORIDA.

EAU GALLIE—State Bank; capital, $16,000; President, John Aspinwall; Cashier, E. G. Vivell.

ST. PETERSBURG—State Bank; capital, $9,000; President, John A. Bishop; Cashier, Herbert A. Bishop.

GEORGIA.

ELBERTON—Bank of Elberton; capital, $25,000; President, W. S. Witham; Cashier, M. L. Heard.

LEXINGTON—Arnold & Stewart; capital, $30,000.

MILLEN—Bank of Millen; capital, $25,000; President, W. S. Witham; Cashier, M. L. Heard.

IDAHO.

MALAD—J. N. Ireland & Co.; capital, $40,000; Cashier, Caleb Jones.

ILLINOIS.

BLUFFS—Bank of Bluffs (copartnership); capital, $10,000; President, John Knoeppel; Cashier, Frank Linkins.

CARBONDALE—First National Bank; capital, $50,000; President, F. A. Prickett; Cashier, E. E. Mitchell.

MILWAUKEE—Plankinton Bank; closed June 1.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, June 4, 1893.

The month just ended is remarkable for a large number of disasters to banks and financial institutions which have deranged values and seriously impaired public confidence and credit. Prices for securities, wheat and some other products have fallen to the lowest point reached not only during the current year but in many years past. Bank failures have been of great frequency although as a rule confined to institutions of limited influence. These failures have not been confined to any particular portion of the country although the greater proportion of them were in the South and West. The frequency of the failures among the National banks caused the Comptroller of the currency to issue a statement showing that twenty National banks, with an aggregate capital of $6,150,000, had suspended during the five months between January 1 and June 1, and additional failures have occurred since the statement was issued.

Bad banking is responsible for some of the disasters, but a feeling of uncertainty and of distrust has been at work in commercial and financial circles, which has tended to check operation and to limit credits. The continuous movement of gold out of the country has been a disturbing influence, the exports in May approximating $15,000,000, making a total of $60,000,000 since January 1. With the exception of the two months, October and November, 1892, there has been a net loss of gold in every month since January, 1892, during which time this country has parted with $120,000,000. The loss has made itself felt in the United States Treasury, in the banks of the principal cities and in circulation.

The Secretary of the Treasury has apparently abandoned the attempt to maintain a reserve of $100,000,000 gold in the Treasury, at least the reserve has been reduced $10,000,000 below that amount. The new Attorney-General is reported to have furnished an opinion to the President that the Secretary has power under the Resumption Act to sell bonds in order to obtain coin for the redemption of the legal tenders. A rumor has been set afloat that the Secretary contemplates the issue of legal-tender notes in order to replenish his gold reserves, but at this writing there is nothing to confirm the report, while the proposition is being severely criticized by banking people.

There have been several public expressions of disapproval of the Silver Act of 1890, and its repeal has been urged by bankers in Texas and other States, by the Commercial Club of St. Louis and by the New York Chamber of Commerce. The report has been revived that the President will convene Congress in special session in September to repeal the Act. This would involve a change in the plans which it is understood the President had previously decided upon, as he is said to have arranged for an extra session in October. More confidence is expressed that the silver law will be repealed, as it is alleged that Mr. Cleveland, who is very much opposed to the law, has succeeded in converting many of his political friends in Congress who were favorable to silver.

The present operations of the Treasury would indicate an ideal condition, were the Government not in debt, and not engaged in the issue of paper money. With the receipts for the month of May, $30,971,497, and the expenditures only $30,872,502, the balance, though small, is on the right side. If the Government had no need of taking thought of the morrow, such a balancing of revenues and disbursements would leave nothing to be desired, for the people's money would be kept in circulation, and there would be neither expansion nor contraction of the currency. But such a condition prevents any reduction in the public debt, and while it continues, debt paying will be suspended as it has been for some time past.

The situation abroad has improved somewhat, but the bank failures in

Australia which occurred in April were followed by nearly twice as many more in May, making a total of twelve that suspended, and leaving only three banks which survived the crisis. The suspended institutions owed depositors £76,000,000, and it is expected that the claims will be paid in full. Little of the £11,000,000 capital, however, will be saved to the stockholders. The failures were seriously felt by many investors in England who had bought the stocks of the banks because of the enormous dividends that they paid when all seemed prosperous. The Bank of England was called upon for considerable gold for shipment, both to Australia and for interior points during the month, and it advanced its rate of discount from 2½ to 3 per cent. on May 4th; to 3½ per cent. on May 11th, and to 4 per cent. on May 18th. The bank lost gold heavily until the latter part of the month, more than £1,800,000 in the three weeks ended May 18th. Since that date the bank has been gaining gold, and for the month makes a net gain of £792,700 on balance. The open market rate in London for 60 to 90-day bills is 2⅛ per cent. as against 2½ per cent. at the close of April, and 1⅜@1½ per cent. in March. In Paris the open market rate is 2⅝ per cent. as against 2⅜ per cent. a month ago; in Berlin 2⅝ per cent., and Frankfort 2¾ per cent. against 2⅜ and 2½ respectively, a month ago. During the last week in May, the Bank of England gained £2,084,713 in bullion, holding at the close £26,101,748. The bank of France reports a decrease of £34,000 in gold, while the Bank of Germany has gained £789,000 since last report.

The United States Treasury statement for May show an increase of $278,-653 in the net public debt. There was a decrease in the non-interest bearing debt of $657,175; an increase in the interest bearing debt of $300, and a decrease of cash in the Treasury of $2,421,132. The total cash in the Treasury is $754,122,984, of which $196,518.609 is in gold coin and in bullion; $486,962,-565 in standard dollars, silver bullion and subsidiary coin; $54,387,421 in gold and silver certificates, legal tenders and National bank notes, and $15,644,581 in National bank depositories and disbursing officers' hands. The amount at present in National bank depositories is $11,649,142. The bonded debt on May 31 was $585,034,110. and total public debt, exclusive of certificates and Treasury notes offset by an equal amount of cash in the Treasury, $961,750,-888. Net available cash balance in the Treasury, including deposits in National banks and gold reserve of $95,048, 640, is $121,565,154.

MINT COINAGE.—The coinage executed at the United States Mints during the month of May and since January 1st, has been as follows:

	May.		Five Months.	
	Pieces.	*Value.*	*Pieces.*	*Value.*
Gold Coinage	177,602	$2,375,040	887,199	$11,910,830
Silver Coinage	4,791,000	1,034,000	15,544,885	5,383,645
Minor Coinage	5,588,000	116,600	29,232,040	549,561
Total Coinage	10,556,602	$3,525,640	45,663,624	$17,844,036

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $99,777 circulation of National gold banks—was on May 31, $177,064,477. This shows an increase for the month of May of $309,180, as compared with an increase of $761,575 in April, and an increase in total circulation since May 31, 1892, of $4,388,904. During the month of May there was issued to new banks $238,-580, and to old banks increasing circulation $699,800. There has been surrendered and destroyed since April 30, $629,150. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $21,036,469, showing a decrease in that class of circulation during the month of $586,510.

The total amount of specie exported from New York city to all points during the month of May was $17,615,845 as compared with $19,003,270 in April, making a total for the year of $77,838,115. The imports for the month were $366,446, as compared with $718,301 in April, making a total for the year of $7,095,747.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	Total Supply.			Net Gold in United States Treasury.	Gold in Circulation.
	Gold Coin.	Gold Bullion.	Total Gold.		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099
March 1....	547,655,068	79,835,048	627,490,086	103,284,219	524,205,867
April 1................	546,674,424	79,503,760	626,178,184	106,893,224	519,284,960
May 1	532,513,105	80,529,774	613,042,879	97,011,330	516,031,549
June 1.......... ..	523,592,686	80,871,868	604,464,554	95,048,641	509,415,913

The following table shows the total amount of gold and silver coins and certificates, United States notes and National bank notes in circulation on June 1, 1893:

	General Stock. Coined or Issued.	In Treasury.	Amount in Circulation.
Gold Coin..........	$523,592,686	$115,646,742	$407,945,944
Standard silver dollars...............	419,332,305	361,278,816	58,053,489
Subsidiary silver......................	77,558,212	11,394,610	66,163,602
Gold certificates.......................	104,794,639	3,324,670	101,469,969
Silver certificates	328,766,504	6,650,912	322,115,592
United States notes..........	507,650,890	39,168,384	468,482,506
National bank notes.................	177,164,254	5,243,455	171,920,799
Totals......	$2,138,859,490	$542,707,589	$1,596,151,901

Population of the United States, June 1, 1893, estimated at 66,826,000; circulation per capita, $23.88.

Domestic Exchange.—Following are the closing prices for New York exchange at the places named: St. Louis, 50c discount. Chicago, 80c discount. Charleston—Buying, par; selling, ⅛ premium. Savannah—Buying, ⅛ discount; selling, par to ⅛ premium. San Francisco—Sight, 20c premium; telegraphic, 25c premium. New Orleans—Commercial, 75c premium; bank 150, premium.

Foreign Exchange.—There was a slight tendency to weakness in sterling exchange early in the month, caused by the break in the stock market, and some buying of American securities for foreign account. Later hardening rates for money in London and advances in the rate of discount by the Bank of England accompanied by low rates here, and also a scarcity of commercial bills, caused an advance in exchange and free exports of gold. For the week ended May 6, rates for sterling exchange were first strong, later falling off, closing with actual rates at $4 85@$4 85½ for long, $4 88@$4 88½ for demand and $4 88½@$4 89 for cable. For the week ended May 13, sterling bills for demand and for cables were very strong with only a moderate amount of bills offering, and closing at $4 85@$4 85¼ for long, $4 89@$4 89¼ for demand and $4 89¾@$4 90 for cables. For the week ended May 20, there was a further advance in demand and cable rates while long exchange was weaker, the closing rates being $4 84¾@$4 85 for long, $4 89¼@4 89½ for demand and $4 90½@$4 90¾ for cables. For the week ended May 27, rates were somewhat lower but continued strong in consequence of the scarcity of commercial bills, the closing rates being $4 85½@$4 85¾ for long, $4 89¼@ $4 89½ for demand and $4 89¾@$4 90 for cables.

The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, $4 86½@$4 87; Bankers' sterling, sight, nominal, $4 90@$4 90½; Bankers' sterling, 60 days, actual, $4 85¾@$4 86; Bankers' sterling, sight, actual, $4 89¼ @ $4 89½; Cable transfers, $4 90 @ $4 90¼; Prime commercial sterling, long, $4 85 @ $4 85¼; Documentary sterling, 60 days, $4 85 @ $4 85¼; Paris cable transfers, $5 16¼ @ $5 15⅝; Paris bankers', 60 days, $5 18¾ @ $5 18⅛; Paris bankers', sight, $5 16⅞ @ $5 16¼; Paris commercial, 60 days, $5 20@$5 19⅜; Paris commercial, sight, $5 18⅛ @ $5 17½; Antwerp commercial, 60 days, $5 20⅝ @ $5 20; Brussels bankers', sight, $5 16⅞ @ $5 16¼; Swiss bankers', 60 days, $5 20@$5 19⅜; Swiss bankers', sight, $5 17½@$5 16⅞; Reichsmarks (4) bankers', 60 days, 94⅞@95; Reichsmarks (4), bankers', sight, 95⅛@95⅝; Reichsmarks (4), commercial, 60 days, 94⅝@94¾; Reichsmarks (4), sight, 95⅛@95¼; Guilders, bankers, 60 days, 40@40 1-16; Guilders, bankers', sight, 40¼@40 5-16; Guilders, commercial, 60 days, 39⅞@39 15-16; Guilders, commercial, sight, 40⅛@40 3-16; Kronors, bankers', 60 days, 26¾@26⅞; Kronors, bankers', sight, 27@27⅛; Lisbon, sight, per milreis, 88@88¼; Italian lire, sight, $5 37½ @$5 36¼.

Paris dispatches quote exchange on London at 25f. 28c.

HOME MONEY MARKET.—Money has been quite abundant throughout the month, and rates for call loans have been tending downward since early in the month, when panicky conditions in the stock market caused a flurry in money—or vice versa, the two events being contemporaneous—and rates went to 40 per cent. on May 5, but fell to 6 per cent. at the close. Late in the month 2@3 per cent. was about the usual rate for money on call. For time money, a 6 per cent. rate is generally charged, and the discrimination as to collateral is radical, any concessions in the rate must be offset by excellence in the securities offered. There is little doing in commercial paper, mainly because of the retirement of the local banks from the market. Out of town banks have been asking freely for re-discounts, and have drawn the proceeds without delay to strengthen their position in view of possible trouble. Rates oncommercial paper are from 6 to 10 percent., depending upon the quality of names and length of time. For the week ending May 6, the open market rate for call loans on stock and bond collaterals ranged from 4 to 40 per cent., the average being 6 per cent. Commercial paper 6 to 9 per cent. For the week ending May 13, the open market rate for call loans on prime collaterals, ranged from 1 to 7 per cent., with 4 per cent. as the average. Commercial paper quoted 6½ to 10 per cent. For the week ending May 20, the open market rate for call loans ranged from 2 to 5 per cent., the average being 3 per cent. Commercial paper quoted 6½ to 8 per cent. During the week ending May 27, the open market rate on call loans ranged from 2 to 3 per cent., the average being 2½ per cent. Commercial paper quoted 6½ to 8 per cent. During the week ending June 3, the open market rate on call loans ranged from 2 to 5 per cent., the average being 2½ per cent. Commercial paper quoted at 6 to 9 per cent.

NEW YORK CITY BANKS.—There was an increase of nearly $6,500,000 in deposits during the early part of the month, but subsequently the accumulation was entirely withdrawn, and the deposits are now $818,000 less than a month ago. There has been but little change in the specie holdings of the banks at any time during the month, and they are within $546,000 of what they were at the close of April. There has been a gain in legal tenders for the month of $9,174,000, making an increase of $8,628,000 in reserve, which is now $128,840,300. The surplus reserve is nearly $21,000,000, against $12,000,000 a month ago. The interior movement is estimated to have resulted in a gain for the New York banks in the week ended May 5 of $3,298,000; a gain in the week ended May 12 of $5,228,000; a gain in the week ended May 19 of $3,362,000; a gain in the week ended May 26 of $2,981,000, and a gain in the week ended June 2 of $2,529,000, making a total gain for the month of $17,398,000. From Sub-Treasury operations and gold exports the banks lost $1,200,000 in the week ended May 5; gained $500,000 in the week ended May 12; lost $1,500,000 in the week ended May 19; lost $3,400,000 in the week ended ended May 26, and lost $5,500,000 in the week ended June 2, making a total net loss of $11,100,000 for the month.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
May 6..	$425,728,200	$70,168,700	$51,159,400	$433,971,700	$5,598,000	$679,025 inc.

3,036,585	1,733,298	913,318	510,487

leaving 1,361,685 shares to represent the dealings in the remaining 149 stocks. In addition 387 different issues of railroad bonds were dealt in, to the amount of $26,993,000 also $50,700 State bonds and $63,300 Government bonds. (Compared with May, 1892, there is an increase of 1,975,666 shares in stocks; a decrease of $21,296,500 in railroad bonds; a decrease of $179,300 in State bonds; a decrease of $69,200 in Government bonds, and a decrease of 287,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $1,000; stocks, 1,261,124 shares, of which 1,127,421 were American Sugar Refiners' common stock and 44,172 preferred; mining stocks, 12,100 shares. American Cotton Oil Certificates, 101,814 shares of common and 11,789 shares of preferred; Pipe Line Certificates, 19,000 barrels. Of National Lead common 115,914 shares, preferred 28,617 shares; of silver bullion certificates, 77,000 ounces, extremes being 84⅛ and 84, closing at 82⅛ bid. The listed stocks show an increase of 2,335,736 shares as compared with the amount sold in April. Transactions in railroad bonds show an increase of $2,341,900 during the same period, a decrease of $132,800 in State bonds, and a decrease of $36,000 in Government bonds. In unlisted bonds a decrease of $12,500; in unlisted stocks an increase of 153,061 shares; in mining stocks a decrease of 24,325 shares; a decrease of 38,818 shares in Cotton Oil Certificates common, an increase of 3,942 shares in preferred; a decrease of 17,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 12,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of May were sold: 2,592,790 shares of railroad and other stocks representing dealings in 79 properties. Of this amount 1,923,355 shares are transactions in the following 12 stocks:

C. M. & St. P..781,100	C. R. I. & Pac. 186,805	N. Pac. pfd....77,100	Gen'l Elect.....60,335
C. B. & Q......216,320	Dis & C. F. Co.104,500	Chic. Gas.......63,320	Mo. Pacific .. 48,930

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*
The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Bunce.—Harvey Bunce, President of the Central National Bank, Boonville, Mo., died May 14, aged seventy-seven years.

Camp.—John N. Camp, President of the First National Bank, Middletown, Conn., died May 21, aged sixty-nine years.

Capen.—George D. Capen, President Missouri Trust Co., St. Louis, Mo., died May 1.

Field.—Robert M. Field, Second Vice-President of the Bowery Savings Bank and a director of the Mechanics' and Traders' Bank, New York city, died May 22, aged eighty-five years.

Hendricks.—Joshua Hendricks, a director of the German-American Bank, New York city, and a member of the firm of Hendricks Bros., dealers in metals, died June 3, in the sixty-first year of his age.

Howell.—Daniel C. Howell, Superintendent of Banks from 1870 to 1873, died in Bath, N. Y., May 15. He was for many years Cashier and later President of the Steuben County Bank. He was seventy-five years old.

Ickelheimer.—Isaac Ickelheimer, a member of the well-known banking firm of Heilldelbach, Ickelheimer & Co., of 29 William street, New York, died April 27, aged fifty-eight years.

Kieckhoefer.—A. T. Kieckhoefer, a well-known retired banker, died in Baltimore, May 10, eighty-eight years old. Mr. Kieckhoefer was born in Hamburg, Germany, in 1804. He was engaged in early life in commercial enterprises in England, France and Brazil. In 1832, he connected himself with the firm of Brown Brothers & Co., bankers, and came to New York. Mr. Kieckhofer formed the banking firm of Riggs & Co., in Washington, and was a member of that firm for twenty-five years. He retired from business about eighteen years ago.

Roots.—Colonel Logan H. Roots died in Little Rock, Ark., May 30, of congestion of the brain. His fatal illness began with an attack of fever, caused by mental exhaustion and overwork. No man in Arkansas was better known than Logan H. Roots. He was born in Perry County, Ill., March 26, 1841, and graduated at the Illinois State Normal University, with first honors in the class of 1862. He joined the Federal army in 1862, and served until the close of the war. He was with General Sherman on the famous march to the sea, and served on that General's staff during the grand review at Washington, in May, 1865. Though never an office-seeker he had both held and declined many important official positions. He was the youngest member of the Fortieth Congress of the United States: was re-elected and served through the Forty-first Congress. He introduced the first Congressional bill that named the great southern transcontinental route, the Texas & Pacific, and introduced, promoted and materially aided in securing the passage of many measures of practical importance to the prosperity of the South. After the war Colonel Roots settled in Arkansas as a planter. He was President of the First National Bank of Little Rock, and was intimately connected with the development of Arkansas. He was also a delegate to the Chicago Republican Convention of 1868, and was commander of the State Grand Army of the Republic.

Rosenberg.—Henry Rosenberg, a wealthy private banker of Galveston, Texas, died May 12.

Sharp.—William Sharp, Cashier of the Mechanics' National Bank, New York City, died May 26, aged seventy-eight years. Mr. Sharp entered the service of the Mechanics' Bank over forty-five years ago as a clerk, and worked himself up to the position he held at his death. He had been Assistant Cashier and Cashier for nearly a quarter of a century.

Tuttle.—John P. Tuttle, Treasurer of the New Haven (Ct.) Savings Bank, died May 27.

Waters.—Ernest Waters, President of the Bank of Telluride (Colo.), died May 9.

Notices of New Books.

AMERICAN RAILROADS AS INVESTMENTS—A HANDBOOK FOR INVESTORS IN AMERICAN RAILROAD SECURITIES, BY S. F. VAN OSS. WITH FIVE COLORED MAPS SHOWING THE RAILROAD SYSTEMS OF THE UNITED STATES. NEW YORK: G. P. PUTNAM'S SONS. LONDON: EFFINGHAM, WILSON & CO.

This work, as indicated by its title-page, is intended for the use of those who think of investing in American Railroad Securities, either in Great Britain or America. The information in the book is derived, to some extent, from the Census Bureau, and the Interstate Commerce Commission, Washington, D. C., but this has been supplemented by the personal knowledge of the author acquired by extensive travel and inspection, extending over some years. There are nine parts, containing fifty-six chapters. The first three parts, twelve chapters in all, are historical, describing the growth of the roads, their contests among themselves, their capitalization, shares, bonds, interest dividends, earnings and expenses. The other parts take up and describe the roads themselves in groups—Eastern, Central, Northwestern, Southwestern, Pacific and Southern. There are appendices and an index. The book is a very valuable contribution to the literature of investments. The information is accurate and full in regard to each road. After referring to it an investor can talk intelligently with his broker in regard to any railroad bond or stock.

RHODES'

JOURNAL OF BANKING.

Vol. XX. JULY, 1893. No. 7.

THE Congress of Bankers and Financiers, held in Chicago, during the week beginning Monday, June 19, and ending on Saturday, June 24, was not as well attended by the bankers of the country as was expected, owing to the unfortunate condition of the money markets of the country and the feeling of apprehension, which kept the bankers at home watchful for themselves and their customers. It is doubtful moreover whether the personal interest in such a Congress, important as it is, could ever be kept to the proper mark, in the full glare of such an attraction as the World's Columbian Exposition. The World's Congress Auxiliary is a part of the World's Columbian Exposition intended for the display of purely intellectual products, as the former is intended for the display of material. The Hon. C. C. BONNEY is the President of the Congress Auxiliary, and has arranged a programme having for its object to "establish fraternal relations among the leaders of mankind, review the progress already achieved, state living problems awaiting solution and suggest means of further progress."

Among the Congresses devised for carrying out this programme, was the Congress of Bankers and Financiers from all over the world. Notwithstanding the fact that the attendance was not what there had been every reason to expect, the addresses and papers upon financial topics were most interesting and valuable. The Congress was opened on Tuesday, June 20, by LYMAN J. GAGE, of Chicago, Chairman of the Committee having the Congress in charge, in a most enlightening address, in which he referred to the existing financial conditions, and the necessity of a full and free discussion by the delegates. He said the great ideas of the world are as apt to arise in the brains of comparatively unknown men as in those of men of greater reputation, and urged the throwing aside any hesitation in the expression of thought that might tend to interfere with the fullest discussion. Mr. Gage's address is published elsewhere in this number. At the close of his address he introduced CHARLES PARSONS, of St. Louis, as permanent Chairman of the Congress. The first paper was presented by BRADFORD RHODES, of New York, upon "The World's Experience in Banking," a most appropriate and interesting subject. The paper was listened to with the closest attention. It is published in this issue of the JOURNAL. The first session of the Congress was closed by a most cordial extension of the hospitalities of Chicago to the visiting delegates by JNO. J. P. ODELL, President of the Union National Bank of Chicago. On Tuesday evening the delegates assembled to listen to a paper on the single gold standard by HORACE WHITE, of New York. This able, exhaustive and convincing paper was remarkable for presenting for the first time the facts as to the French standard of value, obtained for the first time by an original investigation of the original documents in the archives of France. These researches prove most conclusively that the claims of the bimetallists as to the experience of France are not borne out by the record of actual events.

On Wednesday morning the delegates from the several States of the Union, appointed by the Governors, presented papers upon the banking systems and banking laws of their respective States. In view of the agitation for the repeal of the ten per cent. tax upon State bank circulation, this collection of papers prepared under State authority will prove invaluable. On Wednesday evening the Hon. JAMES H. WALKER, Chairman of the Committee on Banking and Currency in the Fifty-second Congress, addressed the delegates upon "The Commercial Need of a Sound System of Money and Banking."

Thursday, at the morning session, the papers on State Banking were continued, and a most interesting address was made by Mrs. CHAS. HENROTIN, of Chicago, upon the large amount of capital now controlled by the women of the country. On Friday morning JAMES S. PLATT, of Denver, Colo., defended the use of silver as money. He was followed by RICHARD P. ROTHWELL, of New York, upon "International Bimetallism." A paper on Usury Laws was then presented by W. A. PAULSEN, of Chicago. Friday evening B. E. WALKER, of Canada, addressed the audience upon the "Banking System of Canada," a most interesting and suggestive paper, which will be published in a later number of the JOURNAL. On Saturday morning a symposium was held for the expression of opinions upon the present financial condition of the country. The session lasted three hours and was a great success, fifteen instructive speeches being made within that time. At the close of this session the Congress adjourned *sine die*. A large number of interesting papers were sent in by bankers who were unable to be present. These cover a wide variety of subjects and will be published in the records of the Congress.

THE EMPIRE OF INDIA issued an order on Monday, June 26, closing the mints of that country to the coinage of silver into legal-tender money on private account. Immediately the price of silver throughout the world fell. India, more perhaps than any other country, civilized or semi-civilized, has been sustaining the price of the white metal by continuing the practice of antiquity and holding its mints open to free coinage of rupees. The silver rupee has been the standard of value. But as the bullion price of silver, in spite of international conferences, and notwithstanding the heroic and self-sacrificing efforts of the United States since 1878, has continued to depreciate. The value of the rupee in the trade of India has depreciated in like ratio, and the revenues of the East Indian Government paid in rupees have proved for this reason inadequate for its necessities The silver standard has been a growing disadvantage to almost every class of producer in India. The foreign trader has been enabled to buy East Indian exchange at the very cheapest rates with which to gain possession of the products of India. The great decline in the price of silver caused by this action of the Government of the Indian Empire has been a shock to the financial world. The price in New York has dropped from eighty-two cents to about seventy-four cents per ounce. Of course the stock of silver properties, and the securities of the railroads transporters of silver ore, have felt a corresponding decline both in London and New York, and above all, the advocates of the free coinage of silver in the United States are very much taken aback.

Some view the action of India as part of a great conspiracy against silver initiated and carried out by England and the bankers of that country and the United States. Others look upon it as a very disastrous move for England herself. SENATOR PEFFER thinks it will hasten the demonetization of gold. GENERAL WEAVER says, "Great Britain has struck another cruel blow at the industrial prosperity of the world." Mr. Bland thinks it a conspiracy and still thinks the United States can restore silver to its former relation of value to gold by adopting free coinage. Mr. W. P. ST. JOHN, of New York, thinks that the action of the Indian Government will prove a great disadvantage to Great Britain; and does not evidently believe in the conspiracy theory. All these contradictory opinions and the somewhat excited style in which they are rendered indicate the weight of the blow to the silver party. India will no longer be the great market for silver it has heretofore been, and the United States, deprived of this ally, now virtually stands alone as the champion of the white metal. For those who advocate the repeal of the Silver Purchase Act of 1890, no more propitious event could have occurred.

It is the fashion to ascribe motives, hostile or otherwise, to this country in every act of Great Britain. The JOURNAL does not pretend to be possessed of accurate information as to this event, but it seems hardly possible that this important step has been taken by the Government of the Empire of India without consultation with the home Government. The commercial views of Great Britain are usually enlightened by experience, and cover longer periods of time than is usually the case with such views in the United States. The return of this country to a silver basis means an immense depreciation of British capital invested here. The eminent statesmen of Great Britain see in the United States one of the best fields for investment, and they prefer to see it maintained as such rather than destroyed as it would be by a relapse to the barbarous silver standard. They see also that the contest for honest money, embodied in the effort to repeal the Sherman Act, is on. That the President and Administration earnestly desire to maintain the present gold standard. It was in their power to indicate how hollow were the props upon which the price of of silver rests to-day. The adoption of the gold standard has long been contemplated in India as a remedy for the many difficulties under which that country suffered on account of the overproduction of silver. It is therefore very probable that the home Government has coincided with that of India in adopting this radical measure at this time.

THE CAUSES OF THE EXISTING FINANCIAL PRESSURE are not far to seek. They are to be found chiefly in the unwise financial legislation of the last twenty years, and in the anomalous attitude of the people of the United States towards their banks. The financial legislation of the last twenty years has been heterogeneous and contradictory. It is a series of compromises between the desire to maintain an honest standard and the desire to secure the votes of multitudes misled by erroneous financial ideas. The best that can be said of these measures, —the Bland Act of 1878, and the Sherman Purchase law of 1890, is that they were necessary in a political sense to maintain the gold standard. They have no doubt up to this time secured their object, although their continuance jeopardizes the longer maintenance of the standard gold dollar. The credit of the United States has been able to sustain itself, notwithstanding these unwise laws, but the reduction of the $100,000,000 gold reserve, and the continued trenching upon it have shaken that credit. No matter how rich a man may be, a continuance of foolish management must destroy his credit. The forced purchase of silver, with notes payable in gold, is a piece of idiocy, patent to all nations, on the part of a nation ostensibly seeking to maintain a gold standard.

The second cause is the anomalous condition of the banks of the United States—unable to issue notes without making deposits of costly bonds, they are deprived of the use, in time of need, of the credit they have secured. In times of prosperity or absence of alarm the surplus money is not redeemed by the Government which issues it, and it accumulates in the banks at the financial centres. These banks hold the reserves of the whole country, and when the people who have deposited the money are alarmed, they begin to withdraw. How the feeling of alarm on the part of depositors commences and culminates is too metaphysical a subject for our consideration, but in the present instance it arose from the very intimate relations existing between the Treasury department and the commercial interests, so that when it was plainly seen that the Treasury might be brought into difficulties by the diminution of its gold reserves, every depositors caught the alarm in a greater or less degree. Here entered in another element, which did not exist in former years, viz., the great development of the safe deposit business. In former panics, when the depositor drew his money from a bank, he either had to deposit it with some other bank or hide or bury it. The safe deposit vault now takes away the last inducement that might impel a depositor to leave his money. The money was drawn by local depositors, and the country banks, to make good their reserves, were obliged to call on their city correspondents. The latter, finding their funds thus reduced, were no longer able to take care of their country correspondents that needed help. It was all they could do to meet the demands of those who demanded their balances. There was thus a gradual squeeze, where the weak banks unable to get help had to go to the wall.

This squeeze will continue, but with each bank that is compelled to drop out, the remainder will grow stronger. Moreover the money deposited in safe deposit vaults all over the country and the large stocks withdrawn from the money centres and held at home by the country banks will soon begin to move as it can find safe investments. The main cause of the difficulty is, however, the apprehension that the United States Treasury, upon the credit of which the value of almost all the money in circulation depends, is in danger of being seriously embarrassed by the continued issue of gold notes for the purchase of silver. Remove this cause, and restore the shaken Treasury credit, and an improvement will at once be manifest. But to prevent the recurrence of these unfortunate difficulties a still more radical reform is necessary. The note-issuing function should be taken from the Treasury and restored to the banks, so that the business of the country need no longer be dependent on the Government.

THE EXTRA SESSION OF CONGRESS, and the prospective repeal of the Sherman Silver Purchase Act, are events in which great reliance is placed by the general public. It is well known that relief cannot come too soon in the mind of the sufferer, and the latter is not apt to take a reasonable view of the situation. In May, 1837, the banks of the United States suspended specie payments, and a financial crisis of the direst character overspread the land. President Van Buren called an extra session of Congress to repeal the Act for the distribution of the surplus money in the Treasury of the United States, which, in 1837, was looked upon, much as the Sherman Silver Purchase Act is now, as the cause of all the monetary distress. Congress met in September, and after a long drawn out debate did modify the offensive law. By the time this action was taken the country had begun to revive by its natural strength, and it may be said with safety that the action of Congress had very little real effect upon the situation.

The distribution Act of that period was, however, a much more innocuous measure than the Sherman Silver Purchase Act. Its effects terminated the surplus once paid, while those of the Sherman Act are continuous. Still, while advocating the repeal of the silver purchase law, the JOURNAL does not believe that it will be accomplished without great opposition in Congress, and that this opposition will be greater the sooner Congress convenes. Therefore, while the calling of an extra session in August next may be of service in allaying the agitation of the public mind, it may result in a long and tiresome debate, in which the ammunition stored up in the financial speeches of the last fifteen years will be again exploded before any conclusion is reached. It is highly probable that if the meeting of Congress had been delayed until the usual time, that the situation would by that time have cleared itself favorably for an immediate repeal of the obnoxious law.

THE INCEPTION OF PANICS may be generally traced to currency inflation and the speculative disposition which such an event always promotes. It is somewhat of a paradox that the prevailing monetary stringency had its origin, not in a lack of money, but in a too liberal supply of that article. Notwithstanding this, the forthcoming session of Congress will doubtless witness frantic endeavors to show that all our financial woes are attributable to currency contraction, and the insufficiency of the present supply.

In view of these probabilities, it is worth while to examine what proportion the currency in use in the United States bears to that of other countries, and also the basis of our paper circulation.

Our currency now comprises $346,000,000 in legal-tenders, $140,000,000 in Treasury notes, $174,731,000 in National bank notes, and nearly $400,000,000 of silver dollars and certificates, at par with gold because of the policy of the Government in exchanging gold on demand for silver. We thus have for 60,000,000 people, $1,060,000,000 of paper and other credit money for which there is available for redemption purposes about $93,000,000 of gold reserve, known as "free gold," and the $175,000,000 in the National banks, or a total of about $268,000,000. The point is made that in addition to the gold available for redemption purposes, all the National and private resources of the country are virtually pledged for the security of this credit money. But in times of extraordinary financial stress there is a limit to the debt-paying powers of even the wealthiest Government, if that wealth is not in a form that can be quickly realized on. The fear of the adoption of a policy of liquidating its obligations in a depreciated currency will impair the credit of any nation, and during the time of financial panic, credit and faith however high and strong can not supply the place of money.

England, whose monetary system is the crystallization of the experience of many years, has, including Wales, a population of 29,000,000 and has about $135,000,000 of paper money in circulation, secured by an equal amount of gold. France, with 38,000,000 people, has $700,000,000 of paper money secured by $340,000,000 gold, and Germany with a population of 50,000,000 has $235,000,000 paper secured by $220,000,000, in coin and bullion, only a small part of which is silver.

It would appear from these figures that if anything is to be gained from a study of the course pursued by the leading commercial nations of Europe, there is no demand, in reason, for currency expansion. A consideration of modern methods of finance will tend to show that the strength of the fabric of finance is more dependent upon the stability than the dimensions of the foundation, and that while the gold basis may be somewhat narrow it sustains with unyielding firmness the money systems of the great nations of the world, and that in finance, as in architecture, the weightiest and most enduring structures are reared on a basis more solid than expansive.

THE GOLD STANDARD CONTINUES TO ADVANCE, as it has continually, since the immense production of silver has almost deprived the latter of its title, *i.e.*, a *precious* metal. It is not correct, however, to assign the over-production of the metal as the only cause of its gradual demonetization. Another and very important cause has been the growth of the science of exchanges of financial insight. The machinery of banks and of clearing-houses and other similar appliances of modern business have gradually displaced the use of actual coin. As a nation advances in industrial civilization the amount of coin used by it in its commercial transactions diminishes. England, the most experienced of commercial nations in her great trade with her colonies and other nations, uses the smallest possible percentage of coin. The people of the United States for many years have been dominated by a great fallacy as to the importance of having the largest possible stock of currency. They have looked upon money, whether of intrinsic value or based upon credit, as the producer of prosperity, and have lost sight in a great degree of the important fact that it is but an instrument of wealth and not wealth itself, except in a very small degree.

For years the only money having intrinsic value throughout the world, that is a value based on its own recognized merits alone, and not dependent upon individual or national credit, has been gold coin. Because the law under which it became coin was in conformity with the custom and practice of the people, whose opinions gave it value. Silver money has been bolstered by enactment after enactment, and yet the value attempted to be given to it by law has failed to be sustained by the opinions and practice of the people in dealing with it. It has been customary to point to India, as a silver-using country and as a market where the owners of silver mines throughout the world might find a market for an indefinite period. But the myth that the East Indian and Chinese peoples had an unappeasible appetite for silver, must now be relegated to the folk-lore of the past. The industrial fever has reached the masses of the East, and the dense ignorance of financial conditions under which they labored is beginning to give place to a better knowledge of the true way of advantageously conducting the affairs of life. The East Indian ryot begins to see that the poor man suffers most from an inferior currency. It is only in the United States that we see a retrograde movement in financial ideas, where may be found people enough to form a respectable party as to numbers, who cling to the cast-off fables of antiquity.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

I.

FULL CONSIDERATION OF PRINCIPLES INVOLVED.

The laws which forbid the majority of banks discretion to lend directly to any one individual a sum beyond a certain percentage of their capital are responsible for conditions which make the task involved in an essay on this subject a somewhat more complicated one than it should be, for to these laws, which render it necessary for important mercantile businesses requiring large loans to scatter their paper in blocks with many lenders, is, of course, largely due the fact that such an enormous proportion of the loans on commercial paper in the great manufacturing and distributing centres of the United States are effected through the sale of paper in the open market. To the loaning of money on this class of paper I find it impossible to apply in their entirety those principles which appeal to me as the only theoretically sound ones which should obtain in a fairly perfect system of banking. But it happens, I think, that in the multitude of smaller cities and towns, in which the industries are of a more or less local nature and not upon so large a scale, the borrowings of individual houses are not, as a rule, beyond the powers of one bank. These being the conditions which surround the great majority of bankers in the United States, and because of the conviction on my part that, if we have a thorough conception of the sound principles which ought to govern in these circumstances, we cannot fail to have such an intelligent appreciation of the risks attending the purchase of paper in the market as will enable us to handle the latter on sound lines, I propose in the main to deal with the subject as relating to banks so situated.

At the outset, then, I would lay it down as a principle, to which bankers ought to adhere as closely as possible, that borrowers should be required to confine their business to one bank. This is a requirement which (upon the ground that the banker should at all times know the extent of his customer's borrowings, as well as that, having made advances, he may fairly expect to reap the profits incidental to a bank account) is manifestly reasonable. But this is a condition so clearly possessing a great advantage to the customer, in that it implies an undertaking on the part of the banker to provide for his customer's wants so long as the latter's position continues satisfactory, that its reasonableness need not be discussed in this connection. An added reason for the requirement on the part of the banker, however, and one to which too much importance can hardly be attached, is, that the transactions passing through such an account afford to the watchful and astute banker a sort of barometer of his customer's business. I believe this principle should only be departed from where the borrowings are upon such satisfactory security as to render them safe apart from the borrower's responsibility, or where, as pointed out later on, in the case of a house in high credit, the bank is only asked to discount bills receivable of a high class.

That a banker, when applied to for advances of any considerable amount is entitled to share his customer's confidence as to his financial position, is a proposition that, to bankers, does not require demonstration; but, as to the degree of confidence, bankers seem to differ. Indeed, I find quotations from some bankers implying that the obtaining of a balance-sheet is very desirable, but not essential; and expressions of regret by others that the practice of requiring a balance-sheet is not more general. On the other hand there appears to be an impression on the part of a portion of the business public, that where they have acquired a reputation for wealth and, deservedly or undeservedly, a good name, this is a sufficient foundation for banking credit, and that a banker should, out of such materials, judge intuitively of the soundness of a customer's business—in effect, that he is a speculator in business risks who fully expects to meet with many losses, but whose profits amply provide for such. This is, of course, absurd. A banker, as the custodian of his shareholders' and depositors' money, may allow the lowes, possible element of chance to enter into his transactions. His business is to gather up the surplus earnings of the saving portion of the community and lend the same to *sound* commercial undertakings, the economic test of their soundness being that, sufficiently provided with capital and efficiently conducted, they will be profitable. He does then lend in the belief that the business is sound under the application of this test. But he does not seek to share the profits on any *pro rata* basis; he asks merely for the market value of his money, and reasonable assurance that it will be duly repaid him; and the market value does not, and certainly ought not to, provide for such losses as would occur were money loaned to any appreciable extent upon anything short of a fair knowledge of the security offered; it provides only for a small proportion of losses arising from unforseen catastrophes, and in a measure for losses arising from a borrower's actual dishonesty.

If this statement of the case be accepted as approximately accurate, it would clearly seem to follow that a banker who lends any considerable sum without obtaining a balance-sheet and ascertaining by careful investigation his customer's position is taking an indefensible risk. (I say considerable amount, as I do not include in this principle those occasional trifling loans which bankers feel called upon to make for politic reasons to individuals in a position to render services to the bank of sufficient moment to warrant the risk of loss.)

There are unfortunately in every community a few men worthy of credit in every way were their position known who have the greatest aversion to divulging their business affairs to anyone; but with these it is largely a matter of the manner of approaching them, for the reasonableness of the request must be obvious to everybody on fair consideration of the matter. At any rate, without actual knowledge of their position, unsecured advances are not warranted. In the majority of cases, however, the natural vanity of man will make him who has a good balance-sheet pleased to exhibit it, and unwillingness to do so is an ominous sign.

FORM OF THE BALANCE-SHEET.

As to the form in which the balance-sheet should be rendered, the main advantage of that submitted by Mr. Cannon seems to be that the statements embodied therein, being declaredly made for the purpose of obtaining bank advances, it would be a serious matter for applicants to state an actual untruth, and they would, therefore, be deterred from deliberately misstating their position; but this advantage, to my mind, is overshadowed by certain disadvantages. It requires that applicants shall set down their assets therein at what they consider to be their fair value, and it therefore becomes an estimate rather than a balance-sheet, which, even if honestly made up and with no liability overlooked, must be relied upon only with due regard as to whether his valuation of the assets is likely to be conservative or the reverse. The use of such a form would probably have a tendency to lead some bankers to a mechanical performance of the duty of investigating their borrowers' positions —to consider the safety of advances wholly in the light of the statement returned, leaving the individual, except as to integrity, out of sight.

A balance-sheet should be the basis for a very full discussion with the applicant of his affairs (on which occasion there should be no difficulty whatever in obtaining all the supplementary information needful), and the result of this discussion, the conclusions arrived at by the banker as to the position of the business, together with his estimate of the *man* and his capacity, should form the basis for credit relations.

The submission to the applicant of a lengthy catechism such as that embodied in the form in question would seem to me to imply that the application would be judged on the merits of the figures and statements contained in the replies to the questions in the form; and I should expect that an applicant, on completing his replies, would be surprised to find that this was by no means the case. I submit my views on this particular matter, however, with all deference to those of so eminent an authority in the banking world.

An examination of a balance-sheet, with no other information than appears on its face, as I have already indicated, would be useless if it is desired to obtain a fairly accurate knowledge of a borrower's position. Of what avail is it to know that the party is possessed of bills and accounts receivable for a certain amount if these contain to a considerable extent deadwood, the accumulation of years; and, even as to those of recent date, are largely made up of names of men who have been allowed credit beyond their deserts? Where it is proposed to make the advances, or a portion of them, by way of the discount of the customer's bills receivable, and the safety of the advances would depend to a great extent on their quality, it is desirable that a list of the bills receivable then on hand should be furnished the banker as an index of the general quality of those proposed to be discounted. And where there are accounts receivable whose value it is important to know, either because of the indifferent quality of the bills receivable or because unsecured advances are sought, there should be as little hesitation in asking for particulars of at least the largest of them, though this, unfortunately, is seldom done.

Many bankers are content to accept a statement of affairs, and, without very full information, make deductions from the assets of certain percentages differing only according to the line of business; but, while on the average a certain percentage of the applicant's valuation in a particular line of business may be recognized as about correct, the variation in individual cases is so great that such a method is practically useless.

As to merchandise, it is not always feasible at the outset to ask for anything but general facts; where an accurate idea of its quality and value is desirable, that must be acquired through various channels later on. To complete investigation of the customer's position involves verification of the position of real estate as too wnership, encumbrances, etc., by actual search in official records.

IMPORTANCE OF READILY-CONVERTIBLE ASSETS.

Banking advances to commercial houses should rest against assets the liquidation of which takes place in the ordinary course of the business; and, having this in view, it is well for the banker's own guidance to make a practice of submitting balance-sheets to an analysis somewhat after the following form, the figures set down for the assets being those which the banker considers could be realized under pressure if the business collapsed and the assets had to be disposed of by creditors:

LIQUID ASSETS.		*FLOATING LIABILITIES.*	
Active: Bills receivable.....		Bills payable...............	
Accounts receivable.		Accounts payable...........	
Cash...............		Due to banks..............	
Merchandise held for sale..............			
Merchandise in process and materials			
	$		
Realizable, but not active: Miscellaneous, movable property.....			
	$		
FIXED ASSETS.		*MORTGAGE DEBTS.*	
Plant and machinery.......			
Real estate.................		Surplus.................	
	$		$

(Indirect liability as endorser, etc., $.)

From the banker's standpoint the main consideration is the proportion of what I have termed "active" liquid assets to floating liabilities, and whether the former may be expected to "melt" readily enough to provide for the liabilities as they mature and for repayment of the bank's advances. The "realizable but not active" liquid assets added to the "active" will indicate the total sources from which *speedy* realization may be looked for in case of failure; but they, together with real estate, plant, etc., should only be regarded in the light of security in that unfortunate event. Where, however, the real estate is heavily mortgaged in proportion to its value it is not sufficient to even leave the margin out of consideration as an asset. Many bankers are disposed to regard mortgage liabilities as of as "fixed" a nature as the real estate itself; but it is necessary to consider whether, in case depreciation in its value or other considerations should lead the mortgagee at maturity to call for a large reduction or repayment in full, the mortgage could be readily placed elsewhere by assignment or new mortgage deed for the full amount, as otherwise a portion, at least, of this liability would go to alter the proportions of the liquid assets and floating liabilities—in conceivable cases to such an extent as to involve a lock-up of the bank's money, if not at a loss.

CAREFUL INVESTIGATION OF BORROWERS' BUSINESS METHODS.

A balance-sheet thoroughly investigated may be expected to show the safety of the required advances at the time of application; but a banker should not only be in a position to form a fairly accurate opinion as to their safety *now*, but he should be able to assure himself that they will continue to be safe during their currency. It is not a rare thing for business concerns to seriously impair a strong position by entering on undertakings beyond their means, as for instance, by reducing their realizable assets or adding to their obligations in order to invest in plant or real estate valuable to them as running concerns but of problematic value otherwise; or by expanding their liabilities in the purchase of material or merchandise for an unduly large business. It is therefore important that the banker should go thoroughly into the matter of the customer's wants, and ascertain at the outset just what liabilities he proposes to incur; what there will be to represent his advances and the other liabilities from time to time; make certain that the customer's finances may be expected to work out pretty much as the latter calculates; and decide with the customer within what limits the advances from the bank should be confined and what form the borrowings should take. This is, perhaps, as far as it is necessary for him to go where a business has been long established, is possessed of ample capital, and is clearly conservatively and ably-managed.

But businesses in the desirable position just described are in the banker's experience the exception and not the rule. There are many houses in a sound position, but so situated that one year of bad management in one of its many forms might seriously involve them and jeopardize the bank's advances.

The banker will probably be able to form an opinion, when discussing the balance-sheet with the customer, particularly if a statement of the bills and accounts receivable is forthcoming, as to whether the latter's views are sufficiently conservative in the matter of crediting; but it is highly desirable also that the banker should—in the case of business houses not overly strong financially, of whose efficient management he is not certain or whose indifferent management is shown by results—either before making advances or at the earliest moment thereafter exhaust every means of ascertaining whether the "economics" of the customer's establishment are sound—*i.e.*, if he be a manufacturer, whether his system and methods are well arranged, and whether he knows what the articles he manufactures cost him; or, if a merchant, whether he buys to suit the wants of his class of customers and keeps his stock turning over quickly; and so on.

In this I hope it will not be objected that I am calling for the performance of remarkable functions by the banker. I quite realize that, situated as many bankers are, it would not be feasible to carry out these ideas fully; but in a general way I think they should aim to do so. I conceive that a banker able to rise to the full opportunities and responsibilities of his position must have a broad knowledge of business affairs, and particularly of those interests in which his customers are concerned; and that, taking an active interest in his customers' success, he should cultivate such relations with them that, where it is necessary to press upon them the existence of defects, the criticism will be received with appreciation and to good purpose.

Then, as to the form in which advances should be made, etc. Where a business yields bills receivable the customer should be required to borrow by way of the discount of these to such extent as they are available, or of their lodgment as collateral. This is important, apart from the question of security, for they afford the most direct evidence of undue crediting. And, wherever there are assets which are recognized as available for a bank's security in the ordinary run, security upon them should almost invariably be had.

Vanity often moves business men to seek to borrow on their own names where they can quite conveniently provide banking security from their business; but the only permissible exception to this rule as to security is where the banking requirements of a business are exceedingly moderate in proportion to the means in the business.

But there are many businesses having to do with staple commodities which not only do not afford bills receivable for the entire borrowings, but in which, from the nature of the assets, the manner of handling them, etc., it would be a matter of difficulty and inconvenience for the borrower to give a lien on merchandise to secure loans; and in such cases, the individual's financial position warranting, it is in order to make unsecured advances.

Where, however, direct advances (*i. e.*, not by way of the discount of bills receivable or against bills receivable lodged as collateral) are made it is a wholesome requirement that they should be liquidated at least once in each year out of the returns from the business, as otherwise that well-recognized maxim, that a bank's loans should not assume the nature of capital in the business, is trenched upon. An exception to this rule may be permitted in businesses in which the purchases of merchandise or material are made pretty evenly throughout the year to meet different classes of trade where the bank is, practically, the only creditor; but even here there should be a healthy fluctuation in the advances, corresponding to each temporary cessation of purchases.

MERCANTILE AGENCY REPORTS—FLUCTUATIONS IN VALUES.

In discounting a line of trade paper we have not, of course, a statement in each case of the obligant's position; and in this connection it is usual to rely largely upon ratings and reports of the mercantile agencies, which afford a very fair index of the quality of the paper *as a whole*. But even in the case of the customer himself, no matter how full a knowledge of his affairs the banker may feel he possesses, unless it is founded on the most thorough inquiry into the business itself, mercantile agency reports or any other independent source of information should never be ignored.

The impression which outsiders generally form of a man and his business is often founded on an aspect of affairs hidden from the view of the banker for the very reason of his office. I have known an instance where a banker went confidently on with an account for years on the strength of falsified balance-sheets showing a large capital and a profitable business, while it was gossip in some quarters, unknown, of course, to the banker, that the business was stagnant and run down; and, when the collapse came, bringing a heavy loss, the most astounded party was the banker.

In connection with accounts where advances are made by way of the discount of bills receivable, an admirable practice is followed by some bankers of keeping, in addition to the ordinary liability ledger, in which the total obligations of the customer from day to day are shown, a supplementary ledger where an account is opened for each obligant on trade paper, to which all bills are posted as they are discounted or paid. It is not necessary here to enlarge on the value of this system in enabling the banker to closely watch the risks in an account, and as a further aid to the formation of an opinion as to the quality of the paper discounted in each case. To one familiar with the system its advantages seem so great as to warrant the view that it is an essential adjunct to the proper scrutiny of any important account in which the borrowings take the form to any extent of trade paper discounted.

At the end of a year's operations the position of any particular business will presumably be more or less altered, and it therefore becomes necessary that, before starting on another season's advances, the borrower should satisfy the banker by a fresh statement of his position that he is entitled to a continuance of his credit facilities. For this reason the borrower should be educated so that he will expect, as a matter of course, to submit the scope of his business to an annual review with the banker.

According to the proportions borne by the bank's advances to the financial strength of the business will the banker's analysis of the year's results be exhaustive or otherwise; but, where the financial strength is not such as to render the safety of his own advances beyond remote question, he will accept an unsatisfactory year's business as a warning note to lead him to enquire into the cause and satisfy himself that the first step of a longer or shorter journey downhill has not been taken. It is at this stage that the information afforded through the "one account" principle, and the knowledge the banker may have acquired of the methods, etc., of his customer's establishment, are of invaluable assistance. And this occasion of the annual review affords an excellent opportunity for the inception of a policy of pressure, tactful or emphatic, with a view to remedying the defects. If the unsatisfactory result is due almost entirely to overcrediting, the banker whose idea of the scope of his business extends only as far as the four walls of his own office, provided he watches critically the transactions in the account and diligently studies the tale told by the balance-sheet, will, I admit, doubtless be able to grapple quite effectually with the situation; but, where the unsatisfactory result is not explained in the balance-sheet or transacations in the account, it is only the banker who has looked beyond his own office and entered, in person or otherwise, upon the field of his customer's operations, into his factory, wharehouse, or whatever it may be, who can hope to read the situation with sufficient clearness to judge of the probability of improvement or the reverse. It will not do to probe the inwardness of an establishment only when, having passively watched its backward course, it is clear that the bank's loans will soon become endangered; a first step toward the avoidance of losses lies in bringing what experience the banker possesses to operate with that of the customer to keep the business in which the bank's funds are employed evenly prospering, and conversely it is a first step towards a loss to in any way ignore a *tendency* to retrogression or stagnation. It is no uncommon occurrence for a banker, in the dark as to the exact cause of the retrogression of a business, to carry on the account from year to year in the hope that a providential turn will come—fearful lest, having cut the account adrift, the turn should come after it gets on the books of another bank—clinging on till the last moment he considers it safe to do so, when, alas! it proves too late, the balance sheets not having told the worst, and the bank is involved in a loss.

In making these remarks I am going on the assumption that, where the relations between a banker and his customer are such as I have maintained they should be, it will be admitted that an able banker may exercise a most powerful influence upon the management and results of his customer's business. I have in my mind an instance where by a constant policy of repression a banker suppressed the expansive tendency of an important customer and succeeded in bringing the bank account into a very comfortable position. This was just accomplished when the firm removed their works to another town to avail themselves of a liberal bonus granted them by the municipality, and, consequently, had to do with another banker. The customer, being now in a better position than ever, was given a generous credit; freed from restraint, he launched out selling of necessity more freely in order to place his larger output, and in about three years failed badly, entailing a large loss on the bank.

CHARACTER AND INTEGRITY OF CUSTOMERS.

I have not, in dealing with my subject, overlooked the question of the general character and integrity of the individual. There is, however, in all transactions between man and man such an unconscious summing up of the character of the other and a measuring of the grounds for trust that it seems to me superfluous to elaborate on the degree to which this consideration should enter in according credit. But it may be stated without reservation that if a banker enters upon transactions of considerable amount with parties he knows to be generally reputed unscrupulous, in which he must rely to any extent on the individual, and suffers a loss thereby, he can only accept it as the result of his own folly. The banker who consults the best interests of his institution will keep his liability books as free as possible from names surrounded by an unsavoury reputation. Even if they were not dangerous from the standpoint of safety they distinctly reflect on the bank's prestige.

In concluding this part of my paper I would like to anticipate two objections which, it occurs to me, may be raised to views it contains. The first is that the "one account" principle, which is in a measure the foundation I have built on, is not feasible because business houses in very good standing would not consent to confine their business to one bank. I would, however, affirm that this is a matter which rests almost entirely with the banks, and that if it is true that business houses will not enter into such close relations with one bank it is because banks are willing to do business on other lines. The other objection is one which I have indeed heard urged, that bankers here are opposed to large advances to individual firms. This, however, is stating the matter as if it were a question between large *risks* and small ones, which is hardly accurate. It is a question, I think, between large advances, on the strength of a full and frank showing of their position, to houses which borrow only from their own banker, and relatively small advances, based on reports of mercantile agencies or others (which do not claim to be founded on full and direct knowledge), to firms who float their paper in unknown quantities with several lenders. In the first instance the element of risk in the total loans of a well-managed bank would not be as great, I am satisfied, as in those of an equally well-managed bank conducted as in the latter instance. As to which is the sounder on principle there does not seem room for doubt, and we have, of course, only to do with principles here.

SOLID COMMERCIAL PAPER.

I have thus far dealt with my subject having regard to the discount of paper where the customer enters or should enter into direct relations with the banker. I have now to treat at less length of commercial paper sold in the market, one-named paper, and the paper given for commodities, endorsed by the seller. I may repeat here what I said in substance in a previous paragraph: that only those concerns whose requirements are so large that they have to be met by several lenders are justified in offering their *accommodation* paper in the open market. Where a borrower's requirements are only measurably larger than one local bank has power or inclination to lend, it is much better for a bank to take up the account jointly with another bank, or even two or three other banks, on the understanding that borrowings are to be equally divided at all times, based on the borrower's full confidence being shared with each of the banks. This is indeed a somewhat stronger position in some respects than that of a single account, as the borrower of large wants, being less independent, the two or three banks could excercise a stronger repressive hand in case of need than could one banker who might be influenced by a fear of losing a profitable account.

It is conceded, however, that there are many business houses which, under existing conditions, must place their paper in the open market. What, then, is the basis on which this paper should be valued?

GENERAL REPUTATION AS TO WEALTH NOT TO SUPPLANT INVESTIGATION.

It is well known that with many concerns in a large way of business bankers are content to purchase paper on the general reputation of wealth and high standing, often much in the dark as to the position in which a house even claims to be; but why this is the case it is difficult to understand. A banker cannot, of course, have an intimate personal knowledge of each business house of whose paper he purchases only a small portion; but I see no reason why he should not receive a full clear statement of each borrower's position, either through the broker offering the paper or on application direct; and for use in this connection I think that the form submitted by Mr. Cannon could hardly be improved upon. The position here, however, even when a full statement is obtainable, is very different from that where the borrower enters into close relations with the banker, and the criterion of the justification for such risks is primarily the proportions they bear to the general financial strength of the bank—*i.e.*, there is a limit so measured with every bank beyond which it would not be prudent to purchase accommodation paper of any concern no matter how strong it may be reputed, and this maximum amount should be scaled down so that in each case the risk taken will be inconsiderable in relation to the claimed worth of the house. In this connection I think that, if bankers made it quite clear that, for instance, given two houses in much the same standing, they would distinguish in the maximum amount of paper they would be willing to take between the secretive house and the house frank about its position, the existing situation, which to an extent compels banks to allow a large element of speculation to enter into the portion of their loans made in this way, would speedily be remedied.

In a business in connection with which the borrowings from banks are made at certain seasons, usually for only one purpose, namely, the purchase of merchandise or material, a banker should endeavor to ascertain when paper is offered for discount what amount of the same paper it is proposed to float during the currency of that offered. In cases particularly where the borrowings will be represented by commodities having the least ready market, and the house is only moderately strong, this is a most essential point—having in view the possible dangerous expansion of the business—in determining the degree of risk involved in discounting any part of the paper.

Where business houses in high standing borrow money by selling *with their endorsement* paper given them for goods sold by customers in good credit, it is a fair risk to ask a banker to take without submitting a statement of their position; but there should, of course, be no connection between the two houses.

In the improbable event of two good houses failing before the maturity of the paper the dividends from the two estates would probably render any loss inconsiderable. But in this instance, also, the measure of the soundness of the transaction is the quantity of any firm's paper which is taken from one endorser. There is, however, a degree in the quality of trade paper, varying in a minor measure only with the strength of the endorsing house, below which a banker should not handle it without knowledge of the endorser's actual position. What this degree is is, of course, a matter for individual judgment in particular cases.

BANKER AND CUSTOMER.

CANADA.

II.

PERCEPTION, JUDGMENT AND KNOWLEDGE OF HUMAN NATURE REQUISITE.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated above.]

The object of this inquiry must be to suggest such methods as may best serve to reduce the instances of extraordinary commercial risk to the minimum. Of course the element of risk is implied in every transaction involving credit. Credit means confidence, and confidence connotes contingency. But there is a standard of commercial security which practical experience has taught the business world to require as a basis of credit below which prudence forbids the self-respecting indorser to condescend in extending his favors. Where such security is offered, the element of risk, while not wholly eliminated, lies not in the want of precaution upon the part of the creditor, but in that contingency of human nature and vicissitude where all our frailities are found, and which must be accepted in business as in society, or the wheels of commerce would be effectually and forever stopped.

The real problem, then, is to bring to bear the accepted rules of commercial judgment upon those instances in which the responsibility of the party to be charged is not immediately known. In this investigation it will be found useful to note the several methods employed in ascertaining the value of commercial paper and reliability of the evidence elicited by these methods.

1. By common experience and report; *e. g.*, Government bonds, notes, etc.

2. By correspondence, as when banks correspond with each other immediately or through the clearing-house.

3. By experience through personal patronage, as in the case of depositors and other dealers, through the bank.

4. By official report, as through the tax-roll, or through statements submitted to court under oath in justification of official bond, or as security in an action for costs and damages.

5. By property statements through commercial agencies made by the party interested or ascertained by the agency's representative, submitted as a basis of commercial credit.

6. By personal recommendation or indorsement of a party known to the bank, for the purpose of special credit.

7. And, last, the personal self-respect and honest purpose of the maker and indorser, ascertained either by personal experience or by common report.

IMPOSSIBILITY OF FORMULATING INVARIABLE LAWS.

But, aside from all this, there is a large margin of commercial paper the value of which cannot be ascertained by the application of any known rule, or which, if so ascertainable, requires too much time for investigation; and, as the wholesome principle of safety is never to be disregarded, the alternative in such cases is either to reject the paper altogether and lose a possibly profitable investment and a good customer, or take an unauthorized risk.

In commerce, as in all other walks of human enterprise, are to be found some instances that prove refractory to every known law. In such cases perception, judgment of human nature and experience are of more value than established rules. Little or no confidence can be placed in the statement of the customer if that statement be unsupported by collateral proof. The reports submitted to commercial agencies are often fearfully and wonderfully made. Oaths subscribed to justifying bonds are sometimes perjured and at others colored by a rosy imagination.

None of the methods usually employed cover all the ground or lay a good foundation for a successful banking institution when considered apart from natural ability and fitness for the work. Banking, like other occupations, is pushed to a successful issue, not by a code of rules, but by having the right man at the head of it. Sharp tools handled by unskilled workmen turn out a poor quality of work. So in determining credit. If in the selection of the Cashier and Discount Board a wise discrimination is used, such rules as have been found to be of practical utility will be properly applied.

But, aside from all rules, a careful study of the personal habits of the customer will be made. Is he extravagant? Does he associate with a fast set, or does he stay at home with his family? Is his wife economical or is she a reflection of the fashion-plate? Does he indorse for his friends? Are his political opinions such as to lead him into antagonism with the wealth-holding classes? Is he communistic in his views of public economy, or does he stand for the right of private ownership? Has he imbibed those ideas of property now advocated by labor congresses whose tendency is to poison the moral sense of so many customers of country banks especially, leading them to believe a bank is tyrannical if it attempts to collect its bills? In what business is he engaged? Is it essentially risky? Is it likely to succeed? or, in case of failure, could it be converted into ready cash? Is he a man who enjoys the sympathy and confidence of the community, or do his neighbors of the better class regard him as cold-blooded?

HUMAN NATURE TO BE CLOSELY ANALYZED.

Thus, not only every vocation, but every specific business enterprise, must be carefully studied, and human nature minutely analyzed. A close and deep study of human nature is absolutely necessary. Every known art of correctly judging men should be employed. Information should be sought about the customer from the oldest citizens of high standing. If he be a new-comer, letters should be promptly written to a bank at his former place of residence, ascertaining his standing. Every case must be considered upon its own merit and in accordance with the circumstances by which it is surrounded.

We certainly do not need any additional rules, but we do need more care and responsibility upon the part of those into whose charge the methods now employed have been committed, and the rules now in operation will become more efficient in proportion as their application be more conscientious and painstaking.

BOIS D'ARC.

TEXAS.

SECRETARY CARLISLE ON SILVER.

In an interview with Secretary Carlisle on the 13th ult., it was suggested to him that there was a lack of precise information touching the amount of silver coined up to the present time, and also as to the manner in which the present operation of the Treasury under the so-called Sherman Act results in the payment of gold in the purchase of silver bullion. In reply to these suggestions Secretary Carlisle said:

"The operations of the United States Mint commenced in 1792, and from that time to 1873, a period of eighty-one years, the total amount of silver coined was $8,045,838. In 1873 the coinage was stopped by Act of Congress, but in 1878 it was resumed under the so-called Bland-Allison Act, by the terms of which the Secretary of the Treasury was directed to purchase and coin into standard silver dollars, of 412½ grains each, not less than $2,000,000 worth nor more than $4,000,000 worth of silver bullion each month, and between the date of Act and the 14th of July, 1890, a period of twelve years, there was coined $378,166,793. In addition to this there has been coined from trade dollars $5,078,472, and from the seigniorage of bullion purchased and coined under the Act of July 14, 1890, the sum of $6,641,109, making the aggregate $389,-886,374 in full legal-tender silver money issued by the Government since 1878. Of this amount only $58,016,010 were in actual circulation on the first day of the present month, the remainder being held in the Treasury as part of the assets of the Government, or being represented by outstanding certificates.

"The Act of July, 1890, required the Secretary of the Treasury to purchase 4,500,000 fine ounces of silver bullion each month, and it provided that he should continue the coinage of silver dollars at the rate of $2,000,000 per month until the 1st day of July, 1891; and under this Act there have been coined $29,408,461, which makes the total coinage of silver dollars, under all Acts since 1878 $419,294,835, or more than fifty times as much as was coined during a previous period of eighty-one years.

"In addition to the silver bullion purchased by the Government since 1878, and coined as above stated, the Secretary of the Treasury has purchased, under the Act of July 14, 1890, and now holds in the vaults of the Treasury, uncoined, 124,292,532 fine ounces of silver bullion, which cost the people of the United States $114,299,920, and is worth to-day at the market price of silver $103,411,386, thus showing a loss of $10,888,530. By the terms of the Act the Secretary was required to pay for all silver bullion purchased by the issue of new United States Treasury notes, payable in coin, and it provided that upon demand of the holder of any such notes they should be redeemed in gold or silver coin, at the discretion of the Secretary, 'it being,' in the language of the Act, 'the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.' In the execution of this declared policy of Congress it is the duty of the Secretary of the Treasury, when the necessity arises, to exercise all the powers conferred upon him by law in order to keep the Government in a condition to redeem its obligation in such coin as may be demanded, and to prevent the depreciation of either as compared with the other.

"The records of the Treasury Department show that during the eleven months beginning May 31, 1892, and ending May 1, 1893, the coin Treasury notes issued for the purchase of silver bullion, under the Act of July 14, 1890, amounted to $49,961,184, and that during the same period the amount of such notes paid in gold was $47,745,173. It thus appears that all the silver bullion purchased during that time, except $2,216,011 worth, was paid for in gold, while the bullion itself is stored in the vaults of the Treasury, and can neither be sold nor used for the payment of any kind of obligation. How long the Government shall thus be compelled to purchase silver bullion and increase the public debt by issuing coin obligations in payment for it is a question which Congress alone can answer. It is evident that if this policy is continued, and the Secretary of the Treasury shall be compelled to issue bonds or otherwise increase the interest-bearing public debt, it will be done for the purpose of procuring gold with which to pay for silver bullion purchased under the Act referred to."

For a Gold Standard.

Under date of June 28, the "New York Sun" published the following as a double-leaded editorial under the caption:

THE DOOM OF SILVER.

"The stoppage of the free coinage of silver in India seals the doom of silver as a standard of monetary value. Great Britain rejected it in 1818, Germany in 1871, the United States in 1873, the Latin Union in 1875, and Austria in 1892. Now that the mints of India are no longer open to it, coins of silver become everywhere, except in Mexico and South America, mere tokens, deriving their value from the fiat of the Governments which issue them, and from their interconvertibility with gold. For other uses, the metal will retain only its commercial value as bullion, like tin, copper, lead, and iron.

"With the effects of the measure, we do not see that anybody, besides the Government and people of India and the miners of silver, has any immediate concern. The Indian Government by fixing the value of the rupee at sixteen pence is insured against further loss in the collection of its taxes, the Indian railroad companies against a similar loss on fares and freights, and salaried employees paid in Indian currency against a practical reduction of their salaries. The attaining of these results was undoubtedly the moving cause of the measure, and nobody can dispute their desirability.

"As to the diminution of the exports of wheat from India to Great Britain in consequence of thus arresting the diminution of the value of the rupeee, which so many predict, there is no ground for expecting it. Wheat is exported from India to London not because of its low price in India, but because London is the best market for it; and it will continue to be exported thither so long as it brings there more than the cost of transportation. The idea that the price in London will advance, and the American wheat-grower thus be benefited, is equally chimerical. India never has supplied Great Britain with more than one-tenth of the wheat she consumes, and for the first five months of this year it has been able to send thither only 989,342 hundred weights against 4,747,576 for the first five months of 1892. India's importance as a competitor in this respect with this country has been ridiculously overestimated, and is likely to become less rather than greater.

"That the measure will produce a further decline in the price of bullion silver is quite probable, and it would not be surprising if the metal sold at half a dollar an ounce by the time Congress meets. The decline will make it impossible for the advocates of free silver coinage to continue their efforts with any prospect of success, and it will be equally fatal to bimetallist projects of every kind. Already it is given out that the Brussels Monetary Conference will not meet again in the autumn, but will be dissolved at once. It is probable that a year or two more will see the end of the silver craze all over the world, and the general acquiescence of civilized nations in gold monometallism."

Edward Gould

SIXTY YEARS A BANK CASHIER.

THE NOTABLE CAREER OF EDWARD GOULD, LATE CASHIER OF THE NATIONAL TRADERS' BANK OF PORTLAND, MAINE.

Edward Gould was born in Gorham, Mass., Province of Maine, January 27, 1805. His father was a saddler by trade; but the hard times incident to the embargo and the War of 1812, made the strictest economy imperative, so that it was only by the sacrifice of many things now considered essential to comfort and by much hard work out of school that the lad was able, in 1820, at the age of 16 to enter Bowdoin College, where the privilege was given him to pursue his studies one year in Gorham Academy. This he did, but at the end of the year he gave up his studies and made his first mercantile effort as clerk in a country grocery, in Gorham, for which he received a salary of $30 a year and board.

In 1823, at the age of eighteen, he came to Portland and was clerk for two or three commission merchants in as many years.

In 1826, he formed a partnership with a Mr. Atwood, but the new firm soon followed many others in the disasters common to those years. So that young Gould found himself at the age of twenty-four bankrupt and out of work. It was not until ten years later that he was entirely free from the debts of this unlucky firm. He soon found employment with Dana & Smith, one of the large and successful wholesale firms of the town.

The Manufacturers and Traders' Bank of Portland, was chartered in 1832. The original Cashier resigned soon after organization, whereupon numerous applications were made for the vacant position, but Mr. Gould was chosen upon his own merits. The salary was $800 with no allowance for clerk or janitor; consequently Mr. Gould performed all their duties.

On April 9, 1833, Mr. Gould entered upon his new duties and remained Cashier until the end of the month of April, 1893, when having served full sixty years and attained the age of eighty-eight he asked to be relieved from further service.

Any young banker who could hear Mr. Gould tell of his early banking methods would be greatly entertained. When he entered the bank there were no railroads in Maine, and no telegraphs or telephones anywhere. Few towns were favored with one mail a day. A trip to Boston from Portland by stage or sailing vessel was a rare event except to the wealthier merchants and other celebrities. Postage was high and express companies not known in Maine—stage drivers and their passengers were pressed into the service now so easily done by the post office department and express companies.

To issue and keep in circulation the greatest amount of his bank's paper money was the chief concern of the Cashier. To keep paper money in "circulation," was, in other words to prevent it being returned home, or to the Suffolk Bank of Boston for redemption, by any means fair or not outrageously foul. To "swap," *i.e.*, to get some kind friend to take your bank's money

A portrait of Mr. Gould, from a recent photograph, is presented in this issue of the JOURNAL.

and give you something you could send to the Suffolk Bank, was grand financiering in those days.

A knowledge of counterfeit, failed and uncurrent paper money was no mean accomplishment. Scores of people would daily visit the bank to inquire of the Cashier, or expert, if a bank note was genuine, or if current at the Suffolk. Small tricks not exactly criminal but happily not in vogue now, kept a Cashier's wits constantly sharpened. Downright falsehood was not common, but to hold one's tongue or to give evasive answers to the over-curious was more necessary then than to-day.

Checks were drawn upon little pieces of paper not half as large as the average check now in use. Everybody knew everybody else so that there was no trouble about identification. Certification was unknown; the bank was only too glad to pay out its paper money if "circulation" was promised, or to pay out other money, if the payee was going to Boston and the risk of transportation by stage drivers avoided. Deposit slips were not used until about 1850.

New York was too far away for a small bank like the Manufacturers and Traders' to keep an account in; Boston, with its Grand Suffolk system of redemption, was sufficient for the needs of nearly all Maine banks. Boston funds sold at a premium even to the most favored customers; while to receive a Boston check and pay therefor the paper money of the bank with assurance that it should be scattered east or west, was so great good fortune that the directors were notified.

Mr. Gould saw during the first decade of his bank life the great financial crash of 1837, or of the "land speculation," as it was locally called. The wild lands of Maine rose in price beyond all reason; and all other property became a base for speculation under the influence of vast issues of paper money. This was in the days of Presidents Jackson and Van Buren, and of the war against the United States Bank.

The Portland banks suffered with all the others; one failed, two closed up, and all passed their dividends. The Manufacturers and Traders' lost 18 per cent. of its capital but scaled down to 50, partly to avoid taxation. Business came almost to a standstill. Mr. Gould was fond of showing his young friends the journal of these years with only from three, two, or one deposit for the day's work. The Cashier's salary was cut down and he sought relief in his vegetable and flower garden, which responded to the increased attention. Better days dawned about 1844.

Mr. Gould married Miss Althea Chase, June 18, 1834. The married life of this couple has been most happy; seven children were the result. Mrs. Gould, as well as her husband, enjoys fairly good health. Though interested in public matters and the welfare of the city, State and Nation, Mr. Gould has always kept "out of politics," and has steadily refused to be a candidate for public office.

Mr. Gould gave up the cashiership of his own accord. The great changes in the methods of banking and the increase in its volume became a source of annoyance to him. He viewed the approach of his last day at the bank with feelings of mingled gladness and regret, but it was unlike him to make any demonstration. He wrote no adieus to any one except a line on the daily letter to the Suffolk Bank, sending his farewell, and reminding them that he had done business with them all these sixty years without a quarrel or an unpleasantness on either side.

Upon his retiring from the bank the following resolutions were passed by the directors:

"In view of the fact that this day completes the sixtieth anniversary that Edward Gould has been Cashier of the National Traders' Bank of Portland; that during this long period there has been no suspension of his duties, no irregularities in the management of the institution, but its honor and credit has been maintained, and from a small beginning in 1833 has become a flourishing and trustworthy financial centre, therefore

"*Resolved*, That we congratulate Mr. Gould that in his retirement he can review his official duties with just pride, and feel assured that no stockholder of the bank, or any person doing business with it was ever injured by any intentional wrong act of his; that by his urbanity of manner, he, in times past, secured the good will and confidence of several successive boards of directors, that have long since ceased to be; that by his uniform temperament and obedience to the laws of health, he has secured to himself length of days far beyond the longevity accorded to the average life of man. We hope that the remaining years allotted to him may be as quiet and pleasant to him, as his many past years, now reaching almost fourscore years and ten, have been beneficial to this community.

"*Resolved*, That a copy of these resolutions be extended upon the records by his uccessor, a copy be sent to Mr. Gould, and also published in the daily papers."

SENATOR ALLISON'S VIEWS.—The "New York Times" has been obtaining the views of Senators and Representatives in relation to repealing the so-called Sherman Act. Among the noteworthy opinions are those of Senator William B. Allison, of Iowa, who says: "I favor the repeal of so much of the Sherman Act as authorizes the purchase of silver and the enforcement of so much of it as requires that gold, silver and paper shall be kept at a parity in value in circulation. I believe that all currency should be issued under the authority of the United States with suitable provisions for reserves to secure redemption of paper issues and the parity in value of gold and silver."

An Extra Session of Congress.

EXECUTIVE MANSION,
WASHINGTON, D. C., June 30, 1893.

Whereas, The distrust and apprehension concerning the financial situation, which pervade all business circles, have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of the manufactures, bring distress and privation to our farmers, and withhold from our working men the wage of labor; and

Whereas, The present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress;

Now, therefore, I, Grover Cleveland, President of the United States, in performance of a constitutional duty, do by this proclamation declare that an extraordinary occasion requires the convening of both Houses of the Congress of the United States at the Capitol, in the city of Washington, on the seventh day of August next, at twelve o'clock, noon, to the end that the people may be relieved through legislation from present and impending danger and distress. All those entitled to act as members of the Fifty-third Congress are required to take notice of this proclamation, and attend at the time and place above stated.

Given under my hand, and the seal of the United States, at the city of Washington, on the thirtieth day of June, in the year of our Lord, one thousand eight hundred and ninety-three, and of the Independence of the United States the one hundred and seventeenth.

GROVER CLEVELAND.

* THE WORLD'S EXPERIENCE IN BANKING.

THE USEFULNESS OF BANKS. LESSONS TO BE LEARNED FROM THE RECORDS OF THE PAST.

The business of banking in its simpler forms is of great antiquity and was no doubt understood and practiced by the Assyrians and Babylonians, by the Greeks and the Romans. As the taking of interest for the use of money furnishes the chief motive and lies at the root of all banking wherever a people advances sufficiently in the arts of civilization to loan money for hire, there would naturally arise many of the practices and methods that still prevail among the bankers of the present day. Credit necessarily springs up with the improvement of social conditions and it is but a short step to the invention of devices for the transfer of credit.

Among the ancients there were, perhaps, used instruments similar to modern checks and bills of exchange, but it is the tendency of enthusiastic antiquarian research to magnify the discoveries that seem to place the origin of modern inventions far back in the past. An English writer on the book of Daniel has described the great bank of Babylon, where the firm of Engibi had done business, fathers and sons, for more than two centuries; collecting taxes and tithes, lending money at exorbitant rates of interest, drawing up mortgages on fields, etc. The description of the business shows it to have been a combination of law, real estate, money-lending and brokerage, rather than a differentiated banking business. The specialization of occupations, professions and employments had not advanced to the extent known to modern civilization. The wise man of Babylon, as we can see in the case of Daniel himself, was an all-round man: something of a lawyer, something of an administrator, considerable of a priest, an astrologer, mind-reader, and interpreter of visions and hard sayings as well as handwriting on the wall. A very small proportion of the population were freemen and a still smaller proportion could freely choose their occupation. These conditions prevailed until comparatively modern times.

Therefore, while it is possible to find the elemental transactions that distinguish banking, even among the earliest civilizations, it is safe to say that in those remote times there were no banks and bankers, in the modern sense, doing an exclusively banking business. There have always been money-lenders, but they loaned their own money, and the modern bank is, on the contrary, an invention for loaning other people's money; a device for economizing the use of money for the benefit of all. The very high rates of interest in ancient Rome and still more ancient Babylon, lasting to comparatively recent times, show that no such invention as a modern bank could have existed as early as is claimed by some. Grass has undoubtedly been cut from the very earliest times, but it would be hard to predicate the ancient origin of the McCormick reaper because of this undisputed fact. The invention of the bank sounded the doom of the individual money-lender with his cent per cent. rates, as the modern mowing-machine has sounded the doom of the sickle,

* Address by Bradford Rhodes, Editor of the JOURNAL OF BANKING, before the World's Congress of Bankers and Financiers, Chicago, June 21, 1893.

although people so disposed or forced by necessity to do so can still use the sickle and the note-shaver instead of the bank and the mowing-machine.

Great enterprises were no doubt carried on in the past without banks; but Shakespeare shows us to what straits an honest merchant might be put, the return of whose ships was delayed beyond the expected time. Incidentally he shows an object-lesson to be approved by all bankers—the dangers of accommodation paper. Antonio's peril must have occurred before the foundation of that great institution which did so much to strengthen the power of the State—the Bank of Venice. If this bank had been in existence we cannot conceive of Antonio's stress for a few thousand ducats. The great merchants, the Doge, and the Council of Ten, who controlled the bank, could not have refused so necessary a loan and Antonio himself would never have permitted his note to go to protest.

The high interest prevailing before the formation of banks increased the dangers and risks of trade and kept the nations of Europe in a semi-barbarous state for centuries. The low rates consequent upon this invention have extended commerce, stimulated agriculture and manufactures, and have been a blessing to the nations of the earth.

Whether it was advancing civilization that caused the invention of banks, or the invention of banks that has advanced civilization, a question that is sometimes discussed, reminds us of that still earlier puzzle—whether the owl produced the egg or the egg the owl; but it is patent that the invention occurred among peoples where comparative immunity from foreign attack had encouraged the arts of peace.

In Venice, impregnable on its islands, the first bank is heard of; clearly not a bank in the full modern sense, yet containing the germ principle of one. The cities of Genoa and Amsterdam followed with institutions similar in kind. In the meantime, the goldsmiths of England had devised some methods of detail that simplified the handling of money, till at last in the private banks of England, the Bank of Sweden and the Bank of England, the full perfection and utility of the invention began to dawn upon the world of traders.

A brief account of these various steps towards latter-day methods of banking will make clearer the nature and uses of the business, and how it multiplies and cheapens the currency of the world.

Lord Overstone, the celebrated English banker, once remarked to a gentleman in his own counting-house that his capital was his desks, ink, pens and books. "That is all my capital," said he; "the rest belongs to me; it has nothing to do in my banking business." In other words, while banking capital is a certain security to depositors and customers, it is really the money of the latter, and not the banker's money, on which the business is done. The money of the public, distributed in the hands of the public, is of comparatively little use to the business world, but when gathered in a bank or collection and managed by an intelligent head to which the public can make known its separate and collective requirements, then its usefulness is so increased that a thousand-fold is an inexpressive term to convey the true idea.

The Bank of Venice may be pronounced the forerunner of modern banking. It had its origin in the necessities of the State of Venice, in the year 1171, as the National Banking System had its origin in the necessities of the United States in 1863. A forced loan was demanded from the citizens of Venice—that is, each citizen having gold and silver money was required to bring it to the public Treasury. The amounts contributed by each citizen were entered in a book instead of giving a bond, as would be done at the present day. The Republic paid punctually an annual interest of four per cent. to those who advanced the specie, but did not repay the principal. The rate of interest allowed was much less than the current rate, but to compensate other advantages, foreseen or not by the propounder of the plan, accrued to the citizens. Who it was that thought of this loan, what position he filled in the Government of Venice, and whether he did or did not build better than he knew, my research has not yet been able to discover. For any information on this subject from those who have investigated further than I the dark places of history, I should be most thankful.

The citizens of Venice, unable to recover the principal of their loans, began to use the indebtedness of the State to them as an asset. Here again the interesting owl and egg question arises: whether the State first extended facilities for the transfer of these credits, or the citizens first suggested the necessity of such facilities to the State. There may have been similar loans before paid off in due time when the State was richer, and there may have been practices of exchange of the indebtedness among private parties, before notaries, in the same way usual to other property. These things are usually a growth until at last from an old confused practice a comparatively perfect system is evolved.

The citizens transferred the credits due them from the State on the books of the bank in their current transactions. The method was recognized as superior to handling the multifarious coins of all nations, which the trade with all the world brought to Venice. Everyone then brought their coin to the bank in order to obtain this convenient bank credit. There were no bills issued or checks used; the transfers of the credits on the bank books, made with certain formalities, were the evidences of payment. This was banking on the security of a Government loan, the prototype of the United States National Banking System. The notes issued by the National banks are a convenient substitute for the transfer of the credits on the books of the bank. If the Bank of Venice had been founded on a diminishing loan, the useful credits would soon have been closed. On the contrary, however, the loan to the State of specie in exchange for bank credits was constantly increasing. The original subscription was 2,000,000 ducats, which increased to 14,000,000 or 15,000,000 ducats when the bank was closed in 1797 by Napoleon the First. In fact, the tendency to deposit specie became so great that after 1423 interest was no longer paid on deposits by the Government. Bank funds were generally at a premium as compared with specie, and there was never difficulty in obtaining specie for them when needed.

Florentine bankers flourished during the tenth, eleventh and twelfth centuries, but their operations were always at excessively high interest, and their efforts were not in the direction of inventing machinery for cheapening money. They loaned a large sum to Edward III. of England, who could not pay, and caused a financial panic in Florence in 1346. There were said to be eighty firms of private bankers in that city in the twelfth century.

The Bank of Genoa was founded about one hundred and fifty years after the Bank of Venice. Macaulay, in his History of England, has a picturesque description of the operations of this bank, which existed from 1320 to 1798. The basis of this bank, like that of Venice, was loans to the Government. Its business was conducted upon similar principles. After the invention of bank notes the Bank of Genoa issued them.

The Bank of Amsterdam came into existence in 1609. Its object was to obviate the difficulties arising from light-weight coin received in the extensive foreign trade of the city. Evidently, a bank as the remedy was suggested by the success of the Banks of Venice and Genoa in handling the same difficulty. The new bank received all coin, light and otherwise, by weight and fineness; in other words, at its real value in standard coin, practically as bullion, and gave in return a credit on its books. Standard coin was to be paid on surrender of the bank credit. It also received bullion and gave both a bank credit five per cent. less than the value of the bullion and a receipt allowing the holder to take the bullion on surrendering bank credit. The depositor thus had his bank credit and his receipt and could use both for what they were worth in the market.

