Alabama.—Josiah Morris & Co., Montgomery, assigned August 12. Depositors held a meeting August 17 to hear a report from the committee appointed to investigate the bank's affairs and report, if possible, a plan for resumption. The committee reported total assets of $3,351,483.63; liabilities, $1,641,238.90. Allowing for a possible shrinkage of $514,456 in assets, there is in gilt-edged securities $2 of assets for every dollar of liability.

LATER.—Information received since the date of the foregoing report says that the banking house of Josiah Morris & Co. resumed on the 28th ult., after having been suspended for two weeks. Not a customer was lost because of the suspension, and the bank has received every encouragement since resuming.

—The First National Bank, Gadsden, suspended August 12. Deposits are placed at $80,000.

—The Exchange Bank, New Decatur, was reported suspended August 15. Assets, $60,000; liabilities, $21,000.

California.—SAN FRANCISCO.—The mismanagement of the Pacific Bank, of San Francisco, by the sons of Dr. R. H. McDonald has caused much comment. The failure of the bank was bad enough, with more than $1,500,000 loaned on poor securities and speculative investments, but the examination of the bank commissioners has brought to light some peculiar banking methods. It is stated that the two brothers have obtained from the bank within four years fully $800,000, for which there is nothing to show. Richard McDonald had an ambition to be Governor of California and he put up cash to run the "California Illustrated Magazine" in the hopes that his contributions to this periodical would help his political aspirations. He spent about $50,000 on the magazine, but on the books of the bank he has charged the periodical with $317,000. The Los Angeles cable road cost young McDonald $380,000, yet he floated bonds for $580,000 and the books contain no record of the difference. On the John Brown colony the difference between what was actually spent and what is charged on the bank's books is $100,000. In other ventures discrepancies have been discovered which bring the total up to $800,000.

Later reports say this bank will reopen, but if so it would seem that there should be an entire change of management.

Colorado.—The Denver Savings Bank, with a capital of $260,000, assigned September 1, and will liquidate. The International Trust Company of Denver is the assignee. The liabilities are $670,000 and the assets $320,000. The directors and stockholders are wealthy men, and it is said the depositors will be paid dollar for dollar.

Florida.—The Volusia County Bank of DeLand closed August 16. Its liabilities are $136,000 and its assets $190,000. It is a State bank.

—The Bank of Leesburg, Yager Bros., was reported failed August 15. Liabilities, $40,000; assets, $90,000.

Illinois.—The banking house of W. W. Beaty, known as the Mansfield Bank, assigned August 11. Liabilities, $106,700; assets, $135,000. Unfortunate real estate investments are said to have hastened the failure.

—The Oswego Bank, a private bank owned by Levi Hall, closed August 16. It is thought that Mr. Hall's assets are reported much less than his liabilities.

—The Kendall County Bank, a private concern, owned by M. E. Cornell, at Yorkville, Ill, closed August 17. The assets are placed at $70,000 and the liabilities at $65,000.

—M. E. Bagley, Jerseyville, suspended August 22. Assets $124,000; liabilities, $110,000.

—C. M. Wright & Co., bankers of Altamont, suspended August 7. Levi Butler the Casher is missing. He left a letter saying he took $41,000.

—G. E. Hallock, a private banker at at Nunda, suspended recently.

—Albert S. Spaulding, Palatine, assigned August 22. The liabilities consisting almost entirely of small deposit accounts, are about $25,000, with assets about the same.

—E. L. Henning, a Plano banker, assigned August 7. He resumed business August 21.

—Richards & Campbell, Carbondale, assigned August 22. Assets, $45,000; liabilities, $42,000.

—The Ford County Bank, Paxton, with liabilities of $95,0000 and assets of about $70,000, assigned August 25.

—The Bank of Yellow Creek, located at Pearl City, closed August 25. The individual responsibility of the bank is placed at $150,000.

—The Central Illinois Banking Association, Jacksonville, was reported suspended August 27. Liabilities, $320,000; assets not stated.

Indiana.—The Prairie City Bank, Terre Haute, suspended August 12. John S. Beach, sole owner of the bank, has made an assignment for the benefit of creditors, Mr. Beach is also Treasurer of the Terre Haute Savings Bank, and his property is said to be mortgaged to secure deposits of the Savings bank with the Prairie City Bank. Assignee Marshall's statement shows that there is little likelihood of the depositors receiving anything. Mr. Beach says that his Cashier and bookkeeper were ignorant of his financial condition. Beach will probably be prosecuted.

— The First National Bank of Hammond was reported suspended August 5.

— The causes that led to the downfall of the Indianapolis National Bank are gradually coming to light, and it is alleged that the methods by which the bank was wrecked were little better than those of the old-fashioned pirate.

One of the causes that led to the collapse was the manner in which the concern was drained of its funds by the Indianapolis Cabinet Company. As far back as five years ago the Cabinet Company was in the bank's debt to the extent of $90,000. Francis A. Coffin is President of the company, and Percival Coffin is its Secretary and Treasurer. Each of these executed his note to the bank for $30,000, and the note of the company was deposited for the same amount, that being the sum (10 per cent. of the capital stock) beyond which it was unlawful to loan to any one patron.

Evading this clause in the law, the Cabinet Company, it is said, located branches, each of which when established negotiated its note for $30,000, until the company owed the bank $360,000, on which, it is said, not more than $60,000 will be realized.

Of the twelve notes not one has been paid, and the interest has been defaulted almost from the first. The entire plant of the Cabinet Company has been mortgaged to the bank, but it will fall far short of covering the claim.

But the most flagrant bleeding of the bank was through the Indianapolis Glue Works and the Indianapolis Curled Hair Works, the moving spirit in which was Schuyler Haughey, son of Theodore Haughey, the President of the bank. Each of these concerns owes the bank for $30,000, and young Haughey discounted his personal note for the same amount. When the funds thus raised were expended, he discounted notes for $30,000, signed by the Secretary, and after him utilized the bookkeeper, the traveling salesman, and finally the engineer, all for $30,000 apiece.

From the most reliable accounts there are sixteen of these notes, each for $30,000 upon which there was drained out a total of $480,000. The only thing in sight upon which the bank can realize for this outlay is the glue and curled hair plants and Schuyler Haughey's string of seventeen horses and his extensive wardrobe. Both factories have mortgaged their plants to the bank, but upon both the bank will hardly realize $30,000.

As the case stands the capital stock has been wiped out, the undivided profits and surplus have been swallowed up, and the stockholders will be assessed for the amount of their capital stock. The collection of the assessment will ruin many of the stockholders.

— Mitchell's Bank, at Martinsville, was reported in liquidation August 9, owing to the division of an estate. It is said to have cash on hand double the amount of deposits.

— The Citizens' National Bank, Attica, suspended August 14. Assets, $136,000; liabilities, $69,000.

Indian Territory.—The South McAlester Bank was reported in liquidation August 12. The National Bank of Denison (Tex.) is assisting in closing up the bank's business.

Iowa.—The First State Bank, Ute, was reported insolvent August 7.

— The Savings Bank of Aurelia was recently reported failed. It is said to have been involved in the failure of the Union Trust Co., Sioux City.

— J. T. Knapp & Co., Cedar Falls, assigned August 22.

—The Commercial Bank, Perry, assigned August 8. Assets, $69,000; liabilities $40,000.

— The Exchange Bank, Angus, assigned August 9.

—The First National Bank, Le Mars, suspended August 18.

The Le Mars National also closed.

The German-American Savings Bank suspended the same date.

The German State Bank also suspended. All these banks are reported solvent. and early resumption is probable. The First National resumed Sept. 11.

— The First National, Dubuque, suspended August 17. A statement shows the assets of the bank to be $200,000 more than the deposits, and assures depositors that they will receive every dollar due them. The bank resumed August 30.

— The Farmers and Merchants' Bank, Merrill, owned by Dent & Co., suspended August 23.

— The Bank of Waukon, operated by Boomer Brothers, which went into liquidation June 1, recently gave mortgages for $56,000. It is estimated that the assets are $40,000 below liabilities. B. F. Boomer says that deposits are $50,000, including $15,000 belonging to his wife, and that his assets are worth $75,000.

Kansas.—The Citizens' Bank, Mound City, was reported in hands of a Receiver August 15. Robert Kincaid, the President. who was also a partner in the suspended bank of Hood & Kincaid, Pleasanton, is reported to have fled. There are said to be outstanding notes against Kincaid to the amount of $200,000.

—The State Bank, Courtland, was reported in charge of Bank Commissioner August 12. Affairs are said to be badly confused.

—The State Exchange Bank, Jamestown, is also in the same predicament.

—The Finney County Farmers' Bank, Garden City, which failed recently, is said to be in a bad condition. There are also allegations of mismanagement. The bank succeeded the Finney County National a short time ago.

—The Receiver of the Citizens' Bank of Kansas City, which closed July 15, filed his report August 17. The report has been ready for some time, but has been withheld on account of certain securities, amounting to $52,000, which he was unable to secure. The report shows assets as follows: Notes held by the Inter-State National Bank, $5,326; notes held by Wyandotte National Bank, $9,719; overdrafts, $252; due from banks, $25,738; real estate, $2,370; stocks and bonds, $5,150; notes and securities held by M. G. McLean *et al.*, $52,511; furniture and fixtures, $2,000; collections outstanding, $76.25; suspense account, $319; cash on hand, $779; total, $114,241. The liabilities are: Due depositors, $69,608; due other banks, $1,884; bills payable, $10,000; certificates of deposit, $5,640; drafts on other banks, outstanding, $5,950; total, $96,083.

—The First National Bank, Marion, was reported in a Receiver's hands, August 22. E. M. Donaldson, the President, is alleged to be a defaulter to the amount of $600,000, of which $23,000 is said to be owing to the Marion bank, and the balance to the Union Trust Co., Sioux City, and various Iowa banks.

Louisiana.—The Bank of Plaquemine suspended August 12. Assets are said to be $61,000 in excess of liabilities.

Massachusetts.—The New Bedford Safe Deposit and Trust Co. closed August 5. It did not do a regular banking business.

Minnesota.—MINNEAPOLIS.—The Commercial Bank closed August 9. Deposits are placed at $620,000; loans and discounts, $642,000.

— The Union National Bank, Rochester, closed August 9. It is said the bank is solvent and will be able to resume without the appointment of a Receiver.

— The People's Bank, Waseca, suspended August 8. Assets, $135,000; liabilities, $67,000.

— Marston, Larson & Davis, bankers at Lake Crystal, suspended August 6. They are reported solvent.

— The First National Bank, Mankato, was reported suspended August 4.

The National Citizens' Bank also suspended on the same date.

The Mankato National also suspended, the cause being a run, as in each of the other suspensions. The three suspended National banks at Mankato resumed August 7.

— The Mapleton Bank suspended August 5.

—The National German-American Bank, St. Paul, which suspended August 3, made public the following statement August 17:

ASSETS.		LIABILITIES.	
Loans and discounts	$3,964,676	Circulating notes	$45,000
Tax certificates	3,278	Deposits subject to check	621,139
U. S. 4 per cent. bonds	50,000	Savings deposits	317,363
Stocks and bonds	47,257	Demand certificates	79,874
Overdrafts	2,766	Time certificates	925,981
Due from U. S. redemption fund	2,250	Certified checks	4,697
Due from banks and bankers	97,749	Cashier's checks	2,004
Banking house	421,785	Letters of credit	5,117
Other real estate	224,040	Miscellaneous accounts	4,115
Safety deposit vault	15,364	Coupon account	1,224
Furniture, fixtures, safes, etc	7,195	Country banks	264,865
Cash on hand	13,123	Collection accounts	44,171
		Unpaid dividends	945
		Bills rediscounted	274,500
		Total liabilities	$2,591,010
		Total assets	$4,849,488
		Total liabilities	2,591,010
Total assets	$4,489,488	Excess of assets	$2,258,478

The capital stock of the bank is $2,000,000; and according to a report made before suspension the bank had surplus and profits of $291,000. From the above figures the final outcome of the bank depends on the value of the loans and discounts, amounting to nearly $4,000,000.

— The Exchange Bank, of Lyle, suspended August 31.

—The report of assignee of the Seven Corners Bank, St Paul, which closed August 1, was filed August 10. It shows that the bank was wrecked by the Cashier, C. A. Hawkes, who loaned from $35,000 to $50,000 of the bank's money to himself almost without security. The bank closed with only $987 cash on hand; liabilities, $333,439, of which $159,000 is due depositors, who will probably not secure more than 50 per cent of their claims.

—The Bank of Lanesboro suspended September 2.

—The Old Bank of St. James, established in 1878, closed August 3. The assets are placed at $150,000 in excess of liabilities.

—The Bank of North Branch closed August 7. It is said that the suspension was due to a run on the Bank of St. Charles, whose Vice-President, J. F. Kingsland, is owner of the Bank of North Branch. A resumption of business was reported September 6.

Missouri.—The Caldwell County Bank, Kingston, suspended August 9.

—The Exchange Bank, Polo, suspended August 9.

—The Bank of Springfield assigned August 14. Liabilities are reported at $151,000 Deposits amounting to $140,000 have been withdrawn recently.

—The Bank of Albany suspended August 16 owing to inability to realize on loans and securities. A statement gives assets at $110,000 and liabilities at $80,000.

—The Receiver of the Northrup Banking Co., Kansas City, filed a report August 9. It places the assets at $449,884 and the liabilities at $350,714.

Montana.—The Stockgrowers' National Bank, Miles City, suspended July 29. E. W. Knight, Jr., has been appointed Receiver.

— The Dillon National Bank was reported in voluntary liquidation August 24. The officers say all claims will be paid.

Nebraska.—The Farmers and Merchants' Bank of Bassett closed August 7.

— The President of the State Bank of Cortland, which closed June 6, has been arrested on a charge of receiving deposits when the bank was known to be insolvent. Liabilities to depositors are between $25,000 and $30,000 and it is alleged the collectible assets will not exceed $2,000.

— The State Bank Examiner, appointed to take charge of the American Savings Bank of Omaha, which closed July 6, has turned over the bank to Receiver J. W. Thomas, of the Union National Bank of Omaha, and has filed his report. The Examiner, after making all necessary deductions, states that the assets will exceed the liabilities by $110,000.

— The State Bank of Franklin failed some time ago; charges of mismanagement have been made against two of its officers.

— The Keya Paha County Bank of Springview suspended August 16.

— The First National Bank, York, suspended August 28. The officers say the assets are $60,000 in excess of the liabilities.

New Hampshire.—The Derryfield Savings Bank, Manchester, went into the hands of a Receiver August 1. A director is reported as saying that in addition to the $50,000 of doubtful paper thrown out, there is from $10,000 to $13,000 due depositors, and it is said there may be a deficiency of $100,000. Deposits are about $150,000 and nominal assets, $254,000.

New Jersey.—William Y. Johnson, Receiver of the Somerset County Bank, Somerville, has prepared his first report to the Chancellor. He states that he is ready to declare a dividend of 50 per cent. to depositors as soon as the Court issues an order to that effect. Since taking possession of the bank's property the Receiver has collected $56,674, which together with the cash on hand at the time the bank failed, makes the amount at hand on August 25, $78.212,827, less disbursements of $572. The liabilities amount to $147,000.

New York—NEW YORK CITY.—The Madison Square Bank was turned over by the State Banking Department to Receivers O'Brien and Cannon, August 25, with the following statement of its conditions:

ASSETS.		
Bills discounted on hand		$81,291
Bills discounted pledged as security		683,887
Bills discounted suspended		146.331
Call loans		552,012
Bonds and mortgages		74.445
Stocks and bonds		195,650
Real estate in Boston		40,000
Real estate in Monroe, Orange Co.		32,500
Furniture and fixtures		5,000
Due from banks and trust companies.		18,969
Due from Maverick Bank, Boston, $2.446.85, good for		480
Overdrafts, $13,136.21, good for		4,691
Cash		117.453
Total		$1,952,702
Of the above assets the following are estimated uncollectible:		
Suspended bills discounted	$101,563.34	
Call and time loans	238,771.53	
		340,334
Total assets		$1,612,367

LIABILITIES.	
Capital	$500,000
Due to depositors	770,723
Cashier checks	439
Certified checks	13,367
Letters of credit	2,941
Bills re-discounted	17,015
Due on account of collections	815
Due to banks and bankers	639.377
Mortgage on Boston real estate	85,000
Rent and expenses, estimated, accrued	4,000
	$1,963,679
Impairment of capital	$371,312

President Blaut says that panic prices have been put on the assets, and the Banking Department admits that the prices are low. The President claims that the lease of the bank building is worth $100,000. They have a thirteen years' lease at $25,000 a year. For the upper part of the building they have been receiving $21,000 a year. The Prescott and Arizona Central bonds, by which Mr. Blaut's $80,000 loan is secured, are practically worthless, and the bonds of the Bridgeport, Ala., Land Improvement Company, which secure Director Spalard's $39,000 loan, are worthless but both loans will be paid, and they are marked good. Several other loans, including those of Mr. Stokes, of the Hoffman House, and Mr. John Delehanty, for $150,000 each, are considered good. One of the losses is on 600 shares of bank stock which has dropped from par to 25. Another loss is that on real estate in Boston. These are the losses since the July examination:

Past due paper	$23,868	Furniture and fixings	$14,213
Call loans	185,367	Overdrafts	5,090
Stocks and bonds	46,850		
Real estate	18,615	Total	$293,914

The largest loss was a call loan to Bullock and Wilder for $105,000, secured by Bridgeport Land and Improvement bonds. The firm has failed.

The Equitable Mortgage Company of 40 Wall street was placed in the hands of

Receivers September 1. The company has a capital of $2,100,000, and a reported surplus of $800,000. The Receivers are James M. Gifford and Charles N. Fowler, President of the company. They were appointed by the United States Circuit Court.

The immediate cause for the application is said to have been the refusal on the part of the company of payment on a note for $45,000. It is stated that the company has falling due interest amounting to $939,520 up to and including December 1, and that owing to the present depressed financial condition these obligations could not be met.

On Oct. 15, 1886, the Equitable Mortgage Company entered into an agreement with the American Loan and Trust Company of New York as the trustees of notes mortgages and security for debentures to be issued in a series of $100,000 each. Subsequently the New York Security and Trust Company was substituted and the amount of securities issued, which are still outstanding and unpaid, reach $4,875,000. In addition to this the Union Trust Company of New York is the holder of securities for debentures to the amount of $1,578,500 and the Kansas City Safe Deposit and Savings Bank, $1,634,000. Notes maturing on Sept. 1, which the Company is unable to meet, $180,184 25; on Oct. 1, $196,383 70; on Nov. 1, $355.522.30; on Dec. 1, $210,430.50.

The nominal obligations of the company are about $16,000,000. Its assets on their face are more than that.

F. R. Mills was appointed Receiver of the Hamilton Loan and Trust Company, at 150 Broadway, August 9. He is the Second Vice-President of the company. F. W. Popple, First Vice-President, was appointed at Denver, Col., a short time ago, Receiver of the property of the company in the Northwest, it having branches at Kearney, Neb., Denver, Omaha and Tacoma.

The company was organized in March, 1886, to make loans on farm mortgages and guarantee them. The company has loaned, it is said, over $2,000,000 on Western farms, and had a paid-in capital of $350,000.

The liabilities outside of capital stock are about $330,000, and assets over $700,000 in lands, first mortgages, accrued interest, etc. The lands, it is claimed, are good property, and worth more than the company paid for them.

Schedules in the assignment of Horace L. Hotchkiss & Company, bankers at 36 Wall street, to Waldron Williams, filed August 24, show liabilities, $567,340; nominal assets, $2,074,921, and actual assets, $544,311. The assets include $38,878 securities in hand and $546,438 stocks and bonds held as collateral, but from these figures of assets, the schedules state, must be deducted $40,000 for depreciation.

—The Bank of Sherman assigned August 23. Liabilities about $40,000; assets, mostly in farms, estimated nearly the same.

—Frank C. Lathrop's Bank, Leroy, assigned Aug. 10.

—Henry N. Lewis, a private banker at Wellsville, was reported assigned August 21. He had been in business ten years.

North Carolina.—The People's National Bank of Winston, capital $100,000, suspended August 18.

—The Bank of Reidsville was reported temporarily suspended August 26.

The Citizens' Bank also suspended the same date. Both banks are said to be entirely solvent.

Ohio.—The Cardington Banking Company, at Cardington, closed August 16. The assets approximate $100,000, and are said to be sufficient to meet the demands of the creditors. The President of the bank, W. G. Beatty, was obliged to make an assignment, and the bank could not weather the trouble brought on by his embarrassment.

Oregon.—PORTLAND.—D. P. Thompson, Receiver of the suspended Portland Savings Bank, filed his inventory August 14 which shows total assets, $3,014,000; liabilities, $2,475,000.

— The Harrisburgh Bank has paid its depositors and closed, on account of ill-health of the proprietor.

Pennsylvania.—E. K. Smith, private banker, of Columbia, suspended August 12. He has confessed judgment in favor of his wife for $86,000. Deposits are $151,000, there are preferred creditors not depositors to amount of more than $69,000, and it is said unless their claims are set aside depositors will get very little.

— Johnston, Buck & Co., Ebensburg, suspended August 10. They resumed August 30. This resumption also includes the branches at Carrolltown and Hastings.

— The Hastings Bank, also an offshoot of Johnston, Buck & Co., Ebensburg, closed August 10. The closing of these three banks is attributed to the circulation of false rumors. The assets of Johnston, Buck & Co. are $207,000, not including $50,000 to $75,000 personal property. There is a surplus of $30,000 in excess of deposits.

— The Carrolltown Bank was reported closed August 10. It was connected with the firm of Johnston, Buck & Co., Ebensburg.

— The directors of the Lebanon Trust and Safe Deposit Bank, which closed its doors August 4, have issued a complete statement of the bank's condition, of which the following is a summary:

ASSETS.		LIABILITIES.	
Bills discounted	$276,752	Capital stock	$ 50,000
Overdrafts	208,000	Surplus fund	16,100
Furniture and fixtures	2,533	Individual deposits	182, 32
Mortgages	1,500	Certificates of deposits	58,832
Real estate	2,647	Cashier's checks	3,904
Due from other banks	9.729	Unpaid dividends	81
Cash and checks on hand	19,618	Due to other banks	21,794
Expenses paid	888	Earnings	981
Total	$313,875	Total	$313,875

— J. R. Dick & Co., Meadville, are reported in liquidation. Assets, $669,000; liabilities, $412,000.

The Farmers' Co-operative Bank suspended August 17.

— The National Bank of South Pennsylvania at Hyndman closed August 17. The bank was operated by John K. and George B. White. Besides this they operated four large tanneries at Hyndman, Dry Run, and Mann's Choice, which were also forced to close down in consequence. The firm was largely interested in the Amazon Steamship Company, plying between New York and South America, and owned a majority of the stock in the Everett Electric Light and Water Companies.

Rhode Island.—The State Bank, Providence, suspended August 4. It was one of oldest of the State banks, having been founded in 1850. Its deposits were about $200,000 at date of last report. It is probable that the bank will go into liquidation.

Tennessee—NASHVILLE.—The First National Bank, considered one of the strong financial institutions of the city, was compelled to suspend August 9. The bank had a capital stock of $1,000,000, with a surplus fund of $76,000, and undivided profits amounting to $17,180.

It was organized a dozen years ago with a capital stock of $500,000. Several years ago, upon its consolidation with the Third National Bank, the capital stock was increased to $1,000,000. President Justi said in an interview that the bank is solvent, and that the suspension was due to the financial stringency and the timidity of depositors. The First National was authorized to resume September 9, and gave public notice that it would be opened for business on the following Monday.

The American National Bank suspended August 10. The Comptroller has authorized the resumption of business.

— The People's Bank of Lewisburg closed August 12.

— The Bank of Martin suspended August 14. Assets, $196,000; liabilities, $83,000.

— The First National Bank, Dayton, suspended payment August 24. Assets are said to be more than double liabilities, and the suspension will probably be temporary.

Texas.— The Waxahachie National Bank suspended August 11. Assets, $206,000; liabilities, $86,000. The bank was permitted to resume business August 19, its capital being unimpaired.

— The Coke County Bank, located at Robert Lee, suspended August 9. Business was resumed August 24.

— The Sutton County Bank, Sonora, suspended August 8. Liabilities are estimated at $17,000; assets are said to consist chiefly of a bank building and a quantity of land of small value.

— The Texas National Bank, San Antonio, suspended August 4. Liabilities are not large, the last statement showing deposits of only $76,000.

— The People's Bank, Alvord, suspended August 15. It began business in 1892 with a capital of $25,000.

— The First National Bank of San Marcos, suspended August 21, but resumed August 28, by order of the directors.

— The El Paso National Bank, which suspended August 2, is reported insolvent, and a Receiver took charge September 2.

Vermont.—S. M. Dorr's Sons, doing a bond and brokerage business at Rutland and Bristol, filed a petition in insolvency August 14, showing nominal assets, $241,406; liabilities, $142,875. It is likely that the firm will resume soon.

Virginia.—The Bank of Big Stone Gap suspended August 8.

— The Bank of Abingdon suspended August 5. The Exchange and Deposit Bank also suspended the same day. Both failures were caused by withdrawals of deposits.

Washington.—The Bank of Colfax suspended August 8.

—A detailed statement of the Spokane Savings bank's affairs was filed August 1. According to the first statement $46,744 is due from the First National Bank. Deposits, including pass book accounts amount to $101,792. To meet this sum, aside from its account with the First National, the bank holds secured notes to the amount of $119,026, besides unsecured notes, real estate and other items. The report makes a better showing than was expected. The bank suspended July 26.

West Virginia.— The Exchange bank of Wheeling suspended August 7. There is about $950,000 due depositors, While assets, ordinarily available, are $1,200,000.

— The Bank of Wellsburg, owned by Samuel George, closed August 8. The bank has assets of $300,000 and liabilities of $150,000.

Wisconsin.— The Barron County Bank, of Rice Lake, of which N. W. Bailey is proprietor, assigned August 8. Liabilities are $20,000; assets, five times that amount.

— The Bank of Tomah has suspended. It was operated by M. A. Thayer, whose bank at Sparta assigned recently.

—The Exchange Bank, Colby, suspended August 4. Capital, $50,000; deposits, $30,000.

— The official statement of Receiver Geilfuss of the Commercial Bank, Milwaukee, was filed August 10. The total assets on July 21, the date the bank suspended, were $1,480,220, against total liabilities of $1,183,999, an excess of assets of $296,221.

—The Union National Bank, Racine, closed August 16. The capital is $150,000, the total resources $892,000. The individual deposits are $243,000. The bank will go into liquidation; there is said to be $1.75 of assets for every dollar of deposits.

—The Bank of River Falls, suspended August 16. The statement for July 1 shows assets of $325,526, with liabilities of $284,000. It resumed business August 24.

— The Bank of Plainfield suspended August 22.

– The Receiver of the Wisconsin Fire and Marine Insurance Co. Bank, Milwaukee, filed a statement August 22. It shows assets of $7,250,000, and liabilities (not including capital and surplus), $6,710,000.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

Wilkinson.—W. S. Wilkinson, President of the First National Bank, Morrison, Ill., died August 17, aged eighty-one years.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, September 4. 1893.

A very marked change has taken place in the financial situation during past month, and one of decided improvement. The most important event of the month, in one sense, was the meeting of Congress in extra session on August 7th to supply remedial financial legislation. The President's message, as was expected, recommended a prompt repeal of the silver-purchasing clause of the silver Act of 1890. The House of Representatives has responded by passing a repeal bill by a vote of 240 yeas and 110 nays, after voting down five free coinage propositions, involving as many different ratios, ranging from 16 to 1 to 20 to 1, and also an amendment to restore the silver Act of 1878, known as the Bland Act. The repeal bill passed the House on August 28th, and is now awaiting action in the Senate, where the sentiment in favor of silver is stronger than it is in the House, but Washington advices indicate that a repeal measure will also pass the Senate. How long Congress will remain in session, is yet in doubt, but the House immediately after its action on the silver bill started in to consider tariff legislation, and it is promised that something in that direction will be accomplished without much delay.

The scarcity of currency has been severely felt during the larger part of the month, and still exists to a greater or less extent, although the worst appears to have been experienced. All kinds of money commanded a premium, and for a time money brokers did a thriving business. Depositors drew currency out of their banks to sell to brokers, and the banks in this city refused to pay checks except through the clearing-house, unless well satisfied that the money called for was actually needed, and in many cases only when it was required for the payment of wages. At times currency commanded as high as 5 per cent. premium, and silver dollars were sold for more than par.

The direct cause of the money famine was the hoarding practiced by individuals who were distrustful of the banks. That they took silver as freely as gold and greenbacks is one of the anomalies of a situation assumed to have been brought about by a general distrust of the stability of our currency. The extent of the hoarding may be only conjectured, but the reports of the National banks of the country on July 12th suggest what a strain was put upon the banks, although a more correct idea would be obtained were the reports of a month later. The 3,807 National banks in the United States report a decrease in individual deposits on July 12, as compared with a year ago on the same date, of $196,500,000, in amount due to other National banks of $128,000,000 and in amount due to State banks and bankers of $62,500,000. That the changes were not entirely due to the failures of so many banks is evident from the fact that the reports this year are from 48 more banks with $1,000,000 more aggregate capital than were the reports of a year ago. As for the loss in cash held by the National banks it amounted to more than $78,000,000.

Never did the United States more abundantly demonstrate its ability to overcome disaster than in the past few weeks. Early in the month a gold importing movement commenced and in four weeks some $41,000,000 of the precious metal was delivered at the port of New York. $13,500,000 in the first week, $11,500,000 in the second week, $8,500,000 in the third week and $7,500,000 in the fourth week. We have no record of any such volume of imports in any one month before. The largest total in the past fifteen years was in September, 1879, when $27,500,000 of gold was brought into the country. Only twelve times in the fifteen years were the gold imports in a single month as much as $10,000,000. The largest *exports* of gold in any month were $30,500,000 in May, 1891, and the *imports* of gold last month exceed that sum by more than $10,000,000.

The necessity of many financial institutions, the Savings banks in particular, to keep on hand ample funds to meet possible demands, caused the marketing of an unusual amount of Government bonds at a price much lower than ruled a few months ago. The 4 per cent. bonds sold at as low as 107¾ while January last they were quoted at 114¼. One result of this has been an extraordinary increase in National bank circulation, the increase in August having been in excess of $15,000,000. From the middle of June to September 1, nearly $30,000,000 of Government bonds have been deposited to secure bank circulation. The National bank in New York City alone now have nearly $10,000,000 of circulation against our $3,500,000 in June, 1891. Should the bill introduced in the Senate by Senator Voorhees, to permit National banks to take out circulation equal to the par of the bonds deposited, an increase of $25,000,000 in circulation would be possible.

One of the remarkable features of the present epoch is the freedom with which gold coin is circulating. At no previous time since the resumption of specie payments, in 1879, have the people handled as much gold coin as during the past two months. Nearly one-half of the total payments at the Custom-House in New York last month was in gold coin, and for some time the Treasury refused to pay out paper and made all its payments in gold. On August 2d the gold reserve in the Treasury was brought up to the $100,000,000 mark for the first time since April 20th but the gold disbursements left the reserve at the close of the month at only $97,000,000. Disbursements in currency have been resumed and an effort will be made to build up the gold reserve again.

The issue of bonds by the Government it is said is now being seriously considered in official circles. The Government's finances are not in a satisfactory condition. The revenues last month were less than $24,000,000 while the expenditures were more than $33,000,000. The receipts from both customs and internal revenue are falling off, a loss of $6,000,000 in the one and of $3,500,000 in the other as compared with August, 1892, has occured. On the other hand expenditures are on the increase, so that the candle is burning at both ends. This condition will make the work of changing the tariff still more difficult, and the question will be how much "protection" it will be possible to eliminate from a tariff for more revenue.

The foreign situation has brightened somewhat. France and England have avoided a call to arms over the Siam affair, and Siam has yielded everything France demanded. The High Court of Arbitration has rendered a decision in the Behring Sea case, which, while ignoring the claims of the United States, grants its request for protection of the seals. The Bank of England has been giving up American gold pretty freely, but to protect itself advanced its rate of discount on August 8 from 2½ to 3 per cent., on August 10 to 4 per cent., and on August 24 to 5 per cent. The Bank of Germany also put up its rate to 5 per cent.

The open market rate in London for 60 to 90-day bills is 3¾ per cent. as against 2 per cent. a month ago. In Paris the open market rate is 2¼ per cent. the same as a month ago; in Berlin 4⅛ per cent., and Frankfort 4¼ per cent. against 3¼ and 3⅜ respectively, a month ago. During the month of August the Bank of England lost £3,576,450 in bullion, holding at the close £26,001,121. The Bank of France lost £1,208,000.

The United States Treasury statement for August shows an increase of $10,442,899 in the net public debt There was a decrease in the non-interest-bearing debt of $160,908; an increase in the interest-bearing debt of $150, and a decrease of cash in the Treasury of $19,783,819. The total cash in the Treasury is $712,857,887, of which $176,423,172 is in gold coin and in bullion; $492,579,409 in standard dollars, silver bullion and subsidiary coin; $26,169,829 in gold and silver certificates, legal tenders and National bank notes, and $16,848,301 in National bank depositories and disbursing officers' hands. The bonded debt on August 31 was $585,037,590, and Total public debt, exclusive of certificates and Treasury notes offset by an equal amount of cash in in the Treasury, $960,960,258. Net available cash balance in the Treasury including deposits in National banks and gold reserve of $96,009,123, is $170,283,910.

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $98,487 circulation of National gold banks—was on August 31, $198,881,881. This shows an increase for the month of August of $15,225,961 as compared with an increase of $5,041,385 in July, and an increase in total circulation since August 31, 1892, of $29,332,054. During the month of August there was issued to new banks $11,290, and to old banks increasing circulation $15,598 685. There has been surrendered and destroyed during the month $384,014. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $20,245,163, showing a decrease in that class of circulation during the month of $189,464.

MINT COINAGE.—The coinage executed at the United States Mints during the month of August and since January 1st, has been as follows:

	AUGUST.		EIGHT MONTHS.	
	Pieces.	*Value.*	*Pieces.*	*Value.*
Gold Coinage	366,420	$4,340,800	1,684,667	$21,057,032
Silver Coinage	1,910,000	674,000	19,463,722	6,729,853
Minor Coinage	3,788,000	105,800	39,518,530	767,475
Total Coinage	6,064,420	$5,120,600	60,666,919	$28,554,360

The total amount of specie exported from New York city to all points during the month of August was $2,950,412 as compared with $4,037,001 in July, making a total for the year of $90,328,941. The imports for the month were $40,935,238, as compared with $5,144,584 in July, making a total for the year of $54,128,505.

The following table shows amount of gold and silver coins and certificates, United States notes and National bank notes in circulation September 1:

	General Stock. Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold Coin	$547,516,035	$78,049,667	$469,466,368
Standard silver dollars	419,332,450	357,677,820	61,654,630
Subsidiary silver	77,036,067	12,700,829	64,335,238
Gold certificates	80,979,419	565,370	80,414,049
Silver certificates	329,088,504	2,882,168	326,206,336
United States notes	502,227,974	19,564,705	482,663,269
National bank notes	198,980,368	3,157,587	195,822,781
Totals	$2,155,160,817	$474,598,146	$1,680,562,671

In answer to the call of the Comptroller of the Currency the National banks of the country, numbering 3807, have reported their condition as of July 12, 1893. From the abstracts of the reports made to the Comptroller during the past year, the following principal items are taken:

	Capital.	*Surplus.*	*Individual Deposits.*	*Gold.*	*Silver.*	*Legal-tenders*
July 12, 1892.	$684,678,203	$238,239,970	$1,753,339,679	$190,751,183	$38,569,297	$137,030,016
Sept. 30, 1892.	686,573,015	238,871,425	1,765,422,984	173,962,133	35,184,246	118,262,945
Dec. 9, 1892.	689,698,017	239,931,932	1,764,456,177	174,104,783	35,748,436	108,746,335
March 6, 1893.	688,642,876	245,478,363	1,751,439,374	173,995,025	34,346,791	105,610,774
May 4, 1893.	688,701,200	246,139,133	1,749,930,817	168,862,941	36,359,200	103,511,163
July 12, 1893.	685,786,719	249,188,300	1,556,761,230	150,634,961	36,126,211	102,543,677

FOREIGN EXCHANGE.—The rates for sterling exchange were largely influenced by the premium on currency in New York, the former rising and falling as the latter advanced or declined. For the week ended August 5th rates were easier until the advance in the Bank of England rate of discount, when demand bills and cables advanced, the actual rates closing at 4 80¼@ 4 80¾ for long, 4 83¾@4 84 for demand, and 4 84¾@4 85 for cables. For the week ended August 12 rates were first strong, then lower, closing at 4 80@ 4 81 for long, 4 85@4 85½ for demand, and 4 86@4 86½ for cables. For the week ended August 19 rates were strong, closing at 4 82½@4 83 for long, 4 87

@4 87¼ for demand, and 4 88@4 88¼ for cables. For the week ended August 26 rates were irregular, closing lower at 4 81¾@4 82 for long, 4 86¼@4 86½ for demand, and 4 87¼@4 87½ for cables. For the week ended September 2 sterling exchange was dull and rates again irregular, closing at 4 82@4 82¼ for long, 4 86@4 86¼ for demand, and 4 87@4 87¼ for cables.

Following are the rates of the principal dealers: Bankers' sterling, 60 days, 4 82@4 4 82¼; sight, 4 86@4 86¼; Cable transfers, 4 87@4 87¼; Prime commercial sterling, long, 4 81¼@4 81½; Documentary sterling, 60 days, 4 81¼@4 81½; Paris cable transfers, 5 19⅜@5 18¾; Paris bankers', 60 days, 5 23⅛@5 22½; Paris bankers', sight, 5 20⅝@5 20; Paris commercial, 60 days, 5 24⅜@5 23¾; Paris commercial, sight, 5 21⅞@5 21¼; Antwerp commercial, 60 days, 5 25⅝@5 25; Swiss bankers', 60 days, 5 23¾@5 23½; Swiss bankers', sight, 5 20⅝@5 20; Berlin bankers', 60 days, 93¼@94⅜; Berlin bankers', sight, 95⅛@95¼; Berlin commercial, long, 94@94½; Brussels bankers, sight, 5 22½@5 21⅞; Amsterdam bankers', 60 days, 39 13-16@39 15-16; Amsterdam bankers', sight, 40 1-16@40 3-16; Amsterdam commercial long, 39⅝@39¾; Amsterdam commercial, sight, 39 13-16@39⅞; Kronors, 60 days, 26⅝@26¾; Kronors bankers', sight, 26⅞@27; Italian lire, sight, 5 72½@5 67½. Paris advices quote exchange on London at 25 francs, 32½c.

Domestic Exchange.—Following are the latest quoted rates for domestic exchange on New York: Boston—15 cents premium for cash, checks, 15 cents discount to par. Charleston—Buying, ⅛@½ discount; selling, par. Savannah—Buying, ½ discount; selling, par for from $100 to $300, ⅛ discount for from $500 to $1,000 and ¼ discount for $1,000 and over. New Orleans—Bank, $10 premium; commercial, $5 premium. San Francisco—Sight, 15; telegraphic, 25. St. Louis—50 cents discount. Chicago—$1 dis.

The Money Market.—Currency commanded a premium thoughout the month, but toward the close of month the premium had nearly disappeared. Except on call very little money was loaned, although the demand for time money was urgent. Rates for call loans were as high as 51 per cent. early in the month, but fell to 2 per cent. subsequently. Time money carried the legal rate and a handsome commission. For the week ending August 5, the open market rate for call loans on stock and bond collaterals ranged from 2 to 51 per cent., the average being 9 per cent. Commercial paper 8 to 12 per cent. For the week ending August 12, the open market rate for call loans on prime collaterals, ranged from 2 to 6 per cent., with 5 per cent. as the average. Commercial paper quoted 8 to 12 per cent. For the week ending August 19, the open market rate for call loans ranged from 2 to 6 per cent., the average being 4 per cent. Commercial paper quoted 10 to 12 per cent. During the week ending August 26, the open market rate on call loans ranged from 3 to 7 per cent., the average being 5 per cent. Commercial paper quoted 10 to 15 per cent. During the week ending September 2 the rate on call loans ranged from 2 to 6 per cent. with the average 4½ per cent.; commercial paper quoted 12 to 18 per cent.

New York City Banks.—Until about the middle of the month the banks of this city were subjected to a continuous drain of deposits which began some months ago. Nearly $12,000,000 were withdrawn in three weeks, making the total loss in deposits since last Spring $125,000,000. Since August 19th there has been an increase of $3,700,000 in deposits. On August 12th the banks reported the largest deficit in reserve in more than fifteen years, $16,500,000, but by September 2d it was nearly all extinguished. During the month the banks increased their circulation nearly $3,800,000.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
Aug. 5	$408,717,500	$55,929,800	$23,268,700	$372,945,200	$6,302,900	$9,716,125 dec.
" 12	411,795,700	58,624,800	22,880,700	372,203,500	7,036,000	2,527,575 dec.
" 19	406,540,200	58,352,800	22,177,600	370,302,400	7,738,200	4,499,575 inc.
" 26	403,607,400	62,930,900	22,951,400	370,479,900	8,780,200	5,308,125 inc.
Sept. 2	400,169,300	66,860,500	25,074,500	374,010,100	9,911,600	5,170,150 inc.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of July, 1893, and the highest and lowest since January 1, 1893, by dates:

	YEAR 1892.		SINCE JANUARY 1, 1893.		AUGUST, 1893.

The total number of shares reported sold at the New York Stock Exchange during August, 1893, was 4,855,410 representing dealings in 153 stocks. Of this number 3,556,460 shares represent the transactions in the following 20 stocks:

C. M. & St. P.	737,227	C. B. & Q.	200,172	Nor. Pacific.	81,579	N. Y. & N. E.	55,518
Chic. Gas	516,347	C. R. I. & Pac.	158,373	Nor. Pac. Pfd.	80,560	Manhattan	50,658
Gen'l Elect	378,641	A.T. & S. Fe	123,553	Union Pac	77,213	Phil. & Read.	45,700
W. U. Tel.	369,044	Louis & Nash	114,609	Del. L. & W.	66,736	Erie	44,816
Dis. & C. F. Co.	246,759	Chic. & N. W.	107,344	Mo. Pacific	62,293	Lake Shore	39,318
	2,248,018		704,051		368,381		236,010

leaving 1,298,410 shares (including 746,208 shares of unlisted stocks) to represent the dealings in the remaining 133 stocks. In addition 313 different issues of railroad bonds were dealt in, to the amount of $28,067,200 also $25,700 State bonds and $782,500 Government bonds. (Compared with August, 1892, there is an increase of 228,731 shares in stocks; a decrease of $778,600 in railroad bonds; a decrease of $605,300 in State bonds; an increase of $724,500 in Government bonds, and a decrease of 1,284,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $10,000; stocks, 746,208 shares, of which 682,448 were American Sugar Refiners' common stock and 11,318 preferred; mining stocks, 5,500 shares. American Cotton Oil Certificates, 30,619 shares of common and 8,504 shares of preferred; Pipe Line Certificates, 20,000 barrels. Of National Lead common 26,984 shares, preferred 13,436 shares; of silver bullion certificates, 31,000 ounces, extremes being 78⅛ and 70¼, closing at 74 bid. The listed stocks show a decrease of 1,033,772 shares as compared with the amount sold in July. Transactions in railroad bonds show an increase of $8,432,700 during the same period, a decrease of $20,300 in State bonds, and an increase of $543,000 in Government bonds. In unlisted bonds an increase of $9,000; in unlisted stocks an increase of 119,994 shares; in mining stocks an increase of 5,300 shares; an increase of 5,045 shares in Cotton Oil Certificates common, an increase of 434 shares in preferred; an increase of 17,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 959,000 ounces.

At the Consolidated StockandPetroleum Exchange during the month of August were sold: 1,694,053 shares of railroad and other stocks representing dealings in 88 properties. Of this amount 1,393,995 shares are transactions in the following 12 stocks:

C. M. & St. P.	627,720	Chic. Gas	136,620	Dis & C. F. Co.	51,850	Phil. & Read.	16,710
C. R. I. & Pac.	177,200	Gen'l Elect.	75,780	A. T. & S. Fe.	33,275	Louis. & Nash.	11,920
C. B. & Q.	160,780	W. U. Tel.	62,760	N.Y. & N. E.	30,570	N. Pac. pref.	8,810
	965,700		275,160		115,695		37,440

leaving 300,158 shares to represent the transactions in the remaining 70 stocks, of which American Sugar Refinery Common furnished 222,400 shares. Transactions in railroad bonds during the same period amounted to $2,019,900; in mining stocks 5,480 shares 84,000 barrels in Pipe Line Certificates.

Transactions in railroad and other stocks at the above Board show a decrease of 429,943 shares as compared with the month of July; an increase of $84,900 in railroad bonds; a decrease of 6,170 shares in mining stocks; an increase of 25,000 barrels in Pipe Line Certificates.

As compared with August, 1892, Consolidated Stock and Petroleum Exchange transactions show the following changes: stocks increased 50,144 shares; bonds increased $60,900; mining stocks decreased 55,535 shares, and Pipe Line Certificates decreased 828,000 barrels.

The gross earnings of 138 roads for the month of July, 1893, were $41,190,454, being a decrease of $1,765,527 over July, 1892. Below is a list of systems or companies showing excesses of over $30,000 in gains or losses:

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

SPECIAL LIST.

This "Special List" is made up of securities—both stocks and bonds—which are not regularly "called" at the Exchange. Members are at liberty to deal in them daily, on the Bond Call, but the transactions are infrequent.

NOTE.—The railroads enclosed in a brace are leased to Company first named.

RHODES'

JOURNAL OF BANKING.

Vol. XX. OCTOBER, 1893. No. 10.

THE methods of determining the value of discounted paper have been the subject of an interesting series of essays by bankers of experience, published in the JOURNAL during the first half of the year. The importance of a sure test of the value of the paper and other evidences of debt offered to the banks as security for loans was never greater than at the present time. After a financial crisis so severe as has been that of the year 1893, when the money which has been withdrawn from the banks begins to return to them, there is a tendency to a greater increase of the surplus reserve than is profitable to the banking institutions at the money centres. There is consequently a tendency to loan these surplus funds in a way to encourage unwise speculation.

While no doubt the bankers of New York city have as great an experience with securities of all kinds, as well as of the paper presented for discount, as any bankers in the world, yet the comparatively small percentage of losses they make is due more to the fact of their superabundant caution than of their wide knowledge. The truth is that the system is so imperfect by which they obtain their knowledge of the value of the paper offered to them for discount and of the value of the securities offered to them as the basis of loans, that it is by confining their loans to the small circle to which this imperfect system permits their knowledge to extend, that they secure their safety. They undoubtedly lose many chances of benefiting their banks and the public, because of the circumscribed knowledge which a poor system of information entails. A man with a dark lantern will be safe as long as he keeps his steps within the narrow circle of light his instrument affords, but he may miss many safe paths that he could not fail to see in the light of day. It is this imperfect knowledge on the part of bankers that makes the restoration of confidence after a panic so slow a process. And when confidence is restored it is apt to induce the same banker, to take some leaps in the dark.

The banks of the country have become so important in their relations to all business that they should foster every method that will tend to increase their usefulness. Already they have shown that they can by proper united action allay much of the disastrous and senseless panic which usually accompanies a financial crisis. There is no doubt but that by encouraging a system of close examination of the financial status of those whose paper is offered for discount, and of the real values that underlie the securities offered for loans, the banks could to a great extent prevent losses and financial crises and also widen their own usefulness to the community and increase their dividends.

The market price as quoted in the records of the stock boards of the country is not always a safe criterion of the real value of securities. These quotations are too frequently the reflex of temporary opinions based on no real knowledge. The number of stocks, bonds and other securities on the list of the Stock Exchange is not so large but that a properly established bureau of investigation could discover and keep track of the real value underlying each one, so that a banker might grade his loans upon them all so as to be perfectly safe, where under the present system he is misled by the market quotations.

The effect of such a wider knowledge on the part of bankers of the moneyed centres would be a comparative freedom from the dangers of financial crises, even if these crises were not altogether abolished by it, and when such crises occurred, if they did occur, the recovery from their effects and the restoration of confidence would be much more rapid. The effect on the business community of a more complete system on the part of bankers would be exceedingly wholesome. It would be an incentive to honest methods of business, and careful and judicious management of corporations whose stocks and bonds were upon the market. As the bankers of the present day have wider views, and more liberal methods than those of the past, it may be hoped that they will perceive that there is still room for further improvement. We recommend to our readers throughout the country the perusal of the articles upon the best methods of determining the value of discounted paper, published in the JOURNAL during the first six months of the year, as especially instructive during the period of recovery from the torpidity of the financial crisis.

THE EXPORTATION AND IMPORTATION OF GOLD is controlled by the same laws as the exportation and importation of any other commodity in addition to the natural laws which control its flux and reflux as money. As money the office of gold is to pay the balances of trade between countries, but apart from the balance of trade influencing the flow of the metal from one nation to another, there is at work the law to which it is subject as a mere commodity. If another country desires to purchase anything from the United States either for immediate use or for purposes of profit, the thing taken will generally be that which can be purchased cheapest. There is evidence to show that the recent exportation of gold from this country was caused not altogether by distrust or by the balance of trade against the United States, but also by the fact that other commodities, pork and grain and produce and merchandise generally, had been held at such high prices that there was no profit in their purchase to foreign dealers.

Of all the things the people of the United States had for sale, they were willing to sell gold the cheapest, and naturally the traders of the world rushed to get it. If wheat could be obtained for fifty cents in gold a bushel in India, when it could not be obtained for less than a dollar a bushel in the United States, it was better to take the gold dollar from the United States than the bushel of wheat. The traders of this country thought the gold dollar too cheap a thing to buy more than a bushel of wheat. In the case of wheat, therefore, it is easy to see that unless the United States has a monopoly of supplying other parts of the world, it is foolish to undertake to fix the price by trade manipulations or by any artificial means. In the case of silver, also, the United States cheapened gold, by paying more of the latter for each ounce of silver than was warranted by the opinion of the traders of the world. This cheapening of gold made it flow from the country as rapidly as it could be obtained in exchange for imported products and merchandise, or in the payment of indebtedness.

From this may be easily deduced the great effect, the repeal of the silver-purchase law, the great instrument by which gold has been cheapened. The repeal of this law in reality gives notice to the world that gold will no longer be held cheap, but that it will soon buy as much in the markets of the United States as in other countries. Generally speaking, this country is one of the best and most convenient markets both for selling and purchasing that foreign nations have. In other words, the great resources of the United States, the intelligence and enterprise and energetic industry of its citizens make it a very desirable country to trade with. This fact is advantageous not only to foreign traders, but to our own. There is under ordinary circumstances profit in both directions. But notwithstanding the advantages possessed by the United States as a trading country, the price of any commodity cannot be forced beyond what the supply and demand of the world and the opinion of traders as a whole, founded on their knowledge thereof, will tolerate. Trusts, corners and "combines," while they are injurious in domestic trade, are much more damaging to the foreign trade, because in raising unduly the price of any commodity overproduction ensues, and other commodities of equal importance are apt to be unduly cheapened. and while we try to make foreign traders pay a high price for one thing they are able to drain the country of other products at a price that is ruinous to it.

The whole tendency of the dealings of the United States with foreign markets has been towards a selfish and unenlightened policy. Politically it seems to be a fine thing to represent that foreign countries are dependent on our markets, and that prices of some commodities can be put up to the disadvantage of foreigners by political enactment or combinations of traders, but this policy cannot be pursued with everything, and the commodities, the price of which is unduly raised, are sure to cheapen other commodities to an equal extent. The silver combination, as has been intimated, was not the only cause of the cheapening of gold, but it was a principal one. ' here is no doubt but that it has had an indirect effect in advancing prices of many articles beyond the normal point. It has caused uncertainty as to the future, and encouraged reckless speculation. The repeal of the purchase law, if it be effected, will at once show, in the revival of business and confidence, how great a drawback to the prosperity of the United States the unnatural legislation as to silver has been.

"WOMEN AS INVESTORS" was the title of a paper read before the World's Congress of Bankers, held in June in Chicago. This title is somewhat misleading, as the object of the paper was to call attention to the large amount of property held by women in the United States, not investments always made by themselves, but property falling into their hands by inheritance, by gift, etc. The subject is an exceedingly interesting one in connection with the subject of the rights of women. The inquiry naturally arises as to the causes that lead to the accumulation of property in the hands of women to a greater extent in the United States than elsewhere, if such is the fact. But this does not appear from the paper read before the Bankers' Congress. The writer of the paper apologizes for its not covering all the ground, saying that she had not had time to complete her investigations. Mrs. HENROTIN has a great task before her to collect all the data that are necessary to make any statistics upon this subject at all valuable. To discover that a goodly proportion of the bank stock was held by women, or that a large proportion of the real estate was so held, or that women were depositors in banks, Savings banks and financial institutions, is not of much importance. Women have always been as industrious, if not more so, than the opposite sex. They know as well how to take care of their money and investments are as open to them as they are to men. If they have inherited or received wealth by gift, so have men, too.

This line of investigation proves nothing unless there is something to compare it with, and even then it is of little account, except as a matter of curiosity, unless it is desirable to prove something. The only thing in Mrs. HENROTIN'S paper going to show that it had a *raison d' etre* is the reference she makes to the need of the ethical education of women, or, in other words, the necessity of bringing her to a sense of her responsibility as the owner and controller of property. In illustration, she calls attention to the large amount of stocks and bonds held by women in banks and other corporations, which are generally voted by proxy, and intimates that if women were ethically educated they would attend the meetings of stockholders, vote their own stock and see that the world was made better by the management of the bank or corporation. Here, too, there is great want of comparison to prove, if this is what Mrs. HENROTIN meant to prove, that women are inferior to men in their sense of duty toward the public. Very likely this was not what she wanted to prove, but, rather, that if women would give thought to the matter, they would be superior to men in that conscientiousness which would enforce a strict observance of public rights and would not permit the use of a corporation or bank in a manner detrimental to its stockholders and others for whom it acted as trustee. While the paper referred to did not in any way raise the question, yet the collection of such statistics necessarily does involve comparisons between the sexes. Therefore, to render them complete and trustworthy, they should be collected for past centuries, as well as for the present one, for countries under different forms of government, and under different conditions of peace and war.

But, on the other hand, if the statistics of property held by women in all classes of society, as distinguished from that held by men, could be collected for all lands and ages, completely enough to allow of reasonably accurate conclusions being drawn, it is probable that there would be found a greater accumulation in female hands, as war declined and peace advanced, and laws gave security to property. It is probable, too, that complete statistics would show that men have been the gatherers and women the conservators of wealth. It is not probable however that women as a rule are in the least inferior to men in the ethical sense, or that they need any education in this line more than men do.

THE REPEAL OF THE SILVER-PURCHASE ACT passed the House with comparative ease, showing that the representatives of the people recognized the popular sentiment. On the other hand the opposition in the Senate, owing to the rules of that body allowing unlimited debate, has been such as to cause apprehension that the Act may not be repealed. There is however a large majority in favor of unconditional repeal, and without doubt the opposition must eventually give way to superior force. The favorable action of the House of Representatives had a salutary effect in causing an immediate rise in prices and an improvement in business throughout the country, but this movement in the right direction has been checked by the delay in the Senate. The opposition comes largely from the Senators of eight silver mining States, with a total population of less than two millions of people, who apparently desire to compel the remaining fifty-eight million inhabitants of the country to sacrifice their best financial interests in order that the silver miners of these eight States may receive an unnatural price for their product.

The passage of the repeal Act will probably end the long controversy over silver which has occupied the attention of the public to such an extent during the last twenty years. When the Coinage Act of 1873 was passed, omitting the silver dollar from the list of United States coins, the price of silver was satisfactory to the silver miners, and they did not appear to foresee any dangerous consequences from the omission. In fact they much preferred to sell their silver as bullion, and had not for many years previous to 1873 presented it at the

United States mints for coinage into dollars, as the law then allowed them to do. But when the high price had stimulated production in every possible way, by inducing the discovery of new mines and causing the invention of improved methods of mining, then as a consequence the price began to fall. It soon reached a point that made the owners of silver mines look with regret upon the privilege of coining dollars, which they had virtually abandoned in 1873.

The Act for the resumption of specie payments was passed in 1875, and the agitation of the public mind in regard to financial matters, caused by the slow recovery of the country from the panic of 1873, led many to question the wisdom and practicability of the resumption Act. The silver miners and greenbackers joined their forces and raised the cry that the Coinage Act of 1873, demonetizing the silver dollar, was passed in a nefarious and underhanded manner as the result of a gigantic conspiracy to narrow the amount of the world's money and increase its value for the benefit of the goldbugs. This cry has been the oriflamme of the advocates of silver. The Coinage Act has been styled on every stump as the "Greatest crime of the Nineteenth Century." The result of the agitation was the compromise Act of 1878, for the coinage of silver dollars on Government account, and the compromise Act of 1890, for the purchase of silver bullion. Because the evil results predicted from these Acts did not immediately become apparent, it was argued that they never would materialize. The great strength of the country and the Treasury enabled the disease to be borne for a long time, but the end had to come, and it has done so in the financial crisis of the present year. The unconditional repeal of the silver-purchase Act, will probably, as was above stated, end the silver controversy in the United States. There will, of course, remain the question, what is to be done with the immense stock of silver bullion now owned by the Government of the United States. But the discussion of this question cannot in any way afford satisfaction to the silver miners, as it will rather emphasize the unwisdom of the laws under which so burdensome a treasure was acquired.

THE REPEAL OF THE TEN PER CENT. TAX on State bank circulation is apparently as far off as it ever was. As has been insisted from the first in the JOURNAL, the unconditional repeal of this tax would be disastrous to the country. The arguments in favor of a State bank currency, namely, that it would have elasticity, that it would be issued in the localities where it was most needed, that it would utilize local securities, etc., are founded on conditions that may be obtained with equal certainty and with much greater safety under the National banking system, if Congress shall see fit to enact some necessary amendments to the present banking laws. It is very possible, however, that after the repeal of the silver-purchase bill and the final settlement of the silver question, that the class of people who esteem quantity of money in preference, or, rather, in disregard to quality, having been beaten back first from the greenback stronghold, and second from the fortifications of the depreciated silver forces, may unite upon the State bank currency idea as a last ditch. There is much that is good to be said in favor of the issue under State banking systems. The stock arguments against it have their rise in the experiences under some of the worst conducted systems of States newly organized, where the idea of a banking law and its enforcement was in a very primitive condition. Fifty years hence a similar argument may be made against the National banking system by drawing a horrible state of facts from the reports of the Comptroller of the Currency relative to the National banks that have failed.

So the arguments against the issue of bank notes under the banking systems of the States are not drawn from the histories of the banking systems of New York, Massachusetts, Louisiana and the older States East and South, but from the wildcat experiences of territorial Wisconsin, Michigan, Kentucky and other primitive communities. But the order of development of the United States is still the same in many respects as it was during the first fifty years of the history of the Republic. While the large majority of the States to-day could be trusted to establish and conduct banking systems issuing currency as safe and solvent as was issued formerly by the State banks of New York and Massachusetts, there are, nevertheless, localities where banks as wildcat in nature as any of those of the *ante-bellum* days in the newer Western States still exist.

The danger is that an unconditional repeal of the tax on State bank notes would develop an intense interest in banking in some of the more remote parts of the country, and that these remote banks would furnish a very doubtful sort of money. The National banking system, with some needed modifications, will easily furnish all the bank currency needed, and will attract to itself, as soon as its rights and privileges are sufficiently extended, all of the best banks now doing business under the State systems, just as it did in 1865, when there was sufficient profit on circulation to make it an inducement to become a National bank. The proposition however to extend the National banking system by an issue of Government bonds for the special purpose of basing circulation thereon is radically unsound. The Treasury might as well establish warehouses for accepting grain and merchandise as security for loans to farmers and merchants as to issue bonds for the special benefit of bankers. The National banks should be permitted to issue the circulation of the country, based on their reserves and general assets. If this were permitted no repeal of the tax on State bank circulation would be necessary.

An International Monetary Conference is again proposed by the champions of the despairing advocates of cheap silver money. Whenever either side in this controversy desires to gain time in which to effect a compromise, or to make some political deal, that old stalking-horse an International Monetary Conference is put forth. It would seem that this device had been worn so threadbare that no one could have the audacity to imagine that he would not be subjected to derision for proposing it. When the International Monetary Conference of 1892–'93 was proposed, it was well known that the scheme was a mere subterfuge to meet the exigencies of a political deal. The proposition has not even this importance now. Not but what there is value in properly arranged conferences with foreign nations upon financial subjects, and more especially upon the subject of the monetary standard, but such a conference should be held with the object of arriving at some valuable conclusion—not to mask some political move. The delegates to such a conference should be men who can command respect by their openness of mind and scientific and practical knowledge of the subject to be discussed The delegates to the last International Monetary Conference were, with one or two exceptions, bitter partisans of the free coinage of silver, appointed because they were known as such. They were not open to argument or persuasion. They would agree to no settlement of the question except that on which they insisted. If there is to be a future International Monetary Conference let it be held after the bitterness now exhibited in regard to the silver question has subsided, when the silver-purchase bill has been repealed, and when the United States can present a proposition that will not shock the common sense and scientific knowledge of the eminent men who are selected to represent foreign nations at these conferences.

"HOW TO MAKE BANKS SAFE" is the interesting title of an article on another page, to which the attention of the readers of the JOURNAL is called. The writer proposes as the gist of his plan a system of mutual co-operation, based upon the voluntary association of banks for clearing-house purposes. The line of thought developed in the article is not the only one upon this very important subject. Among the readers of the JOURNAL there are so many who have had the opportunity of learning in the school of practical experience, and also of wide observation in banking matters, that we hope they will favor us with their views upon this topic. The article in this issue confines itself to making banks safe in the United States. Perhaps some of our readers will treat the subject more widely, and give the picture of an ideal bank without regard to the legislative difficulties that might be encountered in putting such a bank in actual operation.

The part of the article referring to co-operation among banks by means of Associations, will be an excellent subject for discussion at the coming meeting of the American Bankers' Association. The proposition to legalize the issue of clearing-house loan certificates, in the form of money, in financial emergencies, subject to a tax that will enforce their withdrawal when the emergency requiring their issue has passed away, seems to be an excellent way of safely using this expedient.

HOW TO MAKE BANKS SAFE.

[BY AN EXPERIENCED BANKER.]

The financial panic of 1893 has directed the attention of the public to the methods of conducting banks in the United States in a most emphatic and impressive manner. Not for thirty years have there been so many suspensions and failures of banking and financial institutions, and in addition never have the services which the public have the right to expect from banks been apparently so inadequately performed. Never have so many depositors, who had placed their money in the banks, as in places of safe keeping from which it could be obtained when required, been disappointed in the free use of their money, even if it were not lost altogether.

In the United States, there are the National Banking System, under the Federal laws, the systems of banking under the laws of the several States, Private banks, Saving banks, and Trust companies, all receiving deposits of money from the public. As there have been failures in each of these classes with disappointment to depositors, it cannot be said that a banking institution under any of these systems is absolutely safe. How to make a bank safe is therefore a most important and interesting question, not only to stockholders who furnish the capital, to depositors who place their money with it for safe keeping, but to the general public who must, whether they will or not, while the present methods of business are adhered to, take checks drawn upon it. The immense use of bank checks in modern business has been commented upon again and again, the reports of the Comptrollers of the Currency have for many years called attention to it in this country and the "London Bankers' Magazine" and the "Journal of the Institute of Bankers," in England. Citizens of every class, whether business men or not are necessarily brought in contact with the banking methods of the country in a way that compels them to take cognizance of their defects. Every person who takes a check becomes the creditor of the bank on which it is drawn, and the great multitude of those who receive checks feel the shock that the failure of any banking institution gives to the general credit of all the banks.

A bank is such a complex institution, dealing with such different classes of creditors, that when the question, "How to make a bank safe?" is asked, it is not easy to give a satisfactory answer without first defining the several classes of people whose money and credit make up the institution. Safety for the stockholders alone, or for noteholders alone, or for depositors alone, would not be satisfactory; what is wanted is safety for all. Safety, too, must not be obtained by laws and rules and regulations, which will prevent or restrain or circumscribe the bank in performing its functions with the highest degree of usefulness to all concerned, affording profit to stockholders, free use of their money to depositors, facilities to borrowers, and a free circulation of bank notes and checks among the general public. Safety in finance, as in religion, can no doubt be obtained by quietism, that is by doing nothing. Safety for money may be obtained by burying it in the earth, or by placing it in a safe deposit vault. What is desired however is not this sort of safety, but a safety consistent with a profitable use of accumulated capital. This can only be arrived at through a mutual confidence, which induces the holders of money to entrust it to others. For the confidence required there must be a foundation, and it is the object of the laws and regulations which control the business of financial institutions to furnish this foundation.

When banking was in its infancy the goldsmiths of London were trusted, as private bankers are to-day, on account of their supposed private wealth and high character for honesty. But as the business of gathering in and loaning the people's money increased, definite and legal regulations for ascertaining and assuring the trustworthiness of the managers became necessary. Out of the belief on the part of the law-makers that a business so entirely dependent for success upon a well-founded confidence, as is banking, should become to a great degree the care of the State, have grown the laws and regulations governing the great banks and banking systems of foreign countries, and the laws and regulations governing the financial institutions of the United States. When the question "How to make a bank safe?" is asked, it chiefly means what laws and regulations should be put in active operation in the United States in order to give a reliable foundation to the confidence which leads stockholders to subscribe banking capital and the public to deposit their money with banking institutions.

There is a further point to be considered before attempting to answer the question, and that is the one of politics—of great importance in a country like the United Sta es, governed entirely by the will of the majority. It is often said that finance should be entirely divorced from politics; that politics should not enter into this or that question; but, without discussing what ought or ought not to be, it is certainly a fact that in all civilized countries banking laws are looked upon as State questions, and in none more so than in the United States. The will of the majority in the United States is expressed through a very complicated system of machinery: through the Federal and State elections; through dual legislative bodies, Federal and State, and through a President and Governors, each of whom has the power of veto in some degree. The opinions of the voters of the United States have been moulded, in regard to banking, for a century in a particular direction. They have been led to regard certain forms of banking as monopolies and dangerous to the rights of individual citizens. The result is that all laws of the United States and of the several States and territories in regard to banking have been influenced by this feeling, and the banks established under them cannot attain to the degree of strength under all financial conditions as has been and is to-day attained under some systems in Europe and Canada. It is necessary, therefore, to consider not only what system of laws and regulations will make a bank safe under all conditions in the United States, but also what system can be put in operation under the established form of Government.

A bank is a mere piece of machinery through which the money of a country is rendered more effective than it otherwise would be; its capital consisting of money paid in by stockholders, supplemented by money left on deposit. This bank, or mass of money, is only potentially in the bank vaults, being actually in great part represented by various evidences of indebtedness upon which it has been loaned at interest. It is the nice adjustment as to amount and time that the actual money passes out of and into the bank, so as to meet legitimate demands for it from depositors and customers, that constitutes the safety of the institution. This adjustment, moreover, cannot be uniform, because the bank floats upon the sea of business as a ship floats in the ocean. When business is prosperous the bank finds that the money paid in each day by borrowers and depositors just balances the amounts drawn out in loans and by depositors. Reserves need not be trenched upon, nor are they increased. Business may be dull, and then the income of cash may be greater than the outgo, and reserves will increase, or business may be brisk and the demand for loans great, tending to reduce the reserves. Anything, however, that has a tendency to destroy the even balance, in the flux and reflux of money in the bank's vaults, requires a new adjustment of the policy that steers the institution.

The sea of business is subject to even greater and more sudden fluctuations than the real ocean, and banks, large and small, are like large and small ships. There are some storms that only large and well-formed ships may ride in safety, while in calm or moderate weather the smaller craft have no serious difficulty. With banks it is similar in that, with equal management, large institutions are more sure to survive the perils of the business sea than the small ones. The agitations of the business sea come from causes entirely beyond the control of the banks, just as the storms upon the ocean. Failures of crops, unwise legislation affecting money, speculative fever in the minds of men from various causes, stir up conditions of danger to banks.

Unwise legislation in regard to the banks themselves restricting or unduly enhancing their powers, is like compelling ships by law to sail without anchors, or to carry sail out of proportion to their hulls. There may too arise storms in the business world as on the ocean that will wreck any bank however carefully planned, arising from war or some similar calamity.

DEFECTS IN THE PRESENT BANKS OF THE UNITED STATES.

The defects in the present banks of the United States should be considered before undertaking to answer the important question at the head of this article, defects not only in the National banks, but also in the banks, State and Private, in the Savings banks and Trust companies.

The first and greatest disadvantage under which the National and State banks labor, is that their currency-issuing function has been monopolized by the Government of the United States. It is true that the National banks do in name issue currency, but it is under such onerous conditions that it is rather a disadvantage to them in ordinary times. The power to issue bank notes is the power to use the credit which a well-conducted bank acquires with its customers. A bank possessing the privilege of giving its notes to the extent of unexpected and unusual demands for deposits, can at once restore confidence among those making demands upon it where otherwise it might have to suspend payments. The credit upon which it issues these notes is based upon the assets it holds, convertible sooner or later into cash. It is absurd to say that the only assets upon which this credit should be based are bonds of the United States, the least profitable to a bank of all its assets. The extent to which this credit should be used must however be restricted and properly guarded.

The second defect in both the National and State systems consists in the large number of small banks. A large bank has more margin to work on, more free board. The failure of the small bank may not figure much in a statistical table, but its depositors are hurt all the same. The failure of a large bank may cause wider misery, but before it occurs, small banks, owing twice as much to depositors as the large bank, will have succumbed. The remedy for this is not to abolish small banks but to protect them better by a system of a coalition among themselves.

The third defect grows out of the foregoing, and consists in the lack of union in time of trouble among the banks of the United States. In other countries the power of mutual assistance among banks is well understood. In some it is attained by means of branch banks; in others by having an understanding among the various independent institutions. In the latter direction lie great possibilities for the banks of the United States. Enough has already been done in this direction to show the feasibility of some plan of mutual co-operation among all the banks. The Associated banks of New York, and of the other great cities of the country, show the power of mutual support. The branch system, or any system savoring of real or fancied monopoly, would never be sustained by legislation, and would probably, if established, soon be attacked by demagogues. A great bank like the banks of the United States in 1789 and 1816, modelled on the Bank of England, would not be tolerated. And yet these institutions had great advantages. Their branches, as in all branch systems, gathered up the capital in parts of the country where interest was low and money plenty, and loaned it in sections where interest was high and money scarce. The Canadian system of banking does the same to-day less invidiously, as the banking privilege is not confined to one great bank. But whatever advantages are to be derived from the branch system, can, without doing violence to the system of small independent banks which have in conformity with the institutions of the country grown up in the United States, be obtained here by a private system of mutual co-operation among all the banks of the country, based upon the system of a voluntary association already adopted in so many branches of business, and in the banking business by the banks of New York and other great cities. This co-operation involves, no doubt, the giving up of some independence on the part of each bank, but only in times when there will be an adequate gain by the surrender.

The defects of the Savings banks and Trust companies are that they keep too small cash reserves. The profits of these institutions, the immense surplus piled up by many of the Savings banks, show that they can afford to keep larger reserves in cash. As both of these classes of institutions lie without the line of commercial banks, to whom the inquiry at the head of this article particularly applies, the only reason for mentioning this defect is because it bears upon the relations of Savings banks and Trust companies to commercial banks. The reserves of the first two classes are deposited with the latter, and with a condition of general distrust, the commercial banks are obliged to carry not only their own but the depositors of these kindred institutions.

If after a perfectly safe system of banking for the United States has been hit upon and established by legislation, a system which shall afford fair profits to the banker as well as safety to the depositor, there are still those who desire to conduct business as private bankers, it is not necessary to consider their case, inasmuch as to procure deposits they would have to conduct business in accord with the standard of the general system.

A SAFE SYSTEM OF BANKING—MONEY.

The money of the United States should consist of gold coin and sufficient subsidiary silver coin. In addition, the United States Treasury should issue legal-tender notes to the amount now outstanding, and no more, against which a reserve of thirty-three per cent. in gold coin should be held. This amount of paper money will about correspond to what is called in Great Britain the permanent circulation, kept outstanding by the ordinary demands of business. The banks issue this in Great Britain, but it seems that the Treasury might more properly do so here, as it is in accord with the education of the people during the last thirty years.

CHARACTER OF THE BANKS.

The banks of the country can remain as they now are—National and State. The privilege of issuing circulating notes is to be granted to the National banks, to the extent of fifty per cent. of their general assets, in addition to such circulating notes as they may issue upon United States bonds deposited. All circulation is to be taxed one per cent. per annum, the proceeds of the tax to be reserved as a safety fund, out of which the notes of such banks as may become insolvent are to be paid. In addition, in times of panic National banks are to be permitted to issue notes, under the supervision of the Union or Association of banks to which they belong—in the nature of clearing-house loan certificates to the amount allowed by such Union or Association. These notes are to be taxed two per cent. per annum, the proceeds to be placed in the safety fund. State banks are also to be granted this latter privilege, free of the ten per cent. tax.

ASSOCIATIONS OF BANKS.

Associations are to be formed by the banks—National and State—in each State and principal city, on the model of the clearing-house associations, though not necessarily for clearing-house purposes. These associations are to support a Central Association, which shall be kept informed of the operations of the subordinate associations, and act as a bureau of information among them. The expense of these associations will be slight, as they will only be called into operation in times of emergency. If any bank belonging to any association needs assistance, it can apply to the proper committee of that association, and lay its affairs before it, and receive the power to issue notes to the extent of its assets accepted by the committee. The details of the plan having been once arranged, if in any State or city the Associated banks were unable to obtain cash sufficient, they could notify the officers of the Central Association, who, in communication with all the other associations, could direct where cash was abundant. The present imperfect associations of bankers could be readily turned to account in this system. Under it, the banks of the whole country could act as a unit, with full and accurate information of the condition of each. The supervision which each bank would feel that it must undergo, if by chance it should need assistance, would tend to raise the standard of banking.

In order to insure absolute safety to the depositor, as well as to the note-holder, a tax of one-half of one per cent. per annum might be laid upon the deposits of National and State banks and reserved as a safety fund in the Treasury.

Whenever a bank goes into voluntary liquidation, or ceases to do business by reason of the expiration of its charter, the tax contributed by it to the safety fund, less expenses, is to be returned to it. G. W.

LOANS OF THE UNITED STATES.

REVOLUTIONARY LOANS FROM FRANCE AND SPAIN.

It has been seen how Beaumarchais interested the Government of King Louis XVI. in the struggling colonies, and how through his efforts subsidies of eleven millions livres were obtained either in supplies or money. The American Commissioners in Europe were there to aid Congress in every possible way. They had to purchase supplies, especially gunpowder, to carry on the war, to build ships of war to cruise on the coast of Great Britain in order if possible to make prizes of the richly-laden British ships in those seas. While the new ships were building they fitted out small swift sailing vessels as privateers. One of these sailed entirely around Ireland and captured and burnt seventeen or eighteen sail of vessels, which occasioned great consternation among English merchants, raised the rate of insurance ten per cent., prevented the great fair at Chester, in England, and so much deterred shipments in English vessels that in a few weeks forty French ships were loading in the Thames a thing never before known.

The celebrated Captain John Paul Jones, who was called a pirate by the English, and described as a "short, thick, little fellow, about five feet eight inches in heighth, of a dark swarthy complexion," arrived with his ship the Ranger in France in 1778. He was supplied by the American Commissioners, and going on a cruise, landed at Whitehaven, Scotland, where he was born. He also captured the Drake sloop of war and took two hundred prisoners into Brest. The Commissioners then fitted him out with the celebrated *Bon Homme Richard* of forty-two guns and four other vessels. He cruised in the English channel and captured twenty-six prizes, and closed the career of the *Bon Homme Richard* by capturing the Serapis, sailing with the latter into the Texels. The inception of all these brilliant operations required more money than the subsidies, and the remittances of specie from the Congress in America were very small. In answer to the representations of Silas Deane, the *secret Committee of Congress advised him to obtain a loan.

The French ministry in 1777 did not dare as yet to make an open loan to the Colonies, however warm the sympathy felt, and Deane was referred by them to the Farmers-General. This was a name given in France to a company which farmed or leased certain branches of the public revenue, contracting, that is to say, with the Government to pay into the Treasury a fixed yearly

* The authority for this loan is to be found in the Secret Journals of Congress, "Foreign Affairs," volume ii., page 36, under date of December 23, 1776, and is contained in the following resolution:

Resolved, That the Commissioners of Congress at the Court of France be authorized to borrow, on the faith of the thirteen United States, a sum not exceeding two millions sterling for a term of not less than ten years. That if the money borrowed cannot be obtained at a less interest than six per cent., the Commissioners be permitted to engage for that rate of interest, and that they stipulate for the payment of the interest at periods not less than annual. That is the commissioners can contract for the payment of the principal and interest in products of North America, to be delivered here, it will be very agreeable to Congress.

sum, and receiving the right to collect certain taxes as an equivalent. This system was subject to great abuses, the farmers of the revenue often taking advantage of their great influence with the authorities to commit numerous acts of injustice towards the people of the poorer classes, distraining and selling their goods and compelling them to buy articles for which they had no need. Having the monopoly of the salt trade, they obtained a decree obliging every person over eight years of age to buy a certain quantity of salt whether they wanted it or not. At one time the abuses of this system were so great that out of one hundred and fifty millions of livres paid by the people only thirty millions reached the Treasury. Colbert the finance minister of Louis XIV. called these people to severe account, and actually hung some of them, but under the weaker reigns of Louis XV. and XVI. the abuse crept in again through court influence. Courtiers and ministers had to stand well with the Farmers-General who were by no means stingy with douceurs.

These growing abuses made the revenue farmers very unpopular, and when the revolution broke out many of them were sent to the Guillotine, while a few never got further than the lamp-post. Among these a few years later none was more hated than Foulon who had grown gray in "griping projecting intrigue and iniquity," who so pressed extortionate demands upon the people that at last even his hardened associates asked him, on some new proposition of his, "But what will the people do?" "Let them eat grass" answered Foulon. When later the oppressed people became terrible, the news was that Foulon had died, and presently a sumptuous funeral was seen going on. But this was found to be a deception. It was another corpse that was buried. Foulon was recognized as he was escaping from Paris, and seized, brought back with a bundle of grass tied to his back and a garland of thistles and nettles about his neck, he was, in spite of all efforts to save him, hung to the *lanterne*. We find some traces of this wealth wrung from the people which failed to reach the King's treasury in the accounts of the brilliant Fouquet, who subsidized the literary talent of France; who gave fetes costing ten million livres to the King, and who was almost worshiped by the giddy and corrupt courtiers.

Among the privileges of the Farmers-General in 1777 was that of importing tobacco into the Kingdom free of duty, this being virtually a monopoly of the tobacco trade of France. Deane acted on the suggestion of the ministers and applied to these powerful capitalists for a loan, and they signified themselves willing to furnish two millions of livres in exchange for tobacco. On March 24, 1777, therefore, a contract was signed by Silas Deane and Benjamin Franklin, on the part of the United States, and M. Paulze on the part of the Farmers-General, providing that the Congress should deliver during the year 1777, in the parts of France, five millions of pounds of tobacco grown on the banks of the York or James river, at $7.26 per hundredweight, this amounting for the lot to two millions of livres. One million livres was to be advanced within one month after the contract was signed, and the other million as soon as some of the cargoes of tobacco arrived. If more tobacco arrived than the amount stipulated, it was to be paid for at the same rate. Franklin and Deane received the first million on June 4th, and deposited it with M. Grand, Banker of the United States in Paris. Three cargoes of tobacco were shipped from the United States on this contract during the years 1778 and 1779, in the ships Baltimore, Morris and Bergen. The entire lot sent was 390,891 pounds, for which there was allowed a little over one hundred and fifty thousand livres.

Before the balance was paid the French Revolution came on, and the Associated Farmers-General was abolished. Their effects were seized by the revolutionary government, and among them was found this debt from the United States, then about to enter upon a new stage of prosperity under the constitution. The full amount of the loan was not paid until the latter part of 1793, sixteen years after it was contracted. One reason of this delay was Beaumarchais' failure to turn the first million of the subsidy to the Colonies which he received from the French Treasury into the bank of M. Grand. The King declared he had given three millions in 1776 and 1777; but only two had reached M. Grand, as has been seen, and therefore it was for a long time supposed that the million received from the Farmers-General was the missing one and that it was part of the subsidy, not to be repaid. Franklin was much troubled over the matter, and it was only cleared up when Beaumarchais' receipt was unearthed from the French archives by Gouverneur Morris. Moreover, the transactions of the American Commissioners were necessarily involved in much mystery because of the very delicate relations between themselves and the French Government, at that time at peace with England.

The officials of the Treasury of the United States who had the duty of settling these accounts had great difficulty in getting at the facts, and poor Silas Deane who bore most of the brunt of these secret monetary transactions —while Franklin was sunning himself in the smiles of the ladies of the court of Louis the Sixteenth, and having his picture painted on more snuff-boxes than any man of that age—had for a time to lie under great and unwonted suspicions and to suffer long delays in the settlement of his private accounts. *Bon Homme Richard*, the name given to John Paul Jones' ship, was a French term of endearment applied to Franklin on account of his celebrated "Poor Richard's Almanac." These conditions of mystery had also something to do with the next loan, which was obtained directly from the French Government.

In 1778 after the brilliant capture of Burgoyne's army at Saratoga by the army of the Colonies, the independence of the latter was recognized by France. It appears from the secret journals of Congress that before this on December 3, 1777, that body had passed a resolution authorizing the Commissioners at the Courts of France and Spain to obtain another loan of two millions sterling on conditions similar to those of the resolution of December, 1776. There was however no formal loan until as late as 1782. But in 1778 the French Government, having become openly hostile to Great Britain, began to advance quarterly to the American Commissioners the sum of 750,000 livres, about $136,125. There was at the first a stipulation that the amounts should be repaid although there was no expectation of pressing the claims until the final success of the colonies. In 1782 the prospects of success were good and in that year an account was drawn up and a formal contract entered into on July 16, 1782. The payment amounted to 15,000,000 livres, and 3,000,000 livres were added, making the whole loan 18,000,000 livres. The receipts given as the several sums were received promised to repay them on January 1, 1788, with five per cent. interest, "yet as the payment of so large a sum at one period might greatly injure the finances of the United States, it should be made in twelve annual payments of 1,500,000 livres each, to commence from the third year after the conclusion of peace." It was further declared in the contract that "although the receipts of the Minister of the Congress of the United States specify that the 18,000,000 livres are to be paid at the royal treasury with interest at five per cent. per annum, his Majesty being willing to give the United States a new proof of his affection and friendship, has been pleased to make a present of and to forgive the whole arrears of interest to this day, and from thence to the day of the date of the treaty of peace; a favor which the Minister of the Congress of the United States acknowledged to flow from the pure bounty of the King, and which he accepts in the name of the United States with profound and lively acknowledgments."

In regard to this contract Franklin wrote: "All accounts against us for money lent and stores, arms, ammunition and clothing were brought in and examined, and a balance received, which made the debt amount to the sum of 18,000,000 livres, exclusive of the Holland loan of which the King is guarantee. In reading this contract you will discover several fresh marks of the King's goodness to us amounting to the value of nearly two millions. These, added to the free gifts before made us at different times, form an object of at least twelve milliions, for which no returns but that of gratitude and friendship are expected. These I hope may be everlasting."

It is hard to realize that this benevolent King, Louis the XVI., who appears in so generous a light in his dealings with the struggling thirteen Colonies, should have died on the scaffold on January 21, 1793, a little more than ten years after this contract was signed. The gratitude and friendship which Franklin hoped might be everlasting were of little avail. The forces sent out from France to aid the Colonies and which contributed to the success of Washington at Yorktown, carried back to France the ideas of liberty gained in America, and the seeds of rebellion against the corrupt system of personal government of which Louis XVI. was the innocent representative. The repayment of this loan according to the contract should have begun in 1786, three years after the treaty of peace between the United States and Great Britain in 1783. From 1783 to 1789 the power of the Congress under the Articles of Confederation adopted in 1777 grew weaker and weaker. The States asserted their rights as sovereigns and held themselves aloof from the control of the central government. The fear that the weakness and division among the States might enable Great Britain to regain her control at length compelled the adoption of the Constitution of 1789. During the period from 1786 to 1791 nothing was paid by Congress upon this loan. A similar fate awaited all the loans contracted both abroad and at home from 1777 to 1788.

When Hamilton became Secretary of the Treasury in 1789, he formulated a plan for the payment of the entire revolutionary debt which was adopted by Congress and successfully carried out. This will be treated of in its proper place. In the meantime, the circumstances under which the loans of the revolutionary and subsequent periods up to 1789 were obtained, will be considered. At this period relations between France and Spain were most friendly and their interest in aiding the Colonies against Great Britain almost identical. It has been seen that one million livres of the three furnished through Beaumarchais, came from the Spanish Treasury. Nevertheless, the success of the American plenipotentiary, Mr. John Jay, to his Catholic majesty, the King of Spain, was not great. Mr. Jay, at the age of twenty-nine, was elected a delegate to the first Continental Congress from New York.

He was also a member of the Congress of 1775. In 1776 he was elected to the provincial Assembly of New York, and was soon after made Chief Justice of that State with the right to serve as delegate to the Continental Congress on special occasions, which he availed himself of in 1778, and was elected President of that Congress. In September, 1779, he was sent to Spain, and resigned both the presidency of Congress and the chief-justiceship. He arrived in Spain in January, 1780. He was instructed to represent to the King of Spain the great financial distress of the United States, and to ask for a subsidy to be secured by a guarantee by the United States of all rights which Spain might acquire in Florida by conquest from Great Britain. The instructions as to a loan were as follows: "The distressed state of our finances and the great depreciation of our paper money inclined Congress to hope that his Catholic majesty, if he shall conclude a treaty with these States, will be induced to lend them money. You are, therefore, to represent to him the great distress of these States on that account, and to solicit a loan of five millions of dollars upon the best terms in your power, not exceeding six per centum per annum, effectually to enable them to co-operate with the allies against the common enemy. But before you make any propositions to his Catholic majesty for a loan you are to endeavor to obtain a subsidy in consideration of the guarantee aforesaid."

Mr. Jay's mission was far from satisfactory. He was not received by the Spanish Court in a formally diplomatic character, as had been expected. Congress seems to have been so sure of a subsidy that it commenced at once drawing bills on Mr. Jay, and continued so doing until the amount drawn exceeded half a million dollars. He obtained money to meet some of the bills by importuning the Spanish minister, others he paid himself, and some he was obliged to protest. Finally, he received a remittance from Franklin out of the French loans, which enabled him to save the credit of the Colonies. The sum he obtained from the Spanish minister was $174,011 in all.

After Burgoyne's surrender in October, 1777, and the treaty with France in February, 1778, cheering as these events were to the United Colonies and Congress, there were still to come two of the darkest years of the Revolution. The difficulties of the years 1779 and 1780, were chiefly of a financial character. Congress had resorted to the expedient of issuing paper money, known as Continental money. This was dependent for redemption upon the several Colonies, assessing and collecting taxes apportioned to them by the Congress. These taxes, for various reasons, never became available for the purpose, and the Continental money had rapidly depreciated, so that after sinking in value to seventy-five to one in specie it ceased to circulate about the year 1780.

The foreign loans had been insignificant in amount. The Revolutionary Army was reduced to extremity for want of supplies. In February, 1778, four thousand men were unfit for duty for want of clothes. Early in 1780, General Washington wrote to the Governor of Connecticut that the army had for three months been on a short allowance of bread, and before that sometimes without bread, sometimes without meat, and sometimes almost perishing for want of both. They were reduced to the alternative of disbanding the army, or of calling upon the County magistrates to furnish supplies of grain and cattle, or to resort to military impress. The truth was the people began to rely too much on France and less upon themselves.

Congress at last realizing that relief from new issues of paper money was hopeless, resolved to negotiate a loan in Holland, at that time the financial centre of the world. Henry Laurens of South Carolina was selected as the agent for that purpose. He was instructed to borrow a sum not exceeding ten millions of dollars at not more than six per cent. interest, and to employ on the best possible terms some banking house in Amsterdam or elsewhere in Holland to aid in the procurement of loans and to act as financial representative of the United States. Mr. Laurens was delayed by unavoidable accidents, and in the meantime, in June, 1780, John Adams was appointed minister plenipotentiary to negotiate a treaty of peace and commerce with Great Britain, authorizing him to negotiate a loan with Holland. Francis Dana, the ancestor of Richard Henry Dana, author of "Before the Mast," etc., was Adams' Secretary of Legation. Shortly after these commissions were issued, Henry Laurens sailed; but the vessel he was in was captured off the coast of Newfoundland by a British frigate. He threw overboard all his papers; but not being weighted sufficiently, they floated and were recovered by a sailor. These papers contained a plan of a treaty with the United States, drawn up in accordance with the directions of Van Beckel, grand pensionary of Amsterdam. Holland had before this joined with France and Russia in the celebrated "Armed Neutrality" resistance to the demands of Great Britain on the seas. The discovery of this sympathy with her revolted Colonies caused Great Britain to instruct Sir Joseph York, her minister at The Hague, to demand a disavowal of the plan by the States General, and the "exemplary punishment of the pensionary and his accomplices as disturbers of the public peace and violators of the rights of nations." Satisfaction not being given, war was declared after the usual preliminaries.

Mr. Laurens had been a delegate to the Continental Congress from South Carolina, and was a steadfast supporter of the revolutionary course, a signer of the Declaration of Independence and a firm friend of Washington. He was accordingly regarded as an important prisoner, was examined by the Privy Council and committed to the Tower on the charge of high treason where he remained for fifteen months.

John Adams had in 1777 been appointed Commissioner to France with Franklin, but owing to disagreement with the latter had been recalled. After receiving in 1780 his commission as Minister Plenipotentiary to negotiate a treaty of peace and commerce with Great Britain he sailed for France, but on his arrival there he was prevented from communicating his powers to the English authorities by Count de Vergennes, Foreign Minister of France, who seriously objected to any separate treaty of peace and commerce between the Colonies and the mother country, until the disputes between England and the Continental powers were settled. Adams had been instructed to procure a loan in Holland, and in the absence of Laurens made the attempt, but without success. The Holland bankers were distrustful of the power of the Colonies to pay the loan, and the States General were unwilling to undertake it because of the existence of a strong court party friendly to Great Britain. In December, 1780, Congress sent Col. John Laurens to France to hurry up the matter. The apparent hurry of the Colonies to conclude a peace had caused a coolness on the part of France, and although Count de Vergennes made fair promises nothing was done.

Col. Laurens the son of the prisoner in the Tower was one of the most brilliant of the young American officers. He had displayed great gallantry in every action, and had saved Washington's life at Monmouth. He was called the "Bayard of the Revolution."

He determined to brook no further delay, and resolved to go over the head of the Minister of Foreign Affairs and present a memorial to the King himself. The situation was such that unless financial assistance was granted, the Colonies would be obliged to lay down their arms and again become the Colonies and allies of Great Britain. It was time for a bold stroke. Col. Laurens told Count de Vergennes his intention, in unqualified language, and the latter replied: "Col. Laurens, you are so recently from the headquarters of the American army that you forget you are no longer delivering the orders of the Commander-in-Chief, but addressing the Minister of a monarch who has every disposition to favor your country." "Favor, sir," rejoined Laurens; "the respect which I owe my country will not admit the term—say the object of my mission is of mutual interest to our respective nations, and I subscribe the obligations; but, as the most conclusive argument I can address to your excellency, the sword I now carry, in defense of France as well as of my own country, I may be compelled to draw against France as a British subject, unless the succor I solicit is speedily accorded."

The memorial was presented and was graciously received. The King engaged to become responsible for the sums that might be furnished in Holland. This gave new impetus to Mr. Adams' exertions in that country, and he procured a loan of 10,000,000 livres late in 1781. The loan was made to France on the strength of a Royal obligation entered into on November 5, 1781, between his Majesty and the States General. The King agreed to pay the principal of the debt, with interest at four per cent. per annum, the capital to be returned in ten equal semi-annual payments, the first to commence the sixth year after the date of the loan. on the part of the United States, who received the money, it was agreed that the interest paid to the Royal Treasury of France should be four per cent., and that the principal should be repaid in ten annual instalments of 1,000,000 livres each, to commence in November, 1787. The King, "on account of his affection for the United States, having been pleased to charge himself with the expense of commissioners and bank for the loan, of which expense his Majesty has made a present to the United States." When at last King Louis made up his mind to act, he certainly did it very graciously.

Col. John Laurens also effected another important result: the more active co-operation of the French fleet with the land forces under Washington and Rochambeau. It was largely due to this that the capture of Cornwallis at Yorktown became possible. Laurens returned to America and rejoined the army. The good prospects of the Holland loan and the money spent in the United States by the French army made it easier for Robert Morris to raise temporary resources to move the army from Peekskill and Morristown, New York, to Virginia. Col. Laurens captured the first redoubt at Yorktown, and received the sword of the commander. With the Count de Noailles he arranged the terms of the surrender. He was killed the next year in a skirmish in the South. According to Washington, his only fault was an intrepidity verging on rashness. Henry Laurens was released from the Tower late in 1781, and in November, 1782, with Franklin and Jay, he signed the preliminary treaty of peace. Ill health, contracted during his imprisonment, compelled his return to America, where he lived in retirement until his death in 1792

THE DECLARATION OF BIMETALLISM IN THE VOORHEES BILL.