The city of Amsterdam guaranteed the bank credits as the United States does the notes of National banks, but without a loan at first. The credit of the institution was immense. But alas! unknown to the public the specie and bullion deposits were loaned to the East India Company, to Holland and the city of Amsterdam. The secret was not revealed until 1790 when the East India Company. Holland and Amsterdam were all in financial difficulties together. The bank failed, turning over its unliquidated claims against the State to its depositors. A similar bank, to accomplish the same purpose as the Bank of Amsterdam, was established in Hamburg in 1619, which, although shaken at times by circumstances beyond its control, still flourishes as the Bank of Hamburg.

The Bank of Sweden was founded by a Swede named Palmstruck, in 1656, forty years earlier than the Bank of England. It has been claimed that this bank was the inventor of the bank note in Europe. It may have been the first large bank established by a Government, issuing bank bills, but notes corresponding to bank notes were issued by the goldsmiths in England, and perhaps elsewhere, for some years at least prior to the establishment of the Bank of Sweden which did not issue notes until 1658, while the goldsmiths in London used similar notes as early at least as 1650. The banks of Venice, Genoa and Amsterdam represent the earliest efforts to establish machinery for the more effectual and economical use of money. The so-called banking existing before had for its object the loaning of money merely, without endeavoring to multiply its effects. While the principles on which these banks were founded are the foundations of modern banking, the invention of details in the carrying out of these principles is largely due to the money-dealers of England.

The Jews were the first money-dealers in England. They went to that country with William the Conqueror. They used, if they did not invent, bills of exchange, accumulated goodly stocks of coin which they loaned at high rates of interest, although we are apt to forget these rates were usual whether money was loaned by Jew or Christian. These loans were made to the nobility on the security of their estates. Sir Walter Scott in his famous tale of Ivanhoe has given us a vivid picture of Isaac of York and the barbarous cruelties to which the wealthy Jews were not seldom subjected, and in Ivanhoe's case, an instance of their gratitude and generosity. Edward I. robbed 15,000 Jews of their wealth and banished them all. The business was then taken up by the Lombards, who, not subject to race prejudice, did business as money-lenders, pawnbrokers and goldsmiths. As early as 1566 there was a goldsmiths' company in London consisting of 107 members. About 1645 the goldsmiths first began to act as bankers, collecting rents for their customers and receiving deposits on which they paid interest. These notes were at first receipts payable on demand. They were called "goldsmiths' notes." Checks also soon originated by the practice of customers giving orders on their goldsmiths.

Nothing like these goldsmiths' notes and checks appears to have had currency on the Continent. Macaulay mentions Sir Dudley North, returning to England after many years' residence abroad, as finding that the new practice of depositing cash with the goldsmiths, drawing checks on them and using their notes, had grown up in his absence. When one of his friends asked him where he kept his cash: "Where should I keep it," he asked, "but in my own house?" The poet Pope relates that his father, having enough coin to pay his expenses for the rest of his life, as he calculated, kept it in a chest from which he took the daily sum he needed.

The great advantage to trade of the operations of these early private bankers led to the establishment of the Bank of England. This institution commenced with a loan of 1,200,000 pounds advanced to the Government, the incorporation of the lenders taking place on July 27, 1694. The Government at first allowed eight per cent. on the loan. The charter, at first granted for short periods, has been renewed from time to time until 1844, when the law under which the Bank of England now does business was formulated. The Act of 1844 regulated the issue of bank notes, not only by the Bank of England, but also of all other banks in the kingdom. In addition to the great bank there were joint stock and private banks, many of them the lineal descendants of firms of goldsmiths. The circulation to which each of these banks was entitled under the Act was to be arrived at by taking the average amount of circulation in each case for twelve weeks prior to 1844. The amount for all these banks was by this method found to be eight and three-quarter millions of pounds sterling. The amount to be issued by the Bank of England was fixed at fourteen millions of pounds sterling through an issue department to which was to be transferred an equal amount of the interest-bearing securities representing loans of the bank to the Government. The joint stock and private banks might cede their circulation privilege to the Bank of England for a consideration of one per cent. per annum (this indicates what circulation was thought to be worth to the banks) up to August 1, 1856, and the privilege was forfeited by these banks in case of bankruptcy or of certain changes in the nature of their partnerships. The Bank of England was authorized to issue its own notes for the full amount of circulation ceded by the joint stock and private banks, and by order of the Crown in Council had the further privilege of issuing notes to the extent of two-thirds of the lapsed circulation—all in addition to the fourteen millions of notes first permitted. These further issues must, however, be secured by the deposit in the issue department of additional Government debt to an equal amount. The circulation of the bank since 1844 has been increased by nearly two millions of pounds sterling. The bank may also issue notes to any further extent, provided an equal amount of coin is deposited in the issue department. One-quarter of this coin may be silver but very little, if any, of the bank's outstanding circulation is now based on silver. The notes are a legal tender between all parties except in favor of the bank itself, and only so long as they are paid by the bank in coin on demand. The profits on the circulation are divided between the bank and the Government.

The theory upon which the note issues of the Bank of England are based is that, as proved by experience, a certain amount of paper notes will at all times be kept in use by the public. The public is the air in which the bank, the juggler, keeps several balls constantly flying, only one coming to hand at any time. This certain amount kept flying was determined, as has been stated, by actual experiment. The ultimate redemption is supposed to be secured by the Government debt deposited. The notes issued on gold constitute a method of using the gold without the danger of having it scattered beyond recovery. Practically, as there is no outward distinction in the notes in the hands of the public, whether based on securities or gold, all the gold in the issue department is a reserve for the prompt redemption of such portion of the whole issue as may be presented at any time. It gives the bank a chance to somewhat expand its issues in response to business demands, and serves as a reserve to protect those issues.

The Scotch and Irish banks, like the joint stock and private banks of England, have the right to issue a certain amount of permanent circulation, secured only by their general assets, and not like the permanent circulation of the Bank of England by Government debt specially deposited, but like the Bank of England and unlike the joint stock and private banks, the Scotch and Irish banks have the right to issue additional notes, as many as they can secure pound for pound by a reserve of gold coin. The stockholders of these banks are liable each one to the extent of his private fortune for all the debts of the bank.

The Bank of England controls the flow of specie and bullion in and out of the kingdom by changes in the rate of discount. It discounts the notes of merchants by giving its own notes in exchange which are redeemable in gold. The raising the rate at once increases the difficulty of obtaining gold for export. No notes are issued by the banks of Great Britain in denominations of less than five pounds. This renders necessary the use of gold sovereigns and silver in transactions of less than that amount. The same reason that keeps always in circulation a certain sum in bank notes to carry on transactions of five pounds and over also keeps in the country outside of the banks a certain stock of gold and silver coin to carry on transactions under five pounds. The gold for transactions under five and not less than one pound, and the silver for those under one pound. This stock of gold has been estimated in 1892 by John Biddulph Martin and R. H. Inglis Palgrave at not more than 55,000,000 pounds in sovereigns and half sovereigns, and not below 44,000,000 pounds. It acts an important part as a buffer in protecting the stock held by the banks.

The celebrated Scotchman, John Law, was the originator of the first bank of France. In 1716 he was authorized by the Regent, Duke of Orleans, to establish a private bank of discount and deposit with the right to issue notes. It was to exist for twenty years and its profits were to be free of taxes. The Regent was its protector and it was to be subject to examination by Government inspectors. Its capital was divided into 1,200 shares of 5,000 livres each. By public ordinance its notes were made receivable for public dues and were made payable at the revenue offices when specie was required. They thus secured wide acceptance throughout France. Specie poured into the coffers of the bank and notes were issued to the extent of at least 50,000,000 livres and were in good credit. So great was the success of this private institution that in two years (1718) it was made the Bank of the Nation. The Government purchased all its shares and guaranteed its liabilities. The bank was well conceived and managed and might well have continued solvent had not two mercantile schemes been appended to it. These were the Company of the West and the Company of the Indies. The former was to develop the resources of Canada and Louisiana. Enormous speculation in the shares of these Companies ruined the bank, and after an existence of four years only it collapsed. Everything good and bad in banking was developed in the history of this institution. John Law's ideas seem to have been based on studies of the banks of Venice, Amsterdam and England, with some further notions as to using the power of Government to give credit to paper money. It has always been questioned whether the extravagances of the later management of this bank were altogether his fault. In this institution the specie of the country was collected in one place to serve as a basis for a larger amount in paper. The notes were not at first a legal tender but were made receivable for taxes. The very success experienced at first from sound methods caused the managers to think there could be no end to the exploits of credit.

The wide ruin spread through France by this collapse, greater than that caused by the failure of the Panama Canal scheme in our day, inspired a wholesome distrust of all banking operations and for fifty years no bank could be successfully started.

In 1776, the year of the Declaration of Independence by the thirteen Colonies, a new Bank of France was started by Turgot which issued notes to the amount of 12,000,000 livres, equal to its capital. This bank encouraged trade during the period of the American Revolution. It became embarrassed by the outbreak of the French Revolution and was closed by a decree of the Convention in 1793.

The present Bank of France was established in 1803 and its charter has been renewed from time to time. The shares are held by private individuals; the Governor is appointed for life, and the bank is managed by the Governor and a Council of Regents. The institution is National and is under the fostering care of the Administration for the time being, created both as a fiscal agent and to meet the demands of commerce. It has a monopoly of note issues and can raise the rate of discount whenever circumstances seem to require it. The issue of notes is controlled by the Council who report to the Government. The notes are based upon the security of the general assets of the bank, no part of the assets being segregated for the special benefit of the notes. Sometimes the Government guarantees a temporary or excessive issue and also sustains the bank generally, when necessary, with its own credit. There is no limit fixed on its circulation as long as the bank redeems its notes in specie on demand, but if specie payments are suspended and the Government permits the issue of inconvertible notes, a limit to such issues is always fixed; as was done during and after the Franco-Prussian war.

The principle upon which the note issues of the Bank of France are conducted is that when trade is normal, in ordinary times, when there is no disturbance on account of war or civil insurrection, the interchange of materials and products by and among citizens engaged in making their living requires greater aid to facilitate it than can be afforded by the stock of gold and silver coin. The bank is the machine for doing this. It takes the evidences of ownership of all these materials and products and opens accounts with the owners who, by the transfer of these accounts among themselves, transfer the materials and products represented by the accounts, and also all expenses of the transfers. This may be done most conveniently by the checks of the owners or by bank notes which are simply checks of the bank drawn on itself in convenient denominations. So long as the bank notes and checks do not exceed the evidences of ownership of property placed in the bank and made over to it by the owners in a fiduciary capacity, and the business is conducted with wisdom and honor, the notes and checks will be perfectly safe.

This principle underlies all banking and the further precautions adopted, as in the case of the Bank of France itself, and the Bank of England and other institutions, are safeguards to insure proper and honest management. In the Bank of France no part of the property deposited with it is set apart for the special and particular security of the notes. In the Bank of England Government securities and gold are segregated and devoted to the sole purpose of meeting the notes. The method of the Bank of England appears the safer, but the method of the Bank of France is, other things being equal, much the more economical. In the one case the Government stands more closely behind the bank than in the other. Thus the Bank of France can rely upon the credit of the Government to the full extent in case of necessity, but it must also submit to Government interference and direction. The Bank of England, however, can look for no Government support other than that it can pay for, but neither can the Government dictate its policy except by due enactment of law as in the case of any other citizen. The English method and its modifications are better adapted to a people who are opposed to paternalism in Government. The French system is best when it can be conducted by trained and responsible men under the safeguard and protection of the State. In the one case the Government restriction is imposed indirectly, and by a general law; in the other case directly by the executive branch of the Government, without the necessity of legislation for each particular Act.

A brief *resume* of banking in other countries will readily indicate how far and in what manner Government interference with banking machinery is applied so as to give to the public and the State the largest share of benefit with the smallest chance of loss from errors or dishonesty in running the machinery.

English Australasian Colonies.—The Scotch system of banking heretofore described is the model for banks in the English colonies generally, with such adaptations to the surroundings and circumstances as are necessary. The banks of the Australasian colonies are upon this model. They issue, however, one-pound notes, which form a large proportion of their whole circulation. This has the tendency to drive gold out of ordinary use, and to require the banks to keep much larger reserves in coin than is the case with the banks of Scotland. The banks are required to issue quarterly statements of their condition. The notes issued are a lien upon all the assets, including the liability of stockholders. From recent advices from Australia it appears that bank credits have of late years been much extended there in promoting enterprises of various kinds that require a growth of population to insure their success. As emigration is not encouraged by legislatures controlled by labor organizations, the result has recently been disastrous to many of the banks and financial institutions of these colonies.

GERMANY.—The Imperial Bank of Germany, or Reichsbank, was founded in 1875 as the successor of the Bank of Prussia. The Bank is governed by a Council, of which the Chancellor of the Empire is President. The Banking Act of 1875 fixing the relations between the Imperial Bank and other existing banks as to circulation was modelled on the English Bank Act of 1844. A fixed, permanent amount of circulation was assigned to each of these outside banks; besides this, they may issue notes secured mark for mark by gold coin, and further circulating notes may be issued subject to a tax of five per cent. At first the issue of notes by the Imperial Bank was limited only by the discretion of the controlling Council, but in 1881 its notes over a certain amount were also subjected to a tax of five per cent. This tax has the effect of retiring surplus notes issued in times when there is extraordinary demand for money. A reserve must be kept on all bank notes equal to one-third of their amount in gold coin, gold bullion and legal-tender notes of the Empire. The bank must hold discounted three-months' bills equal to the remaining two-thirds. The Imperial Bank has branches in all parts of the Empire. No notes are issued in denominations of less than an equivalent of twenty-five dollars. The German system embodies features of the English, Italian and also of the National Banking System of the United States.

AUSTRIA.—The Austro-Hungarian Bank has the exclusive right of issuing notes in Austro-Hungary. It is modelled very closely after the Bank of France. Its regular issues, over $100,000,000, must be covered by a one hundred per cent. reserve of specie or bullion, a feature in which it resembles the Bank of England. The Bank is allowed, however, to issue other notes upon the security of discounted paper, obligations of the Austrian Empire, etc., and with the consent of the Government without any security whatever. The notes, like our Treasury notes of 1890, are to be taken for all payments unless otherwise stated in the contract. The bank is governed by a Board of Directors presided over by a Governor appointed by the Emperor. An Imperial Commissioner performs the functions of our Bank Examiner, watching for and preventing violations of law.

SWITZERLAND.—There are in Switzerland two classes of banks: one the Cantonal, where the capital has been furnished by the canton or township, and the other consisting of joint stock banks. They appear to be under very little governmental regulation — not more than State banks in the United States. The most important of all these banks, both Cantonal and joint stock, are united in an Association similar to the associated banks of New York city—that is, they accept each other's notes and interchange and aid each other's business. Some weaker banks are not admitted to this private arrangement. The note issues are not restricted by any law; they are not a legal tender nor are they specially secured. In some of the cantons a tax of one-half to one per cent. is imposed on the maximum issues. The notes of banks not in the Association do not circulate except in the locality of their issue. The notes of the Associated banks circulate throughout the country.

ITALY.—The chief bank in Italy is the National Bank of Italy, founded in 1859, but it is not properly a Government bank. The law under which the banks now operate was passed in 1874 after a minute examination into the banking methods of other countries. This law restricted the issue of notes to six associated banks which were permitted to issue paper to the extent of $200,000,000 for the use of the Government. Upon this loan the State issued interest-bearing securities to be held by the banks. In addition the Associated banks are permitted to issue notes on their own account to the extent of forty per cent. of their capital. The last notes are redeemable in coin or the notes first spoken of.

RUSSIA.—The Imperial Bank of Russia was founded by the State in 1860 in imitation of the banks of England and France. It is conducted under the supervision of the State. Its directors are a Committee of the Treasury and its capital is subscribed by the Government. The circulation is practically unlimited, being increased whenever necessary to meet the exigencies of the Government. No other banks in Russia issue notes. The Imperial Bank is merely the Russian Government doing a banking business for its own benefit.

BELGIUM.—The National Bank of Belgium has practically the exclusive right of issuing notes, because its notes alone are legal tender to the Government, which controls its issues and business. Theoretically, there is no restriction upon the issue of notes by individuals or firms, except by corporations of limited liability. The small extent of the country does not allow any profit in the circulation of local notes in the face of the legal-tender quality and management of the National Bank. Reserves are usually kept in coin to the extent of one-third of the circulation and deposits, but the Government may permit a reduction to 25 per cent. of the liabilities.

NETHERLANDS.—The Netherlandsche National Bank issues the only bank notes permitted in the Netherlands. This bank issues two kinds, like the Associated Banks of Italy, one sort limited to a certain amount based on Government securities, and the other notes of the bank proper unlimited. But a reserve of forty per cent. in gold coin or bullion is required on all liabilities, including circulating notes.

DENMARK.—The Bank of Copenhagen alone issues notes in Denmark. They are without limit, with no security other than the general assets of the bank. For a certain fixed proportion of notes, say $8,000,000, a reserve of good, convertible assets must be kept equal to 50 per cent. of the amount. On all notes over this amount a reserve of gold coin equal to one-third of this additional sum is required. The total gold reserve must never be less than three-eighths of the total circulation.

NORWAY.—The Bank of Norway was chartered in 1816. It is practically a Government bank in whose management the stockholders have no voice. Its right to issue notes is exclusive and the issues are in proportion to its capital, viz.: two and a half times the original capital, twice the amount of a first increase, and one and a half times a subsequent increase. Against its surplus fund it may issue one hundred and fifty per cent. and still further notes may be issued against gold. The notes are a legal tender and though not guaranteed by the State they are practically backed by it.

SWEDEN.—The Bank of Sweden was founded in 1656. Its circulation is unlimited except as secured by a gold coin reserve of nearly fifty per cent. Other banks in Sweden are the Enskilda banks, like our private banks, that also are permitted to issue notes. The partners are of two classes: some whose liability is unlimited, the others whose liability is limited. Upon capital of the first class notes may be issued when twenty-five per cent. of such capital is deposited in a public place of security. The capital of limited liability partners must be deposited to the extent of seventy-five per cent. before the note-issuing privilege is granted. These deposits must be in Government bonds or approved mortgages on real estate. Upon the paid-up capital an issue of notes to the extent of three-fourths is permitted. Also other notes to the extent of the cash in bank and the deposits with the Bank of Sweden. All of these additional notes must not, however, exceed fifty per cent. of the capital. The notes are redeemable at the counters of the banks issuing them. The banks have a system of exchanges to facilitate redemptions at Stockholm.

SPAIN.—The Bank of Spain holds the exclusive right of note issues in that country. Its notes are emitted and circulate solely on its credit to an amount of three times its capital. The bank is required to keep a thirty-three per cent. reserve in gold coin.

PORTUGAL.—Bank notes are issued in Portugal by the Bank of Portugal. This bank claims the exclusive right to put out circulation, but banks in other places issue notes notwithstanding this claim. There is no special security for its notes which, all but a small amount, are payable in gold coin on demand.

JAPAN.—Japan has a banking system modelled upon that of the United States. In addition there is a State Bank of Japan modelled on that of Belgium. The Government subscribed for one-half the capital and the Emperor appoints the President.

From these illustrations may be understood that the usefulness of banks consists not in creating but in performing the exchange function of money. Money not only effects exchanges but it is also the standard of value. Banks and their devices, notes, checks, drafts, etc., effect exchanges without the use of money. When by laws or bad management banks seem to fix the standard of value they are outside of their province. On the other hand, it is a popular error that mistakes their instruments for money.

In Venice we have seen how, by the establishment of a system of accounts, the value of a large mass of coin previously used to effect exchanges among merchants was at once added to the resources of the State, while the necessary exchanges were better effected by the bank machinery than by the coin itself. But Venice maintained and perfected the standard of value.

This bank machinery of Venice was excellent in that it did not confuse the popular idea of real money value. The substitution of bank notes for one part of the Venetian method gave additional convenience. It gives to each individual the freer use of his bank credit in every place, not confining him to making transfers in the bank office. But its dangers are almost equal to its convenience, and it has been the aim of banking law and regulation to cull the utility of bank notes and avoid their dangers; to effect exchanges conveniently without over-stimulating trade, and without departure from a true standard of value.

Banking methods and laws in each country, with this common aim, differ much with the custom and genius of the several nations. Whenever the maintenance of the true mean between utility and danger is lost sight of, or whenever false deductions from the facility in making exchanges lead to a departure from the standard of value, and a belief that the mere machinery of wealth is wealth itself, disaster inevitably follows.

The banking methods of Europe have been perfected by centuries of experience, each among the people it serves. America has profited by them although adapting them to her own conditions.

Both in Europe and the United States sound finance and banking have as their steady company an evil shadow called irredeemable currency, legal-tender fiat money, etc., that sometimes in times of trouble hides the light of truth. These disastrous monetary fallacies secure acceptance with many honest-minded and intelligent people through the seriousness and false philanthrophy of their promoters.

The Simon Magus, or false apostle of finance, is usually a sincere and earnest man who believes his theory, as the second-rate chess-player confides in his infallible gamit. Disaster does not convince him, for do not the soundest plans go astray in the execution! He seems to have had his day in Europe, but he still flourishes in the United States. Reducing his fallacy to its lowest terms, it seems as follows: If payments are daily made in Chicago amounting to 166 millions of dollars, and all but six millions are made in checks, drafts, etc., why, says Simon Magus, should the people pay the banks for doing the exchanges when, if only 166 millions in money were furnished, no one need go to a bank or draw a check or a draft. Coin is too scarce, therefore let a paternal government furnish legal-tender dollars, forgetting that a government without banking machinery cannot know rightly the extent of the exchanges with which the fiat money is to conform.

Learning wisdom by experience is sometimes a severe process, but it is effectual. Just now the thinking people of this country have formed themselves into a school of finance, and they are learning a lesson from the book of experiment. Fortunately the country is rich enough and strong enough to endure the results without irreparable injury. But this immunity cannot be expected to last forever. Financial sins eventually have to pay the natural penalty. Sooner or later the laws of finance will vindicate themselves. It is a hopeful fact, however, that the general intelligence of the people begets progress as well as thrift, and therefore added prosperity can safely be expected in the future.

The banking system of the United States, although satisfactory as to the management of deposits and discounts, has yet to be perfected as the issuer of a currency which will supersede the present system of Government legal-tender notes. I do not advise an exact imitation of any of the particular methods of other countries differing so much among themselves. But our bankers and legislators should not forget the sound principles educed by the experience of the older countries, whose distinguished representatives are with us to-day.

The peoples of the world are getting nearer each other year by year. The world's commerce produces the links which bind us together in the unbreakable chain of commercial unity. Let us strive to solve the financial problems now demanding attention, and which affect the business interests of all lands, in that spirit of brotherhood which befits the advanced civilization of to-day, keeping in mind the truism that a question is never settled until it is settled right.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

LIABILITY OF STOCKHOLDERS—SET-OFF.

Supreme Court of Ohio, April 25, 1893.

JOSEPH KING AND OTHERS *vs.* DAVID ARMSTRONG, RECEIVER.

Each shareholder of a National Banking association is individually liable for its debts to the extent of the amount of his stock at its par value, in addition to the amount invested in the shares held by him, and a Receiver appointed to wind up the affairs of such an association that has become insolvent is authorized, under the direction of the Comptroller of the Currency, to enforce the liability of its stockholders, and to collect from each of them the necessary amount, up to the extent of his liability, for the payment of the creditors.

The indebtedness of the stockholders on their individual liability, together with the other assets of the insolvent bank, constitute a trust fund for the benefit of its creditors; and in equity such indebtedness of a stockholder who is insolvent may be set off against a dividend, payable out of the trust fund, on a balance due him on his deposit account with the bank at the time of its failure.

An assignment by the stockholder of his claim against the bank, before the direction, of the Comptroller to enforce his liability, but after the insolvency of the bank, does not affect the right to set off his liability against the dividend due on his claim, nor does the fact that the Comptroller, at the time of the assignment, had not determined the amount necessary to be collected from the stockholders for the payment of the creditors. It is sufficient that such direction has been given, and amount so determined, when the set-off is made.

WILLIAMS, *J.*: The Fidelity National Bank of Cincinnati, a banking association organized under the National Bank Act, became confessedly insolvent, and suspended business, on the 21st day of June, 1887, and on the 27th day of that month the defendant, David Armstrong, was appointed by the Comptroller of the Currency, Receiver to wind up its affairs. The franchises of the bank were adjudged forfeited, and the association dissolved, by a decree of the Circuit Court of the United States, at Cincinnati, on the 12th day of July, 1887. When the bank failed it was indebted to Charles A. Brownell in the sum of $8,330.52, that being the balance then standing to his credit on his deposit account, which balance, on the 30th day July, 1887, he assigned to the plaintiffs, Joseph King, M. Schroder, and Charles E. Brownell, as a security for, or payment on, a pre-existing debt which he owed them. The plaintiffs soon afterwards presented their claim to the Receiver, and on the 15th day of September, 1887, obtained from him a certificate stating they had made satisfactory proof of the assignment, and that they were creditors of the bank to the amount of the balance due Charles A. Brownell on the deposit account. On the 1st day of November, 1887, the Comptroller of the Currency declared a dividend of 25 per cent. on the claims of the creditors, and issued to the Receiver checks for the amount of the dividend due each creditor, payable to the creditor. Among them was a check for $882.63, the dividend on the claim assigned to the plaintiffs. The defendant refused to pay that dividend to the plaintiffs, who thereupon brought the action below to recover it.

At the time of the failure of the Fidelity Bank, Charles A. Brownell was the owner of 50 shares of its capital stock, of the par value of $100 each, on which, under the provisions of the National Bank Act, he was liable for the indebtdness of the bank to the amount of his stock, in addition to the sum invested in the stock held by him. That Act provides that "the shareholders of every National banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts, debts, and enengagements of such association, to the extent of the amount of their stock herein at the par value thereof, in addition to the amount invested in such shares." Rev. St. U. S. § 5151. When the bank failed, as well as when Brownell assigned the balance due on his deposit account to the plaintiffs, he was, and still is, insolvent, and, immediately after the transfer to the plaintiffs of the balance due him from the bank, he made a general assignment for the benefit of his creditors. At the time the plaintiffs obtained from the Receiver the certificate alluded to, he was not aware of the liability of Brownell as a stockholder of the bank, but became aware of it before the checks for the dividend on the claims of creditors were received; and they were received with instructions from the Comptroller to withhold them from all stockholders and others in any way indebted to the bank. Afterwards the Comptroller decided that it was necessary to enforce the stockholders' liability to the full extent of $100 on each share, in order to pay the indebtedness of the bank, and made his order accordingly, declaring such necessity, and directing the defendant to collect, by suit or otherwise, from each stockholder, including Charles A. Brownell, the full amount of his liability. On the liability of Brownell, which amounts to $5,000, nothing has been paid; and the Receiver sought, in the action below, to have it set off against the dividend in his hands upon the claim assigned by Brownell to the plaintiffs. The Superior Court allowed the set-off, and it is of that the plaintiffs are here complaining.

The question in the case, therefore, is whether, upon the facts stated, the Receiver is entitled to retain the amount of the dividend due on the debt which the bank owed Charles A. Brownell at the time of its failure, and apply it on his liability as a stockholder of the bank. His right to do so is controverted by the plaintiffs, chiefly on the ground that the cross-demands are not due to and from the parties, respectively, in the same right, or, more definitely stated, that the stockholder's liability is for the exclusive and equal benefit of the creditors, and is not a debt due the bank or an asset of the bank, while the balance due on Brownell's deposit account is a debt of the bank, payable out of its assets, which he could not set off against his stockholder's liability, and consequently the Receiver, it is claimed, cannot set off the liability against the debt, or dividend due upon it. There is a noticeable difference, of some importance, between the administration of the effects of an insolvent Ohio corporation and those of a national banking association. With respect to the former the stockholder's liability does not pass to the assignee or Receiver as assets for administration, and no right of action can accrue thereon in his favor. It can be enforced only at the suit of the creditors; and hence the assignee may not lawfully withhold from a creditor of such corporation a dividend due him from its assets, on the ground that he is liable as a stockholder, and the creditors, on account of his insolvency, might not otherwise be able to enforce the collection of any part of his liability. The creditors in such case undoubtedly could, by appropriate action, reach the dividend, and compel its application to the payment of the indebtedness of the stockholder; but, as between a stockholder and the assignee, the latter would not have the legal right to set off the former's liability against a dividend due him as a creditor, for the assignee is wholly without authority to collect or receive any part of the amount owing by the stockholder. It is different with a Receiver of a National bank. By the provisions of the National bank Act the Comptroller of the Currency may appoint a Receiver of such banking association whenever he is satisfied that it is in default in the payment of its circulating notes, or has become insolvent; and the Receiver is required, under the direction of the Comptroller, to "take possession of the books, records, and assets of every description of such association, collect all debts, dues, and claims belonging to it, * * * and may, if necessary to pay the debts of such association, enforce the individual liability of the stockholders." Rev. St. U. S. § 5234; Act June 30, 1876, Supp. Rev. St. U. S. (2d Ed.) p. 107. The Receiver is authorized to collect from each stockholder the necessary amount, up to the full extent of his liability, to meet the demands of the creditors, and appears to be charged with that duty. The amount due from the stockholders becomes assets, to be administered by him as the other assets of the bank in his hands; and all of the assets, including the individual liability of the stockholders, constitute a trust fund for the benefit of all creditors having valid claims against the bank. It therefore becomes the duty of the Receiver, under the direction of the Comptroller, to so administer the fund as to secure to each beneficiary his just proportion of it. In his trust capacity he is the representative of all the creditors and of all the stockholders, both in the collection of the assets and their proper distribution; and the fund collected from the stockholders goes into that arising from the other assets, and is distributed in the same way to the creditors, without separation or distinction on account of the source from which it is derived. It all together constitutes one common fund, for the equal benefit of all the creditors, according to their respective rights; so that whatever is due from Charles A. Brownell on his individual liability as a stockholder is due the Receiver in the same relation in which he owes the dividend on the claim of Brownell against the bank. If Brownell were solvent, so that the amount of his liability could be collected, the fund for the creditors would be increased $5,000 by its collection; and by the payment of the dividend to him or his assignees, the plaintiffs, it would be reduced $832.63. If the dividend were paid to Charles A. Brownell, and not placed beyond the reach of legal process, it might be immediately subjected by the Receiver to the payment of his indebtedness on his stockholder's liability; but, if it is required to be paid to the plaintiffs, the creditors' fund will be permanently diminished to that amount, which, at the same time, will lose the amount due it from Brownell, because, on account of his insolvency, nothing can be collected from him, unless the Receiver is allowed to retain the dividend now in his hands, and have Brownell's indebtedness set off against it. While the relation of Brownell to the Receiver may not, strictly speaking, be that of debtor and creditor, in the sense essential to the right of set-off at law, he was, before he assigned his claim to the plaintiffs, both a debtor to, and creditor of, the fund which the Receiver represents. Equity will enforce the set-off, or compensation of cross-demands so far as they equal each other, when necessary to prevent one of the parties from losing his demand on account of the insolvency of the other. Upon the same principle, when a person entitled to share in the distribution of a trust fund is also indebted to the fund, and is insolvent, his indebtedness may, in equity, be set off against his distributive share; and, as a general rule, the right of set-off will not be defeated by the assignment of his claim, though made before the amount of his indebtedness or of his distributive share is ascertained.

That application of the principle is not in conflict with the case of *Sawyer* vs. *Hoag* (17 Wall. 610), which is relied on by counsel for plaintiffs. Sawyer was indebted to the Lumberman's Insurance Company of Chicago in the sum of $4.250 on his stock subscription, and, after the company became insolvent by reason of its losses in the great fire in that city, bought up, for a small sum, a certificate of an adjusted loss of $5,000 against the company, and sought to have it set off against his stock liability after the company had been adjudged a bankrupt. The court held that the stock subscription was a trust fund for the equal benefit of all the creditors of the company, and Sawyer was not entitled to the set-off he was demanding, because to allow it would give him an undue proportion of the fund, and deprive other creditors of their just share. It was contended in behalf of Sawyer that the right to the set-off was given by the bankrupt Act, which provided that, "in all cases of mutual debts or credits between the parties, the accounts between them shall be stated, and one debt set off against the other, and the balance, only, shall be allowed or paid." That provision of the bankrupt law, it was held, was not intended to enlarge the doctrine of set-off, and, in speaking of the right of set-off under it, Mr. Justice Miller said: "The debts must be mutual; must be in the same right. The case before us is not of that character. The debt which the plaintiff owed for his stock was a trust fund, devoted to the payment of all the creditors of the company. As soon as the company became insolvent, and this fact became known to the plaintiff, the right of set-off for an ordinary debt to its full amount ceased. It became a fund belonging equally, in equity, to all the creditors, and could not be appropriated by the debtor to the exclusive payment of his own claim." The case is essentially different from the one we have before us. The debt which Sawyer owed the insurance company was due to a trust fund, in which all the creditors were entitled to share equally. The debt which the company owed him was one which was only entitled to receive its proportion of the fund, and not entitled to payment out of it in full. He could not, therefore, set off the whole amount of the debt due him against that which he owed the fund, for that would result in an unequal distribution of the fund, and enable him to obtain more of it, proportionately, than the other creditors, and more than his proper share. That was the reason for denying the set-off which he sought to have made. The reason is wholly wanting in the present case. Here the set-off allowed by the court below was not of the entire claim which the bank owed Brownell, against his obligation to contribute to the trust fund on his stockholder's liability, but only of his proper share and proportion of that fund payable on his claim against the bank, as ascertained by dividend duly made and declared. The allowance of the set-off took nothing from the other creditors to which they were entitled, and gave nothing to the claim of Brownell except what it was justly entitled to receive,—its proper share of the trust fund. It in no way interferes with the equal rights and equities of the other creditors, but, on the contrary, preserves and protects their rights, and inures to their benefit, by increasing the fund. We see no valid objection to the set-off adjudged by the court below, unless the right was defeated by the assignment of Brownell's claim against the bank to the plaintiffs; and we think it was not.

It is contended by counsel for the plaintiffs that the liability of Brownell as a stockholder had not accrued when the assignment to them was made, and therefore could not be set off against the dividend due on the claim. The position of counsel is that the liability was not complete, and so not due, until the Comptroller of the Currency directed the Receiver to enforce it, which was subsequent to the assignment. In support of this position, *Kennedy* vs. *Gib-*
to decide when it is necessary to institute proceedings against the stockholders
son (8 Wall. 498, 505), is cited, in which it is said: "It is for the Comptroller to enforce their personal liability, and whether the whole or a part, and, if a part, how much, shall be collected. These questions are referred to his judgment and discretion, and his determination is conclusive. * * * He may make it at such time as he may deem proper, and upon such data as shall be satisfactory to him. This action on his part is indispensable whenever the personal liability of the stockholders is sought to be enforced, and must precede the institution of suit by the Receiver. The fact must be distinctly averred in all such cases, and, if put in issue, must be proved." The power appears to be vested in the Comptroller to determine when it is necessary to collect from the stockholders, and the amount to be collected, but not to establish the liability, or determine when it accrues. The liability is complete, and subject to proceedings for its enforcement, when the banking association becomes insolvent and suspends business. The Comptroller simply directs at what time, and to what extent, the liability shall be enforced. It may require an investigation of the condition of the bank, its assets and liabilities, in order to determine whether resort to the stockholders is necessary, and for what amount; and while that duty is devolved upon the Comptroller, and no proceeding can be instituted against the stockholders until directed by him, the maturity of the liability is not postponed until such direction is given. The proceeding, only, is so postponed. By the provisions of the National Bank Act already quoted, the Receiver is required, "under the direction of the Comptroller, to collect all debts," etc., belonging to the banking association; and it might as well be said that, inasmuch as the Receiver could only collect the debts due the bank under the direction of the Comptroller, a matured note held by the bank at the time of its failure does not become due until the Comptroller has directed it to be sued, as that the liability of stockholders does not mature until instructions are received from the Comptroller to institute proceedings for its enforcement. Receivers generally institute suits under the direction of the courts by which they are appointed; and, though the order of the court authorizing the suit may be essential to its maintenance, it does not follow that the claim sued on matured only upon the order being made. The Receiver of an insolvent National bank obtains his appointment from the Comptroller of the Currency, and acts under his directions and orders, which are analogous to an order of court to a Receiver appointed by it. It is well settled that the statutory liability of stockholders of Ohio corporations is complete, so as to set the statute of limitations running in their favor, when the corporate property has been placed in the hands

of an assignee in bankruptcy or insolvency, or of a Receiver to wind up its affairs. The exact amount of the liability of each stockholder may not then be known, and can only be ascertained in the progress of the action; yet the court may retain control of the cause and parties until the amount is definitely fixed, and the ultimate rights of the parties are adjusted. (*Younglove* vs. *Lime Co.*, 49 Ohio St. 663.) The liability of Charles A. Brownell, as a stockholder of the Fidelity Bank, was due, we think, in every sense essential to the set-off, when the bank failed; and the assignment of his claim against it to the plaintiffs therefore presented no obstacle to the allowance of the set-off. Nor did the certificate which the plaintiffs obtained from the Receiver. That gave them no new right, and amounted to nothing more than an acknowledgment of the correctness of the claim, and its assignment to them. Their position was in no way changed on account of it. We are of opinion the court committed no error in retaining the cause until the amount of Brownell's liability was determined, and then setting it off against the dividend due on his claim against the bank. The judgment is affirmed.

POWER OF BANKS TO PURCHASE NOTES.

Supreme Court of Missouri, Division No. 2, May 16, 1893.

SALMON FALLS BANK *vs.* LEYSER AND OTHERS.

A banking corporation engaged in the general banking business has, in the absence of any restriction in its charter, the power to buy notes outright.

This was an action upon a bond given to secure the payment of certain promissory notes. BURGESS, *J.*, (omitting part of the opinion):

A further contention is that the Court should have sustained a demurrer to the evidence, because plaintiff failed to prove that it had the authority, under its charter, to purchase the notes sued on. The petition alleges that the plaintiff is a corporation duly organized under the laws of the State of New Hampshire, and is engaged in doing a general banking business. This is admitted in the answer. The question raised by defendants is not as to its corporate existence, but, although it be a banking corporation, yet, in the absence of any proof conferring upon it the authority to buy outright, promissory notes, that it has no such power, none being implied, and that the purchase of the notes in suit was *ultra vires*, and that it cannot maintain this suit. The Supreme Court of Minnesota, in the case *Bank* vs. *Baldwin* (23 Minn. 198), held that the bank had no authority to purchase promissory notes, and the attempted act of purchase was *ultra vires*, and conferred no rights whatever. The Court says: "The power to carry on the business of banking by discounting notes, bills, and other evidences of debt, is only an authority to loan money thereon, with the right to deduct the legal rate of interest in advance. This right can be fully enjoyed without the possession of the unrestricted power of buying and dealing in such securities as choses in action and personal property. Though, as urged by plaintiff, the bank acquires a title to discount paper, and hence may, in a certain sense, be said to have purchased it, yet it is a purchase by discount, which is permitted, and does not involve the exercise of a power of purchase in any other way than by discount." (*Bank* vs. *Pierson*, 24 Minn. 140.) And in the case of *Bank* vs. *Baker* (15 Ohio St. 68) it was held that a power given to a corporation by a statute of the State of New York "to carry on the business of banking, by discounting bills, notes, and other evidences of debt," is not a power to buy promissory notes, but to loan money upon the paper described, and that a transaction of that character is within the usury laws of that State.

In *Fleckner* vs. *Bank* (8 Wheat. 338) it appeared that the plaintiff purchased from another bank a note which had been passed to it through several parties, from the original holder. The bank was forbidden to deal in anything except bills of exchange, gold or silver, or take more than 6 per cent. upon its loans or discount. It was claimed by defendant that the purchase of the note was *ultra vires*, but the Court held that it was not, and that such purchase was but a discount. In the opinion, Story, *J.*, speaking for the court, says: "But in what manner is the bank to loan? What is it to discount? Has it not a right to take an evidence of debt which arises from the loan? If it is to discount, must there not be some chose in action or written evidence of a debt, payable at a future time, which is to be the subject of the discount? Nothing can be clearer than that by the language of the commercial world, and the settled practice of banks, a 'discount by a bank' means, *ex vi termini*, a deduction or drawback made upon its advances or loans of money upon negotiable paper, or other evidences of debt, payable at a future day, which are transferred to the bank." In the case of *Smith* vs. *Bank* (26 Ohio St. 141), the defence was that the bank (a National bank) purchased the papers of the payees, and that it had no authority to make such purchase. Upon this question the Court says: "It does not state that the purchase was made at a usurious rate of discount, but it avers that under the Act of Congress to provide a national currency, under which the bank was incorporated, it had no authority to purchase the bill. It seems to be the idea of counsel making the objection that negotiable paper, perfect and available in the hands of the holder, is not the subject of purchase by a National bank, at any rate of discount. This view we think entirely erroneous. We see nothing in the Act of Congress, nor in reason, why a borrower may not obtain the discount by a bank of one of the existing notes and bills of others, of which he is the holder, as well as of his own paper, made directly to the bank. It is true that, as between natural persons, the purchase of such paper, when made in good faith, and not as a disguise for a loan, is not subject to the usury laws; but it is otherwise as to a bank. In the business of banking, the purchasing and discounting of paper is only 'a mode of loaning money.'" In the case of *Pape* vs. *Bank* (20 Kan. 440), bottomed on notes secured by mortgage, which defendant had bought outright, and did not acquire them by reason of having made a loan of money, Brewer, *J.*, in speaking for the court, says: "Again, the power granted is the naked power of discounting, and the term 'discounting' includes purchase as well as loan. 'To discount' signifies the act of buying a bill of exchange or promissory note for a less sum than that which, upon its face, is payable. (1 Bouv. Law Dict. tit. 'Discount.') It is also undeniably clear that the term 'discount' when used in a general sense, is equally applicable to either business or accommodation paper, and is appropriately applied, either to loans or sales by way of discount, when a sum is counted off or taken from the face or amount of the paper at the time the money is advanced upon it, whether that sum is taken for interest upon a loan or as the price agreed upon a sale." (*Bank* vs. *Baker*, 15 Ohio St. 68, and *Fleckner* vs. *Bank*, *supra*. See, also, Morse, Banks § 72; *Tracy* vs. *Talmage*, 18 Barb. 462; *Bank* vs. *Sherburne*, 14 Ill. App. 566.)

It is true that it is held by this court in the case of *Bank* vs. *Simpson*, (1 Mo. 184), that the plaintiff, a corporation created under the laws of the State of

Illinois, could not, under its charter, so deal in promissory notes as to become the purchaser thereof. But its charter, the Court says, "restrains the bank generally from dealing or trading except in bills of exchange, gold, or silver, or in the sale of goods pledged for money lent, or which shall be the proceeds of lands." It will be observed that the decision in this case is based altogether upon the restrictions in plaintiff's charter, which was before the court, and incorporated in the bill of exceptions. No such restrictions are shown to have been placed upon plaintiff's power as a banking institution. It seems, then, from the authorities herein cited, that plaintiff, under its charter, had the power—nothing appearing to the contrary therefrom—to buy outright the notes sued on, but it had no right to purchase them at a greater rate of discount than the rate of interest it might lawfully charge for the loan of that money, if it had discounted the notes, instead of buying them, and if it did so the amount of discount in excess of the lawful rate of interest is usurious. We conclude, therefore, that the purchase of the notes in question was within the powers granted to the plaintiff, and that in so doing the transaction was not *ultra vires.*

CHECKS—PROTEST—WHEN BANK LIABLE FOR FAILURE OF NOTARY.

Supreme Court of Nebraska, April 26, 1893.

WOOD RIVER BANK *vs.* FIRST NATIONAL BANK OF OMAHA.

The term "protest," as applied to inland bills of exchange, includes only the steps essential to charge the drawer and indorser.

Bank checks, in this country, are regarded as inland bills of exchange, for the purpose of presentment and demand and notice of dishonor, and do not require a formal protest in order to charge the indorsers.

They are also due upon presentation, and not entitled to days of grace.

A bank receiving for collection, from a correspondent, checks drawn upon it by a customer, with instructions to protest in case of non-payment, is required, in case payment is refused for want of funds, to give notice to the bank from which they were received not later than the next day after dishonor; and when they are held for two days in order to enable the drawer to provide funds for payment thereof a jury will be warranted in finding that the bank intended to accept them, and become liable thereon.

The general rule is that where a bank delivers a note or bill to a notary public for demand, protest, and notice, it will not be liable for the default of the latter.

But where such bill remains in the bank to be protested for non-payment by the President and manager thereof, a notary public, and who, although aware of the instructions to the contrary, delays noting for protest or giving notice, in consequence of which the indorsers are discharged, such notary will be held to be the agent of the bank, and the latter will be liable for his negligence.

HALL, *J.:* This was an action in the District Court of Hall county to recover for the failure of the defendant below, plaintiff in error, to give notice of the dishonor of certain checks received by it for collection from the plaintiff below, by reason of which certain indorsers thereon were discharged, to the damage of the latter. The facts were substantially as follows: About the 11th day of January, 1887, at Ravenna, in Buffalo county, one Hildebrandt drew 11 checks, to the order of as many different payees, upon the defendant, the Wood River Bank, doing business at Wood River, Hall county, amounting, in the aggregate, to $737.28. The checks were all cashed by the Farmers' Bank of Ravenna upon the indorsement of the several payees, and upon the day above named were transmitted by it, with proper indorsements, for collection, to the First National Bank of Omaha. On the evening of the next day, January 12, the last-named bank forwarded them by mail, properly indorsed, for collection, to the defendant bank, at Wood River, with instructions to protest unless promptly paid. The evidence is conflicting with respect to the time of the receipt of the checks by the defendant. If we regarded that question as decisive of the case, we would feel constrained to resolve it in favor of the defendant, notwithstanding the finding of the jury that they were received by it on the evening of the 13th. Both Hockenberger, the Cashier, and Hallister, the President, testify positively that the checks were received by the bank on the afternoon of the 14th. But the judgment is right, nevertheless. It is evident from their testimony that the checks were received at the bank before the close of its business on the 14th; that they were opened and examined by the witnesses, who were both aware that there were no funds to the credit of the drawer, and who delayed giving notice or taking any steps for the protection of the plaintiff below, in order to enable Hildebrandt to provide funds to balance his account the next day. It is admitted, also, that the defendant bank continued to pay Hildebrandt's checks in favor of home customers, although no entries appear to his credit on its book subsequent to the 13th. The jury were warranted, upon the admitted facts, in finding that the bank intended to accept the bills, and that by its delay it became liable thereon. (*Bank* vs. *McMichael*, 106 Pa. St. 460.)

Checks like those in question are to be regarded as inland bills of exchange. Therefore, protest is not essential in order to preserve the rights of antecedent parties (*Hughes* vs. *Kellogg*, 3 Neb. 194; Daniel, Neg. Inst. 926; Chit. Bills, [8th Ed.] 500, 501), although the holder is required to exercise the same degree of dilligence in giving notice of dishonor as in cases where a formal protest is necessary. The term "protest," as applied to inland bills, is used in its popular sense, and means the steps essential in order to charge the drawer and indorsers. (Daniel, Neg. Inst. 929; *Aryault* vs. *Bank*, 47 N. Y. 570.) It was the duty of the defendant bank to promptly give notice of the non-payment of the checks, either directly to the bank from which they were received, or to place them in the hands of a notary public for protest and notice. Bank checks, unlike bills of exchange, are due on the day they are presented for payment, and not entitled to days of grace. (Boone, Banking, 165, 250; *Morrison* vs. *Bailey*, 5 Ohio St. 13; *Champion* vs. *Gordon*, 70 Pa. St. 474; *Fletcher* vs. *Thompson*, 55 N. H. 308; 2 Amer. & Eng. Enc. Law, 398.) The checks in question were dishonored on the 14th, when received through the mail, and payment refused for want of funds. Both the President and Cashier, the only managing officers of the bank, knew that Hildebrandt's account was overdrawn. There was, therefore, no occasion for time to examine their books. It is said by Chancellor Kent (3 Kent, Comm. 105): "According to modern doctrine, the notice must be given by the first direct and regular conveyance. This means the first mail that goes after the day next to the third day of grace so that if the third day of grace be on Thursday, and the drawer and indorser reside out of town, the notice may be sent on Thursday, but must be put into the postoffice or mailed on Friday, so as to be forwarded as soon as possible thereafter."

The next inquiry is whether by delivering the checks to the notary public on the 15th for protest, the defendant discharged its duty to the plaintiff, for it is clear, upon authority, that that was the latest day on which notice could have been given in order to charge the indorsers. The rule sanctioned by the weight of authority is conceded to be that a bank which places paper in the hands of a notary public with directions to proceed in such manner as to protect the rights of the beneficial owner and indorsers, will not be held liable for the failure of the notary to discharge his duty. (See Boone, Banking, 205; 2 Amer. & Eng. Enc. Law, 113.) But this case cannot be held to be within the rule just stated. Here the notary was the President and managing officer of the bank, and who, being aware of the dishonor of the checks on the 14th, did not protest them for non-payment, or notify the plaintiff or other indorsers of that fact until the 17th. It is evident, too, that the Cashier was aware of the dereliction of the President, for the checks appear to have remained in the bank during all the time, and whatever was done by the latter by way of noting protest, giving notice, etc., was with the knowledge of the former. It is true the 16th was Sunday, but the default occurred on the 15th. It was the duty of the notary, on that day, to notify the plaintiff, by mail, of the dishonor of the paper. The failure to protect the plaintiff as an endorser is directly attributable to the fault of the managers of the bank, and it will not be permitted to take refuge behind the notary, and to interpose his negligence as a defense. Upon the facts of this case the notary will not be held to be the agent of the plaintiff, but rather of the defendant. (*Bank* vs. *Barksdale*, 36 Mo. 563.)

The plaintiff below assumed the burden of proving the solvency of the first indorsers, the payees of the several checks. For that purpose, Mr. Davis, the Cashier of the Farmers' Bank of Ravenna, was called as a witness, and testified that he was acquainted with the financial standing of the parties named, and that he considered them good for the amounts named in the checks bearing their respective indorsements. From his cross-examination it appeared that one or more of them were somewhat embarrassed financially. It is now urged that there is not sufficient evidence of the solvency of the indorsers, hence it cannot be said that the plaintiff has been damaged. This argument is fully answered by the opinion of Judge Lake in *Steele* vs. *Russell*, (5 Neb. 211). The fact that the indorsers may have been unable to meet all obligations at maturity does not conclusively establish their insolvency, such as to constitute a defense in this action. The judgment of the District Court is right, and is affirmed. The other judges concur.

PROMISSORY NOTE—AGREEMENT FOR ATTORNEY'S FEE.

Supreme Court of Nebraska, March 29, 1893.

SECURITY COMPANY OF HARTFORD *vs.* EYER.

Under the laws of Nebraska an agreement in a note stipulating for the payment of an attorney's fee is invalid.

This was an action to foreclose a mortgage given to secure a note for $700. One of the questions raised was, whether the plaintiff was entitled to an allowance of an attorney's fee, and to have the same taxed as costs in the case. On this question the Court said:

"The note and mortgage each contained a provision to the effect that, in case an action is commenced to foreclose the mortgage, the plaintiff should be allowed by the court, in the decree, an attorney's fee of $70. Counsel for plaintiff, in the brief, cite a long line of decisions from the courts of last resort of several of our sister States, which hold that a stipulation in a mortgage like the one before us, for the payment of an attorney's fee in the event of an action being instituted to foreclose the same, is valid and binding. This

Court, in repeated decisions, has held—and it is now the settled law of this State—that stipulations of this character found in contracts executed since June 1879, the date of the taking effect of the Act repealing the attorney's fee statutes, are invalid, and will not be enforced. (*Dow* vs. *Updike*, 11 Neb. 95; *Hardy* vs. *Miller*, 11 Neb. 395; *Otoe Co.* vs. *Brown*, 16 Neb. 393; *Winkler* vs. *Roeder*, 23 Neb. 706.) The question being no longer an open one, we shall not now attempt to examine this subject anew, or to review the authorities which hold a different view from the one enunciated by this Court in the cases cited above. If the rule is changed in this State it should be by statute, and not by judicial decision."

INJUNCTION TO NATIONAL BANK—JURISDICTION OF U. S. CIRCUIT COURT.

United States Circuit Court of Appeals, April 18, 1893.

HOWER *vs.* WEISS MALTING AND ELEVATOR COMPANY, *et al.*

An injunction to a National bank may issue from a Federal Court before final judgment.

This action was brought in the Supreme Court of the State of New York, and was removed from that court to the United States Circuit Court for the Eastern District of New York. Prior to the removal, the State court had granted an injunction restraining the defendants from transferring, disposing of, or in any wise interfering with, certain certificates of stock, representing 8,102 shares of the Fred Hower Brewing Company, during the pendency of the action. After the removal the defendants moved in the Circuit Court to dissolve the injunction. The Circuit Court, held by Judge Benedict, after hearing the parties, made an order denying the motion to dissolve, and continuing the injunction in force. The defendants appealed from this order.

LACOMBE, *Circuit Judge* (omitting part of the opinion):

On behalf of the defendant, the First National Bank of the City of New York, it is also insisted that under Section 5242, Rev. St. U. S., there was no power in the State court to issue this injunction, nor in the United States Circuit Court to continue it. The practical effect of Judge Benedict's order was to enjoin the defendants pending the litigation, and that court had the power to issue an injunction against a National bank, such order should be sustained, irrespective of the question whether the State court which originally enjoined the defendant bank had or had not power to make such an order. The prohibition upon which the defendant bank relies is found at the close of section 5242, Rev. St. U. S., in the following language: "No attachment, injunction, or execution shall be issued against such association [a National bank] or its property before final judgment in any suit, action, or proceeding in any State, county, or municipal court." This clause contains no direct restriction upon the power of circuit courts of the United States. It was held in *Bank* vs. *Mixter* (124 U. S. 721) that under this provision a Circuit Court was not authorized to issue attachments or mesne process against a National bank. That conclusion, however, was reached because the only grant of such power to the Circuit Court was found in section 915, Rev. St. U. S., which provides that "in common-law causes in the Circuit and District courts the plaintiff shall be entitled to similar remedies, by attachment or other process, against the property of the defendant, which are now provided by the laws of the State in which such court is held for the courts thereof."

Inasmuch as the prohibition of section 5242 left the State courts without power to grant attachments on mesne process against National banks, no such power was conferred on the Circuit Court by section 915. The power to issue an injunction, however, is inherent in the original jurisdiction in equity which is conferred upon the circuit courts by section 629 of Rev. St. U. S., and its various amendments, and is not curtailed by the provisions of the section upon which the appellant bank relies.

The order appealed from should be affirmed, with costs.

DEPOSIT FOR SPECIAL PURPOSE.

Supreme Court of Kansas, May 6, 1893.

BROWN *vs.* KINSLEY EXCHANGE BANK.

The owner of a tract of land, desiring to sell the same, placed it in the hands of an agent, who made a conditional sale, and received from the proposed purchaser a sum of money, which was to constitute a part of the purchase money if the proposition to purchase was accepted and the conditional sale approved, and if not, the money was to be returned to the proposed purchaser. The money so received was deposited in a bank, to be disposed of in accordance with these conditions, and the bank issued an ordinary deposit slip without any conditions written thereon, which was delivered to the owner of the land. He did not accept the proposition, nor ratify the sale, and the money was withdrawn by his agent, and returned to the proposed purchaser. Subsequently the owner brought an action against the bank on the deposit check, claiming that it was an unconditional agreement, and that the bank was absolutely liable for the amount deposited. *Held*, that the bank faithfully performed its trust, and that the landowner was not entitled to recover.

This was an action upon a deposit slip issued by the defendant. The facts were as stated above.

NATIONAL BANK LENDING CREDIT—AUTHORITY OF PRESIDENT.

United States Circuit Court, District of Kansas.

NATIONAL BANK OF COMMERCE OF KANSAS CITY *vs.* ATKINSON.

A National bank cannot lend its credit, or become an accommodation indorser.

The President of a bank has no power inherent in his office to bind the bank by the execution of a note in its name; but the power to do so may be conferred upon him by the board of directors, either expressly, by resolution to that effect, by subsequent resolution, or by acquiescence in transactions of a similar nature, and of which the directors have knowledge.

This was an action of law upon certain promissory notes and a certificate of deposit. Two of these notes were signed by the English and American Mortgage Company, Limited, by Eli H. Chandler and D. R. Emmons, Directors, and indorsed by Eli H. Chandler, D. R. Emmons, and the First National Bank of Kansas City, Kans., by D. R. Emmons, President.

The Court held that the transaction, so far as the First National Bank was concerned, was a lending of credit, and the indorsement an accommodation indorsement, and that in indorsing the name of the bank upon the notes Emmons, the President, was not acting within the general scope and sphere of his duties as President of the bank, and that he had no authority, either express or implied, to make the indorsement, and that the bank was not liable.

"There is no doubt," the Court said, "but what the law is that a National bank cannot loan its credit or become an accommodation indorser. On that question the decisions are uniform. It is also true that the President of a bank has no power inherent in his office to bind the bank by the execution of a note in its name, yet the power to do so may be conferred upon him by the board of directors, either expressly, by resolution to that effect, by subsequent ratification, or by acquiescence in transactions of a similar nature, and of which the directors have knowledge. In other words, I think it must be held that banks are liable for the acts of their officers, especially executive officers and general agents, within the general scope and apparent sphere of their duties; but that they are not liable for the acts of their officers done without special authority, in cases which are not within the general scope and sphere of their duties as such officers. The responsibility of a bank (in the absence of express authority to do a particular act) is limited to the acts of its officers and agents, performed in the discharge of their ordinary duties in the usual course of business and within the sphere and scope of such duties.

CHECKS—CUSTOM AND USAGE OF BANKS.

Supreme Court of Iowa, May 23, 1893.

SHAW *et al.* *vs.* JACOBS.

Where a check is payable to a named person as bearer, and the payee indorses it in blank, and delivers it to a bank, and receives credit for it, in an action by the indorsee against the maker, evidence that, by a custom among bankers, where a check is drawn on a bank and presented to another bank, it is passed to the credit of the customer, but that the credit so given is treated as a receipt for the check, and not as a payment, is inadmissible, as the indorsement and check evidence the agreement between the payee and indorsee, and the transfer of the check is governed by the law merchant.

This was an action upon a check in the following form :

"$362.68. Monticello, Iowa, Oct. 17, 1890. G. W. & G. L. Lovell, Bankers: Pay Osborn Bros., or bearer, three hundred sixty-two 68-100 dollars. John Jacobs." The petition alleged that the payees of the check, in the usual course of business, transferred it to plaintiffs by writing thereon "Osborn Bros.;" that it was forwarded through a bank in Dubuque to a bank in Monticello, which presented it to G. W. & G. L. Lovell for payment, but that payment was refused for the reason that defendant had ordered that payment be not made; and that the check was then duly protested.

The defendant alleged as a defence that the check was given in payment of certain hogs purchased by defendant of Osborn Bros.; that the hogs were warranted to be free from disease; that they were not as warranted, and that there was a failure of consideration for the check. The defendant also denied that plaintiffs were the owners of the check, and alleged that the action was brought for the benefit of Osborn Bros., who were the sole parties in interest for the purpose of avoiding the defence pleaded.

GRANGER, *J.* (omitting part of opinion): The defendant admits, in effect, that, if plaintiffs are innocent purchasers of the check for value, they are entitled to recover its amount, but he insists that in law they are presumed to have taken it for collection only, with the right to return it when payment was refused. For the purpose of showing that such a presumption is authorized, he offered to prove by two experienced bankers of Jones county that, by general custom of bankers in that county and elsewhere, a check drawn on one bank, when presented to another by one of its customers, was passed to his credit, but that the credit so given was treated as a receipt for the check, and not as a payment. The offered evidence was rejected. The appellant insists that it should have been received, and cites numerous authorities to show that in the absence of a special agreement, when a bank receives from a depositor a check upon another bank for collection, if, without fault on the part of the bank receiving it, the collection is not made, that bank has the right to return the check, and cancel the credit for it which was given to the depositor. The custom which defendant sought to prove would not have affected the right of plaintiffs to stand upon their agreement with Osborn Bros. That was shown by the check and the indorsement thereon set out in the petition. The check is in form a negotiable instrument. The transfer of such checks is governed in most respects by the rules applicable to negotiable promissory notes. (Tied. Com. Paper, § 440; 2 Pars. Notes & B. 57 *et seq.*)

Notwithstanding that the fact that the check in suit is payable to bearer, it was transferred by an indorsement in blank. By so indorsing it the payees assumed the same liability they would have been under by such an indorsement had the check been made payable to order. (Tied. Com. Paper, § 257a, 270; *Bigelow* vs. *Colton*, 13 Gray, 309; *Smith* vs. *Rawson*, 61 Ga. 208; *Johnson* vs. *Mitchell*, 50 Tex. 212; 1 Morse, Banks, § 391; Story, Prom. Notes, § 132.) The effect of the blank indorsement of a negotiable instrument, including delivery, is to transfer the title to such instrument to the indorsee, and the presumption, in the absence of a showing to the contrary, is that it was for a valuable consideration. Tied. Com. Paper, § 256. The effect of the indorsement in question was to transfer to the plaintiffs the title to the check, not merely to enable them to collect it, but for all purposes. That such was the intent of the parties is shown to some extent by the fact that credit was given to Osborn Bros. for the check. In the absence of evidence that the giving of credit was only for the purpose of keeping a record of the check—a matter of bookkeeping—we must presume that it was intended as a payment. The custom of banks upon which defendant relies could not have controlled the agreement of the parties as shown by the indorsement, and evidence to prove it was therefore properly rejected. The claim that plaintiffs are not the owners of the check is not supported by the evidence.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: HOT SPRINGS, Ark., June 19, 1893.

SIR:—We received on June 1, 1893, a telegram from a bank reading "Honor B's draft on us one hundred and twenty-seven dollars." Seventeen days have passed and B has not called to make such draft. For how long a time would we be protected in honoring such telegram. The same has not been confirmed by letter, which would cause us to refuse; but suppose it had been duly confirmed (?). We also received on March 24, 1893, a telegram stating "will honor B's draft on us for twenty dollars every week. See letter." The letter confirming the telegram does not limit the time to which the authority extends. B drew several of these drafts and then ceased to call. Should he now return for funds on such authority, would we be protected in continuing payments?

W. W. WRIGHT, *Cashier.*

Answer.—It is impossible to fix any precise limit to the time within which the bank could safely pay drafts on orders such as those mentioned above. In general, in order that the promise to pay a non-existing bill or draft shall amount to an acceptance, the instrument must be drawn within a *reasonable* time, for otherwise the drawer will be presumed to have declined to act on the authority granted him to draw, and the drawee will not be deemed to have intended an indefinite liability. (*Coolidge* vs. *Payson*, 2 Wheat. 66; *Greele* vs. *Parker*, 5 Wend. 414; *First National Bank* vs. *Hensley*, 2 Fed. Rep. 609.) But what is a reasonable time would depend upon the circumstances of the particular case. In the first instance stated by our correspondent, the fact of the sending of a telegram would indicate that the bank expected the authority to be acted upon at once; and, therefore, payment could not safely be made after any considerable time had elapsed. In the second case, if the drafts were made regularly every week, the authority could be deemed to be a continuing one until notice given of its revocation. But the failure of the party upon whom the authority to draw was conferred to continue to make the drafts, would probably be regarded as evidence of a revocation of the authority to draw, and, therefore, our correspondent should not pay any more of these drafts without some new evidence that the authority still continues.

Editor Rhodes' Journal of Banking: SOUTH OMAHA, Neb., June 21, 1893.

SIR:—I submit to you the following for your opinion in the JOURNAL. A draws a check on his bank, payable to the order of B. It falls into the hands of C, who forges B's name on the back of the check, and the same is paid by a country bank, by which bank it is indorsed to another country bank, and by the last-mentioned bank is indorsed to a city bank. The city bank puts its "paid" stamp on the back and presents to the bank upon which drawn, which pays it, cancels it, and charges it up to A's account. At the end of the month, his vouchers are returned and he knows nothing of the forgery until called upon for the money by B. I understand the bank that paid the money to C on the forged indorsement is liable, but are all the indorsers in turn liable for the amount? Is a bank indorsement necessarily a guarantee of all previous indorsements. J. L. CARSON, *Ass't Cashier.*

Answer.—If the first-named country bank indorsed the check "for collection" then the banks subsequently indorsing it, if they likewise indorsed it in such form, would not be liable for the amount, if, before they received notice of the forgery, they paid the money over to their respective principals. The second country bank and the city bank were merely agents for collections, of which fact the indorsement "for collection" was notice to the paying bank (*National City Bank* vs. *Westcott*, 118 N. Y. 468, 473), and as they acted merely as agents, they could not be required to repay, provided they had paid over the money before notice of the mistake (*National Park Bank* vs. *Seaboard Bank*, 114 N. Y. 28, 33). In the case first cited it was said: "If the Westcott Express Company had been or had assumed to be the apparent owner of the check when it was presented to and paid by the plaintiff, the defendant would have been liable to reimburse the plaintiff. But in the present case the check was in fact sent to the defendant company for collection, of which the plaintiff was advised by the indorsement upon it to that effect made by the N. Y. & B. D. Express Co. The defendant, therefore, apparently and in fact represented that company, and in the relation of such agency received the money from the plaintiff, and prior to the time of the discovery of the fraudulent character of the check, having handed the money over to the company from which it was so received for collection, the defendant was not liable to the plaintiff as for money paid by mistake." In the last edition of Daniel on Negotiable Instruments the rule is thus stated (Sec. 849a): "While it is a general principle of law that money paid on forged or altered instruments may be recovered back as having been paid under a mistake of fact, yet where such payment is made to an agent holding the paper under the restrictive indorsement '*for collection*,' acting in good faith and asserting no claim to the proceeds other than that of a mere agent for collection, its indorsement thereof is no warrant of the genuineness or validity of the paper, and it will not be liable thereon, it having, before discovery of the mistake or fraud, paid over the proceeds in good faith to its principal."

Editor Rhodes' Journal of Banking: BUFFALO, N. Y., June 30, 1893.

SIR:—Will you kindly answer the following question in your next issue?

I have a note for $1,000, due June 1, at the First National Bank of ——. I send note to said bank for collection and it returns with the following endorsement: "For collection and remittance to John Jones & Co., Buffalo, N. Y., John Jones, Cashier."

This note is paid on June 1, and on June 2 the bank fails and goes into the hands of a Receiver. To whom does the money belong that was paid to the bank for this note? Does it belong to us, on the ground that the bank is only an agent, and that the money is a special deposit for us? Or do we have to come in as an ordinary depositor? We having had *no* credit account with them of any nature.

JOHN JONES, *Cashier.*

Answer.—The money collected on the note undoubtedly belonged to our correspondent; but whether he can recover it specifically, or must prove his claim as an ordinary creditor, must depend on other facts than those stated in the inquiry. It is clear that the collecting bank was merely the agent to make the collection, and that there was no intention of establishing the relation of debtor and creditor; and if the money collected on the note can be traced, it will be impressed with a trust in favor of our correspondent. (*Atkinson* vs. *Rochester Printing Company*, 114 N. Y. 168; *Cutler* vs. *American Exchange National Bank*, 113 N. Y. 593; *Arnot* vs. *Bingham*, 55 Hun, 553.) But it will be necessary to identify the fund in some way. The rule is thus laid down by the Court of Appeals of this State: "It is the general rule, as well in a court of equity as in a court of law, that, in order to follow trust funds and subject them to the operation of the trust, they must be identified. A court of equity, in pursuing the inquiry and administering relief, is less hampered by technical difficulties than a court of law; and it may be sufficient to entitle a party to equitable preference in the distribution of a fund in insolvency, that it appears that the fund or property of the insolvent remaining for distribution includes the proceeds of the trust estate, although it may be impossible to point out the precise thing in which the trust fund has been invested, or the precise time when the conversion took place. The authorities require, at least, this degree of distinctness in the proof before preference can be awarded." (*Cavin* vs. *Gleason*, 105 N. Y. 256.)

It would, therefore, be incumbent upon our correspondent to show, at least, that the money went into the property sought to be charged. If this can be shown, then we think he could recover it as his own money, and would not come in merely as an ordinary depositor. (*Continental National Bank* vs. *Weems*, 69 Tex. 489; *Commercial National Bank* vs. *Armstrong*, 39 Fed. Rep. 684.)

NATIONAL BANK CIRCULATION.—The total amount of National bank notes ordered issued for the month of June was slightly in excess of $3,600,000, as against about $870,000 in May of this year, and $1,000,000 in June, 1892. The unusual issue of this form of currency is attributed chiefly to the pressing demands for money, and in part to the decreased premium on Government bonds deposited as a basis for circulation. There appears to be a concerted movement on the part of National banks to extend the limits of issues to 95 per cent. of the par value of the bonds deposited.

TENNESSEE BANKERS' ASSOCIATION.

PROCEEDINGS OF THE FOURTH ANNUAL MEETING, AT KNOXVILLE, MAY 17 AND 18, 1893.

The Fourth Annual Convention of the Tennessee Bankers' Association met at Knoxville, May 17 and 18, with an attendance of about 100.

The address of welcome was made by Col. William A. Henderson, of Knoxville, and was responded to by David N. Kennedy, President of the Northern Bank of Tennessee at Clarksville.

Col. John R. Godwin, President of the Mercantile Bank, of Memphis, delivered an address in favor of the repeal of the tax on State bank circulation. The concluding portion of his address was as follows:

"The subject before us is in no sense a question of good or bad money, but is essentially a question of abundance or scarcity. Money in Massachusetts at 3 to 3½ per cent. interest is as good as the money in Texas at 10 to 12 per cent.

"Objectors to State bank issues claim it will not pass current in New York, Boston, Chicago and other financial centers. I hope this will prove true for some time at any rate, because it will be needed at home. If we should visit those cities for pleasure or business we are not expected to carry a bank in our pocket, or bank bills, except in small amounts, for fear of being robbed or otherwise losing them. When people travel they use exchange, because it is safer and better.

"But one says: 'We want an international currency that will pass the world over.' This could only be true in theory. The bills of the banks of England and France are at par in every civilized country, but how many of them were ever seen in Tennessee? Probably not more than one person in 1,000 ever saw one in this or any other State, and so it is with the greenbacks in foreign countries; outside of entry ports they are not known. One had just about as well think of taking his horse and carriage abroad as to take his money. Exchange is what people use for this purpose, and will continue to do so, no matter what kind of currency we have."

The following resolution in relation to the Sherman Silver Purchase Act was passed unanimously:

"That this Association recommend to our Senators and Congressmen the repeal of the Sherman law providing for the purchase of silver. We are thoroughly convinced that the continuance of such purchase will at an early date bring the Government down to a depreciated and debased currency."

By a narrow majority the Convention passed a resolution against the repeal of the State tax on circulation, as follows:

"*Whereas*, The question of the repeal of the 10 per cent. tax law on the circulation of State banks is now made a State and National issue.

Resolved, By the Tennessee Bankers' Association in convention assembled, that the repeal of the prohibitory tax is inimical to the best interests of the entire community, and that our Senators and Congressmen be asked to use their influence to prevent its repeal."

Officers were elected for the ensuing year, viz.:

A. B. Branner, of Knoxville, President; G. N. Henson, First Vice-President; Herman Justi, Nashville, Second Vice-President; F. O. Watts, Union City, Third Vice-President; J. H. Smith, Memphis, Treasurer; J. W. Faron, Chattanooga, Secretary. The new Executive Committee consists of W. H. Meadow, Waverly; A. J. Rooks, Somerville; Geo. S. Crouch, Morristown.

The Oldest Savings Bank.—The first Savings banks of this country started in 1816. The question as to which was really the first bank is still undecided. There are really two claimants for the honor of being first. The Boston Provident Institution for Savings was incorporated in December, 1816, and opened for business the latter part of January the following year. It is now the leading Savings bank in New England. The Philadelphia Savings Fund Society was organized November 27, 1816, and began business December 2, 1816, but it was not incorporated until February 25, 1819. It is quite probable that this later institution received the first savings deposit ever made in the United Stated. The third Savings bank was started in 1818 at Salem, Mass., and is, with the other two institutions, still flourishing. The Bank for Savings in New York comes fourth and was chartered March 26, 1819—74 years ago.—*American Investments.*

IOWA BANKERS' ASSOCIATION.

SEVENTH ANNUAL CONVENTION, HELD AT COUNCIL BLUFFS MAY 23 AND 24.

The Iowa State Bankers' Association met in seventh annual convention May 23. A large number of bankers were present from all parts of the State. Mayor Lawrence delivered an address of welcome on behalf of the city, which was responded to by V. F. Newell, Vice-President of the Association and Cashier of the Bankers' Iowa State Bank of Des Moines. President S. F. Smith of Davenport delivered the annual address. He declared there must be but one standard and that gold and silver must be brought into parity. The silver dollar should intrinsically be worth a gold dollar. Then only would the silver question be solved. State bank notes must be as amply protected as the national currency.

One of the most notable addresses was that of Hon. E. S. Lacey, ex-Comptroller of the Currency, and President of the Bankers' National Bank, Chicago, on "Our Circulating Medium; Its Volume and Character." He said, in part:

"The circulating medium of the United States is composed of gold and silver coin, Government notes and certificates and circulating notes issued by the National banks. The total of these issues outstanding April 1, 1893, was $2,163,121,710. Of this total the sum of $560,600,904 was held by the United States Treasury and the remainder, aggregating $1,602,520,306, was actively employed and constituted our circulating medium.

The complex character of our circulation will be more fully understood by considering the qualities imparted by law to each of its constituent parts.

1. The gold coins of the United States are a full legal-tender to any amount when of standard weight; if below the standard weight they are legal-tender at valuation in proportion to their actual weight.

2. Standard silver dollars are legal-tender to any amount except where otherwise expressly stipulated in the contract.

3. The subsidiary silver coins are legal tender to the amount of ten dollars; they are redeemable in lawful money by the Treasurer or any Assistant Treasurer of the United States, when presented in the sum of twenty dollars or multiples thereof.

4. Minor coins are legal tender to the amount of twenty-five cents; they also are redeemable in lawful money if presented in sums of not less than twenty dollars.

5. United States notes were made a legal tender by the Acts authorizing their issue, except for duties on imports and for payment of the interest on the public debt. Since the resumption of specie payments on January 1, 1879, they have been received for duties on imports. They are redeemable in gold or silver coin at the office of the Assistant Treasurer of the United States at New York, if presented in sums of not less than fifty dollars.

6. The Treasury notes issued in payment for silver bullion purchased under the Act of July 14, 1890, are a full legal tender except where otherwise expressly stipulated in the contract; they are redeemable in gold or silver coin at the discretion of the Secretary of the Treasury. It has been the policy of the department to redeem them in gold coin if so demanded by the holder.

7. Gold and silver certificates are receivable for customs duties, taxes and all public dues; they represent the kind of coin deposited and reserved in the Treasury for their redemption; they are not made a legal tender by the Acts of Congress authorizing their issue.

8. Currency certificates are issued upon the deposit of United States notes in sums of ten thousand dollars and are made payable to order of the depositors; they are redeemed in the kind of money deposited and are not a legal tender.

9. National bank notes are secured by the deposit of United States interest-bearing bonds with the Treasurer of the United States; they are redeemable in lawful money, but are not a legal tender, though receivable for all public dues, except duties on imports; and also for all salaries and other debts and demands owing by the United States to individuals, corporations and associations within the United States, except

interest on the public debt and in redemption of national currency. They are also receivable at par for any debt or liability due to any national banking association.

All of the various forms of money above described excepting national bank notes are available as part of the lawful money reserve held by national banking associations.

It is thus apparent that we have ten varieties of coin and paper circulating as money, no two of which are subject to the same requirements as to redemption, nor clothed with the same legal-tender and debt-paying qualities. It is a matter of sincere congratulation that the discretion conferred upon the Secretary of the Treasury has heretofore been wisely exercised, because to this fact are we mainly indebted for the maintenance of the parity of these widely dissimilar and unscientific issues.

The circulating notes of National banks more fully meet the proper requirements of representative currency or secondary money than any other of the issues mentioned, as they alone possess the quality of elasticity which is so essential and yet they are the object of malignant attack upon the part of well-meaning but misguided people, whose interests would be in largest degree promoted by the maintenance of an ample, sound and flexible currency. It is a matter of regret that the increasing premium on Government bonds and the continued imposition of the war tax upon these notes, has rendered their issue unremunerative to the banks and thus caused a very great reduction in the volume outstanding.

Our entire circulating medium will be maintained at a parity with gold only so long as the Government continues to redeem, directly or indirectly, all forms of secondary money in the yellow metal. This redemption in gold is not made obligatory upon the Government by law, but has been maintained thus far through the exercise of discretionary power conferred upon the Secretary of the Treasury. It is apparent, therefore, that the maintenance of the present standard of value depends upon the will of whomsoever may occupy the position of Secretary of the Treasury, and his having the ability as well as the disposition to maintain redemption in gold.

So we present the remarkable spectacle of a Nation of the first rank in the point of manufactures, commerce and agriculture, possessing more wealth, greater average intelligence and freer institutions than any other, making itself dependent upon the integrity and sound judgment of the one man who may, for political reasons, be charged with the administration of the department of the Treasury, in fixing the value of the circulating medium of the country, by which is determined the price of every commodity, the wage of every laborer and the value of every contract. How can we defend a policy which places in the hands of a single individual powers the unwise or corrupt use of which might result in such a change in prices as would be tantamount to confiscation?

By a change to the silver standard employers of labor would primarily profit at the expense of wage earners and the investments of the latter class in Savings banks, Trust companies, life insurance companies, building and loan associations, etc., would greatly depreciate in value, the cost of living would be enhanced, while municipalities, corporations, trusts and persons of great wealth, who constitute the chief borrowing class, would be enabled to pay their debts in a depreciated medium.

Wage workers constitute the largest and most important class, and are entitled to the preference whenever their interests come in conflict with those of the debtor class, subject to such limitations as justice and equity may impose.

The maintenance of the gold standard will cause no contraction, while a change to the silver standard would tend to retire from circulation more than $500,000,000 of gold.

Some relief should be demanded from the present Congress, and I may be permitted to suggest that:

1. The Act of July 14, 1890, should be repealed.

2. All gold coin, United States Treasury and National bank notes of the denomination of $5 and under should be retired and reissued in larger denominations, utilizing in place thereof silver coin and silver certificates, the denominations of the latter being restricted to one, two and five dollars.

3. The legal-tender quality of silver coin should be limited to one hundred dollars.

4. The tax should be removed from National bank notes and the issue thereof be increased to the par of bonds pledged for their redemption.

The larger part of our legislation upon questions affecting the currency has been the result of enforced concession to the enemies of sound finance in order that some supposed peril might be averted or some governmental exigency met. The calm and intelligent application of well established principles to the formation of a complete and symmetrical monetary system adapted to the necessities of a commercial people has found scant exemplification in the enactments which now afflict us. One of the most potent forces employed in the adoption of unwise measures is based upon the assumption that the country is suffering from an inadequate supply of the circulating medium. This theory is widely entertained and strenuously asserted, but it is not capable of demonstration, and in fact the weight of evidence seems to establish its fallacy.

If we would successfully issue from the struggle we must make unceasing appeals to the conscience and intelligence of the American people, and thus incite to vigilance and activity a constituency which is occasionally misled, but always wise and just in its ultimate conclusions."

Mr. Lacey was followed by Henry W. Yates, of Omaha, President of the Nebraska National Bank, on "The Silver Question; Its Relation to Our National Finances." Other papers read before the Association were those of M. B. Hutchinson, of Ottumwa, on "Iowa Bankers and Their Duty to Business Interests of the State and Each Other;" F. E. Wettstein, of La Porte City, on "Young Men in Banking;" Auditor of State McCarthy on "The State Savings Banks of Iowa and Laws Relating to Their Organization." Ex-Congressman Pusey delivered an interesting reminiscent address.

The report of Secretary J. M. Dinwiddie showed 302 names on the books, three dropped by request, and 22 for failure to pay dues of 1892; active membership 277, which was increased by the addition of a number of new members at this meeting.

The following officers were elected for the ensuing year: President, W. A. McHenry of Denison; First Vice-President, Simon Cassidy, Des Moines; Vice-Presidents, J. W. Garner, Columbus Junction; F. Heinz, Davenport; W. W. Donnan, Independence; S. B. Ziegler, West Union; G. W. Glick, Marshalltown; M. B. Hutchinson, Ottumwa; O. P. Wright, Knoxville; C. T. Cole, Corning; A. S. Riley, Defiance; A. C. Brown, West Bend; H. N. Smith, Spencer; Treasurer, J. F. Latimer, Hampton; Secretary, J. M. Dinwiddie, Cedar Rapids.

Des Moines was chosen as the next place of meeting.

Chicago State Banks.—Following is a summary of the condition of the twenty-four Illinois State banks located in Chicago, as shown by their reports to the Auditor of Public Accounts, Hon. David Gore, June 5, 1893:

RESOURCES.		LIABILITIES.		
Loans and discounts	$59.702,804	Capital stock		$12,827,000
Overdrafts	99,221	Surplus fund		4,416,500
United States bonds	45,186	Undivided profits		2,914,487
Other bonds and stocks	8.099,449	Bills payable		65,910
Cash on hand	7,875,646	Total Deposits—		
Due from other banks	9,299,623	Savings deposits subject to notice	$21,275,599	
Real estate	117,985	Individual dep. subject to check	33,527.893	
Furniture and fixtures	109,562	Demand certificates	2,047.458	
Current expenses	121,988	Time certificates	3,686.202	
Checks and other cash items	1,716,144	Certified checks	852,047	
Collections	36,135	Cashiers checks unpaid	498.364	
		Due to other banks	5,132,847	67,000,124
Total	$87,223,693	Total		$87,223,696

The last statement, made April 10, 1893, showed loans and discounts of $63,691,821; due from other banks, $10,985,211; cash on hand, $7,317,576; furniture and fixtures, $63,240: checks and other cash items, $1,671,830; total resources, $92,857,560; surplus, $4,416,560; dividends unpaid, $8,491; savings deposits, $22,120,195; total deposits, $72,892,950.

New National Banks.—A statement prepared by the Comptroller of the Currency shows that since the first day ofthe year 150 new National banks have been organized, with an aggregate capital of $14,325,000. Comptroller Eckels has decided that hereafter every National bank shall be examined twice a year, instead of once.

Indispensible.—M. W. Gorman, Cashier of the Hibernia Savings Bank, Portland, Oregon, writes regarding "Patten's Methods and Machinery of Practical Banking," "I would say that I consider it the most indispensible book in a bank library, and so enclose New York draft for $5.00 in payment of the copy recently received."

TEXAS BANKERS' ASSOCIATION.

NINTH ANNUAL CONVENTION, HELD AT SAN ANTONIO, MAY 16, 17 AND 18.

FIRST DAY'S PROCEEDINGS.

The ninth annual Convention of the Texas Bankers' Association convened at San Antonio, May 17. There was a large attendance. The Convention was presided over by President A. P. Wooldridge, of Austin. George Paschal, Mayor of San Antonio, delivered the address of welcome in behalf of the city, and response was made by T. J. Groce, of Galveston. President Wooldridge in his annual address discussed briefly various financial and banking questions. He believed that the tax on State bank issues should not be repealed. The reports of the Secretary and Treasurer show that the Association is in a flourishing condition. President J. G. Lowdon, of the Abilene National Bank, read a paper on "Three Days Grace; Should the Practice Be Abolished?" He favored abolishment on sight drafts. A resolution was adopted by the Convention supporting his position. W. Goodrich Jones, of Temple, read a humorous paper on "Country Bankers."

THE SECOND DAY.

There was an increased attendance at the second day's session of the Convention. The regular programme was taken up and the address prepared by M. Lasker of Galveston called for. The subject was "The Hoarding of the Public Money of Texas in the State Treasury; How to Restore It to Circulation Among the Masses." Mr. Lasker was not able to attend and his paper was read by the Secretary. Its chief feature was an argument for the creation of depositories for State funds. G. A. Levi, President of the banking house of A. Levi & Co., of Victoria, delivered an address on "The Tax on State Bank Issues: Should It Be Repealed?"

Mr. Levi's paper favored the repeal of the 10 per cent. tax on State bank circulation, on the ground that such a tax was not consistent with the spirit of our laws. He does not, however, favor a return to the antiquated system of State bank currency, and says that the past history of that system offers no hope for its future safety as a means of supplying a stable and sound circulating medium, but that the safety and elasticity of the currency will be best promoted by uniform regulations under the direction of the National Government. This may be accomplished by relegating the currency issues to the National banks, the notes to be secured by a first lien on the assets of the bank and a safety fund created by the imposition of an annual tax of one per cent. on circulation, one-half of this fund to be applied to the redemption of notes of insolvent banks, if the assets of the bank are insufficient for that purpose, the other half to go to the Government's general revenues. The public have more confidence in the machinery of governmental oversight and in a currency guaranteed by the Nation than in the variety of laws and requirements as to security prevailing in different States.

A. S. Reed, Cashier of the Ballinger National Bank, read a paper upon the subject of "Defense of the National Bank System."

THE THIRD DAY.

The concluding day of the session was opened with an address by Colonel J. F. Miller, of Gonzalez, on the subject of "Panics; Their Causes and How to Prevent Them."