[COMMUNICATED.]

The following is the full text of the bill introduced by Senator Voorhees of Indiana, and reported favorably by the Senate Finance Committee on the 18th of August:

A BILL Discontinuing the purchase of silver bullion.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That so much of the act approved July fourteenth, eighteen hundred and ninety, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of four million five hundred thousand ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding one dollar for three hundred and seventy-one and twenty-five one-hundredths grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

It would be a lesson worth the learning if every thinking man in the United States could be brought to a convincing knowledge of the exact position to which this bill assigns his economic and financial intelligence. Read the first sentence of the so-called bimetallic declaration and answer the question, Can the self-respecting and intelligent people of the United States afford to have a declaration so clearly out of line with the facts formally enacted by their representatives?

"Continue to use both gold and silver as standard money." I challenge any Senator to show one market quotation in which values are determined by "both gold and silver standard money." This statement is misleading. Values in the United States have never been fixed by "both gold and silver standard money." Therefore a "declared policy to continue the use of both gold and silver as standard money" cannot be and has never been carried out. It is the lack of economic and financial intelligence necessary to enable legislators and the people to recognize this fact that has plunged the affairs of this country into the troubled waters that now surround them. A failure to recognize and to be governed by this fact now will surely open a way for future trouble. And "to coin both gold and silver into money of equal intrinsic and exchangeable value," to continue to do this, mind you, as though it had ever had been done. If the intrinsic value of coined United States silver dollars was to-day, and on all days, of equal intrinsic value with the coined United States gold dollars, there would be no financial panic, no silver question. It is be cause the silver dollar is worth only fifty-five cents in gold, and because all values in the United States are fixed by the single gold standard of value and not by an impossible double standard of "both gold and silver standard money" that there is fear of being forced on to the silver standard basis.

"Equality to be secured through international agreement" is the dream of the theorist and the stock trick of the politician. Any person capable of discussing financial questions intelligently can tell to-day, and on any day, just how much silver is required to place the value of a silver dollar on a parity with the value of a gold dollar in the markets of the world. The values in the markets of the world of coins issued by this or any other country have never been and never can be determined by international agreement. Civilization has not yet reached a point of development at which it is feasible to institute a confederacy of nations presided over by a world's congress. When the day comes in which this is possible it will be found that it did not come until politicians and people had learned that market values are not determined by acts of legislatures, and that while governments may issue money, so-called, they are impotent to fix its purchasing power. As witnesses of this fact I call the experience of the United States and of the Confederate States during the war for the preservation of the Union.

This bimetallic declaration is not an effort to align and fix the declared policy of the United States in accord with the natural laws of money. It is an attempt to make a declaration in a way to enable politicians to cause the uninformed in both parties to think their party has won the day, and thus preserve party prestige. This is a specimen of the economic education which politicians give to the people, and for which the people pay the enormous cost of financial disturbances such as are now being endured.

A BIMETALLIC DECLARATION AS IT SHOULD BE WRITTEN.

And it is hereby declared to be the policy of the United States to continue the use of gold as a standard money and of as much silver as may be required fully to satisfy a commercial demand for the same at its denominational value, when coined in the weights and fineness now prescribed by law.

This is all there is of it. In international exchanges neither gold nor silver passes at its coined or denominational value. It always passes at its bullion value. In internal exchanges it is as easy to maintain silver on a parity with gold by giving two silver dollars for one gold dollar as it is to put twice the amount of silver into the silver dollar. If silver coins are issued only in compliance with a commercial demand for them, at their denominational value, just as gold coins are issued, the Government showing no partiality whatever between the two metals, there will never be enough silver coin in circulation to threaten the standard of value, unless, through some unforeseen cause, the silver bullion in the silver coin should become more valuable in the international markets than the gold bullion in the gold coins. In that event the commercial demand would be for silver as it is now for gold, and silver would become the standard of value. Such a change would increase all values and could injure no one. Panics never occur on rising values. Confidence is never lost when the basis upon which it is founded is increasing. Credit never contracts when the values of securities are expanding.

This brief discussion enables me clearly to define the meaning of the clamor for free silver coinage. It is a demand that those who own silver bullion shall have the right to deliver their bullion to the United States mints and have it there minted into coin which contains silver bullion of less value than the denominational value of the coin, and further to have such coin made a legal tender at its denominational value for the payment of all debts. In compliance with an unwritten natural law of money, universal in its action, whenever any person has two coins of unequal intrinsic value, he invariably pays out the coin of least value, and retains the one of greater value. It is this law which inevitably causes cheap money to drive good money out of any country which tolerates its use. No matter what the ratio is, parity never exists between two metals. Any law that compels a government to coin all of two metals brought to it, at any ratio that can be established, will find that it is the metal which, at the ratio, contains bullion less valuable than the denominational value of the coin made from it, that is offered most abundantly and becomes the standard money of the country.

Silver men loudly demand that no favor shall be granted by the United States Treasury between gold and silver as money metals, but the thing they want done is to compel the Government to show the most marked discrimination against gold and in favor of silver. They want a silver dollar coined at 16 to 1, 17 to 1, 18 to 1, 19 to 1, or 20 to 1, whatever ratio they can force upon the people, and then to declare that such a dollar shall be accepted as being of equal value with the gold dollar by which it is standardized when it is not as valuable in the markets of the world. They want the Government to lie for them, and then to compel intelligent people who detect the lie to accept it as truth. This is political free coinage. This is a discrimination against gold of the most violent and dangerous character.

If silver men will stand by the logic of their own demand it will be an easy matter to enact a coinage law that will render the action of the United States Treasury perfectly automatic, and permit the coinage of either gold or silver absolutely without choice for or discrimination against the one or the other. Let the law declare that the Treasurer shall always supply all the gold or silver coin of the weights and fineness now specified by law, for which he may have a commercial demand at its coined denominational value, and that, whenever the Government does not own sufficient gold or silver bullion to supply such a demand, the Treasurer shall buy a sufficient quantity of bullion of either metal, at its market price, to enable him fully to supply the demand for the coin wanted, neither coin to be redeemable by the other. This is economic free coinage.

Under political free coinage the owner of silver bullion can take fifty-five cents' worth of silver to the mint and have it coined into a silver dollar, which he can compel the farmer to take in payment for his wheat, or the workingman to take in payment for his labor.

Under economic free coinage the United States Treasurer will buy one dollar's worth of gold bullion and coin it into a gold dollar, which will be a legal tender throughout the United States, at the option of the payee, and will pass at its bullion value throughout the world. He will also buy fifty-five cents' worth of silver bullion, the present value of the bullion in a silver dollar, if out of silver, coin it into a silver dollar, which will be a legal tender throughout the United States, at the option of the payee, and will pass at its bullion value throughout the world. When the owner of silver bullion is compelled to accept pay for his bullion in silver dollars at their denominational value, that are legal-tender at the option of the payee, having sold his silver at its bullion market price, there will be no danger of his getting enough silver dollars issued through his commercial demand for them to carry the finances of the country on to a silver basis.

Now let me ask farmers and workingmen one question: If silver dollars at their denominational value are good enough to pay you for your wheat or your labor, when sold at market price, why are they not good enough to pay for silver bullion when sold at its market price?

If silver is to be true standard money, it must be money of final payment and should not be redeemable in other money. Establish this principle and then allow the people free choice as to which they will take, gold or silver coin, and the Treasury will be placed in position to supply all commercial demands for either gold or silver without showing a preference for one over another. The preference will be shown by the people who are to use the coins. This is their right. This is free coinage of both gold and silver, without preference for one over the other by the United States Treasury.

A. R. F.

President Cleveland's Views.

In reply to a request for a clear declaration of his views on finance, President Cleveland addressed the following letter to Governor Northen of Georgia:

EXECUTIVE MANSION,
Hon. W. J. Northen. WASHINGTON, D. C., Sept. 25.

MY DEAR SIR: I hardly know how to reply to your letter of the 15th inst. It seems to me that I am quite plainly on record concerning the financial question. My letter accepting the nomination to the Presidency, when read in connection with the message lately sent to the Congress in extraordinary session, appears to me to be very explicit.

I want a currency that is stable and safe in the hands of our people. I will not knowingly be implicated in a condition that will justly make me in the least degree answerable to any laborer or farmer in the United States for a shrinkage in the purchasing power of the dollar he has received for a full dollar's worth of work, or for a good dollar's worth of the product of his toil.

I not only want our currency to be of such a character that all kinds of dollars will be of equal purchasing power at home, but I want it to be of such a character as will demonstrate abroad our wisdom and good faith, thus placing upon a firm foundation our credit among the nations of the earth.

I want our financial conditions and the laws relating to our currency safe and reassuring, that those who have money will spend and invest it in business and new enterprises instead of hoarding it. You cannot cure fright by calling it foolish and unreasonable, and you cannot prevent the frightened man from hoarding his money. I want good, sound, and stable money, and a condition of confidence that will keep it in use.

Within the limits of what I have written, I am a friend of silver, but I believe its proper place in our currency can only be fixed by a readjustment of our currency legislation and the inauguration of a consistent and comprehensive financial scheme.

I think such a thing can only be entered upon profitably and hopefully after the repeal of the law which is charged with all our financial woes. In the present state of the public mind this law cannot be built upon, nor patched in such a way as to relieve the situation.

I am, therefore, opposed to the free and unlimited coinage of silver by this country alone and independently, and I am in favor o the immediate and unconditional repeal of the purchasing clause of the so-called Sherman law.

I confess I am astonished by the opposition in the Senate to such prompt action as would relieve the present unfortunate situation.

My daily prayer is that the delay occasioned by such opposition may not be the cause of plunging the country into deeper depression than I have yet known, and that the Democratic party may not be justly held responsible for such a catastrophe.

Yours very truly, GROVER CLEVELAND.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

LIABILITY OF PERSON TAKING NATIONAL BANK STOCK AS PLEDGEE.

United States Circuit Court, S. D. California, June 12, 1893.

PAULY *vs.* STATE LOAN & TRUST CO.

Where one in good faith takes a transfer of National bank stock to himself as collateral security for a loan, and the transfer is made to him "as pledgee," and is so entered on the books of the bank, he will not be liable as a stockholder on such stock should the bank afterwards become insolvent.

This was an action by Frederick N. Pauly, Receiver of the California National Bank of San Diego, against the State Loan & Trust Company, a corporation, to recover an assessment on certain shares of the bank.

Ross, *District Judge:*

The plaintiff, as Receiver of an insolvent National bank, brings this suit against the defendant bank to recover the amount of an assessment on 200 shares of the stock of the insolvent bank, originally taken by the defendant as collateral security for $12,500, with interest thereon, loaned by defendant to J. W. Collins and S. G. Havermale upon that security and upon the promissory note of Havermale, indorsed by Collins. At the time of the loan Collins was President and Havermale one of the directors of the California National Bank of San Diego, and each was the registered owner and holder of 100 shares of its stock. The bank was then carrying on its ordinary business, and, so far as known to the defendant and the public, was perfectly solvent. Upon the making of the loan, and for the purpose of securing its repayment with interest, Collins and Havermale each indorsed in blank his certificate for 100 shares of the stock in question to defendant, and thereupon, and upon the application of the defendant to the bank whose stock was thus represented and assigned, that bank took up the two certificates issued to Collins and Havermale, and in lieu of them issued to the "State Loan & Trust Co. of Los Angeles, as pledgee," two certificates for 100 shares each.

The defendant thus stood upon the registry of the National bank as the holder of 200 shares of its stock "as pledgee," and so stood at the time the bank became insolvent. The indebtedness to defendant for which the stock was given as security, though reduced in amount to $10,000, continued, and the question presented for decision is whether, under such circumstances, defendant is liable for an assessment upon the 200 shares of stock for the benefit of the creditors of the insolvent bank. The statute providing for the association of persons for carrying on the business of banking provides, among other things, as follows:

"The capital stock of each association shall be divided into shares of one hundred dollars each, and be deemed personal property, and transferable on the books of the association in such manner as may be prescribed in the by-laws or articles of association. Every person becoming a shareholder by such transfer shall, in proportion to his shares, succeed to all the rights and liabilities of the prior holder of such shares; and no change shall be made in the articles of association by which the rights, remedies, or security of the existing creditors of the association shall be impaired." Rev. St., § 5139.

By Section 5151 of the Revised Statutes it is declared:

"The shareholders of every National banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts, debts, and engagements of such association, to the extent of the amount of their stock therein, at the par value thereof, in addition to the amount invested in such shares."

—With certain exceptions, not applicable to the present case.

Section 5152 is as follows:

"Persons holding stock as executors, administrators, guardians, or trustees, shall not be personally subject to any liabilities as stockholders; but the estates and funds in their hands shall be liable in like manner and to the same extent as the testator, intestate, ward, or person interested in such trust funds would be if living, and competent to act and hold the stock in his own name."

The precise question involved was not presented in any of the numerous cases that have been cited by counsel. But, in my opinion, the doctrine of the case of *Anderson* vs. *Warehouse Co.* (111 U. S. 479), carried to its logical conclusion, exempts the defendant from the liability with which it is sought to be charged. In that case the Supreme Court, while declaring it to be well settled that one who allows himself to appear on the books of a National bank as an owner of its stock is liable to the creditors as a shareholder, whether he be the absolute owner or pledgee only, and that, if a registered owner, acting in bad faith, transfers his stock in a failing bank to an irresponsible person, for the purpose of escaping liability, or if his transfer is colorable only, the transaction is void as to creditors, and that it is also true that the beneficial owner of stock registered in the name of an irresponsible person may, under some circumstances, be liable to creditors as the real shareholder, said it knew of no case that held that a mere pledgee of stock is chargeable where he is not registered as owner.

In that case the Philadelphia Warehouse Company had loaned money on certain shares of the stock of the First National Bank of Allentown, which afterwards became insolvent. One William Kern, who was a member of the firm of W. H. Blumer & Co., and to which firm the loan was made, was the registered holder of 490 shares of the stock of the bank, and as security for the loan he caused 450 shares standing in his own name on the books of the bank to be transferred, and a certificate to be issued therefor in the name of T. Charlton Henry, president—Henry being president of the warehouse company. As soon as that fact became known to the directors and members of the executive committee of the company, they deemed it inadvisable to have the stock stand in the name of the president, and accordingly the certificate was thereupon transferred, under the seal of the company and the signatures of its president and secretary, to Denis McCloskey, an irresponsible person, and a porter in its employ. With this assignment the certificate was presented by the company to the bank, with the request for the issuance of a new certificate in the place of it in the name of McCloskey, and accordingly the stock was transferred to McCloskey on the books of the bank, and a new certificate issued in his name and delivered to the warehouse company. McCloskey never had possession of the certificate, and at the request of the company he executed in blank an irrevocable power of attorney for the sale and transfer of the stock. He subsequently died, and after his death the stock was transferred on the books of the bank, at the request of the company, to another one of its employes, who was also an irresponsible person, and who indorsed thereon an irrevocable power of attorney for its transfer, and in whose name it stood at the time of the failure of the bank. All of this was done with the avowed purpose on the part of the company to avoid incurring liability as a shareholder of the bank. The circumstances of the case were such as to satisfy the court that the company acted throughout the transaction in good faith, and without any fraudulent intent.

Such being the facts, the court declared the law to be that the warehouse company never was the owner of the stock; that its transfer was only by way of pledge, and that the company was bound to return it whenever the debt for which it was held should be paid; that there was never a time, from the date of the original transfer by Kern on the books until the failure of the bank, that it was or pretended to be anything else than a mere pledgee. "Those who examined the list of shareholders," said the Court, "would have found the name of McCloskey or of Ferris as the registered holder of four hundred and fifty shares. There was nothing on the books of the bank to connect them, or either of them, with the warehouse company, and therefore no credit could have been given on account of the apparent liability of the company as a shareholder. If inquiries had been made, and all the facts ascertained, it would have been found that either Kern or Blumer & Co. were always the real owners of the stock, and that it had been placed in the name of the persons who appeared on the registry, not to shield any owner from liability, but to protect the title of the company as pledgee. Blumer & Co. and the bank were fully advised who McCloskey was, and of his probable responsibility, when they allowed the transfer to be made to him, and they undoubtedly knew who Ferris was when the stock was put in his name after McCloskey's death. The avowed purpose of both transfers was to give the company the control of the stock for the purposes of its security, without making it liable as a registered shareholder. To our minds, there was neither fraud nor illegality in this. The company perfected its security as pledgee, without making itself liable as an apparent owner. Kern or Blumer & Co. still remained the owners of the stock, though registered in the name of others, and pledged as collateral security for their debt. They consented to the transfer, not to escape the liability as shareholders, but to save the company from a liability it was unwilling to assume, and at the same time to perfect the security it required for the credit to be given. As between Blumer & Co. and the warehouse company, Blumer & Co. or Kern were the owners of the stock, and the company the pledgee. As between the company and the bank or its creditors, the company was a pledgee of the stock, and liable only as such. The creditors were put in no worse position by the transfers that were made than they would have been if the stock remained in the name of Kern or Blumer & Co., who were always the real owners. To our minds, the fact that the stock stood registered in the name of Henry, president, from December 27 to January 10, is, under the circumstances of this case, of no importance. The warehouse company promptly declined to allow itself to stand as a registered shareholder, because it was unwilling to incur the liability such a registry would impose. It asked that the transfer might be made to McCloskey. To this the owners of the stock and the bank assented, and from that time the case stood precisely as it would if the transfer had originally been made to McCloskey instead of Henry, president, or if Henry had retransferred to Kern or Blumer & Co., and they had, at the request of the company, made another transfer to McCloskey."

It seems to me there was stronger ground for holding the warehouse company liable in the case from which the quotation has been made than there is for holding the defendant in the present case liable. Here it is not pretended that there was any fraudulent conduct on the part of the defendant. There that claim was made, and it constituted the ground of the dissenting opinion of two of the justices of the court. If the holding of the stock as pledgee rendered the warehouse company liable under the statute, it could not have relieved itself of that liability by causing the stock to be placed upon the books of the bank, and a certificate therefor to be issued in the name of one of its irresponsible employees; for the same case declares it to be well settled that a liability incurred cannot be so avoided. The warehouse company was without any liability, because, being pledgee only, it was not the real owner of the stock, and it was not liable as the apparent owner because it did not appear upon the records of the bank as such apparent owner; and hence no one could have been misled by its acts.

Applying this reasoning to the case at bar, the defendant bank must be held not liable. If, as held in *Anderson* vs. *Warehouse Co.*, a pledgee is not liable because not the real owner of the stock, it is manifest that the record of the truth upon the books and certificate of the bank that the stock is held in pledge cannot render such pledgee liable. Any and every person dealing with the bank is thereby apprised that the pledgee only holds the stock as security for some debt or obligation, and that the real owner of it is the pledgor, to whom he must look for the statutory liability.

It results that there must be judgment for the defendant, and it is so ordered.

MUNICIPAL BONDS—POWER TO ISSUE NEGOTIABLE SECURITIES.

United States Circuit Court of Appeals, Eighth Circuit, May 15, 1893.

ASHUELOT NATIONAL BANK *vs.* SCHOOL DISTRICT NO. 7.

An express power conferred upon a municipal corporation to borrow money for corporate purposes does not in itself carry with it an authority to issue negotiable securities.

The latter power will never be implied in favor of a municipal corporation, unless such implication is necessary to prevent some express corporate power from becoming utterly nugatory.

In every case where a doubt arises as to the right of a municipal corporation to execute negotiable securities the doubt should be resolved against the existence of any such right.

In error to the Circuit Court for the District of Nebraska.

This was an action by the Ashuelot National Bank of Keene, N. H., against School District No. 7, Valley County, Neb., to recover the amount of certain negotiable bonds with interest coupons attached. The judgment of the Circuit Court was in favor of defendant, whereupon plaintiff sued out a writ of error.

The only statutes authorizing the issue of bonds were as follows: Act. 15, 1869.

"Sec. 30. Any school district shall have power and authority to borrow money to pay for the sites of schoolhouses, and to erect buildings thereon, and to furnish the same, by a vote of a majority of the qualified voters of said district present at any annual meeting or special meeting: provided, that a special meeting for such purpose shall be upon a notice given by the director of such district at least twenty days prior to the day of such meeting, and that the whole debt of any such district at any time for money thus borrowed, shall not exceed $5,000." Laws Neb. 1869, pp. 115-120.

Act Feb. 27, 1873.

"Sec. 1. That from and after the passage of this law it shall be the duty of the precinct or township and school-district boards or officers, after having first filed for record with the County Clerk the question of submission, return of votes for and against, notice and proof of publication, to register with the County Clerk all precinct or township and school-district bonds voted and issued pursuant to * * * sections 30, 31, and 32 of 'An Act to establish a system of public instruction for the State of Nebraska,' approved Feb. 15, 1869." "Sec. 3. It shall be the duty of the County Clerk, on presentation of any precinct or township or school-district bonds for registry, to register the same in a book prepared for that purpose, which register shall contain—First, the number or name of the precinct, or township, or school-district; second, the number of the bond; third, the date of the bond; fourth, to whom payable; fifth, where payable; sixth, when due; seventh, when interest is due; eighth, amount of bond; ninth, reference by page to the book provided for in section 2, giving history of bond. The County Clerk shall receive a fee of 25 cents for every bond so registered." Gen. St. Neb. 1873, pp. 883, 884.

THAYER, *D. J.* (omitting part of the opinion):

These being the only laws in force in the State of Nebraska on the 21st of November, 1874, under and by virtue of which the power to issue negotiable securities can be derived, the question arises whether they are adequate for that purpose. In the case of *Merrell* vs. *Monticello* (138 U. S. 673) it was held that, although a municipal corporation has an implied power to borrow money, and to give written evidence of the indebtedness in the form of a note or bond, yet that it has no authority, as an incident of such power, to issue a negotiable security. It was further held that the power to borrow money and the power to give a negotiable bond which may circulate in the market freed from all equitable defenses, are essentially different powers, and that the latter power will not be implied from the former. In a later case (*Brenham* vs. *Bank*, 144 U. S. 173) it was held that a city which had an express power under its charter, "to borrow for general purposes not exceeding $15,000 on the credit of the city," had no authority, as an incident of such power, to issue negotiable securities. In accordance with that view, certain negotiable bonds, in the hands of an innocent purchaser, were declared to be void, although another provision of the charter of the city declared, that "bonds of the corporation of the city of Brenham shall not be subject to tax under this Act," and although the latter clause could only have had reference to bonds issued in pursuance of the power to borrow money for general purposes on the credit of the city. In speaking of the scope of the decision in *Brenham* vs. *Bank*, Mr. Justice Harlan, in the dissenting opinion, says:

"It seems to us that the Court in the present case announces for the first time that an express power in a municipal corporation to borrow money for corporate or general purposes does not, under any circumstances, carry with it, by implication, authority to execute a negotiable promissory note or bond for the money so borrowed. * * * A declaration by this Court that such notes and bonds are void because of the absence of express legislative authority to execute negotiable instruments for the money borrowed will, we fear, produce incalculable mischief." Pages 196, 197, 144 U. S., and page 568, 12 Sup. Ct. Rep.

It is unnecessary for us to assert that the decision last referred to goes to the full extent last indicated, of holding that a municipal corporation can only acquire authority to issue negotiable securities by a statute which confers such power in express language, and that the power will not be implied under any circumstances. We think, however, that we may fairly affirm that the two authorities heretofore cited do establish the following propositions: First, that an express power conferred upon a municipal corporation to borrow money for corporate purposes does not in itself carry with it an authority to issue negotiable securities; second, that the latter power will never be implied, in favor of a municipal corporation, unless such implication is necessary to prevent some express corporate power from becoming utterly nugatory; and, third, that in every case where a doubt arises as to the right of a municipal corporation to execute negotiable securities the doubt should be resolved against the existence of any such right. The application of these principles to the case at bar satisfies us that the judgment of the Circuit Court was for the right party, and should not be disturbed.

CASHIER—AUTHORITY TO COMMENCE SUIT—LIABILITY OF BANK FOR FALSE IMPRISONMENT.

Supreme Court of Michigan, July 25, 1893.

WACHSMUTH *vs.* MERCHANTS' NATIONAL BANK *et al.*

Where an action of libel was instituted in the name of a bank, and it was alleged in the affidavit on which the writ for the arrest of the defendant was obtained that the deponent was the Cashier of the bank, and had full authority to make the affidavit for and on behalf of the bank, and the attorneys bringing the suit were the regular attorneys of the bank, and one was a director of the bank, and the expenses of the proceedings on motion to quash the writ were paid by the bank. *Held*, That it would be presumed, *prima facie*, that the Cashier had authority to direct the commencement of the suit.

A bank may be liable in tort though a malicious intent is necessary to be proved.

This was an action for false imprisonment. Judgment below was for plaintiff, and defendant appealed.

Plaintiff, on October 20, 1891, was a member of the Common Council of the City of Muskegon. The Merchants' National Bank was the financial depository of said city. John Torrent was President of said bank, and defendant Lange was Cashier. On that date plaintiff, as Alderman, presented to the Common Council of the city, at a session thereof, the following preamble and resolution: " Whereas, by a late decision of the Supreme Court of this State, a decree of the Circuit Court for the County of Muskegon, in Chancery, was affirmed against John Torrent, and which decree will in all probability compel the said Torrent to pay at least $125,000; and whereas, the said Torrent is the principal surety of the Merchants' National Bank on its bond as depository of the moneys of the City of Muskegon; and whereas, this Council does not deem it entirely safe to leave the city's money on deposit in said bank without additional security to be approved by this Council: Therefore, be it resolved by the Common Council of the City of Muskegon that, for the security of said city an order be drawn on the City Treasurer in favor of Leonard Eyke, the City Treasurer, for the sum of one hundred and eighty-four thousand dollars, and that the money so received by said Leonard Eyke as the proceeds of said order be deposited in the other four banks of the city in equal proportions, and there kept until such additional security to the satisfaction of this Council be given by the said Merchants' National Bank. John

Wachsmuth." A motion to refer the resolution was lost by a vote of three to nine. A motion to adopt was lost by a vote of five to seven. On October 25, 1891, the Merchants' National Bank commenced an action on the case for libel, by capias, which was issued upon the affidavit of the defendant Lange. An order to hold to bail in the sum of $2,000 was indorsed by a Circuit Court Commissioner, and plaintiff was arrested, committed to jail and afterwards gave bail.

McGrath, *J.* (omitting part of the opinion): It is urged that malice cannot be charged against a corporation unless it is shown that the act done was ordered by the Board of Directors. The suit was instituted in the name of the corporation. Its cashier made the affidavit, in which he alleged that he is "the Cashier and agent of the Merchants' National Bank, the plaintiff named in the annexed writ of *capias ad respondendum*, and has full authority to and makes this affidavit for and on behalf of said plaintiff." The attorneys for the plaintiff were the regular attorneys of the bank, were employed and paid by the bank, and one of the attorneys was at the time a director in said bank. A motion was made by defendants to quash the capias, which was granted. Application was then made to this court by the bank for a mandamus directing the circuit court to set aside the order quashing the writ. The expenses of that proceeding were shown to have been paid by the bank. The Cashier must be presumed, *prima facie*, to have had authority to direct the commencement of the suit. *Frost* vs. *Sewing Machine Co.*, 133 Mass. 563, where it was held that the general manager or agent of a corporation must be presumed to have had authority to direct the issue of a writ of replevin, for the improper service of which the corporation was sued. A ratification of an unauthorized act of an officer of a corporation may be presumed from acts of recognition and acquiescence. Beach, Priv. Corp. § 196.

Again, defendants' plea sets forth that the alleged acts, if committed at all, were committed by the "said defendant Herman O. Lange, acting as Cashier and agent of the Merchants' National Bank." In order to avail themselves, in any event, of want of authority, the fact should have been pleaded. (Beach, Priv. Corp. § 863.)

It is now well settled that a corporation may be liable in tort, even though a malicious intent is necessary to be proven. The malice of the agent is imputable to the corporation. (Cooley, Torts (2d Ed.) p. 196; 7 Amer. & Eng. Enc. Law, 684; Beach, Priv. Corp. §§ 428, 445, 447, 453, 455.) As is said by Mr. Beach (section 455): "The doctrine that an action will not lie against a corporation for a tort is exploded. The same rule applies to corporations as to individuals. They are equally responsible for injuries done in the course of their business by their servants. This is said to be so well settled as not to require the citation of authorities." (See, also, *Bacon* vs. *Railroad Co.*, 55 Mich. 224, 228; *Goodspeed* vs. *Bank*, 22 Conn. 536; *Carter* vs. *Machine Co.*, 51 Md. 290; *Reed* vs. *Bank*, 130 Mass. 443; *Vinas* vs. *Insurance Co.*, 27 La. Ann. 367; *Railroad Co.* vs. *Jackson*, 81 Ind. 19; *Quigley* vs. *Railroad Co.*, 11 Nev. 350; *Miller* vs. *Railroad Co.*, 8 Neb. 219; *Williams* vs. *Insurance Co.*, 57 Miss. 759; *Railroad Co.* vs. *Schuyler*, 34 N. Y. 30.) In *Goodspeed* vs. *Bank* the Court say: "But, after all, the objection to the remedy of this plaintiff against the bank in its corporate capacity is not so much that, as a corporation, it cannot be made responsible for torts committed by its directors, as that it cannot be subjected to that species of tort which consists in motive and intention. The claim is that, as a corporation is ideal only, it cannot act from malice, and therefor cannot commence or prosecute a malicious or vexatious suit. This syllogism or reasoning might have been very satisfactory to the schoolmen of former days; more so, we think, than to the jurist, who seeks to discover a reasonable and appropriate remedy for every wrong. To say that a corporation cannot have motives, and act from motives, is to deny the evidence of our senses, when we see them thus acting, and effecting thereby results of the greatest importance every day. And, if they can have any motive, they can have a bad one; they can intend to do evil as well as to do good. If the act done is a corporate one, so must the motive and intention be. In the present case, to say that the 'vexatious suit,' as it is called, was instituted, prosecuted, and subsequently sanctioned by the bank, in the usual modes of its action, and still to claim that, although the acts were those of the bank, the intention was only that of the individual directors, is a distinction too refined, we think, for practical application."

PROMISSORY NOTE—DATED ON SUNDAY—EVIDENCE TO PROVE DATE.

Supreme Court of Alabama.

GOODLOE *vs.* HAUERWAS, *et al.*

Where a note is dated on Sunday, the burden of showing that it was made on another date is on the person claiming on it.

Upon the question as to the actual time of the making of the note, it is admissible to show that the note is in the handwriting of the Cashier of the bank holding the same, and that he was not in the employ of the bank until after the date mentioned in the note.

Plaintiff introduced in evidence the note sued on, and in connection therewith, a book regularly used by the bank in its business, and known as the "discount register," in which the number, name of maker, date, amount and maturity of all the notes discounted by the bank were entered. This book showed that the note in suit was a renewal of the note which matured on March 15, 1891 (Sunday), and was renewed March 27, 1891: *Held*, that it was error to admit such book in evidence.

This was an action brought by J. C. Goodloe, as Receiver of the Florence National Bank, against J. A. H. Hauerwas, Louis Levin, and Osworth Breuss, on a promissory note. From a judgment for plaintiff, defendants appealed.

Defendants pleaded as a defense that the note sued on was made on Sunday, on which plea plaintiff joined issue. The plaintiff introduced the note in evidence, and, in connection therewith, a book regularly used by the bank in its business, and known as the "discount register," in which the number, name of maker, date, amount, and maturity of all the notes discounted by the bank were entered. This book showed that the note in suit was a renewal of the note which matured on March 15, 1891 (Sunday), and was renewed on March 27, 1891. S. D. Tice was introduced as a witness, who testified that he was in the employ of the bank at the time the note was renewed; that the book was correctly kept; and that it was the custom of the bank in renewing notes, if the renewal was not made on the same day the old note matured, to date the new note back to the date of the maturity of the old note. The defendants objected to the introduction in evidence of the discount register, on the ground that it failed to show any connection between the note in suit and said book. The Court overruled this objection, and the defendants excepted. It was further proved that the body of the note was in the handwriting of Mr. Tice, who was the Cashier of the plaintiff, and that on March 15, 1891, said Tice was not in the employ of the bank, and did not come to the bank until the 19th of March, and that the note in suit was not made until March 27, 1891. The defendants introduced no testimony, and after the introduction of all the testimony of the plaintiff, they asked the following written charges, and separately excepted to the Court's refusal to give each of them as asked: (1) "If the jury believe the evidence, they must find for the defendants." (2) "If the jury believe that the note sued on was made on Sunday, then they must find for the defendants." (3) "If the plaintiff has failed to prove to you that the note in suit was not delivered on the day it bears date, then your verdict must be for the defendants." (4) "Unless you believe from the testimony that the note in suit was made and delivered to plaintiff on the 27th day of March, 1891, then your verdict must be for the defendants."

STONE, *C. J.:* The note sued on is copied in the bill of exceptions. It is dated March 15, 1891, which was a Sunday. The presumption is that it bears its true date, and the burden of overcoming that presumption rests on him who asserts the contrary. In other words, it was on the plaintiff to prove that it was executed on a day which was not Sunday. (*Dodson* vs. *Harris*, 10 Ala. 566; *Aldrich* vs. *Bank*, 17 Ala. 45; *Burns* vs. *Moore*, 76 Ala. 339.) If executed on Sunday, it could not be the subject of a recovery. As a general rule, witnesses can only testify to facts within their knowledge. They cannot testify to their belief that a fact exists. This rule has exceptions, but there was no question in this case which brought it within any of the exceptions. There was no error in receiving testimony that the body of the note sued on was in Tice's handwriting, and that he (Tice) did not become an employe of the bank until after March 15, 1891. This tended to prove the note did not bear its true date. There was no authority for introducing the bank book in evidence. All contracts hostile to, or violative of, the Constitution or laws, or offensive to the public policy of the United States, are invalid, and a recovery cannot be had upon them. (3 Brick. Dig. p. 145, § 61.) There were several errors committed in the trial of this case. We need not specify them. The principles declared above will be a sufficient guide for another trial.

Reversed and remanded.

EFFECT ON PROMISSORY NOTE OF STIPULATION FOR EXCHANGE.

Supreme Court of Minnesota, July, 1893.

The fact that an instrument for the payment of a specific sum of money is made payable with current exchange on a place other than the place of payment does not affect its character as a negotiable instrument.*

Per MITCHELL, *J.:*

The only point raised on this appeal is whether the instruments sued on are promissory notes, for, if they are, they are unquestionably negotiable

* To the same effect see *Smith* vs. *Kendall*, 9 Mich. 242; *Johnson* vs. *Frisbie*, 15 Mich. 286; *Leggett* vs. *Jones*, 10 Wis. 85; *Morgan* vs. *Edwards*, 53 Wis. 599; *Bridley* vs. *Still*, 4 Biss. 478; *Cartra Bank* vs. *Strather*, 28 S. C. 504; *Bank* vs. *Bynum*, 84 N. C. 24; *Fitzharris* vs. *Leggett*, 10 Mo. App. 529; *Heighitt* vs. *Johnson*, 28 Fed. Rep. 865; *Bank* vs. *McMahon*, 38 Fed. Rep. 283; *Russell* vs. *Russell*, MacArthur (D. C.), 263.

under the law merchant. They are promises to pay specific sums of money in St. Paul, "with current exchange on New York city," and the only question is whether this provision as to exchange renders the sums required to discharge them uncertain, within the meaning of the familiar rule that one of the essential qualities of a promissory note is that the amount to be paid must be fixed and certain, and not contingent. * * *

The reason and purpose of the rule that the sum to be paid must be certain is that the parties to the instrument may know the amount necessary to discharge it, without investigating facts not within the general knowledge of every one, and which may be subject to more or less uncertainty, or more or less under the influence or control of one or the other of the parties to the instrument. The provision for the payment of the current rate of exchange between the place of payment and some other place is not within the reason of this rule, or subject to the evils or inconveniences which it was designed to prevent. While the rate of exchange is not always the same, and while it is technically true that resort must be had to extrinsic evidence to ascertain what it is, yet the current rate of exchange between two places at a particular date is a matter of common commercial knowledge, or at least easily ascertainable by any one, so that the parties can always, without difficulty, ascertain the exact amount necessary to discharge the paper. It seems to us that within the spirit of the rule requiring precision in the amount to be paid a provision for the payment of the current rate of exchange in addition to the principal amount named does not introduce such an element of uncertainty as deprives the instrument of the essential qualities of a promissory note. A provision for the payment of exchange is very different from one for the payment of reasonable attorneys' fees in case of suit, as in *Jones* vs. *Radatz* (27 Minn. 240). The latter introduces an element of uncertainty very different both in kind and degree from that introduced by the former. Not only is the amount of the attorneys' fees incapable of either easy or definite ascertainment, but the amount of it is more or less under the control of the holder of the instrument. Moreover, such a provision has never been considered in business circles as properly ancillary or incidental to commercial paper, or any part of its legitimate "luggage."

The law merchant, including the law of negotiable paper, is founded upon, and is the creature of, commercial usage and custom. Custom and usage have really made the law, and courts, in their decisions, merely declare it. The law of negotiable paper is not only founded on commercial usage, but is designed to be in aid of trade and commerce. Its rules should, therefore, be construed with reference to and in harmony with general business usages, and, as far as possible, with the common understanding in commercial circles. This was the very purpose of the statute of Anne placing promissory notes on the same footing as bills of exchange, and thus setting at rest a question upon which there had been some difference of opinion in the courts. Now, we think we are safe in saying, and justified in taking notice of the fact, that if bankers or other business men accustomed to dealing in commercial paper were asked whether such an instrument is a promissory note, and whether they would deal with it as negotiable paper, the answers would, in almost every instance, be unhesitatingly in the affirmative. We have no doubt but that this is the way in which such paper is generally looked upon and treated in commercial and other business circles; and, if so, the courts should, as far as possible, make their decisions to conform to this general custom and understanding. We recognize the importance of simplicity and certainty in the terms and conditions of commercial paper, and appreciate the objections to permitting it to be loaded down with unnecessary "luggage," but we cannot see, under all the circumstances, and especially in view of what we believe to be the commercial usage, that any practical evil will result from permitting the addition of such a provision for the payment of current exchange on the principal amount. Nor are we disposed, as a rule, to extend the quality of negotiable paper to contracts for the payment of money beyond the strict limits of the already established rules of law; but to exclude from that category paper like that under consideration would be to exclude the very class of paper which ought to be held negotiable, if any promissory notes ought to be so held—paper given and taken in commercial transactions, properly so called, for rarely, if ever, would a provision for exchange be incorporated in any other.

COLLECTIONS—LIABILITY OF BANK FOR FAILURE TO CHARGE INDORSER—EVIDENCE OF MAKER'S INSOLVENCY.

Supreme Court of Minnesota, August 22, 1893.

SARAH E. WEST *vs.* ST. PAUL NATIONAL BANK.

A bank receiving an indorsed note before maturity for collection is required to take the proper steps to fix the liability of the indorser.

In an action by the owner of the note for neglect of that duty, resulting in the discharge of the indorser, the question of the solvency of the maker is material as affecting the measure of damages.

Insolvency may be shown *prima facie* by proof of general reputation. Proof of insolvency within a reasonable time after the maturity of the note *held* admissible.

DICKINSON, *J.*:

The plaintiff was the holder of a promissory note for $1,150, executed by one Onken to one McMenemy, and by the latter sold and indorsed to the plaintiff before maturity. It was secured by a mortgage of real estate. Long before the maturity of the note the plaintiff delivered it to the defendant bank for collection, as we must now consider the fact to have been. When the note matured, in August, 1891, the bank did not protest for nonpayment; and for want of notice the indorser, who was solvent, was discharged. In June, 1892, the plaintiff foreclosed her mortgage by advertisement, she being the purchaser at the sale for $870. This action was commenced in November, 1892, to recover the difference between the amount for which the plaintiff bid off the property—less the expense of the foreclosure—and the amount of the note, the action being founded upon the neglect of the bank to take the necessary steps to charge the indorser. In receiving the note for collection the bank assumed the duty of taking the proper steps to fix the liability of the indorser. (*Borup* vs. *Nininger*, 5 Minn. 523, [Gil. 417]; *Jagger* vs. *Bank*, [Minn.] 55 N. W. Rep. 545.) For a neglect of that duty it would be responsible to the extent of the damages suffered thereby. If the maker of the note were solvent, so that the note could be collected from him, the damages resulting from the discharge of the indorser would be merely nominal. Hence, as the plaintiff must prove the extent of the damage, the question of the solvency of the maker. Onken, became material. *Borup* vs. *Nininger* (*supra*). The fact that one is insolvent may be established by proof that such is his general reputation in the community where he resides. (*Nininger* vs. *Knox*, 8 Minn.

140, [Gil. 110]; *Burr* vs. *Willson*, 22 Minn. 211; *Angell* vs. *Rosenbury*, 12 Mich. 241, 251; *Bank of Middlebury* vs. *Town of Rutland*, 33 Vt. 414; *State* vs. *Cochran*, 2 Dev. 63); or, it may be added, where he is engaged in business.

The proof of the financial irresponsibility of the maker of this note was meager, and not wholly satisfactory; but we regard it as *prima facie* sufficient. It appeared that in the fall and winter of 1891 he was living in Duluth, but it was not shown how long he had lived there. There was evidence going to show that at that time he was reputed to be insolvent, and that such had been his reputation since the spring of 1891. It is said that a general condition of insolvency is not inconsistent with ability on the part of the debtor to pay a particular debt, or on the part of the creditor to enforce payment. This is true, but proof of insolvency is evidence, *prima facie*, of the inability of a creditor to enforce payment, and the mere possibility that the plaintiff might have enforced collection of the note from the maker does not forbid her recovery for the negligence of the defendant in allowing the discharge of the indorser, admitted to have been solvent. (*Lamberton* vs. *Windom*, 18 Minn. 506, 514, 515, [Gil. 455].) While the plaintiff did not institute legal proceedings to enforce payment from the maker, the defendant, while it held the note for collection, and at or after maturity, demanded payment by mail, which demand the maker disregarded. We think that proof of this demand and of the maker's insolvency was sufficient to justify the plaintiff in calling upon the defendant to respond in this action.

Some of the appellant's assignments of error are based on the erroneous theory that because the cause of action arose in August, when the indorser was discharged, the proof of the insolvency of the maker of the note should have been confined to that time. The proof of the maker's insolvency was not necessary to establish a cause of action, but to show the extent or measure of the resulting damage. The plaintiff was not bound to sue the maker immediately upon the maturity of the note, even though he were then solvent; and if the maker became insolvent thereafter—at least, if within such time as the plaintiff might have reasonably allowed to pass without instituting legal proceedings—such insolvency would afford a basis for the measurement of damages resulting from the discharge of the indorser. Hence there was no error in receiving proof of the insolvency of the maker some four months after the maturity of the note.

PURCHASE OF PROPERTY BY NATIONAL BANK—ULTRA VIRES.

Supreme Court of Minnesota, July 20, 1893.

HENNESSY *vs.* CITY OF ST. PAUL *et al.*

The objection that an executed purchase of property by a National bank is *ultra vires* can be urged only by the Government of the United States.

This was an action to determine an adverse claim to real estate. The property had been sold under a judgment in favor of the city, and bid in by the city, which subsequently assigned the certificate of sale to one Bigelow, who in turn assigned it to a National bank.

MITCHELL, *J.* (omitting part of the opinion):

The last point made is that the defendant bank, being a National bank, had no authority to purchase this certificate. It is well settled that no one but the Government can raise this question. (*Bank* vs *Hanson*, 33 Minn. 40; *Bank* vs. *Matthews*, 98 U. S. 621; *Bank* vs. *Whitney*, 103 U. S. 99; *Fortier* vs. *Bank*, 112 U. S. 451.)

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: CHICAGO, Ill., Sept. 20, 1893.

SIR:—Reciprocal relations existed between Bank B of Y and Bank C of X, each receiving items from the other and crediting on account balances drawn on at pleasure, or remitted when called for at a small charge. On Saturday the 17th of June, 1893, Bank B sent to Bank C a check for $250 drawn on Bank C. The letter inclosing this check reached Bank C about 8 o'clock on Monday morning June 19th, and before 9 o'clock the amount was placed to the credit of Bank B and passed into the hands of the Teller as cash. At this time Bank B owed Bank C more than the amount of the check in question. At 10 minutes after 9 o'clock on the morning of that day, Bank B filed a deed of trust in the proper office. Later Bank A of Z, from which bank, Bank B had received this item, made claim upon Bank C of the amount of the check, by virtue of the following indorsement which appears upon the back of the check: "For collection and remittance to Bank A," asserting that this restrictive indorsement was notice to Bank C that the item had been sent for collection only, and was therefore still the property of Bank A. But Bank C claims that the check was paid and the proceeds credited to Bank B as directed by that Bank as customary, before any notice of the insolvency of that bank had been given, and that such credit was absolute payment, Bank B being at the time indebted to Bank C.

Question.—(1) Was not the amount of the check properly credited to Bank B, and did not such credit at once reduce the indebtedness of that bank to Bank C, and thereby constitute an actual payment of the proceeds into the hands of Bank B before its insolvency was disclosed?

(2) What would have been the status had the check been credited at an hour or at a day subsequent to that on which the deed of trust was filed?

Again, a party in Y makes draft on party in X to the order of Bank B, with nothing about the draft to indicate whether it was deposited for credit or collection. Bank B sends it to Bank C for credit when paid. The draft is accepted on June 17th and matures, and is paid on the 20th, the day of the assignment of Bank B. The suspended bank being in debt to Bank C, should not the proceeds of draft be credited to Bank B, and has the drawer at any time thereafter the right to demand the amount from Bank C because he had received no credit or cash on account of it from the bank to which he had intrusted it unconditionally? Suppose, because of this accepted draft, Bank C, knowing the acceptors to be good, had allowed Bank B to overdraw its account, would that have affected the status? CASHIER.

Answer.—With respect to the check sent by Bank A, we think the claim of that bank to the proceeds can be maintained, unless certain other facts more favorable to Bank C than those stated by our correspondent can be shown. The indorsement "for collection and remittance" was notice to Bank C that Bank B was only the agent to receive the proceeds, and Bank C could acquire no better title thereto than Bank B had. (*Sweeny* vs. *Easter*, 1 Wallace, 173; *Blaine* vs. *Bourne*, 11 R. I. 119; *Central R. R. Co.* vs. *First Nat. Bank of Lynchburg*, 73 Ga. 384; *Nat. Butchers & D. Bank* vs. *Hubbell*, 117 N. Y. 384, 393.) The case of *Bank of Metropolis* vs. *First Nat. Bank of Jersey City* (19 Fed. Rep. 658) is directly in point. In that case checks indorsed "for collection" were sent by plaintiff to the Mechanics' Nat. Bank of Newark, which sent the same to the defendant, pursuant to an existing arrangement between them by which each sent to the other commercial paper for collection, it being understood that the proceeds were not to be specifically returned, but were to be credited to the sending bank by the receiving bank, and enter into the general account between them, consisting of such collections and other items of account, and offset any indebtedness of the sending bank to the receiving bank. It was held, that as the defendant could claim no better title to the proceeds than the Mechanics' Bank had, the plaintiff was entitled to recover them. (See also *First Nat. Bank* vs. *Reno Co. Bank*, 3 Fed. Rep. 257; *City Bank of Sherman* vs. *Weiss*, 67 Tex. 332; *Cecil Bank* vs. *Farmers' Bank*, 22 Md. 148; *Blaine* vs. *Bourne*, 11 R. I. 119; *Commercial Nat. Bank* vs. *Hamilton Nat. Bank*, 42 Fed. Rep. 880.)

The theory of the law is that the real owner of paper sent for collection is entitled to recover the proceeds from all persons except a *bona fide* holder for value, without notice, and that where the indorsement is "for collection" this is notice to all persons to whom the paper is sent that such owner still retains his title thereto. It is unimportant, therefore, in this view, whether the credit was given to Bank B before or after the deed of trust was filed. In either event Bank A is entitled to the proceeds, because it never parted with its title to them, of which fact, Bank C, by the form of the indorsement, had notice. But if the arrangement between Bank A and Bank B was that the latter was to collect and remit at regular intervals, then (if the collection is to be deemed to have been made before the insolvency occurred) Bank A, as soon as the check was paid, became a general creditor of Bank B, and, therefore, has no right of action against Bank C. In such case, the money, when collected, became the property of bank B, and as such Bank C could credit it to the account of that bank against the existing indebtedness. (*Commercial Nat. Bank* vs. *Armstrong*, 13 Sup. Ct. Rep. 533.) The efforts of Bank C should therefore be to show that such an arrangement existed between the two other banks, and that the check was paid before the insolvency occurred. These are purely questions of fact.

In regard to the draft on an individual in X, if there is nothing more in the case than stated by our correspondent, we think Bank C could not retain the proceeds. As Bank B had become insolvent before the collection was made, such insolvency amounted to a revocation of the authority given by the customer for that bank to constitute him merely a general creditor, and he is entitled to the specific fund in the hands of the sub-agent, Bank C. (*First Nat. Bank of Crown Point First* v. *First Nat. Bank of Richmond*, 76 Ind. 561.) But if, as suggested by our correspondent, Bank C had allowed Bank B to overdraw its account on the faith of the acceptance, then Bank C would clearly have a right to retain the proceeds in virtue of its general lien. It would, in such case, be in the position of a *bona fide* holder for value without notice of the rights or equities of the drawer.

Editor Rhodes' Journal of Banking: BATAVIA, N. Y., Sept. 29, 1893.

SIR:—On the 17th of June last we received from our New York correspondent a check on Ward's Bank of Forestville, they having received the same from a western bank. We forwarded it to the First National Bank of Springville, by whom it was sent directly to Ward, on the 19th. On the 26th we received a remittance from Springville, covering this and other items. Nothing more was heard until after Ward's suicide and insolvency, when by letter from Springville, dated July 6th, they asked us to refund, claiming they had not received payment. Are we right in declining to do so?

D. W. TOMLINSON.

Answer.—The Batavia bank being only an agent for collection, there can be no recovery against it, if, before receiving notice from the Springville bank, it had paid over the money to its correspondent or otherwise altered its position, so that loss would result to it if it were compelled to refund. (*Nat. City Bank* vs. *Westcott*, 118 N. Y. 468; *Nat. Park Bank* vs. *Seaboard Bank*, 114 N. Y. 28. See also replies to inquiries on pp. 955-956, of JOURNAL for September.)

Editor Rhodes' Journal of Banking: HASTINGS, Neb., Sept. 7, 1893.

SIR:—A, being in Kansas City, deposits in a bank there the sum of $1,000 to the credit of one of our city banks for his own use, and so notifies the bank. On his arrival here the bank here allows him to check $500, and in the meantime ordered the Kansas City bank to remit the $1,000 for their credit to New York bank, but before the draft reached New York, the Kansas City bank failed, and draft went to protest. A brings suit to compel the bank here to pay the balance of $500. Is he entitled to any of the money? F. J. MILLER, *Asst. Cashier.*

Answer.—We think it is clear the A has a good cause of action against the Hastings Bank. By ordering the money sent for its account to New York, the bank treated such fund as its own, and in so doing became indebted to A in a like sum. Merely making the deposit to the credit of the Hastings bank would not have given A any right against that bank, but when the bank assumed control and dominion over that deposit, its liability to A attached immediately.

Editor Rhodes' Journal of Banking: ST. JOHNSBURY, Vt., Aug. 15th, 1893.

SIR:—Can the double liability be enforced against a stockholder residing in the State of Vermont, who has stock in the Northwestern Guaranty Loan Co. of Minneapolis, Minn.? JOHN T. RICHIE, *Treasurer.*

Answer.—The general rule is that the ordinary statutory liability against stockholders is a contract liability and as such will be enforced in the courts of other States. (*Corning* vs. *McCullough*. 1 N.Y. 47; *Queenan* vs. *Palmer*, 117 Ill. 619; *Aultman's Appeal*, 98 Pa. 505; Cook on Stock and Stockholders, Sec. 223, and cases there cited.) But where the liability is in the nature of a penalty for failure to do certain acts, then upon the principle that the courts of one State will not enforce penalties imposed by the laws of another State, such liability could not be enforced in another State. (See authorities above cited.) The answer to the question of our correspondent will therefore depend upon the nature of the liability. We infer that it is the ordinary statutory liability, and hence could be enforced in Vermont.

Postal Savings Banks.

A bill to establish Postal Savings banks was introduced in the House September 13 by Representative Curtis of Kansas. He proposes that the banks shall be established at money order offices on the request of one hundred patrons addressed to the Postmaster-General. Blank certificates of deposit are to be issued similar in form to money orders and interest is to be paid by the Government at the rate of 2½ per cent. per annum, but no interest is to be paid on deposits withdrawn within six months. The money received is to be transmitted to the Postoffice Department, but may be deposited in banks which are willing to pay 2½ per cent. interest for its use. These deposits are to constitute preferred claims against the banks. The establishment of such banks would undoubtedly greatly benefit communities where banking facilities are meagre. According to a late report of the Postmaster General the average distances of savings depositories from post offices in the several sections of the country are as follows: In the New England States, 10 miles; in the Middle States, 25 miles; in the Southern States, 33 miles; in the Western States, 26 miles; in the Pacific States, 52 miles. While almost every town has a post office there are many towns that do not have a Savings bank.

CHICAGO BANKERS DINE COMPTROLLER ECKELS.

James H. Eckels, Comptroller of the Currency, who has lately been seeking relaxation and rest from the severe strain put upon him by the unusual number of bank failures during the last few months, was tendered a reception and dinner by the Bankers' Club, of Chicago, on September 15.

Lyman J. Gage, President of the First National Bank, presided, and at the close of the dinner in introducing Comptroller Eckels, said:

"When this young man, our guest, was called upon to assume the duties of this important office somewhat of a thrill of apprehension passed over the land, especially over that district known as the east. We knew that he came from Illinois and we knew that that of itself was a pretty good qualification; we knew, also, that if a man has had his moral and intellectual developments go on under the inspiriting influences of western life, that was in itself a pretty good qualification for any position. But they did not understand this down east.

They were afraid. Well, they were not afraid without reason; they could not help it. Many of our friends had never seen anything but the resplendent Hudson flowing from the north to the beautiful waters of the Atlantic; they knew nothing of the great west; but now they have come to know more of us and more of him, and the time has come when we hear little complaint from them. So far as we know, they are now satisfied with this young man from Illinois."

Mr. Gage concluded by introducing the guest of the evening who said:

"I trust the representatives of the banking interests of Chicago will believe that I indulge in no formal sentiments of gratitude when I return to them my thanks for this night's hospitality. Judging from this generous treatment and cordial welcome, I may well believe that here at least I stand as no 'stranger within the gates,' but instead have a friend and earnest well-wisher in each one here present. I am grateful not alone for this evidence of interest in me, but because throughout the trying times of the months since undertaking the duties of the Comptroller's office I have known and felt that in each effort put forth to maintain the credit of the banks and make more sure the financial stability of the country, I have had your hearty co-operation and sincere support. * * * *

On every hand is evidence of a bettered condition, so marked that 'he who runs may read.' If there yet be here and there some 'doubting Thomas' let him but know that the mills of New England are once more being put in operation; the fires in the furnaces of Pennsylvania relighted, and the factories throughout the country becoming the hives of busy industry—and even he must no longer doubt. The paralysis of fear which so insidiously came upon the people is surely leaving them. It yielded to a degree when the President called in extra session Congress to repeal the culminating cause—'the Sherman silver Act.' The advance has been marvelous since the heroic treatment accorded it in the House of Representatives, and the recovery will be complete when the Senate, under the coercive force of public opinion, confirms the action of the House. * * *

These memorable months ought to be fruitful in lessons to our people. It cannot but lead to better considered financial laws on the part of our national legislators. No experimental legislation will again be undertaken. The experience through which we have passed has been so costly that no party, no matter how strongly entrenched in power, will from this on ever attempt to juggle with the business interests of the country for the sake of political advantage. The laws regulating the monetary system will hereafter be the laws which govern the world's trade, and, being such, must make our people rich beyond compare.

In conclusion, let me bespeak what I know to be the sentiments of the American people when I say that to the conservative, wise and judicious course pursued by the bankers of this country is due in the largest measure the fact that there has not been greater depression. The politician and the carping critic may find fault, but the thoughtful citizen, unbiased and unprejudiced, seeking neither votes nor notoriety, knows that the course which has been pursued here and elsewhere by the interests here represented has prevented a panic that would have gathered within its sweep every business interest in the country. In a great emergency the bankers of this country have risen to the full measure of their responsibility and, meeting it, have earned a people's thanks."

A witty and brilliant address was also made by Franklin H. Head, Vice-President of the American Trust and Savings Bank. Mr. Head strongly advocated the repeal of the one per cent. tax on National bank circulation, and the issue of currency up to the par value of the bonds.

Edward S. Lacey, ex-Comptroller of the Currency, and President of the Bankers National Bank, the next speaker, also made an interesting address, in which he praised the Comptroller for the wisdom and discrimination displayed by him under peculiarly trying conditions.

PROCEEDINGS OF CONGRESS.

THE AMERICAN BANKER IN THE PANIC OF 1893.

SPEECH OF HON. JOS. C. HENDRIX, OF NEW YORK.

In the House of Representatives on August 28, the House having under consideration the bill (H. R. 1) to repeal a part of an Act, approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," Mr. Hendrix spoke in part as follows:

"This debate has proved a vent for many financial notions, which have been threshed out, I think, to general satisfaction; but one of the persistent hallucinations that attend the closing words of the speakers for free silver is the capacity of the American banker to cause a panic like this and to take infinite delight in locking up money. For a half century of legislation the American banker has been pilloried in Congressional debates. Every time foolish laws come home, like chickens to roost, the statesman goes for the banker. It seems, however, that in this panic he is the only man in sight to get the blame, and he has got it all

But, Mr. Speaker, the pages of the "Record" would be less of a transcript of the time if it did not appear here that the American banker has played a role in these exciting times which has won for him distinction in the thought of his reasoning fellow citizens. This panic has affected more people, greater wealth, more diverse industries, has extended over a greater area, has run a longer course in distance and in time than any we have experienced before; but despite the heavy loss of deposits, the widespread hoarding of money, and the senseless fear of the multitude, the banking system of our Republic comes out of it with its machinery unbroken, and it will not stop one moment for repairs.

The men who have so bravely encountered disaster to conquer it and have faced panic to shame it down will not be forgotten by the business men they have befriended and the depositors they have protected. It is true some timid bankers have closed the doors when their banks were solvent, but they are opening them again. Other banks have been frank enough to say that as they were drained of their cash they must ask for indulgence, and their customers met them as frankly and said, 'We will stand by you.'

There were weak banks that failed, and some vicious banking has come to grief, but the general deportment of bankers throughout the land, in holding things together, keeping business men on their feet, helping out honest enterprises at great sacrifice, and in endeavoring to allay this panic, which, by their very survival, they prove to be due to causes independent of their business, has commanded the highest respect from the American public.

To stop panics men have stood in the highway pledging their personal fortunes. To stop runs, rich directors have gone along the excited line of men and women and offered to guarantee deposits To keep money active men who did not need to borrow have pledged their property to bring out from its hiding place hoarded money to redeposit it in banks for the use of their neighbors. To supply common business need, investors have left their money on deposit when they might be doubling their fortunes in the security market.

Banks combined their assets and pledged to each other all their resources in cities to give extensions of credits to country banks. The choicest property has been sent to the auction block to get cash to replace in common channels that which had been withdrawn through fright. Sleepless nights, anxious days, little acts of kindness like those from generous American hearts in times of pestilence, self-sacrifice as heroic as ever gave a soldier fame on a battlefield—these things show character. I appeal to them against caricature. Business men have cried, 'Help me, or I sink,' and bank experts and skilled financiers have gone with them over their affairs and helped them to stem the adverse tide.

Banks are not owned by millionaires. They belong to men of smaller fortune, to estates, to widows, to clergymen, to lawyers, doctors, college professors, investors whose money follows lines of faith in men rather than speculation and calculation. Bank shares are more subdivided than any other form of personal security. When a bank goes down the rich suffer less than the poor. The banker stands on neutral ground between the creditor and debtor classes, which have so often been mentioned here, for he is both creditor and debtor. He is a partner with every borrower, and is not only a creditor, but is a guarantor of the debtor's debt. Whatever may injure the creditor injures the banker, and he shares equally the lot of the debtor. He is in no sense a partisan of either class if there is ever a clash of interests between debtors and creditors.

The money he handles chiefly belongs to those of small means. His debts are due chiefly to the middle class and the poor. Rich men know how to do their own banking, and they are rich and remain so because they keep but little money idle. The accumulations of the poor in the Savings banks pass through the banks of deposit and discount before investment. The money of a community is mobilized and distributed through the nerves and arteries of business by the banker's skill.

The corn in a railroad crib, the cotton plant growing on the plantation, the waving field of ripening wheat, the stored tobacco, the grazing herd, the sheep on the mountain side, the fattening pigs, the dairy by the spring, the machinery of the farm, the piano in the parlor, the carpet on the floor, the floating logs on the river, the reservoirs of water irrigating a rich soil and making a desert bloom, the rushing locomotive, the grain laden barge on the lake, the turning mill-wheel—every witness of enterprise, industry and thrift is related either to the debts which the banker owes or the debts which he has guaranteed. He gives a potency and volume to circulating money that is beyond the force of legislation, and instead of controlling the movements of money and the extension of credits, he is controlled by the conditions about him. When his debtors restrict their credits to him, he is obliged to restrict his credits to others.

It is his first interest, therefore, to maintain such faith in national finance that the humblest may feel secure that their deposits will remain at their full value in money; that general business will not be shocked or disturbed; that the farmer may raise good crops and get good prices, the laborer receive good wages, and the manufacturer prosper. There is no flood that destroys wealth, no pestilence that dulls or checks the producing power of the people, no blight that decimates the flock, no drought that causes the crops to fail, and no calamity or misfortune of any kind or degree that does not register itself through some vital nerve leading from the injured to the banker's box. He prospers with your prosperity; he suffers with your misfortune. He is at the nerve-centre of all your enterprises, and he feels the first thrill of a change in your condition.

Is it any wonder then that he is always on the side of good order, peace, upright living, honest dealing, public faith, a sound moral, legal, and social code, and of good financial laws? Is it any wonder that he is against repudiation in any form, against financial experiments condemned by human experience, against coin clipping or debt clipping, against demagogy that stirs the passions, the prejudices, and the malice of the unthinking poor, and against the abuse of legislative power in the selfish interest of any class? He is held fast in his position by high civilization. He disappears when social disorder runs mad.

If I know the American banker, he is modest in his way of life, prudent in his affairs, exemplary in his conduct, faithful in his line of work, friendly in spirit, helpful to the thrifty, and sincerely devoted to the prosperity of the town, village, city, or State, wherever he may be found, and customarily a man of such honor and pride of character that he would 'coin his blood into drachmas' rather than disappoint the humblest man who called for the payment of his deposit.

Yet through this debate and in these printed pages the American banker has been hunted with the rifle shots of speech. He is put into this literature like a dragon in a fable, a villain in a play, or a vampire in old wives' gossip. His office is a public offense, his high trust is the enemy of the producer, his caution in dealing with the money of others the avarice of a Shylock and his determination to keep ready to discharge his own debts the bloodless deed of a miser.

So he is represented here as hoarding money to create a panic, as conspiring to put currency at a premium, as desiring to make money scarce and its volume small. To effect a repeal of the Sherman law he is pictured here as a shark in Wall street; a gold-bug east of the Alleghanies; a vulture in Lombard street, and the incarnation of the rest of the odious part of the animal kingdom in the various market places of the world. A banker who locks up money to create a panic does not pay 12 per cent. for rediscounts to help the farmer move his crops. A banker who hoards money to repeal a bad law does not pay 6 per cent. for clearing-house certificates to help his country correspondent help the farmer. A banker who locks up all of the money of the people does not fall below his reserve and call down Senatorial wrath for being a lawbreaker.

Is it not about time in our civilization for statesmanship to get above the level whereon the American banker is distorted and misrepresented to the view of the unthinking? His brave conduct in the panic of 1893 is proof both of his competency and the soundness of his business, and public esteem will inevitably register its appreciation of his patriotic service in straining every nerve and taxing every resource for the common good.

Do the gentlemen who so vigorously denounced bankers want first to put this country on the level of nations which use only silver for currency and then drop it to the level of countries which use no banks? Deposits are not required by statute, and it is not against the law to refuse to borrow money from banks. In a fortnight the people of this country could abolish banking without the aid of Congress. It is because our people can transact their business better with banks than without them that they use them so freely and stand by them so loyally. The gentlemen who say that the banks have refused to pay out currency are right. Why? They did not have it to pay. What is the reason? They have let it out to do service in moving and paying for the crops, and those who got it hoarded it. The National banks of this country lost $196,578,450 in deposits in the year ending July 12, 1893. This was a loan to them—a loan on demand—and when it was called for it was paid.

In the same time these banks curtailed their loans $107,273,521. Is there not to be found in the difference a tribute to the resource of the American banker in helping his neighbors in a trying time?

Since this panic began the National banks have lost $40,000,000 of gold, $34,500,000 of legal-tenders, and $2,400,000 of silver. In the year ending with the date of the beginning of this extraordinary session of Congress the banks in the city of New York had to pay debts to depositors amounting to $153,000,000. They cut down their loans $80,000,000. They lost over $71,000,000 of cash.

If they were hoarding money why do their sworn statements show such wholesale withdrawals? Does it please the farmer to hear bankers covered with abuse? Does he cease to use them? My friends, the farmer will not do away with railroads and go to the market in his wagon over bad roads, because they are abused. He prefers to improve upon the old ways and make more money. It is to his interest to use banks, and his representatives would earn his respect and his warmer support if they would get into closer touch with his everyday common sense.

There are petitions from nearly thirteen thousand bankers in the hands of different members here which register the sentiment against the foolishness of our silver-supporting policy. The wave of popular opinion has reached this House. It betokens a revolution in the American mind. We are not to fool any longer with a depreciated and a rejected money metal, and try to bear alone a burden which civilized nations should share in common. The silver problem will, after our action, remain in the world, and on the world, but not on this country alone. We can take care of the forty cents of credit in our silver dollar. We can keep all of our large stock in free circulation on a parity with gold, and the banks will take care to keep in such position as to meet the demands for foreign exchanges.

THE FINANCIAL SITUATION—THE COINAGE LAWS.

SPEECH OF HON. JOHN SHERMAN.

On August 30th, the Senate having under consideration the bill to repeal a part of an Act, approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," Mr. Sherman said in part:

The immediate question before us is whether the United States shall suspend the purchase of silver bullion directed by the Act of July 14, 1890. The existing financial stringency grows out of the fear that the United States will open its mints to the free coinage of silver. This is the real issue. The purchase of silver is a mere incident. The gravity of this issue can not be measured by words.

If we adopt the single standard of gold without aid from silver, we will greatly increase the burden of national and individual debts, disturb the relation between capital and labor, cripple the industries of the country, still further reduce the value of silver, of which we now have in the Treasury and among our people over $593,000,000, and of which we are the chief producers, and invite a struggle with the great commercial nations for the possession of the gold of the world.

On the other hand, if we continue the purchase of 54,000,000 ounces of silver a year, we will eventually bring the United States to the single standard of silver—a constantly depreciating commodity, now rejected by the great commercial nations as a standard of value; a commodity confessedly inconvenient by its weight, bulk, and value for the large transactions of foreign and domestic commerce, and detach us from the money standard now adopted by all European nations, with which we now have our chief commercial and social relations.

Upon one thing I believe that Congress and our constituents agree: that both these extreme positions shall be rejected; that both silver and gold should be continued in use as money—a measure of value; that neither can be dispensed with. Monometallism, pure and simple, has never gained a foothold in the United States. We are all bimetallists. But there are many kinds of bimetallists. One kind favors the adoption of the cheaper metal for the time being as the standard of value. Silver being now the cheaper metal, they favor its free coinage at the present ratio, with the absolute certainty that silver alone will be coined at our mints as money, that gold will be demonetized, hoarded at a premium, or exported where it is maintained as standard money. The result would be monometallism of silver.

Another kind of bimetallist, recognizing that 16 ounces of silver are not worth in the market 1 ounce of gold, proposes the free coinage of 20 ounces of silver as the equivalent of 1 ounce of gold. But this is only a difference in degree, because 1 ounce of gold is worth from 27 to 29 ounces of silver. Gold being undervalued, the hoarding or exportation of gold will inevitably follow, and silver will be the only standard. Another kind of bimetallist is one who believes that the essential quality of bimetallism requires that the coins of the two metals shall be maintained of equal purchasing power. The only way in which this can be done, in case the two metals are not on a parity of value at the legal ratio, is by freely coining the more valuable metal and coining the cheaper metal at the legal ratio, and maintaining by the fiat of the Government coins of the two metals at parity with each other.

The two metals, as metals, never have been, are not now, and never can be kept at par with each other for any considerable time at any fixed ratio. This necessarily imposes upon the Government the duty of buying the cheaper metal and coining it into money. The Government should only pay for the bullion its market value, for it has the burden of maintaining it at par with the dearer metal. If the bullion falls in price the Government must make it good; if it rises in value the Government gains.

The Government is thus always interested in advancing the value of the cheaper metal. This is the kind of bimetallism I believe in. It is the only way in which two commodities of unequal value can be maintained at parity with each other. The free coinage of silver and gold at any ratio you may fix means the use of the cheaper metal only. This is founded on the universal law of humanity, the law of selfishness. No man will carry to the mint 1 ounce of gold to be coined into dollars when he can carry 16 ounces of silver, worth but little more in the market than half an ounce of gold, and get the same number of dollars.

The free coinage of silver means the single standard of silver. It means a cheaper dollar, with less purchasing power. It means a reduction in the wages of labor; not in the number of dollars, but in the quantity of bread, meat, clothes, comforts he can purchase with his daily wages. It means a repudiation of a portion of all debts, public and private. It means a bounty to all the banks, saving institutions, trust companies that are in debt more than their credits. It means a nominal advance in prices of the produce of the farmer, but a decrease in the purchasing powers of his money. Its chief attraction is that it enables a debtor to pay his debt contracted upon the existing standard with money of less value, If Senators want cheap money and to advance prices, free coinage is the way to do it; but do not call it bimetallism. The problem we have to solve is how to secure to our people the largest use of both gold and silver without demonetizing either.

* * * * * * * * * * * * * * * * * * * *

I am not a new convert for the repeal of this purchasing clause. If I erred in yielding to the opinion of my associates, and consenting to sign the conference report, I must take my share of the responsibility for the great loss that has fallen upon the Government by the Act of July 14, 1890. Still, I feel bound to say for myself and my associates that we did what we thought was best in securing the compromise between the opposing bills of the two Houses, and still believe that the advantages secured by that Act in the repeal of the Bland Act, and the guaranty of the United States to maintain its coins at a parity with each other was a wise and prudent compromise under the circumstances.

I never questioned the sincerity of the motives of the representatives from the Western States, where silver was an important and leading industry. They obeyed the will and sought to promote the interests of their constituents. But it remains nevertheless true that in the struggle of opposing opinion we secured, by the Act of July 14, 1890, the most favorable result of this controversy for the people of the United States that could then possibly be obtained. The immediate result of the measure was to increase our currency, and thus relieve our people from a panic then imminent, similar to that which we now suffer. My reasons for its repeal are now stronger than ever.

The result of the Act has by unforeseen events disappointed the hopes and expectations of its authors. It has by its operation, tended to reduce rather than to increase the value of silver. The burden assumed by the United States led to the completion of gold monometallism in Europe by giving a market to silver that was demonetized. Its results encouraged and led to the Indian policy of the British Government. The Act of 1890 may have contributed somewhat to the amount of gold sent to Europe, though I think that the cause of this movement is that the balance of trade has lately been against the United States, and therefore transferred to Europe the only money they will accept in payment of balances due them. One of these imports paid for in gold was silver sent us from Mexico and Europe.

The Act of 1890 has demonstrated also the inevitable result of free coinage in our country. If the purchase of 54,000,000 ounces of silver a year did not prevent the further decline of that metal, what would have been the result if we received and coined all the silver that would be brought into the United States from any region of the world at the fixed price of $1.29 per ounce, worth in the market 73 cents an ounce? This is a proposition the logic of which it is impossible to avoid. It is a lesson necessarily to be taught. Without it many honest people could not be persuaded that the fiat of the Government was not sufficient to lift the price of silver or .o prevent its fall.

There is no doubt that the Act of 1890 is made the imaginary pretext for many evils it did not produce. It is made to bear the results of wild speculation, of fears well or ill founded as to future legislation, of failures and disturbances with which it has no connection. It is made the scapegoat for extravagance and folly.

Certain it is that the Act of 1890 did not produce a scarcity of currency. The evil which our people are suffering now is not the volume of money, but the hoarding of it. It is a currency famine caused by the hoarding of money taken from its ordinary channels an i hidden away in secret places by reason of the fears of millions of people in all ranks and conditions of life. This Act which we called upon to repeal has furnished yearly from $3↓,000,000 to $50,000,0 0 of Treasury notes issued for the purchase of silver bullion. If the issue of this great sum in monthly installments had any effect, it must have been to expand the currency. Its repeal leaves no law in force for any increase of a circulating medium at a time when above all others currency of every kind is in great demand and is bought at a premium.

Let us not deceive our people as to the reasons for this repeal; for when the purchasing clause is repealed you will still have to deal with the real causes of the prevailing stringency and distrust. I do not vote for this repeal with any expectation that it will in any considerable degree relieve us from the industrial stagnation that has fallen upon all kinds of business and production, and that has thrown out of employment hundreds of thousands of laboring men and women. The fear that industrial conditions will be so changed that the prosperity of the past will be followed by diminished production, lower prices, lower wages, diminished exports and increased imports, resulting in a continued balance of trade against us—these are the chief factors of the present financial stringency. It is manifest that if this law is repealed, it is not to relieve the people from a stringency of currency, but to relieve the money market from the dread of the effect of the free coinage of silver.

The President, in the midst of a panic, appeals to us to repeal this law. He will not make this appeal in vain to me. We ought to suspend the purchase of silver bullion. The strange spectacle is presented that those of us who confess ourselves responsible for this law and voted for it are willing to repeal it, while the great body of his political friends who voted against it and declaimed against it refuse to repeal and cling to it as their ark of safety. Our Democratic friends have denounced this purchasing clause as a miserable makeshift. It was a makeshift, but I think a good one to defeat the free coinage of silver on the ratio of 16 to 1. I believe in this respect it has rendered the country an enormous service.

It is said that the demand for repeal comes from the banks and bankers in the Eastern cities; that they have combined together to influence our action; that they refuse to pay their depositors and co-operate to create a panic, and therefore a repeal. Such action should not influence us either way. If any of them refuse to pay a lawful demand of a depositor it is an act of bankruptcy and should lead immediately to the appointment of a receiver. This would be the action with any bank in Ohio of $50,000 capital, and should even be more summary with a bank of ten millions capital. The clamor of a bank or banker should not influence us for or against repeal.

I will vote for its repeal because I believe the purchase of silver no longer necessary, that it is unprofitable and dangerous—not that I wish to depreciate silver, for if I had the power to regulate the market, I would gladly advance it to par with gold at the legal ratio. As this is impossible, I am willing to vote for any measure that will tend to maintain the parity of the two metals at some fixed ratio approaching their commercial value. I will co-operate with any person or any party in any measure that will tend to maintain the harmonious use of silver and gold as standards of value for all human productions.

Now, I wish to make a few observations in regard to what ought to be done for the future. If the purchasing clause is repealed, what then?

I take it the first object we all have in view is to preserve intact the parity of all our money. We have now seven or eight hundred million dollars of paper money outstanding for which we are responsible. We have undertaken to maintain that at a parity. How can it be done?

In order to carry that out it may be necessary to issue the securities of our country to buy gold. They will command gold in any market. They would draw it from the Bank of England. A demand note, a note payable at the pleasure of the United States, drawing, say, not to exceed 4 per cent. interest, would command gold everywhere; and although this is not my business, yet at the same time it is the only way by which you can summarily acquire the possession of gold to maintain your reserve.

There is another point to be noticed. We must not overlook the fact that there may possibly be a balance of trade against us next year. The appropriations made at the last session of Congress, although made under the scrutiny of very careful economists, may exceed the amount of revenues received by the Government. Some authority to make good this deficit, whatever it may be, ought to be provided for by law. There is no question about that. Some power should be given to the executive officers they do not now possess. If there is an insufficient revenue to meet our expenditures, a contingency which I hope will not happen, they ought to have the power to meet it. That power has always been granted by any party, whatever it may be, to any Administration whenever such a necessity is likely to arise.

Another thing, I think, could be done for immediate relief. By that strange rule of logic by which you can coin an equal amount of dollars out of a given quantity of bullion and then have a surplus over, if there is such a surplus in the Treasury (and I suppose there is, because some Senators have said there is), I would undoubtedly coin that surplus, and use it, if necessary, for the ordinary operations of the Government to prevent a deficiency, or for any purpose that it might be lawfully coined.

I do not believe in that kind of management, buying silver from our people and then coining the same amount and having a large profit, as it is called. If it is a profit it is an outrage. If it is not a profit it is a fraud, and I think it is a fraud to call our purchases of silver bullion profitable because we can coin more dollars out of it, having the supreme power to do it, than we pay for the silver bullion.

Senator Sherman replied at length and in detail to the charge that the Coinage Act of 1873 was passed surreptitiously, and that Congress had been bribed by Ernest Seyd, of London. Senator Sherman declared that Seyd was a bimetallist, and further stated that the bill omitting the silver dollar from the list of coins before Mr. Seyd was said to have come to this country. Continuing, he said:

Now, Mr. President, to resume for a moment the history of the act of 1873: It was framed in the Treasury Department after a thorough examination by experts, transmitted to both Houses of Congress, thoroughly examined and debated during four consecutive sessions, the information called for by the House of Representatives and printed six times, by order broadly circulated, and many amendments were proposed, but no material changes were made in the coinage clause from the beginning to the end of the controvery. It added the French dollar for a time, but that was superseded by the trade dollar, and neither was made a legal tender but for $5. It passed the Senate on the 10th of January, 1871—36 yeas and 14 nays—every Senator from the Pacific coast voting for it.

It was introduced in the House of Representatives by Mr. Hooper at the next session. It was debated, scrutinized, and passed unanimously, dropping the silver dollar as directly stated by Mr. Hooper. It was reported, debated, amended, and passed by the Senate unanimously. In every stage of the bill and every print the dollar of 412½ grains was prohibited, and the single gold standard recognized, proclaimed, and understood. It was not until silver was a cheaper dollar that anyone demanded it, and then it was to take advantage of creditor.

There never was a bill proposed in the Congress of the United States which was so publicly and openly presented and agitated. I know of no bill in my experience, which was printed, as this was, sixteen times, in order to invite attention to it. I know no bill which was freer from any immoral or wrong influence than this Act of 1873. Not one single word of that Act has been impugned, but there has been the false allegation made that the silver dollar was surreptitiously omitted from the coinage. No fact can be proved more clearly and fully than that that is a falsehood and a lie by whomsoever uttered.

Now, it has always been within the power of Congress to correct this error, if error was made; but Congress has refused over and over again to do it. When the controversy arose about the Bland bill and the House of Representatives proposed the free-coinage of silver, the Senate rejected it after a deliberate contest and substituted in place of it what is called the Bland-Allison Act, which required the purchase of silver bullion at its market value and its coinage to a limited amount. Every effort has been made from that time to this to have the Congress of the United States pass a free-coinage Act.

As I said before, shortly after the passage of the Bland-Allison Act, and from that time on there was a constant debate going on in Congress, and finally Congress raised the amount of silver bullion to be purchased to four million and a half ounces by the Act of 1890. The question then was between the free coinage of silver and the purchase of silver in a limited amount to be coined at the pleasure of the Government as it was needed. The same question is upon us now in the difficulties which surround us, and it is time that the question should be definitely and finally settled.

Mr. President, it is said that if we stop the coinage of silver it will be the end of silver. I have heard here that moan from some of my friends near me, that it will be the end of silver. I do not think it will be the end of silver. We have proven by our purchases that the mere purchase of silver by us in a declining market, when all the nations of Europe are refusing to buy silver and throwing upon us their surplus, is an improvident use of the public money, and it ought to be abandoned, or at least suspended until a time shall come when we may, by an international ratio or by some other provision of law, prevent the possible coming to the single standard of silver. Now, that can be done.

What do we propose to do now? We simply propose to stop the purchase. We do not say when we will renew it again, but we simply say we believe, in view of a panic or any possibilities of a panic, that it would be idle for us to waste either our credit money or our actual money to buy that which must be put down into the cellar of our Treasury and there lay unused, except as it is represented by promises to pay in gold. I say that such a policy as that would be foolish and delusive.

Senators say that this is a blow at silver Why, silver is as much a part of the industry of my country as it is a part of the industry of the State of the Senator from Colorado, the able exponent of this question. The production of silver is a great interest, and the people of Ohio are as deeply interested in the success of that interest as the people of Colorado. It is true we have not the direct ownership of the property, but it enters into measures of value of our property. There could be no desire on the part of any portion of the people of the United States to strike down silver. That idea ought to be abandoned at once. Therefore, in order to at least give the assurance of honest men that we do not intend to destroy an industry of America we put upon the bill a provision proposed now by the Senator from Indiana.

I say that instead of desiring to strike down silver we will likely build it up: and any measure that could be adopted for an international ratio that will not demonetize gold will meet my approbation and favor. But I would not dissever the financial business of this great country of ours, with its 65,000,000 of people, from the standards that are now recognized by all the Christian nations of Europe. I would not have our measure less valuable than the measure of the proudest and haughtiest country of the world.

Mr. President, this is not a question of the mere interest of Nevada or Colorado. It is not a question about what Wall street will do. They will always be doing some deviltry or other, it makes no difference who is up or who is down. We take that as a matter of course. The question is what ought to be done for the people of the United States in their length and breadth. If Congress should say that in its opinion it is not now wise after our experience to continue the purchase of silver bullion is any injustice done to Colorado or Nevada? Are we bound to build up the interest of one section or one community at the expense of another or of the whole country? No. I heartily and truly believe that the best thing we can now do is to suspend for a time, at least, the purchase of silver bullion. We should then turn our attention to measures that are demanded immediately to meet the difficulties of the hour. Let this be done promptly and completely. It involves a trust to your officers and great powers over the public funds. I am willing to trust them. If you are not, it is a strange attitude in political affairs. I would give them power to protect the credit of the Government against all enemies at home and abroad.

If the fight must be for the possession of gold, we will use our cotton and our corn, our wheat and other productions, against all the productions of mankind. We, with our resources, can then enter into a financial competition. We do not want to do it now. We prefer to wait awhile until the skies are clear and see what will be the effect of the Indian policy, and what arrangements may be made for conducting another international conference. In the meantime let the United States stand upon its strength and credit, maintaining its money, different kinds of money, at a parity with each other. If we will do that I think soon all these clouds will be dissipated and we may go home to our families and friends with a consciousness that we have done good work for our country at large.

A COLORADO PLEA FOR SILVER.

SPEECH OF SENATOR E. O. WOLCOTT (COLO.), AUGUST 31, 1893.

Since this subject was threshed over during the last Congress two new reasons have been advanced why silver should cease to be either purchased or coined at our mints. They are persistently presented to us by the advocates of the bill reported by the finance committee. They are, first, that our abandonment of silver will compel England to agree to an international conference and to the restoration of silver as a money metal to be freely coined as offered, and another that the repeal of the purchasing clause will restore confidence in our finances and our financial institutions to the people, who have lost faith in business. We are constantly assured that our abandonment of silver will force England to an international agreement. This may be true. There is not gold enough in the world to do its business, and some day this will be recognized by the monometallist countries. But the time is far away. Capital is strong and selfish. This senate chamber to-day is the best possible exemplification of

its power, and the long period of suffering and of shrinkage will pass before we return to the double standard.

Meantime the sections heretofore devoted to search for silver will become largely depopulated. The mines will fill with water, the timbers which sustain their walls will rot, the vast industries dependent for success on the mining regions will become bankrupt and a generation will not serve to renew their prosperity, even after silver may be remonetized. Investments in railroads, mines, smelters and other property directly and fatally affected by the action recommended by the finance committee aggregate more than $1,000,000,000, and they are all to be sacrificed that we may make our financial policy in exact accord with Great Britain, the creditor of the world. The argument is as if one should say, protection is wise and must be the bulwark of our prosperity. It is threatened year after year by the advocates of free trade. There is one way to settle the agitation finally and forever. Submit to absolute free trade. A few years will show the folly of it. The country will then return to protection and you will not be again disturbed. I picture the eagerness with which New England would grasp the suggestion, the warm-hearted welcome she would extend to the friends who thus advised her.

We have a vast area of country with many and varied resources and constantly increasing needs. Our great cities, the centres of the commerce of the country, surrounding them, are remote from and largely independent of each other. Endless new enterprises everywhere spring up and constantly increasing avenues of trade demand a steadily enlarging volume of currency to keep pace with our growing demands. We produce of gold, available for coinage, less than $18,000,000 annually. We can absorb silver offered us for coinage without inflation of currency and without impairing our financial credit at home or abroad.

Referring to the issue of clearing-house certificates, Mr. Wolcott said:

Nobody was disposed to find fault with this procedure, but when a resolution was offered calling on the Comptroller of the Currency, whose integrity everybody recognizes, to inform us whether the banks were obeying the law or not, an extraordinary incident occurred. Senator Gorman, with bated breath, informed us that, as a matter of fact, all the banks were violating the laws; that if they did not violate the law they would all have to close, and we were urged not to inform ourselves of the facts, but to let the Comptroller alone. No more remarkable statement was ever made. Congress is in session ready to enlarge or change the law if necessary but we are informed that it is our duty to blind ourselves to the facts and to our oaths and to suffer the law to be violated without inquiry or rebuke.

THE LACK OF CONFIDENCE.

Did it ever occur to the Maryland Senator that the depositors might have some rights which the law ought to protect? And did it ever occur to the banks that possibly "lack of confidence" in their institutions might not be wholly due to the Sherman Act? In the struggle which is now being fought out on this floor, whatever may be the outcome, we have all learned something of the divinity that hedges around monied institutions to an Eastern mind. The Western point of view is not so much valued these days on Wall street, but I venture to suggest to able financiers of that attractive but expensive locality, that if they will prevent a repetition of such frauds as the Whisky Trusts, and such mismanagement as has been shown in the Cordage and other industrials; will remember that the Sherman Act or some kindred measure recognizing silver coinage must afford them the only avenue possible for the enlargement of the currency which they especially need; will look at a map of these United States and observe that they cover a broad expanse of country and contain many people with many views, and will so modify their opinion as not to believe that every man who differs from them respecting financial matters must be either a villian or a crank, we will sooner arrive at that condition of mutual confidence and regard which ought to obtain between citizens of the same country.

WHY THE WEST IS FOR SILVER.

The people of the far Northwest favor the resumption of the free coinage of silver because they believe in the principle of bimetallism. We oppose the single standard because there is not enough gold to do the business of the world and furnish its inhabitants with the currency they need. The history of all times has shown that the scarcity of the circulating medium means a continuous fall in price, depression in business activity, impoverishment of the people and decline in civilization. The last twenty years have but emphasized the experience of the centuries. Silver has not depreciated, gold has appreciated. The double standard relieves the tension which may be caused by the lessened production of the other. It secures to the debtor at the maturity of his debt money of the value he received when his debt was incurred. Two metals together furnish a standard which has permanency, stability, accessibility and is a suitable and adequate measure of value. The question as to whether silver shall, by the passage of the bill before us, be finally demonetized is National and not local. The claims we urge in behalf of the recognition of silver are not pressed because we of the mountains ask your sympathy for the region which your proposed action would impoverish and ruin. If we represented any other section, with our knowledge of the possibilities of the great West, we would be equally tenacious for the preservation of the white metal as a standard of value. Our interests, our hopes and aspirations are identical with those of the other sections of our country which are borrowers and not lenders. We demand the coinage of both metals, because the history of our country and of all lands has taught us that they afford the safest and most adequate basis for the currency of the people.

If the mining States were alone to suffer by the unconditional repeal which is proposed, we would sacrifice without a murmur our interests to the mistaken policy for the public good, but there is no section of our country you are not likewise devoting to disaster and impoverishment. You are endeavoring to remove one of the corner stones on which the fabric of our Government is based. You are seeking to tear down one of the pillars of the temple of our prosperity. You will find to your sorrow that when the western and southern walls have fallen the eastern facade will not remain unmutilated and secure.

The words once used to express a proposition in finance sound cold and formal and dry. But the result of our action at this great crisis must affect deeply every home and fireside in this broad land.

No sectional horizon obscures our vision. If the contest for the people is to be won, it must be because against the selfish demands of the East are arrayed the united votes of the South and West. The fertile acres of your section wait for the plow, so do ours. You need capital for the development of your great resources, so do we. Both sections alike need fair prices for produce of the farm, and stable and sufficient currency.

It is for us, standing together on this great question, to save our common country from greater suffering and impoverishment than even the horrors of war could inflict; and by our united votes to maintain, not alone the standard of both gold and silver contemplated by the constitution and consecrated by centuries of usage, but to maintain as well the standard of American independence and American manhood.

The House Committee on Banking and Currency on Septembr 22 authorized Mr. Cox of Tennessee to report favorably to the House the bill introduced by him to promote the safety of funds and deposits of National banks.

The bill prohibits the officers and other employees of banks, except directors who are not otherwise officers or employees, to become borrowers or to become liable to the bank by reason of overdrawn account, or as indorser, guarantor, security, or otherwise, except upon written application approved by a majority of the directors or executive committee. Violation of the Act is made punishable by a fine of not more than $5,000, or imprisonment for not more than five years, or both.

On the same date Representative McCreary of Kentucky appeared before the House Committee on Coinage, Weights and Measures, and submitted a bill providing for a joint Congress Commercial and Monetary Commission. A similar proposal has been made in the Senate by Mr. Gallinger (N. H.).

At the date of this writing (October 10) no vote has yet been taken in the Senate on the Repeal bill. It has been announced that dating from Wednesday, October 11th, a continuous session of the Senate would be held until a vote was reached.

New Counterfeit Bank Notes.

A New Counterfeit $20 U. S. Silver Certificate.—This counterfeit has recently made its appearance in the West. It is of the Act of February 28, 1878, Series of 1880, check letter A, plate No. 9; B. K. Bruce, Register; A. U. Wyman, Treasurer; portrait of Decatur. The note has the appearance of having been printed from a zinc etched plate, and is so poorly executed that it is not deemed necessary to go into details. The portrait of Decatur does not bear any resemblance to that on genuine, none of the lines of the lathe work can be traced, the Treasury numbers are irregular and different sizes, and are almost black in color. The parallel silk threads are imitated by red and blue ink lines drawn across both face and back of note. The seal is so faint and coarsely executed that its design cannot be determined.

New Counterfeit $100 U. S. Treasury Note.—A. L. Drummond, Chief of the Secret Service Division of the Treasury Department, sends out the following under date of September 13: A pen-made $100 U. S. Treasury note, series 1880, check letter B, W. S. Rosecrans, Register, J. N. Huston, treasurer, large spiked chocolate seal, has been discovered by Miss Alma C. Smith of the Redemption Bureau, U. S. Treasurer's office. Owing to the fact of its being a pen production it is probably the only one in existence. At first glance the note is very deceptive but will not bear examination. The small lettering in the penalty on back of note is very irregular and poorly formed. The lathe work is represented by a mass of pen scratches that do not bear any resemblance to the work on the genuine. The seal and treasury numbers are well colored, but while the seal is well executed, the numbers are not so heavy as those of the genuine and are out of alignment. The imprint does not appear on bottom, back, nor left end face of note as in the genuine.

New Director of the Mint.—On September 27 the President sent to the Senate the name of Robert E. Preston to be Director of the Mint. Mr. Preston has been connected with the Mint Bureau for many years, and he is admirably fitted for the duties of the position for which he has been named, and will be a worthy successor to his able predecessor, Mr. E. O. Leech.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— The New York Clearing-House Association held its fortieth annual meeting at the Clearing-House on October 13. These officers and committee were elected to serve until October 2, 1894: *President*—George G. Williams; *Secretary*—Alexander Gilbert; *Clearing-House Committee*—Frederick D. Tappen, William A. Nash, George F. Barker, William W. Sherman, Richard Hamilton.

Messrs. Perkins, Simmons and Cannon have served longer than the other members, and therefore declined to have their names considered as candidates for re-election.

William Sherer was reappointed manager of the association. As a recognition of his valuable services during the recent financial troubles his salary was increased to $10,000 a year. William J. Gilpin was reappointed assistant manager.

The association changed its by-laws so that hereafter the admission fee for all banks, with a capital not exceeding $5,000,000, will be $5,000, and for banks with a capital in excess of $5,000,000, $7,500.

A majority of the members are in favor of purchasing a site and erecting a new building. It is understood that the association has several sites under consideration. It owns the building in which its offices now are located, but the lot is regarded as too small for a new structure such as is contemplated.

Extracts from the annual report of Manager Sherer for the year ended October 1, 1893, show that the Clearing-House transactions for the year have been as follows: Exchanges, $34,421,380,869; Balances, $1,696,207,175; total transactions, $36,117,588,045.

—A summary of the condition of the State banks of New York city, as shown by the statement of September 19, indicates a marked falling off of deposits, the decrease since June 1, the date of the last previous statement, being over $20,000,000. During the same time loans and discounts decreased $15,000,000; and specie about $5,000,000. The changes in several items from September 22, 1892, to September 19, 1893, is shown in the following table:

Date.	*Loans and Discounts.*	*Duefrom Banks.*	*Specie.*	*Legal-tenders.*	*Net Profits.*	*Due Banks.*	*Other Deposits.*
Sept. 22, 1892.	$105,494,700	$9,666,700	$10,277,900	$10,001,800	$14,966,400	$11,823,800	$101,541,400
Sept. 19, 1893.	88,070,100	8,047,600	11,479,800	8,738,900	15,636,800	11,642,500	85,370,800
Increase or Decrease..	$17,424,600	$1,619,700	*$1,201,900	$1,262,900	*$670,400	$181,300	$16,170,600

* Increase.

It will be seen that the greatest loss of deposits was sustained from June 1, 1893, to September 19, 1893. Since the abatement of the late financial crisis the deposits of the National banks have shown a very large increase, and the State banks of the city have doubtless shared fully in this recovery.

— David McClure, Receiver of the National Bank of Deposit, was authorized by Comptroller Eckels to pay an extra dividend of 10 per cent. to depositors on September 30, in addition to the dividend of 25 per cent. previously ordered to be paid on that date. This makes a total of 75 per cent. to depositors within three months.

— On September 25th President Henry W. Cannon of the Chase National Bank received a draft for $20,000, which purported to have been drawn on his bank by the Southwestern National Bank, Perry, Oklahoma Territory. The draft was fraudulent and did not in any way bother Mr. Cannon, as he was fully aware of a swindle now going on to defraud some banks in Kansas City and St. Joseph on the part of swindlers in Perry, Oklahoma Territory, as the Chase National Bank had telegraphed the Comptroller of the Currency and ascertained that no such bank had been organized as the Southwestern National Bank of Perry, O. T., and no application was ever filed for the organization of such a bank.

— Howard L. Bain, Cashier of the Home Bank, has been sentenced to four years' imprisonment for embezzling $20,000 in Wabash bonds from the bank. Bain confessed the theft, and says the securities were lost in Wall street speculation. The bank will lose but little, being secured by the Cashier's indemnity bond.

— The Plaza Bank, formerly at 753 Fifth avenue (Plaza Hotel), has removed to 2 and 4 East Fifty-eighth Street, corner of Fifth avenue.

NEW ENGLAND STATES.

Mechanics' Savings Bank, Auburn, Me.—The publication of this institution in the "List of Banks Closed Since January 1, 1893," in the September JOURNAL, was incorrect. The report of the suspension probably originated from the fact that some time ago, by order of a court, the deposits were reduced 12½ per cent. to stop a run then in progress. Since that time the bank has been open and running as usual.

Boston, Mass.—The second trial of ex-President Asa P. Potter of the Maverick National Bank began in the United States Court September 11, and resulted in Potter's acquittal, September 21.

— Charles Head was elected President of the Boston Stock Exchange, September 25.

MIDDLE STATES.

Country Banks Unite.—At a meeting of the representatives of the banks of Cattaraugus county recently held at Salamanca, N. Y., every bank of the county save one the Olean Exchange National, was represented. The meeting was called to form an organization of the banks of the county, similar to the clearing-houses of the cities for mutual protection in times of stringency in the money market, thereby giving the combined strength of all the banks to any member of the association, if solvent. President Edward B. Vreeland, of the Salamanca National Bank, was elected chairman and Cashier C. A. Case, of the Ellicottville Bank, secretary. A resolution was unanimously adopted that such an organization should be formed, and a committee consisting of E. B. Vreeland, William E. Wheeler and C. A. Case was appointed to prepare a constitution and by-laws to perfect the organization. A statement of the combined capital and surplus of the banks forming this organization aggregates over $1,360,000, with available cash on hand reaching the sum of over $730,000, an amount greatly in excess of the legal requirements, showing great strength, and when united equal to any emergency. Both banks of Franklinville, N. Y., were represented at the meeting, the Farmers' National by Cashier Adams and Alfred Spring, and the First National by Cashier Case.

Bank Failures in New York.—In commenting on a recent press dispatch purporting to give a list of bank failures in the United States in 1893, Superintendent Preston, of the State Banking Department, said:

"This article, which has been widely copied, does great injustice to the State banks of this State, in classing them with private banks. Any person or persons may engage in banking in this State, as they may in making boxes, selling meat, keeping store, or any other vocation, and with no more connection with the State Banking Department than if engaged in any other occupation. They may or may not have capital; they are subject to no supervision, and the amount of their business depends on the favor of the community in which they reside.

It is manifestly unfair, therefore, to add the failure of such firms to those of legitimate incorporated banks in order to prove the greater safety of the banks organized under the national system. The fact is that there have been five failures of State banks in this State since Jan. 1, 1893: The Canal Street Bank, the Madison Square Bank of New York city, the Cataract Bank of Niagara Falls, the Queen City Bank of Buffalo (the latter having resumed), and the Commercial Bank of Brooklyn, N. Y.

Wholesale Forgeries Reported.—Large numbers of forged checks on the First National Bank, Corning, N. Y., were recently reported. The checks are drawn by a mythical firm of A. J. Haines & Co., and are for small amounts.

Baltimore.—The New Building for the Merchants' National Bank now being erected on the southeast corner of South and Water streets will front 50 feet on South street and 143 feet on Water street, running through to Holliday street, on which it fronts 28 feet. The structure will be faced with pink Maine granite and is designed in the Renaissance style of architecture, and will be seven stories high.

Stole to Deal in Stocks.—Frank B. Kendrick, Assistant Cashier of the Commercial Bank, Syracuse, N. Y., is said to be a defaulter to the amount of $30,000. Stock speculation is alleged to have been the motive of the crime.

Cashier Dies in Prison.—Matthew T. Trumpbour, convicted of aiding in wrecking the Ulster County Savings Institution, Kingston, N. Y., died in Clinton prison September 17.

SOUTHERN STATES.

State Bank of Virginia.—By one of those unfortunate typographical blunders which sometimes occur despite the utmost care, the State Bank of Virginia, of Richmond, Va., was given a capital of only $400,000 in an advertisement appearing in the mid-year BANKERS' DIRECTORY AND COLLECTION GUIDE. The correct capital- $500,000—is given in the regular list of banks at Richmond. The bank has a surplus of $240,000 and undivided profits, $33,900. While the error is to be regretted, it cannot in any way impair the reputation of so well-known and conservative an institution as the State Bank of Virginia.

Nashville, Tenn.—A new bank was recently incorporated to be known as the Bank of Nashville. The capital will be $100,000, which is already nearly all subscribed. Selden R. Williams will be President and W. A. Wray, Vice-President.

—The American National Bank, which resumed business on September 5 after a brief suspension, received $360,000, and paid out only $7,000 on the day of resumption.

Meridian (Miss.) Banks Sound.—During the late financial stress the banks of this thriving town continued to pay all demands in cash, and at the same time extended the usual accommodations to customers. There were no unusual withdrawals of deposits.

Vicksburg Banks Remove Restrictions.—The five banks of Vicksburg. (Miss.), which some weeks ago adopted the system of certified checks and reduced cash payments to depositors to $50 daily, voted, September 11, to remove all restrictions.

Certified Checks Called In.—The associated banks of Little Rock, Ark., held a meeting September 28, and passed a resolution calling in for cancellation all certified checks that were issued during the recent financial stringency.

WESTERN STATES.

Nebraska Bank Regulations.—The State Banking Board has adopted a new rule with regard to capital stock of banks hereafter commencing business in this State. The present law regulates the capital stock but places no limit on the amount of commercial paper and the board now decides that commercial paper, absolutely first class, shall not be more than 16⅔ per cent. In addition thereto the board rules that the banking house, including the lot on which it is located, furniture and fixtures, shall not be more than 33⅓ per cent. and that cash shall not be more than 50 per cent; also that if the valuation of the house, lot and furniture be less than 33⅓ per cent, the difference between the actual value and one-third of the capital stock must be in cash.

Marshall & Ilsley Bank, Milwaukee, Wis.—A typographical error in the Mid-year BANKERS' DIRECTORY AND COLLECTION GUIDE makes it appear that the surplus of this bank is only $20,000, instead of $200,000. The report of September 23d shows that this bank not only has a surplus of $200,000, but undivided profits of $33,000. It passed through the recent financial crisis with capital and surplus unimpaired, and is at present in good condition. The bank commenced business in 1847, and its standing and strength are too well established to be seriously affected by a mere error of the types.

Confidence in This Bank.—A statement regarding the Wisconsin Marine and Fire Insurance Company's Bank, Milwaukee, Wis., was recently made by a creditor of the bank to the amount of $225,000, who said:

"I have examined the complete list of assets of the bank and am confident if its affairs are properly handled it will pay 100 cents on the dollar and 6 per cent. interest. The Receiver has now on hand and in the bank $700,000. I think by Jan. 1 he will have collected $3,000,000, or about 60 per cent. of the bank's assets. Allowing for all possible depreciation in the remaining 40 per cent. I do not think there will be a shortage of $1,000,000 for the stockholders to make good. There is besides, $1,200,000 of the Chapin Mining Company's stock, of which no account has been taken whatever."

Denver, Colo.— An order was granted by Judge Graham on the 16th ult. to Assignee Blakeney of the Rocky Mountain Dime and Dollar Savings Bank, to restore the assets of the bank to the officers. It was shown by an answer of the bank to the petition and demurrer that of $105,000 due depositors agreements had been signed for all but $4,195. The depositors who have not signed are either deceased or their where abouts have not been ascertained. The bank resumed business on September 19.

Chicago.—The National Bank of the Republic, although a comparatively new institution, has easily maintained a high standing during the late monetary excitement. Its cash reserve on July 12 was 34.8 per cent., and available cash on hand and due from banks, 55 per cent. The surplus and undivided profits accumulated in the two years of the bank's existence are upwards of $75,000. Much of the institution's prosperity is attributed to the popularity and ability of its officials.

Omaha, Neb.—The American National Bank opened its doors for business September 8, after a suspension of nearly three months. The bank opens with more than 50 per cent of its deposits on hand in cash. Demand liabilities are less than one-quarter the whole and loans have been reduced $100,000. The officers remain the same as before suspension. Wm. Minot, jr., Morris Levy and William Baird are new directors.

Minneapolis, Minn.—On Wednesday evening, September 13, Samuel Hill, President of the Minneapolis Loan and Trust Company, gave a banquet at the Minneapolis Club in honor of President H. W. Cannon, of the Chase National Bank, New York city. The banquet was very elaborate, covers being laid for 2?. The list of guests included a number of men prominent in local business and financial circles.

Louisville, Ky.—The Kentucky National Bank has been authorized to resume business. The conditions imposed by Comptroller Eckels, including a reduction of capital stock from $1,000,000 to $500,000, and reorganization of the directors and official force, will be fulfilled. Logan C. Murray, of New York, is mentioned for President.

National Bank of Kansas City.—This well-known institution, which was forced to suspend during the late crisis, resumed business on October 9. No changes were made in the officers and the bank will continue under the efficient management of the old officials and directors.

St. Paul, Minn.—Efforts are being made to reopen the National German-American Bank. A report on the 29th ult. stated that the bank had on hand over $400,000 in money, and extensions had been secured on $1,386,000 of deposits.

PACIFIC SLOPE.

Montana National Will Resume.—The Montana National Bank of Helena is engaged in securing the consent of its depositors to a plan which provides for the payment of deposits in installments and the resumption of business on December 1.

Helena (Mont.) Banks Consolidate.—The stockholders of the Second National Bank have decided to consolidate with the Helena National Bank. E. D. Edgerton will continue as President, and F. D. Baird, Cashier, of the Helena National.

San Francisco, Cal.—Work has been begun on a new building for the Union Trust Co., to cost $200,000.

American Bankers' Association.

The nineteenth annual convention of the American Bankers' Association will be held at Chicago on October 18th and 19th. The convention will be in the Art Institute on the Lake Front, and delegates will register at Parlor "O," Palmer House. The following gentlemen will address the convention:

Hon. James H. Eckels, Comptroller of the Currency, Washington, D. C.; Mr. George S. Coe, New York.; Hon. Joseph C. Hendrix, New York, Subject: "The Panic in Australia and the United States;" Mr. Horace White, New York, Subject: "An Elastic Currency;" Mr. Allen R. Foote, Washington, D. C., Subject: "A Plea for a Sound Currency and Banking System;" Mr. George A. Butler, New Haven, Conn., Subject: "A Practical Plan of Banking and Currency;" Mr. George E. Leighton, St. Louis, Subject: "The Need of a Comprehensive Currency Reform;" Mr. W. C. Cornwell, Buffalo, N. Y., Subject: "Bank Currency—State and National;" Mr. E. H. Thayer, Clinton, Iowa, Subject: "Better Roads." A paper prepared by the Hon. E. O. Leech, New York, will be read to the convention. Subject: "The Silver Question as Related to the Appreciation of Gold." Besides papers will be presented to the convention by Prof. Sydney Sherwood, Johns Hopkins University; Mr. Joseph F. Johnston, Birmingham, Ala.; Mr. Frank C. Dillard, Sherman, Tex.; E. E. Lindemuth, Clearfield, Pa., and others.

A detailed report of the convention will appear in the November issue of the Journal.

FAILURES AND SUSPENSIONS.

Colorado.—DENVER.—Crippen, Lawrence & Co., loan agents, assigned September 18 to S. H. Standart. The firm is one of the largest loan concerns in the city or in the West, and has done a business running up into the millions. No statement has been made, but an estimate places the assets at $1,350,000, and liabilities at $900,000. The firm have done an immense business throughout the State of Kansas. Joseph J. Crippen and Henry Putnam, two members of the firm, reside in Denver, and Mr. Lawrence lives in Concord, N. H., where the firm has a branch.

—A report of the condition of the Denver Savings Bank was made by the assignee on September 25. It shows the total assets to be $916,233; total direct liabilities, $653,521; excess of assets over direct liabilities, $262,711. In addition to the direct liabilities there are contingent debts amounting to $80,000.

District of Columbia.—The banking firm of Woods & Co., Washington, which suspended some time ago, assigned September 15. Assets, $33,397; liabilities, $26,000.

Idaho.—The Idaho Commercial Company, of Weiser, filed a petition in insolvency September 15. Liabilities, $40,000; assets, $60,000.

Illinois—CHICAGO.—Adam W. Jaeger, assignee for Conrad L. Niehoff, the insolvent banker, made a report to the county court recently, which shows the cash account is short to the extent of $109,114. The assignee also states $79,114 has been embezzled by Niehoff's sons, Frank J. and Otto E., both of whom, together with their father, have left for parts unknown.

Indiana.—The First National Bank, North Manchester, suspended October 4. The bank is said to be owned principally by Jesse Arnold, of North Manchester, who is reported to be worth many times the amount of his stock in the suspended bank.

—The bank of J. Arnold & Co., South Whitley, also suspended October 4.

Kansas.—The State Bank Commissioner has been investigating the affairs of the Kincaid chain of banks in Kansas. It is said that he has discovered that fully $200,000 of the banks' money is missing. Kincaid announces his intention of meeting all his liabilities.

Kentucky—LOUISVILLE.—It is alleged that the Louisville Deposit Bank, which suspended some time ago, was deliberately wrecked by its President for the benefit of himself and the German National Bank. The substance of the charges is that the National had been carrying Schwartz for years, and knew that he was totally insolvent; that in order to save itself from bankruptcy the bank entered into a conspiracy with him to wreck and loot the Deposit Bank after inveigling men to take its stock, and that the statement that the National would cease business and turn its funds and patronage over to the Deposit was only one ruse among many to induce men to go into the new bank. The condition of the Deposit Bank is said to be not such as to encourage the creditors. When it failed its liabilities in round numbers were: Capital stock, $300,000; individual deposits, $95,000; time deposits, $60,000. This makes a total liability of about $455,000, of which the directors are creditors in deposits to the extent of about $77,000. As Mr. Schwartz and his friends are said to owe the bank over $300,000, and as expenses and other charges are to come off, it can readily be seen that there is not much margin for the creditors. The deposits were small, and in the course of time the depositors, outside of the directors, will probably receive all of their money.

—On September 21, the stockholders of the Frankfort National Bank, decided to go into liquidation. The bank was organized in August, 1889, with a capital stock of $100,000. It did not have many depositors.

The President and Vice-President resigned in time to make private assignments. What little confidence remained was shaken by this, as both were largely in debt to the bank.

An officer of the bank says that neither the depositors nor the stockholders will lose a cent. The loans amount to $126,400. The deposits are $20,000, and these, added to the capital stock, make the total indebtedness $120,000, leaving $6,400 for the stock, holders. The bank has paid in all three semi-annual dividends of 3 per cent.

— The Bank of Guthrie, capital $25,000, was reported suspended August 19.

Minnesota—Minneapolis.—The revelations that are coming to light in regard to the doings of the Northwestern Guaranty Loan Company, form one of the most remarkable chapters in the financial history of the eventful year 1893. The head of the gigantic concern was Louis F. Menage, who seems to have been possessed of most extraordinary skill as a manipulator of finances. Menage had been in business on his own account prior to the organization of the Guaranty Loan Company, and had made considerable money in real estate speculation. The company was organized in 1884 with a paid-up capital of $200,000, which was subsequently increased to $500,000, and later to $1,250,000. Semi-annual dividends of four per cent. were paid regularly, the last one being paid in January, four months before the company suspended. It was incessantly proclaimed that no investor in the company's securities had ever lost a dollar, that the dividends were never missed. All maturing paper was promptly met. The success and apparent solidity of the concern won the confidence of some of the most staid and conservative business men, East and West, and in 1890 this confidence was increased when the company opened its handsome twelve-story building, substantially built of green granite and red sandstone. It was generally conceded to be one of the best buildings in the Northwest, and one that would be creditable to a much larger city than Minneapolis. Things progressed swimmingly until the financial upheavals of last Summer, when the large amount of paper falling due compelled Menage to seek aid in the East; he succeeded in raising $150,000, but this did not stay the tide, and on May 19 a suspension was forced.

When the Receivers began to estimate the value of the assets, they at once congratulated themselves on having at least one item of great value. The splendid office building, which, though bonded for $600,000, would yet leave an equity of $800,000. But on investigation it was found that the Guaranty Loan Company had no equity whatever in the structure. The building was first bonded for $600,000 four and a half per cent bonds. These were placed in Amsterdam, Holland. Then came a time Menage wanted money, and he determined to turn the building to account. He organized the Northwestern Guaranty Loan Building Company, with a capital stock of $2,000,000. The officers of this company were made the same as the officers of the loan company. As officers of the loan company they transferred the building to themselves as officers of the building company, taking in payment the $1,400,000 in stock, the $600,000 in bonds being subtracted from the total amount of capital stock. The $1,400,000 worth of stock was floated. This is how it came about that the building is not an asset of the loan company.

There were names of men in the directory of the loan company who had no official connection with it, and who, for a long time, did not even know of the use being made of their names.

The fraudulent paper floated by the company is not far from $3,000,000. Many of the names on notes guaranteed by the company are said to be either obscure or those of fictitious persons. These notes were curious in form, many of them bearing endorsements like these: "Maker is a young man of some means, with income sufficient to enable him to meet his obligation;" "Maker has by thrift and energy accumulated some property, and has good reputation for promptness in business matters." In Vermont alone $750,000 of this worthless paper was sold, the little town of St. Johnsbury holding about $250,000 of this amount.

Menage was the organizer of no fewer than thirty-four companies, with an aggregate capital stock of $15,000,000. These corporations included the Puget Sound Iron Co., the Chicago Dock Improvement Co. (the latter purporting to have assets in excess of $26,000,000), and enormous real estate speculations at West Pullman, Ill., and North Galveston, Tex. It was this latter speculation that hastened the disasters which have befallen the loan company.

William S. Streeter, Vice-President of the Company, is said to have received a salary of $6,000 from Menage, and the same amount from the Company. Streeter has been indicted.

The concern, it appears, varied its reports to suit the requirements of different States. Thus in reporting to the Commissioner of Foreign Mortgage Corporations of Massachusetts, the items of guaranteed loans and loans said not to be guaranteed were omitted from the report; in the statement made to the Vermont Examiner these items were included, making a difference of $4,000,000 in the two reports. The purpose of this latter was, it is said, to impress the magnitude of the concern on the Vermonters, a purpose which was evidently accomplished.

Louis François Menage was born in Providence, R. I., in 1850. His maternal ancestor was a descendant of one of the Pilgrims who came over in the Mayflower. Menage was successively the keeper of a confectioner's shop, a teacher of shorthand, timekeeper in a logging camp, a laborer in a sawmill, a real estate speculator, financial manipulator, and fugitive from justice. Such is an epitome of the career of one of the notable characters of a most remarkable epoch.

Missouri.—KANSAS CITY.—The troubles of the Lombard Investment Company, which have been the subject of extensive press comment for some time past, culminated in the appointment of receivers on September 18. S. B. Ladd, Frank Hagerman and H. E. Mooney will have charge of the company's affairs in the West, and M. E. Whitney and Charles S. Fairchild in the East. The following was the condition of the company at the date of last report, February 28, 1893:

RESOURCES.		LIABILITIES.	
First mortgages	$4,899,809	Capital	$4,000,000
Second mortgages	45,328	Guaranty dividend fund	60,000
Bills receivable	445,784	Surplus fund	60,000
Industrial bonds	501,000	Undivided profits	6,057
Railroad and municipal bonds, and other stocks and bonds	572,494	Unearned commissions	21,223
U. S. 4 % bonds and premium.	59,225	Debentures	4,903,833
Land Company stocks, at par	1,447,800	Principal and interest paid, awaiting presentation of mortgages and coupons	383,261
Interest and insurance premiums advanced, on loans sold	531,491	Due branch offices and auxiliary companies	22,891
Tax deeds and tax certificates	52,756	Other deposits	106,389
Real estate	235,088		
Foreclosure costs advanced	83,610		
Furniture and fixtures	10,000		
Overdrafts	6,268		
Due from branch offices	12,264		
Due from banks and bankers, and cash	660,785		
Total	$9,563,657	Total	$9,563,657

In addition to the above statement, the Lombard Investment Company has a contingent liability of $32,548,817 of guaranteed mortgages secured on real estate in twenty States, appraised at over $100,000,0000.

The guaranteed loans have been somewhat reduced since the date of the above report, and are now probably about $28,000,000.

On March 28 last, J. Russell Reed, the Commissioner of Foreign Mortgages of Massachusetts, forbade the company to transact any further business in that State. This was a severe blow, for in Massachusetts alone the interest of the company in securities and stock amounted to about $12,000,000

The value of the stock has been depreciating for some time, having fallen from above $100 to $8 per share. The difficulties of the company have been greatly aggravated by internal dissentions.

—The appraisers of the defunct Kansas City Safe Deposit and Savings Bank filed their reports September 25; the officers of the bank gave the amount of deposits as $1,750,000, and the total assets as $2,044,000. The appraisers give the assets as $885,000. President Darragh and Cashier Sattley are out on bail on four criminal suits against them, and their cases will come before the Grand Jury.

Nebraska.—A report of the condition of the Holt County Bank, at O'Neill, which closed July 11, was made public September 22. The book value of the resources is placed at $139,369, on which the Examiner estimates a probable loss of $55,818. Deposits were $91,000. David Adams, who was President of the bank, is reported missing.

New York.—NEW YORK CITY.—The Jarvis-Conklin Mortgage Company, whose main office was at 40 Wall st., went into the hands of Samuel M. Jarvis and Roland R. Conklin as Receivers September 29.

The Jarvis-Conklin Mortgage Trust Company, was organized for the purpose of receiving moneys in trust at such rates of interest as might be obtainable or agreed upon. The bulk of its investments was in Western mortgages. The capital stock of the company issued and outstanding is $3,750,000. Its original capital stock was $1,500,000, fully paid up in cash. In June, 1892, it was decided to increase this by $2,500,000. The increase was all subscribed for, but $1,125,000 remained unpaid up to August of the present year. In August it was decided to call in the remainder at the rate of 10 per cent. every four months. Only $150,000 has been paid, leaving $975,000 unpaid. The company has outstanding debenture bonds to the amount of $7,025,171.97, bearing interest at the rate of 5 and 6 per cent. It is said the company is indebted to various banks, individuals, and corporations on demand and time loans due or about to become due, secured and unsecured, to the amount of $491,044. To cover this indebtedness the company has deposited with the payees bonds and securities to the par value of $840,000. It is further indebted for money borrowed and received on deposit to the amount of $417,794, of which $105,600 matures on or before Oct. 10. There are also the following sums due and to fall due:

Sept. 1, interest on outstanding debentures	$75,708	Nov. 11, promissory note	160,000
Oct. 10, promissory notes	75,000	Nov. 14, promissory note	11,578
Oct. 15, interest on debentures	61,000	Demand loans and fixed deposits maturing before Dec. 1	179,336
Oct. 15, installment of principal of outstanding debentures	875,515		
Oct. 22, open account	$1,180	Total	$939,315

The liabilities of the company are estimated to exceed $8,000,000. The company owns the following property in New York and elsewhere:

Real estate mortgages	$1,131,000	Open accounts and bills receivable	$820,000
Debentures held by company, secured and held as treasury assets	133,000	Real estate appraised at	834,774
Stocks, bonds, and securities of corporations	687,000	Total	$3,105,774

Solomon L. Simpson, a private banker at 50 Broadway, assigned September 25. The nominal assets are $1,070,330, and actual assets, $175,000. The liabilities are estimated at $121,565.

It is stated that the Receiver of the Madison Square Bank, which failed in August, has recovered from the clearing-house securities amounting in value to $360,000. These securities were taken out of the bank by the clearing-house committee, which visited the bank on the afternoon before its suspension was announced. They were taken to cover the withdrawal of the $200,000 which Elliott Danforth, the State Treasurer, took from the bank and the $53,000 which Frederick T. Uhlmann, President of the East River Bridge Company, secured on the same day.

Checks to cover the amount withdrawn by the State officer and the President of the bridge company, who was one of the officers of the bank, were passed through two banks, which were members of the clearing-house association, and the securities were taken to cover the amount of the checks. A formal demand was made upon the clearing-house for the securities, and their counsel decided that the securities were not held legally.

—The appointment of a permanent Receiver for the Commercial Bank of Brooklyn was postponed for thirty days on September 30 in the hope that the directors, stockholders and depositors may agree upon a plan for resumption of business. Deputy-Attorney General Hogan applied for the appointment of a permanent Receiver. Horace Graves, for the organized depositors, presented an affidavit setting forth that the deponents, the committee of the depositors, represented $300,000. They desired an immediate winding up of affairs of the bank. A summary of the affairs of the bank was presented, setting forth that the deficit to be made good would be $350,000, instead of $110,695 as figured by the directors, and that the bank had been insolvent for four years, while the directors had knowingly made false reports and had manipulated the assets of the bank in a suspicious manner. Counsel for the Receiver denied the allegations of Mr. Graves.

—The Merchants' Bank of Lockport closed Oct. 6. A Deputy Bank Superintendent is in charge. It is thought that the assets will cover all liabilities. The bank has done a large business, and was believed to be perfectly solvent. The capital stock was $100,000, and the last statement published showed the amount due depositors to be $224,973. The bank is only three years old.

Ohio.—The statement of the assignee in regard to the personal affairs of Charles

Foster, twice ex-Governor and ex-Treasurer of State, was filed by the assignee, J. B. Gormley, September 6. The report shows:

	Amount.	*Appraised.*
Bills and accounts receivable	$157,393	$106,200
Stock	376,181	118,785
Real estate	82,123	Par
Personal property	2,950	Par
Life insurance policies	4,200	Par
Totals	$622,849	$314,259

The liabilities are: Bills payable, $75,800; overdrafts on Foster & Co.'s bank, $135,000.

Tennessee.—The Bank of Carroll, of Huntingdon, was reported failed October 2. It is said the Cashier, R. F. Truslow, acknowledges "using" $5,000 of the bank's funds.

Washington.—The Port Townsend National Bank suspended September 18. Liabilities are less than $100,000; assets between $120,000 and $130,000. The directors have given personal pledges to pay depositors in full. The Port Townsend National Bank was organized in the fall of 1889, with a capital stock of $100,000. During the present year it absorbed the State Bank of Washington, and took some of the accounts of the Marine Savings Bank. A Receiver has been placed in charge.

Facts About Banks.—There are 3,700 National banks, 3,000 State banks and about 1,500 Private banks in the United States, a total of 8,200, somewhat diminished since May by suspensions and insolvencies. The gross deposits in National banks of the United States amount to $1,500,000,000; in State banks to $650,000,000, and in private banks to $100,000,000, a total of $2,250,000,000. The gross deposits in American banks are equal to about 60 per cent. of all the gold coin in the world.

The National banks of the country had loans in excess of two thousand million dollars at the date of the Comptroller of the Currency's report on July 12. The State and private banks at the same time had loans to the amount of $1,500,000,000 additional, the two combined equivalent to $50 for each inhabitant of the United States, adult or minor.

Certificates of Deposit Liable to Taxation.—The Treasury Department issued the following circular from the Office of the Commissioner of Internal Revenue under date of September 7:

To Collectors of Internal Revenue and Revenue Agents:

It has come to the knowledge of this office, through published news item, by correspondence and otherwise, that banks are issuing certificates of deposit payable in the money or currency of the United States, and that these obligations of the banks, negotiable notes, carrying little in their circulation from hand to hand, are paid out and used for circulation in lieu of the money of the United States.

Such issues are taxable, and you will inquire as to the amount of such issues, and report them to this office for assessment of the taxes incurred.

JOS. S. MILLER, *Commissioner.*

Notices of New Books.

POOR'S MANUAL OF RAILROADS, 1893. New York: H. V. & H. W. Poor.

The number of this well-known cyclopedia of railroad information for 1893 shows that during the year ending December 31, 1892, the length of track laid in the United States was 175,223.44 miles. The net increase in mileage for the year was 4,428.91. The total assets of the railways of the country are $11,481,584,822 and total liabilities, $11,088,933,606, an excess of assets amounting to $392,651,276. There were carried during the year 575,769,678 passengers and 749,331,860 tons of freight. The gross traffic earnings were $1,205,272,023, and operating expenses $846,633,503, leaving net earnings, $358,638,520 to which must be added other receipts, including rentals received from lessor companies, viz., $114,619,545, making an aggregate available revenue of $473,-258,065. Of this sum there was paid for interest on bonds $232,659,089; other interest, $6,600,799; dividends, $83,336,811; rentals, tolls, etc., $62,553,445; miscellaneous, $32,711,-558—a total of $417,861,702, leaving $55,396,363 excess of available revenue over actual payments therefrom.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

4857—First National Bank, Patton, Pennsylvania. Capital, $50,000.
4868—Chapman National Bank, Portland, Maine.
4929—National Bank of Orange County, Chelsea, Vermont. Capital, $50,000.

NEW BANKS, BANKERS, ETC.

ALABAMA.

CLAYTON—Barbour County Bank.
TUSKEGEE—Bank of Tuskegee (successor to C. W. Thompson & Co.); capital, $50,000; President, C. W. Thompson; Cashier, John H. Drakeford.

ARIZONA.

PHOENIX—Home Savings Bank; capital, $20,000; President, J. H. Braly; Cashier, W. K. James.

CONNECTICUT.

BRIDGEPORT—Industrial Savings Bank; President, Patrick Coughlin; Vice-President, John C. Copeland; Secretary and Treasurer, John J. Noble.

FLORIDA.

ORLANDO—State Bank of Orlando; capital stock, $25,000.——H. G. Garrett, Banker.

ILLINOIS.

ABINGDON—J. Mosser & Co.
ARMINGTON—C. C. Aldrich.
PEARL CITY—Pearl City Bank (successor to Bank of Yellow Creek); individual responsibility, $150,000; President, H. M. Tims; Vice-President, Simon Tollmeir; Cashier, G. W. Dow.

INDIANA.

VEEDERSBURG—State Bank; capital, $25,000; Pres., T. R. Zeigler; Cashier, L. G. Martin.

IOWA.

CINCINNATI—Farmers and Merchants' Bank, organizing.
CLIO—Bank of Clio.
FARRAGUT—Bank of Farragut (successor to Exchange Bank).
LARCHWOOD—Savings Bank of Larchwood (successor to Bank of Larchwood); capital, $45,000; President, B. L. Richards; Cashier, Chas. Shade.
WALL LAKE—Wall Lake State Bank; capital stock, $30,000; President, A. Herrig; Cashier, Neil McFarlan.

WASHINGTON.

PORT TOWNSEND—Port Townsend National Bank; suspended Sept. 18.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, October 4, 1893.

The extra session of Congress which the President convened a month earlier than he originally intended, is still in session although nearly two months have elapsed since it began, and the silver law is not yet repealed. The House performed its part of the work just three weeks after it assembled; the Senate has spent an additional five weeks on a measure of its own and there is some doubt whether or not it will pass. All question as to a compromise, as far as the President is concerned, appears to be settled by the letter written by Mr. Cleveland to Governor Northen of Georgia, on September 25, in which he states explicitly that he is "opposed to the free and unlimited coinage of silver by this country alone and independently." This declaration on the part of the President has won favorable criticism by many who are in favor of the repeal of the silver-purchase law, but it has excited apprehension as to its effect upon those Senators and Representatives who have been willing to vote for unconditional repeal while believing that subsequent legislation "in favor of silver" would receive the President's approval.

While the delay in disposing of the silver question in Washington has kept alive the feeling of uneasiness, there has been made very satisfactory progress towards improvement. At the beginning of the month the Treasury Department resumed the payment of currency after paying gold exclusively for some time, and with this came an end to the currency famine. By September 5th the premium on currency had entirely disappeared, and before the end of the month the Government was receiving $1,000,000 or more of soiled and uncurrent United States and National bank notes per day, to be exchanged for new notes. During the stringency the notes, no matter how dilapidated they were, were retained by the holder, but as soon as the hoarding ceased the fact was made manifest in the demand for their retirement.

The increase in National bank circulation has continued during the past month, but at a less rapid pace, and with the prospect of an early cessation, the price of Government bonds having recovered about 4 per cent from the low point touched during the recent panic, and the supply having once more become very limited. There has been an increase in bank circulation of about $25,000,000 in the past two months nearly $10,000,000 of it during September.

The Clearing-House banks of New York last month began the retirement of their loan certificates, of which there had been a total of $41,490,000 issued. There were $13,000,000 cancelled since September 1, and $16,000,000 altogether the amount now outstanding being only $25,395,000.

The gold importing movement practically ceased soon after the first of the month, and only about $4,500,000 of gold arrived at the port of New York during the month. The total imports since January 1 amount to nearly $58,000,000, which is only $12,000,000 less than the total exports. A considerable portion of this gold it is claimed has been borrowed from abroad, and may be demanded when the loans mature, the sentiment on the other side, however, is not favorable to instituting another drain upon the gold supply of this country.

The statistics of bank failures and resumptions indicate the disastrous character of the period through which the country has been passing, and also the substantial recovery that has recently taken place. From January to September 560 State and private banks and 155 National banks, a total of 715, suspended. Of these 72 of the former and 70 of the latter, a total of 142, have resumed. A large proportion of the failures were in the West, but the banks of that section are rapidly recovering from the effects of the late crisis.

The industrial situation has not as yet improved to any great extent. This is indicated in the heavy decreases which the railroads have been reporting in both earnings and profits since July 1. The loss in earnings has been from 10 to 15 per cent. for some time past, and for the month of August only 24 roads out of a total of 134 reported an increase. The incomplete returns for September show but little if any improvement.

In the iron trade the depression is still pronounced, and the average weekly production of the furnaces in blast is less than at any previous time in many years, and less than one-half what it was last May. The weekly capacity of the furnaces in blast on September 1 was 83,481 tons against 115 926 tons on August 1, 160,952 tons on July 1, 177,407 tons on June 1 and 186,982 tons on May 1. The decrease in four months is equal to more than 5,000,000 tons per annum.

The record of failures in 1893 will undoubtedly surpass that of any previous year in more than a decade. A partial compilation for the first nine months of the year shows nearly 11,200 failures, or 3,800 more than in 1892, and 2,300 more than in 1891. The liabilities aggregate $324,000,000, while in 1892 they were less than $77,000,000, and in 1891 less than $139,000,000. The largest total in any previous year was in 1884, and then the liabilities were only $196,000,000. It is gratifying to note, however, that there are signs of a general revival of business, and a more hopeful feeling prevails for the future.

The yield of the staple crops of the United States for 1893 is now of interest, and the September report of the Agricultural Department suggest a small output of wheat, with the other crops closely approximating in quantity those of 1891. The figures will probably be about as follows: Wheat, 372,000,000 bushels; corn, 1,620,000 bushels; oats, 650,000,000 bushels; cotton, 6,700,000 bales. The wheat crop is the smallest in more than a decade excepting only 1885 and is only about 15,000,000 bushels larger than in that year. As a surplus of something like 100,000,000 bushels was carried over from the crops of 1891 and 1892 there is no danger of a deficiency. As however the world's supply is estimated as being 100,000,000 bushels below requirements the disposition of America's surplus does not seem to be a difficult problem.

The foreign situation has developed no new feature. The money market in London has been easy throughout the month. At the semi-annual meeting of the Bank of England on September 14 it was announced that the liabilities of Baring Brothers & Co. had been reduced to £4,223,001, and that the assets were being realized upon slowly. Several indications have been given that England is not yet ready to take any step in the direction of bimetallism. The Marquis of Lansdowne, the retiring Governor-General of India, has publicly declared that India is well satisfied with the results of her new silver policy. Sir William Harcourt, in a private letter, has very plainly stated that the British Government has no idea of doing anything more than to listen respectfully to the proposals of other states, should the Brussels Conference be reconvened. At the coming meeting of the Latin Union, France is expected to urge its dissolution in an emphatic manner. An interesting controversy over tariff privileges has arisen between Russia and Germany, the possible effect of which may be to increase the grain exports of the United States to Germany.

BANK OF ENGLAND.—The Bank of England made two reductions in its rate of discount last month, from 5 to 4 per cent on September 14 and from 4 to 3½ per cent on September 21. In September last year the rate was 2 per cent, and in 1891 it was 2½ and 3 per cent. The changes in the rate during the present year have been as follows:

January 26	3 to 2½ per cent.	August 3	2½ to 3 per cent.
May 4	2½ to 3 per cent.	August 10	3 to 4 per cent.
May 11	3 to 3½ per cent.	August 24	4 to 5 per cent.
May 18	3½ to 4 per cent.	September 14	5 to 4 per cent.
June 8	4 to 3 per cent.	September 21	4 to 3½ per cent.
June 15	3 to 2½ per cent.		

The open market rate in London for 60 to 90-day bills is 3⅝ per cent. as against 3¾ per cent. a month ago. In Paris the open market rate is 2⅛ per cent. against 2¼ per cent. a month ago; in Berlin 4¾ per cent., and Frankfort 4⅞ per cent. against 4⅛ and 4¼ respectively, a month ago. During the month of August the Bank of England lost £1,566,522 in bullion, holding at the close £27,567,648. The Bank of France gained £1,842,028 and now holds £68,974,658.

United States Treasury.—The statement of the United States Treasury for September shows an increase in the total debt of $5,036,999, of which $4,610,482 is in certificates and Treasury notes, offset by an equal amount of cash in the Treasury. The net debt, less cash in the Treasury, increased $834,794. The total cash assets are $719,548,155, of which $16,280,076 is in National bank depositories. Following is a summary of the statement:

	Sept. 30, 1893.	*Aug. 31, 1893.*	
Interest bearing debt	$585,037,740	$585,037,590	Increase..... $150
Debt on which interest has ceased	1,984,770	2,045,540	Decrease.... 60,770
Debt bearing no interest	374,364,265	373,877,128	Increase..... 487,137
Total	$961,386,775	$960,960,258	Increase 426,517
Certificates and Treasury notes	570,225,363	565,614,881	Increase..... 4,610,482
Aggregate debt	$1,531,612,138	$1,526,575,139	Increase.....$5,036,999
Net cash in Treasury:			
Held against certificates and Treasury notes	570,225,363	565,614,881	Increase. ... 4,610,482
Gold reserve	93,582,172	96,009,123	Decrease.... 2,426,951
Net cash balance	13,293,461	11,274,787	Increase..... 2,018,674
	$677,100,996	$672,898,791	Increase....$4,202,205
Total net debt	854,511,142	853,676,348	Increase.. .. 834,794

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $98,407 circulation of National gold banks—was on September 30, $208,592,172. This shows an increase for the month of September of $9,710,291 as compared with an increase of $15,225,961 in August, and an increase in total circulation since September 30, 1892, of $35,911,254. During the month of September there was issued to new banks $11,260, and to old banks increasing circulation $9,902,175. There has been surrendered and destroyed during the month $203,144. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $20,727,188, showing an increase in that class of circulation during the month of $482,025.

The total amount of specie exported from New York city to all points during the month of September was $3,698,555 as compared with $2,950,412 in August, making a total for the year of $94,027,496. The imports for the month were $5,634,245, as compared with $40,935,238 in August, making a total for the year of $59,762,750.

The following table shows amount of gold and silver coins and certificates, United States notes and National bank notes in circulation September 1:

	General Stock, Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold coin	$556,479,232	$72,183,123	$484,296,109
Standard silver dollars	419,332,550	360,499,882	58,832,668
Subsidiary silver	77,596,621	13,496,416	64,100,205
Gold certificates	79,756,819	129,220	79,627,599
Silver certificates	330,864,504	5,909,370	324,955,134
United States notes	506,485,056	17,031,951	489,453,105
National bank notes	208,690,579	7,815,481	200,875,098
Totals	$2,179,005,361	$477,065,443	$1,701,939,918

The population of the United States on October 1, 1893, is estimated at 67,806,000; circulation per capita, $25.29.

Foreign Exchange.—The disappearance of the premium on gold in New York at the opening of the month tended to restore to a normal condition the sterling exchange market. Until the latter part of the month the market was dull, with rates inclined to weakness. On September 18 rates began to advance on the scarcity of bills, largely due to the delayed movement of cotton, and on the settlement of maturing sterling loans. The advance caused some apprehension of gold exports, but toward the close of the month rates began to decline as the result of the better supply of bills and the renewal of sterling loans. The following statement shows the actual rates at the close of each week for the month.

Week ended	BANKERS' STERLING.		*Cable Transfers.*	*Prime Commercial. Long.*	*Documentary Sterling. 60 days.*
	60 days.	*Sight.*			
Sept. 2....	4.82 @ 4.82¼	4.86 @ 4.86¼	4.87 @ 4.87¼	4.81¼ @ 4.81½	4.81¼ @ 4 81½
Sept. 9...	4.82½ @ 4.83	4.85¾ @ 4.86¼	4.86¾ @ 4.87	4.81¾ @ 4.82¼	4.81¼ @ 4.81¾

Italian lire..	....	5.77½ @ 5.72½	....	....	....

THE MONEY MARKET.—The stringency in money appears to be over for the present, and neither gold nor currency has commanded a premium since the first of the month. Money on call has loaned at as low as 2 per cent, and is in ample supply. Time money commands 6 per cent., but the demand has not been heavy, neither are the banks urgent in putting it out. Commercial paper rules at 8 to 12 per cent., and most of the demand comes from out-of-town institutions, the local banks not yet having come into the market to any extent. For the week ending September 9, the open market rate for call loans on stock and bond collaterals ranged from 2 to 5 per cent., the average being 4 per cent. Commercial paper 8 to 10 per cent. For the week ending September 16, the open market rate for call loans on prime collaterals, ranged from 3 to 7 per cent., with 4 per cent. as the average. Commercial paper quoted 8 to 12 per cent. For the week ending September 23, the open market rate for call loans ranged from 2 to 5 per cent., the average being 3 per cent. Commercial paper quoted 7¾ to 9 per cent. During the week ending Septem- 30, the open market rate on call loans ranged from 2 to 5 per cent., the average being 4 per cent. Commercial paper quoted 7½ to 8 per cent.

NEW YORK CITY BANKS.—Since August 12 last there has been a rapid and continuous improvement in the bank situation in New York. Rarely in the histories of the banks of this city have the reserves piled up so fast as in the month of September. The cash reserves have increased nearly $30,000,000 since September 2, $14,000,000 of which was in specie. Instead of a reserve of $16,500,000 less than the 25 per cent. limit on August 12, and $1,500,000 less on September 2, the banks now have a surplus of $24,000,000. Another increase in circulation, of about $4,500,000, for the month is reported, or nearly $9,000,000 since the depression began.

The following table gives the condition of the New York Clearing-House banks, as shown by the bank statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
Sept. 2..	$400,169,300	$66,860,500	$25,074,500	$374,010,100	$9,911,600	$5,170,150 inc.

1,804,741	840,694	352,164	199,498

leaving 1,540,907 shares (including 876,524 shares of unlisted stocks) to represent the dealings in the remaining 149 stocks. In addition 338 different issues of railroad bonds were dealt in, to the amount of $21,804,200 also $93,000 State bonds and $7,450 Government bonds. (Compared with September, 1892, there is a decrease of 1,318,365 shares in stocks; a decrease of $3,648,300 in railroad bonds; a decrease of $570,700 in State bonds; an increase of $1,750 in Government bonds, and a decrease of 399,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $11,000; stocks, 876,524 shares, of which 749,224 were American Sugar Refiners' common stock and 10,641 preferred; mining stocks, 11,260 shares. American Cotton Oil Certificates, 25,881 shares of common and 8,651 shares of preferred; Pipe Line Certificates, 30,000 barrels. Of National Lead common 89,050 shares, preferred 12,033 shares; of silver bullion certificates, 106,000 ounces, extremes being 75¼ and 73, closing at 74⅛ bid. The listed stocks show a decrease of 117,406 shares as compared with the amount sold in August. Transactions in railroad bonds show a decrease of $5,253,000 during the same period, an increase of $67,800 in State bonds, and a decrease of $775,050 in Government bonds. In unlisted bonds an increase of $1,000; in unlisted stocks an increase of 130,316 shares; in mining stocks an increase of 5,760 shares; a decrease of 4,738 shares in Cotton Oil Certificates common, an increase of 2,137 shares in preferred; an increase of 10,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates increased 75,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of September were sold: 1,898,242 shares of railroad and other stocks representing dealings in 95 properties. Of this amount 1,462,356 shares are transactions in the following 12 stocks:

C. M. & St. P..550,630	Chic. Gas......145,560	Dis & C. F. Co. 80,780	N. Y. & N. E.. 47,380

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

SPECIAL LIST.

This "Special List" is made up of securities—both stocks and bonds—which are not regularly "called" at the Exchange. Members are at liberty to deal in them daily, on the Bond Call, but the transactions are infrequent.

NOTE.—The railroads enclosed in a brace are leased to Company first named.

BANKERS' OBITUARY RECORD.

Ames.—Frederick L. Ames, one of the wealthiest men in Massachusetts, was found dead in his state-room on board a Fall River steamboat, September 18, death having resulted from an attack of apoplexy. Mr. Ames was President of the First National Bank and the North Easton Savings Bank, North Easton, Mass., and was a director in a number of Trust companies and other corporations in New York and Boston.

Boyd.—Anderson J. Boyd, President of the Bank of Reidsville, N. C., died recently.

Brooks.—Judge Geo. M. Brooks, President of the Middlesex Institution for Savings, Concord, Mass., died September 22. He had been a member of the State Legislature, and was a member of Congress from 1869 to 1872.

Crouse.—John Seneca Crouse, Cashier of the First National Bank at Red Hook, N. Y., died October 6. He was sixty-five years old, twenty-five of which he had been Cashier of the Red Hook bank. He was very well known among banking and financial circles along the Hudson and in New York. Before moving to Red Hook he was paying teller in the Poughkeepsie National Bank.

Currier.—Warren Currier, of Newburyport, Mass., died September 10, aged 68. He was a director of the Institution for Savings and a director of the Ocean Bank.

Dennison.—E. E. Dennison, a member of the banking firm of E. W. Clark & Co., Philadelphia, died September 13.

Egbert.—Wallace W. Egbert, a member of the New York Stock Exchange, died recently.

Groesbeck.—David Groesbeck, who was a broker for Commodore Vanderbilt and Daniel Drew during the war, died in New York September 29. He was born in Albany in 1817.

Hurcomb.—Walter Fuller Hurcomb, Vice-President of the Colonial Bank, New York city, died September 24, in the sixty-fifth year of his age.

Lawrence.—William Thomas Lawrence, Secretary of the Institution for the Savings of Merchants' Clerks, New York city, died October 1, at the age of sixty-three years.

Livingston.—Frederick Livingston, President of the First National Bank, Peterborough, N. H., and a trustee of the Peterborough Savings Bank, died September 29, aged ninety-one years.

McCoy.—Robert McCoy, Cashier of the Blair County Banking Company, Tyrone, Pa., died by his own hand September 11.

Ostrom.—Olof M. Ostrom, President of the Swedish-American Bank, Minneapolis, Minn., died September 19, aged forty-three years.

Peck.—George H. Peck, a director of the First National Bank, Birmingham, Conn., died September 27.

Powers.—William H. Powers, a member of the New York Stock Exchange, died suddenly of heart disease, October 6.

Steel.—Francis P. Steel, until a short time ago President of the Southwark National Bank, Philadelphia, died September 22.

Stewart.—John H. Stewart, ex-President of the Bank of Commerce, Indianapolis, Ind., died September 18.

Webb.—Eckford Webb, a director of the First National Bank, Brooklyn, N.Y., died September 27.

Weller.—C. L. Weller, Cashier of the Hampden Bank, Westfield, Mass., died September 20, aged thirty-nine years. He had been connected with the bank for nearly twenty years, succeeding his father as Cashier.

Wilcox.—W. S. Wilcox, President of the Adrian (Mich.) State Savings Bank, died recently at the age of seventy-five years.

Of Practical Interest.—The August number of RHODES' JOURNAL OF BANKING, published monthly by Bradford Rhodes & Co., 78 William Street, New York city, is at hand, and, as usual, contains matter that will be found of practical interest to the banker, broker and all having financial affairs at stake, as it keeps fully up to the times in the money market.—*Philadelphia Price Current.*

Its Statistics Reliable.—The July number of RHODES' JOURNAL OF BANKING is of especial interest as reviewing the monetary movements and presenting reliable arrays of statistics pertaining to one of the most exceptional periods in the financial history of the century. Its showing of the movement of stocks and the aggregate failures that mark this period are especially noteworthy and bankers and economists will more than ever appreciate the features of this number.—*Omaha (Neb.) Bee.*

Relative Gold and Silver Product.—A statement prepared by the Mint Bureau, Treasury Department, shows that since 1792, and up to 1892, the aggregate production of gold was $5,633,908,000, and of silver, $5,104,961,000. Of the gold produced, $3,582,605,000 has been coined as money, and the balance has been used in the arts. Of the silver produced, $4,042,700,000 has been coined as money, and the balance used in the arts. Of the gold used in the arts, it is stated unofficially that most of it is now in graveyards, as the practice of dentistry absorbs a large amount of gold.

RHODES'

JOURNAL OF BANKING.

Vol. XX. NOVEMBER, 1893. No. 11.

THE lack of elasticity of the National bank note has been its greatest defect, and a bank note currency without elasticity, whatever its other advantages, is in no ways suited to carry on the business of the country. The system of issuing notes upon the security of bonds was an outcome of the circumstances that prevailed in 1863 when the National Currency Act, as it was then termed, became a law. The previous bank currency of the United States had been issued by the State banks. It had elasticity, but the laws governing the creation and operation of banks in the several States were in many cases so illy drawn and so badly executed that there was no uniformity of security Some of the bank notes were good, but some, and not a small quantity by any means, were bad, and the bad ones attained such an evil notoriety that the public generally were sick and tired of State bank notes and were ready to praise to the skies the National bank notes, based upon bonds issued by the United States.

The immense debt of the United States in the years from 1863 afforded for the following ten or twelve years so cheap and broad a basis for the notes that their defect in elasticity was not perceived by the general public. But very early in the history of the system it was noted and commented upon by banking experts and by the Comptroller of the Currency. It is curious to note that the reason then noted for this defect was not the reduction of the debt of the United States, as is the case now, but a more radical cause, viz., that there was no redemption. They were redeemable at that time in another form of paper money only, in legal-tender notes, and as there was always as many legal-tender notes outstanding as National bank notes; and as the legal-tender note was secured by the Government guarantee the same as a National bank note, there was really no profit or inducement of any kind to exchange one for the other. In 1873 the Comptroller of the Currency referred to this fact, and said that a law requiring the redemption of National bank notes in New York city in legal-tender notes, at one-quarter per cent. discount, would no doubt increase the cost of domestic exchange, but would result in the return of the notes of the National banks at certain seasons of the year, when they were not needed, to the vaults of the country banks ready to be paid out when the demand for currency increased, and would give what was exceedingly desirable—elasticity to the currency. In fact, there was so little redemption of the National bank notes that that currency became worn out, mutilated, and filthy. The Act of June 20, 1874, compelled redemption at the Treasury, but its purpose was more to purify the currency than to give elasticity. In fact, as the Comptroller remarked in November, 1874, "No real redemption could be expected as long as the notes to be redeemed were less in amount than the notes—legal-tender notes—in which they were to be redeemed"

In these years however there was no complaint on account of the lack of bonds and in fact the National bank currency did continue to increase slowly with the wants of business up to the time that high premiums on bonds began to induce the banks to retire their circulation and withdraw the security in order to realize the premiums. In this first period the National bank notes could increase but could not diminish with the fluctuating demands of business. But since the bonds have become scarce this currency has been enclosed between two inflexible walls, that of no redemption, preventing decrease, and that of expensive bonds, preventing increase.

The advantages of the National bank note, its uniformity and safety, have been so cried up that the public mind has become convinced that no other safe bank currency could be had, and that the safety of National bank currency even could only be secured by a deposit of bonds. It is now somewhat of a relief to see an effort making to convince the public mind of the defects of the National bank note, with the object of removing them, while retaining all its good qualities.

Several able addresses were made at the recent Convention of the American Bankers' Association in Chicago, in which the fallacy that a bond deposit is necessary for the safety of bank circulation is strongly combated and substitutes equally good proposed. These propositions are not at all new; they are the growth of experience, and every one made in these addresses has been made editorially and otherwise in the JOURNAL during the last two or three years, and notably within the past nine or ten months. It is refreshing however to see how the crisis of 1893 has shaken up the confidence that has heretofore been felt in the perfection of the present system of issuing bank notes based on bonds. In former conventions such propositions would have been regarded almost as heresy. The highest flight of the imagination on the part of those who desired to secure the permanency of the National bank note resulted in propositions that the Government issue long bonds at low rates of interest to serve as security for the notes. Now it is beginning to dawn on many minds that even if bonds should be issued by the United States elasticity, that most important quality, would not be secured. In former conventions Mr. GEO. S. COE has, it is true, stated in his addresses the true principles which underlie a sound and useful bank note issue, but either he was not definite in his propositions or the time was not ripe for them. The result of this discussion will tend to convince the public that, with a few modifications of the present law, in the line suggested in the JOURNAL in February last, the National banking system can issue a currency as safe as that based on bonds, and possessing the elasticity which will encourage and protect the legitimate business of the country.

AMONG THE OBJECT LESSONS OF THE FINANCIAL CRISIS of the year 1893 the following is one of the most striking. There were in May 3,700 National banks, 3,000 State banks, and about 1,700 private banks doing business in the United States. The number of private banks includes only such as receive deposits and transact business similar to the incorporated banks. Of the National banks 155, or about four and two-tenths per cent., were obliged from various reasons to close their doors. Of the combined State and private banks 560, or nearly twelve per cent., closed their doors. Of the 155 National banks that succumbed to the violence of the financial storm seventy-two, according to a report of the Comptroller of the Currency, or nearly fifty per cent., have again resumed business, while of the State and private banks only seventy, (up to October 24) have again re-opened their doors. The number of National banks whose suspensions proved permanent is therefore eighty-three, or two and three-tenths per cent. of the whole number doing business, while the permanently disabled State and private banks were 490, or over ten per cent. of the whole number. The figures are not yet obtainable showing the comparative loss to the creditors of the two classes of banks.

This comparison is instituted, not from a desire to make any invidious distinctions, but in view of the fact of the agitation in regard to the revival of State bank currency. If the State and private banks are inferior to the National banks in preserving the money of their depositors, they would to the same extent, at least, be more unsafe if they were practically unrestricted in the issue of a note currency. The reason of the superiority in safety of the National banks is the successful administration and enforcement of the restrictive laws of the National banking system. The bureau of the Comptroller of the Currency is supported and paid by the Government of the United States. It has ample means under its control for carrying out its purposes and it can do so more economically for the 3,700 National banks than the separate State governments can each carry out the provisions of their laws for the regulation of State banks. If the three thousand State banks were distributed equally among the forty-four States there would be an average of about sixty-eight banks to each State. To maintain an efficient banking department the legislature of each State would have to appropriate at least one-quarter as much as it costs to maintain the office of the Comptroller of the Currency. For it is in accordance with the principles of economics that a large number of banks can be supervised much more cheaply in proportion than a small number. The cost of the Comptroller's office to the Treasury of the United States is about one hundred thousand dollars per annum. If each of the States appropriated twenty-five thousand dollars for its banking department the aggregate cost for the supervision of the banks of the country, that is if State banks took the place of National banks, would be over one million of dollars per annum. If all the banks of the country were under the supervision of the Comptroller of the Currency, the cost would not probably exceed one hundred and fifty thousand dollars. There is little doubt but that the cost of supervision of State banks now imperfectly as it is performed in many States is at least twice as great as the cost of the supervision of the National banks by the Comptroller of the Currency. This question of cost is an important one, as the more economically the necessary governmental functions can be performed the less necessity for imposing heavy taxes upon the banks of the country by the National Government and the States, and the more cheaply can the banks furnish money to their customers. It is safe to say that even the present expense of maintaining the Bank Superintendents and the Bank Commissioners of the several States, would, if the supervision of all the State and private banks of the country were delegated to the Comptroller of the Currency, be a large contribution to a safety fund for the purpose of protecting depositors and note holders.

Therefore if there were no other argument against the repeal of the ten per cent. tax on State bank notes, this one of the expense of supervision, so necessary to reduce the danger of loss from insolvency to a minimum, would be sufficient. But there can be no uniformity of supervision by forty-four different State Governments, any more than there can be uniformity of State banking laws. On this point of uniformity an eminent authority upon the history and theory of banking, Mr. HORACE WHITE, in an address made by him at the Chicago Convention of the American Bankers' Association, said: "Imagine forty four States sending out bank notes under forty-four different banking systems. Who would be able to know anything about their goodness? You might as well play forty-four games of chess with your back to the table." The same would apply to the protection of depositors under the same circumstances. There might, as this authority remarked, be more good State banks than bad ones, as there were before the civil war, but the percentage of bad ones would be so high that there could be no effectual safety fund or insurance against unavoidable disasters. The statistics quoted at the beginning of this article are no new thing, they show that the history of 1893, as regards the comparative safety of State and National banks, is the same as it has been in every financial panic since the National banks have been in existence. There are to-day, as there always have been, many State banks whose management is of the highest standard of excellence. But there is a greater temptation to loose management under the State systems than under the National systems.

THE AMERICAN BANKERS' ASSOCIATION held its Nineteenth Annual Convention on October 18th and 19th in the city of Chicago. The Convention was a large one and the addresses of more than usual interest as might have been expected in a year so exceptional in the hardship that it brought to the banking interests. For a number of years there has been a feeling of hesitation on the part of the Association to make any recommendations to Congress relative to financial legislation, because the prejudice against banks, so often appealed to by politicians, would, it was thought, make such recommendation a detriment rather than a benefit to the desired legislation. But this year from no fault of the banks themselves, simply from the unwise financial legislation of previous years, a condition was reached destructive of the very foundations upon which the confidence making the banking business possible rests, and the banks suffered in an unprecedented manner and degree. The Association, naturally roused by these startling events, passed a resolution stirring up the United States Senate to accomplish the repeal of the silver-purchase Act. It is gratifying to note that the decisive action on the part of the Association is far from being detrimental to the banking interests and that it has served to strengthen public sentiment in the right direction. It is evident that the bankers of the country regard the silver-purchase Act as the cause of the panic of 1893. In this respect the sense of the World's Congress of Bankers and Financiers held in Chicago in June last, and of the Convention of the American Bankers' Association held in October, was the same.

Addresses were made by President RHAWN, the Comptroller of the Currency, GEO. A. BUTLER, HORACE WHITE, ALLEN RIPLEY FOOTE, JOSEPH C. HENDRIX, E. O. LEECH, ex-Director of the Mint, and several others. Mr. RHAWN's opening address covered a wide field, giving a large amount of statistical information in regard to banks which will prove of great value to the literature of banking. One marked feature of his address was a compilation of the statistics of the banks in the United States which during the financial crisis of the year were obliged to succumb. The Comptroller of the Currency, Mr. ECKELS, confined himself to mentioning the unusual stress under which the banks of the United States had been placed, and eulogized the skill and courage which their managers had shown in meeting it. Mr. GEO. A. BUTLER's address was a plea for a bank currency instead of one issued by the Treasury of the United States, and his plan was in effect that recommended by the JOURNAL before the panic had occurred in February last, viz.: the issue by the National banks of circulation to a certain per cent of their capital not secured by bonds, with a safety fund derived from taxation to guarantee the payment of losses through insolvencies.

HORACE WHITE in his address recommended a plan almost identical, but in his clear and picturesque style defined an elastic bank currency and its advantages, using the interesting history of Geo. Smith's bank as an illustration. It is encouraging that two such addresses as these, following so closely the line which has for years past been so strenuously recommended by the JOURNAL, should have formed so important a part of the programme of the Convention. Both Mr. BUTLER and Mr. WHITE are men well versed in the financial history of this country and their plans show a fitness to all the conditions prevailing in the United States.

The address of ALLEN RIPLEY FOOTE, of Washington, differed from the foregoing, in bearing the marks always found in the production of one whose acquaintance with the subject has been derived from text-books more than personal acquaintance with events as they occur. His views on a sound currency seem to be orthodox. He recommended that a special committee be appointed in each State to organize a National monetary commission to bring about the adoption of a sound currency and banking system. This plan seemed to strike the fancy of Mr. GEO. S. COE, who endorsed the proposition. Inasmuch as this plan would require the action of the legislatures of forty-four States, the prospect of its execution is very vague. But inasmuch as in the National banking system there already exists a sound banking system, it seems in this respect, at least, an unneccessary plan. The JOURNAL, in the article "How to Make Banks Safe," indicates a way in which banks by associating may, without the assistance of further legislation, insure absolute safety to their creditors, both stock-holders and depositors. The advantage of a National Commission in securing a sound currency is very doubtful seeing how many influences even more powerful have hitherto been brought upon Congress in vain.

The proceedings of the Convention are published on another page.

IN 1836 THE UNITED STATES was entirely out of debt; in fact, in June of that year Congress passed an Act for the distribution of about thirty-six millions of surplus money among the States. In 1837 however the situation was altogether changed. The financial panic of that year caused the revenues of 1837 to fall short of the expenditures by about ten millions of dollars. This deficiency of revenue continued for some years, and in 1841 the public debt amounted to $12,000,000. This increase in the debt can be traced to the unwise legislation and administration of the period.

History abounds in repetitions and partial repetitions of former events. From 1885 to 1890 the United States Treasury was in trouble with its surplus revenue. Since 1890 the revenues have decreased and expenditures increased, and instead of a further reduction of the public debt it is probable that the coming year will see an increase of it. The gold reserve in the face of deficient revenues is gradually drawn upon to meet the immediate wants of the Government until it is now hardly more than eighty millions of dollars. The remedy proposed for this is an issue of bonds. It is no doubt true that the bonds of the United States can be sold for gold, but while not desiring to be pessimistic the JOURNAL believes that the offer of any large amount in the present condition of the market would tend to depress the price of securities even like those of the United States. Moreover, it is unwise policy to issue a bond that to secure any market at all must run some years to meet what is likely to prove only a temporary deficiency of revenues.

In 1836 the Secretary of the Treasury was granted the legal power to issue Treasury notes, not a legal tender, at rates of interest not to exceed 6 per cent. The credit of the United States Treasury was not so good then as now, but the Secretary succeeded in raising the money to make good the deficiencies in revenue at almost nominal rates of interest. If Mr. Carlisle had the same authority to-day he could take advantage of the large surplus reserves which accumulate in the banks at the money centres to obtain all the money he wants. This proceeding on his part would not only relieve the necessities of the Treasury; it would have an immediate and powerful effect upon the industries of the country. It would stimulate confidence by removing the torpor that prevails in financial circles when they have large sums of money on hand for which they have no call. With reviving confidence trade would revive and the revenues would increase, enabling the Secretary to redeem the Treasury notes. These might (as were those of 1836) be put out for one year, with the privilege of earlier redemption. If the revenues did not revive it would then be time to issue bonds to fund the Treasury notes. The right to issue these Treasury notes to make good temporary deficiencies in revenue should be possessed by the Secretary of the Treasury with the concurrent advice of the President. It would prevent the temporary embarrassment to which the Treasury will be otherwise always exposed from the inequality of the collection of revenues and the payment of expenses.

THE LATEST PROPOSITION OF SENATOR SHERMAN is to grant authority to issue a new series of three per cent. bonds to mature in five years, but payable at the pleasure of the Government. he loan is to be placed among the people by the offering for sale of refunding certificates similar to those issued at the time the four per cent. loan was placed in 1877. These certificates are to be in small denominations. The theory upon which these certificates are to be issued is that the financial depression has caused an immense amount of hoarding in old crocks and stockings, and that these certificates would bring these small reserves to light. The object of the loan is to supplement the deficient revenues so that the Secretary need no longer draw upon the gold reserve to meet ordinary expenditures. Having thus the wherewithal to meet the ordinary expenses, the gold reserve will increase from the gold paid in for customs duties.

The theory that people hoard money for any length of time in crocks and old stockings is, it is believed, untenable at the present time. There is always a large amount of currency in the pockets of the people, and any distrust causes it to circulate less easily. There was no doubt a very large amount of currency withdrawn for a time from the banks and placed in safe deposit vaults. This withdrawal was temporary, and most of it has probably ere this returned to the banks. Not but that the safe deposit vault is an invention in the interest of hoarding which will have an increasing effect in withdrawing money from the banks as long as the latter are not permitted to issue their own notes. But it is not probable that there is any such amount of hoarding as is imagined by many or that the refunding certificates if issued would be taken up with money from this source. In other words, there is no such danger that bonds of ordinary denominations will not be taken as to render it necessary to resort to this device. It must also be remembered that these certificates could most likely be sold at par only, while bonds of other denominations would no doubt command a premium.

If it is desired to make a popular loan why not open books for subscriptions in all the principal cities and towns and permit them as low as ten dollars if necessary, letting the subscribers fix the premiums they will offer and accepting the highest bidders. It is believed however that for the small amount the Treasury will require to make good the deficiencies in its revenues a popular loan would be a farce. It would be bad politics for any party to make it, because when a comparatively small loan is really required a very large number of subscribers would be disappointed in finding their subscriptions rejected.

THE HOUSE COMMITTEE ON BANKING AND CURRENCY has taken up the subject of the repeal of the tax on State bank circulation. This tax prevents State bank issues, not especially because of its onerousness, but because of the manner in which it is laid. During the late panic, when money was bringing from twenty to fifty per cent. a State bank might well have afforded to pay a tax of ten per cent. upon quite a large issue, for a time at least. But this was prevented by the fact that the tax is laid not only on the bank that issues it but upon every bank that subsequently pays the circulation out or uses it. It is well to bear this point in mind in all discussions of this question. The talk in the Committee of Banking and Currency arose over a resolution of Mr. WARNER asking the Treasury Department for all information in its possession in regard to State banks past and present. From 1837 to 1863 reports were gathered by the Secretary of the Treasury from the State banks as far as possible. From 1863 reports for purposes of taxation were made to the Commissioner of Internal Revenue, and from 1873 the Comptroller of the Currency has collected statistics from official and non-official sources in regard to the State, Savings and private banks of the country. Before 1836 much information is found in the State papers on finance and in the reports of the Secretaries of the Treasury. The resolution was referred to a sub-committee, who it is hoped will treat the matter with the care it deserves.

SUBSTITUTES FOR MONEY—ORDINARY AND EXTRAORDINARY.

THE CURRENCY QUESTION.

[By A. B. HEPBURN, late Comptroller of the Currency; President of the Third National Bank of New York City.]

This country has had an object lesson in currency. It has had conditions not theories to contend with, and the defects in our currency laws are clearly shown by the substitutes for money which the necessities of different localities evolved.

With more money in circulation than at any previous time in the history of the country, with business halting in the presence of probable changes in our economic laws, and hence requiring a smaller volume of money to transact current business, we have, nevertheless, had the unique experience of currency at a premium; not alone gold or government notes, but bank notes. All forms of money commanded a premium over bank drafts and other forms of exchange.

Absolutely reliable data obtained from the National banks, at widely separated periods, by several Comptrollers of the Currency, showing in detail the actual business of the banks as it was transacted for the day over their counters, demonstrates that ninety-two per cent. of all business transactions that pass through the banks is consummated by means of bookkeeping; that is —credit. The moving consideration is not money, but notes, checks, bills of exchange—some form of credit. If, then, only eight per cent. of the business of the country is transacted by means of actual money, and ninety-two per cent. by means of credit, it is easy to see how business is paralyzed when credit is withheld. It is also easy to see that if with our $1,701,939,918 of actual money in circulation only eight per cent. of business transactions represent money, how impossible it is to furnish currency sufficient for business needs, independent of credit. The transportation of money involves danger of loss and a proportionate charge for the service; the transmission of a draft payable to order involves no risk and the slight cost of postage, economy and convenience have induced a minimum use of money and a maximum use of credit. The amount of domestic exchange—checks and drafts—drawn upon each other by the national banks during the year 1892 was $12,999,959,950, and, with other banks and bankers included, the aggregate would approximate $20,000,000,000. The total exchanges for the fifty-seven clearing-house cities in 1892 were $61,017,832,067. The average daily exchanges of the City of New York last year were $118,561,782, and only fifteen minutes are allowed at the clearing-house in which to complete the exchanges, and less than ten minutes usually consumed. In this modicum of time is this vast volume of business adjusted and a balance struck between the different banks. The balances only are paid in cash. To such an extent does the business community employ substitutes for money in the ordinary conduct of affairs. In this age of steam and electricity people cannot wait to count money except in small change transactions. Banks are being multiplied throughout the land. The keeping of bank accounts by all classes of people is becoming habitual. The function of credit is being extended in all directions, and in all forms. It is evident that however perfect a currency system may be, and our own is far from perfect, it cannot supply the wants of the public during a panic. When people hoard their money and withhold credit, business will be paralized and the community suffer, but an elastic currency system, whose volume will expand or contract, as business needs press or relax, will do much to preserve confidence and prevent monetary stringency.

The initial cause of our recent panic was distrust of our currency, a fear of the free coinage of silver, and a conviction that under the operations of the Sherman law we were rapidly approaching the condition that would result from the free coinage of silver, at a ratio of sixteen to one, while the commercial ratio ranges about twenty-eight to one. All contracts, when not otherwise specified, are payable in lawful money of the United States, hence should a free coinage law pass all contracts could be paid in silver coin in pursuance of such act. The commercial value of our silver dollar is about fifty-five cents. In case A owed B one hundred dollars for goods purchased A could take fifty-five dollars worth of silver to the mint and have it coined, free, into one hundred silver dollars with which he could pay his indebtedness, and B would be compelled to accept the same. This, however, would apply only to existing contracts. If A wanted to owe B another hundred dollars B could and would protect himself by asking a higher price for his goods. All people would do the same, and thus the price of current commodities would be appreciated in the same ratio that our currency was depreciated, while existing debts would remain the same. This would amount to a practical repudiation of such percentage of existing indebtedness.

The Sherman law, so called, compelled the Government to purchase 4,500,000 ounces of silver each month, store the same in the vaults of the Treasury, and issue Treasury notes, in form of money and redeemable in gold, in payment for same. The world would not believe that any government, however rich, could purchase 54,000.000 ounces of silver yearly and cord it away unused in the Treasury, and long be able to redeem in gold the notes issued in payment therefor. Anything that should send gold to a premium would tend to drive it out of circulation, and the withdrawal from the channels of trade of the $550,000,000 of gold in circulation would produce a contraction of the currency so violent as to produce most disastrous results. The fear of such a contingency excited distrust of the gold value (that is the commercial value) of our currency. The foreign investor first took fright and not only withheld further investments, but sent back to us in large quantities the securities already held lest the future might compel him to accept payment in depreciated money. Credit generally became alarmed, and the hoarding of gold followed. The currency famine thus inaugurated, intensified by business necessities, sent all forms of money to a premium and taxed the resources of every locality to find money and substitutes for money for the transaction of business.

We have seen to what an extent ordinary substitutes for money are utilized, now let us examine the extraordinary substitutes made use of during the recent panic. The Associated Banks of the City of New York issued clearing-house certificates aggregating $38,280,000. They were issued by an authorized committee upon approved securities, and were "received in payment of balances at the clearing-house." These certificates in their practical working become a forced loan—that is, banks having a credit balance at the clearing-house are forced to loan to the debtor banks an amount equal to the certificates received in settlement of such balances. In this way the stronger banks of the association contribute of their strength to the weaker ones, and at the same time are amply protected by the collateral. Any bank subjected to a greater strain than the others, and whose deposits are more rapidly withdrawn, is enabled by means of these certificates to settle its daily debits (which the withdrawal of the deposits necessarily entails) and gives it time in which to liquidate its assets, and realize funds with which to retire the certificates. As long as a bank has plenty of good securities upon which to obtain these clearing-house certificates, it can make loans to its customers and settle the drafts drawn against such loans by means of these certificates. The issuing of such certificates is a practical consolidation of the banks of the city for the protection of the public. In a degree it imparts to each bank the strength of the whole. It insures united action. It inspires and restores public confidence. It enables banks acting through the clearing-house to meet emergencies and overcome embarrassments that, but for this united action, must prove disastrous. It means, in short, the powerful and commanding action of the many millions of dollars acting in unison. It is the laying one side of rivalry and intense competition for business and a union of counsel and of strength for the protection of all. The wisdom of such action has been many times evidenced, but never was it more fully attested or more generally acknowledged than at the present.

The action of the associated banks of Boston was practically the same as those of New York. Certificates to the amount of $11,448,000 were issued.

In ordinary times Boston banks have a custom of borrowing and loaning at clearing; that is, a bank that is debit at the clearing-house will borrow, from one or more banks, having a credit balance, funds to enable it to settle its debit balance in whole or in part. In payment therefor a cashier's check is given, which bears interest, and "is kept by the loaning bank until the borrowing bank wishes to pay the same, or the loaning bank may call the same at any time."

Philadelphia banks adopted the same course as New York and Boston. They do not make public the amount of clearing-house certificates which they issue.

The action of the Baltimore clearing-house was essentially the same.

Baltimore banks have a custom in ordinary times of borrowing and loaning at clearing. A cashier's check is given with one day's interest, which in turn comes through the exchanges the following day, at which time the borrowing bank will have, or hopes to have, a credit balance with which to offset the same.

The Chicago clearing-house association adopted the necessary measures to enable its members to take out certificates. No certificates were taken out, however. The Chicago banks have a custom of "exchanging balances with each other at clearing." A distinguished banker of that city says: "This has been the custom here for many years. It is done to save unnecessary trouble to the banks, and to avoid the risk incurred in carrying money both to and from the clearing-house. For this reason the strongest of our banks will generally receive clearing-house orders from credit banks. Our banks appear to exchange balances as above whether 'money in sight' is scarce or plenty."

Generally the clearing-house certificates issued could be used only in the settlement of debit balances, and were good only in the hands of banks who were members of the respective associations. In some localities, however, the certificates were made payable to bearer, and were utilized in the hands of the general public. The Atlanta clearing-house issued certificates payable to bearer. A distinguished banker of that city, commenting upon their use, said: "No effort had been made to push them into general use, but a considerable portion was in the hands of the people. They were favorably received, and the general feeling was that they had done good and would play an important and useful part in moving the cotton crop."

The clearing-house of Columbia, South Carolina, issued similar certificates. A prominent banker of that city, commenting upon their use, says that "they have afforded material relief to the community, and have been productive of substantial good." Birmingham, Alabama, issued similar certificates, and in as small denominations as twenty-five cents.

In many places the banks took no action, but manufacturers did. For instance, the Eagle & Phœnix Manufacturing Company of Columbus, Georgia, issued an instrument reading upon its face as follows:

EAGLE and PHŒNIX MANUFACTURING CO.

No. 7889. *Columbus, Ga., August 15, 1893.*

PAY TO BEARER

ONE DOLLAR in EAGLE AND PHŒNIX MERCHANDISE at Retail.

To ——— ———, Supt.
Eagle & Phœnix Mfg. Co., ...
Columbus, Ga. *Treasurer.*

and upon its back was a certificate of the Columbus Savings Bank that goods had been deposited in trust to secure payment. These were made in various denominations and were readily accepted by business men and banks.

The Muscogee Manufacturing Co. issued an instrument in the following form:

$1 *—ONE—* *$1*

MUSCOGEE MANUFACTURING COMPANY.

No. 1790. *Columbus, Ga., Sep. 2, 1893.*

On demand at any time after sixty days from date, without grace, THE MUSCOGEE MANUFACTURING COMPANY promise to pay the bearer the sum of One Dollar. *$1* *This obligation is given as security for, and not in payment of wages due*..................................
and on payment hereof, such claim will be fully satisfied and paid.

$1 .... *$1*
Sec'y & Treas.

It will be noticed that the company sought to avoid the possibility of being subjected to the prohibitory tax of ten per cent. imposed upon unauthorized circulations by inserting the words "This obligation is given as security for, and not in payment of wages due."

Certified checks were quite generally utilized as money. A representative banker of Buffalo writing in regard to the matter, says:

"As a substitute for money I enclose a sample of the form used here so as not to conflict with the ten per cent. tax on circulation. The method was as follows: John Doe wants a pay-roll of $1,000, and he brings us his check for that amount, and we issue to him checks like the enclosed, charging his account $1,000, crediting pay-roll check account. He signs these small checks, which we certify; he pays them out to his men, who can use them to pay rent, buy groceries and so forth, and they come in to us through the clearing-house. Being payable to the bearer there is no trouble about endorsements."

A prominent banker of Minneapolis says, as to the action in that city:

"As far as the Minneapolis clearing-house association of this city is concerned, would say, that they did not issue certificates in any form, but in order to start the grain movement some of our elevator companies and grain firms issued their checks in denominations of twenty, ten, five and one dollars bearing the certification of their bank, these checks being sent into the country by their agents in the same way as currency would be sent in ordinary years. Other concerns issued drafts on themselves in small denominations, making them payable at their bank, and still other elevator companies issued drafts as above, payable by the commission houses handling their grain. The exact extent to which these checks and drafts were made to serve as a substitute for currency it would be difficult to ascertain, but probably there were several hundred thousand dollars worth of them in constant circulation."

It is a custom in ordinary times with many of the interior cities to allow a portion of the clearing-house balances to be settled in New York exchange. In some instances they were allowed during the recent troubles to settle their entire balances in New York exchange. In some towns and cities cashier's checks have been issued with the cashier's name and all printed or lithographed, and pay-roll checks were issued, some printed entire, and others with written signatures, some certified and some not.

The manufacturers of many cities used for pay-rolls their own checks without certification, payable through the clearing-house, and drawn for even amounts, as one, two, five and ten dollars. The laborers, instead of receiving one check for the amount due them, received a number of checks of various denominations so issued that they might possess the convenience of money.

I have corresponded with representative people in every one of the fifty-seven clearing-house cities. The substitutes for money which I have briefly described may, without amplification, be accepted as illustrating the expedients generally adopted. In the smaller towns, as a rule, and in some of the larger cities no change was made from the regular course of business.

It is the recognized function and duty of government to coin the precious metals. Modern business necessities, as well as convenience, demand a paper currency which the government should also provide for by proper legislation. The failure of our laws in this last respect has been made only too conspicuous by recent events.

Necessity supplied these substitutes for currency without the aid of law, and possibly in direct conflict with the law as to a portion thereof. Beyond the coinage of the mints, and the printing of treasury notes under the arbitrary requirements of the Sherman law nothing in the form of money can be issued other than National bank notes, and they must be secured by United States bonds, and can only be issued to ninety per cent. of the par and also the market value of such bonds; that is, in order to issue ninety theusand dollars circulation, a National bank must invest one hundred and ten thousand dollars (the present price of the four per cent. bonds) and by the transaction the bank locks up twenty thousand dollars of its money, and lessens instead of increases its power to accommodate its customers. No bank can afford to own these high priced bonds as an investment, and can illy afford to own them as a basis for circulation. There is also an onorous tax of one per cent. annually imposed on this circulation, which has amounted in the aggregate to $72,670,412.30. Section 19 of the laws of 1875 reads:

"Every person, firm, association other than a National bank association, and every corporation, State bank, or State banking association, shall pay a tax of ten per centum on the amount of its own notes used for circulation and paid out by them."

Section 20 imposes a like tax on any party paying out such notes for circulation. Our bank note issues could hardly be surrounded by more rigid, inflexible regulations, and yet certain elements have conspired to prevent any modifications. The National bank system was created to supply the fiscal needs of the Government while putting down the rebellion. Banks were compelled to own certain amounts of bonds as a condition of organization, and they were induced to become large purchasers by the profits offered upon circulation. Bonds were constantly being issued, and netted full rates as an investment. The banks received back ninety per cent. of the par of the bonds in circulation upon which they realized the current rates of interest, which ruled very high during war times. The profits upon circulation were large—the growing volume of bonds offered an ample basis—the tax was, under the circumstances, light.

After nearly thirty years, with the interest bearing debt reduced from $2,383,033,315 (August 31st, 1865,) to $585,037,590 (September 1st, 1893—with premium on the bonds so high they net an investor less than three per cent. —with current rate of interest one-third lower—we still have the same currency laws; laws which were designed to furnish the Government, not the public, money. The Government no longer needs to coax or coerce purchasers of its bonds. The people *do* need an elastic currency.

Stock or bonds as security are by no means indispensable to a perfectly safe currency system. If, however, such security is to be maintained, a sufficiently guarded law can be framed permitting other securities than United States bonds as a basis for circulation.

The point to be aimed at is this. Whatever securities are required as a basis for circulation, they should not be so difficult to obtain, nor command so high a premium that a bank cannot afford, when viewed in the light of profits of circulation, to carry the same as an investment against which, in times of monetary stringency, their issue of bank notes may be extended; and then, when the emergency has passed and their notes return to them they can store the same in their vaults until the demands of business again call them forth, and that too without feeling the continued ownership of the securities upon which the issue is based to be a burden.

But no currency can be elastic that is based upon stock or bonds. If before issuing notes, a bank is compelled to invest as much or more money in the purchase of securities as a basis for its note issue as the bank notes which it is in turn authorized to issue amounts to, then elasticity is destroyed. In order to respond to the increased demands of the people banks should be allowed to create money—to issue notes against credit. The substitutes for money used in the recent panic were based upon credit. It is the proper function of banks to meet just such an emergency as the one through which we have recently passed by an increased bank note issue. With proper legislation they would have done so. The abnormal use of checks would have been avoided, much of the panicy feeling prevented, and the need for clearing-house certificates materially lessened.

The entire cost to the general government on account of National banks up to October 1st, 1892, was $14,535,000. An annual tax of one-fifth of one per cent on the outstanding circulation would have repaid this cost. The total issue, outstanding at the date of the failure of the one hundred and eighty-one National banks that had failed prior to November 1st, 1892, was $16,840,850. A similar tax of one-quarter of one per cent. would have redeemed all these.

An annual tax of one-half of one per cent. imposed on the outstanding circulation of the National banks from the time of their organization would have redeemed every note of every failed bank, and paid the entire cost of the National banking system during a period of thirty years, with something of a margin over. The experience of thirty years ought to be, and is, a safe criterion on which to base legislation as to the future. Hence a safety fund created by a very moderate tax upon the outstanding circulation would defray all expenses, and enable the Government to assume the immediate redemption of the notes of all the failed banks without loss to itself. Then by making the redemption of the circulating notes a first lien upon the assets of the bank, including stockholders liability, it could restore the amount temporarily withdrawn from the safety fund. The Government would run no risk of loss, and such a currency would be as good as the Government. There can be no reasonable doubt of the prudence and safety of such a measure. The safety fund experiment of the State of New York, as to State bank issues failed only because it was made chargeable with all the debts of the safety fund banks as well as the redemption of their circulating notes. Such a safety fund would do away with the necessity for bonds as security for circulating notes (the faith of the Government being already pledged for their redemption), and would certainly render it unnecessary to require United States bonds as such security.

Canada has an excellent banking system, well conceived, and approved by its practical workings. We can study their currency laws with profit. Their note issue is regulated as follows:

"The bank may issue and reissue notes payable to bearer on demand and intended for circulation; but no such notes shall be for a sum less than five dollars, or for any sum which is not a multiple of five dollars, and the total amount of such notes in circulation at any time shall not exceed the amount of the unimpaired paid-up capital of the bank, and shall be the first charge upon the assets of the bank in case of its insolvency."

Each bank is required to pay to the Minister of Finance a "sum equal to five per cent. of the average amount of its notes in circulation during the twelve months next preceding * * * which same shall be adjusted annually."

The fund thus created is maintained at five per cent. of the outstanding circulation, and is designated the "Banks Circulation Redemption Fund."

This fund is held exclusively for the redemption of the notes of failed banks. The Minister of Finance is directed to redeem all such notes from this fund, and is then given a prior lien upon the assets of such failed bank to enable him to restore to this five per cent. fund the money so advanced. Proper provisions preserve a bank's equities in case it chooses voluntarily to wind up its affairs. No deposit of stock or bonds is required as security for circulation, and the Government assumes no responsibility for the payment of bank notes except to the extent of its application of the safety fund. Canadian banks publish verified reports of condition monthly, but have no public examinations. The monetary troubles that have afflicted so many countries seem to have disturbed Canada very little indeed.

The National banks on July 12th had a capital of $685,000,000 and surplus of $343,000.000, with a total outstanding circulation of going banks, of only $155,000,000. With a currency law similar to that of Canada the National banks could during the recent stringency have easily increased their circulation over $500,000,000. With such a law, could we have had a currency famine?

With proper provision for an elastic system of currency very much of the recent business embarrassment would have been relieved, and in ordinary times the periodical demands for large sums of money to "move crops" and like objects would be supplied with more ease, less friction, and less expense to the producer and his metropolitan factor.

Of all remedies suggested for the present currency ills, the restoration of State bank circulation is most unwise. A State bank can supply all the banking needs of the public except as to circulation. All money should be national, and be issued by a bank chartered by and responsible to the Congress of the whole nation, and whose bank notes would be as good in New Mexico as in New York. There is no good reason why Congress should divide this function with the forty-four States. We would then have a chain of sovereignties furnishing our currency, and, like all chains, it would be no stronger than its weakest link.

SILVER PURCHASES AND COINAGE.—In answer to certain questions of Senator Sherman, Secretary Carlisle laid before the Senate, October 30, a letter relative to silver purchases and coinage. The letter shows that Treasury notes amounting to $52,395,840 have been redeemed in gold, and $2,224,192 in silver. The amount of silver bullion purchased from the date the law went into effect to June 30, 1891, was 48,393,113 fine ounces, costing $50,574,498. From August 13, 1890, to June 30, 1891, there was consumed of this bullion in the coinage of 27,292,475 silver dollars, 21,109,023 fine ounces, costing $22,747,860, giving a seigniorage of $4,544,614; of this seigniorage $25,466 was used to reimburse the bullion fund of the mint for silver wasted and for silver sold in sweepings, the balance being accounted for and paid into the Treasury.

Of the silver bullion purchased under the Act of July 14, 1890, the amount consumed in coinage since July 1, 1891, has been 6,808,232 fine ounces, costing $6,362,326. The number of silver dollars coined therefrom has been 8,794,810, giving a seigniorage of $2,432,843. Of this $110,000 was paid out for various expenses and the remainder was covered into the Treasury and used in the payment of current expenses.

There has been no coinage of silver dollars since May, 1893, except $200 in proof pieces. The balance of silver bullion on hand October 1, 1893, was 137,666,275 fine ounces, costing $124,561,426; add to this, say 1,800,000 ounces purchased in October, and it will give a balance on hand November 1, 1893, of 139,466,257 fine ounces, costing $125,888,929. The coining value of these would be $180,320,008, and the seigniorage $54,431,080.

HOW TO MAKE BANKS SAFE.

II.

[BY AN EXPERIENCED BANKER.]

In a former article the ground was cleared for the consideration of this question and a general remedy proposed for the lack of safety to stockholders and depositors under banking methods in vogue in the United States. When mentioning the defects of the present systems it is well to reflect that while each failure of a bank, be it ever so small, causes serious distress and loss to its stockholders and customers, nevertheless the percentage of loss to individuals has been less from bank failures than from the failures of corporations and firms engaged in other than the banking business. The best statistics on this subject are those of the National banking system, and these are far from perfect. The Comptroller of the Currency, in his report for 1879, gives some interesting figures upon this point. At that date eighty-one National banks had become insolvent and passed into the hands of receivers. Their capital was $17,452,600; the claims of creditors other than stockholders proved against them were $24,859,472. The estimated losses to depositors were $6,240,189. This does not include the loss of the capital to stockholders of $17,452,600. which was almost wholly lost, making a total loss of nearly $24,000,000 in sixteen years under the National banking system. Moreover, stockholders and depositors experienced some loss from National banks which closed their affairs voluntarily, although this was comparatively slight, very few complaints being received by the Comptroller from stockholders or depositors of such banks. Assuming that the loss on account of insolvencies, which occurred after voluntary liquidation, that were not brought to the attention of the Comptroller to have been one million of dollars, the total loss under the National banking system for sixteen years, from 1868 to 1879, was about $25,000,000. During that period the deposits varied from $710,-000,000 to $920,000,000, and the capital stock from $390,000,000 to $454,000,-000, or say an average capital of $425,000,000 and average deposits of $815,-000,000, or an average total liability of $1,240,000,000 to stockholders and depositors. A total loss of $25,000,000 in sixteen years would be at the rate of $1,560,000 per annum, and this sum is a trifle more than one-tenth of one per cent. There is no reason to suppose that this percentage of loss has increased since 1879.

The losses to stockholders and depositors of State and savings banks and private bankers are no doubt greater than to the same class of creditors of the National banks. The Comptroller of the Currency, who made a thorough investigation of this subject in 1879, said "There is no means of definitely determining the losses sustained through the failures of banks operating under systems of banking in the States during the earlier periods in the history of this country. The losses under those systems, both to note holders, to whom there can be no loss under the National banking system, and to their general creditors and shareholders are known to be large. The loss to noteholders

2

alone is estimated to have been five per cent. annually upon the total amount of circulation outstanding. In Elliot's Funding System, on page 1.176, it is stated that fifty-five banks, with an aggregate capital of $67,036,265 and a circulation of $23.578.752, failed in 1841. The total bank capital of that year is stated by the same authority to have been $317,642.692, and the circulation at $121,565,198; and it is also stated in the same connection that in nearly every instance the entire capital of the banks which failed was lost."

There is nothing said in regard to the losses experienced by depositors under these early systems. Deposits were not as large in those days in proportion to capital as they are under the National banking system. For instance, in the year 1841, as is given in a table compiled from the most reliable sources, which may be found in the report of the Comptroller of the Currency for 1876, the total capital of 784 banks in the United States, from which reports are on record, was $313,608,959, while their deposits of individuals and banks were about $107,000,000. Another point which must not be lost sight of is that the losses on account of circulating notes cover to a great extent losses to depositors, for when a bank possesses the right, as these early banks did, to issue circulating notes almost without limit or check in times of approaching panic the depositors who applied for their funds were paid off in circulating notes. Thus under these old systems the banks foisted their currency on their depositors, who took their chance of passing it over to the general public. Now, under a better system of circulating notes, the first inconvenience falls upon depositors.

But in order to institute a better comparison between losses incurred by the creditors of National banks and those incurred by the creditors of other banks than was afforded by the losses of the State banks of 1841, the Comptroller in his report of 1879 gave a table which showed that the claims against 210 State, Savings and private banks which had failed in twenty-two states and cities during the three years previous to 1879 amounted to $88,440,028, the estimated loss on which would be $32,616,661. According to the same report the total number of State, Savings and private banks was 4312, in 1879 and the number had not varied materially from this during the previous three years. The capital of the banks was $201,000,000 and the deposits $1,180,000 000 Assuming that the capital in the 210 failed banks mentioned averaged $46,000 each, which is the average shown by the 4,312 State banks, etc., in the Comptroller's report, the total capital of these banks would have been $9,660,-009; and if this was a total loss, as is assumed in the case of the National banks, it should be added to the $32,616,661 loss to depositors, making the total loss to stockholders and depositors of State, Savings and private banks $42,276,661 in the space of three years, or about fourteen millions of dollars per annum, or over one per cent. per annum upon the united capital and deposits of the existing State, Savings and private banks then existing. But the statistics in regard to these last named banks were not at all complete and the real percentage of loss was probably somewhat over this. When it is considered that the loss under the National banking system to stockholders and depositors was only one-tenth of one per cent. or less than one-tenth of the loss incurred under banks doing business contemporaneously under other systems the advantage that may be gained from a good system of banking becomes most evident. Encouragement may also be drawn from the foregoing facts that if the laws and methods of National banking have so reduced losses to creditors of all kinds further improvements derived from experience may still further reduce the losses of the future.