Resolutions were introduced and acted on as follows: (1) Favoring repeal of the Sherman Act. Adopted. (2) Opposing the unlimited coinage of silver. Adopted. (3) Favoring adherence to the single or gold standard. Action indefinitely postponed, both sides apparently timid in submitting to a test vote, though the affirmatives claiming a good majority.

The following officers were elected: T. J. Groce, President, Galveston; A. S. Reed, First Vice-President, Ballinger; J. N. Brown, Second Vice-President, San Antonio; J. E. McAshan, Third Vice-President, Houston; J. E. Longmoor, Secretary, Rockdale; C. F. Smith, First Assistant Secretary, McGregor; W. Nolte, Second Assistant Secretary, Seguin; W. Goodrich Jones, Treasurer, Temple. Executive Committee: L. L. McInnis, Bryan; J. G. Lowdon, Abilene; J. C. Harrison, Fort Worth; Wm. Worsham, Gainesville; T. T. Emerson, McKinney.

After adjournment an excursion was made to various points in Mexico.

WORLD'S CONGRESS OF BANKERS AND FINANCIERS.

HELD AT CHICAGO, ILLINOIS, JUNE 19-25.

The Congress of Bankers and Financiers met in the Memorial Art Institute, Chicago, at ten o'clock, June 20. The attendance was large, considering the uneasy feeling existing in banking circles at the time, and embraced representatives from nearly all the States, as well as leading bankers from the various sections of the country. A number of foreign bankers, visiting the World's Fair, attended the sessions, and were interested in the proceedings.

Lyman J. Gage, President of the First National Bank of Chicago, Chairman of this Department of the World's Congress, called the meeting to order. Following is the principal part of Mr. Gage's opening address:

"We have met at a time when a peculiar interest attaches to our deliberations. There has lately swept over the land—nay over the whole world -one of those reactionary waves which bring painful anxiety to all, loss and ruin to many. This phenomenon may be regarded as nature's all-powerful protest against methods based not on her imperial wisdom, but on fallacious and vain imaginings. Under the rod of discipline we do well to inquire as to the manner and extent of our trangressions, and to seek for the future ways of safety and peace.

As an intermediary in the system of credits and industrial exchange, the banker finds himself in a position where he cannot suddenly and totally cease his vocation without violent shock to that system which his function is designed to serve. In times of fear and panic the temptation is strong for him to do this, however, even to the prejudice of his own interests, as well as to those of others.

ACTION AND REACTION.

Some years since a banker in a prosperous community in Western New York told me this story: 'In the country where I live,' he said, 'there came, at the most critical time of the year, a killing frost, which swept the values from every farm. The community was a prosperous one generally, owning their lands and many of them having having money in bank and quite free from debt. Discovering the loss which had fallen upon the community generally, it occurred to me that it was my duty to immediately proceed to collect all the claims I had and refuse to lend to my clients, no matter how pressing their necessities nor how great their ultimate responsibility. Inaugurating this course with a good deal of vigor, I soon discovered that my deposits were rapidly falling. Being the only bank in the community, I soon found that all the claims that I held which were paid were paid by checks on myself, and gathered up by my debtors from members of the community who had funds in trust with me. In short, I discovered that I was putting my affairs into a course of rapid liquidation. I immediately reversed my line of action; things came to a rest, I won back the confidence of the community and suffered no ultimate loss, and was able to make my usual semi-annual dividend.'

I recently heard of a banker in Wisconsin, a banker of iron firmness, who, moved by similar considerations, and bearing of the bank troubles in many localities, determined that he would not lend a dollar, but would collect every claim due him. He enjoyed the entire confidence and respect of the community, being a man of undoubted responsibility; but soon after reaching this determination, a man of substance applied to him for a small loan of $100. He roughly refused on the ground that he could not spare the money. The would-be borrower, from whose mind the illusion had not yet been dissipated that a bank was a fountain from which wealth flowed, was shocked, surprised and pained. He went about among other members of the community, expressing his grief that his banker was in such a distressed situation. Certain depositors put their own construction upon the meaning of all this, and within a week the banker himself was a humble borrower in Chicago, having paid in hard cash 25 per cent. of his liabilities to the community who had lost faith in him.

An incident to the contrary, showing the power of a little money in the work of liquidation, is in pleasant contrast. After the panic of 1873 I visited a not distant town of moderate size, and from the most important merchant in the place I heard this story:

WHAT ONE HUNDRED DOLLARS DID.

'For a week or ten days during the panic,' he said, 'business here came to a standstill. We did absolutely nothing; but one day we received a one-hundred dollar bill by express from a distant town, with a direction to credit it upon the open account of the sender. We looked at the one-hundred dollar bill with interest and curiosity, and, after conferring together, concluded to send it to Mr. A., to whom we owed a small account, knowing that he was in need. About 3 o'clock in the afternoon, a wagon-maker in the village came to our office with a broad smile upon his face, and said: 'I am glad to pay you $100 on account. It is the first money I have seen in a good while.' We took the money from his hand, and discovered it to be the same note we had received by express in the morning. We asked him where he got it, thinking he would reply that he received it from Mr. A., to whom we had paid it. He informed us that he had received it from Mr. E. We then followed the history of the note back, and found the facts to be that it had paid us $100 of debt in the morning and had liquidated six other debts of $100 each during the day, and in the afternoon it had come back to us, liquidating another debt of $100, and we still had the note for fresh operations on the morrow.'

These incidents carry their own suggestions and need no enlargement.

On behalf of the committee which I have the honor to represent, I have to express our sincere thanks for the many who have favored us with their acceptance to this gathering. Oppressed with multiplied duties in other directions, the committee have not been able fully to realize in the arrangement of the programme what we had hoped. We feel assured, however, that with so good a basis to start from as the programme now provides, there will be no difficulty in developing both subjects and speakers to fully occupy the time that can be devoted to your sections here.

It is not the intention to fill the hours of the day and evening so completely as to shut you off from the privileges and delights of the White City just to the south, whose spires, noble domes, beautiful facades, ornamenting grand buildings filled with the garnered treasures of all the earth, will enrich your visit here with happy and lasting memories.

Charles Parsons, of St. Louis, a gentleman well known to the banking fraternity of the United States for many years, has consented to act as permanent Chairman of the Congress, and I now beg to put into his hands and into yours the great interests which you are here to represent."

CHAIRMAN PARSONS SPEAKS.

Mr. Parsons, on taking his seat as permanent Chairman, said in part:

"The magnitude of financial transactions in the world is now beyond—almost—the thought of the mathematician to calculate, or at least contemplate. The world in its exchanges travels on the fleetest ships, and even more rapid than the fabled Mercury moves on electric pinions with lightning speed over sea and land. Our enormous everyday home money transactions make the least variation in the usual regular current of trade or in the standard of value, a matter for a million of eyes to see and as many minds to study over. A great change in usual course of money movements arising from political or other disturbance may silence the wheels of the artisan, furl the sails of the merchant ships, or stop the revolving screws of the ocean steamers and bring in that final result, sorrow and starvation to many proud as well as humble homes.

Therefore, so great a subject is well worthy the best thought of the wisest brains, and the most thoroughly trained and experienced mind can find in our topic and the themes intimately connected with it the most ample occupation and room for fullest development.

For this discussion we are now assembled in this Financial and Banking Congress of the Columbian Exposition, and it is our purpose now in the various aspects in which it may come before us to receive information, to debate propositions, and generally to consider as intelligently and thoroughly as possible the world's finance."

Owing to the absence of Hon. John Sherman, the programme had to be changed somewhat. Bradford Rhodes, of New York, was introduced by the Chairman, and delivered an address on "The World's Experience in Banking." The paper is presented elsewhere in this number.

J. J. P. Odell, President of the Union National Bank, Chicago, extended the following address of welcome on behalf of the bankers of Chicago to the financiers in attendance at the Congress.

"Mr. Chairman and gentlemen of the Bankers' Congress—It is my agreeable duty to welcome you in the name of the Chicago bankers to this city, and to extend to you its hospitalities. The performance of a duty is always accompanied by a sense of satisfaction, but this satisfaction becomes a positive pleasure when the duty performed is in accord with one's inclinations and duties. In this case duty and desire go hand in hand. We welcome you among us; we extend to you the freedom of our hearts and homes.

It seems particularly fitting that this Congress should be convened now and here. Now, because at no time during many years have wise counsel, earnest effort and discriminating judgment seemed more necessary to allay the inflammation of the public mind than at the present; and here, since there is no place where the student, the observer, or the practitioner can be brought into so close or immediate touch with the problems which will present themselves to you for solution.

Chicago is to be congratulated that it has been able to attract so many eminent men, and you are to be congratulated that the occasion has been made which brings you together. To many of you Chicago has been until recently nothing more than a name on the map. To others her history is as well known as that of their own families. These latter have watched the progressive rise of our city with an interest akin to ownership, and we know that the former have but to catch the spirit of their present surroundings to become imbued with the same feeling. We ask our old friends to enlarge their acquaintance—to get closer to us—with every assurance that with every new step taken by our side there will be born a new tie.

It is not my purpose to traverse the fields of other speakers, but I cannot help giving expression to the belief, that when the history of this great exposition is written, the crowning feature that will remain, after the pomp and glory of the material show have passed away, will be the work of the auxiliary congresses; and among the brilliant jewels that will adorn the diadem, the Congress of Bankers will shine forth bright and clear, and to you, gentlemen, will belong the credit of having discovered the jewel and set it in place."

ADDRESS OF HORACE WHITE, ESQ.

At night there was a general union meeting of the Commerce and Finance Congresses in the Hall of Columbus, the principal feature of which was the address of Horace White of New York on "The Single Gold Standard."

Mr. White began by saying:

The most impressive fact in the world of finance was the dominance of the gold standard. It began in England nearly a century ago and had conquered one country after another untill all civilized nations were brought under its sway. Three international conferences have been called to stay its march and none had been held to assist it, but the movement has been as little impeded as that of an ocean steamer would be by the action of a debating society in its own cabin. Was all this due to human perversity, or had it a rational cause founded on the needs of mankind?

Beginning with the experience of England, a sketch was given of the various coinage ratios established between gold and silver, showing how the Government and society had strenuously sought to keep both metals in circulation, but had failed in every instance, and never succeeded in having a stable currency until they adopted the single gold standard.

The experience of the United States was next considered. We followed the example of the Old World when we adopted the the double standard in 1792. The ratio of 15 to 1, which we chose, was as near as possible to the market ratio at that time, yet the market ratio changed within a comparatively short period. Gold rose in comparison with silver. It became profitable to export the former. The yellow metal began to grow scarce in the year 1810, and had wholly disappeared from circulation in 1817. Our ancestors finally became tired of lugging silver around. In 1834 they made the ratio 16 to 1, in order to bring back gold and expel silver from circulation. The Act did expel silver from circulation so completely that for a period of forty years nobody ever saw a silver dollar in circulation.

The Act of 1873, commonly called the Demonetizing Act, merely made the law conform to the pre-existing fact. The demonetization of silver, which was practically decreed in 1834 and legally decreed in 1873, had not been disturbed or reversed by any subsequent act. The purchase of a limited amount of silver by the Government was a very different thing from remonetization of that metal. The United States had adopted the single gold standard for the same reason that England did, namely, because it was the most convenient system.

Prior to 1871 Germany had the single standard of silver. As soon as the North German Confederation was formed the German economists began to advocate a plan for unification of the coinage. In the year 1863 an international monetary conference was held in Paris with this object in view. The German States, both north and south, were represented in this conference, and they all voted in favor of the single gold standard. It is said by some that Germany did all the mischief by her acts of 1871 and 1873, that she compelled France and the Latin Union to close their mints to silver, and that this caused the great decline in the price of that metal. If this were true it might possess an academic but not a practical interest, since Germany is not answerable to other nations for her likes and dislikes. We cannot go back to 1871, nor blot out the intervening years.

As to the decline in the price of silver, it had continued after Germany had completed her monetary reform. Germany ceased selling silver in 1879. The decline in silver up to that time had been 9d. per ounce, but since that time it had been 13d This proved that there were other causes in operation even more potent than the action of Germany.

France had the same experience as England in her endeavors to keep the two metals in circulation on a ratio fixed by law. There were 26 changes of the coinage ratio in a period of 200 years.

In 1873 there was a premium of 1½ per cent. on gold in the Paris market. Silver bullion was going to the mint in unusual amounts to be coined and exchanged for gold for export. It was now necessary for France to make a definite choice between silver and gold. The Latin Union nations were hastily assembled in conference, and they agreed to limit the coinage of silver to 120,000,000f. per year for all the countries composing the union. This coinage was to be only on Government account. This was virtually the demonetization of silver in France, but the formal Act closing the French mint to silver was not passed till 1876. The truth is that the gold standard made its way in France not only without any design on the part of individuals, but in spite of the strenuous resistance of almost all the men who busied themselves with the subject at all.

It was the same way in Holland and Austria, a sketch of whose monetary legislation and experience was next given.

"Now, if we find a movement of civilized mankind going on steadily for a hundred years," said the speaker, "working out, in different countries, uniform results, which commend themselves to successive generations, the presumptions are all in favor of that movement being beneficial." The speaker was so well convinced of this that if all power were placed in his hands he would not do anything different from it. He would consider it presumptuous to interfere with an obviously natural evolution in human affairs. Such an attempt would be futile because it would be necessary to alter the preferences and likings of individual men.

The secret thought which paralyzed the Brussels Conference and all other conferences of the kind was, "What would happen the day after international bimetallism if individual men should continue to prefer one ounce of gold to sixteen ounces of silver?" The speaker thought that the scramble for gold would be more pronounced the day after a bimetallic treaty than the day before, because everybody would suspect everybody else of gratifying his secret liking for gold at the expense of his neighbors. He considered the gold standard beneficial to all classes, and he examined and answered the various arguments advanced to show that it was detrimental to some. The present silver law, commonly called the Sherman law, was not bimetallism. It was based on the idea that the purchase of silver, and the issuance of Treasury notes against it, increases the supply of money in the country, whereas it diminishes it.

SECOND DAY'S PROCEEDINGS.

P. W. Peoples, of Jackson, Miss., in a paper on the banks of his State, said the Southern people in their sober second thought could not but be in favor of a sound, stable currency. Members of the Mississippi Bankers' Association were all for free silver two years ago, but more recently the same association adopted unanimously resolutions demanding the repeal of the Sherman bill and indorsing President Cleveland's financial policy.

Mr. Peoples did not think the Sherman bill entirely responsible for the present financial stringency, but said the law was fraught with danger and should be repealed. More money was needed by the people, but it should be a sound and safe currency.

THIRD DAY'S SESSION.

Owing to the absence of Governor Stone, Missouri, who was to have given an address on "Western Money Ideas," and Hon. H. W. Cannon, New York, who was to have spoken on the "The International Monetary Conference, 1892-3," the original programme was not carried out. The interesting reports from the States, while dealing with the subject more locally, were readily accepted as a substitute.

S. Davis Page, Philadelphia, read a paper of the resources and financial system of Pennsylvania. According to Mr. Page's report, there were in Pennsylvania last year eighty-four State banks, sixteen Saving institutions, and seventy-two Trust companies, with an aggregate capital of $44,789,641; surplus, $19,386,296; undivided profits, $12,877,597, and deposits, $201,450,822.

I. W. Vernon of Providence, spoke for Rhode Island.

Richard C. Lake, Rapids City, spoke for South Dakota.

Mrs. Charles Henrotin was introduced, and made a vigorous plea for the recognition of women in the financial world. She said that women should be admitted into banking institutions on an equal footing with men, also that marriage should be reformed making the husband and wife equal partners in the financial affairs of the family.

H. A. Coffeen was the delegate from Wyoming. His address was largely taken up with a defense of bimetallism, and a plea for the remonetization of silver.

The report for Kansas was given by M. W. Levy, President of the Wichita National Bank. The present banking system of Kansas, he said, was controlled by wholesome statutory enactments, adopted in 1891. As far as consistent, the banking Acts of the State of New York and the rules regulating National banks had been adopted. Twenty per cent. of the deposits, Mr. Levy said, must at all times be held in reserve. The penalty for receiving deposits when a bank was in a failing condition was a fine of $5,000 or five years in the penitentiary or both.

The paper prepared by C. H. Bell, Washington, D. C., was read only by title.

At the evening session a paper was read by R. M. Widney, of Los Angeles, Cal., on "Essential Elements of a Monetary System."

Hon. J. H. Walker, of Massachusetts, delivered an address on "Banking and Currency—the Need of a Sound System of Both." This paper was a notable contribution to monetary literature, and will be published in a subsequent number of the JOURNAL.

THE FOURTH DAY.

When Chairman Parsons called the meeting to order, he announced that the call of States would be resumed, and he called upon John H. Leathers, of Louisville, Ky., who gave an account of the resources and finances of his State. The State banks, he said, dominated over the National banks. The capital stock of the banks in Kentucky he gave as follows: State banks, $26,000,000; National banks, $20,500,000; Savings banks, $4,000,000. The State has 72 National banks and 152 State banks.

Hon. James H. Platt, Colorado, was introduced, and announced himself as a layman who was glad to have a chance to talk to such a lot of bankers. He contended that the country was becoming bankrupt under the present coinage system which demonetizes silver. In Colorado and other Western States, he said, industries were depressed, and if this continued long enough it would end in disaster. The remedy, he claimed, was in returning to the conditions of 1873. Going on to speak of the manner in which the demonetization Act was passed, Mr. Platt said:

DEMONETIZATION OF SILVER.

"The demonetization of silver by Congress, as it was effected in 1873, is the monumental crime of this century. It was done secretly, feloniously, and without the knowledge of a dozen members of the United States Senate or House of Representatives There had been no demand for it from the people or the press; it was not discussed in or out of Congress. President Grant signed the apparently innocent bill in which the omission of one word performed the fatal act without the remotest conception that it would demonetize silver. It was six months after its passage before the country discovered that silver was demonetized and that the United States had adopted the single gold standard. I know the absolute truth of these statements. Myself a member of the Forty-third Congress, I stood nearer to Mr. Hooper, of Massachusetts, than I am to you, Mr. Chairman, when, amid the confusion of a night session, he obtained the floor and called up for passage the bill which was to prove of such momentous importance to the United States. I never dreamed that it was anything more than a bill containing some unimportant amendments to the existing mint laws of coinage, weights and measures, as its title implied. I assert upon my positive personal knowledge that when the question of passage was put by the Speaker not more than six members responded aye, none responded no when the negative was called, and the bill was declared passed. I also assert, and the statement is absolutely true, that had the question of the demonetization of silver been brought before that House as a question for discussion and action it would have been defeated by more than a two-thirds vote."

Mr. Platt asserted that $500,000 was sent to this country from England, and was used liberally in smoothing the way for the bill's passage.

R. P. Rothwell, editor of the "Engineering and Mining Journal," followed with an address on "International Bimetallism." It was an able plea for the establishment of an international monetary clearing-house.

Several papers were read at the evening session. Lyman J. Gage presided.

A paper on "Banking in Canada" was read by B. F. Walker, Toronto. It was an able and lucid sketch of the Canadian banking system. A report of Mr. Walker's paper is reserved for a later number.

CONCLUDING DAY'S SESSION.

At the final session of the Congress there was an interesting debate on the general financial situation in this country. Gold men and silver men were about equally represented. A disposition was shown on the part of the silver men to call Eastern financiers names rather than to engage in a calm and philosophical dissection of current financial problems. Lon V. Stevens, the young and energetic State Treasurer of Missouri, was the chief offender in this respect. He called the bankers of New York goldbugs, misers and Shylocks for not promptly responding to applications for loans from certain of the banks of Missouri. For this display of acrimony he was called to task at the close of the meeting by Charles Parsons, of St. Louis, the presiding officer. Mr. Parsons defended New York financiers, remarking that they are as honorable and patriotic and benevolent a class of men as can be found anywhere else in the world.

Logan C. Murray, of New York, made the initial speech of the morning. He said:

"The trouble which beset us a short time ago is passing away. It commenced on the eastern seaboard and came on to Chicago, which met it in a magnificent way. It passed on to Omaha and then to the Pacific coast, and I hope it will bid us a final good-by and go into the Pacific Ocean. I believe that we are passing through the trouble exceedingly well. At the time we demonetized silver in 1873 there were only 8,000,000 of silver dollars in existence in this country. It has been said on this platform that silver was demonetized for the purpose of making gold the one standard. But that was not so, in truth. We were to have a subsidiary coinage like other nations, but in 1816 England adopted the single standard; in 1872 Germany demonetized silver and got a gold basis; the Latin Union followed and would not buy silver; and we, for self-protection, passed the Act of 1873. In 1878 came a cry that we must have silver, hence the Bland bill was passed. Then came the so-called Sherman bill, which was simply a compromise measure to stop the tide of free coinage of silver.

I am not a monometallist and am no more for gold than I am for silver, but I don't want the country to get on a silver basis. It is well that we should meet the crisis now. We are not simply American bankers here. This Congress comprises financiers from all parts of the world. Our securities are held abroad to the amount of millions of dollars and those securities have come back to us in great abundance during the last two or three years. We want to stop that. We do not want the Europeans to send back our securities, but if we adopt the silver standard our securities will come back and American bankers will suffer accordingly. We have fifteen hundred millions of circulation, which I certainly think is enough for our business. If we have not, let us find money which will take its place, but do not let us go on selling bonds, which is tantamount to getting more gold to buy more silver, for finally the weight will be so great that we will be forced upon a silver standard.

PHENOMENAL RECORD FOR THIS GOVERNMENT.

Two years ago the Secretary of the Treasury was offered par for 2 per cent bonds by the million for the purpose of keeping up the National bank circulation. Was there ever a government which reached a 2 per cent before? And yet we are confronted with a proposition to throw that superb position away to get upon a silver basis and go back to the position of a South American or Mexican republic. Let us hold fast to our gold standard and let silver take its legitimate place with it. We don't want to throw it out of existence. Let us meet the problem now and settle it. I hope President Cleveland will ask Congress in September to do something to settle it. The splendid record which we made by the resumption of specie payments in 1879 is threatened by the Silver States demanding that silver should be put on the people, that we should have free coinage of silver. When we have reached that point it is time for us to take a patriotic stand and stop it."

Mr. Wills, of Pennsylvania, indorsed the views of the preceding speaker in an earnest address, and then Congressman Bryan, of Nebraska, spoke in favor of bimetallism.

HISTORY OF THE SHERMAN BILL.

Congressman Walker, of Massachusetts, was the next speaker. He explained the circumstances under which the Sherman bill was passed, as follows:

"I see it stated in the newspapers that Senator Sherman says the Act of July 14, 1890, ought to be repealed. Let me say to the gentlemen present and to the country that Senator Sherman has not changed his mind upon that bill. The only question that agitated the minds of any of us who framed it was how soon it could be repealed after it was enacted into law—whether it could be repealed in the Fifty-third, Fifty-fourth or Fifty-fifth Congress. If we could have been assured of when it could be done we could have measured the loss to the country by the enactment of that bill, providing the bill had been enacted when there was no free coinage bill upon the statute book.

In a letter which I was asked to write to a Boston paper I then stated that the bill would cost the country from $100,000,000 to $200,000,000, but that it would come out of the rich corporations and capitalists; but if we went into free coinage the cost would be from $2,000,000,000 to $4,000,000,000 a year, which would come out of the farmers and the wage-workers of this country. Now this is something that we know. In 1860 twenty-three of the leading articles that every poor man that has a wife and two children has to consume, cost $152; the same things in the same amount in 1865 cost $301; to-day the same things and the same amount cost $121. You can see what this means to the poor man, and it is a matter that has been figured out by as careful economists as ever investigated impartially any question. Those articles cost the workingmen $2,700,000,000, that went into the pockets of the speculator and the men who had property, the day we issued the greenback, before their wages reached a plane that would buy the same commodities for their families that they could buy in 1860. Do you want to try that again? Do you know that every article that you send to any silver measure country costs 43 per cent. more than you pay for it here?

I am telling what the bills of exchange show that are issued in London, New York and everywhere else on silver measure countries. Now we are asked to plunge down to the level of Mexico and India and China. Talk about debts! Talk about goldbugs wanting their debts paid in gold! Why, all the mortgages in this country are paid for, on an average, every three and a half years and we have been on a gold basis for sixty years except when we had the greenback. Only $8,000,000 of silver coin was issued from the foundation of the Government down to 1873, and more was coined in 1873, after the demonetization act and from then on, than was coined during the whole existence of the Government.

There is not any one who really requires more money. What we want are products. The day has gone by when men want money to hoard and lock up and count over. Those who do that are miserable misers. This question of money we are now considering is purely a question of having a sufficient amount for the demands of trade and commerce. It makes no difference what it is. In proportion as they have emerged from barbarism countries need less coin and use more paper. A demand for coin means a demand for a return to barbarism; it means that you have no confidence in yourselves."

The next speaker was Mr. Vernon, of Rhode Island, who urged the necessity of starting a discussion of this kind on a common ground. He was glad to see that they were agreed, first, that we wanted a stable currency; and, second, a stable basis for that currency that should possess an intrinsic value, and an intrinsic value that it professes to possess. He continued:

"How is it to-day that in London money is loaning at 1½ per cent. per annum, while in New York it is loaning at 20 per cent. per annum. There are two of the financial centres of the world that are within five days of each other. I think I can tell you the reason—apprehension. Apprehension of what? Apprehension that this great country, which redeemed its pledges and promises given in distress and war in gold, is no longer going to be able to redeem its pledges in gold. And why? Because of silver legislation. It is charged that Eastern men want to appreciate the value of the dollar and demonetize silver. We don't want any such thing. If you can devise any way in which you can put 100 cents' worth of real, intrinsic value into a silver dollar and keep it there, we have no objection to free coinage. I am with you, but for the sake of the laboring man, for the sake of the farmer, I say give us an honest dollar. It is not that we want to demonetize silver, but that we don't want you to demonetize gold."

FROM A FOREIGN STANDPOINT.

B. E. Walker, of Toronto, discussed the question from the standpoint of a foreigner interested in the financial stability of this country. He said he was not wedded to any other standard, but it was necessary that the country should be under one standard or another. The time was coming when the United States must build up a great export trade if she is to go on growing in population and wealth. It would be impossible for us to become a great export country if there were a difference of from 35 to 40 per cent in exchange against us.

There never was a time when there was so much British money seeking investment, and it was the desire of the English people that this money should come to the United States, but it could not come until the standard is settled. He deprecated discussing so important a matter from sectional points of view, believing it wiser, as well as more patriotic, to settle the monetary question on a broad national basis. He thought currency should be issued by the banks, based on products and not on money. If that were done there would be no panics, we would always have enough money in times of strain and not too much in times of inflation.

"If you want foreign capital to come up here," he concluded, "If you want to build up an immense export trade, settle on the standard of the best nations of the world and do not fall to the level of China."

Mr. Harper, of Quincy, thought the question of finance should be considered from an international standpoint. He favored one standard and advocated the repeal of silver legislation.

Commissioner Theo. C. Sherwood of the banking department of Michigan, said:

"I believe that everyone is satisfied in one respect—that we have enough currency to-day. I can go into any Michigan town of 5,000 inhabitants and buy $100,000 worth of grain without paying one cent in currency."

"But the currency is behind the check," interrupted a delegate, "or it would not be paid."

Mr. Sherwood continued:

"There is property back of it, of course. What we need to-day more than anything else is confidence. A bank is built up of one-third capital and two-thirds confidence. Now, confidence in our monetary system was disturbed in congress last fall. That was the cause of the panic. When congress adjourned the silver question was relegated to Wall street and the papers have discussed it ever since.

I should suggest that when congress assembles it should refer this question to the different States; that the President should designate one individual in each State, and let the commission so formed meet with closed doors so that the public shall hear nothing about its work until it formulates a system of currency."

William Shelby, of South Dakota, declared that the Sherman bill was at the root of the whole trouble and should be repealed. Great relief would also be obtained by abolishing the tax on bank circulation. By taking off the tax and increasing the circulation up to the full amount he thought there would be sufficient currency to meet all possible demands.

Joseph Moore, Jr., of Philadelphia, in the course of an eloquent address, urged that a dollar must be a dollar not only in the United States but the world over. We must have a standard that will be the world's standard. He could not understand the outcry against National banks, which, he said, had been the salvation of the country in times of financial stress and peril.

D. C. Miles, of Massachusetts, spoke briefly in favor of the gold standard, and urged the removal of the tax on circulation.

Benjamin Mattice followed with a speech on the text that a gold dollar is a dishonest dollar. From this text he naturally preached that silver is the only honest money.

Congressman Coffeen submitted a resolution commending the World's Fair as a wonderful and meritorious enterprise, surpassing anything ever before seen in the world, which was adopted unanimously.

On motion of W. P. Hallidy a vote of thanks was accorded Charles Parsons and Lyman J. Gage for the able and impartial manner in which they had presided.

PRAISE FOR NEW YORK BANKERS.

In bringing the session to a close, Chairman Parsons complimented the speakers and authors of papers for the interest they had taken in the Congress. He continued:

"I feel compelled to notice a few remarks made by a gentleman from my own State in regard to the bankers of New York. It seems to me to be in bad taste to attack those gentlemen. Many of you are acquainted with the men who control the banks of New York. They are not misers; they are not men who wish to oppress the people. They are men who recognize the enormous responsibility that rests upon them as virtually controlling the purse strings of the country. They intend to do justice to all people who have business with them. The gentleman said you have to go hat in hand to Wall street to get money. I went to Wall street in 1873 and asked for the loan of $150,000, and I found no difficulty in getting it, because my request was reasonable. The value of my account with the bank of which I asked the favor was such that they felt they must recognize the request. Every banker, every member of Congress, every business man knows that a bank must recognize the people who do the best business with it. Bankers should not be called Shylocks or misers because they do business on business methods. If the bankers of New York have certain views on the gold question it does not follow that they are rascals or scoundrels. If you look at the various benevolent institutions throughout the country you will find tens of thousands, hundred of thousands, yes, millions of dollars have been given to them by gentlemen connected with the various banks of New York. It is to bankers that the world is largely indebted for this magnificent exposition.

CHICAGO BANKERS MADE THE FAIR.

Four Chicago bankers are the leading men of that enterprise—Mr. Gage, Mr. Odell, Mr. Keith and C. L. Hutchinson. The latter gentleman is at the head of the Institute in which we have been holding our sessions. It is largely through his influence and efforts that the Art Institute of Chicago was founded and stands on such a substantial basis to-day. I think we should hear no more denunciation of bankers, no more allusions to them as money lovers and misers. They represent capital; they represent widows and orphans, business people of every description, and the stockholders in their banks number thousands and thousands. All that a good and honest banker should desire to do is to represent fairly the people whose money and stock is placed in his control. Many of them have nobly and manfully stepped to the front to the relief of business in just such times as the present. This is no time for a banker to show want of courage. He should sustain every business man to the extent of his ability, and, if necessary, go to the point that the bankers of New York city did—those gold bugs and scoundrels—issue certificates pledging the common property for the benefit of the whole people of the United States."

Condition of the National Banks.—Abstract of reports made to the Comptroller of the Currency, showing the condition of the National banks in the United States at the close of business on Thursday, May 4, 1893. Number of banks, 3,830.

RESOURCES.

Loans and discounts		$2,141,376,526 69

Aggregate		$3,432,176,697 25

*The amount of circulation outstanding at the date named, as shown by the books of this office, was $176,845,168; which amount includes the notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under the Acts on June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

JAMES H. ECKELS, *Comptroller.*

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— The board of directors of the National Bank of Commerce, one of the strongest financial institutions in this city, on motion of J. Pierpont Morgan, passed the following resolution June 20:

Resolved, That in order to encourage the more general taking out of clearing-house certificates, and with the view of affording needed facilities to solvent borrowers, the officers of this bank are instructed to take out clearing-house certificates to the extent of $1,000,000.

The National Bank of Commerce has merely repeated its action of 1890. When certificates were authorized then it was the first to take any out, its reasons for the step being the same which now actuate it. Its policy is expected to encourage weaker institutions to avail themselves of the benefits offered by the certificates.

The National Bank of Commerce has a capital of $5,000,000 and a surplus of $8,664,-300. Its loans, according to the bank statement of June 10, were $18,316,100 and its deposits $11,903,800. Its percentage of reserve was 26.

— Three of the officers of the Irving Savings Institution, at 96 Warren St.—the President, Clarence D. Heaton; the Secretary, William H. Buxton, and the Paying Teller, D. D. Tompkins—have resigned by request, a shortage of $70,800 having been found in the bank's funds, for which, it is alleged, they are responsible. Heaton has made good the amount assigned to him, and Buxton has paid in $25,000 and given security to meet any further claims against him. Tompkins is accused of helping himself to $18,000. It is alleged that shortages have been increasing for years, and some of them have been concealed by false entries in the books and by opening fictitious accounts. The announcement of the defalcation caused a run on the bank which lasted only one day. The Institution has a surplus fund of $675,560.

— Henry Allen & Co., who suspended May 4, have settled with their creditors and have been reinstated as members of the Stock Exchange. The firm's settlement was on the basis of fifty cents cash, and the signing off by their creditors of fifty per cent. with the understanding that the firm will consider this a moral obligation, and meet it as soon as is convenient. The firm's liabilities were $400,000, and it is said that the unrealized assets remaining are $800,000, which, as soon as things improve on the Stock Exchange, can be realized on at a profit.

— Bank Examiner Kimball surrendered the custody of the National Bank of Deposit to Receiver McClure on June 12. Mr. Kimball said that he was not able to fix any date for a first dividend to stockholders, but that it would be made without "undue delay." He declined to say whether it would be in two or three or six months' time. He said that there would be no sacrifice of securities, and that the assets would certainly not suffer from the appraisement of the Receiver's.

— An important change is likely to be made soon in the Constitution of the New York Clearing-House, by which all new banks admitted to membership will be required to pay an admission fee of $5,000. An amendment to that effect has been proposed by Frederick D. Tappen, President of the Gallatin National Bank, and has been favorably received. It will come up for action at the next meeting of the Association.

— The "New York Journal of Commerce" and the "Commercial Bulletin" were consolidated June 12 under the title of "The Journal of Commerce and Commer-

5

cial Bulletin." David M. Stone, who has been connected with the "Journal of Commerce" continuously since 1849, has retired at the age of 75 years.

— On June 29 there was a sale at the Stock Exchange of $2,000 United States registered twos at 96. This is the first recorded sale of United States bonds below par since 1879; but 96, at which these bonds were sold, is the lowest price since 1866—27 years ago.

— Charles H. Stout, formerly Assistant Cashier of the National Bank of the Republic, has been promoted to the Cashiership. President, Oliver S. Carter; Vice-President, E. H. Pullen.

— The City Bank Commission has added the National Union Bank to the list of depositories of municipal money. The interest rate of 2½ per cent. was not changed.

—David F. Porter, President of the Hamilton Bank, has been appointed a Rapid Transit Commissioner in place of Samuel Spencer, who resigned June 21.

NEW ENGLAND STATES.

Boston.—Two banks in this city have been victimized by one of the cleverest cases of forgery that has come to light in many years. Two Cashier's checks, supposed to have been drawn by the First National Bank, of Lewiston, on the National Bank of Commerce—one for $3,000, the other for $2,500—were sent to the Security National Bank, which in turn sent them through the clearing-house. The same method was adopted with the National Bank of Redemption, which loses $5,900. The checks drawn on this bank were for $3,100 and $2,800. There were four checks in all. Each was accepted without hesitancy by some of the sharpest bank officials in Boston, They passed through the clearing-house without any trouble. Yet the checks were complete forgeries. Even the background of the check was forged. The forms were apparently correctly lithographed. The numbers corresponded closely with the numbers used by the Lewiston and Franklin banks on the days specified in the dates of the spurious checks. The signatures of the Cashiers were also cleverly imitated.

Another Defaulting Bank Cashier.—The defalcation of Fred L. Kent, Cashier of the First National Bank of Ellsworth, Me., was announced June 20. The amount of the defalcation is about $19,000, of which $10,000 is covered by his bond in the Guaranty Company of North America. The bank loses about $9,000, but as it has a surplus and undivided profits of over $23,000, its ability and credit are unimpaired. The cause of the defalcation is unknown, but it is supposed to be secret stock operations. His life and conduct have been exemplary so far as known. He has made full confession and will surrender himself to justice. The business of the bank will go on without interruption, Henry W. Cushman acting as Cashier.

Law To Be Tested.—The Maine Savings Banks Association has decided to test the constitutionality of the Act of the Legislature of last winter which makes a discrimination between State and outside investments as regards taxation, in favor of the former. The assets of the Maine Saving banks represent $54,000,000, and an Auburn banker estimates that forty per cent. of this is placed in municipal bonds, railroad bonds, securities, etc., outside of the State. The outside investments under the new law are taxed seven-eighths of one per cent, and home investments five-eighths. It is the larger banks which will suffer the most, as they go in for outside investments more than the smaller ones.

MIDDLE STATES.

Pennsylvania Banking Laws.—Governor Pattison has approved the bill giving such banks of this Commonwealth as have heretofore erected buildings for banking purposes, permission to expend such sums not in excess of one-half of their surplus fund as may be necessary to renew or replace such buildings with such new structures as are convenient for the transaction of their business, and permitting them to lease such portions of their buildings as are not used for banking purposes.

The bill designating days and half-days to be observed as legal holidays and for the payment, acceptance, and protesting of bills, notes, drafts, checks and other negotiable paper on such days has also been approved.

It provides that New Year's day, Washington's birthday, Good Friday, Memorial day, the Fourth of July, the first Saturday of September—known as Labor Day—the first Tuesday after the first Monday of November, Christmas, every Saturday after twelve o'clock noon until twelve o'clock midnight, and any other days appointed or recommended by the Governor of this State, or by the President of the United States, as a day of religious observance, shall for all purposes as regards the presenting for payment or acceptance, and as regards the protesting and giving notice of the dishonor of bills of exchange, checks, drafts and promissory notes made after the passage of this Act, be treated as the first day of the week, commonly called Sunday. Negotiable paper payable at sight or on demand, which would otherwise be payable at any half holiday Saturday, shall be deemed to be payable at or before noon on such half holiday: *Provided, however*, that for the purpose of holding liable any party to any bill of exchange, check, draft or promissory note, and which shall not have been paid before twelve o'clock noon of any Saturday designated a half holiday as aforesaid, a demand or acceptance or payment thereof shall not be made, and notice of protest or dishonor thereof shall not be given until the next succeeding business day. Persons receiving for collection any check, bill of exchange, draft or promissory note on any Saturday designated a half holiday shall not incur any liability in not presenting for payment or acceptance, or collecting such check, bill of exchange, draft or promissory note on that day.

It is expressly provided that nothing in this Act shall be construed to prevent or invalidate any legal process on any of the Saturday afternoons designated as holidays, nor to prevent any bank from keeping its doors open or transacting its business on any of the said Saturday afternoons, if by a vote of its members it shall elect to do so.

Whenever the first day of January, the twenty-second day of February, the fourth day of July or the twenty-fifth day of December shall any of them occur on Sunday, the following day shall be declared a public holiday. The days and holidays designated as legal holidays shall be regarded as business days for all other purposes than those mentioned in this Act.

Condition of Pittsburgh State Banks.—R. J. Stoney, Jr., furnishes the following consolidated statement of the condition of the State banks of Pittsburgh, Pa., on June 7:

ASSETS.	
Cash on hand in bank	$ 4,531,965
Investment securities	17,658,562
Loans and discounts	14,960,734
Real estate, furniture, etc.	1,912,227
Bonds, mortgages	6,630,711
Overdrafts	12,205
Miscellaneous assets	498,686
Total	$46,205,090

LIABILITIES.		
Capital		$ 5,440,710
Surplus		2,403,082
Undivided profits		819,602
Individual deposits	$24,249,522	
Special deposits	12,850,871	
Certificates of debt	20,521	
Certified and cashiers checks	45,795	
Due to banks and bankers	191,848	
		$37,458,057
Miscellaneous liabilities		42,475
Dividends unpaid		29,964
Re-discounts and bills payable		11,200
Total		$46,205,090

The changes in the several items, compared with the last preceding statement, on March 4, 1893, are as follows: Cash on hand and in bank, decrease, $881,098; investment securities, increase, $381,539; loans and discounts, increase, $531,935; loans on bonds and mortgages, increase, $389,565; real estate and fixtures, decrease, $18,536; capital, increase, $299,170; deposits, increase, $192,367.

Examining Savings Banks.—Under the improved system of examining banks, now pursued by the Examiners of the New York Banking department, there remained but seventeen Savings banks which had not been examined on June 16.

Soon after the State Banking Superintendent, Charles M. Preston, assumed the duties of his office, he became convinced that the examination of a bank was not as thorough as it should be, especially with reference to proving its liabilities. This had never been done, on account of the immense amount of labor connected with such a work, until Mr. Preston put into operation in September, 1891, his new system of bank examination, which includes the proving of liabilities. Since that time five bank defalcations have been unearthed, ranging in amount from $10,000 to $581,000. Mr. Preston is satisfied that but for the proving of the liabilities in the five banks affected, those defalcations would still be covered up.

Philadelphia, Pa.—The Clearing-House Committee recently passed the following resolution: "Checks, drafts, notes, acceptances and other items not payable in this city are received and forwarded at the depositors' risk only, until we have received final actual payment."

Pittsburgh, Pa.—The third and final account of the assignee of the famous Penn Bank, which failed seven years ago for $3,000,000, was filed June 19. The balance on hand will be sufficient to pay the creditors ½ per cent., or 12 per cent, in all.

Clearfield Bank Dividend.—A fourth dividend, 25 per cent., has been declared to the creditors of the First National Bank, of Clearfield, Pa., making in all 100 per cent. on claims proved amounting to $149,699.

SOUTHERN STATES.

Merchants' National Bank, Ft. Worth, Tex.—Owing to a misapprehension of facts, the above bank was reported as being closed on the 5th ult. Under date of June 22, A. B. Smith, Esq., Cashier, writes as follows in relation to the affairs of his bank:

"In your June number you stated this Bank was closed the 5th. In this you have been misinformed. The bank is still open and will remain so until liquidated by the shareholders. The present management has paid off all its indebtedness, amounting to $740,000.00 with the exception of about $18,000.00 which is not due until August, at which time it will be promptly paid. Its officers and directors have recommended to the stockholders to go into voluntary liquidation, and vote upon that question will be taken July 18. You also said that application had been made for the appointment of a Receiver; it is true such is the case, but it was by a minority of the shareholders several of whom were largely indebted to the bank, and the step was taken to prevent the present management from taking the step of collecting what they justly owed the institution, for they had obtained judgment for same and had their property advertised for sale on June 6. The application for Receiver was made on May 18, with a view of having the Receiver appointed or getting the present management out of the bank to delay said sale. The Court promptly overruled the application. During the pendency of the said suit for Receiver our board of directors telegraphed the Comptroller to send an Examiner here as we wished to be protected from any interference by the State court. The Examiner has gone; the present management is still in full control and the property of the debtors was sold on June 6, and their attempts to injure the management by wilful misrepresentations have been fruitless."

Queer Banking.—John R. Williams, President of a National bank, at Rockwall, Texas, which closed its doors last winter, has been indicted.

The Federal Grand Jury returned two indictments against Williams, one for embezzling $23,000 and the other for violating the Banking laws of the United States while acting as President of the bank.

It is probable that wreckers of other banks will be arrested. The Federal Grand Jury, investigating the books and papers of several of the broken banks in this district, found the paper of several bank examiners among the collateral.

It is stated that upward of $80,000 was borrowed from banks in that section by bank examiners during the last five or six years.

Georgia Bankers Oppose Free Coinage.—The Georgia Bankers' Association's second annual meeting was held recently at Savannah. On motion of T. B. Neal, representing the Clearing-House of Atlanta, and R. F. Burdell, representing the Clearing-House of Savannah, resolutions were adopted urging Georgia's Senators and Representatives to use all efforts in their power to secure the repeal of the Sherman Law, and also declaring that the Association was opposed to the free coinage of silver unless 100 cents' worth of silver was coined in the dollar.

National Bank Shareholders Assessed.—Controller Eckels has levied an assessment of 100 per cent. on the shareholders of the Second National Bank, of Columbia, Tenn. The entire assessment is payable July 28; but the Receiver of the bank has been authorized to grant an extension, without interest, to shareholders who pay twenty-five per cent. of the assessment at that date, and who give satisfactory guarantee to pay twenty-five per cent. on August 28, and the remainder, fifty per cent., on September 28.

Stockholders Assessed.—The Comptroller of the Currency has levied an assessment of 100 per cent. on the stockholders of the Commercial National Bank, Nashville, Tenn., which failed some time ago. The amount—$500,000— is payable in the following installments: 10 per cent on the 15th of June, July and August, respectively;

15 per cent. on the 15th of September, October and November each, and the balance, 25 per cent., on Dec. 15 The present deficiency in the assets is estimated at $109,580.

Bank of Carolinas Resumes.—The Bank of the Carolinas, with headquarters at Florence, S. C., notice of the suspension of which was published in the JOURNAL in June, resumed business on the 23d ult. The branches of this bank at Conway, Kingstree and Varnville, S. C., have been disposed of and only Florence and Williston re-opened under the old name.

Application for Receiver Denied.—Judge Green, of the Forty-eighth Judicial District Court, has delivered an opinion in the case of D. Portwood *et al.* vs. the Merchant's National Bank of Fort Worth, Texas, refusing to allow the Receiver asked for by plaintiffs.

An Arkansas Bank Robbed.—The People's Bank of Bentonville (Ark.) was robbed of $10,000 by a gang of six desperadoes, on June 6.

Nashville, Tenn.—A first dividend of 30 per cent. has been declared in favor of the creditors of the Commercial National Bank, which failed March 25.

WESTERN STATES.

Condition of Minnesota Banks.—Bank Superintendent Kenyon has completed his abstract of reports showing the condition of all State and National banks of Minnesota at the close of business on May 4, and also a comparative statement of their present condition with that of March 6, at which time the public examiner made his last report.

Following is a detailed statement of the resources and liabilities of the State and National banks combined at the close of business May 4, cents omitted:

RESOURCES.		LIABILITIES.	
Loans and discounts	$79,566,[illegible]27	Capital stock paid in	$25,881,200
Overdrafts	8[illegible]6,362	Surplus fund	3,968,973
United States bonds on hand	2,688,593	Other undivided profits	4,995,617
Other stocks and bonds	2,055,504	Dividends unpaid	21,740
Due from other banks	10,085,652	Due to depositors	6[illegible],129,191
Banking house, furniture and fixtures	3,448,159	Due to other banks	7,867,276
Other real estate	1,250,111	Notes and bills rediscounted	2,841,485
Expenses paid	7[illegible]1 483	Bills payable	1,441,210
Taxes paid	78,582	Other liabilities	1,730,399
Checks and cash items	366,839		
Exchanges for clearing-house	1,205,919		
Cash on hand	9,314 022		
Other resources	88,599		
Total	$111,135,809	Total	$111,135,809

The total resources of the State banks on May 4, as shown by Mr. Kenyon's report, was $42,985,209.57; of National banks, $68,150,600.11; total, $111,135,809.68. The total resources of State banks, March 6, was $42,793,214.68; of National banks, $67,3[illegible],362.97; total, $110,162.577.65, giving an increase in the resources of the State banks between March 6 and May 4 of $191,994.89; National banks, $781,237.14; total, $973,232.03. The increase in the capital of State banks between the same dates was $60,000; of National banks, $52,970; total, $112,970. Between the dates specified there have been three new State banks and one National bank authorized to do business in this State.

Silver Producers Act.—At a meeting of the heaviest mine and smelter operators held at Denver, Colo., of June 29, the following resolutions were adopted:

Whereas, It appears from the continued attacks on silver by the mono demetallists of the United States, England, and other nations that there exists in their minds (induced, probably, by the product of an exceptional or phenomenal mine) the idea that the metal is so abundant, and the cost of production so little, as to justify the depreciation of its value; and

Whereas, From years of experience in mining, milling, and smelting we are in a position to more thoroughly and correctly know the actual cost of producing silver, and have, in the hope that its market value would more nearly approximate its intrinsic value by its rehabilitation on some equitable basis, kept our men employed in our mines, mills, and smelters, though at a loss to ourselves in general; and

Whereas, From the present price and the condition of affairs and the tendency of of events it is evident this hope is dissipated for the present; now, therefore, be it

Resolved, That it is the unanimous sense of this meeting of mine, mill, and smelter owners that we put a stop to our further losses by an immediate and complete cessation of all our silver mining, milling, and smelting operations in the State of Colorado, in the full belief that the monometallist element will finally appreciate three vital points:

First—That the world cannot transact its business without the use of silver as money.

Second—That the actual cost and value of the metal far exceed the incorrect views which they have formed.

Third—That the inevitable course of events will quickly demonstrate that the enormous sums of money invested in railroads, loans, and other property will so depreciate in value that the monometallists will also be convinced that some action must be taken with silver to restore it to its legitimate use which it has held from time immemorial; and be it further

Resolved, That we deprecate and condemn the intemperate opinions and statements of unreasonable men, which have been telegraphed to the East, that Colorado has any intention of repudiating her obligations, public or private. On the contrary, we think ourselves as well able as any other part of the world to meet whatever may come in this emergency.

J. J. Hagerman, of Colorado Springs, called the meeting to order. Ex-Governor J. B. Grant was elected Chairman, and John C. Gorham, of Leadville, Secretary. The committee on resolutions consisted of J. J. Hagerman, Chairman; D. H. Moffat, R. C. Brown, M. W. Thatcher, and D. M. Hyman.

Chicago.—At a recent meeting of the stockholders of the Chemical National Bank it was decided by a practically unanimous decision to resume business. The conditions laid down by Comptroller Eckels as necessary to be carried out before the bank will be allowed to open its doors, were accepted, and steps were taken at once towards reorganization.

—George G. Smith, of the firm of George Smith & Co., brokers and real estate dealers, of 611 Chamber of Commerce building, was arrested recently on a charge of making and uttering counterfeit Bank of England notes of the denomination of £5. It has hitherto been considered practically impossible to counterfeit a Bank of England note. Only one factory in England makes the water-marked paper on which the notes are printed. This is so closely imitated in the counterfeits that without close comparison with a genuine note detection would be impossible. The ink used on the genuine note is a secret only known to a very few officials in the bank, and yet the counterfeit notes are not defective here. The ink on the bad notes is so well put on that they can be washed without injury.

— At a meeting of the board of directors of the National Bank of Illinois, held at its office June 5, Mr. Walter L. Peck was elected Vice-President and Mr. Wm. A. Hammond, Second Vice-President; Mr. Carl Moll, Cashier, and Mr. Henry D. Field, Assistant Cashier. The vacancy in the office of Second Assistant Cashier was not filled.

— The body of Hermann Schaffner, the banker, who has been missing since the day his bank collapsed, some time ago, was found floating in the lake, June 14. The body was fully identified by papers found upon it and by the relatives of Mr. Schaffner. Nothing had been heard of the banker since the day his establishment closed, although every effort had been made to find him. It was generally believed, however, that he had drowned himself.

Kansas City, Mo.—At a recent meeting of the board of directors of the Lombard Investment Company the resignations of Mr. J. L. Lombard as First Vice-President and and general manager, and of Mr. B. Lombard, Jr., director in the company, were tendered and accepted. The Lombards have sold their stock to Mr. H. E. Mooney and friends. The resignations are to go into effect September 1. Mr. Mooney was elected Second Vice-President and general manager, and Mr. E. R. Crutcher was elected Third Vice-President and assistant manager. Mr. J. L. Lombard said regarding his sale of stock and resignation. "It was simply a business transaction. I had a chance to sell my stock and did so and of course had to resign my position. I shall remain in Kansas City and attend to my private business. Mr. B. Lombard, Jr., of Boston, will remain in Boston, the statement that he will come here being a mistake." Being asked whether the recent troubles in the company had anything to do with his withdrawal, Mr. Lombard refused to say anything further than that Mr. Mooney had been prominently identified with the Lombard interests during the trouble.

—Witten McDonald, President of the Midland National Bank, has resigned, to take effect August 1. Mr. McDonald will, as soon as relieved of his duties at the Midland National Bank, devote his undivided attention to the "Kansas City Times," in which he became interested about fifteen months ago.

Banking Without Money.—An association has been formed by prominent Populists of Topeka, Kansas, under the title of the Co-operative Exchange, to test the feasibility of issuing mutual checks to take the place of currency in the interchange of business between members. The association will first operate in connection with the Alliance Exchange store in Topeka. The object of the experiment is to make business matters easier for the members of the Alliance and increase the volume of circulation by issuing checks instead of money, the checks to be a legal tender between members of the exchange. The plan as outlined by a member is as follows:

"We propose to make our checks as good as money. When a farmer brings in forty bushels of potatoes, instead of paying him the cash, we will issue him our checks. Members of the company, when not producers, will be issued checks to the amount of their cash deposits. What we eventually propose to do is to help the unemployed by giving them work, and in payment issue them these checks for their labor. It may be some time before we get to that, but that is what the exchange is intended to do. This exchange will come under the provision of the State banking law, and its books and accounts will be inspected by State Bank Commissioner Briedenthal."

Forger Convicted.—Annie M. Doolittle, in general known as Annie Murphy, perhaps the most noted female forger in America, who has forged drafts on banks in Maine, Michigan, Minnesota, Washington, New York and Alabama, to amounts ranging from a few hundred dollars to $5,000, was convicted at St. Paul, Minn., on the 11th ult. of forgery in the first degree and sentenced to four years' imprisonment. The specific case of which she was convicted was the forgery of two drafts on New York, on which she secured the cash in St. Cloud. Mrs. Doolittle has been twice married. Her last husband, Arthur M. Doolittle, to whom she was married in Detroit, on October 22, has just been sentenced to serve seven years for forgery at Nashville, Tenn.

Capital National Bank Resumes.—The Capital National Bank of Indianapolis (Ind.), which suspended May 11, resumed business June 19. The bank reopened with almost $1,000,000 in cash on its tables. There was a run lasting an hour, and then the depositors ceased to show any anxiety to get their money. During the day the bank received in deposits almost as much as was paid out to depositors. The bank resumes business with new officers and under conditions that appear to make it one of the most substantial banks in the city.

Plankinton Bank Affairs.—An analysis of the statement of the Plankinton Bank, Milwaukee, Wis., filed by Assignee William Plankinton in the office of the Clerk of the Court shows that President Day secured in loans from the bank nearly $400,000 instead of $300,000. Of this sum $278,000 was loaned to himself and $100,000 to the Milwaukee Brass and Copper Works, of which he was president.

Safe Unlocked—Cash Gone.—The Bank of Ava, Ill., was robbed recently of about $3,000 while the bank employees were at dinner. The robbers gained entrance by prying open a window. Then they took the money out of the safe, which was unlocked. The Cashier was not absent from the bank twenty-five minutes.

Bank Wrecker Pleads Guilty.—Chas. W. Mosher, President of the wrecked Capital National Bank, of Lincoln (Neb.), appeared before the Federal Court, June 17, and pleaded guilty to falsifying the books of the bank. He has been sentenced to five years' imprisonment.

Dividend Declared.—A fourth dividend, 10 per cent., to the creditors of the Vincennes National Bank, of Vincennes, Ind., has been declared, making in all 80 per cent. on claims proved, amounting to $224,490.

Cashier Morgan Acquitted.—The jury acquitted Fred W. Morgan of the charge of embezzling funds of the late Morganville (Kan.) State bank while acting as Cashier. The funds were some $10,000 short.

A Bank Resumes.—The Exchange Bank of Gladstone (Mich.), resumed business June 9, and will pay dollar for dollar. The Plankinton failure in Milwaukee on June 2 caused the suspension.

PACIFIC SLOPE.

California National Banks.—The last official statement of the National banks of California, made to the Comptroller of the Currency May 4, shows total resources to-be $32,708,314. The aggregate capital is $8,300,000, and surplus and undivided profits, $3,600,000. Individual deposits amount to $17,129,120, and total deposits $20,000,000.

Washington Bank Reopens.—On account of the suspension of the Bank of Spokane Falls, the First National Bank, of Palouse, was compelled to close June 8. Funds were quickly secured from neighboring towns, and the bank reopened June 9.

New Bank at Visalia, Cal.—The private bank of Harrell & Son, at Visalia, Cal., has been merged into the Producers' Bank, recently incorporated with $250,000 capital.

FAILURES AND SUSPENSIONS.

Alabama.—The Tuscumbia Banking Co., at Tuscumbia, failed June 9. The depositors have had Hinton E. Carr, the president, arrested on warrants charging embezzlement and receiving money for deposit, when he knew the bank to be insolvent. The committee appointed to investigate the advisability of accepting Mr. Carr's proposition to form a stock company, reported the assets to be a little over $9,000, while the liabilities are $34,000—$24,000 due depositors and $10,000 due for collections and to other banks.

Arkansas.—The State Bank of Stuttgart and the Farmers and Traders' Bank of De Witt, Ark., failed July 7. The State Bank of Stuttgart had a capital stock of $25,000, with only $5,000 paid up. The De Witt Bank had a capital stock of $10,000. It is reported that C. K. Leslie, the Cashier, has been arrested, charged with issuing Exchange after the bank was closed.

California.—The Board of Directors of the Pacific Bank, of San Francisco, decided not to re-open the doors June 23. The direct cause of the suspension was a notice from the Clearing House Association that the bank's paper would not be accepted hereafter. The Pacific Bank was organized in 1863 by R. H. McDonald, and its present manager is R. H. McDonald, Jr. It has a paid-up capital stock of $1,000,000, and a nominal reserve of about $700,000. The State Bank Commissioners have completed a preliminary examination, and find the nominal assets to be $3,800,000, of which several items are loans and discounts, $2,500,000 cash, and other items $53.000; due from banks and bankers $280,000; bank premises and other real estate, $370,000. The assets appear to be balanced by the liabilities, of which the several items are: Due depositors, $1,037,-000; capital stock, $1,000,000; due banks and bankers, $485,000; reserve fund, $800,000; profit and loss, $76,000.

It is believed that when the values of the securities held by the bank are finally ascertained, the concern will be found to be solvent.

— The People's Home Savings Bank, San Francisco, failed to open June 23. The President, Columbus Warehouse, deeded all his property to the People's Bank that that they might raise money on it to tide them over the crisis. This property is far in excess of all liabilities of the bank. Failure to realize on the securities was the immediate cause of the temporary suspension. The directors of the bank have ordered the regular dividend to be paid July 1. The stock dividend will be withheld

There seems to be very little question of the solvency of the bank.

— The Riverside Banking Company, at Riverside, failed to open its doors June 14. This bank was incorporated February 12, 1885. It previously existed as a private bank, with O. T. Dyer as manager. It was incorporated with a capital of $200,000, which was afterwards increased to $1,000,000, but the amount paid up on the 1st January, 1893, was $429,100. On that date its resources were $1,117,285, and it owed depositors $641,550. On July 1, 1892, the bank had $154,500 loaned on real estate in San Bernardino county, the market value of which was placed at $300,000. It also had $29,425 invested in stocks, the market value of which was reported to be the same as the par value, $77,500. Of this amount $16,750 was in the stock of the California Marble and Building Stone Company of the same market value and $65,000 par value.

— Comptroller Eckels appointed Frederick N. Pauley a temporary National bank examiner, and placed him in charge of the Consolidated National Bank of San Diego, Cal., which closed June 21. The capital of the Consolidated National Bank is $250,000, and at date of last report the nominal resources were stated at about $1,279,000. The Savings bank of San Diego County also closed on the same date, and the Bank of Commerce on June 22. The two latter banks reopened June 26.

— The First National Bank and the Commercial Bank of Santa Ana closed June 22, owing to heavy withdrawals of deposits and inability to collect fast enough. Both are declared to be solvent, and can, in time, pay in full.

— On June 21 the following Los Angeles banks temporarily suspended: First National, Southern California National, Broadway Bank, East Side Bank, University

Bank and City Bank. All have ample assets, but they were paralyzed by the panic which infected the people. It is said all of the banks will resume shortly, with the possible exception of the City Bank. The Broadway, Southern California National and East Side Banks have reopened.

Colorado.—The failure of the Chaffee County Bank at Salida July 1 proves to have been a bad one. Liabilities are $80,000 and genuine assets only $8,000.

— The American National Bank, Pueblo, has suspended. The assets are placed at $1,250,000, and liabilities at $635,000. O. H. P. Baxter, one of the wealthiest men in the State, is President of the bank. It is believed that the bank will be able to resume.

The Central National and the Western National also suspended. These are all sound concerns, and their assets are ample. The Central National has assets of $200,000 and liabilities of $85,000. "The Western can pay all depositors twice and then have enough for all stockholders," is the statement made by its President, W. L. Graham.

The Pueblo Savings Bank is also reported suspended, but its securities are thought to be good, and the embarrassment to be only temporary.

— Owing to unexpected demands the Bank of Clear Creek County, at Georgetown, made an assignment June 30. The assets are said to be more than ample to meet every obligation They amount to $397,000, while the liabilities are only $233,000.

—The First National Bank of Ouray, closed July 1, owing to a want of currency. Assets are placed at $110,000 and the liabilities $42,000.

—The Eagle County Bank, Red Cliff, suspended July 1. Its capital is $42,000 and assets, which are estimated at $40,000, are considered worth 100 per cent. The liabilities are $34,000. The withdrawal of large sums on account of the drop in silver was the cause.

—The American National Bank of Leadville, closed July 3, owing to inability to realize on securities.

Georgia.—Hobbs & Tucker, private bankers at Albany, suspended payment June 10. Mr. Hobbs says that the failure is due to too heavy loans and an inability to realize on collaterals. A quiet run on the bank had been in progress for a month, and deposits aggregate only $80,000 at the time of suspension. Mr. Hobbs is said to be individually good for more than the total deposits. Mr. Tucker is also wealthy.

Illinois.—August Jernberg and William B. Griffin, composing the banking firm of Jernberg, Griffin & Co., Chicago, made a voluntary assignment June 9, to Edward Maher. Liabilities are $20,0.0 and assets $24 000. Jernberg also conducted a real estate business, and at the same time assigned this, placing his assets at $200,000 and his liabilities at $151,000.

— Joseph Hagins, owning a private bank at 84 Washington street, Chicago, and three corresponding institutions in Illinois towns made an assignment June 9. Assets are scheduled at $50,000; liabilities not estimated. Hagins operated banks at Mascoutah, Sorrento, Gillespie and St. Ann. The assignment covers all. The attorneys who represent the assignee claim that Hagins has enough assets to pay the liabilities several times over. He has a large amount of real estate in several counties of the State, the attorneys claim, but it was impossible for him to realize on this in time to avoid an assignment. It is said that Hagins was connected with the Columbia National Bank of Chicago, which failed some time ago.

— The liabilities of S. Bonham, Fairfield, the banker, who failed June 15, are in the neighborhood of $125,000, with assets equal to more than that amount. It is thought the bank will pay dollar for dollar. E. Bonham's merchandise store is also included in the assignment.

— Conrad Niehoff, private banker, at 49 La Salle street, Chicago, suspended June 8. An assignment for the benefit of creditors was filed transferring the banker's property to Adam W. Jaeger, as assignee. The assets are scheduled at $90,000 and liabilities at $60,000. The refusal of the bank through which Niehoff cleared to pay checks caused the trouble. The bank was conducted under the title of Conrad Niehoff & Co., but the banker had no associate in business.

— Ferdinand Gehrke, Chicago, who had been doing a private banking business has assigned. The liabilities are placed at $33,000 and assets at $40,000.

— The assignees of Herman Schaffner & Co. of Chicago, the insolvent bankers filed a report June 18. The liabilities, secured and unsecured, are shown to be $2,350,010;

the total assets estimated as good, $1,894,905, and the total assets of every kind $2,312,-818, leaving an excess of liabilities of $37,102.

Indiana.—The Albany Banking Company suspended payment June 7. The suspension was caused by the run made on the Bedford Bank at Bedford, Ind., which forced it to close. The principal stockholders in the two banks are T. S. Winstandley, of New Albany, W. S. Winstandley, of Bedford, and W. L. Breyfogle, of Chicago. W. L. Breyfogle executed a deed of trust on $300,000 worth of unencumbered real estate in Chicago for the benefit of the depositors of the two banks. It is claimed the assets are $212,000; and liabilities $100,000.

— The Farmers and Merchants' State Bank of Fairmount, Ind., suspended June 14. The capital stock is $50,000; assets, $191,060.91; liabilities, from $130,000 to $150,000. The prevailing impression is that all creditors will be paid. County Treasurer Parker, whose home is in Fairmount, recently drew out a deposit of $30,000 of the county's money, which is supposed to have hastened the collapse. An agreement has been signed by depositors which will probably result in reopening the bank soon.

— I. W. St. John, Trustee of the Dunkirk Bank at Dunkirk, announced June 26 that he would pay a dividend of 20 per cent. The bank suspended May 11. It was in the syndicate controlled by Dwiggins, Starbuck & Co., of Chicago.

— The Citizens' Bank of Converse, owned by L. Gottschalk and George Ober, and which began business last spring, failed to open its doors June 17. The proprietors were associated with Zimri Dwiggins, of Columbia National Bank fame, and, it is asserted, lost from $10,000 to $12,000 in the Columbia failure. The capital invested was about $20,000. The report of Assignee Roscoe Kimple shows that the concern has the following assets: Bank, including cash, furniture and fixtures, notes, and securities, $13,-238; hoop works at Geneva, Ind., stock of material on hand, $15,962; individual property of stockholders, $6,230; other real estate than specified, $11,150. The deposits of the bank, which had at one time run up to $25,000, were only $10,000 when it closed, so that if even a fraction of the total of $47,000 of assets are realized on the depositors will suffer no loss.

Iowa.—The First National Bank of Grundy Centre closed June 16. The statement on May 4 showed deposits subject to check $34,761.72, demand certificates of $27,836.70, and time certificates $71,715.50. The capital was $50,000 and surplus $16,000. The bank had $12,531 invested in banking house and $9.000 in other real estate and mortgages. It had been paying a high rate of interest and is reported to have lost $20,000 a short time since by the failure of a grain firm on a loan of about $32,000.

— The failure of the Union Trust Company, Sioux City, was announced June 28, by E. M. Donaldson, its secretary, who filled a petition for a Receiver. The statement shows liabilities of $350,000 and assets $450,000. The stock is largely held in New Hampshire. It is claimed that when the assets can be realized upon all creditors will be paid.

— The Union Stock Yards State Bank, at Sioux City, filed an assignment June 10, naming Howard G. Pierce as assignee. The assets of the bank are placed at $482,-667; liabilities, $163,140. The bank is capitalized at $300,000. The clearing-house committee states that the failure is due to loose methods of carrying on business, and will not affect any one else in the city. The deposits aggregate $50,000, and it is claimed they will be paid. Skerry and the two Pierces have been promoters of the Leeds Electric Railway, and it is said the failure is due in large part to the company's paper. Accounts on the bank have been overdrawn $34,184; the principal item of assets is $368.448 notes and bills discounted, the actual value of which is doubtful. D. F. McCarthy, State Bank Examiner, announced June 20th that all depositors have been paid. No one will lose except the stockholders.

Kansas.—The first National Bank of Arkansas City failed to open June 15. The deposits are reported to be $600,000.

The bank was organiz d on June 30, 1885, with a capital stock of $50,000, which it afterward increased to $125,000. When examined in December, 1892, it had a capital of $125.000 and surplus and profits as shown by its books amounting to about $90,000, but the examiner's report showed that excessive loans to the amount of $180,000 had been made to ten parties and that loans and discounts to the amount of $60,000 had been made to some of the officers.

The examiner estimated that losses to the extent of $140,000 had been sustained by the bank, and the Comptroller in criticising the report then made directed the bank to use its surplus and profits to charge off $90,000 of this estimated loss and gave notice of an assessment of $50,000 upon the bank to make good the impairment of capital shown to this amount.

— The Bank of Ness City was closed by State Bank Commissioner Breidenthal June 26. It had a capital stock of $40,000; $31,300 deposits and when the officer took charge it had cash on hand just $83.95. Bank Commissioner Breidenthal says the bank was loaded down with real estate.

— State Bank Commissioner Breidenthal, who recently examined the affairs of the Bank of Burr Oak, which failed June 10, declares that Manager Hurlbut of the bank conducted its affairs in a very loose manner. Hurlbut disappeared the day after the failure, and cannot be found.

Commissioner Breidenthal says Hurlbut has made false statements to the Bank Commissioner. The bank's deposits amount to $45,000, and, although the assets on their face show a value of $53,000, they are nearly worthless, and will net depositors less than 20 cents on the dollar.

— The City Bank of Angell & Matthewson, at Parsons, assigned June 16. Liabilities about $100,000. The firm has turned over $350,000 in real estate to satisfy creditors.

Kentucky.—The Second National Bank of Ashland suspended June 27. Liabilities said to be $110,000; assets, $200,000. Inaqility to realize on the assets caused the suspension.

Michigan.—The Northern National Bank, of Big Rapids, closed July 8, because of the withdrawal of funds by depositors.

Minnesota.—The People's Bank of Minneapolis suspended June 20. The suspension was caused by the assignment of James McMillan & Co., the hide merchants. Mr. McMillan was President of the bank. The bank is only two years old, and its paid-up capital was $100,000.

— The Pine County Bank, at Hinckley, and a branch bank at Sandstone, owned by F. H. Grant & Son, closed their doors June 29. It is said that there was nearly $160,000 on deposit in the Pine County Bank. No statement of assets as yet.

— The Bank of Le Seur made an assignment July 8, to protect home depositors. Liabilities, $225,000; assets about the same.

— Jacob Fisher, owner of the Todd County Bank, Long Prairie, assigned June 24. The bank is said to be indebted to the county for funds deposited to the extent of $12,000 or $15,000. It is said he will be able to pay about 75 cents on the dollar.

The Northwestern Guaranty Loan Co., of Minneapolis, which passed into the Receiver's hands May 20, made public the following statement, June 10:

ASSETS.	
Mortgages and stocks, with trustees, collateral for $2,841,300, debentures.	$2,476,059.50

CONTINGENT LIABILITY ON GUARANTIES.	
Notes	$3,017,776.48
Mortgages	393.445.00
Stocks and bonds	123,050.00
Total	$3,543,271.48

— The Bank of New England, at Minneapolis, closed June 26. Mr. Blethen, the President, said the bank had considerable money tied up by the Chicago failures.

Every depositor, he adds, will be paid, as the stockholders will suffer instead of the depositors if the bank does not resume. The capital stock of the bank is $100,000; surplus, $12,000; undivided profits, $4,000. The Chemical National of Chicago, which recently failed, was the Chicago correspondent.

The bank had cash available of $64,000 on May 4, the time of its last report, but its liabilities were $200,000 and assets somewhat in excess of that amount.

— The Farmers and Merchants' State Bank, of Minneapolis, Minn., made an assignment to the St. Paul and Minneapolis Trust Co., June 20. The bank suspended payment May 15.

Missouri.—Excitement over the Exchange Bank failure, Moberly, Mo., which occurred June 14, seems to grow as the case develops. Attachments to the amount of $40,000 have been placed on the property of the President and other officers of the bank.

— Julius H. Pease, assignee of the Security Savings Bank, Kansas City, has filed an appraisement of the bank's assets, showing total assets of $87,065. Of this $706 is cash in the hands of the assignee. The second mortgage notes, of which the aggregate face value is $26,781, are appraised at $20,000. An overdraft of Willard P. Holmes & Co. of $22,851 is appraised at $12,300. Willard P. Holmes was President of the institution. The value of the safety deposit vaults and appurtenances is fixed at $7,500. The liabilities are about $90,000.

Montana.—The Livingston National Bank, Livingston, closed July 7, and is in charge of a bank examiner.

— The First National Bank of Phillipsburg, closed July 1, owing to the stringency in the markets and continual demand of depositors, together with an inability to realize on their paper.

Nebraska.—The McCague Savings Bank, of Omaha, closed June 12. The withdrawal of deposits during the last few weeks amounted to about $65,000. It was impossible to obtain money to any great extent on the securities, which are mostly mortgages on Omaha real estate. The assets are: Mortgage loans, $250,000; collateral loans, $71,000; stocks and bonds, $94,000; warrants, city, county, etc., $6,000; real estate, $13,000; which with cash and other securities, making a total of $477,000. Deposits, $420,000.

Mr. John L. McCague, Vice-President of the suspended bank, fixed the liabilities at $300,000 and estimated the assets of the bank at from $360,000 to $475,000.

— The American National Bank of Omaha was closed by order of the Comptroller of the Currency, June 13. It is understood that the affairs of the bank are entangled with those of the McCague Savings Bank that closed June 12.

When the assets of the American National came to be examined by the Clearing-House they were pronounced not good enough, and the aid of the Associated Banks was withheld. A great deal of paper which is thought not to be first class figured in the resources of the bank. The falling off in deposits had amounted to nearly $200,000 since May 4, and this badly crippled the institution.

— The American Loan and Trust Company, of Omaha, went into the hands of a Receiver July 5. The company has a capital of $400,000 and has done a good business. The cause of the suspension was the failure at Houston, Texas, of the Omaha and Houston Improvement Company, a town-development enterprise, in which the American Loan and Trust Company had $250,000.

The directors of the American Savings Bank, controlled by the American Loan and Trust Company, requested the State Bank Examiner to take charge of the bank when the Receiver for the Trust Company was appointed. President O. M. Carter asserts that the institution will resume when relieved from the present embarrassment. He says they have two dollars of assets for one dollar of indebtedness. Deposits in the institution amount to $295,000.

The National Bank, of Ashland, which has failed, was also an offshoot of the American Loan and Trust Co.

— The State Bank, at Shubert, has failed. It is said the Cashier was $21,000 short in his accounts. The stockholders will pay depositors.

— The State Bank at Cortland, closed June 6, owing to lack of funds to meet demand of depositors. The concern has been considered shaky for some time past. The capital stock is $12,000, the last statement showing a surplus of $1,600. It is thought its amounted to about $20,000, belonging to business men and farmers. The

President of the bank has been engaged in the grain business, operating an elevator at Cortland, which is said to have been the cause of embarrassment.

New York.—The Canal Street Bank, a State institution, doing business in New York City, closed on June 6, the direct cause being the refusal of the National Shoe and Leather Bank to continue clearances.

An examination made by Superintendent Preston, of the State Banking Department, places the assets at $503,907.78; liabilities, $529,315.91.

— The Queen City Bank, of Buffalo, suspended June 26 on account of a heavy withdrawal of cash resources. It is claimed that securities are ample to secure all concerned. Superintendent Preston, of the State Banking Department, says of the failure: "The report of the condition of this bank on the morning of June 1st last, as filed with me on June 7, shows: Resources—Loans and discounts, $1,895,958; due from directors, $82,427; overdrafts, $4,218; due from trust companies, banks and brokers, $171,767; stocks and bonds, $1,000; specie, $27,719; United States legal tender notes, and notes of National banks, $103,002; bills and checks for the next day's exchanges, $87,985; other items carried as cash, $8,794; current expenses, $18,677; furniture and fixtures, $20,000; premium on United States bonds, $100; total, $2,351,644. Liabilities—Capital stock paid in in cash, $600,000; surplus fund, $30,000; undivided profits, $80.260; due depositors as follows, viz: Deposits subject to check, $878,190; demand certificates of deposit, $240,966; certified checks, $692; due trust companies, State and National banks, $441,505; due private bankers and brokers, $59,510; bills rediscounted, $50,500; total, $2,351,644. Investments made by the bank in its early history are said to have so impaired the credit of the institution, that it appears to have been unable to withstand the present hard times."

Efforts are being made to reorganize the bank and resume business.

— The Cataract Bank, of Niagara Falls, closed June 23 owing to the steady withdrawal of deposits and inability to realize on several large loans handed down to the bank by the former management. The bank has a capital stock of $300,000 and a surplus of $50.000. Its quarterly statement, made on May 31, gives its undivided profits as $26,880. About a year ago the Banking Department, by an investigation, ascertained that the bank was loaning too largely to a few persons and companies and immediately stopped the accommodations and compelled a change of management whereby the President and Cashier resigned and new officers were elected in their places. The bank materially improved under the management of the new officers, the loans spoken of were reduced, and collateral security taken in all cases where there was doubt about the sufficiency of the parties indebted, and the bank was in every way strengthened, so far as it was possible to do it. But owing to the fact that it had to take in a large amount of real estate, and by reason of the recent money stringency, the deposits were materially drawn down. It appearing by the last report called for by the department that their legal reserve was impaired, it was thought best that the department take possession in order that the interests of all parties might be equitably preserved. The State Banking Department announces the liabilities to be $1,026,805; assets, $754,996. Peter A. Porter, late President of the bank, has been appointed Receiver.

— H. C. Tucker & Co., private bankers, of Buffalo, closed June 21. The company had a large amount of money lent on mortgages, also on notes and paper on which it was hard to realize quickly. Aside from the banking business, they continued to do a general real estate, loan and insurance business.

—W. Ward, the manager of Ward's Bank of Forestville, a private institution, was found dead in the rear of his house July 3, and it was supposed that he committed suicide.

The bank failed to open July 3. Deposits are from $50,000 to $70,000. What the assets are is not known.

New Jersey.—The Somerset County Bank, of Somerville, suspended July 8. The bank being a State institution, the Attorney-General has asked the Chancellor for a rule to show cause why a Receiver should not be appointed. The Somerset County Bank has a capital stock of $100,000, with $15,000 surplus, and carried about $250,000 of deposits.

North Carolina.—The Bank of New Hanover, located at Wilmington, closed June 19, owing to the withdrawal of more than $320,000 of deposits and notices of over $150,000 intended withdrawal maturing in a few days, and also to inability to realize quickly upon assets. The assets are estimated at $1,250,000, the liabilities at $800,000. All unpaid collections of the Bank of New Hanover have been turned over to the Wilmington Savings and Trust Company for remittance.

Ohio.—The Sandusky Savings Bank failed to open for business June 5, owing to inability to realize quickly upon securities. The assignee states, that the loans of the bank amounted to $300,000, while its deposits were about $200,000, so that depositors will not lose anything. In addition to this, there is a surplus of $5,000; and the stockholders, who, without exception, are persons of means, are liable for $100,000 more.

— The Lake County Bank, of Aaron Wilcox & Co., at Painesville, suspended temporarily June 14.

The personal estate of the stockholders is liable for the indebtedness, in all amounting to several hundred thousand dollars. The bank is believed to be solvent. It was organized twenty-five years ago, and has always been considered a sound institution.

A later report says: The Lake County Bank, which was forced to suspend because of a run, was solvent. A statement shows that the assets were $450,000, and the liabilities $350,000.

— The Exchange Banking Company, of Weston, closed June 14. The bank had a run, was unable to get help, and the directors thought it best to close. There was about $33,000 drawn out on the day prior to the suspension, and indications of a heavy run on the following day, which was promptly forestalled by putting up the shutters. The bank did an immense business through one of Ohio's business and farming communities. The condition of the bank is said to be good, and it will eventually be able to meet all demands.

— An assignment was made June 26 by the Sabina Bank, of Sabina, Ohio, to A. E. Clevenger, of Wilmington, and in the same path followed the Jeffersonville Bank and the Glouster Bank, branches of the Sabina institution. The direct cause of the suspension of all these was the assignment of W. T. Haydock, the St. Louis buggy man, supposed to be a heavy stockholder in the Sabina Bank.

The Sabina bank had $65,000 on deposit and claims to have $80,000 in good collateral for loans, and besides the three partners have 1,300 acres of unincumbered real estate and considerable personal property.

— The Citizens' Savings Bank of Portsmouth assigned June 21. A run on the bank made the step necessary. The liabilities are something over $300,000 and assets over $400,000.

— The Lynchburgh Bank, affiliated with the Citizens' National Bank of Hillsboro, Ohio, closed June 9. Matters have not been altogether satisfactory for some time in the business management. W. L. Stantner, Assistant Cashier, says the bank will pay deposits in full. The liabilities are not fully known, but the amount is said to be about $100,000. A loan of about $70,000 was made to the Citizens' National Bank of Hillsboro, and as soon as it was learned that the Citizens' National Bank had closed, the depositors made a rush on the bank of Lynchburgh, which caused the suspension. In an interview with Isma Troth, President of the Lynchburg Bank, he said that there may be a small loss, but he could give no definite answer to any question in regard to the financial condition.

— The Citizens' National Bank, of Hillsboro, was closed by order of Comptroller Eckels and placed in the hands of bank examiners June 10. The bank's statement, made two months ago, showed; capital, $100,000; surplus, $50,000; undivided profits, $19,000; average deposits. $275,000; circulation, $22,500.

— H. L. Glenn, President of the Camden Bank, made an assignment of the bank to E. S. Dye, of Eaton, Ohio, June 10, Mr. Glenn also assigned his individual property. The bank had an authorized capital stock of $50,000. The failure of the Citizens' National Bank, of Hillsboro, was the cause of the assignment. Assets are $47,544 and the liabilities $62,400. The heaviest depositors think it will not pay fifty cents on the dollar, while H. L. Glenn, late President of the bank, says the appraisements are too low on some accounts, and that the creditors will secure not less than eighty cents on the dollar.

Oregon.—The Lynn County National Bank, at Albany, closed June 19. J. L. Cowan, President of the bank, says the deposits amount to about $150,000, and that the assets will exceed the liabilities by $80,000 to $100,000. J. W. Crawford, the wealthiest citizen of Albany, and one of the directors, says he will personally guarantee every depositor. No official statement has been made. The Bank of Lebanon, a branch of the Lynn County National Bank at Lebanon, closed its doors on the same date, and the Bank of Oregon, at Albany, also suspended. Cashier Blain says the assets are 50 per cent. more than the liabilities. Both failures were caused by steady withdrawals of deposits for several weeks. The Cashier of the Linn County National Bank says that the liabilities are about $220,000, and assets $318,000. The assets of the Bank of Oregon are $23,000; liabilities, $45,000. The Bank of Lebanon, owned by Cowan, Ralston & Co., had $27,000 in deposits; assets largely in excess of liabilities.

— The creditors of Hamilton, Job & Co., bankers, at Corvallis, who failed June 10, held a meeting June 19. The Receiver made a statement showing total assets $195,000. A deduction of $62,000 for doubtful overdrafts and bills receivable leaves available assets of $133,000. The liabilities are $224,000. An assignment has been made for the benefit of the creditors.

Pennsylvania.—The Ridgway Bank, a private institution, closed June 22 owing to the depressed finanaial situation rendering it impossible to realize on securities. Assets estimated at $364,000, liabilities at $216,000.

South Dakota.—Hart & Hatten, proprietors of the Farmers and Merchants' State Bank, of Plankinton, assigned June 24. Assets and liabilities are about $60,000 each. Hatten has turned over $20,000 worth of property for the benefit of creditors.

— The First National Bank of Hot Springs, closed July 7.

Tennessee.—The Nashville Savings Company, a private bank, made an assignment June 13. The papers filed state that the Nashville Savings Company is indebted to various parties in sums aggregating $222,876, as follows: Deposits subject to check, $109,010, certificates of deposit, $72,911, bills payable, $39,800; Herzfelt & Co., $1,155. The loans and discounts are only $27,478.11. The Company had been in existence many years, but was a small concern.

— The Penny Savings Bank at Chattanooga, controlled and patronized by colored men, closed its doors June 17. H. N. Willis, the Cashier, says the failure was due to the stringency of the money market and inability to collect notes due. The assets are about $16,000, with liabilities not stated. The bank was organized three years ago; its capital stock was $50,000, of which $14,000 had been paid in, and it is said the depositors will receive about 50 per cent. of their claims. The deposits at one time reached an average of $20,000; lately they have been less than a third of that amount.

— The City Savings Bank of Chattanooga was forced to assign June 19 on account of an unfortunate blunder, whereby it was confounded with the Penny Savings Bank. A messenger in telephoning the intelligence to the chief banks of the city used the name "City Savings" instead of Penny Savings, but the error was immediately corrected. Depositors, however, learned of the unfortunate report and soon withdrew over $60,000.

The withdrawal was so wholly unexpected that the bank was forced to assign. The assets are given as $475,000 and the liabilities at $225,000. The amount due depositors is about $216,000. Nothing is due any local bank. G. H. Jarnagin was named as assignee. All depositors will be paid.

Texas.—Comptroller Eckels was informed June 17 that the City National Bank of Brownwood, Tex., capital, $150,000, had closed. Its last report gave : assets, $397,200.

— The Bank of Alvin closed June 19. It was a private concern claiming $19,000 capital. Liabilities about $18,000 and assets about $17,000, consisting of vendors' lien notes and cash.

Utah.—The National Bank of Commerce, of Provo City, closed July 1, owing to a run caused by the failure of the First National. Assets, $80,000; capital, $50,000; other liabilities, $25,000.

Washington.—R. B. Lehman, Receiver of the Oakland Land, Loan and Trust Company, the Oakland Loan and Trust Company, the Washington Trust Company and the Manhattan Trust Company, has made a report to the court, showing that the assets of the companies were sufficient to pay all debts and leave a considerable surplus, if the mortgages were collectible. The capital stock of each of the first three was $300,000, of the last one, $200,000.