Stress is laid upon this point to answer the argument sure to be made that under any system of banking so long as human nature continues to be imperfect losses will necessarily occur. This is undoubtedly true, but it is of equal truth that by care and attention in interpreting the experience of the past these necessary losses can be reduced to such a minimum that the cost of insurance will be very little indeed. To illustrate this point: The losses of State, Savings and private bankers, being fourteen millions a year, among banks having a capital of 201 millions of dollars it would require to keep up an insurance or safety fund of equal amount to reimburse these losses, an assessment of about seven per cent. per annum upon the capital of each bank, or of one per cent. upon the combined capital and deposits. A system so illy calculated to avoid loss could not afford to insure itself. The well conducted banks in it could not afford to do business with such a handicap. But where losses are reduced, as they are in the National banking system, to one-tenth of one per cent. per annum, the tax to sustain an insurance or safety fund would be so slight that no bank could grumble at it.

This, therefore, is the principle that it is desired to lay down: First, a system of banking laws and rules which will reduce the aggregate losses to the very lowest possible minimum; and second, a system of insurance or safety fund out of which these losses, found to be unavoidable and inseparable from the business even when every precaution is taken, shall be paid. The success of the insurance or safety fund is dependent upon the reduction of losses to a minimum, and this reduction can only be effected by a carefully planned and strictly enforced system of banking laws.

Inasmuch as in a former article it has been shown that in the United States the system of banking must, in its laws and methods, be consonant with the genius of the institutions and ideas of the people, so it is better to build upon the state of banking as it exists rather than to model a new system upon the practice of foreign countries, however well suited those practices may be to those countries, or to start some entirely new and untried plan, however well it may seem to answer the purpose in theory.

In most foreign countries the tendency is to secure safety by a large central bank under Government control. This system answers extremely well. It was tried in the United States by the organization of the first Bank of the United States in 1791, and of the second Bank of the United States in 1816. As far as solvency is concerned, safety to both stockholders and depositors was never jeopardized in either of these institutions. This statement may be disputed as to the second Bank of the United States, but it will be seen to be correct when it is remembered that this latter bank after its United States charter expired in 1836 continued business as a State bank under a charter from the State of Pennsylvania until 1844. The failure occurred under the State charter, after the bank had been deprived of its power and prestige as a national institution.

The trouble with banks of this description in the United States is that their management cannot be kept out of politics. The favor or the jealousy of politicians is sure to ruin such an institution. One is as bad as the other. By the people generally they come to be regarded as monopolies granted to the stockholders by the Government, and although they be successful from a business standpoint, they are dragged down sooner or later by the jealousy excited by their apparent political importance. This is why the Bank of England or the Bank of France, so safe and beneficial in those countries, would have but a short career in the United States. The large bank under the special protection of the Government, and patronized by it, has been tried in the United States and has proved a failure for political reasons. Even if it afforded the safety to all its creditors and customers that would fully answer the demands of the question at the head of this article, it would not give also the practicability that the question equally implies.

Banks under the authority of State laws have also been very thoroughly tried in the United States. From 1836 until 1863 banks of this description performed all the banking functions required by the business of the country. They performed the exchanges, received deposits, and loaned money, and in addition furnished the entire paper currency used by the people. The defects of banks under the laws of the separate States may be summed up in one word, lack of homogeneity. There was no uniformity in their solvency or in the wisdom of their management. Many of the banks were as well managed and sound as could be desired, while others were free from any of the characteristics of a desirable banking institution. One quality the State banks possessed, there was a freedom from anything like monopoly, and an adaptation to local wants that in spite of their other defects, endeared them to the majority of the people. Their growth in numbers was the reaction against the fancied monopoly of a large central bank fostered by the Government.

The number of the States and the number of banking systems tried by each have formed a school of banking experience under so many conditions that hardly in any country in the world can there be found the like. In these various systems authorized by the laws of so many separate States, hardly any banking expedient known under the laws of any country in the world has escaped trial, and some that were never tried elsewhere have been put in practice under some of these systems.

The system of insurance or safety fund was first applied to banks by the laws of New York State. This plan was first suggested by Mr. Joshua Furman, of Syracuse, to Governor Van Buren. He got the idea from the regulations of the Hong merchants in Canton, where a number of men, each acting as a separate business man, have received by a grant from the Government the exclusive right of trading with foreigners, and are all made liable for the debts of each in case of the failure of any one or more. This seemed to be the case of the banks. They were each chartered by the State, and altogether possessed the exclusive right of doing a banking business, and were, therefore, altogether justly held responsible for any losses that the public might otherwise incur through the insolvency of one of their number. The safety fund bill was recommended by the Governor, and became a law on April 2, 1829. The law required each bank doing business in the State to contribute annually a sum equal to one-half of one per cent. of its paid in capital stock until the corporation had contributed an amount equal to three per cent. of its capital stock. The fund was to be in charge of the Comptroller and the Treasurer, and was to be kept separate from the funds of the State. It was to be invested by the Comptroller, and the income, after paying the expenses of the Bank Commissioners appointed to enforce the law, was to be returned to the contributing banks in proportion to their contributions. Whenever the fund was reduced by payments on account of insolvency the banks were required to continue their annual contributions until the limit of three per cent. of capital of all the banks was again reached.

Contributions to the safety fund under this law began in 1831. In 1832 there were fifty-two banks in operation under the system. In 1835 the number of banks contributing to the safety fund was seventy-six, with a capital of $26,231,460. The fund itself had reached $400,000, the total of three per cent. being $786,944. In 1841 occurred the first failures of banks in the safety-fund system. The whole capital of the ninety banks under it on January 1, 1841, was $32,551,460. The fund then amounted to $861,643. The first test of the law indicated that it had been unfortunately drawn. It is plain that Mr. Furman's idea had been to protect circulating notes only by the safety fund, but through inexperience or design the law had been drawn to protect deposits also by the fund. Here was a radical defect, for while the percentage of capital required as a contribution from each bank was ample to have protected circulating notes alone, it was not adequate to protect deposits in addition to circulating notes. If it had been designed to protect deposits also a larger contribution should have been required. It was a mistake to make the contribution a percentage of capital. It should have been a percentage of the thing protected, that is, of circulating notes, as intended by Judge Furman, or if deposits were also to be protected there should have been a percentage upon deposits contributed in addition to a percentage upon circulating notes. Then there could have been no doubt or ambiguity. In 1842 an attempt was made to remedy this defect by legally restricting the safety fund to the protection of circulating notes. But this was too late, as legal rights in the safety fund had been created in the case of the creditors of banks failing before 1842. Up to 1848 the total contributions to the fund were $876,063 and the notes redeemed from it were $1,548,558. But there were additional debts on account of deposits and other liabilities over and above the safety fund that had to be provided for. In order to provide for the failure of the safety fund to reimburse all the losses to the noteholders and creditors of the insolvent banks which had contributed to it the State of New York issued bonds at six per cent. to the amount of $900,828, the bonds to be paid from future contributions to the safety fund. There is no doubt, from the experience with the imperfectly drawn and badly executed safety fund law of New York State, which from 1829 to 1866 paid in full all the debts of the insolvent banks under it and left a surplus of $13,000 in the State Treasury, but that the principle of banking therein contained is a sound one if properly applied. It is estimated that if the safety fund of New York State banks had been levied upon circulation instead of capital, and had been applied to the payment of the notes only of insolvent banks instead of to circulation and deposits, there would have been a surplus of at least one million dollars in the Treasury of the State of New York in 1866.

The State banking systems having failed from lack of homogeneity and the great Government bank having also failed in the United States on account of the political jealousy it excited in the minds of the public, the National banking system is an attempt to reconcile the advantages of both in a form that will be in consonance with the political institutions of the United States. But in order to fulfil all the requirements it is necessary that the banking laws should be amended and added to from time to time. The laws under which the National banks are now managed are those which were applicable enough at the close of the war and with the experience of the year 1866, but they do not suit the present time when the debt of the United States has been reduced, and when the financial laws of the country have undergone so much change.

CAUSES OF NATIONAL BANK FAILURES.

Having arrived at the conclusion that the present system of National banks is a suitable foundation upon which to raise a system that shall be safe to stockholders, depositors, and note holders, and at the same time furnish to the public all the conveniences that a banking system can be expected to supply, it will now be interesting to institute an inquiry into the history of the National bank failures since the inauguration of the system. It is believed that a study into the causes of these mishaps will reveal certain natural laws which govern these matters, by observing which failures may be much reduced if not altogether prevented.

In his report for 1891 the Comptroller of the Currency gives a table in which are set down the causes of failure of one hundred and sixty-four National banks that up to November of that year had been placed in the hands of Receivers. There have been a number of failures since the date of the report mentioned, and especially during the unprecedented depression of the past year, but these later failures will not be fully reported until the Comptroller's report for the current year, and the report of 1891, giving the experience of twenty-eight years of National banking is an ample basis for the present purpose.

The causes of failure are defined as follows: Defalcation of officers, fraudulent management, excessive loans to officers and directors, excessive loans to outsiders, depreciation in securities, injudicious banking, investment in real estate and mortgages on real estate, failure of large debtors. This classification is doubtless as good as can be made, but it is hardly as clear as could be wished, as some of the causes as defined could as well be included under one of the heads. Thus defalcation of officers would naturally be a kind of fraudulent management, as excessive loans or loans on real estate would be injudicious banking. But there are shades and distinctions in fraudulent management that are attempted to be expressed by the division of definitions. But it is easy to see from the Comptroller's table that all bank insolvencies are due either to fraud, to ignorance, or to misfortune.

The banks that failed from a fraud of the management are sixty-four. Those that failed from the ignorance of their managers, number fifty-nine. The failures of the remaining forty-one may be more or less justly ascribed to misfortune. Of course there is hardly one bank the failure of which can be ascribed to any single one of the causes. As a rule several causes are combined in producing each result. Fraud, in a greater or less degree, is apt to be a concomitant of injudicious banking, and it is apt to go with ignorance as well as with a full knowledge of banking principles. The causes which have been classed as misfortune, depreciation of securities taken, and unexpected failures of large debtors, might in many cases no doubt have been counteracted and met by more knowledge and sagacity.

It is to be expected that bank failures under the National bank laws in the long run can be ascribed in a great measure to ignorance and the fraud which is apt to be its consequence. The ignorance of two banking principles and lack of practical banking training in the management of an institution will bring its affairs to a condition almost sure to induce fraudulent practices to cover up the previous errors. Under the banking systems of England, Scotland, and Canada, taken as typical of what would be styled the monopolistic system, the possession of valuable bank charters leads to the better training of bank officers and the better understanding by them of correct banking methods. In the United States, where the institutions of the country and the system of banking permits any who can obtain the necessary minimum capital of $50,000 to organize banks, naturally many new and untried men become bank officers. Of course the well established banks of the United States are as well officered as any in the world, and most of those who go into the new banks as officers are quick to learn and often have previous experience, but there is a larger margin under the National banking system, as well as under the State systems of banking, for untrained men to become bank officers than under the more monopolistic system of the countries mentioned. This can be traced in the table of one hundred and sixty-four insolvent banks in the Comptroller's report. Of these banks sixty-three had the minimum capital of $50,000, thirteen had between $60,000 and $75,000, and thirty-nine, $100,000. The remaining thirty-nine had over $100,000 but only seven had a capital of $500,000 and over. This shows how few banks with large capital have failed. In the next article will be given a table compiled from the Comptroller's reports showing at a glance the effect that large capital has in securing careful management, and also the comparatively brief existence of a large proportion of the insolvent institutions.

The failure of only one hundred and sixty-four banks in twenty-eight years indicates both the necessity and the value of governmental supervision under any system that would be politically acceptable in the United States. The percentage is very small as compared with what might have been expected if there had been no supervision, and, at the same time, considering the care that has, as a rule, been exercised by the Comptroller's office in scrutinizing reports and making examinations, it shows the utter impossibility of preventing failures altogether. The value of these statistics is in showing that these disaster can be reduced to a very small minimum, so that to protect the public absolutely from the consequences of these unavoidable insolvencies a very small safety or insurance fund would be required.

New York Clearing-House.—The retirement of the last of the loan certificates on November 1 marked the close of an important epoch of the financial crisis of 1893. The issue of these certificates was an expedient absolutely necessary. From February 4 to August 4 the New York city banks lost $113,000,000 of deposits, and from the middle of June to the last week of August there was a loss of over $32,000,000. It was impossible to contract loans with sufficient rapidity to meet these extraordinary demands without great injury to the business of the country. The first issue of certificates was on June 17 and the total amount issued was $41,490,000, though the maximum outstanding at any time was $38,280,000. The cancellation was begun on September 6 and it has taken less than sixty days to retire the whole issue. The total expense of issuing and cancelling the certificates was only $562.27, and it is a noteworthy fact that of the $55,320,000 of collateral deposited to secure the certificates not a dollar proved bad.

The wisdom displayed by the Clearing-House Loan Committee during the past few months is worthy of unstinted praise. By the issue of certificates every dollar of cash was made available to meet the demands of banks throughout the country, and but for this action the failures of banks and commercial houses would surely have resulted in a more general and disastrous panic.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

SET OFF—ASSIGNMENT OF CLAIM—INSOLVENCY OF CLAIM.

Supreme Court of Michigan, July 25, 1893.

STONE *vs.* DODGE.

In an action by the Receiver of an insolvent bank against a debtor of the bank, to recover a sum due at the date of the suspension of the bank, the defendant will not be allowed to set off a certificate of deposit procured by him from a creditor of the bank, after its suspension and before an application was made for the appointment of a Receiver.

This was an action by George W. Stone, as Receiver of the Central Michigan Savings Bank, against Frank L. Dodge. From a judgment allowing a set-off plaintiff brought error.

The Central Michigan Savings Bank was organized under Act No. 205 of the Laws of Michigan, 1887, with a commercial department and a savings department. On the 18th day of April, 1893, said bank, being unable to meet the then current demands upon it, closed its doors, and conducted no business thereafter. On May 4, 1893, the commissioner of the banking department of the State filed a bill in the Circuit Court of Ingham County, alleging the insolvency of said bank and praying for the appointment of a Receiver for said bank. On May 8, 1893, plaintiff was appointed such Receiver and qualified as such. Plaintiff brought this suit to recover the sum of $3,529.27 due the bank upon the day of its suspension. Defendant was allowed to set off against this claim a certificate of deposit dated July 19, 1892, for the sum of $4,000, issued to Nellie F. Butler by said bank, and which defendant purchased April 23, 1893, and judgment was rendered for defendant.

McGRATH, *J.* (omitting part of the opinion): The sole question in the case is whether, in an action by the Receiver of an insolvent banking corporation against a debtor of the bank to recover a sum due at the date of the suspension of the bank, the defendant may set off a certificate of deposit procured by him from a creditor of the bank, after its suspension, and before an application was made for the appointment of a Receiver. There can be no doubt that the certificate of deposit in this case would, in a proper case, be a proper subject of set-off. It is well settled that in a suit by a Receiver of an insolvent bank upon a note or obligation due the bank the defendant will be allowed to set off his deposit or a certificate of deposit held by him at the time of the suspension of the bank. (*Dickson* vs. *Evans*, 6 Term R. 57; *Pedder* vs. *Preston*, 9 Jur. (N. S.) 406; *Bank* vs. *Rosevelt*, 9 Cow. 409; *Ogden* vs. *Cowley*, 2 Johns. 274; *McLaren* vs. *Pennington*, 1 Paige, 112; *Miller* vs. *Receiver*, Id. 444; *In re Receiver of Middle District Bank*, Id. 585; *Smith* vs. *Fox*, 48 N. Y.

674; *Bank* vs. *Tartter*, 4 Abb. N. C. 215; *Berry* vs. *Brett*, 6 Bosw. 627; *Jordan* vs. *Sharlock*, 84 Pa. St. 366; *Farmers' Deposit Bank* vs. *Penn. Bank*, 123 Pa. St 283; *Kentucky Flour Co.'s Assignee* vs. *Merchants' Nat. Bank* (Ky.) 18 S. W. Rep. 910; *Receivers* vs. *Gaslight Co.*, 23 N. J. Law, 283; *Platt* vs. *Bentley*, 11 Amer. Law Reg. 171.) None of these cases, however, support the defendant's contention; indeed, so far as the question here involved is discussed, they are opposed to that contention. * * * *

The only case called to my attention which goes to the extent of the claim made by counsel for the defendant is that of *Moseby* vs. *Williamson* (5 Heisk. 278.) The case was decided upon the ground that under the bankrupt law a banker was not insolvent unless he "stops or suspends fraudulently for a period of fourteen days;" and "in analogy to this rule as to bankruptcy" the Court was unable to see "upon what ground the insolvency of a bank can be assumed from the simple fact of closing its doors for two or three days, or until some such step as filing a bill to have its insolvency determined has been taken."

I have been unable to discover any statute in Tennessee similar to our own relating to the winding up of affairs of a banking corporation, or restricting the right of the corporation after an act of insolvency. The insolvency of corporations does not generally, of itself, extinguish the power of the company to manage its assets, or fix the lien of creditors upon the specific property in hand. Mor. Corp., § 786. A corporation, being a person in law, has the same rights, and is subject to the same obligations, as an individual, unless the act of incorporation varies those rights and liabilities. Persons dealing with a corporation, whose powers are restricted by its organic law, are charged with a knowledge of such limitations, and are bound thereby. The Act under which the bank in the present case was organized subjects banking corporations to State supervision. It regulates the manner in which the business shall be done. A Commissioner is provided for, and every bank organized thereunder is subject to the inspection and supervision of such Commissioner. Upon the refusal of a bank to submit its books, papers and concerns to inspection, such Commissioner may institute proceedings for the appointment of a Receiver. A bank desiring to go into liquidation must first give notice to the Commissioner. No consolidation of banks can be had without the consent of the Commissioner. Section 55 provides that "on becoming satisfied that any bank has refused to pay its deposits in accordance with the terms on which such deposits were received, (if received in accordance with the provisions of this Act,) or that any bank has become insolvent, or that its capital has become impaired, or that any bank has violated any of the provisions of this Act, or for any cause hereinbefore or hereinafter stated, the Commissioner of the Banking Department may forthwith, with the approval of the Attorney General, apply to a court of record of competent jurisdiction for the appointment of a Receiver for such bank, who, under the direction of such court, shall take possession of the books, records and assets of every description of such bank, collect all debts, dues and claims belonging to it, and sell or compound all bad or doubtful debts, and sell all the real and personal property of such bank on such terms as the Court shall direct, and may, if necessary to pay the debts of such bank, enforce all individual liability of the stockholders. Such receiver shall pay over all money so collected or received to the State Treasurer, and also make report to the Commissioner of all his acts and proceedings." Upon the appointment of the Receiver it is made the duty of the Commissioner to cause notice to be published, calling upon all persons having claims to present the same to the Receiver.

Section 57 provides for dividends under the direction of the Commissioner, and requires the Receiver to make ratable dividends of the moneys realized by him on the claims proven and determined, and the remainder of the proceeds, if any, after the costs and expenses of such proceeding, and all debts and obligations of the bank are satisfied, shall be paid over to the stockholders. Section 47 provides that "all transfers of notes. bonds, bills of exchange or other evidences of debt owing to any bank, or of deposits to its credit, all assignments of mortgages, or other security on real estate or judgments or decrees in its favor, or deposits of money, bills, or other valuable things for its use. or for the use of its stockholders or creditors, all payments of money, either after the commission of an act of insolvency or in contemplation thereof, with a view to prevent application of its assets in the manner prescribed in this Act, or with a view to the preference of one creditor over another, shall be held to be null and void." The primary purpose of these provisions is the protection of depositors and other creditors, and the provisions of the Act should receive a liberal construction to effectuate that object. The object of section 47 is to secure a proportionate division of the assets of the bank between its creditors, and to prevent preferences. By force of this section, upon the commission of an act of insolvency, the assets of the bank become actually impounded for the benefit of creditors. If a debtor can connive with his particular friends who may happen to have deposits in the bank, and a number of the debtors might do the same thing. the very object of this provision may be frustrated. It cannot be contended that the officers of the bank, after its suspension, could have received this certificate of deposit. and surrendered defendant s obligation. That obligation was an asset of the bank, and the effect of that transaction would have been to prevent its application in the manner provided by the act. The law will not allow or compel the Receiver to do what it expressly prohibits the bank from doing. (*Diven* vs. *Phelps*, 34 Barb., 224; *Venango Nat. Bank* vs. *Taylor*, 56 Pa. St. 14)

In *Diven* vs. *Phelps* the bank suspended business, closed its doors, and was insolvent on the 21st of September. The Receiver was appointed November 8th following. In the meantime defendant had procured certain bills of the bank which he undertook to offset to a claim in favor of the bank. The Court says: "The bills, having been obtained after the bank had suspended and become insolvent in effect, could not, I think, be used as a set-off. The bank could not then have paid this demand in any way. It was absolutely prohibited by suit from so doing. If the bank, before the appointment of the Receiver, had given up the defendant's note in satisfaction of his claim as holder of the bills, the transaction would have been void, and the note thus given up might have been recovered of the defendant as part of the assets belonging to such bank or the creditors thereof. Before the defendant procured his bills the bank held the note against him, and, the latter being insolvent, the note belonged equally to all the creditors of such bank. If the defendant could be allowed to purchase or receive the bills of the insolvent bank, and with them satisfy, and thus take from the assets. this amount, or any other, the policy of the statute, which is to secure perfect equality among all the creditors of insolvent corporations of this description, would be entirely defeated." In the course of the opinion the Court refers to 1 Rev. St. p. 591, § 9. That section is as follows: "No such conveyance, assignment, or transfer, nor any payment made, judgment suffered, lien created, or security given, by any such corporation when insolvent, or in contemplation of insolvency, with the intent of giving a preference to any particular creditor over other creditors of the company, shall be valid in law; and every person receiving, by means of any such conveyance, assignment, transfer, lien, security, or payment, any of the effects of the corporation, shall be bound to account therefor to its creditors or stockholders, or their trustees as the case shall require." In the case of the Venango Bank, Taylor owed the bank $35,000. One Rynd had in the bank a deposit of $44,000. The bank, being insolvent, stopped payment. The next day Rynd assigned his deposit to Taylor. Held, that Taylor could not set off the deposit against his indebtedness to the bank, as it would give a preference to one creditor of the bank after the act of insolvency. The Court discusses the Act of Congress of June 3, 1864, and especially section 52 of that act, which is substantially the same as section 47 of our own statute, above quoted. The Court say: "The bank is a creature of the act, depending upon it for all its powers, and controlled by all the restrictions the act imposes. * * * It provides a system for closing the affairs of an insolvent bank, the design of which is to place all creditors, except the Government and note holders, on an equal footing. Its purpose is to disallow preference of one creditor over another, and it denies the power to make such preference at any time after an act of insolvency."

Section 52, read in connection with section 50, "admits of no doubt that the purpose of Congress was to secure all the assets of the bank existing at the time of its act of insolvency for ratable distribution. We cannot assent to the argument that it was intended for no more than to avoid all acts of the bank itself, all voluntary transfers by it with the view of giving preference. Its language is general, as applicable to legal as to voluntary transfers. If the deposit can be set off against the bond debt, what is it but a transfer of the bond debt to the satisfaction of the creditor, thus giving him preference? It is not contended that the bank was not prohibited from doing this, but it is insisted the transfer may be accomplished by an adverse proceeding at the suit of Rynd for the use of Taylor. It is not denied that Rynd, had he made no assignment of the claim, could not have obtained payment of the debt due by him by calling upon the bank after its doors were closed, and when it suspended payment. The bank was not at liberty to transfer to him either their claims against Taylor or any of their assets, or to pay him any money; and, if so, can the thing be secured by a hostile proceeding? Will the law compel a payment or a transfer which the law prohibits a debtor from making? If Rynd could in no way have obtained payment of the deposit due him except through the Comptroller of the Currency, how could he give to Taylor, by his assignment of the deposit, any right which he did not himself possess." It is not pretended that the bank was not insolvent in fact at the time it suspended payment. In the Venango Bank case the only evidence of insolvency was the suspension of the bank. In Diven v. Phelps, supra, it was held that under the statute cited a recovery might be had whether the party receiving the payment knew of the insolvency or not. (*Brouwer* vs. *Hardbeck*, 9 N. Y. 589; *Robinson* vs. *Bank*, 21 N. Y. 406.) It was held in *Gillet* vs. *Moody* (3 N. Y. 479) that stopping payment is of itself sufficient evidence of the insolvency of a bank, and when there is nothing to rebut the presumption the evidence of insolvency is conclusive. In *Dodge* vs. *Mastin* (5 McCrary, 411, 17 Fed. Rep. 660) it was held that the ordinary acceptation of the term "insolvent," when applied to a bank, means "inability to meet its liability in the usual course of business." In *Markson* vs. *Hobson*, (2 Dill. 330,) it is said: "A bank suspending payment and closing its doors against its creditors declares to the world a proclamation of its insolvency." Insolvency is frequently defined as inability to make payments as usual, or as they mature, or according to the undertaking, or in the ordinary course of business. (Webst. Unabridged Dict.; And. Dict. 552; Wait, Insolv. Corp. § 28; *Bayly* vs *Schofield*, 1 Maule & S. 338; *Sacry* vs. *Lobree*. 84 Cal. 41; *Walton* vs. *Bank*, 13 Colo. 265. *In re Dalpay* (Minn.) 48 N. W. Rep. 564, 6 Lawy. Rep. Ann. 108, and note.) Whatever may be the rule as to when a bank may be said to be insolvent, the closing of its doors and suspension of its business must be deemed *prima facie* evidence of insolvency, and it is clear that such an act is "an act of insolvency," under section 47, above given. In the present case, at the time of the transfer of the certificate, the bank had remained closed for a period of five days. The judgment must be reversed, and judgment entered here for plaintiff, with costs of both courts. The other justices concurred.

COLLECTIONS—SENDING PAPER DIRECT TO DEBTOR—BANK—NOTICE TO BANK OF COMMUNICATIONS RECEIVED BY OFFICER—DUTY OF BANK TO SUE ON PAPER.

United States Circuit Court of Appeals, Sixth Circuit, June 8, 1893.

FIRST NATIONAL BANK OF EVANSVILLE *vs.* FOURTH NATIONAL BANK OF LOUISVILLE.

Where a bank receives a certificate of deposit for collection it is negligence to mail the same direct to the bank which issued it, and for any loss resulting from such negligence the collecting bank will be liable.

A bank is charged with notice of letters duly mailed to it and received by the general bookkeeper, whose duty it is to open and distribute mail matter, although he conceals such letters to hide certain irregularities in his office, and thereby prevents their coming into the hands of the other bank officers.

It is no part of the general business of a bank to bring suit upon a draft left with it for collection, at least in the absence of special circumstances, or where delay to bring suit would discharge a surety, or an immediate attachment is necessary.

In error to the Circuit Court of the United States for the District of Kentucky.

This was an action for negligence in failing to make a collection. Verdict and judgment for nominal damages were given for the plaintiff, who brought error.

On the 8th of May, 1888, the plaintiff in error sent by mail to the defendant in error, for collection, a certificate of deposit, of which the following is a copy:

Banking House of M. M. Pool & Co., Shawneetown, Ill., February 8, 1888.

Dr. Wm. N. Warford has deposited in this bank twenty-six hundred and sixty-six and 66-100 dollars for three months, payable to the order of himself on return of this certificate, properly indorsed. Interest at five per cent. per annum from date until maturity. M. M. POOL & CO.

No. 1,158.

The certificate was received by the Louisville bank on May 9, 1888, credited by it to the Evansville bank as $2,700, and so entered on the account current mailed to that bank June 1, 1888. M. M. Pool & Co., who issued the certificate, were then bankers in good credit at Shawneetown, Ill., near to plaintiff and remote from defendant. They continued in good credit and active business until some time after January 1, 1889, when they failed.

Warford, who assigned and indorsed the certificate to the plaintiff, was a man of wealth. By the law of Illinois he was liable as indorser only upon condition that the holder of the certificate should bring suit against Pool & Co., at the then next term of the Circuit Court of Gallatin County, Ill. (in which county Shawneetown is located), being the term of September, 1888, and prosecute them to insolvency.

It does not appear from the record that the certificate was indorsed to the defendant, but it is averred in the complaint, and not denied in the answer, that Warford, before the maturity of the certificate, indorsed it to the plaintiff; and in a letter written by the counsel for the Louisville bank to the Evansville bank on the 14th of August, 1889, and put in evidence by the plaintiff, the certificate is referred to as indorsed by Warford to the plaintiff. The record does not show that any instruction or authority was given defendant to bring suit upon the certificate.

The defendant, on the day on which it received the certificate, sent it by mail to Pool & Co., requesting them to remit. On the 1st of June, 1888, having heard nothing from Pool & Co., although it made repeated inquiries after the certificate, defendant wrote to plaintiff as follows:

"Dear Sir: On May 9th we received from you a certificate of deposit for $2,700, issued by M. M. Pool & Co., bankers, Shawneetown, Illinois. We sent the item for collection and returns, but so far have heard nothing from them, notwithstanding we have sent several inquiries after it. Will you kindly see the indorser and have him investigate it, and either obtain us a duplicate of it or have them remit to us for it?"

Not receiving any answer to that letter, the defendant, on June 22, 1888, mailed another letter to plaintiff, of which the following is a copy:

"We charge your account $2,700 for item on Shawneetown, Illinois, in yours of May 8th. We have written repeatedly for the item, but can get no returns. We also wrote you for a duplicate several weeks ago, but have not received one as yet. We hope you can settle this matter without further trouble."

On Monday, July 2, 1888, plaintiff having made no objection to the course suggested in the letter of June 22d, the defendant mailed to plaintiff its account current for June, in which the Shawneetown item of $2,700 was charged back as stated in the letter of June 22d.

Monthly accounts current were duly sent for every month thereafter up to and including the account mailed April 1, 1889, for March, 1889. Each of these accounts omitted the Shawneetown item. No objection to the omission, nor to what had been done by defendant, was made until April 24, 1889, but in the meantime Warford had been released—in September, 1888—and Pool & Co. had failed in January, 1889. With reference to the receipt of the letters of June 1 and June 22, 1888, and of the account current of July 1, 1888, it appears from the evidence that the mail was brought to plaintiff's bank by a letter carrier, and there came into the hands of Mr. Schor, general bookkeeper of the bank, whose duty it was to open and distribute mail matter received. He had been guilty of certain irregularities, not, it is said, "involving any moral turpitude;" that is to say, he took no money belonging to the bank, but, falling behind in his work, concealed letters and communications, including the above, and they did not come to the actual knowledge of the officers of the bank until after April, 1889, when the letter of June 1 and the account current mailed July 2, 1888, were found among

Schoi's papers, he having suicided upon the discovery of his irregularities. The letter of June 22d was not found.

SAGE, *District Judge*, (omitting part of the opinion): The assignments of error set forth in the record are embodied in the propositions relied upon by counsel for appellees in their brief.

Their first proposition is that the transmission by the defendant in error of the certificate of deposit to M. M. Pool & Co., the makers, for collection, was negligence, which made defendant in error responsible for any loss resulting. They cite *Bank* vs. *Burns* (12 Colo. 539); *Drovers' Nat. Bank* vs. *Anglo-American Packing & Prov. Co.* (117 Ill. 100); *Bank* vs. *Goodman* (109 Pa. St. 424). The court below took this view of the law, and approved the cases above cited in overruling a general demurrer to the answer. See, also, *Farwell* vs. *Curtis*, (7 Biss, 162); *Indig* vs. *Bank* (80 N. Y. 100); and *Briggs* vs. *Bank* (89 N. Y. 182). The jury were charged that the defendant violated its duty as an agent by sending the certificate to the makers of it for collection, and that it was liable for the damage resulting from that violation of duty. So far, therefore, the plaintiff in error has no ground for complaint. The Court went on to state to the jury that the real question in the case was whether the damage claimed was the result of the negligence complained of. Calling attention to the letters of June 1 and June 22, 1888, and to the charging back of the amount of the certificate in the July account, the Court referred to the fact that there was no conflict of evidence, and instructed the jury that those letters and the charging back amounted to a renunciation of the defendant's agency, so far as the defendant could renounce it. But the Court added that the defendant could not, by its renunciation, put an end to the agency, as the facts then were, and relieve itself from liability, without the consent, express or implied, of the plaintiff, and that such consent would be implied from the silence of the plaintiff after being informed of the renunciation. The Court added that, if the plaintiff made no objection to the renunciation, the defendant was not liable for damage thereafter, resulting from events subsequent, and not from the sending of the certificate to Pool & Co. for collection. [This ruling was held to be correct.]

It is assigned as error that the court below instructed the jury that it was not the duty of the defendant to sue the indorser of the certificate. Upon this point the jury were further instructed that, while the defendant had no such authority, it was under the duty, or would have been, if the renunciation of its agency had not been accepted by the acquiescence of the plaintiff, to push the matter, and if it could not make the collection without suit, to promptly inform the plaintiff, so that it might sue for itself if it thought proper to do so. It was held in *Crow* vs. *Bank* (12 La. Ann. 692) that it is not within the scope of the collecting bank's agency to bring suit upon paper left with it for collection. This view is supported by the text of Morse on Banking (section 246), where it is said, upon the authority of *Wetherill* vs. *Bank* (1 Miles, 399), that the collecting bank "might be seriously prejudiced by the institution of such proceedings; for the fact might, under some circumstances, be evidence going to show that the bank had itself adopted the paper, and therefore, whether it were paid or not, owed the amount of it to the original holder." It was said in *Sterling* vs. *Trading Co.* (11 Serg. & R. 179) that a note given in charge to a bank for collection, and so indorsed as to place the apparent and technical title in the bank, if not withdrawn after nonpayment and protest, might be sued upon by the bank in its own name. In *Ryan* vs. *Bank* (9 Daly, 308) it was held that it is no part of the general business of a bank to bring suit upon a draft deposited with it for collection. The authorities are decidedly in favor of the law as given in charge to the jury by the Court. It may be, however, that under special circumstances, as where delay to bring suit—the collecting bank being the indorsee—would operate to discharge a surety, and there was not time to wait for advices from the owner of the paper, or where an immediate attachment was necessary to prevent the fraudulent removal or disposition of his property by the debtor to avoid payment, it would be the duty of the collecting bank to bring suit. But there was no such contingency here The loss resulted, not because no suit was brought, but because the defendant was induced to believe, by the plaintiff's failure to respond to the letters and statements of account mailed by defendant from time to time, and had the right to believe, that the plaintiff had accepted the renunciation of the agency, and had undertaken the collection on its own account. It is therefore immaterial whether the instruction complained of was right or wrong.

It is also assigned as error that the Court below erred in charging the jury that the defendant's letter of the 22d of June, and the letter of July 2d, inclosing the account current for June, with the charging back to the plaintiff of the $2,700 credit on account of the certificate, amounted to a renunciation of the agency, and that, if the plaintiff did not object within a reasonable time, it must be held to have accepted the renunciation; the Court adding that, in its opinion, there was no evidence that the plaintiff ever did anything, and, if that was so, the defendant was not liable for any loss that resulted from its subsequent inaction. So far from there being error in this instruction, we think that upon the evidence the Court would have been justified in directing the jury to find that the agency was renounced by the defendant. that the renunciation was acquiesced in by the plaintiff, and that the plaintiff was entitled to recover only nominal damages. It was in evidence that the letters were properly mailed, and the presumption is that they reached their destination and were received by the plaintiff. *Rosenthal* vs. *Walker* (111 U. S., 193). As the Court said in its charge to the jury, there was no contrariety of evidence, no dispute as to the facts, and there is no doubt that the conclusions of law were correctly stated by the Court.

The judgment of the Court below is affirmed, with costs.

COLLECTIONS—INSOLVENCY—TRACING FUNDS—RIGHT TO RECOVER SPECIFICALLY.

United States Circuit Court of Appeals, Fifth Circuit, May 22, 1893.

ANHEUSER-BUSCH BREWING ASSOCIATION *vs.* CLAYTON.

In order to enforce a trust in favor of the owner of paper sent for collection as to any money collected thereon, it must be specifically traceable into the hands of the Receiver.

Merely sending a draft for "collection and return" does not constitute one a "depositor," so that he can claim the benefit of the provision in the Alabama constitution that "depositors who have not stipulated for interest shall for such deposits be entitled, in case of insolvency, to preference of payment over all other creditors."

Appeal from the Circuit Court of the United States for the Middle District of Alabama.

This was a bill by the Central Railroad and Banking Company against the

John McNab Bank and W. Tullis for a Receiver of the bank. The Anheuser-Busch Brewing Association intervened, and claimed the amount of a draft collected by the bank on intervener's account, and asked that the same be paid to it by Henry D. Clayton, Receiver of the bank. The matter was referred to a master, who reported that the intervener was a general creditor. From a decree confirming the master's report, the intervener appeals.

TOULMIN, *District Judge:*

The appellant, a corporation, having its chief place of business in the city of St. Louis, Mo., on the 20th of March, 1891, drew its draft for the sum of $793.80, with exchange, on one P. H. Morris, who resided at Eufaula, Ala., and sent the draft to the McNab Bank for "collection and returns." On the 26th of March, 1891, Morris paid the draft with his check on the McNab Bank. He had at that time about $3,000 to his credit as a depositor in said bank, and there was as much as $10,000 in cash in the vaults of the bank belonging to it. On the same day—the 26th of March, 1891—the McNab Bank forwarded to appellant its exchanges drawn on the Hanover National Bank of New York, which being sent forward by appellant for collection in New York was protested for nonpayment, the NcNab Bank having failed and made an assignment between the time it forwarded the draft to St. Louis and the date of its presentation in New York. It appears that the McNab Bank was insolvent at the time of this transaction, but was engaged in business as a "going concern" down to the 30th of March, 1891, While the McNab Bank was largely indebted to the Hanover National Bank of New York, it had a line of credit with it, and all drafts drawn on said bank by the McNab Bank were duly paid down to and including the date of the latter's suspension. On the 30th of March, 1891, the McNab Bank made an assignment for the benefit of its creditors of all its property and assets. A short time thereafter, on a bill filed by a large creditor, the assignee was removed from the control and possession of the bank's estate, and the appellee was appointed Receiver in his stead, to take charge of and administer the same. The assignee delivered to the Receiver all the property and assets transferred to him by the bank. Among the assets so delivered was a sum in cash of $9,200.

Appellant's contention is that in the collection of its draft on Morris the McNab Bank acted as its agent and trustee, and that it is entitled, as against other creditors of the bank, to priority of payment out of the bank's assets; that, notwithstanding the money collected from Morris was intermingled with the general assets of the bank, or was in a common mass with moneys of the bank, and cannot be identified or specifically traced into the hands of the Receiver, yet a court of equity will subtract the amount due appellant from the funds in the hands of the Receiver, and will compel him to restore it to appellant, because the amount had been collected by the bank as its agent and trustee, and had increased *pro tanto* its general assets. An appellant further contends that, if not entitled to this relief, it at least has a right to be classed among depositors who had not stipulated for interest on deposits, these being a class preferred for payment out of the general assets of the bank under the constitution of the state of Alabama. Article 14, § 17.

The relation between appellant and the McNab Bank as to the draft on Morris sent by the former to the latter for collection was that of principal and agent; but, in order to enforce a trust in favor of appellant as to any money collected on said draft, it must be specifically traceable into the hands of the

Receiver, *Commercial Nat. Bank* vs. *Armstrong*, 39 Fed. Rep. 684; 148 U. S. 50. Accepting Morris' check in payment of his debt to appellant, and charging the amount of it on Morris' account by the bank, was but a shifting of its liability, whereby it became appellant's debtor, and assumed the obligation to pay to it the amount of the check less exchange. There is nothing to indicate that this amount was separated and kept unmingled with the bank's own money; but, on the contrary, it is conceded that it is undistinguishable from the mass of the bank's own money, and cannot be traced to and identified in the hands of the Receiver. This being so, appellant has no better equity than the other creditors of the bank, and is entitled to no priority over them. It can only come in as a general creditor, unless it was a depositor in contemplation of article 14, § 17, of the constitution of the State of Alabama, which provides that "depositors who have not stipulated for interest, shall for such deposits be entitled, in case of insolvency, to preference of payment over all other creditors." Such are the decisions in Alabama, where the transaction occurred, and the text-books and the decisions in the Federal courts are in accord with the Alabama decisions. (*Maury* vs. *Mason*, 8 Port. (Ala.) 212: *Goldsmith* vs. *Stetson*, 30 Ala. 164; *Parker* vs. *Jones*, 67 Ala. 236; 2 Story, Eq. Jur. 1259; Bolles, Banks, § 474; 2 Morse, Banks, § 590; Wait, Insolv. Corp. § 659; *Illinois Trust & Savings Bank* vs. *First Nat. Bank*, 15 Fed. Rep. 858; *Bank* vs. *Dowd*, 38 Fed. Rep. 172; *Bank* vs. *Russell*, 2 Dill. 215; *Commercial Nat. Bank* vs. *Armstrong*, supra; *First Nat. Bank* vs. *Armstrong*, 42 Fed. Rep. 193; 148 U. S. 50, *Commercial Nat. Bank* vs. *Armstrong*.)

Was appellant a depositor who was entitled to preference of payment over all other creditors? "A bank depositor is one who delivers to or leaves with a bank money subject to his order." (And. Law Dict., 343, 344; Newmark, Bank Deposits, § 12.) Deposits made with bankers are either general or special. In the case of a special deposit of money the bank merely assumes the charge or control of it, without authority to use it, and the depositor is entitled to receive back the identical money deposited. (1 Morse, Banks, Sec. 183.) The relation thus created is that of bailor and bailee. Money received by a bank on general deposit becomes the property of the bank and can be used by it as other moneys belonging to it, the relation between the bank and the depositor being that of debtor and creditor; "that kind of deposit of money peculiar to banking business, in which the depositor, for his own convenience, parts with the title to his money, and loans it to the banker." (*Commercial Nat. Bank* vs. *Armstrong*, supra; *Wray* vs. *Insurance Co.*, 34 Ala. 58; *Alston* vs. *State*, 92 Ala. 124.)

The contention of the learned counsel for appellant is that his case meets this definition of a general depositor. We cannot agree with this contention. Appellant did not leave his money with the McNab Bank subject to its order, or to be returned to it on call. It did not, for its own convenience, part with the title to its money, and loan it to the bank. There was no contract, express or implied, that the collection from Morris on appellant's account was to be a deposit of any kind, but it is clear that it was intended that the money received from Morris should be remitted in "a reasonable time" from date of collection. Appellant inclosed its draft on Morris to the McNab Bank "for collection and returns." Morris took up the draft with his check on the McNab Bank, and on the same day the latter forwarded to appellant exchange on a New York bank for the amount of Morris' indebtedness. The draft was not paid, but this did not alter the relation between appellant and the McNab Bank. The bank still owes the debt. But we find that under the facts of the case appellant has no lien on the funds of the bank in the hands of the Receiver, and was not a depositor entitled to preference over the other creditors of the bank, within section 17, art. 14, of the constitution of the State of Alabama. The decree of the Court below is affirmed.

TRUST COMPANIES—REGULATIONS REGARDING DEPOSITS—SAVINGS BANK RULES.

Court of Appeals of New York, October 3, 1893.

THE PEOPLE *vs.* THE BINGHAMTON TRUST COMPANY.

A trust company organized under the banking laws of New York, having the power to receive deposits and pay interest thereon, may establish such regulations relating to the receipt and repayment of such deposits as it may deem proper.

It may, if it desires, adopt for this purpose substantially the same rules as those adopted by the Savings banks in the State.

The provisions of the statute forbidding any corporation, etc., "to advertise or put forth a sign as a Savings bank, or in any way to solicit or receive deposits as a Savings bank" is intended to prevent a deception being practiced on the public, and where a trust company does not hold itself out to the public as a Savings bank it does not violate the statute merely by adopting rules respecting the receipt and repayment of deposits similar to the rules in use among Savings banks.

This was an action to recover the penalty prescribed by Sec. 283 of the Banking Law (ch. 409, Laws 1882).

By that section it is made unlawful for any corporation, association, or person "to advertise or put forth a sign as a Savings bank, or in any way to receive deposits as a Savings bank;" and for every offence against these provisions the offender "shall forfeit and pay . . . the sum of $100 . . . to be sued for and recovered in the name of the people of the State, by the district attorneys of the several counties, for the use of the poor chargeable to said county in which said offence shall be committed."

GRAY, *J.:*

The facts were agreed to by the parties. It appears that the defendant's mode of doing business is to issue a pass-book to customers upon the receipt of deposits, containing sundry so-called "rules governing deposits;" that it issued and distributed a circular descriptive of the nature of the corporate business and pointing out the advantages to the public in dealing with the company; and that it also published in the papers a certain advertisement descriptive of its business. With respect to the pass-books issued by this defendant it was argued that, as they were exactly similar to those issued by Savings banks, in the feature of a set of interest rules, a violation of the banking law is evidenced. Whether it is true that the pass-books are alike in the feature alleged we cannot say, inasmuch as the fact is neither admitted nor shown by the record. But, assuming that such likeness exists, are we then to say that there has been a violation of the law?

If those rules are such as Savings banks have adopted in their relations and dealings with depositors, I see nothing in them but a regulation of the manner of doing business, which has nothing in its nature to make it so peculiarly appropriate to the Savings bank business as, in the view of the law or of the ordinary mind, to constitute any test of the organic business; or that the rules are other than would be appropriate for adoption for the regulation of any business in which deposits of money are received and held upon an obligation to pay interest. I do not see that the rules which are given in the circular as governing the "Interest Department," and which are printed in the pass-book, are such as should be confined in their use to a Savings bank business.

They are eight in number. The first states the hours for business; the second, that entries of deposits and withdrawals of money are made through a pass-book; the third, that to draw out moneys there must be a written order, or check, and that the right to withdraw is subject to a condition, to be imposed at the option of the company, requiring a certain notice to be given, varying with the amount proposed to be drawn; the fourth fixes the rate of interest which will be paid on deposits left for three months, and states how it will be compounded and computed; the fifth reserves a right to the company to close and refuse accounts; the sixth states that moneys may be deposited for minors under written directions; the seventh provides for the case of the loss of the pass-book; and the eighth states that the acceptance of the pass-book, with its entries, shall be the evidence of an agreement by company and depositors to be governed by these rules. The trust company has the power, under the fourth section of the Act under which it exists, "to receive deposits of trust moneys, securities and other personal property from any person or corporation, and to loan money on real or personal securities." With this rather broad privilege, and having the power, by its first section, "to make contracts," there can be no question as to its right to agree with its depositors with respect to their relative duties and obligations. That agreement is embodied in the eight rules, and in no one can we find any such innovation upon commercial practices, or such a novelty in idea, as to characterize it as especially applicable to any peculiar institution.

These rules are, evidently enough, the product of a consideration of the nature of the obligation which the trust company assumes toward the depositor, and of certain prudential requirements, which have been suggested by a business sense and by the experience of men, founded upon commercial transactions and crises. The company's power, by the eleventh section of the Act, over the deposits extends to the use of them in making loans and in a pretty wide range of investments. Its relations with a depositor are, obviously, those of debtor and creditor. The moneys belong to the company when deposited, and through their use, in the permitted ways, are gained the moneys from which to make the interest payments agreed to. Without being a banking corporation, as such is legally understood, it is a moneyed corporation and possesses many of the powers of a banking corporation, as may be inferred from the eleventh section, in prohibiting a construction which would authorize the issuance of bills to circulate as money. These circumstances sufficiently show that in the formulation of rules to govern deposits the company but compels the adoption of a reasonable and prudential agreement as the basis of its relations with a depositor. The statute has not prescribed a set of rules or of regulations for doing bnsiness with depositors, for the adoption by the one or the other class of corporations; nor has it done anything more than to define and limit their powers, duties and privileges.

I know of no principle of law which, as to commercial transactions within their chartered powers and involving the receipt or borrowing of, and the obligation to repay, moneys, denies the entire freedom to regulate them by such a contract as the parties are willing to enter into.

The learned Attorney-General, conceding that trust companies may receive deposits of moneys and may pay interest upon them, argues that they may not transact or regulate their business upon the general plan, or in the manner usually adopted by Savings banks. Why may they not? Can there be such a thing as an exclusive appropriation of a system conducting commercial transactions, and thereby to symbolize it to the world? I do not think that Savings banks, however closely in the public interest they should be guarded, should be accorded a monopoly of any set of business rules. The vice of the position taken for the people in this controversy, seems to be found in attaching a wrong sense to the language of the section. The prohibition is that a corporation shall not "solicit or receive deposits as a Savings bank." It would not be correct to interpret that language as though its literal reading were "to solicit or receive deposits as a Savings bank solicits or receives deposits." That would, in my opinion, impute to the legislature an unnecessary intentention. I think it plain that it embodies the legislative intention that a corporation shall not, in soliciting and receiving deposits, represent, or hold itself out as a Savings bank so as to deceive the public. Unless it can be established that, in the acts of issuing the circular and of publishing the advertisement in question there is either a soliciting of deposits from the public in the character, or under the pretense of being a savings bank, or an advertising of the corporate business in such manner as to deceive persons into believing it to be that of a Savings bank, we would not say that any violation of the law has been made out. It ought to be plain to the ordinary mind in reading the circular, that the features described to the public as being valuable and attractive, mark the company at once as being other than a Savings bank, and as possessing several attributes and capacities very different from those of banks for savings. It sets out by announcing to the public its corporate title, and its readiness to receive deposits of money, and to transact such other business as its charter permits.

It describes the advantages which trust companies offer by reason of having a capital, and being subjected to certain legal restrictions, and their greater safety as depositaries which people may trust with their savings. It sets forth the amount of its paid-in capital; mentions the liability and solvency of its stockholders, as an added security to the depositor; describes its investments; narrates the powers conferred by the charter, and under the heading of "An Interest Department," gives a set of rules, which are the same as printed in the pass-book, and which have been described. Its explicity says that it "differs from a Savings bank in that it has a large capital invested, that is pledged as a security to its depositors." The whole circular is the company's prospectus, setting forth the advantages and superiority of trust companies in general, as depositaries of the people's moneys, and of this company in particular; not because of any special legal attributes, but because possessing, in connection with its organization and management, certain solid and attractive features. There is nothing in the paper which should lead minds of the plain order to suppose that the corporate business was that of a Savings bank; and the only feature of corporate resemblance is in the soliciting of deposits in the manner in which they would be received and held. That, however, is not a business distinctively and exclusively of a Savings bank. Nor is the published advertisement of the defendant subject to any other legal criticism than is the circular. The advertisement is not that the defendant could, or would, do business as a Savings bank; and, no more than the circular, does it hold the company out as a Savings bank.

In discussing whether acts were in violation of law I have, of course, had in mind the statutory prohibition or provision in the section of the banking law referred to. I have not had reference to the statute under which the defendant is incorporated. We are not concerned with the question of whether it has violated any provision of its charter. That question is not here. If there has been any such violation, or an exercise of powers or privileges not conferred by law, that question can only be raised and tried out in another form of action provided to be brought by the Attorney-General. That with which we are alone concerned is whether the inhibition in the banking law is met by the facts of this case, so as to render the defendant amenable to the penalty prescribed for a violation. I think it clearly is not. The provision is only aimed at preventing a deception from being practiced on the public by sign or representation. It is intended to act as a safeguard to what, under the legislation in the State, exists with respect to corporations which are created to become safe depositaries of the people's money, and which are designed solely for the public advantage, and not for the promotion of any private interests of the organizers or members.

If we were called upon to discuss the relative advantages of the two classes of institutions, in the feature of security offered to the depositor, it might be said that the trust company is the safer in the added resource of a capital stock. Each is placed under a supervision by the State Government, and the difference in the powers or in the restrictions imposed upon the use or investment of moneys rests upon the difference in the purposes for which incorporated. The trust company is incorporated for the purpose of gain to the members of the corporation, while the Savings bank is in the nature of a charitable institution, the sole corporate purpose of which is to securely protect moneys deposited up to a certain fixed amount by individuals, and, by investing them in such limited and prudent ways as the Legislature has prescribed, to secure a safe and moderate return by way of interest upon the moneys held. Whatever tends to the protection of a bank for savings is in the public interest, and it is in the line of that protection that any appearance or external sign or representations should be prohibited, which would deceive and cause the public to suppose that a business institution, really organized for the gain of its members, was a Savings bank. But the line ends with securing that general protection against public deception, and does not project itself into mere methods by which transactions with depositors or dealers are conducted. There can be no exclusive appropriation of business laws or business methods.

Where commercial transactions are alike in their character the parties to them are entitled to make use of the same business rules, and to contract in the same manner respecting them.

I think, for these reasons, that the judgment of the General Term was right, and should be affirmed by us, with costs.

All concur, except MAYNARD, *J.*, not voting.

Judgment affirmed.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor Rhodes' Journal of Banking: OSAGE, Iowa, Oct. 4, 1893.

SIR:—A note dated June 1, 1893, due four months after date given and payable in Iowa is due when?

Answer.—By the law merchant, both in England and the United States, a month is construed to mean a calendar month in all cases of negotiable instruments. (Daniel on Negotiable Instruments, §624; Chitty on Bills [13 Am. Ed.], 420.) In *Rohner* vs. *Knickerbocker Life Ins. Co.* (63 N. Y. 163) the general rule is thus stated: "In computing the time when a note payable at a certain number of months after date will become due, the rule is to exclude the day of the date from the calculation, and to include the day of payment when no days of grace are allowed. When a promissory note is dated on a day of any month, and made payable at a specified number of months after date, without days of grace, it accrues due and payable on the same day in the stipulated number of months afterwards with the day of the date of the month." And in Daniel on Negotiable Instruments it is said (§624): "Therefore, a bill dated the first day of January and payable one month after date would be payable (grace included) on the fourth day of February; and one dated February first, payable one month after date, would likewise be payable (grace included) on the fourth day of March, although February is two, or three days (in leap year) shorter than January." The statutes of Iowa have not in any way changed these rules of the law merchant. Hence, the note mentioned in the inquiry was due (days of grace included) on the 4th of October.

Editor Rhodes' Journal of Banking: ARLINGTON, Mass., Oct. 5, 1893.

SIR:—As a subscriber to your valued magazine I respectfully submit the following question for authoritative settlement. Where a customer's account is trusteed (garnishee process) is the amount due from the bank to the customer the sole amount held by the service or does it also hold money which may afterward be deposited or come into possession of the bank for the account? Morse, Paragraph 346, 3rd Ed., makes a statement that money coming into the possession of bank after service and before judgment is held, but two lawyers and a business man consulted deny that this is the case. What are the facts? W. D. HIGGINS.

Answer.—The garnishee's liability, considered with reference to the time of the garnishment, cannot, without the aid of special statutory provision, be extended beyond the defendant's effects or credits in his hands at the date of the garnishment. The attachment is the creature of the law, and can produce no effect which the law does not authorize. Its operation, when served, is upon the attachable interests *then* in the garnishee's possession; and it cannot be brought to bear upon any liability of the garnishee to the defendant accruing after its service, unless the law so declare. (Drake on Attachment § 667.) In Massachusetts it has been uniformly held that the garnishee cannot be charged beyond the value of the effects in his hands, or the amount of debt due from him to the defendant, when he was summoned. (*Wilcox* vs. *Mills*, 4 Mass. 218; *Sanford* vs. *Bliss*, 12 Pick. 116; *Meacham* vs. *McCorbitt*, 2 Metcalf, 352; *Allen* vs. *Hall*, 5 Metcalf, 263; *Osborne* vs. *Jordan*, 3 Gray, 277;

Hancock vs. *Colyer*, 99 Mass. 187.) Hence, the deposits made subsequently to the service of the summons are not bound by the garnishment. A similar rule prevails in New York. (*Gibson* vs. *Nat. Park Bank*, 48 N. Y. Supr. aff'd 98 N. Y. 87; *Mathod* vs. *North Riv. Bank*, 16 Civ. Proc. R. 314; 6 N. Y. Supp. 498.)

Editor Rhodes' Journal of Banking: GALESBURG, Ill., Oct. 30th, 1893.

SIR:—If a National bank director owning but ten shares of stock should put his stock up as collateral security for a debt would that act vacate his office as director, to the extent that his acts as director after that would be void? CASHIER.

Answer.—In the late case of *Briggs* vs. *Spaulding*, (141 U. S. 132) the Supreme Court of the United States, speaking of the resignation of a director said: "The resignation was orally tendered to the President and manifestly accepted by him, since the sale of the stock was made at the same time, and the President informed the Cashier of the fact a few days afterwards. Putting a resignation in writing is the more orderly and proper mode of procedure, but if the fact exists and is adequately proven the result is necessarily the same, as applied to this case." It would appear from this language that the Court deemed that something more was necessary to sever his connection as director than the mere sale of his stock, at least in a case where he is sought to be held liable for neglect of duty as a director. But, however that may be, if he is permitted to continue to act as director, after hypothecating his stock he would be deemed a director *de facto*, and an action of the board would not be held void simply because he was allowed to vote on the question, even though his presence was required to make a quorum, or his vote necessary to pass the resolution. (*Mechanics' Nat. Bank* vs. *Burnet Manf. Co.*, 32 N. J. Eq. 236; *Del. Canal Co.* vs. *Penn Canal Co.*, 21 Pa. St. 131; *Thorington* vs. *Gould*, 59 Ala. 461. See Cook on Stock and Stockholders, § 714 and numerous cases were cited; Morowetz on Corporations, § 639.

Editor Rhodes' Journal of Banking: CORNING, Iowa, Oct. 30, 1893,

SIR:—Is a "no protest" ticket on the end of a draft sufficient restriction not to protest when the item is from a bank and nothing said in the letter in regard to protest, or when the general instructions are given "protest all items unless otherwise instructed?" Also, is the drawer of a bill of exchange released in case the bill is not protested upon refusal by the drawee? CASHIER.

Answer.—We think that the attaching of the "no protest" slip is a sufficient instruction not to protest the item. As we have before said in reply to a similar inquiry: "It must be assumed that these slips are intended to answer some purpose, or they would not be in such common use. * * * * If the sender intended the paper to be protested, why should he attach such a slip? His act in such a case would be purposeless. The courts try to give effect to all the acts of the parties, and they would not assume that the officers of a bank intended to do an idle and meaningless thing." (RHODES' JOURNAL OF BANKING, June, 1893, p. 613.) (2) Where a bill of exchange is dishonored the drawer is entitled to notice of such dishonor or he will be discharged. (Daniel on Negotiable Instruments, §§ 970–995.) In the case of an inland bill of exchange, *e. g.* one drawn and payable in the same State, a formal protest is not required, but a notice from the holder or his agent will be sufficient, though it is customary to protest inland bills as well as others, and this is the preferable practice, since it affords the safest and most convenient mode of proving presentment and notice.

CHICAGO NATIONAL BANKS.—Statement of condition at the close of business, October 3, 1893, compiled from official reports to the Comptroller of the Currency, and the totals of July 12 for the purpose of comparison:

Since July 12 individual deposits have increased $1,098,766; bank deposits, $6,133,200. Loans and discounts have decreased $8,852,415. There has been an increase of $15,956,446 in the item of Cash and Treasury Credits.

SUBSTITUES FOR CURRENCY.

The scarcity of money during the late season of financial pressure called forth numerous devices for alleviating the hardships of such a condition. In New York city clearing-house certificates were largely used in settlement of balances between the banks, and instead of paying out cash on checks for large sums these checks were stamped "Payable only through the New York Clearing-House." The form of certificates was as follows:

FIVE THOUSAND DOLLARS.

No. ...... **$5,000.**

LOAN COMMITTEE OF THE NEW YORK CLEARING-HOUSE ASSOCIATION.

NEW YORK, ..., 1893.

THIS CERTIFIES, that the .... has deposited with this Committee securities in accordance with the proceedings of a meeting of the Association, held June 15, 1893, upon which this Certificate is issued. This Certificate will be received in payment of balances at the Clearing-House for the sum of FIVE THOUSAND DOLLARS, from any member of the Clearing-House Association.

On the surrender of this Certificate by the depositing bank above named, the Committee will endorse the amount as a payment on the obligation of said bank, held by them and surrender a proportionate share of the collateral securities held therefor.

....
....
....
....
.... Committee.

$5,000.

In Philadelphia a somewhat different course was pursued. Payments of currency were limited, as nearly as possible, to daily cash receipts; the plan of certification or acceptance of checks were not in use. Instead, the checks were paid, or taken up, by the issue of due bills in the form given below:

No. 695.

............, 189..

Issued to *Seventh National* Bank.

Number *695.*

Countersigned

[*CLEARING-HOUSE DUE BILL.*]

THE SEVENTEETH NATIONAL BANK.

PHILADELPHIA, ..., 189..

Due by THE SEVENTEENTH NATIONAL BANK *To* SEVENTH NATIONAL BANK...............

....*thousand*

...........*hundred and*..........$\frac{}{100}$*Dollars.*

This Due Bill is only good when signed by one and countersigned by another authorized person, and is payable only in the Exchanges through the Clearing-House the day after issue.

$.........$\frac{}{100}$ ....

Teller.

A person presenting one or more large checks for payment at the counter of a bank member of the Clearing-House Association, in the ordinary course of business, would receive for the amount of such check or checks one of these due bills signed by the Paying Teller and countersigned by one of the officers. In issuing the due bill the Teller would ask the party what bank he desired to deposit the due bill in and would insert after the word "to" the number of that bank in the Clearing-House, or if no particular bank should be named the word "banks" would be inserted after the word "to." Occasionally a due bill might be drawn to the order of the party presenting the checks, but that seldom occurs. It will be noticed that the due bill is intended to be deposited in some one of the Clearing-House banks, from which it will reach the issuing bank through the exchanges of the following day.

THE STATE BANKS OF TEXAS.

Texas has a history peculiar to itself and especially peculiar as regards its financial features. Passing through the vicissitudes of a desperate struggle for independence, culminating in the formation of a free and independent republic, which, after a brief and troubled existence, was absorbed into the great union of the United States, the early days of Texas were replete with incidents well calculated to stir the blood and stimulate the energies of the hardy participants in those scenes.

As might be expected in a Government passing through such experiences, the people at different times found themselves confronted with contingencies by which they were forced into positions most uncomfortable and sometimes disastrous. From the first appearance of civilization within the wilds of Texas a rabid antipathy to banks was engendered, to be fostered with assiduous care as time went on.

Even as early as 1833, before Texas had a thought of national independence, when Colonel Sam Houston, representing Texas in its efforts to secure admission into the Mexican Union, appeared in her behalf before the San Felipe convention, he carried with him the constitution of the proposed new Mexican State of Texas, and one of the most prominent features of that constitution was its emphatic prohibition of all banks and banking institutions, while the one question raised in that convention by Colonel Houston, to which he bent his best energies, was that of unyielding opposition to banks.

It must be remembered that the pioneers of Texas came chiefly from the United States, and many who came bore the scars of unsuccessful conflict with the wild-cat banks which, at that time, in many localities flooded the country with their paper. With the smart of financial disaster still upon them, these men, seeking new fortunes in fresh fields, brought with them prejudices deep seated indeed, each new addition from the States as the years went on only serving to deepen them, until the sentiments thus engendered live in their effects to this day in Texas.

Recovering from the rebuff with which Mexico met her overtures, Texas waged and won her war of independence, and in the ten years of its existence the republic saw hard times indeed. Public credit ran low and the "Texas red-backs," as the paper money issued was called, were worth but little, though retrenchment and economy had mended matters somewhat and even a little money was laid away by the Government when Texas was admitted to the United States.

In 1845, Texas, as one of the United States, adopted her constitution, and in that instrument the time-honored antipathy to banks found expression in section 30, of article 7, which read as follows: "No corporate body shall hereafter be created, renewed or extended with banking or discounting privileges."

In 1861 a new constitution was adopted, but that the sentiment remained unchanged was proved by the reappearance of this same prohibitory clause under the head of article 5, section 30.

Then came the civil war with its disaster and its devastation. Reconstruction days found Texas, like all other Southern States, in the hands of men of different minds from those who had hitherto guided her destinies. Under this regime, in 1869, another constitution was adopted in which the bank prohibiting clause found no place.

This constitution having been adopted, the next legislature, which convened in 1871, passed an Act defining the purposes for which private corporations may be formed, which Act, after enumerating a number of the purposes, made provision for "the formation of private corporations intended for mutual profit or benefit, not otherwise especially provided for and not inconsistent with the constitution and laws of this State."

It was under this Act State banks found their first opportunity to incorporate in Texas. The Act regulating and restricting the incorporation and existence of banks was approved December 2, 1871. It provided that any five or more persons in any county in Texas may organize a bank of deposit, discount and exchange, allow interest on deposits, etc., with a capital stock of not less than $50,000, nor more than $500,000, and shall file with the Secretary of State a complete record of its organization, as well as semi-annual reports setting forth actual financial condition, amount of property owned, liabilities, etc. The law further requires that these banks shall declare semi-annual dividends of net profits the first of each January and July.

Under these provisions banks were incorporated, and 4 remain in existence to-day.

The general dislike to banks in Texas was by this time an inherited instinct rather than a judgment drawn from an impartial consideration of the merits of the matter, but the fostering of the idea by the republicans, who had come into positions of power, was sufficient to arouse the hostility of the dominant democracy of the land, and when the republican rule was overthrown in Texas the first demand was for a new constitution, and one of the first steps in the construction of the constitution of 1876 was the rehabilitation of the old bank-prohibiting clause, which appears as section 16, article 16.

Thus is Texas left in the anamalous position of having four incorporated banks and a constitution prohibiting such incorporations. So far as I have learned their right to continued existence under the law by virtue of which they were chartered has never been brought in question, though of course it has been a subject for much private discussion.

Competent authorities who have investigated the matter hold that their charters are contracts and the intervention of the constitutional prohibition of 1876, while preventing further incorporations, does not affect the legality of their incorporation nor the propriety of their continuation, and the law under which they incorporated, while rendered nugatory to all other intents and purposes, remains in full force and effect as to the regulation and control of the incorporations under the constitution of 1869.

This opinion is held under the Dartmouth College case, U. S. Superior Court, 4th Wheaton, 518.

Thus the four State incorporated banks are, to an extent, in possession of a monopoly, their official reports and State sanction give them a certain prestige, and they are virtually placed in positions of vantage such as the law did not contemplate when they were organized.

The last official report from these institutions, published by the Secretary of State, appeared in the report of 1892 and showed their condition at the close of business June 30, 1892.

At that time they showed the resources of the Red River County Bank of Clarkesville, Texas, to be $226,549 capital stock; $100,000 surplus; and profits, $19,932. The Fannin County Bank, of Bonham, Texas: Resources, $267,885; capital stock, $100,000; surplus and undivided profits, $31,414. The Paris Exchange Bank, of Paris, Texas: Resources, $264,343; capital stock (paid in), $50,000; surplus and undivided profits, $57,952. The Farmers and Merchants' Bank of Paris, Texas: Resources, $551,960; capital stock, $200,000.

The report of the Secretary of State has not been published for this year, but I have hunted up the last reports made by the banks, with the following results:

Semi-annual statement of the condition of the Fannin County Bank, Bonham, at the close of business June 30, 1893, which shows:

RESOURCES.		LIABILITIES.	
Loans and discounts	$168,586	Capital stock	$100,000
Over drafts (secured)	12,345	Surplus fund	25,000
Real estate	6,792	Undivided profits (net)	9,014
Bank building and fixtures	2,442	Deposits	137,493
Cash and exchange	81,341		
Total	$271,507	Total	$271,507

The Semi-annual statement of the Red River County Bank, Clarkesville, at the close of business, June 30, 1893:

RESOURCES.		LIABILITIES.	
Loans and discounts	$181,256	Capital stock	$100,000
Real estate, furniture and bank building	23,475	Deposits	107,659
Cash and exchange	29,043	Surplus and undivided profits	25,570
Expenses	2,733	Due other banks	3,279
Total	$236,509	Total	$236,509

Semi-annual statement of the Paris Exchange Bank of Paris, at the close of business, June 30, 1893:

RESOURCES.		LIABILITIES.	
Loans and discounts	$144.939	Capital stock (authorized $100,000) paid in	$50,000
Over drafts	2,057	Surplus fund	25,000
		Undivided profits	36,852
Real estate, furniture and fixtures	25,689	Exchange account	352
		Discount account	2,344
Expense account	2,913	Interest account	4,936
		Rent account	1,372
Cash and sight exchange	69,833	Deposits	124,574
Total	$245,433	Total	$245,433

At the date of this writing the statement due from the Farmers and Merchants' Bank of Paris, for June 30, 1893, has not been filed, the last statement on record from that institution being of date December 31, 1892, which was as follows:

RESOURCES.		LIABILITIES.	
Loans and discounts	$333,612	Capital stock	$200,000
Cash and sight exchange	228,715	Bank deposits	5,879
Overdrafts	3,244	Individual deposits	298,950
Real estate, furniture and fixtures	28,298	Surplus	68,175
		Rediscounts	20,847
Total	$593,869	Total	$593,869

All these statements are signed and sworn to by the various Cashiers and are duly filed and recorded in the archives of the State. The banks themselves stand well and their record is one of the strongest proofs the advocates of State banks in Texas have in support of their platform.

The State bank idea is gaining ground here, and I hope in a future communication to show some interesting features relative thereto as far as it has advanced.

AUSTIN, Texas, October 20, 1893. BOBANNETTE.

Plan for Providing an Elastic Currency.

Editor Rhodes' Journal of Banking:

SIR:—I herewith submit an outline of a scheme for the issue of new bonds by the United States Government which, it appears to me, might if properly elaborated have some advantages, and which might possibly commend itself to popular opinion which is now a very important factor in all financial problems. (1) Congress to provide for an issue of twenty-year gold bonds, interest not to exceed two per cent. per annum. To be sold for cash payable at the Treasury in Washington or any sub-Treasury of the United States and to be delivered at the expense of the Treasury in any part of the United States. Bonds to be either registered or coupon, at the option of the purchaser, in sums of $50 or upwards, and to be used as a basis for National bank circulation. (2) All United States currency which is now payable in gold which shall actually be received in payment for the above-described bonds to be cancelled and retired, and the amount so cancelled replaced by new notes as provided hereafter. Bonds to be paid for either in gold or Treasury notes as above.

Congress to provide for an issue of Treasury notes having the same legal-tender qualities as the present issue but redeemable only in bonds of the above issue or in silver, silver to be delivered in any part of the United States as now provided by law. The amount of such Treasury notes issued to be limited to an amount sufficient to replace old Treasury notes cancelled as above and to redeem bonds as provided hereafter. Any person holding bonds of the above issue in amounts of $1,000 or multiples thereof, who shall present them at any sub-Treasury of the United States to receive payment for the same in Treasury notes herein provided for, with accrued interest for each full calender month for which interest remains unpaid. Bonds so redeemed to be cancelled and retired. The currency provided for in the above to be at all times exchangeable for bonds in sums of fifty dollars or multiples thereof. Treasury notes so received to be cancelled and retired. Bonds herein provided for to be exchanged at any time for bonds of the United States, bearing a higher rate of interest the interest to be adjusted on the basis of two per cent. without loss to the Treasury. The bonds herein provided for to be used as reserve by all National banks to the extent of one-half their legal reserve. E. MARSHALL.

CALEDONIA, Minn., Oct. 28.

NEW JERSEY STATE BANKS.

The following table shows the condition of the State banks of New Jersey at the close of business, September 30, 1893, as exhibited by reports to the Commissioner of Banking and Insurance, and for comparison the reports of June 24, 1893, with increase and decrease:

Resources.	*June 24, 1893.*	*September 30, 1893.*	*Increase and Decrease.*
Loans and discounts	$8,510,748	$7,189,869	$1,320,879
Overdrafts and protests	12,746	13,347	601
Due from banks	835,781	734,871	*100,910
Cash on hand	455,698	638,903	183,205
Stocks and bonds	857,101	907,034	*49,933
Banking house	209,109	209,435	326

* Decrease. Number of banks June 24, 22; September 30, 21. †Net Decrease.

New York Savings Bank Investments.—A correspondent asks: "In the bonds of what cities outside of New York State are New York Saving banks now allowed to invest?"

An amendment to the law passed at the last session of the Legislature (chapter 440, Laws of 1893) permits Savings banks to invest in the bonds of the following cities, namely: Boston and Worcester, Mass.; St. Louis, Mo.; Cleveland, Ohio; Detroit, Mich.; Providence, R. I., and New Haven, Conn.

Concise, Clear and Condensed.—Financial facts and figures and intricacies of banking and national economics are presented in profuse variety for the benefit of the student interested in the dollar of to-day and the bread of to-morrow, all in condensed and concise clear form thoughout the pages of RHODES' JOURNAL OF BANKING. Banking law also receives a quota of attention, and is of exceptional interest in these exceptional times.—*Omaha (Neb.) Bee.*

Wigwam Lost, Indian All Right.—The late monetary scare brought out this forceful statement of an important truth from a Western banker, who posted the following notice of suspension: "Gone, but not 'busted.' I owe the community $5,000; the people owe me $100,000; the people cannot pay; the people are 'busted.' When the people pay me, I will pay the people. In the meantime, let us all take a rest."

Close of the World's Fair.—The total paid attendance at the World's Fair, which closed October 30, was 21,460,000; total, including passes, 27,539,000. The treasurer has a cash balance on hand of $2,500,000. Allowing $1,500,000 for liquidation, there will be $1,000,000 left for stockholders. The World's Fair paid out $30,558,000.

IOWA BANK STATEMENTS.

CONDITION OF STATE BANKS (SO CALLED) AND THE SAVINGS BANKS.

STATE OF IOWA, OFFICE OF AUDITOR OF STATE,
DES MOINES, Sept. 8, 1893.

To the General Assembly of Iowa:

GENTLEMEN:—In compliance with the requirements of section 24, chapter 60, Laws of 1874, I have the honor herewith to present statements of the condition of the Savings banks and of the State banks, so-called, which were under the supervision of this office June 30, 1893.

The increase in the number of State and Savings banks during the year ending June 30, 1893, was eighty-one—the largest increase in any one year in the history of the State.

The report of my predecessor in office shows that on June 30, 1891, there were 205 incorporated banks doing business under the State law. His report published a year ago shows a total of 245 banks.

On June 30, 1893, 148 Savings banks and 177 State banks, or a total of 325 banks reported to this office.

The following tables show the total assets and liabilities of the Savings and State banks at the close of business June 30, 1893:

ASSETS.		LIABILITIES.	
Bills receivable	$29,369,994.01	Capital stock	$6,409,700.00
Cash and cash items	1,622,125.89	Deposits	26,426,031.70
Credit subject to sight draft	2,675,539 28	Due banks and others	537,852.26
Over drafts	173,675.41	Surplus	677,709.56
Real and personal property	892,641.90	Undivided profits	682,682.97
Total assets	$34.733,976.49	Total liabilities	$34,733,976.49

STATE BANKS.

ASSETS.		LIABILITIES.	
Bills receivable	$20,534,831.51	Capital stock	$8,074,420.00
Cash and cash items	1,869,682.63	Deposits	15,725,402.65
Credit subject to sight draft	2,126,090.32	Due banks and others	576,623.59
Over drafts	303,982.71	Surplus	867,451 56
Real and personal property	1,286,278.95	Undivided profits	876,968.32
Total assets	$26,120,866.12	Total liabilities	26,120,866.12

CONSOLIDATED STATEMENT OF THE ASSETS AND LIABILITIES OF THE STATE AND SAVINGS BANKS, JUNE 30, 1893.

ASSETS.		LIABILITIES.	
Bills receivable	$49,904,825.52	Capital stock	$14,484,120.00
Cash and cash items	3.491,808.52	Deposits	42,151,434.35
Credit subject to sight draft	4.801,629,60	Due banks and others	1.114,475.85
Over drafts	477,658.12	Surplus	1,545,161.12
Real and personal property	2,178,920.85	Undivided profits	1,559,651.29
Total assets	$60,854,842.61	Total liabilities	$60,854,842.61

The total assets of the State and Savings banks at the close of business June 30, 1892, were $59,011,405.14.

It will be noticed that there has been an increase in assets during the past year, of $1,843,437.47. Of this amount $1,749,920.00 is increase in capital by reason of the organization of new banks.

The total deposits, June 30, 1892, were $42,476,395.89. Those of June 30, 1893, were $42,151,434.35, or a decrease of $324,961.58.

The reports on file in this office show a gradual increase in deposits up to the beginning of the present financial stringency. At the close of business, March 31, 1893, the total deposits amounted to $46,069,920.68. It will thus be seen that in the three months from March 31 to June 30, 1893, the deposits decreased $3,918,486.33, or about 8½ per cent. In view of the financial disturbances all over our country, amounting almost to a panic in many states and cities, this showing is decidedly encouraging, and speaks well for the good sense of our people, as evidenced by their continued confidence in the banks.

FAILURES AND SUSPENSIONS.

Since the last annual report four banks which were under the supervision of this office have been placed in the hands of receivers.

The Northwestern State Bank of Sibley, Iowa, made an assignment April 6, 1893, and H. E. Thayer was appointed receiver.

The Union Stock Yards State Bank of Sioux City made an assignment June 17, 1893, and E. C. Tompkins was appointed receiver.

The Aurelia Savings Bank, of Aurelia, was closed June 30, 1893, and W. P. Miller was appointed receiver.

The First Ute State Bank, of Ute, was found to be insolvent August 7, 1893, and Richard Palmer was appointed receiver.

In accordance with the provisions of law, these receivers are now closing up the affairs of their respective banks under the direction of the courts.

The principal cause of these failures was bad management on the part of the officers of the banks. The closeness of the money market also contributed its share in bringing about this result.

When we consider the fact that our financial institutions have lately been passing through one of the most trying ordeals in their history, it is a source of congratulation that out of the 325 banks under the supervision of this office only *four* (4) have been compelled to place their affairs in the hands of receivers. Such a record reflects the highest credit upon the ability and integrity of our bankers, and presents to the country the very best evidence of the prosperity and financial solidity of our State.

RECOMMENDATIONS.

The experience of the past few months has forcibly suggested that the law relating to the organization and management of the so-called State banks is very incomplete, and should be revised and improved.

The law governing Savings banks is reasonably full, and needs comparatively little revision.

I respectfully beg leave to make the following recommendations:

1. The liability to the bank on the part of an officer or director thereof should be limited by law.

2. An examining committee, whose duty it is to examine the affairs of the bank at least once a quarter, should be provided for.

3. All loans to directors or bank officers should be passed upon by the board of directors and their action made a matter of record; and no loans should be made to an officer or director except upon same security as that required of other borrowers.

4. A minimum cash reserve should be fixed by law.

5. Investments in real estate for use of the bank should be limited.

6. The stockholders should have power to levy an assessment upon the stock in order to prevent the impairment of the capital when such impairment is threatened.

Respectfully, C. G. McCarthy, *Auditor of State.*

Passage of the Repeal Bill.—Since the last issue of the Journal the time of the Senate has been chiefly consumed by a discussion of the Voorhees bill repealing the Act of July 14, 1890, relating to the purchase of silver bullion. This repeal bill passed the Senate on October 30 by a vote of 43 to 32. Amendments proposing the free coinage of silver, the revival of the Bland-Allison Act, etc., were all voted down. The bill enacted by the Senate is somewhat different from that which originally passed the House. It was concurred in by that body on November 1 by a vote of 193 to 94, and was signed by the President. The purchase of silver bullion under the Act of July 14, 1890, has therefore ceased.

The Voorhees bill in full has been previously printed in this magazine (see Journal for October, 1893, page 1081).

"The Wizard" on Gold.—Thomas A. Edison, the inventor, says: "Gold is only valuable because it it rare. It is not nearly so useful as iron, which is the real precious metal. Aluminum is too soft. It is light, but it lacks strength. The metal of the future is nickel-steel, which combines strength with pliability. Gold is not worth as much as lead in commerce, and brass is more than worth its weight in gold."

AMERICAN BANKERS' ASSOCIATION.

NINETEENTH ANNUAL CONVENTION, HELD AT CHICAGO, ILLINOIS, OCTOBER 18TH AND 19TH, 1893.

The nineteenth annual Convention of the American Bankers' Association, which convened in Hall 3 of the Art Institute, Chicago, Ill., on Wednesday, October 18, 1893, was a notable assemblage of representative bankers from all parts of the country.

When it is considered that the Convention had been once postponed, and that the country was but slowly recovering from a severe financial convulsion (to say nothing of the strong counter attraction of the World's Fair), the attendance was remarkably large. It was especially so on the second day of the session, and the interest manifested in the various papers was genuine and continuous.

Perhaps no previous meeting of the Association has been productive of so many able and thoughtful papers on banking and finance, nor has there ever been a more opportune time for the presentation of the views of men eminent in monetary science.

A resume of the papers read before the Convention would probably embody the following points:

(1) Adherence to a single gold standard.

(2) The repeal of the provision requiring the deposit of bonds to secure circulation, and the creation of a safety fund for the redemption of the notes of insolvent banks.

(3) Opposition to State bank notes.

(4) Confining the issue of paper currency to the banks solely.

In regard to the first of these, so far as may be learned from the papers read, the sentiment was unanimous, and it is also noteworthy that the most energetic plea for a gold standard came not from the East but from the Southwest—Texas.

For the various plans and arguments in relation to the other points, the papers themselves should be consulted.

An important alteration in the methods of procedure of future conventions was made. Hereafter papers are limited to twenty minutes time in reading, and those members not presenting papers are to be given an opportunity to address the Convention on any subject they may deem fit. This will give a freer scope to the deliberations of future conventions, and the applause with which the change was received is an indication of its popularity with the members. The operation of the rule previously in force, though primarily intended merely to confine discussion within profitable limits, has been found to somewhat restrict the representative character of the conventions and to circumscribe debate within narrower bounds than was desirable. The new rule is in line with the liberal spirit manifested by the Executive Council, and will hereafter give all the members a better opportunity of being heard.

A pleasing feature of the Convention was a reception and banquet tendered the members by the Bankers' Club of Chicago, at the rooms of the Union League Club, on Thursday evening, October 19.

THE PROCEEDINGS IN DETAIL.

FIRST DAY'S SESSION.

The Convention was called to order in Hall 3, of the Art Institute, Wednesday morning, October 18, 1893, President William H. Rhawn in the chair. Prayer was offered by Rev. Hiram Thomas, D. D., of Chicago.

Mayor Carter Harrison, whose recent tragic death is fresh in the public mind, was introduced and delivered an address warmly welcoming the members of the Association to Chicago. He spoke at length of the liberalizing and enlightening influence of the various congresses of the year, and urged a full recognition of the community of interests existing between the banks and the people.

President Rhawn then delivered the following address:

PRESIDENT RHAWN'S ADDRESS.

Gentlemen of the American Bankers' Association:

We are assembled in the Nineteenth Annual Convention of this Association in circumstances most extraordinary. For the first time since its foundation at Saratoga, in 1875, and final organization at Philadelphia, upon the Centennial grounds in 1876, it has been found necessary to postpone a duly called Convention of the Association. Immediately prior to the time first appointed for our meeting the country was in the throes of a financial convulsion of wider extent and greater severity than had befallen it in twenty years, if ever, which, it is reported, involved over 700 banks in suspension or failure, with liabilities of more than $180,000,000.

"Bradstreets," October 14, 1893, reports that in nine months to September 30, 1893, 567 banks suspended, having liabilities of $164,813,219, as follows:

States.	*Nat'l.*	*State.*	*Savings*	*Trust Co.*	*Private*	*Mtg. Inv'ts.*	*Totals.*
New England.	2	1	3	3	1	2	12
Middle	3	9	1	0	15	0	28
Western	45	60	18	2	82	2	209
Northwestern.........	38	47	10	5	44	2	146
Southern	34	23	7	2	23	0	89
Pacific	25	30	7	1	11	0	74
Territories......	5	2	1	0	1	0	9
Totals	152	172	47	13	177	6	567

"Dun's Review," October 7, 1893, reports:

"The aggregate number of failures of all kinds during the three quarters ending September, 1893, was about 12,000, and the aggregate of liabilities about $750,800,000 . . . which includes failures of railroads, banks, private bankers, loan and trust, mortgage and investment, and other financial corporations, which were not included until this year in such quarterly or yearly records of commercial disasters with the failures of commercial and manufacturing concerns, to which the records have heretofore been confined. . . . To the commercial world it would be an obvious injustice to include for the first time, without separate statement, the returns of banking and other financial concerns, of which there have been 718 failures during the year. In many cases it has been impossible to ascertain the amount of liabilities of these concerns, as they have not hitherto been reported to this agency, and it is also proper to remember that many of them, after a brief suspension of a defensive character, have resumed business and have since been paying in full all claims against them. From the reports made to this agency, reports emanating from the office of the Comptroller of the Currency at Washington, and dispatches published in various journals, an approximate statement of the aggregate liabilities of these banking and financial concerns has been prepared. Not deducting those which have since resumed payment, these failures represent aggregate liabilities of about $181,000,000, as follows:

	National.	*Other.*	*Liabilities.*
New England	4	13	$10,400,000
Middle States	3	40	10,500,000
Central States	19	156	34,000,000
Western States................................	58	190	50,200,000
Southern States	23	62	20,500,000
Southwestern States	19	46	29,400,000
Pacific States....	27	58	25,800,000
Total..	153	565	$180,800,000

"The failures of this character alone, during the months of January and February, represented liabilities less than $2,000,000 in each month. But in March the aggregate liabilities of banking and financial corporations which failed were about $4,500,000, in April about $8,500,000, in May about $17,500,000, in June about $33,500,000, making about $68,000,000 for the first half of the year. In July the liabilities were $73,000,000, in August $24,900,000, and in September $14,800,000, making $113,000,000 for the third quarter of the year, and about $181,000,000 for nine months ending with September. Of this amount about $21,000,000 represents liabilities of such corporations which failed in the Eastern and Middle States, about $50,000,000 in the South, about $84,000,000 in the West, and about $26,000,000 in the Pacific slope. But in this statement injustice would be done were it not carefully borne in mind that a considerable number of these banks, with a large aggregate of liabilities, have since resumed payment."

It was felt that during such a crisis, the length and extent of which no one could foresee or measure, bank officers could not leave their banks, where their presence was imperatively demanded, to attend a convention until the storm was past or had abated. When the Convention was postponed indefinitely by the Executive Council it was impossible to fix a date when we might venture to meet; in fact, it then seemed doubtful whether it would be possible to carry out the original intention of a convention in Chicago during the World's Columbian Exposition. Keeping this intention in view, however, the Council directed the second call to be issued so soon as it became evident that the acute stage of the crisis had subsided, in obedience to which call we are here met to-day.

Our meeting at this time and in this place is remarkable, if not extraordinary, in another respect, inasmuch as we are here to do honor to Chicago, the greatest of the world's younger cities, and to witness and take part in her magnificent and unparalleled triumph in the greatest of the world's expositions, the universal story of which from the multitudes returning from it has been that it is too great and too marvelous to be adequately described, and to be realized must be seen.

Permit me to congratulate you, one and all, upon being here after the labor, the anxiety and the suffering through which you, as bankers, have so recently passed, and upon the more pleasant prospect before you; and if the attendance here to-day and throughout the sessions of the Convention shall appear less than upon former occasions it must be attributed to the disarrangement of plans due to the monetary stringency and the unavoidable postponement of the Convention, as well as to the superior attractions of the White City, besides which all else here must appear but tame and insignificant, save and except always the great city of Chicago herself.

The cause of the financial crisis through which the country has just passed is an intensely interesting question to bankers; and I trust that some of the eloquent and distinguished speakers who are to address you may enlighten you fully upon it. The "Commercial and Financial Chronicle" of September 2, states the cause briefly and in a way that you will understand and generally appreciate when it says: "We assert that the existing state of business affairs is the direct result of the silver purchase-clause - first of the Bland-Allison Law and second of the 1890 statute," known as the Sherman Silver Law. "That the action of these provisions (1) destroyed confidence in Europe in the stability of our currency and hence in the stability of values here; (2) stopped the flow of fresh capital into the United States; (3) led to the withdrawal of a large part of the foreign capital invested here; (4) infected our population generally with the same lack of confidence; (5) induced the hoarding of gold and currency by Savings banks, trust companies, and individuals in this country, the currency being hid away also by the less intelligent; (6) and as a result business transactions became impossible and so commerce was at a deadlock or standstill."

The extreme gravity of the situation, as it appeared in August, when the clearing-houses of New York, Philadelphia and Boston had issued nearly sixty million dollars of clearing-house loan certificates, in their efforts to sustain credits; when currency was selling at a premium of from four to five per cent., deranging the entire exchanges of the country, and checks, except for small sums, were being paid only through the clearing-houses; and banks were daily closing by scores throughout the country, seemed to demand immediate action that would clearly define the position of this association and aid in the removal of the generally recognized cause of the crisis, so clearly pointed out by the President of the United States, to whom all honor is due for the firm stand he has taken and so nobly maintained in what he deemed a righteous cause. The officers therefore took the responsibility of addressing a circular letter to the bankers of the United States on August 19, which was sent to them with the petition to Congress therein referred to.

"*To the Bankers of the United States*: NEW YORK, August 19, 1893.

GENTLEMEN:—The extraordinary monetary crisis through which the United States passing, which involves the banks of the country to an extent that compels their officers to remain constantly at the post of duty while the danger is imminent, has constrained the American Bankers' Association to indefinitely postpone its Annual Convention called for the 6th and 7th prox., at Chicago. This will prevent such expression upon the part of the Association as the financial situation demands, which otherwise would be made. It thus becomes the duty of the officers of the Association to speak for it at this time, and suggest what seems to them to be the proper action for the bankers of the country to immediately take with a view to obtaining speedy relief from the continued and disastrous stringency.

It is manifest that the immediate cause of the prolonged stringency is the fear and apprehension of disaster engendered in the minds of the people by the continued purchases of silver by the Government, and by the unceasing issue of its obligations therefor, redeemable in gold, which fear and apprehension can only be removed and confidence restored by the removal of the cause. It is believed that the bankers of the country will understand and realize this to as great, if not to a greater, extent than any other class of citizens, and it therefore becomes the duty of such of them as fully realize this to urge upon their fellow-citizens, and upon Congress, the great necessity for the immediate and unconditional repeal of the purchasing clause of the Sherman Silver Act.

The repeal of this clause is demanded in the interests of those favoring a gold standard and of those favoring the use of silver with gold, as the continued purchase of enormous quantities of silver with gold obligations can only result in the final inability of the Government to redeem such obligations in gold, and in the continued over-production and consequent further depreciation of silver, thus rendering the prospect of any international agreement for its more general use throughout the world more hopeless than at present.

The President of the United States having convened Congress in extra session and recommended to it such repeal, the power of public opinion should be brought to bear upon Congress, to induce favorable action thereon. This may best be done by invoking the aid of the Press, and by citizens writing to their Senators and Representatives, and by sending to them petitions urging such repeal; all of which should be done to the fullest extent possible, and without delay.

A blank form of petition is enclosed, to be circulated among merchants, business men and others for their signatures, to which additional sheets may be appended. Act at once in the matter and secure the intelligent co-operation of others, providing them with printed or typewritten copies of the petition for the purpose.

Respectfully, WILLIAM H. RHAWN, *President*.

E. H. PULLEN, *Chairman Executive Council*.
H. W. FORD, *Secretary*.

PETITION TO CONGRESS.

The undersigned, business men, merchants, and others, believing that *restoration of confidence* is absolutely necessary to avert further disaster, and that it is the duty of our legislators to do everything in their power to bring about such restoration of confidence, respectfully but earnestly urge upon Senators and Representatives at the extra session of Congress, that the purchasing clause of the Sherman Silver Act be unconditionally repealed."

The letter was prepared with due regard to the fact that while the Association has always favored the fullest use of silver consistent with the maintenance of the gold standard, it has repeatedly condemned the excessive purchase of silver and its coinage into silver dollars as detrimental to the best interests of the people and dangerous to the welfare of the Government. It is important that the position of the Association upon this most momentous question should again be clearly and positively defined at this time by this Convention. Nothing would seem more certain than the impossibility of maintaining the present gold standard if the purchase of silver with obligations redeemable in gold is to be continued as heretofore.

The last Convention, after an exhaustive discussion of the subject, unanimously adopted a resolution declaring that State bank note issues for money are neither safe nor desirable. The decisive stand thus taken by the Association should still be firmly adhered to, now that the question is before Congress and the country in the proposed repeal of the law taxing such issues, which is the only barrier to a return to a vicious system of bank note circulation utterly abhorrent to every sound banker having knowledge of it in the past. It is not the destruction of the National banking system of uniform currency which would follow the removal of such barrier that is required, but its preservation with all needed improvement through well considered amendments that may from time to time be made in the National banking laws. One improvement suggested by the crisis would be the legalization of the suspension of payments in currency by solvent banks during a monetary stringency or crisis, and the authorization of payments through clearing-houses and of other like transfers of bank credits.

The preparation of a review of the work of the Association from its organization and a table of contents and analytical index of all its published proceedings was directed by the last Convention. The table of contents and index have been compiled and published and copies have been sent to the members of the Association. The compilation is very complete, embracing 147 pages uniform with the proceedings of the Association, and is in itself in the nature of a review of the work of the Association for the past eighteen years of its existence that will be a revelation to those unfamiliar with its history. More than two pages of the index, in double columns, refers to silver alone, and shows the extent to which it has claimed the attention of the Association from its earliest Convention. The review has been prepared by Sidney Sherwood, Ph. D., of Johns Hopkins University, the author of "The History and Theory of Money," and will be given an appropriate place in the proceedings of this Convention. Bankers will find it most interesting and instructive, and it embodies views of its writer upon our past and future work that should receive due consideration.

The educational work of the Association, which was begun with the appointment of a committee upon the subject by an Executive Council four years ago, is one that is very dear to the heart of your President. The Committee on Schools of Finance and Economy, of which he has the honor to be Chairman, presents its report to this Convention in the fourth of the series of pamphlets upon the education of business men published under the direction of the committee, entitled "Education of Business Men in Europe," being a full account of Professor Edmund J. James, following his address of last year, of investigations made by him in Europe for this Association into what is being done there in the way of providing for the special education of the business classes. The pamphlet is one of some 250 pages uniform with the proceedings, and has been sent to the members of the Association and to the universities and colleges and the leading financial and other journals of the country, and it should prove of inestimable value to the cause of business and financial education, which no country in the world needs more than the United States. This educational work is one that the Association should keep alive in such manner as may from time to time appear best and as means may permit. It is moreover a work that should specially commend itself to the various State Bankers' Associations, as it already has to some, and be continued until every leading university and college in the land shall see the necessity for establishing a department like the Wharton School of Finance and Economy, and until every city and large town throughout the land shall recognize the need for one or more of the Commercial High Schools so well described and so strongly advocated by Professor James.

The report of the Executive Council was read by Mr. E. H. Pullen, Vice-President of the National Bank of the Republic, of New York, as follows:

The following matters were referred to the Council by the Association which met at San Francisco, in September, 1892:

(1) Mr. Sherwood, of Michigan, offered a resolution recommending the abolition of par lists and that all country bankers make a reasonable charge upon all items received by them and remittances and credits.

This subject the Council voted to lay on the table.

(2) The Missouri Bankers' Association recommends that the by-laws be changed so that the representative appointed by each State Association will be elected a member of the Executive Committee for their Association for the State which he represents, and that the President of each Association be elected Vice-President for his State; that the Executive Committee so elected appoint members for all other States who have no Association, from members in attendance from those States.

This was also laid on the table.

(3) A series of resolutions offered by Mr. Webster, of the State of Washington, proposing to change entirely the organization of our Association, which you will find in the report of our proceedings of that convention.

The Council voted to lay them on the table.

(4) Mr. Northup, of Wisconsin, offered resolutions adopted by the Wisconsin Bankers' Association which opposed the move made on the part of the Washington Bankers' Association. Then he introduced the following resolution:

Resolved, That the Executive Committee be, and they are hereby instructed to take such steps as may be necessary to procure legislation abolishing the three days of grace on all commercial paper within the State of Wisconsin.

The Council are still holding this resolution under advisement.

(5) Mr. Northup also offered the following amendment to our constitution:

"*Resolved*, That section 1 of Article 9 of the Constitution be amended so as to provide that all State organizations of bankers shall have the right to name the Vice-President of the Association from their respective States."

After considerable discussion it was thought best that this also be laid on the table.

I think that concludes all the report we have to make at this time, and is all the business that was referred to the Executive Council by the last Convention.

On motion the report was accepted.

The Treasurer's report was then read, together with the report of the auditing committee thereon. The Treasurer's report is as follows:

TREASURER'S REPORT.

To the American Bankers' Association: NEW YORK, August 31, 1893.

GENTLEMEN:—I have the honor to submit the following report of the receipts and disbursements during the past year:

Balance on hand as per report Aug. 28th, 1892, including $10,000 invested funds returned to Treasurer		$12,315.46
Received from banks, bankers, etc., subscriptions		
625 at $10.00	$6,550.00	
362 at $5.00	1,810.00	
Received for interest on invested funds, ($10,000 bonds)	500 00	
Received for advertisements in proceedings of 1892	110.00	
do Guide	97.80	
do do 1893 (in part)	1,666.00	
do "Education of Business Men"	50.00	
do Demand Loan from First Nat'l Bank, N. Y.	5,000.00	$15,783.80
		$28,099.26
Disbursements as per accompanying vouchers, including $10,212.50 paid for $10,000 Lake Erie 2d Mortgage 5% bonds for investment account		27,741.94
Leaving balance on hand of		$357.32

GEORGE F. BAKER, *Treasurer.*

The report was accepted and ordered printed in the proceedings.

The Secretary's report was read, as follows:

SECRETARY'S REPORT.

To the American Bankers' Association: NEW YORK, October 11, 1893.

GENTLEMEN:—At the Executive Council meeting, held on January 18th, 1893, I was elected Secretary in place of William B. Greene, resigned. On January 19th, when I assumed control of the Secretary's office, I found that the Secretary had during the month of June, 1892, called dues in advance from 981 members of the Association to the amount of $5,275.00, and that on July 29th there had been paid into the hands of the Treasurer the funds that had been invested by the Executive Council, $10,000, with interest, as per statement attached thereto, $1,185.86, Total $11,185.86. I also found that the official year commenced with August 26th, 1892, and showed a balance of $12,-315.46 in the hands of the Treasurer, George F. Baker.

On November 9th $10,000 of Lake Erie and Western 2nd Mortgage 5's were purchased at 102½ net, amounting to $10,212.50, which left an available balance of $2,102.96.

From August 26th to January 18th inclusive dues were collected from 872 members, amounting to $7,145. Payments had been made to the amount of $5,167.91 in addition to the investment as above, leaving in the hands of the Treasurer, as a balance on January 18th, $4,145.01

From January 19th to August 31st dues were collected from 145 members to the amount of $1,220.00. During the same time interest was collected on investment for one year, $500. Also during that time there was collected from advertisements $1,878.80. On May 1st, we made a loan of $5,000 on our investment of bonds as collateral.

From January 19th to August 31st payments were $8,216.48, leaving a balance of $357.32 on August 31st, 1893, as shown by Treasurer Baker's report.

During the year we sent out over 95,000 circulars, pamphlets, petitions and letters, costing in postage $2,689

During the year we had 178 new members; we lost by failure, liquidation and withdrawals 190, dropped from the list 250, who had neglected to pay dues, leaving us with an active membership on August 31st, of 1,672. During the year we have noticed over 150 deaths of members in the Association; the complete list will appear in our mortuary report which will be published in the proceedings which will be issued by Dec. 1st.

HENRY W. FORD, *Secretary*.

The report was accepted and ordered printed in the proceedings.

THE PRESIDENT—Mayor Harrison saw fit to make some allusion to the stature of a very worthy gentleman. I take occasion to say that probably the greatest intellect of the 19th century was Napoleon Bonaparte, who has always been known in history as a man of great financial ability. I see no reason why the present Comptroller of the Currency should not be regarded as an authority on finance because he happens to be a little less in stature than other people. It affords me great pleasure to introduce the Hon. James H. Eckels. Comptroller of the Currency, who will now address us.

ADDRESS BY HON. JAMES H. ECKELS.

Mr. President and Gentlemen:

You will excuse me if I do not care to pose as a Napoleon of Finance. My observation has been that they are the most dangerous men who break into the financial arrangements of our country. I appreciate the compliment however and I certainly appreciate the cordiality of the reception which has greeted me.

Doubts have arisen in my own mind as to the propriety of one who is not a practical banker undertaking to discuss before an assemblage of experienced financiers questions bearing upon the conduct and operation of banks. And yet, because of the official position which happens to be mine, it is not inappropriate that I should be here, if for no other reason than to form your personal acquaintance. Nor is it impossible but that, from the vantage ground of having under the law the supervision of a system of banking which embraces within its fold almost four thousand National banks, capitalized to the extent of hundreds of millions of dollars, and having within their keeping three billions of the people's money, I might utter something of benefit gathered from an experience which, if brief in space of time, has at least been "big with events" in the history of American banking.

It is no exaggeration of statement to say that the happenings of the months passed from May to September must be accounted the most remarkable in every phase of financial bearing ever experienced by the American people.

Heretofore in our financial distresses the test of solvency has been applied to store and factory, to great industrial enterprises and railway corporations, but within the period of these months an affrighted people, fearful of the resultant effects of a financial system vitiated by ill-advised and ill-considered legislation, became for the first time doubtful of the distinctively financial institutions of the country, the banks, and as a consequence a steady drain upon deposits was begun, until, within the period of two months from May fourth to July twelfth, from National banks alone had been withdrawn more than $193,000,000, and from State, Savings and private banks a sum probably as great, not for purposes of trade or investment, but to lie in wasteful idleness, thus rendering the soundest institutions helpless, and causing a complete currency starvation in the midst of absolute plenty. These months witnessed the closing of more than one hundred and fifty National and not less than five hundred State, Savings and private banks, many of which under ordinary circumstances would have been solvent, and under fostering care and improved conditions have reopened their doors for business, to enjoy the confidence of the very ones most doubtful of them.

To-day, so great has the situation changed that, having in mind the past, both in the severity of the strain undergone and the long continuance of it, it would be, in the light of present conditions, both unfair and unjust, to deny that the bankers of this country have exhibited masterful skill in coping with a situation rendered complex beyond anything heretofore known by the withdrawals of currency by depositors on the one hand and the pleadings for assistance on the part of merchant and manufacturer on the other. The course pursued has caused no depositor to complain, while the generous treatment of mercantile interests in extension of credits and renewal of paper has prevented a panic in other directions, the far-reaching effect of which cannot be estimated.

But, while boasting of this new evidence of the ability of our people to withstand the severest of financial ailments, it will not do to count too much upon the progress made toward recovery and the recuperative power shown. Complete return to financial health cannot be had so long as the first great cause which covered all the land with doubt and uncertainty, and filled the people's minds with fear as to the stability of our financial institutions, yet remains to plague the lines of business, create distrust at home and abroad as to the value of American securities, and bring to naught the efforts of those who, in the midst of present disaster and threatened ruin, yet maintained full faith in the coming of better times. Until our financial laws accord with those that govern the world's trade, our currency takes on a uniformity and elasticity that now are wholly lacking, and our people are rid of the pernicious doctrine that money which is cheap and plenty is a blessing, and a source of wealth instead of a curse and the cause of financial panic and ultimate poverty, we cannot but expect at stated periods the return of conditions such as have and do still threaten us.

It is said, however, that in bringing about a different and other set of financial laws, the banking interests must hold aloof. It is a striking illustration of the extent to which unreasoning passion and prejudice have crept into our politics that, in the present emergency which confronts the country, bankers are compelled to hesitate as to the advisability, from the standpoint of prudence, of actively urging the repeal of the measure which stands confessedly as the source in the largest degree of past disasters and a dire menance to future prosperity. Surely the banking interests of the country are vast enough and of sufficient import to warrant a respectful hearing and careful consideration without arousing either the passions or prejudices of any fair-minded citizen of the Republic. It may be that bankers are selfish, but not more so, I venture, than men in other walks of life. Surely not more so than the representatives of the silver interests, who to-day inveigh the most loudly against them, and yet, with an inconsistency so marked that "he who runs may read," are, with selfish indifference to the public good, not only blocking the wheels of legislation at Washington, but, unmindful of the voice of people, and of the press, are making the fundamental principle of our Government, the right of the majority to control, "a hissing and a by-word," that their own selfish purposes may find fruition in legislative enactment that will compel the Government to be the special patron of their special product.

These critics who would debar the banker, because of the business in which he is engaged, from being heard on grave questions of financial policy, which engage the law-making powers, seem to forget that bank stocks are not all held in cities by capitalists and merchant princes, but that every town and village boasts of its banks, the stock of which is owned by men of moderate means—by merchants, farmers and mechanics. They forget that the deposits placed in the custody of the bankers of the country are of the many, and not the few who intrust to them their earnings and expect of them a watchfulness that no financial disaster, through legislation or otherwise, shall ensue. And, because of this bankers would be derelict in the discharge of a duty which they owe to a clientage larger in number, more widely scattered, embracing more classes and conditions of people, and possessed of greater aggregate wealth than any special interests within our borders, if they did not at such a time as this, with all the power at their command, insist that the rights of those whose interests have been placed with them be protected from the wasting influence of harmful laws. Therefore, when these dangers to the public good are upon us, let no banker hesitate to discharge his trust because of the utterance of some demagogue striving to win votes in coming elections, but having an abiding faith in the fairness of the American people, let him give utterance to his views through speech, petitions or the columns of the press upon every financial proposition that is under consideration, discussing it not from the standpoint of the shop, if I may be permitted to use such a phrase, but upon the broader ground of public good and sound economic principles, and he may rest assured the time will speedily come when the interests of the bank will be treated by our public men as dispassionately as that of any other business institution.

But what shall we learn from all this season of disaster? It was but yesterday that a distinguished citizen of the Republic gave utterance to the statement that the disasters through which our people have just passed, costly as they have been, would not have been too dearly purchased if from them there should be gathered sufficient wisdom to avoid in the future the errors which brought them upon us. The bankers of the country ought to gather some lessons from it all. I am sure some were not as strong to withstand the drafts made upon them as they would have been had they kept in mind in times of great prosperity the necessity of so banking as to be prepared for times of financial stringency. Competition for business is carried to the danger point by many, and the desire to secure a large business has led to the taking of risks not consistent with prudent methods. Not less a source of weakness has been the fact that to too large an extent has been carried the paper of those engaged in purely speculative enterprises, the value of which is at the best largely fictitious, and in times of great depression is worthless, and when to this is coupled the further fact that there is too little tendency on the part of banks to distribute their loans and too great desire to place them with large corporations, the reason is not wanting for many suspensions and not a few failures. It is a source of constant complaint on the part of some National banks that it was unreasonable to hamper them by limiting their loans to 10 per cent. of the amount of their capital stock, but the events of the past months have demonstrated the wisdom of that provision, and makes more strong the belief that a more strict adherence to it would make the banks stronger instead of weaker when threatened by financial panic. No section of the banking law is so frequently violated and in none is there so great safety.

In conclusion, Mr. President, let me say that the greatest safeguard to the banking interests must always rest in the wisdom, the high character, the absolute integrity of those who manage and conduct these institutions, whether they be National, State or private. The officers of the law must look to them for constant aid, and if mindful of the law and regardful of their duty towards those who have placed faith in their probity, there need be little fear of dangerous banking or dishonest dealings.

The next paper was by George A. Butler, President of the National Tradesmen's Bank, New Haven, Ct. Mr. Butler's paper showed careful research and thorough familiarity with the subjects discussed. It was listened to with the closest attention. The main points of the address are presented below:

A PRACTICAL PLAN OF BANKING AND CURRENCY.—BY GEORGE A. BUTLER.

In an address delivered at Saratoga in August, 1878, I was so bold, or else so indiscreet, as to say that bank notes secured by Government bonds give the country a circulating medium from which no loss can come to the holders of the notes; but that from an economic standpoint I cannot see that a deposit of bonds to secure the notes is at all necessary. Though the experience of this country justifies the continuance of the present system it wholly fails to meet the one thing demanded of paper money, and which alone justifies the use of paper money at all, and which a system of bank notes alone can give us. This one thing, which is so loudly demanded by many, is elasticity.

With a system of banking, the notes of which are not secured by bonds, the note circulation will expand and contract as the business of the country is more or less active. Such a system of bank note circulation would be exceptionally advantageous at the time of moving the great crops, cotton, corn and wheat. As no portion of the assets of the banks will be invested in low interest bearing bonds for the security of the notes the banks can afford to take out the full amount of circulation allowed by the Banking Act. All the banks having the amount of capital required, taking out the full amount of circulation allowed, will have a much larger amount of notes than can be kept out all the time, therefore there will always be a large amount of idle notes in the vaults of the banks, ready for use when there is more than the usual demand for currency. These notes, a considerable portion of which will be idle the greater part of the year, will meet the needs of the hour, and when the exigency has passed will flow back to the banks that issued them, there to remain until again needed for a similar emergency. These notes, not costing the banks anything in the way of depriving them of the use of a portion of their funds, will always be kept on hand until needed in the more active portions of the year.

Paper money not convertible into specie on demand unsettles values and disturbs and paralyzes industry. It should not under any circumstances be allowed to exist without the most strenuous opposition. Convertibility should be something more than a name. It should be a condition capable of sustaining the severest trial without causing disturbance or disaster.

In a paper read at Saratoga in August, 1880, I expressed the opinion that resumption of specie payments was not the final settlement of any of the great questions of finance that had agitated the country for so many years, and that it was not a demonstration of the courage and highest financial wisdom of the nation; that these things lay in the future, and that it was then the time for us to determine whether we are a wise and prudent people.

I thought then, as I do now, that it would be better both for the banks and for the country that the banks be freed from the difficulty of depositing Government bonds to secure their circulating notes. Safety to the holders of the notes is all that should be required so far as they are concerned. That can be attained as well without as with bonds.

I have on several occasions urged an amendment of the National Banking Act in such a way as to give more flexibility to the currency, and I feel confident that the holders of the notes will be as well protected as they ever have been.

(1) Repeal the section requiring a deposit of bonds to secure the notes.

(2) Issue to the banks notes, say to eighty per cent. of their capital.

(3) Permit no notes of a denomination less than ten dollars unless the smaller notes are fully covered by coin.

(4) The banks to keep a reserve in specie to the amount of twenty-five per cent. of the notes issued.

(5) Place a tax of one-half of one per cent. on the circulation as a safety fund, out of which the notes of any bankrupt bank may be paid in case the assets of the bank are not sufficient to pay all the debts of the bank.

(6) Remove the Department of the Comptroller of the Currency to the City of New York; the twenty-five per cent. reserve fund to be kept there also.

(7) It would be well to fix the amount of capital that a bank should have if it is to issue notes. It should be sufficiently large to be a guarantee of the good faith of those engaged in it. $200,000 will not be unfair to any place desiring a bank.

(8) Before issuing a certificate authorizing a bank to begin operation the Comptroller of the Currency should make a careful examination as to the means and character of all of those proposing to start a bank.

Under such a plan as is here contemplated, not one dollar would ever be lost to the holders of bank notes. A recapitulation will conclusively show that there is not the least need of deposited collaterals for the notes.

(1) There will be the capital and surplus of the banks.

(2) The liability of the stockholders to an amount equal to the par value of the shares owned by them.

(3) The circulation would be for only eighty per cent. of the paid in capital.

(4) There will be the coin reserve for twenty-five per cent. of the whole amount of the notes issued, the amount of which will always be greatly in excess of the amount at any time actually in circulation. This reserve reduces the amount for which resort to the assets of the banks must be had in case of failure to sixty per cent. of the paid-up capital.

(5) And finally, there will be added to the security mentioned, the safety fund which will always be accumulating, out of which the notes of an insolvent bank can be paid in the event that resort to other means should be inadequate to their full payment.

It may after all be said that all of these provisions do not give absolute security.

The absolute is not an attribute of man, nor is it necessary that it should be. A strong and seemingly sure condition of security is all that is needed, and is all that should be required. Had this plan been adopted thirty years ago, it is altogether probable that the total bank note circulation would not be less than five hundred millions of dollars, and if the tax had been, as now, one per cent. of the circulation, the amount collected would not be far from one hundred and twenty-five millions of dollars. As it is, the sum that has been collected by the Government up to the year 1892, is $72,670,412.

During the twenty-nine years 181 banks have failed, with capital of $33,030,900 and liabilities of $70,830,366, on which dividends have been paid to the amount of $48,052,938, leaving as the total amount now unpaid $22,777,428; cash in hands of receivers, $1,459,528; net amount not realized, $21,317,900, and assets still on hand, $25,802,888. If we call the remaining assets worthless the total loss under the National Banking System is only $21,317,900, but there is no good reason to call this amount lost as there are still 54 receiverships in full operation. But I am quite willing to admit of the worst possible statement that can be made; therefore will call the total loss for twenty-nine years $20,000,000, which, of course, falls entirely upon the depositors, the notes having been paid in full.

Had the $72,670,412 collected on the circulation been kept as a safety fund, both for the notes and the deposits, every dollar of the liabilities of the bankrupt banks could have been paid from this fund and there would still be left more than $52,000,000, or more than two and one-half times the amount of the total loss from the failing banks. The stockholders of the banks paid in on assessment $7,623,760. If we add this to the loss and not assess the stockholders at all there would still be left about $45,000,000 of the safety fund, or once and one-half the loss from the failing banks, calling the assets of the 54 banks in process of liquidation worthless, which they are not. Therefore it is quite evident that the plan proposed would not only fully protect the bill-holder but the depositor as well, as if they were put under the same conditions.

Thus far I have dealt mainly with conditions necessary to the safety of the holders of bank notes. Safety to the note holder is the first necessity of a bank note circulation, but it is not all that is needed to give the country all that is desirable in a circulating medium. There are other considerations of a purely economic character which must be kept fully in view, which, in fact, are absolutely necessary to a good system of currency. Under no circumstances should there be a paper currency which will drive coin out of circulation, or even to make the coin circulation a very small part of the circulation of the country. At this point I may as well say that I believe that any kind of paper money not limited in amount by law will at times cause a degree of inflation, and that at times the inflation will be of such an extent as to create an unfavorable condition of exchange. It is therefore necessary that there should be a large central reserve of coin, and also that there should be a large amount of coin in general circulation. The reserve of 25 per cent. will provide the central reserve, and the prohibition of all small notes—say below ten dollars—will keep a large general fund of coin to which the banks can have recourse to replenish the central reserve when largely drawn upon. The prohibition of small notes, unless they are fully covered by coin, is in accord with the best economic and financial thought of the time. It may fairly be said to be the cardinal principal of a sound and safe system of currency.

The object to be attained by the prohibition of small notes is the accumulation and keeping in the country a large amount of coin which will be in active circulation. The wisdom of having such a fund of coin will be seen in the fact that it will, to a large extent, be the movable currency of the country, and the only fund from which the banks can draw to make good their reserves. Also, that it will remain largely in the hands of the people, who will use it for their current expenses, making it active and flexible in its character and movements. One advantage of a large central reserve of coin against the circulating notes is that any degree of inflation will make itself felt upon this reserve and so distribute its force upon all the banks of the country, thus giving them timely warning that good judgment and caution are to be observed if they wish to escape trouble. This central reserve would be a financial barometer, by which the banks could tell somewhat about the financial weather.

Central redemption is an indispensable part of a good system of paper money. Without central redemption the bank note lacks contracting power; it can expand easily, but has not sufficient impelling force toward contraction. Central redemption supplies this. I deem it necessary to furnish the currency a highway over which the surplus currency can travel easily and rapidly. In central redemption we have this highway, over which the surplus notes may readily find their way home to the issuing banks, and that the amount will be much larger than it otherwise could be, thus giving to the currency much greater flexibility and thus adapting it more fully to the needs of the country.

My own observation of the Suffolk Bank system of redemption leads me to the belief that at times the circulation of the banks may be largely increased without in the least contributing to speculation, but there are times when the circulation may be expanded largely and rapidly without producing any unpleasant results; but, on the contrary, such expansion will tend to remove friction and to aid legitimate and necessary transactions. When the banks of the Eastern States were under the Suffolk system, and the notes were not much more than nominally convertible because of the very small reserve required by law, the circulation of the banks could not be pressed beyond certain limits, and every effort on the part of the banks to do so was met by correspondingly enlarged redemptions through the Suffolk Bank. The banks were compelled to recognize this fact and to be prepared to meet the demand of the Suffolk Bank. It was the Suffolk Bank system of central redemption that did so much to make the circulation of Eastern banks superior to that of other parts of the country. During this period the bank which I had the honor to represent had many transactions with drovers who bought cattle in Western States and who took the notes of the bank for that purpose. Our notes were also sought by and sent to Western bankers, but when the notes reached an amount in excess of the general average of the circulation they came home very rapidly, and sometimes in the original package. Under no circumstances could we extend the circulation beyond a certain amount, and that much within what our charter permitted, without the notes coming home without delay.

But after all that is said as to the benefit of a central reserve and central redemption, and notwithstanding the fact that it will do much to prevent an excessive issue of bank notes, I think it must be admitted that there will be times when an issue of paper money not limited in amount by law will contribute to the expansion of business and will aid speculation to an extent which will result in an unfavorable condition of foreign exchange and consequently the exportation of the precious metal. But I do not feel so sure that it will do so to such an extent as to be a very serious objection to such a system as I have presented for consideration.

At present the currency is very heavily weighted with a great amount of inferior silver coin, as well as with a large amount of paper money, known as greenbacks, issued by the Government. It seems to me very desirable that in bringing into operation a new system of currency, such as a mixed currency of coin and bank notes, the old should in part give way to the new, else we may fear that there may be such a measure of inflation as will further imperil the stability of the currency by a greater outflow of gold. I am of the opinion that there is already too large a portion of the currency that is not of gold, to make it perfectly safe to permit a free issue of any kind of paper money, and that in putting into operation a mixed currency of coin and bank notes, it will be only prudent to bring the change about gradually, by at first limiting the amount that may be issued, and also to retire the legal-tender notes as fast as bank notes are issued.

The money of a country is the implement of exchange used by every one in the country. One may not need a bank, but every one must have money, therefore the currency should be established upon the basis of public welfare. The benefits to be had by the banks should be a secondary consideration. It may be accepted as a great and general truth that the currency which shall prove to be the best for the people will be the best for the banks also.

The establishment of a new currency is largely a matter of detail, and prudential as well as economic reasons should enter into it. It therefore becomes a question as to which amount of capital a bank should have to be allowed to issue circulating notes. It is a question upon which people will differ. There is no purely economic objection to a bank of any size issuing notes. It is merely a question of prudence. There are weighty reasons of a prudential character which lead me to the belief that banks issuing notes should have a very considerable capital—a capital large enough to be a guarantee of the genuine need of a bank where located, and which will prevent banks from being located at every cross-road. The great number of small banks that have failed recently indicate that very many banks were located where they were not needed, and where they could not command the services of men who were at all qualified for the business. I do not think that any one has the right to complain if the amount of capital required is not less than $200,000. A place that does not need a bank of that amount of capital hardly has the right to take part in supplying the currency of the country. I believe that small banks, under incompetent management, are not to be desired.

The question of reserve is still an unsolved problem. Whether to leave bankers free to exercise their own judgment and discretion, or to have a reserve, the amount of which should be fixed by law, is still an open problem. Strong argument may be made on both sides of the question. I greatly doubt whether bankers may safely be left to their own discretion in the matter. The impulse for gain, proper to the business, will be a constant temptation to loan their funds too freely. On the other hand, a reserve that cannot be used in an emergency without exposing a bank to a receivership unless it refuses to discount paper when the reserve is below a fixed proportion of indebtedness, is no reserve at all, and is of no use whatever. It might as well have no existence. In fact it is a source of danger rather than an element of safety.

The question whether the banks are above or below their reserve is either a source of confidence or of distrust and danger. There needs to be a new idea about reserves. The public should be educated to the idea that the reserve has been maintained during ordinary times for the purpose of having a fund reserved for use in times of emergency, and a free use of the reserve in times of panic should be considered a wise and prudent action in the interest of the business of the country, and as being directly in the line for which the reserve is provided. If this be true it may be said that thus all laws in regard to reserves are of no value, but on the whole vicious. I do not take that view of it. It seems to me that there should be some regulations to which the banks may be held for the greater part of the time, which will in ordinary times create and maintain a large fund upon which they may fall back in times of emergency. That the banks cannot safely be left to the exercise of their own discretion in the matter, is seen by the operations of Trust companies all over the country, as well as by the fact that banks in the great cities practically break down in every great crisis.

At this point I wish to antagonize the generally accepted opinion that a reserve of 25 per cent. is sufficient for the reserve cities and 15 per cent. for banks not in the reserve cities. I believe that good banking anywhere needs an average reserve of 25 per cent. if banks are to be kept in a condition to meet a sudden and unexpected strain upon their resources. A still larger reserve should be kept in the great commercial cities. When bankers become educated to this view of their duty there will not be many suspensions of banks. Until bankers very generally believe in and practice keeping large reserves it may be doubted if it is wise to leave it entirely to their judgment and discretion.

The great advantage of a mixed currency of coin and bank notes may be expressed by the words flexible or elastic. The great advantage of a currency that can expand and contract with the buying and marketing of our great crops of cotton, corn and wheat will, I believe, more than compensate for any inflation possible under a bank note issue, limiting the denomination of the smallest uncovered note to ten dollars. I am confident that the great crops may be moved without the annually recurring troubles nearly every autumn, with which we are so familiar, and which to my mind are more disturbing and disastrous to the country than can result from such measure of inflation as I have mentioned, and which I think I have shown can be entirely avoided.

Under our present condition these disturbances are much more frequent than they could be under a good system of bank notes. It will be entirely in order to say that the panics under our mongrel system of currency have been more disastrous and the depression more prolonged than any we have had even under the old State bank circulation. I, of course, exclude the depression of 1837-1839, which had many causes. But I should regret a return to the old ways, though I would prefer that to free coinage of silver or Government paper. It matters not what the couse of the frequent contraction of credit, or, what amounts to the same thing, the inability to expand credits at the time of moving the great crops, the result is the same, a greater or less business depression, which I think would be much less frequent under the system of bank notes here outlined.

The prohibition of small notes not fully covered by coin is in accord with the best thought in monetary science, for the money which will be in the hands of poor people will be coin or notes fully covered by coin, therefore there will be no feeling of distrust on the part of the great mass of people and therefore no demand upon the banks by them. The holders of the larger notes will be of the same class that has deposits in the banks, who will know that the notes are even more secure than the deposits, therefore there will not be any strain put upon the banks by that class of holders of the notes, but on the contrary, as it is money that the people want in time of panic, that they may be sure to have something that they can use, people will be glad to get all that they can of the notes, which will operate to increase the strength of the banks.

Then again, a bank will not be obliged, as now, to use $110,000 of its capital to get $85,000 of notes to use, thus tying up $25,000 out of every $110,000 of capital. It is evident that the present system of secured notes curtails the ability of the banks to discount the notes of their patrons, by the difference of the cost of the bonds and the amount of notes issued, including the 5 per cent. reserved.

On the other hand, the notes not issued against a deposit of bonds add to the bank's ability to discount commercial paper, and at times of moving the crops will be of the greatest advantage. The advantage of a great reserve of coin is so apparent as to need no argument.

The advantage of central redemption has already been fully demonstrated in the Suffolk Bank system of redemption. Every great commercial nation has a currency of coin and bank notes. Many years ago I proposed this plan, except that I attached to it the limiting of the amount of issue by law, but I do not believe that this provision would work well in a country of so great an area as this country. Natural causes have placed this limitation upon our bank circulation, and it has not been satisfactory. There must be an elastic currency, which only a bank note circulation can give, or we must be content to endure the present embarassment in moving the crops each year.

But, more than this, I believe this country will have some kind of paper money, and that we must choose between a well-regulated bank note circulation and a Government issue of practically unlimited amount.

I believe the ultimate struggle on the currency question will be between a Government issue and bank notes. As between the two, almost any kind of bank notes will be less disastrous to the country than an issue of Government paper. One cannot contemplate the Government again putting its printing presses into operation without the greatest apprehension and alarm.

A very able paper was read by Allen Ripley Foote, Washington, D. C., the subject being "A Plea for a Sound Currency and Banking System."

At the conclusion of Mr. Foote's address Mr. Geo. S. Coe, President of the American Exchange National Bank, New York, was introduced and read a series of resolutions appended to Mr. Foote's paper proposing the appointment of a Monetary Commission to devise a plan of currency reform, the commission to be composed of members of the American Bankers' Association and the various trade and industrial organizations of the country.

In support of the resolutions Mr. Coe said:

It is a striking fact in our financial history that expedients adopted by this Nation under the sudden stress of civil war, are those which more or less substantially remain to the present date, and, while every other evidence of that momentous conflict has passed into oblivion that which was hastily adopted and would seem most transient is really the most enduring.

The power of government to enforce upon the people its own promises to pay something as equivalent to present payment of existing debts, still remains in modified form as the full legal-tender money of the Nation. A present value of service done by any one member of the community, does not even now fully meet a service of equal value, done by another, without the mysterious and qualifying intervention of a Government debt somehow interposed between them.

The question now naturally arises whether the public debt may be prolonged simply to issue currency upon it or may the amount be increased or diminished for this reason alone? Also, is there not in the National exchange of property passing through the hands of producers and consumers the real and fundamental currency most required for all sound banking?

The resolutions were referred to the Executive Council.

Hon. E. H. Thayer, of Clinton, Iowa, read a paper on "Good Roads as a Matter of Finance."

The next paper was by W. C. Cornwell, President of the City Bank of Buffalo, New York. A report of this paper is reserved for a subsequent issue of the JOURNAL.

The final paper on the programme for the day, was by Thomas B. Paton, of New York, on the subject: "Risks and Responsibilities Incurred by Sending Collections by Circuitous Routes." He showed that under the law there was no sanction for any circuitous road of forwarding checks, but a roundabout course of their transmission was directly contrary to the established rules of law; and he especially emphasized the statement that the cases on the subject contemplate direct (as distinguished from circuitous) transmission to the place of payment. Examining the law as to bills of exchange, the speaker quoted the conflicting judicial opinions as to whether equal diligence was required in their presentment a in that of checks.

Mr. George S. Coe offered this resolution, which was adopted:

"*Resolved*, That the action of the officers of this Association in sending out their letter of August 19, with accompanying petition to Congress, be, and the same is hereby approved."

On motion the Convention adjourned until Thursday, October 19, 1893, at 10 A. M.

SECOND DAY'S SESSION.

The Convention convened at 10 A. M., and was opened with prayer by the Rev. Dr. Thomas Hall.

Mr. George S. Coe presented a handsome gavel to President Rhawn, who accepted the gift in an appropriate speech.

President Rhawn then announced the names of the Nominating Committee as follows: Hon. Charles Parsons, St. Louis, Mo.; Henry C. Brewster, Rochester, N. Y.; E. H. Bourne, Cleveland, O.; Frank M. Hoffstot, Allegheny, Pa.; H. C. Drew, Lake Charles, La.; A. J. Frame, Waukesha, Wis.; James R. Branch, Richmond, Va.

The Executive Council, by the Chairman (Mr. E. H. Pullen), then reported:

First.—That hereafter all addresses prepared for delivery to this Convention shall not exceed in length twenty minutes, and as much shorter time as possible, and that the members seated in the body of the house shall have an opportunity on at least one day of the session to express their views and opinions an any subject they see fit.

Second.—That provision, however, only applied to speeches and papers made by members of the Association; it did not apply to those gentlemen who may be invited to address us, yet at the same time we shall intimate to these gentlemen that it would be well to limit their addresses also to the same time.

Third.—We felt that in the present condition of financial affairs and of the United States Senate that it would be well to adopt a simple resolution to the following effect:

Resolved. That in the opinion of the American Bankers' Association in convention assembled at this time, it is wise and absolutely necessary that the United States Senate shall immediately and absolutely pass the unconditional repeal of the silver-purchase clause of the Sherman bill.

The resolution was adopted.

THE PRESIDENT.—Gentlemen, it is now my very great pleasure to introduce to you a member of Congress who had the courage to rise in defence of the American banker in the silver debate on the floor of the House of Representatives in Washington. The Hon. Joseph C. Hendrix, of New York, President of the Union National Bank of that city, will now address us.

Mr. Hendrix spoke in part as follows, his theme being:

THE PANIC IN AUSTRALIA AND THE UNITED STATES.

In the year 1893 two countries, both new worlds, which have for many years been in evidence as possessing boundless resources and unlimited possibilities in the production of wealth, have put on the sackcloth of repentance and have covered their heads with ashes for their financial sins. The one is a pigmy among nations, the other is a giant. The relation between the explosion of the new South Sea bubble in the Australian colonies of Victoria and New South Wales and the panic which has forced the Congress of the United States to meet in extraordinary session to apply a remedy for our financial ills by legislation, is closer than mere coincidence. It is, of course, granted that our finances have felt the force of the Australian explosion, and that it was one of the disturbing influences at work with us, but it is not less certain that we have contributed by our financial errors to give the pigmy the strong drink, under the influence of which he has fallen, and in his fall has tripped and almost upset the giant. Australia has had a period of financial intoxication. The world has no parallel to it. Four millions of people in that far away land of the kangaroo have been able, publicly and privately, to borrow about two thousand million dollars from the rest of the world, chiefly from England, and to get control of most of this vast capital during the time that this country was following the financial theories of owners of silver mines and turning its back upon the settled experience of civilized nations. Our folly was Australia's opportunity. The foreign capital which poured in upon us after the resumption of specie payments marked the opening of a period of prosperity in this country that was cut short by the creation of the Bland silver dollar. It was continued in Australia, and it has ended there with disaster. We sold our birthright for a mess of pottage. Australia got it and wasted it.

The high promise of the ten years following the resumption of specie payments, in which period the surplus capital of Europe came to us freely, was chilled by the threatening advance of silver in our currency, and the date of the heavy withdrawals of gold from the United States marks the beginning of the period of Australian inflation. There were two new and inviting fields for the capital which our laws were expelling. One was Argentina; the other Australia. Land booms, mining booms, and speculation of all kinds became rife in Victoria and New South Wales. The tide of foreign investment set strongly toward the English colonies. A sort of patriotic fervor seized London to help develop English possessions.

There were deposit agencies established in the United Kingdom for the various Australian banks, and the following table of quoted rates for deposits is a specimen of the bait dangled before the eyes of the British public:

Mr. Hendrix then read a table showing the rates of interest offered by the various Australian banks, these rates ranging from 3½ to 4½ and 5 per cent. for deposits from one to three years.

The old maids of England fell in love with Australian fixed interest bearing deposits. The banks dripped with fatness. Around them grew up every conceivable form of land, loan and finance companies, to make use of their spare cash. These companies issued shares which speculators pledged at the banks. They created securities based on land and building booms, and these were put up as collateral. There was a high carnival of speculation. Wandering players who had counted railroad ties out West got to Australia and became rich and famous. The Australian millionaire brushed against the silver king on the Strand, without stopping for mutual felicitations over the common cause which enriched them both. There seemed to be no end to the confidence of the British public. When a speaker at a banquet given by the Mayor of Melbourne said that the motto there seemed to be "Money is no object," the diner shouted with delight. The gold that had ceased to flow to America was seeking reward in a thousand and one schemes in that far off land, and the stories of fortunes quickly made in Victoria were on the tongues of gossips in the ale houses of London.

A fickle public at last took warning. Argentina had proved a delusion and Australia passed under suspicion. The first sign of weakness was when the Melbourne banks formed an alliance and agreed to raise the interest rate on fixed deposits for twelve months to five per cent., and to refrain from advancing any more on real estate security. The numerous financial companies of Melbourne whose advancing shares had made adventurers rich, began to tremble and land speculations began to experience hard times. Land booms collapsed. The supply of money, however, though shrunken, continued to come from England, and in the two years ending March, 1892, belated investors sent over $35,000,000 to Australian banks for fixed deposits, which remain as fixed as Lot's wife looking backward. Things rapidly shaped for a panic of the first magnitude. Forty of the mortgage and investment companies went to pieces and their assets have so far yielded about one cent on the dollar.

In six months, 20 institutions in New South Wales, involving $80,000,000 of capital, went under, and up to May, 1892, various financial companies in the Colonies, involving over $125,000,000, also went down. These were not banks, but building, land, loan and finance companies upon whose securities the banks had loaned. The banks then began to topple—not small banks of the Zimri Dwiggins order, but great heavily capitalized institutions of the English and Scotch model. In the fall of 1892, the Federal Bank passed its dividend and wrote off its reserve fund, and the Commercial Bank wrote off $1,500,000 and reduced its dividend. The panic began when in January, 1893, the Federal Bank closed its doors, and it extended when the Commercial Bank failed with its 80,000 accounts, its $80,000,000 of time deposits at high rates, and its $30,000,000 of home money. The balance sheet of this bank on June 30, 1892, showed the item of bank premises and furniture at $2,250,000. Fourteen banks went down in a row, locking up $130,000,000 of English money, a large portion of which naturally and commercially belonged to the various forms of investment offered by this country.

The principle of co-operation was wholly absent from the Australian banks in their hour of trouble. They had an alliance to increase the rate of interest in 1888 to stimulate the British public to send out more money, but this bond proved to be a rope of sand when the Federal and Commercial banks failed, and then followed a sudden loss of confidence in the rest of the banks. Indeed, their condition was probably beyond the power of co-operative help. There was too much of a vacuum caused by shrunken land booms and demoralized building speculation to be overcome by any device like our clearing-house certificates.

In this country when a bank fails the thought is to pay the depositors as speedily as possible, and the instances are very rare where the creditors are asked to become partners in a reconstructed institution. Of nine great banks in Australia under reconstruction the amount due to depositors exceeds $300,000,000, of which sum more than $250,000,000 are fixed deposits, and of this sum $85,000,000 is due to British investors. The fate of these fixed deposits interests us most. Their treatment varies, but the final payment is deferred in most cases into the twentieth century.

The singular and novel action of the Government of New South Wales is worth mentioning. It is a method of relief hitherto unknown. The bank notes payable on demand already issued, to be issued or reissued, were made a legal tender and when the Sydney banks suspended the Government agreed to an issue of $10,000,000 of Treasury notes to pay off fifty per cent. of the demand claims of depositors. Inasmuch as the British claims were time contracts this legislation created a preference in favor of home creditors and made their claims, which the Government assumed in part, the first charge upon the assets of the broken banks. This has naturally increased the disgust of the Englishman with his patriotic desire to develop the Colonies, and his reflection doubtless is that he could have fared no worse in America. In Victoria the law makes him a shareholder or debenture owner in a reconstructed bank, whose assets, intermingled with collapsed land and building booms, have not been either examined or appraised, and in New South Wales he has to fall in behind the bank note and the Government Treasury note charges against the assets of the bank where his money was deposited. The Western farm mortgage business has never dipped as low as that.

The food for reflection contained in the history of the Australian panic should not be lost. The imagination is dazzled by the splendor of the era that must have followed the resumption of specie payments in this country had we clung to a stable standard of value and promptly crushed out the false finance of the silver producer and the fiat money apostle. The Bland Act, followed by the Sherman Act, with a free coinage party never idle in Congress, drove away the foreign capital that Australia has since squandered, and this distrust of Europe in our ability to keep upon a gold basis came so vividly home to us when the free gold in our Treasury fell below the point of fixed reserve that our own people caught the infection of distrust.

No one could tell how fast the remainder of the gold stock would disappear. Every sign pointed to a steady drain, and the European holders of our securities to the extent of probably a thousand millions had our gold supply at their mercy. Large holders of cash or its equivalent began to get their money into gold or its representative and to use safe deposit vaults instead of banks. The day of judgment in our finances seemed at hand. The apparition of the sixty-cent dollar frightened the Savings banks' depositors. That large class, which sees no monetary system beyond the banks, began its steady withdrawal of deposits. Fluid cash was sponged up with amazing rapidity. It disappeared from the channels of commerce like water running into dry sand. The National Banks from May 4th to July 12th lost $193,000,000 of deposits. Savings banks, State banks, trust companies and private banks—that great collection of financial institutions from which we get no adequate or uniform concentrated reports -lost in the same proportion. A general suspicion of the condition of the banks did not seem to control the withdrawals. The future of the money of the country was suspected instead, and the feeling seemed to be to corral and mass in hiding all of the present money that individual ownership could control. All kinds of money were hoarded. We began to think about ourselves just as the foreigners for years had been thinking about us.

Banks cannot do business without deposits, and the heavy drain of cash caused numerous failures. In the eighteen years from 1873 to 1890, the annual average failures of National banks has been 6½. In 1873 only 11 National banks failed. This year there were 155 failures among National Banks. In the thirty years of the National banking system, up to October 31, 1892, there were but 181 failures. The Comptroller of the Currency reports that since January 1, and up to September of this year, 560 State and private banks have failed. The National banks which had failed had liabilities amounting to $71,496,383. One-half of these banks have resumed, indicating that insolvency was not the cause of their failure. The statistics as to State and private banks cannot be put forward with confidence. In the following table, as prepared by "Bradstreets," it appears that the total liabilities of all the banks which failed were $166,131,618:

Failed.	*Liabilities.*
151 National Banks	$71,496,383
171 Private Banks	19,517,404
164 State Banks	34,755,268
45 Savings Banks	16,234,563
12 Loan and Trust Companies	22,338,000
6 Mortgage Companies	1,790,000
549	$166,131,618

It is a curious fact that in the sections of the country most fertile in financial heresy, and most prolific of legislation inimical to banking and money lenders, the bank failures have been largest. Kansas leads the list in the number of failures. West of Pennsylvania the suspended banks owed $108,000,000, while east of Ohio their liabilities were less than one-fifth of that amount. In striking contrast to the collapse of the Australian banks to which the savings of the English middle class were so freely sent, is the fact that the liabilities of the American Savings banks which failed in the panic of 1893 were but nine-tenths of one per cent. of the total of the liabilities of all the Savings banks. The liabilities of the National banks which failed were about 4 per cent. of the total deposits of such banks, the liabilities of the State banks were about 5.3 per cent. of the total deposits of such bank, and the liabilities of the private banks were about 20 per cent. of the total deposits in private banks.

So many banks have resumed and so many others are considering resumption, that the final loss to depositors will be small, and as compared to the Australian disasters, positively not worth mentioning. Indeed, no such reconstruction schemes as are familiar in the Colonies, involving the transference of depositors' claims, partly into banking shares and partly into long time debentures, would be tolerated in this country. We required no new remedial legislation for depositors in broken banks, and no one ever thought to look at a bank note to see if the bank that issued it had failed.

The principle of co-operation has been vindicated afresh in this panic. The associated banks in clearing house cities made common cause of the disaster, and not only protected each other and their customers but proved a tower of strength to the whole banking system of our country. They have demonstrated that by co-operation the banks of this country have a resource of power superior to that which legislation can confer, and that this power exceeds any possible legislation in protecting the interests of the bank creditors. It keeps watch over weak banks, supplies deficiencies in resource to solvent banks under attack, and speedily liquidates where liquidation is necessary. The splendid generalship of the Clearing-House Committee in New York city commands unqualified praise. This group of skilled bankers bravely faced the storm and uttered no note of discouragement in the darkest hour. The New York bank reserves went down to $16,545,000 below the legal point, and currency payments were practically suspended, but each day at high noon this committee was in council, keeping a brave heart and steadily guiding the banks of the whole country, conscious that a false step or failure might precipitate the suspension of gold payments by the Government and the collapse of the financial machinery of the land. The promptness with which the device of clearing-house certificates was adopted was a most important check to the wave of disaster. The certificates were freely issued, and although on September 23 there was a surplus of reserve of over $17,000,000, they were ungrudgingly continued and will be until the last sign of danger is past.

The whirlwind which has affected so many of our banks has proved the severest test to which they have been subjected in modern times, and that they have as a body come out of the storm so trim and sound will be the topic for admiring observation for many years. The National banking system has shown afresh its splendid capacity for meeting the popular wants, and its short-comings are due to the ignorance and narrowness of the legislation that binds them and limits them, and not to their management. The whole banking system of our country is likely to be reconstructed in the near future. It is time that out of the ripeness of our own type of industrial civilization there should be developed a system that will have the character of permanence, stability and elasticity. Reason should cut away the straight-jackets into which banking legislation confines its offspring. No country should be punished by a system which, in times of panic, must find in itself, through its own devices, a way to supply the deficiencies of law, and in doing so, to defy law. Such a time as we have just experienced shows that safety in banking may make the infraction of law a necessity. This is not a condition which bankers can tolerate. There are some legislators who cannot understand why impaired reserves and suspension of currency payments should not mean to a bank at any time instant dissolution, but practical experience enforces a lesson that must ultimately penetrate their intelligence that good banking keeps the financial machinery at work in times of great panic by cutting the knots of red tape, and that, when public safety requires it, there is a higher law, that of self-protection and the defense of sacred trusts, that dictates the conduct of great banking interests. The common sense of depositors does not expect that banks possess ability to reduce their assets to liquid cash, under the whip of a panic, or that they will withhold relief from their reserve to thirsting and starving commerce, and add force to the disaster raging about them. The power of combination to protect and defend bank property and depositors' interests in days of panic, presses home to legislators the impotency of their multiform restrictions, which, if obeyed in 1893, would certainly have smashed the financial machinery of the whole country. The banking system that is not built to ride the storms of panic does not properly belong to this country or this age, and it becomes the duty of bankers in the United States to follow approaching legislation with a keen intent to see that the work of a lifetime and the accumulations of years of patient industry shall not in the hour of a great shock to credit, or of financial convulsions, be placed in special peril by reason of strangulation in the leading-strings of narrow-minded regulation. In the struggle for life no man wants his hands or feet bound. In dealing with panics no banking system should find itself so tied up that it cannot be free to act in self-defense.

We have thus imperfectly outlined for observation, and not specially for contrast, the panics of two countries that lie far apart on the path of the world's travel, and the evident conclusion is that the essential soundness of commercial conditions in our Republic has been so demonstrated, that, as Englishmen view the Argentina and the Australian collapse, they will be disposed to await with impatience an opportunity to come back to us with their surplus capital. That hour will strike when our National finances are in line with the experience of all the civilized nations. The stinging lesson of the panic of 1893 is an old one. It is simply that "Honesty is the best policy." It is because the world believed that we had lost sight of this old principle, that English capital was drawn out of our very vitals when we needed it and was thrown at the heads of the Australians who did not know how to use it. With complete submission to the stubborn truth which all through life convicts conscience and convinces judgment that in all of our dealings we must maintain good faith if we would prosper, our Nation may now, by heeding the lessons of 1893, gird itself for a new era, which will be made glad by the confidence which, if it deserves, it will receive.

Horace White, editor of the "New York Evening Post," spoke on "An Elastic Currency." This paper will appear in a later number of the JOURNAL.

At the conclusion of Mr. White's paper the President introduced Mr. Lyman J. Gage, President of the First National Bank, Chicago, Ill.

ADDRESS OF LYMAN J. GAGE, OF CHICAGO.

Mr. President and Gentlemen:

I think it is not quite fair to catch a fellow all relaxed, interested in what somebody else has been saying, deeply absorbed in the reflections of others, and then pulling him to the front like this and asking him to make a few remarks to a body of gentlemen like you. Of course no man would like to risk such little reputation as he might have gained in any of the walks of life by speaking to a thoughtful body of men without having had some opportunity for previous reflection. I shall not make that mistake. I look around upon this assembly with extreme gratification. I remember well the early days of this Association when the thought of a bankers' association in America first found lodgment in the minds of a few men. I see some of those men here to-day—Mr. Coe, the veteran banker of New York; Mr. Deshler, Mr. Pullen, Mr. Rhawn, Mr. Van Slyke and others. We did not know whether its future history would ever justify the movement that was then set on foot. Doubts were expressed all over the country about that. The bankers themselves, who live so isolated lives, as you know, and who are suspicious of all influences that come in to operate upon them, preferring to be independent in all their ways, distrusted somewhat such an organization. This fact, perhaps, has hindered its usefulness and delayed its progress; but that the fundamental idea of a friendly association among representatives of financial institutions living in all parts of the United States has been justified by the facts this assembly I think fully demonstrates. And the history of the Association, in the literature it has produced, in the discussions that have been had from time to time, and in the better methods which have come to prevail, largely I believe as the result of sound and true ideas emanating from these assemblages, commend to the reflection of the individual at his home the consciousness that there was an atmosphere for the co-operation of all the banks of the United States, to which he was in a measure responsible for his correct thought and his correct action, and has induced him to study more closely and to be more faithful and more judicious in all his operations. I deprecate, and I think we all do, a sentiment which has been bred in the minds of our people by self-seeking demagogues, by political tricksters, by men who seek no aim except self-aggrandizement, to cultivate in the minds of the people a prejudice against the bankers of the United States. It has been their effort, and they have to a degree succeeded in their efforts, to make the people believe that the bankers in some way had separate interests from the people; that in a scarcity of money or in some particular form of money which the bankers desired by that system, if adopted, the interests of the people would be endangered. Now we all know that in all communities there is no man more respected than the banker, and the individual banker does possess the confidence and the respect of his clientele and of the society in which he lives. But this thought that the bankers as a whole have got some peculiar ambition by which they wouldserve their own personal advantage at the expense of the public, operates not upon individuals but upon the bankers as a class. Well, how can we overcome it? We can overcome it by individual right action. We can overcome it by right living. We can overcome it by associating together in a friendly relationship, such as is represented here. We can overcome it by being interested and true members of the societies to which we stand related in our business affairs. We can overcome it by showing that we are interested, and that our interests are so widely related to the general industry and the prosperity of the country that nothing of the kind can happen to any man engaged in trade or industry adversely to him without coming back and affecting us.

I cannot tell you, gentlemen, how glad I am to see you in Chicago. I am sorry that the bankers here are so absorbed in their hospitalities and duties that theyowe perhaps to a larger public than to the bankers that they cannot give you quite as much time and attention as they have in past years. I assure you we are glad to see you here, not only as visitors to this convention, but we believe you have come also out of sympathy and regard to that beautiful White City of ours which has been produced at the expense of such prodigious effort and labor.

I hope all of you will accept the invitation of the Union League Club to attend the reception to-night. There we may be able to meet in a more informal way than we can here in Convention, and can introduce ourselves to one another, and the man from Omaha can say to the man from Pittsburg, "My name is Millard, from Omaha."

The following were presented and ordered printed in the proceedings: Paper by Hon. E. O. Leech, New York, subject: "The Silver Question as Related to the Appreciation of Gold;" paper by Mr. James H. Tripp, Marathon, N. Y., subject: "Is the National Banking System of any Benefit to the Country, and Should it be Preserved and Perpetuated?;" address by Mr. Frank Miller, Pres. Nat. Bank of D. O. Mills & Co., of Sacramento, Cal., subject: "Land Transfers;" address by Mr. E. D. Edgerton, President of the Helena National Bank, Helena, Mont., subject: "Montana and the Silver States during the Recent Panic."

F. J. Dillard, of Sherman, Texas, addressed the Convention on the subject of "Money." On closing his address Mr. Dillard said:

On yesterday, Mr. President, you saw fit to refer to the Comptroller of the Currency as the Napoleon of finance. Remembering the ruin, the trouble, the despair which had been wrought by these Napoleons of finance he declined to accept the term. Let me then make this amendment and say that he and the Secretary of the Treasury are the lieutenants, the aids, the able helpers of that Wellington of finance, Grover Cleveland, against whom all the Napoleons of finance of this day have warred in their attempt to overcome all economic principles, in their attempt to wipe out lines which for ages have set off sound money from poor money, and all their efforts have in him met with their Waterloo.

George E. Leighton, of St. Louis, read a paper on the "Need of a Comprehensive Currency Reform."

Mr. Charles R. Parsons, of St. Louis, Mo., addressed the Convention. He said:

As we are approaching the end of this session I desire to take this opportunity of offering a resolution of thanks and congratulation to the people of Chicago. I wish to thank them for the courtesies they have extended to us on this occasion. I also think it is the duty of this Convention to express the thanks of the bankers of the United States to the city that had the nerve and the courage to establish this great World's Exposition here, and I wish to thank them for the wonderful success of the "White City." I imagine that no such exposition will occur again very soon. I think it is doubtful if a location could be found possessing all the elements of beauty that are here displayed. The architects and the artists have carried to the highest degree of perfection the beautiful designs. There is, however, one element of profound regret in all this beautiful scene, and that is that these magnificent structures must be destroyed. To change the language of the immortal bard, Shakespeare, it is a matter of serious regret that these cloud-capped towers and gorgeous palaces, this great exposition itself, and all that inhabit it, shall dissolve and like an unsubstantial pageant faded leave but a wreck behind.

I therefore move, sir, that the thanks of this Convention be tendered to the City of Chicago for the civilities which have been so hospitably extended to us and for the sublime courage they have exhibited in the establishment of this wonderful exposition.

This motion was seconded by Mr. E. H. Pullen, of New York, who said:

Mr. President and Gentlemen: I desire to say a few words, expressing our appreciation of the generous hospitality extended by our Chicago brethren to our Association. They have literally and abundantly taken us in.

If there is a city in this country, or indeed on the face of the globe that can do this pre-eminently well, Chicago is that city. In comparison, all other cities are not in it.

We appreciate their elegant courtesies more gratefully at this time when the citizens of this peerless city are called upon to entertain countless thousands of visitors from every part of the world who have flocked here to see the greatest exhibition of all ages.

The financial cyclone that recently visited our country from the North to the South, from the East to the West, touched Chicago but lightly. New York practically suspended for a period cash payments; Chicago did not. New York resorted to the issue of clearing-house certificates; Chicago did not. New York had no World's Fair, drawing money by the millions from the pockets of visitors from all lands and isles of the sea. Chicago had and reaped a golden harvest. New York bore cheerfully the heat and burden of the day and held out its helping hand to all sections of this great country, struggling in the throes of financial panic, whose far-reaching proportions have never been equalled. Chicago—well, Chicago, took good care of Chicago and her guests.

Wonderful Chicago! Her history is a marvelous record. Roll back the tide of time! Behold her in infancy, then note her rapid progress,—the development of her seemingly illimitable resources, her unparalleled growth through the years, until ruin came, as it were in the twinkling of an eye, in a destructive, devastating and widespread conflagration.

The ruin seemed irreparable, but Chicago rose phoenix-like from the ashes, and is to-day a grander and nobler city than before, and she has now given us the World's Fair, an exhibition such as the world has never seen and may never see again; but while we are overwhelmed with astonishment at, and admiration of, its marvelous and numberless attractions, we are impressed with the indomitable perseverance, the irrepressible energy, the industrious enthusiasm, the unfaltering courage of the men and women of this city, who achieved such a wonderful success, and we gladly acknowledge their pluck, snap and vim.—(Applause).

The attractions of the World's Fair have drawn many of us away from our Convention, where we have been edified with able addresses, delivered by eloquent speakers on financial topics,—on good roads (to Chicago), (Laughter), an elastic conscience,—or was it currency, (Renewed laughter), and the relationship of the Australian Kangaroo to the American Eagle. Then in the White City we have been edified by the wonderful display of the skill and inventive genius of man. We have mingled with Fijis, Esquimaux, Turks, Hindoos, Mongolians, Egyptians, and all other races of mankind. We have walked the streets of Cairo and Constantinople, and have ridden on the camels around the pyramids, and finally, tell it not in Gath, publish it not in the streets of Askalon, we have meandered in the seductive Midway Plaisance. [Laughter and Applause.]

The Plaisance, the Plaisance;
They say such things,
They do such things,
In the Plaisance, the Plaisance;
We will never go there any more.

We are glad to be here—we appreciate the generous hospitality of our Chicago brethren.

Banks throughout our country should be bound together indissolubly by the ties of fraternal sympathy. Surely those who toil in a common profession, who are citizens of a common country, speaking a common language, and having common influences, inspirations and aims, should be one in sympathy, with hearts keenly sensitive to the joys and woes, the fortunes and the misfortunes of each other, and responsive in the charity that ennobles a common humanity.

Our professional labors are the same. They have been stereotyped and reduced to a uniform system by the experience of years, until now we seem parts of a vast and intricate machinery, and this identity of work, interest, trust and responsibility should draw us all together in fraternal union. (Applause.)

We meet but seldom, and many do not meet at all, but though we may never see each other face to face, yet our venerable Uncle Samuel brings to each of us daily au-

5

tographic remembrances, some of which resemble Egyptian hieroglyphics, or the fantastic inscriptions on China tea-chests, and yet are familiar to our eyes and worthy of our confidence, so thus in our interwoven system of exchanges we enjoy mutual recognition.

We will return to our respective homes with the most grateful recollections of the kindnesses lavished upon us during our brief visit, by the banking fraternity of this city, and with the sincere hope that we may have an opportunity to reciprocate in some measure the generous treatment we have received.

Mr. Parsons' motion was carried unanimously.

Thomas R. Roach, New Orleans, La., commended the banks of New York in the following language:

I rise to offer another resolution, which I think is due from every banker in America. Our friend, Mr. Pullen, in his remarks just now, spoke of what the bankers of Chicago had done, and what the financiers of New York *per contra* had not done. All who know New York and its bankers know that one of their pervading traits is exceeding modesty, and from that modesty arises Mr. Pullen's disavowal of some of the highest and noblest attributes which have marked the course of the New York bankers during the past few months. Take the history of this country through storm and sunshine, in finances, the course of the New York bankers, assembled as they are, through their clearing-house in a compact body, powerful, enterprising, conservative, and evincing an honor of the highest degree, have ever justified the confidence, not only of the banking fraternity but of their fellow men throughout the land. Mr. Pullen spoke of their having resorted to the issuance of forty millions of clearing-house certificates. They did more than that. In order to protect this country and avert disaster, whether from the banks of the Rio Grande or the icy hills of Maine, they resorted to every legitimate expedient to keep not New York alone, to keep not our own banks upon a plane of profitable business, but to keep this grand country of ours, its finances, its business men, its merchants and manufacturers as well as bankers—to keep them from trouble and disaster. I think it is due to the banks of New York that we here assembled, representing every section of the country, should offer them our most profound acknowledgment and grateful thanks for the magnificent work they have performed in the past six months. I therefore offer the following resolution:

Resolved, That the thanks of the bankers of America be and the same are hereby extended to the banks and bankers of New York city for their skilful and magnificent exertions during the past six months in upholding the credit of this country. (Applause.)

Mr. Charles Parsons, of St. Louis, supported the resolution. He said:

I second that resolution, and in doing so I desire simply to say that if the bankers of the City of New York had failed to act as they did—for which action they have been denounced by political demagogues—if the bankers of New York had not used the system of clearing-house certificates that they did, the ruin throughout this country would have been something absolutely terrific. I do not think the people of this country quite appreciate how much we owe to the bankers of New York, and I look with scorn upon the few contemptible men in either house of Congress that assert that the banks and the bankers got up this panic.

I think that some of our able and honest statesmen ought to denounce some of the miserable shifts that are resorted to by some so-called Senators and Congressmen. It is time that we as bankers endeavored to spread good doctrine, sound truths and a proper knowledge of the subject of banking among the people at large.

The resolution was adopted.

John R. Mulvane, Topeka, Kan., offered a resolution of thanks to the press of Chicago for accurate reports of the Convention. Adopted.

President Rhawn thanked the members of the Association for their indulgence towards him in his first efforts to preside at a convention. He then introduced his successor, Mr. M. M. White, of Cincinnati, Ohio, who said:

ADDRESS OF PRESIDENT M. M. WHITE.

"In succeeding to the office which you have so ably filled, sir, I thank you for your words of cheer and encouragement. And, gentlemen of the Association, I thank you for the high honor which comes to me rather by inheritance, having been your Vice-President—than by any fitness that I may possess. As this Association covers the United States and its Territories and all the surrounding districts that see fit to pitch their tent with us, I trust that the benign influences and the great advantage, not only in the interchange of thought, but in the common civilities of life, and the broadening of our friendships and the appreciation of the responsible positions which we all occupy, may lead to larger usefulness and greater membership in this Association than ever before. And as the foundations of material wealth have been proved during the past summer and been found solid and permanent, broad and deep, I trust that when we meet a year hence we may have a return of the prosperity that has been vouchsafed to this country for the past few years.

"Gentlemen, if there is no further business, I declare the nineteenth annual Convention of the American Bankers' Association adjourned *sine die*."

OFFICERS OF THE ASSOCIATION AND MEMBERS OF THE EXECUTIVE COUNCIL.

President,

M. M. WHITE, President Fourth National Bank, Cincinnati, Ohio.

First Vice-President,

JOHN J. P. ODELL, President Union National Bank, Chicago, Ill.

Chairman Executive Council,

E. H. PULLEN, Vice-President National Bank of the Republic, New York.

Treasurer,

GEORGE F. BAKER, President First National Bank, New York.

Secretary,

HENRY W. FORD, No. 2 Wall Street, New York.

Executive Council,

MEMBERS EX-OFFICIO.

M. M. WHITE, President Fourth National Bank, Cincinnati, Ohio.

J. J. P. ODELL, President Union National Bank, Chicago, Ill.

MEMBERS FOR ONE YEAR.

THOMAS H. WILSON, Cashier First National Bank, Cleveland, Ohio.

C. O. BILLINGS, President Globe National Bank, Boston, Mass.

N. B. VAN SLYKE, President First National Bank, Madison, Wis.

THOMAS R. ROACH, Cashier Southern National Bank, New Orleans, La.

JOHN R. MULVANE, President Bank of Topeka, Topeka, Kan.

DUMONT CLARKE, Vice-President American Exchange Nat. Bank, New York.

G. A. VAN ALLEN, President First National Bank, Albany, N. Y.

MEMBERS FOR TWO YEARS.

RICHARD M. NELSON, President Commercial Bank, Selma, Ala.

E. H. PULLEN, Vice-President National Bank of the Republic, New York.

THOMAS BROWN, Cashier Bank of California, San Francisco, Cal.

FRANK W. TRACY, President First National Bank, Springfield, Ill.

WILLIAM DAWSON, President Bank of Minnesota, St. Paul, Minn.

WILLIAM T. DIXON, President National Exchange Bank, Baltimore, Md.

TOM RANDOLPH, President Merchants and Planters' National Bank, Sherman, Tex.

MEMBERS FOR THREE YEARS.

JAMES B. FORGAN, Vice-President First National Bank, Chicago.

A. B. HEPBURN, President Third National Bank, N. Y.

F. E. MARSHALL, Vice-Pres. National Bank Commerce, Kansas City, Mo.

WM. H. RHAWN, President National Bank of the Republic, Phila.

JOHN P. BRANCH, President Merchants' National Bank, Richmond, Va.

T. P. DAY, Cashier People's National Bank, Pittsburgh, Pa.

F. W. HAYES, President Preston National Bank, Detroit, Mich.

Vice-Presidents.

ALABAMA—Joseph F. Johnston, President Alabama National Bank, Birmingham.
ARIZONA—M. W. Kales, President National Bank of Arizona, Phœnix.
ARKANSAS—John G. Fletcher, President German National Bank, Little Rock.
CALIFORNIA—H. H. Hewlett, President First National Bank, Stockton.
COLORADO—William S. Jackson, Cashier El Paso County Bank, Colorado Springs.
CONNECTICUT—A. G. Loomis, President Ætna National Bank, Hartford.
DELAWARE—Preston Lea, President Union National Bank, Wilmington.
DISTRICT OF COLUMBIA—J. B. Wilson, President Lincoln National Bank, Washington.
FLORIDA—E. W. Agnew, President First National Bank, Ocala.
GEORGIA—Charles H. Phinizy, President Georgia Railroad Bank, Augusta.
IDAHO—C. W. Moore, President First National Bank of Idaho, Boise City.
ILLINOIS—Charles L. Hutchinson, President Corn Exchange Bank, Chicago.
INDIANA—Charles McCulloch, President Hamilton National Bank, Fort Wayne.
IOWA—J. K. Demming, Cashier Second National Bank, Dubuque.
KANSAS—C. K. Holliday, President Merchants' National Bank, Topeka.
KENTUCKY—Frank P. Helm, President First National Bank, Covington.
LOUISIANA—J. C. Morris, President N. O. Canal & Banking Co., New Orleans.
MAINE—Samuel Rolfe, President Maine Savings Bank, Portland.
MARYLAND—Daniel Annan, Cashier Second National Bank, Cumberland.
MASSACHUSETTS—Geo. S. Bullens, President National Revere Bank, Boston.
MICHIGAN—Edwin F. Uhl, President Grand Rapids National Bank, Grand Rapids.
MINNESOTA—J. W. Raymond, Vice-President North-Western National Bank, Minneapolis.

MISSISSIPPI—Samuel S. Carter, President First National Bank, Jackson.
MISSOURI—R. J. Lackland, President Boatmen's Bank, St. Louis.
MONTANA—E. D. Edgerton, President Second National Bank, Helena.
NEBRASKA—Charles W. Hamilton, President United States National Bank, Omaha.
NEVADA—M. D. Foley, President Bank of Nevada, Reno.
NEW HAMPSHIRE—William F. Thayer, President First National Bank, Concord.
NEW JERSEY—John Reynolds, President Paterson Savings Inst'n, Paterson.
NEW MEXICO—Jefferson Raynolds, President First National Bank, Las Vegas.
NEW YORK—G. H. Morrison, Cashier National Bank of Troy, Troy.
NORTH CAROLINA—Julien S. Carr, President First National Bank, Durham.
NORTH DAKOTA—Lewis E. Booker, President First National Bank, Pembina.
OHIO—John G. Deshler, Vice-President Deshler National Bank, Columbus.
OREGON—Henry Failing, President First National Bank, Portland.
PENNSYLVANIA—James H. Willock, President Second National Bank, Pittsburgh.
RHODE ISLAND—Herbert J. Wells, President R. I. Hospital Trust Co., Providence.
SOUTH CAROLINA—W. A. Clark, President Carolina National Bank, Columbia.
SOUTH DAKOTA—Thomas H. Campbell, President First National Bank, Huron.
TENNESSEE—James H. Smith, Cashier Memphis National Bank, Memphis.
TEXAS—George Sealy, of Ball, Hutchings & Co., Galveston.
UTAH—Lewis S. Hills, President Deseret National Bank, Salt Lake City.
VERMONT—Andrew Ross, National Bank of Vergennes, Vergennes.
VIRGINIA—F. R. Scott, President Petersburg Savgs. and Ins. Co., Petersburg.
WASHINGTON—N. H. Latimer, Manager Dexter, Horton & Co., Seattle.
WEST VIRGINIA—J. K. Oney, Cashier Bank of Huntington, Huntington.
WISCONSIN—Samuel M. Hay, President National Bank of Oshkosh, Oshkosh.
WYOMING—T. B. Hicks, President First National Bank, Cheyenne.

Resuming Silver Coinage.—Important action was taken by the Treasury Department on November 3 in regard to silver. Orders were sent to the Superintendents of the United States Mints at San Francisco and New-Orleans to resume the coinage of standard silver dollars which was suspended some time ago. This action is taken under authority of Section 3 of the law of 1890, which is as follows:

That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this Act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this Act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

It is for the purpose of utilizing the seigniorage that the coinage of standard silver dollars is resumed. The expectation is that about 1,500,000 standard silver dollars can be coined at once, which would give the United States Treasury a seigniorage of about $500,000. In other words, the seigniorage will be about one-third of the amount of silver coined.

It is the intention of the Treasury Department as the other mints become clear of gold coinage to have them also coin silver and thus increase the coinage from $3,500,000 to $4,000,000 per month.

This seigniorage is so much clear gain to the United States Treasury, and if it could all be placed to the credit of the Government at once it would increase the balance by $53,000,000. The amount of silver subject to coinage is 140,000,000 ounces.

The Administration has for some time past been considering whether it could use all the seigniorage at once, thus making available $53,000,000, but as far as can be learned no conclusion has yet been reached.

The silver bullion to be thus converted into standard silver dollars is the silver purchased under the Act of 1890 upon which the coin notes are issued.

Coinage of the silver will increase money in circulation to extent of the seigniorage.

Available Stock of Wheat.—"Bradstreets" for November 4, contains a table showing that the stock of available wheat on hand November 1 was the heaviest ever recorded on the same date. The amount held on that date in the United States and Canada was 91,025,000 bushels, an increase of 3,686,000 bushels over the same date last year, and of 27,748,00 bushels compared with two years ago, 45,515,000 contrasted with three years ago, 34,706,000 more than on November 1, 1890, and 40,570,000 increase over the total of five years ago.

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— Decided improvement is shown in the condition of National banks in New York city as shown by the reports to the Comptroller of the Currency on October 3. The reserve held was 35.17 per cent., as against 25.30 per cent. on July 12. The gold and gold Treasury certificates and gold clearing-house certificates aggregated $69,000,000, against $50,000,000 on July 12. The gold coin increased $20,000,000. Other items are:

	OCTOBER 3.	JULY 12.
Individual deposits	$249,500,000	$246,700,000
Loans and discounts	281,000,000	308,300,000
Surplus fund	41,500,000	41,493,000
Capital stock paid in	51,250,000	50,733,000
Undivided profits	18,754,000	16,860,000
Due other banks	100,000,000	106,000,000
U. S. bonds to secure circulation	18,000,000	17,900,000
Exchanges for clearing-house	57,500,000	65,490,000

— The New York Clearing-House Association met November 2 to receive the report of the Loan Committee, which asked to be discharged, as all the loan certificates have been retired. Sixty out of sixty-four members were present. Frederick D. Tappen, Chairman of the Loan Committee, presented the report. The document reviews at length the circumstances attending the formation of the committee on June 15, in view of the disturbed financial condition of the country and as a precautionary measure. The report continues:

"The first issue of certificates, $2,550,000, was made on June 17. The first cancellation of certificates, to the amount of $100,000, took place on the 6th day of July. The committee have met daily up to the present time, and have held 105 meetings. The aggregate amount of certificates issued was $41,490,000. The greatest amount outstanding was $38,2-0,000 on August 29, and continued at that amount until September 6. The amount of collateral received by the committee, in a round sum, was $56,000,000, 72 per cent., or $40,000,000, being in bills receivable; 28 per cent., or $16,000,000, being in stocks and bonds. The total number of pieces deposited with, and examined by, the committee, was 11,029, while 4,049 pieces were examined as substitutions.

It has been frequently stated and feared by some that the amount of certificates issued during the recent crisis was in excess of the amount issued, in proportion to the deposits held by the banks, during any previous panic.

The following table shows the issues of previous years, together with the deposits and the percentage of certificates to deposits:

Year.	*Deposits.*	*Certificates.*	*Per cent.*
1873	$152,640,000	$22,410,000	14.7
1884	296,575,300	21,885,000	7.3
1890	376,746,500	15,205,000	4.0
1893	374,010,000	38,280,000	10.2

The greatest amount of certificates, in proportion to deposits, was issued in 1873. Had the same proportion of loan certificates been issued in 1893 as was issued in 1873, the amount would have reached the sum of $55,000,000.

The percentage of loan certificates used in the payment of balance have been as follows: In June 9 per cent., in July 78 per cent., in August 95 per cent., in September 30 per cent., in October —, being a total of certificates used in the payment of balance of $299,273,000. The amount of interest paid on certificates has been $535,513 33. The expenses of the committees for stationery, clerk hire, etc., have been $562.27. All of this work has been accomplished without loss to the Association."

The report having been presented, Mr. A. B. Hepburn, President of the Third National Bank, offered the following preamble and resolutions:

Whereas, A grave crisis threatened the financial, commercial and industrial interests of this country during the spring and early summer, and this association, by

6

the issuance of clearing-house loan certificates to the amount of $41,490,000, enabled the associated banks of the city to afford relief to needy banks and business interests throughout the United States, and thereby averted widespread disaster; and

Whereas, The arduous duties attending the issuance and cancellation of these obligations were gratuitously performed by the Loan Committee, without loss to the association, and in a manner indicative of a high order of ability and judicious discrimination; therefore, be it

Resolved, That this association record its appreciation of the valuable services rendered by the Loan Committee during the trying times of the panic, and that the thanks of the association be tendered to the gentlemen composing said committee, viz.: George C. Williams, Frederick D. Tappen, J. Edward Simmons, Henry W. Cannon, Edward H. Perkins, Jr., and W. A. Nash, for the marked ability and judgment displayed by them in the administration of their trust.

Resolved, That this preamble and resolution be spread upon the minutes of the association and a copy thereof, suitably engrossed, be presented to each member of the Loan Committee

Mr. Hepburn concluded his remarks upon his resolutions as follows:

"The practical effect of the action of this Association was to add over forty millions to the currency, the commercial life-blood of the nation—currency, if I may be permitted the term, sustained by the united credit of the banks of this city. The proof of the wisdom of your action and the value of the relief afforded is evidenced not alone by the immediate surroundings, but by the expressed approval of representative commercial bodies throughout the country. It was my privilege recently to attend a convention of Ohio bankers, and a resolution extending thanks to the New York banks was offered, and, after earnest discussion, unanimously adopted. We all rejoice in the approval of our fellow-men, and in this instance we can surely console ourselves with the reflection that we met a trying emergency in a manner so judicious and wise as to win the commendation of financial and commercial interests."

General Thomas L. James, of the Lincoln Bank, seconded the resolutions.

Mr. John McAnerney, of the Seventh National Bank, also seconded the resolution, and said:

"While the great commercial exchanges, the press and all whose opinions are of value, have approved the action of the Associated Banks, financial cranks and irresponsible political demagogues have used every influence in their power to destroy confidence and prejudice people of the West and South against financial systems and institutions of the Central and Eastern cities. Men may differ as to financial methods, they may honestly entertain and express their convictions regarding gold, silver and bimetallic standards, but when political demagogues, who unworthily fill high places in the councils of the nation, seek to maintain their political ascendency by denouncing men and institutions that are struggling to prevent commercial distress and financial ruin, they deserve the rebuke they have just received from their colleagues and the American people.

The year 1893 will ever be memorable in the history of our country. By common consent it had been designated as a year of carnival and festivity in honor of the great Columbus and the discovery of America; yet gloom and depression prevailed; our securities returned from abroad; our actual money disappeared through foreign shipments and the hoarding of our own people. The new Administration was powerless, and in this helpless and drifting condition the people waited the action of the New York clearing-house administration, which, representing capital and surplus of more than one hundred and forty millions, deposits of over four hundred millions and daily exchanges of more than one hundred and twenty millions, must needs be the rallying point in the restoration of confidence. Public hope and expectation was not long deferred or disappointed."

The resolutions were unanimously adopted.

— The members of the Clearing-House Committee have decided to put in operation their recently discussed plan of establishing a gold depository for the safe keeping of gold and the issuance of certificates against such deposits. Commodious vaults have been secured from the Mercantile Safe Deposit Company and the operations of the depository will begin as soon as the details of the work shall be finally determined. The certificates will be issued on behalf of the Clearing-House Association, will be known as clearing-house gold certificates of deposit and will pass current only among the banks of the association in the settlement of balances. The reason for the action of the Clearing-House is found in the continued heavy payments of gold in the settlement of the debit balances to the association by the Sub-Treasury. The metal is difficult to handle and the possibility of its being lost, or stolen is always present while it is in transit. The plan is merely devised for purposes of safety and convenience and to expedite business. A new building for the use of the Clearing-House Association will probably be erected in the near future.

— Ebenezer Scofield, Cashier of the First National Bank, of No. 2 Wall Street, was seriously injured in a runaway accident recently.

— Benjamin G. Sanford, for seventeen years correspondence clerk of the Continental National Bank, has been arrested, charged with embezzling $53,000 from the bank, his operations having been continued for the past three months. Sanford had been discharged from the bank on September 22d for speculating in stocks.

NEW ENGLAND STATES.

Boston.—The total amount of clearing-house certificates issued in Boston was $11,695,000; first issue June 27, last issue August 23; first retired August 18, last retired Oct. 20. From June 26 to July 31 there was used in payment of balances $4,826,000 legal-tender notes or greenbacks, $750,000 treasury certificates, $12,950,000 loan certificates, $6,000 gold certificates and $28,402,000 orders. On August 17 but $8,000 in money, all greenbacks, was paid, on August 22 and 23 $9,000 greenbacks was paid in each day. The rest was paid in checks, loan certificates or orders. On the last day of September, payments were made of $630,000 in greenbacks, $140,000 in treasury certificates, $6,000 in coin, and $649,000 in orders. Sept. 22 $283,000 coin was used and $55,000 gold certificates.

New Bank Building.—The First National Bank, Hyannis, Mass., is erecting a two-story building 30x60, and to be fitted with all modern conveniences. It will have a private room for its customers in the new bank. The new structure is in the centre of the town, and its construction was made necessary by the increasing patronage of the bank.

A State Bank in Vermont.—A new State Bank is being organized at Barton with a capital stock of $50,000.

MIDDLE STATES.

Lebanon (Penna.) Trust and Safe Deposit Bank.—On October 19, Judge McPherson filed an opinion in the matter of the assignment of the Lebanon Trust and Safe Deposit Bank, closed in August. Jacob M. Shenk was appointed assignee of the bank under the Act of 1850 and auditors were appointed. Exceptions were filed to the proceedings, counsel claiming that it did not fall under the operation of that Act; that the assignment and all consequent acts were therefore illegal, and that individual liability of the stockholders was created by its incorporation. The opinion of the Court sustains the exception and sets aside the report of the auditors.

New Deputy Superintendent of Banking.—Colonel Rodney R. Crowly has been appointed deputy superintendent of banking for New York city in place of W. F. Creed, resigned.

SOUTHERN STATES.

Louisiana Bankers' Association.—A call has been issued for a meeting of the bankers of Louisiana at New Orleans November 19 for the purpose of organizing a State Bankers' Association.

Nashville, Tenn.—Messrs. A. L., J. P. and Lulan Landis and Jno. W. Burrow and W. S. Wells are organizing a new private bank.

WESTERN STATES.

Illinois State Banks.—H. B. Prentice, Superintendent of the Banking Department of the State Auditor's office, has written a letter to H. J. Wynne, special agent of the United States Treasury department, in which a splendid showing is made for the State banks of Illinois. The Superintendent says:

"I am still able to say that there has not been a failure among them. This cannot be said of either National or private banks in Illinois. While there are some features that might be added to the law with profit, still it is working satisfactorily as it is, both to banks and to the public.

There are at present 126 banks operating under the State banking law. Twenty-three of this number, at the time of the adoption of this law in 1888, were already operating under special charters granted by the legislature, but by the law were placed under its provisions. The other 103 have voluntarily organized under the State law. The law does not prohibit private banking, and applies to such newly organized banks only as may desire to avail themselves of its provisions, except banks holding special charters as above indicated.

That over 100 banks should be organized under this law in a little more than four years, voluntarily placing themselves under State supervision, furnishes its own commentary of the favor with which the system is received. It shows that the organizers have been quick to perceive the existence of a strong public sentiment demanding some supervision over such institutions, and have eagerly sought to come under the law for the prestige it would give them with the public.

The authority exercised by the Auditor under the law is respected by the banks, and the supervision has resulted in the correction of many methods and irregularities that would have become permanent with banks practicing same, had it not been for the restraining influence brought to bear upon them by the department. Many of these banks are officered by men who have had experience as private bankers, and were disposed to use the broad-gauge methods to which they were accustomed, but were soon brought within the conservative lines exacted by the department.

That the supervision under the law has been beneficial and had a healthful influence upon the State banking system, is certainly evidenced by the fact that they have stood the prolonged monetary stringency without a failure.

The last call issued by the Auditor was made July 25, 1893, which was responded to by all the banks in the State operating under the State banking law. The reports received showed an average cash reserve of 38 per cent."

Ohio Bankers' Association.—The Ohio State Bankers' Association met in the Chamber of Commerce, Cleveland, October 11. Over 200 members were present. The session was opened with prayer by Bishop W. A. Leonard of Cleveland. Thomas H. Wilson, Cashier of the First National Bank, of Cleveland, delivered the address of welcome which was responded to by T. F. McGrew of Springfield. President White then delivered his annual address. At the afternoon session the time was occupied in listening to general discussions on "Thoughts on Banking Subjects." Hon. John Sherman was on the programme for an address on "Our American Financial System," but was unable to be present. A reception was tendered the visiting delegates in the Chamber of Commerce parlors.

The second day's programme was especially interesting. "Old Time Banking" was a subject upon which T. P. Handy was to address the Association, but he delegated Samuel Mather to act, and the latter's address was listened to with close attention. An address on "State Banks, their Province and Functions," was to have been delivered by General A.V. Rice, of Ottawa. In his absence W. A. Graham, of Sidney, spoke.

The Association has a membership of more than three hundred out of a little less than six hundred bankers in the State. There was a larger attendance at the convention in Cleveland than at either of the other meetings.

Investment Co., in Trouble.—Nine officers of the "Guarantee Investment Company," a Missouri corporation, were indicted by the Federal Grand Jury in Chicago October 16. The Guarantee Investment Company is an ingenious Missouri enterprise, with general offices in Chicago and St. Louis, and ramifications throughout the United States. The scheme is the invention of J. G. Talbott, of Nevada, Mo. It has been in existence two years, and in that time has built up a business of $50,000,000—that is to say it has "placed" 50,000 alleged bonds of the denominations of $1,000 each, and is at the present time in receipt of a monthly income of about $60,000 from its subscribers. It has taken in over $500,000 on initiation fees and about as much more on account of payment of monthly installments, and has paid out $206,000 for the redemption of bonds. It is gaining recruits at the rate of 3,500 or more a month, each applicant paying in $10 as a starter.

Chicago.—Clearing-house banks of Chicago will hereafter close their doors for business every Saturday the year around at noon. This will necessitate making a change in clearing, from 11 o'clock, the present hour, to 9 o'clock.

—Henry Mershon and E. P. Duvell, who were respectively President and Cashier of the Bank of Mershon & Co., in Vermont, Ill., which failed a year ago, were arrested in Chicago recently. It is alleged that they are embezzlers to the amount of $200,000 and that the amount was drawn from the depositors.

— The statement of the condition of the Bankers' National Bank, Chicago, Ill., on October 3, 1893, shows that the institution is sharing in the return of prosperity. From July 12 to October 3 deposits increased $593,570. The cash and sight exchange held on October 3 was $1,263,562—a reserve of more than 50 per cent. of deposits.

Cincinnati, Ohio.—An analysis of the last two bank statements shows that there has been an increase of $341,682 in specie, and $481,341 in legal tenders, and consequently a gain of $823,023 in cash reserve. The aggregate proportion of reserve to deposits is now 35.58 per cent., which is the greatest since February 26, 1889, when it was 35.74 per cent. It is larger by 4.39 per cent., than at the preceding statement, and by 6.51 per cent., than a year ago.

Report of Illinois National Banks.—The reports of the 191 National banks of Illinois, exclusive of Chicago, have been compiled by the Comptroller of the Currency. They show individual deposits $39,151,607, a decrease of about $500,000 as compared with the July statement. The reserve is now 33.06 per cent., an increase from 28.14 per cent. in July. The Illinois National banks now hold $3,122,530 in gold coin and $361,550 in gold Treasury certificates.

Minneapolis Banks.—Abstracts of reports made to the Comptroller of the Currency on October 3 showing the condition of Minneapolis National banks give Loans and discounts, $12,299,649; gold on hand, $897,000; total cash on hand, $975,527; individual deposits, $7,403,324; average reserve, 29.07 per cent.

Private Banks in Kansas.—Judge J. S. West, of the Sixth Kansas judicial district recently decided that the Legislature has power to regulate the business of firms carrying on banks of discount and deposit.

Minnesota Trust Companies.—Attorney-General Childs recently submitted for the guidance of the public examiner an opinion relative to the powers of trust companies to receive deposits and pay them out on checks, in which he holds that such corporations cannot transact a general banking business.

St. Paul, Minn.—W. B. Evans, formerly Cashier, and C. A. Hawks, formerly Assistant Cashier of the Seven Corners' Bank, have been indicted on the charge of converting to their own use over $100,000 of the bank's funds.

— Public Examiner Kenyon has completed reports of the condition of St. Paul banks at the close of business October 3. The report is as follows:

RESOURCES.		LIABILITIES.	
Loans and discounts	$5,630,331	Capital stock paid in	$2,150,000
Overdrafts	13,515	Surplus fund	166,000
Other stocks and bonds	288,929	Other undivided profits	323,464
Due from other banks	779,137	Dividends unpaid	3,512
Banking house and furniture and fixtures	558,862	Due to depositors	5,036,973
Other real estate	181,279	Due to other banks	415,874
Current expenses	29,393	Notes and bills rediscounted	53,900
Taxes paid	614	Bills payable	13,758
Checks and cash items	31,018	Miscellaneous	100,000
Exchanges for clearing-house	113,454		
Cash on hand	612,330		
Miscellaneous	24,615		
Total	$8,263,483	Total	$8,263,483

— The National German-American Bank resumed business October 30, having collected $920,000, or nearly $200,000 more than required by the Comptroller. The deposits on the first day exceeded $100,000.

Farmers' Bank of Kentucky.—The telegraphic report of the suspension of the branch of this bank at Henderson, Ky., was unfounded. The bank did not suspend and it is in good financial condition.

Nebraska Bank Reserves.—By the reports of the National banks of Lincoln, Neb., on October 3 it appears that the reserve has increased from 20.50 on July 12 to 25.11.

PACIFIC SLOPE.

Condition of Nevada Banks.—The response of the Nevada National banks to Comptroller Eckels' call for statements shows that in July the Nevada banks were able to report a reserve of about 30 per cent. The reserve is now 22.9 per cent. The Nevada banks have only $2,000 in silver and nearly $100,000 in gold.

San Francisco.—The average reserve held by the banks of San Francisco at the close of business Oct. 3, as reported to the Comptroller of the Currency, was 31.21 per cent, an increase over that held at the last call, when the average was 28.92 per cent.

— The annual meeting of the Nevada bank was held October 11. The old board of directors and the old officers also were re-elected. The annual report of President Hellman shows that the bank has had an unusually prosperous year.

— The Pacific Bank passed into the hands of the Bank Commissioners October 14, the Supreme Court having rendered a decision to the effect that the directors of the bank could not transact business.

OPEN LETTERS FROM BANKERS.

AN INTERCHANGE OF OPINION BY THE JOURNAL'S READERS.

CLEARING-HOUSE CERTIFICATES VS. CIRCULATION.

Editor Rhodes' Journal of Banking:

SIR:—Some Senators and members of the House, and also the Bank Commissioner of the State of Kansas, the latter in a circular to the Kansas State Bankers, have seen fit to cast reflections upon the bankers of the city of New York, because of their methods during the late financial difficulties. It is very evident that these gentlemen have not duly considered and do not understand the actions they criticise.

New York is one of the greatest money centers in the world, and the very heart of American industries. An artery may be severed and the patient recover, but not so when the knife is plunged into the heart. Business failures in other cities may be local in their influence and easily remedied, but trouble in New York is far reaching and ruinous. It affects every hamlet in the land. New York city is the fountain from which every other city secures assistance in time of trouble. Have its actions in the late crisis been wise, or should it be called to strict account?

Let me illustrate: A rich man has prepared a sumptuous repast. When he seats himself at the table he is interrupted by the cry of a hungry mob at the door begging for food to save them from starving. He bids his servants take the food from his own table and satisfies their wants. Day after day is this repeated, himself dining on water and crackers, until he presents a pale and emaciated appearance. Is he a hero, or should he be ridiculed?

We will change the scene: When the panic alarm was rung in from first one city and then another, the New York bankers took the life blood out of their own reserves and sent it out to save the business industries of this country. This they did day after day, themselves feeding upon clearing-house certificates, until narrow-minded men have taunted them with their apparent financial leanness. Is it right, is it manly that we now laugh or criticize their condition? Well may the people of this country bow in reverence before the unselfish patriotism displayed by the New York financiers. They were great men in a great emergency, and grandly did they prove their greatness.

But there is a lesson to be learned from the crisis just passed. That something is radically wrong we all admit. "What is the remedy?" is the question hard to answer.

The very theory of banking is to gather in the money from those who do not need it, and loan to those who do. No bank can afford to pile up money in its safe to look at—its expenses must be paid by loaning a certain percentage. For this reason no bank can within itself pay on demand all of its deposits unless given time to collect its loans. But the law compels them to pay or close their doors. Hence when there is a "run" on the banks of one city they must seek temporary assistance from those of another. In doing this the former weaken the latter, reducing their available cash by the amount borrowed, and so if the panic should then strike this latter city it finds it that much weaker, and its banks must in turn borrow from some other city, and thus the burden is shifted from shoulder to shoulder until in panics of long duration our whole financial fabric is shaken. Let me illustrate how this actually works:

We will suppose that a panic strikes Kansas City and Milwaukee and to meet the demands of their depositors the banks of Kansas City and Milwaukee borrow in St. Louis and Chicago. Perhaps about the time these first-named bankers are taken care of, the depositors of the St. Louis and Chicago banks conclude to draw their money. To meet this home demand these bankers must call upon Kansas City and Milwaukee to pay back what they have borrowed—thus continuing the depression in those two cities—and in addition Philadelphia and New York are asked to come to the rescue. Thus it is passed from one point to another, until at last New York city must shoulder the burden. With bankers all over the country reducing their balances, and begging for rediscounts, where shall the New York bankers borrow? They must either go to London or the New York clearing-house. The clearing-house is their first resort, and there they secure clearing-house certificates which will pass between the banks locally and take the place of currency. Under our present laws there is no alternative but the issuing of large blocks of clearing-house certificates in severe financial troubles.

I make bold to suggest what seems to me a remedy: Let Congress provide a currency department, presided over by the Secretary of the Treasury and assisted by five Comptrollers of the Currency, appointed for five years, not eligible to reappointment, and their terms of office expiring in different years. Divide the country into five districts, each Comptroller of the Currency having especial charge over one district and concurrent jurisdiction over the others.

Provide that certain high-grade Government, State, municipal, and other bonds shall be considered "approved securities" upon which, when deposited with the currency department, the banks may receive ninety per cent. in "special circulation." Provide that this special circulation may be kept out for six months, and upon proper showing to the department extended six months longer. Upon this special circulation require 4 or 5 per cent. interest to defray the expenses of the department.