— As a result of the suspension of the Bank of Spokane June 5, three other Spokane banks closed their doors. They are the Washington National, the Washington Savings, and the Citizens' National. A. M. Cannon, President of the Bank of Spokane Falls, is Vice-President of both the Washington National and Washington

Savings Bank, and the failure is due directly to the failure of the Bank of Spokane Falls.

The Washington National has a paid-up capital of $100,000, and, according to a recent statement, had deposits amounting to $326,000. The Washington Savings had a paid-up capital of nearly $50,000, and deposits of about $100,000. The Citizens' National has a capital of $100,000, and deposits amount to about $400,000. The liabilities of the Bank of Spokane are placed at $200,000, and assets are said to be largely in excess of this sum. (Later—The Washington National resumed July 6.)

Receiver Augustine, of the Washington Savings Bank, has completed a condensed statement which shows: total assets, $205.690, liabilities, aside from the capital stock and undivided profits, $136,468; balance, $69,222.

— The First National Bank of Port Angeles closed June 26. Two weeks prior to the suspension the deposits were $127,000, and the bank was regarded as one of the safest in the State. But for some cause a run began and continued until the deposits, including county funds, amounted to only $85,000. Against this the bank announced its resources as $142,000.

—The depositors of the Bank of Ben. E. Snipes & Co., Ellensburg, which suspended June 9, held a meeting June 14, and a statement was submitted showing the resources to be $278,190, and the liabilities $210,784, an excess of resources above the liabilities of $67,406. Snipes owns improved realty of the value of $500,000, $383,000 worth of which was unencumbered.

— The First National Bank of New Whatcom closed, June 23. Inability to realize on its securities it the cause given for suspension. The banks officials say their assets are double their liabilities and that depositors will be paid.

— The Bank of Everett made an assignment June 14. The institution was doing business under the State law with a nominal capital of $50,000. Its paid-up capital was $30,000. Liabilities are about $65,000; assets, $87,000. An examination of paper and securities was made by a committee of the clearing house which authorized the statement that, in its judgment, if the securities should be handled properly every depositor would be paid in full.

— On account of inability to realize on securities, the Puget Sound National Bank, of Everett, suspended July 5. The suspension is said to be owing to the refusal of Eastern banks to honor heavy drafts on security offered. No statement is yet made. The bank's capital is $100,000.

Wisconsin.—The Hudson Savings Bank closed, June 9. Liabilities, $736,127.56; assets, $596,276.36; due depositors, $644,493.28.

— The Bank of Washburn closed, June 7. It is a private institution, with a stated capital of $25,000, and a surplus of $12,000. The deposits are about $40,000. A. C. Probert, the President, says depositors will be paid.

— The Citizens' Bank, of Winneconne, closed July 7. In the afternoon Cashier Varacter was arrested on the charge of receiving deposits after he knew the bank to be insolvent. He claims that the bank can pay in full.

— Owing to the failure of the bank of A. C. Probert, at Washburn, the Shell Lake Savings Bank, of which he is the principal owner, has suspended. It is said that the depositors will be paid in full. Assets and liabilities are not stated.

Winnipeg, Manitoba.—Liquidators have been appointed to wind up the business of the Commercial Bank, which has been declared insolvent. The liabilities are placed at $1,370,000 and the assets at $1,981,115. A part of the assets is not good, but the bills of the bank are equal to gold under the Dominion law.

No Other Can Take Its Place.—In a letter bearing date of June 20, H. G. Woodruff, Esq., Cashier of the First National Bank, Chelsea, Vermont, writes: "As our charter has expired by limitation, we wish the JOURNAL OF BANKING discontinued. We expect to organize a new National Bank and in that case we shall certainly need your JOURNAL. I know of no other that can take its place."

An Accepted Authority.—RHODES' JOURNAL OF BANKING for this month [May] continues to furnish its fund of high-class information and opinions which are accepted as authoritative by bankers and financiers in every country in the world.—*Philadelphia Price-Current.*

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

IOWA PARK—Iowa Park Bank.

UTAH.

PARK CITY—Park City Bank; assigned June 12.
PROVO CITY—First National Bank; reported suspended June 30.

VERMONT.

CHELSEA—First National Bank; expired by limitation June 10.

WASHINGTON.

ELLENSBURGH—Ben E. Snipes & Co.; closed June 9.
EVERETT—Bank of Everett; assigned June 14. — Puget Sound National Bank; suspended July 5.
NEW WHATCOM—First National Bank; closed June 23.
PORT ANGELES—First National Bank; closed June 26.
ROSLYN—Bank of Roslyn; closed June 10.
SPOKANE—Washington Savings Bank; closed June 6.——Bank of Spokane; closed June 5.——Citizens' National; in charge of Bank Examiner June 7.
SUMAS—Bank of Sumas; suspended July 8.

WISCONSIN.

HUDSON—Hudson Savings Bank; closed June 9.
MANITOWOC—State Bank; closed June 6.
SHELL LAKE—Shell Lake Savings Bank; suspended June 7.
TWO RIVERS—Bank of Two Rivers; closed June 6.
WASHBURN—Bank of Washburn; closed June 8.

CANADA.

MANITOBA.

WINNIPEG—Commercial Bank; suspended July 1.

Of Value to Bankers.—RHODES' JOURNAL OF BANKING is running a series of articles on "How to Determine the Value of Paper Offered for Discount," which must prove of value to merchants and bankers.—*The Collector.*

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, July 4, 1893.

THE FINANCIAL EVENTS of the past month have been of exceptional interest and of extraordinary importance. It is a significant fact that just as the silver portion of the circulating medium of the United States came to be in excess of the gold, the price of silver should fall to the lowest point of which there is any record. The total gold coin and bullion now in use as money in this country is estimated at about $592,000,000, while the silver so in use aggregates nearly $615,000,000. After fifteen years of a silver policy the country finds its money system containing more silver than gold. In the meantime the market value of silver fell from $1.22 per ounce, the price ruling when the Bland bill was made a law in 1878, to 62 cents per ounce on June 29, 1893. As the coining value of silver is $1.29 per ounce, the market value has fallen to less than one-half the value fixed by law.

The decline in silver was accelerated by the announcement that the Indian mints had been closed to the free coinage of silver, and hereafter it is proposed to let the Government make the profit on silver coinage. The price of silver fell to 77 cents on June 26, when this action was made known, from 81⅛ cents on June 23 and 83 cents on June 21. The decline continued until June 29 when the low price of 62 cents was reached and then a recovery set in.

The general financial situation in this country had been unsettled for some time prior to the collapse of silver. Bank failures were more numerous than they had been even in April, and on the Pacific Coast were particularly disastrous. The New York banks were called upon to ship funds to the West until their reserves were in danger of depletion. Then the expedient tried so successfully in 1884 and 1890 was adopted and the Clearing-House banks agreed to issue loan certificates to such banks as should need them. Some $20,000,000 of such certificates have been issued, and, while the rates for money have remained exceptionally high, the effect has been to strengthen confidence. The Clearing-House banks of Boston, Philadelphia, Baltimore and New Orleans followed New York and issued loan certificates to such banks as were in need of money.

As the situation grew worse more urgent appeals were sent to Washington, that an extra session of Congress might be called to repeal the silver law of 1890. Mr. Cleveland early in the month had announced his purpose to convene Congress some time between September 1st and 12th. On June 30th, however, the President issued a proclamation calling Congress to meet in extra session on August 7. What Congress will do is a matter of uncertainty, but already the friends of silver have called conventions to discuss methods of resisting any attempt to legislate against silver, and a strong fight is promised.

That silver is not the only cause of the present financial trouble is suggested in various directions. Recalling the fact that the decrease in the gold in the United States Treasury was one of the earliest events that occasioned distrust, the official statement of the receipts and expenditures of the Government for the past fiscal year is of interest. While the revenues were $387,700,000 the expenditures were $392,500,000, or $4,500,000 more than the receipts. The Government has paid out more than it received, and is bound to do it for some time to come.

Since the Government stopped issuing gold certificates there has been considerable reduction in the amount outstanding, as whenever one is redeemed it cannot while the gold reserve is below $100,000,000 be re-issued. On July 1st the gold certificates outstanding amounted to about $93,000,000 while on March 1st last there were $114,000,000 a decrease in four months of $21,000,000. There has been a decrease since June 1, 1892, of $64,000,000 and the effect has been to make it difficult to supply the gold-using cities on the Pacific Coast with the currency they desire.

The exports of gold ceased early in the month, $2,000,000 having been shipped on June 1 and $1,000,000 on June 6. One shipment of $500,000 was made from London to New York and it arrived on the 30th, but no further imports are expected for the present.

The casualties in business during the first half of the present calendar year have been extraordinary, both in number and in the amount of liabilities.

The commercial failures for the six months ending June 30, are reported at 6,239 in number with total liabilities of $170,860,222 and estimated assets of $105,371,813. For the corresponding period last year they numbered 5,351, with liabilities of $56,535,521 and assets of $28,935,106. The ratio of assets to liabilities this year is 61 per cent. against 51 per cent. last year, indicating to a certain extent that the failures were in part due to the stress in the money situation rather than to inherent defects in business methods.

Abroad, the financial situation has been easier. The Bank of England on June 8 reduced its rate of discount from 4 to 3 per cent. and the week following to 2½ per cent While the Bank has increased its reserves, it is following a policy of obstruction to any efforts to draw gold for shipment to this country. It has declined to name any price for American Eagles, and refused to part with any quantities of them at 76s 6½d per ounce. The Indian Government, on June 26, decided to suspend the free coinage of silver for private account, and to issue rupees coined for Government account, in exchange for gold at the rate of 16d per rupee.

The open market rate in London for 60 to 90-day bills is 1½@1⅝ per cent. as against 2⅛ per cent. a month ago. In Paris the open market rate is 2¼ per cent. as against 2⅝ per cent. a month ago; in Berlin 3½ per cent., and Frankfort 3⅝ per cent. against 2⅝ and 2¾ respectively, a month ago. During the month of June the Bank of England gained £4,017,260 in bullion, holding at the close £30,119,008. The Bank of France gained £120,000.

The United States Treasury statement for May shows a decrease of $1,177,-886 in the net public debt. There was a decrease in the non-interest bearing debt of $321,112; an increase in the interest bearing debt of $1,990, and an increase of cash in the Treasury of $897,138. The total cash in the Treasury is $745,004,601, of which $188,455,432 is in gold coin and in bullion; $492,332,-471 in standard dollars, silver bullion and subsidiary coin; $42,286,108 in gold and silver certificates, legal tenders and National bank notes, and $16,093,221 in National bank depositories and disbursing officers' hands. The bonded debt on June 30 was $585,037,100, and total public debt, exclusive of certificates and Treasury notes offset by an equal amount of cash in the Treasury, $961,431,-766. Net available cash balance in the Treasury, including deposits in National banks and gold reserve of $95,485,413, is $122,462,290.

MINT COINAGE.—The coinage executed at the United States Mints during the month of June and since January 1st, has been as follows:

	June.		Six Months.	
	Pieces.	Value.	Pieces.	Value.
Gold Coinage	375,548	$4,485,402	1,262,747	$16,396,232
Silver Coinage	1,877,337	639,208	17,421,722	6,022,858
Minor Coinage	4,520,490	73,214	33,752,530	622,775
Total Coinage	6,773,375	$5,197,824	52,436,999	$23,041,860

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $99,337 circulation of National gold banks—was on June 30, $178,614,535. This shows an increase for the month of June of $1,550,058 as compared with an increase of $309,180 in May, and an increase in total circulation since June 30, 1892, of $6,038,897. During the month of June there was issued to new banks $399,-500, and to old banks increasing circulation $1,750,100. There has been surrendered and destroyed during the month $599,542. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $20,713,436, showing a decrease in that class of circulation during the month of $323 033.

The total amount of specie exported from New York city to all points during the month of June was $5,503,413 as compared with $17,615,845 in May, making a total for the year of $83,341,528. The imports for the month were $952,936, as compared with $366,446 in May, making a total for the year of $8,048,683.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	Total Supply.			Net Gold in United States Treasury.	Gold in Circulation.
	Gold Coin.	*Gold Bullion.*	*Total Gold.*		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099
April 1..............	546,674,424	79,503,760	626,178,184	106,893,224	519,284,960
May 1	532,513,105	80,529,774	613,042,879	97,011,330	516,031,549
June 1..............	523,592,686	80,871,868	604,464,554	95,048,641	509,415,913
July 1......	513,743,623	78,345,510	592,089,133	95,485,414	496,603,719

The following table shows the total amount of gold and silver coins and certificates, United States notes and National bank notes in circulation on July 1, 1893:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold Coin............................	$513,743,623	$110,109,923	$403,633,700
Standard silver dollars..............	419,332,450	362,302,707	57,029,743
Subsidiary silver.....................	77,256,212	11,855,944	65,400,268
Gold certificates.....................	94,041,189	1,071,170	92,970,019
Silver certificates	330,975,504	4,468,339	326,489,165
United States notes................	506,236,243	32,763,866	473,472,377
National bank notes................	178,713,872	3,982,733	174,731,139
Totals......	$2,120,281,093	$526,554,682	$1,593,726,411

Population of the United States, July 1, 1893, estimated at 66,946.000; circulation per capita, $23.86.

In answer to the call of the Comptroller of the Currency the National banks of the country, numbering 3830, have reported their condition as of May 4, 1893. From the abstracts of the reports made to the Comptroller during the past year, the following principal items are taken:

	Capital.	*Surplus.*	*Individual Deposits.*	*Gold.*	*Silver.*	*Legal-tenders*
May 17, 1892..	$682,232,158	$235,192,005	$1,743,787,545	$200,290,974	$38,753,134	$134,396,402
July 12, 1892..	684,678,203	238,239,970	1,753,339,679	190,751,183	38,569,297	137,030,016
Sept. 30, 1892.	686,573,015	238,871,425	1,765,422,964	173,932,133	35,184,246	118,262,945
Dec. 9, 1892...	689,698,017	239,931,932	1,764,456,177	174,104,733	35,748,436	108,746,335
March 6, 1893.	688,642,876	245,478,363	1,751,439,874	173,995,025	34,346,791	105,610,774
May 4, 1893..	688,701,200	246,139,133	1,749,930,817	168,862,941	33,359,200	103,511,163

Foreign Exchange.—The rates for sterling exchange have been weak during the greater part of the month, and the market was demoralized by the high rates for money in New York, while discounts in London have ruled very low. For the week ended June 3, rates for sterling exchange were strong, closing with actual rates at $4 86½@$4 86¾ for long, $4 89@$4 89¼ for demand and $4 89¾@$4 90 for cables. For the week ended June 10, sterling exchange developed great weakness, closing at $4 84¾@$4 85 for long, $4 86¾@$4 87 for demand and $4 87@$4 87½ for cables. For the week ended June 17, there was a further decline in rates, closing at $4 83¼@ $4 83¾ for long, $4 84¾@4 85¼ for demand and $4 85@$4 85½ for cables. For the week ended June 24, foreign exchange was so weak on account of the stringency in money here, that rates fell to exceptionally low figures closing at $4 82@$4 82½ for long, $4 84½@$4 85 for demand and $4 85@$4 85½ for cables. For the week ended July 1, sterling exchange rates fluctuated considerably and went still lower closing at $4 80½@$4 81 for long, $4 82½@ $4 83 for demand and $4 83@$4 83½ for cables.

The following are the latest actual rates of the principal dealers: Bankers' sterling, 60 days, \$4 80½@\$4 81; sight, \$4 82½@\$4 83; Cable transfers, \$4 83 @\$4 83; Prime commercial sterling, long, \$4 78½@\$4 79½; Documentary sterling, 60 days, \$4 79@\$4 80; Paris cable transfers, \$5 20⅝@\$5 20; Paris bankers', 60 days, \$5 23¾ @ \$5 23⅛; Paris bankers', sight, \$5 21⅞@5 21¼; Paris commercial, 60 days, \$5 26¼@\$5 25; Paris commercial, sight, \$5 23⅛. @ \$5 21⅞; Antwerp commercial, 60 days, \$5 27½ @ \$5 26¼; Swiss bankers', 60 days, \$5 25@\$5 23¾; Swiss bankers', sight, \$5 23⅛@\$5 21⅞; Berlin bankers', 60 days, 94 @ 94¼; Berlin bankers', sight, 94⅝ @ 94⅞; Berlin commercial, long, 93½ @ 93¾; Brussels bankers, sight, \$5 23⅛ @ \$5 22½; Amsterdam bankers', 60 days, 39⅝ @ 39¾; Amsterdam bankers', sight, 39 13-16 @ 39 15-16; Amsterdam commercial long, 39⅜ @ 39½; Amsterdam commercial, sight, 39 9-16@39 11-16; Kronors, 60 days, 26½@26⅝; Kronors bankers', sight, 26¾ @ 26⅞; Italian lire, sight, \$5 42½ @ \$5 40.

Paris advices quote exchange on London at 25.17 @ 25.18.

HOME MONEY MARKET.—Severe stringency has been the dominating feature of the local money market from the beginning to the end of the month, Rates for call loans generally ruled as high as 15 per cent., while on June 29, 3-16 per cent. per day premium in addition to the regular 6 per cent. interest, equivalent to about 74 per cent. per annum, was paid. Time money has been scarce and high, the nominal rate of 6 per cent. and a commission of 1 @ 2 per cent. ruling throughout the month. The market for commercial paper was stagnant, the offerings of paper being large but the money not forthcoming. In some cases the makers of paper were very urgent and were willing to pay ruinously high rates, still were left with their wants unsatisfied. For the very best names as high as 12 @ 15 per cent was quoted according to the quality of names and length of time. For the week ending June 10, the open market rate for call loans on stock and bond collaterals ranged from 2 to 12 per cent., the average being 4½ per cent. Commercial paper 6 to 7 per cent. For the week ending June 17, the open market rate for call loans on prime collaterals, ranged from 4 to 25 per cent., with 7 per cent. as the average. Commercial paper quoted 6½ to 8 per cent. For the week ending June 24, the open market rate for call loans ranged from 3 to 25 per cent., the average being 9 per cent. Commercial paper quoted 7 to 15 per cent. During the week ending July 1. the open market rate on call loans ranged from 4 to 74 per cent., the average being 15 per cent. Commercial paper quoted 8 to 12 per cent.

NEW YORK CITY BANKS.—The local banks have been called upon to supply an extraordinary demand for funds in the West during the past month, and were compelled to resort to the expedient of issuing Clearing-House certificates to prevent a collapse of credit. Deposits were withdrawn to the extent of about \$33,500,000 between June 3 and July 1, leaving them at \$397,970,000, against \$534,608,000 on July 2, 1892; a decrease of \$136,638,000. In the past five months nearly \$98,000,000 of deposits have been withdrawn, to meet which the banks reduced their loans \$53,000,000 and their cash reserve \$32,000,000. Since June 3 the banks have lost about \$7,000,000 specie and \$21,000,000 legal tenders, making a decrease in reserve of \$28,000,000. The surplus reserve has fallen to \$1,251,700 from nearly \$21,000,000 a month ago. The interior movement is estimated to have resulted in a loss for the New York banks in the week ended June 9 of \$8,018,000; a loss in the week ended June 16 of \$7,643,000; a loss in the week ended June 23 of \$5,101,000; a loss in the week ended June 30 of \$3,451,000, making a total loss for the month of \$24,213,000. From Sub-Treasury operations and gold exports the banks lost \$1,500,000 in the week ended June 9; gained \$700,000 in the week ended June 16; lost \$100,000 in the week ended May 23; gained \$600,000 in the week ended June 30, making a total net loss of \$300,000 for the month.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
June 10..	\$414,400,200	\$69,529,300	\$49,623,000	\$418,925,600	\$5,613,500	\$6,566,600 dec.
" 17.	410,700,400	68,218,400	42,192,500	406,536,400	5,650,500	5,644,100 dec.
" 24..	405,966,100	65,923,200	39,074,800	398,064,100	5,553,400	3,294,825 dec.
July 1..	413,650,400	62,988,300	37,758,2[illegible]0	397,979,100	5,618,400	4,230,2[illegible]0 dec.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of May, 1893, and the highest and lowest since January 1, 1893, by dates:

	YEAR 1892.		SINCE JANUARY 1, 1893.		JUNE, 1893.

A.T. & S. Fe...	275,795	C. R. I. & Pac..	139,903	Del. L. & W...	96,838	Union Pac .	42 332
	1,980,879		930,433		527,744		261,854

leaving 1,080,239 shares (including 515,375 shares of unlisted stocks) to represent the dealings in the remaining 156 stocks. In addition 362 different issues of railroad bonds were dealt in, to the amount of $19,979,500 also $93,000 State bonds and $228,500 Government bonds. (Compared with June, 1892, there is a decrease of 565,647 shares in stocks; a decrease of $16,718,500 in railroad bonds; a decrease of $262,200 in State bonds; an increase of $84,000 in Government bonds, and an increase of 332,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $79,000; stocks, 515,379 shares, of which 423,079 were American Sugar Refiners' common stock and 12,210 preferred; mining stocks, 3,100 shares. American Cotton Oil Certificates, 23,452 shares of common and 3,701 shares of preferred; Pipe Line Certificates, no sales. Of National Lead common 46,883 shares, preferred 8,207 shares; of silver bullion certificates, 665,000 ounces, extremes being 83⅛ and 62, closing at 69 bid. The listed stocks show a decrease of 3,289,603 shares as compared with the amount sold in May. Transactions in railroad bonds show a decrease of $7,013,500 during the same period, an increase of $43,300 in State bonds, and an increase of $165,200 in Government bonds. In unlisted bonds an increase of $78,000; in unlisted stocks a decrease of 745,749 shares; in mining stocks a decrease of 9,000 shares; a decrease of 78,362 shares in Cotton Oil Certificates common, a decrease of 8999 shares in preferred; a decrease of 19,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 588,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of June were sold: 1,947,313 shares of railroad and other stocks representing dealings in 79 properties. Of this amount 1,576,041 shares are transactions in the following 12 stocks:

C. M. & St. P..	507,930	C. R. I. & Pac.	125,770	N.Y. & N. E....	87,380	Gen'l Elect.....	52,191
C. B. & Q......	192,810	A., T. & S. Fe.	122,460	W. U. Tel.......	64,250	N. Pac. pfd....	32,860
Phil. & Read..	187,040	Chic. Gas......	113,510	Dis & C. F. Co..	58,730	Nat'l Cordage..	31,110
	887,780		361,740		210,360		116,161

leaving 371,272 shares to represent the transactions in the remaining 67 stocks, of which American Sugar Refinery Common furnished 216,020 shares. Transactions in railroad bonds during the same period amounted to $2,204,000; in mining stocks 26,522 shares, 135,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show a decrease of 645,477 shares as compared with the month of May; an increase of $258,000 in railroad bonds; a decrease of 5,623 shares in mining stocks; a decrease of 201,000 barrels in Pipe Line Certificates.

As compared with June, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks decreased 443,767 shares; bonds decreased $700,000; mining stocks decreased 81,483 shares, and Pipe Line Certificates decreased 492,000 barrels.

The gross earnings of 137 roads for the month of May, 1893, were $43,074,051, being an increase of $3,537,074 over May, 1892. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Brown.—Geo. F. Brown, of Salem, Mass., died June 11, aged eighty-two years. He was a Trustee of the Five Cents Savings Bank, and a director of the Asiatic Bank.

Chamberlain.—V. B. Chamberlain, of New Britain (Conn.) died June 25, aged sixty years. He was judge of the police court for 25 years, was State treasurer for two years under Gov. Harrison, and was a member of the Army and Navy Club of the State. He was also President of the Mechanics' National Bank, Treasurer of the Burritt Savings Bank, and representative in the legislature. He was very prominent in politics, and was well known throughout the State.

Conrad.—C. H. Conrad, a member of the banking firm of W. S. Patton Sons & Co., Danville, Va., was found dead on the track of the Richmond & Danville Railroad, near Amelia Court House, June 23. He is supposed to have fallen or been thrown from the train.

Drexel.—Anthony J. Drexel, the head of the banking house of Drexel, Morgan & Co., New York; Drexel, Harjes & Co., Paris, and Drexel & Co., Philadelphia, died suddenly of apoplexy at Carlsbad, Germany, June 30. Anthony Joseph Drexel was born in Philadelphia in 1826. His father, Francis Martin Drexel, was a native of Donbirn, in Austrian Tyrol, where he was born in 1792, coming to America in 1817. F. M. Drexel in 1837 founded the large financial institution of which his son was the head. The father died in 1863, and was succeeded by his sons, A. J. and Francis A. Drexel, under whose management the firm became one of the most successful in the country. The New York house of Drexel, Morgan & Co. was founded in 1850, and the Paris house, Drexel, Harjes & Co., in 1867. A. J. Drexel was the head of the Philadelphia house of Drexel & Co. and a partner in the others. The Drexel houses are money furnishing establishments, their principal business being to supply capital for individual and corporate enterprises, especially those of large proportions. A. J. Drexel entered the bank of Drexel & Co. at the age of 13, and since then a history of his life can best be found in the history of the Drexel houses. To his directing hand has been attributed, in large measure, the wide influence and solidity of the firm. In all negotiations touching upon the supplying of capital he had a quick and almost intuitive perception, which enabled him to arrive at conclusions without delay. The high character of Mr. Drexel won him many friends, in Philadelphia particularly. In the promotion of good he was always relied upon to take the lead. He was publicspirited and gave liberally of his own means. He recently founded and heavily endowed the Drexel Institute in Philadelphia. With his warm personal friend, George W. Childs, he endowed the printers' home in Colorado. His habits were of the most quiet kind, being of a most retiring and unpretentious disposition, and he disliked nothing more than display. He had a strong inclination to art and especially to music. Mr. Drexel is supposed to have been worth about $30,000,000. Three sons and a daughter survive him

Fallis.—J. D. Fallis, President of the Merchants' Bank, Cincinnati, Ohio, died suddenly at Jamestown, N. Y., June 8.

Hains.—James M. Hains, President of the New Albany (Ind.) National Bank, died June 26, at the age of seventy-five years. He was a successful manufacturer and banker, and had accumulated a large fortune.

Hall.—John Hall, Sr., President of the Bank of Fulton (Kans.) died June 17.

Harris.—Capt. Thomas Harris, President of the New Hampshire National Bank, Portsmouth (N. H.), died June 26.

Hastings.—H. F. Hastings, a director of the People's Savings Bank, of Grand Rapids, Mich., died June 19.

Keller.—Col. Wm. J. Keller, formerly President of the Bankers and Merchants' National Bank, Dallas, Texas, died June 9, aged fifty-eight years.

Lawrence.—Abbott Lawrence, a director of the Merchants' National Bank, Boston, Mass., died July 6, aged sixty-four years.

McMillan.—Geo. W. McMillan, Cashier of the Mechanics' Bank, Brooklyn, N. Y., died June 7.

Northrup.—Daniel W. Northrup, founder of the Brevoort Savings Bank, Brooklyn, N. Y., died June 9.

Ormsby.—D. V. B. Ormsby died June 22, aged seventy-four years. He was one of the original incorporators of the Franklin Co. Savings Bank of Farmington (Me.) and its first President, having served three years, and at the time of his death was one of the trustees.

Richardson.—Daniel Richardson, President of the Farmers and Merchants' Bank, Hennessy, Oklahoma Ter., died June 8.

Spaulding.—Hon. Edward H. Spaulding, founder of the First National and City Savings Banks, Nashua, N. H., died June 21, aged sixty-eight years. He had not been inactive business for some years prior to his death.

Tower.—Dr. Charles Carroll Tower, Vice-President of the South Weymouth (Mass.) Savings Bank, died May 29.

Whitin.—W. D. Whitin, a director of the Whitinsville (Mass.) National Bank, died June 4.

Woolworth.—R. C. Woolworth, President of the Crocker-Woolworth National Bank, San Francisco (Cal.) died June 10.

RHODES'

JOURNAL OF BANKING.

Vol. XX. AUGUST, 1893. No. 8.

CONGRESS will be in session when this number of the JOURNAL appears, and it is not good to prophesy what the extra session will do upon any given question. The repeal of the silver-purchase Act, being the especial object for which the extra session was called, appears to be confidently expected by a majority of the people. It is however customary to confidently hope for what is desired the most, and there is little doubt but that all of those interested in sound finance desire this repeal above all things. It is not so much the stoppage of the silver purchases that will avail to improve the monetary condition of the country as the understanding that this stoppage, if it can be effected by the votes of the representatives of the people, means that the gold standard will be maintained. It is the uncertainty of the maintenance of the gold standard in the face of continued silver purchases that has from the beginning of the year caused all this liquidation and consequent woe. The consensus of opinion to be gathered from interviews with financial men, from addresses before congresses and before boards of trade, and from financial writers, is strong upon this point: that the dread of having the immense amount of evidences of indebtedness based upon property in the United States lose a large portion of their value, that has depressed all these securities. Everyone holding them felt their possessions shrinking in their hands, and there has consequently been a tendency to sell and hold the cash to purchase to advantage at still lower rates, that has placed the weaker financiers and capitalists in straits. All the business institutions of the United States are based upon comparatively short credits, and there is very little capacity to endure a long and continued strain such as this has been.

However great the necessity for some action by Congress, it is too much to expect that the representatives can act without delay. It is the province of a legislative body to deliberate, and while the press and many distinguished financiers may think that the arguments pro and con have by this time been pretty well presented, it will probably be found that Congress will take the matter up *de novo*, and that there will be much old straw to be threshed over again before a conclusion will be reached. There are, moreover, a multitude of financial questions all germane to the main question of relief that will be sure to crop out as soon as the debate begins.

The mere repeal of the silver-purchase law is not sufficient in itself. There should be some method adopted to maintain the gold standard so sincere and cogent that it will inspire our own people and the people of the world with confidence. There are defects in our banking system, both National and State, that should be remedied. There are also many defects in the system of managing the finances of the Nation that should be amended. Each representative will come imbued with the ideas prevalent among his constituents, and it will take time to express and harmonize these ideas, both in the committees and upon the floor of the House, before there can be coalescence and agreement. As has been stated in the JOURNAL, the opposition has not yet been heard. However erroneous the arguments of the self-styled bimetallists may be they are powerful in numbers and in conviction. It will not do to say that that they are not sincere and do not believe their arguments. The subject has so many aspects, and is so connected with the science of political economy, that men representing constituents whose vital interests are involved can readily believe the most unsound financial doctrine. The question of silver is so involved with that of supply and demand and of general credit of large sections of the country, that narrow views are apt to impress many people. The advocates of State bank circulation and unlimited greenbacks will no doubt endeavor to press their views, and fallacious as they are, there are many who hold them. It is to be hoped however that there will be temperate and statesmanlike discussion of the soundest character upon the finances of the United States. There never was a time when the public were more ready and anxious for prompt relief. It is to be hoped that the question will finally not only be settled right, but after so thorough an investigation and ventilation that it will stay settled for a long time to come.

The people are in no mood to endure filibustering or delay. The business of the country demands prompt as well as conservative action.

EUROPEAN GOLD HOLDINGS, thanks to the philanthropic financial legislation of the United States, have shown a remarkable increase within the past three years, and had the nations that are struggling to get on a gold basis desired to shape our fiscal policy in their own interests they could have devised no measure whose operations would have more effectually served their purposes than the so-called Sherman Act.

Between July 1, 1890, and July 1, 1893—a period almost coincident with the operations of the silver-purchase Act—our net losses of gold foot up to $103,473,896, of which $95,000,000 was withdrawn from the Treasury, and $8,500,000 from circulation. On account of the large additions to the gold circulation during the past year, caused in part by the release of gold by the banks, the losses by export have borne more heavily on the banks and the people than for the preceding year. From July 1, 1892, to July 1, 1893, the net decrease of gold in the United States was $72,000,000, of which $53,000,000 was taken from the circulation and only $19,000,000 from the Treasury.

It should also be borne in mind that while the decrease of gold from 1890 to 1893 is $103,000,000, we have, in the same period, produced more than $90,000,000 of the yellow metal.

An examination of the gold holdings of four European countries—England, France, Germany and Austro-Hungary—will show that all those nations, excepting Germany, have increased their stock of gold between July 1, 1892, and July 1, 1893, the total increase being $39,500,000. In the same time Germany lost some $20,000,000. If we extend the comparison from July 1, 1890, to July 1, 1893, the result is more significant. Below are shown the changes since July 1, 1890:

Bank of	*July 1, 1890.*	*July 1, 1893.*	*Increase.*
England	$106,000,000	$150,500,000	$44,500,000
France	264,000,000	343,000,000	79,000,000
Germany	141,500,000	163,000,000	21,500,000
Austro-Hungary	25,000,000	52,000,000	27,000,000
Total	$536,500,000	$708,500,000	$172,000,000

A glimpse at this table is enough to reveal the whereabouts of a large number of American eagles that are already pluming their wings for homeward flight in anticipation of renewed confidence in the stability of our monetary system, the natural result of the return of sanity to our legislative councils.

THE FINANCIAL PRESSURE OF THE PRESENT YEAR has shown both the strong and the weak points of the methods of banking in the United States. The abhorrence of monopoly shown by people under a republican form of government has prevented the establishment of a great bank, like those of France, England and Germany, to protect and at the same time dominate the business of the country. Such a system was partially tried under the two banks of the United States, the first existing from 1791 to 1811, and the second from 1816 to 1836. The power exercised by either or both of these banks was much less than that exercised by the Bank of England, and yet they were accused of manipulating the currency and manœuvring with their resources to the injury of the business interests of the country. Every attempt to revive a National bank after 1836 failed. Much of the opposition to and prejudice against the National banking system is due to the impression that it is a great united machine by which the banks all act as one. It is however the lack of coherence among the banks of the country that causes the exhibition of so much weakness in times when credit falters. The banks of the United States carry the principle of independence of each other to a disastrous extent. In ordinary times the bank exercises the freest choice of correspondents, and often changes its accounts upon the smallest pretext or the slightest chance of more accommodation and consequent profit. The competition for accounts has done much to eradicate all sentimental feeling, and the desire of the banks to help each other in times of disaster is now almost wholly grounded upon an enlightened selfishness. In other words, this financial storm found very many of the banks of the United States like a large number of comparatively small institutions, each without other reliance than its own immediate resources. There was no power of combination among them, but a great deal of distrust arising from the fact that each bank felt its inability to help others. Even in the largest cities of the country there are no single banks that compare as to availability of resources with the banks of England and France. And this explains the failure in so many parts of the country of banks in the possession of perfectly adequate resources, if they could be realized upon. It is a disgrace to the system of banking that with resources perfectly good if carried for a few months a respectable bank cannot get money to protect it from failure. It is no wonder that so many think the supply of currrency is inadequate when in reality it is abundant if proper relations existed among our banking institutions. That this is true is proved by what may be called the strong point of the banking system of the United States—the association of the banks in our great cities for mutual protection. If there had been a similar association among all the banks of the country, preserving their individual independence and at the same time having an organization with competent heads to pass on their resources, so that if help was needed the strength of all could be drawn upon, there would have hardly been a failure or even a suspension.

It is a well-known fact that in the United States or in any developing country almost any asset or resource will increase in value within a certain number of years. Mortgages on good but undeveloped lands and other securities based mainly on realty are almost sure to acquire value within a reasonable time. The notes and other evidences of debt included in the assets of a bank are of a character far above the average as to security and as a rule are sure to be realizable in money in the near future. If therefore there were some form of organization for mutual help among the banks of the United States, National and State—in both city and country—by which the good resources of each could be preserved in times of trouble, failure of any and especially of any well-managed bank, would be almost impossible.

The power of association has shown itself among the banks of New York city. With the changes necessary to altered conditions of distance and locality there is no reason why such an association should not exist among all the banks of the country. The example of the Bank of England and the English joint stock banks in dealing with the Baring failure is a case in point. The Barings had for their principal resources the securities of Argentina, impossible of immediate realization. The Bank of England and the joint stock banks of England guaranteeing the liabilities of the Barings gave the time necessary for the securities mentioned to gain value. Argentina, like the United States, has a great future. This co-operation among banks would not only have a preservative effect in time of trouble, but as a side issue would keep competition within bounds and have a wholesome effect in repressing the unnecessary organizations of new banks by speculators and irresponsible people. Such a movement should be inaugurated by the banks themselves and should not be a matter of legislation.

THE MAIN ARGUMENT OF THOSE WHO ADVOCATE the retention of silver as a coin metal is that the gold in the world alone is not sufficient to furnish a basis for the financial transactions of the world. To those who believe that for every business transaction, for every act of buying and selling, there should be an equal amount of coin in existence, this argument may appear to have some force. Perhaps there are some who cannot really understand that a measuring instrument need not be as long as the thing measured, but men of ordinary intelligence readily comprehend that one bushel measure can measure a thousand bushels of grain or a million if time is given, and that one yard-stick can do the same for any number of yards of cloth. To reduce the time required the unit of measure, whether bushel or yard, is multiplied by various devices, but the unit continues the same.

So with gold as a measure of value; there are the devices of credit which multiply its measuring power within short periods of time, to almost any extent required—resolving themselves after having accomplished their purpose into the original unit of value again. It is often asserted that if all the paper money and all the debts payable in gold were demanded at once that there would not be gold enough to pay them. In one sense possibly there would not, but the operations of the clearing-houses in the great cities of the world show how over ninety per cent. of the debts that become payable at the banks from day to day are each day paid in gold with the use of hardly any gold at all. It is the possibility of offsetting one debt against another, of exchanging debits for credits, that lies at the basis of modern financial methods. But the world's stock of gold is by no means inconsiderable. As shown on another page the Banks of England, France, Germany and Austro-Hungary had on July 1 a total of $708,500,000, and the United States on the same date held $592,000,000—an aggregate of $1,300,500,000.

Another argument is that the United States should rise up in arms to replace silver as a money metal criminally robbed of its prerogative. The assertion is made with a vehemence that would convince the very elect, if there were only some truth behind it, that there has been a conspiracy on the part of the creditor portion of the world to reduce the money of the world one-half by the demonetization of silver. That this conspiracy was participated in by some persons in the United States who were bribed by Ernest Seyd in 1873 with 100,000 pounds sterling in British gold to secure the passage by Congress of the Act demonetizing the silver dollar.

This story seems to be without the essential elements of proof. Ernest Seyd is dead, and although this of itself would not invalidate the story, yet no part of the sum of money which it is alleged he brought into the country has ever been traced, and some of the most ardent silver advocates admit that none of it was spent in the United States, but that Mr. Seyd simply finding it unnecessary to perpetrate bribery either kept the money for himself, or, assuming that a corruption fund was even arranged for, it seems quite unlikely that any part of it ever reached this country. That silver has been cheapened as measured by gold is a fact, and it is also certain that this cheapening process has gone on more rapidly since the demonetization of the silver dollar in 1873 and the closure of the mints of foreign countries to the free coinage of the metal. The last drop in silver has been caused mainly by the closure of the East Indian mints. But this closing of the mints against silver during the last century has not been caused by a conspiracy but by the gradual consensus of mankind in favor of money of one standard of value. Silver was tried as the one standard but found impracticable, and the resort to gold has been as plain a result of natural laws as any accepted fact in the domain of science.

THE FAILURE OF THE WISCONSIN FIRE AND MARINE INSURANCE CO. BANK indicates how a bank of acknowledged strength and credit must succumb to a steady drain upon its cash resources, if long enough continued, when standing by itself alone. This was one of the oldest and most famous banks of the Northwest It had a most romantic and interesting history, which has heretofore been given in the pages of the JOURNAL. It was founded by men versed in the principles of Scotch banking, and in the *ante bellum* days was famous for the large amounts of currency it issued and the strict integrity with which it redeemed all its pledges. Perhaps, adhering too closely to the principle of English and Scotch banking in the matter of reserves, and relying too much upon the credit of the bank, the managers did not recognize as much as they should have done how isolated the strongest bank may become in the United States, and carried their resources in less available form than they might otherwise have done. But in a time of stringency, when the unreasoning suspicion of depositors has once been fixed on a single institution, we doubt whether any bank, however strong, could realize upon sufficient of its assets to pay its depositors in full. The support to be expected from one or two correspondents in such times cannot amount to a great deal, because the resources of even the strongest bank in the United States must be reserved for each of its correspondents pro rata, and cannot be given to one alone. This failure is a type of many others that need not have occurred had there been a system of organized support, in times of apprehension, in existence among the banks of the United States such as already exists among the banks of the largest financial centres.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

I.

RULES GOVERNING RATES OF DISCOUNT.

Discount is the process by which the bank takes from the face value of paper offered the proper or legal deduction as a compensation for the use of money loaned. The amount of the deduction, according to accepted theories, is governed by the following rules and modifications and extensions of them:

(1) The rate of discount is low where the time is long and the security great.

(2) The rate is low where the security is great regardless of time.

(3) Where the time is long and the security doubtful the rate is high.

(4) Where the security is doubtful and hazardous the rate is high.

The question of discount in its ultimate results means not only the acquisition of a proper per cent. as interest (which the bank usually obtains in advance), but what is more important, the return of the principal loaned. Hence the questions for consideration are in each case:

(1) Will the note offered be voluntarily paid at maturity?

(2) If not so paid can its collection be enforced by the sale of collateral attached or by legal proceedings?

To answer the first question correctly implies a knowledge of the character of the party offering the paper for discount.

(1) The party is well known.

(2) The party is know personally by reputation.

(3) The party is a stranger.

The banking business is in some cases conducted by the same officials for years. The borrower has been known from infancy, and his parents before him. He inherited the business, and from parental instruction, early education and continued practice he knows it thoroughly. He has always kept his account at the same bank, and has maintained his character for honesty and integrity through every vicissitude of his business career. His word is as good as his bond. His estate is no secret. The bank official knows this man. He has confidence in him. He feels that the bank's money is as safe intrusted to him as it would be if invested in Government bonds. He does not care to present to this man any blank applications, asking him to state his assets, liabilities, etc. The answer might be:

"Certainly, John, but you can make this out as well as I can, you know it all yourself."

Every bank official has such men among his customers—and they are always welcome to any money the bank has to offer on the best of terms and on their personal paper.

"Woe is me," says Mr. Ironclad. "You are preaching a false doctrine.

The First National Bank has none but two-name secured paper." My answer is: "I don't believe it."

Unfortunately, the above class of borrowers is not large for the reason that their wants are generally few and far between. It is not fair to say that the above loans are a class absolutely safe. Alas for human nature, it is liable to fall. The honest man of to-day becomes a known thief to-morrow. A life of rectitude is swallowed up in a single act of infamy, and the bank official is blamed for his trust in human nature. Mr. Ironclad's statement that "business is business" is eagerly applauded, and there are many "I told you so's."

While this is true, the statement of a successful banker of forty years' standing to a young friend whose theory was "Trust no man," is full of force. Said he: "In my long experience I have found that the great majority of men are honest."

The sophomore in college declaims: "Between the known and unknown is the border land of doubt." The bank officer often finds himself in this undesirable region.

The fact that the proper official is considering the paper offered implies that the bank has funds to lend. Such being the case there is a proper desire on his part to secure the best attainable paper.

KNOWN AND UNKNOWN BORROWERS.

We now reach our second class of borrowers where the party is known personally and by reputation, and is not as in the first case an approved borrower of the bank. This applicant may be one, 1st, with whom the bank has a previous arrangement to lend him a certain sum upon agreed securities; or, 2nd, one to whom the bank is bound by no agreement. The first case admits of but few questions: Is the amount desired within the agreed limits? Are the securities offered according to the arrangements made? Have any new facts come to the knowledge of the officials which in their opinion render it necessary to vary the former agreements? These questions, except under peculiar circumstances, are easily answered.

The second case presents for consideration a new loan. This opens the question presented for discussion fully.

How shall the proper bank authorities determine the value of this paper? For the sake of argument, we will assume that the would-be borrower has no account at the time with the bank; that he is in business; that he is offering his own paper, secured by personal endorsement or collateral. In the first place, he is either acquainted with some officer or director of the bank, or he is introduced by some known person to the President or Cashier as desiring to do business with the bank. It is very likely that if he is introduced to one officer, that one will introduce him to others.

Without seeming inquisitive, the officers, in the general conversation that follows, will discover where the previous bank account has been kept, the character of balance maintained, the line of discount (if any) given, the reasons for a change. The nature of the business of the depositor, whether individual, a partnership, or a corporation will be ascertained; the reason for which a demand for accommodation will arise, the amounts desired, and other general information.

All things being satisfactory and the account appearing desirable, it is likely that the President will suggest that the Loan Committee will meet the next evening but one; that it is desirable that accurate information be placed before them in regard to the business of the proposed borrower; and that they have found in their practice that a much more accurate idea can be formed from a written statement than in any other way. Would Mr. B. kindly take one of their blank applications and have it properly filled out and return it to the Cashier before the close of business hours on the day of the committee meeting? Meanwhile, the officers assure Mr. B. that their bank is noted for the manner in which it takes care of its friends, both old and new, etc.

WHAT THE APPLICATION SHOULD SHOW.

Mr. B., upon going to his office, opens the blank, or blanks, given him, for there are two of them. They read as follows:

...., being desirous of opening an account for the transaction of a general banking business with the Second National Bank of Buffalo, N. Y., and wishing to obtain at times a line of accommodation to the extent of —— dollars, presents for the consideration of the President of the said bank the following statement:

(1) Name.
(2) Residence.
(3) Character of business.
(4) If a partnership, state names and residence of each.
(5) Has any or either of said parties any other business? If so, what.
(6) State age and length of time each partner has been in the business.
(7) If an incorporated company, give the names of the stockholders, their residence and the amount of stock held by each.
(8) State when incorporated.
(9) Is the capital stock fully paid up in cash? If not so paid, state how paid.
(10) What has been your average balance in bank by the month for the past year?
(11) At what time in the year will you require loans from the bank, and in what amounts?
(12) Do you propose to give endorsers on your paper? If so, give names.
(13) State the residence, business and supposed worth of each endorser.
(14) Do you propose to give collateral? If so, state what and the present market value of same.
(15) What is the yearly volume of your business?
(16) Have you any money borrowed from private parties? If so, state name and amounts.
(17) What securities, if any, have you given these parties?
(18) Give a complete statement of
Assets and Liabilities.
(19) What amount of Insurance do you carry, in what companies and in whose favor?
(20) Do you keep any other bank account? If so, state where.
(21) If a corporation, state the officers. President, Secretary, Treasurer, Directors and their business occupations.
(22) What amount of regular business paper will you have to offer?
(23) Will the officers and directors endorse your direct paper?
(24) Sued or any suits pending?
(25) Signed by all parties, the individual or the officers of a corporation?
(26) Form of verification.

To this list of questions each banker may add such others as he may consider necessary.

Some borrowers, or, rather, would-be borrowers, may decline to answer such questions, and indignantly carry their paper to some bank where the officers will be less inquisitive. They will fail to see that a thorough understanding of their financial condition is requisite to that complete confidence which should exist in such cases. Their individual paper may be good, their character for honesty and integrity unquestioned, their business judgment of a high order—the higher the class in which they stand, the less real reason there is for concealment. They must remember, too, that while they know their business and needs thoroughly, the banker must learn these things from some source, and why should he not get information from the borrowers themselves?

If, however, the applicant takes the blanks from the Cashier and duly fills them out and presents them for the consideration of the officers and directors, it becomes the duty of the President and Cashier to carefully examine the blanks filled.

STATEMENTS TO BE SCRUTINIZED.

There must be consistency all along the line. When it comes to the statement, the items of assets and liabilities must be examined with due care and the accuracy of the figures tested. There will be strong points here and possibly weak ones there. A fictitious value may be placed upon real estate or stock, or some item of personal property. The bills payable may be out of proportion to the cash assets. In fact the bank officers must so examine the statement that when they present it to the Board of Directors of the Committee on Loans, they will be able to give promptly and accurately any desired information.

The directors are presumed to be men of business experience, and when the President at their meeting, says: "We have the following statement to present," they are ready to examine it in detail. Some one of them may be in the same line of business as the applicant; if so he is able to state upon brief consideration an opinion as to the condition of business as shown by the statement.

It is needless to follow the discussions of the directors. Sufficient to remark that unless there is comparative unanimity of opinion it is better to respectfully decline the account and the paper offered.

If the account is desirable and the security offered satisfactory, it then becomes the duty of the President to so notify the applicant, who then proceeds to open his account. After this period, subject to the conditions of the agreement, the question of amount of advancements is easy. But each note offered requires careful scrutiny as to form, collateral and endorsements. Each note, like a tub, must stand upon its own bottom.

When the bank officers have convinced themselves that a loan is desirable, it is of course necessary to scrutinize carefully the form of the note. To do this the Cashier or President must know the law relating to commercial paper—and this is not the same in all the States. But few things are essential—the name of the place of execution, the promise to pay a specified amount at some bank, a stated time for payment, the name of the payee, a stipulation for attorney's fees, a waiver of valuation and appraisement laws, a statement as to the rate of interest, whether from date or maturity, the signatures of the maker and security, or the endorsers.

The distinction between a note and a bankable note, with the different rights belonging to each, are too well understood to be argued at length in an article like this. If a note is secured by collateral, in the shape of stock or bonds, or other personal property, it is customary for the note to show upon its face, for example, the number of the certificate of stock, the number of shares it represents and their face value, an agreement that the holder may, upon giving so many days' notice, sell the collateral, and also that the holder may purchase the same at the sale.

I suggest the following forms which would probably be held good in the courts of last resort in any of the States:

A.—PROMISSORY NOTE.

$.................. Buffalo, N. Y.,.......................... 189

.... after date...... we, or either of us,

promise to pay.. or order,

.... DOLLARS,
100

and Attorney's Fees, value received, without any relief whatever from Valuation or Appraisement Laws. The drawers and endorsers severally waive presentment for payment, protest, and notice of protest, and non-payment of this note.

Negotiable and Payable at the Second National Bank, Buffalo, N. Y.

With ...... per cent. interest until paid.
Interest paid until maturity.

....

....

Due.......................... ....

B.—COLLATERAL NOTE.

$.................. 189

.... after date, I, we, or either of us, promise to pay

.... of ....

or order, at ....

.. DOLLARS,
100

and Attorney's Fees, for value received, without any relief whatever from valuation or appraisement laws, (the drawers and endorsers severally waive presentment for payment, protest, notice of protest and non-payment of this note), with interest at .... per cent. per annum .... until paid. And .... hereby pledge as security for the payment of this note and for the further payment of any and all indebtedness of .... due or to become due to said .... Shares of .... said shares bearing Nos .... and being of the face value of .... Dollars, with power hereby conferred upon the holder of this note to sell said stock after default in the payment of this note, in such manner and at such time as he or they may deem proper, either at public or private sale, without notice. Said .... or the then holder of this note shall have the right to purchase said stock at such sale.

....

....

These matters scarce deserve mention here, for no bank official would think of discounting a note unless its form was to his entire satisfaction.

DETAILED CONSIDERATION OF DIFFERENT KINDS OF PAPER.

Among the first essentials is to know that the paper offered is either a straight loan, or that it represents an actual business transaction; in other words, that the paper offered is not simply a loan of credit or accommodation paper. This is seldom desirable.

A very high order of paper not included in the previous discussion is what is generally termed a bill of exchange or draft. An excellent author has said in regard to the varieties of paper with which a bank has to deal: "In the first order of merit come bills bearing the names of banks or banking houses as drawers, acceptors or endorsers, together with other names of high standing. These bills stand A1 in the estimation of the discount market, and the fanciful speak of them as gilt-edged. Then we have 'remittance paper'—bills drawn by houses abroad on banks or correspondents in England. Then comes 'inland drawn paper'—bills drawn by shippers of goods on the agents in England or the houses abroad to whom the goods are shipped. Anon we come upon 'brokers' paper'—bills drawn by importers against commodoties placed in brokers' hands for sale. Then we reach the class of bills arising out of our manifold trades and industries, known as trade paper; and, finally, we have a nondescript class, of limited amount, consisting of promissory notes, or loan bills."

To this might be added our general term of drafts, or drafts with bills of lading attached—an excellent kind of paper for discount. But we take it that none of these come within the scope of our article except promissory notest Is it possible to classify such promissory notes as will be offered? Yes.

First. Individual, or one-name paper.

Second. Paper having personal endorsements.

Third. Paper secured by collateral representing personal property.

Fourth. Paper secured by collateral representing real property.

The first three classes may be taken by all bankers; the last is open, to a very limited extent, to National banks.

What a pity that paper offered for discount cannot be tested like silver money—by an acid—or be looked up in a counterfeit detector. Here the test is by mental and psychical processes. The mind of man by concepts and precepts and a chain of reasoning reaches a conclusion. It may be accurate, it may not.

Which of the four classes of paper is the best for a bank to hold? Many will say shun one-name paper. Yet each will admit that he has in his note-book just such paper, which is as "good as the bank."

It is likely that most bankers will agree that classes two and three are the best for banking purposes. Paper represented by either of these is strictly legitimate banking paper. The only question, then, to be determined is the value of the particular piece of paper. This must be decided by the proper authorities, after gaining all the information in their power.

SHREWD BUSINESS JUDGMENT.

After all, in practical business life, we cannot stop to apply worked-out theories and stiff rules to everyday work. Life is too short; we are too busy. The age is too fast. While we should neglect no species of education, it is the shrewd business judgment of the bank officer which is the real foundation stone of the bank's success. "How to determine the value of paper offered for discount"—a theoretical essay by the Hon. So and So, or a learned argument by a rising young bank officer—will be read with interest by many a banker. It will be pronounced good or bad largely as it measures up to his own methods.

It may be that here and there some disciple will endeavor to apply the theory announced to his own practice. But most bankers will, in the end, declare that a shrewd business judgment, the creation of a long and successful banker's experience, is the very best touchstone by which to determine the value of paper offered for discount. Enoch Pratt

ENOCH PRATT.*

[illegible] OF THE [illegible]

[illegible] AND [illegible]

[illegible] these days when great fortunes are made [illegible] by legitimate [illegible] by [illegible] speculation, when men grow rich in a single night not by their [illegible] but by the mere favor of fortune, it is refreshing and instructive [illegible] upon the career of a successful merchant who [illegible] success by [illegible] industry, by perseverance, by good judgment and by strict adherence [illegible] old fashioned ideas of steady work and practical business methods.

Such a man is Enoch Pratt. At fifteen years of age he left the school [illegible] counting house, and for well nigh seventy years has labored [illegible] in every quarter of the commercial field. Mr. Pratt received his [illegible] training among the merchants of Boston, and in that city learned those [illegible] principles of business which lie at the foundation of all true commercial success. At the age of twenty-three he left his New England [illegible] to the city of Baltimore, where he has since passed his life, and where his name is as familiar as a household word.

Enoch Pratt was born in North Middleborough, Plymouth County, Mass., [illegible] 10, 1808. His father, Isaac Pratt, was born in the same town [illegible] and his mother, Naomi (Keith) Pratt, was a descendant of the [illegible] James Keith, who came from Scotland in 1662. The American head of the Pratt family was Phineas Pratt, who arrived at Plymouth, Mass., in the [illegible] in 1622, and died in Charlestown, Mass., April 19, 1680, at the age [illegible] seven years. The record of both families is well known throughout the North especially.

Shortly after his arrival in Baltimore, Mr. Pratt established himself in the [illegible] iron business, under the firm of Pratt and Keith, succeeded by the [illegible] firm of E. Pratt & Bro., which is composed of Mr. Enoch Pratt, Mr. [illegible] (Mr. Pratt's brother-in-law), and Mr. Henry Janes, Jr. Though [illegible] merchant all his life, Mr. Pratt's strong and vigorous intellect has [illegible] him into many other fields of commercial activity. It has been in the [illegible] of freight and passengers, however, and in banking that Mr. Pratt has found his special work. He has been for thirty years director [illegible] Vice President of the Philadelphia, Wilmington and Baltimore Railroad, [illegible] more than half a century a director and President of the National [illegible] and Planters' Bank of Baltimore. He has also been closely connected with many of the Southern roads, and is probably one of the [illegible] men in the country as to the value of railroad property. [illegible] of the numerous steamboat companies that ply about the Chesapeake [illegible] tributaries owe their success to his aid and counsels.

[illegible] it has been as a banker and financier that Mr. Pratt [illegible]

* A portrait of Mr. Pratt, from a recent photograph, is presented in [illegible]

Chas. Pratt

ENOCH PRATT.*

PRESIDENT OF THE NATIONAL FARMERS AND PLANTERS' BANK OF BALTIMORE AND FOUNDER OF THE ENOCH PRATT FREE LIBRARY.

CAREER OF THE DISTINGUISHED MERCHANT AND PHILANTHROPIST.

In these days when great fortunes are made not by legitimate industry but by bold speculation, when men grow rich in a single night not by their own efforts but by the mere favor of fortune, it is refreshing and instructive to dwell upon the career of a successful merchant who has won success by patient industry, by perseverance, by calm judgment and by strict adherence to the old-fashioned ideas of steady work and prudent business methods.

Such a man is Enoch Pratt. At fifteen years of age he left the schoolroom for the counting-house, and for well-nigh seventy years has labored steadily in every quarter of the commercial field. Mr. Pratt received his early training among the merchants of Boston, and in that city learned those fundamental principles of business which lie at the foundation of all true commercial success. At the age of twenty-three he left his New England home for the city of Baltimore, where he has since passed his life, and where his name is as familiar as a household word.

Enoch Pratt was born in North Middleborough, Plymouth County, Mass., September 10, 1808. His father, Isaac Pratt, was born in the same town, March 6, 1776, and his mother, Naomi (Keith) Pratt was a descendant of the Rev. James Keith, who came from Scotland in 1662. The American head of the Pratt family was Phineas Pratt, who arrived at Plymouth, Mass., in the ship Ann in 1623, and died in Charlestown, Mass., April 19, 1680, at the age of eighty-seven years. The record of both families is well known throughout the North especially.

Shortly after his arrival in Baltimore, Mr. Pratt established himself in the wholesale iron business, under the firm of Pratt and Keith, succeeded by the present firm of E. Pratt & Bro., which is composed of Mr. Enoch Pratt, Mr. Henry Janes (Mr. Pratt's brother-in-law), and Mr. Henry Janes, Jr. Though an iron merchant all his life, Mr. Pratt's strong and vigorous intellect has carried him into many other fields of commercial activity. It has been in the transportation of freight and passengers, however, and in banking that Mr. Pratt has found his special work. He has been for thirty years director and Vice-President of the Philadelphia, Wilmington and Baltimore Railroad, and for more than half a century a director and President of the National Farmers and Planters' Bank of Baltimore. He has also been closely connected with many of the Southern roads, and is probably one of the best-informed men in the country as to the value of railroad property. More than one of the numerous steamboat companies that ply about the Chesapeake Bay and its tributaries owe their success to his aid and counsels.

But it has been as a banker and financier that Mr. Pratt has won most

* A portrait of Mr. Pratt, from a recent photograph, is presented in this issue of the JOURNAL.

distinction. His careful and conservative methods have so impressed themselves upon the policy of the bank of which he is President that the institution occupies in Baltimore a position somewhat similar to that held in London by the "old lady of Threadneedle street." When quite a young man he entered the bank as a director, and soon became the leading spirit in the board. When he assumed the duties of President he is said to have been as familiar with the inside workings of the bank as the most experienced clerks in the institution. As President of the clearing-house Mr. Pratt has piloted the Baltimore banks through many a dangerous storm and can justly claim no small share of the honorable distinction that his adopted city has not had a bank failure of any importance for more than fifty years. At the more active period of his life Mr. Pratt was a director in more than forty corporations covering every branch of commerce and manufactures. Naturally the advice and countenance of such a man has been eagerly sought and charitable and benevolent institutions of every kind deemed themselves fortunate when they secured the benefit of his counsels.

For many years Mr. Pratt has been one of the most trusted directors in the Savings Bank of Baltimore, the oldest institution of the kind in the city, and the deposits of which run hard on to twenty millions. Lately, however, he has withdrawn from the more active management of the Savings bank, though his advice and counsel are still sought on all questions of importance. Perhaps the most remarkable tribute to Mr. Pratt's ability as a financier and his integrity as a man is found in the fact that the City Council of Baltimore, though almost unanimous in differing from him on political questions, has time and again chosen him as one of the city's finance commissioners, a trust which he has discharged with a rare degree of skill and judgment. The position of finance commissioner is the only public office which he has ever filled, having uniformly declined every other offer of political preferment.

Though active in every branch of mercantile life Mr. Pratt has found time to devote much thought and care to all kinds of charitable institutions, to many of which he has contributed most liberally from his private fortune. He has been particularly interested in the school for the deaf and dumb, located at Frederick, Md., and in the reformatory for colored boys at Cheltenham, Prince George Co., in the same State. In these institutions he does not confine his attention merely to the financial department, but goes down into every detail of management, seeing for himself that every part of the machine is in proper running order. In fostering the reformatory for colored boys Mr. Pratt has shown that truest spirit of charity which goes off of the trodden way and into the by-paths of human misery to seek out those whom others have neglected and passed by. Perhaps many men who have accumulated great sums of money cherish some ideal plan of benefitting their fellows, but to very few is it given to see in their own lifetime the results of their generosity.

Mr. Pratt, however, wisely determined to lay with his own hands the foundations of his greatest gift. It was in 1882 that he announced to the Mayor and City Council of Baltimore his intention to donate to the city a public library with four branch buildings and a sum of money for its maintenance. The whole gift amounted to $1,145,833.33. The conditions of the donation are worth special mention. The main building and the branch buildings were transferred to the city and, in addition, a check for $833,833.33. When the gift was finally effected an additional $12,500 was added. The gift was absolute in its nature, and in return the city is forever bound to pay to "The Trustees of the Enoch Pratt Free Library" the sum of $50,000 per annum. It will be seen that by this far-sighted arrangement the library is effectually guarded from any loss by waste of the funds, for whatever might happen to the original fund, the city is still bound to pay the annuity to the library. As a matter of fact, the city provided the annuity out of the general tax levy and invested the original fund up to a short time ago, when the fund, with its accretions, amounted to sufficient to yield the required amount of $50,000. When this donation was first made public, Mr. Pratt was overwhelmed with begging letters from all parts of the country. It is said that one gentleman sent only his photograph, with name and address, and the legend, "Remember me." That gentleman had his trouble for his pains. The Enoch Pratt Free Library illustrates the character of the donor, in that is is essentially a popular institution, intended not for learned scholars nor for literary pedants, but for the everyday wants of plain people. The crowds that daily throng its rooms show that the donor has realized to the full his good intentions.

An account of Mr. Pratt's career as a successful merchant, railroad man and banker would form a standard text-book for daily use by every aspirant for commercial honors. In it are illustrated the old-time virtues of hard work, persistent application, unbending honesty and a rigid performance of contracts. Mr. Pratt is, above all things, an intensely practical man, a man who believes in doing and not in theorizing. With a man of this character to think is to act. Positive in his convictions and, within the bounds of courtesy, scarcely less so in his manner, Mr. Pratt has always been a leader among his fellows and the success of the undertaking has usually been the best justification of his leadership.

Mr. Pratt's habits have been careful and regular to a remarkable degree. His daily life is modest and unassuming to the verge of plainness. Easily approached by all who have occasion to call upon him he displays that true sense of gentility which treats all men with respect. In the President's room of the National Farmers and Planters' Bank he receives with equal courtesy the leading financiers of the city and the humblest callers who come to him for aid. At threescore years and ten when most men are content to lay aside the burdens of life and to rest awhile from their labors, Mr. Pratt was in the prime and vigor of his intellect, and now at more than fourscore years he still performs the duties and enjoys the pleasures of life in rare health both of mind and body, his eye not dimmed nor his natural force abated. Enjoying the fruit of his labors and resting in the shade of the goodly trees which his own hand has planted, he lives surrounded on every side by "honor, love, obedience, troops of friends and all that should accompany old age."

NATIONAL BANK CIRCULATION.—The expectation of Comptroller Eckels that the National bank note circulation would increase $5,000,000 during July has been realized. The net increase has been $5,041,385, raising the total circulation to $183,-655,920. The circulation based on bonds has increased $5,320,194, making the total live circulation $163,221,293, while there has been a loss of only $228,809 during July by the cancellation of notes retired from circulation. The total National bank note circulation is now larger than at any time in the past five years.

COMPTROLLER ECKELS IN NEW YORK.

As an introduction to the bankers of New York city, Hon. James H. Eckels, Comptroller of the Currency, was the principal guest at a dinner given at the Union League Club on Tuesday evening. July 18. Mr. Eckels had not met any of the officers of the New York city National banks before this time.

The dinner was planned by Hon. A. B. Hepburn, President of the Third National Bank, who was Mr. Eckels' official predecessor.

Those at the table were, besides Mr. Eckels, Mr. Hepburn, and Henry W. Cannon, President of the Chase National; President George G. Williams of the Chemical, President Frederic D. Tappen of the Gallatin, President J. Edward Simmons of the Fourth, President William A. Nash of the Corn Exchange, President James Stillman of the City, President George S. Baker of the First, President George Montague of the Second, President Ebenezer K. Wright of the Park, President Robert M. Gallaway of the Merchants', and President Brayton Ives of the Western; President John A. Stewart of the United States Trust Company; and Hon. Charles M. Preston, Superintendent of the Banking Department of this State.

After the introductions were concluded, Mr. Eckels said:

"The condition which confronts the American people is one that deserves the thoughtful attention of every citizen who has at heart the interests of the country. It is not a time of panic, because we have passed the period in our history when a panic is a possibility, but it is one of a slow liquidation, the result of undue speculation and unwise financial legislation. Nothing is to be gained by taking on a fright that is unwarranted by either the immediate past or the immediate future.

"What the American people ought to do, in the midst of the failures that have occurred, is not to give way to uncalled for alarm, but to study the characters of the institutions which have failed, the causes which have produced them, and the localities where they have occurred. After such a study let them view the solvent institutions everywhere about them, and the conclusion that must irresistibly follow is that the legitimate business life of the country is not threatened, but instead will come out of the present turmoil the stronger for having passed through it.

"In conservative business centers the failures have been few, either in banking or other lines. Bad banking at any and all times is dangerous and must inevitably bring disaster upon those who engage in it. The present stringency has simply hastened the closing of some banks because they were inherently weak. Others have closed as a resultant effect of having kept alive the operations of speculators in the extreme West and in portions of the South. The art has not as yet been discovered of making something out of nothing, and the financier who stakes his all upon an unbuilt city reaching out into the waste places of the earth must bring about the ruin of his own and kindred institutions which have trusted in him and pinned their faith to assets yet unborn.

"Disasters have fallen upon a number of speculative institutions which have in turn injured solvent ones, but the States of New England and the East and the Middle States and those of the Northwest, not less than of the South, have thus far escaped, and will, because the foundation upon which they are builded is of rock and not of sand.

"Such a review as that which I have indicated cannot but have the effect of quieting the fears of the timid and encouraging those who have thus far maintained an unswerving faith in the speedy coming of better times. It ought to check those who invite disaster by withdrawing from solvent institutions the money which the depositor cannot possibly use. The people are hoping and asking much from the banks of the country.

"In turn the banks have the right of considerate treatment from the people. Let those who have so long transacted business with the banking institutions have sufficient confidence in them to know and feel that if in years past they have proved safe they surely must do so in the present emergency. Runs upon banks but destroy the interests which otherwise would be protected, and those who indulge in them cause to come about the thing which they say they wish to avert.

"In conclusion, permit me to say that I indulge neither in extravagance of speech nor undue flattery when I say that the course followed by the banks of this great city throughout the last weeks has been such as to commend them to the good wishes of every citizen of the Republic. Here has been displayed a wisdom that has met every emergency, and here the maintenance of a sound condition of affairs on the part of the banks has been a constant source of inspiration to all the country."

As he closed, Mr. Eckels reviewed the financial condition of the country, and upon this review he built an earnest plea for the repeál of the Sherman law. The company applauded and cheered him as he resumed his chair.

Superintendent Preston, the next speaker, argued against the proposed repeal of the tax on State bank circulation, and spoke in favor of nationalizing the currency. All money should be issued by the general Government, he urged. Let the currency be national and let the banks all become State organizations, subject to supervision and examination by State authorities. This was the true course of safety for banking, in his opinion. Some of the bankers evidently believed as he did, judging from the attention his remarks received.

Addresses were also made by Messrs. Tappen and Cannon.

President Hepburn emphasized the desirability of the closest possible relations of the governmental supervising authorities and the clearing-house associations. He showed how the Government could only restrain by prohibiting bad banking methods. It could arrest but not build up. Through the clearing-house associations, on the other hand, the banks could breathe life into faltering institutions.

President Brayton Ives, of the Western National, also spoke on the monetary situation, after which the other bankers gave brief addresses, all declaring for the repeal of the silver-purchase law.

SILVER COINAGE IN INDIA.—From 1878 to 1891 the amount of silver coined in India reached an aggregate of $523,802,919. The official figures for 1892 are not yet at hand, but they would probably increase the total to $550,000,000. The amount coined in the different years is shown in the subjoined table:

1878	$78,741,556	1886	$27,121,414
1879	28,122,004	1887	44,142,013
1880	40,002,173	1888	36,297,132
1881	20,682,625	1889	37,927,814
1882	29,386,322	1890	57,931,323
1883	24,927,400	1891	42,670,498
1884	17,353,531		
1885	48,487,114	Total	$523,802,919

The free coinage of silver in India, lately suspended, dates from 1835. The silver rupee contains 165 grains of pure silver, and the half, quarter and eighth rupees are of corresponding weight.

In comparison with silver coinage in India it is interesting to note that during about the same period covered by the above table, the United States, under the provisions of the Bland and Sherman Acts, has coined 426,000,000 ounces of silver. Of the silver purchased under the Sherman Act approximately 130,000,000 ounces remain uncoined in the Treasury.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the Journal's Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

CASHIER—POWER OF—INVESTING IN STOCK—POWER OF BANK.

Supreme Court of Nebraska, June 6, 1893.

BANK OF COMMERCE *vs.* HART.

The Cashier of a banking corporation has by virtue of his office no authority to accept the stock of another corporation in payment and discharge of a debt due to the bank.

A banking corporation organized under the laws of Nebraska has no power to become a stockholder in an insurance company.

The acts of the directors of a bank in dealing with and investing the funds of the stockholders to bind the bank, must be confined to the expressed purposes for which the bank was incorporated, and to purposes necessarily incidental thereto in the successful conduct of its legitimate business.

Ragan, *C.* The Bank of Commerce sued Hart on a note for $20,000, executed and delivered by him to the bank. The defense of Hart, so far as the same is material here, was that on March 30, 1888, he paid on said note $14,105.46, with which payment the bank has not credited him. Hart claims to have made this payment by the sale of certain shares of stock in an insurance company to the bank through one Johnson, its Cashier, who promised at the time to credit the note when it should be returned from New York, where it then was. The bank claims that the sale of said stock, if made, was to Johnson individually, and not to the bank; that it had no interest or part in said sale; that the same, if made, was without its knowledge or consent; and the purchase of the stock by its Cashier, if made for the bank, was in excess of his authority, and void. The jury, by its verdict, allowed Hart the credit he claimed, thus, in effect, finding that the purchase of the insurance stock was made by the bank. Assuming for the purpose of this opinion that the evidence in the record supports this finding, we then proceed to inquire whether the Cashier exceeded his authority in using funds of the bank in the purchase of this stock. In *Sandy River Bank* vs. *Merchants', etc., Bank* (1 Biss. 146), the facts were: The Cashier of the Mechanics' Bank settled an account of $22,000 with the Cashier of the Sandy River Bank by paying $10,000 cash and giving $12,000 private paper, which the Cashier of the Sandy River Bank accepted in payment, and gave a receipt in full. The Sandy River Bank brought its action against the Merchants and Mechanics' Bank on the account. The latter pleaded payment by the contract with the Cashier. The question in the case was whether the Cashier had authority to receive in payment anything but money. In the course of the opinion delivered the Judge said: "A Cashier of a bank is ordinarily the executive officer of the bank. He is the agent through whom third persons transact their business with the bank. * * * The bank holds him out to the world as having authority to act according to the general usage, practice and course of business, and all acts done by him within the scope of such usage, practice, and course of business bind the bank as to third persons who transact business with him on the faith of his official character; and perhaps it may be presumed without proof, and merely from his office, that he is authorized to receipt and discharge debts, deliver up securities on payment or discharge of the debt for which they are held. * * * But still his authority is a limited authority. When a party claims a discharge from a debt due the bank not by payment, but by giving other or different notes, bills or securities which the Cashier has agreed to take and release the debt, his authority, like that of any other agent, must be shown by proof. As a general rule, the jury have no right to infer that the Cashier of a bank, as such, has authority to compromise and discharge debts without payment, or by taking other securities, but the authority from the bank must be shown expressly or by necessary implication, or it must be established by the particular usage, practice, or mode of doing business of the bank, or it must be ratified or acquiesced in by the bank, in order to be binding." In *U. S.* vs. *City Bank of Columbus* (21 How. 356.) the facts were: The Cashier of the Columbus bank gave to one of its directors, Miner, a letter to the Secretary of the Treasury of the United States, to the effect that Miner had authority to contract in behalf of the bank for the transfer of money for the Government. Relying upon this letter, the Secretary of the Treasury made a contract with Miner for him to transfer $100,000 of the Government's money from New York to New Orleans. Miner received the money, but never delivered it. The United States brought suit against the Columbus bank to recover the money. The Supreme Court of the United States decided that the action could not be successfully maintained, as the Cashier of the Columbus bank had no authority to make such a contract, and there was no proof that the board of directors had authorized it. In the course of the opinion, Justice Wayne said: "The court defines a Cashier of a bank to be an executive officer, by whom its debts are received and paid, and its securities taken and transferred; and that his acts, to be binding upon the bank, must be done within the ordinary course of his duties. The term 'ordinary business,' with direct reference to the duties of a Cashier of a bank, occurs frequently in * * * reports of decisions in our State courts, and in no one of them has it been judicially allowed to comprehend a contract made by its Cashier without express delegation of power from the board of directors to do so, which involves the payment of money, unless it be such as has been loaned in the usual and customary way. Nor has it ever been decided that a Cashier can purchase or sell property, or create an agency of any kind, for a bank, which he had not been authorized to make by others to whom has been confided the power to manage its business, both ordinary and extraordinary." The power of this bank to purchase stock in an insurance company, if it exists at all, is an extraordinary power, and one not confided to the Cashier, but belonging to the directory. In *Bank* vs. *Bailhache* (65 Cal. 329) it is said: "The power to make a settlement of defalcation to a bank, and accept a deed of real estate in satisfaction and release, is the function of the board of directors, and not of any individual director or officer." It has also been decided that in the absence of special authority, the Cashier of a bank could not release the surety from a note owned by the bank; (*Bank* vs. *Rudolph*, 5

Neb. 527; *Bank* vs. *Haskell*, 51 N. H. 116); that in the absence of special authority or established usage, the Cashier has no power to compromise claims due his bank. (*Bank* vs. *Koehner*, 8 Daly 530); that he had no authority to bind his bank by issuing a certificate of deposit to himself (*Lee* vs. *Smith* 84 Mo. 304); nor bind the bank by any official endorsement of his own note; (*West St. Louis Sav. Bank* vs. *Shawnee County Bank* 95 U. S. 557).

The Cashier of the Bank of Commerce, then, as the executive officer of the bank, was clothed with authority to collect all debts due the bank, but this means collection in money. If a Cashier may discharge the debts due his bank by exchanging the evidences of them for stocks of an insurance company or a gas company, then he can, under the name and charter of the bank, conduct an entirely different business, and use the funds of his stockholders for a purpose for which they were never subscribed, and in violation of the law of the bank's creation. The purposes for which the Bank of Commerce was organized, as expressed in its articles of incorporation, were to receive deposits of money, and pay the same out on proper vouchers, to loan money on personal security, to issue drafts or letters of credit, to buy and sell securities of every kind, and do a general banking business. Had this charter expressly provided that the corporation might invest its funds in stocks of insurance companies, and deal generally in stocks of other corporations, such a provision would have been contrary to the laws of the State, and void; but there is no provision in the bank's charter which by any reasonable construction can be construed into an authority to purchase and hold the stocks of any other corporation. True, it says "to purchase securities of every kind," but certificates of stock are not securities within the meaning of this provision, nor such as the word imports in commercial or banking phraseology. "Securities," as here used, mean notes, bills of exchange, and bonds; in other words, evidences of debt, promises to pay money. We conclude, therefore, that the Cashier, by virtue of his office, had not the power to accept the stock of the insurance company in payment of the debt due the bank, but that power, if it existed, was lodged in the directory, and, as it had not expressly authorized the Cashier thereto, he exceeded his powers in agreeing to accept, on behalf of his principal, the insurance company, stock in payment of the debt due from Hart to the bank, and that the latter is not bound thereby.

The powers of the directory to ratify the purchase of the insurance company's stock and bind the bank thereby. In *Mechanics and Workingmen's Mut. Sav. Bank & Bldg. Ass'n* vs. *Meriden Ag. Co.* (24 Conn. 159), it is said: "The first question is whether the defendants, being a joint-stock corporation, organized for a specific purpose, had power to become a stockholder in the association of plaintiffs. The purpose for which the agency company united, as expressed in their articles of association, was to do a general insurance agency, commission, and brokerage business, and such other things as are incidental to and necessary to the management of that business. So far as that business was concerned, the proper officers of the company had power to act and bind the company, but, if they had departed from that business, and entered into contracts not authorized by the company, such contracts would not be binding. The subscription to the stock of a building association has no legitimate connection with the business of an insurance agent, commission merchant, or broker, and was not, therefore, authorized by the defendants' articles of association. But when the directors of the company subscribed for stock in a building association, whatever may have been their motive, * * * they transcended the powers conferred upon them, and departed from the legitimate business of the company." In *Franklin Co.* vs. *Lewiston Sav. Bank* (68 Me. 43), it is said: "If a corporation can purchase any portion of the capital stock of another corporation, it can purchase the whole, and invest its funds in that way, and thus be enabled to engage exclusively in a business entirely foreign to the purpose for which it was created. A banking corporation can become a manufacturing corporation. and a manufacturing corporation can become a banking corporation. This the law will not allow, and it has been held that notes given by a manufacturing corporation for the purchase of shares in a bank are not collectible. In Cook on Stock, Stockholders & Corporation Law (section 316), it is said: "A banking corporation has at common law no power to purchase or invest in stocks of another corporation, whether that other corporation be itself a bank or of a different business. The bank is organized for the purpose of receiving deposits and loaning money, not for the purpose of dealing in stocks. Any attempt to engage in such transactions is a violation of its charter rights and of its duties toward the stockholders and the public." In *Bank* vs. *Jones* (95 N. Y. 115), Chief Justice Ruger said: "The question involved in this case * * * is the right of a bank corporation, chartered under the laws of this State, to subscribe for the stock of a railroad corporation. It is clear that a bank corporation cannot enter into a contract of this character unless it has authority under its charter to become a subscriber for the stock of railroad corporations, and thereby assume the obligations to which such stockholders are subject. The plaintiff is a moneyed corporation, organized under chapter 260 of the Laws of 1838, and authorized by that statute to carry on the business of banking by discounting bills, notes, and other evidences of debt, by receiving deposits, by buying and selling gold and silver bullion, foreign coins, and bills of exchange, and by loaning money on real and personal property. The Legislature intended by the Act in question to inaugurate in this State an entirely new system of banking, and thereby undertook to provide for the establishment of moneyed corporations, which should furnish to the public a safe and reliable circulating medium for the transaction of its business, and secure solvent depositories for the custody of such moneys as were needed for current use by business people. The language employed in the Act * * * excludes by necessary implication the capacity to carry on any other business than that of banking, and the adoption of any other methods for the transaction of such business than those especially pointed out by the statute. The spirit of the law, as well as sound policy, forbids these institutions from risking moneys intrusted to their care in doubtful speculations or enterprises. For these reasons we are of the opinion that the plaintiff was not only precluded by public policy, but was not authorized by the statute under which it was organized, to enter into any agreement as a stockholder in a railroad corporation."

The learned Judge who presided at the trial below charged the jury as follows: "(a) In investigating the question as to how far, if at all, the bank was bound by the acts of Johnson in the premises, you will be governed entirely by the testimony which has been adduced before you on the trial. If you shall find from the testimony either that Johnson, in his negotiations with Hart, and his final agreement with him for the purchase of the shares of stock in the insurance company, was acting under authority conferred upon him in that behalf by the board of directors of the bank, or that subsequent to the transaction the directors approved of and ratified what has been done by Johnson, acting in his capacity as Cashier of the bank, (if you shall find that in such transaction he did act as such Cashier), and accepted the fruits of such transaction, then, in that case, the bank would be estopped to deny the authority of Johnson in the premises, and would be bound by his acts in that behalf. (b) If on the other hand, you shall find from the testimony that Johnson did not have authority from the board of directors of the bank to negotiate for and purchase the shares of stock in the insurance company referred to in the testimony, and that the directors did not subsequently approve and ratify the acts of Johnson relating thereto, nor accept and retain the fruits of such negotiations and purchase, then, and in that case, the bank would not be bound by what Johnson did relating to such negotiation and purchase, and, in such case, the plaintiff would be entitled to your verdict for the amount of the note sued on, and interest." This charge proceeded upon the theory that, though the purchase of the insurance company's stock by the Cashier was unauthorized, yet the board of directors could have afterwards ratified and adopted it, and bound the bank by it. We do not assent to this doctrine, as applied to this case. It is doubtless true that the bank could legally take the stock of another corporation as security for a debt previously contracted. Possibly it might make a loan on the strength of the stock as security at the time. On this point the authorities are not in harmony, and, as it is not material here, we do not decide. An emergency might arise when a bank's board of directors would be justified in taking the stock of another corporation in settlement, adjustment, or compromise of a doubtful claim or debt, acting in the honest belief that only by so doing could a serious loss to the bank be averted. None of these reasons, however, existed in the case at bar, or, if they did, the record before us does not disclose them. The Cashier had no authority to bind the bank by buying the insurance company's stock. The board of directors had no authority to authorize him to do so; and, if the Cashier bought such stock in behalf of the bank, the directory had no authority to ratify the purchase, and thus bind the bank. But, assuming that this charge states the law correctly, there is no evidence in this record that the board of directors ever authorized the Cashier to purchase this insurance stock; and there is no evidence in this record that the board of directors ever ratified such a purchase, if made, or that the bank accepted the fruits of the transaction; and the jury could not, from the evidence, so find either.

We conclude, then, that the powers of a directory of a bank in dealing with and investing the funds of the stockholders are limited to the purposes for which the bank was incorporated, and to purposes necessarily incidental thereto, in the successful conduct of its legitimate business.

We are constrained to say that the verdict of the jury is not supported by the evidence, and that the judgment of the conrt is contrary to the law of the case.

The judgment of the district court is therefore reversed, and the case remanded for further proceedings.

The other commissioners concur.

CASHIER—POWER OF—WHEN BANK AFFECTED BY KNOWLEDGE OF.

Supreme Court of Alabama, May 2, 1893.

BIRMINGHAM TRUST AND SAVINGS COMPANY *vs.* LOUISIANA NATIONAL BANK.

Where a banking corporation has the power to negotiate loans, the business of such negotiations falls within the line of duty and authority intrusted to the Cashier as executive officer to whom the management and transaction of the ordinary business of the bank is intrusted.

Knowledge of the Cashier acquired in the course of such a negotiation is to be imputed to the bank.

Where knowledge is acquired by a Cashier in the course of his duties as such Cashier, the bank will be affected thereby as to transactions forming a part of the same business had after his death by other officers of the bank.

Where the Cashier of a banking company negotiated for a stockholder therein a loan from another bank upon the security of his stock in such company, and made the collections upon the notes, *Held*, That this was notice to the company of the prior lien of such bank upon such shares.

This was a bill by the Louisiana National Bank against the Birmingham Trust and Savings Company and W. C. Ward, as administrator of the estate of John Boddie, deceased. The prayer of the bill was that the Birmingham Trust and Savings Company be compelled to enter on its books a transfer from John Boddie to the complainant of the stock pledged to it by said Boddie; that the lien of the complainant on said stock by reason of said pledge be declared superior to the lien of the defendant company; that it be referred to the register to state an account of the dividends due and received of the Birmingham Trust and Savings Company; and that it be required to pay the same to complainants. From a decree for complainant, defendants appeal. Affirmed.

The facts averred in the bill as going to establish the equity thereof were substantially as follows: The complainant was a resident of New Orleans, La., and the other parties resided in Birmingham. On April 25, 1889, John Boddie borrowed from the complainant $25,000, and executed his note therefor, payable six months after date; and pledged at the same time as collateral security for the payment of said note 300 shares of the capital stock of the Birmingham Trust and Savings Company. This pledge was made by, and with the active assistance and co-operation of, the Cashier and assistant book-keeper of the trust and savings company. When the note matured it was renewed by Boddie, Hudson, the Cashier of appellant, writing the written part of the renewal note, and indorsed in his own handwriting on the back of the note the pledge of 300 shares of stock as collateral security. On the maturity of this note Boddie informed the complainant that he had sold 50 shares of the pledged stock, made a payment of $5,000 on said note, and again executed a note for $20,000, and pledged the remaining 250 shares of the capital stock of the defendant company as collateral security therefor. It was also averred in the bill that Hudson, the Cashier of the Birmingham Trust and Savings Company, upon the loan being negotiated, and the check drawn in favor of John Boddie being cashed in New Orleans, as directed by Hudson, the amount thereof was placed to the credit of Boddie with the defendant company. Upon the maturity of this last note, given as stated above, and upon the same not being paid, the Louisiana National Bank demanded of the Birmingham Trust and Savings Company a transfer of the stock pledged to them on the books of said company. This demand was refused, the trust and savings company claiming that Boddie was indebted to it, and that on account of this indebtedness the company had a lien on the stock so pledged by the complainant. Thereupon the complainant filed its bill for the purposes as above stated. The defendants, in their answer, and in the evidence introduced in support thereof, did not deny the equity of the bill, but set up the defense that under section 1674 of the Code it has a lien on the stock by reason of the indebtedness of Boddie to it, and that it had no notice of the transfer of the stock to appellee.

STONE, *C. J.* (omitting part of the opinion):

The pledge to the appellee preceded in point of time the exclusion of credit to Boddie, and the creation of the debts for the security and payment of which the trust and savings company now attempts to assert a statutory lien on the stock. The material inquiry is, therefore, whether the company at and prior to the creation of the debts is chargeable with notice of the pledge. The fact is undisputed that Hudson, the Cashier of the company, at the time of the pledge, had knowledge and notice of it, and was in fact an active participator and agent in the creation of the debt it was intended to secure; and the fact is undisputed that all the correspondence and intercourse the appellees had with him were had in his official capacity and relation as Cashier, and were not had with him in his private, individual capacity. Nor can it be disputed that the correspondence, intercourse and dealing were in accordance with the general usage, practice and course of business of banking institutions and within the general apparent line of duty and authority of the Cashier of such institution. He is the executive officer, held out to the public as having authority to act according to the general usage, practice, and course of business of such institutions; and his acts and dealings within the scope of such usage, practice and course of business bind the corporation in favor of those dealing with him, not having other knowledge. Notice received or knowledge acquired by him while engaged in the transaction of business according to such usage and practice is substantially notice to and the knowledge of the corporation. (*Everett* vs. *U. S.*, 6 Port. (Ala.) 166; *Bank* vs. *Steele*, 10 Ala. 915; *Merchants' Bank* vs. *State Bank*, 10 Wall. 650; *Case* vs. *Bank*, 100 U. S. 454.)

The general rule, applicable alike to individuals and corporations, is that the knowledge acquired or the notice received by an agent, which will affect and bind the principal, must have been acquired or received by the agent doing some act within the line of his duty and authority. Whether, as between Boddie and the trust company, the transaction in which Hudson was engaged was the negotiation of the loan from the appellee to Boddie, or the collection for Boddie of the proceeds of the loan, is not material. It may or may not be within the usual scope of the business of a banking institution to negotiate loans. The negotiation of loans is, however, a function and power expressly conferred by the charter on the trust and savings company. The power existing, the negotiation becomes business of the company, which may be transacted as other ordinary business is transacted. It falls within the line of duty and authority intrusted to the Cashier as the executive officer to whom the management and transaction of the ordinary business of the company is intrusted. (1 Mor. Priv. Corp. § 359 *et. seq.;* 2 Amer. & Eng. Enc. Law, p. 118.) There is no other officer of whom the public at large would so readily expect the exercise of such function and power; no other with whom it would so confidently deal in reference to its exercise. Whether there was a by-law or a resolution of the board of directors expressly imposing the duty or delegating the authority, in the absence of knowledge or notice thereof, is not a matter of importance when the rights and dealings of third persons are involved. Whoever deals with an agent or officer of a corporation within the scope of the apparent powers of such agent or officer is not affected by the secret instructions of the corporation or the secret limitations which may have been placed upon his power. (2 Mor. Priv. Corp. § 598 *et seq.*)

Nor is it important whether it be true or not true that in no other instance than this did Hudson ever negotiate a loan. If the negotiation of loans was within the scope of his authority and duty as Cashier under the usages, practice and course of business of banking institutions, it was the right of the appellee to rely on this apparent authority in dealing with him in his official capacity. If, in his capacity of Cashier, Hudson negotiated or aided in negotiating the loan for Boddie, and in the course of the negotiation acquired knowledge and received notice of the pledge, that knowledge was also acquired, and the notice also received, in the course of the collection for Boddie of the proceeds of the loan, and it cannot be doubted that in making the collection he acted wholly for the company, and within the line of his duty and authority. There are but few functions of a banking institution more frequently exercised than that of making collections, especially at places distant from the locality of the bank. The collection of necessity is made through the medium of correspondence, and the conduct of its correspondence is surely, according to the usages and practice of banking institutions, within the line of the duty and authority of the Cashier. The loan having been negotiated, a pledge of 300 shares of the capital stock of the trust and savings company was the required security for its repayment. Hudson attested the transfer of the certificates of stock, and they were forwarded to the appellee in an envelope bearing the stamp of the company. At the same time the trust company, through Hudson, its Cashier, drew upon Seixas, the broker in New Orleans, for $24,162.50, the net proceeds of the loan, remitting the draft to the appellee for collection, with instructions to collect and deposit to the credit of the company in the Whitney National Bank of New Orleans. The collection and deposit were made, of which the company were promptly informed. On the same day the certificates of stock were forwarded to the appellee, the draft was drawn, and Boddie was credited with the draft and debited on the books of the company with charges on account thereof, $62.50. Whatever may have been the knowledge acquired or the notice previously received by Hudson in this particular transaction, by the collection from Seixas of the proceeds of the loan he acquired full knowledge, and received full, actual notice of the pledge of the stock to the appellee. That knowledge and notice were the knowledge of and notice to the company. The collection of the money for Boddie was ordinary business of the company, and such business, according to the usage and practice of banking institutions, is transacted by and through the Cashier. It is only through its officers and agents that a corporation acquires knowledge or receives notice; and, though knowledge acquired or notice received by an officer or agent, while not engaged in transacting the business of the corporation, may not affect, or be imputed to it, yet, if it is acquired or received while engaged in the sphere of his official duty and authority, the knowledge or notice becomes the knowledge of and notice to the corporation; otherwise knowledge and notice could never be traced to the corporation, and the utmost insecurity in dealing with it would follow. As against corporations, there are peculiar and urgent reasons for a stringent enforcement of the general rule that knowledge acquired or notice received by an officer or agent within the scope of the agency is deemed notice to the principal, as "the corporation cannot see or know anything except by the intelligence of its officers." (*Bank* vs. *Whitehead*, 36 Amer. Dec. 186, notes.)

It is insisted that, although Hudson, in his relation and capacity of Cashier, acquired knowledge and received notice of the pledge, the knowledge and notice is not imputable to the company to affect such transactions had with Boddie which were conducted by other officers and agents subsequent to Hudson's death, and who were without such knowledge or notice. This insistence is founded in misapprehension of the principles of law and of its true theory. The knowledge and notice an agent acquires and receives in the transaction of the business of the principal is not personal, pertaining to the agent only. The legal principle is thus tersely expressed: "Notice to an agent is notice to the principal." (Wade, Notice, § 672.) And the theory of the principle is that, if the principal had in person transacted the business, he would have acquired the knowledge or received the notice the agent acquires and receives, and therefore is chargeable with such knowledge and notice (*Sooy* vs. *State*, 41 N. J. Law, 400); and upon general principles of public policy it is and must be presumed that the agent communicates to the principal the facts of which he acquires knowledge or notice. If the communication is not made, it is the fault or neglect of the agent, which must be visited on the principal, rather than upon strangers dealing with the agent, within the scope of the agency. (Story, Ag. § 140.) The trust and savings company, being chargeable with knowledge and notice of the prior pledge to the appellee, is not entitled to assert a lien on the stock for the security of the debts subsequently contracted by Boddie. We find no error in the record, and the decree of the Chancellor is affirmed.

DRAFT NOT AN ASSIGNMENT OF FUND.

U. S. Circuit Court, E. D. of Pennsylvania, May 23, 1893.

FOURTH STREET NATIONAL BANK *vs.* YARDLEY.

A check or draft drawn upon a fund in the hands of a bank in the ordinary course of business is not an equitable assignment of such fund or any part of it.

Nor does it amount to such an assignment that the draft is taken upon the representation that the drawer, a bank, has a reserve fund with a correspondent, against which the draft is drawn.

In Equity. Suit by the Fourth Street National Bank of the city of Philadelphia against Robert M. Yardley, Receiver of the Keystone National Bank, to charge him as a trustee of a fund. Bill dismissed.

DALLAS, *Circuit Judge:* It is authoritatively settled for this court that a check or draft drawn upon a fund in the hands of a banker in the ordinary course of business is not an equitable assignment of such fund, or of any part of it. (*Bank* vs. *Millard*, 10 Wall. 152; *Bank* vs. *Schuler*, 120 U. S. 511.) The learned counsel for the complainant, while frankly admitting this to be the rule, insists that the giving of a check may, "in connection with other circumstances, be evidence of such equitable assignment." Conceding this, the question is as to the sufficiency of the circumstances relied on in this case; and these, according to the statement thereof in the complainant's brief, are as follows: On March 19, 1891, G. W. Marsh, the President of the Keystone National Bank, called at the Fourth Street National Bank, and stated to the Cashier that he had a heavy debt in the clearing-house against his (Marsh's) bank, and that all its funds, or the greater part of them, were in New York—so much so that it could not meet its debt in the clearing-house—and asked if the Fourth Street National Bank would accept its (the Keystone's) draft against its reserve account in the New York bank for this sum of money, and give him clearing-house gold certificates. Mr. Marsh supported this statement by showing a memorandum giving the exact balance which the Keystone Bank had with the Tradesmen's National Bank of New York city—a sum between $26,000 and $27,000. Upon this statement the Fourth Street Bank gave to the Keystone Bank clearing-house certificates for $25,000, and accepted a draft for the same amount drawn by the Keystone Bank on the Tradesmen's Bank of New York. The general ledger sheet of the Keystone Bank showed a balance to its credit with the Tradesmen's Bank at the close of business of March 19, 1891, after deducting this draft for $25,000, of $1,757.82.

Accepting for the present purpose this presentation of the facts, we have an express statement by the President of the Keystone Bank that a fund was provided for payment of the draft; but between a draft taken in reliance upon such a statement and an assignment of the particular fund, the distinction is obvious, and of the latter, or of any intent that the transaction should be in effect anything different from what it was in form, I perceive no indication whatever. It seems, too, that Marsh's statement that the Keystone Bank had between $26,000 and $27,000 with the Tradesmen's Bank was not true, and that the general ledger sheet of the Keystone Bank, to which reference has been made, was not correct; but inasmuch as, irrespective of these matters, the fundamental proposition upon which the case of the complainant rests cannot be sustained, no other question need be discussed.

The bill is dismissed, with costs.

REFUSAL TO PAY CUSTOMER'S CHECK—LIABILITY—MEASURE OF DAMAGE.

New York Supreme Court, General Term, First Department, May 12, 1893.

BROOKE *vs.* TRADESMEN'S NATIONAL BANK.

The refusal of a bank to pay a check upon presentation gives the drawer a right of action in case he has funds in the bank to meet the check, and the refusal to pay was without authority.

The measure of damages will be the amount of actual loss the party has sustained, which may fairly and reasonably be considered as naturally arising from the breach of the contract, according to the usual course of things.

The ordinary amount of damages in such case would be the amount of check, interest and costs.

The immediate entering of a judgment against the drawer, and the seizure of his business by the sheriff, in consequence of the failure of the bank to pay the check, is not an injury for which the bank would be liable.

This action was brought by the plaintiff, as Receiver of one William C. Rogers, a judgment debtor, to recover damages sustained by Rogers because of the failure of the defendant to pay a note of Rogers which had been made payable at the defendant's bank, Rogers having at the time of such refusal on deposit with the defendant more than sufficient money to pay the note. The plaintiff did not claim to recover as such damages the amount of the deposit, but certain special damages arising from the fact that, in consequence of the failure of the bank to pay the note in question, certain creditors of Rogers had the right to enter judgment for some $8,000 immediately, and issue execution thereon, which they did, under which execution the sheriff levied upon the stock and fixtures in Rogers' store, by reason of which his business was ruined.

VAN BRUNT, *C. J.* (omitting part of the opinion): It is undoubtedly the rule that the refusal to pay a check upon presentation gives the drawer a right of action in case he has funds in the bank to meet the check, and the refusal to pay was without authority, and that the measure of damages will be the amount of actual loss the party has sustained, and that damages which may fairly and reasonably be considered as naturally arising from the breach of contract according to the usual course of things are always recoverable. In applying this rule to the case at bar, how can it be claimed that, because the bank neglected to pay the note of Rogers for $517.51, he having on deposit with the bank at the time $611.08, that the result which in the usual course of things would follow was the immediate entry of a judgment against Rogers for over $8,000, and the seizure of his business by the sheriff? This condition of things arose because of an agreement made between Rogers and his creditors, of which the bank had no notice. and which they had no reason to suppose existed. Now, as has already been stated, the relation between the bank and its depositor is that of debtor and creditor, and that only; and the ordinary liability to which a debtor subjects himself for non-payment of a debt in an action for damages for breach of his contract to pay, is that he be mulcted in damages to the amount of his debt with interest and costs, and these are the only damages which in such case might fairly and reasonably be considered as naturally arising from the breach of the contract according to the usual course of things. As well might it be said that if A promises to pay B a certain sum on a given day, and B had agreed with C to make a payment to him upon that date, or subject himself to a forfeiture which would be very detrimental to his interest, and B relied upon receiving the money from A to make the payment, A, upon making default in payment, would be liable in damages for the whole interest which B had forfeited, because he was unable, in consequence of A's default to B, to make his payment to C. The damages claimed in this action are clearly not those which naturally arose from the breach of a contract between debtor and creditor, and therefore cannot be recovered.

FRAUDULENT CONVEYANCE TO NATIONAL BANK—STATE STATUTES.

Supreme Judicial Court of Massachusetts, June 22, 1893.

TRADERS' NATIONAL BANK *vs.* CHIPMAN.

A State statute forbidding conveyances by insolvent debtors for the purpose of giving a preference applies to such a conveyance made to a National bank.

This was a writ of entry to recover possession of two parcels of land. The demandant was the assignee in insolvency of the joint and several estates of Dudley Hall and Dudley C. Hall, partners doing business under the name of

Dudley Hall & Co., who were adjudged insolvent debtors on March 28, 1891. The tenant claimed title under a deed from Dudley C. Hall dated December 15, 1890, and delivered two days later. The tenant was at the time of the conveyance a director of, and counsel for, the Traders' National Bank, and the consideration of the conveyance was an indebtedness from the firm of Dudley Hall & Co. to the bank. The demandant contended that the conveyance was a fraudulent preference, and in fraud of the insolvent law, under Pub. St., c. 157, §§ 96, 98. The case was tried and argued as if the conveyance had been made directly to the bank, and the Court so treated it.

LATHROP, *J.* (omitting part of the opinion):

The tenant further contends that as the bank was a banking association incorporated and existing under the national banking Act of the United States the demandants are not entitled to recover, on the ground that Pub. St. c. 157, §§ 96, 98, are in conflict with sections 5,136, 5,137, Rev. St. U. S. These sections define the powers of a National bank. Under section 5,136 it has the power to adopt and use a corporate seal; "to make contracts;" "to sue and be sued, complain and defend, in any court of law and equity, as fully as natural persons;" to elect certain officers; to make by-laws; and to do a banking business. Section 5,137 is as follows: "A National banking association may purchase, hold, and convey real estate for the following purposes, and for no others: First, such as shall be necessary for its immediate accommodation in the transaction of its business; second, such as shall be mortgaged to it in good faith by way of security for debts previously contracted; third, such as shall be conveyed to it in satisfaction of debts previously contracted in the course of its dealings; fourth, such as it shall purchase at sales under judgments, decrees, or mortgages held by the association, or shall purchase to secure debts due to it." An elaborate and able argument has been addressed to us by the counsel for the plaintiff in the second case, in favor of the propositions that to receive such a conveyance as was made in this case is among the powers granted to National banks by the law of the United States; that such a conveyance is prohibited by the law of this commonwealth; and that, therefore, the law of the State is inoperative and void as to a National bank, and the tenant has a good title to the land. We do not accede to this view of the law, but regard the enumeration of the powers conferred upon National banks by the sections above cited as defining the extent and limitations of their powers in a general way. If they act in excess of their powers, no one but the Government can complain. (*Bank* vs. *Whitney*, 103 U. S. 99; *Reynolds* vs. *Bank*, 112 U. S. 404.) If they act within the powers designated, the legality of their action is still to be determined. Thus section 5,136 gives to National banks the power to make contracts, but it cannot be contended that they therefore have the power to make a contract which is illegal by the law of the State where the contract is made. Indeed, as is said by Mr. Justice Miller in *National Bank* vs. *Com.* (9 Wall. 353, 362) speaking of National banks: "They are subject to the laws of the State, and are governed, in the daily course of business, far more by the laws of the State than of the Nation. All their contracts are governed and construed by State laws. Their acquisition and transfer of property, their right to collect their debts, and their liability to be sued for debts, are all based on State law. It is only when the State law incapacitates the banks from discharging their duties to the Government that it becomes unconstitutional." (See, also, *Waite* vs. *Dowley*, 94 U. S.

527.) In *Bank* vs. *Hunt* (11 Wall. 391) the question of the validity of a mortgage to a National bank turned on the point whether it was recorded in accordance with a State law. It is also to be noticed that under section 5,137, cl. 2, a National bank is authorized to hold real estate only when it is "mortgaged to it, in good faith, by way of security for debts previously contracted." The title of the bank to land must be determined by the law of the State in which the land is situated; and if a mortgage to it is not in good faith, by the State law, the bank gets no title. (*Witters* vs. *Sowles*, 32 Fed. Rep. 758.) We find nothing in the Act of Congress which countenances the defendant's contention that Congress intended that a National bank should have power to acquire land in fraud of our insolvent law. In the first case the order must be, exceptions overruled.

COLLECTIONS—PROTEST—LIABILITY OF BANK FOR NEGLECT OF NOTARY.

Supreme Court of Minnesota, June 1, 1893.

JOHN JAGGER *vs.* NATIONAL GERMAN BANK OF ST. PAUL.

When a bank receives commercial paper for collection there is an applied undertaking on its part that, in case of its dishonor, it will take all steps necessary to protect the holder's rights against all previous parties to the paper; and an allegation that the holder instructed the bank to do so only states what the law implies, and changes neither the issue nor the burden of proof.

The collection clerk, to whom the paper was delivered, having testified that the holder told him not to protest it in case of non-payment, and having in corroboration of his testimony introduced the collection book in which he had, at the time, made an entry to that effect, the defendant offered to prove that the clerk was a cautious, careful man, and that this was the only error ever attributed to him. *Held*, that the offered evidence was inadmissible.

Mere knowledge on part of an indorser, derived from the maker, that paper has been dishonored, is not "notice." The notice must come from a party who is entitled to look to him for payment.

MITCHELL, *J.:* This was an action to recover damages for the alleged failure of the defendant to take the necessary steps to fix the liability of the indorsers on a promissory note which plaintiff deposited with it for collection. The allegation of the complaint is that plaintiff delivered the note to the bank for collection, "notifying it to take all necessary steps, in case of nonpayment of the note at maturity, to hold the indorsers upon the same by due notice of nonpayment." Defendant insists that, having alleged express instructions to the bank, plaintiff was bound to prove it, and could not rest on the undertaking of the bank implied from the mere fact of receiving the paper for collection. There is nothing in this. The complaint alleged nothing more than would have been implied in the absence of any express instructions. The allegation referred to neither changed the issues nor the burden of proof. The position of counsel is, in effect, that if a party alleges more than is necessary he is bound to prove it.

Defendant's collection clerk testified that when plaintiff delivered the note for collection he notified him not to protest it, and in corroboration of this he was allowed to introduce in evidence the collection book, in which he made an entry at the time that the note was not to be protested. It can hardly be necessary to say that it would not have been competent, for any purpose, to prove that this clerk was a cautious, careful man, and this was the only error ever attributed to him. If he committed an error on this occasion the defendant is liable, although it may have been the only mistake he ever made.

Nor would the evidence offered have any legal bearing upon the question at issue, viz., whether the plaintiff gave express instructions not to protest the note.

Defendant offered to prove that the maker of the note, at the time it fell due, notified the plaintiff that it would not be paid, and that the latter said "he would carry the note along for a time;" also, that on the day the note fell due, or the day subsequent, the maker notified one of the indorsers of the dishonor of the note. If this evidence was offered for the purpose of proving that plaintiff had knowledge of the dishonor of the note, and therefore should himself have notified the indorsers, the answer is that he had intrusted that matter to the defendant, and had a right to assume that it would attend to it. If it was offered for the purpose of proving that plaintiff had extended the time of payment to the maker, and thereby himself released the indorsers, it is enough to say that the evidence had no tendency to prove any such extension. And if it was offered for the purpose of proving that the indorsers had notice of the dishonor of the paper, and therefore was not released, the answer is that what was offered to be proved would have been insufficient as notice in respect to both its source and its substance. Mere knowledge of the dishonor of paper is not notice. Notice signifies more. It must come from one who is entitled to look to the party for payment, and must inform him (1) that the note has been duly presented for payment; (2) that it has been dishonored; (3) that the holder looks to him for payment. Although, probably, if the notice comes from the proper party, and contains the first two of these requisites, the third would be implied. The evidence was inadmissible for any purpose. Order affirmed.

PROMISSORY NOTE—PAYMENT IN FOREIGN MONEY—NEGOTIABILITY.

Court of Civil Appeals of Texas, June 7, 1893.

HOGUE *vs.* WILLIAMSON.

Though a negotiable note is made payable in foreign money, it is not necessary for plaintiff to prove a consideration to make a *prima facie* case.

This was an action upon a promissory note for one thousand Mexican silver dollars. The Court held as above stated.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: ——, July 13, 1893.

SIR:—A and B, individual members of the firm of A & Sons, opened a deposit account with this bank to carry on a manufacturing business. In the course of time the bank loaned them $15,000 on a note made by the individual members of the firm and indorsed by the firm. The proceeds were credited to the firm's account in the bank's books, and in their bank pass-book, and drawn out in the usual way by the firm's checks. The note was renewed sundry times, and passed through the firm's books in that shape. In December, 1891, the individual members of the firm gave a judgment for $15,000 in lieu of other notes. After that the firm paid on account in February, 1892, $1,000, and $2,000, and in April $450, leaving a balance of $11,550. In May, 1892, the bank entered judgment and took out an execution and levied on the property of the firm, and sold at sheriff's sale. No objection was made nor notice given at the time. A creditor of the firm now intends to resist the bank's claim to the proceeds of the sale on the ground that the firm's debts must be paid first, before individual debts are paid. The records show the judgment was given by individual members of the firm. Is there any similar case where parol evidence, say the bank's books, were admitted to prove as in this case it was a firm debt ?

——— ———, *Cashier*.

Answer.—It is clear that there will be no difficulty in the bank's holding the proceeds of the sale under its execution. We infer from what our correspondent says that the other creditors had not levied any execution or attachment on the property; and if so, they cannot claim any part of the proceeds of the sale under the bank's execution, even if the judgment obtained by the bank does not appear to have been upon a firm indebtedness. A case directly in point is *Saunders* vs. *Reilly* (105 N. Y. 12), in which case the principle upon which the right of the firm creditor to have the firm's debts first paid out of the partnership property is explained, and the limitations of that right pointed out. The principle as there explained is this: While firm creditors are entitled to a preference over creditors of the individual member of the firm in the payment of their debts out of the assets of the firm in course of liquidation, their equity is not held or enforceable in their own right, but is a derivative one, practically a subrogation to the equity of each individual partner to have the firm's assets applied primarily to the payment of its debts; and, therefore, where the firm property has been sold upon a joint judgment against all the members of the firm, no equity is left in any of them to have the property thereafter applied in discharge of the firm's debts; the equities of the members have been wiped out by the sale, and as it is only through the equity which one member has in the firm property as against his co-partners that firm creditors can enforce their claims to a priority, the sale also operates to defeat any claim they may have of this character. (See also *Fitzpatrick* vs. *Flanagan*, 106 U. S. 648; *Case* vs. *Beauregard*, 99 U. S. 119; *Foster* vs. *Barnes*, 81 Pa. St. 377; Beach on Modern Equity, secs. 787, 788.) In the case stated in the inquiry, the judgment was against all the individual members jointly, and a sale thereunder cut off all the equities of such members to have the firm assets applied to the firm's indebtedness, and upon the principle above explained, cut off also the equities of the firm creditors. It is true that in the New York case, the question was as to the title of the purchaser of the property; but it will be observed that the ground of the decision is that the partners had the right, if they saw fit, to apply the firm property upon the joint judgment against them, or could have turned it over to the sheriff when he came with the joint execution against them.

As it is immaterial whether the judgment was on a firm indebtedness it is unnecessary to introduce any evidence to show that fact. But there can scarcely be any doubt that the bank would have the right to do so. We do not find any case directly in point; but the general principle is well established that even at law between the parties to a judgment, parol evidence is admissible to show what questions were involved in the decision, so long as there is no attempt to contradict the record. (*Russell* vs. *Place*, 94 U. S. 606; *Wilson* vs. *Dean*, 121 U. S. 525; *Sillis* vs. *Emigrant Ditch Co.* 95 Cal. 553; *Foye* vs. *Patch*, 132 Mass. 105; *White* vs. *Chase*, 128 Mass. 158; *Coleman's Appeal*, 62 Pa. St. 252; Freeman on Judgments, sec. 273, 274; Browne on Parol Evidence, 409-412.) For still stronger reasons, such evidence would be admissible where the other party has gone into a court of equity and asked that court to give him a preference over a judgment creditor who has reduced his claim to judgment, and issued an execution, and sold the property thereunder.

The ultimate fact to be proved in the court of equity is, Was this a firm debt or an individual debt? and there seems to be no reason why this fact may not be proved by evidence outside of the judgment roll, which does not contradict anything in the roll. And where the judgment is upon a joint note of all the partners, it is not a contradiction of that judgment to show that the firm got the benefit of the money advanced on the note.

Editor Rhodes' Journal of Banking: TORONTO, Can., June 24, 1893.

SIR:—In your June number, at page 614, I see a reply to an inquiry as to the right of banks to close on days that are not legal holidays. Will you kindly say if there is any statute law fixing the days on which banks must be open and, if not, on what law the opinion is based? J. H. PLUMMER.

Answer.—As stated in the reply referred to by our correspondent, the days on which a bank, whether State, National or private, may close are only those which are legal holidays in the State where the bank is located and doing business. On all other days it must keep open in order to meet its obligations. If it were to close on any day when checks or drafts may be presented for payment, such checks or drafts could, and would, be treated as dishonored, and the bank would thus commit an act of insolvency; and if it were an incorporated bank the proper public officers would be compelled to take charge of it as a bank which had suspended payment, or if it were a private bank attachments might issue against its property.

Editor Rhodes' Journal of Banking: SPARTA, Ill., July 5, 1893.

SIR.—A check dated May 23, 1893, for $620, drawn by a patron on this bank and made payable July 3, 1893, has been sent to us for collection. Is it entitled to grace or should it be protested for non-payment on July 3. A. L. WILSON, *Cashier.*

Answer.—As we have previously explained (See JOURNAL for June, 1893, p. 613), the question whether such an instrument as that mentioned in the inquiry is entitled to grace is one about which the decisions are not harmonious. In some States it is held that an instrument in such form is a check, and, therefore, not entitled to grace (*Bank vs. Wheaton*, 4 R. I. 30; *Way vs. Towle* (Mass.), 29 N. E. Rep. 506; RHODES' JOURNAL OF BANKING, March, 1892, p. 261; *Champion* vs. *Gordon*, 70 Pa. St. 474; *In Re Brown* (2 Story, 502). But in other States it is held that such an instrument is a bill of exchange, and as such carreis grace. (*Harrison* vs. *Nicollet Nat. Bank*, 41 Minn. 488; *Ivory* vs. *Bank of the State*, 36 Mo. 475; *Morrison* vs. *Bailey*, 5 Ohio St. 13; *Minturn* vs. *Fisher*, 4 Cal. 36: *Henderson* vs. *Pope*, 39 Ga. 361; *Georgia Nat. Bank* vs. *Henderson*, 46 Ga. 496.) We do not find that the question has been decided in Illinois. In some States the matter is governed by statute; but the Illinois statute contains no provision applicable to the case.

CHANGES IN NATIONAL BANK LAWS.—It is stated that the Comptroller of the Currency will in his forthcoming report make a number of important recommendations in the way of amendments to the present National banking laws. The most important will be one authorizing the issue of circulation up to the par value of the bonds deposited to secure the same. It is probable that he will also recommend the repeal of the Act which provides for the organization of banks in small cities on the deposit of $12,000 United States bonds. Ninety per cent. of the banks which have failed lately were of this character, having been established in many instances where they were not needed, and in others by irresponsible people. A number of other amendments are under consideration.

COLORADO'S APPEAL FOR SILVER.

Representatives of the silver interests, including bankers and others, in Convention at Denver, Colorado, July 12, adopted the following as an address to the people of the United States. As Congress is now in extra session, called especially to consider the silver question, the address is of special interest.

To the People of the United States :

The people of Colorado, standing in the gloom of impending disaster and representing in condition and sentiment the people of Montana, Idaho, Wyoming, Nevada, South Dakota, Utah, Arizona and New Mexico, with reverence for the Constitution and unswerving loyalty to the general Government, ask for your calm and candid consideration of the following facts before you give your approval to the destruction of silver as money and to the final establishment in this country of the single gold standard of values and thus at one stroke change all debts to gold debts and inaugurate a never-ending rise of gold and a continued corresponding fall in the price of every commodity.

Congress has been called to meet in extra session on August 7. Preceding that call the class which struggled for twenty years to overthrow the bimetallic money standard provided by the Constitution, inaugurated a panic which they untruthfully charged to the existing Silver law, ignoring the facts that there were $300,000,000 of outstanding legal-tender notes, commonly called "greenbacks," that were equally available with the Treasury notes issued in payment for silver to draw gold from the Treasury; that the balance of foreign trade had turned against us, rendering settlement abroad with American gold a necessity, and that the great bankers of Europe were purchasing gold with which to change the money standard of Austria and to fill the treasury vaults of other monarchical countries.

The evident purpose was to create prejudice against what is known as the Silver Purchasing Act and under pressure secure its unconditional repeal. The success of this scheme was partial.

Venal Presidential patronage, supplementing false and incendiary utterances by the gold press, aggravated by daily circular assaults upon the law by Eastern money brokers sent to every commercial body and banking corporation in the four quarters of the country, possibly won over the House of Representatives to it; but even the President admitted that in the Senate there was a staunch majority against it.

Suddenly, like a fire bell in the night, the news was flashed beneath the oceans that free coinage in India had been suspended and that the market price of silver had fallen within forty-eight hours fully 20 cents per ounce. This startling action, forced upon the Indian Government without a moment's warning the step held in secret contemplation by the British Government for months, to be taken at a critical and opportune time when the consternation it must create, it was hoped, would stamp out the last phalanx of bimetallism defenders. It must have had as one of its chief aims the intimidation of the Senate to bring it in line with the subservient lower house.

Immediately the wires were burdened with appeals from banks and clearing-houses and commercial bodies to the President, renominated by them, for an extra session, and to Senators to repeal the Sherman law, which, it was claimed, was responsible for all the disaster.

The call was made. The time for the session to commence is early; so early, indeed, that it may have been the hope of the President that the panic would not subside and the measure of repeal be forced through before reason resumed its sway and truth and logic could dominate the Congress. The enemies of bimetallism, and they now fairly number all those who oppose free coinage for silver alike with gold, as it was before the demonetization of silver in 1873, openly declare that they will be content with nothing less than the unconditional repeal of the silver-purchasing clause of the Sherman law. It is for that they struggle; it was to secure that that the panic was created and free coinage in India suspended.

Unconditional repeal means striking from the laws the last remnant of legislation that secures coinage for silver. It fixes the United States firmly in the ranks of the single-standard nations. It is the consummation of the conspiracy organized at the close of the Franco-Prussian war to destroy as ultimate money redemption one-half the coined money of the world, leaving the other half to bear alone the vast mountain of credit upon which the world's business is conducted, inviting more frequent panics, and rendering them more destructive and enduring.

It is idle to hope that reducing the value of silver to the lowest stage will force Great Britain to seek international solution of the dilemma. The home of the single standard is in her islands. Its members have fully anticipated the low degree to which silver will descend. They have discounted its disturbance of her Indian trade and steeled their hearts against her Indian subjects. The power that could plot for seventy-seven years; that could force its yoke upon Germany, the Latin Union, Austria and the United States; that could gain to its use the daily press of the country; that could control for twenty years the National Conventions of the great American political parties—granting in their platforms professions of bimetallism, but always securing Presidential candidates unalterably opposed to it; that could change an overwhelming sentiment among the people for bimetallism to a feeling of enmity or indifference, can never be induced to relent, for it has counted the cost and learned its power.

The Sherman law is not the work of the silver-producing States. It was forced upon the country against their will. Their constant demand has been that of the agricultural States of the West and South and of the working masses of the whole country. They have not sought to impose upon the country some new financial nostrum, but have asked simply for the restoration of coinage laws as they were from the first year of the Federal Constitution until the furtive repeal of 1873. The Sherman law was the trick by which that restoration was defeated. It was accepted by bimetallists as a pledge that the old laws should at some future time be restored, and they now demand not that the Sherman law shall be retained, but that the hostage shall be redeemed by the re-enactment in its stead of the coinage laws under which the country grew and prospered for more than three-quarters of a century.

The charge that the bimetallists demand that 60 cents shall be made a dollar is a lie. It was the trick of the single-standard conspirators that lessened the value of silver. Had gold been demonetized instead of silver—retaining for silver its greatest use and chiefest function and depriving gold of its greatest and chiefest functions —gold would not to-day be worth $5 per ounce and silver's value and purchasing power would be increased largely above its former highest figure. What bimetallists do ask and all they ask is that the law relating to coinage as it was for the seventy-five years of the country's greatest glory shall be restored without the addition or expunging of a syllable.

If, with that law re-enacted and a fair trial of it had, silver shall not, without the purchase of an ounce of metal by the Government, resume its former relative value with gold, bimetallists will cheerfully submit to any legislation that experience will suggest as necessary to make every dollar in the United States equal in intrinsic value to every dollar bearing its stamp. They urge the old law with supreme confidence, born of the unassailable truths of history, that it will immediately place every coined American dollar upon a par value, both as coin and bullion, restore the bonds of weakened love and confidence and set in happy motion all the wheels of the country's magnificent industries.

Will you listen to us while we speak in words of sober earnestness of the local effects the unconditional repeal of the silver law will have?

The silver mining States and Territories, embracing 1,000,000 square miles of continent, with 2,000,000 Americans inhabiting them, depend pecuniarily upon silver mining for their prosperity. That industry is the very heart from which nearly every other industry receives support. Agriculture will not thrive without artificial irrigation; its mines of coal, iron, stone and clay, while magnificent, are worked with such dear labor and are so remote from other local markets that their movement would be feeble and their operation disastrous without the stimulus the mining industry affords. It supports our foundries, operates our machine shops, supplies our railroads with freights, stimulates travel, keeps bright the fires of the smelters, and sends customers to the shops of our merchants. It has invoked in the valleys and upon mountain sides magnificent cities and thrifty towns and villages.

Great manufactories of paper, cotton, leather, iron, steel and clays distribute their finished products and support thousands of prosperous and happy families. But because agriculture is so limited in area, confined to narrow strips along our few and scanty streams, our labor so high and its handiwork so remote from other than the local markets, the coal is mined, the coke is burned, the rail is rolled, the grain is grown, the fruit is gathered, in the main for the owners and workers in silver mines and smelters and the proprietors and workmen of the industries and callings dependent upon them.

The reduction in the price of silver to about 70 cents has shut down 99 per cent. of the silver mines of the country and the smelters must soon follow their example. There are in Colorado to-day 15,000 idle miners, who know not where to turn if work is not resumed. There will soon be added to this idle army of labor 4,000 men from the smelters. The stone quarries are nearly all shut down, the railway companies are laying off train crews by the score, the foundries are nearly all out of orders, the farmers and fruit growers will be barely paid for the cost of saving their crops, the merchants are countermanding their orders, the traveling men for Eastern houses seek almost in vain for customers. This is no exaggeration.

The destruction of the silver industry will devastate the country as if swept by a cyclone, reaching from the British possessions to the Mexican border line. This sorrowful picture of Colorado, with its mining industry destroyed, but represents the condition of the other mining States and Territories with the same calamity upon them.

If the silver mines shall remain closed, one-half of the American output of lead must be lost. The greatest bulk of the lead product is taken from silver-bearing ores. It requires the one metal supplemented by the other to remunerate the lead-silver mines. Not less than 55 per cent. of the gold product of the country depends upon the maintenance of the silver industry. The placer or creek washings, the earliest and most prolific source of our gold supply, are practically exhausted.

Those who contend for the gold single standard willfully mislead you as to the cost of producing silver. We say to you, in the most solemn and truthful manner, that reliable statistics prove that, including the legitimate items in the account, the silver of Colorado costs, by the time it is on the market, not less than $1.29 per ounce. Like gold, some silver is produced for much less than its market value, but the average cost of silver is fully the highest price it ever brought in the market.

All the mining States and Territories are a debtor class. Stop and consider, men of the East, how many millions of your money are invested with us. The funds of estates of widows and orphans have been loaned on our lands and have built our edifices. Colorado has been a favorite field for such investment. Have the people of any State ever proved more punctilious in prompt repayment? The

Legislature has enacted laws cruel to its own people, and unrivaled in liberality to the creditors, that no man might shirk or escape repayment of the borrowed dollar.

There are held throughout the East hundreds of millions of dollars in railroad stocks and bonds, in municipal securities, in trusts and mortgages, the payment of the greatest body of which depends upon the prosperity of the silver mining country. We of Colorado pride ourselves upon our commercial and financial integrity. No calamity can induce us to repudiate one dollar of an honest debt. All of our assets are at the will of our creditors for their reimbursement. But if by bad Congressional legislation, if through Congress you shall wipe out the great industry of the section around which all others cluster for vigor and profit, the values of our property will shrink, our business will be destroyed, our towns and cities will largely be depopulated, and the railroads traversing the Western half of the continent will be sent into bankruptcy.

Certainly, in the face of such unmerited infliction, you cannot blame us if we are thus deprived of all ability to meet our obligations. You may, it is true, take the country in payment, but after you get it, what will do you with it?

But, though you may do all in your power, whether in ignorance or through selfish greed, to destroy us, we will not submit to the destiny of poverty without a struggle. We shall seek to open up new markets and to build up our silver industry along new lines and with new and more sympathetic neighbors.

Colorado has aided, with her vote, to build up the tariff wall between this country and Mexico and the silver-producing and silver-using republics of the Southern continent. As Senator Teller, one of the staunchest supporters of this exclusive policy, declared but two years ago in the United States Senate, it was not in Colorado's interest to vote for such isolation, but Colorado, thinking more of her sister States than herself, had patriotically sacrificed her own in their interests.

In the South, Colorado appeals with more soul-felt words. Two years ago you feared with sinking hearts and paling lips the enactment of the law that threatened to deprive you of self-government and to turn your election booths over to the tender mercies of Federal bayonets on election day. To save you from the outrages of the Federal Force bill, Colorado's two Senators—Republicans—defied the edicts of their party's caucuses and defeated what was to you the certain humiliation and the horrors of subjection to the electoral will of your former slaves.

We saved you then. You can save us now. With us now it is more of a death struggle than it was then with you. If the schemes of the gold kings are accomplished, if the present silver law shall be unconditionally repealed, the great bulk of us will be made paupers and our beautiful and wonderful State will be set back in its march of progress more than a quarter of a century.

Colorado, great in its resources, proud of its business record, filled with brave men and resolute hearts, makes this its appeal for preservation to the open-hearted and generous people of the country. We are confident that it will not be in vain. The atrocity of making homeless, through the destruction of the chief industries of 1,000,000 square miles of American territory, 500,000 men, women and children, with all the attendant scourges of enforced and hopless idleness, can never be the work of an American Congress with your approval.

Hopeful of speedy delivery from the crushing burdens of a financial system begotten of the greed of Great Britain's remorseless money power, and of the prosperity inseparable from an American system which includes the free coinage of gold and silver at the American ratio of 16 to 1, we submit to the people of the United States this statement of our cause.

THE LATIN UNION AND SILVER.—Negotiations are proceeding between the governments of Italy, France, Belgium and Switzerland looking to the protection of the interests of the nations composing the Latin Union, in consequence of the action of the Government of India in regard to the silver currency of that country. It is believed that none of the members of the union will withdraw from it. In Berne the minting of one-half, one and two-franc pieces has been almost suspended. A few five-franc pieces are still being coined.

WHY THE SILVER PURCHASE ACT WAS PASSED.

The following letter from Senator John Sherman of Ohio to Congressman J. H. Walker of Massachusetts, is of considerable interest just now. The letter was made public July 10:

"MY DEAR SIR:—Your letter, enclosing a copy of your statement of the causes that led Mr. Conger, yourself and me to agree with great reluctance to the Silver Act of 1890, is received. You clearly and correctly state the history of that Act. The bill that passed the House provided for the purchase of $4,500,000 worth of silver at gold value. The Senate struck out this provision and provided for the free coinage of silver, or the purchase of all that was offered at the rate of 129 cents an ounce. As conferees acting for the two Houses, it was our duty to bring about an agreement, if practicable, without respect to individual opinion. The result of the conference was to reject free coinage and to provide for the purchase of 4,500,000 ounces of silver at its gold price—a less amount than was proposed by the House. The provisions declaring the public policy of the United States to maintain the parity of the two metals, the authority to stipulate in contracts for payments in gold, the limit of the issue of Treasury notes to the actual cost of silver bullion at gold value, and the repeal of the Act providing for the senseless coinage of silver dollars when we already had 300,000,000 silver dollars in the Treasury that we could not circulate, were all in the line of sound money.

"Another object I had in view was to secure a then much-needed addition to our currency, then being reduced by the compulsory retirement of National bank notes on the payment of the United States bonds. This would have been more wisely provided by notes secured by both gold and silver, but such a provision could not then be secured. These reasons fully justified the compromise.

"But the great controlling reason why we agreed to it was that it was the only expedient by which we could defeat the free coinage of silver. Each of us regarded the measure proposed by the Senate as a practical repudiation of one-third of the debts of the United States and its people, as a substantial reduction of the wages of labor, as a debasement of our currency to a single silver standard, as the demonetization of gold and a sharp disturbance of all our business relations with the great commercial nations of the world. To defeat such a policy, so pregnant with evil, I was willing to buy the whole product of American silver mines at its gold value. And this was what we provided, guarded as far as we could.

"To accomplish our object we had to get the consent of the Republican Representatives from the silver-producing States. This we could only do by buying the silver product of those States. It was a costly purchase. The silver we purchased is not worth as much as we paid for it, but this loss is insignificant compared to our gain by the defeat of the free coinage of silver.

"It is said there was no danger of free coinage, that the President would have vetoed it. We had no right to throw the responsibility upon him. Besides, his veto would leave the Bland Act in force. We did not believe that his veto would dispel the craze that then existed for free coinage. Many people wanted the experiment tried. The result of the experiment of buying four and a half million ounces of silver a month at its market value, will be the best antidote against the purchase of all the silver of the world at one-third more than its market value.

"I never for a moment have regretted the passage of the Act of 1890, commonly called the Sherman Act, though, as you know, I had no more to do with it than the other conferees. There is but one provision in it that I would change, and that is to strike out the compulsory purchase of a given quantity of silver, and give authority to the Secretary of the Treasury to buy silver bullion at its market price when needed for subsidiary coinage. Other provisions should be made for full legal tender United States notes supported by reserves of both gold and silver and backed by the credit and wealth of the United States, but these are grave subjects for separate consideration. What we want now is relief from further compulsory purchase of silver. We would gladly have reduced the amount to be purchased and at a fixed time suspended the purchase, but this was refused by our conferees.

"Now that the great evil we have feared has, I trust, passed away, we would willingly leave the amount of both gold and silver to be coined or held in the Treasury to the law of supply and demand. I assume that Republican Senators and members who after full conference agreed to our report, will in the main vote for the repeal of the compulsory purchase of silver bullion, and hope that our political friends who felt bound by the local interests of their constituents to advocate that clause or free coinage, will be convinced by the experiment made that the only position we can occupy in the interest of our constituents at large is one fixed standard of value, and the use of both metals maintained at par with each other on a ratio as near as possible to their market value. Such a policy, I believe, is right. With reserves both of gold and silver in due proportions, we can maintain the entire body of our paper money, including coin, at par with each other.

"For one, I will never agree to the revival of State bank paper money, which cannot be made a legal tender, and which, on the first sign of alarm, will disappear or be lost in the hands of the holder. Respectfully yours, JOHN SHERMAN."

HOW TO PREPARE FOR A PANIC.

The following is from a well-known California banker, and although it has especial reference to the recent panicky feeling among depositors in that section, the letter contains valuable suggestions to bankers everywhere.

Editor Rhodes' Journal of Banking:

SIR:—Being safely through this panic, and panics do not follow each other closely, we bankers may now talk over the past and get some light for our future use.

One strange feature has been noticed—some depositors in commercial banks have withdrawn and put their funds in Savings banks. The reason is self-evident. In the latter the last man has an equal chance with the whole crowd; the people are protected against themselves and thus know it and appreciate it.

Commercial banks do not understand their rights in cases of runs nor the true remedy. By custom, under printed reports of condition and in compliance with the laws of the country and the requirements of the official inspectors, they have the right to lend two-thirds or more of their deposits on good paper for short terms.

There is no law compelling them to pay all their depositors in one day or in ten days They must pay in the "usual and ordinary manner."

It is clear that if any banker shall pay off 3 per cent. of his deposits in one day and continue to pay at that rate for thirty-three days he would be held in high estimation. As a matter of fact, this feat is impossible, even for the Bank of England; but there is no good reason why the rule may not be good in its application to the beginning of a drain, for each banker keeps on hand enough cash to last him a week if he will pay but 3 per cent. of his depositors daily. His frank declaration of this intention at the beginning of a run will show his clients that he has not lost his wits and they will the quicker recover theirs. If they know that he can, and will, keep open for one week the excitement can be easier handled, especially if reserves can be brought up.

If no outside resources can be obtained the banker is then compelled to call on his borrowers. While paying the 3 per cent. daily he may make a heroic call on his loans by beginning suit at once publicly against each debtor and compel them to attend on the line and collect the funds after they have left the bank door. Most bankers have not enough stamina for this, but will allow a bank to sink rather than harrass their borrowers. It is respectfully submitted that it is the duty of a banker to sustain his bank even if the community shall suffer severly with cramps and when he succeeds he is entitled to the praise which will surely come to him.

He may vary the above plan by quietly asking his depositors to take temporarily some of his bills receivable and there has been much success in this procedure.

This last method involves a preparatory line of action and here comes the subject most important for your attention.

The banker must be ready at all times with the notes of solvent men, which are not past due (and subject to set-offs), and these notes must mature within a few months, and they must be of small amounts—say $1,000 each.

If his deposits do not average $5,000 to each creditor, he cannot use notes over $1,000 each.

Through a long succession of many years of easy money-getting, low rates and much competition, we have got in the way of loaning greatly on one-day notes—and worse yet—on over-drafts.

Such debts cannot be receivable for clearing-house certificates, and cannot be re-discounted, and cannot be bartered off to timid depositors.

It is time to adopt a rule which shall put the whole fraternity in better shape and yet allow free competition as to rates of interest.

Such a rule might be framed and signed by bankers all over the coast. Allow me to suggest this as an example:

"The undersigned hereby agree to charge and collect *no interest* on accounts or unsecured loans, except from borrowers resident outside the limits of this State, intending, however, to write unsecured loans on definite time (non-interest bearing) and to take them at such rates of discount as may be agreed upon."

Such a rule, if generally signed, would put an end to overdrafts and other unsecured loans at one day which are really payable, not when you wish, but at the convenience of the other fellow. Each banker would have his loans in negotiable shape and could change his rate of discount from day to day.

His borrowers would not be subject to sharp and unexpected calls; they would carry respectable credit balances for future use. They would enforce the same rule against their customers and bring in their clients' notes for discount.

Many of our clan will hereafter desire to carry a large supply of good bonds which can be quickly sold in the market or exchanged with crazy depositors, as that means a curtailing of loans, and as a good man's note is usually as good as a county bond, it would seem as if it were better to arrange our securities as above stated.

Many of the country bankers must lend on landed security, and, if it were not for the blessed mortgage tax, they could write these loans in bonds or notes of $1,000 each—several under one mortgage—and they would be very acceptable to most depositors.

They certainly would be as good to the city banker as the overdraft of the country bank.

"Convertibility" is the watchword in preparing for future "squeezes." F. M.

A Programme for Congress.—Hon. Michael D. Harter, member of Congress from the Fourteenth District of Ohio, submits the following:

"Much has been said about the duty of Congress at its extra session. It seems to me the following very brief programme will fully meet the immediate needs of the country:

(1) The purchasing clause of the so-called Sherman Act should be promptly repealed, and without conditions of any kind.

(2) The National banks should be allowed to issue notes up to the par value of their bonds deposited to secure their circulating notes.

(3) When he deems it necessary for the purpose of maintaining the paper and silver money of the United States at a parity with its gold money, or when he deems it necessary in order to promptly pay all debts of the United States as they become due and payable, the Secretary of the Treasury should be authorized, with the approval of the President, to sell in such amounts, at such times, and upon such terms as he considers wise, five-thirty three per cent. bonds of the United States.

(4) When he shall have been properly advised that not less than ten of the leading nations of Europe, including Great Britain, Germany and France, have opened their mints to the free and unlimited coinage of both silver and gold as legal-tender money, the President should be authorized to open the mints of the United States to the free and unlimited coinage of both metals at the same ratio as then governs the European mints.

(5) The extra session should then adjourn, leaving all further legislation for the regular session."

BANKING AND CURRENCY.

THE COMMERCIAL NEED OF A SOUND SYSTEM OF BOTH.

ADDRESS OF HON. J. H. WALKER, OF MASSACHUSETTS, BEFORE THE WORLD'S CONGRESS OF BANKERS AND FINANCIERS, AT CHICAGO, JUNE 21, 1893.

"The affirmative of the question assigned me, viz.: "THE COMMERCIAL NEED OF A SOUND SYSTEM OF MONEY AND BANKING," is so obvious, and admitted by all, that I shall devote the time allotted me to an exposition of the subjects embraced in the question, viz.: MONEY and BANKING, and to the anomalous financial condition of the country.

In order to an intelligent discussion of the question, it becomes necessary that I should first clearly state the nature and function of money, in its relation to all other forms of wealth, and, secondly, to state clearly the nature and function of banks in their relation to all other owners and dealers in property—wealth.

Wealth is roughly divided into three classes: Productive wealth. Consumable wealth and coin.

Coin is neither productive nor consumable. It has but two uses, viz.: that of a measure of the value of commodities, at the point of their exchange only, and that of currency. Coin being absolutely dead capital producing nothing, and non-consumable, the having or keeping a dollar of coin more than is necessary, is an utter waste to the country, of all the capital invested in coin, in excess of what is necessary. A sufficiency is enough in coin or paper money, as in all other things.

Productive wealth is, roughly, real estate. The handling of titles to this form of wealth is the business of Savings banks, Trust companies, insurance companies, and all other companies or individuals dealing in titles to wealth that are known as solid securities. This business is wholly distinct from that of banks of issue, or banks handling titles to consumable wealth, which banks only are contemplated in the question before us.

In making all loans, each particular paper given is identical, in essence, with every other whether a check, draft, bill of exchange, or paper money, or a credit to the borrower on the books of the bank. The real thing the borrower gets is capital. The paper money he gets is not the loan. It only represents the loan, and passes out of his possession in a day. It is only a token, a symbol of the capital—the wealth—which the bank transferred to the borrower. While the specific piece of paper, of whatever name, which the borrower secured, passes out of his hands in a day, the capital borrowed of the bank by him remains in his possession for the seven, thirty or sixty days, or four months, as the case may be, as well as the property he is subsequently to deliver, and for the length of time the obligation runs.

In other words, men do not borrow or lend money, but capital—wealth—property. It is as irrational to attempt to increase wealth by increasing money as it would be to talk of increasing land by increasing deeds. Money is no more wealth than deeds are land. Money is only a title to property—wealth—as deeds are titles to land, and neither is useful beyond its power to give possession of the thing it signifies.

As the average daily transactions of banks are about $400 millions, it follows that the banks buy and sell, of business men, each year, about $120,000 millions of property. It is as untrue that money is wealth because it conveys the ownership of wealth, as it is untrue that freight cars are merchandise because they carry merchandise, and as foolish to think of adding to the wealth of the country by increasing money as to think of increasing merchandise by increasing freight cars. It is a very serious thing, to any country, to be short of the number of cars that can be profitably used to carry every passenger who buys his ticket to ride, or to carry every pound of merchandise that offers for transportation, but to have any more of money, coin or paper, or of cars, than is necessary, is not only a positive loss to the country but is an excrescence upon and demoralizing to all legitimate business.

The loanable funds held by National banks in this country, is shown, by the report of the Comptroller of the Currency, to be in round numbers $2.800 millions. Of this sum, $1,800 millions are deposits of customers and the balance belongs exclusively to the banks. The loans and discounts are $2,200 millions, and the other $600 millions is held as a reserve. This means that the banks hold titles to $2,200 millions of the consumable wealth of the country, that is now in the hands of the farmers, manufacturers, merchants, etc., and that farmers, manufacturers, merchants, etc., hold titles to $1,800 millions of the funds now in banks.

As the deposits are $1,800 millions, and the daily transactions are $400 millions, it is evident that the average time each deposit remains in bank is 4½ days. This $1,800 millions of capital is and can only be made available to all the community by banking. Its constant use would be impossible without banking or its equivalent. Upon the principle of chances, as railroad trains are run, and all other things done, the banks know that their deposits will average to equal the amount drawn from them each day, and therefore they make loans on thirty, sixty or ninety days, or even four months. They do this, knowing that the capital they are the agents in loaning, once, will change real ownership from 7½ to 30 times, before the capital loaned will be returned. Without banks or their equivalent, each man would be obliged to keep, all the time, as much quick capital as he needed, at those times when needing the most, and this $1,800 millions will lie dead capital. Furthermore, it is impossible for any other agency than banks to economically issue paper money that is sure of immediate redemption in coin, on demand. The issue of paper money is not necessary to, or even an essential part of the function of, banks. Some banks, whose customers do all, or nearly all, their business with checks and drafts, now refuse to issue currency, and there is no device by which such banks could keep it in circulation, in sound banking. There are hundreds of private bankers in the country, whose connection with National banks, as officers, etc., enables them to put all the onerous duties of banking upon such National banks, and take only the more profitable business to themselves, who have no desire to issue currency.

Banks are public markets for the exchange of their own *bona fide* capital and that of others, which capital cannot be diminished. All the currency or other paper they issue is only to facilitate the exchange of capital. Government, on the other hand, has, and can have, no capital. In economics, it is only an agent to collect and expend taxes.

Government, State or National, has no machinery and can construct none—none can exist excepting such as inheres in the bank—that will enable it to issue paper or coin money excepting at an enormous cost to the people, unless it becomes a full-fledged bank. The annual direct cost of the experiment of doing so, which the United States Government is now trying, is $40,000,000 or more, in direct and indirect taxation of the people. Had we a rational National banking system; had we a banking system conformed to what the experience of the centuries approves; had we a banking system modelled after the solid, safe and economical system of England; had we a banking system modelled after that of Germany; every loan and discount made by banks, could be made at a rate of interest about 1 per cent. lower than they are now made and the banks pay as large dividends as now. A saving of 1 per cent. on the $2,200 millions loans and discounts would be $22 millions annual saving to the people. If we had had a rational banking system wholly dissevered from the Government. excepting in police supervision, for the last thirty years, we never should have heard of a political coinage question, either of gold or silver. Had we now such a banking system, we should not be carrying more than $400 millions of coin in excess of what we can possibly find economic use for. This excess entails an annual loss of 5 per cent., of $20 millions, which, added to the $22 millions which the people are made to pay in excessive interest, makes an annual loss to the people of over $40 million. Not a dollar of coin in this country is earning, or can be made to earn, income. That can be done only on coin in bank reserves; where the visible coin in Europe is, and is there earning an income.

The fundamental principles of the banking system of England have stood every shock of and been justified by eighty years' experience. Here is one of the most successful financial systems ever devised, as to safety, cheapness, flexibility and abundance. Compared with that of the United States, it shows our system to be expensive, rigid and uncertain. Our system of finance, as compared with that of England, ought to bring the blush of shame to every statesman who is responsible for its existence.

Every dollar of coin money habitually carried in the pockets of the people must be deducted from the aggregate coin in a country, to ascertain the amount of commercial coin. Coin in the pocket performs only the function of currency. As much goes back into the pockets of the people, each day, in payment, as comes out of them, in the purchase of commodities. Therefore, the coin in the pockets of the people is a perpetual or dead deposit, so far as commerce is concerned. This is equally true of all paper money. Economists can take cognizance only of 'visible coin' as the coin of commerce.

According to the report of the Director of the Mint, we have $1,200 millions of coin in this country.

We have of visible gold coin	$337,000,000
We have of visible silver coin	468,000,000
Total visible coin of commerce	$805,000,000
France has of visible gold coin	$264,000,000
France has of visible silver coin	251,000,000
Total visible coin of commerce	$515,000,000
Germany has of visible gold coin	$206,000,000
Germany has of visible silver coin	56,000,000
Total visible coin of commerce	$262,000,000
England has of visible gold coin	$125,000,000
England has of visible silver coin	0,000,000
Total visible coin of commerce	$125,000,000

The mere reading of these figures ought to bring the blush of shame to every American who knows the feeling of financial security and power—the unbounded confidence—that reposes in the breast of every inhabitant of Great Britain, and the well-grounded sense of insecurity, weakness and fear that prevails here, which is paralyzing every enterprise in the country.

Our banking laws have three admirable features:

(1) Their supervision by expert examiners and the publicity of their condition, which ought to be made even more thorough and controlling than now.

(2) The requirements for bank reserves, and especially their being allowed to keep a part of the reserves at the great banking centres.

(3) The certainty that the currency notes of the banks will ultimately be paid in full.

Every man in this country, at all informed on the theory or practice of sound banking and the best methods of furnishing the people with a sound and cheap currency, knows that the currency furnished our people under existing banking laws is the most expensive and the poorest in every respect save one of any currency that is furnished to the people in any first-class Nation.

All persons whose investigations and experience give their opinion any special value know that the money of a people should be: (1) Safe. (2) Abundant. (3) Elastic. (4) Cheap. (5) Uniform. (6) It should be in the locality of its issue, where it is most needed, as far as it is practicable to have it.

In every one of these elements of a sound currency, or good money, the United States stands at the foot of the list.

Not a man present will dispute the proposition that what makes a sound currency or good money is its certain and instant current redemption, convertible into coin, when a demand for coin is made. This demand is made and answered ten times, or ten thousand times, as the case may be, with every dollar, during its life, and as often as it is returned to the bank issuing it.

Where two coins of different commercial bullion value are legal-tender, sure redemption means that it be instantly done in the coin of the highest commercial bullion value. To doubt money is to discredit it. There is not a man present who does not know that all-pervading doubt exists as to the continued current redemption of our currency. This fear is manifest everywhere, and is injuring every business and occupation, and paralyzing some. How thoroughly inexcusable, and even disgraceful to the country our financial condition is, will be made apparent by seeing how impregnable and superior to all others our position would be had we a proper National Banking Act.

All economists know that coin is now used almost exclusively as a measure of value, certainly so in this country, and also that foreign commerce, alone, really tries the coin strength of a nation's commercial system. We have men of commanding intellect and genius, the equal of those in any country or of any time. Have they been playing the demagogue, for party advantage, on questions of finance? The genius of her statesmen maintains a commercial system in Great Britain, the absolute impregnability of which is nowhere questioned, on $125,000,000 of visible gold, while she has a foreign commerce alone of $25 to every dollar of her visible gold. We have $337 millions of visible gold and a foreign commerce of only $2 1-5 to each dollar of visible gold; and yet every acknowledged financier in the country is compelled to distrust the soundness of our money and our financial integrity. Is it not perfectly clear that with three times as much of the gold of commerce as Great Britain, and with only one-twelfth the demand upon each dollar of this gold that is made upon each dollar of the gold of Great Britain, all our financial troubles and anxieties are caused by a discreditable financial system, and are not caused by our lack of financial strength or our need of more gold, or more coin of any kind. The facts I have given show that in gold, proportionate to England's, or to any legitimate commercial demand that could be made for it, had we a sound financial system, no fear would exist. Our stock of visible gold coin is proportionately 3.829 times as large as that of England. Did England insist on hoarding as much gold, in proportion to her commerce, as we now have, she would insist on having $1,424 millions in gold instead of $125 millions. Her statesmen absolutely refuse to be at the trouble and expense of keeping more than $125 millions, or one-twelfth of the vast proportional sum we now have, and for two reasons: 1st. because it would tax her people $6½ millions, or an annual tax of twenty cents on every man, woman and child; and, secondly, because it would embarrass every other Nation and ruin her commerce. Compare the wisdom of her statesmen with that of ours. Here we unblushingly put an annual tax on our people of 67 cents a head by a financial system infinitely inferior to that furnished free of charge to the people of Great Britain by her statesmen.

Again, the actual daily need of coin is not a matter of speculation. As I have before said, our daily bank exchanges are about $400 millions, and we know that only 1½ per cent, of them are made in coin.

This proves beyond peradventure that our actual daily use is only $6 millions of all kinds of coin. Six millions against a stock of $337 millions of visible gold alone, and about $800 millions in all kinds of coin! and yet, like Oliver Twist, while shivering with fear, we call for more, and refuse to conform our financial system to approved methods.

Again, the efficiency of each $1,000 in coin, in making the exchanges of the world, has increased a thousandfold faster than have the exchanges of any country, or of the world. This efficiency has increased faster in the last ten years and is now increasing faster than ever before, by the better use of railways, steamships, telegraphs, telephones, and, above all, in improved commercial methods and economies. In trade between Boston and Canton, the efficiency of each $1,000 in coin has increased 13,000 times since 1830, $1,000 now being the equivalent of $13,000,000 under the methods of 1830. Then, a ship loading for a six months' voyage to Canton, took its supercargo to trade for a return cargo, and what coin it needed to pay the difference. Now, the coin is transferred by telegraph, and an answer received, in five minutes. Thirty days were consumed in going to and from Boston and St. Louis. Now, coin is transferred in one minute. Coin is now 10,000 times more efficient in that trade, $1,000 in 1830 being equivalent to $10,000,000 now.

In the second and third qualities of sound money, abundance and elasticity, we are at the same disadvantage. No currency can possibly be abundant that is not elastic. Have as much as you please, and it still will be cribbed and confined. This we know from experience. At a fixed and invariable amount, whatever the amount may be, normal business adjusts itself to that amount. At the moving of the crops, or at any other periodical expansion of trade, there must inevitably be a stringency. Instead of all uniting to conform our financial system to approved methods, we have two bodies of citizens fighting a fierce battle over this foolish question of quantity. One is contending that we have not enough money, and the other that we have too much. Both are right and both are wrong. This country must have an elasticity of from $100 millions to $200 millions in its currency, between the maximum and minimum amounts. Our currency never will be abundant or elastic until we adopt a system that will allow an adjustment as wide as I have indicated.

Fourth, as to cheapness, our money averages to cost our people, in interest on loans, fully $100 where it ought to cost no more than $86, or one-sixth too much. There is not another first-class country in which the reserves of its banks are not kept in coin. There is no such country, except the United States, where every dollar of its funds—the wealth—of the people, in its banks, is not available to the banks to loan. In every country, excepting the United States, the banks are allowed to issue currency (circulating notes) to an amount equal to their reserves. In other countries all the visible coin is in the reserve of banks where the people can surely get what they need of it at any moment, by presenting the paper issued by the bank, to the amount of the coin they desire. Notes being issued by the banks to the amount of their reserve, every dollar of banking funds is earning an income. Here, not a dollar of the bank coin reserves is earning any income.

In England, Germany, France, etc., the coin reserves of banks are performing three functions:

(1) They are used to measure values in every transaction in the country, as all transactions are ultimately and equivalently settled in the banks. The paying of the final balance in coin is the equivalent of each bank paying each single obligation in coin.

(2) They act as our bank reserves act. They are at hand to satisfy any and every obligation against the bank, which obligations practically mature only in balances shown, of debts and credits between banks.

(3) Currency notes are issued to an amount equal to these coin reserves, and they are thus made a source of as much income to the bank as any of its quick funds.

As I have before said of the $2,800 millions of banking funds in our banks, $600 millions, or more than one-fifth, is absolutely, needlessly and foolishly—I had almost said wickedly—and by compulsion of law, held out of earning an income. This is an enormous sum. While we glibly pronounce the words, we fail to realize the significance of this enormous loss. The law only compels about $400 millions to be kept in reserve. Had we a financial system that justified the same confidence that is felt in other countries the usual reserve would be no more than $400 millions. I therefore use $400 millions in my calculations, proving by them that the average bank loan and discount is forced by the law to a price to the borrower one-sixth higher than its normal price would be had we a rational system like that of other countries. Assuming an average interest of 6 per cent, on the loans and discounts of National banks, viz., $2,200 millions, the interest amounts to $132 millions. One-sixth of this sum, or about $22 millions, is absolutely wasted to the people in unnecessary cost. One-seventh of the funds in banks, viz., $400 millions, being compelled to be held from earning an income, the interest charge on the remaining six-sevenths must be one-sixth higher.

(5) As to uniformity. Our currency is admitted to be about as uniform as was the color of Jacob's cattle.

(6) Having currency in the locality of its issue and where most needed is of very great importance. No one would claim that existing law is so framed as to legitimately press currency back to the locality of its issue. The requiring of a proper system of current redemption for, and paying out of currency, by banks, by not allowing them to pay out their own currency when they have that of other banks in their vaults, would induce them to return the currency of other banks to the United States Treasury for redemption, and thence to the banks issuing it. Banks can earn no money on their own currency, unless out of its vaults in circulation. This would influence banks to give local men and local business the preference in all loans, in order to keep the currency out as long as possible, which would be an advantage to the section of country where a bank is located, not realized by those who have not seen the experiment tried.

The definitions and illustrations introduced in this paper show that the nature of money is such that it is physically impossible for governments to do more, concerning it, than to exercise a police supervision over it, and that banks take the place of money. In fact, banks are money, in the check, draft, bill of exchange, etc., issued on them. Every sound business maxim, every correct business method, presupposes a bank as a part of each business concern. Banks are interwoven with, and are a part of, all business enterprises. It is a physical impossibility for a government to be an agent in any part of banking, without being a bank and co-partner with every one of its patrons. Banks have come to be an inseparable part of every business, as they are an inseparable part of currency, whether they issue any currency or not. It is hown by the returns made to the Comptroller by National banks, on a given day, on two or more occasions, that the percentage of coin used in each day's transactions is about 1½ per cent.; of currency bank notes, about 4½ per cent.; and of checks, drafts, bills of exchange, etc., which do the work of money, about 94 per cent. Issuing paper money by banks is essentially and actually no more in kind than writing a credit on the book of the customer of the bank. If to-day the use of every check, draft, bill of exchange, etc., were prohibited and should cease, and bank currency notes take their place, and thus the issuing of bank bills be increased more than twenty fold, it would not increase the liability of a bank, or affect it in any way, working no advantage or injury to it. It would simply inconvenience and increase the risk to every person in the community doing any business and almost beyond calculation.

The business man would then keep that money in his safe or vault, instead of keeping his blank checks or drafts. He would then be obliged to have his currency money in his safe to the same amount that he now has credit on the books of the bank. Again, the deposits which every prudent business concern carries in a bank, bear a certain percentage to the business of the concern, as reserves do to banks and are to each one carrying them, his reserve to meet contingencies known or unknown, precisely as the bank keeps the reserve required by law, of 15 per cent. or 25 per cent. as the case may be, to meet contingencies. Some business concerns secure from the bank, or otherwise, on each Monday morning, enough money to pay every obligation maturing in 14 days. The concern then has 1-26 as much money on hand as its annual business. This is its reserve capital—capital not in active use. When the sun rises on the following Monday, it still has a reserve amounting to 1-52 of its annual business. This is exactly what banks do. They are simply business concerns, and do their business as other business is conducted.

Simply coining metals into money for private persons is no part of issuing coin money, even by the Government, in the sense in which the term is now used. Never did any Government try the experiment of issuing money any more faithfully, or under any more favorable conditions, than has the Government of the United States.

The utter want of confidence in the money of the country, betrayed in every financial quarter, pronounces the experiment a failure. Look at the existing conditions. We have of:

Legal tender notes (old issue)	$347,000,000	National bank notes	$172,000,000
New Treasury notes (July 14, 1890)	130,000,000	Currency certificates	11,000,000
Gold certificates (paper)	143,000,000		
Silver certificates	327,000,000	Total paper outstanding	$1,130,000,000

While theoretically the Government is responsible for the current redemption of the $347 millions legal-tender notes only, whoever is to finally redeem it, the Government, in fact, must currently redeem in coin every dollar of the $1,100 millions as long as there is a legal-tender note in circulation. Were every dollar of this $1,100 millions currency issued by the banks, they would now have in their vaults, to redeem it, every dollar of the visible gold in the country, viz., $337 millions. All visible gold in England, Germany and France is in the banks of those countries. The inexorable laws of trade and finance compel it. These laws are such that gold cannot be taken from any bank and not be quickly returned to some bank, and ultimately to the bank from which it was drawn. Proper banking laws, establishing a proper banking and financial system, make it strongly for the pecuniary interest of every bank to conserve the gold it needs. Still more strongly is it for the pecuniary interest of every man in the country to help the banks to get and keep the gold they need. On the other hand every law of finance and trade militates against the getting or keeping, by a bank or by any person, gold it does not need. In finance the Government counts only as an individual. Bankers have a thousand legitimate and beneficent ways of keeping the gold they need, and for the use of any person who demands it of them. The Government has none. Banks are obliged by their regular customers to keep gold and wholly and necessarily at the expense of the bank and to the good of every citizen of the country, rich or poor. No bank will keep one dollar in gold more than sound finance compels it to keep, as witness the Bank of England which keeps an average of only $125 millions of gold and refuses to have any more. The United States Government, and every other Government, has, and can have, no legitimate and normal need of coin under a rational financial system. Under our hybrid system, it is utterly helpless to get and keep one dollar of gold, sorely as foolish legislation is now compelling it to get it, unless it is freely and benevolently given it by friends. It is inevitably in the attitude of a mendicant, naturally and inevitably, by the laws of the universe. which fix alike the condition of individuals, governments and banks. Its attitude as to money is the exact opposite of that of banks.

While there is a single million of legal-tender notes in circulation, that current money can be exchanged for, the Government is inexorably bound to redeem every dollar of the whole $1,100 millions of currency afloat. Every one of us knows that no power could overcome the natural defences of banks so as to divert $337 millions of gold from them, while every one knows that the $100 millions in the United States Treasury is as utterly defenceless as it would be in the possession of an individual doing as much business and owning a floating debt of $1,100 millions in demand notes, as does the United States. Every one is now demanding that the issue of legal-tender Treasury notes to the amount of $4½ millions a month, for the purchases of silver for the sole purpose of increasing the Government currency, shall cease.

There is no help for us while the Government continues its purchase of silver to increase the currency, or while the United States Government is responsible for the current redemption, in either gold or silver coin, of a single million of Treasury notes or legal-tender notes. We know the people will not justify Congress in levying taxes to pay them; therefore some other practical method of disposing of them, of which the people will approve, must be devised. Neither can the tax on State bank circulation be safely repealed until every Government legal-tender note is disposed of.

The Committee on Banking and Currency of the last Congress reported to the House a bill (H. R. 10,615) which will be before the next Congress, which fully meets and remedies every defect and difficulty of our financial situation. Repeal the purchase clause of the silver Act of July 14, 1890, and pass the banking bill mentioned, and we shall be immediately in a stronger financial situation, as well as in every other, than any country on the face of the earth.

For security (1) the bill provides that every bank shall keep its cash reserve in coin, at least half in gold coin, and may keep the other half in silver coin.

For quantity and elasticity (2) that banks may issue currency notes at any time to an amount equal to their average reserve during any six consecutive months in the previous year, and the Comptroller may reduce the sum to their average reserve during any other six consecutive months, thus earning income on the reserve, and giving elasticity of $100,000,000 to $200,000,000.

(3) That banks must proportionately take upon themselves the current redemption of existing legal-tender notes, by each bank taking a part of them equal to the currency it issues because of its reserves, the Government to "finally redeem" them when the bank goes out of business.

(4) For more perfect examination and reports by examiners.

(5) For an expert board of advisers (directors) associated with the Comptroller.

(6) That banks may be used by the Secretary of the Treasury to do the work of current redemption of bank notes, etc.

(7) Bonds are eliminated, but every other beneficent feature of our present national banking system is kept and perfected, and a tax imposed upon banks of one mill per annum on each dollar they issue of currency. This tax, small as it is, will yield many times more money than the losses to holders of bills could possibly be, as shown by 30 years of experience. This tax to remain in the United States Treasury in place of bond security.

The scheme contains not a single new feature in banking. It would simply apply to banking in this country, those maxims and regulations concerning all things affecting banks that are approved by the experience of the past and are now in operation in the strongest European banks.

A Farmer's Views on Silver.—Secretary Morton puts the silver question down as a business proposition and in a way to appeal to the tillers of the soil when he presents these facts:

The Granite Mountain Mining Company produced refined silver in the year 1887, or 1888, according to its report to Secretary of Treasury, to the amount of nearly 3,000,000 of ounces at a cost for mine labor for refined silver of 12 cents an ounce. The whole output cost that year in all $36 800. Coined at 412¼ grains to the dollar it would make over $3,000,000 of legal tender for over 3,000,000 bushels of wheat, the labor cost of which is more than $300,000. That is, by free coinage, under law, $36,800 of mine labor is made and forced to an equality with $3,000,000 of farm labor cost. By law this free coined silver will, when it represents only $36.800 of mine labor in Montana, be made exchangeable for $3,000,000 farm labor in Nebraska.

RELATION OF SILVER TO THE CURRENCY.

ADDRESS OF HENRY W. YATES, PRESIDENT OF THE NEBRASKA NATIONAL BANK, OMAHA, BEFORE THE RECENT CONVENTION OF THE IOWA BANKERS' ASSOCIATION.

That something is wrong with our financial system must be admitted, and it will be my endeavor to show where, in my opinion, silver is the disturbing cause. To do this I must trouble you, as briefly as possible, with a historical statement of the connection of silver with our currency.

The Constitution of the United States in defining the powers of Congress contains the words "To coin money and regulate the value thereof." Nothing is said concerning either metal—the States are prohibited therein from coining money or the making of anything except gold and silver coins a tender in payment of debts. So far as the powers of Congress extended, either or both of the money metals could be used.

The word "regulate" seems to have a plain meaning—it cannot be construed by the ordinary mind to mean "create" or "fix" a value.

The old and honest theory of money, which is as true to-day as it ever was, is that the Government stamp should add nothing to the value of the metal contained in the coin—it should simply be a guarantee of weight and fineness, and the word "regulate" is capable of only one construction—that when two metals are used for money the amount of metal in the coins should be proportioned to each other, or regulated to the prevailing value ratio of the uncoined metals, so that both might be used and maintained in circulation. The early Congresses so understood the meaning of the word.

A HISTORY OF RATIOS.

The first Coinage Act, April 2, 1792, named the ratio as fifteen parts of silver to one of gold. These figures were not chosen arbitrarily, but represented the then existing commercial value of the two metals. Subsequently the action of Great Britain in adopting a single standard of gold, to some extent depreciated silver, so that our mints became closed to gold from its being undervalued in our coinage. In order to restore the coinage of gold the Acts of 1834 and 1837 were passed, raising the ratio to sixteen to one, which was evidently a continuance of the undertaking to regulate as required by the Constitution. The discovery of gold in California in 1847 caused an enormous expansion of gold currency. The amount of that metal produced in the United States from 1849 to 1890 aggregated over $1,800,000,000. This caused some appreciation in the relative value of silver, which thereby became undervalued in our coinage and ceased to circulate. No inconvenience, except scarcity of small change, was experienced from this, because the gold production supplied all the money demanded, and the more bulky metal was not missed, and was not then produced to any extent, as compared with gold.

The Act of 1854 gave us our present subsidiary coins, in which the silver was greatly overvalued, for the sole purpose of supplying and maintaining in circulation the lesser coins. In 1873 the silver dollar, having become obsolete, was dropped from the coinage.

THE ACT OF 1878.

We have now arrived at the period when, in my opinion, not only was silver made a disturbing element in our circulation, but it also suffered great damage as a money metal at the hands of its so-called friends. Not long after 1873 attention was drawn to the fact that a mistake, in the opinion of many, had been made in demonetizing silver, and, in response to the popular clamor following thereupon, the Act of 1878 was passed, restoring the dollar to our coinage, but upon terms and conditions entirely different from any former practice in our financial history.

The metal in the silver dollar, which in 1873 was worth $1.03 in gold, had fallen in value by 1878 to 88 cents. In order to regulate the value of the two coins a change in the standard was required, and this was at least eighteen to one. Instead of doing this and leaving our mints open to the coinage of silver, Congress undertook by its fiat, or governmental power, to make sixteen equal to eighteen. Here was where the wrong was done to silver, and the damage inflicted upon a monetary system up to that time perfect in its arrangements. Silver from that period ceased to be a true money metal, and became a commodity. The obligation upon the Government—so opposed to common sense—to purchase $2,000,000 per month, at any price at which it might be offered, made this the dearest market in the world for silver, where it should have been the cheapest, upon a commodity basis. It also exposed the Government to any manipulation or combination that bullion speculators or mine owners could organize. The Act of July 14, 1890, increased this forced purchase by the United States to 4,500,000 ounces monthly.

SILVER'S STEADY FALL.

Notwithstanding these heavy purchases, silver has continued to fall in price. Shortly after the law of 1890 went into effect its price was raised temporarily, and it reached $1.21 per ounce, but within a year from that period it was down to its then lowest recorded price of 83 cents.

Notwithstanding the excessive issue of notes on account of silver, their parity with gold has been maintained up to the present time. The Resumption Act of 1879 required the Secretary to sell bonds for gold until a sum of at least $100,000,000 should be obtained, which should be held in the Treasury as a reserve for resumption purposes. This Act, which took effect January 1, 1879, contained a provision that on and after that date all notes and claims against the Government should be paid in coin, at the option of the holder.

This $100,000,000 provided for constitutes the reserve of which so much has been said and written, and all gold in the Treasury in excess of this sum is termed free gold. Under the Silver Act of 1878, which was subsequent to the Resumption Act, silver certificates were authorized upon deposits of standard dollars, the impossibility of circulating the coins being from the first recognized. No provision was made in this Act for gold redemption, but each successive administration has deemed it wise to deal with these notes and coins the same as with the legal-tender notes, and the Act of 1890 contains the following:

"That upon the demand of the holder of any Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

It will be seen that ample authority has been given to maintain our fiat money on a par with gold, but no means have been provided in any of the Acts following the Resumption Act to enable the Secretary to obtain gold for the purpose of maintaining this parity.

It has, however, been no difficult matter to maintain gold parity on account of the favorable conditions existing during the following years.

THE SITUATION TO-DAY.

From 1879 to 1891 the balance of trade was, as a general thing, largely in our favor, and this covers a period of phenomenal growth and prosperity, which seems to date from the period when specie resumption placed us in financial accord with the balance of the world. In 1879 the gold in the Treasury amounted to $135,000,000, and the total estimated in the country was $244,353,000. The total United States notes was $346,000,000, so that the gold on hand was 40 per cent. of the liability. In estimating treasury liabilities for redemption I do not include National bank notes or subsidiary silver coin.

In 1891 the gold circulation of the country was estimated at over $700,000,000, an increase over 1879 of nearly $500,000,000. The silver issues had increased the Treasury liabilities by $344,000,000, making, with legal tenders, a total of $790,000,000. The gold in the Treasury, however, had increased to $177,000,000, leaving the reserve 22 per cent. This was still sufficient, but the increasing liabilities, under the Bland bill, clearly indicated future trouble, and it would have arrived sooner or later. The Sherman bill simply accelerated the effects of the Bland bill.

The Treasury balance continued to fall after 1890, as follows: January, 1891, $141,000,000; January, 1892, $119,000,000; January, 1893, $108,000,000; and at this time it is very slightly in excess of the $100,000,000 minimum reserved required to be maintained. The liabilities have increased at this date—May 1, 1893—to $922,000,000, leaving $100,000,000, a reserve of less than 11 per cent.

The demand for gold for export now threatens the $100,000,000 reserve, and under the Resumption Act, when this occurs, the deficiency must be restored by the sale of bonds.

Only one certain and reasonable course is open, and that is the repeal of the silver purchase Act; and if necessary its unconditional repeal.

REPEAL THE PURCHASE ACT.

Let this be done, and all doubt and distrust, so far as our monetary basis is concerned, would disappear. Complete confidence would be restored and all the gold needed to maintain the parity of our currencies would be freely tendered. Gold exports would lose their terror and legimate business will again prosper, free from an incubus which has constantly threatened its life since the inevitable effects of the silver policy inaugurated in 1878 began to be felt and appreciated.

The question, however, will naturally occur, what then will become of silver if the purchase Act is unconditionally repealed?

If necessary to maintain our financially free intercourse with the capital of the world, it would be best that we should leave it to its fate. But I am not opposed to silver as a money metal. The world is not yet prepared to banish it as such, which fact is proved by the immense amount still used for that purpose. In many respects it is a better and safer metal for the purpose than gold, and joined with these considerations, is the further fact that it constitutes one of the most important productions of this country. The destruction of its money value would cause great damage and distress to many deserving enterprises and the business life of many flourishing communities, to say nothing of the immense loss to this Government, whose Treasury forms a holding larger, perhaps, than any other in the world.

Its loss in value has been caused not so much from over-production as from its disuse as money. Beginning with its demonetization by Great Britain in the early part of the century all the great commercial powers of the world have closed their mints to its coinage, whereas all had previously recognized it upon some named ratio with gold. As I have already shown, it was demonetized in this country by the Act of 1873.

THE FETICH OF SIXTEEN TO ONE.

It is difficult to comprehend the fetich of sixteen to one as the ratio value of silver to gold. In the time of Julius Cæsar it was ten to one, and during all the centuries since it has been changed according to the caprice or preference of nations. In England the ratio was repeatedly changed by proclamation, and in our own brief history, as I have already shown, it was changed once from fifteen to one to sixteen to one. The intention of all these changes has been entirely clear: it was to regulate the ratio of the metal in the coins by the prevailing ratio value of the metals to each other. When this practice has been deviated from in the issue of base or degraded coins, it has always been in the exercise of despotic power for revenue purposes, and has usually failed and invariably carried with its failure disturbance and disaster in all commercial lines, with its inevitable cost in the end. Equal circulation of gold and silver upon a ratio of sixteen to one, which so grossly undervalues gold, is impossible.

A FEASIBLE PLAN.

I will now venture to give what I believe a feasible plan in the interest of silver, which, in my judgment, demands something at our hands, provided our entire currency system, joined with its coinage, may be maintained on a parity with gold.

The late Secretary Windom, in his report to Congress in 1889, says: "The coining of silver dollars containing a dollar's worth of bullion is impracticable and impolitic." I am inclined to believe the Secretary was emphatic in his opinion mainly for the reason that he had a scheme of his own which he desired to press upon Congress. This plan was the issue of Treasury notes against the deposit of silver bullion at the market price of silver—redeemable in bullion or dollars at a like value. This would have continued silver on a commodity basis, whereas I agree with Mr. Bland, that silver is either a safe money metal or it is not, and believing that it should have a fair trial, which it has never had since the first Bland Act, I favor the opening of our mints to the free coinage of silver upon the lines laid down in the Constitution, and I do not believe with Mr. Windom that it is impracticable, and it is certainly not impolitic, if guarded by proper conditions. We must continue to recognize the fact that gold is the standard of that part of the world the use of whose capital we desire.

THE NEW RATIO.

With this end in view, the ratio to be adopted should be a figure which takes silver at its minimum price during any considerable period of time, which, I should say, would now be twenty-five to one.

It would be impracticable, it is true, to coin a silver dollar containing 580 grains of fine silver, but it is entirely unnecessary that the dollar should be coined. The English silver pound sterling and the French gold franc have never been coined, and yet they have constituted the money of account in those countries for centuries. Without going much further into details, my plan, briefly stated, would be to issue certificates upon deposits of silver bullion, the certificates to be redeemable in bullion of like weight and fineness of the dollars therein described, or in coins to be authorized under the Act.

The new coins to be authorized should be halves and quarters, containing the amount of silver required by the standard adopted, but only to be coined as actually demanded for circulation. The further coinage of fiat dollars, halves and quarters should cease. What disposition should be made of the present coinage need not be considered here, except to say that it permitted to circulate they should be maintained on a parity with gold by redemption, as at present.