Let us see how this will work: The banks at Kansas City and Milwaukee find that at certain seasons of the year money is a drug in the market and at other times very close. Under this system when money is plenty these banks would purchase the bonds of their city, county and State, and deposit them with the currency department ready for circulation. When money becomes scarce or a panic strikes their locality, they wire the department at Washington to send them circulation. Thus the emergency is met and no other city is weakened by loaning them. This will provide an elastic currency that will go direct to the spot where it is needed, perform its work and then retire. If in a panic money is hoarded, this plan provides a substitute that will take the place of that hid away until the latter returns into circulation and then steps aside. By appointing five Comptrollers more personal attention can be given to each district. Not permitting re-appointment will prevent any long-continued collusion between a Comptroller and the banks of his district. Having their terms of office expire at different periods keeps an experienced board at all times, and perhaps as non-partisan as you could well make it.

By charging 4 or 5 per cent. interest it would make this circulation unprofitable, causing it to be held in reserve for an emergency. Allowing six months in which to retire it would enable banks even in panics to continue to loan, or reduce their loans gradually and save their community from financial depression. By providing a uniform currency it can be printed and kept in stock so that there would be no delay in shipment. There is no need of either the name of the bank or its official's signatures on any bill. It could be called "National Circulation, secured by deposit of approved securities with the Secretary of the Treasury, and redeemable by the Government." It can be redeemed in the same manner as National bank bills are now retired.

Permitting circulation based on municipal bonds, would enhance the desirability of such securities, and they would float at a very much reduced rate of interest, and thereby benefit every tax-payer.

It is my opinion that such a plan, which could be quickly and safely put in operation, would increase the earnings of banks, lessen the rate of interest to customers, move crops, prevent panics, revive industries, start factories, and give employment to our idle workingmen. CHARLES W. TRICKETT.

KANSAS CITY, Kansas, October 24, 1893.

ENGLISH POSTAL SAVINGS BANKS.

Editor Rhodes' Journal of Banking:

Sir:—Being a very careful and interested reader of your instructive JOURNAL OF BANKING, I wish to give you a new proof thereof by calling your attention to page 496 of your May issue where you speak of the English Savings banks. Allow me to insert an historical alteration.

Mr. Henry Fawcett, Postmaster-General of the United Kingdom, has during the term of his administration, entered into considerable improvements, worthy of his great character, which, I as founder of the scientific and administrative missions in England very often had occasion to test. But the Post Office Savings banks were really established some twenty-five years before he began his administration. The origin of this institution we owe to an essay which Mr. Charles Sikes, a banker of Huddersfield, submitted the first of September, 1857, through Mr. Rowland-Hill, the celebrated inventor of the penny postage, to Mr. Gladstone, who was then Chancellor of the Exchequer. On account of this essay Mr. Gladstone had a bill introduced which, in 1861, after long discussions in the Parliament, became the law of the 17th of May, 1861, the Post Office Savings Bank Act; 24 Victoria, C. 14.

In 1880, when Mr. Fawcett entered into his term as Post-Master General, the number of Post-Office Savings banks in the United Kingdom had largely increased. Since 1861, 6,233 were established and they were in charge of 2,184,972 accounts representing a general amount of £34,375,936.

The last report published in 1891, shows 10,563 Post-Office Savings banks with 5,118,395 accounts, and 71,608,002 pounds sterling. Not included in this report are the Trustee Savings Bank of which there is also a very large number.

The Post-Office Savings banks have been established to enable laborers or farmers of even the smallest places to deposit money in the post offices. These post offices take money and pay out amounts which have been deposited. You may here notice a combination which has been effected in France by a law dated October 22, 1875, and which protects the old established Trustee's Savings Banks and at the same time makes use of the post offices. The post offices are authorized to operate as assistant agencies or sub-agencies of the Trustee's Savings banks, that is to say they receive money from depositors and pay it out for the account of the neighboring Savings banks for which they receive a compensation (for deposits received and payments made) which is in proportion to the transactions done in the name and for account of the Savings banks.

Mr. Fawcett has greatly contributed to the extension of this savings system, for during the five years (1880-4) of his administration of the General Post Office he has added new and very useful features and which we have to mention in order to do him justice. One of these features is the development, by a most simple yet comprehensive method, of the small insurance, procured by the Government and through the intervention of the post offices; another was by facilitating the system of saving deposits, as the smallest deposit taken is limited to one shilling. The saving of a shilling, since Mr. Fawcett's administration, is facilitated by starting with deposits of one penny by means of stamp slip deposits, where a modest depositor may paste stamps upon a card until same has a value of one shilling; for example, by pasting 12 one penny stamps on the card. Then this card of the value of one shilling may be deposited, the same as a coin of the value of one shilling; this may be done at any post office.

This system has had great success among the population, first in England and then in France and the Continent. Since 1875 it has been recommended respectively by the English and French Governments, the first of May, 1875, by Mr. Charles Dibdin, an official of the General Post Office, and by Mr. Malarce, Commissioner of the French Ministry of Finances.

Mr. Fawcett having been provided with plenty of common sense and open to all kind of useful improvements, made use of this system. At the same time he again earned the thanks of the greater part of the population and especially of the smaller people by a celebrated circular, teaching how to save money in school, by the means of Schools Savings Banks directed and attended to by schoolmasters. This system of practical economical education, which is a very old idea, but which has been regulated by a simple, sure and absolutely correct method, was established in France in 1874, by Mr. Malarce, who has organized this new branch of popular education in more than 24,000 French schools, where more than 100,000 pupils learn by continuous practice a regular and sober life, how to make use of their workmens' earnings, how to resist unhealthy and useless irritations. They learn how to master their own will and how to become men.

This is the institution which since the last few years, Mr. John Pomeroy Townsend, Vice-President of the Bowery Savings Bank of New York, and Mr. J. H. Thiry of Long Island City, N. Y., have been successfully trying to introduce into the United States.

Allow me to add to this work of Mr. Fawcett's the measure which have been prepared or have been affected by him in regard to the parcel post, postal orders (more convenient than money orders), reduction of telegram rates, etc., not to speak of his ability in political life and the help he gave to the drawing up of political laws under the Liberal administration.

All this justifies our great regret of the premature and unexpected death of this statesman, who, (being blind since his 25th year on account of an accident while out hunting), died at the age of 55 years after a life which was devoted to economical science.

PARIS, Sept. 22, 1893. A. DE MALARCE.

FAILURES AND SUSPENSIONS.

Colorado—DENVER.—G. W. E. Griffith, Receiver of the Western Farm Mortgage Co. (branch of Lawrence, Kas.), reports that there are no assets, and that stockholders and those having unsecured claims against the company will meet with a total loss.

Illinois.—The Receiver of the failed Central Illinois Banking and Savings Association, Jacksonville, have filed a report which shows total assets, $409,751, and liabilities. $364,392. The assets consist of about $200,000 in loans, $180,000 real estate and other items.

Indiana.—There is no possibility that the First National Bank, of North Manchester, which closed Oct. 4, will resume business. When the institution suspended there was but $3,000 of money and $6,000 of exchange on hand, while the deposits were $99,000. It is understood that there is considerable dubious paper in the $125,000 of loans, and while the depositors will be paid the stockholders will realize little or nothing. Bank Examiner Hackard is quoted as saying that the failure is much worse than he anticipated when he took hold.

— The Receiver of the bank of James Arnold & Co., of South Whitley, has made a report, showing assets of $90,000 and liabilities of $100,000. It is stated the assets will shrink considerably.

Iowa.—The Bank of Tripoli is reported failed and the proprietor, Henry Eifert, under indictment on the charge of fraudulent banking.

— An investigation into the condition of the failed firm of J. T. Knapp & Co., Cedar Falls, is said to reveal a bad state of affairs, there being about $35,000 of worthless paper already discovered among the assets.

Kansas.—The Hutchinson National Bank, of Hutchinson, which suspended in July and resumed in August, again closed October 18. Assets are placed at $270,000 and liabilities to depositors $135,000. The suspension is attributed to lack of agreement among the directors.

— The Bank of Andale was reported in the hands of a Receiver October 18. Its liabilities are about $10,000 and nominal assets double that sum.

—The State Bank Commissioner received notice on November 3 of the closing of Bailey's Bank, located at Chanute. The institution was in operation under the title of M. Bailey & Co., bankers, when the State banking law went into effect in 1891, the name being changed November 10, 1891, to Bailey's Bank.

Missouri.—The St. Clair County Bank, Osceola, assigned October 2. It was the oldest bank in the county.

New Hampshire.—On a petition of the Bank Commissioners an injunction was issued on October 16 restraining the Contoocook Valley Savings Bank from doing business. The assets and liabilities are reported as about $80,000.

New York—NEW YORK CITY.—William L. Patton, who until recently did business as a stock broker at No. 6 Wall street, was arrested October 17 on a charge of hypothecating railway and other securities. He is the senior member of the firm of William L. Patton & Co., which made an assignment May 5. The other member of the firm is Henry L. Saltonstall. The claim on which the present action is taken is one for $60,000 due the Craig estate. According to the assignee's report, which was filed some time ago, the liabilities of this firm amount to about $788,000 and the cash assets to less than $11,000. Of these liabilities $350,000 represent the actual loss to the creditors, and of this latter amount, according to Patton's alleged confession to his creditors, $250,000 was transferred to Patton's account and lost by him in unsuccessful speculation.

On the 24th ult., the President, Cashier and several directors of the failed Madison Square Bank were arrested on account of affairs relating to the failure of the bank. There are charges of reckless and criminal mismanagement, and the outlook for depositors is not promising. On November 1 securities of the bank of the par value of

$1,500,000 were sold at auction for $60,000. About $400,000 had been loaned on these securities.

— On October 31, William N. Dykman was appointed permanent Receiver of the Commercial Bank, of Brooklyn. Judge Cullen then heard the evidence of the Bank Examiner, who testified that he had found the assets to be $814,790, and the liabilities, $925,586. Since his appointment as temporary Receiver, Mr. Dykman has collected $246,840.

— An examination of the condition of the Merchants' Bank, of Lockport, which suspended October 6, shows: Total indebtedness, $201,000; good assets, $176,000; paper thrown out by the Examiner, $123,000.

Pennsylvania.—J. S. McAleb, proprietor of the Hungarian Bank of Connellsville, assigned October 9. The liabilities are placed at $178,000 and the assets consisting principally of real estate at $75,000, though at present prices it would probably not bring more than $50,000.

Rhode Island.—Wilbour, Jackson & Co., of Providence, suspended October 12. It is said the suspension was due to the endorsement of large amounts of the paper of the Denver (Colo.) Street Railway Co.

Sheldon & Binney, private bankers, also suspended on the same date for a similar reason.

The Merchants' Savings Bank of Providence has gone into voluntary liquidation. This action was said to have been due to depreciation of its securities. Deposits amount to $1,207,000.

Tennessee—NASHVILLE.—The Safe Deposit, Trust and Banking Co. assigned October 17 to W. H. Mitchell. President Fite furnished the following statement:

ASSETS.		LIABILITIES.		
Cash on hand	$355	Due depositors	$66,764.15	
Discounts, call loans, paper due	188,952	Estimated interest	900.00—	$67,664
Bonds and stocks (cost)	6,776	Bills payable	57,287.50	
Real estate (cost)	23,139	Estimated interest	100.00—	57,387
Estimated interest on loans	4,500			
Insurance, expiration value	2,000			
Estimated profits of insurance business	600			
Delinquent safe rentals	300			
Overdrafts on insurance ledger	1,130			
Assets	$227,954			
Liabilities	125,051			
Assets over and above liabilities	$102,903	Total liabilities		$125,051

During the late financial panic in Nashville the Trust and Banking Co. was compelled to suspend payments for sixty days, but it had hoped to realize on assets sufficiently by the end of that time to meet all demands. A failure to fully realize these expectations led to the assignment.

— The Farmers and Merchants' Bank, Clarksville, has decided to go into liquidation, owing to the prevailing depression. The resources are said to exceed the debts.

Canada.—Monroe, Miller & Co., the well-known stock brokers of Montreal, suspended October 31. The firm had wires in Montreal, Quebec, Toronto, Hamilton, Malone, N. Y., and Plattsburg, N. Y. Their Montreal offices were managed by Labbe & Co., R. N. Brand and Crispin & Co.

Value of Foreign Coins.—The quarterly report of the Director of the Mint, giving the standard value of foreign coins on October 1, and changes in the value since the last statement, is as follows:

	Value Oct. 1, 1893.	*Value July 1, 1893.*		*Value Oct. 1, 1893.*	*Value July 1, 1893.*
Boliviano of Bolivia	$0.61	$0.60.4	Rupee of India	$0.29	$0.28.7
Peso, Central Amer. States	.61	.60.4	Yen of Japan	.65.8	.65.1
Tael, Shanghai, of China	.90.1	.89.2	Dollar of Mexico	.66.2	.65.6
Tael, Haikwan, of China	1.00.4	.99.4	Sol of Peru	.61	.60.4
Peso of Colombia	.61	.60.4	Ruble of Russia	.48.8	.48.3
Sucre of Eucador	.61	.60.4	Mahbub of Tripoli	.55	.54.5

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

4930—First National Bank. Normal, Illinois; capital, $50,000.
4919—Blairsville National Bank, Blairsville, Pennsylvania.

NEW BANKS, BANKERS, ETC.

CALIFORNIA.

WOODLAND—Home Savings Bank, organizing

CONNECTICUT.

DERBY—(P. O. Birmingham)—Home Trust Co.; capital, $25,000; President, George H Peck; Vice-President, H. Holton Wood; Treasurer, Chas. N. Downs.

FLORIDA.

KISSIMMEE—E. Nelson Fell.

GEORGIA.

AUGUSTA—Augusta Clearing-House Association; Manager, C. S. Goodrich.

ILLINOIS.

JACKSONVILLE—Cenaral State Bank, organizing; capital stock, $100,000.
PEARL CITY—Pearl City Bank; capital, $10,000; President, Harvey M. Tims; Vice-President, Simon Tollmier; Cashier, Geo. W. Dow.
NORMAL—First National Bank; capital, $50,000; President, John W. Aldrich; Cashier, Charles C. Schneider; Vice-President, D. C. Smith.

INDIANA.

OXFORD—Bank of Oxford; Cashier, Joseph W. McConnell.

IOWA

AURELIA—Farmers' Loan and Trust Co.: successor to Aurelia Savings Bank; President, James F. Toy; Vice-President, Lot Thomas; Cashier, A. J. Whinery.
KEOKUK—State Central Savings Bank; successor to State Bank and Central Savings Bank; capital, $100,000; President, William Logan; Cashier, J. C. Weaver; Assistant Cashier, H. T. Graham.
PERRY—Citizens' State Bank; capital, $47,000; President, John Law; Vice-President, Jay G. Dutton; Cashier, Charles E. Walker.

KANSAS.

MINNEAPOLIS—Citizens' National Bank, organizing; successor to J. W. Smith & Co.

MASSACHUSETTS.

BOSTON—Blodgett, Merritt & Co.

MINNESOTA.

BUFFALO LAKE—Bank of Buffalo ake (Edward and Timothy O'Connor); Cashier, F. G. Nellermore.

MISSOURI.

CANTON—Citizens' Bank; capital, $20,000; President, Joseph Patterson; C. M. Bradshaw; Assistant Cashier, W. D. Legg.
POTOSI—Washington County Bank.
STANBERRY—First National Bank, organizing.

NEW YORK.

NEW YORK CITY—William K. Kitchen, member Stock Exchange.

OHIO.

CAMDEN—Commercial Bank.
WEST CLEVELAND—West Cleveland Banking Co.; President, W. J. White; Vice-Presidents, V. D. Anderson and Gustav Schmidt; Sec. & Treas., Thomas West.

OKLAHOMA.

ENID—First National Bank, organizing.
PERRY—T. M. Richardson & Sons; President, T. M. Richardson; Vice-President, D. C. Richardson; Cashier, T. M. Richardson, Jr.; Assistant Cashier, G. B. Farrar.——Farmers and Merchants' Bank; Cashier, L. D. Freeman.
WOODWARD—Exchange Bank.

PENNSYLVANIA.

BLAIRSVILLE—Blairsville National Bank; President, John H. Devers; Cashier, Robert M. Wilson.

SOUTH CAROLINA.

WESTMINSTER—Westminster Bank; capital, $5,000; President, John S. Dickson; Cashier, C. Mason.

SOUTH DAKOTA.

SALEM—Commercial State Bank; capital, $25,000; President, I. J. Todd; Vice-President, C. D. Puntney; Cashier, D. Goldsmith.

TEXAS.

WEST—West Bank; capital, $50,000; President, Thos. M. West; Cashier, James B. Cook; Assistant Cashier, J. A. West.

UTAH.

HEBER CITY—A. Hatch & Co.

VERMONT.

HARDWICK—Hardwick Savings Bank & Trust Co.
MIDDLETON SPRINGS—L. & A. Y. Gray.

VIRGINIA.

DANVILLE—Citizens' Bank; capital, $100,000; President, John H. Schoolfield; Vice-President, Thomas B. Fitzgerald; Cashier, Jas. T. Catlin.

WASHINGTON.

CASPER—American Exchange Bank; reported out of business.
SUNDANCE—First National Bank; in hands of Receiver Oct. 11.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, November 4, 1893.

No more important financial event has occurred since the resumption of specie payments on January 1, 1879, than the repealing of the silver-purchase clause of the Silver Act of 1890, which was completed by the passage of the Repeal bill in the Senate on October 30 and in the House on November 1, and its approval by the President on the latter date.

For the first time in the history of the country the policy of stopping altogether the issue of silver currency is to be tried. From 1792 to 1873 there was free coinage of the silver dollar of 371¼ grains of pure silver, the only change in that time being in the amount of alloy, until 1837 the old silver dollar being of the weight of 416 grains and since that date of 412½ grains. From 1873 to 1878 the standard silver dollar had no place in the list of coins, but the trade dollar of 420 grains, containing 378 grains of pure silver, was authorized. On February 28, 1878, the "Bland Act" became a law. This authorized the purchase monthly of from $2,000,000 to $4,000,000 worth of silver bullion to be coined into standard dollars of the former weight and fineness. On July 14, 1890, followed the "Sherman Act," which directed the purchase of 4,500,000 ounces of silver bullion per month and the issue of legal-tender Treasury notes therefor. Fifteen years of these two Acts have brought into existence $545,000,000 of full legal-tender silver money, and at this point a halt has been called. In the same time the gold used as money has increased $450,000,000.

While the silver legislation has undoubtedly had a widespread influence towards the restoration of confidence, there was a pronounced recovery from the depression of the summer months even before the prospect of silver repeal was altogether assuring. The rapid retirement and final extinguishment of the clearing-house loan certificates in both New York and Boston gave evidence of the improved situation. The Boston banks retired the last of their certificates on October 20. They had issued altogether $11,695,000 between June 27 and August 23, and began to retire them on August 18. The New York banks issued $41,490,000 between June 17th and August 29th, and the entire amount had been retired by November 1. The Philadelphia banks have yet some $2,000,000 certificates outstanding which are being gradually reduced; their total issue was $6,000,000.

There are certain features of the Government finances which are not as encouraging. With nearly $500,000,000 of paper redeemable in gold, the Government has in the Treasury a gold reserve of only $85,000,000, and at one time during the past month it was down to $81,500,000. When there were only $346,000,000 of legal-tender notes to look after, it was deemed wise to maintain a reserve of not less than $100,000,000. How to replenish the reserve is a problem not of easy solution at the present time, for the Government revenues are running behind the expenditures. In October the receipts were $24,553,000, and the expenditures $29,588,000, a deficiency of more than $5,000,000, and it would have been larger but for the paring down of pensions $1,300,000 as compared with last year. Since July 1 a deficit of $24,000,000 has been created or at the rate of $72,000,000 per annum. It is not surprising therefore that an issue of bonds has been seriously discussed in Administration circles.

The foreign trade movement while favorable in the direction of influencing imports of gold, nearly $2,000,000 now being on the way to this country from Europe, is still not offering any solution of the financial problem now presented to the Administration. The Government is losing in customs receipts $5,000,000 per month while the imports of merchandise are $15,000,000 per month less than they were last year. On the other hand our exports are very large, the completed returns for September showing a total of $71,969,000, or $9,000,000 more than in the corresponding month last year, while the net exports were $25,609,000 against net imports a year ago of $4,558,000. The wheat movement since July 1, has been 15 per cent larger than in 1892, about 76,000,000 bushels having been exported from New York against 60,000,000 last year. Exports of corn are nearly 100 per cent. larger than they were in 1892, and about 20,000,000 bushels have been exported since July 1.

Another record was made for the price of silver last month, and on October 31 the London price was down to 31⅛ pence per ounce English standard. The American equivalent was 68⅛ cents making the bullion value of the silver dollar 52.9 cents. As the coining value of silver is $1.29 per ounce and the Government paid as high as $1.20 per ounce soon after the Act of 1890 was passed, the decline in the price of silver since that law went into operation is seen to have been serious. The price paid by the Government for the last silver purchased was 70 cents an ounce for 645,000 ounces bought on October 31.

The situation abroad involves considerable uncertainty as to the future. The Russian fleet received so warm a greeting in the French cities it visited that an alliance between France and Russia for offensive operations is considered to be not far in the future, and both England and Germany are watching events closely. The former has been warned that it has a good deal more to fear from France as a naval power than has generally been conceded to be possible. Italian finances are still in a bad way, but a loan of £2,000,000 obtained in Berlin will tide over the January interest payments. A loan of £24,000,000 was sought, but was not to be obtained. New South Wales placed a loan of £2,500,000 on favorable terms. The civil war in Brazil is commanding the attention of various powers, but so far without causing any dangerous complications. Australia is still suffering from general business prostration, paying the penalty of past excesses.

FOREIGN EXCHANGE.—The tendency of sterling exchange was downward almost continuously during the month, and before the close rates had fallen to the gold importing point resulting in the engagement of about $2,000,000 gold in London for shipment to New York. The market was largely influenced by the supply of cotton bills although later there was a better supply of bills against breadstuffs. The firmer rates for money in the open market at London, influenced by apprehensions of a drain of gold to America tended to strengthen rates for sterling late in the month. Some sales of American securities abroad to take advantage to the rise in prices in the stock market, and the demand for remittances on account of imports of sugar, also checked the decline in sterling exchange The actual rates at the close of each week for the month are:

Week ended	BANKERS' STERLING.		*Cable Transfers.*	*Prime Commercial. Long.*	*Documentary Sterling. 60 days.*
	60 days.	*Sight.*			
Oct. 7.....	4.83 @ 4.83¼	4.85 @ 4.85¼	4.85⅛ @ 4.85¾	4.82¼ @ 4.82½	4.81¾ @ 4.82
" 14....	4.83½ @ 4.83¾	4.85¼ @ 4.85½	4.85¾ @ 4.86	4.82¾ @ 4.83	4.82¼ @ 4.82½
" 21....	4.82¼ @ 4.82½	4.84¼ @ 4.84½	4.84¼ @ 4.84¾	4.81¼ @ 4.81½	4.80¾ @ 4.81
" 28....	4.80½ @ 4.80¾	4.83¼ @ 4.83½	4.83¾ @ 4.84	4.79¾ @ 4.80	4.79¼ @ 4.79½
Nov. 4....	4.81 @ 4.81¼	4.83¾ @ 4.84	4.84¼ @ 4.84½	4.80¼ @ 4.80½	4.80 @ 4.80¼

Continental rates advanced generally during the month and are higher than a month ago. The range at the close of the month was as follows:

	BANKERS.		*Cable Transfers.*	COMMERCIAL.	
	60 Days.	*Sight.*		*60 Days.*	*Sight.*
Paris........	5.23¾ @ 5.23⅛	5.21¼ @ 5.20⅝	5.20⅝ @ 5.19⅜	5.25 @ 5.24⅜	5.22½ @ 5.21⅞

Brussels ...	....	5.21⅞ @ 5.20⅝	....	....	....
Amsterdam	39⅞ @ 39 15-16	40 3-16 @ 40¼	....	39⅝ @ 39¾	....
Kronors....	26¾ @ 26⅞	26 15-16 @ 27	....	....	....
Italian lire..	....	5.75 @ 5.70	....	....	....

BANK OF ENGLAND.—On October 5th the Bank of England reduced its rate of discount from 3½ to 3 per cent., which rate was continued throughout the month. On October 20th last year the rate was raised from 2 to 3 per cent., and in 1891 the rate was advanced from 3 to 4 per cent. on October 29. Following are the changes made during the present year:

January 26	3 to 2½ per cent.	August 3	2½ to 3 per cent.
May 4	2½ to 3 per cent.	August 10	3 to 4 per cent.
May 11	3 to 3½ per cent.	August 24	4 to 5 per cent.
May 18	3½ to 4 per cent.	September 14	5 to 4 per cent.
June 8	4 to 3 per cent.	September 21	4 to 3½ per cent.
June 15	3 to 2½ per cent.	October 5	3½ to 3 per cent.

The open market rate in London for 60 to 90-day bills is 2⅝ per cent. as against 3⅝ per cent. a month ago. In Paris the open market rate is 2½ per cent. against 2⅛ per cent. a month ago; in Berlin 4⅜ per cent., and Frankfort 4½ per cent. against 4¾ and 4⅞ respectively, a month ago. During the month of October the Bank of England lost £1,590,873 in bullion, holding at the close £25,976,770 against £24,429,253 a year ago. The Bank of France lost £1,035,865 gold and now holds £67,938,793 against £66,919,748 in 1892.

United States Treasury.—The statement of the United States Treasury for October shows an increase in the total debt of $17,944,215, of which $17,384,498 is in certificates and Treasury notes, offset by an equal amount of cash in the Treasury. The net debt, less cash in the Treasury, increased $5,141,058. The total cash assets are $729,447,015, of which $16,458,341 is in National bank depositories. Following is a summary of the statement:

	Oct. 31, 1893.	*Sept. 30, 1893.*		
Interest bearing debt	$585,039,040	$585,037,740	Increase...	$1,300
Debt on which interest has ceased.	1,974,570	1,984,770	Decrease..	10 200
Debt bearing no interest	374,932,882	374,364,265	Increase...	568,617
Total	$961,946,492	$961,386,775	Increase ..	559,717
Certificates and Treasury notes	587,609,861	570,225,363	Increase...	17,384,498
Aggregate debt	$1,549,556,353	$1,531,612,138	Increase..	$17,944,215
Net cash in Treasury:				
Held against certificates and Treasury notes	587,609,861	570,225,363	Increase...	17,384,498
Gold reserve..	84,384,862	93,582,172	Decrease..	9,197,310
Net cash balance	17,909,430	13,293,461	Increase...	4,615,969
	$689,904,153	$677,100,996	Increase..	$12,803,157
Total net debt	859,652,200	854,511,142	Increase...	5,141,058

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $97,827 circulation of National gold banks—was on October 31, $209,214,166. This shows an increase for the month of October of $621,994 as compared with an increase of $9,710,291 in September, and an increase in total circulation since October 31, 1892, of $36,886,972. During the month of October there was issued to new banks $47,260, and to old banks increasing circulation $1,150,725. There has been surrendered and destroyed during the month $575,991. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $21,197,938, showing an increase in that class of circulation during the month of $470,750.

The Money Market.—The supply of money for several weeks past has been greater than the demand from borrowers whose names or collaterals would command attention. Money on call has ruled at 1 @ 2 per cent. with the bulk of loans made at less than the higher figure. Time money is also in plentiful supply while the demand is light, the rates ranging from 3 per cent. for 30 days to 5½ per cent. for six months. Commercial paper is readily taken by outside institutions, but the city banks have not yet come into the market to any extent. The rates rarely go above 6 per cent. and sometimes are as low as 5 per cent. For the week ending October 7, the open market rate for call loans on stock and bond collaterals ranged from 1½ to 3 per cent., the average being 3 per cent. Commercial paper 6½ to 7 per cent. For the week ending October 14, the open market rate for call loans on prime collaterals, ranged from 1½ to 3 per cent., with 2½ per cent. as the average. Commercial paper quoted 6 to 8 per cent. For the week ending October 21, the open market rate for call loans ranged from 1 to 3 per cent., the average being 2 per cent. Commercial paper quoted 5½ to 6 per cent. During the week ending October 28, the open market rate on call loans ranged from 1 to 2½ per cent., the average being 2 per cent. Commercial paper quoted 5½ to 6½ per cent. During the week ended November 4th the open market rate on call loans ranged from 1 to 2 per cent., the average being a little less than 2 per cent. Commercial paper quoted at 5 to 6 per cent.

The following table shows amount of gold and silver coins and certificates, United States notes and National bank notes in circulation November 1:

	General Stock, Coined or Issued.	*In Treasury.*	*Amount in Circulation.*
Gold coin	$564,738,578	$66,616,899	$498,121,679
Standard silver dollars	419,332,550	360,606,732	58,725,818
Subsidiary silver	76,977,002	12,667,195	64,309,807
Gold certificates	79,005,169	115,860	78,889,309
Silver certificates	333,444,507	7,727,275	325,717,232
Treasury notes of 1890	152,735,188	1,916,606	150,811,582
United States notes	346,681,016	24,788,988	321,892,028
Currency certificates	22,425,000	100,000	22,325,000
National bank notes	209,311,993	11,566,766	197,745,227
Totals	$2,204,651,008	$486,106,321	$1,718,544,682

The population of the United States on November 1, 1893, is estimated at 67,420,000; circulation per capita, $25.49.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	TOTAL SUPPLY.			*Net Gold in United States Treasury.*	*Gold in Circulation.*
	Gold Coin.	*Gold Bullion.*	*Total Gold.*		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099
July 1.	513,743,623	78,345,510	592,089,133	95,485,414	496,603,197
September 1.	547,516,035	98,373,505	645,889,540	96,009,123	549,880,417
October 1	556,479,232	101,026,648	657,505,880	93,582,172	563,923,708
November 1	564,738,578	96,657,273	661,395,851	84,384,863	577,010,988

NEW YORK CITY BANKS.—The accumulation of money in the local banks is now more rapid than ever before; in fact the present cash reserves of $163,866,600 are the largest ever reported with the single exception of February 13, 1892, when the total was $164,111,000. The surplus reserve is $52,013,450, and this has never before been equalled except for a short time in 1885. Deposits to the amount of $77,000,000 have been returned to the banks since August, and the holdings of specie have been increased $43,000,000 and of legal tenders $44,000,000 during the same time. Loans have begun to increase, but are still $4,000,000 less than they were when the deposits were $77,000,000 smaller.

The following table gives the condition of the New York Clearing-House banks, as shown by the statements for a number of weeks past:

	Loans.	*Specie.*	*Legal-tenders.*	*Deposits.*	*Circulation.*	*Surplus Reserve.*
Oct. 7	$393,341,800	$84,372,700	$14,305,000	$400,193,900	$14,940,000	$4,508,225 inc.
" 14	395,716,000	90,379,400	46,680,700	412,456,200	14,956,600	5,267,325 inc.
" 21	394,039,700	95,718,500	52,314,000	421,686,900	14,690,500	8,744,725 inc.
" 28	397,324,800	96,564,500	60,538,400	433,261,700	14,610,800	6,146,700 inc.
Nov. 4	402,383,300	97,116,500	66,750,120	447,412,600	14,409,900	3,225,975 inc.

The total amount of specie exported from New York city to all points during the month of October was $2,779,589 as compared with $3,698,555 in September, making a total for the year of $96,807,085, of which $70,173,547 was gold and $26,633,538 silver. The imports for the month were $1,869,610, as compared with $5,634,245 in September, making a total for the year of $61,632,360, of which $58,568,789 was gold and $3,063,571 silver.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of October, 1893, and the highest and lowest since January 1, 1893, by dates:

2,502,037	1,111,104	476,909	232,794

leaving 1,731,085 shares (including 884,040 shares of unlisted stocks) to represent the dealings in the remaining 154 stocks. In addition 350 different issues of railroad bonds were dealt in, to the amount of $25,243,300 also $565,500 State bonds and $126,800 Government bonds. (Compared with October, 1892, there is a decrease of 440,490 shares in stocks; a decrease of $1,836,900 in railroad bonds; a decrease of $607,700 in State bonds; a decrease of $100,550 in Government bonds, and a decrease of 1,615,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $10,000; stocks, 884,040 shares, of which 796,874 were American Sugar Refiners' common stock and 15,561 preferred; mining stocks, 24,900 shares. American Cotton Oil Certificates, 28,154 shares of common and 6,539 shares of preferred; Pipe Line Certificates, 2,000 barrels. Of National Lead common 39,975 shares, preferred 13,495 shares; of silver bullion certificates, 80,000 ounces, extremes being 74 and 73¼, closing at 68¼ bid. The listed stocks show an increase of 1,319,105 shares as compared with the amount sold in September. Transactions in railroad bonds show an increase of $3,439,100 during the same period, an increase of $472,500 in State bonds, and an increase of $119,350 in Government bonds. In unlisted bonds a decrease of $1,000; in unlisted stocks an increase of 8,516 shares; in mining stocks an increase of 15,640 shares; an increase of 2,264 shares in Cotton Oil Certificates common, a decrease of 2,112 shares in preferred; a decrease of 28,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 26,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of October were sold: 2,101,690 shares of railroad and other stocks representing dealings in 90 properties. Of this amount 1,678,120 shares are transactions in the following 12 stocks:

C. M. & St. P..476,900	Phil. & Read..162,140	W. U. Tel..... 70,650	Gen'l Elect.. 31,020
C. B. & Q......255,160	C. R. I. & Pac. 158,190	N. Y. & N. E.. 63,820	Union Pac.... 19,900

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Ayer.—T. P. Ayer, President of the Winchester (Mass) Savings Bank, died October 12, aged seventy-five years. He had been connected with the bank from its organization, and was for many years one of Boston's well-known business men.

Brown.—Philip Henry Brown, of J. B. Brown & Sons, Portland, Me., died October 25.

Clarke.—Charles F. Clarke, Vice-President of the Hibernian Banking Association, Chicago, Ill., died recently.

Doughty.—Samuel Doughty, for eighteen years President of the Lake City (Minn.) Bank, died October 9, at the age of seventy-seven years. Mr. Doughty retired from the presidency of the bank in January last.

Frayser.—Colonel R. Dudley Frayser, formerly a prominent banker of Memphis, Tenn., died recently at the age of fifty-three years.

Haven.—Franklin Haven died suddenly at Beverly, Mass., October 31 at the age of ninety years. He was President of the Merchants' National Bank of Beverly for a continuous period of 50 years. He resigned ten years ago and was succeeded by his son.

Jones.—John J. Jones, President of the Bank of Baughman, Orr & Co., Tuscola, Ill., died October 15 while on a trip to the World's Fair.

Kennedy.—S. H. Kennedy, at one time President of the State National Bank, New Orleans, died November 7, aged seventy-seven.

McGuire.—E. J. H. McGuire, Second Assistant Cashier of the Union National Bank, Chicago, Ill., died October 26, at the age of forty-three years.

Meigs.—Thomas Meigs, for twenty-two years a Paying Teller in the Bank of America, New York city, died October 12.

Mick.—Robert Mick, President of the First National Bank, Harrisburg, Ill., and the Gallatin County Bank, Ridgway, Ill., died October 10, aged seventy-four years.

Priestly.—John W. Priestly, President of the Hunterdon County National Bank, Flemington, N. J., died October 15 at the age of seventy-four.

Scoville.—James W. Scoville, President of the Prairie State National Bank, Chicago, Ill., died at Pasadena, Cal., November 2. The death of Mr. Scoville was the result of a slight stroke of paralysis some six months ago. James W. Scoville was essentially a self-made man. He was born on a farm in New York State sixty-eight years ago. His early life was the same monotonous and sturdy existence that falls to the lot of farmers' boys. His education in youth was neglected. It was not until he had reached his majority that he was able to get into the high school, where he paid his tuition expenses by cutting cordwood at 25 cents a cord and performing the duties of janitor. In this way he laid the foundation for the success of after life. In 1874, when he was twenty-two years old, he emigrated westward and located in Chicago. When he first set foot in the then small town he had but 38 cents in his pocket. But he possessed perseverance, pluck and energy to an unusual degree. He secured employment in a foundry and worked in minor positions there for several years and was finally promoted to the position of manager. Leaving this employment he engaged in the real estate business. In the spring of 1869 he established, with T. M. Avery, what was known at that time as the Prairie State Loan and Trust Company. He became President of the company, which was afterward merged into the Prairie State National Bank. Mr. Scoville was made President and continued in the office until his death. He occupied many prominent positions, in addition to his close attention to his duties as President of the bank. Mr. Scoville had spent but little time in Chicago for the past six years, but, with his wife and one son, Charles P. Scoville, had made Pasadena, Cal., his home. He always made it a point to visit Chicago twice each year to attend to his many duties, and his interest in the city, its citizens and everything in connection with it was as warmly alive as ever. His residence in Oak Park is one of the most magnificent of the many beautiful private residences of that suburb. He owned considerable real estate in various parts of the city. The amount of his estate is roughly estimated at $1,500,000. The Scoville Institute, which he built for Oak Park, is a handsome structure, containing a library. He had also given considerable money to Beloit College, Wisconsin, and Carleton College, Minnesota.

Story.—Albert G. Story, formerly President of the Herkimer County Bank, Little Falls, N. Y., dropped dead in the bank building in Little Falls November 1. He was the oldest banker in New York State, having been President of the National Herkimer County Bank for sixty years. He was 81 years of age.

Vennard.—William L. Vennard, a director of the Bowery Savings Bank, New York city, died recently.

Whipple.—G. A. Whipple, President of the Orange (Mass.) National Bank, died October 23. He was also one of the organizers of the Orange Savings Bank.

Wildman.—Hon. F. S. Wildman, ex-Treasurer of Connecticut and President of the Savings Bank of Danbury, died October 16 at the age of eighty-eight years.

White.—William White died at his home in North Plainfield, N. J., November 5. He helped found the City National Bank of Plainfield, of which he was a director. Mr. White was seventy years old at the time of his death.

Zoller.—John A. Zoller, President of the Farmers and Mechanics' Bank, Fort Plain, N. Y., died November 6 at the age of seventy years.

RHODES'

JOURNAL OF BANKING.

Vol. XX. DECEMBER, 1893. No. 12.

MANY of the bank failures that marked the financial disasters of the year now closing were the result of reckless mismanagement, and it is a matter for congratulation, costly though the process be, that periodic financial upheavals like that of the past year reveal the ugliness of these excrescences on the banking fraternity and throw the searchlight of publicity on their nefarious doings. Whole chains of banks, like those of the Dwiggins syndicate in Illinois and Indiana and those of the E. Ashley Mears system in North Dakota, have succumbed, not only because of their inherent weakness, but owing to reckless schemes of financiering that were constructively criminal in their scope and operation.

There is no finer exemplification of duty well done than that of the banker who, soliciting the confidence of the community, receives it and is faithful to the trust placed in him; and, per contra, there is no one more deserving of contempt and execration than they who use the money of their depositors to bolster up what, in nine cases out of every ten, are visionary schemes of wild speculation, or to gratify the extravagant tastes of officials who take advantage of their position to rob those who trust them.

There were, of course, numerous suspensions during the year for which no blame attaches to the management of the banks. In some communities depositors were seized with panic, and it was impossible to meet their demands; but in most cases the suspension of well-conducted banks was only temporary, and they have resumed business with the full confidence that succeeded the wave of apprehension that submerged the country. But there were far too many failures that were due to speculation and peculation. Out of a total of about 8,400 incorporated banks in the country the failures and suspensions aggregated less than 600, or about seven per cent.; but the failure of this comparatively small number worked great injury to those that were solvent, and compelled them to make forced sacrifice of their assets to meet the drain on deposits.

The strain was first felt by the weakest banks and they were the first to succumb; but, unfortunately, the attack did not stop here. The failure of these small institutions—numbering as many as thirty in a single day—created general distrust, and before these fears were allayed many banks of good standing had gone down.

With a proper system of banking and a rigid supervision under competent authority, anything like a general panic among bank depositors would be impossib'e. The day is past, too, when firms and individuals doing business under bank titles can hide their light under a bushel by failing to make and publish frequent statements of their condition. The large individual responsibility claimed by a majority of such banks is a variable and unknown quantity to the depositors as a rule, and in nine cases out of ten, as proved by actual experience, the claimed responsibility shrinks into insignificance when the test comes No bank or firm receiving deposits, no matter how well known in the community, which fails to publish regular statements of condition is entitled to confidence. Time was when secretive banking might flourish, but not in this enlightened age.

The great body of the banking fraternity is made up of men of the highest ability and integrity; their profession should no longer be at the mercy of small Shylocks and adventurous schemers.

THE RATE OF INTEREST that can be earned by banks throughout the United States is a very interesting topic, and an equally interesting one is the rates at which borrowers can obtain money from the banks. Among all the discussions which are going on relative to improvement of the banking systems of the country these points are not very much dwelt upon. Yet the very object of banks and the secret of their being is the necessity of furnishing money at low rates of interest to the business community and at the same time secure a fair profit for so doing.

Before banks were invented there was hardly any limit upon the rates of interest charged for money when loans were made for commercial purposes. Immediately upon the invention of banking in the modern sense the rates of interest began to fall, until the word usury, so opprobrious a term in the past, has almost lost its meaning.

It seems strange that in a country like the United States, where trade between the several sections and States is so free and unimpeded and where there is no business division, the rates of interest should vary so greatly. In the West and South and newer parts of the country the rates are exorbitant compared with those charged in the East and older settled portions. This condition of things has existed so long that it appears to have been acquiesced in by all men as being a natural law which can in no way be overcome. There is good reason to believe however that there is no natural law about it, further than that it is the natural consequence of a bad financial system, and that this condition can be readily changed were proper financial methods adopted.

It is the knowledge of this inequality of the rates paid for the use of money that lies at the root of the dissatisfaction with present financial conditions that has furnished so many enthusiastic supporters of the greenback and cheap silver dollar heresies, and lastly of the populist heresy. These converts have an accurate perception that some injustice exists, but their ideas as to the cause and the cure are so fatuous and inconsequent as to be amusing if they were not so dangerous to the welfare of the country.

The savage who falls victim to disease knows he is ill, but, incompetent to conceive of the real cause, ascribes it to the malevolent attack of some evil spirit, and calls upon some potent medicine-man who shall frighten away the spirit with hideous noises and fearful stenches. The greenbackers and populists are made up of those who perceive the inequality of price at which monetary facilities are obtained in different parts of the country and, like the savage, are ignorant of the true causes and remedies. They appeal for aid against the mysterious "gold bug" to "medicine-men" as ignorant of finance as themselves. The remedy has been to have the Government make and put more money into circulation—whether paper, based on faith or fiat, or upon cheap silver, it is equally acceptable. The solemn Peffer and the blatant Stewart are the apostles of this remedy, and the theory of these men is that if the per capita circulation is increased money must be more easily obtained by every one. But the inefficacy of it is apparent when it is considered that for the last twenty years the per capita circulation has been gradually increasing while there is as much inequality in interest rates in different parts of the country as ever.

The true reason of this inequality in interest rates is the imperfect and abortive manner in which the business of banking is permitted to perform its functions by the laws of the country. The bankers of the country are not at fault, but they are forbidden by law to use the means by which monetary conveniences can be conveveniently and equally distributed. They are deprived of the right of issuing a paper note circulation based upon their credit, which would conform to the wants of the business of the country in all its parts. The Treasury of the United States has entirely usurped this right, issuing virtually the entire paper circulation of the country. The notes issued by the National banks are based on United States bonds deposited, and are in no way founded, as a genuine bank note should be, upon bank credit. The paper money issued by the Government, while safe, is without elasticity. It has an irresistible tendency to accumulate in the larger money centres and become a drug there, lowering the rates of interest and encouraging unnecessary speculation. The reason of this accumulation is that the Government, whose operations chiefly keep the mass of its issues in motion, pays its dues in checks upon the various assistant treasuries. These checks are cashed at local banks, which send them to the banks at the centres. When they are finally paid the cash received goes into the central banks. Of course cash is again remitted to the outlying banks, but the tendency towards the centres is much greater than towards the exterior. It is only the movement of the crops in the fall and spring that for brief periods reverses this tendency. To counteract it in part high rates of interest at the outside points become necessary.

The real remedy for this inequality of interest lies in giving the currency-issuing function exclusively to the banks of the country, under proper restrictions and safeguards. Each bank would then issue the currency required in its locality, and if one could not do it more would be organized. When this currency was no longer needed it would be redeemed. This redemption would be more in the nature of an exchange or cancellation of the notes by the various banks among themselves, and would require hardly any real money to effect it. If the banks were permitted to issue currency in a scientific manner the rates of interest would be the same from Maine to Oregon and from Minnesota to Texas; and not only this, they would also be lowered all over the country, and the dissatisfaction upon which so many financial heresies have been founded would be to a great extent ended.

THE CONDITION OF THE TREASURY during the last few months has been one of difficulty on account of the excess of expenditures over revenues. During the ten months ending October 30 the total revenues were about two hundred and ninety-eight millions of dollars, while the expenditures were three hundred and twenty-six millions, being a deficiency of twenty-eight millions of dollars for the whole period. The largest part of this deficiency has occurred during the past four months. The Secretary has been obliged to resort to every expedient to maintain the credit of this Government through the very difficult period. The total cash balance in the Treasury on October 30 was $102,294,291, of which $84,384,862 constituted the so-called gold reserve.

When the revenues of the country exceeded the expenditures there was little difficulty in keeping up the various reserves required by law and in finding money to meet the expenditures. In fact the surplus was at one time piled up to such an extent that it was a source of trouble and annoyance. The abundance of revenue and the desire to avoid an accumulation of surplus doubtless led to some extravagance and to an increase in the payment of pensions. Of the three hundred and twenty-six millions of dollars of disbursements during the last ten months one hundred and twenty-six millions were for pensions, as against one hundred and seventy millions of ordinary expenditures and about twenty-five millions of interest upon the public debt. The people do not realize that as the so-called bonded debt is being paid off that the pension payments constituting a debt just as real are increasing. At three per cent. the money now paid out annually in pensions is equal to the interest on a bonded debt of four billions nine hundred millions, greater than the maximum debt at the close of the war by over a billion of dollars. And this debt will probably have to run for over thirty years. This reflection indicates how unfounded is the assertion often made by demagogues that the United States Treasury is managed in the interests of the rich bondholders. And it further shows how important to the large number of persons to whom this pension debt is owing is the maintainance of the gold standard, whatever the form of dollar in which that standard may find expression.

If there had been failure in the effort to repeal the silver-purchase bill, all the dollars of the United States in circulation would have been equal to the silver instead of the gold dollar. The latter in any form would have been out of circulation and would have commanded such a premium as would make the silver dollar worth about sixty cents in gold purchasing power instead of one hundred per cent. There would consequently have been a shrinkage of more than one-third in the real value to the receiver of all pension payments.

Since the repeal of the silver-purchase Act there is no longer doubt as to the ability of the Treasury to maintain gold payments. Gold is returning to the country, and as soon as business revives the revenues will increase and will in larger proportions be paid in gold. The stock of gold in the banks is increasing, and should the Treasury require more than the revenues furnish, the banks will no doubt gladly exchange it for paper. But the difficulty the Treasury finds is not that the proportion of gold in its revenues is too small, but the much greater one that the revenues have been deficient. This deficiency has been due to the uncertainty and depression existing in business circles. The tariff too no doubt needs readjustment with due regard to a sufficient revenue to meet the increase in pension expenditures which is bound to continue for some years to come. Temporary deficiencies in revenue are apt to be followed by temporary surpluses, and in any country that wisely adjusts its taxation to its real necessities there ought to be some power vested in the management of the Treasury to equalize these differences, to tide over the deficiencies and make them up by the later coming surplus.

The English Exchequer overcomes this difficulty by the issue of Exchequer bills, and, as was suggested last month, the Secretary of the Treasury could do the same thing by the issue of Treasury notes payable at a fixed time at low rates of interest. However willing the banks may be to help the Treasury they cannot do it unless the Treasury like any other borrower can give them something to show for it, a bond or a due-bill would be all the same to them. But the Secretary has no authority to issue either, and so about all the help he can expect from the banks is the exchange of one form of cash for another. There is no National Treasury in the world that is compelled to work with so little authority as that of the United States. As long as the revenues were superabundant, no authority was required, because a surplus will always run itself; but since taxation has been wisely reduced the increased difficulties of adjusting revenues and expenditures nearly equal should be taken into consideration and sufficient authority given to the Secretary on lines tried by experience to enable him to meet these difficulties creditably without begging.

THE COMPTROLLER OF THE CURRENCY, the Hon. JAMES H. ECKELS, is showing by his addresses that he is in full accord with the financial ideas of the most experienced and conservative bankers of the country. At the time of his appointment to the office it was bruited abroad in explanation of the selection by the President of an assumedly inexperienced young man trained in an entirely different profession for a position requiring technical knowledge and experience, that the purpose was to have the National banks and their manner of conducting business subjected to the scrutiny of one who might be regarded as an outsider. It had been asserted again and again by political demagogues, who, whenever they lacked an argument to stir up their followers, made an attack upon the gold bugs and the banks, that the Comptroller's office had always been presided over by men who were apparently the censors, but in reality the humble servants of the banks, doing everything in their interest and not in the interests of the public. And the earlier utterances of Comptroller ECKELS rather warranted the belief that the attitude of his mind towards the banks in some degree bore out the above theory of his appointment, and that he was rather inclined to believe the National banks to require a more rigid censorship than his predecessors had been accustomed to take upon themselves. Whether this was really the case or not the condition of financial affairs soon after he assumed the office became such that whether he had desired to exercise it or not an extraordinary degree of vigilance and activity was required of him, and the times justified his acting with a degree of promptness and decision that in ordinary periods might be criticized as severity. The weak spots in the system were exposed to his gaze beyond the power of concealment. It cannot be denied that he met with energy and good sense an emergency such as was never before known in the history of his office.

Out of nearly four thousand National banks doing business only one hundred and fifty-five succumbed to the greatest financial storm of the century. Of these seventy-two resumed business. If the Comptroller had any idea on assuming his office that the National banking system was in any way weak or had suffered from lack of proper supervision at the hands of his predecessors, this experience must have very much astonished him. He must at once have learned to respect the experience, the integrity and the eminent conservatism of the men who as bank officers manage the affairs of the National banks of the country.

The origin of the panic is not to be attributed to any fault on the part of the banks, either National or State; it may be accurately ascribed to the unwise financial legislation of the last fifteen years from the passage of the Act of 1878 remonetizing the silver dollar. Congress had not only done nothing in all that time to aid the banks, with the exception of one Act of 1882, permitting renewal of charters which did not increase their privileges in the least, but had at every step crippled them for efficient service to trade and commerce. Notwithstanding the disadvantages they suffered under in being virtually deprived of the power of issuing notes, the National banks pursued a career of usefulness to the people, and as far as in them lay counteracted the disastrous operation of unwise laws, and gave aid to the Treasury whenever called upon in its struggle against the dangerous conditions imposed on its management by Congress.

If the banks had been less strong and well managed than they were, they would have been swept away in the stress of the spring and summer. But they were the real bulwark that saved the country from the humiliation of absolute financial wreck. The Comptroller in his recent addresses before the Convention of the American Bankers' Association at Chicago, and at the annual dinner of the Bankers' Association of Boston, appears to recognize the power and steadfastness of the banks forming the system over which he is the official head. He said at Chicago: "It would be * * * both unfair and unjust to deny that the bankers of this country have exhibited masterful skill in coping with a situation rendered complex beyond anything heretofore known by the withdrawals of currency by depositors on the one hand and the pleadings for assistance on the part of merchant and manufacturer on the other." He further urges bankers to speak out upon all financial and economic questions, and thus do what they can to dispel the unfounded prejudice against banking, appealing to which has been the stock in trade of many a demagogue anxious to catch votes. In his speech at the Boston dinner the Comptroller again recommends an aggressive policy on the part of bankers, saying that "no errors are so spontaneously popular with the mass of people as financial ones, and none are so easily dispelled when aggressively attacked."

Of course the soundness of this latter remark may be criticized by those who have been fighting financial errors for lo! these many years, and who have discovered that whether aggressively attacked or not, some of these financial errors die exceedingly hard, and often when apparently dead start up with a solemn and tiresome pertinacity.

But the Comptroller's advice is good in these times when financial error has been so seriously discredited by results more disastrous than common. The bankers of the country have, perhaps, minded their own business too exclusively, and have distrusted their influence with the masses of the people, though there are many among them who have borne reiterated witness to the belief that was in them. Moreover it is probable that, under the political system of the country, they have as much influence as any class of men of equal intelligence and numbers. Whether they have been discouraged by apparent lack of effect from making sufficient effort to influence financial legislation in the past, it is certain that during the year 1893 the banks of the country have by their conduct presented a silent but cogent argument for better treatment by American legislators in the future than they have hitherto received.

THE PRICE OF SILVER, IT IS BELIEVED, will increase now that the United States Government has gone out of the market as a purchaser of the metal. The attempts made to bolster the price have in every case failed, because they have aroused undue expectations in the minds of the silver miners and have resulted in an output of silver that has swamped the market notwithstanding the attempts made to corner it. The news from India and China shows that the natural market which those countries have from time immemorial afforded for silver continues to absorb even larger quantities than before. This may be due in part to the lower price of the metal, but it indicates that the demand has not weakened. The low price will also cause a great falling off in the amount produced, and the diminished supply with at least a constant demand will tend to increase the price. It is highly improbable that the price will for a long time, if ever, reach a point at which the silver dollar will be the equivalent of the gold dollar in bullion value, but it may go to eighty and even ninety cents an ounce. The silver bullion purchased by the Treasury, now amounting to nearly one hundred and twenty-seven millions of dollars, may therefore, since the purchase Act has been repealed, prove a not unprofitable investment, if the disaster which the purchase policy has brought upon the country be left out of sight.

The cause of the increased export of silver to India and China during the past year is that the exports of those countries have exceeded their imports more largely than usual. This condition of increasing exports and decreasing imports is likely to continue. From all the observations which can be collected of European publicists and travellers of experience and judgment the effect of Western civilization upon the masses of population of India and China is most likely to prove effervescent. The Occidental mind has no conception of such numbers of people. The citizens of the United States congratulate themselves upon being a great country with a population of between sixty and seventy millions. Russia, with seventy millions, is considered the colossus of Europe. According to the census of 1891 British India alone had a population of nearly two hundred and twenty-two millions, or over three times as large a population as that of Russia or the United States. China, according to the latest authority, has a population of over three hundred and eighty-six millions The British domination of India brings the people of that country more directly under the influence of Western ideas, and yet it is to be expected that they will in the long run absorb and modify these ideas rather than be greatly influenced by them. The Chinese are only infringed upon at the few ports open to foreign trade. It is hardly to be expected that the financial habits and ideas of this great mass of people will be seriously changed by contact with the financial ideas of Western civilization. Because the nations of Europe and their offshoots and colonies prefer gold will not cause the masses of India and China to cease to like silver. The cheapness of the metal has no doubt been a boon in their estimation, and has enabled them to obtain a larger supply in exchange for fewer products.

The introduction of European manufacturing processes and machinery will, particularly in India, before many years enable the people there to make for themselves most if not all of the articles they now import. Labor, which is the greatest difficulty in the way of further cheapening production in England, is nowhere cheaper than in India. The Chinese, too, though not so directly under foreign influence, are an exceedingly observant and provident people. They will no doubt in time take what is best for their own purposes and uses from Western civilization and will manufacture much at home that they now import. On the whole, therefore, the tendency with both India and China will be to increase exports and diminish imports. This implies a continual augmentation of their demand for silver. In an increasing demand and a diminishing supply there is warrant for the expectation of a gradual increase of price, which will in time warrant the revival of many of the silver industries of the United States.

The conduct of the silver mining industry since 1878 in the United States has been most unwise and unscientific. It has had for its motive an immediate gain with no sagacious outlook for the future of the industry. Instead of looking to the natural market of their product and building up a trade in that direction that, as far as can be known about something never put in practice, would have maintained the price of the metal at a fair figure, the silver mining interest has been whining about the legislative halls of the Nation asking the people of the United States to furnish them with an artificial market. Various causes made their demands only too successful, but as favor after favor was granted the only effect was to cheapen their product more and more, selling at reduced prices to England and other foreign commercial nations the metal with which the western coast of the United States might have built up a prosperous foreign trade with India and China. Even those miners whose bonanzas were immensely profitable at the reduced prices, might have made more by directing their energies to the natural course of trade rather than to waste them in an attempt to secure important legislation, and many mines have ruined their possessors. It is not too late yet for a prosperous silver mining industry, but the miners must look for the natural markets and trade direct with them, and not expose their product to the manipulation in the hands of middle men sure to reduce its price.

MR. SPRINGER'S PLAN FOR a banking system modelled and based on the National banking system is before us. Before commenting upon it further study of its details will be required. The JOURNAL has already more than once outlined a plan for the restoration of a safe and elastic bank currency, which may easily be adopted with the least possible change of tne present National banking laws. It contains the results of the long experience of the late JOHN JAY KNOX as Comptroller of the Currency and practical banker. It has been adopted and improved in many of its details by such authorties as HORACE WHITE of New York, and GEORGE A. BUTLER, of New Haven.

But the JOURNAL has repeatedly recognized the fact that to elaborate a good plan for a bank currency is a far more easy thing than to secure for it the authority of legislation. Most of the plans which we have hitherto seen proposed by members of Congress have seemed to be too complicated in their details, and not enough in the line of the banking experience of the last thirty years. They all of them adhere to the plan of depositing securities, Government, State or municipal, as a special security for circulation. This idea of a circulating note absolutely protected seems to have obscured all the other requirements of a good bank note. The very purpose for which bank notes were invented—to enable local credit to supply itself with means—is rendered utterly impracticable by this one idea. In the next number of the JOURNAL, when Mr. SPRINGER'S plan shall have been carefully examined, a resume of its good and bad points will be given our readers.

THE PRESIDENT'S MESSAGE WILL PROVE DISAPPOINTING to those who expected a recommendation for an early and radical revision of the present banking and currency system of the country. Mr. Cleveland's utterances justify his reputation for conservatism in dealing with fiscal affairs. He regards the path of delay as that of safety, and thinks it would be wise to study the changed conditions arising from the repeal of the silver-purchase Act before entering on any comprehensive scheme of currency legislation. But the President's suggestions are not controlling, and there are men eminent in monetary affairs who regard the present time as being most auspicious for mending the defects in our banking and currency laws, and the attempt will doubtless be made with as little delay as possible.

The President's declaration against resort to temporary expedients (of which the country has already had quite enough) are creditable. and it is to be hoped that his suggestions for the adoption of a lasting and comprehensive plan will be adopted. The scheme of an International Monetary Conference is again referred to, and authority is asked to convene such conferences at any time when there should be a fair prospect of accomplishing an international agreement on the subject of coinage. It is to be regretted that present conditions seem to place that time in the distant future, and from the present outlook the hope of an international agreement on the subject of coinage is chimerical.

The recommendation touching authority to issue bonds probably foreshadows the action of Congress on the subject, and a more liberal grant of authority to the Secretary of the Treasury may be expected.

HOW TO DETERMINE THE VALUE OF PAPER OFFERED FOR DISCOUNT.

CONCLUDING ARTICLE OF THE SERIES.

[In competition for the JOURNAL'S prize for the best descriptive article on the subject stated in above title.]

PROMISSORY NOTES CONSIDERED.

The value of paper offered for discount is a term of great significance and widely varied import. Borrowers and lenders are constantly seeking each other, and the "paper" which represents their stock in trade may perhaps differ as widely in quality as the commodities of other branches of business. The determining of this quality is, then, a matter of especial moment to the purchaser; and, it not being apparent on the face of the matter, nor to be determined by inspection of the paper itself, a discussion of the methods by which it may be known is of especial importance to the lenders of money.

The paper having been presented and the request made that it be discounted it at once becomes the duty of the proper person to examine into the merits of the article offered and the claims to credit of the parties to it. If it is the regulation promissory, the promissor is naturally the first to be looked into, as the first to meet the test of its maturity. It may perhaps be an individual, firm or corporation, or either, by procuration. If in the smaller towns or villages, and the parties are of the immediate locality, the signature will probably be recognized, and without further process a conception of a more or less general nature will be immediately formed as to the desirability of this particular piece as an investment; and often here the "determining" ends and the paper is returned to the applicant rejected or accepted and passed into the loan.

But the matter has not been actually determined as far as may be by investigation and thorough examination of the financial strength of the parties to the promise; and if, as before supposed, the locality is that of a small bank in a small place, little more is to be learned of the business interests which would give information beyond what the bank probably already knows, and the best source of information is the books of the business or a correct balanced statement from them, exhibiting in sufficient detail the resources and liabilities, which should be sworn to or signed by those in authority.

Having obtained this, a careful study should be made of the information set forth.

Now in these days of small profits and large sales, manufacturing concerns are prone to extend their business beyond the scope of the capital already employed. This point should be carefully considered, and the statement examined with especial reference to the question whether or not the resources are heavily taxed and the credit strained to enable the business to carry itself along. If the bank account is frequently overdrawn, the dividends all scrip or none at all, and the concern lives along in a (if the expression may be permitted) from hand-to-mouth fashion, even if the business is good and upon a sound basis, the advances made are apt to be in the nature of continual capital loaned.

The Bills Receivable should show the amount of past due unpaid paper and length of time it has lain in that condition. The assiduity with which the collection of these is pushed speaks volumes for the business management.

The same is true of accounts receivable, which is an item very apt to get clogged with old and worthless debts; and it should be positively known if any large portion of it cannot be realized upon. In the retail trade the open account is a most frequent source of loss to the business, and its proper management in the way of giving credit on account and enforcing payment is of the utmost importance in giving the concern itself a sound basis for credit. No business can thrive and be obliged to regularly charge off large amounts of bad debts; wherefore, these old accounts and long past due paper tell against the standing of the house.

The merchandise, if the business is mercantile, should be merchantable. To be so it is necessay that the stock should be constantly renewed. Old, shop-worn, unsalable goods are a depreciated asset. If the machinery and fixtures are inventoried as one of the assets, the nature of these should be looked to, and the manner of fixing their value, for they are not generally immediately available.

If the real estate is similarly treated, care should be taken that it be not overestimated, since its value as a security may be far different from its appraisement under the conditions of the business.

The Current Expenses should show necessary expenditures incident to carrying on the affairs of the business, and any extravagance in this item is a bad defect in its claims to credit. Extravagance is unbusinesslike, and is fatal to a good reputation in the commercial world.

PREVIOUS BORROWINGS FROM BANKS.

Among the liabilities as shown by the statement, naturally the first to be noticed in estimating financial strength is the amount of capital invested; but as this has little bearing in determining that question, except in the light of the disposition made of this capital, attention might be turned to that item "Bills Payable to Banks."

This shows the extent to which the business has already borrowed, and is therefore of particular importance in determining whether more credit can be safely extended; it should show from whom and in what manner the loans have been obtained, whether in the shape of discounts from the bank with which the firm keeps its account and which may be renewed if occasion demands, or in notes sold in open market. It should be noted whether all the bills receivable are negotiated immediately, showing the business to have little reserve force; although this fact need not necessarily indicate insecurity in its obligations, or an unstable condition of the business, for of course business concerns do not borrow unless they need money, the real value of the loan in such cases depending not upon the fact that the borrowings are large or small, but upon the use made of the money borrowed.

Bills Payable for Merchandise will not generally have any particular bearing upon the subject under discussion, though it may be well to note on how long a credit the firm buys, and that there is nothing irregular about them.

Of other liabilities which may be of a miscellaneous or unclassified nature special attention should be given to those which represent money borrowed or any thing of a like nature which is liable to cause embarrassment by a sudden demand for money.

After studying the various items of the statement it should be considered carefully as a whole and noted if it be a well balanced one; not merely that the sides foot equally, but that the different parts are in proportion to each other. The volume of merchandise carried should be enough for the demands of trade, not more. All the resources should not be in the accounts and bills receivable; no larger daily balance need be kept in bank than will pay the bills and remunerate it for whatever accommodations it has vouchsafed; the real estate, improvements or fixtures should be kept down to their actual value by charging off losses and depreciations, and the repairs, or at least a part, should go to the expense account; and above all, the expenses of the business should not eat up the profits by reason of salaries to officers who are figureheads, extravagant furnishings, waste of material or anything resulting from carelessness, inattention or neglect; the bills payable for merchandise should be in proportion to the merchandise held; the bills payable to banks should not show an unduly extended credit.

The statement being the main evidence of condition, the banker wishes to *know* it is correct. It should be verified as far as possible by whatever means at his command, and general appearances may tell a great deal. If the firm desiring credit is really in good condition he may be sure the managers can soon convince him of it if they will. So any hedging or reluctance on the part of the applicants for credit is not a favorable symptom. If vigorous investigation is made it will not be an easy task to make a satisfactory showing of an unsatisfactory condition of the business.

Again, in addition to this, the statement will also incidentally show the manner and methods which prevail in the book-keeping; and this is a matter of no small significance.

While it is true that imperfect and unbusinesslike accounts may indicate loose management in the business as a whole, aside from that the bad book-keeping may show inaccurately the true condition of affairs and so mislead. The investigator will note it as a favorable indication if the most improved methods are used, and such things as inventorying, balancing, closing and taking proofs of accounts are done with regularity and the books show accuracy and systematic method.

MISCELLANEOUS COMMERCIAL PAPER.

In case the paper offered is of that class known as business paper we may often have recourse to the reference books of the mercantile agencies, furnishing information which, though not exhaustive, is of great value in giving an index to two things—the pecuniary strength and the credit. They are tolerably accurate, but not based upon actual investigation. This class of paper is ahead of all others in its value as an investment, and it is also a kind less in volume than formerly.

The note which is given in good faith (not an "accommodation") in payment of bills of merchandise, and that is based upon actually existing values, rests its value to the banker upon its "double-name" quality—a maker who is expected to pay promptly at maturity, and an endorser to fall back upon in case of the default of the maker. But, as between the two classes, those who pay promptly and those who default or come tardily to time after a protest, although there is perfect security in the endorser, the first is of greatest value to the investor, for nobody wants the bother, care and anxiety of pushing the collection of past due and protested paper.

In investing in paper on the open market, more properly buying than discounting, the mercantile agencies and general reputation and information are the chief reliance. This paper is offered largely through the note brokers, who, though not generally endorsing their offerings, are none the less anxious that they should be of good quality. For it is the pride of this kind of business that its paper sold should be uniformly good, and it is upon this that they build a reputation And thus the standing of a house of which this kind of paper is bought may partly determine its value.

These rules and principles relate to corporations and firms where a person's individuality or responsibility as an individual are more or less lost or merged into that of the body corporate. The character of a corporation is a less tangible thing than that of a person; thus the inquiries of the commercial agencies do not ask after the "character" of a company or corporation. But when considering the claims to credit of a private person this question of character is a most important one bearing upon the value of paper which such person may issue. How he himself regards this obligation may vitally affect its value. A sense of honor in the promise given in good faith for actual value received, so sacred and binding as to have no recourse to the statute of limitations, is strong security. Other things being equal, the safe loan is to the honest man. Although it is, of course, not meant to be inferred that assignments and other rights and privileges accorded by law are not justified by circumstances.

But after all, general principles only can be laid down in a discussion of the subject. The bank President does not determine the value of paper offered for discount by applying to it, like a mathematical formula, a fixed rule and noting if it fulfills all its conditions. There is no easy way of arriving at this value, no more than is there a royal road to learning; the keys to it all are judgment, insight, foresight, and especially judgment, which is indispensable. The banker has in each piece offered him a different phase upon which to exercise these faculties, as a physician has in each and every patient a case with its own individual peculiarity, separate from and unlike all others, where he must discriminate especially for each one.

WHAT KIND OF A MAN IS HE?

Insight into character is of as much value as a quality for a bank President, as that element is important in commercial obligations. It seems that this faculty may scarcely be an acquired one, but a natural gift. Personal contact with men always conveys some kind of impression of character. We all have an idea of our own, of "what kind of a man" is each one whom we know; yet it may be more or less vague, uncertain or inaccurate; to be able to confidently feel and understand character by personal association, is, indeed, a quality most desirable in one who is constantly choosing men in whom to put his trust.

The determining to whom shall the bank lend and what paper shall it discount entails care and responsibility which the President will scarcely care to assume alone; and it is well that the judgment of others supplements his own. Nevertheless he has generally the most influence in determining the value of paper the bank is discounting, as it is his business to have. All the sources of his knowledge can scarcely be enumerated, or all his means of arriving at conclusions explained, in the present consideration of the subject, in a manner which would serve as a guide for others in many cases; for he may feel, or be told by his intuition, in certain cases, of the undesirability of certain paper which may be offered him without being able to give exact reasons for his opinion; and thus the answer to the query propounded at the head of this paper is to be found only in work, study and experience, combined with the discriminating powers of the mind. COUNTRY CLERK.

NEW YORK.

NOTICE.

The above paper concludes the series of prize articles begun in the January number of the JOURNAL on the best methods of determining the value of paper offered for discount. The first paper was by Mr. James G. Cannon, of New York. This article, as already stated, will not be in competition for the prize of $100 offered for the best one of the series.

The papers in the contest appeared as follows: February, one paper, signed "Millennium"; March, three, signed "Sigma," "Credo" and "Felix"; April, three, signed "Loans and Discounts," "Investigator" and "Nemo"; May, two, signed "Discount" and "Safeguard"; June, three, signed "Aloha," "Tradesmen" and "Katydid"; July, two, signed "Banker and Customer" and "Bois D'Arc"; August, one, signed "Lex"; December, one, signed "Country Clerk."

In accordance with the terms governing the contest we now ask all JOURNAL subscribers to indicate on a postal card the article which, in their judgment, is entitled to the prize, indicating their choice by designating the name signed to the paper.

Each subscriber is allowed one vote. The voting will be limited to four weeks from December 15, and all votes must be mailed to this office not later than the 15th of January, 1894. The votes will be recorded as received, and the result announced in the February number.

The articles have produced much interest in the subject among bankers everywhere, and we hope the JOURNAL'S readers generally will examine each one critically, and send in their votes as above indicated.

THE AUSTRALIAN PANIC.—Some idea of the appalling extent of the late Australian panic may be gained from the following, printed in a recent number of the London "Bankers' Magazine:"

"Liabilities amounting to £25,000,000 connected with building and miscellaneous companies, and liabilities on the part of the banks which were compelled to suspend payment, aggregating nearly £100,000,000 more, form a larger mass of money in this position than has ever been recorded previously. Mr. Coghlan, the Government statist in New South Wales, estimates the British deposits in Australian banks as not less than £40,000,000. This sum, no doubt, includes the amounts, and they are large, held by those leading Australian banks that have successfully emerged from the crisis; but no allowance apparently is made in the estimate for shares held by the British investing public in the Australian banks. The sums employed in this way are very considerable, and we should think it probable that the total amount affected by the recent lock-up totals altogether something very near to £50,000,000. We may form some idea of what this sum means when we remember that it nearly reaches the half of the amount of banking capital in England and Wales, including in this the capital of the Bank of England."

HOW TO MAKE BANKS SAFE.

III.

A PLAN TO INCREASE CIRCULATION AND SECURE DEPOSITORS OF NATIONAL BANKS.

The late financial crisis was attended by a startling depreciation in our securities, by innumerable failures of moneyed institutions, and by a withdrawal of public confidence, not only in our banks, but in the credit of the Government itself. To what extent this lack of confidence has extended can best be exemplified by the statement that, in the National banks alone, the individual deposits made the alarming decrease, from May 4 to July 12, of $193,000,000, and from July 12 to October 3, $106,000,000, or a total of nearly $300,000,000 for the five months. The hoarding of a large part of this money, coupled with the fact that the banks held a large excess of cash through fear of the danger which constantly threatened them, brought about an unusual condition of affairs, in which the gold and currency of the nation have been bought and sold at a premium, and quoted like stocks and bonds on the market. The National Treasury, very properly not being engaged in the business of banking, can render but little assistance in such trying emergencies, and cannot place in circulation any of its accumulations except at a money value, with the exception, of course, of its disbursements for the expenses of the Government.

The necessity for a currency elastic in its character, and which can be expanded and contracted according to the necessities of the country, has never been more strongly demonstrated. And the necessary conclusion has been reached that there is no medium better adapted to supply this species of currency than the banks organized under the National Banking Act; for, located as they are in all sections of the country, their officers being in a position to learn of the wants of the several communities, they would naturally expand or contract their circulation according to the demands made upon them. So that it would seem the part of financial wisdom to enact such legislation as would lead the National banks to serve as the medium of furnishing the people with a safe and reliable currency, the volume of which to be based on the public necessities and on the free and successful working of all the machinery of business.

The simple statement of the fact that in 1883 the National bank circulation was $316,000,000 and in 1892 $147,000,000, or a decrease of $169,000,000 in ten years, conclusively proves that there is a radical defect in the situation, and that this great loss has been occasioned by the unprofitableness of circulation to the banks. With a tax of one per cent. on circulation and U. S. four per cent bonds selling in the market, as they have done, at a premium of thirty and over, the banks which held the bonds have found it profitable to sell, and those which did not have them found it unprofitable to buy. We are of the opinion that the remedy lies in the enactment of legislation, which will furnish the banks with circulation to the par of bonds deposited as security, these bonds to be long time, say 30 years, and bearing interest at the rate of 2 per cent. With the purchase money of these bonds the Government could bid for the outstanding 4 per cent. bonds at a price, and the exchange would inure to the great profit of the Government, as is shown in the following extract taken from ex-Comptroller Hepburn's report of December 5, 1892:

Quarterly interest paid on 4s (559 mil)	$5,595,867 50
" " " 2s (635 mil)	3,175,377 78
Quarterly saving in interest	$2,420,489 72
Value October 1, 1892, of these savings of interest, money at 2 per cent. reinvested quarterly	123,406,683 00
Value October 1, 1892, of $75,488,806, price of 2s in excess of price of 4s, money at 2 per cent. reinvested quarterly	56,245,132 00
Value of net saving to the Government	$67,161,551 00

I am firmly of the opinion that the National banks would readily accept 30 year 2 per cent. bonds, on which circulation should be issued to the par thereof. This legislation should be strengthened by the adoption of the following reasonable suggestions:

First—Remove the tax of 1 per cent. on circulation, thus destroying the last relic of war taxation.

Second—Make the circulation of National banks a legal tender, or, at least, permit it to be counted in the legal reserve which the banks are obliged to hold. Based as national notes are on United States bonds payable in gold, for their security, they are certainly entitled to the legal tender quality as much as silver certificates or silver coin with its rapid fluctuations and uncertain value.

Having thus considered the question of circulation, we desire to dwell on a matter of the greatest moment to the financial situation, the solution of which would go far towards restoring confidence in our banking institutions. We refer to the great question of affording reasonable protection to the depositors of the banks. While the stockholders, being joint partners in the business and sharing in its profits, must needs take the chances incident to any business undertaking, while the noteholders are absolutely secured by a deposit of United States bonds, the depositors are only secured by a reserve, which is too often impaired, and by the character and integrity of the officers of the banks, who are often tried, and alas! too often found wanting. We would therefore present the following table, which will explain the remedy proposed:

The capital of the National banks July 12, 1893, was		$686,000,000
On which it is proposed to issue 2 per cent 30 year bonds to the amount of 50 per cent of capital, to be used as a deposit to secure circulation to the par thereof, making		343,000,000
At the same date as above the banks were indebted—		
Individual deposits	$1,556,000,000	
Net balance due banks	225,000,000	
Other liabilities	80,000,000	
Total	$1,861,000,000	
On which it is proposed to buy 15 per cent in United States 2 per cent 30 year bonds at par, the same to be deposited with the Comptroller of the Currency as security for deposits, making		279,000,000
Total bond issue		$622,000,000

The capital and liabilities on which the amount of bond issue is based are taken from the Comptroller's report of July 12, 1893. As these amounts must necessarily be variable the plan would of course require a system by which the average could be obtained. This could be had from reports made by the banks to the Comptroller at stated periods for this purpose, from which the average capital and liabilities for a certain period could be calculated and the amount of bonds for circulation and liabilities be determined. The total of bonds to be issued could be fixed, and while the capital and liabilities might rise to such an amount that the percentage thereon might be more than the total issue of bonds, in such case the percentage could be reduced. It is highly probable that the increase in capital and liabilities would not at any time be so much increased as to seriously interfere either with the circulation of the banks or with the amount of liability bonds. And if they did the maximum amount of circulation might be fixed so as to interfere as little as possible with the amount of liability bonds deposited.

A provision of law might also be safely enacted permitting the banks, after examination by an agent of the Comptroller showing their absolute solvency, to take out circulation to par on two-fifths of their bonds deposited for liabilities, the same to be retired when the emergency is passed and provided always that the banks shall hold not less than 20 per cent. of legal reserve. This would prevent stringency in the currency of the country, thus solving to some extent a question which has entered very largely into our present financial distress and increasing the volume of currency to help meet the requirements of business. Under the working of such a provision, an emergency like the present might have been relieved by the issue of upwards of $111,000,000 of new notes (two-fifths of $279,000,000) to be kept in circulation only as long as the exigencies of the situation might require.

In addition we would require the banks to hold in legal tender and balances in hands of reserve agents 10 per cent. of all liabilities, so that there would be held for security of liabilities the following amounts:

Fifteen per cent. of liabilities deposited in bonds held by Comptroller	$279,000,000
Five per cent. reserve on circulation	17,150,000
	$296,150,000
To which add the 10 per cent. reserve held in bank, etc., on liabilities	$186,100,000
Total equal to 25 per cent. of liabilities	$482,250,000

From tables carefully made, embracing the period from 1865 to 1890 inclusive, it has been shown that the percentage of dividends on claims proved was 75 per cent., so that the plan proposed of holding 25 per cent. in absolute safety would simplify the situation materially. The position would gain additional strength if it were provided that no bank be permitted to declare and pay dividends until the surplus of 20 per cent. of capital required shall first be created, and no dividend be made when the legal surplus shall be in any way impaired. In order to show the results of the proposed plan we present the following tables, one embracing all of the banks in the national system and the other illustrating the working of the plan in the case of an individual bank. It will be noticed that no account is made of the undivided profits, which with all the banks would be $93,000,000, and in the case of the separate banks $145,000 and the interest as calculated at 5 per cent., which in many localities would be 6 per cent. or even a higher rate, so that the result could be made to appear even more favorable than in the statements which follow:

EXAMPLE NO. 1.—EMBRACING ALL OF THE NATIONAL BANKS.

Two per cent. on bonds to secure circulation (343 mil)	....	....	$6,860,000
Two per cent. on bonds to secure liabilities (279 mil)	....	....	5,580,000
Interest on circulation at 5 per cent. (343) mil)	....	....	17,150,000
Interest on capital and surplus	....	$936,000,000	
Less invested in bonds	$343,000,000		
Reserve on circulation	17,150,000		
		360,150,000	
Interest at 5 per cent. on	....	$575,850,000	28,790,000
Interest on liabilities	$1,861,000,000		
Less invested in liability Bonds $279,000,000 and 10 per cent. cash reserve $186,000,000..	465,000,000		
Interest at 5 per cent. on	$1,396,000,000	....	69,800,000
Gross profits	....	....	$128,180,000
Expenses and taxes	....	....	5,000,000
Net profits	....	....	$123,180,000

Or nearly 18 per cent. of capital $686,000,000, without taking into account undivided profits of $93,000,000.

EXAMPLE NO. 2. CASE OF SINGLE BANK.

Capital of bank	$500,000	Held by Comptroller as security for liabilities 5 per cent. reserve	$12,500
U. S. bonds for circulation 50 per cent	250,000	15 per cent. reserve	120,000
Circulation 50 per cent	250,000	Total	$132,500
Liabilities	800,000	Add 10 per cent. reserve held by bank	80,000
		Total	$212,500

or over 25 per cent. of liabilities.

RESULT TO BANK.

2 per cent. on bonds to secure circulation	....	....	$5,000
2 per cent. on bonds to secure liabilities	....	....	2,400
Interest on circulation $250,000 at 5 per cent	....	....	12,500
Interest on capital and surplus	....	$600,000	
Less invested in bonds	$250,000		
Reserve on circulation	12,500	262,500	
Interest at 5 per cent	....	$337,500	16,875
Interest on liabilities	....	800,000	
Less invested in liability bonds	$120,000		
10 per cent cash reserve	80,000	200,000	
Interest at 5 per cent. on	....	$600,000	30,000
Gross profits	....	....	$66,775

While we have been thus dealing with the question of providing as full security as possible for the creditors of the banks, it might be added that the rights of the creditors, as well as the character and standing of the banks, would be well subserved were a provision of law made that in the event of a bank being threatened with a run which might prove disastrous, it could have permission from the Comptroller, after thorough investigation by his agent and under certain careful restrictions, to demand reasonable time on payment of the claims made upon it, thus strengthening confidence in the public mind as to solvency of the bank and the safety of the deposits. The very nature of banking requires that the banks should have their available funds fully invested, and to attempt to realize on them is always attended with great loss to the banks and great distress to the community, while in most cases it is practically impossible. There is no reason why a solvent and well managed bank should be obliged to close its doors in obedience to the demands of an unthinking and frantic crowd, instigated in many cases by malicious foes or idle gossip-mongers And if the institution be insolvent, there is no justice in the fact that one depositor receives more than another who presents his demand later.

When we think of the tremendous depreciation in the market value of the securities of the banks thrown on the market almost in the condition of a panic; when we consider the heavy withdrawal of deposits, lessening the ability of the banks to earn fair profits, when we bear in mind the accumulations of cash in their vaults, much of it bought at a price fixed by the money broker; when we think of the grand total of money borrowed by the banks to avert the threatened danger, rising in July, 1893, to upwards of $50,000,000, we can form some idea of the damage done to the standing of the banks and the irreparable loss which has been inflicted on the very people who have brought about this condition of affairs.

In conclusion, while I think that the tables show that the plans submitted would afford the National banks a good, but not exorbitant return on their capital, it may be argued that the plan would be objected to by many who look upon the banks as a monopoly and the issue of Government bonds as a curse. But keeping in mind that these bonds are not an increase in the public debt, but can be exchanged for those now outstanding, and that a large portion of them are to be used as a guarantee for the deposits of all classes of people, I have good reason to hope that even those who have been loudest in their denunciation of the National banks will join with the friends of these institutions in the preservation of a system which has been the support and stay of the Nation in the most critical periods of the past, and which, with certain changes and amendments, will prove a safeguard for the great interests which may be intrusted to its care. WILLIAM HACKETT.

EASTON, Penna., Dec. 6.

INTERNATIONAL CLEARANCES.—Acting Assistant Treasurer Muhleman, of New York city, has prepared some very suggestive statistics proving the value of the establishment of a system of international clearances. In the fifteen years from June 30, 1878, to July 1, 1893, there was a difference of only $10,000,000 between the amount of gold imported and exported; yet in that time $1,000,000,000 of gold had been moved, or $498,000,000 one way and $508,000,000 the other. In round figures, the cost of transporting this gold across the Atlantic, to settle a balance practically of only $10,000,000, was about $3,800,000 or 38 per cent. on the total balance.

COLORADO'S INCREASING GOLD PRODUCT.—The loss to the silver industry of Colorado will be compensated for to some extent by the large increase in the gold product of the Centennial State. For the first half of the month of November there was a gain of over 100 per cent. in gold receipts at the Denver Mint. The figure for the first of the month is $114,362 against $56,618 in the first half November, 1892. The gain reads $57,743, to which Gilpin County, Cripple Creek and the Denver district in Arizona have been the heaviest contributors.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS GENERALLY.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable. Attention is especially directed to the "Replies to Law and Banking Questions," which are also included in this Department.

NOTES OF CORPORATIONS—AUTHORITY OF TREASURER TO MAKE.

Supreme Judicial Court of Massachusetts, October 19, 1893.

MERCHANTS' NATIONAL BANK OF GARDINER *vs.* CITIZENS' GAS LIGHT, OF QUINCY.

It is not necessary that the authority of an officer or agent to sign notes in behalf of a corporation should appear in the by-laws, or should have been expressly given by a vote of the directors or of the stockholders.

If a corporation permit their treasurer to act as their general fiscal agent, and hold him out to the public as having the general authority implied from his official name and character, and by their silence and acquiescence suffer him to draw and accept drafts, and to endorse notes payable to the corporation, they are bound by his acts done within the scope of such implied authority.

The making and indorsing of negotiable paper is to be presumed to be within th power of the treasurer of a manufacturing and trading corporation whenever from the nature of its business as usually conducted the corporation is naturally to be expected to use its credit in carrying on commercial transactions.

The treasurer of a gas company has power, by virtue of his office, to sign a note which will bind the corporation.

This was an action by the Merchants' National Bank of Gardiner, Me., against the Citizens' Gaslight Company of Quincy and others, on a note executed in its behalf by C. S. J. Ruggler, as its treasurer. There was a verdict in plaintiff's favor, and defendant the Citizens' Gaslight Company excepted to the court's refusal to rule as requested.

BARKER, *J.* (omitting part of the opinion):

As the plaintiff discounted this note before maturity, "in the usual course of its business, without notice or knowledge of any defect or infirmity," and as its good faith is not questioned, if the note were signed by an officer authorized generally to give notes in its behalf the defendant company would be liable, although the agent in signing this particular note exceeded his authority, or the powers of the corporation. (*Monument Nat. Bank* vs. *Globe Works*, 101 Mass. 57.) It is not necessary that the authority of an officer or agent to sign notes in behalf of a corporation should appear in the by-laws, or should have been expressly given by a vote of the directors or of the stockholders. In *Lester* vs. *Webb* (1 Allen 34) it was said, "The rule is well settled that if a corporation permit their treasurer to act as their general fiscal agent and hold him up to the public as having the general authority implied from his official name and character, and by their silence and acquiescence suffer him to draw and accept drafts, and to indorse notes payable to the corporation they are bound by his acts done within the scope of such implied authority. (*Fay* vs. *Noble*, 12 Cush. 1; *Williams* vs. *Cheney*, 3 Gray, 215; *Conover* vs. *Insurance Co.* 1 N. Y. 290.) On the facts proved at the trial the plaintiff might well claim, if the jury believed the evidence, that the treasurer had authority to indorse the notes in suit, derived, not from any express direction, but from the course of conduct and dealing of the treasurer with the knowledge and implied assent of the directors of the corporation." (See, also, *McNeil* vs. *Chamber of Commerce*, 154 Mass. 285; *Mining Co.* vs. *Anglo-Californian Bank*, 104 U. S. 192.) But cases where the actual authority of an officer is inferred from a course of business known to and permitted by the stockholders or the directors of a corporation do not touch the question whether authority is to be implied as a matter of law from the name and nature of the office itself. In the present case the jury were instructed that the treasurer of such a corporation as the defendant company has by virtue of his office authority to sign a note which shall bind the corporation, and the defendant contends that this instruction was incorrect. The incidental powers of some officers or agents have become so well known and defined, and have been so frequently recognized by courts of justice, that certain powers are implied as matters of law in favor of third persons who deal with them on the assumption that they possess these powers, unless such persons are informed to the contrary. The officers and agents usually mentioned in this category are auctioneers, brokers, factors, Cashiers of banks, and masters of ships. (See *Merchants' Bank* vs. *State Bank*, 10 Wall, 604; *Case* vs. *Bank*, 100 U. S. 446.) Treasurers of towns or cities in this commonwealth are well-known officers, and their powers are very limited. They are in general to receive, keep, and pay out money on the warrant of the proper officers of the towns and cities. Treasurers of business corporations usually have much more extensive powers, and the decisions of this court hold that the treasurer of a manufacturing and trading corporation is clothed by virtue of his office with power to act for the corporation in making, accepting, indorsing, issuing, and negotiating promissory notes and bills of exchange, and that such negotiable paper in the hands of an innocent holder for value, who has taken it without notice of any want of authority on the part of the treasurer, is binding on the corporation, although with reference to the corporation it is accommodation paper. (*Narragansett Bank* vs. *Atlantic Silk Co.* 3 Metc. [Mass.] 382; *Bates* vs. *Iron Co.* 7 Metc. (Mass.) 224; *Fay* vs. *Noble*, 12 Cush 1.; *Lester* vs. *Webb*, 1 Allen, 34; *Bank* vs. *Winchester*, 8 Allen, 109; *Bird* vs. *Daggett*, 97 Mass. 494; *Monument Nat. Bank* vs. *Globe Works*, *ubi supra*; *Corcoran* vs. *Cattle Co.* 151 Mass. 74). While it is possible that most, if not all, of the cases in which this rule has been stated as law have some special circumstances from which the treasurer's authority could be inferred, and that the court was influenced in the decisions by the well known fact that in many of the manufacturing corporations of this commonwealth the treasurer not only has the custody of the money, but is the general financial manager and often the general business manager of the corporation; but the rule itself has been frequently and broadly stated in our decisions, and is well known both to the officers of manufacturing and trading corporations and to those of banks and financial institutions. It could not now be abrogated or unsettled without disturbing commercial transactions. There are, however, many corporations which transact more or less business to which the rule has been held not to apply. Thus it does not apply to a college (*Webber* vs. *College*, 28 Pick. 302); nor to a parish (*Packard* vs. *Society*, 10 Metc. [Mass.] 427); nor to a monument association (*Torrey* vs. *Association*, 5 Allen, 327);

nor to a municipality, (*Bank* vs. *Winchester*, 8 Allen, 109); nor to a Savings bank (*Tappan* vs. *Bank*, 127 Mass. 107); nor to a horse railroad company, (*Craft* vs. *Railroad Co.* 150 Mass. 207). Upon consideration of the decisions cited, we think it fair to say that the making and indorsing of negotiable paper is to be presumed to be within the power of the treasurer of a manufacturing and trading corporation whenever from the nature of its ordinary business as usually conducted the corporation is naturally to be expected to use its credit in carrying on commercial transactions. Such paper is the usual and ordinary instrument of utilizing credit in commercial transactions, and it is for the interest of the corporation and of the community that the best instrument should be employed. It is no less for the interest of all that, if negotiable paper is to be employed, its validity should not be open to objections which would impair its usefulness by requiring at every step an inquiry into the authority by which it is issued. These are matters of common knowledge pertinent to the present question. Gaslight companies like the defendant are chartered for the purpose of making and selling gas. They are located in every city of the commonwealth, and in most of the larger towns and villages. In the recent development of the use of electricity many electric light or light and power companies have been established where gaslight companies are in operation. The powers, obligations, and business of these electric companies are so similar to those of gaslight companies that they are classed with them in the minds of business men, and are under the supervision of the same State board. We see no reason why, in respect to the present question, all of this general class of corporation should not be governed by one rule. * * * * * A majority of the court is therefore of opinion that the jury was rightly instructed that the treasurer of the defendant corporation, by virtue of his office, had authority to sign a note which would bind the corporation.

NATIONAL BANK—POWERS OF CASHIER—PROMISE TO PAY DRAFT ON CUSTOMER.

United States Circuit Court, S. D. California, June 19, 1893.

FLANNAGAN ET AL. *vs.* CALIFORNIA NATIONAL BANK.

A Cashier of a National bank has no authority to bind the bank by a promise to pay a draft to be drawn on one of its customers, in anticipation that the customer will make a deposit of the amount of the draft with the bank.

This was an action by P. Flannagan and J. W. Bennett, partners in business under the firm name of Flannagan & Bennett, against the California National Bank and others.

Ross, *District Judge:* The plaintiffs, who are citizens of Oregon, and bankers doing business at the city of Marshfield, in that State, bring this suit to recover the amount of a certain draft drawn by one Baines on the defendant Graham. By their complaint the plaintiffs seek to charge the defendant, the California National Bank of San Diego, now in the hands of the defendant receiver, with the payment of the draft; and a demurrer filed by the receiver, on behalf of the bank, raises the question of the latter's liability.

The complaint alleges that on the 15th of September, 1891, Graham, through his agent, Baines, applied to the plaintiffs at their bank in Marshfield for a loan of $6,000, "to be paid by draft upon said California National Bank of San Diego." This allegation in respect to the proposed drawee was probably a mistake of the pleader, for that allegation is immediately followed by this:

"At the same time, plaintiffs received a telegram sent by said California National Bank to plaintiffs in which it stated that Baines' draft on Graham for $6.000 was [would be] good on the 16th of the next month."

To which telegram plaintiffs replied by a telegram as follows:

MARSHFIELD, Coos Co., Or., Sept. 16, 1891.

To California National Bank, San Diego, California: Will you pay Baines' draft on Graham for $6,000.00 on October 15, next? FLANNAGAN & BENNETT.

In reply to this telegram plaintiffs received on September 18, 1891, the following, by telegraph, from the defendant bank:

SAN DIEGO, Cal., Sept. 18, 1891.

To Flannagan & Bennett, Marshfield, Or.: See our telegram of 15th. Should Graham money arrive earlier, we will pay when it comes, possibly tenth.

CALIFORNIA NATIONAL BANK.

To which plaintiffs, on the 19th of September, replied by telegraph as follows:

MARSHFIELD, Coos Co., Or., Sept. 19, 1891.

To California National Bank, San Diege, Cal.: Are we to understand that you will pay Baines' draft on Graham for $6,000.00 not later than 16th of next month?

FLANNAGAN & BENNETT.