The proper condition to be required, in my opinion, would be the creation of a commission composed of the Secretary of the Treasury, Director of the Mint, Treasurer of the United States and Comptroller of the Currency. The commission should have the power to suspend coinage or the issuance of certificates upon the adopted standard whenever, in their opinion, the operation of the privilege was tending to disturb the free and equal circulation of the two metals as money. They should have the power to raise or lower the ratio as the monetary situation required it. There should be no provision for gold redemption. When the ratio was increased, the money value of the coins and certificates under the previous ratio would be lessened, but they would doubtless continue to circulate at par for the reason that they would be legal tender and the aggregate amount under that ratio could not at any time be excessive. On the other hand, if the ratio were lowered, the notes and coins would be worth a premium, which would result in the withdrawal of the bullion so deposited.

A larger use for our silver could also be effected by encouraging its circulation in other countries. For instance, our coins possessing a circulating value in France equa to a 5 franc piece. would contain on the twenty-five to one ratio, 61 per cent. more silver than that coin, and the same would practically be the case as compared with British, German, and other Continental coins. It seems reasonable to believe that our coins on this basis would in time secure a large circulation away from home and special coins might be authorized for the purpose. The only endeavor ever made to obtain foreign circulation for our silver was the trade dollar, which was intended to supplant the Mexican dollar in China. It was a failure because it contained exactly the same quantity of silver as the Mexican and there was no inducement for the substitution. With such coins as I have suggested, it does not seem possible that the Mexican and Austrian silver dollars could circulate away from home as they now do in competition with our superior coins. But no matter what your opinion may be of the merit of my plan, the main fact that I have undertaken to show and desire to press with all my power is the necessity of maintaining, at all hazards, the monetary standard of the world, now threatened by our present silver policy.

In this great country we still need capital for the continual development of our boundless natural resources. No impediment should be permitted to interfere with its free course towards us, and the demand of the hour is the repeal, at the earliest possible time, of the so-called Sherman Act."

Value of Foreign Coins.—The quarterly report of the Director of the Mint giving the standard value of foreign coins on July 1, and changes in the value since the last statement, is as follows:

	Value April 1, 1893.	*Value July 1, 1893.*		*Value April 1, 1893.*	*Value July 1, 1893.*
Boliviano of Bolivia.......	$0.61	$0.60.4	Rupee of India....	$0.29	$0.28.7
Peso, Central Amer. States	.61	.60.4	Yen of Japan......	.65.8	.65.1

EX-SENATOR HENDERSON ON THE SILVER QUESTION.

Ex-Senator John B. Henderson, of Missouri, has addressed the following communication to the Honorable John G. Carlisle, Secretary of the Treasury:

"There is no error of more common prevalence than that the abundance of money issues necessarily adds to the commercial or business energy of a people. Of course, a certain amount of money tokens are absolutely essential with which to effect the smaller exchanges of commodities. These money tokens do not create exchanges, but the exchanges create a necessity for the tokens. Money tokens do not grow wheat and corn, nor manufacture cloth, nor operate railroads, nor sail ships. Labor and skill do these things, and among a people entirely civilized, over 95 per cent. of the exchanges necessary in these operations are consummated through the medium of bank checks. Experience demonstrates that this mode of exchange is more convenient, safer, and less expensive, and experience also demonstrates that these bank facilities become enlarged or contracted as money tokens become scarce or abundant.

The bank check is better for another reason, to wit: That, having performed its office, it ceases to circulate; it is removed from the volume of circulating money and is forever canceled. If the exigencies of business demand another check, it is issued anew, and that in like manner, is destroyed when its object has been accomplished. We shall never have a perfect currency until every note used for circulation shall be destroyed on its return to the authority issuing it, and no new note issued except for value, and only at the call of business demands.

The amount of money in circulation per capita among the people of the United States on the 1st day of July of the years named below is given in the following: In 1873, $18.03; 1874, $18.13; 1875, $17.16; 1876, $16.12; 1877, $15.58; 1878, $15.32; 1879, $16.75; 1880, $19.41; 1881, $21.71; 1882, $22.37; 1883, $22.91; 1884, $22.65; 1885, $23.02; 1886, $21.82; 1887, $22.45; 1888, $22.88; 1889, $22.52; 1890, $22.82; 1891, $23.41; 1892, $24.47; June 1, 1893, $23.88.

These figures demonstrate to the business man of a few years' experience that neither individual prosperity nor commercial activity is absolutely controlled by the amount of the circulating medium. * * * Whatever the volume of the circulating medium, it does not impose itself on anybody. He who gets it must give an equivalent for it. If nobody wants his labor or his property, he can get no money. If he who has it refuses to loan it, in fear that the currency to be paid back at maturity of the loan will be less valuable, the condition is one of stagnation, and 'scarcity of money' is the consequence.

The per capita circulation in the United Kingdom of Great Britain is now $19.34. Of this $14.49 is gold, circulating freely among the people. Of silver there is only $2.63 and of paper $2.24.

The per capita circulation in Germany is still less, to wit, $17.56. And yet in these countries, with their vast commerce and manufactures, there is no dearth of money and interest rules at scarcely more than half the rates prevailing in this country.

England adopted the single gold standard in 1816 and has adhered to it ever since, and by so doing has become the money centre of the world. Germany adopted the single standard in 1872, and since that time she has been rapidly advancing in all the elements of National greatness. It is true that France has a seemingly large per capita circulation, ($41.07) but of this $17.95 consists of silver which was coined prior to 1873, while silver maintained its relative intrinsic value to gold. The finances of France fortunately are steadied and made secure by the happy possession of at least $800,000,000 in gold coin alone. More than half of its depreciated silver (a total of $700,000,000), lies idle in the Bank of France, where it is likely to remain unused, as the $361,278,816 of coined dollars that on the first day of June, 1893, lay hoarded in the Treasury of the United States. The per capita actual circulation in France scarcely exceeds that in the United States, and consisting, as it does, almost wholly of gold, the currency is reasonably permanent and reliable; and as France has now ceased to coin silver, the financial situation there is not threatened as here by a change of standard.

The panic of 1873, was, without doubt, the direct result of speculation and overtrading, induced by the Greenback era, beginning in 1862-3. Between 1863 and 1873, both inclusive, the balance of foreign trade against us was $1,086,440,587—that is we imported into this country during these eleven years, over and above our exports of merchandise, this enormus sum of over $1,000,000,000. This long and steady drainage, lasting, without a single intermission, for eleven years, brought its legitimate fruit—a loss of a large part of the Nation's wealth and with it the country's entire stock of gold. * * *

Two years after adopting the single standard, to wit, in 1875, a measure was passed for the resumption of specie payments, to become operative on January 1, 1879. If these two measures had remained on the statute books, inviolate and unamended, there is no economical reason why the United States and its people should not to-day enjoy the most unbounded prosperity. We should have had the best and most abundant currency—a gold currency of universal value and of such volume as to force its circulation, as in England, France and Germany, into the hands of the people.

To be assured of this fact it is only necessary again to examine the conditions of commerce for the last seventeen years. In the first year after resolving on specie payments the excess of our exports of merchandise over imports was $79,643,481. In the next year, ending June 30, 1877, this excess was $151,152,094. For 1878 it was $257,814,234. For 1879 it was $264,661,666. And this excess continued, with varied amounts, down to 1892, excepting only small adverse balances in the years 1888 and 1889. The net balance of trade in our favor from June 30, 1876, to June 30, 1892, amounted to the enormous sum of $1,892,885,446. It is safe to assume that if the legislation of 1873 and 1875, looking to a permanent circulating medium of intrinsic value, had remained, at least one-third—that is, $600,000,000—of this vast trade balance would have been paid to us in gold.

In the first six years of the time ending June 30, 1881, we had already imported in gold over $102,000,000 more than we had exported, and it must be remembered that in 1881 we had been already for four years on our downward course toward a silver standard after the Bland law of 1878.

Finally, after the passage of the Sherman law in 1890, which more than doubled the silver purchases, the remarkable fact is disclosed that no amount of exportation of merchandise could stay the shipments of gold from the United States. For instance, in 1890 we exported an excess of merchandise of over $68,000,000, and in the same year exported an excess of gold of over $18,000,000. In 1891 we exported an excess of merchandise of over $39,000,000 and exported an excess of gold of over $72,000,000; and although the excess of our exports of products in 1892 amounted to nearly $203,000,000, yet the almost startling fact appears that during that year we exported over $13,000,000 of gold, and now that the balance of trade has turned against us the country is being drained of its remaining gold with alarming rapidity.

From January, 1889, to June, 1892, nearly $160,000,000 of gold and gold certificates were withdrawn from the national Treasury.

The rapid disappearance of gold may be further determined by the fact that in January, 1891, 88.6 per cent. of the customs taxes in New York were paid in gold and gold certificates, while in May, 1893, only one-tenth of 1 per cent. was similarly paid.

The Act of February 28, 1878, known as the Bland Act, was by title, 'To authorize the coinage of the standard silver dollar and to restore its legal-tender character.' It directed the Secretary of the Treasury to purchase monthly not less than $2,000,000 nor more than $4,000,000 worth of silver bullion, to be immediately coined into silver dollars of 412½ grains of standard silver—that is, 371¼ grains of pure metal—and these dollars when so coined were made a legal tender for all debts, public and private, except where otherwise expressly stipulated in the contract. The Act further provided that the holder of those coins might deposit them with the Treasurer or Assistant Treasurers of the United States and receive therefor certificates of not less than $10 in amount, and these certificates were made receivable for customs, taxes, and all public dues, and when so received might be reissued.

The Act of July 14, 1890, known as the Sherman law, directs the Secretary of the Treasury to purchase each month 4,500,000 ounces of silver bullion at the market value thereof, so long as silver was depreciated below the par of gold, and to issue in payment therefor Treasury notes of the United States in denominations of from $1 to $1,000. These notes were made a legal tender for all debts and receivable for all public dues, and to be reissued by the Government. The Secretary of the Treasury is required to redeem these notes in gold or silver coin, at his discretion. To induce the National banks to accept them, they are authorized to count them as part of their lawful reserves. Coinage of silver dollars was to continue, as provided by the Bland Act, till July 1, 1891, and after that the Secretary is required to coin any additional bullion that may be necessary to redeem the Treasury notes issued for its purchase.

Under the Act of 1878 the Government purchased 291,292,019 ounces of fine silver at a cost of $308,199,262, and coined it into silver dollars to the amount of $378,166,793. The profit of nearly $70,000,000 made by stamping a falsehood on the coin was covered into the Treasury as so much money. Under the Act of 1890 the Government, up to June 1, 1893, had purchased 145,361,857 ounces, and under the injunction of continued coinage for a year, under the Act of 1890, there were coined additional dollars to the amount of $36,087,040. Adding to these amounts the recoinage of trade dollars into standard dollars, we had on June 1, 1893, coined silver dollars amounting to $419,332,305.

If we take the market price of silver on June 1, 1893 (83 cents per ounce), the loss on this bullion so purchased by the Government was on that day $83,518,628. On June 28, 1893, bar silver was worth only 73 cents per ounce, entailing upon the Government an additional loss of $44,583,432 in less than a month.

When we examine the financial history of the country, and more especially the history of our coinage laws, the new-born zeal for the silver dollar, as developed in the Act of 1878, is quite remarkable. At the time of its passage the dollar provided for was intrinsically worth only 89 cents as compared with gold—that is, the ratio of value as between this authorized dollar and the old dollar was 17.94 to 1, instead of 16 to 1, as fixed by the coinage Act of January 18, 1837. Silver had then been constantly declining for several years, and all Europe had closed its mints against its coinage, except into subsidiary coins, limited as to legal tender. Of this fact the Congress of 1878 was surely advised, because the second section of the Act makes it obligatory on the President to invite the countries comprising the Latin Union, which had been the last to reject the use of silver, and other nations of Europe, to join us in a conference to adopt a common ratio between gold and silver and to secure fixity of value between the metals.

To show beyond all cavil that the Act of 1873, demonetizing the silver dollar as a tender for debt, was advisedly and considerately passed, we need only examine the contemporaneous legislation on the same and kindred questions. The provisions of the Act of 1873 itself are too plain to have been misunderstood; and to have made them different would have been a marked departure from the policy of the Government as fixed by the Coinage Act of February 21, 1853, which decreased the quantity of metal in the subsidiary silver coins and limited their legal-tender character to payments of $5 and less. Hence the Act of 1873, dropping the further mention of the silver dollar from the coinage of the United States, expressly confines the use of all silver coins of the United States to payments not exceeding $5 in amount. The Act of June 22, 1874, was strictly in consonance with that of 1873. It had been our previous policy since the foundation of the Government to make foreign coins, of both gold and silver, receivable for public dues and also as between individuals. The values fixed by law for many of these coins, especially those of silver, were already beyond their intrinsic worth, and silver gave signs of continued decrease. Hence the Act of 1874 declared, first, that all foreign coins should cease to be a legal tender; second, that the gold coins of the United States, when not reduced below the rate of tolerance, should be a legal tender for all debts; third, "that the silver coins of the United States," (including, of course, the silver dollar) "shall be a legal tender at their nominal value for any amount not exceeding $5"; and, fourth, that the minor coins (the nickels and copper cents) shall be a legal tender for only 25 cents.

It was obvious to the least discerning financiers of the country that the Act of 1878 would eventually bring about, not a double standard as pretended by its friends, but a single standard of depreciated silver. Hence, from the beginning these dollars were received with great distrust. But Congress, having entered upon this strange scheme of expansion, determined to use the power of the Government to force the circulation upon an unwilling public. The associate banks of New York, Boston and Philadelphia adopted rules forbidding the use of these dollars, and also the silver certificates, in clearing balances among themselves. It really seems that when both debtor and creditor agree not to use a currency thought to be injurious to the public welfare, they should be allowed to reject it in their own transactions without the fear of punishment. The National banks, however, held their charters from the Government and the discipline of Congress was soon brought to bear.

It was decreed that no National bank should belong to a clearing-house that refused silver certificates in payment of balances. When bank charters had to be renewed the renewal was conditioned on the receipt and circulation of a currency already bad and getting worse day by day. The Government now entered the field as a common carrier and transported, without charge, this unacceptable currency to any part of the country that would deposit gold for it in the Sub-Treasuries. Thus the Government sowed the wind, and now, by the just law of retribution, reaps the whirlwind. The public demands that gold back, and the Government must pay it or embark at once on the treacherous sea of depreciated currency.

When pains and penalties failed to coerce the banks, the persuasion of self-interest was resorted to and they were offered the bribe that silver certificates received by them might be counted in their bank reserves. Finally, when the banks remained obdurate against threats and seduction, it was thought the general public might surrender to the temptation of small notes, and to that end, in 1886, it was enacted that the Secretary of the Treasury should thereafter issue silver certificates in denominations of one, two and five dollars, and the larger certificates already issued under the Act of 1878 might be exchanged for the smaller denominations.

If greater expansion of the currency were really required by the legitimate demands of business it might have been secured, it seems to me, by inducing an increase of the National bank notes, a currency secured by the United States bonds, payable in gold, and always worth a premium. In stead of this the contrary policy was most persistently pursued, resulting in a decrease of specie-paying bank notes from $356,000,000 in 1883 to $172,000,000 in 1892. While this better currency was being driven out by unfriendly legislation the channels of business were being gorged by an issue of $419,000,000 of silver dollars, $335,000,000 of silver certificates, and, finally, under the Act of 1890, by the issue of $154,000,000 more of Treasury notes in the purchase of silver bullion at an enormous loss to the people and to the Government.

Of the five or six hundred millions of gold with which we began in 1878, none can now be found in circulation. What has not gone to foreign countries enjoying the blessings of a single standard has been hoarded, not to reappear until its holders have some guarantee that, if loaned, it will be returned in money equally good." * * *

Mr. Henderson proposes the following remedies:

" *First*—The customs duties should hereafter be paid in gold alone.

Second—The silver bullion in the Government vaults should at once be sold for cash in gold and the proceeds covered into the Treasury.

Third—Three per cent. gold bonds to the amount of $300,000,000 should be promptly sold and the proceeds transferred to the Treasury.

Fourth—A day should be fixed, not later than January 1, 1898, for the redemption and payment in gold coin of all circulating notes of every description heretofore issued by the Government.

Fifth—At least half of the silver dollars issued under the Acts of 1878 and 1890 should be sold as bullion and the remainder minted into subsidiary silver coins and made legal tender only in payment of $10 or less.

Sixth—Provision should be made for the use of the $300,000,000 of gold bonds as a basis for banking, making the provisions as liberal as possible consistent with safety, but under Government supervision.

Seventh—The basis of National banking should be so enlarged as to permit the issue of circulating notes on the deposit of other than United States bonds, the solvency of such bonds to be passed on by responsible Government officials.

Eighth—All bank issues to be redeemed in gold coin on demand.

Ninth—All foreign gold coins should be made a legal tender for debt and receivable for Government duties at their value as fixed by law.

Tenth—Previous to the 1st of January, 1898, the surplus funds of the Treasury, either from loans or collections, to be placed with the banks in such sections of the country and in such amounts as may be determined by the Secretary."

Wisconsin State Banks.—On July 3 the State banks of Wisconsin report the following capital, deposits, cash items, and due from banks. The figures are compared with those of January 2, 1893:

	July 3, 1893.	*Jan. 2, 1893.*	*Increase or Decrease.*
Capital	$6,806,900	$7,136,900	$330,000....Decrease
Deposits	37,826,559	44,560,057	6,733,498....Decrease
Specie	1,783,577	1,435,377	348,200....Increase
Cash items	784,678	1,298,777	514,099....Decrease
United States currency	3,564,732	2,806,486	758,246....Increase
Due from banks	5,714,948	8,237,926	2,522,978....Decrease

CHICAGO NATIONAL BANKS.—Statement of condition at the close of business, July 12, 1893, compiled from official reports to the Comptroller of the Currency, and the totals of May 4 for the purpose of comparison:

RESOURCES.

BANKS.	Loans and Discounts.	Over-drafts.	U. S. bonds for circul'n.	U. S. bonds for deposit.	U. S. bonds on hand.	Other stocks and bonds.	Pre-miums paid.	Real estate and office fixtures.	Checks for Clearing-House.	Due from banks and agents.	Cash and Treasury credits.

TOTALS, JULY 12, 1893..	$21,300,000	$13,886,506.29	$990,840	$59,754,766.89	$5,647,238.99	$907,541.84	$1,514,408.05	$37,389,748.06	$290,984.25	$105,504,677.90
TOTALS, MAY 4, 1893.	$21,300,000	$14,006,043.81	$965,250	$67,418,251.05	$6,228,302.58	$1,699,139.41	$2,251,347.67	$49,451,393.54	$286,203.27	$127,334,637.52

Since May 4 loans and discounts have decreased $15,000,000; amount due from banks, $1,000,000; cash items, $5,000,000. For the same time there has been a decrease of $12,000,000 in amount due banks and bankers; individual deposits show a decrease of $8,000,000 and total deposits a decrease of $22,000,000.

Notwithstanding the extraordinary demands made upon them during the recent depression, the Chicago banks remain in excellent condition. Their reserve July 12 was considerably in excess of the legal requirement.

CONDITION OF MICHIGAN STATE BANKS.

Abstract of reports made to the Commissioner of Banking, showing the condition of the State banks in Michigan at the close of business May 4, 1893:

RESOURCES.		
Loans and discounts	$41,058,257 97	
Stocks, bonds and mortgages	27,176,048 86	
		$68,234,306
Overdrafts		231,835
Due from banks in reserve cities		8,297,217
Due from other banks and bankers		522,580
Banking house, furniture and fixtures		1,419,887
Other real estate		483,077
Current expenses and taxes paid		283,072
Interest and premiums paid		229,576
Exchanges for Clearing-house	$409,801 05	
Checks and cash items	251,485 45	
Nickels and pennies	21,468 34	
Gold coin	1,292,646 04	
Silver coin	306,158 55	
U. S. and National bank notes	2,293,866 00	
		4,575,030
Total		$84,276,584
LIABILITIES.		
Capital stock paid in		$11,465,780
Surplus fund		2,211,491
Undivided profits		2,474,697
Dividends unpaid	$4,511 72	
Individual deposits subject to check	15,885,967 69	
Certificates of deposit	10,778,849 04	
Savings deposits	38,762,180 61	
Certified checks	39,949 69	
Cashier's checks outstanding	71,110 90	
Due to banks and bankers	1,898,682 29	
		67,431,251
Notes and bills rediscounted		452,362
Bills payable		241,000
Total		$84,276,584

Number of banks May 4, 1893, 149; number of trust companies, 3.

T. C. SHERWOOD, *Commissioner.*

On December 9, 1892, the report of the condition of 139 State banks and 3 trust companies was as follows:

RESOURCES.—Loans and discounts, $38,883,892; stocks, bonds and mortgages, $26,843,183; overdrafts, $222,549; due from banks in reserve cities, $9,435,452; due from other banks and bankers, $526,816; banking house, furniture and fixtures, $1,274,415; other real estate, $692,412; current expenses and taxes paid, $364,068; interest paid, $258,417; premiums paid, $13,009; cash, checks and exchanges, $4,135,294.

LIABILITIES.—Capital stock paid in, $11,109,827; surplus and undivided profits, $4,658,502; dividends unpaid, $5,739; deposits, commercial, $26,686,149.80; savings, $37,909,010.12; due to banks and bankers, $1,869,563; notes and bills re-discounted, $279,390; liabilities other than those above stated, bills payable, $131,349.

The last Annual Report of the Commissioner of the Banking Department recommends an alteration of the law so that an insolvent bank may be closed more quickly than under the present law which gives the bank 90 days to make good any impairment of its capital before a Receiver can be appointed. In the opinion of the Commissioner this affords dishonest bank officers an opportunity to dispose of the bank's assets to the detriment of the depositors.

The Commissioner makes the following recommendation relative to surplus accounts:

"In this connection I desire to call attention to the necessity of a larger surplus account than the banks are required to maintain at the present time. The ambition of the average bank officer is to make large dividends to stockholders, rather than to accumulate a surplus which enhances the security of the depositor. There is no doubt hat the excessive taxation of bank shares in some localities has deterred many banks from accumulating a large surplus, or even adding to their undivided profits. I would therefore suggest that State banks be required to carry a surplus account twenty per cent. of the net profits of the bank for the preceding half year, or for such period as is covered by the dividend, until such surplus shall amount to fifty per cent. of its capital stock, and that all surplus up to and including that amount be exempt from taxation. This will be an inducement to bank officers to accumulate a surplus, and to prevent a discrimination in the assessment of bank stock, which at the present time is not uniform throughout the State. Every banker and business man appreciates the security which a large surplus account guarantees the depositor, and I hope the Legislature will take favorable action in the matter."

The Commissioner is of the opinion that private banks should not be allowed to use a corporate name in advertising their business. He says:

"There are now in Michigan about two hundred private banks. Nearly one-half of this number are using a corporate name, instead of or in connection with their individual or firm name. I would again call the attention of the Legislature to the necessity of a law preventing private banks using a corporate name in advertising their business. No reasonable argument can be urged against the adoption of such a law, as it simply prevents irresponsible persons advertising an individual or partnership business as though it were a corporation."

NEW JERSEY STATE BANKS.

The following table shows the condition of the State banks of New Jersey at the close of business, June 24, 1893, as exhibited by reports to the Commissioner of Banking and Insurance, and for comparison the reports of December 31, 1892, with increase and decrease:

Resources.	*June 24, 1893.*	*December 31, 1892.*	*Increase and Decrease.*
Loans and discounts	$8,510,748	$8,242,901	$267,847

Total liabilities	$11,159,242	$11,536,010	*$376,768

* Decrease. Number of banks at date of each report, 22.

Another Silver Proposition.—A correspondent of the JOURNAL proposes the following plan for the continued use of silver as money: "I think that the bankers and merchants of the East could do one thing which would do a great deal to conciliate the silver producers of the West. It is simple, and one which all the rest of the world has long since adopted, viz.: To abolish all bills of smaller denomination than $5 and use silver in their stead. This is done in England, France and Germany. It is the rule on the Pacific Coast. If it were done in the East it would make a market at once for the entire body of silver bullion locked up in the United States vaults and would give us a limited but steady demand for silver for the future. On some such line as this a compromise can be effected which will bring about a repeal of the Sherman Law immediately."

BALTIMORE NATIONAL BANKS.—Statement of Condition at the close of business July 12, 1898, Compiled from Official Reports to the Comptroller of the Currency; and, for comparison, the totals as shown by Statement of May 4.

NEW YORK CITY NATIONAL BANKS.

CONDITION JULY 12.

Following is an abstract of the reports made to the Comptroller of the Currency, showing the condition of the 49 National banks in New York city at the close of business on July 12, 1893, (cents omitted):

RESOURCES.		
Loans and discounts		$308,384,673
Overdrafts		262,260
Unied States bonds to secure circulation		7,904,000
United States bonds to secure deposits		1,100,000
United States bonds on hand		129,450
Stocks, securities, etc		28,188,857
Due from approved reserve agents		....
Due from other National banks		27,647,998
Due from State banks and bankers		4,842,975
Banking house, furniture, and fixtures		11,390,789
Other real estate and mortgages owned		737,683
Current expenses and taxes paid		200,702
Premiums on U. S. bonds		431,088
Checks and other cash items		2,790,857
Exchanges for clearing house		65,493,779
Bills of other National banks		1,101,609
Fractional paper currency, nickels and cents		45,017
SPECIE, viz.:		
Gold coin	$16,574,699	
Gold clearing-house certificates	34,208,045	
Silver dollars	143,018	
Silver Treas'y certificates	3,634,631	
Silver, fractional coin	447,883	— 55,008,276
Legal tender notes		19,741,077
U. S. certificates of deposit for legal tender notes		1,970,000
Five per cent. redemption fund		312,870
Due from U. S. Treasurer		353,777
Total		$538,037,745

LIABILITIES.		
Capital stock paid in		$50,733,500
Surplus fund		41,493,774
Undivided profits		16,859,945
Nat'l bank notes issued	$6,621,840	
Less amount on hand	153,377	
Amount outstanding		6,468,462
State bank notes outstanding		24,328
Dividends unpaid		339,983
Individual deposits		246,736,850
United States deposits		586,088
Deposits of U. S. disbursing officers		346,547
Due to other National banks		106,882,507
Due to State banks and bankers		48,624,719
Notes and bills rediscounted		....
Bills payable		....
Liabilities other than those above stated		18,941,032
(Reserve fund held, 25.30 per cent.)		
Total		$538,037,745

In view of the heavy requisitions made upon the New York banks since the beginning of the present monetary stringency, the above figures are reassuring. The banks are not only in good condition, but they have shown remarkable firmness in the face of extraordinary demands.

On the date of the report the reserve was slightly in excess of the legal requirement.

COMPARATIVE FIGURES.

RESOURCES.	*July 12, 1893.*	*May 4, 1893.*	*July 12, 1892.*
Loans and discounts, including overdrafts	$308,646,935	$307,372,243	$353,627,162

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— Superintendent Preston, of the State Banking Department, on July 20 issued a certificate of authorization to "Wells-Fargo and Company's Bank" to transact a discount and deposit business in New York city. The capital stock is $500,000. The directors and subscribers to the capital stock are: John J. Valentine, of San Francisco, 3,000 shares; Homer S. King, of San Francisco, 1,000 shares; Dudley Evans, of Englewood, N. J., 910 shares; Hosmer B. Parsons, Alphonse W. Zimmerman and William V. Nevins, of Brooklyn, 10 shares each; Emory A. Stedman, William A. Jennings, Charles Cass, Joseph C. Gothwaite, James B. Arthur and Harry E. Manchester, of New York city, 10 shares each. The capital stock is all paid up in cash. The bank, besides starting with $500,000 paid-in capital, has a surplus of $500,000, each share of stock having been sold to the subscribers at $200. The Wells-Fargo Express Company already have a bank in San Francisco and one in Salt Lake City.

— Work on the Bowery Savings Bank's new building is rapidly progressing. The building will be one of the largest in the city wholly devoted to banking purposes. It will occupy nearly an acre of ground, having a frontage of 50 feet on the Bowery, running back 100 feet and joining the building 100 feet square now being erected on the corner of Grand and Elizabeth streets.

— The Comptroller of the Currency has authorized the payment of a dividend of 40 per cent. to the creditors of the National Bank of Deposit.

— The National Shoe and Leather Bank has increased its capital from $500,000 to $1,000,000.

— A movement is on foot in this city to induce Savings banks to sell $8,000,000 or $10,000,000 of Government four per cent. bonds to the National banks, to be used by the latter as basis for additional circulation to relieve the scarcity of currency. Relying upon favorable action by the Savings banks, several of the larger banks have already arranged to take out circulation amounting to about $5,000,000.

— The record made by the New York city banks in meeting the unusual calls upon them is one of which they may well be proud. Between July 12, 1892, and July 12, 1893, there was a shrinkage in bank and individual deposits of $118,000,000. Between May 4 and July 12, 1893, the decrease was about $54,000,000; on the latter date the deposits were $402,000,000; on May 4 they were $455,000,000; July 12, 1892, they were $510,000,000. The manner in which the banks have responded to these demands is a striking evidence of their strength.

— As a precautionary measure the Savings banks of New York city and Brooklyn took the following action, July 28, in regard to withdrawals of deposits, as outlined in the subjoined letter addressed to Savings bank officials throughout the State:

DEAR SIR: — At a meeting held this day at the Emigrant Savings Bank, numerously attended by the representative officers of the Savings banks of this city and Brooklyn, it was their unanimous opinion that in view of the recent developed manifestation of depositors to withdraw their funds, as learned in many instances to hoard the same, and also in view of the exceptional difficulty of obtaining currency as well as the serious loss which must arise in the effort to sell securities at the present time, to satisfy the demand, the best interest of the depositors require prompt action on our part here and throughout the State. Therefore be it

Resolved, That it is the judgment of this meeting that the time has arrived when in the interests of their important trusts, it is expedient that the trustees of the Savings banks of New York, Brooklyn and elsewhere throughout the State should require from their depositors the notice of withdrawal of deposits, provided in their respective by-laws, and in accordance with the agreement under which all deposits are received.

The resolution is signed by John Harsen Rhoades, Chairman of the meeting and of the Executive Committee of the Savings Banks of the State of New York, and Wm. G. Conklin, Secretary.

The authority for this action is found in Section 113 of the General Banking laws of 1892, which is as follows:

"Repayment of deposits; regulations; limitation. The sums deposited with any Savings bank, together with any dividends or interest credited thereto, shall be repaid to such depositors respectively, or to their legal representatives, after demand, in such manner and at such times and after such previous notice, and under such regulations as the board of trustees shall prescribe. Such regulations shall be posted in a conspicuous place in the room where the business of the corporation shall be transacted, and shall be printed in the pass-books or other evidences of deposit furnished by it, and shall be evidence between the corporation and the depositors holding the same, of the terms upon which the deposits therein acknowledged are made.".

Several of the largest Savings banks in New York and Brooklyn enforced the rule requiring notice of withdrawal as provided in their by-laws. The withdrawals of deposits have recently been large, but there has thus far been no indications of panic.

NEW ENGLAND STATES.

Mortgage Companies Retiring.—The following-named Mortgage Investment Companies of other States have ceased to do business in Massachussetts since January 1, 1893: The case of the Lombard Investment Co. is still undecided; Central Kansas Loan & Trust Co., Russell, Kans.; Chamberlin Investment Co. (failed), Denver; Colorado Loan & Mortgage Co., Colorado Springs, Colo.; Eastern Banking Co., Hartford, Conn.; Knight Investment Co., Wichita, Kansas; Lockwood Mortgage Co., Anthony, Kansas; Northwestern Guaranty Loan Co. (failed), Minneapolis; Oberlin Loan, Trust & Banking Co., Oberlin, Kansas; Sioux City Land Co., Sioux City, Iowa; Sioux Investment Co., Sioux City, Iowa; J. B. Watkins Land Mortgage Co., Lawrence, Kansas. The New Hampshire Trust Co. is in Receiver's hands, August 1, but will probably resume business.

Under the Laws in reference to the supervision of Foreign Mortgage Corporations (Chap. 303, Acts of 1893) the Commissioner "shall, as regards such corporations, have the same powers and be required to perform the same duties given to and required of the Commissioners of Savings banks by the provisions of Section 14 of chapter 387 of the Acts of 1888, and such associations or corporations shall annually make to said Commissioner such returns as are required of Loan and Investment companies by said section 14."

Section 6 of the Laws of 1893 relating to the license fee and the revocation of licenses reads as follows:

"The compensation of the Commissioner shall be three thousand dollars per annum, payable monthly from the treasury of the Commonwealth, which, together with all incidental and travelling expenses authorized and approved by the Governor and council, shall be borne by the several companies and corporations. For the purpose of providing for the salary of the Commissioner and other expenses approved by the Governor and council an annual license fee of fifty dollars, payable in advance, shall be assessed upon every association or corporation doing business under this Act; *provided*, that if the sum realized is not sufficient to meet the expenses, the balance shall be borne by the several companies in proportion to their business done in this Commonwealth, and shall be assessed and recovered in the same manner provided for the assessment and recovery of the expenses of the railroad Commissioners.

The Commissioner upon the payment of such fee shall, if satisfied with the condition of any company or corporation doing business under the provisions of this chapter, issue a license to such company or corporation allowing them to do business in this Commonwealth for one year from the date thereof; *provided*, their condition continues satisfactory to him; and no company or corporation subject to the provisions of this chapter shall do business in this Commonwealth unless it holds such a license, and if the condition of any company shall become unsatisfactory to him he may revoke such license."

J. R. Reed is Commissioner of Foreign Mortgage Corporations.

Boston.—A Boston bank has a letter from the Comptroller of the Currency defining loan certificates as not available for counting as lawful money reserve, but saying they may be treated as exchanges for the clearing-house when held, and are allowed as one of the deductions from liabilities for deposits. They should be treated as bills payable, representing borrowed money.

New England Savings Banks.—Following the course recently adopted by some of the New York Savings banks, the savings institutions of a number of New England cities have decided to enforce the rule requiring notice of withdrawals of deposits.

The scarcity of currency has rendered it impossible in many instances to meet demands without a great sacrifice of securities.

MIDDLE STATES.

Queen City Bank to Resume.—The stockholders of the suspended Queen City Bank, Buffalo, N. Y., held a meeting July 25 and decided to resume business with its capital reduced from $600,000 to $300,000. A statement submitted at the time of the meeting showed among the resources, cash on hand and due from banks, $268,000; bills discounted $1,456,000; items in suspense account, $166,000. The liabilities show: capital, $300,000; surplus "actual," $180,000; surplus for suspended loans and accounts, $166,000; due banks, $54,000; due Savings banks and Trust companies, $305,000; due individual depositors, $817,000. Mr. W. F. Creed, deputy Superintendent of the State Banking department, who examined the bank, says that he found it in better shape than he reported it some time ago. While some of the assets could not be realized on at once, he thought that most of them would prove good if the debtors were given time to turn themselves, and that many items in the suspense account of $166,000 will be collected, thus largely increasing the bank's surplus. He says the bank will reopen with cash on hand amounting to between $300,000 and $400,000, which he believes will be ample to meet all demands.

The bank expects to resume business about August 15 with the following officers: President, Fred C. M. Lautz; 1st Vice-President, J. N. Adam; 2d Vice-President, Wm. F. Creed; Cashier, D. Clark Ralph. The position of 2d Vice-President has been tendered to Mr. Creed, and it is believed he will resign his present position in the banking department and accept the place. He is a conservative banker of twenty years' experience.

Pittsburgh National Banks.—The following abstract of the statements of the National banks for July 12 is compiled from a pamphlet issued by Mr. R. J. Stoney, Jr.:

ASSETS.	
Loans and discounts	$40,817,698
Overdrafts	87,118
U. S. bonds, circulation	2,613,500
U. S. bonds, deposits	250,000
U. S. bonds, on hand	1,500
Stocks and bonds	1,478,468
Premiums paid	206,732
Real estate and fixtures	3,777,600
Exchanges for Clearing House	1,564,030
Due from banks and agents	4,460,851
Cash and treasury credits	5,942,841
Total	$61,200,338

LIABILITIES.		
Capital		$11,648,010
Surplus and profits		8,548,123
Circulation		2,342,840
Individual deposits	$31,011,093	
Certificates of deposit	642,795	
Certified checks	85,183	
Cashiers' checks	111,730	
Due banks	5,004,794	
U. S. Deposits	262,723	
		$37,118,318
Dividends unpaid		154,306
Rediscounts and bills payable		1,388,741
Total		$61,200,338

Since the statement of May 4 there has been a reduction of $1,794,865 in loans and discounts, $511,501 in exchanges for clearing-house, $601,708 in amount due from banks and reserve agents, and $1,474,179 in cash and Treasury credits. There has been an increase of $365,260 in circulation, and a decrease of $6,161,737 in deposits, and an increase of $1,262,137 in rediscounts and bills payable.

Condition of New York Banks.—In an interview published July 21, Superintendent Preston, of the State Banking Department, made the following statement:

"The banks of this State generally are in good condition. Depositors are disposed to leave their money where it is, and seem to have no fears that it cannot be had on demand. I anticipate no failures. The last report from those that come within my jurisdiction was on June 1, and the general average of the banks was sound at that time. Partial reports received since that time show no change. I do not think any of the banks need my attention, with the exception of the two or three which ceased to do business a month or so ago.

So far as my examination goes, all the banks are abundantly secured, and the only possibility of trouble might come from a run at some particular time when there was a lack of ready cash. The banks are holding as much cash as possible. Depositors have no difficulty in getting their money when they want it.

The bankers of New York city are deserving of great praise for the promptness with which they have sent money to Western and Southern cities when there were threats of a crash among the banks there."

Washington (D. C.) National Banks.—Referring to the condition of the Washington National banks, a well-known banker of that city writes: "The Washington banks all show reduced deposits. The taxes took about $1,500,000 out of the banks the latter part of May, which went into the U. S. Treasury. The cranks and timid folk have drawn out and locked up *over $2,000,000* more, which is now lying in safe deposit boxes doing nobody any good."

New Jersey Trust Companies.—The condition of New Jersey Trust Companies at the close of business, June 30, 1893, as exhibited by reports to the Department of Banking and Insurance, is as follows:

RESOURCES.		LIABILITIES.	
Bonds and mortgages	$2,846,031	Capital stock	$1,785,325
Stocks and Bonds	1,904,704	Surplus fund	260,257
Loans secured by collaterals	4,673,080	Undivided profits (net)	481,958
Loans on personal security, including bills purchased	1,941,639	Due depositors	10,464,118
Overdrafts	620	Due to banks	99,201
Due from banks	166,616	Bills payable	122,316
Real estate	688,986	Other liabilities	690,013
Cash on deposit in banks or trust companies	1,001,150		
Cash on hand	291,650		
Cash items	38,167		
Other assets	350,542		
Total	$13,903,190	Total	$13,903,190

Number of companies reporting, 19.

Buffalo Bankers Favor Repeal.—The Bankers' Association of Buffalo, N. Y., recently adopted resolutions favoring the unconditional repeal of the silver-purchasing clause of the Sherman law. They favor the appointment of a committee of financial experts to devise a currency system. The City Bank of Buffalo has sent out 5,000 copies of the following petition:

PETITION TO CONGRESS.—The undersigned, business men and merchants, believing that restoration of confidence is absolutely necessary to avert further disaster, and that it is the duty of our legislators to do everything in their power to bring about such restoration of confidence, respectfully but earnestly urge upon Senators and Representatives at the extra session the following steps:

First.—That the purchasing clause of the Sherman Silver Bill be repealed.

Second.—That no substitute of any kind whatever be enacted at this session.

Third.—That an expert commission be appointed to consider and recommend a scientific plan of currency, based on the experience of other countries, and adequate to the requirements of a great commercial nation.

Albany Bank Statements.—According to the statements furnished at the close of business July 22 the loans and discounts of the Albany banks were $11,267,828, and the deposits were $12,366,419. This is a decrease in loans and discounts of $48,159 and in deposits of $627,223, as compared with the figures of the preceding week. The corresponding week last year the loans and discounts were $11,682,833, and the deposits were $13,922,010.

SOUTHERN STATES.

Chattanooga, Tenn.—The Fourth National Bank of Chattanooga, having decided to go into liquidation, has sold its good-will and assets to Wiehl & Co., doing business as the Bank of Chattanooga, who will assume the liabilities. The Fourth National was established a little more than four years ago, with a capital of $200,000, but has lately been doing an unprofitable business. The financial strength of the purchasers is claimed to be between $600,000 and $1,000,000.

Alabama National Dividend.—The Comptroller of the Currency has authorized Receiver H. M. Hall, Jr., of the Alabama National Bank of Mobile to pay a dividend of 50 per cent. on all claims against the bank. The Receiver estimates that he will eventually have enough funds to liquidate all claims, which amount to $80,000.

Southern Banks Prosperous.—According to the "Manufacturers' Record," out of 117 banks recently declaring dividends, only eight are paying less than 6 per cent. per annum, and one declares a dividend of 40 per cent.

WESTERN STATES.

Missouri Bankers' Association.—The Third Annual Meeting of the Missouri Bankers' Association was held at Excelsior Springs, July 5, 6 and 7. A number of interesting papers were read. The Executive Committee reported a membership of 207. New officers were elected as follows: J. M. Wilcoxson, President, Carrollton; J. Caro Russell, First Vice-President, St. Louis; J. P. Huston, Second Vice-President, Marshall; Miss Kate M. Cox, Third Vice-President, Kingston; F. P. Hays, Secretary and Treasurer, Lancaster; W. T. Sigbee, Assistant Secretary, Springfield; W. J. Anderson, Kansas City; B. Jones, St. Louis, and H. P. Farris, Clinton, Executive Committee.

Chicago.—The Clearing-House Board, consisting of the Presidents of all the Clearing-House banks in Chicago met July 28 and decided to authorize the regular Clearing-House Committee to issue loan certificates in its discretion when necessity existed.

The point was made that New York would interpret the step as a confession of weakness on the part of Chicago banks to follow at so late a day in the steps of New York. It is said that this action of the clearing-house may have the desired effect without any certificates being applied for.

The argument of the four leading merchants, Messrs. Armour, Field, Sprague and Murdock, who presented a letter advocating the issue of certificates, was that the step would tend to make all the banks more rational in their treatment of customers and put an end to the necessity for reserves extending, as in the case of one clearing-house bank, to 66 per cent. of the entire deposit. It is the first time in the history of the Chicago Clearing-House that certificates have been authorized.

The action taken empowers the Executive Committee to issue certificates if in their judgment the situation makes it absolutely necessary.

In the event of any being issued it is not probable the fact of issue or amount will be made public, as is done in the Eastern cities.

The Executive Committee of the Chicago Clearing-House Association is composed of Lyman J. Gage, President of the First National Bank; C. J. Blair, President of the Merchants' National Bank; J. J. P. Odell, President of the Union National Bank; I. G. Lombard, President of the National Bank of America; and Orson Smith, President of the Merchants' Loan & Trust Co. A majority of the committee is said to oppose the issue of Certificates.

St. Louis.—A statement of the condition of the twenty-four banks, National and State, in this city (July 22), shows that the ratio of cash assets to cash liabilities reaches the high standard of 43 per cent. Under ordinary circumstances 25 per cent., the legal requirement, would be considered good enough, but the fact that the percentage was nearly twice that figure is conclusive evidence of the strength of St. Louis banking institutions.

The following table of aggregates has been compiled by F. Chase, manager of the Clearing House:

Capital stock and surplus funds,	$25,194,133	Real estate, furniture, and fixtures	$1,964,344
Bills payable and bills rediscounted	1,016,592	Demand and time loans, bonds and stocks, (not including bonds deposited to secure circulation)	62,286,664
Deposits payable on time	13,880,477	Cash, checks, and exchange	18,223,386
Deposits payable on demand	42,383,192		
Total	$82,474,394	Total	$82,474,394

A Solid Wisconsin Bank.—An action worthy of imitation was taken by the directors of the First National Bank, Ripon, Wis., July 25, when the following resolution was adopted: "We, the undersigned directors of the First National Bank of Ripon, for value received, do hereby jointly and severally guarantee the payment in full of each, every and all the deposits held by said First National Bank of Ripon now and during the year 1893."

The directors thus pledge personal property worth $500,000, which, added to the resources of the bank, gives a security of about $1,000,000 for deposits of $370,000. The bank was organized as the Bank of Ripon in 1856 and has passed successfully through the financial flurries since that time.

Pueblo, Col., Savings Bank.—This bank was incorrectly included among the suspended institutions on July 5, the information coming to the JOURNAL in the usual course. A telegram from the bank on July 19, says: "We have not suspended, and having to-day over 42 per cent. cash on hand, do not expect to suspend." According to a statement received at this office the bank had on July 22, $143,000 deposits, to secure which it held $140,000 in loans and discounts and $60,000 in cash items—a remarkably strong showing.

Kansas Banks.—State Bank Commissioner Breidenthal's forthcoming report will make a remarkable showing for Kansas, considering the failure of the wheat crop in half the State and the shortage of 50,000,000 bushels as compared with last year. Reports received up to June 1 show that the people of the State had about $42,000,000 on deposit in the banks, $20,000,000 of which was in the State and Private banks and $22,000,000 in National banks.

Since June 1 the financial conditions have caused the people to draw out about $10,000,000. Most of the withdrawals have been made in Western Kansas, where depositors have lost faith in many of the banks.

Wisconsin Bankers Arrested.—A. C. Probert and Edwin Probert, the Wisconsin bankers who operated banking institutions at Washburn, Ashland and Shell Lake, were arrested July 19, charged with having violated the banking laws.

Kansas City.—The Missouri National Bank, which suspended July 17, has resumed business.

PACIFIC SLOPE.

San Francisco, Cal.—Two of the local banks were recently swindled by checks which had been very cleverly raised. One check for $3,800, issued on the Farmers' Bank of Fresno, was cashed by the London, Paris and American Bank, and another check for $5,500, on the Bank of Butte County, of Chico, was cashed by the London and San Francisco Bank. When the city banks sent the checks to their correspondents for collection the swindle was discovered. The checks had been raised from $38 and $55. It is believed that other local banks have been victimized in a similar manner.

— According to official reports, July 1, the condition of the 16 commercial banks of San Francisco was as follows:

RESOURCES.		LIABILITIES.	
Bank premises	$1,125,337	Capital paid up	$29,469,784
Other real estate	933,691	Reserve	11,061,948
Invested in stocks and bonds	2,039,496	Due depositors	20,793,541
Loans on real estate	3,360,817	Due banks and bankers	4,841,553
Loans on stocks and bonds	9,231,359	Other liabilities	1,204,452
Loans on other securities	4,318,175		
Loans on personal securities	25,880,652		
Money on hand	9,895,178		
Due from banks and bankers	7,253,528		
Other assets	3,323,046		
Total	$67,361,279	Total	$67,361,279

The resources of the different banks are:

American Bank and Trust Co	$721,183	Donohoe-Kelly Banking Co	$2,265,344
Anglo-Cal. Bank, Limited	8,191,657	Grangers Bank	2,028,792
Bank of California	11,927,922	London, Paris & Am. Bank, Ld	8,231,861
Bank of British Columbia	3,567,639	London and S. F. Bank, Ld.	4,659,998
Bank of British North America	2,307,871	Nevada Bank	7,963,786
Bank of Sisson, Crocker & Co	299,724	Sather Banking Co	2,115,434
Cal. Safe Dep. & Trust Co	2,377,649	Tallant Banking Co	1,366,894
Columbian Banking Co	63,804	Wells, Fargo & Co	9,276,672

Southern California Banks.—The misdirected zeal of a California correspondent recently included the Bank of Tustin City in the telegraphic reports of failed banks. E. D. Buss, Cashier of the bank, writes to the Journal as follows: "The truth is that there was no indication of a run on us, our customers showed no uneasiness and made no unusual withdrawals, and the bank has been open all the time. There was no real foundation in the business condition of Southern California for the late flurry, and nearly every bank which did suspend had ample cash for ordinary business, and most of them have resumed in good shape. This country is fairly prosperous, and the banks are managed by experienced and competent men, and our State banks compare well in every respect with the National banks."

Tulare, Cal., Banks.—E. J. Cox, President of the Tulare County Bank, Tulare Cal., writes to the JOURNAL under date of July 26: "We had in both banks (the Tulare County Bank and the Tulare Savings Bank) July 1, individual deposits amounting to $105,505; but withdrawals since that time have reduced the amount to $59,000. Wheat is at a very low price, but farmers are selling to meet actual demands so a little money is moving. If wheat goes up so that farmers can obtain something like its actual value, money will soon be as it was three months ago."

California Banks Resume.—The First National Bank, San Diego, which was forced to suspend June 21, owing to a heavy run, was authorized to reopen on July 5.

The resumption of business was marked by a strong exhibition of confidence on the part of local business men, the first day's deposits being three times in excess of the amounts paid out.

The University Bank and the First National, Los Angeles, have also re-opened.

Arizona National Bank.—The condition of the Arizona National Bank of Tucson, as shown by the official report made to the Comptroller July 12, shows cash items of $87,000 against deposits of $126,000—an evidence that the bank is well prepared for the emergencies of the present situation.

California Bankers' Association.—A. D. Childress, of Los Angeles, has been appointed Secretary of the California Bankers' Association by the Executive Council, for the unexpired term in place of Geo. H. Stewart, resigned.

CANADA.

Canadian Bank of Commerce.—The Annual Report of the Canadian Bank of Commerce, issued from the head office at Toronto, May 31, 1893, shows that the bank has a capital of $6,000,000 and a surplus of $1,100,000. The stock is distributed among 1,776 shareholders, there being a total of 120,000 shares.

Nashville National Banks.—The statements of the three Nashville National banks, made to the Comptroller of the Currency July 12, shows the following aggregates. For comparison the statement of condition on May 4, 1893, is given:

RESOURCES.	*May 4.*	*July 12.*	LIABILITIES.	*May 4.*	*July 12.*
Loans and discounts..	$6,923.510	$6,500,846	Capital stock paid in.	$3,000,000	$3,000,000
Overdrafts	122,758	106,017	Surplus fund..........	389,000	392,000
United States bonds to secure circulation..	150,000	150,000	Undivided profits....	257,105	244,616
United States bonds to secure deposits......	100,000	100,000	National bank notes outstanding........	134,990	134,990
Other stocks, securities, judgments, etc.	254.818	219,971	Individual deposits subject to check ..	3,915,546	3,292.306
Due from approved reserve agents....	454,615	405,646	Demand certificates of deposits.......	146,332	128,003
Due from other National banks........	389,572	275,812	Certified checks......	19,690	17,396
Due from State banks and bankers.........	108,537	57,247	Cashiers' checks outstanding.............	8,815	38,300
Banking houses, furniture and fixtures, real estate and mortgages owned........	219,954	220,865	United States deposits	85,323	89,619
Current expenses and taxes paid..	17.706	5,951	Deposits of U. S. disbursing officers.....	23,904	25,263
Premiums on U. S. bonds...............	33,000	27,000	Due to other national banks...............	625,885	426,065
Checks and other cash items................	151,273	76,912	Due to State banks and bankers........	501,252	447,322
Bills of other banks...	92,759	94,851	Notes and bills rediscounted............	292,065	584,137
Fractional paper currency, nickels and cts	1,306	985	Bills payable..........	148,089	58,255
Specie	231,691	217,322			
Gold certificates.....	7,240	10,000			
Silver certificates.	32,004	10,000			
Legal tender notes....	267.490	340,600			
Redemption fund with U. S. Treasurer	6,750	6,750			
Due from U. S. Treasurer, other than redemption fund......	11,000	2,000			
Total......	$9,577,999	$8,828,277	Total....	$9,577.999	$8,828,277

The amount of loans and discounts has been reduced some $420,000; the overdrafts are some $16,000 less; the amount due from other National banks is $114,000 less; the amount due from State banks is $50,000 less; the specie, gold and silver certificates have been reduced slightly, while the legal-tender notes have been increased over $72,000.

The surplus fund has been slightly increased and the amount of undivided profits somewhat reduced. The individual deposits have fallen off over $650,000, while the banks have reduced their indebtedness to other banking institutions over $250,000. The total resources are $8,828,277.85, as against $9,577,999.74 on May 4. This is more than covered by the falling off in the deposits.

PRESIDENT CLEVELAND'S MESSAGE.

The Congress of the United States met in extra session Monday, August 7. Following is the Message of Mr. Cleveland, referring especially to the monetary situation, read in both houses of Congress August 8:

TO THE CONGRESS OF THE UNITED STATES:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources, nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans though heretofore satisfactory are no longer accepted. Values supposed to be fixed are fast becoming conjectural and loss and failure have involved every branch of business.

CHARGEABLE TO THE SILVER-PURCHASE LAW.

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the general Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result however has been entirely different, for immediately following a spasmodic and slight rise the price of silver began to fall after the passage of the Act, and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

HOW PARITY IS MAINTAINED.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is however declared in the Act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000. While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion amounted to a little more than $54,000,000 and that during the same period about $49,000,000 were paid by the Treasury in gold for redemption of such notes.

GOLD RESERVE NOT SPARED

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations amounting to about $150,000,000 on account of silver purchases, and has as a consequence, for the first time since its creation, been encroached upon.

We have thus made the depletion of our gold easy and have tempted other and more appreciative nations to add it to their stock. That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been frequently drawn from our Treasury and exported to increase the financial strength of foreign nations. The excess of exports of gold over its imports for the year ending June 30, 1893, amounted to more than $87,500,000.

Between July 1, 1890, and July 15, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the Silver-Purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

GOLD AND SILVER MUST PART COMPANY.

At this stage gold and silver must part company and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international co-operation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single handed.

The knowledge in business circles among our own people that our Government cannot make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce, to become idle and unproductive in the hands of timid owners. Foreign investors, equally alert, not only decline to purchase American securities, but make haste to sacrifice those which they already have.

THE MENACE MUST NOT BE DISREGARDED.

It does not meet the situation to say that apprehension in regard to the future of our finances is groundless, and that there is no reason for lack of confidence in the purposes or power of the Government in the premises. The very existence of this apprehension and lack of confidence, however caused, is a menace which ought not for a moment to be disregarded. Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our unparalleled growth and resources might be favorably passed upon. But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized States, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

HOW IT CONCERNS THE LABORER.

This matter rises above the plane of party politics. It vitally concerns every business and calling and enters every household in the land. There is one important aspect of the subject which especially should never be overlooked. At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortunes of others, the capitalist may protect himself by hoarding or may even find profit in the fluctuation of values; but the wage-earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is practically defenceless. He relies for work upon the ventures of confident and contented capital. This failing him his condition is without alleviation, for he can neither prey on the misfortunes of others nor hoard his labor. One of the greatest statesmen our country has known, speaking more than fifty years ago, when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil."

These words are as pertinent now as on the day they were uttered and ought to impressively remind us that a failure in the discharge of our duty at this time must especially injure those of our countrymen who labor and who because of their number and condition are entitled to the most watchful care of their Government.

EARLY ACTION URGED.

It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once. The maxim "He gives twice who gives quickly" is directly applicable. It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing. We may hope, too, that calm counsels will prevail and that neither the capitalist nor the wage-earners will give way to unreasoning panic and sacrifice their property or their interests under the influence of exaggerated fears. Nevertheless, every day's delay in removing one of the plain and principal causes of the present state of things enlarges the mischief already done and increases the responsibility of the Government for its existence. Whatever else the people have a right to expect from Congress, they may certainly demand that legislation condemned by the ordeal of three years' disastrous experience shall be removed from the statute books as soon as their representatives can legitimately deal with it.

DEAL WITH SILVER BEFORE THE TARIFF.

It was my purpose to summon Congress in special session early in the coming September that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people, as shown by their suffrages, desire and expect, and to the accomplishment of which every effort of the present administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once and before all other subjects be considered by your honorable body.

I earnestly recommend the prompt repeal of the provisions of the Act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfil its pecuniary obligations in money universally recognized by all civilized countries.

GROVER CLEVELAND.

EXECUTIVE MANSION, August 7, 1893.

Comments on the Message.

President Cleveland's Message to the extra session of Congress will be found in this issue of the JOURNAL. Below are given comments thereon of several leading newspapers:

London Times: It may perhaps be thought that the President, as the head of his party, and on the eve of a party fight, is unlikely to understate the case for action which his party contemplates. But it would be difficult to convict him of exaggeration in the face of the daily returns of American prices and exchanges.

Kansas City Star: President Cleveland's Message is the utterance of a strong man who is by nature the dauntless and confident leader of men. It is characteristic of Mr. Cleveland in its courage, in its clearness and in its firmness.

Springfield Republican: The Message will be found to be what everybody must have expected it would be. There is no hint of a compromise with the silver and cheap money forces. It is moderate but inflexible in tone. The President is right.

Denver Times: The President has ignored the platform of his party and planted his foot firmly on the platform of London and Wall street. Utterly condemning the Sherman law, he will not admit that silver has a rightful constitutional place in the monetary system of the country. He throws the white metal to the dogs and demands that the finances of the country be conducted on a purely gold basis.

San Francisco Evening Post: Mr. Cleveland has discovered that legislation beneficial to the East is utterly disastrous to the West; that between the gold kings of Wall street and the silver miners of Colorado there is no bond. Having made this discovery he seeks by the aid of his pen to say to all what is least disagreeable, and then, linking his arm with that of the gold bug, stalks stately by to witness the execution of the white metallists.

Hartford Courant: President Cleveland's Message comes up to the occasion so far as the silver question is concerned. The points that he makes are well taken and clearly stated. The factors that make good times are here, but confidence has gone and good times with it.

Chicago Daily News: His Message lays down the administration programme. Its fulfilment will not be easy, because the opposition is determined, but Mr. Cleveland's entire public career is a guarantee that, believing it to be right, he will omit no honourable means to its accomplishment.

GENERAL INVESTMENT NEWS.

PROPOSED INVESTMENTS.

Chattanooga, Tenn.—The County Court has voted in favor of issuing $150,000 bonds to build a bridge over the Tennessee River; bonds to be issued by Hamilton Co.

St. Petersburg, Fla.—The city will issue $23,000 in bonds to pay for a school, water works and street paving.

Washington, D. C.—The District Commissioners are considering the idea of issuing $10,000,000 in 4 per cent. bonds for municipal improvements.

Fort Worth, Texas.—The City Council has voted in favor of retiring the issue of 5 per cent. bonds recently made, and replacing it with $185,000 worth of 30-year 6 per cent. bonds. The former issue was found to be illegally registered.

Annapolis, Md.—The corporation will consider an issue of $50,000 in paving bonds.

Eastland, Texas.—The Eastland Water Co. will sell $5,000 of bonds.

Tacoma, Wash.—An issue of $60,000 school bonds for the purchase of the Puget Sound University building to be used for public school purposes.

Forsyth, Ga.—The corporation will vote on issuing $25,000 in bonds for building courthouse.

CORPORATIONS SEEKING CAPITAL.

Waco, Texas.—The Waco Electric Railway & Light Co. has increased its capital to $300,000.

Fort Worth, Texas.—The Dallas & Fort Worth Rapid Transit Co. has decided to issue $1,000,000 5 per cent. bonds to build the proposed electric road from Dallas to Fort Worth.

ITEMS.

Evidence of Monetary Stringency.—A striking evidence of the stringency of the money market came to light recently in Manchester, N. H. The city's bonds have always commanded a big premium, and it was supposed that the city could float a loan of half a million easily, the water works being worth more than its total indebtedness, present or prospective. Bids were asked for a loan of $100,000 of all the prominent bankers of New England. Not one was received.

Knoxville, Tenn.—Chancellor Gibson has rendered a decision that the corporation must issue $225,000 bonds which the city voted to issue for building the Knoxville, Cumberland Gap and Louisville road. The city has refused to issue them, claiming the road has not been completed.

Tennessee's Debt Interest.—The July interest on the State debt was paid on the 1st ult. The amount of the interest is $231,000. Of this $200,000 was paid in New York and $31,000 at the capital. The new fiscal agent of the State in New York is Latham, Alexander & Co., and it is through this firm that the $200,000 was paid. The State pays the interest without borrowing the amount necessary to meet the payment.

Richmond, Va.—Auditor Ryland has issued about $130,000 of the State refunding bonds in place of old issues thus far deposited.

Anniston, Ala.—The Equitable Mortgage Company of New York has withdrawn its bids on the $80,000 worth of Anniston bonds. They are again offered for sale.

Kentucky Bonds Legalized.—A bill has been passed legalizing the issue of refunding bonds in certain cities of the second class, up to the time of the adoption of the new constitution. The Act establishes the validity of refunding bonds sold by Lexington, Covington and Newport.

Louisville, Ky.—Judges Lurton and Barr handed down an important opinion in the United States Circuit Court, July 11, in the case of J. Kennedy Tod *et al.* in the Kentucky Union Land Company, declaring that the guaranty by the Kentucky Union Land Company of the bonds of the Kentucky Union Railway Company of $500,000 of stock is valid. This reverses a decision of the State Court of Appeals. This suit involves $3,400,000 of bonds and stocks.

American Bankers' Association.

POSTPONEMENT OF THE ANNUAL CONVENTION.

The following notice will prove of interest to many of the JOURNAL's readers:

OFFICE OF THE AMERICAN BANKERS' ASSOCIATION,
No. 2 Wall Street, New York, August 9, 1893.

The Executive Council of the American Bankers' Association have decided to postpone to a future day, hereafter to be fixed, the convention advertised to be held at Chicago, September 6th and 7th proximo. This action is owing to the present crisis and the inability of bank officers to leave their post of duty.

E. H. PULLEN, *Chairman Executive Council.* WM. H. RHAWN, *President.*
H. W. FORD, *Secretary.*

FAILURES AND SUSPENSIONS.

Alabama.—The First National Bank, Birmingham, closed August 2, owing to a run. Assets, $1,350,000; liabilities, $650,000.

California—San Francisco.—The Bank Commissioners have prepared a statement of the resources and liabilities of the People's Home Savings Bank, which failed June 23, but have not placed any estimate on the items included in the figures.

Liabilities—Capital paid in coin, $333,333.33; reserve fund, $25,000; due depositors, $2,001,861.32; due banks and bankers, $889.87; interested collected, $2,472; profit and loss, $36,878.63; taxes, $8,000; interest accrued on real estate, $13,359.90; total liabilities, $2,421,927.39.

Resources—Real estate, $51,088.08; invested in stocks, bonds and warrants, $557,156; loans on real estate, $1,208,488.68; loans and discounts, $326,134.24; cash balance, $27,919.36; due from banks and bankers, $6,653.13; furniture and fixtures, $14,715.55; expenses and taxes, $625.50; safe deposit vault, $28,194.85; collections from banks, $1,000; Pacific Bank C. D., not yet due, secured by real estate, $200,000; total resources, $2,421,927.39.

Colorado—Denver.—The Chamberlin Investment Company assigned July 10. Direct liabilities are placed at $1,112,118; contingent liabilities (estimated), $1,250,000; the assets, consisting largely of Texas and Colorado real estate, are given as $2,940,691.

The Denver Safe Deposit and Trust Company assigned August 1. Assets, $400,000; liabilities, $100,000.

The Colorado Savings Bank assigned July 17. The assets are said to be $73,000 in excess of liabilities. Deposits, about $500,000.

The Rocky Mountain Dime and Dollar Savings Bank assigned July 17; assets $156,800; liabilities, $105,650.

The People's Savings Bank assigned July 17; liabilities, $1,125,667; assets, $1,124,451. Charges of fraud and conspiracy are made against the management.

The Union National Bank suspended July 18 owing to demands of excited depositors, caused by failure of Savings banks on the previous day.

The Commercial National Bank suspended for a similar reason.

The National Bank of Commerce also closed on the same date because of a run.

The Mercantile Bank, a small private bank, suspended owing to the failure of the Union National Bank through which it cleared.

The Capital Bank, owned by Stephens, Hanchett & Co., assigned July 18. The bank had about 300 depositors

The North Denver Bank also closed on July 18.

The Hamilton Loan and Trust Company went into a Receiver's hands August 3. It did a large business in Nebraska, Colorado and Kansas.

The German National Bank suspended July 19; assets are said to be ample, but could not be realized on quickly.

The State National Bank also closed on the same day owing to a run.

The People's National Bank was also compelled to suspend for like reasons.

It is said each of these banks holds assets largely in excess of liabilities.

The bank Examiner in charge of the failed National Banks at Denver says that in his opinion the appointment of a Receiver for any of the banks will not be necessary, and the Comptroller of the Currency has also promised his aid. Agreements have been submitted to depositors providing for the issue of certificates of deposit bearing 6 per cent. interest and running from four to sixteen months. These agreements have already been extensively signed.

— The Bank of Crested Butte—Metzler Brothers, proprietors—assigned July 21. Their liabilities are $35,000, and assets $65,000.

— The Union Bank of Greeley made an assignment July 22. Liabilities, $100,000; assets and paid-up capital, $300,000.

The Greeley National Bank also suspended on the same date.

— J. B. Wheeler & Co., operating banks at Manitou, Colorado City and Aspen, suspended July 20. The assets of the Manitou Bank are $114,000. The liabilities are $84,-000, of which the personal deposits of J. B. Wheeler are $31,000, leaving the liabilities about $35,000. All depositors were paid in full.

— The First National Bank, of Canon City, suspended July 20, on account of failure of Denver bank with which it had an account.

— The Bank of Silverton assigned July 25. Assets, $75,000; liabilities, $45,000.

— The First National Bank, of Grand Junction, closed July 20. Liabilities, $50,000; assets, $108,000.

— The Bank of Loveland suspended July 19 owing to the suspension of its Denver correspondent.

— The Bank of Newcastle assigned July 31. Assets, $33,000; liabilities, $27,000.

— The Bank of Sterling suspended July 19 as a result of the Denver failures.

Florida.—The First National Bank, of Orlando, closed July 24, on account of heavy withdrawal of deposits.

— The Bank of Apopka—E. B. Prince, owner—failed July 31. It is said the liabilities of the bank will be paid in time.

Idaho.—The Receiver of the Coeur d'Alene Bank of Wallace and the Miners' Exchange Bank, of Wardner, has filed a report showing that the Miners' Exchange Bank owes $43,782 to the Coeur d'Alene Bank. The liabilities of the Coeur d'Alene Bank are given at $89,943, and the Miners' Exchange Bank at $102,430. The Miners' Exchange Bank had $1,274 cash on hand, and the Coeur d'Alene Bank $730.

— The First National Bank, of Nampa, suspended August 1.

Illinois—CHICAGO.—Lazarus Silverman, a private banker, suspended August 3. Liabilities less than $1,000,000, and assets said to be in excess of that amount; deposits about $600,000.

Bradford & Church, small private bankers, closed their doors July 24, and they have not bothered the courts with the details. Their whereabouts are not known. Between $20,000 and $30,000 of poor people's money is gone. The distribution of small iron boxes (safes?) among depositors was a part of their scheme of operations.

Stevens & Ross, who did business in a small way at 204 Fifty-fifth street, under the name of the South Park Bank, failed July 29.

— The banking house of W. T. Thornton & Son, of Shelbyville, failed July 10. It was established in 1859 by Gen. W. F. Thornton, and since his death has been conducted by Thomas M. Thornton under the original firm's name. The house has long been looked upon as one of the strongest private banks in Central Illinois. On July 25 the assignees made the following statement: Liabilities—Total debts, $583,-861.58. Resources—Real estate, $265,000; loans and discounts and overdrafts, $328,-321.30; bonds, cash, etc., $116,461.86; personal property, $3,616; total, $713,399.16. Deduct doubtful notes, $120,000.

— The bank of Hay & Webb, at Carmi, one of the oldest banking institutions in Southern Illinois, assigned July 14. Assets are placed at $216,000; liabilities, $176,000.

— The private bank of George P. Harrington, at Edinburg, closed June 27. Mr. Harrington is a partner in a gold mine in Arizona, coal mines in Central Illinois, and he is also interested in the St. Louis & Chicago electric railway. Estimated liabilities, $225,000. The failure was due to numerous unprofitable enterprises.

— According to information furnished by J. N. Hagins, the Chicago banker, who had branch institutions at Mascoutah and other places in Illinois, his failure was not due to the collapse of the Columbia National as was supposed, but to embezzlement by his manager. Mr. Hagins says that the manager stole $66,000. Hagins says he will be able to settle up dollar for dollar, but creditors doubt it.

— The First National Bank, Kankakee, suspended July 29. Assets are reported good. D. C. Taylor has been appointed Receiver.

Indiana—INDIANAPOLIS.—The Indianapolis National Bank closed July 25, owing to a run. For many years the Indianapolis National has been regarded as among the strongest banks in the city. Added to the demands of local depositors were calls from several of the institution's correspondents, and enough was checked out to convince President Haughey and the board of directors that there was but one course to pursue.

According to the statement July 12, the loans and discounts were $1,545,851; cash and securities on hand, $683,000; fractional paper, currency, nickels and cents, $882;

specie, $54,536; legal-tender notes, $60,000; total resources, $2,313,153. Liabilities, capital stock, $300,000; surplus fund, $100,000; undivided profits, $44,448; National bank notes outstanding, 45,000; individual deposits $826,570; demand certificates of deposit, $344,235; certified checks, $6,000; cashier's checks outstanding, $17,779; deposits, $193,000; deposits of disbursing officers, $106,900; due other National banks, $146,402; due State banks and bankers, $73,578; notes and bills rediscounted, $51,137; bills payable, $58,000; total, $2,313,153. Edward Hawkins has been appointed Receiver.

The Bank of Commerce did not open July 25. This was not unexpected as the bank was owned by the Depauws and the Depauw estate, and the recent failure of C. W. Depauw caused a run. The bank is the oldest in the city and one of the oldest in the State. It was organized as an insurance company in 1836, with banking privileges under the then existing laws. In 1869 it was regularly incorporated as a bank. It has a capital stock of $200,000, of which the Depauws owned nearly three-fourths. The Depauw estate is worth $5,000,000 and the stockholders are liable for twice that amount. C. W. Depauw has made an assignment. N. T. Depauw is President of the bank, but John W. Ray, the Vice-President, has had the management. The statement taken from the books shows loans and discounts, $354,458; real estate, $42,402; cash, $13,530; due from other banks, $17,834; total, $428,225. Liabilities, capital $200,000; surplus, $65,107; deposits, $122,534; due banks, $23,430; total $411,122.

— The Farmers and Merchants' Bank, Covington, closed July 28. Ex-United States Treasurer Nebeker was President.

— The S. M. Mitchell Bank, Martinsville, has gone into voluntary liquidation. It was established 30 years ago and was backed by $500,000. Division of an estate is given as the cause of liquidation.

— The Citizens' Bank, of Connorsville, owned and controlled by J. N. Huston, ex-Treasurer of the United States, closed July 24. In an interview with Mr. Huston regarding the suspension he said: "None of the depositors or creditors will lose a cent. My personal property will more than cover all liabilities, to say nothing about the real estate." Liabilities are about $150,000. Mr. Huston's assets are placed at $500,000.

The Garret City Bank, owned by John L. Davies, closed July 11. Liabilities are about $30,000; assets, $55,000.

The suspended bank had a branch at Auburn which is also closed.

— The Citizens' National Bank, Muncie, one of the oldest and strongest banks in the town, suspended August 4. Assets said to be twice the amount of liabilities.

Iowa.—A. Daniels & Co., private bankers at Marion, assigned July 31. The property is valued at $200,000.

Kansas—KANSAS CITY.—The Northrup Banking Company voluntarily placed itself in charge of the State Bank Commissioner July 15. The fact that J. S. Chick, President of the suspended National Bank of Kansas City, is also President of the Northrup, caused a run which led to the suspension. The bank has a paid-up capital of $100,000, with a surplus of $50,000. Its assets are $475,000, and its liabilities $315,000. Andrew B. Hovey has been appointed Receiver.

The Citizens' Bank also suspended July 17. Assets, $151,500; liabilities, $126,500.

The Armourdale Bank suspended July 16. Thirty days ago the bank had deposits amounting to from $50,000 to $60,000, but they were gradually reduced by about one-half, and the suspension was because of the lack of currency, due to a run. The liabilities are placed at $35,000 and the assets at about twice that amount. The Cashier said that the securities of the bank are excellent and that the depositors will be paid, and that money will be left for division among the stockholders.

— The Hutchinson National Bank suspended July 19. Assets, $251,000; liabilities, $131,000. The bank resumed business August 8.

— Hood & Kincaid's Bank, Pleasanton, failed July 17.

— The State Bank of Parker was reported closed on the 19th ult.

— The Woodson State Bank, Yates Centre, closed July 19.

— The Bank of Garnett suspended July 12. It is thought there that in time the bank will be able to pay all claims.

The Larned State Bank suspended July 3. Liabilities, $28,000; cash on hand, $4,000. Other assets are held.

— The Bank of Belleville, a private institution with a capital of $20,000, failed July 20.

— The Pawnee County Bank, Larned, closed July 1. Liabilities, $18,000; cash on hand, $500. The bank also holds loans and discounts said to be ample to meet all demands in time.

— The People's National Bank, Fort Scott, closed July 18. Deposits had recently fallen from $215,000 to $130,000.

The People's Savings Bank also closed on the same date.

— The Bank of Richmond closed July 18.

— The Farmers' and Merchants' State Bank of Osawatomie was reported closed July 18.

— The First National Bank of Russell was closed July 22, and placed in charge of C. M. Sawyer.

— The Republican Valley Bank at Clyde has failed; liabilities, $45,000 and assets, $76,000.

— The First National Bank of Anthony closed July 21, and posted up notice of assignment. Its assets are $154,000; liabilities, $50,000.

The Anthony Savings Bank suspended August 3.

Kentucky—LOUISVILLE.—The Kentucky National Bank suspended July 22. The bank is a Government depository, and its last statement showed $191,731.83 to the credit of the Government and $138,268.17 to the credit of United States disbursing officers. The loans and discounts amounted to $1,719,966.50, and the surplus was $106,500. According to the statement, the amount of cash on hand July 19 was a little over $85,000, the individual deposits subject to check were $311,695.33, and the loans and discounts were $1,719,966.52. The bank is said to be largely loaded with the paper of W. H. Thomas, a whiskey dealer, who failed recently.

The City National Bank suspended July 24. The bank's capital is $400,000, and in its thirty-five years of existence it has never done a profitable business. Three years ago its receiving teller, W. H. Pope, stole $70,000 and fled the country. This so weakened confidence in the bank that its deposits have been small ever since. When the Comptroller called for its statement a short time ago it showed a reserve of less than eight per cent. Its correspondents and depositors began at once to withdraw their balances. The deposits amount to $222,000 and assets are $865,000. The bank Examiner reports the bank solvent, and it will probably resume soon.

The Merchants' National suspended July 25. Its recent statement showed that it had only $130,000 of reserve, it owed other National banks $172,245 and State banks $216,324, and its deposits had run down to $380,837. The bank has heretofore done a good business and had deposits of $1,500,000 until a few months ago. The first real blow to its credit was inflicted by Mr. Lindenberger three years ago when he went heavily into investment in natural gas, losing heavily. The bank has been declared solvent by the Examiner and may resume.

The Fourth National Bank suspended July 25. It was an offshoot of the failed City National, having been organized by President Warren, who was ousted by rival interests. Its reserve was only about $56,000, and it was largely in debt to other banks. Its deposits were only $174,387.08. Arrangements have been made to resume business.

The Louisville Deposit Bank also succumbed to a run on July 25. It was founded three years ago, but as its stock was not paid in full and other banks never put any confidence in it, it was never admitted to the clearing-house association. It had on June 30 $418,669 of deposits, mostly from its stockholders. It has assigned to the Germania Trust Company. It is reported that the bank will not do more than pay out at the best, as Moses Schwartz, the President, is also President of the Sweetwood Distillery, which has assigned, and he has made an individual assignment. His own liabilities are about $70,000, and the distillery's liabilities are heavy.

— The Pineville Banking Company, of Pineville, closed July 28. It was considered the best bank in Southeastern Kentucky. The President will surrender all his individual property to the bank.

— The First National Bank of Middlesborough closed July 27. The Coal and Iron, the other local bank, will not be affected. The suspended bank had a capital of $50,000, and its individual deposits aggregated usually about $80,000.

— The new Farmers' Bank of Mount Sterling closed July 27. The failure was caused by inability to realize on its paper. The deposits are about $300,000. The bank holds first-class paper to the amount of $600,000.

The Traders' Deposit Bank also suspended on the same date. Liabilities, $160,000; assets, $390,000.

Michigan.—C. W. Chapin & Co.'s private bank, at Stanton, closed July 28. No statement of the assets and liabilities has been given.

— The National Bank of Sturgis closed August 7.

Minnesota—MINNEAPOLIS.—A recent statement of the condition of the failed Citizens' Bank, places the value of the assets at $433,831, and the liabilities as $215,448.

The assets and liabilities of the Farmers and Merchants' State Bank, which made an assignment June 20, show assets of $320,379 and liabilities of $235,401, as follows: Assets.—Loans and discounts, $268,672; real estate, $4,347; cash items, $16,962; furniniture and fixtures, $3,384; cash on hand, $945; claim of Marson & Marson, $84; claim of O. A. Stoneman, $30; overdrafts, $5,894; bonds, stocks, etc., $16,925; stationery, $496; due from banks—securities, $60.17; United States National, New York, $1,694.83; Ft. Dearborn National, Chicago, $882.93;—$2.637—total, $320,379. Liabilities.—Deposit subject to check, $88,129; time certificates of deposit, $116,760; demand certificates of deposit, $5,817; bills payable, $24,411; certified checks not secured, $198; cashier's checks not secured, $211; Farmers' Loan and Trust Company, Sioux City, not secured, $372; total, $235,401.

George H. Fletcher, assignee of the State Bank has filed a report showing $551,-422 debts. and $649,146 assets.

A statement of the condition of the Bank of New England, at the time of its suspension, June 26, shows assets, $281,720; liabilities, $171,485.

The American Exchange Bank suspended June 28. The bank was organized July 28, 1892, with an authorized capital of $500,000, of which $65,000 was paid up.

St. Paul.—The National German-American Bank suspended August 3. It had lost $1,562,000 deposits since January. The bank was a large and strong one, its capital being $2,000,000. Total assets, $5,000,000; deposits $2,261,000.

The Seven Corners Bank, St. Paul, assigned August 1.

The People's Bank suspended August 4. Since March deposits had fallen from $266,000 to $160,000. Assets amount to $400,000; liabilities, $185,000.

The West Side Bank suspended August 4. The deposits were not large, and it is said they will be paid.

Missouri—KANSAS CITY.—The National Bank of Kansas City suspended July 14. It is said on good authority that the assets amount to about $2,500,000, and the liabilities will not greatly exceed $1,000,000.

The bank was one of the oldest in the city. The suspension was due to a steady withdrawal of deposits since the beginning of the financial stringency. President Chick said:

"We began to lose deposits early in May. The demand on us went along until the recent failure of a local Savings bank, and every day since then the withdrawals of deposits have increased. A few minutes before we closed we received demands for $40,000 by telegraph. We saw we could not stand another day's run, and there was only one thing left for us to do. We asked the clearing-house for help, and that fact was telegraphed to creditors and depositors out of town and caused the run to be heavier. I do not see how the depositors can lose a penny. Our deposits at one time were about $4,000,000, but they have been drawn down so that when we closed they were between $800,000 and $1,000,000. I cannot say what our assets are exactly, but they are between $2,000,009 and $3,000,000."

The National Bank of Kansas City had a capital stock of $1,000,000. By its last statement it had a surplus fund of $200,000 and undivided profits of $24,000.

It has outstanding loans of three and one-half million dollars. The bank owns the building it occupied at the corner of Fifth and Delaware streets, which, with the furniture and fixtures therein, is worth about $175,000. The bank also owned real estate and mortgages to the extent of $150,000. In 1884 the National Bank of Kansas City closed its doors for about half an hour on account of the failure of Donnell, Lawson & Simpson in New York, but reopened without loss to any one. The bank was an outgrowth of the Bank of Northrup & Chick, which was the pioneer banking establishment of Kansas City. In 1862 the firm removed to New York city, where it failed in the panic of 1873, but afterward paid in full. The following year Northrup & Chick returned to Kansas City, and in 1875 organized the National Bank of Kansas City.

The Kansas City Safe Deposit and Savings Bank, capitalized at $300,000, supposed to be one of the strongest institutions of its kind in the State, closed July 11. The assignee filed an inventory of assets July 3. They are given at $2,044.217; many of them, however, are of little value. The bank holds as collateral, notes of Cashier Sattley aggregating $13,400, and of notes endorsed by Sattley to the amount of $19,200. The indebtedness of H. P. Churchill, ex-President of the bank, amounts to $125,000. There is an overdraft standing against the Equitable Mortgage Company of New York city for $22,000

The assignment was made owing to rapidly maturing paper, which the directors knew they could not meet. The bank had over ten thousand depositors. Every effort was made to avert the assignment, and the clearing-house was generous in its aid. E. C. Sattley, the Cashier, stated that $450,000 had been withdrawn since June 1. Prior to this date the deposits were about $2,000,000. Efforts are being made to reopen the bank.

— The Franklin Savings Bank assigned July 15. It had about $50,000 deposits; assets are said to be considerably greater than this amount.

— The Bank of Commerce, Springfield, failed July 12. The last statement showed $256,000 resources, $10,000 surplus and $176,000 deposits. It is the first bank failure recorded in the history of Springfield. The President, Vice-President and Cashier of this bank have been arrested, charged with receiving deposits after they knew the bank to be insolvent.

The Springfield Savings Bank, though said to be solvent, assigned July 31. Deposits about $100,000.

The Greene County Bank also suspended August 7. Liabilities, $137,242; assets, $252,251.

— The Exchange Bank, Webb City, closed July 1. Deposits are $60,000.

— The Johnson County Bank, at Warrensburg, suspended July 20, and will go into a Receiver's hands.

— The First National Bank, of Harrisonville, suspended July 20.

— The Citizens' Bank, of Jamesport, assigned July 13. Liabilities about $45,000; assets not stated.

Montana.—The wrecking of the Livingston National Bank, which closed on July 7, is charged to the misdoings of the Cashier, Geo. L. Carey. His obligations to the bank are said to reach $67,000.

The National Park Bank also suspended July 31. A recent statement showed that it was doing a profitable business.

— The Merchants' National Bank, Great Falls, suspended July 24. The directors say depositors will be paid.

The First National Bank also suspended July 28. Deposits, $650,000.

— J. H. Conrad & Co., Red Lodge, assigned July 31.

— The First National Bank of Helena, suspended July 27.

The Montana National also suspended the same day. Both have ample assets but could not realize.

Nebraska.—The American Bank, Beatrice, suspended July 1. Deposits, $60,000; assets said to be sufficient to meet all demands.

The Nebraska National, at Beatrice, also suspended on the same date. Deposits exceed $100,000; assets said to be good.

— The Nebraska Savings Bank, Lincoln, suspended July 13. The Examiner's report shows: Resources—Loans and discounts, $127,000; profit and loss, $36,000; real estate, including furniture and fixtures, $19,000. Liabilities—Capital, $50,000; 20 per cent. assessment paid in, $34,000; deposits, $60,000; clearing-house, $47,000. C. H. Morrell has been appointed Receiver.

— The Plainview State Bank was robbed of $3,000 on July 23, and as a consequence has suspended.

— The State Bank of Florence, established in 1882, failed July 20.

New Hampshire—MANCHESTER.--The Bank of New England was enjoined from doing business July 24.

The National Bank of the Commonwealth has also suspended, owing to other failures. Deposits, $310,500; assets and liabilities, $625,000.

The New Hampshire Trust Co. closed July 22, as a precautionary measure in order to protect the interests of depositors.

— The Security Trust Company, of Nashua, suspended July 20, owing to heavy loss of deposits. The capital and surplus of $250,000 will probably be ample to protect depositors should the resources prove inadequate.

C. W. Hoitt and F. A. Eaton have been appointed assignees of the Mechanics' Savings Bank, which was enjoined several months ago, by order of the court, from the transaction of business.

— The National Granite State Bank, of Exeter, suspended July 27. The institution is declared by officials to be perfectly sound, the present embarrassment having been caused by a drainage of the cash supply and delayed remittances from Boston.

— The Farmington Savings Bank was enjoined on the petition of the Bank Commissioners, July 21, on account of failure to realize on assets.

New Jersey.—Calvin Corle, President of the failed Somerset County Bank, of Somerville, made a statement July 11. The deposits, when the bank closed its doors, amounted to $140,000; cash on hand, $15,000; money borrowed by bank, $55,000. Notes amounting to $10,000 were sent to New York. The bank owes $5,000 to correspondent banks outside of New York city. The bank holds Pidcock's paper to the amount of $84,000. The whole amount of the directors' paper held by the bank amounts to $134,000.

New Mexico—ALBUQUERQUE.—The Albuquerque National suspended July 3.

The First National was placed in the hands of an examiner July 5.

The New Mexico Savings Bank and Trust Co. also suspended July 3.

New York—NEW YORK CITY.—H. I. Nicholas & Co., bankers and brokers, suspended July 26.

John B. Dumont, broker, also assigned on the same date.