Receiving in reply the following:

SAN DIEGO, Cal., Sept. 21, 1891.

To Flannagan & Bennett: Yes. G. N. O'BRIEN, Cashier.

O'Brien was at the time the cashier of the California National Bank. Upon the receipt of the last-mentioned telegram the plaintiffs paid to Baines for the use of Graham $6,000, and received from Baines a draft, signed by him, in words and figures as follows:

$6,000.00 MARSHFIELD, Sept. 23d, 1891.

On October 16th, 1891, pay to the order of Flannagan & Bennett six thousand dollars, value received, and charge the same to account of W. E. BAINES.

To R. A. Graham, California National Bank, San Diego.

On the 16th of October, 1891, the draft was duly presented to the defendant bank, and payment demanded, which was refused, and subsequently payment was demanded of defendant Graham, who likewise failed to pay the same.

It is apparent from the averments of the complaint that at no time did the defendant bank, or its cashier, promise to pay any draft drawn on the defendant bank. Had such promise been made, and plaintiffs had parted with their money on the strength of it, the case would be like that of *Garretson* vs. *Bank* (47 Fed. Rep., 867) and a like ruling would be made here, for I have no doubt of the correctness of that decision. But the present case is altogether unlike that. The promise here counted on was the promise of the cashier of the defendant bank to pay Baines' draft on Graham, who, it would seem from the telegrams, was a customer of the defendant bank and an anticipated depositor; and the question for decision is, whether such a promise of the cashier of a National bank is binding upon the bank. A National bank is empowered, by the seventh subdivision of section 5,136 of the Revised Statutes, "to exercise, by its board of directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business of banking; by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; by receiving deposits; by buying and selling exchange, coin, and bullion; by loaning money on personal security; and by obtaining, issuing, and circulating notes according to the provisions of the title providing for the organization of such banks" Everyone dealing with such a bank does so with notice of, and subject to. the powers conferred and limitations imposed by the law of its creation. The provision of the statute quoted, under which the defendant bank was organized did not authorize its board of directors, or any of its officers or agents, to bind it to pay a draft of one of its customers or depositors. The telegraphic correspondence in the case at bar shows that the defendant bank was anticipating that it would have funds of Graham not later than the 16th of October, 1891, out of which it proposed to pay the draft to be drawn by Baines on Graham; and the definite promise made by the cashier of the bank, by his telegram of September 21, 1891, in answer to that of the plaintiffs, asking, "Are we to understand that you will pay Baines' draft on Graham, for $6,000 not later than 16th of next [October] month?" was, in effect, a promise to answer for the obligation of Graham. Such a promise was beyond the power of the cashier to make, and the defendant bank was unaffected by it. It was organized to carry on the business of banking "by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; by receiving deposits; by buying and selling exchange, coin, and bullion; by loaning money on personal security; and by obtaining, issuing, and circulating notes," according to the provisions of the statute under which it was organized. None of these things embrace, directly or incidentally, a promise to pay, without consideration moving to it, a draft drawn by a third party on one of its customers or depositors. In *Bank* vs. *Dunn* (6 Pet. 51) the court would not permit the President and Cashier of the bank to bind it by their agreement with the indorser of a promissory note that he should not be liable on his indorsement. It said it is not the duty of the Cashier and President to make such contracts, nor have they power to bind the bank, except in the discharge of their ordinary duties.

In the case of *U. S.* vs. *City Bank of Columbus* (21 How. 356) the Cashier of the defendant bank wrote to the Secretary of the Treasury, saying that the bearer of the letter, one Miner, who was one of the directors of the bank, was authorized to contract for the transfer of money from New York to New Orleans. Upon that representation the Secretary turned over to Miner $100,000 of the Government money for transfer from New York to New Orleans, and, Miner having failed to deliver or account for it, the Government sought to recover the amount from the bank. But, it appearing that the action of the Cashier was without the authority or knowledge of the President or board of directors, the Supreme Court held that it was outside of his duties and powers, and that the bank was not liable. In *West St. Louis Savings Bank* vs. *Shawnee County Bank* (95 U. S. 557) where it was attempted, but unsuccessfully, to bind a bank as an accommodation indorser on the individual note of its Cashier, the court said:

"Ordinarily the Cashier, being the ostensible executive officer of a bank, is presumed to have, in the absence of positive restrictions, all the powers necessary for such an officer in the transaction of the legitimate business of banking Thus, he is generally understood to have authority to indorse the commercial paper of his bank, and bind the bank by the indorsement. So, too, in the absence of restrictions, if he has procured bona fide rediscount of the paper of the bank, his acts will be binding, because of his implied power to transact such business; but certainly he is not presumed to have power, by reason of his official position, to bind his bank as an accommodation indorser of his own promissory note. Such a transaction would not be within the scope of his general powers; and one who accepts an indorsement of that character, if a contest arises, must prove actual authority before he can recover. There are no presumptions in favor of such a delegation of power. The very form of the paper itself carried notice to a purchaser of a possible want of power to make the indorsement, and is sufficient to put him on his guard. If he fails to avail himself of the notice, and obtain the information which is thus suggested to him, it is his own fault, and, as against an innocent party, he must bear the loss."

The principle controlling the decisions cited is equally applicable to the case at bar. Demurrer sustained.

STOCK HELD IN TRUST—LIABILITY OF TRUSTEE.

United States Circuit Court, E. D. Pennsylvania, July 6, 1893.

YARDLY *vs.* WILGUS.

Where one voluntarily appears upon the books of a National Bank as a stockholder, he will be precluded from showing that he is not in fact a stockholder.

But where it is admitted that the stock is owned by another, and judgement obtained against him for the amount of the assessment upon such stock, the person in whose name it stands cannot be held liable thereon.

This was an action by Robert M. Yardley, Receiver of the Keystone National Bank, against George S. Wilgus, to enforce defendant's liability as a stockholder in such bank. Verdict was given for plaintiff subject to the opinion of the Court on a question reserved.

DALLAS, *Circuit Judge:* This action was brought to enforce the alleged individual liability of the defendant upon four shares of the stock of the Keystone National Bank, standing in his name. Upon the trial the following statement of the facts, to be accepted in lieu of evidence, was agreed upon and filed:

(1) That the books of the Keystone National Bank show defendant to be the owner of four shares of its capital stock.

(2) That assessment of $50 per share has been duly made upon said stock, payable on August 16, 1891, and defendant notified thereof, and payment demanded.

(3) That C. N. Shellenberger acknowledged himself to be the owner of said four shares, and the assessment due thereon was included in a judgment against him for $1,550.23 in this court.

(4) That said C. N. Shellenberger was and is in fact the true owner of said shares, and said George S. Wilgus was and is the holder thereof only in trust for said C. N. Shellenberger.

(5) That execution has been issued against said C. N. Shellenberger upon said judgment above mentioned, and duly returned, and nothing has been realized therefrom.

I directed the jury, upon this agreed state of facts, to find for the plantiff for the amount claimed, subject to the point which was reserved—whether the plantiff was entitled to recover against the defendant Wilgus, in whose name the four shares in question stood upon the books of the bank, notwithstanding the facts admitted, viz.: that C. N. Shellenberger was and is the true owner of said shares, and said George S. Wilgus was and is the holder thereof only in trust for said C. N. Shellenberger; and also that the assessment for which this action was brought against Wilgus had already been included in a judgment by the same plaintiff against C. N. Shellenberger, upon which judgment execution had been issued and returned without anything being realized. A verdict was accordingly rendered for the plaintiff for $219.76, and the reserved point has now been argued upon defendant's motion for judgment in his favor notwithstanding the verdict.

Either Wilgus or Shellenberger could be held for this assessment, but not both of them. They cannot both be owners of the same stock. The statute (Rev. St. § 5151) attaches the liability only to "shareholders." Upon proof that Wilgus voluntarily appeared upon the books of the bank as a shareholder, he would be precluded (if that were the whole case) from asserting that he was not in fact a shareholder. On the other hand, in a suit against Shellenberger, upon proof that he was the actual owner, it would not avail him to show that the stock stood in the name of another. But here it is admitted that Wilgus is not a shareholder, and also that it has been judicially determined, at the suit of the plantiff in this action, that Shellenberger is the real owner. Both by this admission and adjudication we have, therefore, the fact conclusively established that Wilgus is not a shareholder with respect to the shares in question; and it follows that he is not under the statute, liable for the assessment now sought to be enforced against him.

Judgment will be entered for the defendant notwithstanding the verdict.

NATIONAL BANKS—ATTACHMENTS AGAINST.

Supreme Court of Georgia, February 13, 1893.

PLANTERS' LOAN AND SAVINGS BANK *vs.* BERRY.

The statute of the United States prohibits seizure of property belonging to National banks (irrespective of whether they be solvent or insolvent) before final judgment by virtue of any attachment issued under a State law, and returnable to a State court.

Any such seizure is therefore void, and a bond given by a National bank to dissolve such attachment, served by summons of garnishment, is also void.

Nor is the giving of such a bond an appearance in the attachment case so as to make valid a judgment entered on the bond in that case against the bank and the sureties executing the bond.

BLECKLEY, *C. J.:* "How the statutes of the United States stand at the present time on the subject of protecting National banks against the seizure of their effects by virtue of attachments in advance of final judgment may be seen by reference to Rev. St. U. S. § 5242. The only words necessary to be now quoted are these: 'And no attachment, injunction or execution shall be issued against such association or its property before final judgment in any suit, action or proceeding, in any State, county, or municipal court.' The opinion, whether professional or judicial, which construes this legislation as allowing seizure under attachment before final judgment in case the defendant bank is solvent, and prohibiting it only where the bank is insolvent, is manifestly unsound. Certainly, no such distinction is made in the letter, and we discern no necessity for it in the context or in the reason and spirit of the legislation. The statutory policy seems to be to prevent all preference or priority in claims against these banks sought to be acquired by seizure of effects under State authority before the final adjudication of such claims, and to protect the banks from being weakened or crippled by such antecedent seizures. The National banks created by Congress are to control their own assets and resources as against State interference at the instance of creditors, or of pretended creditors, until the real existence of the alleged debts has been ascertained by final judgment. Ante-judgment seizures cannot be made; a State can make post-judgment seizures only. Mesne process will not suffice for seizing by State courts; these courts can seize only by final process. This policy may be wise or unwise, wholesome or unwholesome, but in either event it is the one established by competent legislative authority, and must be respected and enforced accordingly."

"In *Bank* vs. *Mixter* (124 U. S. 727), Waite, *C. J.*, said: "Although the provision was evidently made to secure equality among the general creditors in the division of the proceeds of the property of an insolvent bank, its operation is by no means confined to cases of actual or contemplated insolvency. The remedy is taken away altogether, and cannot be used under any circumstances." Whether this was obiter or not, as applied to the facts of that case we agree with it, and accept it as a sound interpretation of the statute. And we agree with the Court of Appeals of New York that no aid can be derived from the Act of Congress of July 12, 1882, providing that the jurisdiction of suits brought against National banks shall be the same as for suits against State banks. Raynor *vs.* Bank (1882). 93 N. Y. 371. In the case at bar the attachment was issued under a law of this State, and was returnable to one of the courts of the State. It was levied, before final judgment, by the service of a summons of garnishment upon one of the debtors of the National bank, the defendant in attachment. This was a seizure of the debt, and the debt was the property of the bank. The seizure was utterly void, and the bond given by the bank to dissolve the garnishment was equally void. (Bank vs. Mixter, 124 U. S. 728, 729, 8 Sup. Ct. Rep. 718.) Certainly it was void as a statutory bond, for, as there was no valid authority for issuing or serving the garnishment, there could be none for taking the bond."

It was then held by the court that the giving of such bond was not such an appearance in the attachment case as to validate the judgment entered on the bond in that case against the bank and the sureties on the bond.

PROMISSORY NOTE—STIPULATION FOR ATTORNEY'S FEE—NEGOTIABILITY.

Supreme Court of Washington, May 24, 1893.

SECOND NATIONAL BANK OF COLFAX *vs.* ANGLIN.

A provision in a promissory note for the payment of an attorney's fee in case of default does not destroy the negotiable character of the instrument.

This action was brought to recover an amount alleged to be due upon a promissory note made by the respondent, which, it was alleged, had been endorsed by the payee to the plaintiff before maturity for a valuable consideration. Such note was substantially in the following form: "Five months after date, without grace, for value received, I promise to pay to J. B. Standley, or order, at Colton, Wash. Ter'y, the sum of $213, with interest thereon at the rate of 1¼ per cent per month from maturity until paid; principal and interest payable only in U. S. gold coin; and, in the event of a suit to enforce the collection of this note, or any portion thereof, I further agree to pay the additional sum of $20, in like gold coin, as attorney's fees in said suit."

HOYT, *J.:* The rulings of the lower court during the progress of the trial were based entirely upon the theory that this note was not a negotiable one. Assuming that basis to be correct, it may be that such rulings could be sustained, although as to that question we now express no opinion. But it is clear that, if that basis were not correct, such rulings cannot be sustained; and the judgment rendered in pursuance thereof must be reversed. The only question, therefore, which we shall consider it necessary to discuss, is as to the negotiability of this note. It is claimed that the provision therein for the payment of an attorney's fee in case of suit has the effect to take from such note its negotiable character.

Upon the question of negotiability of notes containing provisions in their make up similar to this one there has been a great deal of controversy, and the decisions of the courts in reference thereto are totally irreconcilable. The only reason suggested why notes of this kind are not negotiable is that, by reason of such provision, the amount thereof is made uncertain; and that, as certainty in amount is one of the necessary conditions of negotiable paper, such uncertainty destroys such negotiability. Upon principle, we do not think that such a condition should be construed to have such an effect. Such clause has no relation to the amount stipulated to be paid in the note if such payment is made in accordance with the terms thereof. It has no effect upon the amount which the holder may rightfully demand at the maturity of the note, nor upon the amount which it will be necessary for the maker thereof to tender at such maturity as a full discharge of his liabilities thereon. It is only upon the conditions of such note being broken, and the promise to pay violated that this condition has any force whatever; and even then it has no force until an action has been brought to enforce the liability growing out of such violation of the conditions of the note. After maturity a note without any such condition loses the protection awarded to negotiable paper by the rules of the law merchant. Therefore such condition, after it becomes effective, does not materially change the rights and obligations of the parties interested in such note. * * *

The authorities upon the subject, as we have already suggested, are inharmonious; and a very large array of cases could be cited to sustain the negotiability of notes of this kind, and substantially an equal array to establish the contrary doctrine. We shall not attempt any review of the cases upon either side, but shall content ourselves with a reference to a single case.

In *Montgomery* vs. *Crossthwaite* (8 South. Reports, 498) this question was directly decided by the Supreme Court of Alabama, and the judge who pronounced the opinion of the court entered upon the consideration of this question with a confessed bias in favor of the proposition, that notes of this kind are not negotiable; but after, as he says, "a more careful investigation into the adjudged cases, and especially a more critical consideration of the reasons upon which the divergent conclusion of other courts are made to rest," he had become convinced that the rule that such notes are negotiable was, in his estimation, the proper one.

In the course of the opinion in this case a large number of authorities upon each side of the proposition are cited and commented upon, and the opinion gives evidence of a most careful examination of the question; and we are satisfied with the result thereof. It follows that the note sued upon was, in our judgment, negotiable, notwithstanding the condition for the payment of attorney's fees contained therein; and that, in holding to the contrary, and for that reason excluding it from evidence, under the circumstances shown by the record, the lower court committed error, for which its judgment must be reversed, and the cause remanded for a new trial.

DUNBAR, *C. J.*, and ANDERS, SCOTT and STILES, *JJ.*, concur.

NOTES OF CORPORATION—DISCOUNT OF—VALIDITY.

Supreme Court of Nebraska, Sept. 20, 1893.

COMMERCIAL NATIONAL BANK OF ST PAUL *vs.* BRILL.

Where a bank has an arrangement with a corporation whereby the bank agrees to discount notes held by the corporation, and in pursuance of such agreement such notes have customarily been brought to the bank, and been negotiated by the secretary of the corporation, such facts are sufficient evidence of the authority of the secretary to transfer a particular note and of the genuineness of the indorsement upon such note, the proceeds of the note having been placed by the bank to the corporation's credit, and paid out on the corporation's checks.

The declaration of officers of such corporation, made after the transfer to the bank, are inadmissible in a suit by the bank against the makers of the note, for the purpose of showing want of authority in the secretary to make the transfer.

This was an action upon a promissory note by the Commercial National bank of St. Paul, Minn., against John W. Brill and John A. Testman. The note was made by defendants to the order of the J. H. Mahler Company, and by that company indorsed to the plaintiff. The defendants admitted the execution of the note, but alleged that it had been procured from them by the Mahler Company by fraud and without consideration, and that one Miller, secretary of the Mahler Combany, had, without authority from that company, delivered the note to the plaintiff, and that the plaintiff knew that Miller had no authority to transfer the note.

IRVINE, *C.* (omitting part of opinion):

The case was argued largely upon the question as to whether or not the bank took the note with notice of the fraud alleged. It will be observed, however, that the precise issue tendered and joined was as to the transfer of the note to the bank, and the authority of the officer making the same. Upon the part of the bank, its Cashier testified that he bought the note for the bank in the ordinary course of business, without notice of any of the relations existing between the Mahler Company and the makers; that the bank had arrangements with the Mahler Company by which it agreed to discount notes held by the Mahler Company, not to exceed at any time $25,000; that this note was taken under that agreement, and its proceeds placed to the credit of the Mahler Company, and checked out by that company. He further testified that Miller, the secretary of the Mahler Company, presented most of the notes for discount. This note bears an indorsement as follows: "J. H. Mahler Company, per J. H. Mahler, Prest." While the secretary of a corporation has not, merely by virtue of his office, authority to negotiate notes held by the corporation, it is well settled that if such an officer has been permitted by the directors to negotiate notes, or if the company acquiesce in and receive the benefits of such acts, a purchaser of a particular note, familliar with such facts, may assume the officer's authority, and the corporation will not be permitted to set up a want of authority against such purchaser. (*Lester* vs. *Webb*, 1 Allen, 34; *Partridge* vs. *Badger*, 25 Barb. 149; *Foster* vs. *Mining Co.* 17 Fed. Rep 130.) The testimony of the Cashier brings the case within this rule. There is no direct evidence of the genuineness of the endorsement itself, but the endorsement being regular in form, and the note having been brought to the bank by that officer of the company who customarily attended to such business, the indorsement must be taken as genuine. As against this testimony there is nothing except the testimony of one of the defendants and another witness as to admissions or statements made to them by the president and secretary of the Mahler Company long after the bank took the note. This testimony was clearly inadmissible against the bank.

DIRECTOR—WHEN BANK NOT CHARGED WITH KNOWLEDGE OF—DISCOUNTS.

Court of Appeals of New York, Oct. 3, 1893.

CASCO NATIONAL BANK OF PORTLAND *vs.* CLARK *et al.*

The knowledge of an officer, derived as an individual and not while acting officially for the bank, cannot operate to the prejudice of the latter.

The fact that a director of the bank is a director in a company for which the bank discounts a note does not charge the bank with notice of equities between the company and the maker of the note.

This was an action upon a promissory note in the following form:—

RIDGEWOOD ICE CO.

BROOKLYN, N. Y., Aug. 2, 1890.

$7,500. Three months after date we promise to pay to the order of Clark & Chaplin Ice Company seventy-five hundred dollars at Mechanics' Bank; value received.

JOHN CLARK, *Prest.*

E. H. CLOSE, *Treas.*

It was delivered in payment for ice sold by the payee company to the Ridgewood Ice Company under a contract between those companies, and was discounted by the plaintiff for the payee before its maturity. The appellants Clark and Close appearing as makers upon the note, the one describing himself as "Prest." and the other as "Treas.," were made individually defendants. They defended on the ground that they had made the note as officers of the Ridgewood Ice Company, and did not become personally liable thereby for the debt represented. It was held that the note was their individual obligation.

GRAY, *J.* (omitting part of the opinion): The appellants proved that Winslow, a director of the payee company, was also a director in the plaintiff bank at the time when the note was discounted, and it was argued that the knowledge chargeable to him, as director of the former company, was imputable to the plaintiff. But that fact is insufficient to charge the plaintiff with knowledge of the character of the obligation. He in no sense represented or acted for the bank in the transaction, and whatever his knowledge respecting the note, it will not be imputable to the bank. (*Bank* vs. *Norton*, 1 Hill, 572, 578; *Mayor, etc.*, vs. *Tenth Nat. Bank*, 111 N. Y. 446, 457; *Bank* vs. *Payne*, 25 Conn. 444.) He was but one of the plaintiff's directors, who could only act as a board. *Bank* vs. *Norton*, *supra*. If he knew the fact that these were not individual, but corporate notes, we cannot presume that he communicated that knowledge to the board. An officer's knowledge, derived as an individual, and not while acting officially for the bank, cannot operate to the prejudice of the latter. (*Bank* vs. *Davis*, 2 Hill 451.) The knowledge with which the bank as his principal would be deemed chargeable, so as to affect it, would be where, as one of the board of directors, and participating in the discount of the paper, he had acted affirmatively, or fraudulently with respect to it, as in the case of *Bank* vs. *Davis*, *supra*, by a fraudulent perversion of the bills from the object for which drawn, or as in *Holden* vs. *Bank* (72 N. Y. 286), where the President of the bank, who represented it in all the transactions, was engaged in a fraudulent scheme of conversion. It was said in the latter case that the knowledge of the President as an individual or as an executor was not imputable to the bank merely because he was the President, but because, when it acted through him as President in any transaction where that knowledge was material and applicable, it acted through an agent. The rule may be stated, generally, to be that where a director or an officer has knowledge of material facts respecting a proposed transaction, which has relations to it, as representing the bank, have given him, then, as it becomes his official duty to communicate that knowledge to the bank, he will be presumed to have done so, and his knowledge will then be imputed to the bank, but no such duty can be deemed to have existed in this case, where the appellants have made and delivered a promissory note, purporting to be their individual promise. If one of the plaintiff's officers did have knowledge—whether individually or as a director of the Clark & Chaplin Company is not material—that the paper was made and intended as a corporate note, his failure to so state to the bank could not prejudice it. It was in no sense incumbent upon him, assuming that he actually participated in the discount (a fact not shown) to explain that the note was the obligation of the Ridgewood Company, and not of the persons who appeared as its makers. He was under no duty to these persons to explain their acts, and the law would not imply any. At most it would be merely a case of knowledge, acquired by a director, of facts not material to the transaction of discount by the plaintiff, and which he was under no obligation to communicate. No other questions require discussion, and the judgment rendered below should be affirmed with costs. All concur.

NATIONAL BANK—PROOF OF CORPORATE EXISTENCE.

Supreme Court of Washington, May 10, 1893.

YAKIMA NATIONAL BANK *vs.* KNIPE.

In an action by a National bank it is competent to prove by parol that it was carrying on a general banking business as a National bank authorized by the general laws of the United States under the name by which it had sued.

This was an action by the Yakima National Bank against Robert Knipe and another on a note. From a judgment for plaintiff the defendant appealed.

One of the questions raised by the defendant on the appeal was that no legal proof of the fact that plaintiff was a corporation had been introduced.

HOYT, *J.* (omitting part of the opinion):

Upon this question, when all the pleadings are taken together, it is doubtful whether or not it was necessary for the plaintiff to prove such fact. The second affirmative defense above mentioned, when interpreted in the light of the reference therein made to the partial affirmative defense, seems to qualify the denial of incorporation made in the first part of the answer. But whether or not this be so, we think the proof offered was sufficient to *prima facie* establish the fact of incorporation. This court will take judicial notice of the general laws of the United States; and, such being the fact, we think it was competent for the plaintiff to prove by parol that it was carrying on a general banking business as a National bank authorized by the general laws of the United States under the name by which it had sued. We are unable to see any reason why a corporation *de facto* may not be proven by this kind of testimony.

USURY—RECOVERY OF PENALTY FOR FROM NATIONAL BANK—JURISDICTION OF STATE COURT.

Supreme Court of Nebraska, September 20, 1893.

SCHUYLER NATIONAL BANK *vs.* BOLLONG.

State courts have jurisdiction of actions against National banks to recover the penalty prescribed by Congress for taking usurious interests.

Action by Neil R. Bollong against the Schuyler National Bank to recover the penalty, under the United States laws, for receiving usurious interest. Plaintiff had judgment, and defendant brought error. Affirmed.

RAGAN, *C.*: Neill R. Bollong sued the Schuyler National Bank of Schuyler, Neb., in the district court of Colfax county, to recover the penalty provided by the acts of Congress for the charging and taking by National banks for the loan of money, of a greater rate of interest than allowed by the laws of the State of their domicile. There was a finding and judgment for Bollong, and the bank brings the case here and alleges the sole error that the district court had no jurisdiction over the subject matter of the action. This precise point has been decided at least twice by this court against the contention of the plaintiff in error. (See *Bank* vs. *Overman*, 22 Neb. 116; *Bank* vs. *Bollong*, 28 Neb. 684.) Without, therefore, examining the authorities cited by counsel in their brief, and on the authority of the above cases, the judgment of the district court is affirmed. The other commissioners concur.

CHECK—ACTION ON—STATUTE OF LIMITATIONS.

Supreme Court of Nebraska, September 20, 1893.

SCROGGIN *vs.* M'CLELLAND.

The statue of limitations begins to run in favor of the drawer of a check at the latest after the lapse of a reasonable time from the presentment of the check.

Action by John W. McClelland against Leonard K. Scroggin on a check. Plaintiff had judgment and defendant brought error.

The check was drawn by plaintiff in error (Scroggin) to the order of defendant in error (McClelland) for $746.22 upon Scroggin & Son, bankers, Mt. Pulaski, Ill., and dated November 10, 1882.

IRVINE, *Commissioner* (omitting part of the opinion):

One of the errors assigned, and the only one which we shall notice, is that the Court erred in not finding that the action was barred by the statute of limitations. This assignment raises the question as to when the statute begins to run upon a bank check in an action against the drawer of a check. A check is in some respects analogous to a bill of exchange or a note payable on demand. On notes payable on demand the statute of limitations has been held to run from the date of the note. (*Little* vs. *Blunt*. 9 Pick. 488; *Newman* vs. *Insurance Co.* 13 Wend. 267.) Where a drawer of a check had no funds to meet it, it was held that the statute began to run from the date of the check.

(*Brush* vs. *Barrett*, 82 N. Y. 400.) It is true that the last case was decided upon the theory that, inasmuch as the drawer had no funds in the bank to meet the check, presentment immediately would have been unavailing, and a cause of action, therefore, arose in favor of the payee as soon as the check was given. We can see, too, that there is a distinction between a note payable on demand and a check, as an action lies at once against the maker of a demand note without actual prior demand. (*Norton* vs. *Ellam*, 2 Mees & W. 461; *Burnham* vs. *Allen*, 1 Gray, 496; *Bridge Co.* vs. *Perry*, 11 Ill. 467.) Nevertheless, a check is not designed for circulation, but for immediate presentment. (*Bank* vs. *Miller* [Neb.], 55 N. W. Rep. 1064.) The time within which presentment must be made is quite limited. Ordinarily, when the payee of a check and the bank upon which it is drawn are in the same town, a check must be presented before the close of banking hours the day after it is received (see cases cited in note to *Holmes* vs. *Briggs* [Pa. Sup. 18 Atl. Rep. 928], 17 Amer. St. Rep. 804); otherwise it should be forwarded for presentment the day after it is received by the payee, and presented the day after it is received by the agent for collection. Special circumstances may excuse a greater delay, but no excuse is pleaded or proved for the delay in this case. We think that the statute should be deemed to have begun to run at the latest upon the expiration of a reasonable time for presenting the check, and that a delay of over six years would complete the bar of the statute beyond all question.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

Editor of Rhodes' Journal of Banking: NEW YORK, Nov. 18, 1893.

SIR:—Will you kindly tell, in your next issue, the method of redeeming National bank notes by the Government; also the modus of winding up a National bank, and how the outstanding circulation is taken care of? CASHIER.

Answer.—By the Act of June 20, 1874, Sec. 3, it is provided that every National bank shall "at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to five per centum of its circulation, to be held and used for the redemption of such circulation." It is further provided by such Act that "all notes so redeemed shall be charged by the Treasurer of the United States to the respective associations issuing the same, and he shall notify them severally on the first day of each month, or oftener, at his discretion, of the amount of such redemptions; and whenever such redemptions for any association shall amount to the sum of five hundred dollars, such association so notified shall forthwith deposit with the Treasurer of the United States a sum in United States notes equal to the amount of its circulating notes so redeemed. And all notes of National banks, worn, defaced, mutilated, or otherwise unfit for circulation, shall, when received by any Assistant Treasurer, or at any designated depository of the United States, be forwarded to the Treasurer of the United States for redemption, as provided herein. And when such redemptions have been so reimbursed, the circulating notes so redeemed shall be forwarded to the respective associations by which they were issued; but if any of such notes are worn, mutilated, defaced, or rendered otherwise unfit for use, they shall be forwarded to the Comptroller of the Currency and destroyed and replaced." The fund kept with the Treasurer for this purpose is known as the bank's "five per cent. fund." It is counted as a part of the bank's lawful money reserve. (Act June 20, 1874, Sec. 2.) The great volume of National bank notes are redeemed in the above manner at the United States Treasury; but the banks are required to redeem their notes when presented at their own counters. (Sec. 5195, Rev. Stat. U. S.) Originally every National bank in Albany, Baltimore, Boston, Cincinnati, Chicago, Cleveland, Detroit, Louisville, Milwaukee, New Orleans, Philadelphia, Pittsburg, St. Louis, San Francisco and Washington was required to designate a National bank in New York city at which it would redeem its circulating notes, and every other National bank was required to designate for this purpose a bank in either New York or one of the other cities named. But these provisions were repealed by the Act of 1874 above mentioned.

Where a National bank goes into liquidation it must within six months of the date of the vote to go into liquidation, deposit with the Treasurer of the United States lawful money of the United States sufficient to redeem all its outstanding circulation. The bonds deposited as security for such notes are then returned to the bank, and all the notes are redeemed by the Treasurer as they are presented. (Rev. Stat. U. S., Sec. 5224.) For further information on this subject see Pratt's Digest, pp. 53–55, 77–78, 107–109, 173–174, 220–225.

Editor Rhodes' Journal of Banking: CHICAGO, Ill., Nov. 14, 1893.

SIR:—As a subscriber to your valuable JOURNAL, we desire to ask your opinion upon a question that has arisen between this bank and one of its customers.

During the recent disturbance in financial affairs quite a number of correspondents in the South and West closed their doors, and there was lodged with some of them checks and drafts sent forward for collection. In all cases but the one in point, the depositors indemnified the bank for such items as were held in suspension. This one case, unfortunately, had a draft locked in a bank that finally passed into the hands of a Receiver. The item in question was a slight draft passed to the credit of a depositor in the usual way as cash. The bank sent it to a correspondent at the place of payment. This correspondent was considered the strongest bank in the State and city where located. The relations between the two were simply that of an agent to collect and remit for everything sent them, they having no account with us. The bank made the collection, received the money, and handed the draft to the drawee, held the money a few days and then closed its doors. The point with us is, is not the depositor bound to indemnify the bank, providing the said bank (we) use due care and diligence in the selection and forwarding of said item?

The depositor claims, through his attorney, that he is not liable, and therefore throws the entire responsibility upon the bank of proving and collecting the claim, sustaining whatever loss there may be in the transaction. In all of the bank books issued by ourselves the following memorandum is printed for the information of depositors, viz.:

"All notes, drafts, checks, coupons, or acceptances discounted or received for collection, or as cash, which are payable at points outside of this city, will be received upon this condition:

That this bank is responsible only for good faith, and due care in the selection of such other banks or agencies as are employed for the collection of such items."

Your valuable opinion in this matter, if consistent with propriety, will be duly appreciated before the matter goes further. CASHIER.

Answer.—In Illinois the State courts have followed the rule established in Massachusetts, that where the employment of a correspondent or other agent is necessary or customary the duty of the collecting bank is fully discharged if it exercises reasonable care in the selection of such correspondent or other agent, and that when the paper has been duly transmitted with the necessary instructions to a suitable agent at the place where it is payable the transmitting bank will not be liable for any neglect or default of such agent. (*Aetna Ins. Co.* vs. *Alton City Bank*, 25 Ill. 243.) But in the Federal courts the New York rule is adopted, that in the absence of an express or implied contract varying such liability the collecting bank is liable for the neglect or default of its correspondent or agent. (*Exchange Nat. Bank* vs. *Third Nat. Bank*, 112 U. S. 276.) If, therefore, it were not for the fact that the bank had expressly intended to limit its liability, the question would be decided differently as the action happened to be brought in the State or Federal courts. But the rule of the Federal courts is only that which is implied where there is no express contract. There is no question as to the right of the bank to limit that liability. And where the bank has such a rule as that stated in the inquiry, and notice thereof is brought home to the customer, there is no doubt that the bank's liability is limited accordingly. The burden of showing notice of intention to limit its common law liability would certainly not be heavier on a bank than on a common carrier, and the printing of the notice in the pass-book delivered to the customer goes further towards bringing the notice home to the other party than any of the acts which in common-carrier cases have been held sufficient for the purpose.

Editor Rhodes' Journal of Banking: BAGLEY, Iowa, November, 16, 1893.

SIR:—Kindly oblige me by answering the following through your columns. A gives B his note, B sells same to C, indorsing same to C in blank, demand is properly made at maturity. Note is dishonored and is duly protested. Can C then proceed immediately and by suit recover from B? Or must C first sue A, and if impossible to recover from him, then look to B? EDWIN COLES, *Cashier.*

Answer.—The rule at common law is that the holder of negotiable paper can sue the indorser without first pursuing any remedy against the maker or acceptor (*Trimble* vs. *Thorn*, 16 Johnson, 152; *Beardsley* vs. *Warner*, 16 Wendell, 613; *Gibson* vs. *Parlin*, 13 Neb. 292), and the action may be commenced against the indorser as soon as notice of dishonor has been given him. (Daniel on Negotiable Instruments, § 1212 and cases cited.) But in some of the states, as for example, in Illinois and Indiana, statutes have been enacted requiring that the holder shall first bring suit against the maker or acceptor and get judgment against him. In Iowa, however, there appears to be no such statue, and the rule of the common law prevails.

Editor Rhodes' Journal of Banking: WATSONTOWN, Pa., Nov. 16, 1893.

SIR:—Is the collecting bank to whom sight or time drafts are sent for collection, without postage for return if not paid, required to return or report back the collection to the bank or party from whom received, and be the loser to the extent of postage and stationery? H. DUNKEL, *Cashier.*

Answer.—It would not be safe to omit sending any notice at all to the bank or person transmitting the item, because it would probably be held that by receiving and making presentment of the same the bank had consented to act as collecting agent, and therefore was bound to the duties and obligations of such an agent. But the bank might give notice of the dishonor, and notify the sender that the item would be returned upon receipt of postage, etc., and hold the item until so reimbursed.

THE TAX ON STATE BANKS.—The Banking and Currency Committee of the House of Representatives met on December 6, and, according to the report, "decided to go on with the consideration of some bill for repealing the tax on State bank circulation."

THE PRESIDENT'S MESSAGE.

The second session of the Fifty-third Congress of the United States met at Washington December 4, when the President's Message was submitted to both houses.

After dealing with various operations of the Treasury for the past year, the President calls attention to the deficit in revenues as follows:

"It is estimated upon the basis of present revenue laws that the receipts of the Government for the year ending June 30, 1894, will be $430,121,365.38, and its expenditures $458,121,365.38 resulting in a deficiency of $28,000,000."

AGAINST TEMPORARY SILVER EXPEDIENTS.

Other matters pertaining to the currency are thus dealt with:

"The recent repeal of the provision of law requiring the purchase of silver bullion by the Government as a feature of our monetary scheme has made an entire change in the complexion of our currency affairs. I do not doubt that the ultimate result of this action will be most salutary and far-reaching. In the nature of things, however, it is impossible to know at this time precisely what conditions will be brought about by the change, or what, if any, supplementary legislation may, in the light of such conditions, appear to be essential or expedient. Of course, after the recent financial perturbation, time is necessary for the re-establishment of business confidence. When, however, through this restored confidence the money which has been frightened into hoarding places is returned to trade and enterprise, a survey of the situation will probably disclose a safe path leading to a permanently sound currency, abundantly sufficient to meet every requirement of our increasing population and business.

In the pursuit of this object we should resolutely turn away from alluring and temporary expedients, determined to be content with nothing less than a lasting and comprehensive financial plan. In these circumstances, I am convinced that a reasonable delay in dealing with this subject, instead of being injurious, will increase the probability of wise action.

The Monetary Conference which assembled at Brussels upon our invitation was adjourned to the 30th day of November in the present year. The considerations just stated and the fact that a definite proposition from us seemed to be expected upon the reassembling of the conference led me to express a willingness to have the meeting still further postponed.

It seems to me that it would be wise to give general authority to the President to invite other nations to such a conference at any time when there should be a fair prospect of accomplishing an international agreement on the subject of coinage.

I desire also to earnestly suggest the wisdom of amending the existing statutes in regard to the issuance of Government bonds. The authority now vested in the Secretary of the Treasury to issue bonds is not as clear as it should be, and the bonds authorized are disadvantageous to the Government both as to the time of their maturity and rate of interest."

The Meaning of "Carat."—The purity of gold is estimated by an Abyssinian weight called a carat, Arabian, quirat, a bean, a fruit of the carob tree, which is subdivided into four parts called grains. The term carat when applied to gold and silver is not a weight unit, but the mode of expressing the purity or fineness of the metal in twenty-fourths. Thus 18 carat gold is metal in which eighteen parts out of twenty-four (or three-fourths) are pure gold. This method of estimating fineness is traceable from the marc of Europe having been divided into twenty-four real-carats or actual weight units. The present method is to estimate fineness in thousandths: i.e., gold fine has 250 parts alloy, corresponds to 18-carat gold, three-quarters of the metal being pure gold in each case. Our gold coins are 21.19 carats —*Mining Review.*

SECRETARY CARLISLE ON FINANCE.

The one hundred and twenty-fifth annual dinner of the New York Chamber of Commerce took place at Delmonico's on Tuesday evening, November 21.

Hon. John G. Carlisle, Secretary of the Treasury, was the principal speaker, his address being in response to the sentiment:

"Commerce demands and the honor of the country requires that the obligations of the United States shall be paid in coin current in any market of the world, and that this question shall be settled for all time and beyond controversy."

After being introduced by President Charles S. Smith, Mr. Carlisle said:

The subject presented by the sentiment just read is so large and involves so many considerations, not only of public policy but of public and private honor and good faith, that I scarcely know how to respond to it on such an occasion as this, where brevity of statement will be more appropriate than elaborate argument. I am somewhat embarrassed also by the fact that I am to talk to an assemblage of gentlemen who, by reason of their personal experience in commercial and financial affairs, are at least in as good a position as I am to understand and appreciate the value of a sound and stable currency and to foresee the injurious effects of a departure from correct financial methods.

Money and its representatives constitute the tools with which the merchant and the banker perform their parts in the numerous and complicated transactions necessarily occurring in the growth and development of our trade at home and abroad. It is not possible to do perfect work with imperfect instruments, and if it is attempted the consequences will not fall upon you alone, but must be felt sooner or later in every part of the land. Confidence would be destroyed, trade would be interrupted, the obligation of contracts would be violated, and all the evils which have invariably attended the use of a base or fluctuating currency would afflict, not the commercial and financial classes only, but the country at large. But our commercial interests are not confined to our own country; they extend to every quarter of the globe, and our people buy and sell in nearly every market of the civilized world. A very large part of our farmers, mechanics and other laboring people find constant and profitable employment in the production and transportation of commodities for sale and consumption in other countries, and the prices of many of our most important products are fixed in foreign markets. Without exception these prices are fixed in the markets of countries having a gold standard or measure of value either by express provision of law or by a public policy which keeps their silver coins equal in exchangeable value to the gold coins at the legally established ratio. The value of our trade with the people of other countries during the last fiscal year was more than $1,700,000,000 and more than $1,100,000,000 of this was with the people of Europe, while with the whole of Asia it amounted to a little over $100,000,000, and with all the countries of South America, excluding Brazil, which has a single gold standard, it was only $46,000,000. While it would be unfair to attribute this unequal distribution of our trade with the outside world to the character of their fiscal legislation, I think it may be safely asserted that this country could not long maintain its present position as one of the most conspicuous and important members of the great community of commercial nations which now control the trade of the world, unless we preserve a monetary system substantially, at least, in accord with the monetary systems of the other principal nations.

MUST BE EXCHANGEABLE VALUE.

There can be no international legal tender without an international agreement, but there must, from the very necessities of the case, always be a common basis upon which bargains are made and a common currency in which balances are settled. No one nation can determine for the others what that basis shall be or what that currency shall be. It may establish a currency for itself and for the use of its own people in their domestic trade, but the value of that currency will be ultimately measured and conclusively fixed by the international standard, whatever that may be. The stamp on its coins attests their weight and fineness, but it adds nothing whatever to their intrinsic value and nothing whatever to their exchangeable value in the markets of the world, so that a nation's stock of international money always consists of its uncoined bullion and the bullion value of its coins. It cannot augment its stock of such money to any extent whatever by overvaluing either gold or silver in its coinage laws, nor can it diminish its stock to any extent whatever by undervaluing either metal. While the number of its nominal dollars, or shillings, or francs, may be increased or diminished, as the case may be, the actual value of the bullion or coins will not be changed in the least, for no Act of Congress or other legislative body can repeal or alter the laws of trade or the laws of finance, and every attempt to do so must result in disaster sooner or later.

No matter, therefore, what our monetary system may be here at home, as established by our own laws, we must either relinquish a large part of our share in the commerce of the world or conduct our international trade upon such basis as the general judgment of commercial nations may establish. We cannot possibly change this situation, and, consequently, the only practical question is, whether it is better to establish by law an inferior kind of money for use at home exclusively and another kind for use abroad, or to have all our money good enough for use in every market where our people trade. I believe the people of the United States are entitled to have for use in their domestic trade just as good money as any other people in the world have, and that they are entitled to have just as much of it as may be necessary to carry on their business regularly and profitably. Whether it be gold or silver, or both, or paper based upon the coins of the two metals, the people have a right to demand that it shall be in fact what it purports to be—a just and true measure of value, or the representative of a just and true measure of value.

Gold is the only international money, and all trade balances are settled in gold, or, which is the same thing, on a gold basis, all other forms of currency being adjusted to that standard. It is useless for the advocates of a different system to insist that this ought not to be so; it is so, and we cannot change the fact. But the gold eagle and double eagle are not accepted at a particular valuation in these settlements simply because the United States of America have declared by law that they shall be legal tender at their nominal value, but solely because the bullion contained in them, if uncoined, would be worth everywhere the same amount.

CANNOT CREATE MONEY.

This is a great and powerful Government, but there is one thing it cannot do—it cannot create money. There are some things, however, which the Government can do for the establishment and preservation of a sound and stable currency. In the exercise of its constitutional authority, to coin money and regulate the value thereof, it can suspend or limit the coinage of either metal whenever it is ascertained that the coins of the two metals, of the same denomination are of unequal value; or it can change their legal ratio so as to make them as nearly equal in value as possible, or it can maintain the parity of its coins by receiving them and their paper representatives in payment of all public dues and discharge all its own obligations in whatever kind of money its creditors may demand.

The principle or rule of law that the option as to the kind of legal tender with which an obligation shall be discharged belongs to the debtor and not to the creditor, has no just application in a case where the Government issues its notes to circulate as a currency among the people and by making them legal tender compels the people to receive them. The private citizen may very properly avail himself of the lawful right to discharge his private obligations held by voluntary creditors in any kind of legal tender money, because he has only his own personal interest to protect and owes no public duty in the premises. But when the Government of the United States has undertaken to supply the country with a currency and has issued its obligations in the form of notes to circulate among the people in the transaction of their private business and has received for every dollar represented by such notes a dollar's worth of the people's services or a dollar's worth of the people's property, its honor, as well as sound public policy, demands that they shall be redeemed upon presentation in money current in all the markets of the world. No government can honorably disparage or depreciate its own obligations, and especially obligations which it has forced its people to accept; nor can any government honorably discriminate between the different kinds of money or currency which it puts in circulation. Whatever may be the differences in the forms and qualities of the currency while it remains in circulation when the time for ultimate redemption comes all must be treated alike.

The country has recently heard a great deal about bimetallism and a double standard, and it is possible that these subjects will continue to be discussed to some extent in the future. For my part I have never been able to understand what is meant by a double standard, or double measure of value, and I have never found any one who could tell me. To my mind it seems as absurd to contend that there should be two different standards or measures of value as it would be to insist upon having two yardsticks of different lengths or two gallons of different dimensions.

ONE MUST BE FALSE.

If there were two standards or measures not equal in value, it is evident that one of them must be a false measure, and if they were of equal value it is evident that, no matter what the law might declare, there would be in fact but one measure, although composed of two different kinds of material. If, for instance, the silver dollar and the gold dollar were of precisely the same value and could be so kept at all times, there would be in fact but one standard, one unit for the measurement of values. Whatever that actual standard may be as established by the laws of trade and finance, whether it be so many grains of fine gold or so many grains of fine silver, it is the duty of the Government to conform to it in the payment of its obligations and in all its dealings with the people.

It does not follow from anything I have said that nothing shall circulate or be recognized as money or currency except gold or paper issued against gold, nor that the prices of commodities ought to be or will be fixed upon the hypothesis that gold is the only money in the world; but it does follow that no part of our currency, whether it be silver or paper, should be permitted to depreciate below the established and recognized standard. Any financial policy which would encourage or permit such depreciation, or create a reasonable apprehension of such depreciation, would unsettle values, paralyze business, arrest the growth and expansion of our industries, and ultimately bring almost universal bankruptcy and ruin upon the country. It must be remembered, however, that it is the function and duty of the legislative department to establish the policy of the Government upon this and all other subjects, and to clothe the Executive with the necessary authority and means to carry it out. When the authority and means are granted, the executive department is responsible for the manner in which the law is executed, but beyond this it has no power to act, and consequently no duty to perform.

Gentlemen, the question whether the obligations of the United States will be paid in coin current in all the markets of the world has already been settled, and it has, in my opinion, been settled for all time to come. It has been settled not by any specific Act of Congress prescribing the exact mode of payment, but by the spirit and obvious purpose of the whole body of existing legislation upon the subject and by the deliberate judgment of the American people and the declared purpose of those who have been intrusted with the execution of the laws. The disposition and ability of the Government to maintain its own credit at the highest possible standard and to preserve the integrity of all the forms of currency in circulation among the people cannot be reasonably doubted, and ought not to be subjects of serious controversy hereafter.

SHOULD LOOK AFTER SILVER.

This does not imply that silver is to have no place in our monetary system. What is to be the ultimate fate of that metal is one of the problems which time and events alone can solve, but for many years, notwithstanding all our legislation in its support, the fluctuations in its value have been so rapid and so great as to demonstrate the fact that it cannot be safely coined without limitation into money of final redemption at the existing ratio or at any other ratio that might be established. It is not possible, under existing circumstances, for any one government to establish and maintain a stable relation between the two metals, and for this reason alone, if there were no others, we are bound to place some reasonable limitations upon the coinage and use of silver. How much of it can be safely coined, and upon what condition can it be safely used, are questions upon which there will be wide differences of opinion; but after all that can be said on both sides they will be finally determined by circumstances which cannot now be foreseen and by the natural increase of our population and the natural growth of our industries and trade.

It is enough to say at present that we have already on hand a stock of silver, coined and uncoined, sufficient to meet all the probable requirements of the country for many years to come. The mints of the United States have coined 419,332,550 standard silver dollars and we now have 140,699,760 fine ounces of silver bullion, which, at the ratio of 16 to 1, would make $181,914,841, or $601,247,391 in the aggregate. Besides this, we have $76,977,002 in subsidiary silver coin, which is legal tender to the amount of $10, and is by law redeemable in full legal tender money on presentation. Our total stock of gold coin and gold bullion is $659,16 ,949.

The five countries constituting the Latin Monetary Union, with a combined population of more than eighty millions, exclusive of their colonial possessions, have $975,000,000 in gold, $725,000,000 of full legal tender silver and $95,000,000 of subsidiary silver coins, and yet they found it necessary several years ago to discontinue the coinage of legal tender silver and enter into an arrangement by which each country agreed to redeem in gold all its own legal tender silver coins when presented by any other member of the union. Thus gold has been made to support a limited quantity of silver coin at par in France, Belgium, Italy, Greece and Switzerland, as it has been required to do in the United States since 1878, and as it must continue to do hereafter, here and elsewhere, unless a great change shall occur in relative value of the two metals.

IN A GOOD POSITION AT LAST.

Being the greatest silver producing in the world and having on hand a large amount of silver coin and bullion, the United States cannot be otherwise than deeply interested in every measure designed to enhance its value and increase its use as money upon a safe and sound basis, but we cannot alone maintain its unlimited coinage as full legal tender in opposition to the policies of the other great nations of the earth; and the country is to be congratulated upon the fact that we have at last placed ourselves in a position which enables us to preserve our own monetary system intact and exercise a potent influence in any movement that may be hereafter made for the permanent adjustment of this very important and difficult question.

It is a great mistake to suppose that the supporters of our recent legislation upon this subject were animated by any feeling of hostility to the continued use of silver as money to the largest possible extent consistent with the stability of our currency and the preservation of the public faith. The wisest and safest friends of that metal are those who have had the sagacity to foresee the inevitable effect of its continuous accumulation in the form of bullion in the vaults of the Treasury and the courage to remove from the statute book an experimental law which from the time of its enactment was a constant menace to the welfare of the whole country.

In conclusion, Mr. President, permit me to thank you and the Chamber of Commerce of the State of New York for affording me this opportunity to meet so many of the leading business men of this great business city. Although your organization has been in existence more than one hundred and twenty-five years, and has passed through many trials and vicissitudes, it is but simple justice to say that its counsel has always been wise and conservative and its action patriotic and beneficial. All that is needed now to insure the early inauguration of an era of great prosperity is such action upon the part of this and similar organizations throughout the country as will inspire confidence and revive the spirit of enterprise among the people. Now that our credit has been greatly strengthened and our currency made more stable and secure, an opportunity is afforded those who control our commercial and industrial interests to resume operations under more favorable conditions than have existed for many years, and I am sure you will cheerfully co-operate in any efforts they may make in that direction.

Comptroller's Annual Report.– The annual report of the Comptroller of the Currency will be found elsewhere in this number; it contains statistical information of great value, and some important recommendations for amending the law in relation to the supervision of the banks. Such changes as are proposed in the currency system will generally meet with approval.

CURRENCY REFORM.

ADDRESS OF WILLIAM C. CORNWELL BEFORE THE CONVENTION OF THE AMERICAN BANKERS' ASSOCIATION, HELD AT CHICAGO OCTOBER 18 AND 19, 1893.

The currency question, one of the most important to the welfare of any nation, has never been satisfactorily settled in the United States.

For more than a hundred years its history is a record of experiments and temporary expedients without a single adequate solution.

No country is so full of currency doctors as ours, and we have finally evolved nine different kinds of money, nearly all diseased. In the meantime the commerce of the country has gone on increasing enormously with the effect that at regular or irregular periods we have some such a tremendous fit of sickness as that through which we are just passing.

The cause is physical; there is poison in the blood. Everything is all right except the circulation; that is diseased. * * *

I have spoken of our currency system as in a diseased state. The existing causes may be listed as follows:

First—Silver legislation.

Second—Greenbacks and Treasury Notes.

Third—National Bank Notes because oversecure.

Fourth—Suppression of Bank Currency.

SILVER LEGISLATION.

Little need be said as to silver. The country has received such an education in the last six months as it will not soon forget.

One thing should be emphasized at this point in the struggle: *Silver-bullion buying is absolutely and alone the cause of the recent panic.* The fact that this country was apparently in the full whirl of prosperity last October is no argument. The steam engine just before explosion is running at greatest pressure—it is then that false metal in the boiler yields. Bullion buying, more than three years ago, caused foreign buying of our securities to cease and foreign selling to begin, along with gold exports, and decrease in treasury gold reserve. Financiers during this whole period have been calling attention to this and predicting just such a state of things as has come about.

GREENBACKS AND TREASURY NOTES.

Under the second head of diseases of the country come the fiat issues of the Government—the greenback and the treasury note.

The greenback is the senior violator of the principle that a government should issue no paper money; $346,000,000 of them, the heritage of the war, are still with us. Since our resumption of specie payments they have stood up stiffly, and until recently have been accepted round the world as good as gold; but that does not one whit abate the fact that their issue is wrong in principle and a rotten element in our monetary make-up.

The greenback is half-brother to rag money, born when the flag was in danger. It has managed thus far to appear in respectable garments, but its fiat character is visible to those who lift the coat flaps. The $100,000,000 gold reserve and the credit of the Government have kept it in countenance until recently, when the other fiat money, the paper silver, fell back with a dull thud on that same hundred millions, and there was an earthquake which shook the faith of millions.

The greenback must go if we desire to act upon an absolutely sound basis.

The treasury notes, of which something over $140,000,000 have been issued under the Sherman Law, being legal tender and redeemable in gold (if there is any), add to the danger of fiat Government issues, begun by the $346,000,000 greenbacks. We have here, both together, $486,000,000 of paper money issued by a government with less than $100,000,000 in gold to keep it perpendicular. Whether or not the Government has the credit to do this, there comes a time (no man can predict the moment), as there came in

June, when suddenly the people begin to doubt, there is one grand explosion, and when the smoke has cleared away the Demon of Distrust looms up, hovering over the ruins and carrying devastation as he sweeps his uncanny wings across a nation's commerce from ocean to ocean.

If the greenback and the treasury note are retired, as they should be, 500,000,000 of the currency is wiped out.

Something must take its place.

NATIONAL BANK NOTES

Let us take up now the National bank note. Strange as it may seem, this popular bread-buyer is the innocent cause of much of our trouble, on account of its unscientific character.

The apparent necessities of war gave birth to the national system as a proposed means of placing more Government bonds. The issues of all but National banks were cut off by the ten per cent. tax, and National banks were alone allowed to issue notes upon security of U. S. bonds at par for ninety per cent. of notes. The country was off a specie basis, so that there was no pressure to redeem, and the high rates of interest on the bonds made issue very profitable. The tendency then was towards inflation, and the total issue went up to 360,000,000, and had to be limited by Congress. When Government rates decreased materially, the issue began to contract because there was no profit in it until in ten years it shrank to 120,000,000. When this decrease begun, a contraction of the currency followed, and that was the time when proper reform should have been introduced as to security, so that the full volume of bank currency could have been maintained and increased. Nothing of the kind was done, and the politician and the silver miner jumped in to fill the gap caused by the contraction of 240,000,000 in bank currency. They filled it, and to-day we have about 500,000,000 of debased silver issues as a result.

The National bank note is an over-secured fallacy, popular because of its abnormal development in one direction, that of security.

A bank note should come out when needed by commerce, and retire after the need has passed.

The National bank note does neither one thing nor the other.

It lacks the vitalizing element of a good bank note—that of redemption. Being secured by a special deposit and over-secured at that, nobody ever takes the trouble to redeem it and the fine character which the redemption test gives, is lost.

SUPPRESSION OF BANK ISSUES.

We come now to the fourth head. The ten per cent. tax confines bank issues to national notes, and these have been shown to be ineffectual. The thinking public has come to recognize the injustice of this suppression, and hence the clamor in many quarters for the repeal of the ten per cent tax. * * *

But admitting that the most perfect form of currency is the note of a good bank, how can you get your banks good before you allow them to issue?

Not certainly by throwing the control of them into the hands of forty-four different legislatures of all degrees of intelligence and political complexion, as would be done if the State tax were repealed.

For thirty years the National system has been perfecting its restrictions until to-day it shows a high standard of average strength and safety, and a record for the whole period of its existence which probably—taking number of banks and all, into consideration—is unequalled in the history of banking. This record is condensed in the statement of a recent Comptroller that the total average of loss in the whole system for the whole time up to last year was only three per cent.

Here, then, is a system which, on one side has been developed and perfected with the utmost care for thirty years by a succession of competent Comptrollers, until on that side—the Department of Safety—it has attained a very high level. On the other side—that most important one—of circulation—there has been actually no development whatever.

The State bank system was a spotted growth from bad to better, with the right principle of note issue as a general basis in some of the States. But to go back twenty-nine years, tear down the delicate net-work of safety which has developed around the National system and by a repeal of the ten per cent. tax start over again, would be a crude and unwise move—a retrogression—unnecessary, because every good feature of State bank issue can be grafted into the strong and efficient trunk of the National system. As to the rights of State banks, it is a very simple thing for a State bank to change to a National one, carrying its rights with it and no injustice done.

REMEDIES.

The situation then condensed is as follows:

We desire to place our currency upon a sound basis, and while eliminating all false elements to maintain sufficient volume, with a provision for increase and a provision for elasticity.

In order to accomplish this; first of all silver purchasing must cease; without this it is absolutely useless to institute other reforms.

Then our legal tenders, the greenback and the treasury note must be retired.

This brings us to the question what shall fill the gap thus created.

There is but one answer. The present tendency in all the great nations of the world is towards bank currency. Bank currency is what we, too, must depend upon. This is strictly in accordance with scientific sequences.

The wealth of a country should be the basis of its currency. The basis is furnished by commerce itself.

The products of the labor of the people represent all there is of financial value (wealth) in a nation. Commercial banks, the friends of all classes of the people, of the wage earner, the merchant and the capitalist—commercial banks, the longest lived and soundest institutions known in history, are the custodians of the representatives of this wealth in the shape of commercial assets, and commercial assets, all time proves, are the highest form of security for note circulation.

Notes issued by properly capitalized and inspected banks to the extent of a proportion of their paid-up capital, and made a first lien upon their assets, not specially pledged, but held as general security, have behind them the only truly scientific basis for circulation in a country like ours—the basis being the product of the energy, the muscle, and brain of our people. Trade consists in the exchange of these products. Banks are the natural facilitators of such exchange. They hold, in short, bills receivable, the paper representatives of the products themselves. As by the increase of products, trade increases, so scientifically and naturally there is produced in an increase of assets a larger basis for note circulation. The means to move the crops are furnished by the crops themselves. What better basis for bank notes can be created than these quick assets? Such bank notes, under regulations for daily redemption, modestly and automatically retire when they are not needed.

Graft this principle upon the national system. Abolish the over security and the tax on circulation. Make the note secure enough, but not too secure. Drop the United States bond special security—adopt the general security principle, which is in such successful operation in Canada, making the note a first lien on all assets, including double liability of stockholders, limiting its issue to a percentage of capital with guarantee fund and other minor details to be arranged.

Establish redemption agencies at financial centres throughout the United States.

Let all notes be printed by the Government as now.

Under the general security principle, daily actual redemption would then become a fact. The operation would be the same as under the Canadian law.

In Canada bank notes are redeemed every day as checks. If a bank receives the notes of other banks, it immediately sends them on for redemption, paying out its own notes over its counter in a daily endeavor to put them in circulation. It is of course a direct benefit to each bank to have as many of its own notes out as it possibly can. Then with every bank crowding for redemption and retirement all the notes of every other bank, and pressing out all it possibly can of its own, it is readily seen that only the actual amount needed by commerce will stay out—that the amount will rise and fall automatically with the actual business demand or lack of it. This is the principle of elasticity scientifically carried out, suppressing inflation, fostering enterprise and working out its own fine end under the fire-test of daily redemption.

Would this currency meet in volume the requirements of the country?

There is no doubt about it. The redemption of the greenback and the treasury note, $500,000,000 in all, could be accomplished gradually, by the use of the $100,000,000 gold reserve, by the sale of silver bullion, by means of the debt sinking fund appropriation, by income, by borrowing on gold bonds for the purpose. This should be done gradually.

Meantime the National bank note issues, relieved of heavy burdens, but protected and made absolutely safe, would increase, and as they did so the legal tender retirement could be kept automatically level with such increase. The volume of notes would also swell from rapid change of State banks into National and from new organizations. A few years would see the change completed.

We would then have for our main circulating medium a bank currency, absolutely secure, subject to daily redemption in specie, of uniform value in every part of the United States, and because of daily redemption possessing the necessary elasticity for the requirements of our commerce, at one time growing rapidly to meet its swelling volume, and afterwards sinking out of sight as the need subsided.

Trade could then go on, for the first time in the history of this country, unhindered by the fear of disturbance and corruption at its very base, sure of the essential foundation of all enduring commercial prosperity—a sound currency.

We could then take the lead as the foremost commercial nation of the earth, and it would not be long before the dollar of the United States, instead of the pound sterling, would rule the world.

New Counterfeit $5 United States Silver Certificate.—A. L. Drummond, chief of the Secret Service Bureau of the Treasury Department, recently sent out the following: "This office has been favored by Mr. F. E. Burgess, Cashier Howard National Bank, Burlington, Vermont, by the submission of a new counterfeit $5 United States Silver certificate, check letter "C." Series 1891, Act of August 4, 1886, W. S. Rosecrans, Register; E. H. Nebeker, Treasurer; oval portrait of Grant; small scolloped pink seal.

The note is a wood cut production and poorly executed, the numbers are badly and irregularly printed in black, instead of blue ink, and are much smaller than those on the genuine, being only about one-eighth of an inch in size; the titles of register and treasurer are wholly omitted from the note and the signatures written with a pen; the words 'United States Silver certificate; five dollars', which appear between small figures 5 all around the border of the face of the genuine note, are entirely omitted from the counterfeit as are also 'Series of 1891' that appears in the upper right-hand corner and lower left-hand portion of genuine note. The 'Act of Aug. 4, 1886' under the Roman figure V, upper right-end of note, is omitted from the counterfeit, a broad black circular line supplying its place; the portrait of General Grant is coarse and scratchy, having only a slight resemblance to portrait on the genuine; and the word 'Grant' that appears directly under the portrait on the genuine is omitted from the counterfeit; the seal is light in color, and no attempt has been made to place therein the design and lettering that are in the genuine. The imprint of the Bureau of Engraving and Printing on back of genuine note is omitted from the counterfeit; no attempt has been made to imitate the fibre that is in the genuine paper. The whole note is much darker than the genuine and heavily printed, and is not calculated to deceive careful handlers of money."

Awards to a Chicago Firm.—Messrs. A. H. Andrews & Co., the well-known Chicago manufacturers of high-grade bank and office furniture, opera chairs, etc., made a comprehensive exhibit at the World's Fair. On each of the six exhibits displayed they received a medal and a diploma. The awards, as rendered by the judges, were for bank and office furniture, folding beds, opera chairs, metal chairs and lumber dry-kiln. The bank exhibit consisted of the counter and furniture of the World's Fair bank in the Administration building. The folding beds, opera chairs and metal chairs were installed in the company's booth in the Manufactures building. The lumber dry-kiln was a part of the Forestry exhibit.

Notices of New Books.

POOR'S DIRECTORY OF RAILWAY OFFICIALS AND MANUAL OF AMERICAN STREET RAILWAYS. New York: H. V. & H. W. Poor.

The eighth annual number of this publication has come to hand. It contains a complete list of all the officials of all the operating railroads in the United States and Canada, and of the chief railroads in Mexico, private railroads of the United States, foreign railways, city and suburban tramways, projected railroads, etc. A new feature, now first introduced into this book, is a classified index to the leading manufacturers of railway appliances, forming a complete buyers' guide for the use of railway officials. The publications of this firm are recognized as authorities on matters pertaining to railways. The book is carefully compiled and will prove an invaluable assistant to all those who may have occasion to consult it.

"NAPOLEONS OF FINANCE!"

— Isaac Bates and William L. Smith, President and Cashier respectively of the recently failed Bank of New Hanover, Wilmington, N. C., have been arrested on the charge of making false certification of statements of the condition of the bank.

— J. C. Darragh and E. C. Sattley, respectively President and Cashier of the Kansas City (Mo.) Safe Deposit and Savings Bank, which failed some time ago, were indicted on the 21st ult. at Independence, Mo. There are said to be fifty cases pending against these officials, who are under bonds aggregating $50,000.

— C. M. Atkins, Cashier of the suspended First National Bank, New Whatcom, Wash., is under arrest charged with embezzlement. He stoutly denies the charge.

— John C. Eno was arrested recently on a new complaint charging him with having wrecked the Second National Bank, New York city, and embezzled over $2,000,000 of its funds in 1884. He waived examination before United States Commissioner Shields on the 24th ult. Eno is still under $30,000 bail to the United States authorities.

— On November 22 six indictments were returned against officials of the State Farmers and Merchants' Bank, Minneapolis, Minn. The following officials are accused: Willis A. James, G. L. Matchen, M. F. Scofield, R. I. Lang, A. E. Flint and Frank Scofield, directors. M. F. Scofield was President, G. L. Matchen, Vice-President, and R. I. Lang, Cashier. They are charged with receiving deposits when the bank was insolvent and performing other illegal acts.

— Charles W. Mosher, convicted of complicity in wrecking the Capital National Bank, Lincoln, Neb., has at last been taken to the Government prison to serve out his five years' sentence.

— J. E. Burlingame, Cashier of the defunct Bank of Commerce, Springfield, Mo., was arrested on the 16th ult., charged with receiving deposits while the bank was failing.

— Kristian Kortgaard, President of the failed State Bank, Minneapolis, Minn., has been indicted for connection with various financial schemes.

— Clarence M. Overman, defaulting President of the broken Citizen's National Bank, Hillsboro, Ohio, has been sentenced to five years' imprisonment at hard labor. He was charged with stealing $50,000, making false reports to the Comptroller and making false entries in the bank's books.

— Joseph F. Blaut, President of the failed Madison Square Bank, New York city, has eleven indictments for felony pending against him. Several directors and an ex-President of the institution are also under indictment.

— W. H. Cochran, President, and R. H. Sayre, Cashier of the First National Bank, Del Norte, Colo., were arrested on November 25, and placed under bonds of $5,000 each to appear to answer to six indictments against them.

— Theodore P. Haughey, President of the wrecked Indianapolis (Ind.) National Bank, has been indicted for complicity in wrecking the institution.

— T. C. Brewer, of New York city, is reported to be under arrest in connection with alleged fraudulent transactions in organizing the new State Bank of Barton, Vt., of which he was projector and Vice-President. It is charged that he procured certified checks under false representations and opened the bank fraudulently.

— J. V. Rockafellow, formerly in the banking business at Wilkesbarre, Pa., was convicted of embezzlement on November 25. There are twelve more indictments against him.

— E. Ashley Mears, a North Dakota financier, is in jail for contempt of court in refusing to relinquish the books of a title insurance company of which he was president.

— L. F. Menage, the absconding President of the Northwestern Guaranty Loan Co, Minneapolis, Minn., is reported to be in Honduras. Further light is thrown on the doings of this eminent financier by the following, taken from a recent issue of a St. Paul paper:

"County Attorney Nye had for a caller yesterday an attorney who represents Mr. Alvin, who figures on a large number of notes in the Menage and Streeter lists. The attorney says that his client signed an almost unknown number of the notes at the request of a friend, who set up the drinks in compensation for the signatures, and that was all he ever expected to come of the matter. It has come to light through some collections received in St. Paul against Alvin, and as he is said to be a man without property it was something of a surprise to the attorneys to receive notes against him for collection. Alvin when seen declared that he owed no notes. The attorney was seeing the County Attorney as to what light he could obtain on the spuriousness of the notes his client had signed. He knows of $65 000 of the Alvin paper, and his client says that he signed notes in blank for an hour or two—how many in all he does not know."

— Warren F. Bean, alias Putnam, President of the National Granite State Bank, Exeter, N. H., was arrested Nov. 11, charged with embezzling $30,000 from the bank.

— Frank Floyd and Philip Scheig, who are accused of robbing the Bank of Minneapolis, Minn., of $90,000, are in custody of officials in London.

— Clarence Murphy, receiving teller of the Salem (Mass.) Savings Bank is reported to have disappeared with $500 of the bank's funds.

– The Grand Jury will investigate the failure of the Continental Trust Company of Kansas City, Mo., which took place Nov. 5, 1892. It is said that just prior to the failure the officers of the institution borrowed $1 5,000 from it, giving their personal note. The depositors have received only 3 per cent.

— Indictments were recently found by the U. S. Grand Jury against various officials of the Stockgrowers' National Bank of Miles City, Mont.; the Livingston National at Livingston, and the Merchants' National at Great Falls. The charges are swearing to false statements, making false entries and misappropriation of funds.

— John S. Beach, sole proprietor of the Prairie City Bank, a private banking institution, at Terre Haute, Ind., which closed on August 12, was recently served with a warrant on eleven grand jury indictments charging him with violating the special statute of 1891. He gave bonds in $11,000.

There could have been 100 indictments as easily as eleven, but as the penalty is from one to three years on each the number found is thought to be sufficient. When the bank failed it became known that it had been insolvent for years. It was not doing a legitimate banking business. It is said that the money of the depositors was used by Beach in his private enterprises. An estimate on his property shows that he will not pay ten cents on the dollar to the depositors.

CONDITION OF MICHIGAN STATE BANKS.

Abstract of reports made to the Commissioner of Banking, showing the condition of the State Banks in Michigan at the close of business October 3, 1893.

RESOURCES.			LIABILITIES.		
Loans and discounts	$33,633,573		Capital stock paid in		$12,102,955
Stocks, bonds and mortgages	24,797,166		Surplus fund		2,375,830
		$58,430,739	Undivided profits		2,234,447
Overdrafts		163,682	Dividends unpaid	$23,173	
Banking house, furniture and fixtures		1,494,946	Commercial deposits subject to check	14,691,013	
Other real estate		564,234	Certificates of deposit	6,486,928	
Current expenses and taxes paid		266,551	Savings deposits	33,502,444	
Interest and premiums paid		218,168	Certified checks	25,359	
Due from banks in reserve cities	6,825,307		Cashier's checks outstanding	31,479	
Due from other banks and bankers	506,207		Due to banks and bankers	1,183,7[illegible]2	55,944,102
Exchange for clearing house	304,445		Notes and bills re-discounted		670,991
Checks & cash items	350,110		Bills payable		302,863
Nickels and cents	22,996				
Gold coin	1,728,851				
Silver coin	269,315				
U. S. and National bank notes	2,485,632	12,492,866			
Total		$73,631,189	Total		$73,631,189

Since May 4, 1893, loans and discounts have decreased $9,803,000; amount due from banks in reserve cities has decreased $1,471,000; deposits have decreased $11,487,000. Number of banks on October 3, 156; May 4, 149; decrease, 7. Number of trust companies on October 3, three; May 4, three.

STATE BANK CIRCULATION.

Mr. Geo. S. Coe, President of the American Exchange National Bank, New York city, addressed the following letter to President Cleveland, under date of November 17:

"Believing that the currency system of our country, no less than its coined money, requires most careful revision before it can be properly re-established, I venture to suggest what seems to me indispensably necessary for any paper system to possess before it can perform the office belonging to it, of interchanging the larger part of the industries of the nation.

First—That all paper instruments, conveying from one person to another the value they represent, should, like a bank check or bill of exchange, that performs essentially the same office, be continually presented to the place of issue for payment, so that for every transaction so closed, there may as often follow through the bank a new one to meet any local need in the movement of annual or more frequent crops. Any system that keeps outstanding and repeating itself in open market, irrespective of commercial demand, an indefinite amount of circulating notes month after month, from seed time to harvest, both in summer and winter, does not meet the National and necessary requirement for a legitimate and flexible currency.

Second—Frequent and absolute redemption of its expressed value in coined money is essential to all sound commercial currency, whether emitted by a bank or otherwise; every deviation from this rule manifestly involves an inherent defect or irregularity.

Third—That to perpetuate in time of peace an inadequate or irredeemable instrument, justified only in time of war, if ever, and which does not subserve the healthful purpose of conveying the full coined value to both parties in a commercial transaction, is nothing less than a legalized fiction; and the continuation of such a system is demoralizing to every individual concerned and to the Government itself.

Fourth—That the withdrawal from use of one form of paper currency by the substitution of another, requires the serious and deliberate attention of the coming Congress. And without disturbing the National system, whatever currency shall hereafter exist in the country must possess substantially the following characteristics:

It should for safety originate with the Comptroller of the Currency in order to restrict the intended amount by some central authority having power to examine the condition and credit of the issuing bank. He should issue registered notes to prevent counterfeiting, and to characterize the proper form and design for each institution and locality. Every bank must be prohibited by a rule that no one can receive more than 75 per cent. of circulating notes to its capital. That the capital shall be liable to payment by each shareholder of another amount equal to his respective holding.

That the notes of one bank held by another shall always be promptly sent home for redemption, and that the notes of every bank shall be made a preferred debt over all other claims in case of failure.

That a sum of 1 per cent. per annum shall be held by the Comptroller as trustee of a sinking fund, until the aggregate reaches 5 per cent., to insure the redemption of the circulating notes of each bank.

With these essential conditions uniformly adopted for public safety, it matters little whether a bank be under the State or the Federal authority. All the States are indissolubly bound together in respect to currency by the strongest ties of interdependence, and so dealing with each other they must necessarily be subjected to the Federal direction upon subjects of mutual interest. Neither in coined money nor in currency can they declare themselves absolutely independent of each other.

The free movement and interchange of crops, mechanical productions and miscellaneous industries have always proved the most reliable bases for the issue of commercial currency. If any new proof were wanting, the successful use of Clearing-House certificates in the recent financial crisis has clearly shown that the general principles supporting the commercial fabric must necessarily proceed together. The time to establish both a solid and an elastic system, with the least direct Government responsibility and alike possessing permanent elements, is now most propitious. It could not be more so, and if the peculiar occasion be lost it may never recur.

Until these conditions, everywhere recognized as indispensable to sound banking, are adequately attained it is the part of wisdom not to disturb the existing prohibitory tax until the country shall have substantially secured the great object of a sound and consistent currency, which every good citizen will devoutly keep in view in order the sooner to reach the same end which the prohibition was intended to subserve. Or if in any repeal of the tax the conditions suggested are imposed upon note currency, the public interest would be equally well promoted."

World's Fair Souvenir.—A handsome "World's Fair" souvenir has been prepared by the Abbott Machine Co. of Chicago. It is an exact *fac simile* of the great check issued on Chicago Day, which virtually freed the World's Fair from debt, as it paid up the bonded indebtedness. The check is for $1,565,310.76 and is probably the best-known check ever issued, as the newspapers in different parts of the country published the fact and some of them showed a cut of the check. It ranks among the largest checks ever issued. Any of the JOURNAL'S readers can obtain these checks by sending a 2-cent. stamp for return postage to the Abbott Machine Company, Chicago. The World's Columbian Exposition have had the Abbott Punch in use in their office since June 5th, 1891, and the great check referred to was punched on this machine.

CONDITION OF THE NATIONAL BANKS.

Abstract of reports made to the Comptroller of the Currency, showing the condition of the National banks in the United States at the close of business on Tuesday, October 3, 1893. Number of banks, 3,781.

RESOURCES.

Loans and discounts		$1,830,667,349 07
Overdrafts		12,966,818 44
U. S. bonds to secure circulation		206,463,850 00
U. S. bonds to secure deposits		14,816,000 00
U. S. bonds on hand		2,760,950 00
Stocks, securities, etc		148,569,950 46
Due from approved reserve agents		158,499,644 28
Due from other National banks		94,740,014 97
Due from State banks and bankers		24,229,106 82

Silver Treasury certificates	28,385,889 00	
Silver coin, fractional	6,009,178 88	224,703,860 07
Legal-tender notes		114,709,352 00
U. S. certificates of deposit for legal-tender notes		7,020,000 00
Five per cent redemption fund with Treasurer		8,977,414 18
Due from Treasurer other than redemption fund		1,262,749 85
Aggregate		$3,109,563,284 36

LIABILITIES.

Capital stock paid in		$678,540,838 93
Surplus fund		246,750,781 32
Other undivided profits		108,474,862 87
National bank notes issued*	$185,460,080	
Amount on hand	2,500,354	
Amount outstanding		182,959,725 90
State bank notes outstanding		75,069 50
Dividends unpaid		2,874,697 59
Individual deposits		1,451,124,330 55
U. S. Deposits		10,546,135 51
Deposits of U. S. disbursing officers		3,776,438 21
Due to other National banks		226,423,979 06
Due to State banks and bankers		122,891,098 21
Notes and bills rediscounted		21,066,737 01
Bills payable		27,426,937 54
Liabilities other than those above stated		31,632,352 16
Aggregate		$3,109,563,284 36

As the statements of May 4 and October 3 cover, approximately, the period of the greatest financial depression of the year, or what has not altogether appropriately been termed the "panic of 1893," the following comparative table will be of interest:

	May 4.	*October 3.*	*Changes.*
Loans and discounts	$2,141,376,526	$1,830,667,349	$310,709,177 Decrease.
Specie	207,222,141	224,703,860	17,481,719 Increase.
Legal tenders	103,511,163	114,709,352	11,198,139 Increase.
Circulation	151,694,110	182,959,725	31,2[illegible]5,[illegible]15 Increase.
Individual deposits	1,749,930,817	1,451,124,330	298,806,487 Decrease.
Bank deposits	428,628,152	349,315,075	79,313,075 Decrease.
Total resources	3,432,176,697	3,109,563,284	322,613,413 Decrease.
Number of banks	3,830	3,781	49 Decrease.

*The amount of circulation outstanding at the date named, as shown by the books of this office, was $208,728,287; which amount includes the notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under the Acts of June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

CONDITION OF KANSAS BANKS.

STATE AND PRIVATE.

Abstract of reports showing the condition of the State and private banks of Kansas, at the close of business on the 3d day of October, 1893.

STATE BANKS.

RESOURCES.		LIABILITIES.	
Loans and discounts on personal and collateral security	$2,460,817	Capital stock paid in	$7,749,222

Expense account	100,21[illegible]	Dividend declared but not paid	56,648
United States bonds on hand	5,000	Individual deposits	2,979,995
Other bonds and stocks at their present cash market value	156,645	Banks' and bankers' deposits	59,297
Checks and other cash items	41,081	Demand certificates	353,541
Clearing-house items	4,859	Time certificates	777,634
Currency	463,556	Bills rediscounted	50,308
Gold coin	327,024	Bills payable	205,290
Silver coin	56,436		
Fractional currency	4,132		
Due from other banks, sight exchange	881,389		
Total	$7,439,985	Total assets	$7,439,985

Number of banks reporting, 142.

The deposits of the State and private banks on January 3 were $21,139,913, and on October 3 they were $14,996,812, showing a decrease of $6,143,100, or 29 per cent. On January 3 the reserve was 35.4 per cent.; on October 3 it was 41.2 per cent., a surplus of 21.2 per cent. above the legal requirement.

During the same period the loans and discounts decreased from $22,920,718 to $16,732,856, the overdrafts decreased from $790,027 to $409,195. The total decrease of indebtedness during this period was $6,293,177.

Including reports from National banks to the Comptroller of the Currency Commissioner Breidenthal estimates the aggregate decrease of banking indebtedness in the State at $13,000,000. He also says that the State and private banks can pay every dollar they owe out of the money due them and still have $2,000,000 due them in addition to the legal reserve. He regards the showing made by these reports as remarkable, considering the troubles the country has passed through since January 3, and that Kansas th s year experienced the shortest crop of her history.

4

ILLINOIS STATE BANKS.

Abstract of statement showing condition of the State banks of Illinois, as shown by reports made to the Auditor of State at the close of business on November 8.

RESOURCES.		LIABILITIES.	
Loans and discounts	$62,118,265	Capital stock paid in	$18,497,500
Overdrafts, secured and unsecured	218,519	Surplus fund	5,405,906
United States bonds, including premiums	49,897	Undivided profits	3,818,174
Other stocks and bonds, inclusive	9,174,353	Dividends unpaid	3,176
Cash on hand	18 499 250	Savings deposits subject to notice	19,922,420
Due from other banks	15,313,431	Individual deposits subject to check	45,999,783
Banking houses	410,383	Demand certificates of deposit	3,843,996
Other real estate	323,003	Time certificates of deposit	5,981,838
Furniture and fixtures	228,556	Certified checks	679,103
Current expenses	263,669	Cashiers' checks outstanding	259,075
Checks and other cash items	3,171,957	Due to other banks	5,819,072
Collections	100,394	Bills payable and notes rediscounted	141,633
Total	$109,871,682	Total	$109,871,682

Since the call made July 25, the total resources have increased $8,000,000 cash, while sight exchange has increased $14,000,000, and loans have decreased $4,500,000. The amount of cash and sight exchange aggregates $37,085,035 to meet deposits aggregating $82,005,292.69, or a reserve of nearly 45 per cent., as against 33 per cent July 25.

CHICAGO STATE BANKS.

The following table shows the condition of the State banks of Chicago, compiled from reports made to Auditor Gore in response to call for statements of condition on November 8. For comparison the figures of July 25, 1893, are also given:

RESOURCES.	*July 25, 1893.*	*November 8, 1893.*
Loans and Discounts	$49,805,392	$47,315,217
Overdrafts secured and unsecured	57,049	37,676
U. S. bonds	45,636	48,336
Other bonds and stocks	8,349,676	7,809 866
Cash on hand	8,822,739	16,969,329
Due from other banks	8,948,079	12,871,478
Other real estate	163,221	237,529
Furniture and fixtures	113,754	66,420
Current expenses	41,911	11[illegible],496
Checks and other cash items	1,833,080	3,080,063
Collections	25,833	51,918
Total	$78,206,020	$88,101,327
LIABILITIES.		
Capital stock	$13,127,000	$13,127,000
Surplus fund	4,539,418	4,497,000
Undivided profits	2,481,931	3,023,108
Savings deposits subject to notice	16,783,850	15,446,987
Individual deposits subject to check	31,931,575	40,185,838
Demand certificates of deposit	1,515,221	1,942,669
Time certificates of deposit	3,016,358	3,423,377
Certified checks	3[illegible]5,062	589,801
Cashiers' checks outstanding	496,072	256,068
Due to other banks	3,969,543	5,609,486
Total	$78,206,020	$88,101,327

The figures show an increase of $10,000,000 in resources over those of July 25, when the last call was made The amount of cash and sight exchange has increased about $13,000,000, and deposits have increased about $10,000,000. The total deposits, aggregating $67,454,219, and cash and sight exchange, aggregating $32,472,788, show a reserve of 48 per cent, as against 33 per cent. July 25, and 28 per cent. June 5, last.

ANNUAL REPORT OF THE COMPTROLLER OF THE CURRENCY,

TO THE SECOND SESSION OF THE FIFTY-THIRD CONGRESS.

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY,
WASHINGTON, DECEMBER 4, 1893.

SIR:—In compliance with law I have the honor to herewith submit for the consideration of Congress the annual report of the Comptroller of the Currency. It covers the year which ended October 31, 1893, and is the thirty-first report made since the organization of the Bureau.

The records of the Bureau show that at the close of the year the total number of National banks in active operation was 3,796, with an authorized capital stock of $6.5.558,120, represented by 7.450,000 shares, held by 300,000 shareholders.

On October 3, the date of their last report of condition, the total resources of the 3,781 banks then in operation was $3,109,563,284.36, of which their loans and discounts aggregated $1,830,667.349.07, and money of all kinds in bank $369,862,636.97. Of their liabilities $1,451,124,330.50 represented individual deposits, $339,153,447.54 surplus and undivided profits, and $182,959,725.90 circulating notes outstanding. The total amount of circulation of National banks October 31, as shown by the books of the office, was $209,311,993, a net increase during the year of $36,886,972.

During the year 119 banks were organized in thirty-two States and Territories, with a capital stock of $11,230,000. Of these 44, with a capital stock of $5,135,000, are located in the Eastern States, 41 west of the Mississippi River, with a capital stock of $2,340,000, and 34 in the Central and Southern States, with a capital stock of $3,755,000.

The number of banks whose charters were extended was 40, distributed throughout twenty-five States, with a capital stock of $5,046,000, and circulation to the amount of $1,529,900. The charters of 4 expired, but in each instance the banks were succeeded by new associations.

Within the same period 158 banks suspended, with a capital stock of $30,300,000. Of this number, however, 86, with a capital stock of $18,205,000, resumed business. The number which passed into the hands of receivers was 65, with a capital stock of $10,885,000. On October 31 seven remained in the charge of examiners, with prospects of speedy resumption. Forty-six banks, with a capital of $5,735,000, went into voluntary liquidation.

By comparing the foregoing synopsis of the history of the banks for the year ended October 31, 1893, with that of the year ended October 31, 1892, as the same is set forth in the Comptroller's Report for that year, the following changes are noted: The number of banks organized decreased 44, receiverships increased 48, voluntary liquidations decreased 7, corporate extensions decreased 47, and expirations of corporate existence decreased 7. The total gain in the number of active banks was 8 and the increase of capital stock $1,689,455.

Comparison of figures of 1893 with those of 1892 in the table on the next page will indicate to what extent and in what respect National banking interests of the country suffered from the severe and unusual monetary stringency which characterized the greater portion of the past year. Comparing their aggregate resources or liabilities on October 3, 1893, with those of September 30, 1892, it is found they were $400,531,613 less, being but $3,109,563,284 on the former date as against $3,510,094,897 on the latter, the highest point ever reached in the history of the National bank system. This unparalleled shrinkage in liabilities is accounted for by a decrease between the dates mentioned in the following items, viz: Capital stock $8,032,677, individual deposits $314,298,653, and bank and bankers' deposits $181,338,125. An increase is shown in circulation outstanding to the gross amount of $40,775,165, in liabilities of all kinds for money borrowed $54,464,628, and in surplus and undivided profits $9,701,265.

The varying condition of the banks throughout the year appears from the

abstract of the reports given below, made in response to the five calls for condition required by law:

RESOURCES.	DECEMBER 9, '92. *3,784 banks.*	MARCH 6, 1893. *3,806 banks.*	MAY 4, 1893. *3,830 banks.*	JULY 12, 1893. *3,807 banks.*	OCTOBER 3, 1893. *3,781 banks.*
Loans and discounts	$2,166,615,720.28	$2,159,614,092.48	$2,161,401,858.59	$2,020,483,671.04	$1,843,634,167.51
United States bonds to secure circulation	163,419,250.00	170,396,550.00	172,412,550.00	176,588,050.00	206,463,850.00

United States deposits	9,673,349.92	9,813,762.17	9,657,243.49	10,379,842.66	10,548,135.51
Deposits United States disbursing officers	4,034,240.37	3,927,760.44	4,293,739.93	3,321,271.84	3,776,438.21
Due to National banks	323,339,449.03	304,785,336.62	275,127,229.28	238,913,573.51	226,423,979.06
Due to State banks and bankers	160,778,117.18	166,901,054.78	153,500,923.94	125,979,422.16	122,891,098.21
Notes and bills rediscounted	15,775,618.63	14,021,596.43	18,953,306.98	29,940,438.56	21,066,737.0[illegible]
Bills payable	9,318,249.82	18,180,228.71	21,506,247.58	31,381,451.27	27,426,937.54
Liabilities other than those above stated	1,688 817.56	2,913,047.88	3,051,379.82	28,689,265.68	31,632,352.16
Total	$3,480,349,667.19	$3,459,721,235.78	$3,432,176,697.25	$3,213,261,731.94	$3,109,563,284.36

Not less marked is the decrease in the items making up the resources of the banks. It shows as follows: Loans and discounts, $327,406,926, stocks, securities, etc., $5,965,-564, and due from banks and bankers, $182,054,654. Cash of all kinds on hand increased

$30,968,606, including $8,410,815 in gold, and United States bonds held for all purposes increased $40,601,250. These figures illustrate the far reaching effect of the year's financial depression and show that when panic-stricken depositors withdrew their money the banks of necessity, to meet the sudden and extraordinary demands made upon them, called in their loans and discounts, supplementing such amounts by borrowed money and the additional circulation which they were able to procure from the Government through a deposit of bonds as security therefor.

A closer examination of the figures contained in the reports of condition made to the Comptroller shows this shrinkage to have occurred chiefly between May 4 and October 3, 1893. Within this period of five months $298,806,487 of individual deposits and $79,313,076 of bank deposits, a total sum of $378,119,563 was withdrawn from the banks. To meet this withdrawal loans and discounts were reduced to the amount of $314,767,-691; amounts due from banks and bankers, $51,298,856, and stocks, securities, etc., $2,177,912, and to provide against further danger of withdrawals of deposits, which strongly menaced them, the banks between the same dates increased their liabilities for money borrowed in various ways $36,615,092, and through the taking out of additional circulation $31,265,616, of which amount $27,788,905 was taken out between July 12 and October 3, 1893.

The cash resources of the banks, which on May 4, 1893, amounted to $343,901,803, were $32,559,267 less on July 12, but between that date and October 3 increased $68,497,-515, amounting at the last-named date to $378,840,056, the largest sum ever held by them. This was accumulated in the face of continued heavy withdrawals of deposits and is the most practical demonstration that could be had of the solvency of the banks as a whole and their ability in an emergency to rapidly convert their assets into cash.

It is unnecessary to here enter upon a further or more specific analysis of these tables. They comply in detail with the requirements of the law, and show "a summary of the state and condition of every association from which reports have been received the preceding year, at the several dates to which said reports refer, with an abstract of the whole amount of banking capital returned to them, of the whole amount of their debts and liabilities, the amount of circulating notes outstanding, and the total amount of means and resources, specifying the amount of lawful money held by them at the times of their several returns."

The careful and unbiased student of the facts shown in this summary must inevitably reach the conclusion that the cause which more than all others contributed to bringing about the stagnation in commercial business of the past months, the suspension of manufacturing and the closing of mills, was this unprecedented demand on the part of depositors for money which the banks had distributed through the channels of trade and which, to meet such demand, they were obliged to withdraw.

The situation made so dangerous for the banks by the action of the depositors caused a sudden contraction of the volume of money needed and already employed for business wants, preventing the making of new loans and rendered it hazardous on the part of the banks to grant renewals of credit already extended. It is to be said, however, that despite the dangers threatening them, the banks contributed in the largest measure by a wise, judicious, and under all the circumstances, generous course, to the prevention of a general commercial panic. In evidence of this is the fact that at no time throughout the prolonged monetary stringency was any complaint made to the Comptroller by any depositor, creditor, or patron of any National bank on account of the treatment accorded him, either as to cash payments of indebtedness, or for any other reason.

So, too, it is worthy of remark that when there is taken into consideration the widespread feeling of distrust so prevalent throughout these months the fact most worthy of comment is not that so many banks closed their doors, but that so many were able to continue in operation. No stronger evidence can be had of the honesty, conservatism, and ability of those active in the management of the banks than the comparatively few failures which occurred, and no greater tribute can be paid to the principles upon which the system as a whole is based and administered.

Supplementary to the information which has already been given should be added that which bears upon the corporate existence of the banks of the system. The table on page 73* shows the title, capital, and circulation of associations whose corporate existence expired by limitation during the year, and of the associations which suc-

* See tabular statement when issued.

ceeded them, the new associations showing an increase in capital of $5,000 and an increase in circulation of $30,250.

The table on page 73* shows by States the number, capital stock, and circulation of the forty banks whose corporate existence was extended during the year. Their aggregate capital stock was $5,046,000, and their circulation $1,585,925.

The table on page 74* shows the charter numbers, title, location, date of expiration, capital, bonds, and circulation of the forty-nine associations whose corporate existence will expire during the year ending October 31, 1894. These associations are located in twenty different States, with an aggregate capital of $6,708,000, and circulation amounting to $2,006,950.

The table on page 73* shows by States the number, capital, and circulation of associations whose corporate existence will expire during the period from 1894 to 1903. Of these there are 777, with an aggregate capital of $117,275,850, and circulation of $32,467,992.

The table on page 72* shows by States the number and capital of the 1,466 banks, whose corporate existence has been extended since the beginning of the system, located in forty States and Territories, with an aggregate capital of $375,945,005. Of these, New York has 225, with a capital of $72,872,840, Massachusetts 209, with a capital of $88,612,500, and Pennsylvania 174, with a capital of $45,954,000.

Of the 119 banks organized as shown in the table on page 71* Pennsylvania is first, with 25 banks, having a capital stock of $2,375,000, New York next, with 11 banks, with a capital stock of $2,050,000, Iowa and Texas have 10 each, with a capital of $610,000 and $500,000, respectively. Wisconsin follows New York in amount of capital stock of newly organized banks, having $1,750,000, although the number of banks organized was but 5.

The marked difference in the number of banks organized during the year ended October 31, 1893, as compared with the preceding year arises largely from the changed monetary conditions, but is also due in a measure to the very rigid rules now enforced in the granting of charters. It has become the policy of this Bureau to more carefully scrutinize all applications for authority to organize new banks, as the Comptroller appreciates the necessity of discrimination to protect the system from the entrance of associations whose weakness would be an injury. To this end the Comptroller before approving an application for authority to organize, satisfies himself in detail as to the business experience and financial responsibility of each of the applicants, by information obtained through inquiries from sources believed to be reliable.

BANKS OTHER THAN NATIONAL.

That the general statement of the resources, liabilities, and condition of banks and banking companies other than national, namely: State, Savings, private banks, and loan and trust companies, may be presented to Congress, as is required by law, the Comptroller, through the courtesy of State officers having supervision of these institutions, has obtained official returns from each State and Territory, excepting Delaware, Maryland, South Carolina, Arkansas, Tennessee, Kansas, Nevada, Oregon, Idaho, Montana, Arizona, and Oklahoma. A summary of this information is here given to complete a résumé of the various banking interests of the country throughout the past year. It will be found in detail in the tables which appear in the appendix.