The Madison Square Bank suspended August 9, the St. Nicholas Bank having refused to clear for it longer. The following notice was posted: "This bank will remain closed temporarily. We will receive no deposits nor will any moneys be paid out. (Signed), Lewis Thompson, Cashier."

It is said the bank's capital of $500,000 is impaired to the extent of $80,000, and that deposits have fallen from $2,000,000 a month ago to $1,100,000 at the time of suspension.

Horace L. Hotchkiss & Co., bankers and brokers, 36 Wall street, suspended Aug. 8.

— The private banking house of N. M. Crane & Co., Hornellsville, closed July 31. The value of the assets are stated to equal the liabilities, but cannot be realized on at present.

— The examiners report that the total liabilities of Ward's Bank, Forestville, foot up $96,000. The assets will not exceed $20,000. The bank failed recently.

North Dakota.—Lloyd's National Bank, Jamestown, suspended July 10. The capital stock is $100,000. The deposits are said to be about $220,000, with assets double the liabilities at greatly depreciated values.

Ohio.—The Farmers' National Bank of Findlay closed July 25. The officers say that they will be able to pay dollar for dollar and have a surplus when the bank's affairs are closed. Ever since the failure of ex-Secretary Foster the Farmers' National has been drawn upon heavily by its depositors. The capital is $80,000, with a surplus of $44,000. The resources are placed at $296,000 and liabilities at $170,000.

— The Wyandotte County Bank, Upper Sandusky, went into Receiver's hands July 31. Officials say assets are three times as great as liabilities.

— R. M. Francy was appointed Receiver of the Toronto Banking Co., Toronto, August 1. The bank commenced business in 1889.

— Having lost $300,000 in deposits during the last month the Citizens' Savings and Loan Association of Akron closed July 29.

Edward E. Voris, Receiver, has given out the following statement: Due to banks, $19,930.27; savings deposits, $241,354.86; business deposits, $88,236.41; certificates of deposit, $211,098 50. Over against the liabilities are placed assets of $692,396.67.

The Akron Savings Bank is in the hands of a Receiver, having closed July 31. Capital, $200,000; surplus and undivided profits, $68,000. A later report says a plan for resumption of business has been agreed to by depositors.

Oklahoma Territory.—The Bank of Oklahoma City and the First National, both at Oklahoma City, closed July 19.

Oregon—PORTLAND.—The Oregon National Bank suspended July 27. Capital, $200,000; surplus, $40,000; average deposits, $500,000.

The Commercial National Bank failed July 29. It had a paid-up capital of $250,-

000. The statement of the Commercial National published July 12 shows that its resources are $1,950,000, and its deposits $1,455,000.

The Portland Savings Bank, under the same management as the Commercial National, suspended on the same date.

The Northwestern Loan and Trust Co. suspended July 27. Capital, $250,000; surplus, $25,000.

The First National Bank of East Portland closed July 31. A statement published July 12 shows resources of the bank to be $325,000; deposits, $150,000.

The Union Banking Co. suspended July 28.

The Ainsworth National also closed July 29. It is a United States depository and has a capital of $100,000. Its resources on July 12 were reported at $687,000, and its deposits at $447,000.

— I. W. Case, private banker, Astoria, closed August 1.

— The Commercial Bank of Cottage Grove suspended July 31.

— The First National Bank, The Dalles, suspended July 31, owing to Portland failures.

— The Pendleton Savings Bank suspended July 31. R. T. Cox has been appointed Receiver. Assets, $250,000; liabilities, $185,000.

South Carolina.—The Nickel Savings Bank, Charleston, assigned August 1. Liabilities, $20,000; nominal assets, $41,000; deposits, $5,000.

South Dakota.—The Chamberlain National Bank suspended July 28. Capital, $50,000, individual deposits, $15,000.

Tennessee.—The State National Bank, Knoxville, closed July 22. Liabilities and assets not stated.

— The Citizens' Bank of Jellico closed June 22.

— The Bristol Bank and Trust Company decided to go into voluntary liquidation July 25. They have $80,000 assets, and owe depositors only $15,000. Unprofitable business is the cause.

Texas.—The Farmers' National Bank, of Henrietta, was reported suspended July 21. The Comptroller has authorized the bank to resume.

— The El Paso National Bank, El Paso, suspended August 2.

— The State National Bank, of Vernon, closed July 21, having paid out all the cash on hand except ten cents.

The First National Bank was also reported suspended.

— The private banking house of J. & L. W. Galbraith, at Lampasas, failed to open July 22. Liabilities, $60,000; assets, $120,000.

Utah.—It has been discovered that Oscar E. Hill, Cashier of the Commercial National Bank, Ogden, is a defaulter to the amount of $65,000, and as a result the bank will go into liquidation. The stockholders are men of wealth and depositors are not likely to suffer any loss.

Washington—TACOMA.—The Traders' Bank, of Tacoma, suspended July 21, and is in the hands of a Receiver. Since October there has been a gradual drain on the deposits, over 50 per cent. having been withdrawn since that time. Its conditions May 31 was: Resources—Loans on real estate, $5,355; loans on personal securities, $1,035,729; other loans and discounts, ———; stocks and bonds, $6,620; real estate, $21,143; due from banks and bankers, $33,665; furniture and fixtures, $14,014; expense account, $21,983; cash on hand, $85,737; total, $1,224,138. Liabilities—Capital stock paid in, $500,000; undivided profits, $58,276; certificates of deposit, $354,288; individual deposits subject to check, $203,047; deposits of banks and bankers, $108,526; total, $1,224,138.

The Tacoma National Bank suspended July 24. It has been regarded as a strong institution, and it is said to have recently aided other local banks.

— The Bank of Anacortes suspended July 17. Assets, $78,000; liabilities, $20,000.

— S. N. Dusinberre, Cashier of the suspended Bank of Puyallup, has been arrested on the charge of embezzling $41,000 of the bank's funds. The surplus of assets of the bank, at face valuation, is $102,793.

— The Ellensburg National Bank suspended July 27, on account of the failure of Portland (Ore.) banks.

— The Committee appointed to investigate the affairs of Ben E. Snipes & Co., the Ellensburg bankers who suspended recently, have made a report showing total resources, $431,564; liabilities, $203,446. In addition to the above resources Snipes is said to own real estate valued at $341,000, which is liable for claims against the bank.

— The Puget Sound Loan, Trust and Banking Co., New Whatcom, suspended July 29. Liabilities, $50,000; assets, $200,000.

— The Bellingham Bay National Bank suspended August 1. Assets, $270,000; liabilities, $160,000.

— A statement of the condition of the Bank of Everett, which recently failed, shows: Assets—real property, building and lots, $12,000; personal property, furniture and fixtures, $2,574; total amount of notes $73,033.99, valued at $58,187; due from banks, $1,619; cash and cash items, $1,301; overdrafts, $1,680; rents, $298; total, $77,639. Liabilities—deposits subject to check, $20,928; certificates of deposit, $27,490; deposits in savings department, $8,125; due Columbia National bank, $2,113; due Everett National bank, $2,500; due other creditors, $330; total, $61,488.

— The First National Bank, Spokane, suspended July 26.

The Spokane Savings Bank, which is connected with the First National, was closed at the same time.

Wisconsin—MILWAUKEE.—The Wisconsin Fire and Marine Insurance Company's Bank, of Milwaukee, the oldest banking institution in the West, closed July 25. The bank is best known as Mitchell's Bank, under which name it has been a tower of financial strength for over half a century. Washington Becker was appointed Receiver.

The last semi-annual statement of the bank, filed July 3, gave the following resources and liabilities:

Resources—Loans and discounts, $6,485,678.39; overdrafts, $29,283.12; stocks and bonds, $567,412.85; loss and expense account, $683.88; due from banks, $1,038,472 41; currency, $532,361; gold and silver, $124,276.27; clearing-house checks, $163,231.82; total, $8,946,344.61.

Liabilities—Capital, $500,000; undivided profits, $75,840.67; due depositors, $7,870,-503.94; due others, $500,000. Total, $8,946,344.61.

The bank was closed on an action brought by Benjamin Weil, a real estate man, who alleged that the bank owed him $3,341.71, which it was unable to pay. On July 1 the city withdrew a deposit of several hundred thousand dollars and paid off a bond issue which it had intended to extend instead of taking up.

It became known, also, that Ferdinand Schlessinger had borrowed $750,000 from the bank on iron receipts, which enormous sum the bank had to carry. The knowledge of the existence of this big loan shook the confidence of some of the bank's stanchest friends, and several special deposits were checked out. Railway officials also withdrew their deposits. That drained the vaults and precipitated the crash.

The bank was founded in the fifties by George Smith and Alexander Mitchell. It successfully went through the old wildcat bank period, about 1857, and under the management of the two Scotchmen gained a name second to hardly any private bank in the United States. George Smith drew out money years before the death of Alexander Mitchell, but so long as the latter lived the bank lost none of its prestige. George Smith now lives in London and Glasgow. He is 80 years old, and has $40,000,-000 invested in American securities.

Vice-President Becker said he was sure depositors would be paid in full. Mitchell has filed mortgages in favor of the bank for $500,000—Ferguson for $300,000, Ferdinand Schlessinger for $150,000. George J. Oberman for $120,000, Bernard Goldsmith for $10,000, and Charles Cox for $10,000.

The Commercial Bank assigned July 21. The assignee appointed in the assignment papers filed in A. B. Geilfuss, the Cashier of the bank. The assets shown in the statement filed on the first Wednesday in July are $1,656,850. The chief item is loans and discounts, $1,315,278. The last statement showed demand deposits $557,-748.23 and time deposits $528,915.22.

The direct cause of the suspension of the bank is attributable to the failure of the Douglas Furnace Company, of Sharpesville, Pa., of whose certificates of stored pig iron the Commercial had about $130,000. It is claimed that somebody, ignoring those certificates, had the Sheriff attach the iron.

W. H. Timlin, the legal representative of the Commercial, said: "If those certificates are genuine, as they are supposed to be, we shall be all right. If we can get the pig iron the warrants call for and to which we are legally entitled, we shall come out all right."

For some time depositors in the Commercial Bank have been quietly withdrawing their money until there was at the time of closing the institution only about $80,000 of demand certificates on hand. One corporation, which had at times as high as $50,000 in the bank on deposit, had but eleven cents when the doors closed.

The banks which have closed hold nearly $2,000,000 of the Schlesinger and Corrigan-Ives paper secured by iron ore. Mr. Geilfuss says: "I found a very large amount of iron on hand, enough certainly to cover the entire claims of the Milwaukee banks. We will be compelled, however, to fight the Receiver of Corrigan, Ives & Co. for it. I think, however, the storage warrants held as security by Milwaukee banks will be good as against the claims. If we can get the iron the market will take good care of it and we will all come out about even."

A. B. Geilfuss, assignee and former Cashier of the Commercial Bank, has recently visited Sharpsville and Sharon, Pa., where he looked into the claim which his bank holds there.

The South Side Savings Bank closed July 22. Since the failure of the Plankinton Bank, the South Side Savings Bank had paid out on savings certificates $850,000, and the run continued until funds were completely exhausted.

J. B. Koetting, Cashier of the South Side Savings Bank, and G. C. Trumpff, President, have disappeared; the general ledger of the bank is also missing, and the affairs of the bank are in bad shape; depositors will probably lose everything. The Cashier left a power of attorney authorizing the sale of real estate, valued at $500,000, for the benefit of the bank's creditors. John Barth has been appointed Receiver.

The Milwaukee National suspended July 22. George H. Noyes, President, says the assets are $500,000 in excess of liabilities. The Examiner in charge reports the bank solvent, and the stockholders have voted to add $300,000 to the capital stock and resume business.

— The German Exchange Bank at Portage failed July 26. The bank is capitalized at $25,000. No statement of assets or liabilities is given.

— John Lienlokken, a private banker at La Crosse, failed July 26. Liabilities, $10,000.

— The Waupaca County National Bank, Waupaca, suspended August 2.

— Hartman & Matt, owners of the Taylor County Bank, of Medford, assigned July 24. Assets, $16,000. Hermann Matt, Cashier, is reported to have absconded.

— The Savings Bank of Baraboo closed July 29.

— The Commercial Bank of Eau Claire did not open its doors July 29. The bank is in the hands of Byron A. Buffington, receiver. The Commercial is a popular Savings bank throughout the Chippewa Valley. It has a capital of $50,000.

— The First National Bank of Ashland suspended July 31. Resources July 12 were $396,488.

— The City Bank, of Portage closed July 27.

— The German-American Bank at Port Washington, and Seymour's Bank at Chippewa Falls, were reported suspended July 28.

— The M. A. Thayer Bank, Sparta, with assets $225,000, and liabilities $175,000, closed July 27.

The Bank of Sparta, with assets of $300,000, and liabilities of $210,000, closed the same day. A later report says the bank has resumed.

— The Commercial Bank, Stevens Point, closed August 3. Since June 25 it has paid out more than $1[illegible]0,000 to depositors; assets, $200,000; liabilities, $1[illegible]0,000.

Wyoming.—The Bank of Newcastle closed July 10. The bank has been pronounced solvent by a committee of depositors, after an examination.

— T. A. Kent, a private banker at Cheyenne, assigned July 19; liabilities, $258,000; assets are said to be three times this amount.

The First National also suspended on July 20; assets are said to exceed liabilities by $200,000.

Florida Bankers Favor Repeal.—A meeting of the Executive Committee of the Florida Bankers' Association, held at Jacksonville, July 13, adopted resolutions favoring the unconditional repeal of the Sherman Act.

Tennessee Bank Examiner.—David B. Plumlee, of Celina, has been appointed a Bank Examiner for Tennessee.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under their proper State headings.

4923—Farmers' National Bank, Ephrata, Pennsylvania. Capital, $50,000.
4912—Citizens' National Bank, Stevens Point, Wisconsin. Capital, $100,000.
4913—First National Bank, New Kensington, Pennsylvania. Capital, $50,000.
4927—First National Bank, North East Pennsylvania. Capital stock, $50,000; paid in capital, $25,000.

NEW BANKS, BANKERS, ETC.

ARIZONA.

MESA CITY—Mesa City Bank; capital, $20,000; President, Wm. Christy; Cashier, E. Wilbor.

CALIFORNIA.

FERNDALE—Ferndale Bank; capital, $25,000; President, A. Putnam; Cashier, J. H. Trost.

GEORGIA.

ATLANTA—State Savings Bank; capital, $60,000; surplus, $8,000; President, R. M. Farrar; Cashier, J. C. Dayton.

ILLINOIS.

CARMI—Carmi State Bank; capital, $25,000; President, Chas. E. M. McDowell; Cashier, T. W. Hall.
CHICAGO—Kopperl & Co., 181 Washington street.
COOKSVILLE—Bank of Cooksville; individual responsibility, $50,000; President, Thos. Arnold; Cashier, W. H. Arnold.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, August 4, 1893.

The financial situation has been dominated by distrust throughout the past month, and the stringency in money has made its influence felt in every direction. A large number of banks were compelled to close their doors, the most important of which was the Mitchell Bank of Milwaukee. The bank failures have been largely in the West, and of 301 banks which suspended between May 1 and July 22 it appears that 251 with a capital of $31,000.0000 were in the Western and Pacific States, 37 with a capital of $4,000,000 in the Southern States and 13 with a capital of $2,600,000 in the Eastern and Northern States. The number of National Bank failures since January 1 reported by the Comptroller of the Currency on July 28 was 105, of which 55 were in the Western States and 25 in the Southern States, while only 4 were in the Eastern States. The failure of so many National banks the Comptroller takes occasion to mention was not due to actual insolvency; in fact, 14 had resumed when the statement was issued and 58 had applied for authority to resume, while only 33 were in the hands of Receivers. Most of the disasters were due entirely to the extraordinary demand for money which it was wholly impossible to meet.

The extent of the drain upon the banks is indicated by the statements of the National banks of the principal cities showing their condition on July 12 last. On the same date last year similar statements were made and a comparison shows that the banks in New York have suffered a loss in the twelve months of nearly $30,000,000 in individual deposits and of $78,000,000 in amount due to other banks. The Boston National banks lost about $21,000,000 and $17 000,000 respectively; the Philadelphia banks $15,000,000 and $8,000,-000 and the Chicago banks $14,000,000 and $25,000,000. Together there is a loss of some $208,000,000 by the National banks of the four cities, of which New York alone lost $108,000,000.

The New York Clearing-House banks have continued their policy of issuing Clearing-House loan certificates to supply the deficiency in currency, and at the close of the month there were $28,000,000 outstanding. The Savings banks of New York and Brooklyn, in order to prevent a panic among their depositors, decided to require 30 to 60 days' notice of withdrawal. This precaution was taken in the hope that by the expiration of that time confidence will have once more been established.

The stringency is felt very severely in the Western country, and the question of moving the crops has become rather a serious one. A plan is now being tried in some parts of the Northwest by which the grain men make their checks given in payment of grain purchased payable in fifteen days, which allows time enough for the collection of drafts against consignments. The movement of wheat promises to be very large and has already reached considerable proportions. The prospect is excellent for a heavy export trade in grain, the crop situation abroad being anything but satisfactory. The exports of wheat and flour during the fiscal year ended June 30 last were nearly 187,000,000 bushels, against 219,000,000 bushels in 1892 and 104,000,000 bushels in 1891. While the indications do not promise more than 400,000,000 bushels as the yield of wheat in this country this year, or about the same as in 1890, the supply of wheat carried over from previous years will permit larger exports than those of 1891.

Although the wheat crop this year will be less than that of any other year since 1885, with the possible exception of 1890. there is promise of a very large crop of corn. The condition of that crop on July 1 was 93.2 per cent. against 81.1 per cent. in 1892, while the acreage is 3.8 per cent. larger. The yield, with nothing unfavorable to reduce it, will likely approximate 2,000,000,000 bushels, or about the same as in 1888. There are favorable indications for the other grain crops, and the effect upon railroad earnings in the autumn is expected to be beneficial.

The official statistics of the foreign trade of the country for the fiscal year ended June 30, 1893, show a large balance of imports of merchandise and exports of gold, the former the largest since 1873, and the latter the largest in 25 years. The imports of merchandise are stated at $941,000,000, and the exports at $847,000,000, making an excess of imports of nearly $94,000,000 against an excess of exports in the previous year of nearly $203,000,000. An error, however, has been discovered in the import figures, caused by the statement of values in certain instances being made in the depreciated currency instead of gold. The correction of this error will, it is stated, reduce the balance "against" the country by $40,000,000. The gold exports during the year netted $87,500,000. For five successive years this country has lost gold, and in that time $210,000,000 of the precious metal has gone abroad. Some gold has been imported during the past month, but the movement as yet has been insignificant.

The returns from the iron industry for the half year ended June 30 are very favorable indeed, a fact somewhat surprising because of the depression in railroad building, only about 1,000 miles of track having been laid in the six months. Nevertheless, the production of pig-iron in the first half of 1893 reached 5,110,468 tons against 5,342,045 in the corresponding period of 1892, and 3,772,280 tons in 1891. The production of Bessemer steel ingots fell only a little below that of the last half of 1892, which was the largest ever known. For the first half of this year the total is 2,348,104 net tons against 2,362,648 tons in the last half, and 2,305,999 tons in the first half of 1892.

Abroad there have been some unfavorable happenings. The long-continued depression in some cases has compelled the abandonment of efforts to carry firms which were crippled some time ago, and liquidation followed. Rioting in Paris early in the month has awakened new discussion as to the future of the French Republic. The large demands made by France upon Siam and the apparent disaffection of England have suggested new problems to be lurking in European politics. The action of India relative to silver has caused the question of a dissolution of the Latin Union to be raised. The coal trade in England has been unsettled by the proposition to reduce the wages of miners 25 per cent. Japan has been reported to be contemplating the suspension of coinage of silver, although the report is somewhat premature.

The open market rate in London for 60 to 90-day bills is 2 per cent. as against 1⅛ @ 1⅝ per cent. a month ago. In Paris the open market rate is 2¼ per cent. the same as a month ago; in Berlin 3¼ per cent., and Frankfort 3⅜ per cent. against 3⅛ and 3⅝ respectively, a month ago. During the month of July the Bank of England lost £541,437 in bullion, holding at the close £29,577,571. The Bank of France gained £168,000.

The United States Treasury statement for July shows an increase of $4,860,-816 in the net public debt. There was a decrease in the non-interest bearing debt of $311,089; an increase in the interest-bearing debt of $340, and a decrease of cash in the Treasury of $12,862,894. The total cash in the Treasury is $782,641,707, of which $186,818,968 is in gold coin and in bullion; $494,942,-945 in standard dollars, silver bullion and subsidiary coin; $83,840,796 in gold and silver certificates, legal tenders and National bank notes, and $15,776,662 in National bank depositories and disbursing officers' hands. The bonded debt on July 31 was $585,037,440, and total public debt, exclusive of certificates and Treasury notes offset by an equal amount of cash in the Treasury, $961,121,-016. Net available cash balance in the Treasury, including deposits in National banks and gold reserve of $99,202,938, is $117,887,567.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $99,227 circulation of National gold banks—was on July 31, $188,655,920. This shows an increase for the month of July of $5,041,385 as compared with an increase of $1,550,058 in June, and an increase in total circulation since July 30, 1892, of $11,235,859. During the month of July there was issued to new banks $156,-240, and to old banks increasing circulation $5,279,530. There has been surrendered and destroyed during the month $394,385. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $20,434,627, showing a decrease in that class of circulation during the month of $278 809.

MINT COINAGE —The coinage executed at the United States Mints during the month of July and since January 1st, has been as follows:

	JULY.		SEVEN MONTHS.	
	Pieces.	*Value.*	*Pieces.*	*Value.*
Gold Coinage	55,500	$320,000	1,318,247	$16,716,232
Silver Coinage	132,000	33,000	17,553,722	6,055,853
Minor Coinage	1,978,000	38,900	35,730,530	661,675
Total Coinage	2,165,500	$391,900	54,602,499	$23,433,760

The total amount of specie exported from New York city to all points during the month of July was $4,037,001 as compared with $5,503,418 in June, making a total for the year of $87,378,529. The imports for the month were $5,144,584, as compared with $952,936 in June, making a total for the year of $13,193,267.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	TOTAL SUPPLY.			*Net Gold in United States Treasury.*	*Gold in Circulation.*
	Gold Coin.	*Gold Bullion.*	*Total Gold.*		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099
May 1	532,513,105	80,529,774	613,042,879	97,011,330	516,031,549
June 1	523,592,686	80,871,868	604,464,554	95,048,641	509,415,913
July 1	513,743,623	78,345,510	592,089,133	95,485,414	496,603,719
August 1	520,273,567	83,450,336	603,723,903	99,202,963	504,520,970

The following table shows the total amount of gold and silver coins and certificates, United States notes and National bank notes in circulation on August 1, 1893:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold Coin	$520,273,567	$103,363,626	$416,909,941
Standard silver dollars	419,332,450	363,108,461	56,223,989
Subsidiary silver	76,563,878	12,556,749	64,007,129
Gold certificates	87,704,739	93,710	87,611,029
Silver certificates	333,031,504	2,843,114	330,188,390
United States notes	503,307,364	27,283,822	476,023,542
National bank notes	183,755,147	3,620,150	180,134,997
Totals	$2,123,968,649	$512,869,632	$1,611,099,017

FOREIGN EXCHANGE.—The highest rates for sterling exchange were made early in the month, on account of remittances for the usual July disbursements to investors. There was a decline very soon thereafter because of a reduction in the open rates of discount in London and the scarcity of bills. For the remainder of the month sterling ruled very low and made the import of gold possible. For the week ended July 8, rates for sterling exchange were firm at advanced quotations, closing with actual rates at 4 82½@4 82¾ for long, 4 84¼@4 84½ for demand and 4 84¾@4 85 for cables. For the week ended July 15, sterling exchange was dull and weaker, closing at 4 81¾@4 82 for long, 4 83¾@4 84 for demand and 4 84@4 84¼ for cables. For the week ended July 22, there was a slight advance in rates, closing at 4 82@4 82¼ for long, 4 84@4 84¼ for demand and 4 84½@4 84¾ for cables. For the week ended July 29, sterling exchange was very dull and the high rate for money caused a decline closing at 4 80½@4 80¾ for long, 4 82¾@4 83 for demand and 4 83½@4 83¾ for cables.

The following are the latest actual rates of the principal dealers: Bankers' sterling, 60 days, 4 79½@4 80; sight, 4 82½@4 83¼; Cable transfers, 4 83½@4 84¼; Prime commercial sterling, long, 4 78@4 79; Documentary sterling, 60 days, 4 78½@4 79⅛; Paris cable transfers, 5 22½@5 21⅞; Paris bankers', 60 days, 5 25⅝@5 25; Paris bankers', sight, 5 23⅛@5 22½; Paris commercial, 60 days, 5 27½@5 26¼; Paris commercial, sight, 5 25@5 24⅜; Antwerp commercial, 60 days, 5 28¾@5 28⅛; Swiss bankers', 60 days, 5 26⅞@5 26¼; Swiss bankers', sight, 5 24⅜@5 23¾; Berlin bankers', 60 days, 93⅝@93¾; Berlin bankers', sight, 94¼@94⅛; Berlin commercial, long, 93¼@93⅛; Brussels bankers, sight, 5 25⅝@5 24⅜; Amsterdam bankers', 60 days, 39 9-16@39⅝; Amsterdam bankers', sight, 39¾@39 13-16; Amsterdam commercial long, 39 5-16@39⅜; Amsterdam commercial, sight, 39½@39⅝; Kronors, 60 days, 26⅝@26¾; Kronors bankers', sight, 26⅞@27; Italian lire, sight, 5 57½@5 52½.

Paris advices quote exchange on London at 25 27@25.28.

Domestic Exchange.—Following are the latest quoted rates for domestic exchange on New York: Boston—$1@$1.25 premium for cash, payable in clearing-house certificates, and 50 cents discount for greenbacks or gold; checks, 15 cents discount to par. Charleston—Buying, par; selling, ⅛ premium. Savannah—Buying, ⅛ discount; selling, par to ⅛ premium. New Orleans—Bank, 150 premium; commercial, par. San Francisco—Sight, 20; telegraphic, 30. St. Louis—$4 discount asked. Chicago—Unsalable at better than $10 discount.

Home Money Market.—The stringency in the money market has become more severe and an actual scarcity of money has developed. A premium is being paid for currency, and it is difficult to be had at any terms. Rates for call loans were frequently as high as 20@25 per cent., and on 26 the rate touched 74 per cent. Very little money is loaned except on call. Time money has been in urgent demand and 12 per cent. has been paid with a commission of 1 per cent. Commercial paper has ruled nominally at 8@12 per cent., but little has been done in it although merchants were willing to pay liberally, their needs being urgent. For the week ending July 8, the open market rate for call loans on stock and bond collaterals ranged from 3 to 25 per cent., the average being 8 per cent. Commercial paper 8 to 12 per cent. For the week ending July 15, the open market rate for call loans on prime collaterals, ranged from 3 to 20 per cent., with 8 per cent. as the average. Commercial paper quoted 8 to 12 per cent. For the week ending July 22, the open market rate for call loans ranged from 3 to 11 per cent., the average being 5 per cent. Commercial paper quoted 8 to 12 per cent. During the week ending July 29, the open market rate on call loans ranged from 2 to 74 per cent., the average being 10 per cent. Commercial paper quoted 8 to 12 per cent.

New York City Banks.—The banks of this city have had their resources severely taxed during the past months without, however, having their stability affected or even doubted. There was a further withdrawal of deposits to the amount of $15,800,000, which reduced the aggregate to $382,177,100, the smallest since December, 1890. Since February 4th last the deposits have been reduced $113,000,000. The surplus reserve has been reduced until at the close of the month there was a deficit of $4,301,675. The interior movement is estimated to have resulted in a loss for the New York banks in the week ended July 8 of $2,017,000; a gain in the week ended July 15 of $1,035,000; a loss in the week ended July 22 of $2,515,000; a loss in the week ended July 29 of $7,782,000, making a total loss for the month of $11,279,000. From Sub-Treasury operations and gold exports the banks lost $1,400,000 in the week ended July 8, lost $500,000 in the week ended July 15; gained $700,000 in the week ended July 22; gained $2,000,000 in the week ended July 29, making a total net gain of $800,000 for the month.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
July 8	$418,685,900	$61,708,700	$32,884,100	$398,679,300	$5,719,300	$6,338,750 dec.
" 15..	413,499,800	62,268,900	32,005,500	394,174,000	5,896,300	812,925 inc.
" 22..	409,191,500	63,853,800	32,509,200	390,476,200	6,025,300	3,012,550 inc.
" 29..	406,486,200	62,631,900	28,610,700	382,177,100	6,136,200	3,045,125 dec.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of July, 1893, and the highest and lowest since January 1, 1893, by dates:

	YEAR 1892.		SINCE JANUARY 1, 1893.				JULY, 1893.

The total number of shares reported sold at the New York Stock Exchange during July, 1893, was 5,889,183 representing dealings in 167 stocks. Of this number 4,459,872 shares represent the transactions in the following 20 stocks:

C. M. & St. P.	724,784	C. R. I. & Pac.	327,810	Erie	150 642	Manhattan	82,558
C. B. & Q.	493,395	A.T. & S. Fe.	209,709	Dis.&C. F.Co.	133,128	Nor. Pac. Pfd.	81,669
Chic. Gas	471,699	Louis & Nash	183,782	Phil. & Read.	127,936	N. Y. Cent'l	66,585
Gen'l Elect.	387,011	Chic. & N. W.	161,199	N. Y. & N. E.	110,534	Lake Shore	62,419
W. U. Tel.	365,339	Del. L. & W.	158,041	Mo. Pacific	104,981	Union Pac	56,671
	2,442,228		1,040,541		627,221		349,882

leaving 1,429,315 shares (including 626,214 shares of unlisted stocks) to represent the dealings in the remaining 147 stocks. In addition 305 different issues of railroad bonds were dealt in, to the amount of $19,634,500 also $46,000 State bonds and $239,500 Government bonds. (Compared with July, 1892, there is an increase of 2,842,212 shares in stocks; a decrease of $8,129,000 in railroad bonds; a decrease of $177,000 in State bonds; an increase of $191,500 in Government bonds, and an increase of 843,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $1,000; stocks, 626,214 shares, of which 517,389 were American Sugar Refiners' common stock and 17,994 preferred; mining stocks, 200 shares. American Cotton Oil Certificates, 25,574 shares of common and 8,070 shares of preferred; Pipe Line Certificates, 3,000 barrels. Of National Lead common 55,684 shares, preferred 20,699 shares; of silver bullion certificates, 990,000 ounces, extremes being 75⅛ and 69, closing at 70⅛. The listed stocks show an increase of 1,108,034 shares as compared with the amount sold in June. Transactions in railroad bonds show a decrease of $345,000 during the same period, a decrease of $47,000 in State bonds, and an increase of $11,000 in Government bonds. In unlisted bonds a decrease of $78,000; in unlisted stocks an increase of 110,835 shares; in mining stocks a decrease of 2,900 shares; an increase of 2,122 shares in Cotton Oil Certificates common, an increase of 4,369 shares in preferred; an increase of 3,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 325,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of July were sold: 2,123,966 shares of railroad and other stocks representing dealings in 81 properties. Of this amount 1,705,610 shares are transactions in the following 12 stocks:

C. M. & St. P.	889,500	W. U. Tel.	105,610	Gen'l Elect.	70,190	Dis & C. F. Co.	21,540
C. R. I. & Pac.	223,560	Chic. Gas	92,180	N.Y. & N. E.	43,910	Louis. & Nash.	19,560
C. B. & Q.	220,180	A., T. & S. Fe.	83,630	Phil. & Read.	22,860	Mo. Pacific	12,890
	1,333,240		181,420		136,960		53,990

leaving 418,356 shares to represent the transactions in the remaining 69 stocks, of which American Sugar Refinery Common furnished 193,400 shares. Transactions in railroad bonds during the same period amounted to $1,965,000; in mining stocks 11,650 shares 59,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show an increase of 176,653 shares as compared with the month of June; a decrease of $219,000 in railroad bonds; a decrease of 14,892 shares in mining stocks; a decrease of 76,000 barrels in Pipe Line Certificates.

As compared with July, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks increased 773,886 shares; bonds decreased $556,000; mining stocks decreased 52,340 shares, and Pipe Line Certificates decreased 424,000 barrels.

The gross earnings of 143 roads for the month of June, 1893, were $45,242,556, being an increase of $2,258,129 over Juue, 1892. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

QUOTATIONS AT THE NEW YORK STOCK EXCHANGE.

Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock.
† Interest payable if earned and not to be accumulative. L. B. stands for last bid.
Highest and lowest sales are given for past month. L. A. last asking price.
A ‡ indicates no quotation for past month, the last previous quotation being given.
NOTE.—The railroads enclosed in a brace are leased to Company first named.

SPECIAL LIST.

This "Special List" is made up of securities—both stocks and bonds—which are not regularly "called" at the Exchange. Members are at liberty to deal in them daily, on the Bond Call, but the transactions are infrequent.

NOTE.—The railroads enclosed in a brace are leased to Company first named.

BANKERS' OBITUARY RECORD.

Baylis.– David B. Baylis, a director of the Long Island Savings Bank, Brooklyn, N. Y., and one of the founders of the South Brooklyn Savings Bank, died July 4, in his ninetieth year.

Bradstreet.– Joseph S. Bradstreet, director of the Merchants' National Bank, Gardiner, Maine, died July 13.

Briggs.—Richard Briggs, director of the National City Bank, Boston, died July 29, aged sixty-nine years.

Bryant.—Warren Bryant, for twenty-nine years President of the Buffalo (N. Y.) Savings Bank, died August 5. He was born at Woburn, Mass., in 1811, and had lived in Buffalo since 1832. During the administration of President Buchanan he was Collector of the Port of Buffalo for two years.

Catlin.—Julius Catlin, head of the dry goods firm of Catlin & Co., Boston, and a director in the Importers and Traders' National Bank and Greenwich Savings Bank, New York city, died July 20.

Cheney.—A. C. Cheney, President of the Garfield National Bank and of the Garfield Safe Deposit Company, New York city, died July 13. Mr. Cheney was born at Groton, N. H., and was fifty-six years old. He came to New York city when he was a boy, and went to work as an office boy in a dry goods house. He afterward did a large business in that line. He was a soldier during the war, and at the time of his death was a member of Lafayette Post, G. A. R. He was President of the Nicaragua Canal Construction Company before Warner Miller was elected to that place. He was an active Republican, and at one time was Treasurer of the Republican State Committee.

Coffin.—Frederick W. Coffin, Treasurer of the Haverhill (Mass.) Savings Bank, died July 29.

Dick.—Sturgis T. Dick, Cashier, and son of the founder of the banking house of J. R. Dick & Co., Meadville, Pa., died July 14.

Dresser.—J. A. Dresser, Trustee of the Franklin Savings Bank, Boston, died August 5.

Edgell.—John Edgell, formerly President of the Gardner (Mass.) Savings Bank, and a director of the First National Bank, died July 7, at the age of nearly eighty-nine years.

Flavel.—George Flavel, who was President of the First National Bank, Astoria, Ore., died July 3, aged seventy-one years. He was one of the Argonauts of '49, having sailed the ship of which he was master into the Columbia River in that year.

Francis.—Edward S. Francis, Cashier of the Pittsfield (Mass.) National Bank, died by his own hand July 27.

Gilman.—Joseph E. Gilman, for thirty years Cashier of the Merchants' National Bank, Portland, Maine, died July 7.

Goldsmith.—Isaac P. Goldsmith, Cashier of the Farmers' National Bank, Mount Holly, N. J., died July 24, aged sixty-eight years.

Leonard.—William B. Leonard, at one time a director of the National Bank of North America, New York city, and founder of the Kings County Bank, Brooklyn, died July 2, in his seventy-third year.

Plumb. - D. W. Plumb, Vice-President of the Birmingham (Conn.) National Bank, died recently.

Prentiss.—E. H. Prentiss, at one time President of the Vermont Bank, Montpelier (Vt.), died July 22, at his home in Brooklyn, N.Y.

Stevens.—Augustus Stevens, Cashier of the Beverly (Mass.) National Bank, died August 1. He entered the employ of the bank in 1854.

Ripley.—Enos C. Ripley, Cashier of the Galena (Ill.) National Bank, died July 6, aged sixty-two years.

Smalley.—Andrew A. Smalley, a director of the State National Bank, and one of the founders of the Dime Savings Bank, Newark, N. J., died recently, aged eighty-nine years.

Spaulding.—Henry F. Spaulding, a director of the Mechanics' National Bank, New York city, died July 17, in his sixty-ninth year.

Waitt.—Caleb Waitt, President of the Malden (Mass.) Savings Bank, and a director of the First National Bank, died July 12, aged eighty-five years.

Wright.—George S. Wright, a well-known retired banker of Cleveland, Ohio, died August 4, aged seventy-six years.

RHODES'

JOURNAL OF BANKING.

Vol. XX. SEPTEMBER, 1893. No. 9.

THE advance made in the science of exchanging the various products of nature and of the skill of mankind is the cause of the triumph of modern civilization so far as it has yet progressed. This science has for its field not only the productions of the world but the manners, customs and moral ideas of every nation, and of every class of men. The desires of the whole world in all their multifarious complexity lie at the root of successful exchanges. In order to approximate success money has been invented. There is nothing that has received so much attention and of which the true understanding concerns so many people as that of the use of money in connection with the affairs of daily life, and yet there seems to be no subject so imperfectly understood. Many financial plans have been evolved both by doctrinaires and by so-called practical men, and some of them have been accepted for a time as the remedies for defects in monetary systems, but under new conditions these plans have proved faulty and full of contradictions.

Painters of the horse formerly used to place him on the canvas in the attitudes of walking, trotting or running, and these attitudes were accepted by all observers as true to life, until Maybridge appeared with his instantaneous photographic apparatus and proved how stiff, conventional and unnatural the formerly accepted positions were. So with finance : it is a moving and breathing science. Its conditions change with climate and country and the customs, manners, and morals of people. It is like a living language that will not be tied down by the utmost efforts of grammarians and pedants, let them construct dictionaries and arrange definitions with never such nicety and skill. The science of finance or of exchanges is moulded by the everyday recurring thought-tide upon which existence depends. In language there comes first the new and apt use of a word which by frequent iteration becomes slang ; by degrees the word is recognized by eminent authors, and the carefully-prepared dictionary is a thing of the past.

There are fundamental bases in the science of exchanges, which are always the same. In all business of which money is the instrument when something of value is given something of value should be received. The machinery of a monetary system or financial practice often comes to obscure or altogether hide this important truth, so that the machinery meant to promote fair exchange of products is used to cajole some men into giving something for nothing; that is, the machinery intended for the equitable use of all, is perverted into a machine for bringing undue profits to some. When a monetary or financial system reaches this stage that it is more available for the unjust than the just transfer of wealth, then it is time that some changes should be made in it.

People generally know little practically about the workings of a great monetary system. The majority receive money to pay out immediately and it is difficult to interest such in the merits of a sound standard of value. The use of unsound money, only temporarily in the possession of an individual in small quantity, exposes him to such an infinitesimal loss in any one transaction that he is seldom aware of any loss at all. It is this slight loss unobserved by individuals that makes up the unjust gains to certain classes by means of an unsound monetary standard. It is the especial province of a good government to protect its citizens from the diminution of their effects caused by these gradual and unperceived losses, and therefore the government that adheres to a monetary and commercial system under which it is practically impossible to cause loss by interference with the standard of value either openly or secretly, is sure to confer the greatest happiness on the greatest number of its citizens.

The issue of bonds in time of peace for any purpose whatever would be a confession of great weakness in the administration of the Government of the United States. The last few months have shown how Government securities can be depressed in price by unpropitious financial conditions prevailing throughout the country, and this depression in price of the existing indebtedness indicates that it would have been almost impossible to have placed a new debt on the market even in moderate quantity without making great sacrifices. It was pointed out in the Journal that an issue of bonds to maintain the gold reserve would only accelerate the depletion of that reserve, and necessitate if the policy of bond issues were adhered to the sale of an amount of bonds only limited by the amount of the paper currency of the Government that could be presented for redemption in gold. So large would be the amount that would have to be sold that it would probably be impossible to obtain any premium whatever for four per cent. bonds.

So long as the silver-purchase law of 1890 continues in operation the paper currency of the United States redeemable in gold will necessarily increase each month and any attempt to sell bonds before the repeal of this Act would be most foolish. Even if this Act be repealed it would be impossible to set any limit on bond sales once commenced, as long as legal-tender and Treasury notes once redeemed in gold are reïssuable. If the silver-purchase Act were repealed and at the same time the reissue of legal-tender and Treasury notes once redeemed were forbidden, then the bond issues necessary, provided the bonds were sold for par in gold, would not exceed the combined amount of legal-tender and Treasury notes say 500 millions of dollars. If however it were found necessary to redeem the silver certificates also in gold in order to maintain the parity of the two metals then another half billion of bonds might be required. In fact if bonds are issued at all there can be no half way limit if gold payments are to be maintained in that way, for it practically means the funding of the non-interest-bearing debt represented by the various forms of Government paper into an interest-bearing debt.

It is a question whether the provision in the Act of July 14, 1890, requiring the Secretary of the Treasury to maintain the parity of the two metals did not commit the Treasury to pay the silver certificates as well as legal-tender and Treasury notes in gold. It is absolutely certain that the parity cannot be maintained unless silver certificates are paid in gold when gold is demanded. Assuming that a sufficient amount in bonds to retire the Government paper were issued, what would be the effect? It is probable that four per cent. bonds would be taken at about par by the public, and this rate would enable the banks to make a very fair profit by using these bonds as a basis for circulation. It is thus readily seen that a bond issue once commenced and carried to its logical conclusion means the substitution of National bank notes for the paper issues of the Treasury.

Evidently those who have been clamoring for the issue of bonds as a relief from the financial pressure were not aware of the extent to which such issues would become necessary if once commenced, or what a radical change in the whole monetary system of the country might be the consequence of them.

THE MOST REMARKABLE FEATURE of the financial pressure of the year 1893 is the diversity of advice that has been given in regard to remedies. Early in the year while Congress was in session and before the anticipated pressure was felt, the JOURNAL proposed a plan which if it had been adopted would have enabled the banks of the country to meet the demands of their depositors and would have prevented the growth of the distrust which has proved so fatal to many of them.

This plan was merely to so amend the National banking laws that the National banks might issue circulation as a first lien upon the security of their general assets to the extent of one hundred per cent. of their capital, at the same time exacting a tax upon this circulation the proceeds of which were to be retained by the Treasury as a safety fund to redeem, if necessary, the notes of banks which might become insolvent. No originality is claimed for this proposition; it was the same as that made by the Hon. JOHN JAY KNOX a short time before his death, and also by Mr. HORACE WHITE. It in no way interfered with the issue of circulation upon bonds inasmuch as the total issue of each bank upon bonds or upon the security of its general assets was not to exceed one hundred per cent. of capital. It would require no new machinery to carry it into execution.

It is interesting now to enquire what would have been the effect upon the business of the country if the last Congress had authorized this amendment to the National bank Act in February last, before the financial pressure had been felt. The consensus of financial opinion has been that the growth of distrust was due to the belief that the continued purchase of silver by the Treasury, paid for virtually in gold, must necessarily so weaken the resources of the Government that the engagement to maintain gold payments could not be kept. The depositors in the banks, especially that class whose accounts are of the most value, feared that if the Government became unable to pay gold on all of its paper issues they would be obliged to receive paper based on silver only from the banks, hastened to draw out their deposits and get them into currency of the form most likely to be paid in gold, legal-tender and Treasury notes. This class of currency was therefore to a very large extent withdrawn from circulation—locked up in safe deposit vaults, and in various other places of concealment, causing a currency famine, and a reduction of the banking resources of the country. The inability to obtain currency and not any deficiency in good assets, is the acknowledged reason of the suspension or failure of many banking institutions. If therefore the National banks had had, as was proposed in the plan published in the JOURNAL in February last, the power to issue notes to the extent of their capital, they could with these notes have satisfied the demands of their depositors, and put in circulation a currency that would have taken the place of the locked up gold, legal-tender and Treasury notes.

If the relief afforded by the issue of clearing-house loan certificates under the auspices of the Associated banks in the larger financial centres be any criterion then this additional issue of bank notes would have effectually prevented the worst features of the crisis of the year 1893. No one hesitates to ascribe to the issue of clearing-house loan certificates the preservation of the credit of the banks of New York city. Without this expedient some of them must have failed to meet their engagements. These loan certificates are but a clumsy and even dangerous expedient compared with a right to issue notes to the amount of their capital upon the security of their general assets, possessed by the New York city banks. If these banks had had this latter right they need not have issued a single loan certificate. But if the National banks of the whole country had possessed the right to issue notes as proposed in the JOURNAL, it is very conceivable and probable that there would have been no financial pressure at all during the present year.

The safety of the plan to the note-holder is admitted by every one who makes an examination of it. Some criticisms were made upon it in that it was thought to reduce the ultimate security of the depositor. At the time the answer made to this criticism was that the Government in providing a banking system was in no way bound to provide security for the depositor to the same extent and in the same way that it provided security for the note-holder. The events of the year have however proved that the power to issue notes more freely would have enabled the National banks to protect their depositors much more easily and completely than they have done. If the note were secure this was all that could or can be expected. The history of the Bank of England in times of panic in that country similar to the crisis of the present year in the United States has shown that an increased issued of bank notes is an effectual remedy for a currency famine.

The lesson of the year 1893 will be almost wholly lost if it does not result in a radical improvement in the note-issuing function of the banks of the country. When the financial history of this period is hereafter written it will probably point out the blindness which failed to see and apply a remedy which was so obvious.

THE REPEAL OF THE TEN PER CENT. TAX upon State bank circulation is still talked of as a possibility, but while believing that the State banks under proper legal restrictions may be safely permitted to issue notes, the JOURNAL is strongly inclined to doubt whether the States would universally impose and enforce such restrictions and whether they could be constitutionally imposed and enforced by the United States Government. It is next to impossible to believe that the States would ever have uniform banking laws. But even if they should all adopt the same laws as to the issue of circulating notes, it is impossible that the manner of enforcing the law by the executive or of interpreting the law by the judiciary would be the same in each State. A matter of so much importance to the welfare of the country as a uniform bank currency cannot be left in any sort of doubt. To secure a uniform law, a uniform enforcement of the law and a uniform interpretation of the law, it is necessary that it should be enacted, enforced and interpreted by the proper authorities of the Federal Government. The National banking system as it stands has the great advantage of being now in existence and ready if a few changes were made in the present statutes to meet the wants of the country to the very fullest extent. The proposition of the Hon. JOSEPH H. WALKER to increase the circulation of these banks by permitting them to issue notes to the extent of their reserves, is in the right direction and is but another way of putting the proposition to permit them to issue notes upon the security of their general assets, inasmuch as the reserves are a portion of the general assets and inextricably connected therewith.

Two or three new sections added to the National banking law will give the country a safe and elastic system of currency that will prevent the recurrence of such unhappy crises as that of the present year. If the note issuing power is given to the National banks and rendered profitable to them, little more will be said about the repeal of the ten per cent. tax on State bank notes, because the State banks will hasten to convert into National institutions in order to obtain the same privilege. The increase in the number of State banks has been due to the unprofitable character of the circulation issues of the National banks, and perhaps to the more severe restrictions and inspections imposed upon the latter. It would therefore, admitting that the banks of the country should be permitted to take a much larger part in issuing the currency of the country than they have hitherto, be infinitely better to grant increased rights in the issue of bank notes to the National banks than to repeal the tax on State bank circulation. If this tax is repealed, the country will be running a very serious risk that the note-issuing privilege will escape a proper control, and if such turn out to be the case, it will be almost without remedy as, except in war times, it would be practically impossible to replace the tax as it was. On the other hand the National banking system is under the jealous observation of Congress, and if the note-issuing privilege were found unsuited to the purpose of furnishing a sound and elastic currency, it would be much easier to curtail it than to impose a tax on State bank issues after that tax had once been repealed.

THE MESSAGE OF PRESIDENT CLEVELAND was a concise and clear statement of the causes which have produced the disastrous financial crisis of 1893. There is no doubt of the soundness of the President's views, and in proposing a remedy he is striking at the root of the matter. The constant drain of gold from the Treasury reserves to redeem the Treasury notes issued in the purchase of silver bullion under the so-called Sherman Act of 1890, has been a subject of remark since the passage of the Act. Attention has been frequently called to it in the JOURNAL. Whatever the ultimate settlement of the silver question it has long been evident that the Act of July 14, 1890, was no remedy, and that under its provisions the United States Treasury was pursuing a suicidal policy.

The proper spirit is shown by the President in the enunciation of the sentiment that "the people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world." The President in pursuing a sound financial policy approved by those whose life experience and training have made them acquainted with the subject, has exposed himself to the criticism that he is the blind follower of Wall street and the money power, but there is reason to think that even as a matter of policy the bold and fearless manner in which he has spoken his honest convictions, in a critical time, will prove the wisest course. Certainly it is so for him as the leader to whom the Nation looks for aid in the crisis.

The reasons of the difficulty are so open and patent and the necessity so great for an open and immediate declaration of the course the Nation intends to pursue in the future that this bold statement of them will be recognized almost universally as unbiassed by any political feeling or purpose. In his inaugural the President deprecated the optimistic frame of mind in which the average American citizen generally views the future of his country—the tendency to think that however bad the methods adopted, the great wealth and resources of the Nation and of the Government would somehow pull everybody through. In this Message he repeats, "It does not meet the situation to say that apprehensions in regard to the future of our finances are groundless and that there is no reason for lack of confidence in the purposes or power of the Government in the premises."

This and what follows it are a mild rebuke to that admiration of the capacity and wisdom of Government which goes far beyond the requirements of an enlightened patriotism, and replaces the latter with an ignorant fetich worship of the Federal administration, thinking it able to do anything. It is this feeling that ascribes to that or the other administration the calamities which depress or the prosperity which enlivens the business of the country. If any disaster occurs the immediate administration should have prevented it, or if times are good, the President and his cabinet get a large portion of the credit. Whether Congress will act with a vigor equal to that shown by the President in his Message remains to be seen. But at least he has shifted the responsibility on the shoulders of that body.

THE BANKING SYSTEM OF CANADA, by means of the establishment of branch banks, maintains a general level of banking resources that cannot be maintained so readily under the United States system of banks without branches. In the Dominion the parent bank situated in a large city establishes subordinate offices for carrying on the banking business, receiving deposits and making loans, issuing currency, etc., in any town or locality where there is business to be done. Naturally there are places where capital is plenty and not so much in demand and the branch established in such a place receives more deposits than it makes loans. In other localities the capital is less and deposits are smaller while there is a greater demand for loans. A bank with branches all over the country can thus send the surplus money gathered up in one branch to be loaned at another, thus establishing a general level throughout its territory. Altogether, parent bank and branches, it forms one institution, with greater strength than can be expected of any bank without branches having but one locality to draw from.

It may be said that the banks in the cities under the National banking system, drawing a large portion of their resources from correspondents in all the smaller cities and towns, act somewhat in the same manner. The distinction is that the large bank in the United States can not have the same knowledge and resulting confidence in the condition of its country correspondents that the Canadian parent bank can have in its branches, which are so to speak part of itself. Further, the city or central bank under the American system has a much greater tendency to loan all its deposits in its own immediate locality rather than to distribute them among its correspondents according to their several needs. This tends to encourage enterprise more at the large centres than it does in the outlying country localities. Of course the tendency to send money for use to the great centres always exists but it is too much encouraged under the American system, while under the system of branch banks in Canada the wants of all the branches are sure to be well taken care of before any money is sent to the general market.

Whether the branch system should be engrafted upon the National bank Act or whether some other device may be adopted by which the banks in the National banking system can mutually supply each other's wants, as the branch banks do in Canada, is a question. The system of chartering banks in the last-named country would be styled monoply in the United States, and it would probably be more in conformity with the political institutions here to accomplish the same result by extending the clearing-house principle to country banks, bringing them by that means into closer relations with their city correspondents so that each could better understand and mutually support their affairs. A clearing-house association made up of banks all over the country could maintain by means of the proper officers a scrutiny into the business done by each that would protect all. There is nothing that will prevent lack of confidence better than accurate knowledge. The employees, examiners, etc., of such a clearing house under the direction of a board or committee made up of representatives from the several banks, obtains far more accurate information than is obtained by the Comptroller of the Currency. Their reports would be gone over by parties interested financially in every bad piece of financiering, and an order or warning from such a clearing-house association would possess the very greatest force in correcting the practices of a delinquent bank Some of the palpably excellent features of foreign banking systems might be profitably adopted into the National banking system without in the least interfering with the individuality of the banks, or any principle involving the peculiar requirements of the political institutions of the United States.

THE PROPOSITION TO MAKE SILVER A LEGAL TENDER at its bullion or commercial value means, if it means anything, that any possessor of silver bullion could tender it in payment of a debt at its market price on the day it is tendered. It is hardly probable that this will satisfy the silver miner, or that it will be agreeable to the general creditor. As far as the producer of silver is concerned it would have hardly any effect in raising the price of the metal, because there would be no great demand for it to pay debts when there are so many other more convenient tenders and methods of payment than that of tendering and paying silver bullion. Who that can pay with a bank check would take the trouble to look up silver bullion to pay with? Of course the silver miner might tender it in payment of his debts but only at the market price, and the market price would not be in the least raised by his offers but rather tend to depression on account of them. To raise the price of any article there must be a general demand, and it is not easy to see how there would be any general demand for silver bullion to pay debts. On the part of the general creditor, there would be a great dislike to receive one day a substance that would be lower to-morrow and that was not in general demand. If the silver miner is to be granted this privilege of tendering his product in payment of his debts to his willing or unwilling creditor why might not the same privilege be accorded to the producer of wheat or other grain, or to the manufacturer of dry goods or other commodities. Why not make every substance a legal-tender at its market price? It might do away with some of the inconveniences of the present monetary system but it would certainly bring others not less trying. Why fly from accustomed evils to those we know not of?

The silver dollars themselves have been found very difficult of circulation as such, except in some parts of the South. If it were not for the silver certificates representing them which from their convenience have disguised the bulk and weight of the dollars they represent, it is extremely doubtful whether the craze for silver would have continued as long as it has. The mass of the people in their business transactions make no distinction between legal-tender notes, Treasury notes, and silver certificates. They do not notice how in the payments in large financial institutions the silver certificates are paid out first. If the coined dollars did their own circulating instead of remaining, most of them, locked up in the Treasury vaults, the people would more quickly perceive how inconvenient they are and how much they take the place of money calling for gold coin. On the other hand without the silver certificates and with the circulation of the coined dollars themselves, it would have been almost impossible for the Treasury to have maintained gold payments.

THE WORLD'S MONETARY SYSTEMS have been recently tabulated under direction of the the Bureau of the Mint. The table (see folder in this issue of the JOURNAL) shows the monetary systems of the different countries and the approximate stocks of money in the aggregate and per capita for each country.

Of the twenty-six countries included in the report only nine have a single gold standard; six have the silver standard, and ten both gold and silver, and one does not report.

The ratio between gold and full legal-tender silver is greater in the United States than in any of the other countries except Japan and Mexico. In population the United States stands third, being exceeded by India, China and Russia. Our stock of gold is greater than that of any other country except France. As to silver stock the United States stands fourth, India leading and China and France having equal amounts. South America has the greatest liking for uncovered paper "money" and is followed by Russia and the United States in the order named.

Coming to the per capita circulation we find that of gold Australia has the largest amount, France standing second, and the United States eighth in the list. Of silver per capita France absorbs the greatest sum, the Netherlands being second and the United States third. The per capita circulation of paper is greatest in Cuba, Haiti, etc., South America following, India having the smallest amount and the United States ranking ninth in this respect. As to the total per capita circulation we all know that France leads; it will be somewhat surprising though to learn that Cuba, Haiti, etc., are next in order. This surprise may be somewhat tempered by the fact that out of a total of $31 there is $20 in paper. Central America has the smallest total per capita circulation, and the United States stands sixth, being surpassed by France, Cuba, Haiti, etc., the Netherlands, Australia and Belgium.

THE NATIONAL BANKS OF NEW YORK CITY are not surprised at the attacks made upon them by those self-seeking statesmen whose political advancement is dependent upon a continued denunciation of the "money power." The man who looks upon a printing-press and paper as the chief requirements of an elastic monetary system may naturally be expected to antagonize a system that is based upon such safe security as Government bonds. Politicians ambitious of power, finding their aspirations repudiated at home, may bid for support by appealing to the enemies of the National banking system, and from the politician's standpoint such a course may not lack justification.

But it is not so clear why bankers themselves will allow local jealousy to so blind their judgment as to make them outdo the most rabid enemy of the National banks in their attempts to injure the National banks of the country, for an attack on the National banks of New York is practically an attack on the entire system.

The course of the associated banks of New York during the late crisis has met with the approval of many of the representative newspapers and commercial organizations of the West, including the clearing-house associations of Omaha, Kansas City, and other centres, which recognize that the course of the associated banks of New York was largely instrumental in staying the force of a panic which at one time seemed likely to sweep over the entire country. Had the banks at this centre refused to issue clearing-house certificates, and contracted their bank loans accordingly, there would have been a crash which would have shaken the country as never before, and from which recovery would have been slow and difficult.

The effort to create hostility between the banks of any particular section of the country is unpatriotic and unwise, and will not be upheld by conservative public opinion. The financiers of New York city have borne their full share in preventing the disasters of 1893 from becoming universal, and this fact is fully recognized by the West as is shown by the action of the commercial bodies to which we have alluded.

UNIVERSAL BIMETALLISM.

At the World's Congress of Bankers and Financiers, an interesting paper was read upon "Universal Bimetallism" by Richard P. Rothwell of New York. The view taken is that unless something is done the complete demonetization of silver is inevitable. The history of this demonetization so far is as follows:

"Germany, in December, 1871, assumed the sovereign right of coinage, adopted the gold standard and discontinued the mintage of the silver standard, and in July, 1873, it commenced the sale of its silver and thereby forced France, and in the following year the whole Latin Union, to limit the coinage of silver. In February, 1873, the United States, which had then no silver money in circulation, reduced the legal-tender right of silver to payments not exceeding five dollars; thus practically demonetizing it. In 1874 the Scandinavian States demonetized silver, and in 1875 and 1876 Holland, Switzerland, Belgium, France, Spain and Russia suspended the mintage of silver, except in special cases, for Government account. * * * Under the suspension of free silver coinage in India the market for the metal is still further lessened."

If the United States ceases to purchase silver there must be a further decline in its price and an appreciation in that of gold. This it is argued will tend to produce very great financial distress. If silver ceases altogether to be used as money, except perhaps for subsidiary coin, the author of the paper thinks the price may drop to even ten cents per ounce, as its mere physical properties are not much more useful than those of nickel, aluminum or copper.

The remedy proposed for the alleged danger to the financial institutions of the world, is an International Monetary Clearing-House, by which the silver question can, the paper argues, be settled beneficially. This clearing-house, composed of representatives of all nations, is to select a universal monetary standard, to adopt measures to secure the use of gold and silver on a flexible ratio as will give a permanent stability in the value of the world's money, to facilitate international monetary transactions, and supervise and control them. The members of this clearing-house, it is suggested, should, to attain the end in view, ascertain the amount of all kinds of money held by each country. On this basis the several nations are to buy silver of the silver basis nations, with gold, so as to put all on an equal bimetallic standard. International certificates are suggested to be redeemed in gold or silver at the holder's option or possibly in gold and silver in specified proportions. The changes in the value ratio of gold and silver are also to be determined from time to time as they are affected by changed conditions of production. National transactions in money are to be cleared by it.

The foregoing are the merest outlines of the plan for a gigantic union among the nations for maintaining the price and encouraging the production of a metal which the loss of the "traditional value in money," would cause to sink to the value intrinsically of nickel or copper. While desiring to do the greatest justice to the ability and skill with which this plan has been conceived and formulated, there are inevitably certain questions which arise the answers to which seem to militate seriously against it. Would any such financial disasters as are alleged by the author follow the complete demonetization of silver? or can a majority of the nations now on a gold standard be convinced of such consequent disasters? Can a sufficient number of nations be induced to join in such a measure? and if they should, would a recalcitrant nation be forced against its own apparent political interest to abide by the decisions of the majority? Suppose the United States agrees to such a clearing-house, and a new party arises that thinks the domination in money matters of this artificial arbiter subversive in some way of what they conceive to be the public good, would the leaders of the party dare to submit, in the face of popular opposition? Can a majority of the nations force a minority to give up the sacred right to foolishly run in debt when their popular conditions are favorable to running in debt? The universal brotherhood of mankind, "the parliament of man and federation of the world" could accomplish much if it ever became other than a poet's dream.

Mr. Rothwell is a mining engineer and mining expert. He knows well the immense amount of capital invested in the mining of silver—and this would all be withdrawn if silver be wholly demonetized. However ingeniously the plan may be formulated, and however equitably the expense may be distributed among the several nations, is it right that the nations, all together any more than one nation singly, should pay tribute to one particular industry, or that all the nations any more than one nation should be taxed to benefit the holders of one particular commodity? Such an international machine once put in power could regulate the price of wheat or of any article of production or manufacture. Would not the principle if followed out in all lines of business do away with all flucuations of prices and take away all the motives which now encourage enterprise in business and individual activities? Is the game after all worth the candle? Is it certain that gold alone will not more fitly perform the duty of the monetary standard and basis of monetary transactions than gold and silver together? If evolution, divining the past, shows anything it shows that other metals, iron and copper at least, have met the monetary death that seems to threaten silver. Who knows that gold itself will not some day cease to be regarded as money? An international clearing-house such as the plan conceives could no doubt furnish satisfactory money in no way dependent on gold, just as easily as it could satisfactorily furnish money based on gold and silver maintained at some ratio of value to each other.

CONDITION OF THE UNITED STATES.

REASONS FOR RENEWED CONFIDENCE.

It seems to be generally conceded that the one thing most needful to put our finances in a normal condition is the restoration of confidence. There are numerous and different theories to account for the semi-panicky conditions —the Sherman Law, the Baring failure, the tariff, the periodicity of panics regardless of any cause, all of which may be crystallized in one word—distrust. But for this unfortunate and widely prevalent mental condition it would not be necessary for the banks to hold such large reserves, amounting in some instances to 100 per cent. of deposits. The financial policy of the United States for some time past has not been wholly guided by the lessons of experience, and the silver-purchase law does not reflect the highest type of financial sagacity, but those who doubt our ability to main the parity of our currency will find how groundless their fears are by studying the following table, compiled by the Census Bureau :

*	1890.	1880.	Increase.
Total wealth	$62,600,000,000	$43,642,000,000	$18,958,000,000
Money in circulation	1,429,251,270	973,382,228	455,869,042
Interest bearing debt	725,313,110	1,723,993,100	†998,679,990
*Immigration	450,000	175,000	275,000
Nat. Banks, number of	3,540	2,132	1,418
do. capital	667,250,000	463,000,000	204,250,000
Savings banks, number of	1,011	629	382
do. deposits	1,654,826,142	891,961,142	762,865,000
Capital in manufactories	2,900,735,884	1,232,839,670	1,667,896,214
Total value of manufactured product	4,860,286,837	2,711,579,999	2,148,706,838
Wages paid	1,221,170,454	501,965,778	719,204,676
Hands employed	2,271,134	1,301,388	969,746
*Wages	555	388	167
*Exports	845,000,000	823,000,000	21,000,000
Duty collected on imports	226,540,036	182,747,653	43,792,383
*Farm yield	4,500,000,000	3,475,000,000	1,025,000,000
*Pig iron, tons	9,202,703	3,835,191	5,367,512
Product of silver, ounces	58,330,000	30,320,000	28,010,000
Product of gold, ounces	1,604,480	1,741,500	†137,020
Railroads, miles of	166,702	92,296	74,506

Miles of Telegraph wire	678,999	233,534	445,465
Telegraphic Message receipts	22,387,029	12,782,895	9,604,134

*Average annual for the ten years. † Decrease.

We have increased our material accumulations at the rate of $100,150 an hour, or about $2,500,000 a day for each day of the ten years, equal to one-third of the daily accumulation of the world. The indebtedness of the United States compared with other nations is as follows :

	National Debt.	Population.	Debt. Per Capita.
United States	$585,000,000	65,000,000	$9.00
Great Britain	3,288,868,000	38,000,000	86.44
France	5,908,000,000	39,000,000	151.60
Germany	2,660,875,000	50,000,000	53.20
Austria	2,095,926,000	41,000,000	51.09
Spain	2,227,850,000	18,000,000	68.17
Portugal	455,000,000	4,800,000	94.79
Belgium	446,960,000	6,200,000	72.09

These figures ought to reassure the timid. They are an indisputable proof, if any were really needed, of the unassailable credit of the United States, and demonstrate beyond question the impregnable strength of the Nation and its ability to maintain its credit and to pay its obligations in the accepted money of the world.

DENVER.—The condition of the suspended National banks in Denver at their reopening indicates the conservative methods upon which banking has heretofore been transacted in that city as shown by the present value of their resources. Adverse legislation to silver will surely depress the spirits of many business men and wage-earners throughout Colorado but it will not materially affect the future of the State. The vast resources of the Centennial State, of which silver only occupies about one-fifth part, are ample to warrant continued prosperity.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

CRIMES OF BANK OFFICERS—MISAPPLICATION OF FUNDS—INDICTMENT.

United States Circuit Court, S. D. of New York, May 16, 1893.

UNITED STATES *vs.* ENO.

An indictment for a misapplication of the funds of a National bank must specify the particulars of the appliation, so as to show the application charged to be a criminal misapplication as distinguished from applications that are unlawful but not criminal.

An allegation that the defendant, for the use, benefit, and advantage of himself misapplied certain money of the bank by paying them to A. & Co. is not sufficient; for it does not show that such payment was criminal; but the facts showing that the payment to A. was not only unlawful, but a criminal application of the money should have been stated.

It is not necessary to aver that the acts were done without the knowledge or assent of the directors of the bank.

This was a motion to quash an indictment against John C. Eno for misappropriation of the funds of a National bank of which he was President.

BENEDICT, *District Judge*: This case comes before the court for the first time upon a motion to quash the indictment. The indictment, found on the 17th of June, 1884, contains several counts which differ from each other only in the amount of money charged to have been misapplied, and in the name of the payee of the money. What is there said in regard to the first count is therefore applicable to all the counts.

The first count, after alleging that the defendant was President of the Second National Bank of the City of New York, an association carrying on a banking business in the city of New York under the Act of Congress approved June 3, 1864, charges as follows:

"The defendant unlawfully and willfully, and with intent to injure and defraud the said association for the use, benefit, and advantage of himself, the said John C. Eno, did misapply certain of the money and funds of said association, to wit, the sum of $100,000, which said sum of money he, the said John C. Eno, then and there, with the intent aforesaid, paid and caused to be paid from the moneys and funds of said association to Arthur Dyett and Abraham R. L. Norton, who then and there carried on business under the firm name and style of A. Dyett & Co."

To this charge it is objected that it is insuffcient in law—First, because the facts stated do not show that the payment by the defendant of $100,000 to A. Dyett & Co., was a criminal misapplication of the funds of the bank by the defendant; second, because it is not charged that the money paid A. Dyett &

Co. was converted by the defendant to his own use; third, because the indictment fails to allege that the misapplication charged was without the knowledge and consent of the directors of the bank; fourth, because it does not charge that the misapplication was made by Eno as President of the bank.

The law controlling on this occasion has been settled by the Supreme Court of the United States. The only duty devolving upon the court in this case is to apply that law to the indictment found against the defendant. By the law declared by the Supreme Court in *Britton's Case* (107 U. S. 669), an indictment for a misapplication of the funds of a National bank, must specify the particulars of the appropriation, so as to show the application charged to be a criminal misapplication, as distinguished from applications that are unlawful but not criminal. "There must be averments to show how the application was made, and that it was an unlawful one." And in *Northway's Case* (120 U. S. 332) it is said by the Supreme Court:

"It is of the essence of the criminality of the misapplication that there should be a conversion of the funds to the use of the defendant, or of some person other than the association."

In my opinion, the indictment in hand does not comply with this law. The statement of the indictment is simply that the defendant, for the use, benefit, and advantage of himself, misapplied $100,000 of the moneys of the association of which he was President, by paying $100,000 of the association's money to Dyett & Co. This statement shows how the application was made, viz. by paying $100,000 to Dyett & Co. at the time and place stated, but it does not show that such payment was an unlawful one. It will be observed that the indictment contains no averment that the $100,000 was by the defendant paid, or by Dyett & Co. received, to the use of the defendant. It is not averred that the payment by the defendant to Dyett & Co. was in truth and in fact a payment to himself. There is no statement that Dyett & Co. were not entitled to be paid by the bank the $100,000 that was paid them. They may have had $100,000 on deposit in the bank, or their note for $100,000 may have been discounted by the bank. For aught that appears in this indictment, the payment to Dyett & Co. was entirely lawful, and, if so, the payment was not a conversion of the money by the defendant. Such a payment of $100,000 to Dyett & Co. might be useful or beneficial or advantageous to the defendant without being a conversion of the money by him. It is of no consequence that the payment is stated to have been unlawful. Calling a thing unlawful does not make it unlawful. Facts showing that the payment of the $100,000 to Dyett & Co. was not only unlawful, but a criminal application of the bank's money, should have been stated. Nor is the indictment helped by the averment that the money was paid by the defendant to Dyett & Co. with intent to injure and defraud the association. The rule on this subject has been stated as follows:

"The words 'with intent to injure and defraud' are words essential to the offense as charged, but do not enlarge the significance of the language, which avers the facts neccessary to be proved in order to constitute the offense." Mass. Crim. Law, 624.

It may be proper to add, in regard to the point made that the indictment is defective because it fails to aver that the acts charged were done without the knowledge or assent of the directors of the association, that, in my opinion, such an averment is not essential in an indictment for the misapplication of the funds of a National bank. The statute does not make absence of authority from the directors an ingredient in the crime of misapplication. I conceive that a conversion of the funds of a National bank by its President may be a criminal misapplication of the funds of the bank, although done with the knowledge and assent of the directors of the bank. The President of a National bank is not the association, nor are the President and directors the association. They are only officers of the association. The moneys of the stockholders and of the depositors of the association are not the moneys of these officers, but of the association; and it has not yet been held that a National bank may be pillaged of such moneys by its President, with impunity, provided the act be done in pursuance of a conspiracy between the president and the directors, or a majority of them.

The motion to quash must be granted.

CERTIFICATION OF CHECK—FICTITIOUS PAYEE.

Appellate Court of Indiana, June 24, 1893.

Where a check is drawn, payable to a person under a fictitious name, in payment for property which it afterwards appears he has stolen, and the bank at which it is payable certifies the check, a bank which subsequently cashes such check, on its being indorsed by the payee with his fictitious name, acquires a valid title thereto, which it can enforce against the certifying bank; it appearing that, though the payee acted all through under a fictitious name, yet the check was received by the identical person to whom its drawer intended to deliver it, and was by him indorsed in the name in which it was issued to him, and he, as was intended by the drawer, received the benefit of it.

On rehearing.

GAVIN, *C. J.*: Counsel for appellant have filed quite an earnest petition for rehearing, in which they assail the proposition of the original opinion, that the appellee, if a *bona fide* assignee, by indorsement, for value, took the certified check freed from any equities existing between the original parties. They assert the opinion to be in direct conflict with the case of *Parke* vs *Roser* (67 Ind. 50). We have examined the case carefully, as we did on the former hearing, and are unable to see the slightest conflict between the holding in this case and the decision in that. There no such question as here presented was under consideration. That case simply holds that the certifying bank does not guaranty the genuineness of the body of the check, following *Marine Nat. Bank* vs. *National City Bank* (59 N. Y. 67). This was the only question before that court for its determination. A careful examination of the brief of counsel for appellant shows that they themselves did not controvert its liability, if the appellee was a *bona fide* holder for value, and by indorsement. Their claim was that there was no legal, valid indorsement, and that, therefore, the check was subject to equities; relying upon *Freund* vs. *Bank* (76 N. Y. 352) and kindred cases. To show their position upon this subject, we quote from their brief somewhat in addition to what was set out in the original opinion: "It follows, therefore, that Stockton, Gillespie & Co. could countermand payment at any time, of this check, so long as it remained out in the hands of the thief or any other person taking it with notice; or, to put the proposition from the other side, until the check comes in due course of business to the hands of a *bona fide* holder for value, without notice, neither the maker nor the banker can be compelled to pay a check given for stolen cattle, or otherwise invalid." In support of their claim, appellant's counsel quoted also the following from the case of *Bank* vs. *Bingham* (118 N. Y. 349): "It is too well settled by authority, both in England and in this country, to permit of questioning, that the purchaser of a draft or check, who obtains title without an indorsement by the payee, holds its subject equal to all equities and defenses existing between the original parties, even though he has paid full consideration, without notice of the existence of such equities and defenses. [Citing very many cases.] The reasoning on which this doctrine is founded may be briefly stated as follows: The general rule is that no one can transfer a better title than he possesses. An exception arises, out of the rule of the law merchant, as to negotiable instruments. It is founded on the commercial policy of sustaining the credit of commercial paper. Being treated as currency in commercial transactions, such instruments are subject to the same rules as money. If transferred by indorsement, for value, in good faith, and before maturity, they become available in the hands of the holder, notwithstanding the existence of equities and defenses which would have rendered them unavailable in the hands of a prior holder. * * * The bank did certify that it had the money; would retain it, and apply it in payment, provided the check should be indorsed by the payee. If the check had been transferred to plaintiffs by indorsement, the defendant would have had no defence, not because of the doctrine of estoppel, but upon principles especially applicable to negotiable instruments." Our own supreme court in the case of *Born* vs. *Bank* (123 Ind. 78) referred to in the original opinion, expressly says that the certifying bank becomes bound for the payment of the check it certifies; there being in that case no question involved as to the genuineness of the check in all its parts. This shows, as in fact do all the cases, that the literal interpretation given by counsel to some of the argumentative language used in the case of *Parke* vs. *Roser* (*supra*), is not justified. The decision in the original opinion was intended to be, and we still think was, kept strictly within the facts of this particular case, going no further than was required in order to dispose of the merits of the cause. After careful consideration, we are still satisfied that the proposition announced of which complaint is made, is in harmony with the authorities cited, and the many cases upon which they are founded. The petition for rehearing is therefore overruled.

TAXATION—PRIVILEGE TAX—BASIS OF TAXATION.

Supreme Court of Mississippi, January 16, 1893,

BANK OF OXFORD *vs.* BOARD OF MAYOR, ETC., OF TOWN OF OXFORD.

Under the statute of Mississippi authorizing banks to pay a privilege tax in lieu of other taxes, a bank in order to secure the exemption declared by the statute, must estimate all its assets and pay the privilege tax on such basis.

The entire amount of the capital stock is liable to taxation, notwithstanding that a part, or the whole thereof, is invested in non-taxable securities.

The Act of March 7, 1892, granting relief from penalties, is not available to a bank which has failed to pay the privilege tax estimated on the proper basis.

This was a proceeding by the Bank of Oxford against the Board of Mayor and Aldermen of the town of Oxford to review the action of the defendant in making certain assessments for taxation against plaintiff. From a judgment and decree fixing the basis of taxation of plaintiff the same as an individual, and deducting from its choses in action its liabilities to depositors, both parties appealed.

CAMPBELL, *C. J.*: In *Bank* vs. *Worrell* (67 Miss. 47) we held that the Act approved March 8, 1888, amending section 585 of the Code of 1880, as to

2

banks, was constitutional, and that its purpose was to impose a tax, measured by the entire assets of the bank, in lieu of all other taxes, and that a bank which paid according to the requirements of that Act thereby secured the immunity from other taxation which it declares. We added that "any bank which did not estimate all of its assets beyond the amount of its capital stock, and pay the privilege tax on the larger basis, is in default, and did not secure the exemption from taxation declared by the law in favor of those which conformed to its terms." This is the expression of the plain implication of the declaration immediately preceding, viz. that such as complied with the law secured its benefits. The obvious suggestion—the irresistible inference—from this is that such as did not pay according to the law did not secure its benefits, and, instead of leaving it to inference, this was plainly declared, and now we are met by the assertion that this utterance is *obiter*. This we deny, and adhere to it as a pertinent and correct declaration of the court in dealing with the matter before it. We hold now, as we said then, that any bank, not having paid as provided by the law, did not secure its benefits. That was as far as it was proper for us to go then. The question before us now is, what taxation was a bank subject to if it did not pay in accordance with the Act of 1888? We answer that section 498 of the Code of 1880 governs in such case. It was never repealed. By the Act entitled "An Act to amend sections 557 and 585, Code of 1880," etc., approved March 18, 1886, (Acts, p. 12, *et seq.*) the privilege tax imposed by the Code of 1880 was materially changed, but section 498 of the Code, which provides for taxing capital stock paid in at its market value, was not affected by it. That remained in full force, unaffected by the requirement of a privilege tax. The Act of March 8, 1888, already spoken of, took the place of the Act of March 18, 1886. It greatly increased the privilege taxes on banks, and declared their payment to be in lieu of all other taxes upon banks, but it did not abrogate section 498 of the Code. That remained in full force, inoperative if the Act of 1888 was complied with, but operative if it was not. The proposition that the assets of banks were taxable as those of individuals is not maintainable. Section 498 of the Code of 1880, copied from the Code of 1871, § 1683, which was transferred from the Code of 1857, p. 77, art. 24, which was taken from the Act of March 5, 1846 (Hutch. Code, p. 196) furnishes the rule for taxation of bank stock. Section 468 of the Code of 1880 declares what property shall be exempt from taxation, and succeeding sections provide for obtaining lists of taxable property, and placing them on the assessment rolls; but the capital stock of banks and other joint stock companies is excepted from the provisions applicable to property generally, by the special provisions contained in section 498, which looks to the company as the medium through which to impose a tax according to value on the capital stock paid in. In this way it is sought to tax, at its value, the personal property consisting of shares of capital stock. Nominally the tax is on the company, but really it is upon the shareholders who own the capital stock, who bear whatever burden is imposed on the company, which is the aggregation of all who own its capital. The foregoing proceeds on the assumption that the Bank of Oxford did not comply with the Act of March 8, 1888, and secure immunity from other taxation; and this is true, for while the assets of the bank considerably exceeded $75,000, it paid the tax prescribed for banks whose assets did not exceed that sum. Its claim is that it had $10,000 of its assets invested in non-taxable bonds, and, deducting this sum, its assets were reduced to $75,000.

This position is not tenable. If every dollar of its capital stock and assets was invested in United States bonds or other non-taxable security, the liability to taxation would not be lessened, or in any way affected. The securities are not taxable, and are not taxed. The value of the shares of capital stock paid in is taxed. They are property and taxable as such, no matter in what the assets of the company may be invested. An individual is taxable on what is due him. He is required to report to the assessor the amount of indebtedness to him in various forms of indebtedness, as well as money on hand or deposit, that he may be taxed on these things. A bank is not required to do this. It may have many times its capital employed in discounts and loans, and receive interest on this enlarged basis, and it is not required, as an individual is, to pay taxes on this basis, but on the value of the shares of its capital. Why this is so is not for judicial inquiry, but so the law is written, and has been in this State for about half a century, and it has been embodied in the constitution of 1890, permissively, but suggestively to the legislature. Section 181. The notion that a bank may deduct the amount of non-taxable securities it may own, because an individual may, arises from misconception, and is completely dispelled by considering that the bank is not taxed as an individual, but in its representative character; that the owners of the bank (shareholders) are the burden-bearers of these taxes, and the bank is named and used as an instrumentality for reaching the property of shareholders in this form. Individuals are entitled to deduct from the sums of their claims such as are not taxable, because the basis on which they are taxable is the amount due them; but, as the bank (or its shareholders) is not taxable on the basis of what is due it, but the capital is to be taxed at its value to the shareholders, no deduction is allowable for anything held by it. Its capital stock (and the shares into which it may be divided) is one thing, and the form in which it may nave invested is quite a different thing. Its entire capital may be put in non-taxable indebtedness, and the shares of its capital stock may thereby be enhanced or diminished in value, but their character as property, and taxable as such, is not in any manner affected by the investment of the capital of the bank. If a bank has added to its capital stock any sum, by whatever name, which augments the value of its stock, and puts that in non-taxable security, that does not entitle it to any deduction in taxation, but the capital stock at its increased value, by reason of such accumulations, is the basis of taxation; the purpose of the law being to impose on holders of bank stock taxes according to value, as on other forms of property. The owner of bank stock is not required to give it in to the assessor. Another mode of reaching it is provided, and that is through the bank, whose officers are required to report it, and the bank is to pay it; in other words, the shareholder is to be taxed and pay through the bank. This is the simple scheme provided by our law for the taxation of corporate property, which has long been in force, and prevails elsewhere, and has been approved by the Supreme Court of the United States as applied to National banks. (*National Bank* vs. *Com.* 9 Wall. 353.) Section 3764 of the Code of 1892, taken from "An act to amend the revenue laws," approved February 24, 1890, expresses the true view of the law as it has existed in this State for many years on this subject. It differs from former laws in its enumeration of the factors in the value of stock, which, though included, was not expressly mentioned in former enactments. This was to prevent evasion, and secure a just admeasurement of value. The refusal to permit the amended bill offered to set up the Act granting the relief from penalties under section 589 of the Code of 1880, approved March 7, 1892, (Acts, p. 81) was right, for that Act has no sort of application to the subject of this controversy. Its sole purpose was to give delinquents an opportunity to escape the consequences of delinquency as to the enforceability of their contracts. The decree is correct as to its finding that the bank did not pay as required by the law of 1888, and did not secure exemption from other taxation. It is erroneous in fixing the basis for the taxation of the bank. If it was taxable as an individual, the deduction from its choses in action of its liabilities in the shape of deposits was inadmissible, and on this ground the decree is wrong in detail on the basis on which it was rendered, but, as shown, it is fundamentally wrong. We reverse the interlocutory decree of November 27, 1891, and the final decree in the cause, and remand it for such further proceedings as may be proper in conformity to this opinion. As this will require a settlement of the controversy on a view not before suggested in the cause, new pleadings and evidence may be necessary, the consideration of which matter we merely suggest, without expressing any opinion.

Reversed and remanded.

SUIT ON BOND OF CASHIER OF NATIONAL BANK.

United States Circuit Court of Appeals, First Circuit, June 1, 1893.

WALKER, *et al.* vs. WINDSOR NATIONAL BANK.

A suit upon the bond of the Cashier of a National bank is a suit "arising under the laws of the United States," and is therefore within the jurisdiction of the Federal courts regardless of the residence of the parties.

In error to the Circuit Court of the United States for the District of New Hampshire.

This was an action by the Windsor National Bank against John S. Walker, Jr., John S. Walker, Sr. and Harriet H. Walker, upon the bond given for the faithful performance by said John S. Walker, Jr., of his duties as Cashier of the plaintiff bank.

The defendants filed a motion in arrest of judgment on the ground that defendant J. S. Walker, Jr., was at the date of the commencement of the action, as appeared by the record, a citizen of the same State as the plaintiff, to wit, the State of Vermont, for which reason as alleged, the court had no jurisdiction of the action, or any party thereto.

PUTNAM J. (omitting part of the opinion):

The Acts of July 12, 1882, § 4, (22 Stat. 163) and of August 13, 1888, § 4, (25 Stat. 434) do not place National banking associations under any disadvantage with reference to raising so-called Federal questions in Federal Courts. (*Bank* vs. *Cooper*, 120 U. S. 778, 780, 781; *Petri* vs. *Bank*, 142 U. S. 644, 650, 651.) What is a Federal question under the existing statute of August 13, 1888, § 1, (25 Stat. 434) depends upon the words, "any suit of a civil nature, at law or in equity, arising under the constitution or laws of the United States, or treaties," and so on. We think this suit is of that character. It is based upon the official bond of a Cashier of a National banking association, given to the association pursuant to Rev. St. § 5136, cl. 5, providing for such bonds, and for defining the duties of Cashiers.

The bond in the case at bar was conditioned, not only for the faithful execution of the office of Cashier by the principal in it, but also that he would perform the duties thereof "according to law, and the by-laws" of the bank. Even without the express use of the words quoted the condition of a bond of a Cashier of a National banking association, providing in terms only for the faithful performance of the duties of his office, or of any bond given as contemplated by section 5186, Rev. St., would inevitably imply the further condition that the Cashier should regard all the provisions of law looking to the protection of the association from loss, or to the accomplishing its successful, safe, and profitable operation. Such provisions are found mainly in the Revised Statutes, or are at least so extensively embodied in them, and originated by them, that any attempt to read correctly a bond of the class in suit must lead at once, and directly, to their examination, and must find very largely, if not in the main, its support in their injunctions. If such bonds are not matters of jurisdiction with the Federal tribunals, they and the duties of Cashiers of National banking associations may be construed and defined very differently, and with absolute lack of harmony, in various States, with no opportunity of securing uniformity by appeal to any Courts of the United States, and we think that Congress could not have contemplated such a result. We conclude, therefore, that this suit involved a Federal question, even in view of the strict construction found in *Cooke* vs. *Avery* (147 U. S. 375), assuming, as no doubt we justly should, that nothing therein is intended to overrule *Tennessee* vs. *Davis* (100 U. S. 257, 264) or any of its expressions. We think our conclusion is aided by the lines of reasoning found in *Bock* vs. *Perkins*, (139 U. S. 628); *Pacific R. Removal Cases* (115 U. S. 1); *Railroad Co.* vs. *Amato*, (144 U S. 465); and *Railroad Co.* vs. *Cox* (145 U. S. 593, 603). *Assurance Soc.* vs. *Ford* (114 U. S. 685) and *Whittemore* vs. *Bank* (134 U. S. 527) were attempts to maintain rights based entirely on the common law, and were each one step further removed from the statutes of the United States than a suit on the bond now in question.

ULTRA VIRES—WHEN BANK ESTOPPED TO PLEAD.

Supreme Court of Washington, April 7, 1893.

TOOTLE *et al.* *vs.* FIRST NATIONAL BANK OF PORT ANGELES.

Where a bank has received and retained the benefit of a contract made by its officers it cannot plead that the contract was unauthorized by the directors or beyond the power of the bank or its officers to make.

This was an action to have part of the proceeds of property conveyed to the bank by a bill of sale and afterwards sold by the bank applied to the payment of debts of a company called the "Schwartz Company," applied to the debt due from such company to the plaintiff. The property had been turned over to the bank as security for a debt of $2,000 due to the bank, and under an arrangement made by the bank, through its President, that the bank would take all the property and pay all the creditors 50 cents on the dollar. The property so turned over was worth about $7,000 or $7,500. The bank did not pay such debt.

DUNBAR, *C. J.*: We think there can be no question that the bill of sale of the property of the Mercantile company was intended as a mortgage to secure the payment of the notes. This is apparent, both from the testimony and from the answer, and the only serious question in the case to consider is whether the bank is bound by the action of its officers in the transaction upon which this suit is based. This fact seems certain from the testimony, viz. that the bank has received property worth $7,000, when its claim was only $2,000. It is not necessary to decide whether or not the contract was *ultra vires*, for it was not immoral, it was fully performed by the other party, and the bank received and retained the benefits, and in such a case the plea of *ultra vires* is unavailing. (2 Morse, Banks, [3d Ed.] § 740). "The doctrine of *ultra vires* as a defense has died so hard that it is well to repeat the proposition which seems to be fully established by the more recent decisions,—that where a contract has in good faith been fully performed, either by the corporation or the other party, the one who thus has received the benefit will not be permitted to resist its enforcement by the plea of mere want of power. Time and again corporations have been held estopped to plead *ultra vires* to an action on the contract performed by the other parties, where the corporation have received the benefits, although clearly beyond its powers." (2 Beach Priv. Corp. § 425. To the same effect is 2 Mor. Priv. Corp. [2d Ed.] § 688, and Green's Brice, Ultra Vires, p. 729, note a.) The doctrine of *ultra vires*, when invoked for or against a corporation, should not be allowed to prevail where it would defeat the ends of justice or work a legal wrong. (*Railroad Co.* vs. *McCarthy*, 96 U. S. 258.) This rule is so well established that it is the work of supererogation to quote authorities to sustain it. While it is not shown that the contract to pay this indebtedness was entered into by resolution of the trustees of the bank, it does plainly appear to our minds from the testimony that the trustees were in consultation about the matter, and that the business was done in the bank through its President and Cashier, the men who practically do the business of the bank; and even if it did not authorize the transaction, it has indorsed it by receiving and appropriating the benefits flowing from the transaction, and it would be against conscience and right to allow it to repudiate the contract, and still retain the benefits. We think the plaintiffs made out a *prima facie* case, and were entitled to a judgment thereon, and that the court erred in sustaining defendant's motion for judgment. The judgment will therefore be reversed, and the cause remanded for a new trial in accordance with this opinion, with costs to appellants.

NOTE MADE ON SUNDAY.

Supreme Court of Michigan, June 30, 1893

ARBUCKLE *vs.* REAUME *et al.*

Under the laws of Michigan a note made and delivered on Sunday is void.

Where the notes were made payable in Ohio, but were given for machinery, and the contract of sale was made in Michigan, and the property delivered there, *Held*, that the notes were to be governed by the law of Michigan.

This was an action by John M. Arbuckle and others against Albert D. Reaume and others on a note. From a judgment in favor of plaintiff defendants appealed.

LONG, *J.*: This action was brought to recover upon two promissory notes. The notes were dated November 4, 1889. They were executed and delivered to the plaintiffs' agent in this State, but payable at plaintiffs' office, at Toledo, Ohio. The defendant Peter Donnelly pleaded the general issue, and denied the execution of the notes. The other defendants did not appear, and were defaulted. It was admitted that, while the notes bore date as of Monday, they were in fact executed and delivered to the agent of the payee in this State on Sunday. The court below ruled that, though the notes were executed and delivered in this State on Sunday, yet, the testimony showing that the office of the plaintiffs was in Ohio, and the contract to be performed there, that they were not void, under section 2015 How. St., as the laws of Ohio, and not of Michigan, governed the transaction; and judgment was given in favor of the plaintiffs. It was not shown upon the trial what the statute laws of the State of Ohio were. The only contention upon this record is whether the question is to be determined by the law of the place where the notes were executed and delivered or by the laws of the State where made payable. The notes were given for machinery. The contract of sale was made in this State, and the property delivered here. The notes were taken by the plaintiffs' agent on the delivery of the machinery; the whole transaction being closed on Sunday. (How. St. § 215) provides: "No person shall keep open his shop, warehouse, or workhouse, or shall do any manner of labor, business, or work, or be present at any dancing, or at any public diversion, show, or entertainment, or take part in any sport, game, or play, on the first day of the week. The foregoing provisions shall not apply to works of necessity and charity, nor to the making of mutual promises of marriage, nor the solemnization of marriages. And every person so offending shall be punished by fine not exceeding ten dollars for each offense." In *Adams* vs. *Hamell*, (2 Dough. [Mich.] 73) it was held by this court that a note made on Sunday was void, under the provisions of the statute of 1838, which is similar to the provisions of How. St., above quoted. In *Tucker* vs. *Mowrey*, (12 Mich. 378) this court approving Adams *vs.* Hamell, said: "The statute not only makes it a penal offense, but takes away the legal capacity of the parties to make a contract on that day; and, whether the supposed contract has been executed or remains executory, we think the rights of the parties are to be determined as if no such contract had ever been made." The court below was in error in holding that the note could be enforced here by reason of being made payable in Ohio. Parties cannot be allowed to defy our laws, and recover upon a contract void from its inception under our statute, by making the place of payment out of the State. It is an elementary principle that one who has himself participated in a violation of law cannot be permitted to assert in a court of justice any rights founded upon or growing out of the illegal transaction. (7 Wait, Act. & Def. p. 114; *Myers* vs. *Meinrath*, 3 Amer. Rep. 371.) The judgment must be reversed, and a new trial ordered. The other justices concurred.

NOTICE OF PROTEST.

Supreme Judicial Court of Massachusetts, June 21, 1893.

SWAMPSCOTT MACHINE CO. *vs.* RICE.

Where a notary sent a notice of protest of a note addressed to the indorser to the payee, whose bookkeeper duly mailed it to the indorser, stamped, and with direction to return if not delivered in five days, and the letter was not returned, it was sufficient evidence that the notice was sent and received.

This was an action by the Swampscott Machine Company against Thomas Rice and wife upon a note signed by the husband, payable to the plaintiff, and indorsed in blank before delivery. The indorsement of the wife was for the accommodation of the husband. The only evidence as to notice to the wife was as follows: The notarial certificate of protest stated that the notary inclosed a notice of non-payment for the indorser, Ada C. Rice, under cover to the plaintiff. William P. Peirce, plaintiff's witness, testified that he was at date of maturity of the note in plaintiff's employment, as a bookkeeper; that he received the notary's notice of protest of the note; that "immediately after or upon its receipt" by the witness, the witness, though he made no note or memorandum thereof at the time in writing, and could not say upon what day of the week or month, inclosed the notice in an envelope, marked on outside to return in five days to plaintiff, with postage stamp thereon, addressed to defendent Ada C. Rice, to her residence in Cambridge, Mass.; that he did not personally put it in the post office or in the United States mail box, but that it was the ordinary course and usual course of business for him to put all letters for the mail into a box or place in plaintiff's office, whence it was the usual and ordinary course of business for an office boy in plaintiff's employ to carry letters to the United States post office, and that it was witness' memory that in this case he followed his usual course of business by placing said envelope with notice in said office box in the office; and in answer to the question "whether or not, to your knowledge, that envelope was ever returned," witness said "No, sir;" but the office boy, if any, was not produced as a witness, and no further evidence was offered except the defendent Ada C. Rice, who testified that she did not remember ever receiving any notice, and in cross-examination she said she would not say that she did not receive any notice, but that she did not remember.

HOLMES, *J.*: If the certificate of the notary public that he "duly" notified the indorsers is insufficient, taken with the context, to import that he did his duty and sent the notice in due time, as is intimated in *Insurance Co.* vs. *Wilson* (29 W. Va. 528, 563) the fact is shown by the date of the certificate, which is July 30th, the very day of the demand. The plaintiff's bookkeeper received it at the date of the maturity of the note, and at once put it into a box in the office, stamped, and with a direction for return if not delivered in five days. It was the regular course of business for an office boy to carry the letters from this box to the post office. The letter never was returned. This was evidence that the notice was sent and received. (*Dana* vs. *Kemble*, 19 Pick. 112; *Skilbeck* vs. *Garbett*, 7 Q. B. 846.)

TAXATION—INSOLVENCY OF BANK—COLLECTION OF TAXES FROM RECEIVER.

United States Circuit Court of Appeals. First Circuit. February 8, 1893.

CITY OF BOSTON *vs.* BEAL.

Where a National bank has become insolvent, and the property representing the capital stock has been swept away, no tax on the shares can be collected from the Receiver under a statute requiring the tax to be paid by the bank.

This was a bill in equity by the city of Boston against Thomas P. Beal, as Receiver of the Maverick National Bank of Boston, to recover the sum of $12,096 for taxes due October 1, 1891. The assessment was made under Pub. St. Mass. b. 13, §§ 8-10, which, in effect, provide that shares of stock in all banks, State and National, shall be taxed to the owners thereof, to be paid in the first instance by the bank itself, which, for reimbursement, shall have a lien on the shares and all the rights of the shareholders in the bank property. The circuit court dismissed the bill, and the city appealed.

The decree of the court in this case was entered as follows·

"Judges Putnam and Webb concurring, and Judge Nelson dissenting, the decree of circuit court is affirmed." *

* For report of the case in the circuit court see RHODES JOURNAL OF BANKING for October, 1892.

ASSESSMENT OF BANK STOCK—VALUATION.

Supreme Court of Mississippi.

ALEXANDER *vs.* THOMAS.

Under the statute of Mississippi (Code 1882, § 3764) providing that for the purpose of taxation bank stock shall be assessed at its par value, unless it appear to be worth more or less, such stock cannot be rated at less than its par value merely because other property is so rated.

This was a bill by G. D. Thomas, receiver of the Bank of Greenville, against A. Alexander, collector of the city of Greenville, to enjoin defendant from collecting an amount alleged by plaintiff to be in excess of the tax justly due defendant. An injunction was granted as prayed, and defendant appeals. Reversed.

W. A. Pollock, Receiver for the Bank of Greenville, made the following statement to the assessor of Washington county for the bank's assessment:

No. of shares of capital stock paid in, 2,500, at $100 each	$250,000 00
Surplus and unpaid profits net	582 47
	$250,582 47
Estimated value of shares at 66⅔ per cent., capital stock, surplus, and undivided profits,	
Less real estate	$ 5,000 00
Less 33⅓ per cent.	83,333 33
Amount for assessment	$162,249 14

G. D. Thomas succeeded W. A. Pollock as Receiver of the bank. The report was accepted by the Board of Supervisors of Washington county, and the county and State tax levied thereon accordingly. The Receiver refused to give any statement to the city assessor of the city of Greenville when called upon to do so, but referred him to the statement made to the county assessor. The city council then assessed the capital stock at its par value, less the value of the realty of said bank. The bank, through its President, objected to said assessment of said property, claiming that the city was compelled to assess the property at the amount assessed for the State and county taxation. They did not claim that the stock was worth less than its par value, but that the property in said county was assessed at 66 2 3 per cent. of its value, and that the property of the bank should be assessed likewise. The city council refused to alter its former assessment, and levied a tax of 75 per cent. of the rate of the State and county tax on the capital stock at par value. The bank tendered the amount of taxes due in accordance with the statement rendered the County Assessor, and filed this bill of injunction to restrain the collection of a greater amount by the city collector. The defendant answered, and moved the court to dissolve the injunction, which motion was overruled by the court below, and a perpetual injunction granted, restraining the collection of any taxes in excess of those tendered by complainants, from which decree this appeal is taken by the collector.

CAMPBELL, *C. J.:* The city had the right to levy 75 per cent. of the State tax on the capital stock paid in the bank, as shown by the written statement of its President, delivered to the county assessor, and was not bound to, and would not have been justified in, following the error of the Board of Supervisors in disregarding the express provisions of the law that the stock should be rated at par, unless worth more or less. The law, which is highly favorable to banks in imposing taxes, intended that the capital stock should be paid on its value, and the par value is fixed as the standard, subject to be varied by the facts. The idea that the stock is to be rated at two thirds of its value—of its par value—because property generally is rated thus, is utterly inadmissible. Decree reversed, and cause remanded, with directions for a decree to the court in favor of appellee and sureties on injunction bond for a bond for amount of taxes enjoined and 10 per cent. thereon, and all costs.

INSOLVENCY—RECEIVERSHIP—PRACTICE.

Supreme Court of Nebraska, June 6, 1893.

STATE *vs.* COMMERCIAL AND SAVINGS BANK OF KEARNEY.

In winding up the affairs of an insolvent bank, under the statutes of Nebraska, the Receiver of such bank, when so authorized by this Court, may take such steps as shall be necessary to enable him to secure possession of the assets of such bank, or their value.

It is not necessary, in proceedings to obtain possession of the assets of an insolvent bank, wrongfully withheld by one of its former officers, to join as parties to the proceedings other individuals, for whose benefit the misappropriation took place. Neither can such bank officer require the allowance of a set-off or counter-claim as a condition precedent to the delivery of the possession of such assets.

Where parties have, by the fraudulent conduct of themselves or their agents, obtained possession of the assets of an insolvent bank, and are unable to return to the Receiver of such insolvent bank the said assets, in kind, such parties will be held to strict accountability for the value thereof.

This was an original action by the State of Nebraska against the Commercial and Savings Bank of Kearney. Heard on report of Referee. Judgment for plaintiff.

TAXATION OF NATIONAL BANK STOCK—DEDUCTION FOR DEBT.

Supreme Court of Ohio, May 9, 1893.

CHARLES E. NILES *vs.* OLIVER P. SHAW.

The tax laws of Ohio do not authorize the deduction from the value of shares in a National bank, entered on the duplicate for taxation, of legal, *bona fide* debts owing by the holder of such shares of stock.

This was an action to restrain the defendant from collecting certain tax assessments. The petition was dismissed on demurrer, and plaintiff brought error.

PER CURIAM: We think the demurrer was properly sustained. Irrespective of the question, whether or not, in arriving at the correct amount of property subject to taxation, legal, *bona fide* debts owing by a debtor can be deducted from credits owing to him (considered in Bank *vs.* Hines, 3 Ohio St. 1, and in Latimer *vs.* Morgan, 6 Ohio St. 279), we are of opinion that shares of stock in a National bank are, within the meaning of Sections 2780, 2781, Rev. St., "investments in stocks," and not "credits," and that, in determining the amount to be charged on the duplicate for taxation against a stockholder in a National bank, *bona fide* debts owing by such stockholder cannot be deducted from the value of his shares. Judgment affirmed.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: WASHINGTON, N. J., July 27, 1893.

SIR:—A deposits with us a check on a Chicago bank. We credit it to A's account, and forward it to our New York correspondent, which credits our account with it, and forwards it to the Chicago bank, but before the latter bank makes its periodical settlement, it fails. Now, who suffers the loss, the depositor, our bank or the New York bank? R.

Answer.—We think the loss in this case must fall upon the New York bank. The arrangement between it and the Chicago bank was apparently such that the proceeds of the draft, when collected, became the property of the Chicago bank, which became indebted to the New York bank in that sum. As to the latter bank, then, the collection was complete when the Chicago bank entered the credit for the amount, and the Washington bank was entitled to a corresponding credit on the books of the New York bank.

Editor Rhodes' Journal of Banking: JAMESTOWN, Ohio, Aug. 3, 1893.

SIR:—We received a note from a customer for collection. The note was made payable at the Valley Bank, Spring Valley, Ohio. Xenia being the nearest place to that point, and as we did business with the Citizens' National Bank of Xenia, we sent the note there for collection thinking they had exchange with the Valley Bank; but they did not, and so they sent the item to the Second National Bank of Cincinnati for collection. The Second National Bank sent the item direct to Spring Valley for collection and remittance. The Valley Bank made the collection ($15.00 being the amount) from the farmer that owed it, kept 20 cents out for fees, etc., and sent the Second National Bank a draft for $14.80 on the Columbia National Bank of Chicago. The Second National Bank accepted the draft, and credited the Citizens' National Bank with the same, and the Citizens' National Bank credited us, and we paid the money out to our customer. Now, this Columbia National Bank of Chicago failed before the draft reached them, and was protested and returned to the Second National Bank as endorser, with $2.31 protest charges added, and before the draft got back to Cincinnati, the Valley Bank was closed up also. Now, the question that we bankers are arguing is, who has to hold this draft, and become a creditor of the Valley Bank? H. C. DEAN, *Cashier.*

Answer.—The credit given by the Cincinnati and Xenia banks was only provisional and liable to be cancelled when the draft was returned unpaid; and if the money had not been paid out by the Jamestown bank, that bank could likewise have cancelled the credit given to its customer. But having paid out the money, that bank has altered its position, and having been induced to so act by the representation of the other banks, that the draft was paid, we think there can be no recovery against it. And as the Xenia bank could not recover over against the Jamestown bank, its position has likewise been changed, and the Cincinnati bank could not maintain an action against it. The latter bank must, therefore, hold the draft and make claim against the parties thereto. This, though, is solely on the ground that there has been such a change in the situation of the parties that an action for money paid under mistake can not be maintained. Neither the Xenia bank nor the Cincinnati bank appears to have been at fault in making the collection. The item being payable at the Valley bank it was not improper to send it there direct; and in so doing the Cincinnati bank did not constitute the Valley Bank its agent to receive payment, so as to make it liable for the latter's default. *Indig* vs. *National City Bank* (80 N. Y. 100) is a case directly in point. In that case, as here, a note had been sent direct to the bank at which it was payable, and a draft returned for the amount, which draft was dishonored when presented for payment. The Court said:

"The loss occurred through the subsequent failure of the bank and the consequent non-payment of the draft. The same result ensued which would have taken place if the defendant had sent the note to a third party as sub-agent, for collection. Such sub-agent would have been authorized under the circumstances of the case to surrender the note to the bank on receiving its draft on New York, because the proceeds were not to be used in Lowville but to be transmitted to the defendant in New York or Brooklyn. There is no proof in the case that if the note had been presented by a third party at the counter of the bank of Lowville it would have been paid in cash, but assuming that it would, it would have been the duty of the agent to transmit the funds to the defendant, and a proper method of doing this would have been to purchase a draft on New York. There being nothing in the case to show that the Bank of Lowville was not in good credit at the time, the sub-agent would have been authorized to purchase its draft, with the proceeds of the note. Instead of going through these formalities he might properly have taken the draft in the first instance. No damage was caused therefore by not employing a sub-agent. Besides it appears to be a usual mode of transacting such business to collect paper payable at a bank at a distance in the manner which the defendant adopted."

Editor Rhodes Journal of Banking: HAVEN, Kans., August 2, 1893.

SIR:—Will you kindly answer through your journal the following question: Are National bank notes legal-tenders? Also, How much fractional silver is a legal-tender?

J. R. HILL, *Teller.*

Answer.—(1) National bank notes are not a legal-tender in payment of private debts, but are legal-tender for some debts and demands owing to or by the United States. The words of the statute are: "And the same [the notes of National banks] shall be received at par in all parts of the United States in payment of taxes, excises, public lands, and all other dues to the United States, except duties on imports; and also for all salaries and other debts and demands owing by the United States to individuals, corporations, and associations within the United States, except interest on the public debt, and in redemption of the national currency." Also, where a National bank is designated as receiver or depository of the public money it must take and receive at par all of the National bank notes which have been paid in to the Government for internal revenue or for loans or stocks (Rev. Stat. U. S. 5,153). (2) Fractional silver is a legal-tender to the amount of ten dollars. (Act June 9, 1879, Sec. 3.)

Editor Rhodes' Journal of Banking: MUSKEGON, Mich., August 8, 1893.

SIR:—On February 15th, we discounted a three months' note for a customer of ours. It became due March 13, 1893, was protested and returned to us. We charged it to our customer's account, and returned it to him. On April 4th, it was handed to us for collection. We forwarded it to a bank in Fairmount, Indiana. The firm who made the note paid it to the bank, which made a New York draft for it and sent it to us. The bank which issued the draft failed before we could get the draft to New York. Our customer refuses to make it good. Who should be liable for it?

Answer.—The question must depend upon whether the Indiana bank is to be regarded as the agent of the Muskegon bank. If so, the latter bank must bear the loss, because in contemplation of law a payment to its agent was equivalent to a payment to itself. In Michigan the New York rule has been adopted that the "bank to which the paper is transmitted for collection is the agent of the transmitting bank, and not the sub-agent of the owner of the paper." (*Simpson vs. Walby*, 63 Mich. 447.) But this rule does not apply to a case where the paper is sent direct to the bank at which it is made payable, the purpose in such case being to extract money from that bank, and not to constitute it the agent to receive the money on the paper. *Indig vs. National City Bank*, (80 N. Y. 100.) If, therefore, the paper was payable at the Indiana bank, there was no agency, and consequently no liability on the part of the Muskegon bank (*Id.*). But if the former bank was not to make payment but was to collect the money from the maker or from some other bank, then, as it was the agent of the Muskegon bank to receive payment, the latter bank is chargeable with the money so collected. It is to be further observed, however, that in some cases it has been held improper to send paper direct to the bank which is to make payment, and that where it is shown that the collections would have been safely made if the paper had been sent to some other bank, the transmitting bank is liable. (*Merchants' National Bank* vs. *Goodman*, 109 Pa. St. 422; *Drovers' National Bank* vs. *Provision Company*, 117 Ill. 100; *German National Bank* vs. *Burn* (Colorado), RHODES JOURNAL OF BANKING, September, 1889, p. 836.) But whether these decisions would have any application to the present case we could not say without further knowledge of the facts.

Editor Rhodes' Journal of Banking: HAWARDEN, Iowa, August 8, 1893.

SIR:—In the case of a bank receiving a note for collection with instructions to protest for non-payment, and failing to do so, what is the exact liability in curredby the bank? Is the liability unconditional, and can the holder of the note look for immediate payment of the note from the bank, and not look further to the maker and indorser, or must he exhaust all means to collect it from the maker or indorser, and failing to do so, then resort to the bank? W. J. LIFFING.

Answer.—As in failing to protest the paper so as to hold the indorsers the bank has been guilty of negligence, an action can be maintained against it at once for its default. But the question in such case is one of damages, and the bank may show that notwithstanding its fault the owner of the paper has suffered no actual damages, and the recovery can then be for nominal damages only. The amount of the damages is *prima facie* the face of the paper, but evidence is admissible to reduce it to a nominal sum. The bank may mitigate the damages by showing either the solvency of the maker, the insolvency of the indorser, or that the paper was partially or wholly secured, or any other fact that will lessen the actual loss occasioned by its fault. *First National Bank* vs. *Fourth National Bank*, 77 N. Y. 320; *Borup* vs. *Nininger*, 5 Minn. 523; *Allen* vs. *Suydam*, 20 Wendell (N. Y.), 321; *Van Woort* vs. *Woolley*, 5 Div. & R. 3741; *Blanc.* vs. *Mut. Nat. Bank*, 28 La. Ann. 9211.

Editor Rhodes Journal of Banking: MINNEAPOLIS, Minn., August 10, 1893.

SIR:—Suppose I am endorser on a notewhere the words "in gold coin of the U. S. or its equivalent" are added after the word Dollars, or the words "in gold" are put in fine print under the word Dollars, could I be held as an endorser of such paper? Do not the words "in gold," or the first-named phrase, "in gold coin, etc.," take away the paper from the realm of commercial paper, reducing it to a contract, causing the maker to furnish a certain commodity? and when it does become a contract does not that release the endorser? RICHARD H. BROAT.

Answer.—The fact that the note is made payable "in gold" or in "gold coin" does not affect the negotiable character of the instrument. (*Chrysler* vs. *Renoit*, 43 N. Y. 209.) The general principle is that it does not destroy the negotiability of commercial paper or change its character, that it is in terms made payable in any description of money that is recognized and known as money current in business, and which is made a legal tender in payment of debt. (*Butler* vs. *Hortwitz*, 7 Wall, 258; *Brouton* vs. *Roder*, 7 Wall, 229. See also Daniel on Negotiable Instruments, §§ 55–58, and numerous cases there cited.) Besides, even if the note were non-negotiable, this would not discharge the indorser from liability; it would only have the effect of allowing him to set up as against the holder any legal or equitable defense he might have against prior parties.

CONDITION OF THE NATIONAL BANKS.—Abstract of reports made to the Comptroller of the Currency, showing condition of the National Banks in the United States at close of business July 12, and for comparison statement of May 4, with increase and decrease.

RESOURCES.	July 12.	May 4.	Inc. or Dec.

Number of banks July 12, 3,807; May 4, 3,830; decrease, 23. *Amount of circulation outstanding at date named as shown by the books of this office was $180,262,873, which amount includes notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under Acts of June 20, 1874, and July 12, 1882, for purpose of retiring circulation.

JAMES H. ECKELS, *Comptroller*.

CALIFORNIA BANK REPORTS.

The reports from all the banks under the jurisdiction of the State Board of Bank Commissioners for July 1, 1893, have been filed with those officers. For the past six years the returns of July 1 for the National banks have been incorporated in the report of the Commissioners through the courtesy of the officers of those banks, in order that the whole banking business of the State might be grouped in compact form. This year the National bank officers have been slow in forwarding their reports to the Commissioners; hence the National banks are not included. The figures are compared with those of July 1, 1892.

RESOURCES.	*Commercial*	*Savings.*	*Private.*	*July 1, 1893.*	*July 1, 1892.*
Bank premises........	$2,818,100	$2,766,020	$52,619	$5,636,739	$5,455,004

The number of live banks in the State on the the 1st July under the jurisdiction of the Commissioners compares as follows:

	1892.	*1893.*		*1892.*	*1893.*
State Commercial.............	156	168	Private..........................	17	15
Foreign Commercial..........	5	5			
State Savings....	54	60	Under Commissioners.....	232	248

There has been a net gain of twelve Commercial banks and six Savings banks and a net loss of two private banks in the last fiscal year. Should the four banks now in suspense resume, as expected, the net gain for the year would be 20 banks. Omitting the resources up in these four banks, the net gain in assets for the fiscal year has been in round numbers $9,000,000.

Organization of National Banks.

Editor Rhodes' Journal of Banking:

SIR:—In the law governing the organization of National banks it states that in cities of more than 50,000 inhabitants the capital shall be at least $200,000. Can you inform me if there is such a thing as getting a special permit from the Comptroller to organize with less than the stated minimum capital? SUBSCRIBER.

Answer.—The Comptroller of the Currency has no discretion in the matter whatever. The amount of capital required in the organization of National banks is arbitrarily and absolutely fixed by statute, and a bank with less than two hundred thousand dollars capital cannot be organized in a place of more than fifty thousand inhabitants.

It is within the discretion of the Comptroller, with the approval of the Secretary of the Treasury, to authorize the organization of a bank of fifty thousand dollars capital in a place of less than six thousand inhabitants. That is the only discretion imposed in the law; all else is arbitrary.

TREASURY DEPARTMENT,

BUREAU OF THE MINT,

August 16, 1893.

PROCEEDINGS OF CONGRESS.

In obedience to a proclamation of the President, Congress met in extraordinary session, Monday, August 7.

Several days succeeding the opening of the session were consumed in organization and preliminary work. Among the House committees appointed were the following:

Banking and Currency--Springer, Ill., Chairman; Sperry, Conn.; Cox, Tenn.; Cobb, Mo.; Culberson, Tex.; Ellis, Ky.; Cobb, Ala.; Warner, N. Y.; Johnson, O.; Black, Ga.; Hall, Mo.; Walker, Mass.; Brosius, Pa.; Henderson, Ill.; Russell, Conn.; Haughen, Wis.; Johnson, Ind.

Coinage, Weights and Measures—Bland, Mo., Chairman; Tracey, N. Y.; Kilgore, Tex.; Epes, Va.; Stone, Ky.; Allen, Miss.; Bankhead, Ala.; Rayner, Md.; Harter, O.; Coffeen, Wyoming; McKeighan, Neb.; C. W. Stone, Pa.; Johnson, N. D.; Dingley, Me.; Sweet, Idaho; Hager, Iowa; Aldrich, Ill.; Rawlins, Utah.

The first decisive step towards the repeal of the Act of 1890 was taken by the House on August 11, when Mr. Wilson, of West Virginia, introduced the following bill:

That so much of an Act approved July 14, 1890, as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371¼ grains of pure silver, and to issue in payment for such purchase Treasury notes of the United States, be, and the same is hereby repealed, but this repeal shall not impair nor in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the gold and silver coin of the United States, at the present legal ratio, or such other ratio as may be established by law.

In the Senate on August 14, Mr. Voorhees (Ind.), Chairman of the Committee on Finance, introduced and had referred to that committee a bill to provide for the issue of circulating notes of National banks. It reads as follows:

Be it enacted, etc., That upon any deposit already or hereafter made of any United States bonds bearing interest in the manner required by law, any National banking association which has made or shall hereafter make the same, shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations in blank, registered and countersigned as provided by law, not exceeding in the whole amount in circulating notes thus issued, the par value of the bonds deposited; provided that at no time shall the total amount of such notes issued to any such association exceed the amount at such time actually paid in as its capital stock.

Accompanying the bill was the following letter from Secretary Carlisle:

Hon. D. W. Voorhees:

MY DEAR SIR: Your favor of the 10th inst., enclosing form of a bill "to provide for the issue of circulating notes to National banks," and asking the views of the Secretary of the Treasury as to the advisability of its passage, is received. The enactment of such a law as proposed would enable the National banks to issue and put in circulation at once, on bonds already deposited with the Treasurer of the United States, about $19,000,000 in currency, in addition to the amount now authorized; and this, in my opinion, would afford a very considerable measure of relief to the country under existing circumstances. I therefore recommend the passage of the bill.

Respectfully yours, J. G. CARLISLE, *Secretary*.

In the Senate, August 16, Mr. Cockrell (Mo.) offered an amendment directing the Secretary of the Treasury to pay to the holders of 2 per cent. bonds who may present them for redemption their face value with accrued interest in United States legal-tender notes.

Mr. Sherman (Ohio) stated the objections which occurred to his mind against the amendment. The very moment that the Treasury notes were paid out on these bonds, which were not now due and the interest on which was no burden to the Government, the notes would be presented to the Government and payment in coin demanded. That would be an unbusinesslike proposition and would complicate the situation. The President of the United States had called attention, in clear and forcible language, to the fact that the Treasury notes issued under the Act of 1890, were presented for redemption in gold, and that that caused the first falling of the $100,000,000 gold reserve. The proposed amendment be regarded as a most dangerous financial proposition.

Mr. Cockrell ridiculed the objections made by Mr. Sherman, whom he spoke of as the great friend and patron of the National banks and as the great gold monometallist.

Why, he asked, should the National banks be allowed to increase their circulation by $19,000,000 on their bonds now deposited, while the Government itself could not issue greenbacks to redeem its two per cent. bonds?

In the House on the same day Mr. Bryan, of Nebraska, made a strong argument against the unconditional repeal of the Sherman law. He said that if the United States, the great silver-producing country, abandons silver, it will in all probability lead to the annihilation of silver as standard money throughout the world. The only law making any provision for the increased use of silver money is the Sherman law. The President has recommended its unconditional repeal. We are being dragged toward a universal gold standard—to a realm over whose door is written: "Abandon hope all who enter here." There is no such thing as an honest dollar, because an honest dollar would always have the same purchasing power, and the Government has never attempted to secure absolute stability in the dollar. The most dishonest dollar ever proposed is that child of avarice and ignorance called the gold dollar, for it would constantly rise in value and cheat the debtor. While we cannot secure an absolutely honest dollar, we should approach it as nearly as possible, and the bimetallic standard ought to be adopted, because with bimetallism the money unit fluctuates less than under a single standard.

In the Senate August 18 Mr. Voorhees (Ind.) reported from the Committee of Finance a bill to discontinue the purchase of silver bullion and declaring it to be the policy of the United States to continue the use of both gold and silver as standard money. The full text of the bill is as follows, omitting the enacting clause:

That so much of the Act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces or so much thereof as may be offered in each month, at the market price thereof, not exceeding one dollar for three hundred and seventy-one and twenty-five one-hundredths grains of pure silver and to issue in payment for such purchases Treasury notes of the United States, be and the same is thereby repealed.

And it is hereby the policy of the United States to continue the use of both and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts, and it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

Mr. Vest (Mo.) on behalf of the minority of the Finance Committee, presented a substitute for the bill. The substitute provides that each dollar shall contain 464.4 grains of pure silver and 516 grains of standard silver; that coins hitherto minted as well as Treasury notes issued under the Act of July 14, 1890, shall be withdrawn from circulation and exchanged, and that after the expiration of two years they shall cease to be legal tender. The final section repeals the purchasing clause of the Sherman Act. This is a bill that establishes the free coinage of silver at the proposed ratio of 20 to 1.

The bill for the increase of National bank circulation was then taken taken up and Mr. Allen (Neb.) advocated the adoption of the amendment offered by him to suspend interest on the bonds on which the increased circulation is based.

In his judgment the bill would commit the country to the policy of a continuance of the National banking system, and he believed that the time had come when safety required the overthrow of that system, and the wiping of it out of existence as speedily as possible. Nine-tenths of the people of Nebraska were, he declared, unalterably opposed to anything looking to the perpetuation of the national banking system.

Mr. Stewart (Nev.) declared that the Sherman Act must not be repealed until the whole question was investigated and discussed and the condition of silver as a money metal provided for. This was no time for the National banks to ask a further subsidy until every effort was made to relieve the country. If that effort was not made in good faith it would not be the fault of the silver men. They would agree to everything that would give relief. They asked no subsidy, no advantage, no change of policy.

Mr. Manderson (Neb.) opposed the amendment and favored the immediate passage of the bill. He totally disagreed with his colleague as to nine-tenths of the people of Nebraska being opposed to the national banking system, and he referred to the last report of the Comptroller of the Currency, showing that there were in that State 130 National banks with an aggregate capital stock of ten millions, and with deposits aggregating over twenty millions. As to the enormous profits which National banks were supposed to make on their circulation, Mr. Manderson gave figures to show how small the real profits are, and pointed to the fact that National bank circulation had declined from $362,000,000, its highest figure, to $172,000,000.

Mr. Pugh (Ala.) suggested that such being the fact, he could see no reason why the Government should not resume its proper constitutional power and issue all the currency the people needed in their business.

Mr. Wolcott (Col.) inquired what authority there was in law for the issue of clearing-house certificates in New York to the amount of $37,000,000.

Mr. Manderson did not believe that there was any. The banks had been driven to it by the necessities of the situation.

Mr. McPherson (N. J.) explained that these clearing-house certificates were not used as currency, but only to pay balances between the banks themselves.

After further discussion, a vote was taken on Mr. Allen's amendment, and it was rejected. Yeas, 11; nays, 39.

The debate on the repeal of the silver-purchase law was continued in the Senate August 22, Mr. Voorhees (Ind.) speaking in favor of repeal. Senator Voorhees is Chairman of the Senate Committee on Finance, and his remarks are therefore worthy of reproduction. Mr. Voorhees appears to believe that the financial crisis of 1893 was largely the result of a conspiracy on the part of the National banks to force an issue of Government bonds. In support of this theory he says:

The bitter and determined assault on the present Administration to compel an enormous issue of Government bonds had not gone unheeded by the American people, nor had the authors of the assault and those interested in its success escaped widespread and intelligent observation. By breaking the gold reserve it was supposed the Secretary of the Treasury would be under the immediate necessity to issue and sell bonds to keep the reserve intact. The attack, therefore, on the head of that column was swift and strong. With intervals of delay for ample and skillful preparation, these attacks have been repeated again and again, and have only slackened in their frequency and force since it was found that the Executive Department could not be coerced in that way. The campaign of capitalists seeking a new supply of interest-bearing Government bonds did not confine itself to any one point of assault while it operated to break down the gold reserve and to that extent impair the public credit. The capitalists startled the country and thrilled the world with the cry that American gold was running away from the silver blasted country, chased out by silver money, and that there was no way to lure it back except to bait plentifully with Government bonds. The Sherman Act was made to do double duty, and was charged with grave offences in which it had no part. He never believed that our silver had driven gold from the country, and in this connection he recalled the wail of dismal phophecy that went up when, in 1878, the attempt was made to check the torrent of bankruptcy and ruin occasioned by the demonetization of silver in 1873. It was predicted that gold would fly to the uttermost parts of the earth from beneath the folds of the American flag to escape the contamination of silver. What did occur? The Government coined twenty millions of silver per year for twelve years, and meantime the gold in the United States increased at the rate of forty millions per year.

Such was the fulfilment of the prophecy of 1878, and yet he now was expected to believe that the free coinage of silver at a proper ratio would banish all our gold and put us on a single silver basis. He must be pardoned for believing nothing of the kind. The gold shipments were to be accounted for as part of the plan to sack the Treasury which was to be accompanied by a concerted outcry from the terror-stricken business circles and from the whole National banking system, that nothing could restore confidence and credit save the issuance of $300,000,000 in bonds. He had no desire to assail the National banks. It was a system he arraigned and not the individuals who conducted it. The unrestricted, unrestrained and unbridled power of these banks, whereby the circulation of money in the hands of the people can be, and often has been, suddenly fluctuated from a prosperous maximum to a stunned and distressful minimum, constituted a standing and a frightful menance against the safety, the welfare, and the hapiness of the greatest and most useful body of the American people.

In this connection, another great evil arising from the selfish and greedy instincts from the money power demanded thoughtful attention. On general principles, the contraction of the currency throughout the whole country was an object eagerly sought by that limited but powerful class of people who control four-fifths of the wealth and nearly the entire volume of the circulating medium of the United States. The power of the millionaire over the property, the labor, and the very lives of the people depends not merely upon the great sums in his own coffers, but equally as much, and far more, on the fact that the great industrial classes had scarcely any money at all in their hands, and were deprived of every reasonable chance to obtain more. A condition of the two extremes of vast consolidated wealth on one hand and absolute poverty on the other—both very dangerous—was rapidly culminating in this country.

NATIONAL BANKING SYSTEM CONDEMNED.

Turning to a discussion of the National banking system, Mr. Voorhees asserted that the banks were entering on a final fight for a prolonged future existence; they were engaged at their Quatre Bras, preliminary to their Waterloo. They intensely realized that the present supply of Government bonds for banking purposes must be very largely increased within the next five years, or they would be forced to commence winding up and retreating from the theatre of action in which they have so long appeared. Fourteen years hence, in 1907, the last bond on which the banks had issued their currency would have been redeemed and cancelled. Long before this the question of a perpetuation of the National banking system would be pressed peremptorily upon Congress. In view of the recent action of the banks, Congress could not too soon consider what system the Government should adopt in the near future in furnishing a circulating medium to the people. Was there a friend of the National banks bold enough to announce his belief that the tax-paying American people would consent to the indefinite continuance of an immense interest-bearing bonded debt merely for the sake of upholding such a system as we now have?

The Senator then proceeded to outline his idea of what was to follow the National Banking System, and said that when the Democratic party declared in its National platform for the repeal of the Government tax on the issue of State banks, a hue and cry was raised by Republican leaders, as if a public enemy under arms was about to invade the country. Investigation of the subject, however, showed that no one had ever lost a dollar by the depreciation of the notes of a regularly chartered State bank or its failure to redeem its currency in gold or silver when called upon to do so. It was this kind of a circulating medium, resting on a specie basis, and always redeemable, that was driven out of existence by a spurious, insincere mode of taxation for the benefit of the National banks. Mr. Voorhees denied the constitutionality of the 10 per cent. tax on State bank circulation, even though a majority of the Supreme Court had reached such a conclusion, and argued for the right of the State to provide its people with a circulating medium through the agency of State banks. Supposing that this State bank tax had been repealed, Mr. Voorhees asked, what, in that event, should Congress do? He did not expect the Government ever to abandon a National currency, though it would abandon the system of National banks, but he did expect at no very distant day that United States notes, such as are now and have been in existence for thirty years past, their payment guaranteed by the honor of the Government, would supersede all other National money except gold and silver; and that without jar or friction they would circulate in the hands of the people alongside of the well-guarded, safely secured currency issued by the States and guaranteed according to the Constitution by both the precious metals.

Meanwhile it should be the plain duty of the Federal Government to issue its own unassailable notes by retiring much of its present outstanding currency, and also by the payment of its debts, and to issue them in amounts equal to the requirements of trade as nearly ascertained as possible, bearing within the breath of national life, honored in every village and hamlet in the American Union; uniform in value from Maine to Alaska, and their faces as well known as the flag, wherever flies that emblem of the power and glory of a united and fraternal people. Those who lived to witness the adoption of this policy would look upon the safest, strongest and most beneficial system of finance ever before known in American history. It had in it these elements:

(1) A sufficient volume of currency at all times, State and National, on practically a specie basis, guaranteed also by public honor.

(2) The absolute denial and destruction of all power in the hands of individuals,

corporations or syndicates to cause fluctuations in amount of the different currencies in circulation.

(3) Every dollar in circulation, whether gold or silver, State-bank paper or United States notes, on a strict parity and interchangeable with every other dollar.

(4) The settlement of the vexed question of silver money at once and forever by authorizing it to form its portion of the specie basis required by the Constitution for every chartered bank in the Union; by recognizing it when defining the power of the States to make legal tender money, thus making the use of silver, coined into money, as imperative as it will be useful to the great body of the people.

(5) The total and complete overthrow of the dangerous centralization of the money power.

To these five propositions he added but one more—a carefully adjusted and graded income tax—a most equitable and upright measure in providing Government revenue and demanded by old-fashioned, eternal justice.

The resolution offered by Mr. Peffer (Kan.), inquiring of the Secretary of the Treasury as to the conduct of National banks in refusing to pay promptly in currency the checks of their depositors, was taken up by the Senate August 24, and a motion to refer it to the Committee on Finance was made by Mr. Hoar (Mass.), who said that in a time of popular distress and panic the Comptroller of the Currency should not be compelled to drive the National banks up to the strict letter of the law. The President had appointed as Comptroller of the Currency a man believed by him to be a clear-headed, capable man, who had not been a banker or speculator or dealer in credits; and this officer had not thought it best, whenever any National banks had failed to comply with the strict and extreme letter of the law in dealing with their customers, to bring them up to the rack.

Mr. Voorhees (Ind.), Chairman of the Finance Committee, favored the reference of the resolution, and promised that it would not be buried in the committee.

Mr. Kyle (S. D.) argued against the reference, which, he said, would only mean the burying of the resolution.

Mr. Hill (N. Y.) opposed the reference, and insisted on the adoption of the resolution directly by the Senate. He did not assume that the Comptroller of the Currency had violated the law, although the Senator from Massachusetts (Mr. Hoar) had said that it was likely or probable that that officer had in some slight and trivial respect violated the law of the land.

Mr. Hoar denied having said anything of the kind.

Mr. Manderson (Neb.) was not prepared to say that the technical violation of law by the National banks of Boston, New York and Philadelphia was not justifiable in the present deplorable condition of the country, but he did not agree with the Senator from Massachusetts that it was well to cover up from the knowledge of the people what course was being pursued by the banks.

Mr. Gorman (Md.) argued in favor of the reference of the resolution. For the third or fourth time, he said, during the present monetary system, a point had been reached where the National banks were a failure, so far as their power to relieve the condition was concerned. It had been reached in 1873, 1877, 1887, 1890, and now in 1893. At these periods it was utterly impossible for the banks to comply literally with the law. They had violated it by refusing to pay checks of depositors, and had issued clearing-house certificates.

Mr. Washburn (Minn.) said: It seems to me that if this resolution be adopted it will be a notice to the Comptroller of the Currency to administer the law literally and technically. The result of that will be to close every bank in the country and place it in the hands of a Receiver.

Mr. Allison (Iowa) criticised the phraseology of the resolution and suggested modification of it. As to the clearing-house certificates, he regarded them as somewhat irregular, but yet he had been told that they did not circulate as money and were not so intended. If that were so, they might be within the letter of the law, though without the spirit of the law.

Mr. Hoar made an argument against Mr. Butler's amendment to the National bank circulation bill, repealing the ten per cent. tax on State bank circulation. He said he was opposed to restoring to State banks the powers of issuing, circulating, and furnishing currency. The people of the country were entitled to have a currency every dollar of which should be equal to every other, and which should be unchanging in value, so far as the wit of man could bring that to pass. That currency should be National. It was the function of the National Government to see that it was provided. It never had been and never would be provided by the States. He desired to relieve the distress of the people by authorizing the additional use of National bank notes, which were secure and safely guarded, and every dollar of which would be as good as a gold dollar in the pockets of the people, and by a prompt repeal of the purchasing clause of the Sherman Act. He was also willing to take measures in concert with other commercial countries for restoring silver to its proper and permanent place in the service of mankind.

The debate on the repeal of the silver-purchase Act was continued in both houses on the 25th. Mr. Hill (N. Y.) spoke in the Senate in favor of repeal and Mr. Stewart, (Nev.) in opposition.

SENATOR VEST CRITICISES SECRETARY CARLISLE'S RECOINAGE FIGURES.

Mr. Vest (Mo.) said that he assumed, from the zeal manifested by the advocates of the unconditional repeal of the Sherman Act that the great thing to be desired in the interest of the American people was a parity between the two metals, and that the commercial ratio should be, as far as possible, the same as the ratio established by statute. The commercial ratio had been up to within a few days 28 to 1, while the legal ratio was 16 to 1; and he took it for granted that if there was to be an honest attempt to bring the two metals together in order to redeem the pledges of the two great National parties and of the Administration, there should be coinage of gold and silver on a parity.

Now it seemed that the question of expense was to be injected into the discussion, and that, leaving the great and absolute necessity of parity, Senators were to enter into an examination of the number of dollars that the change of ratio would cost. He had made a short and analytical statement of the account between silver and the Government at this time. It showed the profit of the Government under the Bland-Allison Act of 1878 as, in round numbers, $70,000,000, and the profit under the Sherman Act of 1890 as $58,000,000, the total profit being $128,000,000. The uncoined silver in the Treasury was 183,000,000 ounces, and the profit on that was $57,000,000. The number of ounces necessary to recoin the silver dollars now coined was 81,000,000, and the number necessary to recoin the subsidiary silver coins 19,000,000, in all 100,000,000. If this quantity of silver bullion were taken from the uncoined silver in the Treasury on August 16, there would still be left of uncoined silver in the Treasury 83,000,000 ounces. His summing up of the account was: "Silver, debtor side, $112,865,321; credit side, $128,133,314; balance in favor of silver, $15,267,993.

If the Secretary of the Treasury, Mr. Vest continued, meant to put the question fairly to the American people, why had he not told the Senate what he proposed to do with the vast amount of silver now uncoined in the Treasury when the purchasing clause of the Sherman Act was repealed? Was that silver to be there, a menace to bimetallism for all time to come? Or did the Secretary propose to coin it and hold it in the Treasury as dollars? The Secretary had assumed that the Government was to purchase the silver necessary to make good the ratio of 20 to 1, and at the same time logically to leave uncoined the silver bullion now in the Treasury.

On the 26th ult. the debate in the House was participated in by Messrs. Reed (Me.), Cockran (N.Y.), Allen (Miss.) and Bland (Mo.).

Mr. Cockran (N. Y.) said that the banks of New York were largely indebted to their depositors. He instanced the National Park Bank which had deposits to the amount of $34,000,000 and loans to the amount of $25,000,000. That meant that it owed $9,000,000 to its depositors. But the effect of the Silver-Coinage bill would be to make a present of $21,000,000 to the banks of New York and to cut down the wages of toil 45 per cent.

The gentleman from Missouri (Mr. Bland) spoke of the return of gold to this country; and I remind that gentleman of the way in which the gold was brought back. How are we getting the gold back? How, friend of the farmer? By the export of wheat. In three months of 1892 we exported 28,000,000 bushels of wheat and received $27,000,000 for it. In the same three months of this year we exported 32,000,000 bushels of wheat and received $24,000,000 for it. That is to say that $4,000,000 more bushels of wheat brought back $2,500,000 less. You cannot bring back gold by the promissory notes forced into circulation by the operation of the Sherman Act. The only method by which it can be brought back is by the sale of our produce.

Mr. Bland (Mo.) followed Mr. Cockran. He (Mr. Bland) did not defend the Sherman Act, and if he could put in its place a provision for the free coinage of silver at a ratio of 18 to 1, he would vote for its repeal. He saw no reason whatever for changing the existing ratio of 16 to 1. The production of gold and silver for the last 100 years had been at the ratio of about 15½ to 1, and that was the ratio of the silver coinage of the different nations of the world.

Mr. Warner, of New York, inquired whether the banks of New York had not reduced their reserves, in order to meet the demands of the South and West, lower than the banks of the West and South had done.

Mr. Bland replied that the gentleman could put his statistics as he pleased, but it was notorious that the money in the banks of New York could not be drawn by Southern or Western banks. The silver men in the House had offered several compromises; if those compromises were rejected, there would never be another compromise offered.

The bill offered by Mr. Wilson (W. Va.) to repeal the purchasing clause of the Act of July 14, 1890, was put upon its passage in the House August 28, and was adopted by a vote of 240 yeas to 110 nays.

The Wilson Act passed by the House has gone to the Senate where a substitute has been offered by Senator Voorhees and is now being discussed, with probabilities of early adoption. In the course of the debate able speeches were made by Messrs. Sherman (Ohio), Peffer (Kans), Wolcott (Colo.), and Hendrix (N. Y.), an ample report of which will appear in a subsequent number of the JOURNAL.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

Praise for New York City Banks.—The financial skill displayed by the banks of New York city in meeting the late financial crisis has called forth many expressions of approval from both American and foreign financiers. The JOURNAL can only find space for a few of these.

G. G. Williams, President of the Chemical National Bank, and President of the New York Clearing-House Association, laid before the Loan Committee of the Clearing-House the following letter September 7:

G. G. Williams, Esq., Chairman of the New York Clearing-House:

MY DEAR MR. WILLIAMS:—I received a letter yesterday from the Hon. William Lidderdale, late Governor of the Bank of England during the Baring troubles, in which, after dealing with the purpose of his communication, he alludes to our financial matters and the course pursued by the New York banks as follows:

"The worst of your financial crisis has, I trust, been passed. In severity it seems to me to have far exceeded anything seen in the present century in the United States. The New York banks have, I think, shown financial management of a very high order, conspicuously so in the way they have stood shoulder to shoulder and supported credit. They have set a good example in this last respect to our bankers here, one which I trust will bear fruit."

Believing that a knowledge of Mr. Lidderdale's appreciation (which I consider an endorsement of the highest character) of the action taken by our banks under very trying conditions will be very gratifying to you, is my reason for sending you the above extract. Yours very truly, A. E. ORR.

NEW YORK, September 6, 1893.

The President of each of the banks of the New York Clearing-House Association has received copies of the following resolution, adopted by the Governing Committee of the New York Stock Exchange:

DEAR SIR:—The New York Stock Exchange, through its Governing Committee, desires to thank the Associated Banks of the City of New York for their able administration of financial affairs during this period of unprecedented disturbance. The promptness with which the gravity of the situation was realized and the efficiency of the means adopted for lessening the disasters which threatened the financial world have excited respect and admiration. It is difficult to estimate the value of the services thus rendered to the business interests of the United States, but we feel sure that these services will be appreciated and that the financial supremacy of New York will be strengthened and assured by the management of those in charge of its banking institutions.

The New York Stock Exchange begs to assure the Associated Banks of the City of New York that its members are deeply conscious of their indebtedness to those institutions and that no effort on the part of its members to assist in perpetuating the present wise and able policy will be lacking. Faithfully yours, F. K. STURGIS, *President.*

NEW YORK, Sept. 6, 1893.

The Security Loan and Trust Company, of Des Moines, Iowa, has written to its correspondents in New York stating that it thoroughly approved the action of the New York banks.

Among the many who bear testimony of the course taken in New York is the Omaha Clearing House, which has forwarded copies of the following resolution:

Resolved, That the Omaha Clearing House Association hereby approves the course taken by the New York city banks during the financial crisis through which we are passing, and, believing, as we do, that the course adopted by the Comptroller of the Currency and the New York banks has been wise and of inestimable service to the whole country, and has prevented what would have otherwise resulted in widespread disaster, this association exceedingly regrets that Congress should propose taking action implying criticism of the methods employed.

In addition to this the Omaha Clearing House Association writes that all the bank officials of that section of the country have earnestly memorialized Senator Allen of

Nebraska to vote against the resolution, seconded by Senator Hill, which proposed the investigation of New York banks for alleged technical violations of the National Banking Act.

The National Bank of Commerce of Kansas City has sent out the resolutions of the Kansas City Clearing House, in which thanks were voted to the banks of New York city for having saved the country from a "universal disaster."

The Seattle (Wash.) Clearing-House Association has answered Western criticism of the banks of New York in these words:

Resolved, By the associated banks of the city of Seattle, that the course of the New York city banks during the recent crisis, in which they were sustained by the Comptroller of the Currency, should be commended by the people of the United States as wise, patriotic and of the widest popular benefit, preventing disaster and annoying alarm.

—Receiver James G. Cannon, who is in charge of the affairs of the closed Madison Square Bank said recently that his men were still working on the books, and that he would not be ready to issue a further statement to depositors for several weeks.

— At a conference held August 28 by the Hon. James H. Eckels, Comptroller of the Currency, with David McClure, of New York city, Receiver of the National Bank of Deposit, it was decided that the Receiver would be able to pay to the depositors by September 30 a dividend of 25 per cent., and he was authorized to prepare for the payment. This is the second dividend, the first of 40 per cent. having been declared in July last, within one month of the Receiver's appointment, and paid. This declaration, in so short a time, and during the present financial condition, of dividends aggregating 65 per cent. of the deposits, speaks well for the energy and effectiveness of the Receiver.

— The notices of withdrawals of deposits from Savings banks, given during the late scare among depositors, are being largely cancelled and a decidedly easier feeling prevails. The rule requiring sixty days' notice will probably be kept in force for some time longer.

— The Bank of New York sent the following notice to its customers August 17: "Will you kindly have all checks which you may draw upon this bank plainly stamped across the face, 'Payable only through the New York Clearing House.'"

— P. J. Claassen, sentenced in 1891 to six years' imprisonment for aiding in wrecking the Sixth National Bank, was pardoned by President Cleveland August 10.

NEW ENGLAND STATES.

Boston.—The Boston Five Cents Savings Bank has given notice to depositors that as the financial conditions are much improved, the bank is now ready to anticipate payments of withdrawing depositors within the next few weeks.

—A firm of London capitalists, through Brewster, Cobb & Estabrook, recently asked the city Treasurer what part, if any, of $1,000,000 worth of city of Boston bonds they could have and at what premium. The Treasurer consulted with Acting Mayor Lee and later the Boston brokers were informed that out of the $1,000,000 loan advertised July 27, and which went begging at that time, the city has since sold about $600,000 and consequently at the present time the city has but about $400,000 to sell out of the advertised loan. The brokers were told that the city would sell Londoners these $400,000 bonds at the same figures that the city was receiving over the counter, the registered bonds at par and the coupons at a premium of 2 per cent. Acting Mayor Lee wrote to Mayor Matthews asking whether he would authorize the issuance of another $1,000,000 loan to provide sums already appropriated. It is probable that Mayor Mayor Matthews will order the issuance of another $1,000,000 loan for the City Hospital, for the maintenance of streets and for street widenings.

—The city auditor's monthly exhibit shows that the gross debt of the city on Aug. 31, 1893, was $52,897,544, and the net debt of the city on the same date $31,685,627. The city and county debt together is $35,455,770.

—City Treasurer Turner has disposed of all the City of Boston coupon bonds he offered for sale at his office, and has only remaining unsold $300,000 of the twenty-year registered bonds and $700,000 of the Temporary Loan six per cent. certificates in anticipation of taxes payable in two, three and four months for those who desire the City of Boston securities. He sold $500,000 of all classes of city securities in two days.

Losses of Fall River Banks.—A sensation was caused at Fall River, on the 31st ult., by the publication of a statement that several banks which have discounted notes secured by bills of lading for Cotton Broker W. H. Hathaway, who for a score of years has been one of the largest factors in this city, have as yet failed to find the cotton represented by many of the bills of lading. Investigation into the affair is now in progress. The amount the several banks are involved is $107,000. Five bank sare said to be concerned, as follows: First Nat. Bank, $25,000; B. M. C. Durfee Trust Co., $25,000; Massasoit Nat. Bank, $24,000; Union Nat. Bank, $19,000; Pocasset Nat. Bank, $14,000. Mr. Hathaway refused to make any statement. An examination into Mr. Hathaway's affairs began some weeks ago when his actions began to attract attention in the banking community. As a result some securities which were held by other banks than those indicated, were either withdrawn or made good enough to satisfy complaining directors.

A complaint for forgery was made Sept. 5, against Welcome H. Hathaway, the cotton broker, and he was arrested.

Spurious Small Bills.—Owing to the prevailing scarcity of currency it has been discovered that counterfeiters have taken advantage of this condition to float a large number of spurious $2 and $5 silver certificates. The banks of Hartford, Ct., have issued the following description of the $5 certificate which is by far the most frequently found: Small scalloped seal, which is excellent both in color and execution; color treasury number also good, but figures irregular. Portrait of General Grant poorly engraved and has a moth-eaten appearance. It is estimated that there are several thousand dollars' worth of this money afloat in that city and the banks are taxing extra precaution in examining bills received. The bills are among the best ever seen and can only be detected by experts.

Hartford (Ct.) Savings Banks.—The officers of the four Hartford Savings banks have decided to resume paying depositors without notice after September 11. They consider that confidence has been restored and that there will not be any runs. Since August 1, when the 60-day notice rule went into effect, notices of withdrawal of $360,000 have been filed.

Silver Found in Massachusetts.—According to the Boston "Evening Transcript," a vein of silver ore has been discovered at Malden. The discoveries are not thought to be valuable enough to make Massachusetts a free-coinage State!

MIDDLE STATES.

Philadelphia.—The Spring Garden National Bank building, which was purchased by Charles C. Harrison, will shortly be reopened as a bank. All the stock has been taken. The new bank will be conducted by men of acknowledged integrity, as well as banking experience.

- John B. Harper, who has been connected for over twenty-five years with the Southwark National Bank, has been elected President of that institution, succeeding the late Peter Lamb, who, at the time of his death, was acting President, and Ferdinand N. Bonnaffon, one of the directors, has been elected Vice-President, and Clarence H. Speel, formerly Paying Teller, has been appointed Cashier.

—The presidents of a number of National banks are taking steps toward having Philadelphia made a central reserve city, as are New York, Chicago and St. Louis.

SOUTHERN STATES.

Jacksonville (Fla.) Banks.—The Jacksonville Clearing Association representing four National and two State banks, has been in existence about a year and has proved a pronounced success. For the year ending July 31, 1893, the total exchanges were $2,058,747,690; total balances, $375,887,999. Total business transacted during the year, $24,346,356. For a city of 20,00 inhabitants this shows healthy condition of trade.

Money Plentiful in Savannah.—The banks of Savannah have sufficient currency to handle the cotton crop now being received. An offer was made to send any amount from New York and Boston that might be needed, but was declined. Savannah banks are meeting every response upon them promptly without any aid.

Carolina Savings Bank.—This bank, located at Charleston, S. C., notifies its bank correspondents that in order to facilitate the movement of the rice and cotton crops, it has decided to issue its checks in denominations of $5, $10 and $20, to take the place of currency until money shall become easier.

A Prosperous Southern Bank.—The First National Bank, Statesville, N. C., recently increased its circulation $9,000. This bank has not found it necessary to contract its loans on account of the recent general financial distrust.

WESTERN STATES.

Comptroller Eckels Sustained.—Comptroller Eckels is informed that the Court has sustained him in the position he took in the case of the Washington National Bank of Tacoma, Wash. The bank, which suspended some time ago, was in the hands of a bank Examiner. The bank officials desired to resume, but the condition of its finances was such that Comptroller Eckels would not give his permission. The bank officials then tried by applying to the court to take the bank out of the hands of the Comptroller. Being informed of this action, Mr. Eckels placed the bank in the hands of a Receiver. While the bank was still in the Receiver's hands, the court denied the application of the bank officials. The decision is regarded as important, sustaining the right of the Comptroller of the Currency as it does to the sole control under the law of the National banks of the country.

Illinois State Banks.—The Auditor of Public Accounts has made a statement of the condition of the State banks. There are now 125 banks, an addition of ten since April 10. Since that date the aggregate resources, including aggregate loans and discounts, have decreased $16,000,000. The deposits have been reduced about the same amount, or from $85,000,000 in April to $69,000,000 in July. The aggregate reserve in proportion to the deposits is much stronger, showing the general condition to be unusually good on April 10. The available cash was $28,528,208.73, or about 28 per cent. of the deposits, while on July 25 the available cash amounted to $24,069,714.39, or 35 per cent., which is between 12 and 15 per cent. larger than the auditor usually requires.

St. Paul National Bank.—According to the statement of July 12 this bank had a reserve, including secured demand loans, of $401,791 against deposits of $663,006. In a recent letter to the JOURNAL the Cashier says: "We have been able to reduce our deposits between $300,000 and $400,000 with a constantly increasing per cent. of reserve and have done this without cramping a customer. It is a remarkable fact, but fact just the same, that no country correspondent of ours has suspended. Our correspondents are carefully selected and we show our confidence in them at this time by keeping a fair per cent. of our reserve with them."

A Kansas Bank to Resume.—The First National Bank of Cherryvale, Kansas, which suspended July 15th, has advices from the Comptroller of the Currency that it will be given every opportunity to resume business. The officers are engaged in making contracts with the depositors by which they agree to accept certificates running three, six, nine and twelve months at 6 per cent. interest. Depositors are coming forward and signing, and the list will no doubt be completed shortly. The liabilities are $48,000 and assets $98,000. A resumption of business has been authorized by the Comptroller.

Kansas Bank Regulation.—A circular recently promulgated by the State Superintendent of Banking of Kansas contains the following: "To the State banks of Kansas: Please take notice that hereafter you will not be permitted to make loans to your stockholders who are unable to give security other than their stock in the bank. In making loans to stockholders you will require the same security that is required from other borrowers. All loans secured alone by the stock of your bank will, after August 1, 1893, be considered as worthless and must be charged off."

Kansas City, Mo.— Business men and bankers are unanimous in their opinion that the low point in the present financial depression has been reached and that the upward movement has begun.

Bank presidents estimate that the banks have gained over $2,000,000 in deposits since the run in July.

— The National Bank of Kansas City, which suspended a short time ago, has decided to resume business in the near future.

A Utah Bank Reopens. - The Commercial National Bank of Ogden, which closed its doors July 7 on account of a deficit in the accounts of about $70,000, alleged to have been embezzled by ex-Cashier Oscar E. Hill, resumed business September 7. The bank has on hand 50 per cent. more than is subject to a check.

Louisville, Ky.—The Louisville City National Bank, which temporarily suspended payment July 24, announced a resumption of business August 30. In granting authority to resume, the Comptroller, under date of August 17, said: "It appears from the Examiner's report that your bank is perfectly solvent, and after all probable losses estimated at an outside figure have been charged off, there will still remain about $60,000 surplus and undivided profits on hand over and above its capital stock."

Kansas Banks Resume.—The First National Bank of Fort Scott which suspended July 18, resumed business August 16. Bank Examiner Latimer of Sedalia, who has been in charge since it closed, has issued a notice to depositors saying that the institution is in good financial condition.

The Armourdale Bank at Armourdale, which suspended business July 15, re-opened its doors and resumed business August 16.

St. Paul, Minn.—The People's Bank, which suspended August 4, resumed business on August 23. The creditors of the bank gave an extension of time in accepting certificates of deposit payable in three, six and nine months with 4 per cent. interest.

The West Side Bank and the National German-American Bank will also resume.

First National, Albuquerque, N. M.—An error telegraphed from Washington, D. C., and supposed to have originated in the Comptrollers's office, caused this bank to be reported in the August JOURNAL as in the hands of a bank Examiner July 5. There was no ground whatever for the statement, as the bank did not suspend, nor has it been unfavorably affected by other local suspension.

Suicide of a Cashier.—M. J. Bofferding, Cashier of the Bank of Minneapolis, Minn., committed suicide September 7 by shooting himself. It is supposed that he took his life because of sensitiveness over the absconding of Paying Teller Phil. M. Scheig a few days before with $15,000 of the bank's money. President Kirby, of the bank, declares that Bofferding's accounts are perfectly straight.

A Colorado Bank Reopens.—The First National Bank of Rico, Colorado, which supended payment June 30, 1893, having complied with the conditions imposed by the Comptroller of the Currency, and its capital stock being unimpaired was permitted to reopen its doors for business August 16.

A Wisconsin Bank Reopens.—The Bank of Ellsworth, Wis., which temporarily closed on August 17, re-opened on the 26th. Its statement shows a satisfactory condition—resources of $107,107 and liabilities $87,620, a balance of $20,000 on the right side.

Denver.— The National Bank of Commerce, the Union National, People's National, State National and German National, which suspended a short time ago, have all resumed; in every case deposits received have been greatly in excess of withdrawals.

A Pueblo Bank Resumes.—The American National Bank of Pueblo, which suspended payment July 5, resumed Sepembter 6. Their day's business resulted in a net gain of $62,000 in cash for the bank, no withdrawals of deposits having been made.

Evanston (Ill.) National Dividend.—The depositors of the defunct Evanston National Bank received a notice August 15 that a dividend of 30 per cent. would be paid in Comptroller's checks on the United States Sub-Treasury in New York.

A Cashier Killed.—A. T. Blachly, Cashier of the Farmers and Merchants' Bank, Delta, Colo., was killed by robbers September 7. Two of the robbers were killed, and $1,000 of money stolen from the bank was recovered from their bodies.

PACIFIC SLOPE.

Puget Sound National Bank.—The Puget Sound National Bank, of Seattle, has been granted permission by the Comptroller of the Currency to increase its capital stock from $300,000 to $600,000. The bank was organized with a capital of $50,000.

CANADA.

Toronto Stock Exchange.—The Toronto Stock Exchange held its annual meeting recently. Officers were elected as follows: President: J. Stark; Vice-President, J. W. Beatty; Treasurer, A. E. Ames; Secretary, C. C. Baines; Committee: R. S. Cassels, H. M. Pellatt and H. L. Hime; Auditors, F. J. Stewart and J. K. Niven.

American Bankers' Association.

The Executive Council of the American Bankers' Association has decided to hold the Convention of the Association at Chicago, Ill., Wednesday and Thursday, October 18th and 19th, proximo. The Convention was to have been held September 6th and 7th, but was postponed on account of the abnormal state of financial affairs existing at that time.

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

BUSINESS DONE WITH CHECKS.

Editor Rhodes' Journal of Banking:

SIR:—In criticising the recent letter of Ex-Senator Henderson, of Missouri, on the monetary situation, the Philadelphia "Manufacturer" says:

"He urges the preposterous theory that 95 per cent. of the business of this nation is done with bank checks. * * * He would also know, if he is fit to be a teacher, that only the wholesale business of the nation is done with checks. The retail business, which absolutely creates the wholesale business, as brooks and rivulets create a river, is all done with actual money, and it is active just in the ratio that the supply of actual money is large or small."

I think that a more careful reading of what Mr. Henderson said will show that he was referring to the larger exchanges that are made through the medium of bank checks, while freely admitting that the smaller exchanges of commodities are effected by the use of actual money or money tokens.

Here is the way Mr. Henderson puts it:

"There is no error of more common prevalence than that the abundance of money issues necessarily adds to the commercial or business energy of a people. Of course, a certain amount of money tokens are absolutely essential with which to effect the smaller exchanges of commodities. These money tokens do not create exchanges, but the exchanges create the necessity for the tokens. Money tokens do not grow wheat and corn, nor manufacture cloth, nor operate railroads, nor sail ships. Labor and skill do these things; and among a people entirely civilized over 95 per cent. of the exchanges necessary in these operations are consummated through the medium of bank checks."

In this statement, that "among a people entirely civilized over 95 per cent. of the exchanges necessary in these operations are consummated through the medium of bank checks," Mr. Henderson was manifestly referring to the larger business operations of the nation, as reflected through the exchanges of the bank clearing-houses of the country, which, as reported from sixty-seven of them in as many different cities, now aggregate over 1,000 million dollars a week, or over 31,257 million dollars for the first half of this year. For the substantial accuracy of his statement Mr. Henderson has no less eminent authority than Mr. George S. Coe, who, in an address before the American Bankers' Association in 1876, said: "The fact is well known that nearly 95 per cent. of all exchanges of commercial commodities are performed without the presence or manipulation of any money whatever, and the highest moral condition of society most dispenses with its use. This is shown by the clearing-house figures both in London and New York, in which there is striking uniformity."

A remarkable corroboration of Mr. Coe's statement was given by an equally high authority, the late John Jay Knox, who, in 1881, when Comptroller of the Currency, in an address before the same association, gave as the results of his inquiries of the then 2,106 National banks of the United States, that the receipts of 1,966 of them upon a given day [June 30, 1881,] were 284 million dollars, of which .65 per cent. was in gold, .16 in silver, 4.06 in paper currency, and 95.13 in checks and drafts. The percentage of checks and drafts received by the banks in the city of New York was still greater, being 98.70. Later Comptrollers have obtained like results, which are published in their annual reports. Occasionally the proportion of cash to checks and drafts has been somewhat greater. For instance, a report for July 1, 1890, from 3,364 banks, showed that of nearly 422 million dollars of receipts upon that day .89 per cent. was in gold, .32 in silver, 6.29 in paper currency, and 92.50 in checks and drafts.

"That only the wholesale business of the nation is done with checks," and that "retail business . . . is all done with actual money," as broadly stated by you, I think can be clearly shown to be an error [unless we greatly differ as to the meaning of the terms wholesale and retail] as the experience of banks or institutions doing a banking business will undoubtedly show that by far the greater number of checks drawn upon them are for sums of less than one hundred dollars, and it will hardly be

6

claimed that such checks have only been used in wholesale business. In fact, it would need but a slight examination by the bankers of the country to show that the majority in number of all the checks passing through their hands represent only one or more of the small transactions of life, and the constantly increasing extent to which they thus take the place of actual money in passing from hand to hand, while to some extent realized by bankers, is beyond computation, even wages now being paid by railroad companies and other large concerns in checks. Inquiry of a number of banks and trust companies of this city shows that 69 per cent. of the whole number of checks handled by them for a given period was for sums under one hundred dollars, and a very large proportion of these was for less than fifty dollars; in one case 65 per cent. of the whole number of checks handled by the bank was for sums less than fifty dollars. Some conception of the extent to which small checks take the place of specie and paper currency might however be obtained by the Comptroller of the Currency from the National banks of the country and the information would be particularly valuable at this time. WILLIAM H. RHAWN.

PHILADELPHIA, September 1, 1893.

IMPROVEMENT OF THE CURRENCY SYSTEM.

Editor Rhodes' Journal of Banking:

SIR:—The present unsettled financial condition of the country is charged to the Sherman bill of 1890, and while this may be true in a great degree, there are other causes—the uncertainty of the position of the Administration on the tariff and other questions, and the lack of sufficient circulating medium to carry on the business of the country.

In our present circulating medium, we have legal-tender notes, National bank notes and gold certificates, all redeemable in gold coin—good so far as it goes, but when we reach silver we find an unstable currency in the present debased condition of that metal, subject to rapid fluctuations, and drawing largely for its redemption on the gold-bearing securities, thereby disturbing trade, crippling our finances, and bringing on panics and disasters.

In this state of affairs why not repeal the Sherman bill of 1890, the Government to *purchase* and accept on *deposit* silver *bullion* at its market value in gold, issue therefor at 90 per cent. of its market value, certificates as at present redeemable in gold coin or bullion of market value, and at periods of depreciation reduce the certificates by cancellation or increase the deposit in the same ratio, the same as the National banks are required to do, and authorize National banks on a deposit of 25 per cent. of their paid in capital, either in gold or silver bullion or coin, to continue the present National bank system and otherwise subject to present requirements of law; and in addition, holding the assets of the banks for the redemption of their circulation. I offer these suggestions as an amendment to the present banking laws. Also repeal the ten per cent. tax on State bank circulation, and in lieu thereof authorize the States to create a system of banking laws (copied after the existing U. S. laws) requiring State banks to deposit State and municipal bonds legally issued in good credit, and first-class railroad bonds, with the Treasurer of the State where located, and the State to issue circulating notes not to exceed 90 per cent. of the par value of securities; said circulation to be a lien on the assets of the bank, and in every other respect to be governed by the provisions of the U. S. Banking law; having redemption agencies in the leading commercial cities of the United States, and making the notes a legal tender for all dues. These are suggestions I respectfully submit for your consideration.

BELLEFONTAINE, O., Sept. 7, 1893. ROBT. LAMB, *Pres't. People's Nat'l Bank.*

OBVIATING THE SCARCITY OF MONEY.

Editor Rhodes' Journal of Banking:

SIR:—The present scarcity of currency brings me back to the time when the writer first started in business in the early seventies. I had secured a contract from the Government to carry the mails. The route lead through the backwoods of Minnesota which were somewhat sparsely settled and with hardly any passenger business, —so I began to deal in ginseng, game and fur along the line of the route. In those days money was a rare sight; it was all banter and trade. I had no money to do business with and could get no money for the stuff bought, but the game, the fur, the ginseng were there; the settlers were willing to sell it and a profit could be made on prices. I therefore gave due-bills for the goods bought and these due-bills would be taken by the storekeepers along the line of my routes as cash in exchange for goods. I would receive due-bills from the parties I shipped to in St. Paul, and would use those to take up and liquidate my due-bills held by the storekeepers, and they again in turn would send them down to St. Paul to their wholesale dealers, the wholesale dealers turning those due-bills in to the commission merchant by which they were issued in payment perhaps for butter and other produce bought by those same wholesale dealers from the same commission merchant who had bought my stuff, these wholesale dealers supplying parties in other parts of the country with the butter and produce. Thousands of dollars worth of business was done that way with a sort of a "local currency" undoubtedly elastic and flexible and somewhat like the Canadian system as I understand it. This "currency" was retired as soon as it was redeemed but in the meantime my due-bills would pass from one hand to another and be months sometimes before reaching the local storekeeper, being used by neighbors in payment of debts between each other. RICHARD H. BROAT.

MINNEAPOLIS, Minn., September 1, 1893.

NOTICES OF NEW BOOKS.

A BRIEF HISTORY OF PANICS AND THEIR PERIODICAL OCCURRENCE IN THE UNITED STATES. By CLEMENT JUGLAR, Member of the Institute, Vice-President of La Société d'Economie Politique; Englished and Edited, with an Introductory Essay setting forth the indications of approaching panic, by DE COURCY W. THOM, Member of the Baltimore Stock Exchange. NEW YORK: G. P. PUTNAM'S SONS.

This book is one of the "Questions of the Day" series, being published by the Messrs. Putnams, and is, like others of the series, a valuable contribution to the literature of economics.

The precipitating causes of panics are broadly stated to be anything that promotes overtrading. In the United States panics are classed as (1) panics of circulation, or currency inflation; (2) panics of credit when the business world is over-cautious; (3) panics of capital, the locking up of vast sums in internal improvements, and to these the translator adds a fourth kind of panic, viz.: Those due to general tariff changes.

In support of this latter theory of panics Mr. Thom argues at great length and with considerable vehemence, but, as he himself admits, his arguments on this score are pretty effectually refuted by a little table, compiled by M. Juglar, showing the "reiteration and sequence of the same points under varying circumstances, at all times, in all countries, and under all governments." Thus, having labored with so much pains to set up his man of straw—that high protective tariffs are potent panic-producers, and *vice versa*, Mr. Thom demolishes him completely by the table referred to (Introduction, p. 19), and by the further statement that "a new tariff or a general change of duties is apt to precipitate a panic, on account of the unsettling of business."

It is altogether probable, as indicated by the quotation, that the true relation of tariff change to panics consists in the apprehension excited by the uncertainties as to how radical the alterations will be, rather than in the operations of duties high or low.

The book contains many valuable tables, some of which were compiled by the translator; the text throughout is historical and practical, rather than theoretical. In translating this work Mr. Thom has rendered an opportune and noteworthy service to those interested in the discussion of financial topics.

HISTORY OF THE BANK CLERK'S ATHLETIC ASSOCIATION, PHILADELPHIA, PA.

This is the title of a handsomely-printed volume giving a brief history of the above organization, together with a directory of the officers and clerks of the banks and financial institutions of the city of Philadelphia. (Patterson & White, Phila.)

Indebtedness of States.—That there is a tendency toward a more economical policy regarding State finances is indicated by the fact that while the number of States in the Union increased from thirty-eight to forty-four during the ten years between 1880 and 1890, the gross debt of all the States, during the same period, has fallen off from $234,000,000 to $224,000,000, a net reduction of $10,000,000, or at the rate of $1,000,000 a year.

THE WORLD OF FINANCE.

CURRENT OPINION ON MONETARY AFFAIRS FROM MANY SOURCES.

KANSAS MORTGAGE LAW.—A letter has been received by J. R. Reed, Massachusetts Commissioner of Foreign Mortgage Corporations, from the Knight Investment Company of Wichita, Kan., announcing that it withdraws from business in this State and that it intends to do no further business anywhere. The company wishes it understood that it does not withdraw on account of bankruptcy, as has been generally supposed, but for the reason that it is in prime condition, and intends to withdraw rather than lose money by making contracts under the new mortgage law of Kansas. This law, which went into effect recently, is one entirely in the favor of dishonest borrowers. It prohibits the making of contracts payable in gold and gives the borrower under a mortgage eighteen months after foreclosure to redeem his title, he in the meantime retaining possession and without lessening the foreclosure expense materially or reducing the time of obtaining judgment. The effect of this statute, as explained in a circular issued by the Knight Company to its customers, is that where the borrower is given by the lender twelve months in which to catch up in the payment of interest, and suit is then instituted, at least four and often five years of interest and taxes will have accumulated before the lender obtains possession of the property. The circular adds that comment upon this law is unnecessary.

Mr. Reed, the Commissioner of foreign corporations in this State, says that foreclosure proceedings in Kansas by an old law are conducted by a suit in court and proceedings are often prolonged so that a period of two years is necessary to complete the foreclosure of a mortgage. By the new law a further period of eighteen months is given for redemption. The Knight Investment Company, he says, is one of the smaller but more conservative and careful of those engaged in the Western mortgage business.—*Boston Transcript.*

PRICES AND RATIO OF SILVER.—The quotations of silver in the London market are in pence per ounce at the British standard of purity, which is .925 fine. The quotations of the New York market are for pure silver, that is 1.000 fine, in dollars and cents. The price in New York is determined by the price in London, which is the world's great market for the metal. The following table shows the average price of silver in the New York market for the years named from 1878, in which the Bland-Allison Act was passed, until 1892, together with the commercial ratio of silver to gold in each of these years. The entry against the year 1893 gives the price of silver at 77.5 with the corresponding ratio:

Year.	*Price.*	*Ratio.*	*Year.*	*Price.*	*Ratio.*
1878	1.152	17.94	1886	0.994	20.78
1879	1.123	18.40	1887	0.978	21.13
1880	1.145	18.05	1888	0.938	21.99
1881	1.138	18.16	1889	0.935	22.10
1882	1.136	18.19	1890	1.046	19.76
1883	1.110	18.64	1891	0.967	20.92
1884	1.113	18.57	1892	0.871	23.72
1885	1.064	19.41	1893	0.773	26.50

The legal ratio of silver to gold in the United States is 15.98 to 1, or as it is commonly for convenience stated, 16 to 1. This means that by law we estimate gold to be sixteen times as valuable as silver. The actual commercial ratio of the two metals by above quotation is 26.5 to 1, that is, 1 ounce of gold will buy 26.5 ounces of silver. The silver dollar of the United States contains 371.25 grains of silver and enough alloy to make its total weight 412.5 grains. At the legal ratio of 16 to 1 an ounce of pure silver is worth nominally $1.29; at the market value of 77.5 cents per ounce the silver dollar of 412.5 grains is worth between 60 and 61 cents.—*New York Times.*

BIMETALLISM.—The most absurd word in the English language just now is "bimetallism." If one glances anywhere at one of the journals which are fighting the cause of free silver and bad money, he will find its columns plentifully besprinkled with the mouth-filling word. It is a most convenient and respectable cloak for evil intentions. Bimetallism has been the policy of the Government during a large part of its existence. Bimetallism has appeared, to many of the ablest thinkers and soundest financiers who have ever lived, to be the ideal financial principle. Bimetallism is a favorite notion of the American people, and more of them have been deluded, by the use of the term, into support of fanaticism and dishonesty than by any other means. It is a word that ought never to be used except advisedly.

Look about us where we may, the only place discoverable where bimetallism has been thought of or talked about in recent years is the International Monetary Conference. It is true that the talk has not helped any one greatly, but it was at least rational and honest. The use of the term in connection with the financial policy of the United States at this time is wholly inadmissible. We do not have bimetallism in force to-day. We are not progressing towards bimetallism, but away from it as rapidly as we can, in the direction of silver monometallism. That is what the silver enthusiasts want, every mother's son of them, and their use of the big word is only a blind. Bimetallism means the concurrent use of two metals as money, under such conditions that both circulate freely and on equal terms. It can exist, of course, only where the coinage ratio of the two metals corresponds with the market ratio, or where the coinage ratio is adopted by all the leading commercial nations, so as to be unaffected by market changes. It is believed by many students of the money question to be a safe and desirable currency scheme; but it should be borne in mind that every movement of the silver men is distinctly hostile to it, and in the direction of a compulsory monometallism of the most objectionable kind.—*St. Paul Pioneer-Press.*

CHECKS AS CURRENCY.—Comptroller of the Currency Eckels, to whom a dispatch was sent by Vice-President W. B. Baird, of the Buffalo Furnace Company, asking if it was against the law to issue checks certified to by National banks to be used the same as currency in making up pay rolls, has sent the following reply:

Section 51>3 prohibits National banks from issuing post notes or any other note to circulate as money, except such as are named by the National Bank Act. Your proposition appears to suggest the drawing of checks containing certain conditions as to payment by depositors on banks where they have deposits to their credit. Such checks to be used by the depositor and not by the bank upon which they are drawn to other parties to which depositors are indebted. As understood, the proposition appears to involve a business contract between the depositors and their creditors, and in my opinion such transaction would not constitute violation of Section 5183, as the checks will be issued by the depositors and not by the bank. As to certification of such checks by National banks when drawn against deposit to credit of or order I can find no legal objection. See decision Merchants' National Bank vs. State National Bank, Wallace County, etc. JAMES H. ECKELS, *Comptroller.*

WASHINGTON, August 10.

Seattle Bankers Kept Their Wits.

Editor Rhodes' Journal of Banking: SEATTLE, Washington, Aug. 21, 1893.

SIR:—Do you care to make a note of the fact that Seattle has had no bank or mercantile failure this year or in her history? Seattle has been ranked as a "boom" town, and the State of Washington has been held up as a frightful example of the evils of speculation. Here is a city of 60.000 people, with twenty-one banks, just recovering from a terrible fire that destroyed her entire business district. There were bank failures in every other city on the Pacific coast, but there was no panic here, probably because the bankers themselves kept their wits.

J. B. NELSON, Managing Editor "Post-Intelligencer."

The JOURNAL is pleased to give publicity to the above letter, not only because it is a deserved tribute to the stability of the banks of Seattle, but for the further reason that it contains a truth that some other bankers would do well to consider, namely, that during the late financial stress "the bankers themselves kept their wits." Had this course been more generally pursued the list of failures would have been greatly diminished. But in too many instances bank officials, who should have maintained a stiff back-bone when the pressure came, were even more panic-stricken than their depositors. Evidently the Seattle bankers were not of this number. They may well be proud of their record, and in view of it there is nothing surprising in their resentment of criticisms about "boom" towns. The panic of 1893, now happily passing into history, did not wholly originate in Western speculation, and the experience of Seattle forcibly illustrates this fact.

FAILURES AND SUSPENSIONS.