At the close of the fiscal year ended June 30, 1893, there were in operation in the United States 5,024 incorporated banks, banking institutions, and Savings banks, and from 4,837, or 96 per cent., reports of conditions were received, an increase of 419 over the number reporting last year. The number of private banks from which reports were received is 313 less than last year, but the net increase is 106.

In view of the fact that the returns from banks other than national show their condition in most of the States prior to the financial stringency of 1893, the effect of that depression does not appear in these statistics with respect to banks organized under State authority.

The total resources of the 4,837 incorporated and 848 private banks, as shown by the returns from both official and unofficial sources, amount to $3,979,008,533, of which loans and overdrafts are $2,348,193,077; United States bonds, $149,982,221; State, county, etc., bonds, $407,709,961; railroad bonds and stocks, $133,729,231; bank stocks, $45,752,-014; all other bonds, stocks, and securities, $272,430,923; due from banks and cash on hand, $250,700,719 and $205,645,203, respectively.

Of the liabilities the capital reported is $406,007,240; surplus and undivided profits

* See tabular statement when issued.

$346,206,287; individual deposits, $1,285,311,723; savings deposits, $1,785,150,957. The capital employed by the 3,579 State banks is $250,767,709, and their deposits $706,865,643. The reported capital of the 228 loan and trust companies is $94,867,268, and deposits $486,244,079.

The capital of the private banks is $26,943,075 and deposits $68,552,696. Nearly 51 per cent. of the resources of the 5,685 banks is reported by the 1,030 Savings banks, of which 614 are mutual and 381 stock savings institutions; the resources of the former, however, are over 84 per cent. of those of both classes. With the exception of two banks in the Southern and 10 in the Western States, mutual Savings banks are confined to the Eastern and Middle States. Excepting 17 in the Eastern and 7 in the Middle States, stock Savings banks are located in the Southern, Western, and Pacific States and Territories.

It also appears that while the entire deposits in the mutual savings institutions are "savings," the reports show that over 10 per cent. of the deposits in the other class are not of that nature, and the presumption is that the percentage is much greater, as it is known that stock Savings banks in certain States make no classification of deposits, and yet transact a commercial as well as a Savings bank business.

The table on page 237* is a consolidated statement of both classes, showing the aggregate number of depositors, amount of deposits, and the average amount due each in each State. The average savings deposit in the Eastern States is $359.48, in the Middle States $362.21, in the Southern States $168.21, in the Western States $328.11, in the Pacific States and Territories $661.22. The large average in the latter division is due to the fact that the average amount due depositors in the Savings banks of California is $771.28; the average amount due depositors in that division, exclusive of California, being but $163.07.

On page 238* a table appears showing the growth of Savings banks from 1820 to 1893, the interesting features of which are the average annual deposit and per capita deposit in each census year from 1820 to 1890, and annually since the latter date. The per capita deposit in 1820 was but 12 cents; in 1830, 54 cents; in 1840, 82 cents; 1859, $1.87; 1860, $4.75; 1870, $14.26; 1880, $16.33; 1890, $24.35; and in 1891, 1992 and 1893, $25.29, $26.11, and $26.63 respectively. The number of Savings banks in 1820 was 10; the number of depositors, 8,635; the amount of deposits, $1.138,576, and the average deposit $131.86. The number of banks this year is 1,030; depositors, 4,830,599; deposits, $1,785,150,957; the average deposit, $369.55, and per capita deposit, based on the estimated population on June 1 last, $26.63.

The aggregate loans of Savings banks amount to $1,047,270,478, of which $763,579,985 are secured by real estate, $74,179,877 by collateral other than real estate, and the remainder principally by personal security. The stock and bond investments amount to $799 872,476, of which $129,610,783 are United States bonds, $398,606,298 State, county and municipal bonds, $121,519,071 railroad bonds and stocks, $44,466,725 bank stocks, and $105,169,599 other stocks, bonds and securities.

The capital stock of National banks on July 12 last and of other banks, at date of latest returns to this Bureau, in each State and geographical division, is shown in the table on page 241.* This table also shows the amount of capital stock per capita of population in each State. The total capital reported is $1,091,793,959, and the average per capita $16.29. By comparison with similar returns for 1892 it appears that there has been a shrinkage of capital to the extent of about $20,000,000, the average per capita at that time being $16.33.

In this connection data appearing in the table on page 242*, showing the total amount of banking funds at the command of National and other banks—namely, capital, surplus, undivided profits and deposits—will be of interest, for, while as heretofore stated, their total capital is but $1,091,793,959, their aggregate banking funds amount to $6,412,939,954, and is an increase of $22,845,826 over the amount held on the same date in 1892. The estimated population of the United States on June 1 last was 67,021,000, making an average per capita of these funds of $95.68, as against an average of $97.42 in 1892.

The table referred to gives the average of these funds per capita of population and the per capita averages in each class of banks, and in all. The averages in each class are: National banks, $38.64; State banks, $15.83; loan and trust companies, $9.73; Savings and private banks, $29.93 and $1.55 respectively.

The amount of coin, paper currency, etc., held by National banks on July 12 last

---

* See tabular statement when issued.

and by all other banks on or about the same date is shown in detail in the table to be found on page 243*.

The aggregate reported is $515,987,740, of which $310,342,537 was reported by National banks and $205,645,203 by other banks. The total holdings were: Gold coin, $103,417,876; silver coin, $15,315,656; specie not classified, $15,093,221; paper currency, $264,602,355; fractional currency and cash not classified, $117,558,632.

* * * * * * * * * * *

The following shows the principal items of resources and liabilities, and the total resources of banks other than National, as indicated by the latest returns to the Comptroller, to be as follows:

ITEMS.	*State Banks.*	*Loan and Trust Companies.*	*Savings Banks.*	*Private Banks.*
Loans	$763,051,774	$162,823,514	$1,047,270,478	$75,047,311
United States bonds	412,654	18,486,636	129,610,783	1,472,148
Other bonds	76,143,722	110,338,265	669,761,693	3,378,449
Capital	250,767,709	94,867,268	33,429,188	26,943,075
Surplus and undivided profits	103,137,836	70,771,477	163,473,173	8,828,801
Deposits	706,865,643	486,244,079	1,808,800,242	68,552,696
Total resources	1,130,725,537	726,664,506	2,013,775,147	107,843,343

That comparison is herewith made:

	National Banks.	*All Other Banks.*
Loans, etc	$1,843,634,168	$2,348,193,077
United States bonds	224,040,800	149,982,221
All other bonds	148,569,950	859,622,129
Capital stock	678,540,339	406,007,240
Surplus and profits	350,225,444	316,206,287
Deposits	1,465,446,904	3,070,462,680
Total resources	3,109,563,284	3,979,008,533

SUSPENSIONS OF NATIONAL BANKS.

In the introductory pages of this report is indicated the number of associations "whose business has been closed during the year." * * * It does not seem essential, nor would it be possible to enter into a minute statement of all the circumstances attendant upon the closing of the banks during the past year. It is sufficient to say that the cause which brought about the large proportion of such suspensions was the action of depositors who, becoming doubtful of the solvency of the banking institutions of the country, withdrew their deposits. The result was that many banks after paying out on the one hand all the money in their vaults and failing to collect their loans on the other, suspended and passed into the hands of the Comptroller. With a full knowledge of the general solvency of these institutions and the cause which brought about their suspension, the policy was inaugurated of giving all banks, which, under ordinary circumstances would not have closed, and whose management had been honest, an opportunity to resume business. This policy was one which seemed to commend itself to the Comptroller as proper to pursue under the circumstances, and it is believed the results have justified the experiment of its adoption.

In no instance has any bank been permitted to resume on money borrowed or for which as an association it has become liable. Whenever those active in the management of the banks resuming, either an executive officers or directors, have been debtors to such banks, their indebtedness has been paid or secured, and whenever impairment of capital stock has been found, such impairment has been made good, either by voluntary or enforced assessment on the shareholders. In a number of instances changes have been made in the directory and official corps of resuming banks. The criticism to be made upon the management of these banks was the improper distribution of their loans, a circumstance which greatly retarded the conversion of such loans into money at a time when it was needed to avoid suspension.

Of the banks which failed to resume many had long been under the continual criticism of this Bureau for violations of law and imprudent methods of banking, and the closing of them was only hastened by the general condition of financial affairs. Some failed because of criminal acts on the part of officials in charge, and others because of a lack of proper appreciation of the purposes of a bank.

An analysis of the suspensions and failures which occurred shows that during the

* See tabular statement when issued.

year 158 National banking associations, as heretofore stated, were compelled to suspend business, being 4.09 per cent. of the number of existing associations. Their capital stock aggregated $30,300,000, or approximately 4.3 per cent. of the paid-in capital stock of all the banks in the system.

Of the banks which suspended 65, or 41.14 per cent., with a total capital stock of $10,885,000, were insolvent, and required the appointment of receivers; 86, or 54.43 per cent., with a capital stock aggregating $18,205,000, were able to resume business, and 7, or 4.43 per cent., with a capital stock of $1,210,000, were placed in charge of examiners in the expectation of resumption. Of the suspended banks two were located in the New England States, both in New Hampshire, with a total capital stock of $250,000, for each of which a receiver was appointed.

In the Middle States there were three suspensions; two in New York, with a total capital stock of $500,000, and one in Pennsylvania, with a capital stock of $50,000. Those in New York were placed in the hands of receivers, and the one in Pennsylvania in charge of an examiner pending proposed resumption.

There were 38 suspensions in the Southern States, the capital stock involved aggregating $8,765,000. Of these 19, with a total capital stock of $5,630,000, resumed business, and the same number, with a total capital stock of $3,135,000, failed. In this geographical division Texas furnished the greatest number of suspensions, namely 12, with a total capital stock of $1,480,000, of which 6, with a total capital stock of $430,000, resumed business, and the remainder, capitalized to the amount of $1,050,000, failed. There were six suspensions in Kentucky and the same number in Tennessee. The total capital stock of those in Kentucky was $2,300,000 and of those in Tennessee $2,750,000. In Kentucky all the banks that suspended except one, with a capital stock of $50,000, were permitted to resume business. Two of the banks in Tennessee, with a total capital stock of $2,000,000, resumed business and 4 were placed in the hands of receivers. Four banks in Georgia suspended and the same number in Alabama, with a total capital stock of $675,000 and $550,000 respectively. Of these, 1 bank in Georgia, with a capital stock of $[illegible]50,000, and 3 in Alabama, with a total capital stock of $400,000, resumed business. Two banks in North Carolina suspended, with a total capital stock of $300,000, both of which were able to resume business, but the two which suspended in Florida, with a total capital stock of $150,000, required the appointment of receivers, as did also the one in Mississippi, which had a capital stock of $60,000, and the one in Arkansas, with a capital stock of $500,000.

The Western States furnished 49 suspensions, with an aggregate capital stock of $10,125,000. Of these 31 resumed business, 17 failed, and 1 was placed in the charge of an examiner pending resumption or the appointment of a receiver. The capital stock of the banks which resumed aggregated $6,275,000, and of those which failed $3,7[illegible]0,000. The greatest number of suspensions which occurred in this section was in Kansas, namely, 8, although the capital stock involved, $880,000, was less than that of the banks in four other States. Four of the banks in Kansas, with a total capital stock of $480,000, resumed, and three, with a capital stock of $300,000, failed. Of the 7 banks in Indiana which suspended, 4, with a total capital stock of $450,000, resumed, and 3, with a total capital stock of $550,000, were placed in the hands of receivers. In Iowa 6 banks suspended, with a total capital stock of $575,000, of which number but one failed, with a capital stock of $50,000. The same number of banks in Nebraska suspended, three of which, with a total capital stock of $350,000, resumed business, and receivers were appointed for the remaining three, the total capital stock of which was $150,000. Five banks suspended in Wisconsin, with a total capital stock of $625,000, all of which resumed business, while in Illinois there were 4 suspensions, with a capital stock aggregating $2,150,000. All of these were placed in the hands of receivers. In Missouri 3 banks suspended, with a total capital stock of $1,300,000, all of which resumed. In Michigan there were the same number of suspensions as in Missouri, but the capital stock involved aggregated only $215,000. But one of these banks resumed, the capital stock of which was $65,000. The fewest suspensions which occurred in any State in this division was in Ohio, there being but 2, the aggregate capital stock of which was $180,000. One of these banks, with a capital stock of $80,000, resumed business and the other failed.

Sixty-six banks suspended in the Pacific States and Territories, being nearly 42 per cent. of the total suspensions which occurred and represent capital stock amounting to 35 per cent. of the total capital involved. Of these, 36 banks, with a capital of $6,300,000, were solvent and resumed business; 25, with a capital stock of $3,250,000, were placed in the hands of receivers, and 5, with a total capital of $1,060,000, in charge of examiners pending resumption. The greatest number of suspensions was in Colorado, involving the largest amount of capital stock of suspended banks of any State in the Union, the number being 16 and the capital $3,600,000. All of these banks resumed, except one, the capital stock of which was $100,000. The second greatest number of suspensions occurred in the State of Washington, 14 banks, with an aggregate capital stock of $1,735,000. Of this number 4, with a capital stock of $425,000, resumed; 3, with a capital stock of $510,000, were placed in charge of examiners pending resumption, and 7 failed. The suspensions in Montana numbered 10, and their capital stock amounted to $1,875,000. Of these 2, with a capital stock of $300,000, resumed, and 7, with a capital stock of $1,075,000, were placed in the charge of receivers. Six suspensions occurred in Oregon, and the same number in California, the aggregate capital stock represented being $800,000 and $1,200,000, respectively. There was but one failure in each State, the capital stock in the case of the Oregon bank being $100,000, and that of the California bank $250,000. There were 3 suspensions in Utah, 3 in North Dakota, and 3 in South Dakota. The three banks in Utah, with a capital stock aggregating $250,000, resumed business, while the three in North Dakota, with a total capital stock of $400,000, failed. Two of the banks in South Dakota, with a total capital stock of $100,000, were placed in the hands of receivers, and one, with a capital stock of $125,000, resumed. Two suspensions occurred in Wyoming, and the same number in New Mexico. One bank in Wyoming, with a capital stock of $200,000, resumed, and one, the capital stock of which was $50,000, failed. Of the banks in New Mexico, one, with a capital stock of $175,000, failed, and the other, with a capital stock of $50,000, was placed in the hands of an examiner pending resumption or the appointment of a receiver. The only other suspension in this geographical division occurred in Oklahoma, being that of a bank with a capital stock of $50,000, which, being solvent resumed. * *

The official records show that of 4,930 National banks organized since February, 1863, 246, or about 5 per cent. have been placed in the hands of receivers. In this number are included 9 banks which had previously gone into voluntary liquidation, but upon failing to pay depositors the Comptroller appointed receivers to wind up their affairs. Of the 246 failed banks, 39 have paid their creditors, principal and interest in full, 7 have paid principal and a part of the interest, and 16 have paid the principal only. The affairs of 115 of the 246 banks have been finally closed, leaving 131 in process of settlement, of which 16 are virtually closed, with the exception of undetermined litigation. There are 115 receiverships in active operation. In four instances prior to October 31, 1893, the receiverships were terminated and the banks permitted to resume business.

The total amount thus far paid to creditors of insolvent national banks is $50,943,147, upon approved claims aggregating $81,963,207. The amount paid during the year was $2,890,209. Assessments under the provisions of section 5151 of the Revised Statutes of the United States aggregating $20,118,350 have been made upon shareholders of insolvent National banks. From this source the gross collections have been $8,065,331, of which there was received during the past year $462,171. The affairs of but five banks have been closed during the year and final dividends paid to creditors, while the titles of four on the inactive list in 1892 have disappeared.

It is a source of regret that no better exhibit is made of dividends paid to the creditors of failed National banks during the past year, but the same conditions which produced so many failures seriously retarded the ability of receivers to collect the assets of their trusts, and consequently large dividends could not be declared. However, when are taken into consideration the many embarrassments of the year, the general average is good. In the appendix will be found a tabular statement of all dividends, expenses, and kindred matters connected with the trusts which are yet in process of liquidation.

SUSPENSION OF BANKS OTHER THAN NATIONAL.

The same causes which so seriously affected the National banks affected in like manner State, Savings and private banks, and loan and trust companies.

During the year ended June 30, 1892, there were 69 failures of private banks and of those incorporated under State authority, with liabilities amounting to $11,024,623 and assets to $8,125,189. The failures included 24 State banks, with $3,177,529 liabilities;

6 Savings banks, with $917,000 liabilities; 36 private banks, with $6,505,099 liabilities; and 3 loan and trust companies, with $425,000 liabilities.

The number of failures of this class during the last six months of 1892 was 35, of which 18 were State banks, 16 private banks, and 1 a loan and trust company. During the first eight months of the current calendar year the failures and suspensions, as reported by the Bradstreet Agency, numbered 415, the assets aggregating $94,291,348 and the liabilities $97,193,530. Of these institutions 79, or 19 per cent., with liabilities amounting to 14 per cent. of the total liabilities of the suspended banks, resumed business.

The number, assets and liabilities, by classes of banks which suspended and of those which resumed, from January 1 to September 1, 1893, are shown in the following table:

CLASS.	Suspended.			Resumed.		
	Number.	Assets.	Liabilities.	Number.	Assets.	Liabilities.
State banks....	172	$41,281,848	$36,903,266	44	$10,828,088	$7,255,885
Savings banks ..	47	17,673,938	16,930,809	10	3,657,013	2,541,936
Loan and trust companies. .	13	14,337,500	22,354,000	2	1,850,000	1,215,000
Mortgage companies.	6	760,803	1,790,000	......	....	....
Private banks.......	177	20,237,259	19,315,455	23	4,680,875	2,903,200
Total..........	415	94,291,348	97,192,530	79	21,015,976	13,916,021

For purposes of comparison the following statement is given, showing the number of National, State and other banks in existence on July 1, 1893, the number and per cent. of resumptions, failures, etc., of National banks during the year ended October 31, and of other banks during the first eight months of the current calendar year:

CLASS.	Number in existence July 1, 1893.	Suspensions.		Resumptions.		Failures.		In charge of National Bank Examiners.	
		No.	Per cent.	No.	Per cent.	No.	Per cent.	No.	Per cent.

Total...............	12,831	573	....	165	....	....	....	7	....

* June 1, 1893.

Of the total suspensions and resumptions of State banks it appears from January to September, 1893, etc., that 172 were State banks, 47 Savings banks, 177 private banks, 13 loan and trust companies, and 6 mortgage companies. Of the ten suspensions in the Eastern States, 6 occurred in New Hampshire, 3 in Vermont, and 1 in Rhode Island. In the Middle States 15 suspensions occurred in New York, 8 in Pennsylvania, 1 in New Jersey, and 1 in Delaware. The Southern States had 61 suspensions, of which 12 were in Texas, 10 in Tennessee, 8 in Virginia, 6 in Georgia, 6 in Florida, 4 in Alabama, 4 in Kentucky, 3 in Arkansas, 2 in West Virginia, 2 in North Carolina, 2 in South Carolina, and 1 in Louisiana. The most severe effects were felt in the Western States, both in the number of suspensions which, were 232, and the amount of liabilities, which were $51,777,665 or 56 per cent. and 53 per cent., respectively. In Kansas, the largest number (32) occurred, though the liabilities were but 3 per cent. of the total; Wisconsin, with 30 suspensions, followed, but the liabilities were over 14 per cent. of the total; in Ohio 27 were reported, Minnesota 26, Illinois 24, Indiana 23, Iowa 22, Missouri 21, Nebraska 18, and Michigan 11. The number occurring in the Pacific States and Territories was 87, of which California furnished 21, with liabilities amounting to nearly 8 per cent of the aggregate of all the banks. Colorado followed California in number (20), although the liabilities were less than half those of the banks in California. Oregon furnished 13 suspensions, Washington 11, Montana 8, Idaho 4, Wyoming 3, North Dakota 3, and Utah, New Mexico, Arizona, and Oklahoma 1 each.

Of the 79 resumptions, 44 were State banks, or 25 + per cent of the total suspensions; 10 Savings banks, or 21 per cent.; 2 loan and trust companies, or 15 per cent.; and 23 private banks, or 13 per cent. Of the suspensions in the New England States, there was but one resumption, that of a private bank in Vermont. One Savings and 2 State banks resumed in New York. Of the 61 banks which closed in the Southern States, 8 reopened: 2 in West Virginia and one each in South Carolina, Georgia, Florida, Alabama, Louisiana, and Texas. As the suspensions in the Western States were the most numerous, so also were the resumptions, 58 per cent. of the total resumptions being reported from that division. In Minnesota, 10 occurred; in Ohio, Wisconsin, and Iowa, 6 each; in Missouri, 5; Indiana and Kansas, 4 each; in Michigan, 3, and Nebraska 2. The resumptions in the Pacific States and Territories were confined to California (13), Colorado (7), and Montana (1).

The fright among depositors of the present year appears to have affected all classes of banking institutions alike. The shrinkage of deposits of National banks from May 4 to July 12 last exceeded $190,000,000. In order to ascertain the extent of the shrinkage in banks other than National, the Comptroller requested each State officer charged with the supervision of banks organized under State authority to submit a statement showing similar information with respect to that class of banks. Replies were received from the officers of 23 States and 2 Territories indicating that the loss to banks of this character corresponded with that shown by the returns from National banks. Generally no information was given with respect to Savings banks and much less regarding private banks.

CLEARING HOUSE LOAN CERTIFICATES.

The unprecedented condition of the money market from June to September called for extraordinary remedies, not only to avert general disaster to the banks but to prevent commercial ruin. This remedy was the issuing of clearing-house loan certificates, which were brought into use as in 1873, 1884, 1890-'91, by the associated banks of New York, Boston, Philadelphia, Baltimore, and other cities where needed. The service rendered by them was invaluable, and to their timely issuance by the associated banks of the cities named is due the fact that the year's record of suspensions and failures is not greatly augmented.

The form of these certificates, with the conditions under which they were issued in 1890-'91 (the form and conditions being the same during the late issuance of them as then), is described at length in the Comptroller's Annual Report for 1891. The matter is alluded to again only because it constitutes a very important part of the year's banking history, and for the additional reason that here and there are to be found those who entertain an entirely erroneous idea of the purpose for which these certificates were issued and what was accomplished by their issuance.

Briefly stated, they were temporary loans made by the banks associated together as a clearing-house association to the members of such association, and were available to such banks only for the purpose of settling balances due from and to each other, these balances under normal conditions of business being always settled in coin or currency. Each clearing-house association selected a committee charged with the issuing of the certificates to each bank desiring the same, such bank being required before receiving them to deposit with the committee its bills receivable, or other securities, as collateral for the loan. The amount of certificates issued to each bank was limited to 75 per cent. of the value of the securities deposited. They bore interest at rates varying from 6 to 7 3-10 per cent. Immediately upon their surrender to the committee they were canceled and the securities held as collateral were returned to the bank depositing the same.

At a time when vast sums of coin and currency were being withdrawn from the banks, to be hoarded, these loan certificates, by performing the functions of the currency or coin customarily required for settling at the clearing-house daily balances released so much currency or coin to the legitimate and current demands of business and unquestionably placed it within the power of the banks in the cities named to extend to outside banks the aid needed on the one hand and liberally granted on the other. In no instance were these certificates designed to nor did they circulate as money. They were but due-bills and their sole function consisted in discharging the single obligation at the clearing house. An attempt on the part of a bank in any of the associations issuing these certificates to use them otherwise would have incurred a fine and other penalties provided in the rules governing such associations. Their issuance at so early a date in the financial derangement of the country was most opportune in not only preventing an acute panic, but in tending to restore public confidence, such action demonstrating that by mutual agreement of all, the weak banks of the association would be, so far as depositors and other creditors were concerned, as strong as the strongest.

In inaugurating the issuing of certificates so promptly and in issuing them to so large an amount the Clearing-house Association of New York, in particular, rendered the country great service, and the associated banks of that city are entitled to the credit which the public generally accords them.

The following figures, showing the movement and amount of the issue of loan certificates in 1893 in the cities named, will indicate the measure of relief afforded by them:

	Date of issue of first certificate.	*Date of largest amount outstanding.*	*Largest amount outstanding.*	*Date of surrender of last certificate.*	*Amount outstanding Oct. 31.*
New York.........	June 21	Aug. 29 to Sept. 6	$38,280,000	Nov. 1	
Philadelphia....	June 16	Aug. 15............	10,965,000	....	$3,835,000
Boston....................	June 27	Aug. 23 to Sept. 1	11,445,000	Oct. 20	
Baltimore................	....do....	Aug. 24 to Sept. 9	1,475,000	....	845,000
Pittsburg................	Aug. 11	Sept. 15...........	987,000	....	332,000
Total..............	....	....	$63,152,000		

The issue of loan certificates in 1893 greatly exceeded that of previous years. In 1873 and 1884 they were issued only by the New York Clearing House Association, the total amount issued in 1873 being $26,565,000 and in 1884 $24,915,000.

In 1890-'91 they were issued in New-York, Boston, and Philadelphia, the largest amounts outstanding at any time being as follows:

	Date of first issue.	*Largest amount outstanding at any one time and date of same.*
New York..	Nov. 12, 1890	$15,205,000, Dec. 12, 1890
Boston..	Nov. 19, 1890	5,065,000, Dec. 6, 1890
Philadelphia....................................	Nov. 19, 1890	29,140,000, Jan. 9, 1891
Total..	....	$49,410,000

LAWFUL MONEY RESERVE.

Not less attention has been attracted during the present year, and particularly during the closing months of the year, to the subject of lawful-moneyreserve to be held by the banks, than to that of clearing-house loan certificates, and the discussion provoked has been quite as widespread.

As the law now stands all National banks, outside of certain designated "reserve cities," are required to maintain a reserve fund equal to 15 per cent. of the net deposits made with such banks by individuals and by other banks and bankers. They are permitted by law to deposit not over three-fifths of this 15 per cent. (or 9 per cent.) with such National banks located in the "reserve cities" as the outside banks may with the Comptroller's approval select. The remaining two-fifths (or 6 per cent.) must be kept in bank in lawful money, or more, if less than three fifths is kept with reserve agents. The National banks located in reserve cities are divided into two classes: (1) Those in the "central" reserve cities of New York, Chicago, and St. Louis being required to keep 25 per cent. of their net deposits in bank in *lawful money*, with the privilege of acting as the reserve agents of any National banks located outside of these three cities. (2) Those located in the reserve cities, other than New York, Chicago, and St. Louis, being required to keep 25 per cent. of their net deposits on hand, not over one-half of which may be deposited with any National bank or banks located in any of the three central reserve cities, while the remainder must be actually on hand in lawful money. The banks in the reserve cities of this class have the privilege of holding a part of the reserve of any bank or banks located outside of all reserve cities, viz., banks of the 15 per cent. class.

In effect these requirements are not as onerous as they appear, for a National bank in New York City holding $100,000 of the reserve of any other bank or banks on deposit must keep only $25,000 of the amount in hand in money, while it is at liberty to lend or otherwise invest the remaining $75,000. So a bank in a reserve city of the second class holding $100,000 on deposit for other National banks may loan out or invest $75,000 of the amount, and of the remaining $25,000 must keep $12,500 in bank in money and may deposit $12,500 with its reserve agents, receiving a low rate of interest (usually 2 per cent.) on the same. A bank of the 15 per cent class must keep only 6 per cent of its depositor's money actually on hand in bank, and is at liberty to deposit not over 9 per cent. with its reserve agents, on which it usually receives a low rate of interest. To illustrate the operations of the law it will be found that with normal conditions of business the banks in reserve cities (not central) held on December 9, 1892, net deposits amounting to $495,196,952, against which they held $77,869,596 cash in bank, or about 16 per cent., and the 15 per cent. banks held net deposits of $975,622,088, and against these $108,012,546 cash in bank, or about 11 per cent. Again, a large portion of the reserve actually held by the banks can not be considered as taken out of circulation, or as hoarded through operation of the law, for much of it is paid out during each business day, other money coming in through deposits to take the place of that paid out.

In any view of the matter, however, the intent of the law is to compel a bank to retain always on hand a very moderate proportion of the money deposited with it for safe keeping by the depositor, who practically makes a loan to the bank payable on demand, for the use of which he ordinarily receives no interest. The entire effect is to exercise a wholesome restraint upon an undue extension of business by a bank, and that this intent is recognized as an underlying principle of safe and conservative commercial banking is evidenced by the fact that those banks which are compelled by law to maintain but 15 per cent. reserve have voluntarily for years past held an average of over 25 per cent., the proportion required for banks located in reserve cities.

The evident theory of the law is that a bank shall always have on hand such an amount of lawful money as will enable it under normal conditions of business to meet the current demands of its depositors. A careful examination of section 5191, United States Revised Statutes, as amended, will show that it is expected that emergencies will arise under which this fund will fall below the legal proportion to deposits. This contingency is directly recognized by the plain provisions contained in the section named, prescribing what shall be done "whenever the lawful money reserve of any association shall be below the amount" of the required percentage of its deposits. The provisions referred to are that the bank shall make no new loans or discounts, except the discount of bills of exchange payable at sight, nor make any dividend of its profits until the required amount of reserve has been again accumulated.

The reason for this is obvious. The depletion of a bank's reserve occurs either because the bank has loaned out or otherwise invested too great a proportion of the funds it has received on deposit, or that its depositors have withdrawn their money to an extent which produces a similar result. In either case the only safe and prudent course for the bank to pursue is to cease paying out money in any direction except to depositors until either through the collection of demand or maturing loans on the one hand, or the receipt of deposits on the other, the required proportion has been restored. The discount of sight bills of exchange is excepted because money invested in this way will be repaid immediately, and in this branch of its business the bank's customers will be caused no inconvenience and the commercial interests of the country be thus protected from loss which otherwise might ensue.

The provision of law governing the time allowed a bank to make good a depleted reserve is most lenient. It provides that the Comptroller *may* notify the bank to make good its reserve, and further, that if it fails for thirty days thereafter to do this the Comptroller, with the concurrence of the Secretary of the Treasury, *may* appoint a receiver for the bank. However, before the Comptroller can send notice to any bank he must have reliable information that its reserve is deficient, and as the usual source of such information is either the report of its examination, heretofore made once a year but hereafter to be made twice, or its sworn report of condition, made five times a year, some time may intervene before such condition becomes known to him. Again, when he is officially informed, the use of the word *may*, both as to his sending notice and as to his appointing a receiver in a case of non-compliance with such notice, plainly leaves the enforcement of the law to the discretion of the Comptroller in either or both of these particulars. This power thus conferred upon the Comptroller is one that ought to be used with great prudence and caution. It would be not only unwise but would work great injury to the business interests of individual communities and the general public to exercise the authority thus vested in him at a time when arbitrary action must necessarily result in general disaster, and, therefore, in the interest of the public the discretion given to the Comptroller has always been used with moderation. It is this moderation which in an emergency has in numerous instances contributed in no small degree to averting widespread financial ruin. In this view there can be no question as to the legality and propriety of a bank's exhausting its entire reserve if necessary in an emergency to pay its depositors, but for no other purpose except to discount or buy sight bills of exchange, and where the withdrawal of deposits continues or is likely to continue no careful bank manager needs to be informed that not only must he cease to make new loans and discounts, but must replenish his exhausted stock of lawful money by converting his resources into cash through collections of loans and discounts or selling securities, or where this is not possible by using these assets to borrow the money needed to enable him to meet his liabilities.

Tabular statements showing deposits, reserve required, and reserve held, classification of reserve, and average percentage of same on or about October 1 of each year from 1874 to 1893, both inclusive, will be found on pages 119-120 of the appendix,* also a table showing similar figures at the date of each report of condition from December 9, 1892, to October 3, 1893. This last-named table is inserted to show the movement of the reserve during the financial stringency of the present year, both as to volume and average percentage of deposits.

An inspection of these figures will show that the average percentage of reserve to deposits from December 9, 1892, to July 12, 1893, varied only between 26 42 per cent and 27.24 per cent, and that on October 3, 1893, the average increased to 32.66 per cent. In volume the amount of lawful money actually held by the banks was $318,641,595 on December 9, 1892, decreased to $289,244,850 on July 12, 1893, but increased by October 3, 1893, to $346,433,212, an amount approximating $57,000,000 greater than on July 12, 1893, when the panic was at its height, and almost $27,000,000 greater than on December 9, 1892, when business was in a normal condition.

AMENDMENTS RECOMMENDED.

By provision of law it is made incumbent upon the Comptroller of the Currency to call the attention of Congress to "any amendment to the laws relative to banking by which the system may be improved and the security of the holder of its notes and other creditors may be increased." There are certain amendments which it is obvious ought to be made, and which, in their operation, would make the present system more nearly serve the purpose for which it was designed, and to a measurable extent give an increase in the volume of circulation if such is desirable. The following amendments to the law as it now stands are recommended to be made.

(1) That every association may issue circulating notes equal to the par value of the bonds deposited.

No good reason can possibly exist at present for depriving the banks or the business interests of the country of the additional circulation which would be added by such amendment. Whatever reason may have existed at the time of the enactment of the present provision does not now exist and its sole operation is to make circulation unprofitable and to lock up in bond investments the difference between 90 per cent. and 100 per cent of this par value which, under the amendment suggested, would be adding to active circulation under the present deposit of bonds $20,941,635.

(2) That the semi-annual duty on circulation should be so reduced as to equal one-fourth of one per cent. per annum.

In support of this proposed amendment it is respectfully suggested that the present rate of tax takes from the banks a very large sum of money which is not used by the Government to meet the expenses for which the tax was originally laid. Its bearing upon the question of an increased circulation on the part of the banks is important, as the additional cost entailed by it of necessity so largely reduces the profits of circulation and adds to the cost of taking it out that banks will not, except under other circumstances, increase their issue.

Unwillingness on their part to add to the volume of currency, coupled with a tendency some years since to decrease the same, has subjected the banks to criticism. Such criticism, however, is unjust in this, that it is based on the idea that the banks are simply indifferent to the matter and are content to be banks of deposit and dis-

* See tabular report when issued.

count rather than banks of issue. The fact is banks ceased taking out circulation simply because until recently there was no profit in it. The high price of Government bonds necessary to be deposited, coupled with the tax upon circulation, and the refusal to grant more than 90 per cent. of the par value of the bonds in currency return, has rendered circulation either without profit or profitable to so slight an extent as to offer no inducement to banks to take out circulation.

The Government cannot relieve the banks of the additional expense to them by reason of the premium on bonds to be deposited, but it can materially lessen the cost of their circulation by enacting the amendments suggested, and in this manner offer an inducement, which is now wholly wanting, to the banks to add to the volume of bank-note circulation. The whole question is one of a business character. Banks are but business institutions, conducted upon the same lines and for the same purpose as other business undertakings. It can not be expected that they will do that which either entails a positive loss or warrants little or no profit, and if relief come through an expansion of the National bank currency, Congress must remove rather than erect unnecessary barriers.

The following amendments pertaining to the administration and conduct of banks are recommended:

(3) That the Comptroller of the Currency, with the approval of the Secretary of the Treasury, be empowered to remove officers and directors of a bank for violations of law, first giving such officers and directors an opportunity to be heard, leaving the vacancy so created to be filled in the usual way.

It is respectfully suggested that the powers now vested in the Comptroller do not accomplish the result that they otherwise would if the law permitted the removal of officers and directors for misconduct in office. Many banks would be saved from embarrassment, creditors from loss, and shareholders from assessments if the Comptroller, upon learning of the misconduct of those charged with the management of a bank, could take positive action in the premises.

(4) That no executive officer of a bank or employe thereof be permitted to borrow funds of such bank in any manner, except upon application to and approval by the board of direction.

This amendment is recommended with the knowledge that the House of Representatives at the late special session of Congress passed a bill (H. R. 2,344) entitled "An Act for the better control of and to promote the safety of National banks," which bears upon the same subject-matter, but differs in that it embraces in its provisions all directors of a bank instead of confining them to the executive officers and employes only.

At the best the question as to what extent loans and discounts should be made by a bank to its directors and executive officers by reason of the various circumstances under which these are granted is a difficult one to satisfactorily legislate upon, and an equally difficult one upon which to make specific recommendations. Where money is borrowed directly by any such officer or director to an amount exceeding the limit prescribed by section 5,200 of the Revised Statutes of the United States, the Comptroller's duty is as plain as in any other case where the law is violated, but the limit to which discounts should be granted them is a question involving considerations of safety and prudence. Holding this view the Comptroller has, in cases where the aggregate of loans and discounts to executive officers and directors appeared to be out of proportion to the total loans and discounts made by the bank, addressed the following form of letter to the bank, with the request that all directors unite in signing a reply:

TREASURY DEPARTMENT, OFFICE OF COMPTROLLER OF THE CURRENCY,
Washington, D. C., ——, 189 .

—— ——, *Cashier*, —— ——, —— ——:

SIR:—Upon examination of your report of condition on ——, it is found that the "loans and discounts upon which officers and directors are liable" amount to $ ——, out of total loans and discounts of $——.

While recognizing the right of directors and officers to borrow within the limitations of law and safety, the Comptroller must insist most rigidly that directors and others connected with the bank in this fiduciary relation shall not avail themselves of the easy opportunity afforded them to borrow beyond this limit, either directly or indirectly, the funds intrusted to their keeping, in order to carry on enterprises outside of the banks with which they are connected.

Officers and directors should remember that the funds held by banks are in a large measure funds of others held in trust for the safe-keeping thereof, and, as trust funds, ought not to be loaned to the trustees of such funds, except upon the very best collateral or other security.

In the matter of accommodations to them, directors and officers should be placed upon the same footing as other customers of the bank, except that their financial ability and standing should be the more rigidly scrutinized, for the reason that they act in the dual capacity of lenders as well as borrowers.

The continued experience of this office is that such loans in many instances result disastrously to all concerned, and therefore the danger attending upon such a course ought not to be risked. The Comptroller must insist that this condition of affairs be remedied with the least possible delay, by reducing the amount of these accommodations to safer and more reasonable limits

Please bring this communication to the immediate attention of your board of directors for consideration, and request them to unite in making a prompt reply over their individual signatures. Respectfully, yours, ——— ———, *Comptroller.*

The information upon which this letter is based is found in the reports of condition made under oath to the Comptroller, in which appear the indebtedness of every kind and character of each director and officer of the bank.

Accompanying this letter is sent to directors a copy of such sections of the National Bank Act as prescribe their duties and the penalties attaching for the non-performance of them.

Beyond the substance of the amendment above set forth the Comptroller is not prepared to recommend any legislation upon this subject.

It seems that a difference should be made between loans to and overdrawn accounts of directors, who are simply directors, and of those who are the executive officers of a bank, and as such have and receive adequate compensation for the active management of its affairs. The abuse of the easy privilege of loaning to themselves is generally on the part of the managing officers, and not on the part of directors who are only members of the board of direction, and hence the distinction which is drawn between the recommendation here made and the bill referred to.

So far as loans, through drafts or otherwise to directors who are not executive officers of the bank are concerned, there is strong reason against the advisability of such legislation. Any positive restriction imposed by direct law might have the effect of deterring honest, intelligent, and substantial men from serving as directors. As a rule, men of this class are sought for these positions in order to obtain the benefit of their judgment and business capacity in managing the affairs of the bank, and to secure their own business for the bank. This business does not consist alone of deposits, but is largely made up of loans and discounts, by means of which the profits are chiefly earned. As a rule these directors receive no compensation for their services, which are rendered largely through motives of interest as shareholders, or of pride in holding a position supposed to give a certain prominence in business circles.

An inquiry as to the practice of banks paying directors for attendance upon meetings showed that in some cities this is in vogue. It would be better for all concerned if all banks adopted such policy. However small the compensation, it could not but result in benefit to the shareholders and more than compensate for the expense involved. The general criticism to be passed upon directors is their failure in so many instances to give to the business of the bank the attention their oaths and duties require. The successful administration of a bank's affairs depends upon the watchfulness and fidelity of the board of directors. When such conduct is wanting bank failures ensue, or if failures do not follow great loss to shareholders is entailed through want of profits or assessment to make good the impairment of capital stock caused by imprudent loans. The administration of the Comptroller if supplemented by the watchful care of directors would minimize even the comparatively few failures which occur.

(5) That the Assistant Cashier, in the absence or inability of the Cashier of a National bank to act, be authorized and empowered to sign the circulating notes of such bank.

This amendment is suggested in order to meet a difficulty which has arisen in numerous instances during the past months, there being no provision in the law for any one to sign currency for the Cashier in his absence or inability to act, and banks are frequently put to serious inconvenience on this account.

(6) That the law be amended by appropriate legislation so as to empower some class of public officers to administer the general oaths required by the provisions of the National Bank Act.

The necessity for this amendment is occasioned by the fact that the authority of officers empowered to administer oaths is now restricted under the Federal statutes to certain specific cases, and with the exception of the acknowledgment of the organization certificate and the verification of reports of condition, required by section 5211 of the Revised Statutes of the United States, no provision is made for administering the oaths required of the officers of National banks.

The following amendments bearing upon the subject of bank examiners would, the Comptroller believes, result in benefit, and are therefore recommended:

(7) That the bank examiners be required to take an oath of office before entering upon the discharge of their duties, and to give bond with proper conditions in such amount and with such sureties as the Comptroller of the Currency may require.

An anomaly is presented in the case of bank examiners, which does not appear in that of any other public official. No position under the Government is more responsible in the duties attaching to it, and none requires a higher degree of integrity in the incumbent. The exception is rare where dishonesty has been found in examiners, but it is the opinion of the Comptroller that an oath, such as as is required of other officers under the Government, should be taken and a bond given.

(8) That the Comptroller of the Currency, with the approval of the Secretary of the Treasury, be empowered to appoint two general examiners of conspicuous ability and experience to be paid out of the reimbursable funds, whose duty it shall be to visit, assist, and supervise the various examiners in their several districts, in order to secure uniformity in method and greater efficiency in work.

This amendment has heretofore been recommended by former Comptrollers, and the reasons for it suggested. It would aid in uniformity of method and give to the office of the Comptroller at all times officers who could do special and confidential work, which can not be done at present, because no compensation is provided for the same.

(9) That the law be so amended as to provide that the compensation of all bank examiners be fixed by the Comptroller of the Currency, with the approval of the Secretary of the Treasury.

This amendment is suggested in the interest of better examinations. Thoroughness in bank examinations is not to be expected under a system in which compensation is provided for and ascertained by a method that furnishes a constant temptation to the examiners to neglect their duty. Under the law as it now stands the compensation for bank examinations made outside of reserve cities, and the States of Oregon, California, and Nevada, and the Territories, is fixed at various amounts, ranging from $20 in case of a bank having a capital of less than $100,000 to $75 in the case of a bank having a capital of $600,000 and over. As the earnings of the examiner are thus made dependent upon the number of examinations he makes, without regard to the amount of work he actually performs, it is obvious that he has a pecuniary interest in increasing the number of examinations by neglecting his duty to make them thorough.

Again, the law requires a bank which is properly conducted, and the examination of which involves but little time, to pay the same compensation therefor that is paid by a bank which is not properly conducted and which by reason thereof requires a much longer time for its examination. These objectionable features could be remedied if the law were so amended as to provide that the compensation for all bank examinations be fixed by the Comptroller, with approval of the Secretary of the Treasury.

Many other amendments have been suggested to the Comptroller as proper ones to be made to Congress for action, but it is not deemed best to submit them. The foregoing are presented with the earnest request that they receive consideration. Some of these amendments have been recommended by former Comptrollers in the belief, based upon knowledge gained from experience in the Bureau, that they would "improve the system and add to the security of the holders of bank notes and other creditors," but no action has been taken upon them. It is respectfully submitted that as the National banks are under the supervision of the general Government, and Congress is vested with the power to legislate upon all matters pertaining to their control and conduct, it should be the constant aim of Congress to so legislate as to enable them to meet the public needs.

CURRENCY LEGISLATION.

The Comptroller has been urged to make some specific recommendation with respect to a revision of the law so far as it pertains to the issuing of currency. After a careful consideration of the question the Comptroller is of the opinion that, aside from the amendments heretofore suggested, allowing banks to issue circulating notes to an amount equal to the par value of the bonds held to secure circulation, and abolishing a portion of the tax on National bank circulation, the public good will be best subserved at this time by making no radical change in the provisions of the law.

The financial situation of the past months was not the result of either a lack in the volume of currency, of which there is now a plethora, nor a want of elasticity in the present system of issuing it, but arose from a loss of confidence on the part of the people in the solvency ot the distinctively monetary institutions of the country. It is worthy of note and of serious consideration that at the very time the scarcity of currency for business purposes was at its height, the country's volume of currency was increasing the most rapidly, and the amount per capita was much larger than in any recent years. Under the same peculiar condition of affairs which marked the monetary situation from May to September, no system, no matter how elastic, nor volume of currency however large, could afford relief. As long as confidence is destroyed and credit wanting, money hoarding will go on and additional issues but add to the hoardings and give but little, if any, actual relief. On the other hand, when confidence and credit abound there exists little need for an abundant circulating medium, because under such a condition of affairs the amount of actual money required to transact the daily business affairs of life is reduced to a minimum.

The statistics show that the volume of business carried on through cash transactions is on an average but 8.7 per cent. and as the monetary conditions of the country become more fixed and confidence in them established, cash transactions will decrease and credit transactions correspondingly increase. This fact is to be considered in connection with all plans having as their sole object an increase of the volume of bank-note or other paper currency, and coupled with this is the further fact that no issue is so dangerous to a people's prosperity as a large paper issue, unless such paper rests upon a proper foundation, is absolutely redeemable and convertible into coin upon the demand of the note-holder, and surrounded with every safeguard as to supervision of issue and redemption.

In view of the fact that there is now a very great abundance of unemployed currency in the country, as is shown by the daily money returns from the commercial centers, it would seem that whatever need appeared some months since for enlarging to any marked extent the circulating medium has now ceased to exist; and therefore Congress is afforded an opportunity of giving to the whole subject that careful research and investigation which its importance in all of its bearings demands. It will not do to place upon the statute books any experimental legislation upon this subject, but whenever a new law governing bank issues is enacted it must be one that immediately upon going into operation shall command in every respect the confidence of the whole people and insure to them a currency as safe in every respect as the present one, but with none of its defects.

In the meantime it is respectfully suggested that Congress, either through a monetary commission created for such purpose or through the appropriate committees, obtain detailed information of the various systems of banks of issue now in operation, and also such information as is to be ascertained from skilled students of finance and practical financiers, that it may be able to formulate a system complete and harmonious.

CONCLUSION.

In concluding this report the Comptroller desires to bear testimony to the general efficiency of the employes in the Bureau to the examiners in the field, and the work accomplished by the receivers in relation to the trusts in their charge.

An extraordinary amount of work has been placed upon the employes of the Bureau, but it has been performed promptly and intelligently.

JAMES H. ECKELS, *Comptroller of the Currency.*

The Speaker of the House of Representatives.

Increasing Supply of Gold.—According to "Le Monde Economique," of Paris, there is no reason to fear that the future supply of gold will not be sufficient to form a basis for effecting monetary changes already made or to be made. The increase in the gold reserves of the great banks for a series of years is shown in the following table:

Year.	*Millions.*	*Year.*	*Millions.*
1890	$1,560	1892	$1,840
1891	1,720	1893 (June 30)	1,940

BANKING AND FINANCIAL NEWS,

AND MISCELLANEOUS BANK AND FINANCIAL ITEMS.

This Department also includes: "OPEN LETTERS FROM BANKERS"—an interchange of opinion by those interested; "THE WORLD OF FINANCE"—extracts on monetary affairs from newspaper sources; and a complete list of "NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES," under their proper State heads for easy reference.

NEW YORK CITY.

— Mr. Frederick D. Tappen, President of the Gallatin National Bank, and Chairman of the loan committee of the New York Clearing-House Association, was recently presented with a tankard of solid silver in commemoration of his services during the late monetary crisis.

The cup bears this inscription:

> The gift of the Directors of the Bank of England to Sir John Houblon, Governor, Lord Mayor of London, in token of his great ability, industry, and strict uprightness at a time of extreme difficulty. 1696.

Mr. Tappen's associates had added on the lid:

> The gift of the Loan Committee of 1893, of the New York Clearing-House Association, to Frederick D. Tappen, Chairman, in token of *his* great ability, industry, and strict uprightness at a time of extreme difficulty.
> New York, November, 1893. 1873, 1884, 1890, 1893.

In presenting the memento, Mr. J. Edward Simmons, President of the Fourth National Bank, said:

"The Committee has recently come into the possession of a piece of historic silver, a testimonial tankard, which was presented by the directors in 1696 to the first Governor of the Bank of England, in token of their appreciation of his services during the financial crisis then ending.

The circumstances surrounding that first presentation so closely parallel our recent financial troubles, and the inscription upon the tankard so perfectly describes the services of Mr. Tappen during the last and preceding panics, that it requires only the addition of his name to complete its appropriateness. * * *

Original, powerful, and independent, you never shrank from the performance of a duty, nor were you in any way recreant to the great trust reposed in you by the Associated Banks of the city of New York. It is therefore gratifying for us to testify by this gift to the meritorious service you have rendered to the financial and commercial interests of this country.

With the firm assurance that this tankard, which for 200 years has stood for Ability, Industry, and Uprightness, will always represent these qualities in your hands, we leave it with you."

Mr. Tappen replying said:

"This piece of silver, if melted down, would be of little intrinsic worth. The circumstances, however, surrounding its presentation to Sir John Houblon nearly two hundred years ago; the inscription upon it, showing that it was given to him in recognition of services rendered to the Bank of England as its first Governor at a time of extreme difficulty in 1696, make it almost of priceless value as an historic souvenir. When you add to this, however, the duplication of the original inscription, dedicating this tankard to me, its value, in my opinion, becomes inestimable, and I cannot believe that any act of mine can merit so great a compliment.

This gift will be cherished by me during the remainder of my life as a precious treasure, and I trust it will be guarded by my descendants with as great vigilance as it will be by myself. * * * Again, gentlemen, I wish to tender my thanks for this beautiful gift. It has to me an additional value, coming from those with whom I have been so closely and so kindly associated during the many dark and gloomy days of the past few months. I accept it with a grateful heart, and I trust, with becoming modesty."

— The St. Nicholas Bank, which was the clearing-house agent of the Madison Square Bank, may sue the Receivers of the latter bank for 25 per cent. of $500,000. The total claim of the St. Nicholas Bank is $500,000. It holds securities sufficient to bring this sum down to $150,000. The Receivers are to pay a dividend of 25 per cent., and have figured on paying the St. Nicholas Bank 25 per cent. of their credit, less the collateral. The St. Nicholas Bank officials claim that the law permits them to hold the collateral and at the same time get a dividend on the full debt. They back up their claim with a decision in the case of the Chemical Bank against the Fidelity Bank of Cincinnati, where the United States Circuit Court decided a similar claim in favor of the Chemical Bank.

If the Receivers are forced to pay 25 per cent. of the $500,000, that will almost make up the entire debt to the St. Nicholas. Then the St. Nicholas Bank would give up all the securities it holds, and they would immediately become available for a further dividend.

— The November grand jury made the following report in reference to the failure of the Madison Square Bank:

"The grand jury presents to the Court that the facts developed in the Madison Square Bank cases show that examinations by the Examiner as now made are clearly insufficient and misleading, and that some radical change should be made in the system.

"The grand jury furthermore feels obliged severely to condemn the conduct of those who gave their names to the management of financial institutions and neglect the duties of the position.

"The higher the reputations of such persons the greater the value placed thereon in the community as the guarantee of honest and intelligent management."

— It is proposed to reorganize the Equitable Mortgage Company which failed some time ago. The plan provides that the debenture-holders surrender coupons maturing Sept. 1, 1893, and February, 1894, and accept scrip payable March 1, 1904. Five per cent. will be paid on debentures, payable semi-annually, the company reserving the right to pay 1 per cent. in scrip per annum the first five years. No dividends on stock will be paid while scrip is outstanding. Holders of mortgages are asked to accept a reduction of 1 per cent. in the rate of interest. The New York Security and Trust Company is made the depository of assenting stock debentures, etc. The probable income of the company after reorganization is given at $925,000, and fixed charges and all expenses $878,000.

— On November 10 J. Edward Simmons, President of the Fourth National Bank, gave a dinner at his home, 28 West Fifty-second street, to the members of the clearing-house committee and the loan committee which managed the issue of clearing-house certificates. Among the bankers present were Presidents George G. Williams of the Chemical National, Frederick D. Tappen of the Gallatin National, Henry W. Cannon of the Chase National, Edward H. Perkins, Jr., of the Importers and Traders', William A. Nash of the Corn Exchange Bank, George F. Baker of the First National, W. W. Sherman of the Bank of Commerce, and Richard Hamilton, Vice-President of the Bowery Bank.

— William J. Quinlan, Jr., Cashier of the Chemical National Bank, has been appointed Receiver of the property in this State of the Pacific Bank of San Francisco at the request of the Bank Commissioners of the State of California. There is considerable personal property and negotiable securities of the bank in this city held as collateral.

—The issue of certificates for gold deposits in denominations of $5,000 and $10,000 was begun by the clearing-house on November 28, and will be used among the banks in exchanges, instead of gold coin. The vaults for the coin on which the certificates are based are now ready. They will hold $25,000,000.

— The Madison Square Bank was dissolved November 22, and the temporary Receivers, Messrs. Miles M. O'Brien and James G. Cannon, have been made permanent Receivers. The liabilities of the bank are said to be $80,000 greater than the assets.

— The assignment of the firm of Field, Lindley, Wiechers & Co., which took place November 27, 1891, has been set aside on the ground of being fraudulent. Edward M. Field, one of the partners, is in an insane asylum.

— Geo. S. Coe, the venerable President of the American Exchange National Bank had a slight attack of paralysis on November 23. At latest reports he was making satisfactory progress towards recovery.

—Messrs. Macy & Pendleton have formed a co-partnership for the purchase and sale of stocks and bonds. Both partners are members of the New York and Boston Stock Exchanges.

NEW ENGLAND STATES.

A Veteran Bank President.—Ex-Mayor William Widgery Thomas, of Portland, Maine, celebrated, on election day, the ninetieth anniversary of his birth. He has been a leading business man of his city for over sixty years, and is now President of the Canal National Bank, and actively engaged in looking after his own large estate. Gen. Henry G. Thomas, United States Army, is his son. William Widgery Thomas, United States Minister to Sweden and Norway, is also his son.

A Dividend Assured.—Receiver W. A. Heard, of the National Bank of the Commonwealth, Manchester, N. H., has received orders to pay a twenty-five per cent. dividend as soon as a schedule and checks can be arranged. The amount of the dividend will be about $70,000.

An Aged Bank Officer.—Nathan Parker, President of the Manchester (N. H.) National Bank, one of the oldest bank officers in active service in the United States, celebrated his eighty-fifth birthday November 21 by giving a dinner to the employees of the bank.

Boston.—The bank Presidents of Boston gave a dinner to Comptroller Eckels, Nov. 13. Mr. Eckels made a speech on financial matters which was enthusiastically received by those present.

Fraudulent Vermont Bank.—It is charged that the new State Bank recently reported at Barton, Vt., is a fraudulent concern and that it will be enjoined from doing business.

MIDDLE STATES.

A Prosperous Scranton Bank.—The First National Bank, Scranton, Pa., has had a remarkably prosperous career since its organization in 1863. This is forcibly illustrated by a transaction in the bank's shares recently made public. A. A. Low, of Brooklyn, N. Y., thirty years ago bought one hundred shares of the stock at par value; or in other words he invested ten thousand dollars in the bank's securities. He died a short time ago. During the thirty years he received sixty thousand dollars in dividends from the stock, and at his death the stock was placed by the executors in the hands of a New York banking house for sale. The directors of the Scranton bank desired to purchase the stock, and ascertained that the New York banking house had been offered nearly six hundred dollars per share. The purchase was consummated and sixty thousand dollars was paid to the executors of Mr. Low's estate for his one hundred shares of stock in the Scranton bank for which he paid ten thousand dollars. This shows that on an investment of ten thousand dollars Mr. Low and his heirs have received one hundred and twenty thousand dollars by simply permitting the stock to remain in the bank. In other words, the investment has yielded on an average of forty per cent. per annum for thirty years.

Trustees Held Liable.—In the action brought by the directors of the Empire Savings Bank, Buffalo, N. Y., against the Trustees of the Old National Savings Bank to recover $438,000, the amount of Treasurer Dann's defalcation, on the ground that the theft could not have been committed but for the negligence of the directors, Justice Lambert has given judgment dismissing the defendant's demurrer and holding the Trustees liable for the amount of Dann's stealings. He holds that the defendants are properly joined, and no other defendants are necessary parties to the action. The motion to make Edward S. Dann's estate a party to the defense is dismissed. Judgment in favor of the plaintiffs is awarded with costs. It is said that the defendants will probably appeal.

Growth of Pittsburg Banks.—A recent special issue of the "Financial News" contains a table showing the growth of the Pittsburg banks from 1861 to March 6, 1893. During this time the number of banks increased from 13 to 51; the capital from $5,000,000 to $20,000,000. Since 1880 the loans have increased from $26,000,000 to $60,000,000, and in the same time deposits have increased from $33,000,000 to $78,000,000. The capital of all the banks in Allegheny County is placed at $18,000,000; this does not include several new banks, which would make the aggregate more than $20,000,000.

New Bank Organized.—The Juliand Bank, with a capital of $25,000, which may be increased to $50,000, is a new institution at Greene, New York. The directors are J. E. Juliand, Charles W. Gray, W. F. Russell, W. J. Russell and H. M. Juliand.

Wharton School of Finance.—The University of Pennsylvania has just received from Joseph Wharton, the founder of the Wharton School of Finance and Economy in that institution, a gift of $75,000. The gift, together with the two preceding for the same purpose, amounting in all to $200,000, enrolls Mr. Wharton among the large benefactors of education in the United States.

A Veteran Bank Official.—Abraham A. Van Vorst, President of the Schenectady (N. Y.) Bank, celebrated his eighty-eighth birthday November 28. He is in active service, and is vigorous mentally and physically. He has been connected with the Schenectady Bank as director since 1844, and has been President since 1875.

Paying Teller Fardon Acquitted.—Abram Fardon, on trial for embezzlement while acting as paying teller of the First National Bank of Paterson, N. J., was acquitted on November 20.

Taxation of National Banks.—Judge Archbald, of Scranton, Penna., has rendered an opinion to the effect that a State cannot tax the personal property of National banks.

SOUTHERN STATES.

Condition of Southern Banks.—Complete reports from the National banks in Maryland, Georgia, South Carolina, Texas, Florida, Alabama, Mississippi, Louisiana, North Carolina, Virginia, West Virginia, and the cities of Baltimore, Washington and New Orleans explain the reason why so comparatively few bank suspensions occurred in this section during the financial depression. The amount of loans and discounts during the period from July 12 to October 3 decreased $13,120,649 in ten States and two cities. In North Carolina an increase of $77,759 is shown, and in New Orleans an increase of $261,104. This contraction shows the conservatism and caution displayed by the banks in making loans during the summer. The reports show that the banks have hoarded very little gold. The average reserve held by these Southern banks increased 1.525 per cent. from July 12 to October 3. Leaving out the State of South Carolina, where the decrease was 14.92 per cent., due to local causes, the average increase was 3.835 per cent. This is considered a remarkable showing, since the banks were compelled to advance considerable funds to move the cotton crop.

Charged With Robbing the Mails.—W. B. Buchanan, President, and Charles Roe, Vice-President, of the Coke County Bank, Robert Lee, Texas, are reported to be under arrest on the charge of complicity in highway robbery of the United States mail, and attempting to defraud the Government.

New Virginia Bank.—The Bank of Mecklenburg, at Boydton, Va., has decided by vote of its stockholders, to establish a branch at Chase City. This action was the result of a petition presented by the business men of Chase City.

Nashville, Tenn. The jury in the case of Frank Porterfield, the defaulting Cashier of the Commercial National Bank, who has been on trial in the Federal Court, failed to agree and were discharged on November 13.

WESTERN STATES.

Milwaukee, Wis.—It is reported that efforts are being made to consolidate the Merchants Exchange Bank and the First National Bank under the latter title. The capital will probably be increased to $1,000,000.

- Those interested in the resumption of the Plankinton Bank have made an examination of the condition of the bank, and report that after carefully valuing and invoicing the assets of the bank, they found property to the amount of $1,516,988.40 of which they threw out as bad or doubtful $355,105.83. This leaves notes and other property, some of which will be slow, but which is well secured, $1,161,881. The bank owes depositors $1,0?6,507. This leaves a surplus of $65,374. In order to make it safe to resume the old stockholders are to give a bond to provide for further shrinkage for $100,000. The capital stock will be increased from $200,000 to $500,000, which makes the stock liability $500,000. Thus, before depositors can be to any risk, the bank must first lose $?65,374.

— It is stated that the Wisconsin Marine and Fire Insurance Company Bank, of Milwaukee, better known as the "Mitchell" Bank, will resume. Its creditors will receive dollar for dollar. City real estate owned by Senator Mitchell and John Johnson, aggregating in value, as appraised by Edward Barber and Edward P. Hackett, $1,8 0,000, will be pledged as security for the liabilities of the bank for the purpose of enabling it to resume. The bank will be reorganized with a capital of $500,000. The

Receiver now has about $1,000,000, which he has collected since the bank suspended, and debtors are ready to pay $800,000 more when necessary. With its new capital, the funds on hand, and the money available, there will be $1,800,000 with which to resume.

Illinois Bankers' Association.—The annual convention of the Bankers' Association was held at Decatur, November 14, with a large representation of the financiers of the State in attendance.

Officers were elected as follows: President, F. W. Tracy, of Springfield: First Vice-President, E. S. Dreyer, of Chicago; Secretary, E. Tilden, of Chicago; Treasurer, A. B. Hoblit, of Bloomington; Executive Committee, J. J. P. Odell, W. B. Kirk, Chicago; C. D. Keyes, Springfield; C. A. Hight, Dalton City; Lee Kincaid, Athens. The consolidation of the two banking associations in Illinois was effected.

Sale of a Nebraska Bank.—The Lancaster County Bank, of Lincoln, Neb., sold its assets on November 15 to the German National Bank, and will retire from business. The Lancaster County Bank was one of the oldest State banks in Lincoln, having been incorporated in 1872. The capital stock of $50,000 was owned by Walter J. Lamb.

A Crank in a Bank.—On November 10 a crank attempted to take the life of Myron T. Herrick, Treasurer of the Society for Savings, Cleveland, Ohio, and after a terrible fight escaped. He shot once at Herrick and threatened to blow up the place with dynamite if $50,000 was not at once given to him in cash from the vault.

Dividend of a Suspended Bank.—The M. E. Bagley Banking Company, of Jerseyville, Ill., whose suspension occurred some time ago, has declared a payment of 25 per cent. The bank's liabilities amount to considerably over $100,000; assets probably two-thirds that amount.

Chicago.—Geo. McDonald, President; F. M. Schweringen, Secretary, and W. H. Stevenson, director, of the Guarantee Bond Investment Co. of Missouri, were found guilty in the Federal Court, Nov. 2?, of using the mails to further a lottery scheme.

New Colorado Bank.—Woods, Wilson & Ruby is the title of a new banking firm organized at Golden, Colo. W. S. Woods, President, and W. A. Wilson, director, of the National Bank of Commerce, Kansas City, Mo., are members of the new firm.

Fraudulent Management Charged.—A suit was filed on November 17 asking that the assignment of the Cumberland Valley Bank, Barbourville, Ky., be set aside and a Receiver appointed. Fraud and collusion in the management is charged.

Discrepancy in Bank Statements.—It is alleged that a discrepancy has been discovered of over $1,000,000 between the figures given by Cleveland, Ohio, National banks to the Comptroller of the Currency and to the Auditor for taxation.

National Banks Consolidate.—The National Bank of Sioux City, Iowa, and the Security National Bank have consolidated under the latter title. The Security National will increase its capital to $750,000.

Dividend for Depositors.—The Receiver of the defunct American Bank of Dwiggins, Starbuck & Co., at Lawton, Mich., has declared a dividend of 53 per cent.

PACIFIC SLOPE.

San Francisco.—Augustus M. Scriba, ex-United States Bank Examiner and once Cashier of the Shoe and Leather Bank, New York, committed suicide November 26.

— At the last session of the State Legislature, a law was passed concerning unclaimed deposits in the Saving banks. This law obligates these banks to publish a list of the names of all depositors whose accounts have not been disturbed for ten years or more. The list is to be published in January, 1894, and thereafter annually.

A Wyoming Bank Resumes.—The Bank of Newcastle, Wyoming, which was forced to suspend temporarily under pressure of the recent monetary stress, has resumed business under the old management. The capital of $25,000 is unimpaired. The bank succeeded in negotiating $20,000 of its municipal securities, and collected two-thirds of its loans. The first day's deposits exceeded withdrawals by 50 per cent.

Portland, Oregon.—The Commercial National Bank resumed business on October 2, having cash on hand and due from reserve agents amounting to $266,014, nearly the entire aggregate of demand deposits—$269,414. The officials and correspondents of the Commercial National remain as before.

Tacoma National Resumes.—The Tacoma (Wash.) National Bank resumed business December 4 with $174,000 cash on hand.

FAILURES AND SUSPENSIONS.

Colorado.—The State Bank at Julesburg assigned December 4.

Illinois.—The private banking firm of Denman & James, at Greenup, assigned on November 28. It is probable that the private property which the partners turned over to the assignees will meet the deficiency in the bank's assets.

— J. G. Strodtman, a private banker at Petersburg, assigned November 20. Liabilities, $40,000.

— William M. Robertson was appointed Receiver for the Chicago Trust and Savings Bank on December 5. His appointment was the result of proceedings in chancery against Daniel H. Tolman, President of the Institution. This action was the outcome of the regular meeting of the Board of Directors, at which a set of resolutions were adopted charging Tolman with mismanagement and converting and misappropriating large sums of money belonging to the bank.

Kansas.—The Norton State Bank, located at Norton, was placed in the hands of a Receiver, December 5. Liabilities are $36,000 and nominal assets $75,000.

Kentucky.—The Coal and Iron Bank, of Middlesborough, closed November 14. It was the last bank doing business in the place, the others having suspended some time ago. The bank was organized in 1889, capital $500,000, backed by the American Association, promoters of this section. It has lost through depreciation of land values $250,000. The American Association failed a month ago. The assets are now nominal. Liabilities unknown.

Nebraska.—The Citizens' National Bank, of Grand Island, suspended on December 4, owing to inability to collect outstanding loans.

North Dakota.—The Lloyds National Bank, of Jamestown, which failed some time ago, is said to be in very bad shape, its "assets" of $41,000 being practically unsecured.

Ohio.—The Gunckel Banking Co., of Middletown, assigned November 11. The President was connected with a large Paper Co., which failed on the day prior to the suspension of the bank.

The appraisers of Mr. Gunckel's property have completed their work. It aggregates $202,567. This sum includes only that covered by the deed of assignment made by Mr. Gunckel. It was ascertained that the blanket mortgage given some time ago by the banker takes in his residence.

South Dakota.—The Minnekahta State Bank closed December 5. The President claims that assets are sufficient to meet all demands.

Washington.—The Buckley State Bank was reported closed on November 23, and the President and Cashier both missing. A Receiver will probably be asked for. The bank was established in 1891, and had a paid-up capital of $15,000. The shortage is placed at $30,000, of which $15,000 is due depositors.

— The Pugent Sound Savings Bank, of Seattle, is reported as being in liquidation, owing to unprofitable business. All claims are being met, and the bank has not suspended, but is closing up its affairs preparatory to a discontinuance of business.

— The Island County Bank, of Coupeville, suspended December 1. The bank started a few months ago with a capital of $25,000.

NEW BANKS, CHANGES IN OFFICERS, ETC.

We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this Department.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

4931—Citizens' National Bank, Minneapolis, Kansas; capital, $50,000.

The following notices of intention to organize National banks are reported by the Comptroller of the Currency:

First National Bank, Petoskey, Michigan: by James R. Wylie, *et al.*
First National Bank, Montevideo, Minnesota; by M. E. Titus, *et al.*
First National Bank, Fairmont, Minnesota; by C. H. Little, *et al.*
Coshocton National Bank, Coshocton, Ohio; by T. C. Roche, *et al.*

NEW BANKS, BANKERS, ETC.

ARKANSAS.

EUREKA SPRINGS—First National Bank; organizing by W. M. Duncan and others.

ALABAMA.

GENEVA—Bank of Geneva; organizing.

CALIFORNIA.

ANAHEIM—Citizens' Bank; capital, $100,000; President, H. Cohen; Cashier, L. Goldwater.

COLORADO.

DENVER—Clearance Bank of Denver (exchange business only); Controller, A. S. Miller.
GOLDEN—Woods, Wilson & Ruby (W. S. Woods, W. A. Wilson and Jesse Ruby).
HOTCHKISS—Bank of North Fork (Duke Bros.); capital, $15,000; Cashier, Geo. H. Duke.
WRAY—Republican Valley Bank; President, J. B. Whipkey; Cashier, H. M. Lichty.

CONNECTICUT.

SHELTON (P. O. Birmingham)—Shelton Savings Bank; President, Watson J. Miller; Treasurer, J. Tomlinson.

FLORIDA.

JACKSONVILLE—Savings and Trust Bank of Florida; capital stock, $50,000; President, H. Robinson; Cashier, Wm Rawlinson.
ORLANDO—Merchants' Bank; capital, $25,000; President, W. H. Reynolds; Cashier, B. H. Kuhl; Assistant Cashier, E. Kirby Smith.

GEORGIA.

ATLANTA—Manufacturers' Bank, organizing.
BLOOMINGDALE—Franklin Savings and Security Co.; capital, $27,000; President, C. P. Miller; Cashier, G. H. Miller
HAPEVILLE—Mutual Banking Co., organizing.
MILLEDGEVILLE—Geo C. Smith (Collection Agt.).
TALBOTTON—Thornton's Bank (S. W. Thornton & Son); Cashier, E. T. Smith.

IDAHO.

WARDNER—Weber Bank; capital, $10,000; President, J. H. Weber; Cashier, P. P. Weber.

ILLINOIS.

BROADLANDS—Bank of Broadlands (private); President, A. M. Kinney; Cashier, D. P. McIntyre.
CASEY—Casey Bank (private): responsibility of owners, $100,000; President, H. B. Lee; Cashier, James E. Turner.
FARINA—Exchange Bank (Schlagenhauf & Co.); capital, $20,000; Cashier, Thomas Zinn.
MANSFIELD—Commercial Bank (private); capital, $10,000; President, W. H. Firke; Cashier, J. C. Langley.
MANTENO—State Bank; capital, $25,000; President, Frank M. Wright; Cashier, Henry La Rocque
McLEANSBORO—People's Bank (J. H. Miller); Cashier, W. D. Sharpe.
PALATINE—Palatine Bank (private); capital, $20,000; President, Chas. H. Patten; Cashier, F. J. Filbert.
PLANO—H. H. Henning; Manager, E. L. Henning.
PORT BYRON—Simonson & Schafer; capital, $20,000; Cashier, E. B. Stone.
QUINCY—Citizens' Bank; organizing.

INDIANA.

CLAY CITY—J. M. Bowen & Co.
EATON—Farmers' Bank.
KINGMAN—Bank of Kingman; capital, $4,500.

IOWA.

DES MOINES—Provident Loan & Trust Co.; capital, $100,000.

HALBUR—Halbur Bank; capital, $5,000.
LETTS—Citizens' Savings Bank; capital, $20,000.
SIOUX CITY—Inter-Ocean Banking Co.; organizing; capital, $1,000,000.
WOLCOTT—Wolcott Savings Bank; paid-up capital, $30,000; President, H. H. Sindt; Cashier, Henry Kohl.

KANSAS.

GYPSUM CITY—Gypsum Valley State Bank; capital, $5,000; President, J. Tinkler; Cashier, A. C. Spilman.
MOUND CITY—Farmers and Mechanics' Bank; capital stock, $20,000; President, H. A. Strong; Cashier, H. C. Reese.

KENTUCKY.

LOUISVILLE—Halsey & Wood.

MARYLAND.

BALTIMORE—Thom & Redwood (De Courcey Thom and John Redwood).

MICHIGAN.

SIDNEY—Morse & Schneider; capital, $10,000; President, Chauncey E. Morse; Cashier, R. E. Schneider.

MINNESOTA.

ANNANDALE—State Bank of Annandale; capital, $15,000; President, C. M. Buck; Cashier, W. D. McDonald.
BARNUM—Bank of Barnum, organizing.
DASSEL—Bank of Dassel; capital, $16,000; President, C. M. Buck; Cashier, E. E. McGrew.
GRAND FORKS—Lumbermen's State Bank; capital, $25,000.
HALLOCK—Kittson County Bank; President, L. E. Booker; Cashier, W. H. Douglas; Vice-President, G. W. Ryan.
MONTEVIDEO—First National Bank, organizing.
MORRISTOWN—Bank of Morristown, organizing; capital, $15,000; President, A. H. Ridgeway; Cashier, F. W. Ridgeway; will not begin banking business until spring.

MISSOURI.

ATLANTA—Atlanta State Bank (private); capital, $10,000; President, Frank P. Hays; Cashier, W. J. Dearing.
KANSAS CITY—John Mulholland Co.; capital, $5,000.
MEMPHIS—Farmers' Exchange Bank, organizing; capital, $25,000.
ST. LOUIS—Fidelity Savings and Loan Co.; capital, $1,000,000.

NEW YORK.

GREENE—Juliand Bank; successor to Russell & Juliand; capital, $25,000; President Joseph E. Juliand; Vice-President, William F. Russell; Cashier, William J. Russell; Assistant Cashier, W. Gray.
HAMBURGH—Penny Savings Bank, organizing.
MIDDLEPORT—Lyman A. Freeman.
NEW YORK CITY—W. B. Sancton & Co., brokers.——Macy & Pendleton, brokers.
WATERTOWN—Watertown Savings Bank; President, Byron B. Taggart; Treasurer, Wooster Sherman.

NORTH DAKOTA.

CARRINGTON—Carrington State Bank; capital, $10,000; President, Chas. H. Davidson, Jr.; Cashier, E. L. Davidson.
TOWNER—Farmers and Merchants' Bank; capital, $10,000; President, A. Gilbertson; Cashier, John Lahn.

OHIO.

ADA—Ada Savings Bank; capital, $12,500; President, J. Brewer; Cashier, J. Bastable.
GLOUSTER—Citizens' Bank; President, F. J. Wilson; Cashier, David Edwards; Assistant Cashier, Chas. W. Wilson.
TOLEDO—Home Safe Deposit & Trust Co.; capital, $25,000; President, N. H. Swayne. Vice-President, C. F. Braun; Secretary, D. V. R. Manley; Treasurer, Chas. Gardner'

OKLAHOMA TERRITORY.

ENID—O County Bank; capital, $10,000; President, S. F. Spencer; Cashier, B. F. Buffington.——Stock Exchange Bank, (H. H. & Alice P. Champlin).
POND CREEK—Bank of Pond Creek; President, C. Q. Chandler; Cashier, J. W. Berryman.

PENNSYLVANIA.

COOPERSTOWN—Citizens' Bank, (private); President, W. J. Bradley; Cashier, F. Lapsley.

BAY CITY—Bank of Bay City.

THE BANKERS' GAZETTE.

SYNOPSIS OF THE MONEY MARKET AND FINANCIAL SITUATION.

NEW YORK, December 4, 1893.

The country has had a short respite from legislation, but Congress is now to begin its "long" session, and it may prove to be as important as any that has engaged public attention since the close of the civil war. There has been public announcement of the character of tariff legislation that is proposed, the majority of the House Ways and Means Committee having published its report "with leave" to the minority to make any report the latter may care to frame. The measure proposed involves many important changes in the tariff system, not only in the reduction in duties and the extension of the free list, but also in the substitution of *ad valorem* for specific rates. Naturally enough the bill has attracted criticism and developed antagonism, and what will be its fate it is not easy to predict at this time. The general sentiment, however, is that it will go through the House and meet its strongest opposition in the Senate. Tariff legislation, potential as it must be in influencing the prosperity of trade and industrial enterprise, may not after all be the sole factor in determining it. The "Wilson" bill, as it is already known, admittedly will leave a deficiency of revenue of at least $35,000,000, possibly as much as $50,000,000, to be provided for, and the problem to be solved is how best to take care of it. The situation is a serious one for the reason that the revenues are now falling very far behind the expenditures. In the five months since July 1 the ordinary receipts of the Government were $129 000,000 and the expenditures $159,000,000, a deficit of $30,000.000. The receipts were nearly $32,000,000 less than in 1892 while the expenditures were $2,000,000 more. The pressing problem therefore is rather to get revenue enough than to make it as small as possible. Nor does this show all the dificulties involved. The Treasury's working balance, or surplus, has fallen to a very low point. For the first time in many years it fell below $100,000,000 on November 9 last, and it has kept on falling almost continuously since, until at the close of the month it was but a little more than $95,000,000 against $102,000,000 on November 1 and $122,000,000 on July 1 last. It has not been a question of maintaining a gold balance this time, on the contrary it has been the currency which has gone out, leaving only about $12,000.000 now in the Treasury.

The condition of the Treasury has forced the consideration of supplemental legislation in connection with the tariff bill. Reports have been current that Assistant Treasurer Conrad N. Jordan, who went abroad last month, had in charge the negotiation of a loan for the Government but this was officially denied; still it is thought probable that Congress will be requested to consider the wisdom of issuing bonds sufficient to restore the surplus in the Treasury. An income tax of some kind it is understood will be proposed in Congress, in order to increase the revenues; but the proposition has awakened much opposition in the East. An increased tax on whiskey is also one of the pending propositions which may be incorporated in legislation. The Treasury Department was credited with contemplating a plan for setting apart so much of the silver bullion now in the Treasury as would represent the difference between the cost and the coining value of the entire amount, and coining the same as seigniorage. This plan would swell the cash in the Treasury by some $55,000,000 as the silver bullion amounts to about 141,000,000 ounces of a coining value of $182,000,000, while it cost the Government only $127,000,000 The coinage of silver dollars has not yet been resumed, although orders were given on November 3 for the mints to be prepared to commence the coinage of silver dollars at a moment's notice. Secretary Carlisle's very positive declaration in favor of the single gold standard, made at the dinner of the New York Chamber of Commerce on November 20, indicates that the silver basis of the currency will not be broadened for some time to come.

The industrial situation shows many signs of improvement, although still affected by the recent panic, and influenced in part by the uncertainty as to legislation. In the iron trade there has been some increase in activity in the production of pig iron, which had decreased until it was barely one-third of what it was in the spring of 1892, the furnaces in blast having been reduced from 305 to 114 and the capacity per week from 193,902 gross tons to 73,895. A sensational break in the price of steel rails occurred at Pittsburg, a cut being made to $22 per ton. The cut it is understood has been followed by a new arrangement between the steel rail manufacturers which will keep the price up to $25 at tidewater.

One of the favorable signs of the times was the sale of $2,000,000 of cotton goods at auction last month. The prices obtained were a genuine surprise to the dry goods trade, and the unexpected success of the sale has had an inspiring effect upon the trade ever since. There has been a fresh outbreak of "labor troubles," but strikes at the present time are very hazardous. The strike on the Lehigh Valley Railroad was the signal to many unemployed to apply for work. The hat manufacturers at Danbury have given notice to their employes that no "union" labor will hereafter be employed, and have closed their factories pending the settlement of that issue. Upon the whole however, the relations between labor and capital are free from serious strain.

The November report of the Department of Agriculture suggests a corn crop for this year of about 1,650,000,000 bushels or about 21,000,000 bushels larger than in 1892 but 410,000,000 bushels less than in 1891. Since 1881 the yield has been smaller than this year, only in 1883, 1887, 1890 and 1892. The foreign trade movement continues largely in favor of this country, the exports of merchandise still approximating those of a year ago but the imports falling far below last year's totals. The complete returns for October show a decrease in imports of $20,000,000. The excess of exports over imports was $36,000,000 against less than $16,000,000 in October last year.

Foreign financial affairs have developed some sensational features, the most striking being the announcement of the resignation of Chief Cashier May of the Bank of England, after twenty years service, in consequence of heavy losses sustained by the Bank, and for which it appears that Mr. May was to a certain extent responsible. The appearance of Bank of England notes without the well-known signature of Cashier May has caused no little apprehension among the Bank's friends and admirers. Fears that the Latin Union would be dissolved have been ended for the present, an agreement to continue it with certain modifications having been reached. The ½, 1, and 2 franc pieces of Italy will, however, no longer be a legal tender in the other states. Italy has been the center of considerable distrust. The Banca Romana scandal has been followed by the suspension of the Credit Mobilier of Rome and the low state of Italy's credit suggests the ending of the Triple Alliance, which has had much to do with increasing the burdens of Italy. The steps taken by Austria in the direction of establishing a gold standard have been followed by a premium on gold and predictions of a panic are freely made. In England the settlement of the great coal strike was the principal event of the month. Money in London has remained cheap, and the Bank of England has kept its rate of discount unchanged at 3 per cent.

FOREIGN EXCHANGE.—The market for sterling exchange has been largely influenced during the past month by the extremely low rates for money which have prevailed in New York, the higher rates in London causing bankers to restrict their drawing of bills to actual needs. This with a limited supply of commercial bills has kept rates for sterling very firm. Long sterling advanced considerably on the demand for investment. The actual rates at the close of each week for the month are:

Week ended	BANKERS' STERLING.		*Cable Transfers.*	*Prime Commercial. Long.*	*Documentary Sterling. 60 days.*
	60 days.	*Sight.*			
Nov. 4....	4.81 @ 4.81¼	4.83¾ @ 4.84	4.84¼ @ 4.84½	4.80¼ @ 4.80½	4.80 @ 4.80¼
" 11....	4.81¾ @ 4.82	4.84 @ 4.84¼	4.84½ @ 4.84¾	4.81 @ 4.81¼	4.80¾ @ 4.81
" 18....	4.83 @ 4.83¼	4.85½ @ 4.85¾	4.86 @ 4.86¼	4.82¼ @ 4.82½	4.82 @ 4.82¼
" 25...	4.83 @ 4.83¼	4.85¼ @ 4.85½	4.85¾ @ 4.86	4.82¼ @ 4.82½	4.82 @ 4.82¼
Dec. 2....	4.83½ @ 4.83¾	4.86 @ 4.86¼	4.86½ @ 4.86¾	4.82¾ @ 4.83	4.82½ @ 4.82¾

Continental rates are lower for Paris, but slightly higher than a month ago

for Berlin and Amsterdam. The range at the close of the month was as follows:

	Bankers.		Cable Transfers.	Commercial.	
	60 Days.	*Sight.*		*60 Days.*	*Sight.*
Paris........	5.19⅜ @ 5.18⅛	5.18⅛ @ 5.17½	5.17½ @ 5.16⅞	5.21¼ @ 5.20⅝	5.19⅜ @ 5.18¾
Antwerp...	....	....	....	5.22½ @ 5.21⅞	....
Swiss........	5.21¼ @ 5.20⅝	5.18⅛ @ 5.17½	....	....	....
Berlin......	94 15-16@95 1-16	95 9-16@95 11-16	....	94 11-16@94 13-16	....
Brussels ...	....	5.18⅛@5.17 1-16	....	....	....
Amsterdam	40 1-16 @ 40⅛	40 5-16 @ 40⅜	....	39⅞ @ 39 15-16	....
Kronors....	26 13-16 @ 26⅞	27 @ 27 1-16	....	....	....
Italian lire..	....	5.80 @ 5.75	....	....	....

French rentes were quoted at the close of the month at 99 francs 45 centimes. Paris exchange on London, 25 francs 18 centimes.

The Bank of England rate of discount is unchanged at 3 per cent. The open market rate in London for 60 to 90-day bills is 2¼ @ 2⅜ per cent. as against 2⅝ per cent. a month ago. In Paris the open market rate is 2¼ per cent. against 2⅛ per cent. a month ago; in Berlin 4⅛ per cent., and Frankfort 4¼ per cent. against 4⅜ and 4⅛ respectively, a month ago. During the month of November the Bank of England gained £12,200 in gold bullion, holding at the close £25,988,970 against £24,906,231 a year ago. The Bank of France gained £284,198 gold and now holds £68,222,991 against £67,448,476 in 1892.

DOMESTIC EXCHANGE.—The rates for domestic exchange on New York are as follows: Boston—Par @ 5 cents premium for cash; checks, par for cash. Charleston—Buying, par; selling ⅛ premium. Savannah—Buying, ⅛ discount; selling, par to ⅛ premium. New Orleans—Bank, 100 premium; commercial, par. San Fransisco—Sight, 5; telegraphic, 10. St. Louis—90 cents premium. Chicago—75 cents premium.

UNITED STATES TREASURY.—The statement of the United States Treasury for November shows an increase in the total debt of $11,241,265, of which $11,619,441 is in certificates and Treasury notes, offset by an equal amount of cash in the Treasury. The net debt, less cash in the Treasury, increased $6,716,499. The total cash assets are $734,820,435. of which $15,799,333 is in National bank depositories. Following is a summary of the statement:

	Oct. 31, 1893.	*Nov. 30, 1893.*		
Interest bearing debt..............	$585,039,040	$585,039,220	Increase...	$180
Debt on which interest has ceased.	1,974,570	1,939,380	Decrease..	35,190
Debt bearing no interest..........	374,932,882	374,589,716	Decrease..	344,166

The statement of the Comptroller of the Currency shows that the total amount of National bank notes outstanding—not including $97,317 circulation of National gold banks—was on November 30, $208,850,788. This shows a decrease for the month of November of $368,378 as compared with an increase of $621,994 in October, and an increase in total circulation since November 30, 1892, of $35,339 960. During the month of November there was issued to new banks $33,780, and to old banks increasing circulation $598,841. There has been surrendered and destroyed during the month $995,999. The amount of circulation outstanding secured by lawful money on deposit with the United States Treasurer is $21,250,279, showing an increase in that class of circulation during the month of $52,341.

The population of the United States on December 1, 1893, is estimated at 67,547,000; circulation per capita, $25.57.

The total supply of gold coin and bullion in the country, the net gold in the United States Treasury in excess of gold certificates outstanding, and the total gold including gold certificates in circulation on the dates mentioned are shown as follows:

	Total Supply.			Net Gold in United States Treasury.	Gold in Circulation.
	Gold Coin.	Gold Bullion.	Total Gold.		
January 1	$569,633,412	$81,697,350	$651,330,762	$121,266,663	$530,064,099

The Money Market.—The supply of money has at last become so large as to be positively burdensome to people and institutions having it to lend. This is particularly true of the banks which receive out of town deposits and allow 2 or 3 per cent. per annum on balances. Money on call lends at 1 @ 1½ per cent., and most of the business is done in that class of loans. There is little demand for time money as borrowers are content to supply themselves with money on call. There is very little commercial paper of the very best class and what is good is readily taken. Time money loans at from 2 per cent. for 60 @ 90 days to 3½ @ 4 per cent. for 5 @ 6 months. Commercial paper rules at 3½ @ 6 per cent. according to character and time. For the week ending November 11, the open market rate for call loans on stock and bond collaterals ranged from 1½ to 2 per cent., the average being less than 2 per cent. Commercial paper 4¾ to 5½ per cent. For the week ending November 18, the open market rate for call loans on prime collaterals ranged from 1 to 1½ per cent., with the average less than 1½ per cent. Commercial paper quoted 4 to 5 per cent. For the week ending November 25, the open market rate for call loans ranged from 1 to 1½ per cent., the average being less than 1½ per cent. Commercial paper quoted 4 to 4¾ per cent. During the week ending December 2, the open market rate on call loans ranged from 1 to 1½ per cent., the average being less than 1½ per cent. Commercial paper quoted 3½ to 4½ per cent.

New York City Banks.—At no previous time in the history of the New York banks was there as much money in the possession of those institutions as now. Nearly $198,000,000 of specie and legal tenders are held by the local banks, an amount about $34,000,000 larger than was ever before known. Since the extreme depression in August last, the banks have accumulated $50,000,000 specie and $71,000,000 legal tenders. In the same time the deposits increased $117,000,000, of which $54,000,000 was in the past month. A surplus reserve of $76,000,000 is now reported, against a deficit in August of $16,500,000. This surplus is $11,000,000 in excess of the highest amount ever reported prior to last month. Loans decreased until about the middle of the month, but since that time increased $7,700,000.

The following table gives the condition of the New York Clearing-House banks, as shown by the statements for a number of weeks past:

	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surplus Reserve.
Nov. 4 .	$402,383,300	$97,116,500	$66,750,120	$447,412,600	$14,409,900	$3,225,975 inc.
" 11..	402,986,000	98,641,900	73,118,800	455,739,900	14,356,300	5,812,275 inc.
" 18..	401,732,800	99,924,300	81,717,200	461,684,100	14,076,600	7,641,750 inc.
" 25..	405,201,700	100,993,600	88,669,500	475,311,700	13,831,900	5,364,700 inc.
Dec. 2	409,490,100	104,368,800	93,564,400	487,345,200	13,658,200	5,261,725 inc.

The total amount of specie exported from New York city to all points during the month of November was $3,245,960 as compared with $2,779,589 in October, making a total for the year of $100,053,045, of which $70,393,645 was gold and $29,659,400 silver. The imports for the month were $3,317,426, as compared with $1,869,610 in October, making a total for the year of $64,949,786, of which $62,706,247 was gold and $2,243,539 silver.

THE MOST ACTIVE STOCKS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of November, 1893, and the highest and lowest since January 1, 1893, by dates:

2,314,743	978,688	249,497	134,792

leaving 1,745,215 shares (including 1,221,445 shares of unlisted stocks) to represent the dealings in the remaining 130 stocks. In addition 385 different issues of railroad bonds were dealt in, to the amount of $28,994,700; also $811,500 State bonds and $202,700 Government bonds. (Compared with November, 1892, there is an increase of 409,839 shares in stocks; an increase of $1,645,450 in railroad bonds; an increase of $388,700 in State bonds; a decrease of $81,300 in Government bonds, and a decrease of 1,089,000 ounces in silver bullion certificates.) Of unlisted securities were sold: railroad bonds, $31,000; stocks, 1,221,445 shares, of which 1,158.337 were American Sugar Refiners' common stock and 17,454 preferred; mining stocks, 35,500 shares. American Cotton Oil Certificates, 42,021 shares of common and 7,646 shares of preferred; Pipe Line Certificates, no sales. Of National Lead common 24,608 shares, preferred 8,199 shares; of silver bullion certificates, 5,000 ounces, extremes being 70¼, closing at 69¼ bid. The listed stocks show a decrease of 681,174 shares as compared with the amount sold in October. Transactions in railroad bonds show an increase of $3,751,400 during the same period, an increase of $46,000 in State bonds, and an increase of $75,900 in Government bonds. In unlisted bonds an increase of $21,000; in unlisted stocks an increase of 337,405 shases; in mining stocks an increase of 10,600 shares; an increase of 13,867 shares in Cotton Oil Certificates common, an increase of 1,107 shares in preferred; a decrease of 2,000 barrels in Pipe Line Certificates. Sales of silver bullion certificates decreased 75,000 ounces.

At the Consolidated Stock and Petroleum Exchange during the month of Novemder were sold: 2,190.518 shares of railroad and other stocks representing dealings in 83 properties. Of this amount 1,651,420 shares are transactions in the following 12 stocks:

C. M. & St. P..427,840	C. R. I. & Pac. 166,660	Gen'l Elect... 93,540	A. T. & S. Fe.. 44,780

NEW YORK STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange.*

The Quotations indicate the last bid or asked price. Quotations marked * are for less than $10,000 in Bonds or less than 100 shares of Stock. Where there was no quotation during the past month the last previous quotation is designated by a ‡. The highest and lowest prices for the year 1890—actual sales—are given for comparison.

SPECIAL LIST.

This "Special List" is made up of securities—both stocks and bonds—which are not regularly "called" at the Exchange. Members are at liberty to deal in them daily, on the Bond Call, but the transactions are infrequent.

NOTE.—The railroads enclosed in a brace are leased to Company first named.

BANKERS' OBITUARY RECORD.

Burt.—James G. Burt, formerly President of the First National Bank, San Bernardino, Cal., died November 14.

Clement.—Charles Clement, founder of the Clement National Bank and State Trust Co., Rutland, Vt., died November 28, in New York city.

Clinkscales.—J. R. Clinkscales, President of the First National Bank, Carrolton, Mo., died October 24.

Crater.—Philip Crater, Cashier of the National Newark Banking Co., Newark, N. J., died November 24, aged seventy-four years.

Culp S. R. Culp, senior member of the banking firm of S. R. Culp & Son, Athens, Mich., died October 31, after an illness of eight months. Mr. Culp conducted a general banking business in the village of Athens for upwards of eleven years, having founded the present bank in 1882. By his strict business methods and integrity he won many friends, and established himself creditably in the business world. The bank of which he was a member will continue to do a general banking business under the firm name, conducted by J. F. Culp, who has been Cashier of the bank continually since its establishment. Mr. Culp is the junior member of the firm, and only surviving heir of the deceased; he is ably qualified to carry on the large and varied interests of his father.

Gottig.—Lawrence Gottig, President of the German Savings and Loan Society, San Francisco, Cal., died November 10, death being due to a surgical operation.
